Contact Name:	SCOTT VITELLO
DEC Memo:	"07/02/08 - LZ ARCADIS submitted a report dated June 26, 2008, documenting wells' decommisssioning. 01/23/08 - LZ As advised by the Regional Spill Engineer, the spill case is closed and the presence of MGP contamination at the site referred to Gardiner Cross, Central Office, Remedial Bureau C, for further investigation. An NFA letter was sent out (eDods). 11/23/07 - Zielinski ARCADIS BBL submitted a report, dated November 13, 2007, containing groundwater analytical results of sampling conducted on October 17, 2007. A sheen was detected in MW-18(an off-site well). Benzene was detected above groundwater standards limit (0.7 ppb) in twelve wells. The highest concentration was noticed in MW-14R(390 ppb), MW-11(180 ppb), B-2(110 ppb), MW-15(34 ppb), MW-19(35 ppb). Toluene was detected above the limit (5 ppb) in MW-11(17 ppb), MW-14R(21 ppb), B-1(16 ppb), and B-2(11 ppb). Ethylobenzene was detected above the limit (5 ppb)in the following wells: MW-9(5.7 ppb), MW-11(9.2 ppb), MW-14R (35 ppb), MW-19(29 ppb), B-1(13 ppb), and B-2(12 ppb). Total xylens were detected above the limit(5 ppb) in MW-9(20 ppb), MW-11(6.4 ppb), MW-14R(130 ppb), MW-15(8.4 ppb), B-1(46 ppb), and B-2(100 ppb). MTBE was detected above the limit (10 ppb) at MW-5 (11 ppb), MW-6(48 ppb),

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

MW-12(79 ppb), and MW-14R(21 ppb). Acenaphtalene, napthalene, benzo(a)anthracene, benzo(b)fluoroanthene, and benzo(k)fluoranthene were detected above groundwater limits at MW-19(an off-site well). Acenaphthene was detected in MW-9 (20 ppb). 09/19/07 - Zielinski A letter requesting a one round groundwater sampling for the presence of SOVs, SVOCs, and MTBE was sent to ARCADIS BBL. 09/06/07 -Zielinski Historical information on spill # 9804544, 1 North 12th Street, Brooklyn, NY August 28, 1997: well gauging, conducted for Star Enterprise, reveals 0.81 feet of free product in MW-10. October 30, 1997: in its letter to NYSDEC, Star Enterprise declares that it will retain responsibility for cleanup of hydrocarbons existing at the facility, prior to the sale of the facility, and will prepare a site investigation and remediation plan. November 1, 1997: Bayside Fuel Oil Depot Corp. purchases Texaco NY Terminal. November 1997: the removal of USTs at the site. January 16, 1998: sampling by Handex reveals the presence of free product in MW-10 (0.16 feet) , and contamination in MW- 6 MTBE (6,370 ppb) and naphthalene (21 ppb). May 1998: the Technical Analyses and Proposed Remedial Actions for Texaco Facility No. 58079, Brooklyn, NY, is prepared for Star Enterprise by Environmental Systems and Technologies, Inc. Findings: unsaturated zone thickness ranges from 2 to 12 feet; groundwater flows north-northeast toward the East River and the Bushwick Inlet; MW-10 (1.17 feet of LPH); MW-7 (0.04 feet of LPH); MW-6 MTBE (13,000 ppb), benzene (494 ppb); soil contamination below NYSDEC guidance values. Conclusions: the primary focus of remediation should be on removal of LPH and installation of additional wells at vicinity of MW-10. July 10, 1998: Star Enterprise notifies about a spill of an unknown cause, dated February 23, 1996; the spill receives No. 9804544. July 27, 1998: a Stipulation Agreement (SA), signed by Region 2 Regional Spill Engineer, provides that Texaco Refining and Marketing, Inc., is responsible for cleanup of the spill. The cover letter, however, indicates Star Enterprise as the respondent of the SA. The SA requires Texaco Refining and Marketing, Inc. submit a corrective action plan and quarterly progress reports. October 1998: an Investigation Report, prepared by Handex for Star Enterprise, shows results of sampling conducted on July 29, 1998; soil contamination was found near MW-13 (BTEX 754,700 ppb), no MTBE detected, TPH-DRO (Total Petroleum Hydrocarbons-Diesel Range) (2,800 ppm), THP-GRO (9,800 ppm); near MW-14 (BTEX 343,900 ppb), no MTBE, detected TPH-DRO (5,560 ppm), TPH-GRO (18,400 ppm). Groundwater contamination: MW- 10 (0.58 feet of LPH); MW-13 (0.09 feet of LPH); MW-6 BTEX (3,410 ppb). Depth to water: MW-11 (1.94 feet below grade); EPA-3 (7.51 feet below grade). November 1998: Handex prepares a report of behalf of Texaco Refining and Marketing, Inc., which reveals free product at MW-10 (0.40 feet) on September 22, 1008; and at MW-13 (0.67 feet) on September 28, 1998. The results of soil sampling; MTBE not detected, BTEX detected only near MW-16 (1.7 ppb) . January 19, 1999: since the results of investigation by Handex, submitted on November 4, 1998, indicate free product in the velocity of MW-10 and dissolved phased petroleum in the vicinity of MW-16, NYSDEC requests that Star Enterprise submit a proposed CAP in accordance with the SA. April 5, 1999: on behalf of Motiva Enterprise, LLC, Handex submits a remediation plan for the former Star Enterprises facility. The plan includes the use of enhanced fluid recovery (EFR) system, soil-vapor extraction , and removal of free product from MW-6, MW-10, and MW-13. The EFR events will be conducted once a month for six consecutive months. Groundwater samples will be collected twice a year from all

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

wells where free product is not present. November 24, 1999: Handex is submitting, on behalf of Motiva Enterprise, a site status report. Groundwater sampling was conducted in May 1999 and EFR events conducted in May and June 1999. The EFR program was terminated because of the presence of LPH in MW-14 and MW-16. February 17, 2000: NYSDEC, reviewing the November 4, 1999, report determines that the CAP was not successful in the remediation at the site, as required by the SA. NYSDEC states that Motiva Enterprise has failed to submit a proposed plan to complete the cleanup. NYSDEC requests that Motiva Enterprise submit a progress report July 27, 2000: on behalf of Motiva Enterprise, LLC, Handex submits a quarterly progress report which asserts that additional monitoring proposed in the investigation plan were not installed because of the presence of the underground utilities. Soil contamination shows exceedances of SVOCs near MW-17, MW-18, and MW-19 and the presence of free product in MW-10, MW-13, MW-14, and MW-16. August 20, 2001: a letter from Scolaro, Shulman, Cohen, P.C., reveals that NYSDEC agreed to the discontinuance of enhanced fluid recovery in June of 1999 after LPH appeared in MW-14 and MW-16. The letter informs that on April 22, 1999, NYSDEC approved the CAP submitted on July 16, 1998. December 17, 2001: Handex, on behalf of Motiva Enterprise, submits a semiannual monitoring report that reveals the presence of LPH in MW-6, 7, 10, 13, 14, 15, 18, and 19 (from traces to 0.60 feet-MW-10). Groundwater contamination was detected in MW-13 BTEX (7,706 ppb); B-2 MTBE (1,280 ppb). April 1, 2002: Anthony Sigona of NYSDEC in his memo informs that the current owner of the site (Bayside Fuel Oil Depot) has not been directly involved in the cleanup; the cleanup continues under direction of Equiva Services, LLC, which acquired Texaco Refining & Marketing; LPH have dropped to levels no greater that 0.1 feet; dissolved BTEX and MTBE are present. May 30, 2002: TransGas Energy applies for a Voluntary Cleanup Program assistance. The cover letter says that the site is adjacent to a former coal gasification or manufactured gas plant located on the south side of North 12th Street. August 20, 2002: Blasland, Bouck & Lee, Inc., (BBL) on behalf on Chevron Environmental Management Company (CEMC) submits results of June 25, 2002, groundwater sampling; LPH was observed in MW-7, 10, 15, and 16 with the highest number of 0.13 feet at MW-16. Detected groundwater contamination; MW-13 xylenes 93,040 ppb), benzene (2,120 ppb). August 22, 2002: a letter from Joseph Lentol, Assemblyman, Kings Country District, asserts that Texaco merged with Motiva (most likely between July 1998 and August 2002); the DEC files do not reveal Motiva as the company responsible for the cleanup. September 25, 2002: Anthony Sigona of NYSDEC in his letter to Chevron Product Company indicates that since Chevron has merged with Texaco Refining & Marketing , Inc., NYSDEC will determine whether Chevron is authorized to implement the remediation project on behalf of Texaco. If so, Chevron is required--under the CA--submit a feasibility study and estimated cleanup schedule for approval. November 25, 2002: Blasland, Bouck & Lee, Inc., (BBL) on behalf on Chevron Environmental Management Company (CEMC) submits a corrective action plan. The plan evaluates remediation options: natural attenuation, soil vapor extraction or bioventing (installation of wells to pump air out or into the soil), and excavation and a number of remediation methods for excavated soil (disposal and treatment at an asphalt plant, thin spreading, on-site or off-site thermal desorption, bioremediation/biopile remediation, and disposal in a landfill). BBL proposes the excavation (area 25'x50' extending about 2' into the

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

water table, next to MW-10, 13, 14, and 16) and off-site disposal as the remediation method. December 27, 2002: NYSDEC approves a BBL corrective action plan of November 25, 2002, and its implementation schedule. January 8, 2003: a letter from Chevron Product Company informs that Chevron /Texaco Corporation assumes environmental responsibilities associated with Texaco Refining and Marketing, Inc., as a result of the merger on October 9, 2001. Attached to it a certificate reveals that Chevron Corp. has changed the name to ChevronTexaco Corporation. March 5, 2003: Randall Austin in his e-mail informs that during excavation of an UST discovered recently at the site--strong odors were generated and entered an adjacent property, occupied by City Storage. As a result, 3 people were sick and 25 people were evacuated. The contractor covered the excavated area with plastic sheeting and overfilled it with clean sand. March 10, 2003: NYSDEC sends a letter to Chevron Products Co. requesting that because of excessive vapors present on March 5, the CAP must be modified and submitted for DEC approval. The modification must address containment of vapors from contaminated soil. March 11, 2003: Blasland, Bouck & Lee, Inc. (BBL), on behalf on Chevron Environmental Management Company submits November 2002 groundwater sampling and bimonthly gauging results. LPH were detected in MW-10 (0.02 feet); MW-16 (0.12 feet). Benzene was detected at B-1 (120 ppb); B-2 (45.3 ppb); MW-6 (72.4 ppb); MW-11 (70,6 ppb); MW-13 (1,800ppb); MW-14 (155 ppb). Toluene was discovered in B-1 (18.7 ppb); MW-13 (597 ppb). Ethylbenzene, total xylene, and MTBE were detected in B-1, MW-6, and MW-13. March 14, 2003: Windels, Marx, Lane & Mitterdorf, LLP, representing TransGas Energy Systems (TGES), LLC, sends to City Storage/ Citi Postal a Notice of Intent to Sue as a result of TGES s position that the Bayside property was polluted by significant amounts of waste from a former Manufactured Gas Plant (MGP)-a parcel that City Storage occupies. March 2003?: a drafted and undated letter by DEC Deputy Commissioner James Ferreira to Windels Marx, Lane & Mitterdorf, LLP, responds to their March 14, 2003, letter. Ferreira states that TransGas Energy Systems entered into a voluntary cleanup agreement with DEC to investigate and remediate the Bayside property. The property is also on DEC s Addendum to Hazardous Substance Waste Disposal Site Study of December 1998 , and is listed as B.U.G./Williamsburg Works site, presently owned by Keyspan. In response to a Notice of Intent to Sue, Ferreira addresses also alleged contamination of the Bayside property from MGP property, located on two parcels between North 11th and 12th Streets, and subsequent discharge into the Bushwick Inlet. He writes that the CWA allows for the initiation of citizen suits only for point-source discharges to the surface waters . Year 2003: a draft of an Order on Consent, R2-20030401-90(CO), indicates that Chevron Product Company, was the Respondent of this proposed CO. There is no proof that this order has been executed: a signed CO exists neither in the Regional Enforcement Coordination database nor in the DER s files. April 1, 2003: in its letter to NYSDEC, Chevron Environmental Management Company (CEMS) summarizes results of a meeting between these entities: NYSDEC will prepare a drafted consent order; April 7 is a deadline of a revised CAP, which include a method of sampling C&D debris stockpiled at the site; BBL will submit a review comments on a report prepared for TransGas Energy Systems to Shaminder Chawla of NYSDEC. April 2, 2003: on behalf of CEMS, BBL submits a revised corrective action plan. The plan provides that C&D debris will be disposed after analytical results are available; the UST will be left

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

in place and abandoned. The excavation area will be capped and covered with cleanfill. Odors will be monitored by a PID meter in accordance with a Community Air Monitoring Plan. A summary report will be prepared. April 3, 2003: BBL reviews a TRC Environmental Corporation s (TRC) Phase II Baseline Environmental Assessment Report for the Bayside Fuel Oil site (former Chevron facility). BBL agrees to TRC s conclusions that a significant amount of coal tar and petroleum contamination migrated on the Bayside Property and impacted soil and groundwater. The depth of contaminated soil is limited to 13 feet or less. Shallow petroleum contamination is commingled with MGP contamination from the Williamsburg Works site. Deeper soil and groundwater are almost exclusively affected by MGP contamination. April 4, 2003: Anthony Sigona comments on the revised CAP and the Community Air Monitoring Plan (CAMP), prepared by BBL, dated April 2, 2003. Sigona writes that the CAMP must address vapor and dust suppression techniques; PID must be calibrated to 10 ppm for isobutelyne, air monitoring must be recorded every 15 minutes at a number of locations. The revised CAP should include a schedule for submission of a site investigation plan in order to address any contamination documented by the TRC Environmental Corporation s Phase II Baseline Environmental Assessment Report for the Bayside Fuel Oil Site. April 25, 2003: BBL concurs with NYSDEC comments of April 4. May 2, 2003: a letter from Chevron Product Company, commenting on a drafted CO, denies its responsibilities for the spill and identifies Star Enterprise as the respondent. Also, Chevron doubts the bona fides of the Stipulation. According to Chevron, Star is responsible for surface contamination; deeper soil layers have been affected by the MGP. May 6, 2003: David Rubinton of NYSDEC responses to Chevron s letter of May 2, 2003. He rebuts a Chevron s claim that Texaco Refining and Marketing , Inc., was not the responder of the stipulation. Rubinton writes that the current Stipulation will have to be replaced and a Consent Order will be necessary. May 20, 2003: Anthony Sigona, in his letter to Chevron Products Company, approves a revised CAMP, dated May 13, 2003, upon inclusion of stringent levels of detectable hydrocarbons and monitoring of indoor air quality. May 22, 2003: BBL submits a CAMP, revised according to the May 6 NYSDEC comments. May 23, 2003: BBL sends to NYSDEC results of waste characterization sampling of the excavated C&D debris. None of the constituents analyzed were detected except for lead. May 23, 2003: Anthony Sigona requests that the CAP and the CAMP be implemented within seven business days. June 17, 2003: Deputy Commissioner, James Ferreira, responses to a citizen suit notice concerning alleged contamination from the Williamsburg MGP property affecting the Bayside site. The property is owned by Citi Storage/Citi Postal and Steinhardt Management /Fifty Kent Avenue Associates LLP. NYSDEC has plans to pursue Keyspan (the former owner) for the remediation of the property, located on two parcels between North 11th and 12th Streets. July 2, 2003: BBL submits a corrective action report, as required by NYSDEC in its letter of May 20, 2003.The report indicates that C&D debris had no excessive concentrations of SVOCs, VOCs,. Only lead was detected at 0.91 ppm (TCLP limit is 5.0 ppm). C&D debris was disposed at CWM Chemical Services, Model City. The UST was left in place and filled with concrete slurry. The existing sheeting and sand cover remain in place. July 23, 2003: Chevron sends a letter to Sigona in response to his letter of July 14 (not in the DEC files). Chevron indicates that the corrective CAP has been approved by NYSDEC. Chevron also responds to Sigona s request concerning the submission

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

of a site investigation plan (to address petroleum contamination documented by the TRC Environmental Corporation s Phase II Baseline Environmental Assessment Report, dated December 2002). Chevron, before the submission of such a plan, needs to receive DEC s final comments concerning the TRC report. July 23, 2003: Sigona sends a commentary letter in response to Chevron today s letter. He says that while NYSDEC recognizes that there is evidence that coal gasification waste might have migrated onto CPC s former site; there is also evidence that CPC or its predecessors have discharged petroleum at this site. By August 1, 2003, CPC must submit a proposal for additional borings and well installations as well as Remedial Investigation Work Plan in accordance with DER-11. Section 3, Paragraph 3.3. August 29, 2003: BBL submits a Site Investigation Plan for the former Star Enterprise facility, in accordance with DEC Stipulation Agreement, dated July 27, 1998. The investigation will be conducted according to DER-10 and a site-specific Health and Safety Plan/Community Air Monitoring Plan(approved by NYSDEC on April 2, 2003). The plan includes test borings, soil analyses, well installations, and groundwater samplings. September 10, 2003: Sigona sends comments to Chevron Product Company concerning BBL s Proposed Site Investigation Work Plan, dated August 29. NYSDEC requires that the results of the proposed BBL Work Plan be implemented in accordance with an approved schedule referenced in an executed Order on Consent (not in DEC files). April 14(?), 2004: commenting on the CAP, dated April 15, 2004, Sigona requests that Chevron submits a revised CAP by June 30, 2004, including a justification for a manual gauging and bailing instead of selecting of other remedial strategies. Earlier, NYSDEC decided to cease temporarily high-vacuum extraction events in order to investigate alterative remedial strategies. August 12, 2004: Blasland, Bouck & Lee, Inc., (BBL) on behalf on Chevron Product Company sends a revised Corrective Action Plan. Anthony Sigona approves the PSH Recovery Plan. A final remediation report must comply with DER #10; quarterly groundwater monitoring must contain petroleum constituents, dissolved oxygen, pH, alkalinity and hardness. September 16, 2004: Chevron Environmental Management Company sends a letter to NYSDEC summarizing the results of agreement between NYSDEC and Chevron on future environmental response actions at the site. BBL, the Chevron consultant, will perform bimonthly bailing and recovery of PSH; BBL will prepare an Exposure Assessment, focused on shallow zone impacts associated with the site (less than 20 feet below a land surface) by the end of year 2004. A one round of groundwater samples, including BTEX and MTBE ,will be included in the Exposure Assessment. December 27, 2004: BBL submits results of the September 2004 groundwater sampling conducted at 20 monitoring wells. Benzene was detected in B-1 (100 ppb); MW-1 (6 ppb); MW-5 (2 ppb): MW-6 (41ppb); MW-8 (61 ppb); MW-9 (9 ppb); MW-12 (3 ppb); MW-14R (380 ppb); MW-15 (120 ppb); MW-18 (31 ppb); MW-19 (59ppb). Toluene was detected in B-1 (15 ppb); MW-9 (16 ppb); MW-14R (57 ppb). Ethylbenzene was detected in B-1 (16 ppb); MW-9 (45 ppb); MW-14R (110 ppb); MW-18 (140 ppb); MW-19 (63 ppb). Total xylenes were detected in B-1 (64 ppb); MW-9 (45 ppb); MW-14R (280 ppb); MW-15 (11 ppb); MW-19 (10 ppb). MTBE was detected in MW-6 (67 ppb). PSHs were observed in EPA-3 (sheen); MW-9 (0.01 feet); MW-11 (film); MW-12 (film). Conclusions; four wells contained detectable PSH; the plume is stable and has been delineation to the central portion of the site; natural attenuation is occurring on the site. December 27, 2004: the Human Health Exposure Assessment, prepared by

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

BBL, concludes that BTEX and MTBE are present in groundwater at concentrations exceeding NYSWQS. However, the groundwater at this site is not potable, and potential exposures would most likely be limited to direct contact with groundwater and inhalation of indoor air vapors. Potential exposure encountered during excavation could be mitigated through the use of properly trained personnel and protective equipment. Since available soil and soil vapor data is limited, they have not been evaluated. September 2, 2005: BBL submits a report on the second quarter 2005 bimonthly gauging as specified in the DEC-approved CAP. No SPH was detected in any of 21 monitoring wells during any of 8 gauging events. January 31, 2006: BBL submits a report on the bimonthly gauging as specified in the DEC-approved CAP, from August 2005 through December 2005. PSH was detected in MW-18 on December 8, 2005 (0.01 feet); 21 wells were gauged during 9 events. August 7, 2006: BBL submits a report on the twice-a-month gauging from January 2006 through March 2006; 21 wells were gauged on 5 occasions; no PSH was detected. October 6, 2006: BBL sends a report concerning gauging from April 2006 to July 2006; 21 wells were gauged, and no PSH was detected on any of 8 events. Chevron Environmental Management company proposes quarterly gauging and twice-a-year reporting. November 7, 2006: BBL, an ARCADIS Company, submits a report on the twice-a-month gauging as specified in the DEC-approved CAP, from August 2006 through September 2006; 21 wells were gauged on 4 occasions; no SPH was detected. December 14, 2006: Leszek Zielinski of NYSDEC approves the semiannual gauging and groundwater elevation measurements. The absence of PSH had been observed since December 8, 2005, when 0.01 foot of free product in Well MW-18 was found. The data sufficiently demonstrates that asymptotic conditions have been reached. The department approvs BBL's request to perform quarterly gauging of the monitoring wells for the presence of PSH. Similarly, the department approved a request concerning the semiannual reporting on a groundwater elevation and a PSH thickness at these wells. January 4, 2007: ARCADIS BBL submits a report on the bimonthly well gauging from October 2006 through December 2006. PSH (0.09 feet) was detected in MW-18 on December 11, 2006. 21 wells were gauged during 5 events. August 22, 2007: ARCADIS BBL submits a report on the bimonthly well gauging from January 2007 through May 2007. PSH was observed in MW-06 (0.01 feet) in February 2007; MW-18 (0.01 feet) on February 8, 2007, and (0.01 feet) on May 15, 2007. Wells were gauged 4 times in this period. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHAO This site cleanup has been consolidated under Spill No. 9804544. On July 16, 1998, DEC SIGONA RECEIVED PROPOSED site investigation plan. Letter sent to STar Enterprise on 7/17/98 approving plan. Stipulation Agreement sent to Star for signature on 7/10/98. In response to a complaint over elevated vapors on March 5th, 2003, filed under Spill Investigation No. 0211984, the DEC issued a verbal Order to Cease and Desist all remedial activity at the site pursuant to the Blasland, Bouck & Lee, Inc. (BBL) corrective action plan (CAP), dated November 25, 2002. The DEC confirmed that the excessive vapors generated by the excavation of petroleum contaminated soils at the site under the November 25th CAP, were shown to impact worker health and safety at the affected site at CitiStorage. As a direct result of these vapor problems associated with the implementation of the November 25th, 2002 CAP, the DEC has determined that it has become necessary to modify of the CAP conditionally approved by DEC in a letter to CPC, dated December 27, 2002. The CAP must now be modified to continue to

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

satisfy paragraph III of the DEC's Stipulation Agreement with Texaco Refining & Marketing, Inc., dated July 27, 1998. DEC's comments regarding Blasland, Bouck & Lee, Inc. (BBL) revised Community Air Monitoring Plan (CAMP), dated May 22, 2003, to address emission of odors, vapors and dust during the remedial work proposed in the revised CAP. The DEC accepts the proposed CAMP which has addressed the comments in our May 20, 2003 letter to CPC. CPC must now implement the Blasland, Bouck & Lee, Inc. (BBL) revised corrective action plan (CAP), dated April 2, 2003, and revised CAMP, dated May 22, 2003. 4/22/2004 - Spill case is reassigned to Zhao."

Remarks: "Ground water monitoring revealed the presents of petroleum in groundwater star enterprise is developing a remediation plan with DEC (Sigona)."

Updated By: MXMAGLOI
Site Description: "Location: The site is located at 43 57 West Street and 2 24 Oak Street in an urban area characterized by industrial and warehouse buildings, commercial space and residential property in the Greenpoint neighborhood of Brooklyn. It is identified on New York City tax maps as Block 2567, portion of Lot 1 and Block 2570, portion

GREENPOINT MARINA (Continued) **S118950489**

of Lot 36. The site is bounded by Noble Street to the north, West Street to the east, the East River to the west, and the Former Consolidated Freightways Truck Terminal (which is also in the BCP as Site C224191) to the south. Site Features: The site is 3.79 acres in size and comprises the upland portions of Block 2567, Lot 1 (43 57 West Street) and Block 2570, Lot 36 (2 24 Oak Street). It is currently covered with a concrete slab. Five buildings associated with historic operations were destroyed in a fire in 2006. Currently, the only remaining structure is a former coal silo located on the western portion of the site. Current Zoning and Land Use: The site is zoned as R6 and R8 residential with a C2 4 commercial use overlay. The site is currently used for equipment storage including scaffolding, garbage containers, cranes, HVAC equipment, granite, and flatbed trucks. Past Use of the Site: The site was previously used as a shipyard beginning in 1887, a machine shop between 1905 and 1916, milling between 1922 and 2005, and coal storage in 1965. Geology and Hydrogeology: The property is underlain by historic fill consisting of black to gray to brown, medium to fine grained sand with varying amounts of gravel, silt, brick fragments, slag, ash, cobbles, and boulders. Fill extends to depths of 3 to 10 feet below grade surface (bgs). Foundation remnants were observed beneath the surface in the western part of the property. Native material consisting of light brown to tan, fine to medium grained sand with trace silt and clay was observed beneath the fill layer in the eastern and western portions of the site. A layer of river sediment, consisting of grayish black organic clay and clayey silt, was encountered beneath the fill layer in the central portion of the site. The bedrock formation underlying the site consists of schist and granite. The assumed depth to component bedrock is about 80 to 110 feet below bgs. Groundwater elevations recorded during the remedial investigation ranged from 5 to 7 feet bgs. Groundwater flows west toward the East River. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals including copper, lead, mercury, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo[k]fluoranthene, chrysene, indeno(1,2,3-CD)pyrene, trichloroethene (TCE), tetrachloroethene (PCE), carbon tetrachloride and 1,1,1-trichloroethane. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

INST CONTROL:
Name: GREENPOINT MARINA
Address: 43-57 WEST ST AND 2-24 OAK ST
City,State,Zip: BROOKLYN, NY 11222
Site Code: 494058
Control Name: Environmental Easement
HW Code: C224190
Control Code: J
Control Type: INST
Dt record added: 11/25/2019
Dt rec updated: 05/30/2021
Updated By: MXMAGLOI
Site Code: 494058
Site Description: "Location: The site is located at 43 57 West Street and 2 24 Oak Street in an urban area characterized by industrial and warehouse buildings, commercial space and residential property in the Greenpoint neighborhood of Brooklyn. It is identified on New York City tax maps as Block 2567, portion of Lot 1 and Block 2570, portion of Lot 36. The site is bounded by Noble Street to the north, West Street to the east, the East River to the west, and the Former Consolidated Freightways Truck Terminal (which is also in the BCP as Site C224191) to the south. Site Features: The site is 3.79 acres in size and comprises the upland portions of Block 2567, Lot 1 (43 57 West Street) and Block 2570, Lot 36 (2 24 Oak Street). It is currently covered with a concrete slab. Five buildings associated with historic operations were destroyed in a fire in 2006. Currently, the only remaining structure is a former coal silo located on the western portion of the site. Current Zoning and Land Use: The site is zoned as R6 and R8 residential with a C2 4 commercial use overlay. The site is currently used for equipment storage including scaffolding, garbage containers, cranes, HVAC equipment, granite, and flatbed trucks. Past Use of the Site: The site was previously used as

GREENPOINT MARINA (Continued) **S118950489**

a shipyard beginning in 1887, a machine shop between 1905 and 1916, milling between 1922 and 2005, and coal storage in 1965. Geology and Hydrogeology: The property is underlain by historic fill consisting of black to gray to brown, medium to fine grained sand with varying amounts of gravel, silt, brick fragments, slag, ash, cobbles, and boulders. Fill extends to depths of 3 to 10 feet below grade surface (bgs). Foundation remnants were observed beneath the surface in the western part of the property. Native material consisting of light brown to tan, fine to medium grained sand with trace silt and clay was observed beneath the fill layer in the eastern and western portions of the site. A layer of river sediment, consisting of grayish black organic clay and clayey silt, was encountered beneath the fill layer in the central portion of the site. The bedrock formation underlying the site consists of schist and granite. The assumed depth to component bedrock is about 80 to 110 feet below bgs. Groundwater elevations recorded during the remedial investigation ranged from 5 to 7 feet bgs. Groundwater flows west toward the East River. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals including copper, lead, mercury, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo[k]fluoranthene, chrysene, indeno(1,2,3-CD)pyrene, trichloroethene (TCE), tetrachloroethene (PCE), carbon tetrachloride and 1,1,1-trichloroethane. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

Site Code: 494058
Site Description: "Location: The site is located at 43 57 West Street and 2 24 Oak Street in an urban area characterized by industrial and warehouse buildings, commercial space and residential property in the Greenpoint neighborhood of Brooklyn. It is identified on New York City tax maps as Block 2567, portion of Lot 1 and Block 2570, portion of Lot 36. The site is bounded by Noble Street to the north, West Street to the east, the East River to the west, and the Former Consolidated Freightways Truck Terminal (which is also in the BCP as Site C224191) to the south. Site Features: The site is 3.79 acres in size and comprises the upland portions of Block 2567, Lot 1 (43 57

GREENPOINT MARINA (Continued) **S118950489**

West Street) and Block 2570, Lot 36 (2 24 Oak Street). It is currently covered with a concrete slab. Five buildings associated with historic operations were destroyed in a fire in 2006. Currently, the only remaining structure is a former coal silo located on the western portion of the site. Current Zoning and Land Use: The site is zoned as R6 and R8 residential with a C2 4 commercial use overlay. The site is currently used for equipment storage including scaffolding, garbage containers, cranes, HVAC equipment, granite, and flatbed trucks. Past Use of the Site: The site was previously used as a shipyard beginning in 1887, a machine shop between 1905 and 1916, milling between 1922 and 2005, and coal storage in 1965. Geology and Hydrogeology: The property is underlain by historic fill consisting of black to gray to brown, medium to fine grained sand with varying amounts of gravel, silt, brick fragments, slag, ash, cobbles, and boulders. Fill extends to depths of 3 to 10 feet below grade surface (bgs). Foundation remnants were observed beneath the surface in the western part of the property. Native material consisting of light brown to tan, fine to medium grained sand with trace silt and clay was observed beneath the fill layer in the eastern and western portions of the site. A layer of river sediment, consisting of grayish black organic clay and clayey silt, was encountered beneath the fill layer in the central portion of the site. The bedrock formation underlying the site consists of schist and granite. The assumed depth to component bedrock is about 80 to 110 feet below bgs. Groundwater elevations recorded during the remedial investigation ranged from 5 to 7 feet bgs. Groundwater flows west toward the East River. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals including copper, lead, mercury, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo[k]fluoranthene, chrysene, indeno(1,2,3-CD)pyrene, trichloroethene (TCE), tetrachloroethene (PCE), carbon tetrachloride and 1,1,1-trichloroethane. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

The bedrock formation underlying the site consists of schist and granite. The assumed depth to component bedrock is about 80 to 110 feet below bgs. Groundwater elevations recorded during the remedial investigation ranged from 5 to 7 feet bgs. Groundwater flows west toward the East River. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals including copper, lead, mercury, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo[k]fluoranthene, chrysene, indeno(1,2,3-CD)pyrene, trichloroethene (TCE), tetrachloroethene (PCE), carbon tetrachloride and 1,1,1-trichloroethane. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

Site Code: 494058
Site Description: "Location: The site is located at 43 57 West Street and 2 24 Oak

GREENPOINT MARINA (Continued) **S118950489**

Street in an urban area characterized by industrial and warehouse buildings, commercial space and residential property in the Greenpoint neighborhood of Brooklyn. It is identified on New York City tax maps as Block 2567, portion of Lot 1 and Block 2570, portion of Lot 36. The site is bounded by Noble Street to the north, West Street to the east, the East River to the west, and the Former Consolidated Freightways Truck Terminal (which is also in the BCP as Site C224191) to the south. Site Features: The site is 3.79 acres in size and comprises the upland portions of Block 2567, Lot 1 (43 57 West Street) and Block 2570, Lot 36 (2 24 Oak Street). It is currently covered with a concrete slab. Five buildings associated with historic operations were destroyed in a fire in 2006. Currently, the only remaining structure is a former coal silo located on the western portion of the site. Current Zoning and Land Use: The site is zoned as R6 and R8 residential with a C2 4 commercial use overlay. The site is currently used for equipment storage including scaffolding, garbage containers, cranes, HVAC equipment, granite, and flatbed trucks. Past Use of the Site: The site was previously used as a shipyard beginning in 1887, a machine shop between 1905 and 1916, milling between 1922 and 2005, and coal storage in 1965. Geology and Hydrogeology: The property is underlain by historic fill consisting of black to gray to brown, medium to fine grained sand with varying amounts of gravel, silt, brick fragments, slag, ash, cobbles, and boulders. Fill extends to depths of 3 to 10 feet below grade surface (bgs). Foundation remnants were observed beneath the surface in the western part of the property. Native material consisting of light brown to tan, fine to medium grained sand with trace silt and clay was observed beneath the fill layer in the eastern and western portions of the site. A layer of river sediment, consisting of grayish black organic clay and clayey silt, was encountered beneath the fill layer in the central portion of the site. The bedrock formation underlying the site consists of schist and granite. The assumed depth to component bedrock is about 80 to 110 feet below bgs. Groundwater elevations recorded during the remedial investigation ranged from 5 to 7 feet bgs. Groundwater flows west toward the East River. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals including copper, lead, mercury, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo[k]fluoranthene, chrysene, indeno(1,2,3-CD)pyrene, trichloroethene (TCE), tetrachloroethene (PCE), carbon tetrachloride and 1,1,1-trichloroethane. BROWNFIELDS:

Name:	GREENPOINT MARINA
Address:	43-57 WEST ST AND 2-24 OAK ST
City,State,Zip:	BROOKLYN, NY 11222
Program:	BCP
Site Code:	494058
Acres:	3.790
HW Code:	C224190
SWIS:	2401
Town:	New York City
Record Added Date:	04/24/2014
Record Updated Date:	05/29/2021
Update By:	JHOCONNE
Site Description:	"Location: The site is located at 43 57 West Street and 2 24 Oak Street in an urban area characterized by industrial and warehouse buildings, commercial space and residential property in the Greenpoint neighborhood of Brooklyn. It is identified on New York City tax maps as Block 2567, portion of Lot 1 and Block 2570, portion of Lot 36. The site is bounded by Noble Street to the north, West Street to the east, the East River to the west, and the Former Consolidated Freightways Truck Terminal (which is also in the BCP as Site C224191) to the south. Site Features: The site is 3.79 acres in size and comprises the upland portions of Block 2567, Lot 1 (43 57 West Street) and Block 2570, Lot 36 (2 24 Oak Street). It is currently covered with a concrete slab. Five buildings associated with historic operations were destroyed in a fire in 2006. Currently,

GREENPOINT MARINA (Continued) **S118950489**

the only remaining structure is a former coal silo located on the western portion of the site. Current Zoning and Land Use: The site is zoned as R6 and R8 residential with a C2 4 commercial use overlay. The site is currently used for equipment storage including scaffolding, garbage containers, cranes, HVAC equipment, granite, and flatbed trucks. Past Use of the Site: The site was previously used as a shipyard beginning in 1887, a machine shop between 1905 and 1916, milling between 1922 and 2005, and coal storage in 1965. Geology and Hydrogeology: The property is underlain by historic fill consisting of black to gray to brown, medium to fine grained sand with varying amounts of gravel, silt, brick fragments, slag, ash, cobbles, and boulders. Fill extends to depths of 3 to 10 feet below grade surface (bgs). Foundation remnants were observed beneath the surface in the western part of the property. Native material consisting of light brown to tan, fine to medium grained sand with trace silt and clay was observed beneath the fill layer in the eastern and western portions of the site. A layer of river sediment, consisting of grayish black organic clay and clayey silt, was encountered beneath the fill layer in the central portion of the site. The bedrock formation underlying the site consists of schist and granite. The assumed depth to component bedrock is about 80 to 110 feet below bgs. Groundwater elevations recorded during the remedial investigation ranged from 5 to 7 feet bgs. Groundwater flows west toward the East River. "

Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals including copper, lead, mercury, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo[k]fluoranthene, chrysene, indeno(1,2,3-CD)pyrene, trichloroethene (TCE), tetrachloroethene (PCE), carbon tetrachloride and 1,1,1-trichloroethane. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

Reviewed letter and the attachments. The fill line, stick line, and vent line failed. I called Petroleum Tanks to see if they remember detecting any contamination when lines were replaced. I was told Mark Salamack was the person in charge of the tank repairs. He was in a meeting at the time of the call and I left a message for him to call me. Mr. Salamack (718-624-4842) called me back and told me that there was no observed contamination and no elevated reading on the PID meter used at the time of the repairs. NFA. bf"
Remarks:	"RECOMMEND TO UNCOVER-EVALUATE AND RE-TEST"

Site Description:	"The area of concern subject to this work is considered off-site from BCP site C224188 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224188 for further information regarding the status of the site in the Brownfield Cleanup program. Site Location: 87 Kent Ave - Off-site is located in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site consists of the areas surrounding by 87 Kent Ave. Current Zoning and Land Use: The site is included in the M1-2/R6A mixed use district. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). Based on information collected during the investigation of C224188, The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction. "
Env Problem:	"During the on-site Remedial Investigation for site C224188, soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the results of the RI, the primary contaminants of concern for on-site include trichloroethene (TCE) and cis-1,2-DCE. Contamination can likely be attributed to activities associated with the historic use of the site for manufacturing activities. Further investigation is needed to fully delineate the extent of off-site contamination. "
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Site Description:	"Site Location: The site is located at the corner of Kent Avenue and North 9th Street in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site is approximately 0.39 acres in size. The site will be used for a seven-story, mixed-use residential/commercial building, which is under development. The site is surrounded by mixed commercial and residential property uses. Current Zoning and Land Use: The site has an E-designation as part of the Greenpoint-Williamsburg Rezoning and is included in the M1-2/R6A mixed use district. The property is currently vacant. Past Use of the Site: From approximately 1980 to until 1998, the site was operated by Barouh Eaton Allen Corp., a manufacturer of typewriter ink and

87 KENT AVENUE (Continued) **S116550038**

printer products. The building was used from 1998 to 2010 for warehousing and distribution by Lucky Paper Inc. (eastern portion), a distributor or restaurant supplies, and by LJJ, Inc. (western portion), a clothing wholesaler and distributor and from 2010 to 2012 by 200 Supplies Corp., a plumbing supplier. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soil were trichloroethene, benzo(a)pyrene, chrysene and metals including mercury, copper and lead. Remedial actions have successfully achieved soil cleanup objectives for unrestrited use. Prior to remediation, the compounds exceeded groundwater standard were trichloroethene, cis-1,2-DCE and metals including mercury, copper and lead. Remedial action taken place at site removed on-Site sources and post-remedial groundwater sampling documented that the concentrations do not require further treatment or monitoring. Although chlorinated volatile organic compounds were detected in groundwater and soils during the remedial investigation, remediation at the Site consisted of removal of approximately 13,000 cubic yards of contaminated soil and approximately 5.5 million gallons of contaminated groundwater. Furthermore, the foundation of the Site building is below the water table which necessitated installation of a 60 mil thick polyethylene/rubberized asphaltic waterproofing material as part of foundation construction. No further actions are needed to address soil vapor intrusion based on post-remedial environmental data and the construction elements of the building. "

Health Problem: "Remedial actions are complete and have eliminated the potential for contact with site-related contaminants on-site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site. "

Site Code: 492995
Site Description: "Site Location: The site is located at the corner of Kent Avenue and North 9th Street in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site is approximately 0.39 acres in size. The site will be used for a seven-story, mixed-use residential/commercial building, which is under development. The site is surrounded by mixed commercial and residential property uses. Current Zoning and Land Use: The site has an E-designation as part of the Greenpoint-Williamsburg Rezoning and is included in the M1-2/R6A mixed use district. The property is currently vacant. Past Use of the Site: From approximately 1980 to until 1998, the site was operated by Barouh Eaton Allen Corp., a manufacturer of typewriter ink and printer products. The building was used from 1998 to 2010 for

87 KENT AVENUE (Continued) **S116550038**

warehousing and distribution by Lucky Paper Inc. (eastern portion), a distributor or restaurant supplies, and by LJJ, Inc. (western portion), a clothing wholesaler and distributor and from 2010 to 2012 by 200 Supplies Corp., a plumbing supplier. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soil were trichloroethene, benzo(a)pyrene, chrysene and metals including mercury, copper and lead. Remedial actions have successfully achieved soil cleanup objectives for unrestrited use. Prior to remediation, the compounds exceeded groundwater standard were trichloroethene, cis-1,2-DCE and metals including mercury, copper and lead. Remedial action taken place at site removed on-Site sources and post-remedial groundwater sampling documented that the concentrations do not require further treatment or monitoring. Although chlorinated volatile organic compounds were detected in groundwater and soils during the remedial investigation, remediation at the Site consisted of removal of approximately 13,000 cubic yards of contaminated soil and approximately 5.5 million gallons of contaminated groundwater. Furthermore, the foundation of the Site building is below the water table which necessitated installation of a 60 mil thick polyethylene/rubberized asphaltic waterproofing material as part of foundation construction. No further actions are needed to address soil vapor intrusion based on post-remedial environmental data and the construction elements of the building. "

Health Problem: "Remedial actions are complete and have eliminated the potential for contact with site-related contaminants on-site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site. "

Remedial action taken place at site removed on-Site sources and post-remedial groundwater sampling documented that the concentrations do not require further treatment or monitoring. Although chlorinated volatile organic compounds were detected in groundwater and soils during the remedial investigation, remediation at the Site consisted of removal of approximately 13,000 cubic yards of contaminated soil and approximately 5.5 million gallons of contaminated groundwater. Furthermore, the foundation of the Site building is below the water table which necessitated installation of a 60 mil thick polyethylene/rubberized asphaltic waterproofing material as part of foundation construction. No further actions are needed to address soil vapor intrusion based on post-remedial environmental data and the construction elements of the building. "
Health Problem:	"Remedial actions are complete and have eliminated the potential for contact with site-related contaminants on-site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site. "

Spiller Address:	112 NASSAU AVE
Spiller Company:	001
Contact Name:	FF RIPOLL
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 3/14/2001 - Store front building with 3-4 apartments above. 2-275 gallon #2 oil tanks in the basement service the building. Scaggs & Walsh Oil Company made a delivery (no sign of overfill) Later that day the bottom of one of the tanks (looks like corrosion) gave way and approx 100 gallons went to the basement floor and a drywell floor drain. NYFD on scene emptied most of the 275 gallon tank into overpack drums. Scaggs & Walsh arrived on the scene and pumped out whatever remained. Scaggs & Walsh's insurance would not cover the loss because the tank is the property of the building owner and the tank failed due to corrosion. Scaggs & Walsh hired Milro Associates after a verbal discussion with the building owner (Robert Bak 718-628-9700) that the cost of the clean up was the responsibility of the building owner. 3/16/2001 - Sangesland called Milro to find the cleanup status. Paul (at Milro) said between 3/14 and 3/15 a 5'x8' section of the floor was opened up and dug down 2' and 2 cubic yards of contaminated soil was removed. Milro is not working today (3/16) because Scaggs & Walsh is installing new oil tanks. Milro will return on Monday 3/19 to continue excavation. 3/20/2001 Paul at Milro says the excavation is approx 5' x 10' x 3' deep. Because of access problems they can't really excavate any more and he'll probably spend one more day on site. Paul said he would PID the samples first and if they don't look bad, he'll back fill before the soil samples come back from the lab. 4/5/2001 End point sample from excavation was tested for: TCLP Volatiles 8021/STARS (All results were Non-Detect) TCLP Polynuc, Arom. Hydrocarbons (BN) 8270 - Non-Detect Spill closed 4/5/2001"

DEC Memo:	"01/27/2006 Kuldeep received the Fax from Brumer, but again information not adequate and need more follow up. 01/23/2006 Kuldeep sent a letterfor more information. 01/09/2006 Kuldeep Gupta- Facility Faxed on -01/06/2006 copy of consent Order. Region 2 Nick Lombardo on 01/09/2006 Faxed Report of 5000 gallon Tank Test report of 01/05/2004. 01/06/06 Kuldeep Gupta talked to Ms. Jill Huey and she need a letter in writing what document we need. She wanted to fax it at 1-718-486-6862. DEC Faxed the letter as requested. Kuldeep discussed with Philip Lodico Senior Attorney DEC and found Consent order signed on 03/24/2003 for not this spill. Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE Does not appear on PBS database. Called Jill Huey. She stated that she received a Consent Order to bring the facility in compliance with state laws. The tank is 5000 gallons. 3/11/2003 ars. DEC Sigona sent TTF notice on March 14, 2003. 9/11/06 This case was transfered from Albany to Region 2. Zhune spoke to Jill Huey (ph: 718-9052) She doesn't want phone calls. She wants every thing by writing. 9/11/06 A TTF letter was sending to : Jill Huey 498 Leonard Street Brooklyn, NY 11222

BRUMAR SHEET METAL INC (Continued) **S108076226**

09/18/06 Ms. Huey sent a package of documents the passing tank test from 2003 was missing. 09/19/06 I sent a letter requesting her the tank test results from 2003. 09/22/03 Ms. Huey sent a package of 8 pages including the passing tank test results from 2003, letters stated the fallowing: The system test passed. After the system test failed in October due to a vent bad line, we decided to replace all pipes just to be sure we would pass. Also we would like to convey to your department that no contamination was detected in our system. What was the cause of the tank test failure on March 3, 2003? Water in tank issue. Piping needed to be replaced was replaced and systems test passed as a result of replacement. 09/27/06 This case was closed for V. Zhune in accordance with J. Vought. "

DEC Memo: "Sangesland spoke to Ezgy (As-Gee). (See eDocs for Phase 2 Report) She said the property is a 2 story industrial building being sold to a developer who will tear it down for a new residential building. City has placed an e-designation on the property because it's changing from industrial to residential. Problem is associated with leaking from a 5,000 gal buried oil tank. Hydro Tech was hired by the potential buyer and found contamination. Hydro Tech will continue to work on the site and come up with a plan to solve the spill problems and close them out. 6/12/13-Vought-Received call from and spoke to OER Chawla (212-442-3007) and the groundwater is 12-13'bg and proposed full excavation to the water table as part of redevelopment however contamination extends down to 30'bg. They are willing to do additional remedial action but would not like to excavate into groundwater and developer needs to decide by today or he will walk away. Three other developers walked away from site (was previously HydroTech). Former use of site is a plating site. Site was discussed with DEC Cozzy as per Chawla and Cozzy noted that it did not qualify for State BCP and Cozzy did talk to Demeo re site as per OER Chawla. Vought spoke to DEC Demeo and this spill transferred from Demeo to Patel for followup. 06/12/13-Hiralkumar Patel. little 'E' desgination for Hazmat ---------- alternate address: 498-502 Leonard Street PBS #: 2-608752. as per PBS record, the site has oe 5,000 gal #2 oil UST, in-service, installed in Jan. 1929. tank system was tested on 01/20/2010. other spills: 0212132, 1206982 spill # 0212132 was reported on 03/10/2003 due to tank test failure. tank system failed test due to bad vent line. lines were changed and system passed. no contamination found. case closed. spill # 1206982 was reported on 10/16/2012 due to tank test failure of 5,000 gal #2 oil UST. case is still open. 2:02 PM:- left message for Mr. Chawla at NYC OER. asked him to submit available reports. 2:39 PM:- received email from William Wong from NYC OER including link to reports. William H. Wong Ph. (212) 341-0659 Fax (212) 788-1482 email: WiWong@dep.nyc.gov reviewed available information:

were installed to 12 ft bg - general soil type consists of fill material - one soil sample was collected from each boring - found VOC contamination in soil samples - found high PID readings in all borings PID values (in ppm) depth (ft)--------SP-1------SP-2------SP-3------SP-4 6-8------------------------1,413 8-10----------------------1,342-------405--------14 10-12-------------896-----------------610-------702 soil analyticals: ----------SP-1-------SP-2-------SP-3-------SP-4 9-11 ft 6-8 ft 10-12 ft 10-12 ft Benzene------------------310*------------------240 Ethylbenzene----------4,000------1,000 Xylene-------------------820*----------2,600 1,2,4-Trimethylbenzene----------4,800--------300 1,3,5-Trimethylbenzene----------1,300 Naphthalene----------6,500------3,600 Isopropylbenzene-------2,100--------280------6,700------1,300 n-Butylbenzene---------8,200------3,600------9,400------2,500 sec-Butylbenzene------13,000------6,800-----14,000------3,000 n-Propylbenzene--------3,700--------270-----12,000------2,900 3) 12/13/2012: DEC Demeo sent letter requiring documents regarding tank test failure. 4) 02/12/2013: Phase I Environmental Site Assessment: - proposed plan is to demolish the existing structure and construct a multi-story residential building that includes a 65 ft by 74 ft basement - the building was purchased in 1979 and turned into a steel manufacturing company, but this is not indicated on the map ---------- 5) 06/24/2013: Remedial Investigation Report: - Phase II conducted by Hydrotech in Oct. 2012 identified the presence of elevated SVOCs, metals and pesticides in surficial soil samples collected from the depth of 0-2 ft bg and elevated VOCs, SVOCs, metals and pesticides in soil samples collected from 10-12 ft bg - in Oct. 2012, Hydrotech installed 13 wells on the site and adjacent sidewalk. groundwater table elevations were measured between 14.77 and 15.71 ft ---------- - stratigraphy of the site from surface down consists of a layer of historic fill material from approx. 0 to 12 ft bg, sand, gravel and silty with heavy petroleum impacts from 12-16 ft bg, visible petroleum staining from 16-30 ft bg in the area of the UST and an impacted layer of highly compressible organic peat, clay and silt from 16-28 ft bg and highly compressible layer of clay/silt at approx. 28-34 ft bg - schools within 0.2 miles to the south ---------- - in Feb. 2013, GRANT installed five soil borings (SB-01 to SB-05) surrounding the UST in the southwest portion of the site and only visual inspection of the borings were performed (no samples were collected) ---------- - in Apr. 2013, GRANT installed seven soil borings (SB-06 to SB-12) across the entire site and collected 19 soil samples; 7 of 19 soil samples were analyzed for finger printing - borings SB-01 through SB-12 exhibited visual evidence of a petroleum discoloration layer from approx. 4 to 30 ft bg and free product observed from approx. 10 to 12 ft bg - free product noted on between 12 and 24 ft bg in borings SB-02, SB-03, SB-04 and SB-05, these borings were located around the UST ---------- - elevated PID readings were observed ranging from 455 ppm to 895 ppm in borings SB-7 through SB-12 - in Apr. 2013, GRANT installed 3 temporary wells (TWP-01 to TWP-03) towards the northwestern, northeastern and southeastern portions of the site, respectively - temporary wells were installed to a depth of 20 ft bg,

BRUMAR SHEET METAL INC (Continued) **S108076226**

with 10 ft of screen (means there were no screen above water table) ---------- - in Apr. 2013, GRANT installed 3 soil vapor probes (SVP-01 to SVP-03) and collected 3 samples - depth to groundwater was present at approx. 10 ft bg ---------- - groundwater flow direction is generally from the south towards the north ---------- - found mostly sec/n/tert-Butylbenzene in soil samples - high metals found in samples
--*-

BRUMAR SHEET METAL INC (Continued) **S108076226**

Leonard St and extending east - depth to groundwater was present at approx. 10 ft bg - HydroTech installed thirteen (13) monitoring wells - wells were surveyed and groundwater table elevations were measured between 14.77 and 15.71 ft - groundwater flow direction is generally from the south towards the north - soil excavation below the water table is anticipated for the area surrounding the UST in the southwest portion of the site - will collect endpoint samples - will install a vapor barrier and an active SSDS beneath the proposed building 11:13 AM:- spoke with Stephen Morse at Grant Engineering. inquired him about spill remediation work plan, that he mentioned as attachement F in RAWP for NYC OER. Steve mentioned that such work plan is not ready yet. discussed about well gauging and implementation of IRM. Steve will talk to Mr. Fung and try to conduct well gauging prior to meeting with NYC OER on 12/13/13. Stephen Morse Grant Engineering Ph. (212) 464-8689 email: smorse@grantpllc.com 11:25 AM:- left message for Mr. Chawla. 12/10/13-Hiralkumar Patel. 11:40 AM:- left message for Steve inquiring about well gauging, prior to upcoming meeting on 12/13/13. 12/17/13-Hiralkumar Patel. 1:17 PM:- left message for Steve. 1:18 PM:- left message for Mr. Chawla. 12/20/13-Hiralkumar Patel. 10:01 AM:- spoke with Steve. they met with NYC OER on 12/13/13 and discussed remedial action plan. Steve mentioned that owner has not hired his firm to gauge wells and remove any product in well(s). 10:05 AM:- spoke with Mr. Fung. informed him that the Department requires gauging of all existing wells and immediate removal of any product in well(s). he will talk to Steve. 1:04 PM:- received call from Andrew from Grant Engineering inquiring about what work needs to be done. informed him that the Department requires well gauging and removal of any free product from wells, until permanent remediation system is installed. informed him that well gauging must be done by end of 12/27/13. also recommended removing oil from the UST. Andrew Rizk Grant Engineering Ph. (212) 464-8689 Ext. 2 email: arizk@grantpllc.com 01/08/14-Hiralkumar Patel. 10:01 AM:- received call from Andrew. they gauged 12 out of 13 wells installed for the subject project. one well was installed across the site which is inside construction zone and was not accessible for gauging. out of 12 wells, free phase product found in 3 wells. about 4 inch product found in one of the well and less than 1 inch product found in remaining two wells. Andrew will submit memo, once he gets previous well survey data from record. Andrew confirmed that the on-site tank was also pumped out last week. informed Andrew that the department requires implementation of interim remedial measures until permanent remedial system in in operation. 01/09/14-Hiralkumar Patel. received email from Andrew (at 6:59 PM on 01/08/14) including well gauging data. total of 13 wells (MW-1 through MW-13) were installed previously by Hydrotech. well MW-7 is located on west sidewalk of Leonard St, across from the site. well MW-7 was inaccessible due to the presence of green construction fence directly over top of the well. out of 12 remaining wells, product found in three wells (MW-1, MW-2 and MW-8) between 2 and 4 inches. 01/13/14-Hiralkumar Patel. 12:49 PM:- left message for Mr. Fung. 12:50 PM:- left message for Mr. Chawla. 01/27/14-Hiralkumar Patel. 11:12 AM:- received email from Mr. Chawla including owner’s letter and OER briefing. property owner Mr. Fung stated that the entire site will be excavated down to 13 ft bg (into groundwater table). Mr. Chawla included copy of ORC application plan. 4:09 PM:- sent email to Mr. Chawla and informed him that the Department has not received any ORC treatment work plan and such plan is not approved prior to reviewing tank removal report with endpoint

BRUMAR SHEET METAL INC (Continued) **S108076226**

sample results. email copied to Mr. Wong at OER. 01/28/14-Hiralkumar Patel. 9:12 AM:- left message for Mr. Chawla. 9:41 AM:- received call from Mr. Chawla and Mr. Wong from NYC OER. Mr. Chawla mentioned that they received a revised RAWP and ready to issue Notice to Proceed letter. he wanted to know any requirements from DEC, prior to sending letter to property owner. revised RAWP will be forwarded for review. 12:29 PM:- received email from Mr. Chawla including link to RAWP Stipulation List. abstract of RAWP Stipulation List to NYC OER: - entire site will be excavated to 13 ft bg, with additional excavation in locations where further pockets of contamination is observed - collection and analysis of 22 endpoint samples from the bottom of excavation will be collected - a minimum of 20-millimeter vapor barrier will be installed beneath te structure's slab and along foundation wall - dewatering will be performed - excavation of the impacted soil will be performed following the removal of existing tanks abstract of site-specific groundwater treatment and monitoring plan dated 01/21/14: - remaining product from 5,000 gal tank was pumped from the tank on 12/27/13 - proposes to mitigate the contamination in three stages: 1) the existing site will be remediated via purging of product from the existing wells on a monthly basis, 2) site will be excavated to approx. 13 ft bg, or deeper in locations where contamination is present and the open excavation will be treated with chemical application, and 3) monitoring wells and contingency injection wells will be installed in the cellar level of the proposed development to allow for future chemical injections, if necessary - prior to construction, the assessment of groundwater quality will include the collection of groundwater samples from the existing wells 01/29/14-Hiralkumar Patel. 12:46 PM:- sent letter to Mr. Fung requiring bi-weekly monitoring of wells, product removal from impacted wells and monthly submission of well monitoring reports. informed him that the department only approves tank removal work (as listed in appendix 1 of RAWP Stipulation List submitted to NYC OER) and required submission of tank removal report. also informed him that the department may require additional investigation, after reviewing the tank removal report, prior to any comment on in-situ remediation, if needed. letter emailed to Mr. Fung, Mr. Chawla, Mr. Wong, Steve and Andrew. 12:53 PM:- spoke with Mr. Fung and informed him about letter sent in email. he will discuss with Grant Engineering. 02/20/14-Hiralkumar Patel. 1:06 PM:- received email from Andrew. he mentioned that while drilling borings for geotechnical investigation, a second UST was found, directly east of the existing 5,000 gal UST. unknown UST had about an inch of product. he confirmed that product from 5,000 gal tank was pumped out on 12/27/13. they pumped out product from impacted wells (MW1, MW2 and MW) on 02/07/14. 03/04/14-Hiralkumar Patel. 1:32 PM:- received email from Andrew including interim remedial measure letter report. between 1 and 6 inches of product noted in three wells (MW-1, MW-2 and MW-8). 04/09/14-Hiralkumar Patel. received email from Steve (at 5:39 PM on 04/08/14) including interim remedial measure letter report. wells were monitored on 03/07/14 and 03/21/14. between 2.5 and 6.6 inches of product noted in three wells (MW-1, MW-2 and MW-8). 04/18/14-Hiralkumar Patel. received email from Steve (at 8:09 PM on 04/17/14). he mentioned that bi-weekly groundwater gauging, monitoring and reporting will not be conducted this week due to the building currently undergoing asbestos abatement activities. he also mentioned that the existing building will be immediately demolished

BRUMAR SHEET METAL INC (Continued) **S108076226**

once the abatement work is completed. Steve mentioned that well gauging will resume, if demolition does not occur. 04/28/14-Hiralkumar Patel. 3:33 PM:- sent email to Steve inquiring updates. 04/29/14-Hiralkumar Patel. 10:15 AM:- received email from Steve. he mentioned that currently, the building is under a stop work order and full vacate order. the owner and asbestos abatement contractor are taking steps to address this. 08/19/14-Hiralkumar Patel. 11:58 AM:- received message from Ray Kahn from ESPL. 08/22/14-Hiralkumar Patel. 2:39 PM:- spoke with Mr. Kahn. ESPL has been hired for required work at the site and they are ready to start soil excavation. asked Mr. Kahn to provide work schedule for site work. he will send email. 11/14/14-Hiralkumar Patel. 10:16 AM:- left message for Mr. Kahn. 11/18/14-Hiralkumar Patel. 12:04 PM:- received call from Mr. Kahn. he mentioned that site excavation has not begun yet as owner has planned to change design of new building. Mr. Kahn will talk to property owner about required well gauging/product removal. 12/17/14-Hiralkumar Patel. 1:21 PM:- spoke with Mr. Kahn. he mentioned that property owner has met with NYC OER and planning to start excavation on 01/05/15. he mentioned that well monitoring/gauging/product removal has not been conducted yet since Feb. 2014. 1:22 PM:- left message for Mr. Wong at NYC OER. 1:44 PM:- spoke with Shaminder Chawla at NYC OER and informed him about property owner's failure to comply with the well monitoring/report submission requirements as per the letter dated 01/29/14. informed him that the case may be referred for legal enforcement. Mr. Chawla has no objection to DEC's enforcement. 01/07/15-Hiralkumar Patel. 11:52 AM:- spoke with Mr. Kahn. after discussion on 12/17/14, ESPL installed a test pit next to the UST. the test pit was dug down to 9 ft bg, where groundwater was found. free phase product was noted on groundwater and product recovered using absorbent pads. asked Mr. Kahn to submit letter summarizing test pit work and monitoring data. Mr. Kahn mentioned about chemical treatment of contamination. informed him that the department does not approve chemical treatment at this time and requires submission of endpoint soil and groundwater samnple results prior to finalizing a remedial method. 01/21/15-Hiralkumar Patel. 9:08 AM:- received email from Mr. Kahn including test pit letter report. three test pits were excavate on 12/19/14 to a depth of 11 ft bg (2 ft below groundwater) and 8 ft wide. product found on water in test pit #1 which is located east of the tank farm. product is being collected using absorbent pads. on 01/12/15, a stop work order was issued by NYC DOB. interim cleanup will continue by capturing the product using adsorption pads and pump-out methods until the actual tank removal and spill clean-up can be conducted. 9:11 AM:- sent email to Mr. Kahn and asked him to submit a scaled site map with existing well, tank and test pit locations. email copied to Mr. Chawla. 01/23/15-Hiralkumar Patel. received email from Mr. Kahn (at 8:16 PM on 01/22/15) including site map. he also mentioned that the stop work order was removed and the shoring conctractor is driving the beams into the ground in the west and north side of the site. 01/28/15-Hiralkumar Patel. received email from Mr. Kahn (at 2:54 PM on 01/25/15) including test pit/UST plan and shoring plan. he mentioned that two USTs were exposed on 01/23/15 to prepare the site location plan. both tanks were found containing water. 01/29/15-Hiralkumar Patel. 9:58 AM:- received call from Mr. Kahn. today they pumped out and removed two tanks. excavation was about 9 ft bg and groundwater was not found in the excavation. due to structural safety of the adjoining building, they have to backfill

BRUMAR SHEET METAL INC (Continued) **S108076226**

the excavation. Mr. Kahn mentioned that contaminated soils will be removed once underpinning for adjoining building is done (possibly within two weeks depends on weather). 02/05/15-Hiralkumar Patel. 2:14 PM:- received email from Mr. Chawla. William Wong of OER visited site and noted petroleum odors while tank piping being removed. 02/06/15-Hiralkumar Patel. 10:30 AM:- visited site. met with on-site supervisor. crew was underpining adjacent building in area where the USTs were located. no petroleum odors noted in work zone. 02/11/15-Hiralkumar Patel. 1:32 PM:- received message from Mr. Kahn. 02/12/15-Hiralkumar Patel. 10:03 AM:- received call from Mr. Kahn. during underpining operation, crew found set of ten (10) 1,000 gal tanks in rear portion of the site. Mr. Kahn spoke with neighbours and reviewed sanborn maps. maps shows location of ten tanks. Mr. Kahn has collected liquid samples from these ten tanks. asked him to send site map with these tank location, sanborn map and tank removal plan. also asked him to submit results of liquid samples from the tank, once available. 03/03/15-Hiralkumar Patel. 10:38 AM:- received email from Mr. Kahn including link to UST removal report. abstract: - previously known USTs # 1 & 2 were removed on 01/29/15 - during underpinning of the adjacent structure, two additional tanks (UST # 3 & 4 - size: 5.5 ft dia x 7 ft long) were discovered approx. 3 ft bg on 02/09/15, which were removed - during further work, an additional eight (8) USTs were identified (UST # 5, 6, 7, 8, 9, 10, 11 & 12) on 02/11/15; these tanks were buried vertically approx. 2.5 ft bg - USTs # 5-12 were identified on 1942-1965 Sanborn Maps - USTs # 5-12 were encased in concrete - based on site history and shape of tanks # 5-12 and interior structure, it was concluded that the tanks could have been used for mixing operation which is consistent with the site history of a carpet dying operation during 1940’s and 1960’s - dimensions of tanks # 5-12 varied: 5 ft dia x 6 ft long (1,000 gal) & 5 ft dia x 4 ft long (500 gal) - additional soil excavation will continue Mr. Kahn included copy of PBS application form (signed on 02/11/15) to register previously unknown tanks, but no records found in PBS record. 03/31/15-Hiralkumar Patel. 9:06 AM:- received call from Mr. Kahn. he mentioned that soil from almost entire footprint of the site has been removed to a depth of approx. 11 ft bg. they removed about 3,028 tons of soil. currently, the site excavation is filled with groundwater. the north and south sidewall of the excavations are concrete underpining under adjacent buildings and there is a shoring along the west sidewall to pretect the sidewalk. asked Mr. Kahn to collect endpoint soil samples from east sidewall, water sample from excavation pool and groundwater samples from monitoring wells on sidewalk. asked him to analyze all samples for full list VOCs/SVOCs. informed Mr. Kahn that the department does not approve application of any chemical prior to reviewing soil/groundwater samples. he mentioned that the new foundation will be at around 9.5 ft bg. 04/01/15-Hiralkumar Patel. 8:45 AM:- went to site for inspection, but site was closed. looked through opening in construction fence. the entire excavation was filled with water. no petroleum sheen or odors were observed. 04/09/15-Hiralkumar Patel. 10:55 PM:- received email from Mr. Kahn including status report. abstract: - composite soil sample was collected from east sidewall - groundwater samples were collected from excavation pool and wells MW-5 and MW-6 - no contamination found in any sample based on available documents/information, no further work is needed and case is closed. 3:01 PM:- spoke with Mr. Chawla at NYC OER and informed him about case closure. Mr. Chawla confirmed that a moisture/vapor barrier will

BRUMAR SHEET METAL INC (Continued) **S108076226**

be installed underneath the new building. 3:19 PM:- sent spill closure letter to Mr. Fung. letter emailed to Mr. Fung, Mr. Chawla and Mr. Kahn. **also refer to spill #: 1206982.**"

Remarks: "tank is in place, soil samples confirm contamination"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 4/12/04-Vouight-Spill transferred from Sullivan to Rommel as per Rommel. Contacted present owner. Manny Shurka (212) 832-9100. He

BROOKLYN FILLING STATION (Continued) **U003200532**

has no info on followup tank test. He bought site in 1997. All tanks closed in 1999. If tanks were operated for two years after tank test failure, then tanks can be assumed to have been OK in 1997. Tanks were not suction dispensers. They used submersible pumps. So, depending on where the tank test failure leak was, there could have been a release. Check with Manny if he did an environmental assessment when he bought the property or if Getty did one when they sold the property. 8/17/12 Spill re-assigned to T. Demeo as per RSE. bf 10/09/14-Hiralkumar Patel. reviewed available documents for DEC DeMeo. alternate address: 190 McGuiness Blvd. PBS #s: 2-146994, 2-610594 PBS # 2-146994 for 176 McGuiness Blvd. as per PBS record, site has/had following tanks: - twelve (12) 550 gal gasoline USTs, closed-in-place in Feb. 1999 - one (1) 4,000 gal gasoline UST, closed-in-place in Feb. 1999 - two (2) 4,000 gal gasoline UST, in-service, installed in Feb. 1999 - one (1) 4,000 gal diesel UST, in-service, installed in Feb. 1999 PBS #: 2-610594 for 190 McGuiness Blvd. as per PBS record, the site has on 250 gal waste oil AST on legs, installed in Apr. 2007. other spill # 0204172 was reported on 07/22/2002 due to gasoline odors during delivery to the station. case closed. found tank test report dated 06/25/1997 on PBC edoc. as per the document, twelve (12) 550 gal gasoline tanks and one (1) 4,000 gal diesel tanks were fount tight. there is no document available to confirm source of tank test failure in 1991 (subject spill) and any petroleum release associated with it. Helf Enterprises LLC. **property owner** 10/27/14 TJD File review - determinations are based upon research into historical case file by Patel. Current owner took possession of propert 1997, followed by the closure of (12) UST's in 1999 and a (4K) UST's also closed in place in 1999. In February 1999 a total of (2) new 4K UST's were installed on site and remain in operation. All (12) 550's and (1) 4K gasoline UST's passed a tighntess test in 1997 - no record of repair or remedial action in file. Passing tank tightness reports for all tanks performed in 1997 have been uploaded to DECDOCS. Due to the lack of available history at this property and the fact the tighness test failure was reported in excess of 20 years ago, the suspect tanks were abandonned in place in 1999, the site has new owner's and no additional information is currently available - no further action is required at this time - spill is administratively closed. "

BROWNFIELDS:
Name: FORMER CARTER SPRAY FINISHING CORP.
Address: 65 ECKFORD STREET
City,State,Zip: BROOKLYN, NY 11222
Program: BCP
Site Code: 507618
Acres: 0.230
HW Code: C224218
SWIS: 2401
Town: New York City
Record Added Date: 05/08/2015
Record Updated Date: 01/22/2020
Update By: RKCORCOR
Site Description: "Location: The site is located at 65 Eckford Street in the Greenpoint section of Brooklyn, NY. The site is approximtely 0.23 acres in size. Site Features: The site is an irregular shaped lot and is developed with a one and two-story industrial/manufacturing building. Current Zoning: The site was rezoned in 2005 from industrial (M1-2) to residential (M1-2/R6B). Past Use of the Site: The site was undeveloped prior to 1887. By 1905, several one-story manufacturing buildings were constructed on the site and used as a part of the Meisel Danowitz & Co. woodworking operation. The site was redeveloped by 1916 with the existing one and two-story building currently constructed at the site. From then until the 1940s, the building variously housed a machine shop and parking garage. By 1950, the building was occupied with a wood box manufacturing company, and a company that performed lacquer spraying on the 2nd floor. From 1960 to 1989, the building was used for metal finishing and spraying. Site Geology and Hydrogeology: Based on the Remedial Investigation (RI)

FORMER CARTER SPRAY FINISHING CORP. (Continued) **S117936657**

Report for the site, the regional geologic setting consists of bedrock overlain by layers of unconsolidated sediments (generally sand, gravel and silty clays) deposited by glacial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site consists of historic fill material that extends to 13 feet below grade in some areas, underlain by grey silty clay. According to the United States Geographical Survey (USGS) topographic map for the area (Brooklyn Quadrangle), the elevation of the property is about 14 feet above mean sea level. The area topography gradually slopes downward to the north and west. Groundwater is present beneath the Site at a depth of 11 to 12 feet below grade. Regional groundwater flow is to the northwest."

Env Problem:
"Nature and Extent of Contamination: Soils: Soil samples collected during the Remedial Investigation (RI) were analyzed for all classes of contaminants (i.e., volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides). The following contaminants were found: - Petroleum-related contaminants were detected above unrestricted use soil cleanup objectives (SCOs) and Protection of Groundwater SCOs in soil samples collected at the water table (11-13 ft below ground surface) at several locations throughout the site; - Chlorinated solvents were detected in shallow soil samples (0-4 ft below ground surface) above Unrestricted Use SCOs and Protection of Groundwater SCOs in the southern and western portions of the site; - SVOCs were detected above Commercial SCOs in shallow soils (0-4 ft below ground surface) and soil samples collected from the water table (11-13 ft below ground surface) in the southern and eastern portions of the site; and - Metals were detected above Commercial SCOs in shallow (0-4 ft below ground surface) and deep (18-20 ft below ground surface) soil samples collected throughout the site. Groundwater: Groundwater samples were analyzed for all classes of compounds during the RI. The following contaminants were found: - Petroleum-related contaminants, chlorinated solvents and SVOCs were detected in groundwater samples above the Groundwater Quality Standards; and - Metals were detected in several groundwater samples. However the metals were not dissolved and are more indicative of soil contamination than groundwater contamination. Data does not indicate any off-site impacts in groundwater related to this site Soil Vapor: Soil vapor samples were analyzed for VOCs. The following contaminants were found: - Chlorinated solvents and petroleum-related compounds were detected in all soil vapor samples."

Health Problem:
"The site is completely fenced, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists

FORMER CARTER SPRAY FINISHING CORP. (Continued) **S117936657**

	for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Additional investigation is needed to evaluate whether further actions are needed to address soil vapor intrusion at off-site structures."

Update By:	AMSERVIS
Site Description:	"Location: The site is located in an urban area at 55-63 Eckford Street, on the eastern side of Eckford Street between Driggs Avenue to the north and Engert Avenue to the south in the Borough of Brooklyn. The site is bordered by 1-story building to the north, 1-story industrial building & a parking lot to the west, Eckford Street to the east and a 7-story residential building and a 5-story residential & 2-story industrial building to the south. Site Features: The site is 10,376 square feet in area and currently occupied by a 6-story unfinished steel frame structure with concrete foundations. A partial basement is located beneath the southern portion of the unfinished construction. The remaining portions of the property consist of bare soil, piles of construction materials and overgrown weeds. Current Zoning and Land Use: The site is zoned M1-2/R6B and falls in the paired district category and is currently vacant. M1 (manufacturing district) is paired with R6B (residential district). Paired district are mapped as special mixed use districts. Past Use of the Site: Historic uses of the site included four structures identified as lumber processing facility for planning and molding from 1887 to 1905. According to the Sanborn Fire Insurance maps of 1942, there existed a 2-story building in the northern portion of the property identified as wool rag sorting and bailing. From 1951 to 1992 the property was identified as lacquer spraying and electric plating facility. The property remained vacant after the demolition of on-site buildings in 2004. Site Geology and Hydrology: The site is generally level and is at an elevation of approximately 16 feet above sea level. The geology of Kings County consists of unconsolidated glacial deposits. Groundwater beneath the site was encountered at depths ranging between 10.39 to 12.94 feet. According to the USGS Groundwater Conditions Map, the regional groundwater flow direction in the vicinity of the Site is toward the west in the direction of East River."
Env Problem:	"Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

SWIS:	2401
Town:	New York City
Record Added Date:	10/18/2018
Record Updated Date:	12/28/2020
Update By:	JBSWARTO
Site Description:	"The following Site Description is for the associated BCP on-site: Location: The site is located in an urban area in the Williamsburg section of Brooklyn (Kings County) on the northeast corner of North 10th Street and Roebling Street. Site Features: The site was formerly developed with two single-story industrial buildings and two smaller one-story structures, which are surrounded by parking areas. The buildings were demolished in May 2018. No water bodies are present on site. A mixed-use commercial and residential building is currently under construction on the site. Current Zoning and Land Use: The site is a parcel currently undergoing redevelopment within a special mixed use zoning district (M1-2/R6A), which is characterized by light industrial use (woodworking shops, repair shops, storage facilities) and allows for mixed-use residential buildings. The surrounding parcels are currently used for a combination of residential, commercial, transportation, and open park space. Past Use of the Site: A review of Sanborn Fire Insurance maps show that the site was used for manufacturing and industrial operations that include a dry color and paint storage facility, a varnish research works, and a chemical warehouse. The 1942 Sanborn map also identified one benzene and two gasoline underground storage tanks (USTs). Prior uses of the site that appear to have led to contamination are the varnish research works and USTs, both of which are associated with the use of chlorinated solvents that have potential for release to the environment. Site Geology and Hydrogeology: Site elevation ranges from about 9 to 13 feet above sea level and gradually slopes downward to the east. The subsurface stratigraphy consists of historic fill to about 4 feet below grade surface (bgs), underlain by brown sand, red clay, brown clay, black gravel, and black/brown silt. Predominant geological surface features were not reported and bedrock was not encountered during the 2015 investigation. Depth to groundwater ranges from about 6 to 7 feet bgs and appears to flow towards the west. The site is located within a Zone AE designated flood zone, which is identified as a high risk flood area."
Env Problem:	"The following Site Description is for the associated BCP on-site: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals during the Remedial Investigation. Polychlorinated biphenyls (PCBs) and pesticides were also analyzed for during the preliminary investigation and were not found to exceed standards. Soil vapor was analyzed for VOCs. Based upon

215 NORTH 10TH STREET - OFF-SITE (Continued) **S123661448**

investigations conducted to date, the primary contaminants of concern for the site include trichloroethene (TCE) and its breakdown products, cis-1,2-dichloroethene (DCE) and vinyl chloride, lead, mercury, arsenic, and SVOCs (e.g. benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene). Soil- Metals, such as lead, mercury, and arsenic, were found across the Site in shallow and deep soils. Concentrations of arsenic found on Site (maximum of 95.4 parts per million [ppm]) significantly exceeded the soil cleanup objective (SCO) for unrestricted use (UUSCO) and restricted residential use soil cleanup objective (RRUSCO) (13 and 16 ppm respectively). Lead found on-site (maximum concentration of 5,630 ppm) exceeded the UUSCO and RRUSCO (63 and 400 ppm). Concentrations of mercury found on-site (maximum of 160 ppm) significantly exceeded the UUSCO and RRUSCO (0.18 and 0.81 ppm respectively). SVOCs (mostly polycyclic aromatic hydrocarbons (PAHs) were noted mainly in shallow soils throughout the site, and one deep soil location on the northern portion of the site. Concentrations of SVOCs, such as benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene had maximum concentrations ranging from of 5.1 ppm to 6.5 ppm which exceeded the UUSCO and RRUSCO (all contaminants are 1 ppm for both the UUSCO and RRUSCO). TCE was noted on the northern portion of the Site in shallow soils with a maximum concentration of 30 ppm which exceeds the 0.47 ppm UUSCO and the 21 ppm RRUSCO. Vinyl chloride was noted in shallow soils with a concentration of 1.6 ppm; which exceeds the 0.02ppm UUSCO and the 0.9 ppm RRUSCOs. Other volatile organic compounds noted that exceeded the UUSCO include 1,2,4-trimethylbenzene, methyl ethyl ketone, cis-1,2-dichlorothene, naphthalene, and tetrachloroethene. Groundwater - TCE (maximum concentration of 21 parts per billion [ppb]) and its associated degradation products (DCE at 40 ppb) are found in the groundwater on the central and southern portion of the site, exceeding the groundwater standard of 5 ppb. It is suspected that these contaminants may migrate off-site. Dense Non-Aqueous Phase Liquid (DNAPL) was noted in a central monitoring well (MW-3) during the preliminary investigation, but was not seen during the Remedial Investigation. SVOCs, such as benzo(a)anthracene (maximum of 0.45 ppb), chrysene (maximum of 0.48 ppb), and benzo(b)fluoranthene(maximum of 0.6 ppb), were noted to be greatest at the eastern (most downgradient) monitoring well (exceeding the standard of 0.002 ppb for all named contaminants), and potentially are migrating off-site. Contaminants in this class exceeded the groundwater standards in all wells. Metals, such as lead, mercury, and arsenic, were found across the Site in groundwater. Concentrations of total and dissolved arsenic were found to exceed (maximum of 120.6 ppb) the groundwater standard (25 ppb) in MW4. Concentrations of total lead (maximum of 359 ppb) were found to exceed the groundwater standard (25 ppb) in 16MW2 and 16MW3. Concentrations of total mercury were found to exceed (maximum of 20.05 ppb) the groundwater standard (0.7 ppb) in 16MW2. Additional metals found to exceed the groundwater standard were total and dissolved nickel and zinc. Soil Vapor - TCE was detected at significantly elevated concentrations, up to 243,000 micrograms per cubic meter (ug/m3). PCE was detected at significantly elevated concentrations up to 7,730 ug/m3. Carbon tetrachloride was noted at a maximum concentration of 6,350 ug/m3 and 1,1,1-trichloroethane was noted with a maximum concentration of 6,000 ug/m3. Soil vapor samples were collected at 6 feet below sidewalk grade. Additional soil vapor sampling conducted off-site determined that additional investigations

215 NORTH 10TH STREET - OFF-SITE (Continued) **S123661448**

	for soil vapor intrusion off-site are necessary. "
Health Problem:	"Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion. "

DEC Memo:	"2/27/2019 - Feng - Duty Desk. Spoke to DEP Okoli who found the spill while responding to a sewage complaint. He stated that it is a construction site and they are doing excavation now. There is heavy equipment which broke down and spilled oil on the soil. He could not quantify how big the spill is. He could not provide photo picture nor the contact information of any personnel at the site. NYCDEP Okoli 347-672-6059 Searched the database and found Spill 15-05078 and Superfund 224229. Talked to Jane O'Connell and she said the only active one is C224229 for this address. She had unsuccessful attempts to call Albany. She recommended to email Melissa Sweet and copied Eric Obrecht and John Swartwout. email to Melissa Sweet Hi Melissa, We received the above referenced spill reported this morning. I spoke to DEP Okoli who found the spill while responding to a sewage complaint. He stated that it is a construction site and they are doing excavation now. There is heavy equipment which broke down and spilled oil on the soil. He could not quantify how big the spill is. He could not provide photo picture nor the contact information of any personnel at the site. I searched the database and found Spill 15-05078 and Superfund 224229. I talked to Jane and she said the only active one is C224229 for this address. So I am asking if you can call the consultant PM to see what happened and if anything done to address the spill. If you need Region 2 staff to inspect the site, let us know. 2/27/19-Lin-Responded to site regarding report of an oil spill from DEP. Spoke to the site representative and was informed that someone tipped over a bucket of hydraulic oil (less than 5 gallons) last week. They did not notice the spill right away due to a snow event last week. They put down some speedy dry on the location of the spill. There was no petroleum odor when I was on-site. Case closed. "

Site Description:	"Location: The site is located in an urban area in the Williamsburg section of Brooklyn (Kings County) on the northeast corner of North 10th Street and Roebling Street. Site Features: The site was formerly developed with two single-story industrial buildings and two smaller one-story structures, which are surrounded by parking areas. The buildings were demolished in May 2018. No water bodies are present on site. A mixed-use commercial and residential building is currently under construction on the site. Current Zoning and Land Use: The site is a parcel currently undergoing redevelopment within a special mixed use zoning district (M1-2/R6A), which is characterized by light industrial use (woodworking shops, repair shops, storage facilities) and allows for mixed-use residential buildings. The surrounding parcels are currently used for a combination of residential, commercial, transportation, and open park space. Past Use of the Site: A review of Sanborn Fire Insurance maps show that the site was used for manufacturing and industrial operations that include a dry color and paint storage facility, a varnish research works, and a chemical warehouse. The 1942 Sanborn map also identified one benzene and two gasoline underground storage tanks (USTs). Prior uses of the

215 NORTH 10TH STREET (Continued) **S121933762**

site that appear to have led to contamination are the varnish research works and USTs, both of which are associated with the use of chlorinated solvents that have potential for release to the environment. Site Geology and Hydrogeology: Site elevation ranges from about 9 to 13 feet above sea level and gradually slopes downward to the east. The subsurface stratigraphy consists of historic fill to about 4 feet below grade surface (bgs), underlain by brown sand, red clay, brown clay, black gravel, and black/brown silt. Predominant geological surface features were not reported and bedrock was not encountered during the 2015 investigation. Depth to groundwater ranges from about 6 to 7 feet bgs and appears to flow towards the west. The site is located within a Zone AE designated flood zone, which is identified as a high risk flood area."

Env Problem:

"Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs, trichloroethene, and its breakdown products, zinc, nickel, arsenic, mercury, and lead in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for residential use to 15 feet below ground surface. Residual contamination in the soil and groundwater is being managed under an local groundwater controls. Prior to Completion of Remediation: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals during the Remedial Investigation. Polychlorinated biphenyls (PCBs) and pesticides were also analyzed for during the preliminary investigation and were not found to exceed standards. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include trichloroethene (TCE) and its breakdown products, cis-1,2-dichloroethene (DCE) and vinyl chloride, lead, mercury, arsenic, and SVOCs (e.g. benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene). Soil-Metals, such as lead, mercury, and arsenic, were found across the Site in shallow and deep soils. Concentrations of arsenic found on Site (maximum of 95.4 parts per million [ppm]) significantly exceeded the soil cleanup objective (SCO) for unrestricted use (UUSCO) and restricted residential use soil cleanup objective (RRUSCO) (13 and 16 ppm respectively). Lead found on-site (maximum concentration of 5,630 ppm) exceeded the UUSCO and RRUSCO (63 and 400 ppm). Concentrations of mercury found on-site (maximum of 160 ppm) significantly exceeded the UUSCO and RRUSCO (0.18 and 0.81 ppm respectively). SVOCs (mostly polycyclic aromatic hydrocarbons (PAHs) were noted mainly in shallow soils throughout the site, and one deep soil location on the northern portion of the site. Concentrations of SVOCs, such as benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene had maximum concentrations ranging from of 5.1 ppm to 6.5 ppm which exceeded the UUSCO and RRUSCO (all contaminants are 1 ppm for both the UUSCO and RRUSCO). TCE was noted on the northern portion of the Site in shallow soils with a maximum concentration of 30 ppm which exceeds the 0.47 ppm UUSCO and the 21 ppm RRUSCO. Vinyl chloride was noted in shallow soils with a concentration of 1.6 ppm; which exceeds the 0.02ppm UUSCO and the 0.9 ppm RRUSCOs. Other volatile organic compounds noted that exceeded the UUSCO include 1,2,4-trimethylbenzene, methyl ethyl ketone, cis-1,2-dichlorothene (DCE), naphthalene, and tetrachloroethene. Groundwater - TCE (maximum concentration of 21 parts per billion [ppb]) and its associated degradation products (DCE at 40 ppb) are found in the groundwater on the central and southern portion of the site, exceeding the groundwater standard of 5 ppb. It

215 NORTH 10TH STREET (Continued) **S121933762**

is suspected that these contaminants may migrate off-site. Dense Non-Aqueous Phase Liquid (DNAPL) was noted in a central monitoring well (MW-3) during the preliminary investigation, but was not seen during the Remedial Investigation. SVOCs, such as benzo(a)anthracene (maximum of 0.45 ppb), chrysene (maximum of 0.48 ppb), and benzo(b)fluoranthene(maximum of 0.6 ppb), were noted to be greatest at the eastern (most downgradient) monitoring well (exceeding the standard of 0.002 ppb for all named contaminants), and potentially are migrating off-site. Contaminants in this class exceeded the groundwater standards in all wells. Metals, such as lead, mercury, and arsenic, were found across the Site in groundwater. Concentrations of total and dissolved arsenic were found to exceed (maximum of 120.6 ppb) the groundwater standard (25 ppb) in MW4. Concentrations of total lead (maximum of 359 ppb) were found to exceed the groundwater standard (25 ppb) in 16MW2 and 16MW3. Concentrations of total mercury were found to exceed (maximum of 20.05 ppb) the groundwater standard (0.7 ppb) in 16MW2. Additional metals found to exceed the groundwater standard were total and dissolved nickel and zinc. Soil Vapor - TCE was detected at significantly elevated concentrations, up to 243,000 micrograms per cubic meter (ug/m3). PCE was detected at significantly elevated concentrations up to 7,730 ug/m3. Carbon tetrachloride was noted at a maximum concentration of 6,350 ug/m3 and 1,1,1-trichloroethane was noted with a maximum concentration of 6,000 ug/m3. Soil vapor samples were collected at 6 feet below sidewalk grade. Additional soil vapor and soil vapor intrusion sampling is being conducted to determine whether actions are needed off-site to address exposures associated with soil vapor intrusion. "

Health Problem:	"Remedial actions are complete, and measures are in place to control the potential for coming in contact with contamination remaining at the site. Investigation and remediation of offsite contamination will be conducted under a separate program."

Site Description: "Location: The site is located at 215 North 10th Street in the Borough of Brooklyn, NY. The site is bordered on the south by North 10th Street with residential buildings on the opposite side of the street, to the west by a parking garage, to the north by a six story residential building, and to the east by Roebling Street with residential buildings on the opposite side of the street Site Features: The Site currently developed with one-story industrial building, two smaller one-story structures and parking areas. The Site is currently partially occupied by a motorcycle sales and service company and a marble importer/manufacturer. Current Zoning and Land Use: The site is currently zoned M1-2 (light manufacturing) with an R6A (residential) overlay. The site has a New York City e designation for hazardous materials as a result of recent rezoning from the previous MX8 zoning (heavy industrial use). Past Use of the Site: The Site appears to have been developed sometime prior to 1887 and has been occupied by various industrial uses including a dry color and paint storage, a varnish research works (which utilized two benzene tanks and a gasoline tank) and a chemical warehouse. The site is listed as an inactive facility in the Chemical Bulk Storage

215 NORTH 10TH STREET (Continued) **S121933833**

database as site no. 2-000052 for storage of muriatic acid, ammonium hydroxide and nitric acid. Site Geology and Hydrogeology: NYSDEC has not received any reports including these details. "

Env Problem: "SEE SITE NO C224229 FOR FUTURE UPDATES Nature and Extent of Contamination: Based on preliminary sampling, contaminants of concern include volatile organic compounds (VOCs) in soil, groundwater and soil vapor. Samples were analyzed for VOCs, semi-volatile organic compounds (SVOCs), metals, PCBs and pesticides. Soil A total of eleven (11) soil borings were installed and from which twenty-five (25) soil samples were collected for analysis. Petroleum and chlorinated solvent-related VOCs were identified in soil samples. Benzene was found at a maximum concentration of 5.7 parts per million (ppm), ethylbenzene at a maximum concentration of 10 ppm, 1,3,5-trimethylbenzene at a maximum concentration of 35 ppm, tetrachloroethylene (PCE) at a maximum concentration of 9.4 ppm, trichloroethylene (TCE) at a maximum concentration of 220 ppm, cis-1,2-dichloroethylene (cis-1,2-DCE) at a maximum concentration of 36 ppm, vinyl chloride (VC) at a maximum concentration of 0.46 ppm and naphthalene at a maximum concentration of 100 ppm. Groundwater As per the site map, total of four (4) monitoring wells were installed and sampled. Due to insufficient sample volume, only 3 of the wells were analyzed for VOCs (the likely downgradient well was not analyzed for VOCs). TCE was detected at a maximum concentration of 170 parts per billion (ppb), cis-1,2-DCE at a maximum concentration of 16 ppb, VC at a maximum concentration of 15 ppb and naphthalene at a maximum concentration of 31 ppb. Soil Vapor A total of six (6) soil-vapor probes were installed, including one location beneath the occupied on-site building. Petroleum and chlorinated solvent contamination noted in soil-vapor samples including PCE at a maximum concentration of 7730 micrograms per cubic meter (ug/m3), TCE at a maximum concentration of 243,000 ug/m3, cis-1,2-DCE at a maximum concentration of 11,000 ug/m3 and VC at a maximum concentration of 1650 ug/m3. Significant Threat: Determination of significant threat will be made following completion of the Site Characterization. "

Site Description:	"101-105 West Street is located in the Greenpoint area of Brooklyn, NY 10310, Block 2556, Lot 58. The site is a 0.2-acre parcel used as a

101-105 WEST STREET (Continued) **S108524782**

construction material storage yard. It is located between Kent Street and Java Street, on the west side of West Street. A commercial property borders the site to the east. The intended use of the site remains to be a construction material storage yard. The surrounding uses are mainly residential with some commercial divisions. Contamination at the site was predominantly in the soil and represented by Semi Volatile Organic Compounds and metals, and resulted from historic fill and uncontrolled dumping of oil and oil-related products from trucks loading construction materials. The Remedial Investigation work plan was approved in 1999 and the RI was completed in 2000. The groundwater is 8-10 feet below ground. The soil is sandy and it is covered with 3-4 feet of fill material. The Remedial Work Plan was approved in 2001 and the field remedial work was completed in 2002. The remedy involved excavation of the entire site and off site disposal. Clean backfill material has been placed in the former excavation. Remedial work at the site is completed. "

Env Problem: "The contaminants of concern in soil at the site were Semi Volatile Organic Compounds (SVOCs)and heavy metals. The groundwater has not been impacted by the contaminants. In 1998, the Pase I and Phase II Environmental Site Aassessment have revealed that the contaminants of concern in soil were above TAGM 4046 RSCO. The SVOCs had excedences ranging from non detected to Benzo(a)anthracene 43ppm, benzo(a)fluoranthene 1500ppm, benzo(b)fluoranthene 41ppm, benzo(k)fluoranthene 26ppm, benzo(a)pyrene 41ppm, Chrysene 38ppm,Dibenzofuran 12ppm. Some of the havy metal excedences were Arsenic 52ppm, Selenium 5.6ppm, Chromium 49ppm, Cadmium 12.5ppm, Lead 1930ppm,Zinc 1490ppm, Mercury 3.5ppm. The source was presumed to be in the fill material and also produced by uncontrolled dumping. During the remedial phase, the site has been excavated and the end point samples showed that the concentrations of the contaminats levels were very close to TAGM 4046 RSCO. The excavation has been backfilled with clean soil. The remediation was completed in 2002."

Health Problem: "Soils contaminated with metals and semi-volatile organic compounds were identified at this site. Contaminated soils have either been excavated and disposed of offsite or are covered by a concrete slab or the onsite building, thereby minimizing the potential for direct contact exposures. Groundwater has not been impacted, therefore there is no potential for ingestion exposures. Volatile organic compounds were not detected at this site therefore, inhalation via soil vapor intrusion is not a potential exposure pathway . "

Record Updated Date:	08/09/2019
Update By:	RKCORCOR
Site Description:	"The area of concern subject to this work is considered off-site from BCP site C224203 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224203 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The site is located in the Williamsburg section of the borough of Brooklyn, NY. Driggs Avenue bounds the property to the southeast, N 8th Street bounds the property to the southwest, and N 9th Street bounds the property to the north. The site is bound to the west by various mixed-use residential buildings. Site Features: The site consists of multiple tax lots including a paved parking lot and mixed-use residential buildings. Current Zoning and Land Use: The site is currently zoned commercial/industrial/high density residential and general residence (M1-2/R6A and R6B). Allowable uses include light manufacturing, warehouses, wholesalers, and multi-story residential buildings. Past Use of Site: Based on a map dated 1855, the property is believed to have been occupied by a manufactured gas plant (MGP). The MGP was demolished by 1887. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by food warehouse around 1991. Both buildings were demolished in 2006 and replaced with the existing parking lot. Geology and Hydrogeology: Soil at the site is described as historic fill materials to a depth of about 15 feet below the surface followed by native brown fine sand with silt and some clay. Groundwater is present at about 12 feet below ground surface, and flows to the northeast."
Env Problem:	"Nature and Extent of Contamination: Based upon the remedial investigation at the BCP site #C224203, the primary contaminants of concern are expected to be naphthalene, vinyl chloride, and cis-1,2-dichloroethene which were found in the BCP site soil, groundwater, and soil vapor. The BCP site soils also contained some

Update By:	RKCORCOR
Site Description:	"Location: The site is located in the Williamsburg section of the borough of Brooklyn, NY. The site has approximately 175 feet of frontage along Driggs Avenue and 100 feet of frontage along North 8th Street. Site Features: The site prior to remediation was occupied by a parking lot and an attendant booth. After remediation, the site has been redeveloped with an eight to eleven story building the footprint

FORMER STERLING TRANSFORMER CORP. (Continued) **S117363438**

	of which occupies the entire site. Current Zoning and Land Use: The property is currently a vacant parking lot. The site is zoned commercial/industrial/high density residential (M1 2/R6A and R6B). Allowable uses include light manufacturing, warehouses, wholesalers, and multi story residential buildings. Past use of the Site: Based on a map dated 1855, the property is believed to have been occupied by a manufactured gas plant (MGP). The MGP was demolished by 1887. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by a food warehouse circa 1991. Both buildings were demolished in 2006 and replaced with a parking lot parking lot. Geology and Hydrogeology: Soil at the site is described as historic fill materials to a depth of about 15 feet below the surface followed by native brown fine sand with silt and some clay. Groundwater is present at about 12 feet below ground surface, and flows to the northeast."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soils were petroleum VOCs, Chlorinated VOCs (CVOCs) and naphthalene. Non-aqueous phase liquids (NAPL) were present at the site. On site groundwater was contaminated with SVOCs and CVOCs.Pure solvent was detected in groundwater in the southern portion of the site. CVOCs including vinyl chloride were detected in soil vapor at the site. Remedial actions (excavation and disposal of contaminated soil) have successfully achieved soil cleanup objectives for Unrestricted Residential Use. "
Health Problem:	"Remedial actions are complete and no exposures are expected to residual contamination as the site has been remediated to unrestricted use."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 12/23/05- Andersen - Reviewed quarterly report dated 11/7/05. Eight MW sampled on September 23, 2005. Max BTEX 729ppb (MW5), max MTBE 352ppb (MW3). SVE system shut down May 5, 2005 due because low influent vapors. RAP required for remaining contamination. 12/29/05: RAP required letter sent. RAP due 2/9/06. 1/26/06: 1/25/06 meeting with Quantum, NYSDEC, and ET. A sensitive receptor survey and soil vapor survey will be performed, and then site closure will be considered. A kiosk vapor abatement system is in place. 2/2/06: Reviewed the fourth 2005 quarterly report. Max BTEX 497 ppb (MW5), max MTBE 351 ppb (MW6). A sensitive receptor survey will be prepared. 6/30/06: Meeting on 6/28/06 with Hess, Quantum, NYSDEC, EnviroTrac and GSC. Will submit request for closure. Sub slab vapor sampling conducted. 7/25/06: Received the results of sub-slab sampling and a sensitive receptor survey. Two sub slab samples were collected from beneath the kiosk on site. MTBE and BTEX were not detected above method detection limits. The sensitive receptor survey revealed that residential houses with basements are located within 1,000 ft of the site. Closure was requested. 10/6/06: Emailed Dawn Coughlin to followup on quarterly report. Received email from Ed Russo: the site was sampled on August 15, 2006. Results indicated concentrations that we feel warrant closure, especially due to the positive results of the soil-gas sampling and sensitive receptor survey. The report was just finalized yesterday, so you should be receiving it by the middle of next week. 11/1/06: Received closure request. Max benzene 158ppb in MW3, MTBE 338 in MW3. Continued groundwater sampling required. 1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. 1/23/07: Received update report. Wells samples on 11/8/06. Max BTEX 63 (MW3), max MTBE 222 (MW6). 4/20/07: Reviewed update report. Max BTEX 12.3 ppb (MW1). As reportedin the sensitive receptor survey, soil vapor sampling showed soil gas MTBE and BTEX concentrations ND. ND concentrations in downgradient wells. NFA issued."
Remarks:	"SOIL FOUND IN TANK PULL - SOIL BEING STODE PILED."

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Tank test failure. PBS file shows tank in service, but next tank tes due prior to the date of this spill. PBS registration expired in 2000. Need to follow up. 9/22/06 left message for attorney found on deed to contact Williamsburgh Square LLC (new owner as of 2003). address:154 N. 7th St., Brooklyn 11211. deed had no individual's name (only corporation). bf 4/30/08 Sent Old TTF letter to: Jerry Lebedowicz Williamsburg Square LLC 52-47 Browvale Lane Little Neck, NY 11362 Address obtained from tank closure application. bf 5/2/08 Received message from J. Lebedowitz to call him back. bf 5/5/089 Received call from J. Lebedowitz tank was closed. Athena Environmental sampled after tank was removed. bf 6/18/08 Yesterday, recieved message from Spiro of (Name not clear) Environmental Services. He requested call back to (718)784-7490. I called the number today, but number is not in service at this time and no further informatuion is available. Review of PBS file shows tank was closed in 2008. They should have closure report. Called Jerry Lebedowicz and left message to call me back. His number (from PBS application) is (718)784-7490. Mr. lebedowicz hand-delivered sampling results from Athenica Environmental Services. One contaminant was above soil clean-up objectives to protect gw quality: chrysene (690 ppb) in sample B-3. Faxed nfa letter to Mr. Lebedowicz. Fax: (718)229-7111. Also mailed letter to him at address above. NFA. bf"

187 BEDFORD AVE - TTF (Continued) **S106123807**

for hm to call me back, but haven't heard from him yet. 12/1/08 bf: Sent ttf old spill letter to: Alexander Wersocki 187 Bedford Avenue Brooklyn, NY 11211 10/14/14-Hiralkumar Patel. reviewed available information for DEC DeMeo. alternate address: none no other spills found. PBS #: 2-608263. as per PBS record, the site has one 2,000 gal #2 oil UST, in-service, installed in Jun. 1983. as per documents available on PBS database, the tank system was found tight during test on 11/26/2008 and 01/31/2014. Alexander Wersocki **property owner** 187 Bedford Avenue Brooklyn, NY 11211 PH. (718) 963-2659 (646) 287-6165 email: dg.nycbdrs@gmail.com 2/12/15 TJD Spill reassigned from DeMeo to Patel 03/24/15-Hiralkumar Patel. 10:35 AM:- went to site for inspection, but no one was available to provide access to the basement. found a color coded fill port and vent pipe by the building wall, at the southeast corner of the building (adjacent to building 189 Bedford Ave). 10:43 AM:- spoke with Mr. Wersocki. he mentioned that he doesn't remember the actual cause of test failure in 2003, but the tank system was tested tight after 2003. he confirmed no spill inside building. 10:47 AM:- spoke with Richard (917-647-6475), who maintains the boiler system at the site. he confirmed that the site has an underground tank which was found tight during recent testing. he also confirmed no signs of oil spill within building. in accordance with R2 TTF closure protocol, this spill is being closed due to no indication of a current release, no information indicating that there may have been a historical release, no information that this tank test failure will be an issue in the future and the tank system was found tight during subsequent testing."

Record Upd:	10/30/2013
Updated By:	BXANDERS

Site Description: "Location: The site is located in an urban area at 135 Kent Avenue in the Borough of Brooklyn, Kings County, NY. The site is bordered to the north by North 6th Street, to the west by Kent Avenue, to the south by a vacant 2-story warehouse (see BCP site no. C224159), and to the east by a three story building which appears to consist of a garage on the first floor with residential above. Single and multi-family residential is located across North 6th St. and newly-constructed multi-story residential towers are located across Kent Avenue. Site Features: The Site currently consists of a 11,000 sq. ft. (0.27 acre) 2 story brick building with commercial units on the first floor and residential units on second floor. Current Zoning/Use(s): The site is currently zoned M1-2 (manufacturing) with an R6A (residential) overlay. The site is located within the Greenpoint-Williamsburg Rezoning District, and is surrounded by mixed commercial and residential uses. The Site has a NYC Restrictive Declaration (similar to E-Designation) for Hazardous Materials (E-138) and Air Quality (E-227). Past Site Use(s): The Site was previously occupied by a warehouse which operated as a commercial dry cleaner supplies distribution facility (Cleaners Sales & Equipment Corp.). This facility operated from about 1958 to 2002. Cleaners Sales & Equipment Corp. has a USEPA ID no. NYR000113480 for hazardous waste generation (tetrachloroethylene, or PCE). Furthermore, the site is a registered Chemical Bulk Storage Facility (CBS No. 2-000353 for a 5,000 gallon aboveground PCE storage tank) and Petroleum Bulk Storage facility (PBS No. 2-608579 for a 3,000 gallon closed-in-place underground storage tank. Site Geology and Hydrogeology: Soil borings installed on a neighboring property identified fill materials consisting of medium-grained sand with some gravel and brick fragments to a depth of approximately 8 feet below

CLEANER SALES & EQUIPMENT CORP. (Continued) **S103942699**

grade. Beneath the surface fill layer is sand and gravel to a depth of at least 28 feet below grade. Groundwater is present at a depth of approximately 12 feet below grade. Groundwater flows generally to the west-southwest towards the East River, which is located approximately 550 feet west of the site. Borings done in the sidewalk on N 6th St showed sand to 28 feet followed by a clay layer and then silty sand at 35 feet. Groundwater was at 17 feet below ground surface. This site has been accepted into the Brownfield Cleanup Program and, therefore, investigation and remediation will occur under that program. The site Index is C224177."

Env Problem:	"Nature and Extent of Contamination: Recent sampling was conducted as part of the Remedial Investigation for the adjacent BCP site. Soil vapor samples were collected from immediately in front of the loading dock for the former cleaner supply facility, which identified PCE at a concentration of 25,300,000ug/m3, and TCE 10,400 g/m3 and cis-1,2-DCE at 7,060 ug/m3. Significant Threat: Based upon the soil vapor sampling results there is a potential for inhalation of the site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures. The NYSDOH made an evaluation of significant threat for this site. The site was accepted in the Brownfield Cleanup Program (BCP) and the Index # is C224177. "
Health Problem:	"Volatile organic compounds related to the site in the groundwater may move into soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures."

Acres:	0.290
HW Code:	C224177
SWIS:	2401
Town:	New York City
Record Added Date:	07/02/2013
Record Updated Date:	05/29/2021
Update By:	JHOCONNE
Site Description:	"Location: The site is bounded to the north by North 6th St., to the west by Kent Avenue, to the south by BCP C224159, and to the est by mixed commercial/residential buildings. Site Features: The site is currently developed with a 2-story commercial/residential building (measuring approx. 125 ft x 100 ft). The first floor of the building is divided into individual tenant spaces operated by a coffee shop, deli, furniture store, clothing store, and storage area. A small sub-grade utility room exists beneath part of the first floor, where a boiler historically operated. One sump and two cleanout accesses, all with dirt bottoms, exist in the floor of the utility room. The second floor consists of 11 residential units. Current Zoning and Land Use: The site use is commercial and it is included in an M1-2/R6A (Manufacturing with a Residential Overlay) mixed use district. Past Use of the Site: Former Cleaners Sales & Equipment Corp., a dry cleaning fluid distribution facility and laundry supply distributor, operated onsite from approximately 1958 to 2002. Site Geology and Hydrogeology: USGS reports indicate the depth of the bedrock expected to be approximatively 100 feet below ground surface (fbsg). Based on the local topograpy, groundwater most likely flows in the west-southwest direction toward East River, located 500 feet from the subject site. The depth to the groundwater is expected to be 8 to 10 fbsg. "
Env Problem:	"Nature and Extent of Contamination: Limited information about site contamination has been obtained through investigations performed on an adjacent site, and investigations performed on the sidewalk in front of the site by NYSDEC (see former site no. 224177). Further investigation of the on-site portions of the site are planned. The primary contaminants of concern are tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE), 1,2-dichloroethene (DCE) and vinyl chloride (VC). In May and June 2013, NYSDEC performed limited investigation on the sidewalk in front of 135 Kent Ave. and identified these contaminants in soil, groundwater, and soil vapor. Soil - PCE concentrations were detected at concentrations as high as 1.6 ppm (compared with Unrestricted Use Soil Cleanup Objective of 1.3 ppm); VC was detected at concentrations as high as 0.064 ppb (compared with 6NYCRR Part 375-6.8(a) UUSCO of 0.02 ppm). Groundwater - PCE concentrations were detected as high as 870 ppb (compared with Ambient Water Quality Standard of 5 ppb); TCE was found at up to 33 ppb (compared with AWQS of 5 ppb), and DCE was found at up to 20 ppb (compared with AWQS of 5 ppb). Soil vapor - PCE was identified at a concentration of 25,300,000 ug/m3, TCE at 10,400 g/m3 and DCE at 7,060 ug/m3. "
Health Problem:	"Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking contaminated groundwater associated with the site because the area is served by a public water supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface in

CLEANERS SALES & EQUIPMENT (Continued) **1006810542**

	to the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling identified impacts to the indoor air quality of the on-site building and immediate actions have been taken to minimize exposures. Additional evaluation is needed to determine whether soil vapor intrusion is a concern for off-site buildings. "

Updated By:	LSZINOMA
Site Description:	"Location: The site is located at 12 Eckford Street in an urban area in the Greenpoint neighborhood of Brooklyn, New York. The approximately 21,630-square foot site is bounded by a former commercial building currently being used as a construction office for the site and residential buildings to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest. Site Features: An eight story residential building including at-grade parking and a lobby on the ground floor and apartments above. An open air dog run is located in the northwestern portion of the lot. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses) and is currently vacant. This zoning is consistent with the proposed use of the site. The surrounding area is developed primarily with residential and commercial properties. Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1 and have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled

NEW 470 PROJECT (Continued) **S118950508**

	as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Geology and Hydrogeology: The stratigraphy of the site from the surface down consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the historic fill is a native sand, gravel, and silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations. Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concerns were lead in soil and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1 and have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Geology and Hydrogeology: The stratigraphy of the site from the surface down consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the

NEW 470 PROJECT (Continued) **S118950508**

historic fill is a native sand, gravel, and silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations. Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concerns were lead in soil and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Description: "Location: The site is located at 12 Eckford Street in an urban area in the Greenpoint neighborhood of Brooklyn, New York. The approximately 21,630-square foot site is bounded by a former commercial building currently being used as a construction office for the site and residential buildings to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest. Site Features: An eight story residential building including at-grade parking and a lobby on the ground floor and apartments above. An open air dog run is located in the northwestern portion of the lot. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses) and is currently vacant. This zoning is consistent with the proposed use of the site. The surrounding area is developed primarily with residential and commercial properties. Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1 and have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Code: 531164
Site Description: "Location: The site is located at 12 Eckford Street in an urban area in the Greenpoint neighborhood of Brooklyn, New York. The approximately 21,630-square foot site is bounded by a former commercial building currently being used as a construction office for the site and residential buildings to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest. Site Features: An eight story residential building including at-grade parking and a lobby on the ground floor and apartments above. An open air dog run is located in the northwestern portion of the lot. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses) and is currently vacant. This zoning is consistent with the proposed use of the site. The surrounding area is developed primarily with residential and commercial properties. Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1 and have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Geology and Hydrogeology: The stratigraphy of the site from the surface down consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the historic fill is a native sand, gravel, and silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations. Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site."
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concerns were lead in soil and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."
Health Problem: "Remedial actions are complete and measures are in place to control

Site Description:	"The area of concern subject to this work is considered off-site from BCP site C224242 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see below and C224242 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The site is located at 12 Eckford Street in an urban area in the Greenpoint neighborhood of Brooklyn, New York. The approximately 21,630-square foot site is bounded by a former commercial building currently being used as a construction office for the site and residential buildings to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest. Site Features: Currently, the site is vacant and unpaved. The buildings on-site have been demolished. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses) and is currently vacant. This zoning is consistent with the proposed use of the site. The surrounding area is developed primarily with residential and commercial properties. Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1. Former Lots 30, 32, and 33 have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman and Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Geology and Hydrogeology: The stratigraphy of the site from the surface down

NEW 470 PROJECT - OFF-SITE (Continued) **S121933800**

consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the historic fill is a native sand, gravel, and silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations. Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site."

Env Problem: "Nature and Extent of Contamination On-Site: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil: Soil samples were compared to the restricted residential soil cleanup objectives (SCOs). No VOCs, PCBs, or pesticides were found above SCOs. Several heavy metals such as arsenic (maximum of 39 parts per million [ppm], compared to the SCO of 16 ppm), lead (14,000 ppm vs. 400 ppm), and mercury (7.6 ppm vs. 0.81 ppm) were found in the shallow soil across the site. Shallow soil was also contaminated above the SCOs with SVOCs in a class of contaminants called polycyclic aromatic hydrocarbons (PAHs) (for example, benzo(b)fluoranthene). The highest PAH concentration found during the investigations was benzo(b)fluoranthene at 21 ppm (1 ppm SCO). PAHs are typically associated with incomplete combustion of coal or oil. Soil with heavy metal and PAH contamination of this nature is consistent with historic fill. No source area for the VOCs was found in on site soil, but based on the groundwater and soil vapor results, a source area may be present at the boundary with the off site portion of Lot 1. Groundwater: Groundwater samples were compared to Class GA Ambient Water Quality Standards. PAHs were the only SVOCs detected slightly above standards. Naturally occurring metals were also detected above standards in several samples. There were no PCBs in any samples. On site groundwater samples contained methyl tert butyl ether (MTBE) at concentrations of up to 48 ppb, above the standard of 10 ppb. On site groundwater samples did not contain chlorinated VOCs. Soil Vapor: Soil vapor was analyzed for VOCs, and the primary contaminants of concern found in on-site soil vapor include 1,1,1 TCA, tetrachloroethene (PCE), and TCE. The highest levels of these VOCs were measured in the northeastern part of the site in the northern part of former Lot 30, with 1,1,1 TCA at 37,300 micrograms/cubic meter (ug/m3), PCE at 956 ug/m3, and TCE at 1,120 ug/m3. Because these soil vapor concentrations were measured near the site boundary, off site soil vapor may be a concern for the residential buildings adjacent to the site. Nature and Extent of Contamination Off Site: Soil and groundwater were analyzed for VOCs, SVOCs, metals, PCBs, and pesticides. Soil vapor and sub-slab soil vapor were analyzed for VOCs. Soil: No VOCs, PCBs, or pesticides were found above restricted residential SCOs (RRSCOs). Mercury (maximum of 1.4 parts per million [ppm] vs RRSCO of 0.81 ppm), was found in the shallow soil (top 0-2 feet) (Lot 1). Shallow soil also contained PAHs above RRSCOs, with the highest being benzo(b)fluoranthene at 2.1 ppm (1 ppm RRSCO). Groundwater: Groundwater samples were analyzed for VOCs, SVOCs, metals, PCBs and pesticides. . Naturally occurring metals were detected above standards in several samples, and a pesticide was found above the standard in a single water sample. There were no PCBs or SVOCs in any samples. Maximum VOCs concentrations were as follows: 1,1,1 TCA at 43 ppb, 1,1 dichloroethane at 740 ppb, and TCE at 7.6 ppb. All three of these VOCs have a standard of 5 ppb. Soil Vapor/Sub-slab Vapor: Soil vapor was analyzed for VOCs, and the primary contaminants of concern for

NEW 470 PROJECT - OFF-SITE (Continued) **S121933800**

	the site include 1,1,1 TCA, PCE and TCE. The highest levels of these VOCs measured off site were 1,1,1 TCA at 2 micrograms/cubic meter (ug/m3), PCE at 20.8 ug/m3, and TCE at 4.62 ug/m3. Special Resources Impacted/Threatened: None. "
Health Problem:	"People who enter the site could contact contaminants in the soil by walking on the site, digging, or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the soil vapor may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not currently represent a concern. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in the event the site is re-occupied. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in off-site structures."

Date Record Added: 10/03/2013
Date Rec Updated: 05/05/2021
Updated By: WYZHENG
Site Description: "Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "
Env Problem: "Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "
Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and

149 KENT AVENUE (Continued) **S117742197**

affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Site Description:	"Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "
Env Problem:	"Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "

Env Problem:	"Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Site Code: 463657
Site Description: "Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to

149 KENT AVENUE (Continued) **S117742197**

three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "

Env Problem: "Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Site Code: 463657
Site Description: "Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "
Env Problem: "Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants

149 KENT AVENUE (Continued) **S117742197**

of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. Name:	149 KENT AVENUE
Address:	149 KENT AVENUE
City,State,Zip:	BROOKLYN, NY 11211
Site Code:	463657
Control Name:	Soil Management Plan
HW Code:	C224159
Control Code:	14
Control Type:	INST
Dt record added:	10/03/2013
Dt rec updated:	05/05/2021
Updated By:	WYZHENG
Site Code:	463657
Site Description:	"Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "
Env Problem:	"Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

149 KENT AVENUE (Continued) **1011923119**

Record Updated Date:	05/29/2021
Update By:	JHOCONNE
Site Description:	"Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "
Env Problem:	"Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Code:	567117
Acres:	2.441
HW Code:	C224272
SWIS:	2401
Town:	New York City
Record Added Date:	02/23/2018
Record Updated Date:	06/15/2021
Update By:	GWBURKE
Site Description:	"Site Location The site comprises approximately 2.441- acres, consisting of the entire block east of West Street, between India and Java Streets in the Greenpoint Section of Brooklyn. The site is currently defined as tax lot 1 of tax block 2538 and tax lot 51 of tax block 2543. The full lot size of block 2538 lot 1 including underwater land is 4.735 acres. The full lot size of block 2543 lot 51 is 0.424 acres, and mostly consists of underwater land. Only the upland portion of the site, which is defined by the planned bulkhead that will form the western edge of the BCP Site, is included within the BCP Site boundary. The upland portion of the site consists of 2.423 acres from block 2538 Lot 1 and 0.018 acres from block 2543 Lot 51. Site Features The site was developed sometime prior to 1887. The western site building was constructed in May 1935, and the eastern building was constructed in1953 (eastern site building). As of 1951,

GREENPOINT FERRY SITE (Continued) **S121933804**

piers/docs are noted at the end of each street along the shoreline of the East River from Green Street (to the north) to Milton Street (to the south), including India Street. All the piers/docks, except for the pier/dock at the end of Green Street, were no longer depicted by 2006. By 2011, a new pier/dock at the end of India Street was noted (current pier used as NYC Ferry terminal). It also appears that there was partial bulkhead collapse, and the shoreline adjacent to the site has eroded over time beginning in the late 1980s. The East River is located immediately adjacent to the west of the Site. Current Zoning and Land Use The site is currently zoned for R8 and R6, both residential districts, with a commercial overlay of C2-4. As of April 2017, the site was improved with two warehouse-style buildings most recently utilized for storage by movie prop storage companies; and an active NYC East River ferry terminal on the western portion of the Site. Stored material consisted of, but was not limited to, furniture, paintings, kitchen-ware, wagons, clothing, lighting fixtures and the like. The buildings are now vacant. The surrounding parcels are currently used for a mix of urban residential, commercial and still some industrial uses. The nearest residential area is the new residential building being constructed on the Huxley Envelope BCP Site. Past Use of the Site Historical site use includes lumber storage (including presence of a drying kiln) and planning mill (western portion of the Site) between 1887 until the 1940s; an Independent Energy Plant (IEP). IEPs generally utilized coal and/or oil to generate power. In addition, ash (rich in heavy metals and semi-volatile organic compounds (SVOCs) was a typical byproduct which required storage, handling and disposal. Additionally, the site was used as a sash, door and blind factory; sheet metal works (fabrication); truck repair; gasoline tank and pumps for fueling; bottling plant warehouse; plastics manufacturer; cargo storage; and parking. Typical operations associated with these uses include petroleum products and solvents that if released into the environment would impact the soil, groundwater and soil vapor beneath the site. Automotive repair activities commonly use solvents for parts cleaning and generate waste such as waste oils and antifreeze. Improper disposal of solvents and automotive wastes commonly result in subsurface impacts. The site has also historically been utilized for various industrial/manufacturing uses including a plastic manufacturer (as noted in pervious investigation) and a bottling facility (as noted on the 1979 through 1989 Sanborn maps and the 1976 C/O). There is potential for historic industrial/manufacturing operations, including the use of oils and solvents, to have impacted the site. Site Geology and Hydrogeology The grade at the site is relatively flat. The elevation of the site is approximately 3 feet above mean sea level. The direction of groundwater flow in the area of the site is assumed to flow west, based on the proximity of the nearest surface water body, the East River, located immediately west of the site and based on site topography. The site is located adjacent to a tidal wetland, the East River and is in a 100-year flood zone. There are no predominant geological surface features such as rock outcroppings on the Site. According to a report titled Potentiometric Surface of the Water Table, Magothy and Lloyd Aquifer on Long Island, New York, dated1984, and the Water Resources Investigation Report published by the USGS, dated 1987, the subsurface geology in the vicinity of the site consists of the Upper Glacial Deposits, Gardiners Clay, Jameco Gravel, the Raritan formation, and bedrock. The unconsolidated Upper Glacial layer,

GREENPOINT FERRY SITE (Continued) **S121933804**

deposited during the Pleistocene, extends to a depth of 175 below grade surface (bgs) and consists of glacial outwash deposits composed of sands and gravel. The permeability of this unit is moderate to high. The Upper Glacial deposits are underlain by Gardiners Clay consisting of clay, silt, and a few layers of sand. Also deposited during Pleistocene, the Gardiners Clay, which extends to a depth of 200 below sea level (bsl). The permeability of this unit is very low, so it constitutes a confining unit for the underlying aquifer. The Gardiners Clay is underlain by the Jameco Gravel unit consisting primarily of sand and gravel with a few layers of clay and silt. This unit extends to a depth of 250 bsl and is moderately to highly permeable. The Jameco Gravel is underlain by the Raritan formation consisting of the Raritan Confining Unit and the Lloyd Sand Member, deposited during the Cretaceous Period. The Raritan Confining Unit extends to a depth of 300 bsl and is composed of clay (solid and silty), with a few lenses and layers of sand, lignite, and pyrite. The permeability of this unit is very poor. The Lloyd Sand Member extends to a depth of 400 bsl and is composed of sand and gravel within a clayey matrix. The permeability of this layer is poor to moderate. Underlying the Raritan formation is bedrock. Paleozoic and Precambrian in age, the bedrock consists of metamorphic and metaigneous rocks (muscovite and biotic schist, gneiss and metagranites). The bedrock is poorly permeable to virtually impregnable, and constitutes the lower boundary of groundwater reservoir. "

Env Problem:

"Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Primary contaminants of concern for the site is SVOCs, based upon these investigations. The SVOCs are limited to PAHs and result from historic fill being placed on site. PAHs found above their restricted residential SCOs include benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, benzo[k]fluoranthene, chrysene, dibenzo(a,h)anthracene, indeno(1,2,3-cd)pyrene, and phenanthrene. Soil: A total of 53 discrete soil samples were collected and eight SVOCs (all PAHs) were detected above Restricted Residential SCOs. These SVOCs include benzo[a]anthracene (maximum concentration of 42 mg/kg), benzo[a]pyrene (maximum concentration of 54 mg/kg), benzo[b]fluoranthene (maximum concentration of 57 mg/kg), benzo[k]fluoranthene (maximum concentration of 17 mg/kg), chrysene (maximum concentration of 36 mg/kg), dibenzo(a,h)anthracene (maximum concentration of 8.3 mg/kg), indeno(1,2,3-cd)pyrene (maximum concentration of 36 mg/kg), and phenanthrene (maximum concentration of 120 mg/kg). Groundwater: Groundwater SVOC exceedances were identified in two monitoring wells (MW-1 and MW-4) and consist of a total of four SVOCs. These SVOCs include benzo(a)anthracene (Maximum concentration of 0.04 ug/L), benzo(a)pyrene (maximum concentration of 0.06 ug/L), benzo(b)fluoranthene (maximum concentration of 0.03 ug/L), and indeno(1,2,3-c,d)pyrene (maximum concentration of 0.06 ug/L). Soil Vapor: Soil Vapor samples were collected from locations beneath the existing warehouse buildings and indicated the presence of VOCs in soil vapor at the Site. The future Site use will be mixed commercial/residential/recreational use, and the proposed new building will be constructed with its foundation below the water table and will have a robust vapor barrier system, which should eliminate the concern for possible vapor intrusion into the building. "

GREENPOINT FERRY SITE (Continued) **S121933804**

Health Problem:	"People will not come into contact with contaminated soil or groundwater unless they dig below ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site redevelopment and occupancy. However, an evaluation of the potential for soil vapor intrusion to occur is recommended for any site redevelopment. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings."

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.
Registry ID: 110004334872

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description:	"Location: The 2825 square foot site is located at 134 Metropolitan Avenue in the Borough of Brooklyn, Kings County, NY in an urban area. The site is bounded by Metropolitan Avenue to the north, a movie theater to the east, North 1st Street to the south, and a commercial/residential building to the west. Site Features: The Site is approximately 2,825 square-feet and is currently occupied by a two-story commercial building with partial basement (30% of site) and a partial sub-basement. Current Zoning and Land Use: The site is currently zoned as M1-2 (manufacturing) with an R6A (residential) overlay. The on-site building was most recently occupied by a bar/nightclub which closed in 2016. Past Use of the Site: Historic uses at the Site include wire works (prior to 1887), a machine shop (1887-1905), and manufacturing (1951). The current owner plans to add 3 additional floors on the building for residential use. Site Geology and Hydrogeology: No soil or groundwater samples have been collected to date. "
Env Problem:	"Nature and Extent of Contamination: This site was referred to the Department from the NYC Office of Environmental Remediation (OER). A soil vapor intrusion investigation was undertaken on the site under the direction of OER as a result of an environmental e -designation on the site. Soil No soil samples have been collected to date. Groundwater No groundwater samples have been collected to date. Soil Vapor The chlorinated solvents tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE) and 1,2-dichloroethene (DCE) have been detected at maximum concentrations of 223,000 micrograms per cubic meter, or ug/m3 (PCE), 203 ug/m3 (TCE) and 114 ug/m3 (DCE). "
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Updated By: JHOCONNE
Site Description: "Location: The site is located in the Williamsburg section of Brooklyn. The site is bounded by Havemeyer Street to the northwest, North 6th Street to the southwest, Macri Triangle park to the southeast, and North 8th Street to the northeast. Site Features: The site is completely covered with buildings in the northwest section; and covered with asphalt, concrete, and open park space in the southeast section. The site is bisected by an elevated portion of I-278 (the Brooklyn-Queens Expressway (BQE)) adjacent to the park. Current Zoning and Land Use(s): The site is zoned for residential, manufacturing, and commercial uses. The residential area is in the northwest section of the site. The manufacturing building along Meeker Avenue is unoccupied. Past Use of the Site: According to Sanborn maps, the former Ansbacher Color and Dye Factory (Ansbacher) occupied multiple buildings along North 6th Street, North 7th Street, and Metropolitan Avenue from ~1887 to ~1945. The assumed use of the facility was to manufacture paints and/or pigments for commercial and industrial use. In the early 1950's, the buildings in the southeastern section of the site were torn down to make room for the construction of the BQE. It is believed that during this construction, waste material and debris from the former Ansbacher plant may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation (NYSDOT) in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed by the New York State Department of Environmental Conservation (NYSDEC) during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. In 2015, the NYSDEC initiated an investigation on the perimeter of the site to identify the origin of chlorinated solvents found in groundwater beneath the sidewalk as part of routine sampling. Site Geology and Hydrogeology: The site is underlain by fine to medium sands; with limited quantities of coarse sand, gravel, and silt throughout the site at varying intervals. Groundwater is approximately 9.5 - 12.5' below grade. Flow direction in shallow groundwater is toward the west-southwest, while deeper groundwater appears to flow towards the east. (This may be due to the presence of the L train subway tunnel underneath North 7th Street.)"
Env Problem: "Nature and Extent of Contamination: - Soil Sampling was completed in multiple stages from 1988 to 1999. The primary contaminants of concern in soil at this site are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 7,500 ppm, well above the cleanup objective for commercial use (16 ppm). This soil failed for

BQE/ANSBACHER COLOR & DYE FACTORY (Continued) **S106780917**

EP Toxicity (48 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Lead has been found at concentrations up to 10,600 ppm, well above the cleanup objective for commercial use (1,000 ppm). This soil failed for EP Toxicity (20.3 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Mercury was also found at concentrations up to 294 ppm, well above the cleanup objective for commercial use (2.8 ppm). These concentrations were all found in the vicinity of the Arsenate Of Lead building in the southeast area of the site, which is now located in the footprint of the BQE. - Groundwater Sampling has been completed in multiple stages from 1988 to 2015. The primary contaminants of concern in groundwater are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 15,500 ppb, well above the Class GA standard of 25 ppb. Lead has been found at concentrations up to 431 ppb, above the Class GA standard of 25 ppb. Mercury has been found at concentrations up to 75 ppb, well above the Class GA standard of 0.7 ppb. These concentrations were all found in the vicinity of the Arsenate Of Lead building in the southeast area of the site, which is now located in the footprint of the BQE. In 2015, groundwater in the northwest portion of the site was also found to contain tetrachloroethene (PCE) up to 1,900 ppb, trichloroethene (TCE) up to 120 ppb, and cis-1,2-dichloroethene (DCE) up to 320 ppb. PCE, TCE, and DCE all have a Class GA standard of 5 ppb. Significant Threat: The site does not constitute a significant threat to human health or the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory."

Health Problem: "Residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt, thereby preventing direct contact. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Groundwater in the area is not used, since public water is available. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants."

HW Code: 224154
Record Add: 10/06/2011
Record Upd: 02/21/2018
Updated By: GWBURKE
Site Description: "This site has been accepted into the Brownfield Cleanup Program - Site Code C224154. Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing until 2010. The site has a RCRA Closure Work Plan which started to be performed in 2011 and continues in 2014. Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the past ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. In 1999 RGJ contractor closed in place 14 USTs used to store VOCs. RGJ reported soil contamination around the USTs. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001, after Con Edison, the owner of the adjacent property discovered Volatile Organic Compounds (VOCs) under their parking lot and sued Fyn Paint Co. The investigation at the site revealed soil and groundwater highly contaminated with VOCs. After multiple phase investigation in January 2007, an IRM/pump and treatment of the groundwater was installed and operated. The RAWP was approved in 2009, and an excavation of the contaminated soil around six of the USTs constituting the source of VOCs was completed in 2010. Additional remedial design for a dual phase extraction system (DPES) was approved. In June 2014, the DPES was operating at the site. In November 2011, RCRA Closure field work started under EPA supervision and it continued through 2014. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of a layer of antropogenic fill material (0-12 feet and the rest to 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. "
Env Problem: "See also Site No. V00380. Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

	installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP)was approved for off site (OU-2)contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed in May- June 2014. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated and the remedial action will be completed under the State Superfund Program. In March 2015, the site was accepted in the Brownfield Cleanup Program (BCP) with the index # C224154."
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Updated By: YYWONG
Site Description: "Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."
Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

Updated By: YYWONG

Site Description: "Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb),

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

	xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb,

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Site Description: "Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Site Code: 502562
Site Description: "Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison’s former North First Street Oil Storage

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "
Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Site Description: "Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

	at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Name: FYN PAINT AND LACQUER CO., INC.
Address: 230 KENT AVENUE
City,State,Zip: BROOKLYN, NY 11249
Site Code: 56974
Control Name: Building Use Restriction
HW Code: V00380
Control Code: 26
Control Type: INST
Dt record added: 11/21/2014
Dt rec updated: 11/21/2014
Updated By: IXMUNTEA
Site Code: 56974
Site Description: "Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. "

Env Problem: "Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP)was approved for off site (OU-2)contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated. In March 2015, a new owner applied and the site was accepted into the Brownfield Cleanup Program under site no. C224154."

Health Problem: "It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated. "

It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. "

Env Problem: "Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP)was approved for off site (OU-2)contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated. In March 2015, a new owner applied and the site was accepted into the Brownfield Cleanup Program under site no. C224154."

Health Problem: "It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated. "

Site Description:	"The area of concern subject to this work is considered off-site from BCP site C224154 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224154 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The Fyn Paint and Lacquer Co., Inc.- Off-Site is located in an urban area in Brooklyn, Kings County. The site is situated on the block bounded by Kent Avenue to the east, Metropolitan Avenue to the north, North First Street to the south and River Street to the west. Site Features: The site consists of the areas surrounding the Fyn Paint facility. Site Geology and Hydrogeology: Based on information collected during the investigation of C224154, shallow soil consist fill material followed by medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (bgs). Groundwater flow direction is toward the west. The depth to groundwater is approximately 12 to 15 ft below grade. The East River is located approximately 500 feet to the west of the Fyn Paint site. "

Update By:	JHOCONNE
Site Description:	"Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."

Env Problem:

"Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Site Description: "Location: The 0.51 acre site is located at 313-315 Kingsland Avenue in the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. Site Features: The site is completely covered by multiple buildings of varying construction

FORMER SPIC AND SPAN CLEANERS (Continued) **S109416408**

and height. Numerous other commercial and industrial properties are located to the north, east, and west of the site. A large residential area is located immediately south of the site, and extends south along both Kingsland Avenue and Monitor Street. A large sewage treatment plant is located approximately 1/2 mile north of the site. Current Zoning/Use(s): The site is zoned for both residential and light manufacturing. The site is partially occupied, and is utilized for a variety of purposes (residential, warehousing, etc.). Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the mid-1960's. The Meeker Avenue Plume Trackdown Site Characterization in the area of this site was conducted in several phases, and was completed in the Summer of 2009. Operable Units: The site was divided up into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU-01) consists of the on-site source area which includes the sidewalk adjacent to 315 Kingsland Avenue. All remaining off-site contamination will be investigated and remediated separately as Operable Unit 2 (OU-02). 300 Kingsland Avenue is suspected to be part of the former Spic and Span operation and will be addressed as part of OU-02.. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-10' thick), a stratified sand unit with some to no fines (over 120' thick), a discontinuous glacial till unit within the sand unit (0.5-50' thick), a discontinuous clayey silt unit within the sand unit (0.5-25' thick), and the Raritan Formation (approximately 138.5' below ground surface). Groundwater is approximately 11-25' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 1,300' northeast of the site."

Env Problem: "Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 39,000 ppb, and in deep groundwater at concentrations up to 170,000 ppb, exceeding the Part 703.5 class GA standard of 5 ppb. PCE DNAPL has also been found on-site at concentrations up to 1,000,000 ppm (100%) in deep monitoring wells. Trichloroethene (up to 5,000 ppb), cis-1,2-dichloroethene (up to 14,000 ppb), and vinyl chloride (up to 3,200 ppb) have also been found in shallow groundwater at concentrations above their respective Part 703.5 class GA standards (5 ppb each). - Soil PCE has been found in soil up to 290,000 ppm, well above the soil cleanup objective for unrestricted use (1.3 ppm). -Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 8,200,000 ug/m^3, and in indoor air up to 170 ug/m^3. Concentrations of TCE in soil vapor have been found up to 32,000 ug/m^3, and in indoor air up to 12 ug/m^3. Significant Threat: The site poses a significant threat to public health and the environment."

Health Problem: "Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public

FORMER SPIC AND SPAN CLEANERS (Continued) **S109416408**

water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available. "

DEC Memo:	"6/9/2014: During investigation work being conducted at a State Superfund site (Former Spic and Span Cleaners, DEC Site ID No. 224129), a UST was discovered beneath the southern portion of a vacant warehouse during pre-clearing activities. DEC PM (Harrington) directed the standby consultant (URS Corporation) to call in a spill for this site. Soils surrounding the tank have been found to contain visual and olfactory evidence of petroleum contamination. (Harrington) 6/9/2014: H. Patel (DEC - Region 2) received spill from dispatch. Patel contacted D. Harrington (DEC PM - Central Office) to discuss the case, and subsequently assigned it to him. 6/16/2014: URS personel have uncovered a portion of the UST located inside the property (vacant warehouse located at 315 Kingsland Avenue/260 Norman Avenue). Tank appears to be oriented long-way north to south, and is approximately 10' in length. Tank was approximately 14 below grade. Through a hole in the top of the tank, it was observed to be single-walled steel approximately 1/4 thick, and approximately 4' in diameter. There appears to be ~6 of an unidentified liquid at the bottom of the tank. Contents smelled like a mixture of weathered petroleum and solvents such as paint thinner or wood stripper. (Harrington) 6/17/2014: URS personnel collected a product sample from the UST and submitted it to the lab. Product will be analyzed for VOCs, SVOCs, PCBs, RCRA characteristics, viscosity, surface tension, and specific gravity. (Harrington) 11/21/2014: PM requested URS to generate report detailing the findings of investigation surrounding the UST inside the building. Report will include sampling results from soil and product samples, and a tank removal estimate. (Harrington) 12/26/2014: PM sent an e-mail to URS Corporation commenting on the draft UST data summary report for the work done inside the vacant building at 315 Kingsland Avenue. Numerous changes need to be made before the report can be finalized. (Harrington) 1/24/2015: PM sent an e-mail to URS Corporation approving the revised UST data summary report on 1/9/15. This report was distributed to interested parties (including Community Board 1 and Greenpoint branch of Brooklyn Public Library) on 1/21/15. (Harrington) 3/30/2015: PM sent an e-mail to URS Corp. requesting budget estimate for IRM regarding DNAPL recovery and oversight work related to the removal of the UST inside the building (which will be handled separately under response call-out with Island Pump and Tank). (Harrington) 5/18/2015: The Department sent a WA Issuance/Notice to Proceed letter to URS Corporation for the development of the Schedule 2.11 budget package

FORMER SPIC AND SPAN CLEANERS (Continued) **S109416408**

regarding the IRM work assignment. This package is due to the Department in mid-June. (Harrington) 7/21/2015: DEC sent the WA Approval Letter to URS Corporation for the initiation of this IRM work assignment. IRM covers both UST removal and DNAPL recovery at the site. Call-out for tank removal to be completed by PM shortly. (Harrington) 7/31/2015: DEC PM issues call-out 124051 to Island Pump and Tank (IPT) for the completion of UST removal within the abandoned warehouse building at 315 Kingsland Avenue/260 Norman Avenue. Site visit with IPT and URS to be completed week of August 17th. (Harrington) 8/19/2015: DEC PM conducted kick-off meeting with URS and IPT personnel regarding the UST removal from the site building. IPT to confirm the permits needed before initiating work. URS will be providing scope for structural support of roof to IPT shortly. (Harrington) 9/21/2015: IPT mobilizes to the site to complete tank pull. Wall pockets are cut into the south, east, and west walls for placement of structural steel to support the building roof. Bobcat, mini-excavator, scissor lift, and steel brought to the site. (Harrington) 9/22/2015: IPT places the structural steel beams (W12x30) in place (one east-west beam supported by east and west wall pockets, and two north-south beams supported by southern wall pockets and east-west beam). Roof made placement difficult as there is a 5 sag in the middle, as well as numerous sprinkler lines (one of which was cut and capped). (Harrington) 9/23/2015: IPT welds the steel beams together, and seals up the wall pockets with brick and mortar mix. The scissor lift is removed from the site. UST top is exposed at the southern end. There appears to be ~11 of liquid in the tank. It smells like a mix of gasoline and paint stripper. Vent and fill lines are noted heading east from the tank toward the sidewalk. Tank appears to be at an angle descending to the north. (Harrington) 9/24/2015: IPT vacuum truck removes 225 gallons of a Class 3 flammable liquid (ID Number 1993). Tank is removed from the ground and cleaned. There were a lot of holes in the tank bottom; leaks were minimized by clay soils beneath tank. Stained soils evident beneath tank. Soil samples collected by URS. IPT over-excavated the area and stockpiled contaminated soil for shipment off-site. (Harrington) 9/25/2015: IPT completed soil excavations in the UST area to the extent feasible given conditions. URS collected confirmatory samples. MJ Engineering and Land Surveying completed an updated survey of the building interior, UST location, sample locations, and excavation boundaries. (Harrington) 9/28/2015: IPT completes backfill of excavation with clean fill, then finishes by saw-cutting the rough edges in the floor and capping the backfill with a 6 layer of concrete (with wire mesh) to match the surrounding floor. IPT demobilizes from the site. (Harrington) 12/28/2015: IPT has submitted paperwork regarding their efforts to remove the UST at the property. This paperwork was approved in an e-mail to IPT. Reporting on the overall effort will be received from URS in late January-early February 2016. (Harrington) 3/4/2016: URS submitted the UST closure report. Confirmatory soil sampling indicates all contaminated soil has been removed from the site. Spill closed. (Harrington)"

Remarks: "Unknown UST (4'x10') discovered during test borings and contaminated soil found. DEC Dave Harrington out of Albany Ofc is aware and project manager. Cleanup is pending. Tank still in the ground."

Site Description: "Location: The Site is located across multiple addresses in the Greenpoint section of Brooklyn, NY. The addresses for the Site include 257, 259, 263, & 269 Freeman Street and 230, 238, 242 Eagle Street. 269 Freeman Street is also known as 105 Provost Street. The Newtown Creek Water Pollution Control Plant (WPCP) is located directly east of the Site. Site Features: The original Site encompassed five separate buildings and three yards that occupy seven separate lots. The buildings are no more than 2 stories in height. The entire Site is approximately 1.2 acres in size. There are manufacturing buildings to the north, south and west of the Site. Current Zoning/Uses: The area (and properties) is zoned M3-1 which includes heavy manufacturing and industrial uses along with certain commercial uses. Properties on the site are currently used for the manufacturing of air conditioning duct work, a distribution center for paint and varnish, parking, and staging of various contracting equipment. - 263-269 Freeman and 242 Eagle Street are currently used for the manufacturing of air conditioning duct work and accessories - 238 Eagle street is currently used for the distribution of paint and varnish. - The Yard portion east of 238 Eagle Street is currently an unused dirt yard. Historical Uses: In the early 1900?s the site was used as a cooperage for wooden barrel and cask production. From approximately 1942 to 1982, the property was occupied by Reliable Machine Company that had numerous paint spraying locations on the property. In 1982, Ney Smelting and Refining Company took ownership of the property in 1982 and renovated the buildings and used the property for smelting of lead, tin and zinc. Smelting operations ceased in 2003. Site Geology and Hydrogeology: Shallow boring logs indicate the Site overlies historic fill. The soil type below the

FORMER NEY SMELTING AND REFINING COMPANY (Continued) **S113916765**

fill is not known. Depth to groundwater is approximately 10 feet below grade and may be tidally influenced due to the close proximity to the Newtown Creek. Groundwater flow may also be affected by the adjacent Newtown Creek WPCP. Groundwater flow direction is estimated to be to the northeast Miscellaneous: There are no PBS, CBS records for the multiple addresses of the Site."

Env Problem:	"The site is covered with multiple buildings and parking facilities. One small area of the site contains a dirt construction yard that is largely underlain by a concrete slab. The shallow subsurface soil is comprised of historic fill that contains building debris such as brick and concrete, ash, and soil. This material contains elevated concentrations of inorganics that are generally below allowable concentrations at industrial sites. SVOCs are also present in the soil at the site but also do not exceed standards for industrial areas. No VOCs were detected at levels that cause concern. Data from TCLP analyses were all below hazardous waste thresholds. Groundwater is sporadically impacted by PCE and breakdown products. There is no continuous plume of impacted groundwater as would be observed if a source of PCE was present. "

Updated By:	JHOCONNE
Site Description:	"Location: The site is located at 49 Dupont Street in the Greenpoint section of Brooklyn, Kings County, NY. The approximately one-acre site is identified on the tax map as Block 2487, Lots 1, 10, 12, 72 and 78. The site is bordered immediately to the north by Clay Street followed by commercial/industrial buildings, to the east by remaining portions of the Nuhart Plastic Manufacturing facility that are not associated with this NYS Inactive Hazardous Waste Disposal site, to the south by Dupont Street followed by multi-family residential structures, and to the west by Franklin Street followed by a New York City playground. Site Features: The dimensions of the site are approximately 240 feet by 200 feet. The site is entirely covered by a complex of industrial buildings that were constructed at different

FORMER NUHART PLASTIC MANUFACTURING (Continued) **1009232006**

times. Current Zoning and Land Use: The site is zoned M1-2/R6, which designates the site as manufacturing with a residential overlay. The on-site building is currently vacant. Past Use of the Site: The site has been in used for various manufacturing and commercial purposes since 1887. It has been used for manufacturing, as an office, for storage, and for shipping and receiving. Prior to the late 1940s, the site and the surrounding lots were used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. The subject property was developed for plastic manufacturing purposes in the late 1940s to early 1950s, and has remained relatively unchanged since that time. From 1983 to 2004, NuHart and Company made vinyl siding and sheeting at the site. After 2004, NuHart vacated the on-site buildings. There are 12 underground storage tanks (USTs) located on the site. According to records, these tanks were emptied and closed. There are also two large aboveground silos on site. The Petroleum Bulk Storage (PBS) facility number is 2-608875, and the Chemical Bulk Storage (CBS)facility number is 2-000444. Liquid plasticizers stored included bis(2-ethylhexyl)phthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is the on-site source area and associated contamination. OU2 consists of the off-site groundwater and soil vapor plumes. Site Geology and Hydrogeology: Soil at the site consists of a layer of urban fill extending from the surface to about 8 feet below the onsite slab, underlain by sand, silty sand and/or sandy silt. Groundwater is encountered at a depth of approximately 10 to 15 feet below grade surface and flows generally westerly to northwesterly towards the East River. "

Env Problem: "Nature and Extent of Contamination: Soil and groundwater samples from both on-site and off-site were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), PCBs, pesticides and metals. Based upon investigation conducted to date, the primary contaminants of concern for both OU1 and OU2 include phthalates (specifically bis(2-ethylhexyl) phthalate and di-n-octyl phthalate) and VOCs (specifically trichloroethylene and its decomposition products). Soil - VOCs in soil are found both on and off-site at levels above unrestricted use soil cleanup objectives (UUSCOs) in a limited area in the northeast portion of the site and extending off-site beneath the sidewalk on the south side of Clay Street. The highest soil contamination concentration of trichloroethylene (TCE) was reported at 14 parts per million (ppm) compared to the UUSCO of 0.47 ppm. Other VOCs detect above the UUSCOs include: cis-1,2-dicholoretheylene (DCE) with maximum concentration of 2.4 ppm (UUSCO is 0.25 ppm). SVOCs in soil were identified both onsite and off-site above UUSCOs, including bis(2-ethylhexyl) phthalate (DEHP) at a concentration of 59,200 ppm (UUSCO is 50 ppm) and di-n-octyl phthalate (DOP) at a concentration of 3,010 ppm (UUSCO is 100 ppm). The following site-specific chemicals were identified in soil exceeding the restricted residential SCOs: bis(2-ethylhexyl) phthalate, di-n-octyl phthalate, cis-1,2-dichloroethene, and TCE. Groundwater - Phthalates are present as an LNAPL plume floating on the groundwater surface beneath most of the site and extending

FORMER NUHART PLASTIC MANUFACTURING (Continued) **1009232006**

	off-site to the west and southwest. Dissolved-phase phthalates were detected above NYSDEC groundwater standards in several wells generally located on the periphery of the LNAPL plume. The maximum concentration of DEHP was reported at 1,750 parts per billion or "ppb" (compared to the groundwater standard of 5 ppb) and DOP at 87.1 ppb (compared to the groundwater standard of 50 ppb). Dissolved-phase TCE and its associated breakdown product DCE were found in the northeast portion of the site and extending a short distance off-site to the northwest at concentrations exceeding the groundwater standards of 5 ppb. The maximum concentrations of TCE was reported at 33,000 ppb, and DCE at 2,700 ppb. Soil Vapor - VOCs were detected in on-site sub-slab soil vapor beneath the northeastern portion of the site building with the greatest impacts coinciding with the chlorinated VOC-impacted groundwater in this area. Sub-slab vapor contaminant concentrations were detected up to a maximum of 43,000 micrograms per cubic meter (ug/m3) for TCE, 2,500 ug/m3 for PCE, and 3,700 ug/m3 for DCE. "
Health Problem:	"Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site redevelopment or occupancy. Furthermore, the potential for off-site soil vapor intrusion should be evaluated, as appropriate, if off-site property owners grant access. "

FORMER NUHART PLASTIC MANUFACTURING (Continued) **1009232006**

Town:	New York City
Record Added Date:	10/22/2009
Record Updated Date:	08/24/2010
Update By:	YYWONG
Site Description:	"The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The building consists of a number of smaller buildings that have been joined together. The dimensions of the footprint of the one large building are approximately 400 feet by 200 feet. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To the west is a park and to the northwest is a paved lot which is used for truck storage. The site has been in existence since 1887. It has been used for manufacturing, as an office, as storage, and for shipping and receiving. Prior to 1950, the site was used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. From 1983 to 2004, NuHart & Company made vinyl siding and sheeting at the site. After 2004, NuHart & Company removed all of their equipment and offices. The site is now used for the storage of plastic wrapping and many large (36 cu. ft.) fabric bags containing pellets of resin. There are 17 underground storage tanks located on the site and two large silos above ground at the west end of the building. The Petroleum Bulk Storage (PBS)number is 2-608875 (for 13 registered tanks). The site is a former Chemical Bulk Storage (CBS) facility #2-000444 with 5 plasticizer tanks. Liquid plasticizers stored included bis(2-ethylhexyl)tertphthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate. The requestor withdrew the application, and the site was listed on the Registry of Inactive Hazardous Waste disposal site as of June 2010 (see site no. 224136)."
Env Problem:	"The plasticizers bis(2-ethylhexyl)phthalate anddi-n-octylphthalate, as well as #4 fuel oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in soil. From 1983 to 2004 NuHart & Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid plasticizers and petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000,000 ppb of bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. A large plume of plasticizer NAPL was identified under the western end of the factory where the plasticizer USTs were located. This plume had migrated off-site in a northwesterly direction. A small plume of mostly #4 oil NAPL was identified under the northeast corner of the factory and had migrated a shorty distance off site. The environmental remediation which followed involved cleaning the floors of the factory, cleaning out the underground storage tanks, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and equipment. The NAPL plumes have now been reduced in size and consist of three separate plumes. All of the plumes are contained under the sidewalks bounding the factory and under the footprint of the building. The smallest plume is under the northeast corner of the site. The former large plume under the western end of the factory is now two separate plumes (according to the November 26, 2008 gauging

FORMER NUHART PLASTIC MANUFACTURING (Continued) **1009232006**

event) and consist solely of plasticizers. The thickness of the NAPL ranges from 0.16 feet to 1.38 feet. Product collection from these two plumes is continuing and, as of December 2008, has recovered a total of 8,356 gallons of NAPL."

Waste Code: D042

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Description: 2,4,6-TRICHLOROPHENOL

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS)

RADIAC RESEARCH CORP (Continued) **1000245435**

ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: F008
Waste Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F009
Waste Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F010
Waste Description: QUENCHING BATH RESIDUES FROM OIL BATHS FROM METAL HEAT TREATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F011
Waste Description: SPENT CYANIDE SOLUTIONS FROM SLAT BATH POT CLEANING FROM METAL HEAT TREATING OPERATIONS.

Waste Code: F012
Waste Description: QUENCHING WASTEWATER TREATMENT SLUDGES FROM METAL HEAT TREATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F019
Waste Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Waste Code: P001
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste Code: P002
Waste Description: 1-ACETYL-2-THIOUREA (OR) ACETAMIDE, N-(AMINOTHIOXOMETHYL)-

Waste Code: P003

Waste Description: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)- (OR) EPINEPHRINE

Waste Code: P043
Waste Description: DIISOPROPYLFLUOROPHOSPHATE (DFP) (OR) PHOSPHOROFLUORIDIC ACID, BIS(1-METHYLETHYL) ESTER

Waste Code: P044
Waste Description: DIMETHOATE (OR) PHOSPHORODITHIOIC ACID, O,O-DIMETHYL S-[2-(METHYLAMINO)-2-OXOETHYL] ESTER

Waste Code: P045
Waste Description: 2-BUTANONE, 3,3-DIMETHYL-1-(METHYLTHIO)-, O-[METHYLAMINO)CARBONYL] OXIME (OR) THIOFANOX

Waste Code: P046
Waste Description: ALPHA,ALPHA-DIMETHYLPHENETHYLAMINE (OR) BENZENEETHANAMINE, ALPHA, ALPHA-DIMETHYL-

Waste Code: P047
Waste Description: 4,6-DINITRO-O-CRESOL, & SALTS (OR) PHENOL, 2-METHYL-4,6-DINITRO-, &

RADIAC RESEARCH CORP (Continued) **1000245435**

SALTS

Waste Code: P048
Waste Description: 2,4-DINITROPHENOL (OR) PHENOL, 2,4-DINITRO-

Waste Code: P049
Waste Description: DITHIOBIURET (OR) THIOIMIDODICARBONIC DIAMIDE [(H2N)C(S)]2NH

Waste Code: P050
Waste Description: 6,9-METHANO-2,4,3-BENZODIOXATHIEPIN,6,7,8,9,10,10-HEXACHLORO-1,5,5A,6, 9,9A-HEXAHYDRO-,3-OXIDE (OR) ENDOSULFAN

Waste Code: P051
Waste Description: 2,7:3,6-DIMETHANONAPHTH[2,3-B]OXIRENE, 3,4,5,6,9,9-HEXACHLORO-1A,2,2A,3,6,6A,7,7A-OCTAHYDRO-, (1AALPHA, 2BETA, 2ABETA, 3ALPHA, 6ALPHA, 6ABETA, 7BETA, 7AALPHA)- & METABOLITES (OR) ENDRIN (OR) ENDRIN, & METABOLITES

Waste Code: P054
Waste Description: AZIRIDINE (OR) ETHYLENEIMINE

Waste Code: P056
Waste Description: FLUORINE

Waste Code: P057
Waste Description: ACETAMIDE, 2-FLUORO- (OR) FLUOROACETAMIDE

Waste Code: P058
Waste Description: ACETIC ACID, FLUORO-, SODIUM SALT (OR) FLUOROACETIC ACID, SODIUM SALT

Waste Code: P059
Waste Description: 4,7-METHANO-1H-INDENE, 1,4,5,6,7,8,8-HEPTACHLORO-3A,4,7,7A-TETRAHYDRO- (OR) HEPTACHLOR

Waste Code: P060
Waste Description: 1,4,5,8-DIMETHANONAPHTHALENE, 1,2,3,4,10,10-HEXA-CHLORO-1,4,4A,5,8,8A,-HEXAHYDRO-, (1ALPHA, 4ALPHA, 4ABETA, 5BETA, 8BETA, 8ABETA)- (OR) ISODRIN

Waste Code: P062
Waste Description: HEXAETHYL TETRAPHOSPHATE (OR) TETRAPHOSPHORIC ACID, HEXAETHYL ESTER

Waste Code: P063
Waste Description: HYDROCYANIC ACID (OR) HYDROGEN CYANIDE

Waste Code: P064
Waste Description: METHANE, ISOCYANATO- (OR) METHYL ISOCYANATE

Waste Code: P065
Waste Description: FULMINIC ACID, MERCURY(2+) SALT (R,T) (OR) MERCURY FULMINATE (R,T)

Waste Code: P066
Waste Description: ETHANIMIDOTHIOIC ACID, N-[[(METHYLAMINO)CARBONYL]OXY]-, METHYL ESTER (OR) METHOMYL

Waste Code: P067
Waste Description: 1,2-PROPYLENIMINE (OR) AZIRIDINE, 2-METHYL-

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: P068
Waste Description: HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE

Waste Code: P069
Waste Description: 2-METHYLLACTONITRILE (OR) PROPANENITRILE, 2-HYDROXY-2-METHYL-

Waste Code: P070
Waste Description: ALDICARB (OR) PROPANAL, 2-METHYL-2-(METHYLTHIO)-, O-[(METHYLAMINO)CARBONYL]OXIME

Waste Code: P071
Waste Description: METHYL PARATHION (OR) PHOSPHOROTHIOIC ACID, O,O,-DIMETHYL O-(4-NITROPHENYL) ESTER

Waste Code: P072
Waste Description: ALPHA-NAPHTHYLTHIOUREA (OR) THIOUREA, 1-NAPHTHALENYL-

Waste Code: P073
Waste Description: NICKEL CARBONYL (OR) NICKEL CARBONYL NI(CO)4, (T-4)-

Waste Code: P074
Waste Description: NICKEL CYANIDE (OR) NICKEL CYANIDE NI(CN)2

Waste Code: P075
Waste Description: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

Waste Code: P076
Waste Description: NITRIC OXIDE (OR) NITROGEN OXIDE NO

Waste Code: P077
Waste Description: BENZENAMINE, 4-NITRO- (OR) P-NITROANILINE

Waste Code: P078
Waste Description: NITROGEN DIOXIDE (OR) NITROGEN OXIDE NO2

Waste Code: P081
Waste Description: 1,2,3-PROPANETRIOL, TRINITRATE (R) (OR) NITROGLYCERINE (R)

Waste Code: P082
Waste Description: METHANIMINE, N-METHYL-N-NITROSO- (OR) N-NITROSODIMETHYLAMINE

Waste Code: P084
Waste Description: N-NITROSOMETHYLVINYLAMINE (OR) VINYLAMINE, N-METHYL-N-NITROSO-

Waste Code: P085
Waste Description: DIPHOSPHORAMIDE, OCTAMETHYL- (OR) OCTAMETHYLPYROPHOSPHORAMIDE

Waste Code: P087
Waste Description: OSMIUM OXIDE OSO4, (T-4)- (OR) OSMIUM TETROXIDE

Waste Code: P088
Waste Description: 7-OXABICYCLO[2.2.1]HEPTANE-2,3-DICARBOXYLIC ACID (OR) ENDOTHALL

Waste Code: P089
Waste Description: PARATHION (OR) PHOSPHOROTHIOIC ACID, O,O-DIETHYL-O-(4-NITROPHENYL) ESTER

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: P092
Waste Description: MERCURY, (ACETATO-O)PHENYL- (OR) PHENYLMERCURY ACETATE

Waste Code: P093
Waste Description: PHENYLTHIOUREA (OR) THIOUREA, PHENYL-

Waste Code: P094
Waste Description: PHORATE (OR) PHOSPHORODITHIOIC ACID, O,O-DIETHYL S-[(ETHYLTHIO)METHYL] ESTER

Waste Code: P095
Waste Description: CARBONIC DICHLORIDE (OR) PHOSGENE

Waste Code: P096
Waste Description: HYDROGEN PHOSPHIDE (OR) PHOSPHINE

Waste Code: P097
Waste Description: FAMPHUR (OR) PHOSPHOROTHIOIC ACID O-[4-[(DIMETHYLAMINO)SULFONYL]PHENYL] O,O-DIMETHYL ESTER

Waste Code: P098
Waste Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Waste Code: P099
Waste Description: ARGENTATE (1-), BIS(CYANO-C)-, POTASSIUM (OR) POTASSIUM SILVER CYANIDE

Waste Code: P101
Waste Description: ETHYL CYANIDE (OR) PROPANENITRILE

Waste Code: P102
Waste Description: 2-PROPYN-1-OL (OR) PROPARGYL ALCOHOL

Waste Code: P103
Waste Description: SELENOUREA

Waste Code: P104
Waste Description: SILVER CYANIDE (OR) SILVER CYANIDE AG(CN)

Waste Code: P105
Waste Description: SODIUM AZIDE

Waste Code: P106
Waste Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Waste Code: P107
Waste Description: STRONTIUM SULFIDE SRS

Waste Code: P108
Waste Description: STRYCHNIDIN-10-ONE, & SALTS (OR) STRYCHNINE, & SALTS

Waste Code: P109
Waste Description: TETRAETHYLDITHIOPYROPHOSPHATE (OR) THIODIPHOSPHORIC ACID, TETRAETHYL ESTER

Waste Code: P110
Waste Description: PLUMBANE, TETRAETHYL- (OR) TETRAETHYL LEAD

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: P111
Waste Description: DIPHOSPHORIC ACID, TETRAETHYL ESTER (OR) TETRAETHYL PYROPHOSPHATE

Waste Code: P112
Waste Description: METHANE, TETRANITRO- (R) (OR) TETRANITROMETHANE (R)

Waste Code: P113
Waste Description: THALLIC OXIDE (OR) THALLIUM OXIDE TL2O3

Waste Code: P114
Waste Description: SELENIOUS ACID, DITHALLIUM (1+) SALT (OR) THALLIUM(I) SELENITE

Waste Code: P115
Waste Description: SULFURIC ACID, DITHALLIUM (1+) SALT (OR) THALLIUM(I) SULFATE

Waste Code: P116
Waste Description: HYDRAZINECARBOTHIOAMIDE (OR) THIOSEMICARBAZIDE

Waste Code: P118
Waste Description: METHANETHIOL, TRICHLORO- (OR) TRICHLOROMETHANETHIOL

Waste Code: P119
Waste Description: AMMONIUM VANADATE (OR) VANADIC ACID, AMMONIUM SALT

Waste Code: P120
Waste Description: VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE

Waste Code: P121
Waste Description: ZINC CYANIDE (OR) ZINC CYANIDE ZN(CN)2

Waste Code: P122
Waste Description: ZINC PHOSPHIDE ZN3P2, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 10% (R,T)

Waste Code: P123
Waste Description: TOXAPHENE

Waste Code: U001
Waste Description: ACETALDEHYDE (I) (OR) ETHANAL (I)

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U012
Waste Description: ANILINE (I,T) (OR) BENZENAMINE (I,T)

Waste Code: U014
Waste Description: AURAMINE (OR) BENZENAMINE, 4,4'-CARBONIMIDOYLBIS[N,N-DIMETHYL-

Waste Code: U015
Waste Description: AZASERINE (OR) L-SERINE, DIAZOACETATE (ESTER)

Waste Code: U016
Waste Description: BENZ[C]ACRIDINE

Waste Code: U017
Waste Description: BENZAL CHLORIDE (OR) BENZENE, (DICHLOROMETHYL)-

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: U018
Waste Description: BENZ[A]ANTHRACENE

Waste Code: U019
Waste Description: BENZENE (I,T)

Waste Code: U020
Waste Description: BENZENESULFONIC ACID CHLORIDE (C,R) (OR) BENZENESULFONYL CHLORIDE (C,R)

Waste Code: U021
Waste Description: [1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE

Waste Code: U022
Waste Description: BENZO[A]PYRENE

Waste Code: U023
Waste Description: BENZENE, (TRICHLOROMETHYL)- (OR) BENZOTRICHLORIDE (C,R,T)

Waste Code: U024
Waste Description: DICHLOROMETHOXY ETHANE (OR) ETHANE, 1,1'-[METHYLENEBIS(OXY)]BIS[2-CHLORO-

Waste Code: U025
Waste Description: DICHLOROETHYL ETHER (OR) ETHANE, 1,1'-OXYBIS[2-CHLORO-

Waste Code: U026
Waste Description: CHLORNAPHAZIN (OR) NAPHTHALENAMINE, N,N'-BIS(2-CHLOROETHYL)-

Waste Code: U027
Waste Description: DICHLOROISOPROPYL ETHER (OR) PROPANE, 2,2'-OXYBIS[2-CHLORO-

Waste Code: U028
Waste Description: 1,2-BENZENEDICARBOXYLIC ACID, BIS(2-ETHYLHEXYL) ESTER (OR) DIETHYLHEXYL PHTHALATE

Waste Code: U029
Waste Description: METHANE, BROMO- (OR) METHYL BROMIDE

Waste Code: U030
Waste Description: 4-BROMOPHENYL PHENYL ETHER (OR) BENZENE, 1-BROMO-4-PHENOXY-

Waste Code: U031
Waste Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Waste Code: U032
Waste Description: CALCIUM CHROMATE (OR) CHROMIC ACID H2CRO4, CALCIUM SALT

Waste Code: U033
Waste Description: CARBON OXYFLUORIDE (R,T) (OR) CARBONIC DIFLUORIDE

Waste Code: U034
Waste Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Waste Code: U035
Waste Description: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: U036
Waste Description: 4,7-METHANO-1H-INDENE, 1,2,4,5,6,7,8,8-OCTACHLORO-2,3,3A,4,7,7A-HEXAHYDRO- (OR) CHLORDANE, ALPHA & GAMMA ISOMERS

Waste Code: U037
Waste Description: BENZENE, CHLORO- (OR) CHLOROBENZENE

Waste Code: U038
Waste Description: BENZENEACETIC ACID, 4-CHLORO-ALPHA-(4-CHLOROPHENYL)-ALPHA-HYDROXY-, ETHYL ESTER (OR) CHLOROBENZILATE

Waste Code: U039
Waste Description: P-CHLORO-M-CRESOL (OR) PHENOL, 4-CHLORO-3-METHYL-

Waste Code: U041
Waste Description: EPICHLOROHYDRIN (OR) OXIRANE, (CHLOROMETHYL)-

Waste Code: U042
Waste Description: 2-CHLOROETHYL VINYL ETHER (OR) ETHENE, (2-CHLOROETHOXY)-

Waste Code: U043
Waste Description: ETHENE, CHLORO- (OR) VINYL CHLORIDE

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U045
Waste Description: METHANE, CHLORO- (I,T) (OR) METHYL CHLORIDE (I,T)

Waste Code: U046
Waste Description: CHLOROMETHYL METHYL ETHER (OR) METHANE, CHLOROMETHOXY-

Waste Code: U047
Waste Description: BETA-CHLORONAPHTHALENE (OR) NAPHTHALENE, 2-CHLORO-

Waste Code: U048
Waste Description: O-CHLOROPHENOL (OR) PHENOL, 2-CHLORO-

Waste Code: U049
Waste Description: 4-CHLORO-O-TOLUIDINE, HYDROCHLORIDE (OR) BENZENAMINE, 4-CHLORO-2-METHYL-, HYDROCHLORIDE

Waste Code: U050
Waste Description: CHRYSENE

Waste Code: U051
Waste Description: CREOSOTE

Waste Code: U052
Waste Description: CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-

Waste Code: U053
Waste Description: 2-BUTENAL (OR) CROTONALDEHYDE

Waste Code: U055
Waste Description: BENZENE, (1-METHYLETHYL)- (I) (OR) CUMENE (I)

RADIAC RESEARCH CORP (Continued) **1000245435**

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D002
Waste Description:	CORROSIVE WASTE
Waste Code:	D003
Waste Description:	REACTIVE WASTE
Waste Code:	D004
Waste Description:	ARSENIC
Waste Code:	D005
Waste Description:	BARIUM

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D018
Waste Description: BENZENE

Waste Code: D019
Waste Description: CARBON TETRACHLORIDE

Waste Code: D020
Waste Description: CHLORDANE

Waste Code: D021
Waste Description: CHLOROBENZENE

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D023
Waste Description: O-CRESOL

Waste Code: D024
Waste Description: M-CRESOL

Waste Code: D025
Waste Description: P-CRESOL

Waste Code: D026
Waste Description: CRESOL

Waste Code: D027
Waste Description: 1,4-DICHLOROBENZENE

Waste Code: D028
Waste Description: 1,2-DICHLOROETHANE

Waste Code: D029
Waste Description: 1,1-DICHLOROETHYLENE

Waste Code: D030
Waste Description: 2,4-DINITROTOLUENE

Waste Code: D031
Waste Description: HEPTACHLOR (AND ITS EPOXIDE)

Waste Code: D032
Waste Description: HEXACHLOROBENZENE

Waste Code: D033
Waste Description: HEXACHLOROBUTADIENE

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: D034
Waste Description: HEXACHLOROETHANE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D036
Waste Description: NITROBENZENE

Waste Code: D038
Waste Description: PYRIDINE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: D042
Waste Description: 2,4,6-TRICHLOROPHENOL

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE

RADIAC RESEARCH CORP (Continued) **1000245435**

SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: F008
Waste Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F009
Waste Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F010
Waste Description: QUENCHING BATH RESIDUES FROM OIL BATHS FROM METAL HEAT TREATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F011
Waste Description: SPENT CYANIDE SOLUTIONS FROM SLAT BATH POT CLEANING FROM METAL HEAT TREATING OPERATIONS.

Waste Code: F012
Waste Description: QUENCHING WASTEWATER TREATMENT SLUDGES FROM METAL HEAT TREATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F019
Waste Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Waste Code: P001
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: P002
Waste Description: 1-ACETYL-2-THIOUREA (OR) ACETAMIDE, N-(AMINOTHIOXOMETHYL)-

Waste Code: P003
Waste Description: 2-PROPENAL (OR) ACROLEIN

Waste Code: P004
Waste Description: 1,4,5,8-DIMETHANONAPHTHALENE, 1,2,3,4,10,10-HEXA-CHLORO-1,4,4A,5,8,8A,-HEXAHYDRO-, (1ALPHA, 4ALPHA, 4ABETA, 5ALPHA, 8ALPHA, 8ABETA)- (OR) ALDRIN

Waste Code: P005
Waste Description: 2-PROPEN-1-OL (OR) ALLYL ALCOHOL

Waste Code: P006
Waste Description: ALUMINUM PHOSPHIDE (R,T)

Waste Code: P007
Waste Description: 3(2H)-ISOXAZOLONE, 5-(AMINOMETHYL)- (OR) 5-(AMINOMETHYL)-3-ISOXAZOLOL

Waste Code: P008
Waste Description: 4-AMINOPYRIDINE (OR) 4-PYRIDINAMINE

Waste Code: P009
Waste Description: AMMONIUM PICRATE (R) (OR) PHENOL, 2,4,6-TRINITRO-, AMMONIUM SALT (R)

Waste Code: P010
Waste Description: ARSENIC ACID H3ASO4

Waste Code: P011
Waste Description: ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE

Waste Code: P012
Waste Description: ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE

Waste Code: P013
Waste Description: BARIUM CYANIDE

Waste Code: P014
Waste Description: BENZENETHIOL (OR) THIOPHENOL

Waste Code: P015
Waste Description: BERYLLIUM

Waste Code: P016
Waste Description: DICHLOROMETHYL ETHER (OR) METHANE, OXYBIS[CHLORO-

Waste Code: P017
Waste Description: 2-PROPANONE, 1-BROMO- (OR) BROMOACETONE

Waste Code: P018
Waste Description: BRUCINE (OR) STRYCHNIDIN-10-ONE, 2,3-DIMETHOXY-

Waste Code: P020
Waste Description: DINOSEB (OR) PHENOL, 2-(1-METHYLPROPYL)-4,6-DINITRO-

Waste Code: P021

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Description: CALCIUM CYANIDE (OR) CALCIUM CYANIDE CA(CN)2

Waste Code: P022
Waste Description: CARBON DISULFIDE

Waste Code: P023
Waste Description: ACETALDEHYDE, CHLORO- (OR) CHLOROACETALDEHYDE

Waste Code: P024
Waste Description: BENZENAMINE, 4-CHLORO- (OR) P-CHLORANILINE

Waste Code: P026
Waste Description: 1-(O-CHLOROPHENYL)THIOUREA (OR) THIOUREA, (2-CHLOROPHENYL)-

Waste Code: P027
Waste Description: 3-CHLOROPROPIONITRILE (OR) PROPANENITRILE, 3-CHLORO-

Waste Code: P029
Waste Description: COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)

Waste Code: P030
Waste Description: CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED

Waste Code: P031
Waste Description: CYANOGEN (OR) ETHANEDINITRILE

Waste Code: P033
Waste Description: CYANOGEN CHLORIDE (OR) CYANOGEN CHLORIDE (CN)CL

Waste Code: P034
Waste Description: 2-CYCLOHEXYL-4,6-DINITROPHENOL (OR) PHENOL, 2-CYCLOHEXYL-4,6-DINITRO-

Waste Code: P036
Waste Description: ARSONOUS DICHLORIDE, PHENYL- (OR) DICHLOROPHENYLARSINE

Waste Code: P037
Waste Description: 2,7:3,6-DIMETHANONAPHTH[2,3-B]OXIRENE, 3,4,5,6,9,9-HEXACHLORO-1A,2,2A,3,6,6A,7,7A-OCTAHYDRO-, (1AALPHA, 2BETA, 2AALPHA, 3BETA, 6BETA, 6AALPHA, 7BETA, 7AALPHA)- (OR) DIELDRIN

Waste Code: P038
Waste Description: ARSINE, DIETHYL- (OR) DIETHYLARSINE

Waste Code: P039
Waste Description: DISULFOTON (OR) PHOSPHORODITHIOIC ACID, O,O-DIETHYL S-[2-(ETHYLTHIO)ETHYL] ESTER

Waste Code: P040
Waste Description: O,O-DIETHYL O-PYRAZINYL PHOSPHOROTHIOATE (OR) PHOSPHOROTHIOIC ACID, O,O-DIETHYL O-PYRAZINYL ESTER

Waste Code: P041
Waste Description: DIETHYL-P-NITROPHENYL PHOSPHATE (OR) PHOSPHORIC ACID, DIETHYL 4-NITROPHENYL ESTER

Waste Code: P042
Waste Description: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)- (OR)

RADIAC RESEARCH CORP (Continued) **1000245435**

EPINEPHRINE

Waste Code: P043
Waste Description: DIISOPROPYLFLUOROPHOSPHATE (DFP) (OR) PHOSPHOROFLUORIDIC ACID, BIS(1-METHYLETHYL) ESTER

Waste Code: P044
Waste Description: DIMETHOATE (OR) PHOSPHORODITHIOIC ACID, O,O-DIMETHYL S-[2-(METHYLAMINO)-2-OXOETHYL] ESTER

Waste Code: P045
Waste Description: 2-BUTANONE, 3,3-DIMETHYL-1-(METHYLTHIO)-, O-[METHYLAMINO)CARBONYL] OXIME (OR) THIOFANOX

Waste Code: P046
Waste Description: ALPHA,ALPHA-DIMETHYLPHENETHYLAMINE (OR) BENZENEETHANAMINE, ALPHA, ALPHA-DIMETHYL-

Waste Code: P047
Waste Description: 4,6-DINITRO-O-CRESOL, & SALTS (OR) PHENOL, 2-METHYL-4,6-DINITRO-, & SALTS

Waste Code: P048
Waste Description: 2,4-DINITROPHENOL (OR) PHENOL, 2,4-DINITRO-

Waste Code: P049
Waste Description: DITHIOBIURET (OR) THIOIMIDODICARBONIC DIAMIDE [(H2N)C(S)]2NH

Waste Code: P050
Waste Description: 6,9-METHANO-2,4,3-BENZODIOXATHIEPIN,6,7,8,9,10,10-HEXACHLORO-1,5,5A,6, 9,9A-HEXAHYDRO-,3-OXIDE (OR) ENDOSULFAN

Waste Code: P051
Waste Description: 2,7:3,6-DIMETHANONAPHTH[2,3-B]OXIRENE, 3,4,5,6,9,9-HEXACHLORO-1A,2,2A,3,6,6A,7,7A-OCTAHYDRO-, (1AALPHA, 2BETA, 2ABETA, 3ALPHA, 6ALPHA, 6ABETA, 7BETA, 7AALPHA)- & METABOLITES (OR) ENDRIN (OR) ENDRIN, & METABOLITES

Waste Code: P054
Waste Description: AZIRIDINE (OR) ETHYLENEIMINE

Waste Code: P056
Waste Description: FLUORINE

Waste Code: P057
Waste Description: ACETAMIDE, 2-FLUORO- (OR) FLUOROACETAMIDE

Waste Code: P058
Waste Description: ACETIC ACID, FLUORO-, SODIUM SALT (OR) FLUOROACETIC ACID, SODIUM SALT

Waste Code: P059
Waste Description: 4,7-METHANO-1H-INDENE, 1,4,5,6,7,8,8-HEPTACHLORO-3A,4,7,7A-TETRAHYDRO- (OR) HEPTACHLOR

Waste Code: P060
Waste Description: 1,4,5,8-DIMETHANONAPHTHALENE, 1,2,3,4,10,10-HEXA-CHLORO-1,4,4A,5,8,8A,-HEXAHYDRO-, (1ALPHA, 4ALPHA,

RADIAC RESEARCH CORP (Continued) **1000245435**

4ABETA, 5BETA, 8BETA, 8ABETA)- (OR) ISODRIN

Waste Code: P062
Waste Description: HEXAETHYL TETRAPHOSPHATE (OR) TETRAPHOSPHORIC ACID, HEXAETHYL ESTER

Waste Code: P063
Waste Description: HYDROCYANIC ACID (OR) HYDROGEN CYANIDE

Waste Code: P064
Waste Description: METHANE, ISOCYANATO- (OR) METHYL ISOCYANATE

Waste Code: P065
Waste Description: FULMINIC ACID, MERCURY(2+) SALT (R,T) (OR) MERCURY FULMINATE (R,T)

Waste Code: P066
Waste Description: ETHANIMIDOTHIOIC ACID, N-[[(METHYLAMINO)CARBONYL]OXY]-, METHYL ESTER (OR) METHOMYL

Waste Code: P067
Waste Description: 1,2-PROPYLENIMINE (OR) AZIRIDINE, 2-METHYL-

Waste Code: P068
Waste Description: HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE

Waste Code: P069
Waste Description: 2-METHYLLACTONITRILE (OR) PROPANENITRILE, 2-HYDROXY-2-METHYL-

Waste Code: P070
Waste Description: ALDICARB (OR) PROPANAL, 2-METHYL-2-(METHYLTHIO)-, O-[(METHYLAMINO)CARBONYL]OXIME

Waste Code: P071
Waste Description: METHYL PARATHION (OR) PHOSPHOROTHIOIC ACID, O,O,-DIMETHYL O-(4-NITROPHENYL) ESTER

Waste Code: P072
Waste Description: ALPHA-NAPHTHYLTHIOUREA (OR) THIOUREA, 1-NAPHTHALENYL-

Waste Code: P073
Waste Description: NICKEL CARBONYL (OR) NICKEL CARBONYL NI(CO)4, (T-4)-

Waste Code: P074
Waste Description: NICKEL CYANIDE (OR) NICKEL CYANIDE NI(CN)2

Waste Code: P075
Waste Description: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

Waste Code: P076
Waste Description: NITRIC OXIDE (OR) NITROGEN OXIDE NO

Waste Code: P077
Waste Description: BENZENAMINE, 4-NITRO- (OR) P-NITROANILINE

Waste Code: P078
Waste Description: NITROGEN DIOXIDE (OR) NITROGEN OXIDE NO2

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: P081
Waste Description: 1,2,3-PROPANETRIOL, TRINITRATE (R) (OR) NITROGLYCERINE (R)

Waste Code: P082
Waste Description: METHANIMINE, N-METHYL-N-NITROSO- (OR) N-NITROSODIMETHYLAMINE

Waste Code: P084
Waste Description: N-NITROSOMETHYLVINYLAMINE (OR) VINYLAMINE, N-METHYL-N-NITROSO-

Waste Code: P085
Waste Description: DIPHOSPHORAMIDE, OCTAMETHYL- (OR) OCTAMETHYLPYROPHOSPHORAMIDE

Waste Code: P087
Waste Description: OSMIUM OXIDE OSO4, (T-4)- (OR) OSMIUM TETROXIDE

Waste Code: P088
Waste Description: 7-OXABICYCLO[2.2.1]HEPTANE-2,3-DICARBOXYLIC ACID (OR) ENDOTHALL

Waste Code: P089
Waste Description: PARATHION (OR) PHOSPHOROTHIOIC ACID, O,O-DIETHYL-O-(4-NITROPHENYL) ESTER

Waste Code: P092
Waste Description: MERCURY, (ACETATO-O)PHENYL- (OR) PHENYLMERCURY ACETATE

Waste Code: P093
Waste Description: PHENYLTHIOUREA (OR) THIOUREA, PHENYL-

Waste Code: P094
Waste Description: PHORATE (OR) PHOSPHORODITHIOIC ACID, O,O-DIETHYL S-[(ETHYLTHIO)METHYL] ESTER

Waste Code: P095
Waste Description: CARBONIC DICHLORIDE (OR) PHOSGENE

Waste Code: P096
Waste Description: HYDROGEN PHOSPHIDE (OR) PHOSPHINE

Waste Code: P097
Waste Description: FAMPHUR (OR) PHOSPHOROTHIOIC ACID O-[4-[(DIMETHYLAMINO)SULFONYL]PHENYL] O,O-DIMETHYL ESTER

Waste Code: P098
Waste Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Waste Code: P099
Waste Description: ARGENTATE (1-), BIS(CYANO-C)-, POTASSIUM (OR) POTASSIUM SILVER CYANIDE

Waste Code: P101
Waste Description: ETHYL CYANIDE (OR) PROPANENITRILE

Waste Code: P102
Waste Description: 2-PROPYN-1-OL (OR) PROPARGYL ALCOHOL

Waste Code: P103
Waste Description: SELENOUREA

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: P104
Waste Description: SILVER CYANIDE (OR) SILVER CYANIDE AG(CN)

Waste Code: P105
Waste Description: SODIUM AZIDE

Waste Code: P106
Waste Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Waste Code: P107
Waste Description: STRONTIUM SULFIDE SRS

Waste Code: P108
Waste Description: STRYCHNIDIN-10-ONE, & SALTS (OR) STRYCHNINE, & SALTS

Waste Code: P109
Waste Description: TETRAETHYLDITHIOPYROPHOSPHATE (OR) THIODIPHOSPHORIC ACID, TETRAETHYL ESTER

Waste Code: P110
Waste Description: PLUMBANE, TETRAETHYL- (OR) TETRAETHYL LEAD

Waste Code: P111
Waste Description: DIPHOSPHORIC ACID, TETRAETHYL ESTER (OR) TETRAETHYL PYROPHOSPHATE

Waste Code: P112
Waste Description: METHANE, TETRANITRO- (R) (OR) TETRANITROMETHANE (R)

Waste Code: P113
Waste Description: THALLIC OXIDE (OR) THALLIUM OXIDE TL2O3

Waste Code: P114
Waste Description: SELENIOUS ACID, DITHALLIUM (1+) SALT (OR) THALLIUM(I) SELENITE

Waste Code: P115
Waste Description: SULFURIC ACID, DITHALLIUM (1+) SALT (OR) THALLIUM(I) SULFATE

Waste Code: P116
Waste Description: HYDRAZINECARBOTHIOAMIDE (OR) THIOSEMICARBAZIDE

Waste Code: P118
Waste Description: METHANETHIOL, TRICHLORO- (OR) TRICHLOROMETHANETHIOL

Waste Code: P119
Waste Description: AMMONIUM VANADATE (OR) VANADIC ACID, AMMONIUM SALT

Waste Code: P120
Waste Description: VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE

Waste Code: P121
Waste Description: ZINC CYANIDE (OR) ZINC CYANIDE ZN(CN)2

Waste Code: P122
Waste Description: ZINC PHOSPHIDE ZN3P2, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 10% (R,T)

Waste Code: P123

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Description: TOXAPHENE

Waste Code: U001
Waste Description: ACETALDEHYDE (I) (OR) ETHANAL (I)

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U012
Waste Description: ANILINE (I,T) (OR) BENZENAMINE (I,T)

Waste Code: U014
Waste Description: AURAMINE (OR) BENZENAMINE, 4,4'-CARBONIMIDOYLBIS[N,N-DIMETHYL-

Waste Code: U015
Waste Description: AZASERINE (OR) L-SERINE, DIAZOACETATE (ESTER)

Waste Code: U016
Waste Description: BENZ[C]ACRIDINE

Waste Code: U017
Waste Description: BENZAL CHLORIDE (OR) BENZENE, (DICHLOROMETHYL)-

Waste Code: U018

Waste Description: BENZENE, (TRICHLOROMETHYL)- (OR) BENZOTRICHLORIDE (C,R,T)

Waste Code: U024
Waste Description: DICHLOROMETHOXY ETHANE (OR) ETHANE, 1,1'-[METHYLENEBIS(OXY)]BIS[2-CHLORO-

Waste Code: U025
Waste Description: DICHLOROETHYL ETHER (OR) ETHANE, 1,1'-OXYBIS[2-CHLORO-

Waste Code: U026
Waste Description: CHLORNAPHAZIN (OR) NAPHTHALENAMINE, N,N'-BIS(2-CHLOROETHYL)-

Waste Code: U027
Waste Description: DICHLOROISOPROPYL ETHER (OR) PROPANE, 2,2'-OXYBIS[2-CHLORO-

Waste Code: U028
Waste Description: 1,2-BENZENEDICARBOXYLIC ACID, BIS(2-ETHYLHEXYL) ESTER (OR)

RADIAC RESEARCH CORP (Continued) **1000245435**

DIETHYLHEXYL PHTHALATE

Waste Code: U029
Waste Description: METHANE, BROMO- (OR) METHYL BROMIDE

Waste Code: U030
Waste Description: 4-BROMOPHENYL PHENYL ETHER (OR) BENZENE, 1-BROMO-4-PHENOXY-

Waste Code: U031
Waste Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Waste Code: U032
Waste Description: CALCIUM CHROMATE (OR) CHROMIC ACID H2CRO4, CALCIUM SALT

Waste Code: U033
Waste Description: CARBON OXYFLUORIDE (R,T) (OR) CARBONIC DIFLUORIDE

Waste Code: U034
Waste Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Waste Code: U035
Waste Description: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

Waste Code: U036
Waste Description: 4,7-METHANO-1H-INDENE, 1,2,4,5,6,7,8,8-OCTACHLORO-2,3,3A,4,7,7A-HEXAHYDRO- (OR) CHLORDANE, ALPHA & GAMMA ISOMERS

Waste Code: U037
Waste Description: BENZENE, CHLORO- (OR) CHLOROBENZENE

Waste Code: U038
Waste Description: BENZENEACETIC ACID, 4-CHLORO-ALPHA-(4-CHLOROPHENYL)-ALPHA-HYDROXY-, ETHYL ESTER (OR) CHLOROBENZILATE

Waste Code: U039
Waste Description: P-CHLORO-M-CRESOL (OR) PHENOL, 4-CHLORO-3-METHYL-

Waste Code: U041
Waste Description: EPICHLOROHYDRIN (OR) OXIRANE, (CHLOROMETHYL)-

Waste Code: U042
Waste Description: 2-CHLOROETHYL VINYL ETHER (OR) ETHENE, (2-CHLOROETHOXY)-

Waste Code: U043
Waste Description: ETHENE, CHLORO- (OR) VINYL CHLORIDE

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U045
Waste Description: METHANE, CHLORO- (I,T) (OR) METHYL CHLORIDE (I,T)

Waste Code: U046
Waste Description: CHLOROMETHYL METHYL ETHER (OR) METHANE, CHLOROMETHOXY-

Waste Code: U047

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Description: BETA-CHLORONAPHTHALENE (OR) NAPHTHALENE, 2-CHLORO-

Waste Code: U048
Waste Description: O-CHLOROPHENOL (OR) PHENOL, 2-CHLORO-

Waste Code: U049
Waste Description: 4-CHLORO-O-TOLUIDINE, HYDROCHLORIDE (OR) BENZENAMINE, 4-CHLORO-2-METHYL-, HYDROCHLORIDE

Waste Code: U050
Waste Description: CHRYSENE

Waste Code: U051
Waste Description: CREOSOTE

Waste Code: U052
Waste Description: CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-

Waste Code: U053
Waste Description: 2-BUTENAL (OR) CROTONALDEHYDE

Waste Code: U055
Waste Description: BENZENE, (1-METHYLETHYL)- (I) (OR) CUMENE (I)

Waste Code: U056
Waste Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Waste Code: U057
Waste Description: CYCLOHEXANONE (I)

Waste Code: U058
Waste Description: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

Waste Code: U059
Waste Description: 5,12-NAPHTHACENEDIONE, 8-ACETYL-10-[(3-AMINO-2,3,6-TRIDEOXY)-ALPHA-L-LYXO-HEXOPYRANOSYL)OXY]-7,8,9,10-TETRAHYDRO-6,8,11-TRIHYDROXY-1-METHOXY-, (8S-CIS)- (OR) DAUNOMYCIN

Waste Code: U060
Waste Description: BENZENE, 1,1'-(2,2-DICHLOROETHYLIDENE)BIS[4-CHLORO- (OR) DDD

Waste Code: U061
Waste Description: BENZENE, 1,1'-(2,2,2-TRICHLOROETHYLIDENE)BIS[4-CHLORO- (OR) DDT

Waste Code: U062
Waste Description: CARBAMOTHIOIC ACID, BIS(1-METHYLETHYL)-, S-(2,3-DICHLORO-2-PROPENYL) ESTER (OR) DIALLATE

Waste Code: U063
Waste Description: DIBENZ[A,H]ANTHRACENE

Address:	18 DIVISION PLACE
City,State,Zip:	BROOKLYN, NY 11222
Program:	HW

GOODMAN BROTHERS CO STEEL DRUM DIV (Continued) **1000190383**

Site Code: 505634
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 0.670
HW Code: 224211
Record Add: 03/18/2015
Record Upd: 08/10/2020
Updated By: HMDUDEK
Site Description: "Location: The 0.67 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the south side of Division Place between Kingsland and Debevoise Avenues. Site Features: The site is mostly covered with one-story buildings, with a storage yard located on the south side along Richardson Street. Current Zoning and Land Use: The site is zoned for manufacturing. The site is currently used for storage and light manufacturing. Numerous commercial, industrial, and residential properties surround the site. Past Use of the Site: Goodman Brothers began operations in 1909 as a re-conditioner and recycler of used steel drums for re-use or disposal. The Department's initial involvement with the facility was a RCRA inspection conducted in September 1982, as the company was a large quantity generator of hazardous waste above a sole-source aquifer. The company went out of business in June 2002. During the last 20 years of its operation, Goodman Brothers entered into one consent order with the USEPA (1983), and two consent orders with the Department (1987 and 2003), and agreed to pay penalties in the overall amount of $28,000 for numerous violations. Site Geology and Hydrogeology: The site is underlain by a sand/silty sand unit (~15-35' thick), a discontinuous sand/gravel unit within the sand/silty sand unit (~5' thick), a discontinuous clayey silt unit within the sand/silty sand unit (~5' thick), and a sand unit below. Groundwater is approximately 15-20' below grade in the immediate vicinity of the site. Groundwater below the site flows toward the east in the direction of Newtown Creek (~3,600' away)."
Env Problem: "Nature and Extent of Contamination: - Groundwater The primary contaminants in groundwater are Volatile Organic Compounds or VOCs and Per/ polyfluoroalkyl substances (PFAS). For example, the chlorinated VOC, cis-1,2 dichloroethene (DCE) was detected up to 61,000 parts per billion or ppb, compared to groundwater standard of 5 ppb. The PFAS compound Perfluorooctanoic acid (PFOA) was detected up to 5,100 parts per trillion or ppt, compared to a groundwater standard of 10 ppt. - Soil The primary contaminants in soil are VOCs and Polychlorinated Biphenyls (PCBs). For example, the chlorinated VOC, tetrachloroethene (PCE) was detected up to 1,200 parts per million or ppm. This exceeds the commercial Soil Cleanup Objective (SCO) of 150 ppm. Total PCBs were detected up on 130 ppm, which exceeds the commercial SCO of 1 ppm. Soil Vapor: Numerous VOCs were detected in soil vapor. For example, DCE was detected up to 5,600,000 micrograms per cubic meter (ug/m3). Numerous Significant Threat: The site poses a significant environmental threat due to ongoing releases of PCE (and its breakdown products), BTEX compounds, and PCBs from source areas into soil groundwater and soil vapor."
Health Problem: "Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this

GOODMAN BROTHERS CO STEEL DRUM DIV (Continued) **1000190383**

contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion in on-site and off-site structures exists and should be evaluated and may need to be evaluated for off-site structures. "

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Updated By:	KGHALE

Site Description: "Location: The site is located at 460 Kingsland Avenue in the Greenpoint section of Brooklyn, New York (Figure 1). 460 Kingsland Avenue is located within a commercial/industrial area and is bordered by Newtown Creek to the east (which has served as an industrial water way for nearly 140 years), Kingsland Avenue to the west, Greenpoint Avenue (John Jay Byrne) Bridge to the north, and OU-4 to the south. To the east, Newtown Creek has been designated a Federal Superfund Site and is under the jurisdiction of the United States Environmental Protection Agency (USEPA). Site Features: The property is composed of an approximate 3.55-acre parcel, identified as Block 2612 Lot 20 on the Brooklyn tax map. Land surface elevations are approximately 7 feet above mean sea level (AMSL) within the southeastern portion of and gradually rise to approximately 11 feet (AMSL) within the northwestern portion of the site. Currently, the site contains two abutting one-story buildings. Current Zoning and Land Use: The property is zoned M3-1 for heavy manufacturing and industrial use. Exterior areas are paved and used for parking and storage. The site is subleased to numerous third parties for parking, storage, and for use as office space. Past Use of the Site: Historical maps indicate the site and surrounding areas were undeveloped marshlands until the late 1800s when the land was filled for industrial development. The northern portion of the site was operated by the Columbus Distilling Company and the Chris Cunningham Boiler Works from approximately 1892

460 KINGSLAND AVENUE (Continued) **U003074537**

to 1919. The southern portion of the site was operated by ExxonMobil s predecessors as part of a petroleum refinery operation from approximately 1892 to 1920. By approximately 1920, refinery operations had expanded to include the entirety of 460 Kingsland Avenue. The refinery operations within the site continued until 1966. Under ExxonMobil s former operations, 460 Kingsland Avenue also served as a petroleum bulk storage yard. An oil water separator (OWS) was located along southern site boundary. Based on a review of historic aerial photographs, the OWS appears to have been filled sometime between 1961 and 1966. In 1967, ExxonMobil s predecessors sold the property to a freight company and a trucking terminal was built, which currently remains on-site. On or about August 29, 1981, a former site owner reported that the bulkhead had collapsed into Newtown Creek, along with considerable amounts of fill/soil, asphalt parking lot and concrete curb stop. The bulkhead collapse was repaired with fill and a new steel sheet pile bulkhead was installed along the property. As documented in the Updated PCB Source Evaluation Report (September 7, 2012), PCB contamination in this area appears to be attributable to PCB-laden fill materials associated with the bulkhead reconstruction. Site Geology and Hydrogeology: The stratigraphic units underlying the site form three distinct hydrogeologic units; the shallow aquifer, the shallow confining unit, and, the regional aquifer. The shallow aquifer is primarily comprised of the saturated fill materials deposited above the historical creek and marsh sediments. The depth to groundwater in the shallow aquifer varies from approximately 1.5 to 8.5 feet below land surface (ft/bls) within the site and the saturated thickness of the shallow aquifer within the site is typically less than 10 feet. The shallow confining unit is made up of deposits from the historical creek and marsh sediments. Historically, marsh land and open water covered the entirety of 460 Kingsland Avenue. The shallow confining unit ranges in thickness from approximately 5 to 20 feet across the site. The shallow confining unit has very low groundwater movement rates such that, it isolates the shallow aquifer from the underlying regional aquifer. This causes confined or semi-confined conditions within the regional aquifer. The geology of the shallow confining unit is identified as a clay or peat material with varying levels of silt. The regional aquifer is found throughout the site below the shallow aquifer and shallow confining unit. It is made up of fine to medium grained sands, with varying amounts of silt and coarser materials and was found to be at least 10 to 15 feet in thickness. Groundwater movement is consistent in the regional aquifer compared to the shallow aquifer, due to the sand and silty sand material that comprise this layer."

Env Problem: "Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present. Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site."

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

460 KINGSLAND AVENUE (Continued) **U003074537**

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL ALSO SEE LATER, CLOSED SPILL REPORT NO. 9403747. 10/10/95: This is additional information about material spilled from the translation of the old spill file: HEAVY FUEL OIL. 03/29/04 Related to Mobil Greenpoint spill Transferred from Miller to Rommel. 10/12/04 Received call from John Harrison, EcolSciences, Rockaway, NJ, 973-366-9500, representing potential buyer. Plans to FOIA the file. Rommel 3/4/05 - Mr. Arthur Max, a consultant representing the current owner called to inquire about what it takes to close out the case. His Number is 201-867-6777. Transfer it to Alex Zhitomirsky. - KST 3/31/2005 According to Arthur Max Yellow Freight pulled some tanks in 1994. They found and removed most of the soil contamination. DEC asked to remove more contamination around the perimeter. Woodward Clyde stated that due to the Mobil spill and high background contamination there is no point in removing more soil. Weintraub real estate company was hired by Yellow Freight. Alex Zhitomirsky requested on March 4, 2005, that the responsible party should submit documentation supporting their case to NYSDEC. AZ 9/26/2005 Conversation with Arthur Max. They want to buy this property and inquired what should be done in order to close this spill. I responded that site assessment should be performed. Gw wells installed at the property and along the perimetr of the property in order to compare background contamination with the site contamination. AZ 1/17/2006 I left a message for Arthur Max. Investigation/delineation is pending. AZ 1/18/2006 I contacted Arthur Max (Weintraub, Casey - Realtors 201-876-6777). He informed me that they sold this property in November 2005 to Sagres, LLC 2 Galasso Place, Maspeth, NY 11378 718-456-1800(?)(they are in the same building as Galasso Trucking). I contacted Frank Galasso (partner) at 718-456-1800. He said that I should talk to Phil Galasso (partner)516-965-7766. He will ask him to contact me ASAP. AZ 4/3/2006 I contacted Phil Galasso (Reveal New Sag LLC.)516-965-7766. He will file for FOIL and have his consultant contact me. AZ 6/13/2006 I left a message for John Urda (DEC Legal)requesting his assistance with this case. AZ 6/14/2006 Jon Kolleeny recommended to refer this case to J. Urda. J. Urda recommended to send RP a short form STIP. J. Kolleeny supported this recommendation. A short form STIP was sent to Phil Galasso, Sagres LLC, 2 Galasso Place, Maspeth, NY 11378 AZ 6/27/2006 Received a message from Steve Russo (212-421-2150). Left a message for Steve Russo. AZ 6/27/2006 Conversation with Steve Russo, attorney for the owner (Reveal New Sag). He works for Sive Paget company(212-421-2150). They will send me report for review. I will get back to them when I review the report. AZ 6/28/2006 The report does not contain a map showing the locations of the old excavated tanks (15 USTs). No borings were installed near the old tank field. Fingerprint analyses were not attached. AZ 7/27/2006 Left a message for Steve Russo (Sive, Paget & Riesel). AZ 8/2/2006 Conversation with Steve Russo (212-421-2150). I conveyed to him that the report lacks essential information:borings/wells were not installed near the old tank field; there is no map showing the old excavated tanks (15 USTs), fingerprint analyses were not attached to the report. DEC requested new borings/wells installation, mointoring of the new wells and fingerprint analyses of the free phase. He will get back to me with a plan of actin in a week. AZ 8/10/06 I sent e-mail to Steven Russo Sive, Paget & Riesel, P.C. at 460 Park Avenue New York, New York 10022(212) 421-2150 confirming the additional items that should be

460 KINGSLAND AVENUE (Continued) **U003074537**

submitted to DEC: 1. A sampling plan providing for the installation of groundwater wells and collection of soil samples proximate to the area where the former Yellow Freight USTs were excavated 2. Reflect the former UST location on the map or maps accompanying the supplemental sampling plan 3. Provide results of historic and new fingerprint analysis of petroleum, if any, collected from the newly installed monitoring wells or, if no free product is collected from the wells, from soil samples. AZ 1/31/2007 I contacted Steven Russo @ (212) 421-2150 (Sive, Paget & Riesel). Exxon Mobil is preparing an extensive sampling plan for this site which will be submitted within a month. He will send me fingerprint analyses and a map with tank locations. He will forward a sampling plan as soon as it will be available. AZ 2/6/2007 Received historical and current fingerprint analyses from Steve Russo. He stated that we are hoping to finalize access issues with Exxon Mobil in the next week so that a work plan to more fully investigate the site can be submitted shortly. AZ 4/13/2007 Received e-mail from Ed Hampston (DER Albany). He received proposed investigation plan (part of investigations associated with the former Mobil Refinery/Terminal from Exxon) and forwarded it to Reg. 2. E. Hampston will likely to request some of their borings go beyond the first impermeable layer they encounter (or nest wells) to see if there is deeper contamination. I reviewed the Exxon proposals and discussed the work plan with Ed. I suggested increasing the number of wells (they initially suggested 3 wells), advancing wells at the locations of the former Yellow Freight tanks, advancing wells near the Exxon plume boundaries, performing fingerprint analyses on all samples, compiling detailed groundwater and soil plume maps. AZ 11/1/2007 Reviewed Investigation Report by Roux Associates dated August 2, 2007 and received on August 21, 2007. Nine soil borings and three new shallow aquifer wells wells and three new regional aquifer monitoring wells were completed. SVOC and metals were detected at concentrations greater than the NYSDEC Restricted Commercial Use Criteria in the shallow subsurface beneath the property. with the highest concentrations present in the vicinity of SB-4, SB-7, SB-9. PCBs were also detected at three soil borings with the highest concentrations observed at SB-6. Although petroleum staining was observed throughout the shallow subsurface, only globules of free product were observed at two locations that were associated historic petroleum storage operations. There were no observed visual impacts within the regional aquifer. VOC and SVOCs are present in groundwater above the NYSDEC AWQSGV within the shallow aquifer. PCB were detected in one location within the sallow aquifer at monitoring well KNW-4. Within the regional aquifer, only minor concentrations of petroleum and chlorinated compounds were observed in gw above the guidance level. According to the report, data indicated that the free product plume present within the regional aquifer beneath the Exxon Mobil Brooklyn Terminal to the south of the property does not extend to the north beneath the property. AZ 12-27-2007 Letters to Phil Galasso and Exxon Mobil were sent out by DEC (Ed Hampston - Central Office). The DEC letters required further investigation and remediation of the site. AZ 1-9-2008 Meeting with Philip Galasso (Revael New Sag), John Urda, Ed Hapston, Alan Michaels (by phone NYSDEC), Michael Bogin (Steve, Paget), Dan Buget. AZ 8-12-2008 The owner is proceeding with the sale of the property. The existing building will be demolished for a clean fill recycling operation. As part of the demo, they intend to dig out around the building footprint, and want to know if this will be enough to close the UST spill. I recommended taking the

460 KINGSLAND AVENUE (Continued) **U003074537**

end point samples. Also, a work plan containing a site map with UST locations, hot spots (based on the previous investigations), the excavation area and proposed sampling locations should be submitted to DEC. I conveyed my suggestions to John Urda and Ed Hampston. AZ 10-27-2008 I have received an e-mail from Ed Hampston who forwarded a request for spill closure by Leggette, Brashears @ Graham. I e-mailed my response to John Urda and Ed Hampstead. AZ 10-29-2008 Conference call with John Urda and Michael Bogin. DEC requested that New Sag investigate and remediate area in front of the building at the locations of the former USTs (diesel, waste oil and heating oil tanks). According to September 19, 1994 closure report, waste oil tank had 3 holes and soil in the USTs area exhibited VOC exceedances. Also, VOC concentrations in the former USTs area exceeded the background concentrations. DEC (Mike Mulqueen 2-27-1995) requested further investigation and remediation. AZ 1-8-2008 A conference call with Central office was held (V.Brevdo, J. Urda, Ed Hampston, Alan Michaels, Joseph White). The site was discussed. Central Office will work with Exxon Mobil to address PCB contamination. AZ 2/4/2009 A meeting was held among Alex Zhitomirsky, John Urda, Vadim Brevdo, Allan Michaels, Ed Hampston of DEC and Phil Galasso and Michael Bogin representing Mr. Galasso. Phil Galasso and Michael Bogin presented information that appears to support their conviction that PCB contamination and remaining petroleum contamination plums are part of a greater Exxon Mobil plume (Greenpoint plume) and, therefore, should be investigated/remediated by Exxon Mobil. It was decided that Albany (Ed Hempston and Allan Michaels) will call a meeting with Exxon Mobil so the other party can present their case. If information presented by 460 Kingsland owners is confirmed then this spill number will be closed and referred to a main spill number of Greenpoint (Exxon Mobil)spill for further investigation/remediation. AZ 3-27-2009 After consultation with V. Brevdo, J. Urda and Ed Hampston this spill number is closed. According to Ed Hampston, all further activities for this site will be tracked under spill #8800244 (this is the spill Central Ofiice has PIN attached). Ed Hampston intends to create a P site for 460 Kingsland. AZ "

Updated By:	kstang
Site Description:	"The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site."

Record Upd:	04/22/2021
Updated By:	HMDUDEK
Site Description:	"Location: The property is a 0.23 acre property located on the east side of Apollo Street between Nassau Avenue and Norman Avenue. The site is surrounded by commercial and manufacturing properties. Site Features: A one-story commercial building is present on the property. Current Zoning and Land Use: The site is zoned M1-2 (commercial and light manufacturing). The site is currently vacant. Past Use of the Site: A Phase I Environmental Site Assessment identified previous on-site commercial/industrial uses including an adhesives manufacturer. Site Geology and Hydrogeology: On-site geology information is limited. Borings installed in the adjacent sidewalk revealed urban fill in the upper 5ft underlain primarily by fine sand with stratified layers of silt and gravel to groundwater interface at approximately 30ft below grade. Groundwater flow is the area in controlled by large-scale dewatering from the ExxonMobil Greenpoint Petroleum Remediation Project (NYSDEC Site No. S224150)."
Env Problem:	"Nature and extent of contamination based on the initial site characterization: Soil Semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and metals contamination were detected in shallow soil. For example, the SVOC - benzo(a)anthracene was detected at 1.5 parts per million or ppm (compared to the restricted-residential Soil Cleanup Objective [SCO] of 1 ppm), the metal mercury was detected at 2.01 ppm (compared at the

83 APOLLO STREET OER (Continued) **S117742296**

restricted-residential SCO of 0.81 ppm, and total PCBs was detected at 1.2 ppm (compared to the restricted-residential SCO of 1 ppm. Groundwater Elevated petroleum concentrations were encountered in groundwater. For example, benzene was detected at 2,200 parts per billion or ppb (compared to the groundwater standard of 1 ppb). Dissolved-phase petroleum contamination may be related to NYSDEC Site No. S224150: ExxonMobil Greenpoint Petroleum Remediation Project. Soil Vapor Elevated chlorinated solvent concentrations were encountered in soil vapor. For example, trichloroethene (TCE) was detected up to 31,300 micrograms per cubic meter. "

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

DEC Memo:	"9/30/2021 - Feng - Desk Duty in office. Spoke to Craig Purta of CP Engineering. It is a construction site. They did investigation and collected soil vapor and soil samples. Some of the parameters were elevated. No BCP program was applied. They did the geotechnical soil borings today and found odorous soil. Then they stop to go further. The odorous soil location matches the location where they found contamination during the previous investigation. They believe the contamination is from off site. The site near the Green Point site. And adjacent to the site is the New York Fuel Oil at 94 Hausman Street. They will submit the RIR and RAWP. Briefed to Rick Lin and assigned the spill to him. Craig Purta CP Engineering 917-952-8216 Craig@CPEngineeringPC.com"
Remarks:	"uncovered old oil. cleanup pending."

Site Description: "Location: The 0.49 acre site is located at 98, 100, and 104 South 4th Street in the Borough of Brooklyn, Kings County, NY in an urban area. It was previously known as 98-116 South 4th Street. Site Features: The site consists of three buildings: 98-102 (now 98), 104-114 (now 100) and 116 (now 104) South 4th Street. Occupying almost the entirety of the site is a multi-story structure made up of a 7 story structure in the center (100 South 4th St.) flanked by two smaller 1 story structures. Two of the buildings were constructed in 1910 and the third was constructed in 1950. All three buildings were renovated in the early 2000s. The 7 story structure is a residential building with approximately 74 units. Current Zoning and Land Use:

FORMER EL PUENTE (Continued) **S121933853**

The site is currently zoned as M1-2/R6 and is surrounded by residential, commercial and industrial uses. It is identified as a single tax lot, Block 2443, Lot 13 and is a rectangular shaped parcel along the southern side of South 4th St., between Berry St. and Bedford Ave. Past Use of the Site: The site previously had a variety of manufacturing uses, including an adhesives factory (98 S. 4th St, formerly 98-102 S 4th St), an electroplating operation, a laboratory (100 S. 4th St, formerly 104-114 S 4th St), and a dye factory (116 S 4th St). Carmin Industries was identified as a Large Quantity Generator of hazardous wastes, including undefined hazardous wastes, ignitable hazardous wastes, corrosive hazardous wastes, reactive hazardous wastes, chromium, lead and cyanides. Site Geology and Hydrogeology: Soil borings conducted in 1996 identified fill materials to a depth of approximately 7 feet below grade from the first floor of 98 S. 4th St and to a depth of approximately 6 feet below the basement floor of 100 S. 4th St. Beneath the surface fill layer is sand and silt to a depth of at least 17 feet below grade. Groundwater is present at a depth of approximately 15-17 feet below grade."

Env Problem: "Nature and Extent of Contamination: A subsurface investigation was performed in 1997 in support of an application to participate in the Voluntary Cleanup Program (see site no. V00094). Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and polychlorinated biphenyls (PCBs). Groundwater samples were analyzed for VOCs only. Soil A total of nine soil borings were advanced throughout buildings 2 and 3 (access to building 1 was precluded by structural deficiencies). Samples were collected from nine soil borings. Various VOCs were detected at concentrations exceeding the unrestricted use soil cleanup objectives (SCOs), including: tetrachloroethylene (PCE) at a maximum concentration of 5.5 parts per million (ppm); trichloroethene (TCE) at 3.7 ppm; and toluene at 1.4 ppm. SVOCs were also detected above the unrestricted use SCOs including: fluoranthene at a maximum concentration of 14 ppm; phenanthrene at 19 ppm; and pyrene at 19 ppm. The majority of the contaminants appear to be found beneath building 3 (the western one-story building). Groundwater Groundwater samples were collected from 3 locations on-site. PCE was detected at a maximum concentration of 86 parts per billion (ppb), TCE at 100 ppb, and toluene at 28 ppb. In addition, groundwater samples collected from a property immediately adjacent to the south of the site (BCP site no. C224233) identified PCE at a maximum concentration of 71.4 ppb and TCE at 27.2 ppb. Soil Vapor No soil vapor samples were collected. Groundwater samples collected from a property immediately adjacent to the south of the site (BCP site no. C224233) identified PCE at a maximum concentration of 2870 micrograms per cubic meter (ug/m3) and TCE at 3510 ug/m3. Further delineation of the soil vapor was performed at 2 residential buildings located to the west of the Site on Berry Street identified the need for mitigation. See also site no. C224260."

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Updated By: MJKOMORO
Site Description: "LOCATION: The Greenpoint Manufacturing and Design Center (GMDC) property is located at 1155-1205 Manhattan Avenue which is an urban area of Brooklyn (Kings County) in New York City. SITE FEATURES: The property is nearly entirely covered by structures, with only one small area covered with other impervious material located along the northern edge of the property along Newtown Creek. There are eight contiguous four to six-story building on the property. The property borders Newtown Creek on the north side. CURRENT ZONING/USE: This property is currently in use for many separate commercial uses, primarily by small businesses and artisans. The surrounding uses are varied - the property adjacent to the west is indicated as having residential and commercial use but appears commercial; the properties to the east across Manhattan Avenue are indicated as being factory/industrial uses, but appear to be commercial with residential above. HISTORICAL USE(s): The property has a long industrial/commercial history, but went through an extensive remedial effort overseen by local agencies in the 1990's. The property owners have done significant renovations on the buildings and have conducted at least two recent investigations which identified limited groundwater contamination, but did not identify any significant soil contamination."
Env Problem: "NATURE AND EXTENT OF CONTAMINATION: Only two (of ten) temporary groundwater sampling wells located in the basement of the structure at 1155 Manhattan Avenue showed evidence of contamination. Each contained one chlorinated VOC slightly above standards. Tetrachloroethylene was identified at 21ppb; chloroform was identified at 12 ppb. Groundwater standards are 5 ppb and 7 ppb respectively. Soil samples from these borings were below unrestricted standards for the same compounds. Samples taken from permanent wells did not identify any VOC contamination. Based on professional judgment, the slight exceedances of groundwater standards, adjacent to the Newtown Creek Superfund Site, do not constitute a significant threat to the environment. No further investigations are warranted at this time. Site designation was changed from "P" to "N.""

Updated By: HMDUDEK
Site Description: "Location: The 1.01 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the east side of Vandervoort Avenue between Anthony and Lombardy Streets. Site Features: The site is completely covered by one (1) two-story and three (3) one-story brick buildings. The site is surrounded by other commercial and industrial properties. Sergeant William Dougherty Playground is located immediately north of the site across Anthony Street, and the eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located one block to the north. A small residential area is located one block south of the site. Current Zoning/Use(s): The site is zoned for manufacturing. The site is currently used as a granite warehouse and showroom at 95 Lombardy Street, and a paper distribution office and a kitchen cabinet warehouse/showroom at 46 Anthony Street. Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was utilized as a metal fabricator and painting facility from the 1930's to the late 2000's, and a Department database which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing). Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the

95 LOMBARDY ST./ACME ARCH. PRODS., INC. (Continued) **U003652054**

site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site."

Env Problem: "Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is trichloroethene (TCE). TCE has been found on-site in shallow groundwater at concentrations up to 66,000 ppb, and in deep groundwater at concentrations up to 70,000 parts per billion or ppb, exceeding Part 703.5 class GA standards (5 ppb). Concentrations of tetrachloroethene (up to 8,000 ppb) and 1,2-dichloroethene (3,200 ppb) have also been found above their respective Part 703.5 class GA standards (5 ppb each). - Soil TCE was detected in soil at 2.3 parts per million or ppm in one sample (exceeding the unrestricted Soil Cleanup Objective). - Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 3,100 ug/m^3. Concentrations of TCE in soil vapor have been found up to 4,500 ug/m^3, and in indoor air up to 13 ug/m^3. Significant Threat: The site poses a significant environmental threat due to ongoing releases of TCE from source areas into soil and groundwater."

Health Problem: "Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available. Site Description: "Location The 1.08-acre site is located in the Greenpoint/East Williamsburg industrial section of Brooklyn, NY. The site is located on the southwest corner of the intersection of Vandervoort Avenue and Richardson Street. Please refer to Figures 1 2. Site Features The site is completely covered by a one-story brick building. Numerous other commercial and industrial properties are located to the north, south, and west of the site. The Greenpoint Little League fields and a National Grid energy facility are east of the site across Vandervoort Avenue. A small residential area is located 1-2 blocks north of the site. An eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located 4 blocks to the north. Current Zoning and Land Use The site is zoned for (M1) manufacturing. Per NYC Planning, M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. The site is currently used for sheet metal fabrication and offices. Past Use of the Site The Department began a Site Characterization in this area in2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, Site ID No. 224121). This property was identified as a potential source of contamination based on its past use. Klink Cosmo Cleaners operated as a commercial dry cleaner from the 1950's to the mid 1990's. During that time, hazardous waste (spent halogenated solvents) was generated under EPA ID no. NYD000824334. Site Geology and Hydrogeology The site is

FORMER KLINK COSMO CLEANERS (Continued) **S109416412**

underlain by urban fill unit (0.5-8 feet thick), a sand unit (approximately 100 feet thick) with varying textural features, and the Raritan (clay) Formation approximately 110 feet below ground surface (bgs). Groundwater is present approximately 35 feet bgs and flows north to northeast toward Newtown Creek. "

Env Problem: "Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern include VOCs and metals. Nature and Extent of Contamination: Soil The VOC source area was identified in the northeast corner of the current building at depths from 1 - 35 feet below ground surface (bgs). Tetrachloroethylene (PCE) was detected in soils on-site at concentrations up to 273 parts per million or ppm, exceeding the soil cleanup objective (SCO) for commercial use (150 ppm) and for the protection of groundwater (1.3 ppm). Trichloroethene (TCE) was detected in two on-site samples which slightly exceed the protection of groundwater SCO (0.47 ppm). PCE contaminated soil exceeding the protection of groundwater SCO extends off-site approximately ten feet to the north and east below the adjacent sidewalks of Vandervoort Avenue and Richardson Street. Metals contamination associated with urban fill was detected in shallow soil on-site. For example, lead was detected up to 2,680 ppm (exceeding the commercial SCO of 1,000 ppm) and arsenic up to 38.7 ppm (exceeding the commercial SCO of 16 ppm). The data does not indicate any off-site metal impacts in soil related to this site. Groundwater Based on the investigations conducted to date, the primary contaminants of concern detected in groundwater include PCE and trichloroethene (TCE). PCE has been found in shallow groundwater at concentrations up to 46,000 parts per billion or ppb (exceeding the groundwater standard of 5 ppb). PCE has also been found in deep groundwater (atop the Raritan clay) up to 4,500 ppb. TCE, a daughter product of PCE, was detected up to 2,100 ppb (exceeding the groundwater standard of 5 ppb). The groundwater plume extends north and east from the site to at least Lombardy street where it becomes co-mingled with contamination originating from other sites. Soil Vapor PCE has been found in soil vapor beneath the site at concentrations up to 2,090,000 micrograms per cubic meter, or ug/m^3. TCE has been found at concentrations up to 7,380 ug/m^3. Soil vapor intrusion sampling has been completed at twenty off-site structures. Actions described in Section 6.2 were needed to address potential exposure at twelve structures. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the site is covered by a building. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sub?slab depressurization systems (SSDSs) have been installed in twelve off?site residential buildings to prevent the indoor air quality from being affected by the contamination in soil vapor in the area. SSDSs remain available to homeowners in the vicinity of the site who previously rejected the State s offer for a system. The on-site building does not have an SSDS; however, the potential for soil vapor intrusion is being

FORMER KLINK COSMO CLEANERS (Continued) **S109416412**

addressed by the soil vapor extraction/air sparge system which is being constructed and will be operated on-site. "

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/20/2021

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Longitude (West):	73.955677 - 73ˆ 57’ 20.44’’
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	588197.1
UTM Y (Meters):	4508470.0
Elevation:	9 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

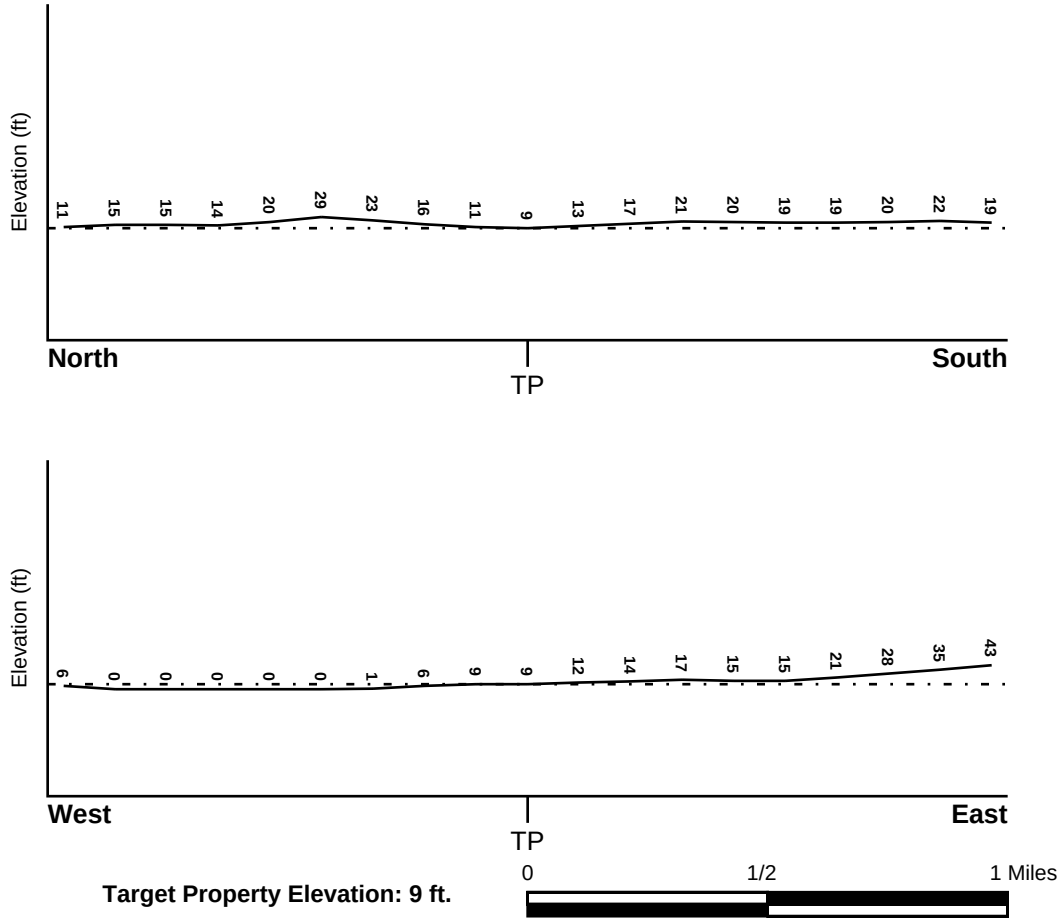
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970202F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970201F	FEMA FIRM Flood data
3604970206F	FEMA FIRM Flood data
3604970203F	FEMA FIRM Flood data
3604970204F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Subject: [OpenRecords] Request FOIL-2022-057-02155 Submitted to New York City Fire Department (FDNY)
Date: Tuesday, February 15, 2022 12:19:21 PM

This message originated outside your organization. Please use caution!

Your request FOIL-2022-057-02155 has been successfully submitted to the New York City Fire Department (FDNY). The details of your request are shown below.

Request Title: Phase I ESA Documents of Interest: Permits, haz materials, cleanups

Request Description: Fuel Tank Special Report (Environmental Assessment Report)

Request Type: Fuel Tank Special Report (Environmental Assessment Report)

Fuel Tank Special Report (Environmental Assessment Report)
Submission Method: Online/At Home
Description of Records: Phase I Environmental Site Assessments, Phase II Environmental Site Assessments, drainage structure investigations, drainage structure remediation, spill reports, environmental permitting and compliance, UST and AST records, tank investigations or removal reports, hazardous waste or petroleum storage/ records, etc. for the following properties: 14 Wythe Avenue, Brooklyn, NY 11211 (Brooklyn Block 2615, Lot 125) formerly identified as 168 Banker Street. Currently owned by Corzo Contracting Co Inc. (Which was identified as a SWF/LF facility) Additionally, any information (BCP) related to the Former Anglo Chemical and Rubber Site (1-9 Wythe Avenue, Brooklyn, NY) Site #C224337
Building Address: see above
Borough: Brooklyn
Account Info: 209 Shafter St

Dear Adam:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 2/15/2022 and given the reference number FOIL #W096387-021522 for tracking purposes. You may expect the Department's response to your request no later than **3/15/2022**.

Record Requested: **Phase I Environmental Site Assessments, Phase II Environmental Site Assessments, drainage structure investigations, drainage structure remediation, spill reports, environmental permitting and compliance, UST and AST records, tank investigations or removal reports, hazardous waste or petroleum storage/ records, etc. for the following properties: 14 Wythe Avenue, Brooklyn, NY 11211 (Brooklyn Block 2615, Lot 125) formerly identified as 168 Banker Street. Currently owned by Corzo Contracting Co Inc. (Which was identified as a SWF/LF facility) Additionally, any information (BCP) related to the Former Anglo Chemical and Rubber Site (1-9 Wythe Avenue, Brooklyn, NY) Site #C224337**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

FOIL #: 22-02-353
RE: 14 Wythe Avenue, Brooklyn, NY

Dear Adam Nasiatka:

This will acknowledge receipt of your request for records under the Freedom of Information Law (FOIL), received by this office on February 15, 2022.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Rosemarie Hewig, Esq.
Records Access Officer

SPECIAL FLOOD HAZARD AREAS
- Without Base Flood Elevation (BFE) *Zone A, V, A99*
- With BFE or Depth *Zone AE, AO, AH, VE, AR*
- Regulatory Floodway

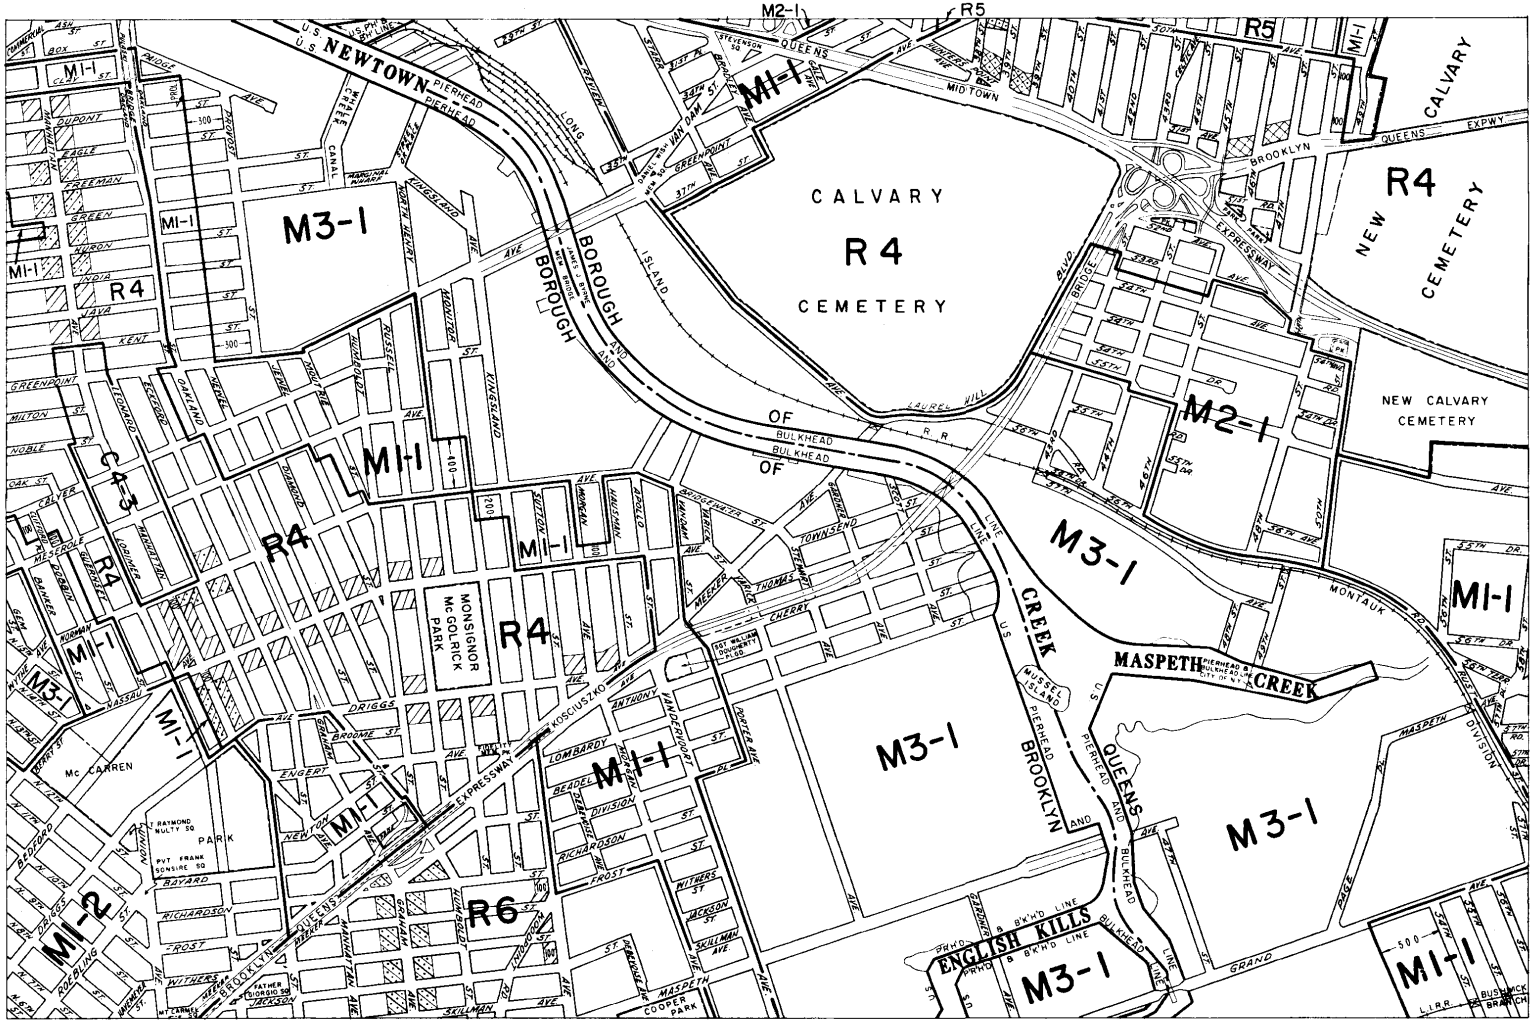
OTHER AREAS OF FLOOD HAZARD
- 0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile *Zone X*
- Future Conditions 1% Annual Chance Flood Hazard *Zone X*
- Area with Reduced Flood Risk due to Levee. See Notes. *Zone X*
- Area with Flood Risk due to Levee *Zone D*

OTHER AREAS
- NO SCREEN Area of Minimal Flood Hazard *Zone X*
- Effective LOMRs
- Area of Undetermined Flood Hazard *Zone D*

GENERAL STRUCTURES
- Channel, Culvert, or Storm Sewer
- Levee, Dike, or Floodwall

OTHER FEATURES
- 20.2 / 17.5 Cross Sections with 1% Annual Chance / Water Surface Elevation
- Coastal Transect
- Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

MAP PANELS
- Digital Data Available
- No Digital Data Available
- Unmapped



N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 2/15/2022 at 12:08 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

NYC PLANNING
DEPARTMENT OF CITY PLANNING CITY OF NEW YORK

Metadata for Historical Zoning Maps:

Source:

These PDF maps were created from the set of past versions of each of the 126 zoning maps in the Technical Review Division's archive. This set includes map versions for each zoning map beginning with the original 1961 issue of the Zoning Resolution and ending with the current zoning map as posted in the Zoning section of the Department of City Planning website: www.nyc.gov/planning.

Scanning and Creation of Adobe PDF copies:

Maps in this archive from 1961 through Update #2 of the Zoning Resolution in 2003 are scans of actual printed zoning map. From Update #3 (2005) onwards, maps are direct PDF copies of the map revisions as printed in updates to the Zoning Resolution.

Notes on conversion of Amendment Numbers to CP (City Planning) or ULURP numbers:

On earlier zoning maps, an Amendment Number (e.g. A-629) is used to identify the area that has been rezoned. Commission reports and sketch maps for rezonings are referenced solely by CP or ULURP numbers. In order to request copies of reports or sketch maps it is necessary to know the CP or ULURP number. A conversion table (ANumber-CPNumberConversion.pdf) is available to translate the "A" numbers listed on the actual zoning maps to their corresponding CP or ULURP numbers. Use of the Amendment Number to identify zoning map changes has been discontinued.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Roux Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Re: Limited Subsurface Investigation
18 Wythe Avenue, Brooklyn, NY 11222
DPV Project #2015008

Dear Mr. Arnaudin:

DPV Consultants Inc. (DPV) has prepared this letter report to document the results of the Limited Phase II Environmental Site Assessment (ESA) services conducted at the above-referenced property on February 11, 2015. The investigation was performed in accordance with DPV's proposal, dated January 9, 2015.

Background

The site consists of a 21,730-square foot (SF) tax parcel located on the north side of Wythe Avenue, between North 15th and Banker Streets, in the Greenpoint section of the Borough of Brooklyn, City of New York, Kings County, New York (Figure 1). The northwest portions of the property are also bordered by Gem Street. The site is currently developed with an approximately 1,350 SF, one-story, workshop/ storage structure and a 350 SF office trailer, both situated at the north-central portion of the lot. Two steel cargo/shipping containers are built into the northern side of the workshop/storage structure. In addition, a corrugated steel canopy structure is present along the fence-line at the southwest corner of the site as a shelter for stored materials. The remainder of the property consists of an asphalt-paved yard area utilized for the storage of construction equipment, vehicles and construction materials. The property is owned by Corzo Maintenance Co., Inc., an underground utility construction contractor and utilized as an office, workshop and equipment/material storage yard.

The Phase I Environmental Site Assessment for the site identified several outstanding environmental issues that required additional investigation to determine if they present a significant environmental risk to the property. The outstanding issues are summarized below:

- Sanborn maps and historic city directories indicate that several of the adjacent and further surrounding properties were historically utilized for industrial purposes including metal foundries, machine shops, paint and varnish manufacturing and various other manufacturing uses, as well as several properties with underground gasoline tanks. As such, there is a potential for historic operations at adjacent/nearby sites to have impacted groundwater and/or soil gas quality beneath the subject property.

- The 1887 Sanborn map shows that southwestern half of the subject property and adjacent areas southwest to N. 14th Street were formerly submerged beneath historic portions of Bushwick Inlet. No documentation regarding the nature or source of the fill materials utilized during land reclamation activities. As such, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on the site. The presence of fill materials beneath the site was confirmed during a 2003 geotechnical investigation.

SCOPE OF WORK

Soil Boring Investigation

DPV conducted a limited subsurface investigation on February 11, 2015 to determine if the historic uses of the adjacent properties and/or the fill materials have impacted the subsurface and to determine if additional investigation and/or remediation is warranted. The investigation included the installation of eight soil borings (SB-1 through SB-8) at representative locations throughout the paved and unpaved portions of the site. Soil boring locations are shown on Figure 2.

The soil borings were drilled by WRS Environmental Services (WRS) of Yaphank, New York using a track-mounted Geoprobe™ Model 6610 direct push unit. The Geoprobe™ uses direct push technology to drive core samplers to the desired depth for soil sample collection. This method can be performed quickly, so if refusal occurs a new location can be accessed with minimal effort. At each boring location, soil samples were collected continuously from grade to the water table, approximately 15 feet below ground surface, using a five-foot long macrocore sampler equipped with disposable acetate liners. Soil samples were characterized by a DPV geologist and inspected for visual and olfactory evidence of contamination (i.e. staining and/or odors). Subsurface soils consisted generally of fill materials (brown to black sandy soil mixed with brick, cinders and gravel), underlain by dark gray silt and clay, with some sandy layers and shells, indicative of a shallow marine environment. In addition, each sample was field screened for the presence of volatile organic compounds (VOCs) using a Rae Systems MiniRae 2000 photoionization detector (PID). Soil descriptions and PID measurements were recorded in a bound field notebook. Boring logs are included in Attachment A. Non-disposable sampling equipment was cleaned using a potable water and Alconox detergent wash followed by a potable water rinse prior to the collection of each sample.

As no visual or olfactory evidence of contamination or elevated PID response was identified, except for the presence of urban fill materials, one soil sample was collected from each (eight samples total) for analysis, with the selected sample depths varied to be representative of site conditions at multiple depths above the water table. Upon collection, the samples were placed in pre-cleaned laboratory supplied glassware and stored in a cooler packed with ice for transport to the laboratory.

Samples were transported by DPV personnel and laboratory courier to Alpha Analytical (Alpha) in Westborough, Massachusetts, a National Environmental Laboratory Accreditation Program (NELAP) and New York State Department of Health (NYSDOH)-certified laboratory (NY Cert. No. 11148) for analysis. The soil samples were analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) using United States Environmental Protection Agency (USEPA) USEPA Method 8260B, TCL semi-volatile organic compounds (SVOCs) using USEPA Method 8270, polychlorinated biphenyls (PCBs) using USEPA Method 8082, pesticides using USEPA Method 8081A and priority pollutant (PP) metals using USEPA Methods 6010B and 7470.

These methods are generally consistent with those required by the New York State Department of Environmental Conservation (NYSDEC) and the New York City Office of Environmental Remediation (NYCOER) in the evaluation of State Inactive Hazardous Waste Sites and City E-designated and Brownfields sites.

Analytical results were compared to the NYSDEC's Division of Environmental Remediation 6 NYCRR Part 375 Soil Cleanup Objective tables (Table 375-6.8[a]: Unrestricted Use Soil Cleanup Objectives [UUSCOs] and Table 375-6.8[b]: Restricted Use Soil Cleanup Objectives Commercial [RUSCOs]) to determine if additional investigation and/or remediation is warranted. The analytical results revealed that one or more VOCs, most notably acetone, 2-butanone (methyl ethyl ketone) and naphthalene were detected above their respective laboratory method detection limits (MDLs) in each of the eight samples submitted for analysis, but at concentrations well below their respective UUSCOs.

In addition, one or more of the SVOCs fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)anthracene, benzo(k)anthracene, chrysene, dibenzo(a,h)anthracene, indeno(1,2,3)pyrene and pyrene were detected in each of the eight soil samples analyzed, except for the sample from soil boring SB-3 (SB-3 [8-10']) at concentrations exceeding their respective UUSCO. The concentrations of benzo(b)anthracene and indeno(1,2,3)pyrene detected in sample SB-1 8-10' and benzo(a)pyrene, benzo(b)anthracene, benzo(k)anthracene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3)pyrene detected in sample SB-5 8-10' also exceeded their respective commercial RUSCOs. Several additional SVOCs were also detected in each of the eight soil samples analyzed, but at concentrations below their respective UUSCOs.

No pesticides or PCBs were detected above their respective laboratory MDLs in each of the eight soil samples analyzed.

Several metals, including arsenic, copper, lead, mercury, selenium and zinc were detected in one or more of the eight soil samples at concentrations exceeding their respective UUSCOs. The concentrations of arsenic in samples SB-4 (6-8') (25 milligrams per kilogram [mg/kg] and SB-7 (8-10') 20 mg/kg) also exceeded the commercial RUSCO of 16 mg/kg. In addition, the concentration of mercury in sample SB-7 (8-10') (7.0 mg/kg) exceeded the commercial RUSCO of 2.8 mg/kg. Several metals were also detected in each of the eight soil samples analyzed, but at concentrations below their respective UUSCOs.

Laboratory analytical results are summarized on Tables 1 through 4, and the laboratory reports are provided as Attachment B.

Groundwater Sampling

Four of the eight soil borings were proposed to be extended below the water table to facilitate the collection of groundwater samples. However, due to the presence of silt and clay below the water table, the formations did not yield sufficient water into the Geoprobe™ samplers or temporary wells in order the facilitate the collection of samples from two locations (soil borings SB-2 and SB-6). As such, groundwater samples were only collected from two of the soil boring

locations SB-1 and SB-7. Poor yield also resulted in insufficient sample volume from soil boring SB-7, which prevented the sample from being analyzed for pesticides and PCBs.

At soil boring locations SB-1 and SB-7, a four-foot long mill slot sampler was driven to a depth of approximately three feet below the water table. This allowed the sampler screen to intersect the water table and allow floating product or petroleum sheens (if present) to be documented. A piece of disposable polyethylene tubing with a stainless steel check valve was then inserted through the probe rods into the water bearing zone and the tubing hand oscillated to obtain the samples. The groundwater samples were collected directly from the tubing into pre-cleaned laboratory supplied glassware and stored in a cooler packed with ice for transport to the laboratory. Non-disposable sampling equipment was cleaned using a distilled water and Alconox detergent wash followed by a potable water rinse prior to the collection of each sample.

The groundwater samples were analyzed for TCL VOCs by EPA Method 8260B, TCL SVOCs using USEPA Method 8270, PCBs using USEPA Method 8082, pesticides using USEPA Method 8081A and PP metals using USEPA Methods 6010B and 7470. As noted above, the sample from SB-7 was not analyzed for pesticides and PCBs due to insufficient sample volume related to poor yield from the silty/clayey formation underlying the site. It should also be noted that due to the presence of silt and clay within the formation and the poor yield, samples submitted to the laboratory were extremely turbid. High turbidity levels may result in falsely elevated analytical results, especially heavy metals, as these compounds tend to adhere to suspended particulates in the sample and are not indicative of dissolved concentrations.

The analytical results were compared to the NYSDEC's Class GA Groundwater Standards specified in the NYSDEC's Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations. The analytical results revealed that the VOC naphthalene was detected in sample SB-7 at a concentration of 14 micrograms per liter (ug/l) slightly exceeding the guidance value of 10 ug/l. Do to the nature of this compound, naphthalene was also analyzed as an SVOC, and was detected at a concentration of 2 ug/l. It should also be noted that naphthalene was detected in the soil sample collected from SB-7 at a concentration of 130 mg/k, which is significantly below the UUSCO of 12,000 mg/kg. Several other VOCs were also detected in samples SB-1 GW and SB-7 GW, but at concentrations below their respective groundwater standard or guidance value.

The SVOCs benzo(a)anthracene, benzo(b)anthracene, chrysene, and indeno(1,2,3)pyrene were detected in each of the the groundwater samples analyzed at concentrations exceeding their respective groundwater standards/guidance values. The concentrations of benzo(k)anthracene detected in sample SB-1 GW also exceeded its groundwater guidance value. Several additional SVOCs were detected in both of the groundwater samples analyzed, but at concentrations below their respective groundwater standard or guidance value. It should be noted that the detected SVOCs are typically associated with the incomplete combustion of fossil fuels, are not likely related to a specific source at the site, and are most likely attributable to the presence of fill material beneath the site and the high sample turbidity. Based on the potential toxicological effects of these compounds guidance values are extremely low (typically below common laboratory detection limits). However, these compounds are poorly soluble, do

not typically migrate far from their source area, and naturally attenuate. Further, the detected concentrations of SVOCs are generally higher in sample SB-1, which represents the hydraulically upgradient sample, compared to sample SB-7. As such, the concentrations of these compounds, while above the NYSDEC standards/guidance values are not significant enough to warrant environmental concern.
No pesticides or PCBs were detected above their respective laboratory MDLs in sample SB-1 GW.

The metals including arsenic, beryllium, chromium, copper, lead, mercury, nickel, selenium and zinc were detected in one or both of the groundwater samples analyzed at concentrations exceeding their respective groundwater standards. Several additional metals were also detected in both of the groundwater samples analyzed, but at concentrations below their respective groundwater standards. As noted above the presence of elevated metals is likely attributable to high sample turbidity.

Conclusions and Recommendations

The soil boring investigation indicated that the property is underlain by approximately 15 feet of fill materials (brown to black sandy soil mixed with brick, cinders, and gravel), underlain by dark gray silt and clay, with some sandy layers and shells, indicative of a shallow marine environment.

Eight soil/fill material samples were collected from eight representative soil borings drilled across the site and analyzed for the presence of VOCs, SVOCs, pesticides, PCBs and metals. The analytical results indicate that each of samples contained one or more SVOCs and/or metals at concentrations exceeding their respective NYSDEC UUSCOs. In addition, the samples collected from borings SB-1 and SB-5 contained several SVOCs at concentrations exceeding their commercial RUSCOs and the samples from borings SB-4 contained one and two metals, respectively, at concentrations exceeding their commercial RUSCOs. No VOCs, pesticides or PCBs were detected in each of the eight samples at concentrations exceeding their respective laboratory MDLs and/or their UUSCOs.

Given that SVOC and metals-impacted soils are presence beneath the site, and since the property is proposed to be re-developed for commercial use, DECA recommends following practical regulatory procedures for the type and extent of SVOC and metals impacts found in on-site fill materials and soils at the site. These procedures and protocols would be outlined in a Soil Management Plan (SMP) and a Construction Health and Safety Plan (CHASP) prepared for the site, specific to any proposed re-development. These procedures generally consist of the following: (a) retaining a Part 364 permitted environmental contractor to excavate, characterize, transport and dispose of impacted fill and/or soils at the appropriately-licensed disposal facility; and (b) backfilling the excavations with clean fill material. All impacted material should be transported, with appropriate manifesting, with the site owner signing as the generator and maintaining the original manifests.

Experience with similar projects shows that approved RAP and CHASP allow for impacted urban fill, not excavated to support construction activities, to remain on-site, and as such we do not foresee an issue related to undisturbed urban fill. However, all urban fill material that is disturbed during the construction project will be required to be addressed (e.g., dust monitoring, stockpiled on and covered with plastic, proper off-site disposal, etc.).

Due to poor groundwater yield from the silty/clayey formation underlying the site, only two of the four proposed samples were able to be collected. In addition, one of these soil boring locations yielded insufficient sample volume to complete the analysis of pesticides and PCBs. Further, the collected samples were extremely turbid and likely resulted in falsely elevated metals, and to a lesser extent SVOC results due to the adherence of these compounds to suspected particulates.

Naphthalene was detected above its groundwater standard in one of the two samples analyzed, but its presence is inconsistent with duplicate analysis performed on this sample and concentrations of naphthalene detected in the soil sample collected from this location. As such, the elevated concentration of naphthalene in this sample is insufficient to warrant regulatory concern.

Several SVOCs, more specifically petroleum aromatic hydrocarbons (PAHs) were detected in both of the groundwater samples collected/analyzed at concentrations above their respective groundwater guidance values (no Class GA groundwater standards have been established for these compounds). A number of metals were also detected in both of the groundwater samples at concentrations exceeding their respective groundwater standards and/or guidance values.

The detected SVOC compounds, most of which are suspected carcinogens have extremely low guidance values, often below laboratory method detection limits. Although SVOCs and metals were also detected in soil samples collected from these borings, their presence in groundwater is likely attributable to high sample turbidity, as they are poorly soluble. Finally, the detected concentrations of SVOCs and metals in groundwater are generally higher in sample SB-1, which represents the hydraulically upgradient sample, compared to sample SB-7. As such, the concentrations of these compounds, while above the NYSDEC standards/guidance values are not significant enough to warrant environmental concern. However, should the proposed redevelopment project include dewatering operations groundwater from the site will likely require filtration to remove suspended particulates. Additional treatment to remove slightly elevated SVOCs can be accomplished with carbon filtration; however, based upon the detected concentrations of SVOCs in groundwater samples carbon filtration is unlikely to be warranted.

Finally, should the proposed re-development of the site be modified to include residential occupancy on the first floor and/or a subgrade level, then DPV also recommends that the building be constructed with sub-slab depressurization systems and/or vapor barriers to prevent the potential migration of contaminate vapors present in unexcavated soils and/or groundwater beneath the site to be protective of the health of future building occupants.

Attached are all analytical data, site boring plan and logs for your review. Should you have any questions or comments, please do not hesitate to contact our office.

Best regards

Michael McMahon
President

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Number:	1501.3360M105	**Report Date:**	02/19/15

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L1502740-06: The internal standard (IS) response for 1,4-dichlorobenzene-d4 (44%) and the surrogate recovery for 4-bromofluorobenzene (139%) were outside the acceptance criteria; however, re-analysis achieved similar results: 1,4-dichlorobenzene-d4 (30%) and 4-bromofluorobenzene (180%). The results of both analyses are reported.

Semivolatile Organics

L1502740-01, -04, and -08 have elevated detection limits due to the dilutions required by the sample matrices.

L1502740-09 has elevated detection limits due to limited sample volume available for analysis.

Semivolatile Organics by SIM

L1502740-09 has elevated detection limits due to limited sample volume available for analysis.

The WG762758-3 LCSD recoveries, associated with L1502740-09, are below the acceptance criteria for acenaphthene (9%), 2-chloronaphthalene (9%), fluoranthene (12%), hexachlorobutadiene (5%), naphthalene (8%), benzo(a)anthracene (11%), benzo(a)pyrene (11%), benzo(b)fluoranthene (11%), benzo(k)fluoranthene (12%), chrysene (11%), acenaphthylene (10%), anthracene (11%), benzo(ghi)perylene (11%), fluorene (10%), phenanthrene (10%), dibenzo(a,h)anthracene (11%), indeno(1,2,3-cd)pyrene (11%), pyrene (12%), 2-methylnaphthalene (9%), hexachlorobenzene (11%), and hexachloroethane (6%); however, re-extraction could not be performed due to lack of additional sample. The results of the original analyses are reported.

Pesticides

L1502740-07 has elevated detection limits due to the dilution required by the sample matrix.

The WG762667-1 Method Blank, associated with L1502740-10, has concentrations above the reporting limits

Project Name:	14 WYTHE AVE., BROOKLYN, NY	**Lab Number:**	L1502740
Project Number:	1501.3360M105	**Report Date:**	02/19/15

Case Narrative (continued)

for heptachlor, cis-chlordane, trans-chlordane, and chlordane. Since the sample was non-detect for these target analytes, no further actions were taken. The results of the original analysis are reported.

Metals

L1502740-09 and -10 have elevated detection limits for all elements, with the exception of mercury, due to the dilutions required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Report Format: DU Report with 'J' Qualifiers

Project Name:	14 WYTHE AVE., BROOKLYN, NY	**Lab Number:**	L1502740
Project Number:	1501.3360M105	**Report Date:**	02/19/15

Data Qualifiers

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

For a complete listing of analytes and methods, please contact your Alpha Project Manager.
