Executive Summary

At the request of Macentico III LLC (Client and User), Roux Environmental Engineering and Geology, D.P.C. (Roux) performed a Phase I Environmental Site Assessment (ESA) of the real property identified as 14 Wythe Avenue (Block 2615, Lot 125) in the borough of Brooklyn, City, and State of New York (Subject Property) (Figure 1). A Subject Property Plan showing relevant features is provided as Figure 2. The Phase I ESA is intended to define the historical uses of the Subject Property and identify any potential Recognized Environmental Conditions (RECs) that could warrant further consideration, in accordance with ASTM International Standard Practice E1527-13 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process).

A review of historical sources, including historical aerial photographs, historical topographic maps, historical Certified Sanborn Maps, City Directory Abstract, and interviews with Key Subject Property Managers indicate the Subject Property was predominantly vacant land with the exception of small structures noted as a wash house, storage and sand blasting which were only indicated in the 1965 Sanborn Map. The Subject Property generally remains as vacant land in the subsequent maps reviewed between 1978 and 1996. The Subject Property was most recently identified to be used as parking space in the 2001 through 2007 Sanborn Maps and used by Corzo Contracting as a storage yard since the mid-1990s. The Subject Property is still utilized by Corzo Contracting as a contracting yard which was observed by Roux during the Subject Property reconnaissance conducted in February 2022.

Based on the information gathered during the Phase I ESA process, Roux has not identified RECs, Historical RECs (HRECs) or Controlled RECs (CRECs) in connection with the Subject Property.

Roux has identified the following Business Environmental Risks (BERs) in connection with the Subject Property:

- Presence of Fill Material: The Subject Property was historically located in a marsh/wetland area adjoining the East River to the east. This area was historically filled in by New York City to create additional developable land. Fill materials deposited in this way are typically non-native materials and can include bricks, concrete, glass, ceramics, and the like. Fill material was confirmed to be present at the Subject Property in the March 2015 Limited Subsurface Investigation conducted by DPV Consultants Inc (DPV). Any future redevelopment activities should consider the fill material for appropriate disposal in accordance with local, state, and federal regulations.
- Presence of an E-Designation: The Subject Property was identified to have an E-Designation (E-585) which was applied by the New York City Department of City Planning (NYCDCP) as an instrument to control development of potentially contaminated properties. The E-Designation was identified for hazardous materials, noise, and air. The hazardous materials portion of the E-Designation would require any redevelopment to be performed under the oversight of the NYC Mayor's Office of Environmental Remediation (NYC OER) and under an approved Remedial Action Work Plan (RAWP).

Roux has identified the following data gaps in connection with this Phase I ESA:

- Roux is awaiting responses to Freedom of Information Act (FOIA) requests from the New York State Department of Environmental Conservation (NYSDEC), New York State Department of Health (NYSDOH) and New York City Department of Environmental Protection (NYCDEP) pertaining to the Subject Property. If any pertinent information is obtained from responses to outstanding FOIA requests regarding the Subject Property and adjacent properties, Roux will prepare a letter addendum summarizing these findings.

1. Introduction

At the request of Macentico III LLC (Client and User), Roux Environmental Engineering and Geology, D.P.C. (Roux) performed a Phase I Environmental Site Assessment (ESA) of the real property identified as 14 Wythe Avenue (Block 2615, Lot 125) in the borough of Brooklyn, City, and State of New York (Subject Property) (Figure 1). A Subject Property Plan showing relevant features is provided as Figure 2. The Phase I ESA is intended to define the historical uses of the Subject Property and identify any potential Recognized Environmental Conditions (RECs) that could warrant further consideration, in accordance with ASTM International Standard Practice E1527-13 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process).

The Phase I ESA was conducted in accordance with the scope of work presented in the original contract between Macentico III LLC and Roux, dated February 14, 2022, and in general accordance with the ASTM International Standard Practice E1527-13 (Standard Practice for Environmental Site Assessments), consistent with the USEPA Standards and Practices for All Appropriate Inquiries (AAI) Rule (40 CFR Part 312, Standards and Practices for All Appropriate Inquiries; Final Rule[1]). The preamble for the AAI Rule states:

> *In today's final rule, EPA is referencing the standards and practices developed by ASTM International and known as Standard E1527-05 (entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process") and recognizing the E1527-05 standard as consistent with today's final rule. The Agency determined that this voluntary consensus standard is consistent with today's final rule and is compliant with the statutory criteria for all appropriate inquiries. Persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-05 standard to comply with today's final rule.*[2]

This AAI Rule was subsequently amended in 2013, as indicated in the following "Background":

> *With today's action, EPA is establishing that parties seeking liability relief under CERCLA's landowner liability protections, as well as recipients of brownfields grants for conducting site assessments, will be considered to have met the standards and practices for all appropriate inquiries, as set forth in the Brownfields Amendments to CERCLA and 40 CFR Part 312, if such parties follow the procedures provided in the ASTM E1527-13 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process." EPA made this determination based upon the Agency's finding that the ASTM E1527-13 standard is compliant with the All Appropriate Inquiries Rule. Therefore, parties conducting all appropriate inquiries may use the procedures in the newly issued ASTM E1527-13 standard when conducting all appropriate inquiries.*[3]

In November 2021, the new Phase I standard E1527-21 became active and available, although still under review by EPA. ASTM E1527-13 is now a historic standard, although it remains compliant with AAI and currently is the only standard recognized by EPA as compliant with AAI. Regardless, the two standards are not materially different as it concerns the findings in this report.

The purpose of the Phase I ESA was to identify, to the extent feasible, RECs in connection with the Subject Property. ASTM Standard Practice E1527-13 defines RECs as:

---

1 Final Rule and information available at www.epa.gov/swerosps/bf/regneg.htm#final_rule, and https://federalregister.gov/a/2013-31112.
2 Federal Register: November 1, 2005 (Volume 70, Number 210), page 66081.
3 Federal Register: December 30, 2013 (Volume 78, Number 250).

the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

ASTM Standard Practice E1527-13 provides that identified RECs can be evaluated and classified into Controlled Recognized Environmental Conditions (CRECs) or Historical Recognized Environmental Conditions (HRECs) based on the following definitions. ASTM Standard Practice E1527-13 defines a CREC as:

a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

ASTM Standard Practice E1527-13 defines a HREC as:

a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

To assess the potential for RECs associated with the Subject Property, Roux utilized a variety of informational sources to perform the Phase I ESA, including a radial information search from federal, state, and local regulatory agency databases; Freedom of Information Act (FOIA)/public records responses from federal, state, and local regulatory agencies; and readily available information from the following sources: historical aerial photographs, historical topographic maps and a City Directory Abstract. The historical research and interviews were conducted to develop an understanding of the following:

- Current and past uses of the Subject Property;
- Current and past uses of hazardous substances and/or petroleum at the Subject Property, if any;
- Waste management and disposal practices that might have potentially caused releases or threatened releases of hazardous substances and/or petroleum products at the Subject Property;
- Current and past corrective actions and response activities undertaken to address past and ongoing releases of hazardous substances and/or petroleum products at the Subject Property, if any;
- The existence of any engineering and/or institutional controls recorded for the Subject Property; and
- Current and past uses of adjoining properties that could have resulted in releases or threatened releases of hazardous substances and/or petroleum products to the Subject Property.

Mr. Craig Werle and Mr. Adam Nasiatka served as the Environmental Professionals who conducted this Phase I ESA. As the Environmental Professionals, Mr. Werle and Mr. Nasiatka possess sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases (as defined in §312.1(c) on, at, in, or to a Site, sufficient to meet the objectives and performance factors in §312.20(e) and (f)). Professional profiles for Mr. Werle and Mr. Nasiatka are provided in Appendix A.

2. Methods of Investigation

The methods of investigation used to conduct this Phase I ESA are outlined in the following sections.

2.1 General

The activities performed in conjunction with the Phase I ESA of the Subject Property include:

- Review of federal, state, and local environmental regulatory agency databases provided by Environmental Data Resources (EDR), Inc. of Milford, Connecticut indicating locations of environmental concern within specified radii from the Subject Property (Appendix B);
- Submission of FOIA/public records requests and inquiries to federal, state, and local regulatory agencies for the Subject Property (Appendix C);
- Review of historical information for the Subject Property and surrounding area, including aerial photographs, topographic maps, historical Certified Sanborn Fire Insurance Maps, and other relevant historical information sources;
- Reconnaissance of the Subject Property and surrounding area; and
- Conducted interviews with Key Subject Property Managers.

2.2 Review of Readily Available Information

The resources compiled and reviewed by Roux to date include the following:

- EDR Radius Map with GeoCheck, dated February 11, 2022 (EDR report) (Appendix B);
- Historical Certified Sanborn Fire Insurance Maps dated 1887, 1905, 1916, 1928, 1942, 1951, 1965, 1978 through 1983, 1986 through 1989, 1991, 1993, 1995, 1996 and 2001 through 2007 (Appendix D);
- Historical Aerial Photographs 1924, 1941, 1944, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1991, 1994, 2006, 2009, 2013 and 2017 (Appendix E);
- United States Geological Survey (USGS) 15 Minute Topographic Maps, Brooklyn, New York Quadrangle dated 1897, 1898 and 1900; 7.5 Minute Topographic Maps, Brooklyn, New York Quadrangle dated 1947, 1956, 1967, 1979, 1995, 2013, 2016 and 2019 (Appendix F); and
- A search of the City Directory Abstract conducted by EDR (Appendix G).

Pursuant to ASTM E1527-13, Roux contacted and reviewed additional environmental records provided by the following agencies:

Agency	Status
United States Environmental Protection Agency (USEPA)	Online database searched; no records identified.
New York State Department of Environmental Conservation (NYSDEC)	Acknowledgement received; no records provided to date. Online database searched; no records identified.
New York State Department of Health (NYSDOH)	Acknowledgement received; no records provided to date.
New York City Department of Environmental Protection (NYCDEP)	Acknowledgement received; no records provided to date.
New York Fire Department (FDNY)	Response received; no records identified.

Agency	Status
New York City Department of Finance (NYCDOF)	Records accessed online and discussed in Section 5.2.
New York City Department of Buildings (NYCDOB)	Records accessed online and discussed in Section 5.2.
New York City Department of City Planning (NYCDCP)	Online database searched; no records identified.

2.3 Subject Property and Surrounding Area Reconnaissance

Pursuant to ASTM Standard Practice E1527-13, Roux conducted a reconnaissance of the Subject Property and surrounding area on February 18, 2022 to identify, investigate, and assess potential RECs and other potential environmental concerns. The reconnaissance included observation of the Subject Property including structures and buildings and the surrounding area to determine the current use and condition of the Subject Property, indications of past uses of the Subject Property, and current uses of adjacent and adjoining properties and the surrounding area. During the Subject Property reconnaissance, Roux placed particular emphasis on identifying the following features, if present, in accordance with ASTM E1527-13:

- Hazardous substances and petroleum products in connection with identified uses;
- Storage tanks;
- Odors;
- Pools of liquid;
- Drums;
- Hazardous substances and petroleum products containers;
- Unidentified substance containers;
- Polychlorinated biphenyls (PCBs);
- Heating and cooling systems;
- Stains or corrosion;
- Drains and sumps;
- Pits, ponds, or lagoons;
- Stained soil or pavement;
- Stressed vegetation;
- Solid waste;
- Wastewater;
- Wells; and
- Septic systems.

In addition, observation of the general topographic setting of the Subject Property was made, and inquiry was made into the source of potable water for the Subject Property and other utilities, as presented in Section 6. Photographs from the Subject Property reconnaissance are presented in Appendix H.

2.4 Interview with Key Subject Property Manager

On February 18, 2022, Mr. Nasiatka interviewed Mr. James Lema, the Key Subject Property Representative. Mr. Lema was identified as the owner of Corzo Contracting and the Subject Property. During the interview, Mr. Nasiatka asked general questions regarding the current and historical use and conditions of the Subject Property and surrounding area and inquired about specific observations made during the Subject Property reconnaissance. Pertinent information obtained during the interview is presented in appropriate sections throughout this Phase I ESA report.

2.5 User Provided Information

As of the date of this Phase I ESA, Roux was provided with historical environmental documentation related to the Subject Property which is summarized in detail below. Copies of historical environmental reports provided to Roux are attached in Appendix I. Roux is aware of an additional environmental report that was conducted under the oversight of Langan which included test pits. This report was not provided to Roux for review as of the date of this Phase I ESA.

DPV Consultants Inc. (DPV) Limited Subsurface Investigation: 18 Wythe Avenue, Brooklyn, New York 11222, dated March 16, 2015

DPV conducted a Limited Subsurface Investigation at the Subject Property on behalf of Park Central Real Estate Co. LLC and Mitchell Holdings LLC in March 2015. DPV stated that the subsurface work was intended to satisfy environmental issues from an unspecified Phase I ESA. The consultant of record or the date of the Phase I ESA was not mentioned in the report. The former Phase I identified two environmental issues for the Subject Property related to the potential for historical fill materials and the presence of surrounding and adjoining properties with historical uses that included metal foundries, machine shops, paint and varnish manufacturing, various manufacturing as well as several other properties with underground gasoline tanks.

The limited subsurface investigation was conducted on February 11, 2015 and included the installation and sampling of eight soil borings. Borings were installed to a total depth of 15 feet below grade, where groundwater was encountered. Soil quality was generally noted to be fill materials (brick, cinders, and gravel), silty clays and sandy layers with shells. Field data collection indicated no visual or olfactory evidence of contamination and no positive photoionization detector (PID) readings. Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), PCBs, pesticides, and metals. No VOCs were detected in the soil samples at concentrations exceeding their respective Unrestricted Use Soil Cleanup Objectives (UUSCOs). Several SVOCs characterized as Polycyclic Aromatic Hydrocarbons (PAHs) were detected in the soil samples at concentrations exceeding their respective Commercial Use SCOs (CSCOs). No pesticides or PCBs were detected in any of the soil samples at concentrations exceeding their respective Method Detection Limits (MDLs). Several metals including copper, lead, mercury, selenium, and zinc were detected in the soil samples at concentrations exceeding their respective UUSCOs. Arsenic was detected at concentrations exceeding both RRSCOs and CSCOs. Mercury was also identified to exceed its respective CSCO in a single soil sample.

Groundwater samples were collected from two of the eight soil borings. The installed groundwater probes did not provide enough groundwater to be analyzed for the full suite of analyses. One of the groundwater samples was not analyzed for pesticide and PCB content. It was also noted that the groundwater samples were very turbid as they were collected directly from a Geoprobe sampler by hand with a check valve. The results of the groundwater sampling identified a single VOC (naphthalene) which was detected at a

concentration of 14 micrograms per Liter (µg/L) which exceeded its respective NYSDEC Ambient Water Quality Standards and Guidance Values (AWQSGV). Several SVOCs characterized as PAHs were detected in the groundwater samples at concentrations exceeding their respective AWQSGV. No pesticides or PCBs were detected at concentrations exceeding their respective MDLs in the single groundwater sample analyzed for these compounds. The metals arsenic, beryllium, chromium, copper, lead, mercury, nickel, selenium, and zinc were detected at concentrations exceeding their respective AWQSGV. It was reiterated that the metals identified in the groundwater sample were likely attributed to the turbid samples and the sediment within them.

As previously mentioned, copies of historical reports provided to Roux are attached in Appendix I.

3. Subject Property Description

Descriptions of the Subject Property and surrounding properties are included in the following sections. The location of the Subject Property is presented in Figure 1. A Subject Property Plan showing relevant features is provided as Figure 2.

3.1 Subject Property Location and Description

The Subject Property is identified as a single tax lot situated on the northwestern side of Wythe Avenue within the borough of Brooklyn, New York. The Subject Property is also bounded by North 15th Street to the southwest, Gem Street to the west and Banker Street to the east. The Subject Property is comprised of the following block, lot and addresses as per the NYCDOB:

- Block 2615, Lot 125: 14 Wythe Avenue, Brooklyn, NY 11211

The Subject Property is currently occupied and owned by Corzo Contracting, which operates as a subsurface utility installation contractor. The Subject Property is currently utilized as a yard to store contracting materials. A 1-story wooden frame structure is present in the northern central portion of the lot which is also partially constructed of steel shipping containers. The interior of this wooden structure is used for employee locker rooms, a bathroom, a mechanic/repair area, and storage. The bathroom was identified to be connected to a septic system which is present in the northwestern corner of the Subject Property. The wooden frame structure was identified to be heated by electric heat blowers. Two mobile construction trailers were also present in the northern and northeastern portions of the yard and were identified to be used for office operations. A metal non-permanent overhang is present in the southwestern corner of the Subject Property which contains an electrical meter, electrical panels, and additional material storage.

The Subject Property and surrounding area were inspected during the Subject Property reconnaissance. The findings of the reconnaissance are summarized in Section 6.

3.2 Current Surrounding Property Usage

The areas surrounding the Subject Property are generally developed with commercial and industrial properties. Table 3.2 below provides details on adjoining and adjacent properties.

Table 3.2 Surrounding Property Uses	
North	ACME Smoked Fish Corp
South	Active Construction Site
East	Commercial/ Restaurant (Rule of Thirds)
West	Technipoly Manufacturing

3.3 Topographic and Hydrogeologic Setting

The grade of the Subject Property is generally even. The average elevation of the Subject Property is approximately 9 feet above mean sea level (ft amsl), as shown in the USGS 7.5 Minute Series Topographic Map (Appendix F) and the EDR Report. According to the EDR Report and National Wetlands Inventory, the Subject Property is not located in or adjacent to any wetlands. According to a review of Federal Emergency Management Agency (FEMA) Flood Maps, the Subject Property is located in the 100-year flood zone.

A formal groundwater flow direction study has not been conducted as part of this Phase I ESA. For purposes of investigating potential migration of off-Site groundwater impacts during this Phase I ESA, the regional direction of groundwater flow in the vicinity of the Subject Property is presumed to be generally towards the west-northwest in the direction of the East River. This estimation was based on local topographic and hydraulic features identified in historical maps.

4. Subject Property History

The historical uses of the Subject Property are discussed below.

4.1 Historical Subject Property and Surrounding Property Usage

The historical uses of the Subject Property and surrounding properties were researched by examining Certified Sanborn Fire Insurance Maps (Appendix D); historical aerial photographs (Appendix E); historical USGS topographic maps (Appendix F); and the City Directory Abstract (Appendix G).

4.2 Historical Sanborn Maps

Roux reviewed historical Certified Sanborn Fire Insurance maps for the Subject Property. Table 4.2 provides a summary of the Subject Property and surrounding area from 1897 to 2007, as determined from the Certified Sanborn Fire Insurance maps, which are included as Appendix D.

Table 4.2
Certified Sanborn Fire Insurance Maps

Date	Description
1887	**Subject Property:** The southwestern portion of the Subject Property is noted as under water. **Surrounding Area:** The surrounding area is not shown as developed.
1905-1916	**Subject Property:** The Subject Property is shown as seven full and two partial undeveloped tax lots. **Surrounding Area:** The surrounding area is not shown as developed.
1942	**Subject Property:** The Subject Property is developed with a small 1-story storage structure in the central eastern portion of the lot. **Surrounding Area:** The Subject Property is adjoined to the north with an iron works, to the east with a fireproof door manufacturer with painting, to the south with a paint and varnish manufacturer and smoked fish company and to the west with a pressure/ die casting company and sheet steel products manufacturer.
1951	**Subject Property:** The former structure is no longer present and now two structures identified as sand blasting and a wash house are present in the northeast and northwest corners of the Subject Property. **Surrounding Area:** Generally, the same as the previous Sanborn Map, except, the former fireproof remanufacturer is now noted as a cloth backing and laminating operation and a private garage with auto repair adjoins to the east.
1965	**Subject Property:** Shown as a vacant undeveloped lot with no structures. **Surrounding Area:** Developed to the north with a machine shop, to the east with a textile coating and laminating facility and mechanics depot, to the south with inflammable liquid canning and smoked fish company and to the west with a shipping warehouse.
1978-1996	**Subject Property:** Shown as a vacant undeveloped lot with no structures. **Surrounding Area:** The surrounding area is similar to the 1965 Sanborn Map; however, the eastern adjoining facility is generally noted as commercial/manufacturing, the building to the east is noted as plastic products manufacturing and the buildings to the southwest and west are generally noted as manufacturing.
2001-2007	**Subject Property:** The Subject Property is noted as parking. **Surrounding Area:** Generally, the same as the 1978-1996 Sanborn Maps.

The Subject Property appears to have been predominantly vacant land with the exception of small structures noted as a wash house, storage and sand blasting which were only indicated in the 1965 Sanborn Map.

The Subject Property generally remains as vacant land in the subsequent maps reviewed between 1978 and 1996. The Subject Property was most recently identified to be used as parking space in the 2001 through 2007 Sanborn Maps. No RECs were identified in a review of the Sanborn Maps for the Subject Property.

The area surrounding the Subject Property predominantly contained commercial, manufacturing, and industrial uses which is consistent with the historical nature of this area of Brooklyn and the vicinity to shipping areas along the East River. Historically adjoining operations have consisted of iron works and welding, a machine shop, fireproof door manufacturing which includes painting, paint, and varnish manufacturing, die casting, sheet steel product manufacturing, cloth backing and laminating, general manufacturing, and plastic products manufacturing. Additional information on the environmental quality of surrounding properties is provided in Section 5.1 of this report.

4.3 Historical Aerial Photographs

Historical aerial photographs were obtained from EDR, and they are provided in Appendix E. Historical aerials may indicate past activities at a property that might not have been documented by other means or observed during a reconnaissance visit. Aerial photographs were obtained for the years ranging from 1924 to 2017.

According to a review of the historical aerial photographs, the Subject Property appears to be undeveloped marshland in the 1924 aerial photograph. The Subject Property appears to be used for light storage and parking in the aerial photographs reviewed between 1941 and 1991. The non-permanent wood frame structure appears to be present in the northern central portion of the Subject Property in the 2006 aerial photograph and remains until the most recent 2017 aerial photograph. No RECs were identified in a review of the aerial photographs; however, evidence of landfilling activities were identified which have been previously identified as a BER.

4.4 Historical Topographic Maps

Historical topographic maps of the Subject Property were obtained from EDR, and they are provided in Appendix F. Elevation of the Subject Property was consistent in topographic maps reviewed from 1897 to 2019. Earlier topographic maps dated 1897, 1898 and 1900 identified the Subject Property within wetland areas associated with the East River. The topographic maps between 1947 and 2019 do not show any significant land elevation changes that would suggest mining or disposal activities. As previously mentioned, the presence of historical fill material is considered a BER. No evidence of RECs was identified in a review of the topographic maps for the Subject Property or surrounding area.

4.5 City Directory Abstract

A City Directory Abstract of the Subject Property was obtained from EDR and is presented in Appendix G. Records reviewed from 1927 to 2017 were sourced from New York Telephone, New York Telephone Company, Cole Information Services, Hill-Donnelly Corporation, R.L. Polk & Co. and the EDR Digital Archive Listings in the table below were translated as written in the City Directory.

Listings for 14 Wythe Avenue are provided in Table 4.5 below:

Table 4.5
City Directory Listings for 14 Wythe Avenue

1997	Private Residential Listing

Listings for the Subject Property included a single residential listing in 1997. No RECs were identified in a review of the City Directory Abstract listings.

The listings surrounding the Subject Property include auto repair shops, a tool company, a chemical and rubber company, a fluid manufacturing company, a goods distributor, contracting companies, a paint and enamels company, an electrical supply store, a welding company, a smoked fish company, a potato chip company, music studios, mechanical companies, a paper company, marble company and a fuel oil company. Additional information on the environmental quality of the surrounding properties is provided in Section 5.1 of this report.

4.6 Environmental Lien Search and Activity Use Limitations

The Client did not engage Roux to review title and judicial records for environmental liens or AULs recorded for the Subject Property. Furthermore, these documents were not provided to Roux for review.

5. Records Review

This section summarizes the information regarding the Subject Property and potential environmental sites of concern contained in the standard and additional environmental record sources reviewed by Roux in accordance with ASTM Standard Practice E1527-13.

5.1 Environmental Database Review

Roux used a computerized environmental database and radius map report prepared by EDR to conduct a government records database search of properties of potential environmental concern within a maximum of one-mile radius of the Subject Property. Appendix B contains a complete copy of the EDR Radius Map Report with GeoCheck. A summary of the pertinent results is provided in Table 5.1. Table 5.1 tabulates all the search results with at least one environmental database entry.

Table 5.1
Environmental Database Listings

NR – Not Reported

The Subject Property was identified in the NY E DESIGNATION database which is discussed in detail below:

1. **NY E DESIGNATION:** The Subject Property (Lot 125, Tax Block 2615) is listed in the E Designation database and is associated with E-585 for hazardous materials testing, noise, and air. The E Designation for hazardous materials would require any redevelopment that disturbs soil at the Subject Property to be performed under the oversight of the NYC Mayor's Office of Environmental Remediation (NYC OER) which would require environmental investigation and submission of work plans for review. The presence of this E-Designation is not an indication of the presence of contamination; however, the presence of this designation would require environmental investigation during planned redevelopment. The presence of this E Designation is considered a BER.

The Subject Property is not listed in any other environmental databases.

Off-site properties that meet the criteria presented below are discussed in this report:

- Facilities adjoining or adjacent to the Subject Property are examined due to their proximity and the potential for surface water discharges (e.g., stormwater runoff, surface water effluent discharges) to enter the Subject Property or through the migration of groundwater or soil vapor.
- Facilities located topographically or hydraulically upgradient of the Subject Property.

Groundwater flow direction is presumed to be generally west-northwest in the direction of the East River. Facilities that are located downgradient or cross-gradient to the Subject Property—but not adjoining the Subject Property—are not discussed in this report because these facilities are considered to pose a low potential environmental concern to the Subject Property.

Adjoining Property Detail

Corzo Contracting (190 Banker Street, adjoins the Subject Property to the north)

The above referenced facility is listed in the Solid Waste Facility/ Landfill (SWF/LF) database and is listed as an inactive construction and demolition material processing facility. No further information was provided in the database.

Former Anglo Chemical and Rubber Site (1-9 Wythe Avenue, adjoins the Subject Property to the southeast)

The above referenced facility is listed in the NY BROWNFIELDS database and adjoins the Subject Property to the southeast. Research on this facility indicates that the full Remedial Investigation (RI) has not been conducted and this site is generally considered young. A Brownfields Cleanup Application (BCA) was submitted for the site and information is still under review by the NYSDEC. The following information was available:

> "Site Location: The site's address is 1-9 Wythe Avenue, Brooklyn, NY 11222. The site is located in Kings County, New York and is identified as Brooklyn Block 2641 Lots 1, 3 & 4. The site is located in an urban area of the Greenpoint neighborhood of Brooklyn, NY on the south side of Wythe Avenue between Banker Street and N 15th Street and approximately 800 feet east of the East River. Site Size: The site is 0.380 acres in size. Site Features: The site is currently a triangular shaped partially lot with three one-story manufacturing facilities located in the northern portion of the property, with a rear yard on the southern portion. Current Zoning and Land Use: The site is currently partially developed land that is zoned for industrial and commercial use. The surrounding properties are currently used for commercial and warehousing/manufacturing purposes. Past Land Use: As found during the Phase I Environmental Site Assessments, the site was developed between 1916 and 1942 with a 1-story building noted as a Paint and Varnish Manufacturer on the eastern portion, barrel storage on the western portion and manufacturing in the northern and central portion. In 1951 the barrel storage area was expanded to the southeastern portion of the subject property. Between 1965-1981 the layout of the subject property remained the same, however, the operations were updated as inflammable liquid canning. Between 1982 and 1993 the subject property was noted as unspecified manufacturing, with an additional warehouse erected in the southwest corner of the property. Recently the site was used for multiple commercial operations including active furniture woodworking and a kitchen counter remodeling shop. The site is currently improved with three one-story warehousing and is vacant. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists primarily of urban fill extending to approximately 10 feet below ground surface underlain by a layer of gray black sand with varying amounts of silt and clay extending to approximately 10 ft bgs. This layer is underlain by grey poorly graded sand to 15 ft bgs. Groundwater was encountered at approximately 9 ft bgs and groundwater flow is to the west."

Preliminary data was available in the form of a March 2018 Phase II investigation conducted by Haley & Aldrich for this facility. The environmental impacts generally consisted of SVOCs and metals to soil and a single exceedance of benzene in a single groundwater monitoring well. Additionally, groundwater was noted to flow towards the west at this facility, which is away from the Subject Property. No environmental impacts are anticipated to migrate from this facility onto the Subject Property and it is not considered a REC.

Upgradient Property Detail

A review of the listings in the upgradient area to the east-southeast of the Subject Property generally contained closed NY SPILLS listings. No significant listings suggesting a nearby release were identified in the upgradient area of the Subject Property.

5.2 Freedom of Information Act Letter Responses

FOIA requests were submitted to the NYSDEC, NYSDOH, NYCDEP and the FDNY. Online USEPA, NYSDEC, NYCDOF, NYCDOB and NYCDCP resources and databases were searched for records related to the Subject Property. If any additional pertinent environmental information is received from the outstanding FOIA requests following the issuance of this report, Roux will provide a letter addendum to this report detailing this information. Information obtained from the Internet Databases and FOIA responses is included as Appendix C.

USEPA

The Subject Property was not identified or listed within the USEPA online databases.

NYSDEC

As of the date of this report, the NYSDEC has acknowledged our initial FOIA request in a digital response dated February 15, 2022. The NYSDEC has not stated whether any documents exist for the Subject Property. Any documents obtained from the NYSDEC will be provided as soon as they are received and evaluated.

The previously mentioned Former Anglo Chemical and Rubber Site was listed in an online search of the DECinfo Locator tool. All available information on this facility was discussed in Section 5.1 and no further information was available to summarize. As previously mentioned, the Former Anglo Chemical and Rubber Site should not adversely impact upon the environmental quality of the Subject Property.

NYSDOH

As of the date of this report, the NYSDOH has acknowledged our initial FOIA request in a letter response dated February 15, 2022. The NYSDOH has not stated whether any documents exist for the Subject Property. Any documents obtained from the NYSDOH will be provided as soon as they are received and evaluated.

NYCDEP

As of the date of this report, the NYCDEP has acknowledged our initial FOIA request in a digital response dated February 15, 2022. The NYCDEP has not stated whether any documents exist for the Subject Property. Any documents obtained from the NYCDEP will be provided as soon as they are received and evaluated.

FDNY

As of the date of this report, the FDNY has responded to our FOIL request and provided documentation related to a fuel oil release, violations and enforcement actions associated with the southern adjoining fuel oil supplier at 9 Wythe Avenue. No documentation was provided for the Subject Property.

NYCDOF

The NYCDOF Automated City Register Information System (ACRIS) was searched for the Subject Property. There ACRIS files consisted of a single memorandum of contract. No deeds were listed in ACRIS for the

Subject Property. According to online resources and conversations with the Key Subject Property Manager, the Subject Property is currently owned by Corzo Contracting.

The NYCDOF building classification for the Subject Property is Z9 – Miscellaneous.

NYCDOB

The NYCDOB online database was searched for the Subject Property and the details are outlined below:

The Subject Property is associated with zero open complaints, zero open DOB violations, and zero open Environmental Control Board (ECB) violations. No Certificates of Occupancy (COs) were available for the Subject Property through the online NYCDOB portal for review.

NYCDCP

The NYCDCP zoning resolution of New York City was searched for evidence of E-designations or Restrictive Declarations (RDs) in connection with the Subject Property. As previously mentioned, the Subject Property is associated with an E-Designation for hazardous materials, noise, and air quality (E-585). As previously mentioned, this E-Designation is considered a BER.

6. Subject Property Reconnaissance

The findings of the Subject Property reconnaissance, conducted on February 18, 2022, are discussed below. The weather during the reconnaissance was approximately 32 degrees Fahrenheit and sunny. At the time of the reconnaissance, the Subject Property was observed to be occupied by Corzo Contracting which utilized the Subject Property as a storage yard for contracting vehicles and materials.

6.1 Utilities

The Subject Property was observed to be connected to electric utilities. No sewer, water or natural gas connections were identified. The Subject Property was identified to have a water connection, however, according to the Key Subject Property Manager the water connection is split from the adjoining neighbor (ACME) to the north.

6.2 Hazardous Substances and Drums

Most of the chemical and oil storage was contained within a steel shipping container which was installed within the wood frame structure in the northern central portion of the yard. A few drums were identified in the exterior of the yard, however, these drums appeared to be empty. Minor petroleum staining was identified on the wooden subfloor of the shipping container, which was noted to have a steel subfloor beneath the plywood. The staining was noted to be contained with absorbent materials. The presence of this staining should not adversely impact upon the environmental quality of the Subject Property and is considered a *de minimis condition*.

6.3 Storage Tanks

No evidence of storage tanks (above or below ground) were identified at the Subject Property.

6.4 Polychlorinated Biphenyls (PCBs)

No evidence of suspected PCB-containing equipment or materials were identified at the Subject Property.

6.5 Staining and Stressed Vegetation

Petroleum staining was identified within the shipping container utilized for oil and hazardous materials storage. This staining was contained with absorbent material and was noted on wooden subfloor which was placed on top of the steel floor of the shipping container. Additional petroleum staining/ sheens was identified in the southeastern corner of the yard on the surface of a puddle. The asphalt appeared to be in good condition in the area where the sheen was identified. The presence of this staining should not adversely impact upon the environmental quality of the Subject Property and is considered a *de minimis condition*.

No other evidence of staining or stressed vegetation was identified at the Subject Property.

6.6 Solid Waste

Solid waste appeared to consist of construction materials and debris which was collected and stored in a 20-cubic yard roll off container stored on the western side of the yard. The roll off container is reportedly picked up and transported off-site from a third party contractor.

6.7 Wastewater and Stormwater

Wastewater was identified to be limited to typical sanitary waste generated from a single sink and toilet located in the wooden frame structure. The sanitary structure was identified to be just to the west of the wooden structure and was capped with a manhole cover. Stormwater reportedly flows off-site into municipally managed stormwater catch basins located in the public streets.

6.8 Pits, Ponds, Lagoons and Floor Drains

No pits, ponds, lagoons, or floor drains were identified at the Subject Property.

6.9 Wells

No groundwater monitoring wells were observed at the Subject Property or on visible portions of adjoining properties.

7. Interviews and User Provided Information

Pertinent findings from these sources are summarized in the following sections.

7.1 Interviews

On February 18, 2022, Mr. Nasiatka interviewed Mr. James Lema, the Key Subject Property Representative. Mr. Lema was identified as the owner of Corzo Contracting and the Subject Property. The following information was identified:

- Mr. Lema indicated that there are no petroleum storage tanks (aboveground or belowground) present at the Subject Property.
- Mr. Lema indicated that the wooden frame structure is mostly used as a small scale repair shop and mechanic area for his trucks and equipment.
- Mr. Lema indicated that his company (Corzo Contracting) previously performed test pits at the Subject Property on behalf of Langan, an environmental consultant. Mr. Lema was not able to identify or provide a copy of this report to Roux for review.
- Mr. Lema indicated that he has not had any environmental issues associated with his business operations and there are no NY SPILLS or LTANKS cases or any other environmental enforcement actions or violations associated with his property.

7.2 User Questionnaire

As of the date of this report, Roux was not yet provided with a completed questionnaire. A copy of the blank questionnaire provided to the User is attached in Appendix I.

8. Summary of Findings

Based on the information gathered during the Phase I ESA process, Roux has not identified RECs, HRECs or CRECs in connection with the Subject Property.

Roux has identified the following BERs in connection with the Subject Property:

- Presence of Fill Material: The Subject Property was historically located in a marsh/wetland area adjoining the East River to the east. This area was historically filled in by New York City to create additional developable land. Fill materials deposited in this way are typically non-native materials and can include bricks, concrete, glass, ceramics, and the like. Fill material was confirmed to be present at the Subject Property in the March 2015 Limited Subsurface Investigation conducted by DPV. Any future redevelopment activities should consider the fill material for appropriate disposal in accordance with local, state, and federal regulations.
- Presence of an E-Designation: The Subject Property was identified to have an E-Designation (E-585) which was applied by the NYCDCP as an instrument to control development of potentially contaminated properties. The E-Designation was identified for hazardous materials, noise, and air. The hazardous materials portion of the E-Designation would require any redevelopment to be performed under the oversight of the NYC OER and under an approved RAWP.

Roux has identified the following data gaps in connection with this Phase I ESA:

- Roux is awaiting responses to FOIA requests from the NYSDEC, NYSDOH and NYCDEP pertaining to the Subject Property. If any pertinent information is obtained from responses to outstanding FOIA requests regarding the Subject Property and adjacent properties, Roux will prepare a letter addendum summarizing these findings.

9. Report Assumptions and Limitations

This Phase I ESA Report, including the exhibits attached hereto, describes the results of Roux's initial investigation to identify the potential presence of RECs involving or affecting the Subject Property in accordance with ASTM Standard Practice E1527-13. This Phase I ESA was conducted by Roux in accordance with the regulatory requirements for conducting AAI as set forth in the USEPA AAI Rule, at 40 CFR Part 312. Specifically, the preamble to the AAI Rule states:

> *"In today's final rule, EPA is referencing the standards and practices developed by ASTM International and known as Standard E1527-13 (entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process") and recognizing the E1527-13 standard as consistent with today's final rule. The Agency determined that this voluntary consensus standard is consistent with today's final rule and is compliant with the statutory criteria for all appropriate inquiries. Persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-13 standard to comply with today's final rule.[4]"*

One of the requirements that a person acquiring real property must meet in order to qualify for either the innocent landowner, contiguous owner, or bona fide prospective purchaser (collectively hereinafter "Prospective Purchaser") defense to liability under the federal Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), is that person must conduct all appropriate inquiry in conformance with the AAI Rule (or the ASTM E1527-13) prior to acquisition of the property. Macentico III LLC understands that, under the AAI Rule, Roux' performance of the Phase I ESA in accordance with ASTM E1527-13 will not alone result in Macentico III LLC satisfying all requirements of the AAI Rule and provide a defense to CERCLA liability.

Macentico III LLC understands that the AAI Rule also requires that the Prospective Purchaser undertake certain additional inquiries and post-acquisition activities to satisfy the CERCLA AAI requirements. **ACCORDINGLY, ROUX MAKES NO GUARANTEES OR WARRANTIES, EXPRESSED OR IMPLIED, REGARDING THIS PHASE I ESA, INCLUDING WITHOUT LIMITATION, ANY WARRANTY THAT THIS PHASE I ESA WILL IN FACT QUALIFY THE CLIENT FOR A DEFENSE TO CERCLA LIABILITY.**

Roux has performed this Phase I ESA in a professional manner using the degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. Professional judgments expressed herein are based on the facts currently available to Roux.

The AAI Rule requires, and the conclusions and recommendations stated herein, represent the application of a variety of engineering and technical disciplines to material facts and conditions associated with the Subject Property. As such, these conclusions and recommendations are based on subjective interpretations and the exercise of discretion. Many of these facts and conditions are subject to change over time. Accordingly, the conclusions and recommendations must be considered within this context.

Macentico III LLC understands that Roux will not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the Phase I ESA was performed. To the extent practicable, Roux has identified data gaps and has evaluated the potential significance of such data gaps. Recommendations to address those data gaps are presented herein and are based on the data available at the time of the performance of the Phase I ESA. Implementation of the recommendations may

[4] Federal Register: November 1, 2005 (Volume 70, Number 210) Page 66081.

not fully address the data gaps as the information obtained from execution of those recommendations may alter or modify the interpretation of the Subject Property conditions and conclusions regarding the data gaps.

It should be noted that Roux has not conducted any intrusive activities on the Subject Property and is relying on information presented by others, often in preliminary, draft, or verbal form. By referencing this information, Roux does not accept responsibility for the accuracy of the underlying data, sampling methods, laboratory analysis, or documentation.

This Phase I ESA Report should not be considered a legal interpretation of existing environmental laws and regulations. The Phase I ESA was conducted with a reasonable degree of inquiry to identify significant RECs, but uncertainty is not eliminated. No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. The Phase I ESA process is intended to reduce, but not eliminate, the uncertainty involved with identifying RECs.

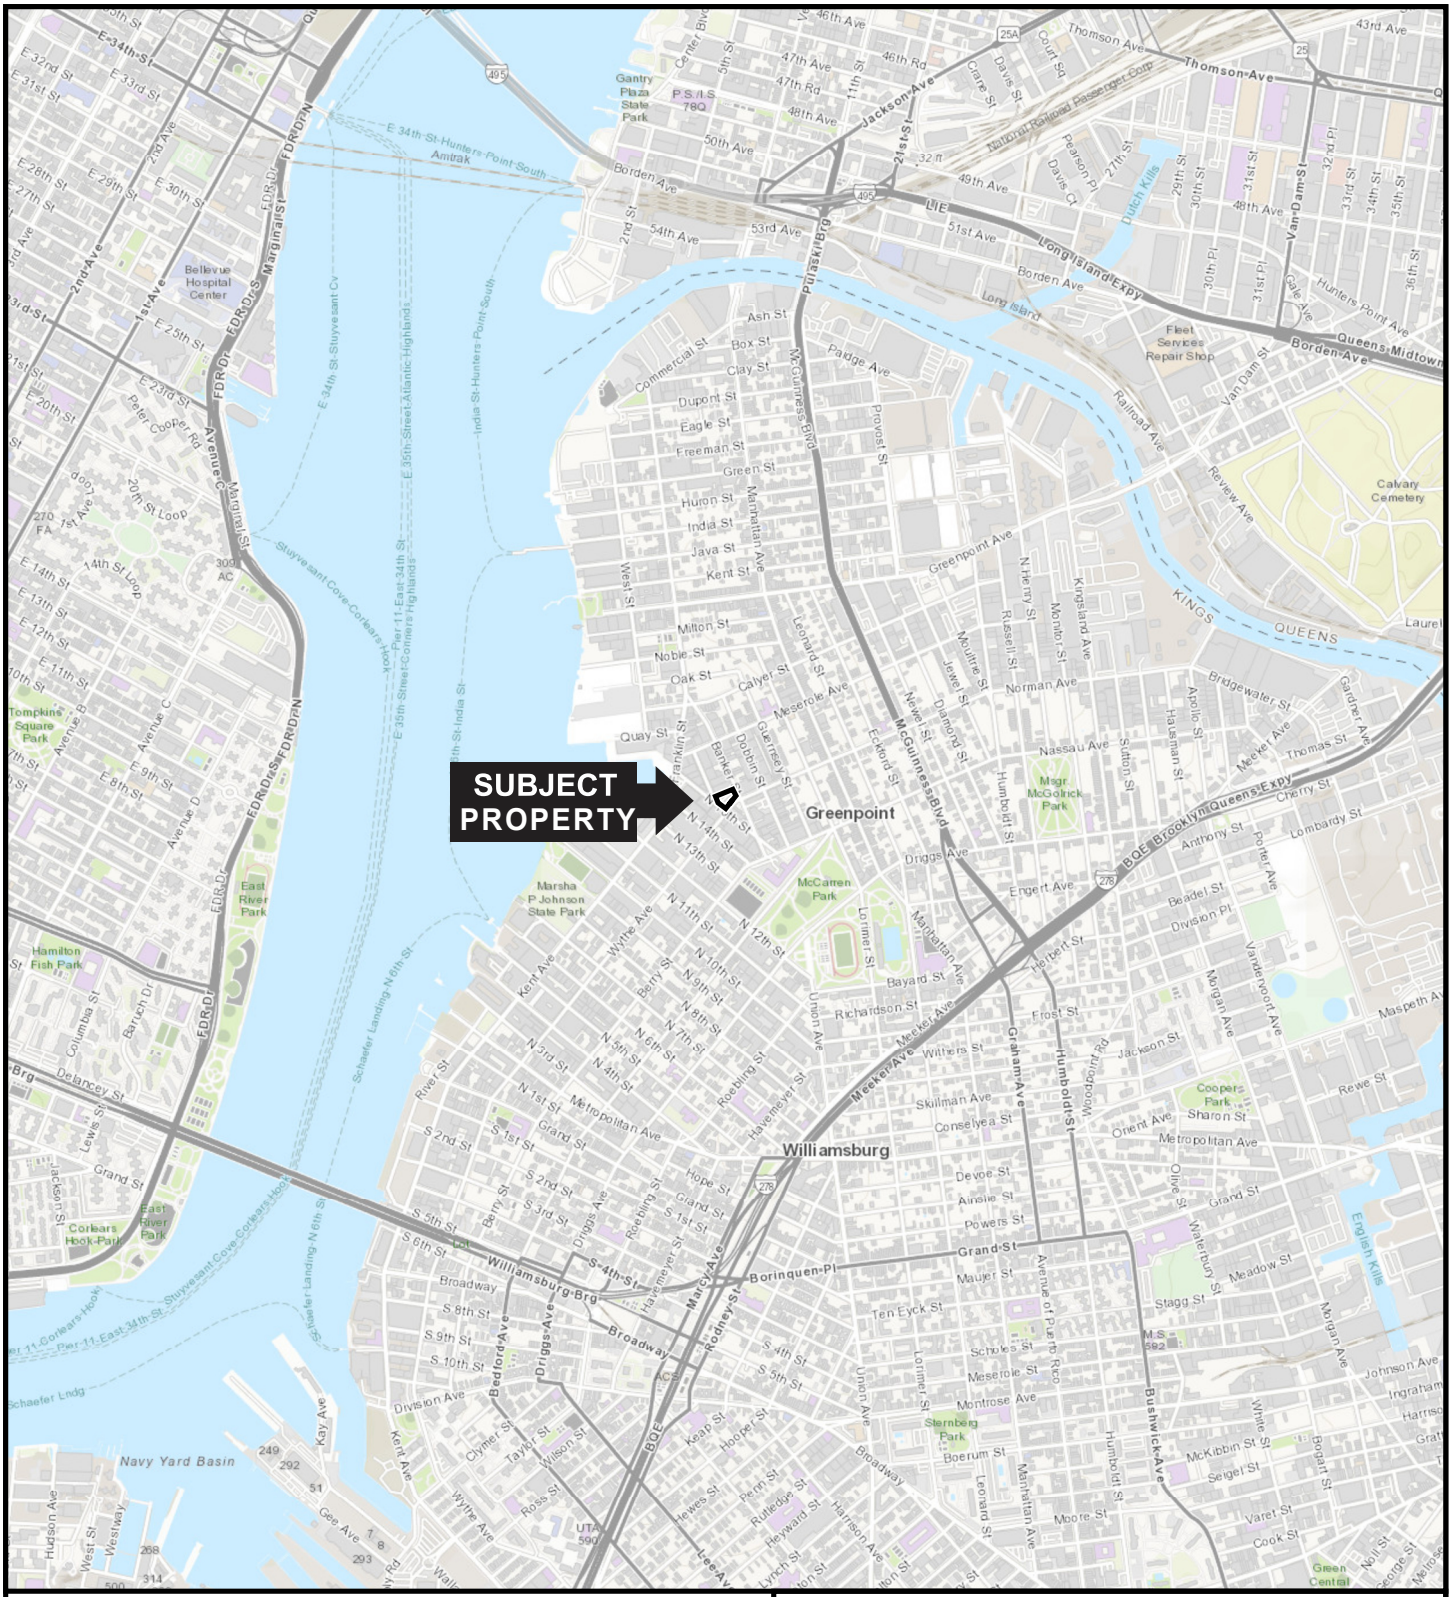
This Phase I ESA Report is not an appraisal or value judgment of the Subject Property. Macentico III LLC understands that Roux shall not be liable for any use of the Phase I ESA Report as an appraisal or value judgment of the Subject Property.

The Phase I ESA Report has been prepared for the exclusive Macentico III LLC for specific application to the Subject Property covered by the Phase I ESA Report. Macentico III LLC understands that any third-party use of this Phase I ESA Report is the sole responsibility and at the sole liability of Macentico III LLC.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312; and

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth on 40 CFR 312.

Respectfully Submitted,



ROUX ENVIRONMENTAL ENGINEERING AND GEOLOGY, D.P.C.

TECHNICAL EXPERIENCE

Phase I and II environmental site assessments, remedial construction oversight, Voluntary and Brownfield Cleanup Program requirements, Petroleum Bulk Storage regulations, mold assessment and remediation, soil vapor intrusion, drywell and storm drain investigation and remediation, regulatory coordination, Underground Storage Tank (UST) investigations and removal, engineering control (vapor barrier and sub-slab depressurization system) design and implementation.

EXPERIENCE SUMMARY:

Five years of experience: Project Geologist at Roux Environmental Engineering and Geology, D.P.C.; Project Manager at HydroTech Environmental Engineering and Geology, D.P.C

CREDENTIALS:

B.A. Environmental Science, Natural Resources and Earth Science, SUNY Binghamton 2014
C.E.I – Certified Environmental Inspector – Environmental Assessment Association
C.E.M – Certified Environmental Manager – Environmental Assessment Association
NYC Mayor's Office of Environmental Remediation Gold Certified Professional
Licensed NYS Mold Assessor #MA01542
OSHA 40-Hour HAZWOPER and OSHA 8-Hour Annual Refreshers
OSHA 30-Hour Construction Safety, 2019
OSHA 10-Hour Construction Safety, 2018

PROFESSIONAL AFFILIATIONS:

Environmental Assessment Association

KEY PROJECTS

- Authored and assisted on over 200 Phase I Environmental Site Assessments for properties in the greater New York City area and Long Island. These assessments ranged from small residential properties to large scale industrial, commercial and manufacturing businesses. Responsible for maintaining report integrity and compliance with ASTM E1527-13 standards. Maintained client expectations and delivered accurate results in a timely manner to satisfy tight due diligence deadlines. Provided recommendations and cost estimates to clients if Phase II investigations were warranted.

- Performed a Phase I portfolio for 16 vacant parcels of land owned by the New York City Department of Housing Preservation and Development (NYCHPD). The developer was interested in purchasing and developing affordable housing on these lots. Several NYCHPD specific requirements were incorporated into each Phase I to satisfy the clients due diligence requirements in the allotted timeframe. The client ultimately purchased the lots and is in negotiations with subcontractors for development.

- Project Geologist for a VCP renovation of a 11,000 square foot 5-story former paint manufacturing building located in Brooklyn, New York. Designed and implemented a remedial action work plan that was approved by the NYCOER which included excavation of lead hazardous and metal impacted soil exceeding industrial SCOs. Directed weekly construction meetings with the numerous subcontractors working at the Site regarding their environmental obligations. Coordinated with the NYSDOH regarding the vapor barrier and SSDS design as well as the NYSDEC upon the discovery of lacquer, paint and varnish product present in the soil. Performed hazardous lead delineation sampling to minimize overall costs of soil disposal, transportation and treatment for the client.

- Project Geologist for a VCP redevelopment of a vacant parcel in the middle of the Coney Island in Brooklyn, New York. Technical challenges included planning for construction in the busy summer months as well as the very active local community board. Meetings were held between the client, community board and the OER to convey the importance and goals of the environmental oversight as well as ease tensions of the local residents. Additional precautions were implemented to minimize trucking activities, sidewalk impact, noise pollution as well as dust production. Towards the end of the project, stockpiled soil was identified to be hazardous and was handled expeditiously with the disposal facility in order to minimize construction delays for the client.

- Project Geologist for a 12.5-acre waterfront property in Whitestone, Queens which was entered into the NYSDEC Brownfield Cleanup Program for a second time. The project had originally completed its remediation under a separate consultant but was not issued a Certificate of Completion (COC) due to the contractor importing approximately 35,000 tons of contaminated backfill onto the Site. The Site was purchased in 2015 with the intention of reentering the BCP under a new agreement and developing 51 single family residential homes and a waterfront park. Responsibilities included the characterization of 137 soil grids for contaminants of concern including SVOCs, metals and pesticides. Approvals were obtained from four separate disposal facilities and a disposal plan was established to ensure proper handling of the excavated soil. Mass excavation of approximately 45,000 tons of impacted material (including hazardous lead and cadmium soil) was conducted peaking at 130 trucks removed per day. Provided daily oversight and communicated directly with the NYSDEC case manager documenting the successful implementation of required storm water pollution prevention measures and remedial construction elements. The final phase included the coordination and sampling of soil source facilities to provide a clean 2-foot cover of soil over the excavated areas. Approximately 30,000 tons of clean material was imported to the Site. On-site soils were also sampled and reused to minimize the cost of clean fill importation. The COC for this Site was issued in December 2017.

- Project Geologist for the remediation and subsequent monitoring of a retail gasoline station in Valley Stream, New York. During underground storage tank replacement, impacted soil and groundwater were identified and a NYSDEC spill case was opened.

Adam P. Nasiatka
Project Geologist

A remedial action work plan was submitted and approved by the NYSDEC and included source soil excavation, endpoint sampling, community air monitoring, odor suppression and backfilling. The work was completed within a month of the identification of the release and the monitoring phase was initiated. A subsurface investigation was conducted at the request of the NYSDEC to delineate any residual soil/ groundwater impact. Dissolved VOCs and SVOCs were identified in the groundwater at concentrations exceeding regulatory standards and a monitoring/ sampling program was proposed and approved. No additional soil contamination remained on Site. Concentrations of groundwater contaminants reduced significantly over time confirming source removal. Coordination was also provided with the law team representing the client and a new purchaser. An access agreement was also developed and executed following the client's sale of the Site to allow for the continuation of the required monitoring activities, meeting all the client's goals for this project.

- Project Geologist for the remediation of a 30,000-square foot former Rubber Adhesives manufacturer in Ravenswood, Queens. The project was enrolled in the BCP and operating under an approved Interim Remedial Measure (IRM) to be performed in conjunction with the development of a 13-story hotel. Due to zoning changes, a strict deadline for the foundation placement had to be met, which provided technical challenges for the entire development team. Five USTs containing a combination of gasoline, toluene, heptane and methyl ethyl ketone were identified, emptied and removed. The entire footprint of the hotel was dug down to bedrock which ranged from 3 to 16 feet below grade. Approximately 2,500 tons of hazardous toluene and 6,000 tons of VOC and metal impacted soil was excavated and disposed off-site. The development team consisting of architects, foundation engineers, developers, environmental consultants and stakeholders attended meetings every week to track progress, issues, environmental obligations and deadlines. Ultimately, the deadline was met and the IRM requirements were completed within time and budget constraints allowing the client to continue with the development of the hotel.
- Project Geologist for the investigation and remediation of stormwater drywells for a client who owned a chain of auto repair shops on Long Island. Drywells were split sampled with the health department and compared to Suffolk County Department of Health Services (SCDHS) Action Levels and several exceedances for VOCs, SVOCs and metals were identified. Coordinated a remediation strategy with the county, which included vacuum truck sediment removal and disposal, endpoint sampling and backfilling the structures with virgin sand.
- Project Geologist for the evaluation of a 25,000-gallon #6 fuel oil tank impacted from Hurricane Sandy located at a large residential complex in Rockaway, Queens. A combined Phase I/II was performed which identified the tank as a significant source of environmental risk. Several temporary monitoring wells and soil probes were installed around the tank and identified significant VOC impacts and petroleum in the soil which prompted the opening of a NYSDEC spill case. The residual product and sludge were removed from the tank and the interior was cleaned and prepped for abandonment. Removal was not deemed technically feasible due to the tanks size and proximately to the foundation walls of the building. Additional soil disposal was conducted on the surface and surrounding the tank until no more product was identified and the NYSDEC spill was subsequently closed.
- Project Manager and Site Assessor for an extensive mold investigation conducted at a 27,000-square foot luxury condominium complex in DUMBO, Brooklyn. The investigation was conducted over several weeks and throughout approximately 20 residential units and common areas including the basement, hallways and amenity spaces. Excess moisture was documented throughout the entire building, accumulating in areas where HVAC ducting was located. Ultimately, it was identified that the HVAC ducts were not properly insulated, and condensation was forming on them and impacting drywall throughout the basement and residential areas. Mold growth was identified in several units throughout the complex, which was confirmed with both bulk and air samples. A remediation plan was provided for all the areas identified with mold impact. Replacement and insulation of the ductwork was recommended to prevent future moisture buildup and potential mold growth. Mold growth in one unit was extreme which required an outside contractor to perform remediation services. Oversight of this work was provided to assess the contractor's ability to follow the remediation work plan provided. Clearance assessment and sampling was also conducted which confirmed the remediation as successful.
- Performed oversight of foundation and general contractors installing various engineering controls including: concrete covers, vapor barriers and SSD systems to ensure appropriate installation methods. Audited and corrected installation methods to ensure strict adherence to engineering design. Performed yearly inspections of these systems for SMP compliance on OER projects and generated SMP inspection reports.

ROUX

PROFESSIONAL PROFILE

Craig A. Werle, P.G.

Principal Hydrogeologist/National Client Manager

TECHNICAL SPECIALTIES

Soil and groundwater investigations, delineation of groundwater flow systems, design and implementation of remedial systems, development of regulatory strategy and regulatory negotiations, environmental due diligence, environmental compliance audits.

EXPERIENCE SUMMARY

Twenty-nine years of experience: Principal Hydrogeologist at Roux; Principal at ERM Northeast; Staff Hydrogeologist at Suffolk County, New York Department of Environmental Control.

CREDENTIALS

B.A. Geography, Clark University, 1974
MA. Geology, SUNY Binghamton, 1978

REGISTRATIONS

Licensed Professional Geologist in New York – No. 000469

KEY PROJECTS

Brownfields/Real Estate Redevelopment

- Principal-in-Charge for taking the 22-acre Former Avis Headquarters site in Westbury, New York through the NYSDEC Brownfield Cleanup Program (BCP) for Equity One Inc. The project was constructed on an expedited basis to meet the deadlines associated with opening a major new shopping center. The project required very close coordination with all members of the construction team to ensure environmental issues didn't delay the demolition of existing buildings or construction of a 312,000 sq. ft. new retail space. The project included submission of the BCP Application, RI Work Plan, implementation of the RI including soil, groundwater and soil vapor sampling. An IRM was implemented that included the excavation of 40,000 tons of soil in support of a Track 1 cleanup. The NYSDEC-approved Remedial Action Work Plan (RAWP) was implemented including an in-situ chemical oxidation (ISCO) remedy for groundwater and soil vapor monitoring. All remedial work was completed on schedule and the Final Engineering Report (FER) was submitted and a Track 1 Certificate of Completion (COC) was issued before the first tenants took possession of their space.
- Principal-in-Charge of all environmental services for Vornado Realty Trust Rego Mall Expansion. Project included Phase II investigation, preparation of Remedial Action Plan for NYCDEP approval. Preparation of three-dimensional sample grid for in-situ waste characterization, conduct 495 sample in-situ characterization plan, provide environmental support to project team evaluation of disposal strategy for 400,000 tons of soil/urban fill. Provide full time oversight of 9-month excavation/waste shipment process. Prepare Remedial Action Summary Report and Groundwater Monitoring Report.
- Principal-In-Charge of NYSDEC BCP project in Brooklyn New York. The site is auto dealership with petroleum and chlorinated solvent contamination in soil and groundwater. The site has been accepted in the NYSDEC BCP and the RIWP submitted. Implementation of the RI is expected late in 2012 followed by a track 4 RAWP in 2013.
- Principal-in-Charge for Equity One development of a site in Bronx NY into an urban mall. Project includes entry in the New York City Office of Environmental Remediation (NYCOER) Voluntary Cleanup Program (VCP), implementation of an RI, submittal of an RI Report and RAWP recommending a soil excavation remedy. Remedial activity is expected to begin in late 2012.

Industry Experience

- Principal-in-Charge/Project Manager for ECRA/ISRA project at a major aerospace facility in New Jersey for Fortune 100 client. Project included development of regulatory strategy, on-site delineation of multiple areas of soil contamination including large scale disposal pits, identification of radiological contamination, delineation of free phase oil body containing PCBs, delineation of multi-constituent contaminant plume containing TCE, UST removal, and RCRA storage pad closure. Designed and implemented comprehensive remedial pilot study to evaluate groundwater treatment technologies, feasibility and treatment of SVE/AS system, oil collection technologies. Aquifer test conducted in conjunction with pilot test. Excavation and off-site disposal of 5,000 tons of contaminated soil from waste pits. Investigation of off-site impact of TCE plume migration including health risk assessment.
- Principal/Project Manager for hydrogeologic investigation of largest private landfill in Connecticut. Including installation of multi-aquifer monitoring network, delineation of flow system and leachate plume.
- Site investigation and design of a multi-aquifer groundwater recovery system at a Connecticut NPL site. Extensive off-site contaminant plume contained TCE, PCE, methylene chloride and assorted chlorinated and aromatic hydrocarbons. Design reviewed and approved by USEPA Region 1.
- Project Manager for investigation of landfill leachate impacts in groundwater/surface water at private landfill in Colchester, Connecticut. Conducted soil and groundwater testing in support of landfill expansion permit.

Craig A. Werle, P.G.

Principal Hydrogeologist/National Client Manager

- Investigation of organic chemical impacts to groundwater associated with industrial landfill at major chemical plant in Naugatuck, Connecticut. Included evaluation of hydraulic and geochemical relationship of aquifer system and Naugatuck River.
- Principal-in-Charge/Project Manager for a soil and groundwater investigation at a tool and die manufacturer in Greenfield, Massachusetts. Project included delineation of TCE contamination in soils surrounding a closed dry well. Soils remediation completed through excavation and off-site disposal. Mapped TCE plume on-site and 4,000 feet off-site. Development of regulatory strategy/regulatory negotiation.
- Principal-in-Charge for a soil investigation/removal action and groundwater investigation at a Hicksville, New York State-lead CERCLA site. Project included delineation of TCE/PCE plume in the Upper Glacial Aquifer. Key issues included differentiation of on-site solvent sources from upgradient and downgradient plumes of similar contaminants.
- Project Manager for a soil and groundwater investigation at a solvent recovery facility in Linden, New Jersey. Project included delineation of significant on-site soil contamination from a wide variety of chlorinated and nonchlorinated solvents.
- Project manager for installation of groundwater monitoring network at Acabonac Road Landfill, East Hampton, New York.
- Project Manager for an expedited investigation of a TCE plume migrating through fractured bedrock toward the only on-site source of potable water at a major industrial facility in western New Jersey.
- Principal-in-Charge/Project Manager for the investigation of TCE contamination in groundwater at a Farmingdale, New York manufacturing facility. Project included development and negotiation of a work plan with NYSDEC. Groundwater modeling of potential off-site plume migration was responsible for delisting of the facility.
- Principal/Project Manager for a soil and groundwater investigation at a chemical distribution facility in Norwalk, Connecticut. Project included removal of buried drums and soil containing solvents and waste oils, identification of on-site source areas, delineation of solvent plume in glacial sediments and shoreline deposits adjacent to Long Island Sound. Negotiation of project scope and approach with CTDEP.
- Principal-in-Charge for investigation of a million gallon gasoline spill in a complex glacial environment. Delineation of free phase gasoline plume and multiple dissolved phase plumes, including the installation of 250 monitoring wells. Design/installation/operation of a remedial pumping system responsible for the recovery of over 460,000 gallons of gasoline. Primary technical representative for regulatory, community and media interaction. Installation and routine sampling of vapor well monitoring network to evaluate residential vapor impacts.
- Principal-in-Charge for detailed baseline assessments of six oil terminals in the northeastern United States prior to divestiture by a major U.S. oil company. Assessments included evaluation of compliance issues and implementation of soil and groundwater sampling plans and development of quantitative remedial cost estimates.
- Principal-in-Charge of detailed pre-acquisition environmental assessments of the Come-by-Chance Refinery in Newfoundland and the BORCO Refinery in Grand Bahama Island. Projects included evaluation of compliance and remedial issues based on both local and U.S. regulations and the development of remedial cost estimates.
- Principal-in-Charge of the remediation and divestiture of 28 service stations in New York for an independent petroleum company. This multi-year project included the design/installation/operation of remedial systems including free product recovery; dissolved phase recovery/treatment; and soil vapor extraction/air sparging. Use of risk-based corrective action (RBCA) and intrinsic bioremediation strategies resulted in No Further Action closures of many stations.
- Principal for the design and construction of a 7-acre impermeable cap over an inactive pharmaceutical waste landfill. Through construction of the cap, the landfill was closed in accordance with CTDEP Solid Waste Management regulations. The cap consisted of a 6-inch gas venting/bedding layer; 40-mil HDPE impermeable layer; 18-inch sand drainage layer and 9-inch vegetative layer. Stormwater runoff was collected in a series of riprap drainage swales and a culvert, discharging to a retention basin. The cap construction was completed within the allotted timeframe and budget.
- Principal-in-Charge for the investigation and remediation of a large gasoline leak at a terminal

209 Shafter Street | Islandia, NY 11749

Craig A. Werle, P.G.

Principal Hydrogeologist/National Client Manager

overlying Long Island's sole source aquifer. Project included the delineation of the 11-acre free phase product plume and the 3,000 foot long dissolved phase plume. Design/construction/operation of a 10 well, 800 gpm recovery system. Over 150,000 gallons of free phase product recovered. Remediation of the dissolved product plume was successfully completed and approved by NYSDEC and the system was dismantled. Design/implementation of a 90-day SVE/AS pilot test. Development of regulatory strategy, regulatory negotiations. Technical representation with the community, media, surrounding landowners and political officials.

- Development and implementation of an underground storage tank management plan for major chemical facilities in West Virginia and New Jersey.
- Principal-in-Charge of a site investigation and remediation project in southern New Jersey conducted under the NJDEP voluntary cleanup program.
- Principal-in-Charge for a groundwater investigation at a major petroleum transshipment terminal on Bonaire. Project included installation of 22 monitoring wells, evaluation of geologic and hydrogeologic setting, determination of groundwater quality and distribution of petroleum in the subsurface.
- Principal-in-Charge for the development of a quantitative environmental baseline assessment at a portion of the former Exxon Lago Refinery in Aruba. Project included installation of monitoring wells, collection and analysis of priority pollutant soil and groundwater samples. Evaluation of contaminant distribution within all environmental media was the basis of establishing remedial responsibility with the Aruban government for new site ownership.
- Principal in Charge of RI/IRM at former dry cleaning facility in Glen Cove, New York. Including negotiation of work plan with NYSDEC and New York State Attorney General's office, delineation of residual DNAPL, PCE plume in groundwater and PCE in soil
- Management of an ISRA project at a plastic injection molding faciltiy in Randolph, New Jersey. Issues include TCE contamination in soil and groundwater and hydrocarbon contamination from an UST release.
- ISRA project at a former fabric dyeing facility in Haledon, New Jersey Including delineation of chlorinated solvents and petroleum in soils and groundwater. Remediation includes soil removal and engineering controls and deed notice.

Litigation Support/Expert Witness

- Expert witness for Wiley Rein & Fielding and Melito & Adolfsen, PC for Glidden Company v. Aetna Casualty & Surety Company, et al. Included preparation of expert report for three Glidden facilities and deposition testimony. Report and testimony related to timing and nature of contaminant releases and reasonability of past costs.
- Claim evaluation for Mendes & Mount and London Market Insurers for Harsco Corporation facility in Fayetteville, New York. Evaluation related to insured's contribution to contamination at a site with sequential ownership. Also, evaluation of timing of releases, and relative importance of various source areas.
- Expert witness for Cuyler Burk, LLP in Selective Insurance Co. v. Parsippany-Troy Hills (Sharkey Landfill site). Included preparation of expert report related to the timing of contamination and the insured's understanding of environmental conditions.
- Claim evaluation for Mendes & Mount, LLP and London Market Insurers for five sites owned by Federal Pacific Electric Corp. and Cornell Dubilier Electric Company. The report evaluated sources of contamination, reasonability of past costs and potential future costs.
- Claim evaluation for Hardin, Kundla, McKeon, Polletto & Polifroni and the Royal Insurance Company for two Mark IV Industries, Inc. (former Rexon Technology Corp.) facilities in New Jersey. The primary issues evaluated were sources of contamination relative to owned property concerns, critical review of past costs and a projection of future costs.
- Claim evaluation for Jackson& Campbell and AIG for two RSR Corporation sites including a battery recycling/secondary lead smelting facility in West Dallas, Texas and a multiparty site on Harbor Island in Seattle, Washington. Both sites are on the National Priority List. The evaluation examined contaminant sources, owned property issues and past and future costs.
- Expert witness for Hardin, Kundla, McKeon, Polletto & Polifroni and CNA on a residential petroleum spill in Saddle Brook, New Jersey. The expert report evaluated timing of the release,

Craig A. Werle, P.G.

Principal Hydrogeologist/National Client Manager

remedial costs and selection of remedial technologies.

- Expert witness in a tax certiorari case at a service station site in Farmingdale, New York. Provided expert testimony related to petroleum release, groundwater impact and remediation costs.
- Fact witness and Principal-in-Charge for an oil company client being sued by a developer related to diminished property value resulting from dissolved phase migration. Provided court testimony related to the nature of the release, migration of free/dissolved phase contaminants, hydrogeologic setting and remedial strategy and efficacy of remedial system operation.
- Fact witness and Principal-in-Charge for an Insured seeking recovery of costs from insurance company at a site in Bay Shore, New York. Provided deposition testimony related to on-site and off-site hydrogeologic investigation, remedial strategy, and off-site recovery system design.
- Fact witness and Principal-in-Charge for a property owner suing a major oil company relative to unremediated environmental impacts from significant gasoline releases at a long term service station lease site.
- Expert witness for The Hartford and Melito & Adolfsen in Gould Electronics, Inc. v. Aetna. Included preparation of expert report and deposition testimony. Expert opinion offered on trichloroethylene contamination of soils and groundwater, DNAPL mechanics and volume
- Expert witness for London Market and Mendes & Mount in TRW Corp. v. London Market Insurers. Included preparation of expert report and deposition testimony. Expert opinion offered on trichloroethylene disposal procedures and state of knowledge concerning TCE toxicity
- Expert witness for Leodori and Napierkowski in Leisure Time Tours v. Continental Insurance Co., et al. Included preparation of expert report related to investigation and remediation of free phase hydrocarbons.
- Expert witness for Rogers Towers Bailey Jones & Gray in Petroleum Products Corp. v. Insurance Company of North America. Included preparation of expert report and deposition testimony related to investigation and remediation of hydrocarbon and PCB contamination
- Principal in Charge of claim evaluation services for Kodak Insurance Defense Group. Includes review and evaluation of environmental reports and invoices related to $298 million claim.
- Claim evaluation for Garrity Graham Favetta & Flinn and Utica Insurance Co. related to North Burlington Regional School District claim. Critical evaluation of documentation for the investigation and remediation of a hydrocarbon release from multiple sources.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 14 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 01/06/2022 has revealed that there are 24

EXECUTIVE SUMMARY

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF UST site within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 01/31/2022 has revealed that there are 41 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 55 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 2 NY HSWDS sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto

site within approximately 0.125 miles of the target property.

DEC Memo:	"emis- 275544 Leak Committee declared a Leak Watch on 345 kV Feeder 62 based on off-line analysis. The estimated leak rate is 7 gallons per day with an estimated loss of 780 gallons of dielectric fluid. All pump houses will be inspected. ChemLab PFT van will patrol the feeder. 11/21/19 - Sekhon On 11/20/19 @ 18:00 the crew installed a clamp on the 10 line in MH64827 terminating the leak at located at Norman Avenue & Banker Street in Brooklyn. An estimated 2390 gallons of oil and 1800 gallons of water was removed from structure. A thru the wall barrel would be needed to make permanent repairs. Case assigned to DEC Zhune (off hr secondary). 3/5/20-Accordingto the Emis 275544 report on 11/20/19 867-STO Extra High Voltage Supervisor Anthony J Pena (03446)reported oil discovered inM64827 at Banker Street Norman Ave. Brooklyn at 13:20. At 17:30 the source of the leak was discovered on the 10 oil line. The pipe was corroded and a leak rate could not measure. The leak was terminated at 18:00 when a temporary clamp was installed and holding. Pending permanent repair which will be initiated on 11/21. A Con Edison tanker removed an estimate amount of oil at 2390 gallons and 1800 gallons of water to be taken to Astoria facility for 0ff-loading and updated totals. A thru the wall barrel would be needed to make permanent repairs. The PFT van did not located any other significant indications along the feeder route. Emis 275544 was created for this incident. On 1/27/20 MH 64827 was double power washed by PSC. PSC removed 250 gallons of NON Hazardous Oily Debris and disposed of it at Clean Earth with manifest 207922081. Spill Closed. "

BROWNFIELDS:

Name:	FORMER ANGLO CHEMICAL AND RUBBER SITE
Address:	1-9 WYTHE AVENUE
City,State,Zip:	BROOKLYN, NY 11222
Program:	BCP
Site Code:	624874
Acres:	0.380
HW Code:	C224337
SWIS:	2401
Town:	New York City
Record Added Date:	09/23/2021
Record Updated Date:	11/05/2021
Update By:	AMSERVIS
Site Description:	"Site Location: The site s address is 1-9 Wythe Avenue, Brooklyn, NY 11222. The site is located in Kings County, New York and is identified as Brooklyn Block 2641 Lots 1, 3 & 4. The site is located in an urban area of the Greenpoint neighborhood of Brooklyn, NY on the south side of Wythe Avenue between Banker Street and N 15th

FORMER ANGLO CHEMICAL AND RUBBER SITE (Continued) **S127990285**

Street and approximately 800 feet east of the East River. Site Size: The site is 0.380 acres in size. Site Features: The site is currently a triangular shaped partially lot with three one-story manufacturing facilities located in the northern portion of the property, with a rear yard on the southern portion. Current Zoning and Land Use: The site is currently partially developed land that is zoned for industrial and commercial use. The surrounding properties are currently used for commercial and warehousing/manufacturing purposes. Past Land Use: As found during the Phase I Environmental Site Assessments, the site was developed between 1916 and 1942 with a 1-story building noted as a Paint and Varnish Manufacturer on the eastern portion, barrel storage on the western portion and manufacturing in the northern and central portion. In 1951 the barrel storage area was expanded to the southeastern portion of the subject property. Between 1965-1981 the layout of the subject property remained the same, however, the operations were updated as inflammable liquid canning . Between 1982 and 1993 the subject property was noted as unspecified manufacturing, with an additional warehouse erected in the southwest corner of the property. Recently the site was used for multiple commercial operations including active furniture woodworking and a kitchen counter remodeling shop. The site is currently improved with three one-story warehousing and is vacant. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists primarily of urban fill extending to approximately 10 feet below ground surface (ft bgs) underlain by a layer of gray black sand with varying amounts of silt and clay extending to approximately 10 ft bgs. This layer is underlain by grey poorly graded sand to 15 ft bgs. Groundwater was encountered at approximately 9 ft bgs and groundwater flow is to the west. "

Env Problem:	"Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

DEC Memo:	"05/17/10- Zhune spoke FF reder from Hazmat 1 (347)-203-6886. He said a storage gasoline tank from a repair shop was leaking. Approximatelly 20 -25 gallons of a mixture of oil and water went to the street and to the sewer. Fire Department cleaned spill on the street. Fire Department notified DEP. Incident # 185034. Repair Shop owner: Ili Argi 718-266-8360, 732 616-6898 Worker Rodney Lochansingh 06/08/10- Zhune spoke Alex Castro from DEP. Alex responded to this site. Alex spoke to Rodney Lochansingh a worker of the shop. Mr. Lochansingh said he was reparing a truck accidentally he punched one of the two gasoline tanks located on the driver side. Approximatelly 25 gallons of gasoline leaked from the tank. He tried to cleaned the spill but due to the vapors they called the Fire Departement. The F. Department used foam and water to clean the spill. This mixture went to the street and then to the sewer. 09/15/10- Saddle tank spill to street. Fire Department cleaned it. "
Remarks:	"Caller reporting a spill of approx 20 gallons of gasoline/ water mixture. Clean up is in progress."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 06/11/08: At direction of my supervisor, Vadim Brevdo, I closed spill no. 9515580 to consolidate with this spill case (9801521), under which remediation of subsurface petroleum contamination at this site will be tracked. Closed spill 9515580 was for diesel tanks; unknown if diesel tanks were at same location as gasoline tanks. - J. Kolleeny 08/04/11: Reviewed Site-Specific Investigation Plan by LiRo, dated April 2011 (in eDocs). Plan states that, based on 1996 aerial photo, old USTs (removed in 1998) were likely located in same area as new USTs. Plan proposes install'n of 4 monitoring wells around existing UST system, with soil sampling during well install'n and GW sampling following well development. If GW is found to be impacted, slug tests may be performed to obtain hydraulic conductivity data. Investigation results will be presented in an ISRP, which will discuss findings and recommend a remedial strategy, if warranted by data. I sent letter (in eDocs) approving SSIP to Afsar Samani of DDC, cc's to Fatemeh Ashkan of DDC and Steve Frank of LiRo. - JK 04/09/13: Reviewed Investigation Summary and Remediation Plan and Spill Closure Request rpt by LiRo, dated 4/5/13 (in eDocs). Rpt summarizes install'n of 4 wells in Sept. 2012 and sampling of wells in Dec. 2012 and Jan. 2013. Results of soil samples showed no VOCs or SVOCs above CP-51 SCLs. GW results for Dec. 2012 showed several low-level exceedances: well LMW-01 had 57 ug/L of MTBE, well LMW-03 had 30 ug/L of naphthalene, well LMW-04 had 160 ug/L MTBE. GW results for Jan. 2013 were similar: LMW-01 again had 57 ug/L of MTBE and LMW-04 had 110 ug/L of MTBE. LiRo concludes that there are no soil impacts ad GW impacts are minimal, therefore they recommend/request spill closure. I closed spill, sent closure letter (in eDocs) to Afsar Samani of DDC, cc's to Fatemeh Ashkan of DDC and Steve Frank of LiRo. - JK "
Remarks:	"TANK REPLACEMENT BEING PERFORMED WHEN CONTAMINATED SOIL WAS ENCOUNTERED-ASSESSMETN WILL BE DONE AFTER TANKS ARE RE-INSTALLED. 06/11/08: These are Caller Remarks [sic] from spill no. 9515580, closed on 6/11/08 to consolidate with this spill case: Piping leaked into the soil of a underground tank. The tanks are 2 1000 gallon diesel tanks. They are still in the ground. piping has been replaced. This occurred in august 1995."

DEC Memo:	"Sangesland spoke to Melissa Whitley at DEP. she said the pump meter was re-calibrated and a tank test is scheduled for the next few days. Inventory reconciliation is using a new system. Tempurature compensation calculations from the Veeter Root system does not add up. The old system was to match delivery quantity from the vendor (this system does add up). After the tank is tested, they will try to work out the new Veeter Root based measuring system. 2/14/2011 - DEP forwarded a 25 page packet of information showing that the problem was human error (forgot to deduct some product manually pumped off) eDocs will not allow the .pdf to be loaded despite several tries."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 3/20/03 - AUSTIN, DDO - SENT OUT TTF LETTER TO BOB KNOZELMAN OF WH CHRISTIAN & sONS 1/7/04-Vought-Spill transferred from Vought to Austin. 1/27/04 - Sawyer - Spill transferred from Austin to Sawyer. 10/5/04 - Sawyer - Received another failed tank test from Pro Test with a letter informing the Department of repair attemps made and the ultimate removal of tank from service. Pro Test will update on further action, investigation and remediation. 03/04/05 - Sawyer - Jim from Protest called me about begining excavation at the above site 0n 3/08/05. They are going to remove the tank an about 60 cubic yards of contamination. 03/30/05 - Sawyer - Met Tom Leddy and Ted Dros of Protest Environmental at excavation. They will pump and pad the pit to clean sheen off water in pit. Clean endpoint samples and a ground water sample will then be needed. 5/26/05 - Sawyer - Received endpoint samples from Protest on 4/12/05 and though some of the groundwater samples were above ground water criteria, this property

WH CHRISTIAN & SONS (Continued) **1000171081**

was included in the Greenpoint Plume. This is the reason there are gasoline constituents in the gw sample. The groundwater is between 12-15 and this is an industrial area. No further action required. Closed."

Remarks: "tank failure, possible bad vent line "

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR SYNTHETIC MINOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Spiller Name:	KEN SALTZMAN
Spiller Company:	FALSE ALARM LTD
Spiller Address:	168 NORTH 14TH ST
Spiller Company:	999
Contact Name:	STEVE SALTZMAN
DEC Memo:	"Sangesland spoke to Steve Saltzman. A tank was pulled at the site 4 years ago and the report from the consultant said the owner should call into the DEC for a spill number. The owner never read the report and didn't call in a spill. Now the building is being refinanced and the bank read the report and is now asking for a copy of a closure letter. Owner needs to submit the report they have and DEC will determine if additional work is required. 12/3/08-Vought-Left message for Ken Saltzman to return call to DEC with more info. Vought received callback from Steve Saltzman and tank was abandoned in 2004 (possibly fuel oil UST) and SVOCs detected in sample analyticals. Saltzman will return call to Vought with fax number. Consultant that performed work was Hydro Tech. As per Saltzman, CSL sent to: Mr. Jay Weitzman False Alarm Limited 816 Avenue I Brooklyn, NY 11230 Fax: (732) 382-2270 12/3/08-Vought-Received email copy of Hydro Tech

FALSE ALARM LTD (Continued) **S109374189**

report dated 4/8/04. Report entitled Tank Abandonment . Tank was a 3000-gallon #2 fuel oil UST located in the western interior portion of the onsite building. Tank was abandoned in place via inert foam. GPR survey performed and four soil probes were performed. Soil borings samples at 2 foot intervals down to groundwater at 13'bg. No visual or olfactory evidence of petroleum contamination. Four soil samples analyzed via 8260/8270 show no TAGM 4046 Required Soil Cleanup Objective exceedences other than PAH exceedences attributable to fill material. Vought called and left message for Saltzman to return call to DEC with future use of property including possible redevelopment and requirement of installation of vapor barrier and SSDS. 12/4/08-Vought-Received phone message from Steve Saltzman that property is not being sold but is rather being refinanced and as such property use and foundation will not change and hence vapor barrier and SSDS not required. Spill closed and NFA sent to above address. "

Remarks: "CALLER STATES THAT THERE WAS A TANK ABANDONMENT 03/19/2004. CALLER HAS TEST RESULTS INDICATING SOIL CONTAMINATION."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL DEC responder notes: 4/12/99- 2:15PM. ROBERT LEUNG SPOKE TO C. ENGELHARDT AND GAVE HIM THE INFO. No. 6 oil spilled during pigging of No. 7 line. On location John Mitchell (White Hat for Con Ed), Barry Korman, Sal Bocuzzi. Barry Korman syas occurred while pigging, had recovery vac truck @ Noble Street. First truck = 4221 gallons, second truck = 1400 gallons when stopped (noticed oil on street). Notified by NYC Sanitation inpector at 12:00. They then shut down the compressor. Contractor Clean Venture was @ Noble Street - responded by 12:15. They were vac'ing line from North 1st Street to valve 10 (North 11th / Kent) - removed 12,000 gallons. FDNY came in fire boat - did not get off boat. No NYCDEP of USCG response. No oil in water (Bushwick Inlet approx. 50 feet west). Thus far only 1 subsurface

CON ED PIPELINE NO. 7 (Continued) **S104648846**

structure (Con Ed vault) is impacted. There is a sewer near 15th Street - oil did not reach it. Equipment on location: 3600 gallon vac truck (AllState Power Vac); 3150 and 5040 gallon vac trucks (Clean Venture). (CAE) 5/25/99: call from John Mitchell. They have not been monitoring the well. They will start every week for 5 weeks, then go to every 2 weeks if no product. Will be going tomorrow and next Tuesday. (CAE) ~~~~~~~~~~~~~~~~~~~ e2mis no. 124-172: On April 12, 1999, working on Fuel Line #7 in Brooklyn. J. O'Connell and M. Dobler was working Noble Street end and J. Daly was working at North 11th Street end of Fuel Line #7. A Santiation Department employee informed D. Daly that oil was coming out on the street. J. Daly informed J. O'Connell and they meet at the location (Kent Ave) where the oil was coming on the street. They took action by putting pads down, put drain plug on the catch basin and putting oil absorent down around the catch basin. Clean Ventures is at the location. They are in the process of taking oil out of the line. Approx. 30 gallons of oil spilled. UPDATE - April 13, 1999, from manhole 4348, 1800 gallons of oil has been pumped. At present leak has not been found, still looking. UPDATE - April 14, 1999, leak was found at 11:00 am, leak clamped 14:00 Tuesday. LARGE OIL SPILL CLEANUP CHECKLIST -Location of spill: N.14TH STREET AND FRANKLIN STREET, BROOKLYN. -Source/cause of spill: PIGGING OPERATION TO REMOVE # FUEL OIL FROM PIPELINE #7; A 20 INCH DIA PIPELINE. -Description of area affected by spill: 50' X 10' X 12' (EXCAVATION - APPROX.). Excavated contaminated soil, bluestone. -Name of contractor: ALL STATE POWER VAC, CLEAN HARBORS AND RCI. -Recovered oil 1,800 GALLONS; Recovered fluids/solids 200 CUBIC YARDS; Recovered oil/water 3,000+ GALLONS . -8 SOIL SAMPLES WERE COLLECTED FROM THE EXCAVATION. -1 WELL INSTALLED; OIL SHEEN ON WATER. ~~~~~~~~~~~~~~ DEC Responder notes (cont'd.): Results of well gauging/bailing/vacuuming: 5/26/99: Well depth - 140 (11.7'); Top of product - 40.5 ; Top of water - 29 ; product thickness - 11.5 . Well was vacuumed, approx. 400 gallons oil/water removed. 6/4/99: Oil thickness 1', Depth to water 9'6 . Approx. 500 gallons oil/water removed. 6/9/99: Oil thickness 1'2 , Depth to water 9'8 . Approx. 500 gallons oil/water removed. 6/16/99: Oil thickness (pre-vacuum) 1', Depth to water 9'3 . No notation on how much oil/water removed. Post-vacuum oil thickness 1.5 . 6/25/99: Oil thickness 8 , Depth to water 9'4 . No notation on how much oil/water removed. 7/28/99: Oil thickness 4 , Depth to water 8'9 . Approx. 350 gallons oil/water removed. Additional vacuum enhanced fluid recovery (VEFR) events occurred 7/11/00 (16 gallons); 10/27/00 (100 gallons); 1/24/01 (16 gallons); 4/17/01 (30 gallons); 10/4/01 (17 gallons); 4/4/02 (32 gallons); 10/24/02 (110 gallons). THIS IS PART OF APPENDIX B SITE 25/45. (JHO) Update 6/9/06 Spill closed based on final site investigation report located in eDocs App. B Site 25. (SKA)"

SWIS:	2401
Town:	New York City
Record Added Date:	06/14/2017
Record Updated Date:	11/22/2021
Update By:	GWBURKE
Site Description:	"Location: The site is comprised of two parcels designated as block 2279, lots 1 and 9, totaling 0.65 acres, and is located at 29-41 Wythe Avenue and 180 North 14th Street in the Williamsburg neighborhood of Brooklyn, NY. Site Features: Lot 1 was improved with a 1-2 story industrial building constructed circa 1925. Lot 9 was improved with a 1-story industrial building constructed circa 1950. Both buildings were recently demolished. Current Zoning and Land Use: The site is currently zoned M1-1 (manufacturing). M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. The site is currently vacant, with concrete covering the entire site. The land use in the immediate vicinity of the site includes an industrial manufacturing building and new development project to the west, a new hotel and retail shops to the south, new construction, a high school and an existing office building to the east, and an industrial/manufacturing property to the north. Past Use of the Site: A portion of Lot 1 was occupied by a varnish factory beginning sometime prior to 1887. The varnish works expanded to cover the entirety of Lot 1 by 1942. Records show that, by 1951, this lot was occupied by the Dutch Masters Paint and Varnish company until 2007. This lot was also used as a manufacturer of typewriter ribbon, a clothing warehouse, a motorcycle repair shop and

FORMER DUTCH MASTERS PAINT AND VARNISH CO. (Continued) **S121493079**

art studio. A portion of Lot 9 was used as a foundry for the manufacture of window weights from 1902 through 1916. By 1942, the property was used as a bed spring manufacturer. Dutch Masters Paint and Varnish took a mortgage on this lot in 1969. Later, the property was used as a warehouse for typewriter ribbons and a clothing warehouse. In 2009, it was rented out as music studios. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of approximately 8 to 10 feet below the surface, followed by native silty-sand and clay layers. The elevation of the property is approximately 12-13 feet above mean sea level. The area topography gradually slopes to the north toward the East River. Groundwater is 7.5-11.8 feet below grade under water table conditions and flows to the north east toward the East River. The entire site is located within a designated moderate risk flood zone area with a portion of Lot 1 in a high-risk flood area. "

Env Problem: "Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides, and emerging contaminants (per and polyfluorinated alkyl substances, or PFAS, and 1,4-dioxane) in groundwater. Soil vapor samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include trichloroethene (TCE), and petroleum related SVOCs. Soil - TCE was found in shallow soil across the site. The maximum concentration of trichloroethene was 3.1 parts per million (ppm), which exceeds the applicable protection of groundwater soil cleanup objective (0.47 ppm). Historic fill material has been identified across the site to depths of 15-17 feet. Analysis of the material showed benzo(a)anthracene at 32 ppm, benzo(a)pyrene at 31 ppm, benzo(b)fluoranthene at 24 ppm, chrysene at 51 ppm compared the unrestricted SCO of 1 ppm, and indeno(1,2,3-CD)pyrene at 18 ppm compared to the unrestricted SCO of 0.5 ppm. Data does not indicate any off-site impacts in soil related to this site. Groundwater - TCE was also found in groundwater at the site at a maximum concentration of 8.7 parts per billion (ppb), which slightly exceeds the groundwater standard of 5 ppb. Petroleum related SVOCs were detected across both lots on the site, including benzo(a)anthracene at 66 ppb, benzo(a)pyrene at 61 ppb, benzo(b)fluoranthene at 31 ppb, chrysene at 58 ppb, and indeno(1,2,3-CD)pyrene at 26 ppb, all above the standard of 0.002 ppb. Several metals were detected above standards, including iron, magnesium, manganese and sodium in the majority of samples. These exceedances are not considered contaminants of concern and are likely naturally occurring. Emerging contaminants (i.e., PFAS) were detected at maximum combined concentration of 134.37 parts per trillion. There were no PCBs, pesticides detections above standards. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - Petroleum related VOCs were detected at low levels in soil vapor samples across the site. TCE was detected in soil vapor at concentrations ranging from 0.24 micrograms per cubic meter (ug/m3) to 320 ug/m3. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Access to the site is restricted, which prohibits public access. Persons who enter the site could contact contaminated soil or groundwater by disturbing the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air

FORMER DUTCH MASTERS PAINT AND VARNISH CO. (Continued) **S121493079**

spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are currently no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern. However, the potential exits for the inhalation of site contaminants for any future onsite development and occupancy. Environmental sampling indicates that soil vapor intrusion is not a concern for offsite buildings. "

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RISK AND TECHNOLOGY REVIEW
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Update By:	JCGRATHW
Site Description:	"Location The 0.64-acre site is located in an urban area in the Greenpoint neighborhood of Brooklyn, New York, and is denoted on the Brooklyn Borough Tax Map as Block 2614, Lot 3. The site is located on the northwestern part of the city block bordered by Meserole Avenue to the north, Gem Street to the east, North 15th Street to the southwest, and Franklin Street to the west. The site is bordered to the southeast by a one-story warehouse building, and the Bushwick Inlet of the East River is located about 400 feet west of the site. Site Features The site encompasses an area of about 27,800 square feet (0.64 acres). Sidewalk elevations (el) generally increase from southwest to northeast and range from about el 8 to 10.5 feet referenced to the North American Vertical Datum of 1988 (NAVD88). The current use of the site is described below: - One-story warehouse (Bacik Sausage Company) - One-story bar/restaurant/brewery (Greenpoint Beer & Ale Co.) - Two-story bar/restaurant (Northern

LOT 3,TAXBLOCK 2614 (Continued) **S122877518**

Territory) - One-story plumbing hardware store (Eastern Metal Plumbing and Hardware - One-story music studio (Scientific Laboratory Music Company) Current Zoning and Land Use The site is located in the M1-2 manufacturing district. M1 districts typically include light industrial and commercial uses, as well as office and retail spaces, which is consistent with the proposed development. The surrounding area includes commercial, industrial, and open space. Past Use of the Site The site has been occupied by commercial and industrial facilities since the early 1900s. The historical site uses are described below: - Lumber company (1916) - Trucking company (1916) - Food manufacturing (1930s-1949) - Garage with three gasoline tanks (1942-1951) - Chipping, blasting and finishing of magnesium castings (1945) - Superior Bearing Bronze Company (1951) - Electroplating (1965-2012) - Polyethylene and cellophane bags manufacturing (1970-2013) - 2,000-gallon UST registered under PBS No. 2-364150 (closed in place in 1996) - Auto shop (2000) - 1,080-gallon UST identified by FNDY documents and visible sidewalk vent pipe Site Geology and Hydrogeology The USGS Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey indicates that the bedrock underlying the site is of the Hartland Formation, and is comprised primarily of dark gray, medium- to coarse-grained muscovite-biotite-garnet schist. During the Limited Subsurface Investigation, fill was identified below the concrete slabs, and predominately consisted of loose, light brown to black, fine- to medium-grained sand with varying amounts of gravel, brick, coal ash, slag, clay, silt and organic material. The surficial fill layer extends to about 1 to 12 feet below sidewalk grade (bsg) across the site footprint. Fine sand, clay and silt stringers of varying depths were observed beneath the fill layer. The inferred regional groundwater flow direction for the area surrounding the site is to the west toward the East River and Bushwick Inlet, located about 400 feet from the site. Groundwater underlying the site was observed at depths ranging from 5 to 8 feet bsg across the site footprint during the Limited Subsurface Investigation."

DEC Memo:	"9/17/18 Paul from Langan sent the following email As discussed, we identified petroleum impacts to soil and groundwater during a subsurface investigation. The site address is 12 Franklin Street in Brooklyn, NY, it comprises Lots 1, 3 and 8 of Block 2614 on the Brooklyn Borough Tax map. The investigation included advancement of 6 soil borings and installation of 3 monitoring wells and 3 soil vapor points. See attached map. " Evidence of petroleum impacts (e.g., odors, staining, and/or PID readings of up to 4,690 parts per million [ppm]) were observed in four soil borings (EB01, EB03, EB04 and EB06) " Petroleum-related VOCs (1,2,4-trimethylbenzene, benzene, ethylbenzene, and total xylenes) and SVOCs (naphthalene) were detected in soil at concentrations above the Unrestricted Use SCOs in boring EB06 and EB01. " Petroleum-related VOCs (1,2,4,5-tetramethylbenzene, chloroethane, n-propylbenzene) and SVOCs (naphthalene) were detected in groundwater at concentrations above the NYSDEC TOGS SGVs for Class GA water in monitoring well MW03. 11/14/19- DEC Piper - Spill project transferred to MD Hoque as per Vadim Brevdo. 12/10/2019-M.Hoque: A remedial investigation is on-going under the NYSDEC BCP program (BCP site# C224286). (MDH) 12/12/2019-M. Hoque: Spoke to Paul McMohan of Langan, consultant for the open spill case and the BCP site# C224286. He told that a remedial investigation completed at the site under BCP program and a RI report will submit to DEC in a upcoming month. RI report will address the spill case to resolve/closure of the spill. (MDH) 11/20/2020-M. Hoque: A tele conference was held with Paul McMohn of Langan Environmental regarding site status. The site is under DEC BCP program and RI completed. A remedial investigation report is still under their internal review to submit to DEC. I requested him to send me a copy of RIR for review.(MDH) 3/31/21-J. Grathwol This spill will be remediated under the BCP, Site Code C224286. This project is transferred to Richard Mustico. (JCG)"
Remarks:	"contamination based on sample results"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:

Name:	FORMER F&S CENTRAL MANUFACTURING CORP. SITE
Address:	103 NORTH 13TH STREET
City,State,Zip:	BROOKLYN, NY 11249
Program:	BCP
Site Code:	517727
Acres:	0.279
HW Code:	C224230
SWIS:	2401
Town:	New York City
Record Added Date:	12/07/2015
Record Updated Date:	01/02/2018
Update By:	BXANDERS
Site Description:	"Location: The Former F&S Central Manufacturing site is located at 103 North 13th Street, identified as Block 2279, Lot 34 in the Greenpoint section of Brooklyn. Site Features: The site is comprised of a single tax parcel totaling 12,500 square feet (0.29 acres), and is currently vacant. The exterior walls and concrete slab of a former one-story manufacturing building remain, with the slab approximately 3 feet above sidewalk grade. Current Zoning and Land Use: The site is zoned as a M1-2 district which allows both commercial and light industrial use. The surrounding parcels are used for a combination of commercial and light industrial. Prior to acceptance into the BCP,

FORMER F&S CENTRAL MANUFACTURING CORP. SITE (Continued) **S118372394**

the site was used for commercial warehouse space. The nearest residential area is approximately 1000 feet to the south. Past Use of the Site: The site was undeveloped prior to 1905. From 1916 to 1930, the site was developed with three small one-story sheds/storage rooms and a portion of a single-story commercial building. The former one-story warehouse/manufacturing building was constructed in 1930. The building was used as an iron pipe warehouse (1940s 1950s), a paper storage warehouse (1960s), metal pipe hanger manufacturing facility (1970s), contractor s storage facility (1990s) and a food storage warehouse (2000s). Site Geography and Hydrogeology: Bedrock in this area of Brooklyn is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth as great as 13 feet below the existing building slab (10 feet below sidewalk grade), followed by a native grey (wet) sandy silt. Bedrock was not encountered at the site. The elevation of the site is approximately 14 feet above mean sea level and gradually slopes to the northwest. The depth to groundwater beneath the site is approximately 7 feet below sidewalk grade. The groundwater flows to the north-northwest."

Env Problem:

"Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzene, ethylbenzene, total xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benz(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, chromium, lead, arsenic and mercury in soil; and 1,1,1-trichloroethane and trichloroethene (TCE) in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and PCB/pesticides. Based upon investigations conducted to date, the primary contaminants of concern include benzene, ethylbenzene, total xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benz(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, chromium, lead, arsenic and mercury in soil; and 1,1,1-trichloroethane and trichloroethene (TCE) in soil vapor. Soil - The VOCs found in subsurface soils were predominantly in the shallower soils (0-5 feet bgs). Concentrations were found as high as 0.2 ppm for benzene; 7.1 ppm for ethylbenzene, and 31 ppm for total xylene. Both 1,2,4-trimethylbenzene (24 ppm) and 1,3,5-trimethylbenzene (23 ppm) were found in deeper soils at 7 to 11 feet bgs. Offsite investigations were not conducted as the adjacent properties are fully built out with existing structures. The SVOCs were found in the shallower soils. These were found as high as 2.4 ppm for benz(a)anthracene; benzo(a)pyrene (1.7 ppm); benzo(k)fluoranthene (1.5 ppm); and chrysene (3.8 ppm). The exception to this was in the southwest corner of the site, where the same SVOC constituents were found at concentrations approximately 12 to 15 times higher at 12 to 16 feet bgs. The metal constituents were also found mostly in the shallower soils. Chromium was found as high as 381 ppm; lead at 37,500 ppm; barium at 6,840 ppm; and mercury at 11.4 ppm. Hazardous levels of lead (as high as 14.9 mg/L TCLP) were found

FORMER F&S CENTRAL MANUFACTURING CORP. SITE (Continued) **S118372394**

	between 4 and 13 feet bgs in the western half of the site. All soil borings were drilled to 20 feet bgs, and there were no detections of any contaminant below 13 feet bgs. Bedrock was not encountered during the investigation. Groundwater - Both lead and chromium were found to slightly exceed groundwater standards on-site, as well as naturally occurring metals including, sodium, manganese and iron. There were no VOC or SVOC constituents detected in groundwater. Soil Vapor - Soil vapor was sampled at depths ranging from 5 to 6 feet below ground surface (bgs) and low levels of petroleum-related VOCs were noted. Also, TCE and 1,1,1-trichloroethane were detected as high as 173 micrograms per cubic meter (ug/m3) and 2,090 ug/m3 respectively, and are attributed to a suspected off-site source."
Health Problem:	"Remedial actions are complete and have eliminated the potential for contact with site-related contaminants. "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL APPENDIX B SITE NO. 63. 6/28/12 - Reviewed investigation work plan. Location of the incident needs to be better determined to properly investigate; the reported cause was a leaking two inch water service line impinging on the oil circulating line over a period of time created a hole; investigation was proposed instead where the feeder crosses the water main (not a service line); a large sewer (eight foot diameter) may also be in vicinity of work area running along Wythe Avenue; relatively shallow groundwater so investigation must be conducted to evaluate its condition; letter sent 6/28/12 Also requested pdf copy of work plan for our files. (JOC) 12/30/13 - response to the letter above submitted via the Department's FTS on

WYTHE AVE & N 13TH ST (Continued) **S103483460**

December 24th. (JOC) 1/17/14 - reviewed response letter, sent email response today including comments to add steps to work plan to make another effort to locate the involved water service line and to clarify the details about the 10 inch circulating line to make sure the correct pipe gets ivestigated and to get additional details about the depth and possible effects on groundwater flow from the large trunk sewer. (JOC) 4/30/14 - spoke with Con Edison PM Madsen - he is moving to new position within the company but advised he will keep working on this through work plan approval then turn it over to new Con Edison PM. Expect revised work plan this quarter. (JOC) 5/16/14 - revised SIWP received through Department FTS today. Under review. (JOC) 5/30/14 - conditional approval letter sent 5/30 (JOC) 6/27/14 - received response letter from CDM Smith/Con Edison dated June 23rd. CDM Smith had reviewed the other recently available reports for the area and made adjustments to the scope based on the relatively shallow depth to groundwater and for flow direction, will adjust based on whether a water service line is located per the history of the spill, and included a schedule for the investigation. The schedule has the utility clearance/geophysical work occuring during the first week of August, investigation work completed by the first week of September and report submission by the first week of November. Sent letter today approving the scope changes and schedule. (JOC) 8/14/14 - called Con Edison PM (Chang) at beginning of month requesting status of work per the schedule; Mr. Chang advised that they were about 7 business days behind the schedule, that they expected to be doing a site walk early in the week of 8/11 with geophysical work tentatively scheduled for 8/13. Sent email to Mr. Chang on 8/13 requesting update, whether the work had started. He called and left a message in response stating that the geophysical work was in progress, that he would follow-up with an email. Received email late in the day on 8/13 advising that geophysical work did ocucr, but they did not gain any other information about the location of a 2 inch water service line, that borings in the vicinity of the sewer along Wythe would be hand-clear only and shallow. He indicated that information and pictures of the work would sent later. He requested meeting at site Monday 8/18. I responded by email asking whether they could access any of the nearby buildings regarding the water service and suggested we meet sooner than 8/18. Held conference call this morning. During call received two pictures and one site figure. Pictures showed the markouts completed, and the site figure showed proposed boring locations and areas cleared by the geophysical work. Figure still shows feeder and circulating lines on opposite sides of Wythe Ave. They provided update on what was completed. Agreed that they need to confirm location of feeder and try again to find water main on Wythe, that the locations should be more north and south of N. 13th if they cannot find the service line. Received additional emails later - 1 confirming that the feeder is not located as shown on the figure, that the manhole in the intersection is distribution not transmission, that the feeder and circulating line are both on the east side of Wythe. Sewer depth was field checked - 8 foot diameter and 14 foot depth, and based on the 8 to 10 foot groundwater depth here, the sewer would limit LNAPL movement. As such, the locations for primary borings can all be on the east side of sewer. Second emails included scheduling for driller and geophysical for tomorrow morning, to meet at site per Con Ed PM at 9:30 to 10. Con Ed PM also followed up that appropriate Con Edison group advised that it is a 10 inch feeder and 10 inch circulating

WYTHE AVE & N 13TH ST (Continued) **S103483460**

line here. Con Edison PM had also mentioned that site at SE corner of intersection undergoing construction and had bad odors of naphthalene. Sent email to DER CO Deyette regarding the noted conditions for work at site 224069. (JOC) 8/19/14 - met at Wythe Avenue and N. 13th Street on 8/15 with Con Edison remediation staff, CDM Smith, ADT and Diversified Geophysics (Silver). They had not found with any certainty the locations of any water service lines. Mr. Silver indicated one line he thought was likely a water service line. CDM Smith indicated they had gotten no response from NYCDEP for tap cards. Apparently they had not yet actually tried to get into the buildings, so this was pursued at the time. Got access to the building unit with the suspect line, found water meter and vault under floor showing it was in fact the water line, roughly 50 feet north of N. 13th Street. Agreed that this would be a good location to start. As part of utility clearance, they will see if there has been a repair barrel installed here on the feeder/return. At the time they had a NYCDOT permit for the intersection only, so they cannot do any work outside that area. Con Edison indicated they will get NYCDOT permit for this block, and will advise on the schedule. Spoke with GEI consultant on-site person on construction site south of N. 13th who indicated they were not aware of any water service lines on the Wythe side but would confer with others. Today sent completed request form by email to NYCDEP requesting tap locations for water service on east side of Wythe between N.12th and N.14th. (JOC) 8/21/14 - NYCDEP responded that a visit the Brooklyn Permitting & Connections office at 250 Livingston Street to get water connection information. Sent email to DEC Region 2 Environmental Permits regarding LI well permit application 2-6161-01342/00001 providing information on this spill. Called Con Edison PM Chang to advise of the same permit application. He advised that they had not yet heard from NYCDOT for the permits. Discussed that if they get the permits they may proceed at the locations selected around the water line north of N. 13th Street. (JOC) 9/29/14 - work in progress. I had requested and obtained copies of documents from the construction project site located at southeast corner of Wythe and N. 13th, including tap card and tie-back drawings. Provided same to Con Edison PM Chang on 8/26. Work was to start right after Labor Day, but a heat alert was put in place so the work was delayed until 9/4. They started at the location north of N. 13th Street, focusing on trying to find a repair to the return line. Visited site on 9/8. They excavated both the return line and the feeder at the location of the water line; found the water line crossing right over the return, but found no repair at that location. Visited site on 9/9 with excavation open to meet with Con Edison staff who could confirm what was exposed. Con Edison S&TO (Slote) came to the location and confirmed (visually) that there was no repair at that location. Con Edison confirmed (9/17) that return line is east of the feeder, along the east side of Wythe. In that no repair was noted at the location, plan was to move south of the intersection for the noted water tap location there. They had to get NYCDOT permits and schedule for the work. Geophys work occurred on 9/19, targetting the area 25 feet south of the intersection of N. 13th. They started clearance work on 9/22. Visited site 9/23. CDM Smith (Horn), Con Edison CM, ADT on location. They had cleared the return line, but again found no repair. Plan at that point was to pre-clear boring locations along that section the next day, which they did. On 9/26, I reviewed the information again about the tap location, and the detail from the tap card was that the measured

WYTHE AVE & N 13TH ST (Continued) **S103483460**

distance was from the building line rather than the property line. Reviewed aerial photos of prior building at that location (since removed for ongoing construction project within that property) showed that they had a small parking area along N. 13th Street, so the building was 18 to 20 feet south of the property line. Sent email to CDM Smith/Con Edison early AM to make sure that one of the borings would be placed approximately 50 feet south of the property line. CDM Smith confirmed that this would be the case. Went to the location later to check on progress. Four borings completed along this section, two completed as monitoring wells (screen 5 to 20 feet), water found at about 15 feet below grade in both. Note that the dewatering system at the adjacent site location is off, so the groundwater level is expected to be recovering (it was at approximately 8 feet below grade prior to the dewatering project). Impacted intervals noted at roughly 6 feet and 9 feet below grade at the locations and were sampled. Discussed with Con Edison and CDM at the time that it would be worth conducting additional analyses at this location. They agreed and VOC and SVOC analyses added to chain of custody. Will check on wells shortly and need to wait for lab results.(JOC) 10/17/14 - at site in AM. CDM Smith (Horn) and ADT at location to develop wells. Two wells had been installed in parking lane close to curb on eastern side of Wythe south of N. 13th Street. Southern well had initial PID ~20 ppm, water ~13 feet; northern well had PID ~400 ppm and water ~11 feet below grade. The ground does slope downward from south to north, so the difference is not unreasonable. There was no evidence that the dewatering system at the adjacent site (east side of Wythe) was operating (no noise at all, and no activity on site). It was believed that the groundwater would be a few feet higher in the absence of any pumping; it may still be recovering, but unknown at this point. The southern well was found installed with a bottom cap on the top of the well (rather than a j-plug) which could not be removed; they had decided to pull up the pipe a couple inches and cut it off, after which they started to develop. No sheen noted in either well. They will continue to develop and collect sample for waste characterization from the drum of development water.(JOC) 11/5/14 - received update on Saturday 11/1 with soil data; no dielectric fluid detections but some VOC and SVOC detections; met with CDM Smith/Con Edison at another site today where they (Chang, Con Ed, and Beattie/Krupka, CDM Smith) indicated they could check/sample the wells tomorrow (focus on LNAPL presence and for TPH as dissolved if not) and agreed that we can meet to determine the locations for north of N. 13th Street at the same time. (JOC) 11/6/14 - went to location, on site were CDM (Horn) and ADT; ADT setting up traffic controls/safety, went to north of N. 13th to look at spacing/locations for soil borings and discussed with Horn; 211 ppm on opening B2, water at about 10 feet below grade, interface probe did not detect any LNAPL; having problem with pump so they had not sampled at all before I left site; sent email response today to 10/31 update and proposal about spacing/locations for borings/wells. (JOC) 11/17/14 - met at location with Con Edison (Chang, Baez), CDM (Horn), ADT (multiple), and Diversified (Silver) who would be completing geophysical work; went through scope and locations, selected five locations (two previously pre-cleared) and location for test pit around area a little past mid-block toward N. 14th Street where there was another potential water line to check for repair on feeder/return line. Still need to wait on Part 753 callout for utility marking. Potentially will start work at the water line/feeder

WYTHE AVE & N 13TH ST (Continued) **S103483460**

return this Wednesday. (JOC) 11/24/14 - spoke with Con Edison PM (Chang) this AM; work has been delayed due to various reasons, including receipt of NYCDOT permits and incomplete utility markout (Code 53). Con Edison is completing additional geophysical work today to make sure the locations of all utilities, including on the west side of Wythe Avenue, are known before they start work. They will let me know when the intrusive work (at TP-3, the ~mid-block location with another potential water service line) is scheduled. (JOC) 12/9/14 - Work restarted 12/1 to clear locations near where TP-3 would be going, first to check in parking lane to find water service line, checked on their progress earlier in the day (they had just started, nothing to see) and later in the day but they were gone (~310PM) and no work in center of street near feeders yet. The feeder was eventually uncovered along with the water service, but no repair was identified. Met on location on 12/4, re-confirmed locations for soil borings and wells along east side of Wythe Avenue, while ADT was on location pre-clearing those locations. Met on location on 12/5, believing they would have Geoprobe on location but it was not; finishing pre-clearing. Met on location on 12/8 in late morning and afternoon. Had already completed and installed boring/well at B-9, and proceeded to completed B-8 boring and boring/well at B-7. Next work day scheduled for 12/10, expecting to complete the last two borings and develop the two wells. (JOC) 2/10/15 - received via email January 15th draft data for work completed to date for soil and groundwater investigation; proposed to conduct sampling of two remaining wells north of N.13th Street and abandon wells at the same time based on findings to date; spoke with Con Edison PM (Chang) about the matter, explained that since the data was draft and with no report, the Department cannot approve the plan as such, any wells abandoned for which additional sampling would be needed following review of completed report would be Con Edison's responsibility to replace; received notice that National Grid, the RP for a nearby former MGP site, had requested to sample the wells installed by Con Edison, which was eventually coordinated by the involved consultants. Wells were sampled for B-07 and B-09, the remaining wells, on February 3rd; National Grid also sampled B-07. Two wells south fo N. 13th were sampled for National Grid on February 4th. Con Edison abandoned all four wells the same day. Asphalt repairs continued on Feb 5th and 6th. (JOC) 3/4/15 - asphalt repairs were completed on Feb 10. We are awaiting submission of the investigation report. (JOC) 5/1/15 - The investigation report was submitted on April 24 and is under review. (JOC) 6/15/15 - This spill was included in Order on Consent R2-1023-88-06 for investigation and, if found needed, remediation by Con Edison. Con Edison has limited information documenting the exact location of the release and on the initial remedial efforts completed, and as such, an investigation was necessary to determine whether impacts from the spill remain. Using the available information for the spill, the investigation was completed along Wythe Avenue north and south of the intersection with N. 13th Street. The investigation included three test pits to expose the feeder in the vicinity of water service lines in the area, since the reported cause of the dielectric fluid (DF) release involved a leaking two inch water line which over time impacted the feeder. Since the test pit work found no repaired section of the feeder, and impacts related to a DF release were not noted at those locations, nine soil borings were then completed along the east side of Wythe Avenue north and south of the intersection with N. 13th Street,

WYTHE AVE & N 13TH ST (Continued) **S103483460**

proximate to the feeder, with four of those borings converted to monitoring wells. Soil samples collected from these borings and groundwater samples from the wells did not find any impact from dielectric fluid. The result reported for a soil sample collected from the initial test pit (TP-1) for TPH analysis included 392 mg/kg which was identified as Sun #6, which is a dielectric fluid but would not have been the kind used in this feeder (more on TPH fingerprinting below). Other impacts unrelated to the DF release were also noted. To the southeast of the investigation location is a remediation site called the Wythe Ave. Station, with site code 224069, which is a former manufactured gas plant (MGP) site. Remedial work, under the oversight of the Department s Division of Environmental Remediation (DER), as well as building construction activities were ongoing at the MGP site at the time of this spill investigation. The work at the MGP site included for a period of time dewatering around the perimeter of the site, which lowered the local water table in the area of investigation for spill 8912490. Based on prior investigation work done at the MGP site, the spill investigation area is downgradient of the MGP site. As such, information about impacts noted and contaminant concentrations (soils from the soil borings in the dielectric fluid spill investigation were additionally analyzed for VOCs/SVOCs) were provided to the MGP site DER project manager. The Department s project manager advised that in the dewatering activities, there were no observations of NAPL recovery/impacts through the on-site treatment system installed for the groundwater being pumped. Additionally, the responsible party for the MGP site collected groundwater samples from wells installed during the spill investigation. The spill investigation was limited to a degree by other utilities in the investigation area, including an eight-foot diameter sewer which runs, generally speaking, parallel to the feeder/return beneath the center of Wythe Avenue; partially under and to the west of the feeder. The remedial investigation report documents the investigation activities completed, provides sample analysis summary tables, a data usability summary report, and the overall recommendation that since no dielectric fluid impacts were found the spill should be closed. In reviewing the RIR, the following should be noted: some of the data validation completed identified some modifications that should be made to sample analyses result data qualifiers, but not all of those modifications as described in the DUSR/validation were made to the summary tables included in the report; there are errors in the RIR text regarding Department soil cleanup objectives (e.g., naphthalene); the entries provided in the RIR data summary tables under the soil cleanup criteria column are, per the RIR table footnotes, 375-6.8(b) restricted residential or protection of groundwater, or if not available, CP-51 supplement soil cleanup objectives; some of the entries made in the same column for the various dielectric fluids are also incorrect (e.g., the Sun products were all mineral oil based and as such the 7,400 mg/kg sco is applicable); the DUSR did not evaluate the data using the project-specific data objectives/goals as defined in the Appendix B Program FSP/QAPP; while the laboratory conducting the analyses did provide identifications for petroleum in some of the samples collected, the identifications were based on GC-FID fingerprint methods only and the laboratory offered no detailed explanation on their identifications; the logs for the test pits mis-identify the equipment used and for TP-2 and TP-3 the completion dates are incorrect; for one sample (63-TP-01) the summary table in

WYTHE AVE & N 13TH ST (Continued) **S103483460**

the RIR mis-identifies the result for TPH fingerprinting as No. 6 fuel oil, while the laboratory report identifies the contaminant in the sample as Sun #6 dielectric fluid with the result at 392 mg/kg. For the purposes of this spill investigation, all of the results for TPH analyses using the approved methodology were well below the DF soil cleanup objective, so the quality of the identification is not significant. While impacts were noted in several locations, the impacts are not related to the DF spill; as noted above, the Department s project manager for the MGP site is aware of this investigation, and the responsible party for the MGP site had collected groundwater samples from the wells installed for this spill that are proximate to the MGP site. The four wells which had been installed in Wythe Avenue have been abandoned and repairs completed to the street surface. While there are a number of noted issues with the RIR, overall the conclusion remains that no DF impacts related to this spill were identified. Based on the investigation completed, this spill is closed. Spill Closure letter sent via email to Con Edison on 6/12/15.(JOC) "

Remarks: "Reported by Con Ed as required under Consent Order."

DEC Memo:	"8/18/15-Vought-Duty desk officer. Spill assigned to Con Edison Unassigned as part of routine Con Edison minor spill portfolio review and possible closure. As per EMIS 242205, Construction Mgmt Street Ops Construction Rep A. Natale discovered 1 gallon of unknown oil in excavation while excavating a test pit to install a manhole. No WR# is available and he is awaiting help to get an env tag#, CoC and sample jars. He will reach out to Env. Ops and call back with necessary info. 8/19 - Sekhon emis 242205 3/17/21 - Kim - Con Ed determined that the unknown oil was from a 3rd party spill to public property. Lab analysis results and Oil ID (Con Ed approval date: 8/19/15) indicated the presence of a substance similar to a light fuel oil. Affected soil was removed for the manhole installation and was transported off-site for disposal. No additional remediation actions were taken by Con Ed. See document files for further information Spill closed end"
Remarks:	"Discovered unknown oil from unknown source. Cleanup is pending."

DEC Memo:	"9/24/15: Mahat DEC Mahat contacted Kevin from EBC inquiring about the spill and its nature. He mentioned that they found some old contaminated soil during the excavation. Phase II is under the progress. Kevin will provide the a narrative email and Phase II report shortly. DEC is waiting for a report. 8/26/16: Mahat e/c: DEC Mahat sent an email to Kevin asking for any update or report on the spill case. On 8/26/16, DEC Mahat received an email informing that site is a DEC BCP site. Email : Site is a NYSDEC BCP Project Former F&S Central Manufacturing Corp Site. C224230 PM is Scott Deyette. Entire Site is being excavated to 15 ft below grade for new building. Endpoint samples already indicate a Track 1 was achieved. Final Engineering Report will be submitted to DEC in 2017. DEC Mahat will partner with DEC BCP PM to discuss the future of the spill case. 8/31/16: Mahat The spill case is closed as the site is acutely under remediation under NYSDEC BCP program. BCP Application number has bee crossed referenced. No further action is required by the DEC spill Units. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DER Facility ID:	15779
DEC Memo:	"8/05-Spoke with A-1 Crown leak. Will get back to me with the owner information. 9/05-Spoke to Stephanie Eisenberg. tank is no longer in use. Will send in paperwork. S. Scharf 4/06- Called stepahnie Eisenberg- reminded her to send in the paperwork that tanks is empty and building now uses gas. 9/14/06 called Stephanie Eisenberg (owner) - left message. bf 9/21/06 ttf letter sent to S. Eisenberg. bf 4/29/09 On 3/30/09, received letter from Mark Salamack of PTC. Tank failed because of many connections to heaters throughout the building were not properly sealed off. No contamination found when tank was removed. No odors or staining of soil found. Three samples taken from under the tank. Minor exceedances in 1 Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene. NFA. bf"

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Update By:	BXANDERS
Site Description:	"BCP Denial Letter signed by DER Div Director on 2/19/14. Site Location: The proposed 94 N. 13th Street BCP site is located in the Williamsburg section of Brooklyn, Kings County. The site is made up of two tax parcels and is bordered by Wythe Avenue, N. 12th Street, and N. 13th Street. Site Features: The site is developed with two-one story commercial/industrial buildings which were built in the 1960's and are occupied. There is a small parking area and buildings cover most of the site area, which is approximately 1.147 acres in size. Current Zoning and Land Use: The site is zoned M1-2 which includes light industrial uses and is currently used by a manufacturer of clear plastic bags, and a manufacturer of wooden pallets. Past Uses of the Site: Previous uses were manufacturing and include the storage

94 N. 13TH STREET (Continued) **S116041508**

	of manufactured gas and also as a plating facility. Site Geology and Hydrogeology: The geologic setting of Long Island is well documented and consists of crystalline bedrock overlain by layers of unconsolidated deposits. The bedrock in this area is igneous intrusive classified as the ravenwood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisteing of dredge spoils, rubble and/or other materials have historically been used to raise and improve the drainage of low lying areas. Subsurface soils consist of a mixture of a silty non-native fill, to a depth of approximately 12 feet below grade followed by sand and gravel. The elevation of the site is 15 feet above National Geodetic Vertical Datum (NGVD) and the area topography gradually slopes to the northwest. Groundwater is present at a depth of approximately 7 feet below the surface and is expected to flow north. "
Env Problem:	"Nature of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include benzene, toluene, ethylbenzene and xylene (BTEX), napthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene; various SVOCs (PAHs), including benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene; and several metals (lead, mercury, barium, nickel, zinc and copper). Soil- Subsurface soil contains maximum concentrations of BTEX (944 ppm), napthalene (280 ppm), total PAHs (218 ppm), lead (920 ppm), mercury (18 ppm). The metals concentrations were 920 ppm for lead, 18 ppm for mercury, 160 ppm for copper, 52 ppm for nickel, 2,300 ppm for zinc, and 2,400 ppm for barium. Groundwater- On-site groundwater contained low levels of PAHs, with a maximum concentration of total PAHs of 7 ug/L. Lead was detected at a maximum concentration of 254 ug/L. Off-site groundwater contained BTEX concentrations as high as 6,480 ug/L, 1,600 ug/L of napthalene, total PAHs of 1,670 ug/L, 600 ug/L of 1,2,4-trimethylbenzene,and 160 ug/L of 1,3,5-trimethylbenzene. DEC Memo:	"06/27/14-Hiralkumar Patel. alternate addresses: 94-102 North 13th Street, 45-59 Wythe Ave, 103-109 North 12th Street 3:51 PM:- DEC Vought sent copy of email he received from DEC Rivera. DEC Rivera received inquiry from Lisa Bloodgood. Ms. Bloodgood visited site on 06/26/14 and noted awful odors at the site. 4:30 PM:- visited site. noted very strong odors in and around the subject site. at the time of inspection, site construction activities were not happening, but a groundwater treatment system was running. site soil has been disturbed and some areas have been excavated to groundwater which is about 10-15 ft bg. met with Terrance, person who is monitoring groundwater treatment system. he mentioned that system will operate 24/7. noted white smoke from pump on the treatment system. spoke with Raphael Rivera (973-417-4467), person who has rented the treatment system. he mentioned that the system uses biodegradable oil and smoke from the system is not hazardous. spoke with Mordy Steinfeld (on-site) and Charles Sosik (over the phone). they are working to get contractor to resolve odor issue. also spoke with John Brooks (over the phone), attorney representing the site owner/developer. he will discuss with National Grid. Mordy Steinfeld **site developer** Level Hotel Ph. (718) 599-1145 (o) (432) 363-5377 (c) Email: mordy@levelhotel.com John Brook **attorney for site owner/developer** PH. (516) 455-0215 received call from Mr. Brook. he mentioned that developer's crew will cover site excavation area with tarp to control any odors from open excavation. while waiting for response from property owner/developer's crew, met with Mr. Morang from GEI, around 7 PM. at this time, the site was locked and no access provided to GEI. GEI represents National Grid. Mr. Morang mentioned that GEI has four air monitoring stations within the property, along the perimeter. he noted that there were no PID readings during work hours today. but after site work was completed, the groundwater treatment system was turned on. he also mentioned that the treatment system was

94 N. 13TH STREET (Continued) **S116041508**

installed recently. Mr. Morang suspects odors due to improper installation of the treatment system, but it can not be confirmed as no site access available. alongwith Mr. Morang, we checked air quality near corner of Wythe Ave and N 13th Street (where the treatment system is located) and found PID readings around 0.4 ppm. at this time, air quality was improved, but there were still some pockets of strong odors. Mr. Morang mentioned that from next week, GEI will use foam to abate any odors from the site. Russell Morang GEI Consultants, Inc. Ph. (860) 368-5416 (O) (860) 608-1438 (C) Email: rmorang@geiconsultants.com Donald Campbell National Grid Ph. (718) 963-5453 (O) (347) 452-5983 (C) 06/30/14-Hiralkumar Patel. 9:40 AM:- visited site. noted tarp in deeper excavation areas where groundwater was visible during earlier site visit. also noted a tarp on the entire frac tank. some odors noted near the intersection of Wythe Ave and N 13th St. DEC Scott Deyette (BCP # C224186) is managing this former MGP site. after discussing with DEC Austin, case closed. refer to BCP # C224186. 07/01/14-Hiralkumar Patel. 2:37 PM:- spoke with DEC Scott. informed him that as per Mr. Morang, GEI was planning to use foam to abate odors. Scott has discussed with involved parties and mentioned that GEI is there only for air monitoring and property owner is responsible to address any environmental issues. Scott asked to provide his cell phone number (518-461-3721) to whoever has any inquiry about remediation."

Remarks: "Lisa Bloodgood went to site on 06/26/14 and noted odors at the site."

DEC Memo:	"Obligado - According to DEC Montineau, while walking past this site she noticed petroleum odors in the vicinity of a drain pipe that was visible through the open gate to this construction site. From the Construction fence signs the owner is: Wythe Berry LLC 266 Broadway Suite 301 Brooklyn NY 11211 718-599-1145 The General Contractor is: Riverside Developers USA Inc. 266 Broadway Suite 301 Brooklyn NY 718-599-1105 and Atweek Inc. 184 Division Ave Brooklyn NY 11211 This site was a BCP site. 94 North 13th Street, site ID #C224186. However the application was denied in Feb 2014 because it is already a Haz waste site under Consent Oder. From UIS The proposed BCP site is part of a larger former manufactured gas plant (MGP) site, currently under an Order on Consent with Brooklyn Union Gas Company, d/b/a KeySpan Energy Delivery New York and KeySpan Gas East Corporation, d/b/a KeySpan Energy Delivery Long Island, d/b/a National Grid, Index Number A2-0552-0606. The site is identified as the Wythe Avenue Holder Station, Site Number 224069. This Order obligates National Grid to develop and implement a remedial program for the site. Spill closed."

DEC Memo:	"12/16/13: Mahat DEC made an attempt to contact Mr. Charles Siski @ 631.504.600 to get more information about the spill. He was away from the desk. Mr. Kevin (Senior Project Manger) suggested to call him tomorrow morning. 12/23/13: Mahat A phone conversation was conducted with Mr. Charles Sosik @ 631.504.6000 regarding more inforamtion about the spill. He mentioned that the site is a MGP (Manufancture Gas Plant) site. During a soil sample for the potnetial buyer they discovered heavy VOC and SVOC. DEC Engineer Jane O'connell is also involved in this case since it is a MGP site. Further investigation is pending as Mr. Sosik is submitting the lab report to DEC. 5/21/14: Mahat Spill case is closed on the data base since it is as MGP site and long term remediation team is working on the case. BCP #C224186 is cross referece for this spill case. "

NORTH 13TH ST & KENT AVE (Continued) **S103936380**

Specialist), Ray Turkin, Barry Korman, John Mitchell. Crews were pulling manholes as precursor to re-starting pigging operation in No. 7 pipeline. Found unknown quantity of unknown oil in manhole marked FDNY Looks like aged #6 oil. All service boxes and manholes in area were checked and are clean. Con Ed contacted FDNY maintenance communications. Manhole had been paved over - Con Ed crew had to break up asphaly on top of manhole to open it. In addtion to No. 7 pipeline, Bayside Fuel terminal located across the street (on west side of Kent Ave). Chem Lab on-site to take samples for oil ID and PCBs. Con Ed was to resume pigging operation today, but will wait until clean up is complete. FDNY on-site @ 1215 hrs, off site at 1220 hrs. NYCDEP (Keith Williams) on-site at 1220 hrs. (JHO) 1410 hrs: John Mitchell, Con Ed, spoke with FDNY Bob Shields. Manhole is for fire alarm conduits. Con Ed checked other FDNY manholes in every direction from this one - all clean. All State power vac is cleaning the manhole. They will check for sources once manhole is cleaned (seepage through manhole walls, oil in conduits, etc.). Oil ID is due back this afternoon. (JHO) 5/5/99: Manhole is to be monitored for additional oil accumulation. (JHO) ~~~~~~~~~~~~~~~~~~~~ e2mis no. 124-322: On April 19, 1999, C. Sabatasso of Transmission Operations reported approx.2.5 gallons of a oily substance between the outer cover and inner pan of a Fire Department Manhole. This is part of the job at Fuel Oil Line #7 pulling manhole covers before start pigging operations. Chem Lab has been notified to come take samples. UPDATE: spoke with C. Sabatasso via phone and was informed that manhole cover had been pull and the amount of the substance had to be changed from 2.5 gallons to 250 gallons of an oily substance. LARGE OIL SPILL CLEANUP CHECKLIST - Material spilled/discovered: Oil FUEL OIL #6. - Sample submitted for analysis? Yes Sample ID No.99-03967 & 03965. - Amount spilled/discovered: 100 GALLONS. - Removed/recovered liquid/solids. - Removed visible traces of oil. - Washed stained areas. - Name of contractor: ALL STATE POWER VAC. - Cleanup completed on Date: 4/19/99 Time: 20:15. Update 6/9/06 Spill closed based on final site investigation report located in eDocs App. B Site 25. (SKA)"

DEC Memo:	"3/11/19- Zhune spoke to Chelsea Farinacci 516-441-5800. Chelsea said our technician performed a Phase II at this site. He collected groundwater samples and found petroleum contamination. They submitted the samples to the laboratory. 3/20/19-CSL Letter was sent to: 10 Berry Development 217 Havemeyer Street, Suite 4 Brooklyn, NY 11211 03/21/19-Hiralkumar Patel. alternate address: 12-16 Berry St, 113-131 North 13th Street no PBS or other spills found. as per NYC DOB record, a permit application was approved on 04/24/2018 to construct at new 3 story commercial and community facility building. 10 Berry Development LLC. **property owner** c/o Cayuga Capital Management LLC 217 Havemeyer Street, 4th Floor Brooklyn, NY 11211 Attn.: Jamie Wiseman Ph. (718) 388-3265 email: jwiseman@cayugacapital.com 04/16/19-Hiralkumar Patel. 1:41 PM:- received call from Chris

COMMERCIAL PROPERTY (Continued) **S123661729**

Tomasello, retained by property owner. he mentioned that Advanced Cleanup Technologies conducted Phase I and Phase II for bank. based on investigation results, the bank refused to finance the property. now property owner is requesting additional time to submit required report as per letter dated 03/20/19. asked Chris to submit available Phase I/II reports for review, prior to any comments on request to extend deadline for report submission. 04/17/19-Hiralkumar Patel. 9:52 AM:- received email from Chris including Phase I (text only) and Phase II report. 04/23/19-Hiralkumar Patel. 10:56 AM:- received message from Chelsea from ACT. 04/29/19-Hiralkumar Patel. 9:32 AM:- spoke with Chelsea and asked her to submit Phase I/II reports for review. Chelsea Farinacci Advanced Cleanup Technologies Ph. (516) 441-5800 Ext. 102 email: chelseaf@act.earth 10:14 AM:- received email from Chelsea including Phase I/II reports. summary of Phase I dated 02/14/19: - block #: 2279 / lot #: 30 - subject property is located approx. 0.19 miles southeast of Bushwick Inlet and 1.33 miles northwest of Newtown Creek - subject property currently contains a commercial storage yard - property is approx. 20,640 sq. ft. in area - vicinity of the site is approx. 14 ft above mean sea level - bedrock beneath the site is located approx. 200 ft bg - regional groundwater in the vicinity of the site is expected to flow northwest towards Bushwick Inlet ---------- - as of 1887, the site contained one and two-story buildings and tanks all identified as Eagle Oil Works. by 1905, the buildings and tanks had been replaced by a one-story storage building, a two-story office building, a two-story stable, and a two-story foundry all identified as Kings County Iron Foundry. by 1916, the one-story storage building had been demolished. by 1942, the two-story stable and foundry had been replaced by a one-story storage building and a two-story garage, and the property had been identified as Albert Pipe Supply Co. Inc. by 1965, the property had been identified as Ace Surplus Co. Inc. and machine storage. by 1978, the property had been identified as contractors and machine storage and the garage had been identified as pipe storage. by 1993, the property had been identified as lumber storage. the property remained substantially unchanged through 2007 - exterior storm drains were observed at the site - oil stains were observed on the eastern portion of the rear yard area - minor fresh oil stain was observed in the southern portion of the front yard area - cylinders of argon, acetylene, and propane are stored in a chemical storage area located along the northern property boundary. containers were observed in fair condition with no associated stains or spills - a 55-gal drum is stored along the western property boundary. drum was observed in good condition with no associated stains or spills - groundwater monitoring well was observed in the sidewalk at the site along N 13th Street - no evidence of current/former AST/UST was noted at the site summary of Phase II dated 03/29/19: - scope of work included the installation and screening of one soil boring, three temporary groundwater wells, and three soil vapor probes - soil boring SB-1 was advanced to a depth of 16 ft bg in concrete-paved yard on the eastern portion of the site - PID reading of up to 8.6 ppm was noted at approx. 14 ft bg - two soil samples were collected from SB-1: 4.5-6.5 ft and 12-14 ft depths - soil beneath the site generally consisted of fill material containing sand, degraded asphalt, brick fragments, concrete and coal from ground surface to approx. 4 ft bg. from 4 to 10 ft bg, soil consisted fill containing light to olive brown moist silty sand followed by degraded asphalt, bricks and concrete slag. from 11 to 12 ft in depth,

COMMERCIAL PROPERTY (Continued) **S123661729**

petroleum-stained wet soil was observed containing degraded asphalt and concrete and visible beads of oil ---------- - static water table was observed at approx. 12 ft bg - saturated soil containing gravel, brick, highly discolored clay and oil/water mix was observed from approx. water table surface to 16 ft in depth ---------- - temporary wells consisted of a 1.25 in riser pipe from ground surface to the water table followed by a 20 mil slotted stainless steel groundwater sampler positioned to intersect the water table - discolored water with a petroleum sheen was noted in TW-1 - gray to black water and petroleum odors were noted in groundwater samples from TW-2 and TW-3 - groundwater sample from TW-1 was analyzed for finger print also and lab identified the dissolved petroleum as hydraulic fluid ---------- - soil vapor samples SV-1 and SV-2 were collected in the front yard of the property, while SV-3 was collected from the rear storage yard - soil-vapor samples were collected approx. 1 to 2 ft below the concrete slab - no contamination noted in soil samples - found minute VOC contamination in groundwater and soil-vapor samples 2:08 PM:- sent email to Chris. informed him that based on review of available information, the department requires delineation of contamination and determination of site-specific groundwater flow direction via installation of permanent monitoring wells. asked him to submit an investigation work plan, including a work schedule, by COB 05/24/19. email copied to Mr. Wiseman. 05/23/19-Hiralkumar Patel. received email from Chris (at 3:48 PM on 05/22/19) including an investigation work plan. reviewed the work plan which needs to be revised. 8:57 AM:- sent email to Chris and asked to submit a revised work plan including/correcting following: - site address is listed as 475 Route 111, Manorville, NY on 2nd page - Section No. 4 is missing - conflicting info about # of wells: Section No. 3 proposes to install 2 wells, but Section No. 5 proposes to sample 9 wells - first bullet in Section 6 should read Soil and groundwater samples selected & . - conflicting info about management of purge water: Section NO. 5 states that & purge water will be filtered through a granulated activated carbon device prior to being discharged ; but Section No. 7 states that & all water generated during well development will be containerized& - construction of previously installed well (total depth, screen size, screen length, screen depth etc.) on sidewalk must be confirmed. will this well be purged/sampled? - RIR must include a scaled site map with all current/previous boring/well locations - RIR must be submitted within 60 days of the work plan approval also informed Chris that borings/wells should be installed at/near the former boring/temporary well locations to confirm subsurface condition. asked him to submit the revised work plan no later than 05/29/19. email copied to Mr. Wiseman, Nicholas Patti (npattijr@gmail.com), and Julian Russell (julian@cayugacapital.com). 05/28/19-Hiralkumar Patel. 3:04 PM:- received email from Chris including a revised investigation work plan. work plan proposes: - installation of nine soil borings to a depth of groundwater interface - collection of soil samples from highest PID/at groundwater interface (only one sample at water table if no elevated levels of PID detected) - installation of nine 2-in diameter wells (in 9 borings), with 10 ft of screen, to a depth of 15 ft bg - collection of groundwater samples from 9 on-site wells and 1 previously installed (by unknown party) well on sidewalk - analysis of soil and groundwater samples for 8260/8270 - disposal of soil cuttings and purged water - submission of RIR within 60 days of work plan approval 05/29/19-Hiralkumar Patel. 2:03 PM:- sent letter to Mr.

COMMERCIAL PROPERTY (Continued) **S123661729**

Wiseman approving work plan dated 05/28/19. letter emailed to Mr. Wiseman and Chris. 09/25/19-Hiralkumar Patel. 1:41 PM:- received email from Chris including a subsurface investigation report which is missing/including incomplete info. 09/26/19-Hiralkumar Patel. 10:39 AM:- sent email to Chris and asked to re-submit investigation report: - including all boring/well logs - correcting typo on page 7 (beneath Table 2, report says Monitoring wells MW6 and MW5 were not sampled due to product) - correcting mis-match info about appendix/addendum (table of contents list figures/photos etc. as addendum but text mention those info as appendix) - including well survey data using one reference point (text on page 6 states Utilizing a Solinst Model 122 Product/Water Interface Meter measurements of depth to product (if present), depth to groundwater and total depth of the monitoring was collected and recorded in feet from the top of the well casing down) - including groundwater contour map confirming site-specific groundwater flow direction email copied to Mr. Wiseman and Julian Russell (julian@cayugacapital.com). 10/02/19-Hiralkumar Patel. 11:44 AM:- received email from Chris including a revised report. summary: - ten (10) borings (MW1 through MW9, SBA) were extended to 15 ft bg - subsurface soil consists fill materials (cinder ash, black beauty, red brick, asphalt, concrete, blue stone, coal, glass and metal slag) with medium to fine orange to green sands from surface to 10 ft bg. at approx. 10 ft a coarser gravely sand materials with bits of fill was found along with varying amounts of contamination to the groundwater level - depth to groundwater has been measured to be approx. 10.7 to 12 ft bg - below the groundwater interface there was peat in some of the borings, but each boring ended in competent grey clay down to 15 ft bg ---------- - installed 2-inch monitoring wells (with 10 ft of screen and 5 ft of riser) in each boring, except for MW9 which extended to 20 ft bg - wells were surveyed on 07/18/19 - depth to water was noted between 10.65 and 13.55 ft - based on survey data, groundwater at the site flows to the north ---------- - during groundwater sampling, product was noted in wells MW6 (0.30 ft) and MW8 (film) ------- - due to presence of free floating product, a vacuum truck was dispatched (on 07/18/19, 08/01/19 and 08/08/19) to pump out wells containing product - product noted in wells MW5, MW6, MW7 and MW8 - oil odor was noted at 14 ft bg in boring SBA - boring MW1 was installed to a depth of 20 ft bg (but log shows soil description/PID values only until 15 ft bg). oil noted in boring MW1 ---------- - strong odor noted in 12.5-15 ft depth in boring MW3 - oil odors noted at 0-5 and 10-15 ft depth in boring MW4 - oil noted above clay at 14 ft bg in boring MW5 - 2 ft of free oil was noted in spoon in boring MW6 - oil in soil noted at 15 ft bg in boring MW7 - free oil noted in sleeve in boring MW8 - oil noted at 15 ft bg in boring MW9 - no contamination was noted in soil or groundwater samples PAL Env. recommended: - bi-weekly VEFRing until construction commences on 09/01/2020 - installation of sub-slab membrane and passive SSDS based on boring logs, signs of contamination (odor or visible oil) were noted in all boring/well except MW2. 10/04/19-Hiralkumar Patel. 12:13 PM:- sent email to Chris and asked him to clarify which well was installed to 20 ft bg as text on page 6 indicates installation of well MW9 to 20 ft bg, but log for boring MW1 shows installation to 20 ft bg. also asked him to submit complete log for boring installed to 20 ft bg (as all logs show details to 15 ft bg) and details about screen size and depth in 20 ft deep well. email copied to Mr. Wiseman and Julian Russell. 10/09/19-Hiralkumar Patel. 10:59 AM:- received email from Chris including a re-revised

COMMERCIAL PROPERTY (Continued) **S123661729**

investigation summary report. Chris mentioned that borings BA and MW1 were drilled to 20 ft bg, but wells were installed at 15 ft bg with 10 ft of screen and 5 ft of riser. 2:39 PM:- sent letter to Mr. Wiseman requiring 1) complete delineation of contamination via installation of wells up- and down-gradient of the site, and 2) bi-weekly gauging of wells/product removal. asked him to submit report by the end of 12/13/19. letter emailed to Mr. Wiseman and Chris. 10/29/19-Hiralkumar Patel. 12:25 PM:- received email from Chris including an investigation work plan for groundwater delineation. work plan proposes installation of six monitoring wells (1 on-site and 5 off-site) to delineate groundwater contamination up- and down-gradient of the site. soil samples will be collected during well installation (two soil samples if soil contamination noted above groundwater otherwise one soil sample at the groundwater interface). six new monitoring wells and an existing well by the truck gate (installed by unknown party) will be sampled a week later. soil and groundwater samples will be analyzed for VOCs/SVOCs. report will be submitted within 60 days of work plan approval. 2:35 PM:- sent email to Mr. Wiseman approving the work plan. email copied to Julian Russell (julian@cayugacapital.com) and Chris. 12/04/19-Hiralkumar Patel. 10:16 AM:- received email from Chris. he mentioned that due to delay in permit process, sidewalk wells will be installed on 12/05 and 12/06/19. 02/18/20-Hiralkumar Patel. 1:19 PM:- received email from Chris including a report. summary: - installed six soil borings: five on sidewalk (MW10, MW11, MW12, MW14 and MW15) and one (MW13) in yard - fill materials (cinder ash, black beauty, red brick, asphalt, concrete, blue stone, coal, glass and metal slag) with medium to fine orange to green sands from the surface to 10 ft bg - at approx. 10 ft, a coarser gravely sand materials with bits of fill was found along the varying amounts of contamination to the groundwater level - two soil samples were collected from each boring except boring MW13 where refusal encountered at 9 ft bg - high PID readings were noted in borings MW10 (806 ppm at 10-12.5 ft bg), MW11 (698 ppm at 12.5-15 ft bg) and MW12 (385 ppm at 12.5-15 ft bg) ------ - 2-inch diameter wells with 10 ft of screen were set in six soil borings, to a total depth of 15 ft bg - during the course of the investigation, groundwater was found to fluctuate up to 0.40 tenths of an inch - groundwater flows to the north - on 01/16/20, groundwater was measured between 9.44 and 13.55 ft bg - on 01/16/20, product was noted in wells MW6 (0.08 ft), MW7 (film), MW8 (film), MW10 (film) and MW12 (0.14 ft) - on 08/08/19, 1.33 ft of product was recorded in well MW6, but PAL believes that the product thickness may have been incorrectly measured due to the extreme viscosity and thickness of the product ---------- - absorbent socks were placed in wells MW6, MW7, MW8, MW10 and MW12 - no contamination noted in soil or groundwater samples - a Class A Superfund site (# C224069, former MGP site) is located directly across N 13th street - samples from borings MW10 and MW11, both located between the site and former MGP site, were analyzed for full list 8260/8270 Chris recommended installation of vapor barrier and passive SSDS during planned redevelopment of the site into 2-story slab on-grade building. the report is missing addendum 4 - disposal manifests. 03/05/20-Hiralkumar Patel. 2:13 PM:- sent email to Chris and asked him to submit missing addendum 4 in the report. also asked him to re-gauge existing wells to confirm presence/absence of free phase product and to determine amount recovered using absorbent socks. email copied to Mr. Wiseman. 03/06/20-Hiralkumar Patel. 3:05 PM:- received email from Chris

COMMERCIAL PROPERTY (Continued) **S123661729**

including a map with well gauging data collected today. Chris also stated that there was no waste generated so no disposal manifests were included in addendum 4 in investigation summary report dated 02/07/20. as per the map: - 0.05 ft of oil noted in well MW7 - there was no sock in well MW7 - dirty sock noted in wells MW6, MW8 and MW12 - dirty sock replaced in wells MW6, MW8 and MW12, and a new sock was placed in well MW7 04/06/20-Hiralkumar Patel. 1:01 PM:- discussed with DEC Austin. based on review of available information, the department requires continuous groundwater monitoring/passive product recovery. 1:12 PM:- spoke with Chris. informed him that the department requires continuous groundwater monitoring/passive product recovery. asked him to provide well monitoring visit schedule, in accordance with applicable guidance on COVID-19. 04/08/20-Hiralkumar Patel. 11:00 AM:- spoke with Chris, Jamie Wiseman, and Julian Russell. informed them that based on review of available information, the department requires groundwater monitoring/passive product recovery. asked them to provide well monitoring visit schedule, in accordance with applicable guidance on COVID-19. Julian Russell Cayuga Capital Management LLC Ph. (929) 304-3062 email: julian@cayugacapital.com 04/24/20-Hiralkumar Patel. 12:32 PM:- sent email to Julian inquiring updates. email copied to Chris and Mr. Wiseman. 12:36 PM:- received email form Julian. he mentioned that Chris has been to the site to take further samples as requested and will be submitting a summary report with the proposed clean up scope early next week. 04/30/20-Hiralkumar Patel. 12:31 PM:- received email from Chris including a remedial plan. the submitted remedial plan is missing data for second visit after 04/08/20 (report states two visits were made, but data for only one visit was included), measuring unit in summary table, plan to keep existing wells safe during construction and copy of SSDS plan. 05/05/20-Hiralkumar Patel. received email from Julian (at 3:33 PM on 05/04/20) inquiring status on review of remedial plan. 05/06/20-Hiralkumar Patel. 9:18 AM:- sent email to Julian and asked him to provide details about how existing wells be kept safe during construction. email copied to Chris, Mr. Wiseman, Nicholas Patti (npattijr@gmail.com), and Chris Rands (chris@psstudiollc.com). 9:29 AM:- sent email to Chris and asked him to submit a revised remedial plan including 1) summary of second visit, 2) unit for depth to water/product, 3) plan for keeping existing wells safe during construction and 4) copy of SSDS plan. email copied to Julian. 05/07/20-Hiralkumar Patel. 11:55 AM:- received email from Chris including a revised remedial plan with SSDS/vapor barrier plan drawing. - existing wells were gauged on 04/16/20 and 04/30/20 - 0.05 ft of product was noted in well MW6 on 04/16/20 - oil film was noted in wells MW-7, MW-8 and MW-12 - rolled, tied polyethylene absorbent pads were placed in affected wells - stained/soaked pads were noted in wells MW6, MW7, MW8 and MW12 - proposes bi-weekly site visits (with report submission) for period of six months to replace absorbent pads and gauge wells Chris mentioned that the new building that is to be constructed is a two-story building with no cellar. the foundation will consist of driven steel piles with concrete pile caps and slab on grade. an impermeable liner and passive vapor recovery system will be installed beneath the building. Chris also stated that any wells damaged/destroyed during construction shall be repaired/replaced as required. 05/12/20-Hiralkumar Patel. 1:28 PM:- sent email to Chris and informed him that the proposed site remedial plan looks good. asked him to submit bi-weekly well gauging/monitoring reports as proposed and

COMMERCIAL PROPERTY (Continued) **S123661729**

provide construction schedule (once available). email copied to Julian and Mr. Wiseman. 05/28/20-Hiralkumar Patel. received email from Chris (at 8:43 PM on 05/27/20) including bi-weekly status report. all fifteen (15) wells were gauged on 05/15/20. wells MW6, MW7, MW8 and MW12 contained absorbent pads. pads from wells MW6, MW7 and MW12 were found almost soaked. cord for pad in well MW8 snugged on side and the pad hung out of water. impacted pads were replaced. 06/25/20-Hiralkumar Patel. received email from Chris (at 4:32 PM on 06/24/20) including revised bi-weekly status report for 05/28/20, 06/11/20 and 06/23/20. during these monitoring, no measurable product was noted in wells but sheen has been noted in wells MW6, MW7, MW8 and MW12. absorbent pads in wells MW6, MW7, MW8 and MW12 have been replaced. Chris stated that more mud than oil has been noted on pads. 07/21/20-Hiralkumar Patel. received email from Chris (at 5:31 PM on 07/20/20) including bi-weekly status report for 07/09/20. 13 out of 15 monitoring wells were gauged. wells MW6 and MW8 were hidden by new construction at the site. no product was noted in wells, except sheen in wells MW7 and MW12. pads in wells MW7 and MW12 were replaced. 08/04/20-Hiralkumar Patel. 9:01 AM:- sent email to Chris and asked him to submit bi-weekly status report for the week of July 20th. also asked him to schedule site inspection tomorrow afternoon, if possible, as next bi-weekly gauging due this week. email copied to Julian and Mr. Wiseman. 08/12/20-Hiralkumar Patel. 1:50 PM:- visited site to witness gauging of wells MW6, MW7, MW8 and MW12. wells MW6 and MW8 were hidden under gravel surface and could not be gauged. Chris gauged wells MW7 and MW12. in both wells, rolled absorbent pads were found minimally stained/soaked (mostly stained with little oil). both wells were gauged using oil/water interface, but no free product was noted. new absorbent pad was placed in both wells. 08/27/20-Hiralkumar Patel. received email from Chris (at 6:07 PM on 08/26/20) including a bi-weekly status report for 07/21/20. 13 out of 15 monitoring wells were gauged. wells MW6 and MW8 were hidden by new construction at the site. no product was noted in wells, except sheen in wells MW7 and MW12. pads in wells MW7 and MW12 were replaced. received email from Chris (at 7:58 PM on 08/26/20) including a bi-weekly status report for 08/12/20. all 15 monitoring wells were gauged. absorbent pad from MW6 was completely stained, but this pad was lastly replaced on 07/09/20. absorbent pad from well M12 contained very little oil and was mostly orange rust and microbes. 09/30/20-Hiralkumar Patel. 10:15 AM:- spoke with Chris and inquired him about gauging wells MW6 and MW8 on 08/12/20. he mentioned that those wells were found after I left the site. absorbent pad in well MW6 was completely stained, but was replaced almost after a month. Chris will submit reports for bi-weekly visits after 08/12/20. 10/01/20-Hiralkumar Patel. 12:58 PM:- received email from Chris including a bi-weekly status report for 08/25/20. 1:25 PM:- received email from Chris including a bi-weekly status report for 09/09/20. during both gauging events, no measurable product was noted in wells but sheen has been noted in wells MW6, MW7, MW8 and MW12. absorbent pads in wells MW6, MW7, MW8 and MW12 have been replaced. MW12 contains very little oil and is mostly orange rust and microbes. 10/06/20-Hiralkumar Patel. 10:22 AM:- received email from Chris including a bi-weekly status report for 09/23/20. all wells were gauged except well MW10 due to debris in the well. well MW10 will be purged prior to next monitoring event. no measurable product was noted in wells but sheen has been noted in wells MW6, MW7, MW8 and MW12. absorbent pads in wells MW6, MW7, MW8 and MW12 have been

COMMERCIAL PROPERTY (Continued) **S123661729**

replaced. 02/09/21-Hiralkumar Patel. 8:11 AM:- sent email to Chris inquiring updates. email copied to Julian (email could not be delivered) and Nicholas Patti Jr (npattijr@gmail.com). 05/28/21-Hiralkumar Patel. 9:53 AM:- sent email to Chris inquiring updates. email copied to Nicholas Patti Jr (npattijr@gmail.com). 06/07/21-Hiralkumar Patel. received email from Chris (at 4:00 PM on 06/04/21). he is currently out of country and will follow up upon his return on 12th. 07/20/21-Hiralkumar Patel. 3:10 PM:- sent email to Chris inquiring updates. email copied to Nicholas Patti. 09/09/21-Hiralkumar Patel. 2:04 PM:- spoke with Chris and reminded him to submit site status report. DEC requires: 1) groundwater investigation up and down gradient of the site, 2) bi-weekly well gauging/product removal"

Remarks: "discovered during phase 2 investigation"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 9/3/99 - Environmental firm was hired by company which is buying the on site company and leasing the land. Environmental firm did a phase 1 & phase 2 assessment with several wells and borings. Found floating product and contamination. SS told them to delineate the site, submit a profile of what is there now and a proposal of what will be done to clean it up. They asked about DEC going after a former owner, SS said no, DEC holds present owner responsible. Envir. firm will submit such a report soon 2/18/2000 Sangesland called Mr. Pradhan at Malcolm Pirnie (614-888-4953). Left a voice mail to ask whatever happened to the report DEC asked for in Sept.99 Report should include: 1) Delineate the site 2) Outline what is on the property now and what will be built 3) Identify how the product will be remediated. ALSO SEE SPILL # 0003390 4/12/04-Vought-Spill transferred from Sangesland to Rommel as per Rommel. 1/11/2006 - Haggerty - Malcolm Pirnie did Phase I,II site assessments to determine if this property was a canidate for development. After discovering free-floating product on groundwater, the decision was made not to develop this property. As far as I know, no additional investigation or remediation was done on site. I have made every attempt to locate responsible party with no luck I am requesting a site visit Alternate addresses 70-72 Wythe Ave 91-101 N 12 St 82 N 13 St 58 Wythe Ave 92 N 13 St I believe this property is located at the intersection of North 13th and Wythe Ave Region 2 rep visited the site, but could not get inside to inspect. Site is rented to Nations Rent - Oscar Parker salesman - 718-387-4872 Posted sign showed two different property managers: Segal Realty Group LLC 718-388-9000 M.C. O'Brien Inc. 718-252-9191 Albany review (above) - jcgrathw 1/29/07 - Austin - Transferred from Albany assignment to Patel in R-2 office for further work - end 03/09/07-Hiralkumar Patel. left message for Bill Blaker (718-387-4872), tenant (Nations Rent) at site. 03/14/07-Hiralkumar Patel. spoke with Mr. Blaker. he gave Mr. Prigozen's number (718-366-7930). spoke with Sage Prigozen. he will ask his father, who is owner of property, to call. received message from Mr. Prigozen (Cell: 917-750-4112), property owner. 03/16/07-Hiralkumar Patel. spoke with Mr. Prigozen, property owner. currently he is living in Florida. as per him, they found this contamination during tank removal and has all paperwork in storage in NY. he will submit these paper once he comes to NY in June 07. Elliot Prigozen 3400 Pen American Drive Miami, Florida 33133 Ph. (917) 750-4112 (C) Fax (305) 860-6699 email: elliotp@bobcatzone.com 06/14/07-Hiralkumar Patel. tried cell number for Elliot, but no success. left message for Elliot's son. 06/15/07-Hiralkumar Patel. left message for Elliot's son. 06/18/07-Hiralkumar Patel. received call from Elliot Prigozen. he searched for records and found some reports on tank removals. asked him to send copy of those reports. Mr. Prigozen will be back in city after 10 days and will send copies at that time. PBS #: 2-091030. as per PBS record, site had following tanks: 1. two 1,500 gal Lube Oil UST, closed and removed in July 2000 2. one 1,500 gal gasoline UST, closed and removed in July 2000 3. four 550 gal diesel USTs, closed and removed in Dec. 1998 4. one 1,000 gal diesel AST, closed and removed in Apr. 2002 5. one 550 gal gasoline UST, closed-in-place in June 1989 6. one 550 gal diesel UST,

NATIONS RENT (Continued) **S104621824**

closed-in-place 7. one 1,100 gal gasoline UST, closed-in-place total 11 tanks were on-site. sent letter to Mr. Prigozen requiring Phase I, soil and groundwater delineation. letter emailed to Mr. Prigozen. 07/02/07-Hiralkumar Patel. received message from Mr. Prigozen. left message for Sage Prigozen as Elliot's number was busy. 07/05/07-Hiralkumar Patel. received copy of three reports from Mr. Prigozen. 1. addendum to tank closure report (don't have original tank closure report) for four 550 gal USTs 2. geoprobe investigation report for soil investigation in area of previously removed four 550 gal USTs (four 550 gal USTs were located in parking lot along Kent Avenue) 3. closure report for four 1500 gal tanks, which were located near main entrance (on north side) along north 12th street, and were removed in June 2000. addendum to four 550 gal USTs closure includes a further review of sample analyticals for samples taken after tanks removed in Aug. 1998. during tank removal found heavy SVOC contamination in three endpoint samples out of four samples. geoprobe investigation in area of previously removed 550 gal USTs was done as found heavy SVOC contamination during endpoint analysis. abstract: - report prepared on Oct. 7, 1998 - four borings were installed (one on each side of excavation area of previous 550 gal UST location) - three soil samples from the smear zone at approx. 7 ft bg, were chosen for analysis: S-1 (southeast of excavation), S-3 (northwest of excavation) and S-4 (northeast of excavation) - all three samples were analyzed for SVOCs only (as didn't found VOCs in previous sampling) - few SVOC contamination found in sample S-3 (which is along Kent ave) abstract of tank closure report for 1500 gal tanks: - removed four 1500 gal single wall, concrete-encased USTs. - from regional water table maps, groundwater occurs approx. 15 ft bg and flows in a northwesterly direction - tanks were located approx. 4 ft bg - tanks were in good condition with no corrosion. no visible holes or leaks were noted - sidewall samples were collected at 8 ft and bottom sample was collected at 12 ft bg - groundwater was not encountered at the site during excavation - approx. 79.16 tons of contaminated soil were removed - highest PID observed in west side wall sample (PID: 398.3 ppm) - due to observed staining, odors and documented PID readings, the DEC was notified (spill #: 0003390) - minor contamination found in soil endpoint samples spoke with Mr. Prigozen. explained him that spill was reported as found free product on groundwater during environmental investigation in 1999. and during tank removal activities, no groundwater sample was taken. asked him to delineate groundwater contamination. asked him to install monitoring wells atleast to previous tanks locations (one along kent ave and one along north 12th street). sent email to Mr. Prigozen with specific requirement of monitoring well locations. 07/09/07-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he removed four 550 gal tanks from his site, which were located along Kent Avenuen and based on closure report addendum, there was no soil contamination. and he believes that groundwater contamination, found in 1999, came from Texaco oil terminal along Kent Avenue. asked Mr. Prigozen to look for investigation report from Aug. 1999, based on which this case was reported. if monitoring wells, during that investigation, were installed along kent ave and found contaminated then based on groundwater flow direction data (if available in report), the department can ask upgradient property to do investigation, but if no site specific groundwater flow direction or previous monitoring well location available to the Deparment, then the department requires him to do groundwater delineation with

NATIONS RENT (Continued) **S104621824**

site-specific groundwater flow direction. Mr. Prigozen will look for report. 07/09/07- Sangesland received a call from an Environmental consultant in Charlotte, North Carolina. He asked if the DEC required work to be done by a licenced New York State Prof. Engineer. Sangesland said no. The only requirement is the lab used for testing must be NYS Licenced and if any material is removed from the site it must be taken by a licenced hauler. 07/13/07-Hiralkumar Patel. received limited Phase II report from Mr. Prigozen. abstract: - an affidavit dated 06/13/1989 indicates that one 550 gal gasoline tank was purged and filled with concrete slurry in the sourthern portion of the site - two soil borings and nine monitoring wells were installed - highest PID reading found in boring BK-6 (595 ppm) at 5 to 7 ft bg less than -------- - groundwater sample was not obtained from boring location BK-6, which was installed closed to sediment trap area less than ---------- - based on site topography and nearby waterways, it is determined that the nearby groundwater flow direction is to the northwest - free product was measured in two monitoring wells (MW-10 with 1.5 inch and MW-7 with 0.05 inch of free product) less than ---------- - minor tetracholorethane was found in (assumed) upgradient groundwater samples (BK-1, BK-2 and BK-3) - MTBE contamination (236 ppb) found in groundwater samples MW-2 and MW-3 (area near abandoned gasoline tank) - highest contamination found in soil sample at BK-6 (near old sediment trap) ----------Xylene----Benzene BK-6 (1-3 ft)------8,730-----2,025 BK-6 (3-5 ft)------3,320-------327 //during Phase II, borings were installed to maximum depth of 17.5 ft bg, but report doesn't mentioned about groundwater depth.// 07/18/07-Hiralkumar Patel. after reviewing available reports found following: - no groundwater depth information - free product in wells MW-7 and MW-10 along Kent Avneue, but no groundwater flow direction - MTBE contamination in groundwater sample at BK3, which is close to previously abandoned gasoline tank location - benzene and xylene contamination in sample at BK-6, which is close to sediment trap. no groundwater sample taken from there. spoke with Mr. Prigozen. based on available data, asked Mr. Prigozen to do following: - soil and groundwater sampling at previous sampling location BK-6 (as found Benzene and Xylene in soil and had highest PID during Phase II investigation) - soil and groundwater sampling at previous sampling location BK-3, close to previously abandoned gasoline UST (as found MTBE in gw) - complete groundwater delineation (with atleast three permanent monitoring wells and site specific groundwater flow direction) in area of previous boring locations MW-7 and MW-10. asked Mr. Prigozen to check any previous wells exists on site. if not then he needs to install new wells. based on available data and reports, asked Mr. Prigozen to disregard requirement of Phase I investigation, as mentioned in letter dated June 18, 2007. 07/19/07-Hiralkumar Patel. sent letter to Mr. Prigozen requiring soil/groundwater sampling at previous boring locations BK-3 and BK-6 and complete groundwater delineation in area of previous boring locations BK-7 and BK-10. letter emailed to Mr. Prigozen with map (from former phase II report) indicating locations where the Department requires further investigation. 09/06/07-Hiralkumar Patel. received email from Mr. Prigozen. he is contacting companies for price quote. 09/13/07-Hiralkumar Patel. left message for Mr. Prigozen. received call from Mr. Prigozen. he is reviewing quotes from companies and will fanalize next week. he will send company's name next week with scheduling and estimated date for report submission.

NATIONS RENT (Continued) **S104621824**

09/20/07-Hiralkumar Patel. received email from Mr. Prigozen. he has hired Hart & Hickman to do the investigative work. they will be on site in two to three weeks. Theron Grim Hart & Hickman, PC Ph. (704) 586-0007 Mr. Prigozen will call once get dates finalized for investigation work. 09/28/07-Hiralkumar Patel. received email from Mr. Prigozen. contractor will start work on Oct. 8th, 2007. 10/23/07-Hiralkumar Patel. received call from Mr. Grim. he just received analytical data from lab and they found contamination and free product in groundwater. Mr. Grim will submit report within two weeks. asked Mr. Grim to send analytical data, groundwater flow direction and site map with sampling locations for review. he will send these tomorrow. 10/26/07-Hiralkumar Patel. received analytical data for few samples and site map. found soil and groundwater contamination in area of former sediment trap. waiting for full report. 11/06/07-Hiralkumar Patel. spoke with Mat Ingalls Hart & Hickman, PC. Mr. Grim is no longer working there. Mat is sending report to Mr. Prigozen to review and approval and once gets approval, he will forward report. Mat Ingalls Ph. (704) 887-4617 email: mingalls@harthickman.com 11/15/07-Hiralkumar Patel. received report from Mr. Ingalls. abstract: - installed four soil borings (BK-3A, BK-6A, BK-7A and BK-10A); three soil samples (BK-3A, BK-7A and BK-10A) were advanced to depth of 5 ft below grade adjacent to existing wells and boring BK-6A was installed adjacent to the northwest corner of the sediment trap and was advanced to depth of 12 ft bg (later converted to temporary well) - installed one temporary well (BK-6A) - found high PID in BK-6A (from 21.3 ppm to 2,350 ppm with max at water table at 7 ft depth) - sampled recently installed temporary well and two existing wells (BK-3 and BK-7) - depth to groundwater at the site ranges from approx. 5 ft bg in the northern portion of the site to 10 ft bg in the southern portion of the site - map indicates shallow groundwater generally flows to the southwest less than -------- - during static water level measurements, 2.37 ft of free product was measured in monitoring well BK-10 less than ---------- - directly south of the bayside fuel oil depot and also upgradient of the subject site is the former Williamburg Manufactured Gas site. soil analyticals: ----------BK-6A (5-7 ft) Benzene----------895 Ethylbenzene----------16,300 Isopropylbenzene----------3,180 p-Isopropyltoluene-------10,200 n-Propylbenzene----------5,780 1,2,4-Trimethylbenzene---22,200 Xylene----------2,530 groundwater analyticals: ----------BK-6 Benzene----------2,110 Ethylbenzene----------844 MTBE----------257 Naphthalene----------697 1,2,4-Trimethylbenzene--3,020 Xylene----------247 conclusions: - based on groundwater elevation data and lack of impacts at the potential source area well BK-7 (previous 550 gal USTs area), it appears the free product in well BK-10 is likely from an offside source - Bayside fuel oil depot is located adjacent and upgradient, and site is under Voluntary Cleanup Program (ID #: V00587-2) less than ---------- - petroleum impacts identified in soil sample collected from BK-6A are likely associated with four 1500 gal USTs located adjacent to sediment trap - lack of groundwater impacts in downgradient monitoring well BK-3 indicates impacts from onsite or upgradient sources have likely not migrated off-site report missing following: - no analysis done to identify product found in well # 10 - no site specific groundwater flow direction available - no information about tidal influence on flow direction 11/20/07-Hiralkumar Patel. left message for Mr.

NATIONS RENT (Continued) **S104621824**

Ingalls to provide missing information. sent email to Mr. Prigozen and Mr. Ingalls with missing information including detailed scaled site plan with all major suspected sites in neighbourhood. 11/21/07-Hiralkumar Patel. received message from Mr. Ingalls. left message for Mr. Ingalls. 11/26/07-Hiralkumar Patel. received email from Mr. Ingalls proposing fingerprint analysis of oil from well # 10, 12 hour tidal survey and detailed site map. sent email to Mr. Ingalls asking 24 hours of tidal survey (instead of 12 hours), fingerprint analysis and detailed site map with surrounding area. 11/28/07-Hiralkumar Patel. received call from Mr. Ingalls. they will do tidal survey on two day period as access available from 8 am to 6 pm only. will submit report after Dec. 10, 2007. 12/13/07-Hiralkumar Patel. received addendum to Phase II report. abstract: - collected groundwater elevation data from monitoring wells BK-3, BK-4, BK-7, BK-8, BK-10 and BK-11 less than ---------- - product was found in wells BK-10 and BK-4 less than ---------- - tidal influence survey indicates that the monitoring well water levels were consistent during the observation period (9.5 hours) and showed no tidal influence less than --------- - direction of groundwater flow was determined to be southeast less than ---------- - product observed in BK-10 is highly weathered middle distillate such as diesel oil or fuel oil less than -------- - floating free product (approx. 0.46 ft) was observed in BK-4; BK-4 is located near four former 1500 gal USTs - collected sample from BK-04 and held at lab (not analyzed) - Bayside Oil is located upgradient from subject site based on following, contractor believes that product in BK-10 is from off-site: - product thickness (2.67 ft) - degree of weathering and biological degradation - sepearation distance (approx. 50 ft) and cross gradient location of BK-10 from the former UST basin - confirmed site groundwater flow direction to the southeast - absence of floating product in BK-7 installed in the immediate vicinity of former UST basin summary: found free product in two wells: BK-4 and BK-10. BK-4 is located in area of previous 1500 gal USTs and BK-10 is located close to corner of Kent ave and N. 13th st. oil in BK-4 could be from previously removed tanks on-site, but oil in BK-10 could be coming from off-site. spoke with Matt. he mentioned that they did not found well BK-4 during Phase II investigation, but found during recent well survey. found free product in well and took sample and it is on hold, in lab. asked Matt to analyze sample from BK-4. also asked him to monitor and remove product from existing wells on-site. discussed with DEC Austin. as owner suspecting off-site spill that impacting well BK-10 at his property, Austin asked to pump out product, weekly for a month to see if any more product comes to the site and then based on product recovery data, may require futher work by site owner. sent email to Matt and Mr. Prigozen requiring analysis of sample from BK-4 and monitoring and product removal from existing wells on weekly basis. 12/24/07-Hiralkumar Patel. spoke with DEC Leszek, who is handling project at Bayside Oil. he confirmed that there was no product found in two monitoring wells (MW-4 & MW-12) located along Kent ave, near 91 N 12th street site. 01/08/08-Hiralkumar Patel. spoke with Matt. he submitted proposal for product removal but haven't heard back. spoke with Mr. Prigozen. he hasn't hire anyone to remove product. asked Mr. Prigozen to remove product from wells on his property and also explained him to install well upgradient from well # 10, on sidewalk, to prove any off-site migration. 01/15/08-Hiralkumar Patel. spoke with Mr. Prigozen. he has authorized Matt to pump product out. asked him to schedule upgradient

NATIONS RENT (Continued) **S104621824**

well installation on sidewalk along kent ave. he is waiting for proposal from Matt. left message for Matt to submit analyticals for sample taken from well # 4. also asked to submit schedule for product removal and to plan for upgradient (from well # 10) well installation. 01/17/08-Hiralkumar Patel. received message from Matt. left message for Matt. received analyticals for sample from well BK-4. during fingerprint analysis, found product from well BK-4 in range from degraded gasoline or similar material to diesel or fuel oil. well BK-4 is installed in area of previous 1500 gal USTs. 01/24/08-Hiralkumar Patel. received call from Matt. they are removing product from BK-4 and BK-10. asked them to continue removing product from these wells for about a month and then based on remaining product, the department may require downgradient well from BK-4 and upgradient well from BK-10. Matt will send report. 03/20/08-Hiralkumar Patel. left message for Mr. Ingalls to submit product recovery data. sent email to Mr. Ingalls and Mr. Prigozen to submit product recovery data by end of 03/28/08. 03/24/08-Hiralkumar Patel. received message from Mr. Ingalls. they finished field work and will submit report, once get Mr. Prigozen reviews it. 03/27/08-Hiralkumar Patel. received report from Mr. Ingalls. abstract: - fingerprint result indicate that the product observed in BK-4 is a mix of low boiling material such as petroleum solvent or degraded gasoline, and a middle distillate such as diesel fuel or fuel oil that has undergone extensive biological degradation apparent product thickness (in feet) in BK-4 and BK-10:
----------01/21/08---------02/06/08---------02/14/08----------02/21/08
BK-04---------0.53----------0.21----------0.29----------0.34
BK-10---------2.55----------0.76----------0.56----------0.91 04/25/08-Hiralkumar Patel. left message from Mr. INgalls to continue product recovery from both wells until finds clean groundwater. based on recent product recovery report, product thickness in wells BK-04 and BK-10 has been reduced. but closest well to well BK-10 is BK-07 which is 50 ft away and crossgradient and next downgradient well from BK-10 is BK-06A which is 250 ft away and has groundwater contaminated. also closest well to BK-04 is BK-06A which is about 40 ft away and crossgradient and there are no downgradient well from BK-04. discussed with DEC Austin. as product thickness in both wells reduced, Austin believes that this could be localized problem. Austin asked for complete horizontal delineation of groundwater contamination around BK-04, BK-10 and BK-06A. Austin asked to call owner regarding continuous recovery of product and about further groundwater investigation work. spoke with Mr. Prigozen. asked him to continue product recovery from both wells. also mentioned to him regarding further groundwater delineation. Mr. Prigozen still believes that product in both wells coming from off-site. sent letter to Mr. Prigozen requiring removal of product from existing wells and further soil/groundwater delineation around wells BK-04 and BK-10 and previous boring location BK-06A. letter emailed to Mr. Prigozen and Mr. Ingalls. 04/30/08-Hiralkumar Patel. received call from Mr. Ingalls. they still believes that product in BK-10 is coming from off-site. they are planning to install well on sidewalk to see any off-site migration. Mr. Ingalls asked for number of wells around BK-10 and BK-04. mentioned to Mr. Ingalls that the department requires complete delineation which may require multiple wells on-site as well as off-site. asked him to install one permanent

NATIONS RENT (Continued) **S104621824**

well at previous boring location BK-06 as found contaminated groundwater in previous investigation and BK-06 is cross gradient from BK-04. 06/04/08-Hiralkumar Patel. left message for Mr. Ingalls. spoke with Mr. Prigozen. they are currently removing oil from wells and will install required well in two weeks. 07/08/08-Hiralkumar Patel. spoke with Mr. Ingalls. they are removing oil from wells on weekly basis but haven't heard from owner regarding further well installation. spoke with Mr. Prigozen. he was out for work and just came back. he will talk to Mr. Ingalls regarding further well installation and will submit schedule by end of 07/18/08. 08/25/08-Hiralkumar Patel. left message for Mr. Prigozen. 09/19/08-Hiralkumar Patel. spoke with Mr. Ingalls. he mentioned that he tried few times but no response from Mr. Prigozen. left message for Mr. Prigozen. 09/22/08-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he was out of country and will contact Mr. Ingalls. will install wells in early october. Mr. Prigozen will ask Mr. Ingalls to call with work schedules. 12/01/08-Hiralkumar Patel. left message for Mr. Ingalls. spoke with Mr. Prigozen. he will call back as was busy. 12/02/08-Hiralkumar Patel. received message from Mr. Prigozen. left message for Mr. Prigozen. 12/03/08-Hiralkumar Patel. received call from Mr. Ingalls. they are still waiting for authorization for required work. received call from Mr. Prigozen. he mentioned that he has gave authorization long time back. asked Mr. Prigozen to contact Mr. Ingalls to solve this confusion and asked to call back with work schedule. received call from Mr. Ingalls. he spoke with Mr. Prigozen and Mr. Prigozen asked him to start work after New Year holiday. mentioned to Mr. Ingalls that required report is overdue since June 2008 and the department can't approve any more extension. he will contact Mr. Prigozen and will call back. 12/04/08-Hiralkumar Patel. received call from Mr. Ingalls. he got approval from Mr. Prigozen for additional work. he spoke with drilling company and can start work from 12/22/08. approves it and asked Mr. Ingalls to submit proposed well location map alongwith existing well locations. sent email to Mr. Ingalls to submit proposed well location map, by end of 12/09/08, including locations of previous borings and wells. email copied to Mr. Prigozen. 12/05/08-Hiralkumar Patel. received email from Ed from Hart & Hickman with proposed well location. they are proposing to install three wells: one upgradient from BK-10 (along property boundry along Kent ave), one downgradient from BK-04 (along N. 12th street) and one downgradient from previous boring BK-06 (across sediment trap which might be route for groundwater contamination.) Edward H. Stephens Hart & Hickman, PC Ph. (704) 586-0007 (704) 887-4609 Fax (704) 586-0373 email: EStephens@harthickman.com sent email to Ed and Mr. Prigozen approving proposed well locations. email copied to Mr. Ingalls. required investigation report submission by the end of Jan. 26, 2009 and weekly submission of well monitoring/product recovery data. 12/09/08-Hiralkumar Patel. received call from Ed from Hart & Hickman. he asked about location of well BK-14. he proposed to install well downgradient from sediment trap instead of at BK-14. mentioned to Ed that the Department wants well at (suspect) source location (which is sediment trap) to capture mostly contaminated material and based on findings, more wells needs to be installed. 12/15/08-Hiralkumar Patel. spoke with Ed at Hart & Hickman. they have scheduled well installation on 12/29/08. 01/06/09-Hiralkumar Patel. received email from Ed. they installed four monitoring wells on 12/30/08 and will submit report once gets sample analyticals.

NATIONS RENT (Continued) **S104621824**

02/04/09-Hiralkumar Patel. received email from Ed with site map including results of recent groundwater investigation. four more wells (or borings) were installed. well/boring BK-12 installed upgradient from BK-10. no contamination found in BK-12. well/boring BK-14 installed near previous sediment trap and found contaminated groundwater. well/boring BK-13 installed on southwest side of BK-14, where no contamination found. well/boring BK-15 was installed on northwest of BK-4 and found contaminated groundwater. groundwater analyticals: ----------BK-14------BK-15
Benzene----------1,060 Ethylbenzene----------468
Xylene----------204 Naphthalene----------738------1,040
02/11/09-Hiralkumar Patel. received call from Ed. he mentioned that during recent survey, they found groundwater flowing in southeast towards northwest portion of the site (near intersection of Kent ave and N. 13th street) and groundwater flowing in south direction towards southeast portion of the site (near intersection of N. 12th street and Wythe ave). according to recent groundwater flow direction, BK-13 is downgradient from BK-14, but cross gradient from BK-4. asked Ed for off-site investigation, downgradient from wells BK-15 and BK-4. also asked for weekly monitoring and recovery of free product. Ed will speak with Mr. Prigozen and will submit complete investigation report. 02/12/09-Hiralkumar Patel. received additional Phase II report (analyticals recorded earlier). abstract: - four borings were advanced to depth of 15 ft bg - one soil sample, with highest PID, from each boring was sent for analysis - groundwater flows to the southeast in the western portion and to the south in eastern portion of the site - found 1.78 ft of free product in BK-10A - strong odor found during installation of wells BK-12 and BK-13 - high PID readings were found during installation of BK-13 (276 ppm at 5 ft) and BK-14 (729 ppm at 6 ft) conclusions from Ed: - free product was not observed in BK-12 (which is upgradient from BK-10) during the recent assessment, it is not common to observe a delay in free product recharge into newly installed monitoring well. BK-12 should be observed over time to confirm occurence of free product. - based on local groundwater flow direction and the absence of a potential on-site source in the vicinity of the observed free product at BK-10A, H&H believes the observed free product has migrated on-site from the upgradient Bayside OIl Depot. - based upon the result of the receptor survey, soil and groundwater assessment, existing poor groundwater quality in the vicinity of the subject property, and a documented upgradient source of groundwater impacts including free product, soil and groundwater impacts at the site can be most effectively managed through LAND USE RESTRICTIONS AND STANDARD ENGINEERING CONTROLS. 02/20/09-Hiralkumar Patel. spoke with Ed regarding conclusions in submitted report. mentioned to Ed that clean groundwater was found in upgradient well BK-12 which indicates no off-site source. Ed mentioned that they will go back to site to check well again as suspecting that newly installed well could recharge slowly. spoke with Mr. Prigozen. based on results of investigations till date, asked him to start weekly monitoring of all wells, and removal of any product, immediately. also asked him for off-site investigation downgradient from wells BK-4 and BK-15. told him that product must be removed from wells by next week (end of 02/28/09) and weekly there after. 02/23/09-Hiralkumar Patel. spoke with Mr. Prigozen. will do product removal on 02/25/09. alternate addresses: 58 Wythe Ave, 91-101 N 12 St, 70-72 Wythe Ave, 82 N 13 St, 92 N 13 St found two old closed spill reports: 1. 0003390:- consolidated with

NATIONS RENT (Continued) **S104621824**

this spill 2. 0207277:- surface spill reported 02/25/09-Hiralkumar Patel. spoke with Mr. Prigozen. he has hired his mechanic guy to bail out product from wells. he mentioned that he got directions from Ed how to remove product and got some forms for recording. he also mentioned that they have waste oil tank on-site and they will collect product into this on-site tank and will pump out tank once get full. asked Mr. Prigozen to call once he reach to site tomorrow (02/26/09). Mr. Prigozen asked to send STIP at following address: Sylvan Holdings LLC. **property owner** c/o Sage Prigozen **Elliot's son** 58-64A Maurice Avenue Maspeth, NY 11378 Ph. (917) 750-4112 (C) Fax (305) 860-6699 email: sagep@bobcatzone.com 02/26/09-Hiralkumar Patel. received call from Mr. Prigozen. he has hired Tri-State environment for product removal (not local mechanic). will submit report. asked him to remove product weekly. 02/27/09-Hiralkumar Patel. received call from Mr. Prigozen. he is planning to hire some local investiation team for further investigation. will call back with company's name who will do further investigations. sent STIP to Mr. Prigozen (7005 1820 0007 9827 6066). STIP emailed to Mr. Prigozen. 03/13/09-Hiralkumar Patel. received call from Paul from Ecosystems. they have been hired by Mr. Prigozen. will submit work plan for additional investigation. Paul Ciminello Ecosystems Strategies Inc. Ph. (845) 452-1658 (O) (914) 475-4208 (C) Email: paul@ecosystemsstrategies.com 03/16/09-Hiralkumar Patel. received STIP delivery confirmation (letter delivered on 03/11/09). 03/25/09-Hiralkumar Patel. received email from Ecosystems with work plan for further investigation. abstact: - will put absorbent pads in wells BK-4 and BK-10 as an interim remedial measure; pads will be changed, as needed, on a weekly basis - will verify groundwater flow direction - propose to install six to ten borings on site - borings will be extended (at a minimum) to the soil/groundwater interface or until refusal - at least two soil samples will be collected: one with highest PID and one at groundwater interface; if no PIDs found then only one soil sample will be collected at groundwater interface - convert one to two borings into a monitoring well - wells will be installed with a ten ft of screen; mimimum of 2 ft of screening will extend above water table according to submitted site plan in proposed work plan, Ecosystems is planning to install all borings around BK-10, but no investigation proposed to delienation soil/groundwater contamination around BK-04. less than ---------- spoke with Mr. Prigozen. told him that without having signed Stipulation agreement, i can't approve any work plan. Mr. Prigozen mentioned that his attorney asked him not to sign STIP as he might loose right to get fund from brownfield program. Mr. Prigozen will ask him attorney to call. Mr. Prigozen has choose to proceed with proposed plan without having approval from the department. spoke with Paul at Ecosystems. they are at the site today and are surveying all wells to confirm groundwater flow direction. they have put absorbent pads in wells and recovering free product. asked Paul about investigation around BK-04. he is currently concentrating on finding source for BK-10 and will eventually include investigation around BK-04. mentioned to him that the department requires investigation around BK-04 also and will only approve the work plan if includes soil/gw investigation around BK-04 along with investigation around BK-10. 03/26/09-Hiralkumar Patel. received email from Larry Schnapf, environmental attorney representing Mr. Prigozen. Larry claims that contamination found in BK-10 is from an upgradient oil depot, so he advised his client not to sign STIP which result in waiver of righs to seek reimbursement

NATIONS RENT (Continued) **S104621824**

from the spill fund. he mentioned that his client will sign STIP if oil spill fund waiver paragraph deleted from agreement. Larry Schnapf email: Lawrence.Schnapf@srz.com 04/01/09-Hiralkumar Patel. spoke with Paul at Ecosystem. groundwater flow direction found almost in same direction as found earlier. no product found in well upgradient from BK-10. 04/02/09-Hiralkumar Patel. received email from Paul with report. abstract: - groundwater flow measurements are broadly consistent with the findings of previous consultant - groundwater flowing towards the south - review of sanborn maps indicates that the western portion was associated with oil refining activities predominantly performed on the adjoining property to the west (towards bayside oil depot) - numerous tanks are shown on the site between 1887 and 1916 - between 1905 and 1965 a tunnel, that appears to have contained pipes connecting both sites, extended beneath Kent ave less than ---------- - according to sanborn maps from 1887 to 1916, western portion of the site (in area of Bk-10) was occupied by an oil refining company and site had multiple tanks on western portion - adjoining to the southwest was MGP site from 1887 to 1916 - 1942 sanborn map showing a tunnel beneath kent ave between the subject site and western property (currently bayside oil depot) spoke with Mr. Schnapf. Mr. Schnapf mentioned that they are suspecting that old tunnel between two properties (current bayside oil depot and subject site) might be bringing contamination on his client's property. he is planning for more soil and groundwater investigation and investigation about a tunnel before signing STIP. discussed with DEC legal and legal division agreed with this. asked Mr. Schnapf to submit revised work plan for soil and groundwater investigation around BK-4 and BK-10 and tunnel investigation with time schedule. Mr. Schnapf will ask Paul to submit revised work plan by 04/06/09. spoke with Paul at Ecosystems. asked him for revised work plan. also asked him to submit site map with approx. locations of following: - BK-10, BK-4 - previous tanks on the property (from 1887 to 1916) - adjoining MGP site - tunnel under kent ave 04/06/09-Hiralkumar Patel. sent email (at 3:30 PM) to Mr. Prigozen to submit revised work plan by 4 PM today. received revised work plan. abstract: - absorbent booms will be used in wells BK-04 and BK-10 as an interim remedial measures - will sample all wells - proposes to dig minimum of three test pits in area where tunnel was located - test pits will be extended to a maximum depth of 10 ft bg or until groundwater is reached - if contamination found in soil during test pit installation, samples will be collected and soil will be removed for off-site disposal - total of 8 to 12 soil borings will be extended across the site with 3 to 5 of these boring being completed as wells - borings will be extended (at a minimum) to the soil/groundwater interface - two soil samples will be collected from each borings: one at soil/groundwater interface and one at highest PID - will submit investigation report within 10 weeks of the approval less than -------- 04/07/09-Hiralkumar Patel. sent work plan approval letter to Mr. Prigozen. letter emailed to Mr. Prigozen, Paul and Mr. Schnapf. 04/16/09-Hiralkumar Patel. received email from Richard Hooker from Ecosystems. will start investigation work at 8 AM on 04/23/09. 05/06/09-Hiralkumar Patel. received email from Richard. they completed extension of test pits at the western property line and the sampling and laboratory analysis of all existing wells. will install on- and off-site monitoring wells and extension of soil boring on-site on 05/13/09. 06/16/09-Hiralkumar Patel. 4:58 PM:- received email from Paul. he just received comments on the draft report from

NATIONS RENT (Continued) **S104621824**

client and will incorporate these changes. will submit report tomorrow. 06/19/09-Hiralkumar Patel. 3:21 PM:- received investigation summary report from Paul. abstract: - one test pit was installed immediately southeast of center point of western property line - eleven soil borings were installed: nine borings (B-1 through B-9) were installed in the vicinity of BK-4 and two borings (B-10 and B-11) were installed in the vicinity of BK-10 - sampling was conducted at each boring location at five-ft intervals to a maximum depth of 20 ft bg or until refusl was reached - test pit documented the presence of a 10 inch diameter iron pipe in a brick-lined depression - broken end of pipe was found approx. 2.5 ft bg and the pipe was found to extend down to approx. 6 ft bg before turning sharply west beneath Kent Ave - water was encountered in test pit at approx. 4 ft bg and no evidence of contamination was encountered less than ---------- - field evidence of contamination was observed at the groundwater interface at most borings extended in the vicinity of BK-4 less than ---------- - no field evidence of contamination was encountered in the vicinity of BK-10 less than ========= - soil borings B-1, B-9 and B-10 were completed as temporary monitoring wells MW-1, MW-2 and MW-3 respectively - screen interval from 2 ft above to 8 ft below static groundwater level - free product was noted in monitoring well MW-2 (B-9) and remains in BK-10 - previously unknown well (MW-4) was discovered to the northeast of BK-10 - found free product in BK-10: 4.7 inches of product on 03/25/09 and 4.2 inches of product on 05/13/09 less than ---------- - found 1.5 inch of free product in MW-2 less than ---------- - borings B-10 and B-11 were installed to the southwest and southeast of BK-10; soil samples from these borings at the groundwater interface found no contamination - boring B-10 was converted into well MW-3; sampled MW-3 and previously unknown well MW-4 (20 ft north of BK-10) and found no contamination - soil samples from borings collected in the area of BK-4 indicate significant, but uneven soil contamination immediately southeast of the repair shop; these results confirm the presence of an area of subsurface petroleum contamination beneath and southeast of the repair shop - petroleum odors found in borings B-1 throgh B-9 - high PID readings found in borings B-2, B-5, B-6 and B-7 PID readings (in ppm): depth (in ft)----------B-2-----B-5------B-6------B-7 1----------845 6----------400 7----------1,500----------142 8----------3,000 10----------3,500----------4,943 11----------500 - heavy soil contamination found in soil samples soil analyticals: ----------B-2---------B-4--------B-4-------B-5----- ---B-7--------B-9 10 ft 9.6 ft 11 ft 11 ft 8.5 ft 8 ft Toluene---------- --510,000 Ethylbenzene----------6, 000----------3,000,000 Xylene----------1, 700----------9,100,000 1,2,4-Trimethylbenzene----------30,000------42, 000----------170,000 1,3,5-Trimethylbenzene----------4, 200----------70,000 Isopropylbenzene----------3,100--------2,400-------2,600---20,

will submit RAWP by 07/17/09 1:45 PM:- spoke with Mr. Prigozen. based on results of further investigation, informed him that the department requires stipulation agreement signed before reviewing or approving any remediation action work plan. also asked him to schedule a site visit. he agreed to meet at the site at 10 AM on 07/01/09. 2:03 PM:- received call from Paul. he spoke with Mr. Prigozen and will meet at 10 AM on 07/01/09. 07/01/09-Hiralkumar Patel. 10:00 AM:- visited site. met Mr. Prigozen and Paul. repair shop nearby entrance along N. 12th street consists three 275 gal ASTs: two for fresh oil and one for waste oil. waste oil tank is not registered. asked Mr. Prigozen to register waste oil tank. inpected areas around sediment trap/repair shop, BK-10, old abandoned tunnel and previosly abandoned gasoline UST. Paul mentioned that abandoned tunnel extends towards BK-10. Paul will submit RAP by 07/17/09. proposes to excavate area by repair shop entrance as found heavily impacted soil in boring B7. asked Mr. Prigozen to excavate all following areas: - around BK-10 (as it could be localized problem) - entire abandoned tunnel running towards BK-10 (to investigate any more product in tunnel) - in front of repair shop in area of B-7 - around B-9/MW-2 as found free product in it suggest to remove old abandoned gasoline UST as found 236 ppb MTBE in well BK-3 nearby tank location. Paul suggest to sample BK-3 again before any excavation in this area. mentioned to Mr. Prigozen that based on gw analytical results from BK-3, the department doesn't require removal of the tank, but as they will do excavation in other part of site, it will be easy to use on-site equipments to dug this suspected area. Mr. Prigozen will discuss with Paul regarding gasoline UST removal. found self-contained parts cleaning machine with small tank (probably 15-20 gal). no stains/odors found around parts cleaning machine. found well cap missing for BK-10. asked Paul to replace it. asked Mr. Prigozen to send his tenant's contact info. 12:46 PM:- received email from Mr. Prigozen with tenant's contact info. David Williams Director of Real Estate and Construction Sunbelt Rentals 800 Hartford Turnpike Shrewsbury, MA 01545-4107 Ph. (508) 925-1611 (O) (508) 245-1107 (C) email: David.williams@sunbeltrentals.com 1:40 PM:- left message for Mr. Williams. 3:51 PM:- sent revised STIP to Mr. Prigozen. asked him to submit signed STIP by end of 07/13/09. 07/06/09-Hiralkumar Patel. 1:45 PM:- received message from Mr. Williams. 07/24/09-Hiralkumar Patel. 10:41 AM:- received work plan from Ecosystems. proposes to monitoring/recover product from wells, excavate contaminated soils from areas of B-7 and BK-10. 07/27/09-Hiralkumar Patel. 10:40 AM:- spoke with Paul about work schedule. today he will send cost estimates to Mr. Prigozen and expect to start work by Aug. 3, 2009. asked him to send confirmed work schedule. 10:43 AM:- sent email to Mr. Prigozen approving proposed plan and asked to submit work schedule. email copied to Paul. 08/06/09-Hiralkumar Patel. 11:53 AM:-

NATIONS RENT (Continued) **S104621824**

left message for Paul about work schedule. 12:18 PM:- received message from Paul. he met property owner and tenant yesterday to coordinate excavation and planning to start work on 08/14/09. will send email with confirmed schedule. 08/12/09-Hiralkumar Patel. 10:39 AM:- received email from Paul. they will start soil excavation on 08/21/09 and expect to finish by 08/22/09. 2:10 PM:- sent email to Paul. asked him to call me once excavation starts as planning to visit site during endpoint sample collection. 08/21/09-Hiralkumar Patel. 8:48 AM:- spoke with Richard (845-803-2709) at Ecosystems. they have started excavation in area of BK-10. found contaminated sand, construction debris and clay layer. thick clay layer found right below water table. 11:20 AM:- received call from Richard. while digging area around BK-10, well was destroyed and found brick structure in ground and heavily contaminated soil. 2:00 PM:- visited site. area around BK-10 was excavated and patially backfilled after collecting endpoint samples. found water in excavation, but no product. Richrd mentioned that brick walls found on both side of BK-10 running parallel to N. 13th Street. Richard believes that this channel in ground around BK-10 was holding some product which was appearing in BK-10. crew was excavating area around B-7 (in front of garage entrance) at the time of site visit. found sticky black material from excavation with strange odors. Richard believes that this black material could be source of heavy contamination in B-7. will excavate to depth of 8 ft where contamination found during soil investigation. crew was also working inside garage where B-2 was installed and product found in MW-2. will collect appropriate endpoint samples. left site around 3 PM. 3:47 PM:- received call from Mr. Prigozen. while working inside garage around MW-2, they found abandoned tank in ground. will investigate more. 08/22/09-Hiralkumar Patel. 9:25 AM:- received call from Mr. Prigozen. they are planning to remove tank. 08/24/09-Hiralkumar Patel. 8:09 AM:- received call from Mr. Prigozen. he mentioned that tank removal is not possible as tank is located closed to foundation wall. it is about 1,500 gal tank. as per Mr. Prigozen, tank was full of product when discovered. asked him to pump out tank, clean it and then collect soil samples through bottom and sides of the tank to confirm no contamination around tank. 08/25/09-Hiralkumar Patel. 10:58 AM:- spoke with Mr. Prigozen. they pumped out at least 3,000 gal of product from tank. currently cleaning tank. 09/23/09-Hiralkumar Patel. 2:22 PM:- received call from Mr. Williams from Sunbelt Rentals inquiring about waste oil tank registration. 2:26 PM:- sent email to Mr. Williams with PBS registration form and instruction. 09/28/09-Hiralkumar Patel. 2:54 PM:- left message for Paul inquiring about cleanup report. 10/30/09-Hiralkumar Patel. 2:25 PM:- received tank closure and cleanup report from Ecosystems. abstract: - found shallow (18 inches) dark-stained soil immediately beneath the asphalt during excavation around BK-10 - beneath the stained material, found construction debris to 7 ft bg around BK-10; no evidence of contamination - immediately beneath well BK-10, a brick lined channel was encountered at 10 ft bg; expanding northwest-southeast for approx. 15 ft, the channel contained grossly contaminated sandy soil and debris - excavation in area immediately southeast of the machine shop found no field evidence of contamination until groundwater was encountered at approx. 7 ft bg and in shallow soils at the far southeastern corner of the excavation where an area of heavy, bituminous material was encountered at between 2 and 3 ft bg - found 3,000 gal previously unknown UST in area of MW-2 inside shop -

NATIONS RENT (Continued) **S104621824**

collected four soil samples through sidewall and two soil samples through bottom of 3,000 gal tank - collected total of six endpoint soil samples (four sidewalls and two bottoms) from each excavations at BK-10 as well as outside of repair shop - collected groundwater samples from wells BK-4, BK-13, BK-14, BK-15 and MW-1 - found little SVOC contamination in endpoint soil samples, but no VOC contamination - found VOC contamination in groundwater sample from BK-13 (but as per report dated 03/04/10, sampling data for BK-13 and BK-14 were switched in the subject report and contamination was actually found in BK-14) - proposes quarterly monitoring for a year based on groundwater result from BK-13 VOC result:
----------BK-14 Benzene----------570
Toluene----------86 Ethylbenzene----------530
Xylene----------239 1,2,4-Trimethylbenzene-----1,400
Naphthalene----------430 MTBE----------87
11/02/09-Hiralkumar Patel. reviewed all previous soil and groundwater data and found: - according to Limited Phase II Environmental Site Assessment, dated Aug. 16, 1999, no contamination found in soil sample in BK-4 at 7-9 ft - found free product in well BK-4, BK-10 and well MW-2 (inside repair shop) - found soil contamination at the entrance of repair shop - contaminated soil removed from area around BK-10 and at the entrance of repair shop - found old 3,000 gal tank inside repair shop nearby MW-2 - collected soil samples through walls and bottom of 3,000 gal UST and found no contamination - installed two wells BK-13 and MW-1 downgradient from BK-4 - no free product ever observed in BK-13 and MW-1 - no free product or groundwater contamination observed in BK-4 during sampling in Oct. 2009 - found soil and groundwater contamination in area around sediment trap (BK-6 and BK-6A) - found high PID in BK-6A throughout boring (from 21.3 ppm to 2,350 ppm with max at water table at 7 ft depth) - no excavation conducted in area of sediment trap spoke with Richard about excavation around sediment trap and BK-6/BK-6A area. Richard mentioned that as found clean sidewall sample from excavation in front of repair shop area, they didn't excavated area around sediment trap. 11/03/09-Hiralkumar Patel. 9:35 AM:- spoke with Mr. Prigozen and informed him that the department requires removal of contaminated soil from area of BK-6/BK-6A (as there was soil contamination above water table and high PID readings during installation of boring BK-6A). also mentioned that the Department suggest to excavate area around BK-4, while excavating area around BK-6A, as found free product earlier. Mr. Prigozen requested copy of site map and he will discuss with Ecosystem. 9:52 AM:- spoke with Richard about location of 3,000 gal tank and MW-2 inside repair shop. Richard mentioned that MW-2 was about 6 ft from tank's north end and there was drain between tank and MW-2. they removed contamination from drain and MW-2 areas. MW-2 was destroyed during excavation work. 10:32 AM:- sent email to Mr. Prigozen with copy of site maps with sample analyticals and asked Mr. Prigozen to remove contaminated soil from area of sediment trap. email copied to Paul. 11/20/09-Hiralkumar Patel. 3:02 PM:- spoke with Mr. Prigozen regarding excavation in sediment trap. he spoke with Paul and waiting for his response. will call back.
11/24/09-Hiralkumar Patel. 10:39 AM:- received email from Richard. they are discussing with Mr. Prigozen and will call back by next week. 12/04/09-Hiralkumar Patel. 2:43 PM:- left message for Mr. Prigozen. 2:47 PM:- spoke with Richard. they are currently discussing and will call back by end of 12/07/09. 3:45 PM:- received call from Mr. Prigozen. he spoke with Richard and will call back once gets

NATIONS RENT (Continued) **S104621824**

answer from Ecosystem next week. 12/09/09-Hiralkumar Patel. received email from Ecosystem (at 5:20 PM on 12/08/09) including response to soil excavation requirement in area of BK-6/BK-4 (response was recalled immediately). Ecosystem proposed for quarterly groundwater sampling instead of soil excavation in area between BK-6 and BK-4 based on endpoint samples from recent excavation and groundwater sample results in Oct. 2009 2:15 PM:- spoke with Mr. Prigozen. based on level of soil contamination and depth of water table, suggested Mr. Prigozen to excavate area around sediment trap and BK-4 to remove probably last spot of contamination. Mr. Prigozen mentioned that he would like to do excavation, if any, in his presence. he is out of NY during winter and will be back in summar. he requested to postpone soil excavation, if any, till summer. based on spill history and soil/gw sample results, approved Mr. Prigozen's request to postpone any soil excavation till summer, but required monthly monitoring and quarterly sampling from existing wells. 2:31 PM:- spoke with Richard at Ecosystem regarding their response which was recalled. Richard mentioned that there is some change in it and will send revised one. Richard requested to hold requirement of gw monitoring and sampling until they submit revised response. 12/15/09-Hiralkumar Patel. 11:38 AM:- spoke with Richard regarding response to soil excavation in area of BK-6/BK-4. Richard mentioned that owner's attorney is currently reviewing it and will submit soon. 12/21/09-Hiralkumar Patel. 2:02 PM:- spoke with Richard and asked to send document by end of tomorrow. 12/22/09-Hiralkumar Patel. received email from Richard (at 4:29 PM on 12/21/09) including response regarding excavation in area of BK-6/BK-4. Ecosystem recommends at least three quarterly rounds of groundwater sampling from existing wells and continued monitoring of the booms in BK-4 prior to decision regarding implementation of any additional remediation. 12/23/09-Hiralkumar Patel. 1:37 PM:- left message for Mr. Prigozen and informed him that the department is agreed with recommendations for three rounds of quarterly sampling. asked him to provide dates for first round of sampling. 1:39 PM:- spoke with Richard. informed him that the department agreed with their recommendation of quarterly groundwater sampling. asked Richard to send dates for first round of sampling. 1:53 PM:- sent email to Mr. Prigozen and asked to submit first quarterly groundwater sampling report by the end of 02/12/10. email copied to Richard and Paul. 2:54 PM:- received call from Mr. Prigozen. he received email and will ask Paul to collect groundwater samples in Jan. 2010. 03/04/10-Hiralkumar Patel. 12:02 PM:- received first quarterly groundwater sampling report. collected groundwater samples from wells MW-1, BK-4, BK-13, BK-14 and BK-15 on 02/01/10. groundwater samples were analyzed for VOCs (via 8260) only. no free product observed in well BK-4. found VOC contamination in groundwater sample from BK-14 and very minor contamination in other wells. but as per report from Oct. 2009, no contamination found in BK-14, but contamination was found in BK-13. Paul mentioned that sample results for BK-13 and BK-14 were switched in report dated 10/30/09. groundwater analyticals:
----------BK-14 Benzene----------469 Toluene----------89 Ethylbenzene----------485 Xylene----------201 1,2,4-Trimethylbenzene-----1,290 Naphthalene----------266 MTBE----------61
06/22/10-Hiralkumar Patel. received quarterly groundwater sampling report from Ecosystems. on 06/08/10, they sampled wells MW-1, BK-4, BK-13, BK-14 and BK-15. found contamination in groundwater sample from well BK-14: the well in previous sediment trap area. found only

NATIONS RENT (Continued) **S104621824**

MTBE (71 ppb) in well BK-4. will sample wells again in Sep. 2010. groundwater analyticals: ----------BK-14 Benzene----------600 Toluene----------92 Ethylbenzene----------470 Xylene----------196 1,2,4-Trimethylbenzene-------930 Naphthalene----------250 MTBE----------64 11:56 AM:- spoke with Mr. Prigozen. informed him that groundwater is contaminated near sediment trap area and if they continue groundwater monitoring and are planning for no excavation, then this case may be transferred to remediation group for long-term remediation. Mr. Prigozen will discuss with Ecosystems and will call back by 07/10/10. 07/28/10-Hiralkumar Patel. 11:08 AM:- received email from Mr. Prigozen. he mentioned that they will excavate area around BK-6/BK-4 in August, 2010. Ecosystem will send work schedule. 08/04/10-Hiralkumar Patel. 9:01 AM:- received email from Richard. they have scheduled a soil excavation around sediment trap on 08/12/10. work will start at 9 AM. 09/13/10-Hiralkumar Patel. 11:51 AM:- sent email to Paul inquiring updates. email copied to Mr. Prigozen. 11:53 AM:- received email from Paul. he will submit report by end of Sep., 2010. 10/26/10-Hiralkumar Patel. 1:56 PM:- received supplemental remediation report from Ecosystems. the submitted report doesn't include info about depth of endpoint sidewall samples and sample analyticals were compared with Part 375 instead of TAGM 4046. 10/27/10-Hiralkumar Patel. 10:22 AM:- spoke with Richard at Ecosystems regarding excavation dimension and endpoint sampling depths. Richard mentioned that final excavation was approx. 50 ft by 30 ft to 15 ft depth. they collected endpoint sidewall samples at groundwater interface (at 7 ft depth) and bottom soil sample was collected at 15 ft depth. as per Richard, groundwater was seeping into excavation at very low rate, so groundwater was not present in exavation for sampling. asked Richard to submit revised report including info about sidewall sampling depth and sample results comparison with TAGM 4046 instead of Part 375. 10:31 AM:- left message for Mr. Prigozen. informed him that based on results of endpoint samples, the department requires further investigation/remediation. 10:40 AM:- sent email to Richard asking to submit revised report. email copied to Mr. Prigozen. 11:38 AM:- received call from Mr. Prigozen. he mentioned that he doesn't remeber discussing about excavation around BK-4 and based on groundwater sampling results, he does not want to dug in area of BK-4. informed Mr. Prigozen that based on quarterly groundwater sampling results from BK-4, the department does not require excavation, but based on endpoint sample results from recent excavation, the department requires further investigation/remediation. 11/30/10-Hiralkumar Patel. 9:32 AM:- spoke with Rich. he will submit revised report. they are proposing for groundwater monitoring at this time and based on monitoring results, may propose additional investigation in former sediment trap area. 12/02/10-Hiralkumar Patel. 2:13 PM:- received revised report from Ecosystems. - excavated area around former sediment trap and well BK-14 - no field evidence of contamination until groundwater was encountered at approx. 7 ft bg and in shallow soils at the far southeastern corner of the excavation where an area of heavy, bituminous material was encountered at between 2 and 3 ft bg - during excavation, petroleum odors and PID readings between 300 and 600 were recorded - five endpoint samples (four sidewalls and one bottom) were collected from excavation - sampled groundwater in wells BK-4, BK-13, BK-15 and MW-1 - petroleum contaminated soils remain at depths greater than 15 ft below the former sediment trap and below

NATIONS RENT (Continued) **S104621824**

static water level - found heavy contamination in bottom endpoint soil sample - very minor VOC contamination found in groundwater samples (max 43 ppb MTBE in BK-4)
----------bottom 15 ft bg
Benzene----------3,400
Toluene----------2,900
Ethylbenzene----------31,000
Xylene----------5,400
1,2,4-Trimethylbenzene---------210,000
Naphthalene----------29,000
Isopropylbenzene----------19,000
n-Butylbenzene----------33,000
n-Propylbenzene----------37,000 due to heavy soil contamination in endpoint bottom sample and heavy contamination in groundwater sample from well BK-14, which was installed in the vicinity of the sediment trap, the department requires further complete delineation of soil and groundwater investigation including installation of one well at the location of endpoint bottom sample with deeper screen. 12/07/10-Hiralkumar Patel. discussed with DEC Austin regarding soil contamination below water table. he asked to contact MGP project manager in Albany as MGP site was in neighbourhood. 11:10 AM:- spoke with DEC William Ottaway in Albany regarding MGP site. Bill mentioned that Douglas MacNeal is the project manager for MGP site (V-00732) on Kent ave. Bill mentioned that MGP waste contains very high SVOCs and may have some VOCs. reviewed recent report. no SVOCs found in any endpoint sample. 1:38 PM:- sent letter to Mr. Prigozen requiring additional soil and groundwater investigation in former sediment trap area. letter emailed to Mr. Prigozen and Paul. 12/20/10-Hiralkumar Patel. 2:22 PM:- received message from Paul from Ecosystems. 12/21/10-Hiralkumar Patel. 2:31 PM:- left message for Paul. 12/29/10-Hiralkumar Patel. 1:35 PM:- received email from Rich. a well at the former sediment trap will be installed on 01/06/11. 01/04/11-Hiralkumar Patel. 3:21 PM:- spoke with Rich. they will start well installation work around 8 AM. he also mentioned that a new drain structure has been installed in the previous sediment trap area. so they have to relocate the new well. Rich will decide well location once visit the site. 01/06/11-Hiralkumar Patel. 10:01 AM:- received call from Rich. they installed boring in area close to former sediment trap. boring was installed to 19 ft depth where they found refusal. during boring, found 160 ppm on PID at groundwater interface (groundwater at 7 ft depth) and 75 ppm from 10-15 ft depth. there was no recovery in 15-20 ft range. the boring was installed in previously excavated area to 15 ft depth. so highest PID was found at groundwater interface in backfill material. a well will be installed in boring with 15 ft of screen. as high soil contamination found at 15 ft depth in endpoint sample from excavation and as no recovery in 15-20 ft depth, asked Rich to install another boring in area. 11:15 AM:- visited site. Rich installed another boring to 20 ft depth and collected soil from 15 to 20 ft depth only. minor odor noticed in clayey material from 15 to 20 ft depth. asked Rich to collect two soil samples: one at 15-16 and one at 19-20 ft depth. Rich will sample all existing wells, around former sediment trap area, next week. 02/17/11-Hiralkumar Patel. 1:13 PM:- received supplemental investigation report from Rich. abstract: - two soil borings (2B-1 and 2B-2) installed in former sediment trap area - collected two soil samples from each boring: at 7 and 15 ft from 2B-1 and at 15 and 20 ft at 2B-2 - installed 2 inch well

NATIONS RENT (Continued) **S104621824**

(BK-14(R)) at boring 2B-1 with 10 ft of screen (from 5 to 15 ft bg) - sampled water from wells BK-4, BK-13, BK-14(R) and BK-15 - no contamination found in any soil sample (not even in sample at 15 ft bg in 2B-1 which was collected in same area as endpoint bottom sample after excavation around former sediment trap) - very minor contamination found in water samples except sample from BK-14(R) groundwater analyticals: ----------BK-14(R) Benzene----------190 Ethylbenzene----------280 Xylene----------120 1,2,4-Trimethylbenzene------1,300 Naphthalene----------210 - recommended sampling of wells MW-1, BK-4, BK-13, BK-14(R) and BK-15 after three months 03/17/11-Hiralkumar Patel. discussed with DEC Austin. based on consistent data in well BK-14, Austin asked for remediation. 3:16 PM:- sent letter to Mr. Prigozen requiring submission of a RAP for remediation of contamination in and around the area of the former sediment trap. letter emailed to Mr. Prigozen, Paul and Rich. 05/20/11-Hiralkumar Patel. 10:40 AM:- received call from Paul. he mentioned that as groundwater contamination found in only by former sediment trap area, he propose to monitor groundwater for some time before any active remediation. he will send work plan by 06/03/11. 07/20/11-Hiralkumar Patel. 1:46 PM:- received quarterly groundwater sampling report from Ecosystem. on 04/28/11, groundwater samples were collected from wells MW-1, BK-4, BK-13, BK-14R and BK-15 and analyzed for VOCs only. next round of quarterly sampling is schedule for the end of July 2011. found contamination in samples from BK-14R. groundwater analyticals: ----------BK-14(R) Benzene----------44 Ethylbenzene----------150 Xylene----------182 1,2,4-Trimethylbenzene--------380 Naphthalene----------240 Paul mentioned that results of groundwater samples support the conclusion that significant natural attenuation of contamination is taking place and he requested to close the case (but quarterly sampling is scheduled for end of July, 2011). need a revised report as confusing info in the report. 08/03/11-Hiralkumar Patel. 11:43 AM:- left message for Paul. 12:32 PM:- sent email to Paul requiring to submit revised report. informed him that the Department requires minimum of two years of groundwater monitoring before considering case closure. asked him to submit revised report and results of groundwater samples that must have been taken in july 2011. email copied to Mr. Prigozen, Larry Schnapf (attorney) and Richard. 08/05/11-Hiralkumar Patel. 2:14 PM:- received call from Richard. he mentioned that as first round of groundwater samples taken in 2009, two years of monitoring is over and thats why they requested closure. informed him that the Department requires two years of groundwater monitoring after the replacement of well in the former sediment trap area. 02/08/12-Hiralkumar Patel. 3:42 PM:- spoke with Mr. Prigozen. he mentioned that groundwater samples were taken last month. asked him to submit report by the end of 02/17/12. 3:45 PM:- sent email to Mr. Prigozen and asked to submit report by 02/17/12. email copied to Paul. 02/10/12-Hiralkumar Patel. received email from Paul (at 5:55 PM on 02/08/12). he will submit report by 02/21/12. 02/21/12-Hiralkumar Patel. 11:22 AM:- received quarterly groundwater monitoring report from Ecosystems. abstract: - wells MW-1, BK-4, BK-13, BK-14R and BK-15 were sampled on 02/01/12 - found very minor contamination in groundwater samples (max 41 ppb 1,2,4-Trimethylbenzene in BK-14R) 04/02/12-Hiralkumar Patel. after reviewing available information, case closed based on results of soil endpoint samples and groundwater samples. 3:35 PM:- sent spill

NATIONS RENT (Continued) **S104621824**

closure letter to Mr. Prigozen. letter emailed to Mr. Prigozen and Paul. 12/05/14-Hiralkumar Patel. received call from Charles Sosik from EBC. he mentioned that soil contamination was noted during collection of waste characterization samples as part of proposed redevelopment of the site by the new owner. he inquired about either reopening the subject spill or reporting a new one. informed him that the case was closed based on available sample results and work summary and it will only be reopened if previously unknown environmental conditions found at the site which requires further work. asked him to provide sample results once available. he mentioned that the entire site will be dug down to 20-25 ft along with dewatering. 3:11 PM:- received email from Mr. Sosik including above discussion."

Remarks: "HISTORICAL SPILL-FLOATING PRODUCT ON GROUND WATER-SPILL WILL CONTINUE TO BE INVESTIGATED."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Control Type: INST
Dt record added: 11/29/2017
Dt rec updated: 11/08/2019
Updated By: SXDEYETT
Site Code: 503484
Site Description: "Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site is bounded by Wythe Avenue to the east, N 13th Street to the north, Kent Avenue to the west, and N 12th Street to the south. Site Features: The site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts include light industrial uses although offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned major oil storage facility (MOSF); however, both of these sites are slated for redevelopment as parks. Past Use(s) of the Site: Beginning in roughly 1867, the site was part of a large, multi-block petroleum refinery known as the Pratt works. Sanborn fire insurance maps dated 1887 and 1916 show numerous storage tanks related to the Pratt Works, and to paint manufacturing facilities. Subsequent land uses include manufacturing, lumber storage, and a scrap metal yard. Most recently, the property was used for storage and maintenance of heavy construction equipment. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in association with underground storage tank (UST) removals. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: Regional maps show bedrock as an igneous intrusive known as the Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River. "
Env Problem: "Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Both the VOCs and SVOCs appear to be derived from former petroleum tank locations. Soil Vapor: TCE (ND-16.2 ug/m3) PCE (ND-245 ug/m3) and TCA (ND-284 ug/m3) were detected in soil vapor samples collected from the site. These COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 503484
Site Description: "Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site is bounded by Wythe Avenue to the east, N 13th Street to the north, Kent Avenue to the west, and N 12th Street to the south. Site Features: The site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts include light industrial uses although offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned major oil storage facility (MOSF); however, both of these sites are slated for redevelopment as parks. Past Use(s) of the Site: Beginning in roughly 1867, the site was part of a large, multi-block petroleum refinery known as the Pratt works. Sanborn fire insurance maps dated 1887 and 1916 show numerous storage tanks related to the Pratt Works, and to paint manufacturing facilities. Subsequent land uses include

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

manufacturing, lumber storage, and a scrap metal yard. Most recently, the property was used for storage and maintenance of heavy construction equipment. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in association with underground storage tank (UST) removals. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: Regional maps show bedrock as an igneous intrusive known as the Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River. "

Env Problem: "Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Town:	New York City
Record Added Date:	01/06/2015
Record Updated Date:	03/09/2021
Update By:	JEBROWN
Site Description:	"Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site is bounded by Wythe Avenue to the east, N 13th Street to the north, Kent Avenue to the west, and N 12th Street to the south. Site Features: The site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts include light industrial uses although offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned major oil storage facility (MOSF); however, both of these sites are slated for redevelopment as parks. Past Use(s) of the Site: Beginning in roughly 1867, the site was part of a large, multi-block petroleum refinery known as the Pratt works. Sanborn fire insurance maps dated 1887 and 1916 show numerous storage tanks related to the Pratt Works, and to paint manufacturing facilities. Subsequent land uses include manufacturing, lumber storage, and a scrap metal yard. Most recently, the property was used for storage and maintenance of heavy construction equipment. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in association with underground storage tank (UST) removals. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: Regional maps show bedrock as an igneous intrusive known as the Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River. "

Env Problem: "Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Both the VOCs and SVOCs appear to be derived from former petroleum tank locations. Soil Vapor: TCE (ND-16.2 ug/m3) PCE (ND-245 ug/m3) and TCA (ND-284 ug/m3) were detected in soil vapor samples collected from the site. These COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with residual contamination remaining at the site."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Update By:	JHOCONNE
Site Description:	"Location: The site is located at 33 Franklin Street in the

33 FRANKLIN (Continued) **S125896292**

Greenpoint section of Brooklyn, NY and is currently identified as Block 2589 and Lot 13 on the New York City Tax Map. The site is an irregular shaped lot located on the west side of Franklin Street, south side of Calyer Street and north side of Quay Street for a total of approximately 0.43 acres. Site Features: The site was developed with a 1-story warehouse in 1968, which is currently vacant. Current Zoning and Land Use: The site is zoned M1-2 (manufacturing) with an R6A (residential) overlay. The site is located within a Special Mixed-Use District (MX) which was established in 1997 to encourage investment in, and enhance the vitality of, existing neighborhoods with mixed residential and industrial uses in close proximity and create expanded opportunities for new mixed-use communities. Surrounding land use includes single family residential, mixed-use commercial/retail/residential and office buildings to the east, industrial/manufacturing facilities to the south and commercial/industrial buildings to the west. Past Use of the Site: The site was developed with three, 3-story dwellings with rear yards and one, 2-story stable fronting to the north along Calyer Street from at least 1887, with a carpenter and an iron foundry occupying the rear of the site. By 1905, one of the dwellings was identified as an office and foundry. By 1951, the 2- to 3-story dwelling had been converted to White Metal Foundry, with two additional 1-story foundry structures in the rear yard. By 1965, the majority of the site was undeveloped, with portions of a factory remaining on the southern border along Quay Street. By 1978, the site was redeveloped with the existing 1-story manufacturing/warehouse building with a mezzanine, which covered the entirety of the lot. The Sanborn maps identified the building with a new construction date of 1968. The site was utilized as storage for an art gallery known as Marlborough Gallery from 1984 to April 2020. The site is currently vacant. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of approximately four feet below grade followed by native fine to medium sand. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately thirteen feet above mean sea level. The topography within the immediate area slopes gradually to the west. Groundwater occurs beneath the site at a depth of approximately seven feet below grade under water table conditions. Based on investigations conducted to date, groundwater flow is generally west.
"

Env Problem: "Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs and metals in soil. Soil: The following VOCs were detected at concentrations exceeding the applicable unrestricted use soil cleanup objectives (UUSCOs): tetrachloroethene, or PCE, at a concentration of 2.5 parts per million (ppm) compared to the UUSCO of 1.3 ppm; and trichloroethene, or TCE, at a maximum concentration of 0.52 ppm (UUSCO is 0.47 ppm). The following SVOCs exceeded their respective UUSCOs: benzo(a)anthracene at 1.8 ppm (UUSCO is 1 ppm); benzo(a)pyrene at 3.2 ppm (UUSCO is 1 ppm); benzo(b)fluoranthene at 5.1 ppm (UUSCO is 1 ppm); chrysene at 4.8 ppm (UUSCO is 1 ppm); and indeno(1,2,3-cd)pyrene at 2.5 ppm (UUSCO is 0.5 ppm). Several metals were detected at concentrations exceeding the UUSCOs including: arsenic at 19.6 ppm (UUSCO is 13 ppm); barium at 718 ppm (UUSCO is

33 FRANKLIN (Continued) **S125896292**

350 ppm); cadmium at 6.56 ppm (UUSCO is 2.5 ppm); lead at 739 ppm (UUSCO is 63 ppm); and mercury at 15 ppm (UUSCO is 0.18 ppm). PFAS was not detected in any soil samples. All exceedances of UUSCOs are limited to the historic fill layer in the upper 4 feet of the site. Data does not indicate any off-site impacts in soil related to this site. Groundwater: The SVOCs benzo(a)anthracene (maximum concentration of 0.08 parts per billion, or ppb), benzo(a)pyrene (maximum concentration of 0.08 ppb), chrysene (maximum concentration of 0.09 ppb) and indeno(1,2,3-cd)pyrene (maximum concentration of 0.07 ppb) were detected above their respective ambient water quality standards. Only naturally occurring metals were detected in filtered groundwater samples. Perfluorooctanoic acid (PFOA) was detected at a maximum concentration of 148 parts per trillion (ppt) and perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 28.9 ppt, exceeding the maximum contaminant limit of 10 ppt each. The highest concentrations of PFAS were detected in the most upgradient well. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: The chlorinated solvents detected include: 1,1,1-trichloroethane at a maximum concentration of 122 micrograms per cubic meter (ug/m3); PCE at a maximum concentration of 60.1 ug/m3; and TCE at a maximum concentration of 13.6 ug/m3. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Since the site is entirely covered by the building people will not come in contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the building on the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern, however the potential exists for the indoor air in future on-site buildings to be impacted by site contaminants via the soil vapor intrusion pathway. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Site Description: "Location: The Williamsburg Works Manufactured Gas Plant (MGP) site is located in a commercial/industrial area in the Williamsburg section of Brooklyn, New York. The site is approximately six acres in size and is composed of three parcels of land located on the east bank of the East River between North 11th and North 12th Streets on the west and east sides of Kent Avenue. Site features: Site features include a vacant asphalt paved lot and the foundation slab for the recently demolished document storage warehouse on the west side of Kent Avenue and a two -story commercial building on the east side of Kent Avenue. Current zoning and land use: The land uses in the area surrounding the MGP site are currently a mix of industrial, residential, and parkland uses. The privately-owned document storage warehouse was in active use until it was destroyed in a fire on January 31, 2015 and subsequently demolished. The vacant lot at 50 Kent Ave. is owned by the NYC Department of Parks and Recreation and used as an outdoor music venue, flea market and skate park. The two-story commercial building on the east side of Kent Avenue is privately owned and in active use. The nearest residential property is located approximately 1 block to the south. Past use of the site: A manufactured gas plant operated on the site from circa 1850 until approximately 1930. Following the decommissioning of the MGP, the lot was occupied by a NYC Department of Sanitation Garage that was demolished around 2000. Site Geology and Hydrogeology: The site is underlain by: urban fill and varied glacial sediments consisting of outwash sand and gravel, till, and lenticular clay more than 100 feet in thickness. The groundwater table is approximately 5 feet below ground surface. Groundwater flows to the west, toward the East River. "

K - WILLIAMSBURG WORKS (Continued) **S109209078**

Env Problem:	"The Remedial Investigation of the site has not been fully completed, since large portions of the site are occupied by buildings. However, the work that has been completed has identified significant coal tar contamination in the subsurface. Soils beneath the vacant lot at 50 Kent Avenue are heavily impacted. Design work is currently under way for an excavation IRM on this parcel during the 2015 field season, and tar collection wells have been completed around the perimeter of this property. Tar removal from these wells is taking place on a continuing basis. Tar contamination has moved off site to the north but does not appear to have reached the shoreline in that area. A large portion of the former plant footprint lies beneath the former document storage warehouse. Test borings around the perimeter of this building confirm the presence of MGP tars in the area, and off site migration of this tar has taken place, leading to contamination of sediments beneath adjacent areas of the East River."
Health Problem:	"The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	01
Tank Id:	278099

Equipment Records:

G02 - Tank Secondary Containment - Vault (w/access)
I05 - Overfill - Vent Whistle
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
J05 - Dispenser - On Site Heating System (Supply/Return)
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
L00 - Piping Leak Detection - None
C01 - Pipe Location - Aboveground

Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	01/01/1911
Capacity Gallons:	3000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"DEC Piper dispatched DEC Lin OH secondary to scene. 11/19/19-Lin-Oil line was broken apart in the boiler room causing oil to spill onto the concrete floor of the boiler room. Puddles of oil are visible on the concrete floor. According to Petro tech, they turned off the sump pump when they arrived. A bucket by the sump pump is half filled with oil. Milro responded and put down pads and degreased the area. Temp tanks and one scrubber was put in. Cleanup is not complete. 12/17/19-Inspected site. Odor was noted in the basement and contaminated soil run around the edge of the basement where the spill occurred. Oil was observed on the puddle of water at the corner of the basement. 2/10/20-Lin-Milro installed air equipment for residual odor. Milro removed oil impacted impacted concrete and soil. Milro hand excavated oil impacted soil to the footings and to the bottom of groundwater. Milro recovered oil impacted water by absorbent and VAC

CON ED (Continued) **S118259442**

truck. Performed site visit a week after the groundwater was pumped out. Free product was not observed on the groundwater. Milro pumped out the groundwater once more and backfilled the excavation. Case closed. Owner info: Neil Dolgin Kalmon Dolgin Affiliates Inc. 101 Richardson st Brooklyn, NY 11211 Neil@kalmondolgin.com 347-390-2331 (direct) 917-209-9980 (cell) "

Remarks: "undetermined amount of #2 fuel oil leaked from a hole in the return line of a 800 gallon above and underground tank. There is oil in the sewage line. Contact on site."

Waste Description: SILVER

Waste Code: D013
Waste Description: LINDANE (1,2,3,4,5,6-HEXA-CHLOROCYCLOHEXANE, GAMMA ISOMER)

Waste Code: D016
Waste Description: 2,4-D (2,4-DICHLOROPHENOXYACETIC ACID)

Waste Code: D018
Waste Description: BENZENE

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D024
Waste Description: M-CRESOL

Waste Code: D026
Waste Description: CRESOL

Waste Code: D027
Waste Description: 1,4-DICHLOROBENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: P001
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

DBA RITE AID #10580 (Continued) **1014926864**

Waste Code: P075
Waste Description: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U035
Waste Description: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U058
Waste Description: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

Waste Code: U072
Waste Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Waste Code: U122
Waste Description: FORMALDEHYDE

Waste Code: U129
Waste Description: CYCLOHEXANE, 1,2,3,4,5,6-HEXACHLORO-, (1ALPHA, 2ALPHA, 3BETA, 4ALPHA, 5ALPHA, 6BETA)- (OR) LINDANE

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U165
Waste Description: NAPHTHALENE

Waste Code: U188
Waste Description: PHENOL

Waste Code: U201
Waste Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Waste Code: U205
Waste Description: SELENIUM SULFIDE (OR) SELENIUM SULFIDE SES2 (R,T)

Waste Code: U211
Waste Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Waste Code: U240
Waste Description: 2,4-D, SALTS & ESTERS (OR) ACETIC ACID, (2,4-DICHLOROPHENOXY)-, SALTS & ESTERS (OR) DICHLOROPHENOXYACETIC ACID 2,4-D

Waste Code: U279
Waste Description: U279

SWIS:	2401
Town:	New York City
Record Added Date:	11/09/2017
Record Updated Date:	11/02/2021
Update By:	JHOCONNE
Site Description:	"Location: The site is located in an urban area in the Williamsburg neighborhood of Brooklyn, NY. The approximately 36,472 square-foot (0.83-acre), irregularly shaped site is bounded to the north by North 12th Street, to the east by Berry Avenue, to the west by a warehouse building used by the Brooklyn Brewery, and to the south by North 11th Street and two buildings containing residential apartments. Site Features: The site is developed with an L-shaped, seven-story residential building that fronts Berry and North 12th Streets, with an open courtyard area located behind the building in the central portion of the site. A basement level parking garage is located under the building and courtyard, with an entrance ramp located on North 11th Street. A small, street-level valet parking lot is also located on North 11th Street, immediately east of the garage entrance ramp. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). The surrounding area is developed primarily with residential and commercial properties. Past Use of the Site: Historic records indicated that the site was developed with industrial and manufacturing uses, including the New York Quinine and Chemical Works between 1887 and 1951. After 1951, the site was used for freight loading and parking of vehicles. Sanborn maps from 1965 to 2006 (after decommissioning of the quinine factory) depict a large 2-story freight loading facility and warehouse in the western portion of the site, a 2-story truck repair facility/warehouse and a 4-story unspecified manufacturing facility in the southwestern portion of the site, and a parking lot in the eastern portion of the site containing two gasoline tanks of unspecified capacity. All on-site buildings were demolished starting

34 BERRY STREET (Continued) **S121933779**

in April 2008, and construction of the existing residential structure started in June 2008. Building construction was completed in early 2009. Site Geology and Hydrogeology: The surface topography in the surrounding area is flat, gradually sloping northwest towards the East River, which is located approximately 1,100 feet from the site. The site lies at an elevation of approximately 20 feet above sea level. Shallow subsurface soils included urban fill material containing brick, asphalt, and concrete fragments to approximately 6 to 10 feet below ground surface (bgs), underlain by apparent native silty sand and silt. Depth to bedrock at the site is expected to be approximately 100 feet bgs. The dominant groundwater flow direction at the site is to the north and northeast, with some variations to the northwest. Groundwater is present at depths ranging from approximately 5 to 8 feet below the basement garage floor, which corresponds to approximate depths of approximately 11 to 14 feet bgs. There are no surface water bodies or streams on or immediately adjacent to the site. "

Env Problem:

"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Sub-slab soil vapor and indoor air were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include petroleum and chlorinated VOCs. Soil - The investigation documented that VOC contamination in soil is present in two distinct contaminant zones; 1,2-dichloroethane (DCA) on the eastern side of the site, and petroleum light non-aqueous phase liquid (LNAPL) on the western side of the site. Fingerprint analysis completed during a previous investigation identified the LNAPL as fuel oil. Since 2009 the NAPL has been managed by a collection system, which was upgraded as an IRM during the Spring of 2019. Quarterly gauging of monitoring wells indicates the extent and thickness of the plume has been reduced by the LNAPL collection system. One VOC, 1,2-DCA, was detected at a concentration in excess of its restricted residential soil cleanup objective (RRSCO) at a depth of 14 to 15 feet below garage basement grade (bbg) (the water table is at 6ft-bbg), at a concentration of 7.9 parts per million (ppm) compared to a RRSCO of 3.1 ppm and the applicable protection of groundwater SCO (PGWSCO) of 0.02 ppm. 1,2-DCA was not detected in any other soil sample collected during the RI, or all the previous investigations at the site, that would indicate any additional source areas. Trivalent chromium was found at a concentration of 251 ppm, which exceeds the applicable RRUSCO of 180 ppm. This metal appears to be attributable to historic fill. Fourteen per- and polyfluoroalkyl substances (PFAS) were detected in one or more soil samples at concentrations ranging from an estimated 0.017 parts per billion (ppb) to 0.12 ppb. None of the detected PFAS compounds had concentrations above the screening level of 1 ppb. Perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.12 ppb and perfluorooctanoic acid (PFOA) was detected at a maximum of 0.039 ppb. 1,4-dioxane was not detected in soil samples. No SVOCS, PCBs or pesticides were detected at concentrations exceeding the unrestricted use SCOs. Data does not indicate any off-site impacts in soil related to this site.
Groundwater - Eight VOCs were detected at concentrations above their respective Ambient Water Quality Standards (AWQS) in one or more samples. These included the petroleum VOCs related to the LNAPL zone, and chlorinated solvents. The petroleum VOCs include benzene at a

34 BERRY STREET (Continued) **S121933779**

maximum concentration of 430 ppb compared to the AWQS of 1 ppb and toluene at a maximum concentration of 17 ppb (AWQS is 5 ppb). Chlorinated VOCs include 1,2-DCA at a maximum concentration of 660 ppb (AWQS is 0.6 ppb), 1,2-dichloropropane at a maximum concentration of 160 ppb (AWQS is 1.0 ppb), trichloroethene (TCE) at a maximum concentration of 21 ppb (AWQS is 5.0 ppb), chlorobenzene at a maximum concentration of 5.7 ppb (AWQS is 5.0 ppb), chloroform at a maximum concentration of 34 ppb (AWQS is 7.0 ppb), and tetrachloroethene (PCE) at a maximum concentration of 13 ppb (AWQS is 5.0 ppb). PFOS and PFOA were detected at concentrations above the NYSDEC screening level of 10 parts per trillion (ppt) each with the maximum PFOA concentration of 130 ppt and the maximum PFOS concentration of 47.7 ppt. 1,4-Dioxane was detected at a maximum concentration of 0.69 ppb, below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained as an engineering control for the site. Sampling will occur as part of the remedy for this site to ensure this engineering control continues to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway.Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion is not currently a concern for onsite or offsite buildings."

DEC Memo:	"4/24/2009 TTF letter sent to: NYC Dept of Field Operations Fuel Division Mr. James Merlo 44-36 Vernon Blvd Long Island City, NY 11101 6/12/09. J.Krimgold reviewed and approved the proposed scope of work outlined in the letter report submitted by TRC and dated June 2, 2009. 01/28/10. J.Krimgold reviewed the SIR dated 08/07/09 and concurs with conclusions and recommendations of the report. However, requested closure of waste oil tank and submittal of appropriate Bulk Storage Application. 02/17/11 - LZ The waste oil tank was permanently closed in place (edocs), which meets DEC requirements. An application was submitted to change the status of the tank. However, it has been returned to the applicant since the tightness test for another tank at the facility is overdue. The spill case is closed. "
Remarks:	"TANK TEST FAILURE ON A 1000 GALLON UST UNK IF ANY PRODUCT WAS SPILLED."

Tank Info:

Tank Number:	002
Tank Id:	214061
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
J02 - Dispenser - Suction Dispenser
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
E00 - Piping Secondary Containment - None
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
A00 - Tank Internal Protection - None
L00 - Piping Leak Detection - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated

DEC Memo:	"3/21/2005 There was an earlier tank test failure spill number (0004062-DeMeo) which has now been closed out in favor of this new spill number. Earth Tech believes that the old tank was relined after the tank failed the prior tank test several years ago, however no work was ever done to remediate the contamination which occurred because of that leak. Earth Tech believes that approx 2 years ago this buried tank was taken out of service. Since that time the building has been supplied by an above ground 5,000 gal tank. Unknown if the buried tank was ever emptied. Earth Tech recently did soil borings around the UST area and came back with high contamination levels. This information was forwarded to the City SCA (SCA Contact:Lee Guterman 718-472-5802) SCA has now decided to removed the UST and excavate out the contaminated soil around it. Earth Tech is modifying the standard city bid package to site specific conditions and will work with the city as they put the excavation/remediation work out to bid. Bid package should go out around April 1st, 2005. Work should be done summer 2005. 04/13/06- Case was transferred from Jake Krimgold to Koon Tang. ---------- ---------- 7/9/07: Reassigned from Koon Tang to Kartik Chanda (Chanda) 7/18/07: Kartik Chanda of DEC reviewed all documents regarding this spill case. On 7/18/07, Chanda sent a letter to Ms. Lee Guuterman, Manager IEH Department, NYC School Construction Authority, requiring that the following documents be submitted to the DEC for review by 9/4/07. 1. An explanation of the cause of the tank system failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

results), or a description of the work performed to close (decommission) the tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation. 10/29/07: Chanda called Mr. Drew Pardus(NYCSCA) to get updated information regarding this spill site. He stated that NYCSCA is finding the information regarding this spill. NYCSCA will send an investigation report shortly. 12/6/07: Chanda received an email (see edocs) from Ms. Lee Guterman, NYCSCA. She stated that The Investigation Summary Report for Automotive Trade HS has been prepared and is under my review. A Remedial Action Plan is being prepared and is anticipated to be completed by 12/15/07. 2/12/08: Chanda received a Subsurface Investigation Summary Report from NYCSCA, prepared by TRC Engineers, Inc. (TRC), dated November 9, 2007. 2/28/08: Chanda has reviewed the Subsurface Investigation Summary Report and has the following comments: -Subsurface investigation report regarding the 20,000-gallon #4 fuel oil UST. - About two years ago, a tank tightness test was performed and the tank failed. At that time UST was taken out of service and a temporary 5,000-gallon AST was installed to supply #2 fuel oil to the boiler. - The soil data indicated that the UST had leaked and had contaminated the surrounding soils near the UST and the supply line to the building. VOCs and SVOCs were detected in soil samples. The greatest impacts appear to be in the immediate vicinity of the UST and just below the depth of UST near the water table. -VOC were not detected in groundwater beneath the site. Several SVOCs were detected in groundwater beneath the site. -The results of finger print analysis indicate that the impacts are associated with #4 fuel oil. - The groundwater table has been measured between 10 and 11 feet bgs. - Removal of UST and associated impacted soil could potentially damage the adjacent school building and concrete vehicle access ramp. 3/3/08: Chanda discussed with Joe Sun (supervisor),and sent a letter with Stips and generalized Corrective Action Plan via certified mail to RP (Ms. Lee Guterman) and Mr. Drew Pardus (NYCSCA). The Department requires installation of permanent monitoring wells to determine the correct groundwater flow direction at the site. The signed STIP must be submitted to DEC by 3/25/08. 3/24/08: The Stipulation Agreement was signed by the RP (The New York City Department of Education). 3/31/08: Chanda sent a fully executed STIP to the RP and required that a Subsurface investigation and monitoring well installation report be submitted to DEC by 6/2/08 for review and approval. 4/3/08: Chanda received a Subsurface Investigation Work Plan from NYCSCA, prepared by TRC Engineers, Inc. (TRC)dated March 18, 2008. 4/4/08: Chanda has reviewed the Subsurface Investigation Work Plan and has the following comments: -TRC will advance ten (10) soil borings across the Site as part of monitoring well installation. Soil samples will be analyzed for the STARS volatile organic compounds (VOCs) and STARS SVOCs. -TRC will install nine (9) two-inch diameter and one (1) four inch diameter flush mounted permanent groundwater monitoring wells. The wells will be screened approximately 5 feet above the water table and 10 feet below the water table. The samples will be analyzed for STARS VOCs and STARS SVOCs. 4/7/08: Chanda sent the work plan approval letter to Ms. Lee Guterman, NYCSCA and her consultant (TRC Engineers Inc.), requiring that an Investigation Report must be submitted to the Department by June 2, 2008 for review and approval.

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

4/17/08: Chanda received the following email from Mr. Drew Pardus, NYCSCA: TRC is scheduled to start preforming the field work for the investigation on April 24, 2008. We will provide the investigation report as soon as it is available. Please feel free to contact me if you have any questions or comments. Sincerely, Drew Pardus 6/2/08: Chanda received an email from Mr. Bob Kanaparthi, NYCSCA, regarding one week time extension to submit the Investigation Report for this site. Chanda sent an extension approval letter to Ms. Guterman, NYCSCA. The Deadline is extended to 6/9/08. 6/9/08: Chanda received a Site Investigation Report from NYCSCA, prepared by TRC Engineers, Inc., dated June 6, 2008. (see eDocs) 7/3/08: Chanda has reviewed the site investigation report and has the followings: -The site consists of a three-story public school building with basement, and asphalt-paved parking and landscaped areas. -The results of the analyses of the soil samples revealed detectable concentrations of VOCs and SVOCs. - Permanent flush mounted ten (10)GW monitoring wells were installed at the site. -The depth to groundwater measured at the Site is approximately 8 to 10 feet bgs. -No SVOCs detected in GW at concentrations exceeding Class GA Values. -Several VOCs were detected in GW samples. -NAPL was not encountered in any of the GW monitoring wells during gauging with an oil /water interface probe. -Based on GW table surface elevation measurements, only a slight gradient, indicating a predominant inward flow direction, exists beneath the site. Based on the results of site investigation, and considering the result of previous investigation, TRC concluded that there is a potential damage of school building that could result from attempting to remove the 20,000-gallon UST from the site. TRC recommended the following: * Permanently close-in-place the 20,000-gallon UST; * In-service waste oil UST identified during the geophysical survey is registered, operated and maintained in accordance with applicable regulations; * Close or take out of service the concrete vault in accordance with applicable regulations; * Monthly monitoring of the permanent groundwater monitoring wells for light NAPL to confirm that it is not present; * Implement a program to ensure proper maintenance of the asphalt pavement in the vicinity of the UST and impacted subsurface soil; 7/9/08: Chanda discussed with Joe Sun, NYSDEC regarding the findings of the Site Investigate Report. It is concluded that the Department (DEC) requires that a Remedial Action Work Plan to remove all contaminated media from this subject site. 7/11/08: Chanda sent a letter to RP (Ms. Lee Guterman, NYCSCA) and her consultant (TRC) requiring that a Remedial Action Plan (RAP) be submitted to DEC by 9/11/08 for review and approval. 8/1/08: A meeting was held on 7/30/08 among DER staff, NYCSCA and TRC Environmental Consultant Inc. (TRC) to discuss the site investigation results and Remedial Action Plan (RAP) to remediate all the contaminated media. The meeting s consensus was that a RAP be submitted to DEC by 9/11/2008 for review and approval. 9/11/08: A follow-up meeting was held on 9/10/08 among DER Staff, Mr. Drew Pardus(NYCSCA), and Mr. David Glass (TRC Environmental) regarding the findings of the recent inspection of the school building basement for this site. As agreed at the meeting, NYCSCA will conduct the following activities associated with the Site: " Clean the 20,000-gallon UST in accordance with applicable regulation but leave it unfilled to use a monitoring point for a short time. " Clean the standing oil into the concrete vault. Evaluate the size and structure of the concrete vault and determine the piping layout associated with the vault. Also, determine if the pumping system is still in

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

operation or needs to be. " Clean the oil strains inside the basement areas and tank vault area to see if they return. " Advance several monitoring wells in the vicinity of the 20,000-gallon UST. " Prepare and submit a brief work plan with borings and monitoring well locations. Include an implementation schedule. 9/11/08: Chanda sent a letter to Ms. Lee Guterman requiring that a brief work plan be submitted to DEC by 10/12/08 for review and approval. 10/10/08: Chanda received a Site Investigation and Interim Remedial Scope of Work from NYCSCA prepared by TRC Engineers, Inc., dated 10/7/08. Chanda reviewed the work plan. The work plan has the following: * Investigation of Concrete Valt *Removal and Monitoring of Seeps * UST and Vault Cleaning and Inspection *Geophysical Survey * Four groundwater Monitoring Wells Installation and Sampling in the vicinity of the 20,000-gallon UST 10/31/08: A meeting was held on 10/21/08 between DER staff and NYCSCA to discuss the project status and investigation work plan regarding this site. On 10/30/08, DEC approved the work plan. Chanda sent a letter to NYCSCA and Consultant (TRC) requiring that a report summarizing the findings of the investigation be submitted to the Department by December 30,2008. 05/13/2009: This spill case was transferred to A. Doronova. - AD Reviewed the file. The investigation summary report requested by Kartik Chanda of DEC was not submitted yet. AD 12/04/2009: Received a RAP. Will review. PDF copy is missing. To request its submission. AD 12/08/2009: Received a pdf copy. DL to eDocs. AD 12/30/2009: Reviewed the RAP. It states that based on previous investigations, evidence of a UST defect was not found; free product is present in soil and GW in the vicinity of UST, and is apparently being conveyed to the concrete vault via subsurface drainage system beneath the building basement; dissolved phase impacts to GW from the release are minimal and limited to the immediate vicinity of the UST. The RAP proposes the following: closure-in-place of 20,000-gallon UST and annual inspection of a concrete vault, the pump pit in the boiler room, and monitoring wells with removal of accumulated oil (if present). Proposed course of actions is questionable. To discuss the RAP with J. Kolleeny. AD 01/06/2010: Discussed the RAP with J. Kolleeny of DEC. Called and spoke with D. Pardus of SCA regarding the RAP and vault investigation. He requested a meeting with DEC. Scheduled the meeting for January 21, 2010. AD 01/21/2010: I and J. Kolleeny of DEC met with Drew Pardus and Bob Kanaparthi of NYCSCA and Charles Guder of TRC. Discussed the proposed RAP. It was agreed that two additional soil borings will be adwanced in the vicinity of the concrete vault, and based in the field observation of the soil samples, one boring will be finished as a permanent monitoring well. It was decided that gauging of the site monitoring wells and vault pumping will be performed quarterly and GW sampling will be semi-annually. Addendum to the RAP will be submitted to DEC for review and approval. AD 04/30/2010: Called and spoke with D. Pardus regarding submission of the addendum to the RAP. He said that it was prepared and is now under review for budgetary approval. AD 06/20/2011: Received an e-mail from Drew Pardus saying: Ainura, In order to continue progress at Automotive Trade HS to remediate DEC Spill 0413160 and in light of constrained City budgets, an inspection of the out-of-service pump station where oil accumulates was performed. TRC s observations of this inspection and removal of oil from the out-of-service pump station (by PTC on behalf of DSF) are provided below. Another site inspection and visual monitoring of the permanent wells will be performed in approximately three months to determine if free product

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

is observed. If no free product is observed after multiple inspections, SCA will request that the fuel oil tank may filled (i.e., closed via abandonment) and no further action for Spill Case 0413160. Please feel free to contact me at 646-577-8280 if you have any questions. Sincerely, Drew Pardus DL the attached document to eDocs. AD 03/27/2012: Received an e-mail from S. Kline of SCA saying: Ms. Doronova- As per your request, our consultant (TRC) has prepared the attached remediation action work plan addendum for the above referenced spill case. Our consultant will proceed with the scope of work described in the attached documents as soon as we have NYSDEC approval and we have secured funding for these additional remedial measures. Since Drew Pardus is no longer working on this project, I will be the SCA point of contact for this project moving forward. Please contact me with and questions or comments. Regards- Stephen Kline, P.E. NYC School Construction Authority IEH Division 30-30 Thomson Avenue Long Island City, NY 11101 Cell (347) 242-7109 Stephen.kline@gza.com DL the attached report and letter to eDocs. Will review. AD 04/20/2012: Reviewed the work plan. It states that TRC proposes to do site investigation via advancing two soil borings with collection of soil sampling; installation on one monitoring well; quarterly groundwater monitoring and free product recovery. Soil sampling will include the following: TRC will advance two (2) soil borings (TRC-SB-1 and TRC-SB-2) adjacent to the subsurface drainage pipe between the concrete vault and the building (refer to Figure 1 for the boring locations). Geologic descriptions of the soil and field screening results will be recorded in field logs. One groundwater monitoring well (TRC-MW15) will be installed in one of the boreholes. The well will be installed in TRC-SB-1 as shown if no evidence of contamination is observed during the subsurface investigation. If contamination is observed, the monitoring well will be installed in the borehole showing the highest evidence of contamination. Quarterly groundwater monitoring will be performed for a period of one year. - Monitoring wells TRC-MW-1, TRC-MW-2, TRC-MW-3, TRC-MW-4, TRC-MW-5, TRC-MW-6, TRC-MW-7, TRC-MW-8, TRC-MW-9, TRC-MW-10, TRC-MW-11, TRC-MW-12, TRCMW-13, TRC-MW-14, and TRC-MW-15 will be inspected and gauged. Any wells found to be damaged will be assessed for re-installation. - The entire monitoring well network will be gauged and sampled during the first quarterly monitoring event. If LNAPL is present in a well, groundwater will not be analyzed from that monitoring well. If the results of the analyses of groundwater from monitoring wells TRC-MW- 6, TRC-MW-8, and TRC-MW-10 (upgradient wells) from the first quarterly sampling round are below Class GA Values, these wells will not be sampled during subsequent quarterly events. However, all wells will be gauged during each quarterly event. A quarterly monitoring report with conclusions and recommendations for further actions, if necessary, will be submitted to DEC. Vault Inspections and Product Removal: TRC will perform the following activities under this task: - periodic inspections and product removal at the concrete vault for a period of one year. For the first quarter, TRC anticipates performing 6 events (three during the first month, two during the second month, and one during the third month). Inspections/product removal events will occur once per quarter thereafter. - If oil is present in the vault, the procedure below will be followed: - The depth to the oil will be gauged and recorded; - The thickness of the oil and the thickness of the water will be gauged and recorded; and, - The oil and water will be removed from the vault by a vacuum truck for off-Site disposal. If no oil is

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

detected in the concrete vault, the depth to the liquid in the vault will be gauged and recorded. - Similarly the boiler room pump pit and on-Site monitoring wells will be gauged for oil. If oil is detected in a groundwater monitoring well, the depth and thickness (if possible) of the oil will be measured and recorded, and the oil will be removed by a vacuum truck for off-Site disposal. If oil is detected in the boiler room pump pit, the pump system will be immediately shut down and the NYCDOE Division of School Facilities and the NYCSCA will be contacted to determine the appropriate course of action. - Waste generated will be properly transported off-Site for disposal in accordance with applicable laws and regulations. - The information collected during the vault inspections/product removal will be submitted with the quarterly monitoring reports. AD 04/24/2012: Discussed the work plan with J. Kolleeny of DEC. AD 04/25/2012: issued and sent an approval letter to L. Guterman of SCA. DL pdf copy of the letter to eDocs. AD 12/21/2012: Received a Project Progress Report #1 from TRC. DL the report to eDocs. Will review. AD 02/01/2013: Reviewed the report. It states that field activities were conducted at the Site between July 14 and October 18, 2012. During this period, the following activities were completed at the site: " In-place closure of the 20,000-gallon underground storage tank (UST); A 20,000-gallon UST, which is located beneath an asphalt paved parking lot north of the school building, was formerly used to store No. 4 and No. 6 fuel oil for the school s boiler and was taken out-of-service in 2003 and was cleaned in 2009. In accordance with the NYSDEC-approved RAP and RAP Addendum, the 20,000-gallon UST was permanently closed in-place in accordance with the applicable requirements of the NYSDEC and the FDNY on July 26, 2012. Prior to closing the UST in place, the UST was inspected to verify that the UST did not require additional cleaning. The UST was observed to contain a small amount of water but there was no evidence of residual product. The remaining contents of the 20,000-gallon UST were removed utilizing a vacuum truck and the UST and concrete hatch were then completely filled with concrete slurry. " Geophysical survey; " Subsurface soil investigation and installation of a permanent monitoring well; A hollow stem auger rig was used to retrieve soil samples. Soil samples were collected and screened for evidence of field contamination continuously from the ground surface to the boring completion depth. No visual or olfactory indications of contamination were observed in any of the soil samples collected. " Soil boring TRC-SB-1/MW15 was advanced, east of and adjacent to the subsurface drainage pipe, to approximately 21 feet bgs. One discrete soil sample, collected from 9 to 11 feet bgs, was selected for laboratory analysis. Groundwater was encountered at approximately 11 feet bgs in TRC-SB-1/MW15. " Soil boring TRC-SB-2 was advanced, west of and adjacent to the subsurface drainage pipe, to approximately 21 feet bgs. One discrete soil sample, collected from 9 to 11 feet bgs, was selected for laboratory analysis. Groundwater was encountered at approximately 11 feet bgs in TRC-SB-2. Soil boring location TRC-SB-1/MW15 was converted into a permanent monitoring well and soil boring location TRC-SB-2 was patched at the surface with concrete. VOCs and SVOCs were not detected in any of the soil samples at concentrations above the SCLs for Fuel Oil Contaminated Soil found in Table 3 of CP-51. " One round of Quarterly groundwater sampling; The first round of quarterly groundwater samples were collected from existing permanent monitoring wells TRC-MW1, TRC-MW3, TRC-MW4, TRC-MW-5, TRC-MW6, TRC-MW7, TRC-MW8, TRCMW9, and TRC-MW10, and from

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

newly installed permanent monitoring well TRC-MW15 on July 26, 2012, July 30, 2012 and August 2, 2012. LNAPL was present in monitoring wells TRC-MW2, TRCMW11, TRC-MW12, TRC-MW13, and TRC-MW14 and these wells were therefore not sampled. The thickness of LNAPL in these monitoring wells could not be accurately gauged due to the viscosity of the LNAPL. An obstruction (debris) was encountered in TRC-MW9 on July 26, 2012, which was cleared by TRC on July 27, 2012 using one-inch PVC well screen. The well was redeveloped by TRC on July 30, 2012 and an inspection of the well and purge water indicated that the well was suitable for sampling. TRC-MW9 was sampled on August 2, 2012. The results of the analysis of groundwater sampling indicate that MTBE was the only VOC detected at a concentration exceeding the corresponding Class GA Value. MTBE was detected at a concentration of 8.3 ug/l in well TRC-MW8, which slightly exceeds the Class GA Value of 5 ?g/L for MTBE. Monitoring well TRC-MW8 is upgradient of the Site and TRC concludes that the concentration of MTBE in the well is likely attributable to an off-site source and not to an on-site release. No other VOCs were detected in any of the groundwater samples at concentrations exceeding Class GA Values. SVOCs were not detected in any of the groundwater samples at concentrations exceeding Class GA Values. With the exception of a marginal exceedance of MTBE in TRC-MW8, which is attributable to an off-site source or regional conditions, VOCs and SVOCs were not detected in groundwater samples collected. Therefore, TRC recommends that upgradient monitoring wells TRC-MW6 and TRC-MW10 will not be sampled during subsequent quarterly groundwater sampling rounds. " Four months of concrete vault and boiler room pump pit inspections; " Four months of monitoring well gauging; and " Four months of light non-aqueous phase liquid (LNAPL) recovery events. The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 26, August 2, August 9, September 5, September 26, and October 18, 2012 by TRC. LNAPL was present during these events in the concrete vault and monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, based on observations noted using a bailer, monitoring well TRC-MW11 was observed to contain only minimal amounts of LNAPL. LNAPL was not present in monitoring wells TRC-MW1, TRC-MW3 through TRC-MW10, TRC-MW15 and in the boiler room pump pit. LNAPL Product Recovery Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 on July 26, August 2, August 9, September 5, September 26, and October 18, 201. During the recovery events, the thickness of the LNAPL could not be accurately determined due to the high viscosity of the LNAPL; however, based on observations noted using a bailer, the thickness of the LNAPL was estimated to be less than 6 inches. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: " The contents of the bottom of the concrete vault were removed below the elevation of the subsurface drainage pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. " The vacuum truck was then used to pump

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

oil and water from the monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14). Since monitoring well TRC-MW11 was observed to contain only minor amounts of LNAPL, an oil absorbent sock was placed in this well for product recovery. The oil absorbent sock was removed and replaced during each recovery event and containerized in a 55-gallon steel drum which is staged on site. Approximately 15,604 gallons of LNAPL and water has been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July through October 2012. Table 5 presents the amount of LNAPL and water recovered during each extraction event. The following activities are planned by TRC during the second quarter. - Quarterly inspections and product removal of the concrete vault and monitoring wells TRCMW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 will continue. Progress Report #2 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in January 2013. - The entire monitoring well network will be gauged during subsequent quarterly events. Quarterly sampling of the monitoring well network (with the exception of upgradient monitoring wells TRC-MW6, TRC-MW10, and any monitoring well which contains LNAPL) will continue. Progress Report #2 will include groundwater sampling results from the next round of groundwater sampling, which was performed in October 2012. AD 03/04/2013: Received a project progress Report # 2. DL the report to eDocs. Will review. AD 04/08/2013: Reviewed the report. It states that TRC performed field activities at the site between October 18, 2012 and January 25, 2013. During this period, the following activities were completed: - Two rounds of quarterly groundwater sampling (October 2012 and January 2013); - Concrete vault and boiler room pump pit inspection (January 2013); - Monitoring well gauging (January 2013); and - LNAPL recovery event (January 2013). Quarterly Groundwater Sampling: Groundwater samples were collected from 8 permanent monitoring wells: TRC-MW1, TRC-MW3, TRCMW4, TRC-MW5, TRC-MW7, TRC-MW8, TRC-MW9, and TRC-MW15 on October 17 and 18, 2012 and on January 21 and 22, 2013. LNAPL was present in 5 monitoring wells: TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 and therefore, these wells were not sampled. The results of the analysis of groundwater sampling indicate the VOC methyl tert-butyl ether (MTBE) was the only VOC detected at a concentration exceeding the corresponding Class GA Value during the October 2012 and January 2013 sampling events in well TRC-MW8: MTBE - 12ppb in October 2012 - 5.1ppb in January 2012 Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging: The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on January 21, 2013 by TRC. LNAPL was present in the concrete vault and in 5 monitoring wells: TRC-MW2, TRC-MW11, TRCMW12, TRC-MW13, and TRC-MW14. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW1, TRC-MW3 through TRC-MW9, and TRC-MW15. The thickness of the LNAPL cannot be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 on January 21, 2013. An oil/water interface probe was used to measure the thickness of LNAPL by lowering the probe to the depth of LNAPL, then submerging the probe into the water until the sound indicated the presence of water, then raising the probe until the oil indicator sounded. LNAPL Product

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14 on January 21, 2013, consistent with the NYSDEC-approved RAP and RAP Addendum. During the recovery event, the thickness of the LNAPL in the concrete vault could not be accurately determined due to the high viscosity of the LNAPL. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: - The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. - The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14). The oil absorbent sock present in TRC-MW11 was saturated with LNAPL and was removed and replaced. The saturated sock was containerized in a 55-gallon steel drum which is staged on site. Approximately 3,650 gallons of LNAPL and water was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) on January 21, 2013. A total of approximately 40 gallons of LNAPL and water were removed from each monitoring well and approximately 3,490 gallons of LNAPL and water were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 19,254 gallons of LNAPL and water has been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to January 2013. Table 3 presents the amount of LNAPL and water recovered during each extraction event. Although accurate measurements of LNAPL thicknesses in the wells were not able to be obtained during previous events, based on measurements obtained during the January 2013 extraction event, previous observations made via bailing and also during the extraction events, TRC states that the LNAPL thicknesses in the wells appear to be decreasing. TRC will continue with quarterly inspection and LNAPL removal from the concrete vault and monitoring wells. Progress Report #3 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in April 2013. AD 05/24/2013: Received the following e-mail from TRC: Ainura, Attached is Progress Report #3 for Spill Case No. 0413160 (Automotive Trade High School). Please review and contact me with any questions or comments. Thank you, Charles Guder Senior Project Manager DL the report to eDocs. Will review. AD 08/30/2013: Reviewed the report. It states that TRC performed field activities at the Site between April 9 and April 19, 2013. During this period, the following activities were completed: - Quarterly groundwater sampling; - Concrete vault and boiler room pump pit inspection; - Removal of ancillary tank gauges and piping from the boiler room; - Monitoring well gauging; and - LNAPL recovery. Quarterly Groundwater Sampling; Groundwater samples were collected from monitoring wells TRC-MW1, TRC-MW2, TRC-MW3, TRC-MW4, TRC-MW5, TRC-MW7, TRC-MW8, TRC-MW9, TRC-MW11, TRC-MW14, and TRC-MW15 on April 18 and 19, 2013. TRC did not collect a groundwater sample from monitoring wells TRC-MW2, TRC-MW11 and TRC-MW14 during previous sampling events (October 2012 and January 2013) due to the presence of LNAPL in the monitoring

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

wells. LNAPL was not present in these wells during this sampling event. In accordance with procedures detailed in the NYSDEC-approved RAP and RAP Addendum, sampling of upgradient monitoring wells TRC-MW6 and TRC-MW10 were discontinued after the initial quarterly groundwater sampling event. In addition, LNAPL was present in monitoring wells TRC-MW12 and TRC-MW13, therefore, these wells were not sampled. The results of the analysis of groundwater sampling indicate there were no VOCs or SVOCs detected at concentrations exceeding their corresponding Class GA Values. Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging: - The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on April 9, 2013 by TRC. Also on April 9, 2013, remnant gauges and piping associated with the closed-in-place 20,000-gallon UST were removed and wall pipe openings were sealed with cement. LNAPL was present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14, and TRC-MW15. As indicated previously, LNAPL was previously measured in monitoring wells TRC-MW2, TRC-MW11 and TRC-MW14 during the previous gauging events (October 2012 and January 2013). The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW12 (0.07') and TRC-MW13 (0.1') on April 9, 2013. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRC-MW13 on April 9, 2013. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. Approximately 3,600 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on April 9, 2013. A total of approximately 25 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 3,550 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside Environmental, Inc. under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Although accurate measurements of LNAPL thicknesses in the wells were not able to be obtained during previous events, three wells which previously contained LNAPL do not currently contain LNAPL and observations made during bailing and the extraction events indicate that LNAPL thicknesses in the wells are decreasing. TRC is planning the following activities for the fourth quarterly LNAPL removal and groundwater sampling event: - Quarterly inspection and LNAPL removal from the concrete vault and monitoring wells. An additional vacuum truck will be used during the next LNAPL removal event to ensure LNAPL present in the building underdrain pipe will flow out of the pipe and be removed from the vault. - Progress Report #4 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in July 2013. - The monitoring well network will be gauged during the 4th quarterly event. Quarterly sampling of the monitoring well network (with the exception of upgradient monitoring wells TRC-MW6, TRC-MW10, and any monitoring well which contains LNAPL) will be performed during this event. No

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

response needed. AD 09/06/2013: Received a Progress Report # 4 for the site. DL the report to eDocs. Will review. AD 10/15/2013: Reviewed the report. It states that between July 19 and July 24, 2013 TRC conducted at the site following field activities: -Quarterly groundwater sampling; -Concrete vault and boiler room pump pit inspection; -Monitoring well gauging; -LNAPL recovery. Groundwater samples were collected from permanent monitoring wells TRC-MW1 through TRC-MW5, TRC-MW7 through TRC-MW9, and TRC-MW11 through TRC-MW15 from July 22 through July 24, 2013. Monitoring wells TRC-MW12 and TRC-MW13 contained LNAPL at minimal thicknesses (approximately 0.03 feet) when gauged on July 19, 2013; however, following vacuum extraction, measurable LNAPL was not detected, and these wells were sampled. The results of the analysis of groundwater sampling indicate that there were no VOCs or SVOCs detected at concentrations exceeding their corresponding Class GA Values. Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging: The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 19, 2013 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW1 through TRCMW11, TRC-MW14, and TRC-MW15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW12(0.03') and TRC-MW13(0.03) on July 19, 2013 with an oil/water interface probe. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRC-MW13 on July 19, 2013 using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13). The oil absorbent sock present in TRC-MW11 was removed and was placed in a 55-gallon steel drum on-site. A new oil absorbent sock was replaced in this well. Approximately 5,626 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on July 19, 2013. A total of approximately 25 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 5,576 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water waste was transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 28,480 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to July 2013. In accordance with the NYSDEC-approved RAP and RAP Addendum, quarterly groundwater monitoring, inspections, and product recovery have been completed for a period of one year. The source of LNAPL at the site - the former 20,000-gallon UST, has been closed-in-place in accordance with 6 NYCRR Part 614. Approximately 28,480 gallons of groundwater/LNAPL mixture have been removed from

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

the concrete vault and monitoring wells. At the initiation of the LNAPL removal program, measurable LNAPL was present in five monitoring wells (TRC-MW2, TRC-MW11, TRCMW12, TRC-MW13, and TRC-MW14). As of July 2013, there is measurable LNAPL in only two (2) monitoring wells (TRC-MW12 and TRC-MW13), at minimal thicknesses (approximately 0.03 feet). According to TRC, the results of groundwater sampling conducted to date show that, with the exception of the concentration of MTBE detected in well TRC-MW-8 during one sampling round, VOCs and SVOCs have not been detected at concentrations above Class GA Values. Therefore, the remaining residual LNAPL in the area of the closed-in-place UST and in the building under drain system is not impacting groundwater at the Site. TRC recommends the following: - Based on the analytical results, sampling of the monitoring well network is no longer required. - Bi-annual inspection and gauging of the monitoring well network should be performed. Absorbent socks should be placed (and replaced, as necessary) in monitoring wells containing measurable LNAPL. - Bi-annual (twice yearly) inspection and LNAPL removal from the concrete vault should continue until LNAPL is no longer observed for two consecutive six month periods. AD 03/17/2014: Reveived Received a Progress Report #5 for the site. DL the report to eDocs. Will review. AD 04/24/2014: Reviewed the report. It states that field activities were conducted at the site on January 20, 2014 and consisted of the following: " Concrete vault and boiler room pump pit inspection; " Monitoring well gauging; and " LNAPL recovery. The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on January 20, 2014 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW-12 and TRC-MW-13, which is consistent with historic data. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW-1 through TRC-MW-11, TRC-MW-14, and TRC-MW-15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, an oil/water interface probe was used to approximate the thickness of LNAPL by lowering the probe to the depth of LNAPL, then submerging the probe into the water until the sound indicated the presence of water, then raising the probe until the oil indicator sounded. According to the data: TRC-MW-12 - 0.03’ of free product; TRC-MW-13 - 0.09’ of free product. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW-12 and TRC-MW-13 on January 20, 2014. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the site consisted of the following: " The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. " The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13). The oil absorbent sock present in TRC-MW-11 was removed and was placed in a 55-gallon steel drum on-site. A new oil absorbent sock was replaced in this well. Approximately 3,703 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13) on January 20, 2014. A total of

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

approximately 35 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 3,633 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside Environmental, Inc. under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 32,183 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-2, TRC-MW-12, TRC-MW-13, and TRC-MW-14) from July 2012 to January 20, 2014. PLANNED ACTIVITIES: The following activities are planned for the next bi-annual inspection and LNAPL removal event: " The monitoring well network will be gauged. " Inspection and LNAPL removal from the concrete vault and monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing measurable LNAPL. " Project progress Report #6 will be submitted to the DEC following the next inspection and product removal event, which will be performed in July 2014. AD 10/20/2014: Reveived Received a Progress Report #6 for the site. Will review. AD 12/10/2014: Reviewed the report. It states that field activities were conducted at the site on July 28, 2014 and consisted of the following: " Concrete vault and boiler room pump pit inspection; " Monitoring well gauging; and " LNAPL recovery. The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 28, 2014 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW-12 and TRC-MW-13, which is consistent with historic data. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW-1 through TRC-MW-11, TRC-MW-14, and TRC-MW-15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, an oil/water interface probe was used to approximate the thickness of LNAPL by lowering the probe to the depth of LNAPL, then submerging the probe into the water until the sound indicated the presence of water, then raising the probe until the oil indicator sounded. According to the data: TRC-MW-12 - 0.02’ of free product; TRC-MW-13 - 0.05’ of free product. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW-12 and TRC-MW-13 on July 28, 2014. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the site consisted of the following: " The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. " The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13). New oil absorbent socks were replaced in these wells. Approximately 3,119 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13) on July 28, 2014. A total of approximately 35 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 3,049 gallons of water mixed with LNAPL were removed from the concrete vault for off-site disposal. The LNAPL and water removal was performed by Brookside Environmental, Inc. under the supervision of TRC and transported to

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 35,302 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-2, TRC-MW-12, TRC-MW-13, and TRC-MW-14) from July 2012 to July 28, 2014. PLANNED ACTIVITIES: The following activities are planned for the next bi-annual inspection and LNAPL removal event: " The monitoring well network will be gauged. " Inspection and LNAPL removal from the concrete vault and monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing measurable LNAPL. " Project progress Report #7 will be submitted to the DEC following the next inspection and product removal event, which will be performed in January 2015. NRN. AD 02/12/2015: Received the following e-mail from C. Guder: Ainura Attached is Progress Report #7 for Spill Case No. 0413160 associated with Automotive Trades High School, Brooklyn, NY. Please review and contact us with any questions or comments. Thank you, Charles Guder Senior Project Manager Will review. AD 03/24/2015: Reviewed the report. It states that field activities were conducted at the Site on January 19, 2015 and consisted of the following: - Concrete vault and boiler room ejector pit inspection; - Monitoring well gauging; and - LNAPL recovery. Concrete Vault/Boiler Room Ejector Pit Inspections and Monitoring Well Gauging: The concrete vault, located north of the school building, the boiler room ejector pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on January 19, 2015 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13, which is consistent with historic data. LNAPL was not present in the boiler room ejector pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14, and TRC-MW15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. LNAPL has only been measured in monitoring wells TRC-MW12 and TRC-MW13 since April 2013. The LNAPL thickness measured in wells TRC-MW12 and TRC-MW13 have also decreased since April 2013. The LNAPL thickness measurements (feet) recorded in monitoring wells TRC-MW12 and TRC-MW13 in April 2013 were 0.07 and 0.10, respectively. LNAPL Product Recovery: Periodic recovery of LNAPL has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRCMW13 on January 19, 2015 using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: - The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. - The vacuum truck was then used to pump oil and water from the monitoring wells containing measurable LNAPL (TRC-MW12 and TRC-MW13). - The oil absorbent socks present in the monitoring wells around the closed-in-place UST (i.e.,TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW-13, TRC-MW14) were found to be saturated with oil. With the exception of monitoring wells TRC-MW12 and TRC-MW13, measurable LNAPL was not identified in the monitoring wells after removal of the oil absorbent socks. The oil absorbent socks present in the monitoring wells were removed and replaced with new ones. Approximately 5,724 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on January 19, 2015. A total of approximately 25 gallons of water mixed with

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

LNAPL were removed from each of monitoring wells and approximately 5,674 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. Approximately 41,026 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to January 2015. PLANNED ACTIVITIES: In connection with the NYSDEC approval letter dated October 15, 2013, the following activities are planned for the next bi-annual inspection and LNAPL removal event: - The monitoring well network will be gauged. - Inspection and LNAPL removal from the concrete vault and monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing LNAPL. - Project Progress Report #8 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in July 2015. AD 08/12/2015: Received a Progress Report # 8. Will review. AD 10/02/2015: Reviewed the report. It states that field activities were conducted at the Site on July 27, 2015 and consisted of the following: - Concrete vault and boiler room ejector pit inspection; - Monitoring well gauging; and - LNAPL recovery. Concrete Vault/Boiler Room Ejector Pit Inspections and Monitoring Well Gauging: The concrete vault, the boiler room ejector pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 27, 2015 by TRC. LNAPL was only present in the concrete vault and wells TRC-MW12 and TRC-MW13, which is consistent with historic data. LNAPL was not present in the boiler room ejector pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14, and TRC-MW15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. LNAPL has only been measured in monitoring wells TRC-MW12 and TRC-MW13 since April 2013. The LNAPL thickness measured in wells TRC-MW12 and TRC-MW13 have also decreased since April 2013. The LNAPL thickness measurements (feet) recorded in monitoring wells TRC-MW12 and TRC-MW13 in July 2015 were 0.03 and 0.03, respectively. LNAPL Product Recovery: Periodic recovery of LNAPL has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRCMW13 on July 27, 2015 using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: - The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. - The oil absorbent socks present in the monitoring wells TRC-MW12, TRC-MW-13 were found to be saturated with oil and removed. A vacuum truck was then used to pump LPAPL and water from TRC-MW12 and TRC-MW13. After pumping was complete, new oil absorbent socks were placed into TRC-MW12, TRC-MW13. Approximately 2,606 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells (TRC-MW12 and TRC-MW13) on July 27, 2015. Approximately 50 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 2,506 gallons were removed from the concrete vault for off-site disposal. Approximately 43,632 gallons of water/LNAPL mixture have been removed from the site for the period from July 2012 to July 2015. PLANNED ACTIVITIES: The following activities are planned for the next bi-annual inspection and LNAPL removal event: - The monitoring well network will be gauged. - Inspection and LNAPL removal from the concrete vault and

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing LNAPL. - Project Progress Report #9 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in January 2016. AD 02/17/2016: Received Progress Report #9. Will review. AD 03/29/2016: Reviewed the report. It states that field activities were conducted at the site on on January 18, 2016 and consisted of the following: " Concrete vault and boiler room ejector pit inspection; " Monitoring well gauging; and " LNAPL recovery. Concrete Vault/Boiler Room Ejector Pit inspections and Monitoring Well Gauging: The concrete vault (located north of the school building), the boiler room ejector pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on January 18, 2016 by TRC. LNAPL was only present in the concrete vault and monitoring wells TRC-MW 12 and TRCMW-13, which is consistent with inspection results since April 9, 2013. The oil absorbent socks present in monitoring wells TRC-MW 12 and TRC-MW 13 we re also found to be saturated with oil. LNAPL was not present in the boiler room ejector pit or in monitoring wells TRC-MW-1 through TRC-MW-11, TRCMW-14, and TRC-MW-15. An oil/water interface probe was used to approximate the thickness of LNAPL by lowering the probe to the depth o f LNAPL, then submerging the probe into the water until the sound indicated the presence of water, then raising the probe until the oil indicator sounded. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. Since April 201 3, only monitoring wells TRC-MW12 and TRC-MW13 have had measureable LNAPL. The LNAPL thicknesses measured in monitoring wells TRC-MWl2 and TRCMW13 have decreased since April 2013. The LNAPL thickness measurements recorded in monitoring wells TRC-MW12 and TRC-MWl3 in April 201 3 were 0.07 and 0.10 feet, respectively. Periodic recovery of LNAPL has been performed at the Site since July 201 2. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW 12 and TRCM W 13 on January 18, 2016 using a vacuum truck. The procedure for measurement and removal of LNAPL at the Site consisted of the following: - The contents o f the concrete vault were removed below the elevation of the building under drain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water were then pumped from the concrete vault into the vacuum truck. - The oil absorbent socks present in monitoring wells TRC-MW12 and TRC-MW13 were found to be saturated with oil and we re removed. A vacuum truck was then used to pump LNAPL and water from monitoring wells TRC-MW12 and TRC-MW13. After pumping of LNAPL and water from monitoring wells TRC-MW12 and TRC-MW13 was complete, new oil absorbent socks were placed into monitoring wells TRC-MW12 and TRC-MW13. A total of approximately 3,248 gallons o f water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MWl2 and TRC-MW13) on January 18, 2016. Approximately 25 gallons of water mixed with LNAPL were removed from each of the monitoring wells and approximately 3,198 gallons of water mixed with LNAPL were removed from the concrete vault for off-site disposal. Approximately 46,880 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to January 2016. In connection with the NYSDEC approval letter dated October 15 , 20 13, the following activities are planned for the next bi-annual inspection

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

and LNAPL removal event: " The monitoring well network will be gauged. " Inspection of and LNAPL removal (if required) from the concrete vault and monitoring wells. Absorbent socks will be replaced, as necessary, in monitoring wells containing LNAPL. " Project Progress Report #10 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in July 2016. AD. 08/20/2016: Received progress Report #10. Will review. AD 09/29/2016: Reviewed the report. It states that field activities were conducted at the Site on July 5, 2016 and consisted of the following: - Concrete vault and boiler room ejector pit inspection; - Monitoring well gauging; and - LNAPL recovery. The concrete vault (located north of the school building), the boiler room ejector pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 5, 2016 by TRC. LNAPL was only present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13, which is consistent with inspection results since April 9, 2013. The oil absorbent socks present in monitoring wells TRC-MW12 and TRC-MW13 were also found to be partially saturated with oil. LNAPL was not present in the boiler room ejector pit or in monitoring wells TRC-MW1 through TRCMW11, TRC-MW14, and TRC-MW15. A minimal amount of LNAPL was recovered by the oil absorbent socks installed in monitoring wells TRC-MW2, TRC-MW11, and TRC-MW14. An oil/water interface probe was used to approximate the thickness of LNAPL in TRC MW-12 and TRC MW-13 by lowering the probe to the depth of LNAPL, then submerging the probe into the liquid until the sound indicated the presence of water, then raising the probe until the oil indicator sounded. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. Since April 2013, only monitoring wells TRC-MW12 and TRC-MW13 have had measureable LNAPL. The LNAPL thicknesses measured in monitoring wells TRC-MW12 and TRC-MW13 have decreased since April 2013. The LNAPL thickness measurements recorded in monitoring wells TRC-MW12 and TRC-MW13 during the previous event on January 18, 2016 were 0.03 and 0.03 feet, respectively. Thickness measurements on April 9, 2013 were 0.07 feet in TRC-MW12 and 0.10 feet in TRC-MW13. LNAPL recovery: Periodic recovery of LNAPL has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRC-MW13 on January 18, 2016 using a vacuum truck. The procedure for measurement and removal of LNAPL at the Site consisted of the following: " The contents of the concrete vault were removed below the elevation of the building under-drain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water were then pumped from the concrete vault into the vacuum truck. " The oil absorbent socks present in monitoring wells TRC-MW12 and TRC-MW13 were found to be partially saturated with oil and were removed. A vacuum truck was used to pump LNAPL and water from monitoring wells TRC-MW12 and TRC-MW13. After pumping of LNAPL and water from monitoring wells TRC-MW12 and TRC-MW13 was complete, new oil absorbent socks were placed into monitoring wells TRC-MW12 and TRC-MW13. Approximately 2,862 gallons of water mixed with LNAPL were removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on July 5, 2016. Approximately 50 gallons of water mixed with LNAPL were removed from each of the monitoring wells and approximately 2,762 gallons of water mixed with LNAPL were removed from the concrete vault for off-site disposal. Approximately

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

49,472 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to July 2016. Planned activities: In connection with the NYSDEC approval letter dated October 15, 2013, the following activities are planned for the next bi-annual inspection and LNAPL removal event: " The monitoring well network will be gauged. " Inspection of and LNAPL removal (if required) from the concrete vault and monitoring wells. Absorbent socks will be replaced, as necessary, in monitoring wells containing LNAPL. " Project Progress Report #11 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in January 2017. AD 05/05/2017: Had a conversation with TRC, Philip Castellano requested a meeting with DEC to discuss the site. TRC thinks that the site is ready for closure. Discussed the dates with J. Kolleeny. Sent the invitation to TRC. Booked the conference room for May 9, 2017. AD 05/09/2017: J. Kolleeny and I had a meeting with Lee Guterman and Bob Kanaparthi of NYCSCA and their consultants Philip Castellano of TRC and Michael Sherwood of Sherwood Environmental. Lee Guterman said that they performed extensive remediation at the site, it was effective, and only two site wells now have 0.01' of free product. According to Ms. Guterman, NYCSCA had exhausted their funds for further remediation at this site, and questions its effectiveness. We discussed the remediation performed at the site, site specific conditions and what further actions should be taken. Since the last gauging event was in January 2017, it was agreed that TRC will remove absorbent socks from the monitoring wells and will gauge them few weeks after for LNAPL presence. Final closure report will be prepared with case closure request justification, stating all the performed remedial activities, site specific conditions, sensitive receptors survey and other related data. Jon and I had discussed the above-referenced site and request for spill case closure with Vadim Brevdo. He agreed with the proposed course of actions such as: removing absorbent socks from the monitoring wells and gauging them few weeks after for LNAPL presence and preparing final closure report. Sent an e-mail to Ms. Guterman confirming Vadim's agreement with the proposed course of actions. AD 06/29/2017: Received the following e-mail from Bob Kanaparthi: Dear Ms. Doronova, Attached please find the requested Spill Closure Report for Automotive Trades High School, Spill Case No. 04-13160. Please contact me with any questions or comments. Thank you, Bob Kanaparthi Industrial Hygienist C Industrial and Environmental Hygiene Division New York City School Construction Authority 30-30 Thomson Ave, Long Island City, New York 11101 Email: skanaparthi@nycsca.org Telephone: (718) 472-8620 Fax: (718) 472-8500 Will review. AD 07/05/2017: Reviewed the submitted report. It states that on May 10, 2017 the oil-absorbent socks installed in monitoring wells around the perimeter of the closed-in-place UST were removed. The socks, previously installed on January 16, 2017, were stained but were not saturated with LNAPL. Following removal of the socks, monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 were gauged. No measurable quantities of LNAPL were present in the wells. On May 24, 2017, two (2) weeks following removal of the socks, the wells were gauged again, and no LNAPL was present in the wells. CONCLUSIONS: Based on the information collected during remedial efforts conducted on-site to date, the following can be concluded: - Gauging data collected since 2012 has demonstrated that there is no potential for migration of LNAPL off Site. - Since July 2014 (5

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

gauging events), LNAPL has been detected in only two wells, with measured thicknesses less than 0.05 feet. - LNAPL was not detected in the wells adjacent to the UST on May 10, 2017 following removal of the oil-absorbent socks installed on January 16, 2017. - LNAPL was not detected in the wells adjacent to the UST, two (2) weeks after sock removal, on May 24, 2017. - Based on the age of the release, the absence of dissolved phase groundwater impacts, and observations during remedial measures conducted to date, mobile petroleum-related impacts are not present at the Site. Considering the above conclusions, TRC recommends closure of Spill No. 04-13160. Will discuss with J. Kolleeny of DEC. AD 07/07/2017: Discussed the site with J. Kolleeny. Based on the newly submitted data regarding absence of the LNAPL in the all site wells, performed remediation, nature of the product (#6 oil) and absence of dissolved phase, it was decided to approve case closure request. Issued and sent an approval letter to Lee Guterman. Case closed. AD "

Remarks: "OLD TANK THAT WAS INSTALLED AND WANTED IT TO BE REOVED. THEY TOOK TESTS AND FOUND THAT THE TANK HAS LEAKED. THE TANK HAS FAILED MANY TIMES BEFORE. TOOK TESTS FROM THE SOIL. HAS NOT BEEN CLEANED OR REMOVED. OUTSIDE UNDERGROUND TANK. 20,000 GAL CAPACITY."

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

Site Description: "Location: The Williamsburg-Pratt Refinery site is located in a commercial/industrial area in the Williamsburg section of Brooklyn. The site comprises a single real estate parcel, Block 2277 Lot 1, at 26 N 12th St. It is approximately 7 acres in size and is located between Kent Ave. and the East River and between N 12th St. and Bushwick Inlet. Site Features: The site formerly included above ground petroleum bulk storage tanks, a 3 story office building, a one story cinder block garage, a fuel dispenser island, and a large asphalt paved area. All above ground structures, buildings and storage tanks, were dismantled and removed during the summer of 2019. Current Zoning and Land Use: Currently the site is vacant covered by concrete slabs and asphalt. The land use in the surrounding area is currently a mix of industrial, commercial, residential, and parkland use. The nearest residential property is located approximately 2 blocks to the south. Past Use of the Site: A petroleum refinery operated on the site from circa 1870 into the early 1900s. Subsequently, the property was utilized as a major petroleum bulk storage facility until the early 2000s. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till and lenticular clay more than 100 feet in thickness. The fluvial marsh silty clay to clay is encountered from approximately 5 to 25 feet below ground surface across the site. The groundwater table is approximately 6 feet below ground surface. Groundwater flows to the north northwest, toward Bushwick Inlet and the East River. "

Env Problem: "The Williamsburg former Pratt Refinery is a former major oil storage facility and refinery which is also considered an off-site component of the Williamsburg MGP. Although it has not yet been subject to a formal remedial investigation, it was subject to a Site Investigation (M&E 2006) and Site Characterization (Roux 2020). Nature and Extent of Contamination: On behalf of NYC, Metcalf and Eddy of New York, Inc. (M&E) completed a Site Investigation (SI) at the Block 2277 Site and submitted the findings to the NYSDEC in November 2006 (GEI, 2015). The purpose of the SI was to evaluate the lateral and vertical extent of potential contamination in subsurface soil and groundwater that may exist from historical and current operations. The scope included the collection of 43 soil samples from 19 on-Site and off-Site soil borings completed to depths ranging from 47.6 to 72 feet below land surface (ft. bls). In addition, groundwater samples were collected from 19 monitoring wells. Data and information obtained from the SI included the following: Visual petroleum impacts were identified in one of the 19 soil borings; Visual MGP tar impacts were identified in two of the 19 soil borings; VOCs and SVOCs were detected above Technical and Administrative Guidance Memorandum (TAGM) soil criteria in 17 and 18 of the 43 soil samples, respectively; and PCBs were detected in soil samples, but below the NYSDEC TAGM soil criteria. A Site Characterization was conducted by Roux EEG on behalf of NYC and Exxon Mobile First Phase of SC Field Activities (Pre-Demolition January 11, 2019 through February 25, 2019): Completion of a geophysical survey investigation; Advancement of 40 soil borings (RXSB-1 through RXSB-40) along with the collection and analysis of 171 soil samples; Installation of 10 temporary groundwater monitoring wells (RXSB-29 through RXSB-37, RXSB-39, and RXSB-40); and Collection and analysis of 14 groundwater samples (from newly installed temporary monitoring wells RXSB-29 through RXSB-37, and RXSB-39, as well as existing monitoring wells MW-10 and WW-MW-18). Second Phase of SC Field Activities (Post-Demolition

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

December 3, 2019 through January 16, 2020): Completion of a geophysical survey investigation; Advancement of 31 soil borings (RXSB-38 and RXSB-41 through RXSB-70) along with the collection and analysis of 123 soil samples; Installation of two temporary groundwater monitoring wells (RXSB-38 and RXSB-41); and Collection and analysis of three groundwater samples (from newly installed temporary monitoring wells RXSB-38 and RXSB-41). Soil Conditions: VOCs VOC exceedances of RRSCOs were detected in only seven soil borings with the majority of the impacts being present near the water-table in the area of the recently demolished ASTs. Less than 2.5 percent (%) of all VOCs exceeded RRSCOs, with 1,2,4-Trimethylbenzene having the highest percent exceeding. With respect to the RRSCOs, only one sample exceeded at the surface, two samples exceeded in the vadose zone, two samples exceeded in the saturated zone, and two bottom samples exceeded. The soil samples with the highest VOC concentration were found near the water table interface, indicating some residual petroleum impacts are likely present. The deep exceedances detected at RXSB-6 (21.5-22 ft bls) were vertically delineated by a deeper sample (24-24.5 ft bls) that had all VOC concentrations below RRSCOs. In addition, the contamination collected at 21.5-22 ft bls was observed to have identifiable residual dense non-aqueous phase liquid (DNAPL) impacts typical of MGP coal tar impacts migrating from the adjacent former MGP site (Block 2287), with elevated levels of naphthalene. The majority of the BTEX exceedances are in the areas directly beneath the former refinery operations and bulk storage operations and free product was observed in a few soil borings and a monitoring well. SVOCs SVOCs, primarily polycyclic aromatic hydrocarbons (PAHs), commonly associated with historic fill, were detected in a majority of the soil borings with the exceedances of RRSCOs being primarily within the shallow soil samples located within historic fill. With the exception of one exceedance of hexachlorobenzene and two exceedances of phenol (all within shallow samples), all of the SVOC exceedances of RRSCOs are PAHs. PAHs, specifically benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene accounted for the highest percentage of SVOC exceedances of RRSCOs at 47.4%, 46.8%, 48.6%, 20%, 41.1%, and 49.3%, respectively. The concentrations and distribution of PAHs at the surface coincide with the presence of fill material and are generally representative of urban historic fill present throughout NYC. The exceedances detected within saturated samples generally coincided with areas where historic fill was encountered at deeper depths and where residual petroleum impacts are present. The PAH concentrations are generally higher in samples with identifiable residual MGP tar impacts (50,000-300,000 ppm) than in other samples across the Block 2277 Site (100-500 ppm). The highest concentrations of PAHs found in the soil at both the Block 2277 Site and the Former National Grid MGP site (Block 2287) are very high which is indicative of MGP tar and tar products (e.g., creosote). Based on the data collected during the SC, the Block 2277 Site has PAH contamination above RRSCOs primarily located within historic fill and within residual LNAPL impacts near the water table and the assumed DNAPL impacts present at depth. Metals Metals were detected in Block 2277 Site-wide soil samples collected during this SC. Thirteen metals (arsenic, barium, beryllium, cadmium, total chromium, copper, lead, manganese, mercury, nickel, selenium, silver, and zinc) were detected in soil samples exceeding RRSCOs during this SC. Of the

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

294 samples analyzed, 152 soil samples showed exceedances of metals in comparison to the RRSCOs. The concentrations and distribution of metals at the surface coincide with the presence of fill material, typically within five feet of grade and are generally representative of urban historic fill present throughout NYC. Arsenic, lead, and mercury, which are associated with urban historic fill throughout NYC, accounted for the highest percentage of metal exceedances of RRSCOs at 46.4%, 32%, and 24%, respectively. The exceedances detected within saturated samples generally coincided with areas where historic fill was encountered at deeper depths. Only one compound (i.e., mercury) in one sample (RXSB-45_24.5-25) from the bottom zone was present at concentrations above RRSCOs. Based on the data collected during the SC, the Block 2277 Site has metal contamination above RRSCOs primarily located within historic fill which decreases with depth with almost complete delineation provided by the SC. PCBs PCBs were detected in two soil samples collected from one soil boring location (RXSB-38) during this SC exceeding NYSDEC SCOs. The exceedances for total PCBs were in samples RXSB- 38_0-0.5 and RXSB-38_ 4.5-5. Pesticides Pesticides and herbicides were detected in seven soil samples collected during this SC exceeding RRSCOs and included Alpha BHC, Delta BHC, 4,4 -DDD, 4,4 -DDE, and 4,4 -DDT. Alpha BHC (Alpha Hexachlorocyclohexane) was detected at a concentration exceeding UUSCOs and PGWSCOs (0.02 mg/kg, respectively) in one soil sample (RXSB-34_6.5-7) at a concentration of 0.048 mg/kg. Delta BHC (Delta Hexachlorocyclohexane) was detected at a concentration exceeding UUSCOs (0.04 mg/kg) in one soil sample (RXSB-34_6.5-7) at a concentration of 0.1 mg/kg. 4,4'-DDD was detected at a concentration exceeding UUSCOs (0.0033 mg/kg) in one soil sample (RXSB-33_16.5-17) at a concentration of 0.0039 mg/kg. 4,4 -DDE was detected at concentrations exceeding UUSCOs (0.0033 mg/kg) in one soil sample (RXSB-34_0-0.5) at a concentration of 0.014 mg/kg. 4,4 -DDT was detected at a concentration exceeding UUSCOs (0.0033 mg/kg) in six soil samples, with concentrations ranging from 0.0036 mg/kg to 0.5 mg/kg, with the maximum detection in soil sample RXSB-38_0-0.5. Groundwater: VOC Benzene was only detected in three locations slightly above AWQSGVs. The presence of MTBE in the sample collected from RXB-33 is indicative of a modern release (i.e., after 1979) and is generally downgradient of the area where Chevron conducted remedial actions. Based on the data, groundwater at the Block 2277 Site does not appear to be significantly impacted with VOCs. SVOC SVOCs were detected in eight of the 11 monitoring well/temporary monitoring well locations. SVOCs, specifically PAHs, were detected and exceeded the AWQSGVs, which is likely attributed to high turbidity and sediment in the groundwater grab samples. In comparison, the two existing monitoring wells (MW-10 and WW-MW-18) which were sampled, did not have any exceedances of SVOCs. Metals No exceedances of AWQSGVs were observed in filtered samples. PCBs PCBs were not detected above the laboratory reporting limit in any groundwater sample collected during the SC. Pesticides Pesticides were not detected above the laboratory reporting limit in any groundwater sample collected during the SC with the exception of Aldrin, which was detected in parent sample RXSB-41, at an estimated concentration of 0.0027 ?g/L, exceeding AWQSGV (0 ?g/L), but was not detected in the field duplicate sample. PFAS Maximum PFOA concentration was detected at 160 ug/l Maximum PFOS concentration was detected at 17 ug/l Total PFAS concentration exceeded 500 ug/l in a sample PFAS samples are likely attributable to a foam storage

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

location within the MOSF. Soils beneath the Williamsburg former Pratt Refinery are impacted with both petroleum and coal tar. Although not fully understood, the petroleum impacts appear to be spatially associated with historic refinery operations and from more recent petroleum bulk storage. Coal tar has migrated through the subsurface from the former Williamsburg MGP under the southern margin of the site. The coal tar impacts are relatively deep, ranging from 30 to 50 feet below ground surface. Sediment data gathered as part of the Williamsburg MGP RI show co mingled coal tar and petroleum contamination in the East River sediment adjacent to the site. "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY TRANSFERRED FROM Y.KRIMGOLD. Also, refer to spill # 9607376 & 9401167. 12/14/04-Spill Case is trnsferred to I. Islam. The site is under remediation by LiRo Engineers. - II 4/22/05- Reviewed the quarterly monitoring report (Nov./04 - Jan./05). The monitoring data show persistently high level of both soil and groundwater contamination. LiRo claims that the long history of the site for operation as a manufactured gas plant (MGP) may be the cause of this. However, a letter has been issued in order for LiRo to consider alternative measure(s) to remediate the site. The monitoring report has been installed in the eDoc Folder. - II 5/13/05- Afsar Samani of DDC raised the MGP issue of this site in the meeting with DEC on 5/4/05 as LiRo has written them either to increase the cost for remediation of the MGP related contaminants at the site or get the Key Span and/or other responsible agency handle the MGP site through DEC. Koon Tang is exploring with the Central office as to the finding of responsible agency to handle the former MGP site remediation.- II. 5/31/03- Joe Moloughney of Central Office confirmed via email that this site would be remediated under the KeySpan Consent Order for MGP sites. This site has been assigned with # 224055 as the MGP site. Therefore, the spill is closed.- II"
Remarks:	"also ground water affected - reprts says that site is contaminated with petro and heavy metals. Also see spill # 9401167."

Tank Info:

Tank Number:	1
Tank Id:	53846
Material Code:	0008
Common Name of Substance:	Diesel

Equipment Records:

J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
C00 - Pipe Location - No Piping
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
B04 - Tank External Protection - Fiberglass
I02 - Overfill - High Level Alarm
G04 - Tank Secondary Containment - Double-Walled (Underground)

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Fiberglass Coated Steel
Tank Status:	Closed - Removed

BROOKLYN NORTH 1 GARAGE (Continued) **U003074882**

Pipe Model:	Not reported
Install Date:	06/01/1997

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D004
Waste Description: ARSENIC

Waste Code: D008
Waste Description: LEAD

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D018
Waste Description: BENZENE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS

WILLIAMSBURG MGP (Continued) **1000141021**

LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U019
Waste Description: BENZENE (I,T)

Waste Code: X001
Waste Description: Not Defined

WILLIAMSBURG MGP (Continued) **1000141021**

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:
Name: FORMER CONSOLIDATED FREIGHTWAYS TRUCK TERMINAL
Address: 29 WEST STREET
City,State,Zip: BROOKLYN, NY 11222
Program: BCP
Site Code: 494074
Acres: 6.948
HW Code: C224191
SWIS: 2401
Town: New York City
Record Added Date: 04/24/2014
Record Updated Date: 06/07/2021
Update By: JHOCONNE
Site Description: "Location: The site is located at 29 West Street in Brooklyn, NY. The site is an urban area in the Greenpoint neighborhood of Brooklyn and is denoted on the New York City Tax Maps as Block 2570, Lots 1, 10, 20, 30, 40, 50 (formerly Lot 1). The site is bordered on the east by West Street, on the west by the East River, on the north by Oak Street and the Greenpoint Marina BCP site (C224190), and on the south by Quay Street. Site Features: The site is approximately 6.948 acres in size and is currently undergoing redevelopment. The site was previously improved with three buildings and was occupied by a lumber and building materials supplier and a commercial space leasing company. Current Zoning and Land Use: The site is zoned R6 R7 (residential) with C2 4 (commercial) overlay which allows some ground floor retail. It is subject to New York City Office of Environmental Remediation (OER) E designation program due to the presence of underground gasoline storage tanks. Past Use of the Site: The site was developed prior to 1887 as a shipyard and iron works known as Samuel Sneden & Company and its successor, Continental Iron works. The latter company was contracted to build iron water pipes, boilers, iron ferryboat, steamboats and Ironclad warships for the United State Navy during the Civil War. The company focused on building marine boilers and iron components for gas works after the Civil War. The site was vacated sometime between 1916 and 1942. Between 1942 and 1951, the site began operation as a lumber yard, which was later replaced by a machine shop and welding company. The current building was constructed in 1965. Auto repair shops were identified in the east and west end of the building with a fueling station shown on the north side of the building in 1965. In 1978, Consolidated Freightways replaced Associated Transport and occupied the property until the company filed for bankruptcy in 2002. Site Geology and Hydrogeology: Subsurface soils at the site include a mixture of fill materials consisting of bricks and other rubble in a silty soil matrix. The thickness of the fill ranges from 5 to more than 10 feet. Below the fill material is a silty sand. Groundwater is present under water table conditions at a depth of approximately 5 8 feet below the ground surface and flows southwest. Elevation of the site varies from 1 to 9 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the west toward the East River. "
Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related contaminants, semi-volatile organic compounds

CONSOLIDATED FREIGHTWAYS (Continued) **U003074667**

	(SVOCs) and metals including barium, lead, fluoranthene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, chrysene, isopropylbenzene, n-propylbenzene, arsenic, mercury, and 1,1,1-trichloroethane. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan.Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related contaminants, semi-volatile organic compounds (SVOCs) and metals including barium, lead, fluoranthene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, chrysene, isopropylbenzene, n-propylbenzene, arsenic, mercury, and 1,1,1-trichloroethane. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	002
Tank Id:	23719
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	H00 - Tank Leak Detection - None
	A00 - Tank Internal Protection - None
	B01 - Tank External Protection - Painted/Asphalt Coating
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	F01 - Pipe External Protection - Painted/Asphalt Coating
	C03 - Pipe Location - Aboveground/Underground Combination
	G00 - Tank Secondary Containment - None
	J02 - Dispenser - Suction Dispenser
	I04 - Overfill - Product Level Gauge (A/G)
Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	06/01/1950
Capacity Gallons:	5000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	02/01/2001
Register:	True

Tank Info:

Tank Number:	001
Tank Id:	4140
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	D00 - Pipe Type - No Piping
	K00 - Spill Prevention - None
	A00 - Tank Internal Protection - None
	B01 - Tank External Protection - Painted/Asphalt Coating
	G00 - Tank Secondary Containment - None
	J02 - Dispenser - Suction Dispenser
	H00 - Tank Leak Detection - None
	L09 - Piping Leak Detection - Exempt Suction Piping
	E00 - Piping Secondary Containment - None
	I04 - Overfill - Product Level Gauge (A/G)
	C01 - Pipe Location - Aboveground
	F00 - Pipe External Protection - None
Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	12/01/1931
Capacity Gallons:	2500
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	NTFREEMA

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Acres:	8.000
Date Record Added:	06/04/2002
Date Record Updated:	10/30/2009
Updated By:	MOBARRIE
Site Description:	"The TransGas Energy (TGE) Facility is a project for a new energy facility located on the East River waterfront between the Greenpoint and Williamsburg sections of Brooklyn. TGE proposed to construct and operate an 1100-megawatt gas-fired plant on the Brooklyn waterfront near Bushwick Inlet between the communities of Greenpoint and Williamsburg. For over 100 years, the Site has been operated as a fuel oil storage and distribution facility. Site soils and groundwater are contaminated with Petroleum spill contaminants, MGP Waste and heavy metal contamination. TGE entered the Department?s Voluntary Cleanup Program (VCP) in December 2002. The current owner of the Site is the Bayside Fuel Oil Depot. Under Bayside Fuel and previous owners (which include Socony Mobil, Texaco Refining and Marketing and others), the Site has been operated as a fuel oil storage and distribution facility for over 100 years. The Phase II assessment was completed in January 2003 and confirmed widespread groundwater and soil contamination with MGP waste and petroleum related contaminants. RI is on-going. The VCP Agreement was terminated in 2009 for lack of progress. There is an existing oil spill stipulation (Spill No. 9804544) with Texaco Refining and Marketing that has resulted in ongoing recovery of free-product and

BAYSIDE OIL (Continued) **S113922082**

	contaminated-groundwater. See also site no. 224055 (Williamsburg Works MGP) for further information. "
Env Problem:	"Previous studies at the Site confirm widespread petroleum contamination with MGP involvement. For example, fuel oil and naphthalene odors are reported in boring logs as deep as 60 feet, and in July 2002 TRC Environmental (TGE?s consultant) found heavy staining and MGP waste in a boring 20 feet below grade and reported the occurrence to NYSDEC as a spill (No. 0203677). In addition to organic pollutants, a 1997 investigation also found soil samples with elevated levels of lead. The Phase II assessment was completed in January 2003 and confirmed widespread groundwater and soil contamination with MGP waste and petroleum related contaminants. Heavy staining and odors (coal tar) observed from 20 feet depths to top of clay at 60 feet depths. VOCs and PAH exceed RSCOs below 20 feet depth. Benzene concentrations below 20 feet depth observed up to 864,000 ppb. Off-site benzene detected upto 128,000 ppb. Free product observed (wells B4, MW7). On-site groundwater impacted from water table to top of clay by petroleum and coal tar related compounds. Benzene detected throughout the site at concentrations of 6.5 ppb to 29,500 ppb (in MWB-11). MTBE ranged from 1.2 to 329 ppb and naphthalene ranged from 1.6 to 579 ppb."

DER Facility ID:	272130
DEC Memo:	"Tipple was at the site at 6:40 AM and discovered the spill. Detailed work outline was discussed with Bayside and Classic Fuel to clean up both the yard area and the street. 08/10/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called Pat at (718)372-9800 and talked to Ms. Dana regarding status of the spill. She said that when Mr. Pat will come she will find about it and she will convey my message to Pat. Mr. Pat will call me back. -QA 09/22/06: On September 21, received a closing confirmation letter from Mr. Albert Cirino (Model Petroleum Transportation INC.). According to Mr.Cirino the spill was on concrete. No water and no land were contaminted by the spill. the spill is cleaned. Also talk to Bayside Terminal manager Mr. Sergio, He said they clean their yard. Also talk to Mr. John (718)388-1515 he said yard is asphaltand asphalt is sealed, it is not open dirt. John spoke on phone that they picked up each & every pocket of the product. so according to letter of Albert Cirino and Conversation with John and Terminal Manager Sergio DEC Staff closed the spill. -QA"
Remarks:	"OVER FILLED WHILE FILING UP A TANK: CLEANED UP:"
