DEC Memo:	1/24/08 - Raphael Ketani. I spoke with Jeff Bohlen of EnviroTract (631) 924-3001. He said he represented the potential buyer, Krzysztof Kielan, Millenium Development and Construction, LLC, 57 Ballard Street, Valley Stream, NY, 11580. He said that the site is still an active cabinet making business and is owned by Henryk Zawojek. Mr. Bohlen went on to say that the site is a 1 story commercial building. There is a gas tank (UST) in the building and a dispenser and remote fill outside. All three are out of service. Three borings were performed, one at each part of the fuel system. There are low hits of BTEX in the soil which are below TAGM. Two wells were installed. One well had 0.73 ppb benzene and one well had 1.3 ppb benzene. Total xylenes were 6.80 ppb. The site has an E designation, but no one has been assigned to the case. The contact is Dan Cole, Deputy Director, NYC DEP, 59-17 Junction Blvd., 11 Floor, Flushing, NY, 11373. His phone number is (718) 595-4536. A CSL was sent to Mr. Zawojek with a c-c to Mr. Cole.

LOT 21,TAXBLOCK 2738 (Continued) **S108076393**

3/5/08- DEC Piper - I met
Envirotrac and sub contractor AARCO, onsite today. They were uncovering at least 1 550 ust that
contained gasoline for motor fueling. They will remove tanks soil and piping and collect endpoints
to be submitted in closure report. 3/27/08- DEC Piper recieved and reviewed closure report. Approx
19 tons of soil were removed. Endpoints were below tagm. This spill is closed. See e-docs if
warranted.

Remarks: phase two and found contaminated soil

Longitude: Not reported
DEC Memo: 7/28/2015 - Feng - Duty Desk. Talked to Kim Somers of EBC (631-504-6000). The site is being developed under the OER BCP program. OER has approved the RAWP already. They have installed borings/wells and found soil and groundwater contamination. Soil consist of historical fill and 1,000 ppb benzene, 1,600 ppb toluene at 1-2 feet. Groundwater was found to have 420 ug/L MTBE and SVOCs. DTW is at 5-7 feet. They probably start the excavation in 1 month pending the Notice to Proceed letter from OER and the DOB's permit. The investigation was done in 2/2015 and EBC reported it to OER and reported to DEC now. The RAWP calls for excavation of 10 feet in the north portion, 3 feet in the south portion and no excavation in the 25 feet of midsection. The RAWP calls for vapor barrier also. They are building a 4-story mixed use building which expand the existing building. Partial cellar to 10 feet for the 25 feet of the new building. Contact: EBC, Kim Somers, KSomers@EBCIncNY.com NYCOER, Shaminder Chawla, ShaminderC@dep.nyc.gov Horase Zhang, 212-788-8484 Discussed with the runner K. Patel and spill is assigned to K. Patel. 07/28/15-Hiralkumar Patel. alternate address: 202-226 N 10th Street no PBS or other spill records found. Shirley Dorto / Joseph A. Dorto **property owner** 39 Linden Street Malverne, NY 11565 Kimberly Somers Environmental Business Consultants Ph. (631) 504-6000 Fax (631) 924-2870 email: ksomers@ebcincny.com 07/29/15-Hiralkumar Patel. received reports from Kim. abstract of Phase I: - according to the sanborn maps, the site appears to have been originally developed sometime between 1887 and 1905 with two, one-story structures identified as sheds with an office, and an attached two-story structure in the southern rear portion of the lot - site appears to have been redeveloped in 1970 with the currently existing, one-story industrial warehouse building - the building is slab-on-grade - site was identified as a private garage (1951, 1965), an auto repair use (1978) and a warehouse (2007) - no ASTs or evidence of USTs were observed - site was assigned an E-designation hazmat ---------- abstract of RIR: - proposed future use of the site will consist of the redevelopment of the existing structure in two, 4-story mixed use (commercial and residential) buildings with a mezzanine level and partial cellars - the cellar level will require excavation to a depth of approx. 11 ft bg across the first 36 ft of the site from N 10th St - the first floor sunken level in the rear 50 ft portion of the building will require excavation of at least 3 ft bg - elevation of the site is approx. 14 ft - water table is present at a depth of approx. 7 ft bg -

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

installed nine borings (SB1 through SB4 on 07/19/14 and SB5 through SB9 on 02/11/15) - borings SB1
through SB4 were installed to a depth of 16 ft bg; borings SB5 through SB7 were installed to a
depth of 15 ft bg; boring SB8 was installed to a depth of 7 ft bg and boring SB9 was installed to a
depth of 10 ft bg - borings installed in Feb. 2015 were at or in close proximity to previous
borings installed in Jul. 2014 (SB5 near SB4, SB6 near SB3, SB8 near SB2, SB9 near SB1) -
stratigraphy of the site consists of 3 to 5 ft of historic fill,
underlain by native brown sand -
no PID readings above background concentrations were detected (but as per borings logs, PID values
and odors were detected in borings SB5 and SB7) - total of fourteen (14) soil samples were
collected for VOC and SVOC analyses: one from borings SB1 through SB4 (shallow soil samples from
SB1 through SB4 were not analyzed for VOC/SVOC) and two from borings SB5 through SB9 - three (3)
temporary 1-inch diameter groundwater monitoring wells (MW1 through MW3) were installed to a depth
of 15 ft bg; with 20 ft screen at MW2 and 10 ft screen at MW1 and MW3, set to intersect the water
table - free product was noted in GW2 (or MW-2??) during the Feb. 2015 sampling. the thickness of
the product layer was not measured - well GW2 installed in boring B7 where contamination noted in
shallow soil ------- - installed four soil gas implants to a depth of approx. 5 to 6 ft bg and
collected four soil vapor samples - found some VOC contamination in soil samples, with maximum at
0-2 ft in boring SB7 but no contamination noted on deeper soil sample (at 11-13 ft bg) in SB7. the
deeper soil sample was collected from below the water table and free phase product noted in well
GW2 which was installed at/near SB7 ---------- - found SVOC contamination in almost all soil
samples, mostly in shallow soil samples - free phase product noted in well GW2 --------- - some
VOCs detected in soil vapor samples (maximum: 47.9 ug/m3 in SG-3) soil analyticals:
----------B1----------B2----------B7 13-14 ft 8-10 ft 0-2 ft
Benzene----------340*----------1,000
Toluene----------1,600
Xylene----------540---------940--------1,640
MTBE----------680*--------570*
* - higher reporting limit the submitted RIR has following information incorrect, confusing or
missing: - as per table 1, monitoring wells were installed to a depth of 15 feet below grade; but
as per text on page #8, wells were installed with 20 feet of screen at MW2 - as per text on page
iii, groundwater flow is west-northwest; but as per figure 9, groundwater flows to the east - as
per text on page 8, no PID readings above background concentrations

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

were detected; but as per
borings logs, PID values and odors were detected in borings SB5 and SB7 - report missing detailed
boring logs for soil borings SB1 through SB4 and well installation logs - as per table 6, 420 ppb
of MTBE was detected in groundwater sample from well MW2 during sampling in July 2014; but as per
the lab report, MTBE was non-detect abstract of RAWP: - will remove any USTs encountered during
excavation - will collect and analyze endpoint samples - dewatering will occur - will install
waterproofing/vapor barrier system below the concrete slab of the building as well as behind
foundation walls 08/04/15-Hiralkumar Patel. 11:07 AM:- spoke with Kim. informed her about
missing/confusing/incorrect information in the remedial investigation report. asked her to submit a
revised report. also asked her about status of monitoring wells. informed her that the department
requires re-gauging of existing wells to confirm depth of groundwater and product thickness. 11:11
AM:- spoke with Mr. Finnican. he leased this property. inquired him about reason for not reporting
spill in July 2014 when contamination was detected first time. he mentioned that EBC was handling
this case from beginning and NYC OER was aware of the findings. asked him to provide contact
information for property owners. Thomas Finnican **leasee** 202 North 10th LLC. 144 North 7th
Street, Suite # 408 Brooklyn, NY 11249 Ph. (646) 688-5144 email: tfinnican@patoma.com 11:33 AM:-
sent email to Kim and Mr. Finnican. asked Kim to submit revised remedial investigation report
including correct/missing information and results of re-gauging of existing wells to confirm depth
of groundwater and product thickness. asked Mr. Finnican to submit contact information for property
owners. email copied to OER Chawla and Charles Sosik. 11:48 AM:- sent email to Kim and Mr. Finnican
and asked them to submit signed copy of RAWP. email copied to OER Chawla and Charles.
08/06/15-Hiralkumar Patel. 8:57 AM:- sent email to OER Chawla requesting call back to discuss spill
notification issue. 08/07/15-Hiralkumar Patel. received message from Hanna Moore (at 5:36 PM on
08/06/15) from OER. she mentioned that OER was informed about contamination at the site in Mar.
2015 and since then they have asked property owner/operator to report spill. 08/19/15-Hiralkumar
Patel. 9:05 AM:- sent email to Kim and Mr. Finnican. asked Kim to submit revised report and signed
copy of RAWP along with results of re-gauging of existing monitoring wells. asked Mr. Finnican to
submit property owners' contact information. email copied to OER Chawla and Charles.
09/16/15-Hiralkumar Patel. 10:49 AM:- spoke with Kim and inquired her about revised RAR and signed

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

RAWP. she mentioned that she has sent link to those documents on 08/28/15, but I have not received
it. asked her to resend it. also asked her about product thickness in impacted the well. during
regauging, they found 0.03 ft of product. Kim mentioned that they have received Notice to Proceed
from NYC OER. 10:56 AM:- spoke with Mr. Finnican and asked him to provide property owner's contact
info. 10:56 AM:- received email from Kim including copy of OER's Notice to Proceed letter. searched
online and found number for property owner. 11:14 AM:- spoke with Ms. Dorto (516-887-1006) and
informed her about open spill case at the site. she mentioned that the site has been leased out and
she asked to contact leasee. 11:24 AM:- received email from Kim including GW elevation table and
map. as per the map, groundwater flows to the north and well MW2 is the downgradient well. there is
typo in GW elevation table. as per depth to water and depth to product data, 7.85 ft of product
noted in well MW-2. 11:32 AM:- spoke with Kim and informed her about typo in elevation table. she
will submit revised one. also asked her to submit RIR and RAWP via mail. 11:51 AM:- received email
from Mr. Finnican including Mr. Dorto's phone number. Shirley Dorto / Joseph A. Dorto **property
owners** 39 Linden Street Malverne, NY 11565 Ph. (516) 887-1006 (516) 643-0133 received revised RIR
and signed copy of RAWP. 12:11 PM:- received email from Kim including revised GW elevation table
and map. after using correct information from field notes, groundwater flow found towards the
northeast. 11/20/15-Hiralkumar Patel. 11:02 AM:- spoke with Kim inquiring updates. she was out of
office and will call back next week after reviewing file.
12/08/15-Hiralkumar Patel. 1:49 PM:- sent
email to OER Hannah inquiring update. email copied to OER Shaminder.
12/10/15-Hiralkumar Patel.
2:53 PM:- spoke with Kim. she mentioned that the developer has received notice to proceed from NYC
OER, but project has not started yet. 2:56 PM:- tried Mr. Finnican's phone number multiple times,
but no response. 2:58 PM:- spoke with OER Hanna. she has not heard from property developer yet. she
checked NYC DOB record and noted that the developer has not received required DOB permit yet.
03/31/16-Hiralkumar Patel. 8:58 AM:- spoke with Kim and inquired her about current status. she
mentioned that site redevelopment is on hold. asked her to re-gauge existing wells.
04/01/16-Hiralkumar Patel. 2:54 PM:- received email from Kim. she mentioned that they are going to
the site next week to re-gauge the monitoring well. she inquired if product sample needs to be
collected for fingerprint analysis, if found in monitoring well. 3:42 PM:- sent email to Kim and
asked her to collect product sample for fingerprint analysis, if

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

found. 04/26/16-Hiralkumar Patel.
9:21 AM:- received report from EBC. abstract: - three monitoring wells (MW-1 through MW-3) were
gauged on 04/04/16 - found approx. 1-inch product in well MW-2 - depth to groundwater ranges in
depth from 5.85 to 7.94 ft bg - depth to groundwater in MW-2 could not be determined due to
thickness of product present - product sample from MW-2 was collected for fingerprint anslysis -
lab findings for the petroleum ID on the oil sample from MW-2 was inconclusive, with majority of
mass listed as unidentified . the chromatogram in general, however was noted to resemble that of
motor oil ---------- 12:05 PM:- spoke with OER Hannah inquiring about current status of project in
OER file. she will talk to project manager (Horace Zhang) and will call back. 04/28/16-Hiralkumar
Patel. 9:31 AM:- spoke with Kim. inquired her about current status of the site. she mentioned that
the developer is revising redevelopment plans due to revised floodplain maps. 12:58 PM:- spoke with
Mr. Finnican. he mentioned that they have not received required permit from NYCDOB yet. due to
revised floodplain maps, now they will not create a cellar and on-site building will not be
demolished. a new footings will be installed to extend existing one-story building into four-story
building. as redevelopment plan changed and there will be no basement, need a revised RAWP. 2:38
PM:- sent letter to Mr./Ms. Dorto and Mr. Finnican requiring implementation of interim remedial
measures (weekly well gauging/product removal) and determination of site-specific groundwater flow
direction (via installation of additional well). also asked them to collect endpoint samples, if
soil excavation occurs. asked them to submit report, including plans for remediation of all
contaminated media and vapor mitigation details, by the end of 07/01/16. letter emailed to Mr.
Finnican, OER Shaminder and Kim. 05/26/16-Hiralkumar Patel. received email from OER Horace Zhang
(at 5:21 PM on 05/25/16) including summary of meeting between OER, property owner and property
owner’s consultant. he mentioned that additional investigation scheduled for Friday 5/27 to -
install 1 additional groundwater well (MW4) to determine flow direction - convert MW2 to a 2 inch
well for increased product recovery - collect soil samples to delineate the extent of contamination
in 10 increments outward from MW2 he mentioned that because the development plans don t require
site-wide excavation, owner is also exploring the possibility of conducting test pits to delineate
the contamination/ potentially identify source.
construction/remediation is expected to begin in 2
to 3 months. the partial cellar is being eliminated to comply with DOB flood zone requirements. new

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

plans with finalized excavation depths will be submitted when the foundation design is completed.
11:40 AM:- received email from Kim. she mentioned that the following steps will be implemented at
the site to address the free-phase petroleum identified in monitoring well MW2: 1) installation of
a permanent groundwater monitoring well in the vicinity of MW2 2) replacement of existing
monitoring well MW2 with a 2-inch diameter well to improve product recovery efforts 3) gauging all
monitoring wells on-site and implementing product recovery of any free-phase product present 4)
installation of test borings around MW2 at 10ft intervals to delineate the extent of the
contamination. soils from each test boring will be screened with a PID and inspected for physical
evidence of petroleum contamination. test borings will extend from the location of MW2 in 10-ft
intervals until field conditions/PID readings do not indicate evidence of petroleum contamination
5) soil samples will be collected from the driest deepest depth of the test borings where visible
contamination is not present to confirm the horizontal extent of the petroleum-impacted soils. 6)
soils from the well installations will be screened continuously with a PID. soils samples from the
deepest driest interval and the interval with the highest PID reading will be retained for
laboratory analysis of VOCs and SVOCs (CP-51) Kim mentioned that the above work is scheduled to
commence at the site tomorrow, Friday 5/27. well gauging and product recovery efforts will continue
on a weekly basis. documentation of the weekly gauging/product removal will be submitted to NYSDEC
and OER for review. Kim submitted a site map with proposed well and test pit locations.
05/27/16-Hiralkumar Patel. 12:30 PM:- visited site and met Tom from EBC. he drilled couple of
borings, including proposed well MW4, around existing well MW2. well MW4 is installed west of well
MW2, where some oil staining noted. Trans Boro Fuel Oil is located to the west of the subject site.
Trans Boro Fuel Oil 481 Driggs Ave (alternate address: 198-200 N 10th St) Brooklyn, NY PH. (718)
389-1466 no PBS or spill record found for 481 Driggs Ave.
06/02/16-Hiralkumar Patel. received email
from Kim (at 10:04 AM on 06/01/16) including summary of observations during well/borings
installation on 05/27/16. stained soils/odors were detected in four test borings west of MW2 at
approximately 8-10 ft bg and extending to the western site boundary. PID readings were highest in
the boring where MW4 was installed, approximately 10 ft west of MW2, 40 ppm at 8-10 ft bg. borings
installed 10 ft north and south of MW2 contained minor staining at the 8-10 ft interval and PID
readings were low (0.0-1.8 ppm). test boring to the east of MW2 did

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

not have any visual or olfactory evidence of petroleum-impacted soils and PID readings at the 8-10 ft interval were 0.0 ppm. total of 12 soil samples were retained for laboratory analysis of VOC and SVOCs. the four monitoring wells at the site were gauged and sampled on May 31, 2016. a less than 1 layer of thick free-phase petroleum product was detected in MW2 and MW4. four groundwater samples were retained for laboratory analysis of VOC and SVOCs. groundwater flow direction was reassessed and appears to flow towards the northeast. 9:44 AM:- spoke with a person (who did not provide his name) at Trans Boro Fuel. he mentioned that they only park fuel oil truck at the site and don't have any storage tanks or repair shop at 481 Driggs Ave. 06/10/16-Hiralkumar Patel. 8:53 AM:- received email from Kim including results of weekly product removal conducted on 05/27/16 and 06/08/16. 0.03 ft of product found in well MW2 on 05/27/16. on 06/08/16, depth of product in MW2 could not be determined because the probe was coated with product. total of 24 oz of product/water mix was removed from MW2 on 06/08/16. 06/17/16-Hiralkumar Patel. 1:24 PM:- received email from Kim including results of weekly well gauging conducted on 06/16/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. depth of product in MW2 could not be determined because the probe was coated with product. total of 28 oz of product/water mix was removed from MW-2. 06/28/16-Hiralkumar Patel. received email from Kim (at 4:32 PM on 06/27/16) including results of weekly well gauging conducted on 06/23/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. depth of product in MW2 could not be determined because the probe was coated with product. total of 1/2 gal of product/water mix was removed from MW-2. faint reading indicating product noted in well MW-4. 06/30/16-Hiralkumar Patel. 8:12 AM:- received email from Kim including sampling report for delineation work conducted on 05/27/16. abstract: - installed total of eight soil borings (SBD1 through SBD8) within the vicinity of MW2 to horizontally delineate extent of petroleum-impacted soils - soil borings were installed to a depth of 10 ft bg - visually contaminated soil (grey/black stained) and PID readings were identified in three soil borings (SBD4, SBD6 and SBD7), all of which are located west of MW2 ---------- - as per site map, boring SBD2 was installed to replace well MW2 - total of 12 soil samples were collected for analysis: two each from SBD1, SBD3, SBD4, SBD6 and SBD7; and one each from SBD5 and SBD8 - installed a new 2-inch well MW4 west of existing well MW2 - existing 1-inch well MW2 was replaced with a 2-inch well - wells were installed with 10 ft of screen - depth to groundwater is approx. 7 ft bg - direction of

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

groundwater flow appears to flow towards the east/northeast ----------
- four groundwater samples
were collected - free-phase product is present in wells MW2 and MW4 -
petroleum-impacted soils
appear to be concentrated in the area of MW2, extending west towards
the property line at the 6-10
ft bg interval - found sandy silt with clay with ash in soil borings -
less than 10 ppm recorded on
PID in soil borings, excepts SBD4 (40 ppm at 8 ft bg) and SBD7 (29.6
ppm at 8 ft bg) - no
contamination noted in groundwater samples - found VOC contamination
in deeper soil samples from
SBD1, SBD4, SBD6 and SBD7 - highest contamination noted in boring SBD6
which is along the western
boundary of the site soil analyticals:
----------SBD1----------SBD4----------SBD6----------SB

recommendations from contractor: -
continuation of product removal effort on a weekly basis until site
redevelopment begins -
excavation to a depth of groundwater in the area of MW2 and MW4,
without compromising integrity of
existing structure or the adjacent structure, during site excavation
activities for the proposed
new building footings - collection and analysis of endpoint samples
the report does not include any
details about vapor mitigation efforts. 07/01/16-Hiralkumar Patel.
1:33 PM:- received email from
Kim including results of weekly well gauging conducted on 06/30/16.
wells MW-1, MW-2, MW-3 and MW-4
were gauged. no solid tone was detected for either well, indicating no
product. but when the probe
was removed, there was trace amount of product on probe for both MW-2
and MW-4. 07/05/16-Hiralkumar
Patel. reviewed weekly well gauging data and soil/gw delineation
results. based on well gauging
reports, groundwater found at around 8 ft bg in well MW-1; and between
5 and 6 ft bg in wells MW-2,
MW-3 and MW-4. based on these, heaviest soil contamination noted in
soil boring SBD6 was noted
below water table and no contamination noted in groundwater sample
from well MW-4, which is less
than 10 ft away from borings SBD6. 10:42 AM:- sent email to Kim and
asked her to submit a revised
RAWP as redevelopment plan has changed. email copied to Mr. Finnican.
10:45 AM:- received email
from Kim. she mentioned that RAWP will be revised once the finalized
plans are received from the
developer. 07/11/16-Hiralkumar Patel. received email from Kim (at 1:53

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

PM on 07/08/16) including
results of weekly well gauging conducted on 07/07/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged.
no solid tone was detected for either well, indicating no product. but when the probe was removed,
there was trace amount of product on probe for MW-2. MW-4 had no trace product. 07/18/16-Hiralkumar
Patel. 9:53 AM:- received email from Kim including results of weekly well gauging conducted on
07/13/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. no solid tone was detected for either well,
indicating no product. but when the probe was removed, there was trace amount of product on probe
for MW-2. MW-4 had no trace product. 07/22/16-Hiralkumar Patel. 9:18 AM:- received email from Kim
including results of weekly well gauging conducted on 07/21/16. wells MW-1, MW-2, MW-3 and MW-4
were gauged. no solid tone was detected for either well, indicating no product. but when the probe
was removed, there was trace amount of product on probe for MW-2. MW-4 had no trace product.
08/05/16-Hiralkumar Patel. received email from Thomas Gallo (at 4:15 PM on 08/04/16) from EBC
including results of weekly well gauging conducted on 08/03/16. wells MW-1, MW-2, MW-3 and MW-4
were gauged. thick product encountered in MW-2. product coated interface meter probe preventing
depth to water reading in MW-2. trace product noted in MW-4. 08/31/16-Hiralkumar Patel. received
email from Thomas Gallo (at 8:12 PM on 08/14/16) including results of weekly well gauging conducted
on 08/11/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product encountered below
groundwater interface and in bottom 3 ft (12-15 ft bg) in MW-2. trace product noted in MW-4.
received email from Thomas Gallo (at 8:06 PM on 08/21/16) from EBC including results of weekly well
gauging conducted on 08/19/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product
encountered in MW-2. trace product noted in MW-4. 09/01/16-Hiralkumar Patel. 9:31 AM:- received
email from EBC including results of weekly well gauging conducted on 08/26/16. wells MW-1, MW-2,
MW-3 and MW-4 were gauged. thick product encountered in MW-2. trace product noted in MW-4.
09/12/16-Hiralkumar Patel. received email from EBC (at 8:52 PM on 09/11/16) including results of
weekly well gauging conducted on 09/02/16 and 09/09/16. wells MW-1, MW-2, MW-3 and MW-4 were
gauged. thick product coated probe at MW-2 and trace product noted in MW-4 during both events.
09/23/16-Hiralkumar Patel. received email from EBC (at 5:40 PM on 09/22/16) including results of
weekly well gauging conducted on 09/15/16 and 09/22/16. wells MW-1, MW-2, MW-3 and MW-4 were
gauged. thick product coated probe at MW-2 and some light staining on tubing from well MW-4 during

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

both monitoring events. 10/13/16-Hiralkumar Patel. received email from EBC (at 7:09 PM on 10/12/16)
including results of weekly well gauging conducted on 09/29/16. 0.03 ft of product noted in MW-2
and some light staining on tubing from well MW-4. 11/01/16-Hiralkumar Patel. received email from
EBC (at 1:36 PM on 10/31/16) including results of weekly well gauging conducted on 10/12/16. 0.05
ft of product noted in MW-2 and some yellow staining on tubing from well MW-4. 11:45 AM:- received
email from Kim including results of weekly well gauging conducted on 10/28/16. thick product coated
probe at MW-2 and some yellow staining on tubing from well MW-4. 11/16/16-Hiralkumar Patel. 8:34
AM:- received email from Kim including results of weekly well gauging conducted on 11/04/16 and
11/11/16. thick product coated probe at MW-2 and some yellow staining on tubing from well MW-4
during both monitoring events. 11/23/16-Hiralkumar Patel. 11:08 AM:- received email from Kim
including results of weekly well gauging conducted on 11/22/16. no product was detected with
interface probe in MW-2, but mostly yellow oil mix in purged groundwater and thick product coated
outside of tubing. no product in purged groundwater from MW-4, but some yellow staining on tubing.
12/05/16-Hiralkumar Patel. 12:30 PM:- received email from Kim including results of weekly well
gauging conducted on 12/02/16. no product was detected with interface probe in MW-2, but mostly
yellow oil mix in purged groundwater and thick product coated outside of tubing. no product in
purged groundwater from MW-4, but some yellow staining on tubing. 12/13/16-Hiralkumar Patel. 2:44
PM:- received email from Kim including results of weekly well gauging conducted on 12/09/16. no
product was detected with interface probe in MW-2, but thick product coated bottom and sides of
tubing. no product in purged groundwater from MW-4, but some thick product at the tip of tubing.
12/27/16-Hiralkumar Patel. 9:33 AM:- received email from Kim including results of weekly well
gauging conducted on 12/16/16. light film of product on interface probe in well MW-2. product seen
on bailer at 4 ft below groundwater interface in MW-2. MW-4 had no product in purged groundwater,
but some yellow staining on bailer and tubing. 01/10/17-Hiralkumar Patel. 10:44 AM:- received email
from Kim including results of weekly well gauging conducted on 01/09/17. 0.02 ft of product was
detected in MW-2 including thick film of product coated on interface probe. also thick product
lined inside and outside of tubing during purging of well. MW-4 had small amount of staining on
bottom, inside tubing from purging. 02/01/17-Hiralkumar Patel. 2:34 PM:- received email from Kim
including results of weekly well gauging conducted on 01/18/17 and

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

01/26/17. during both events, no
product detected with interface meter, but small particles of product in purged groundwater from
MW-2. also thick product lined inside and outside of tubing during purging of well MW-2. MW-4 had
small amount of staining on bottom, inside tubing during purging. 02/14/17-Hiralkumar Patel. 9:23
AM:- received email from Kim including results of weekly well gauging conducted on 02/02/17. small
amount of product in purged groundwater from wells MW-2 and MW-4. 02/27/17-Hiralkumar Patel. 9:03
AM:- received email from Kim including results of weekly well gauging conducted on 02/17/17 and
02/24/17. 0.01 ft of product noted in well MW-2 during both gauging events. no product found in
MW-4. 03/21/17-Hiralkumar Patel. 9:51 AM:- received email from Kim including results of weekly well
gauging conducted on 03/03/17 and 03/16/17. 0.01 ft of product noted in well MW-2 during both
gauging events. no product found in MW-4. 04/25/17-Hiralkumar Patel. received email from Kim
including results of weekly well gauging conducted on 03/23/17, 03/30/17, 04/06/17 and 04/20/17.
during all four gauging events, trace amount of product noted around casing in well MW-2. based on
gauging results, Kim proposes to install a filter sock in the well to reduce the frequency of
product removal. 05/04/17-Hiralkumar Patel. 2:31 PM:- spoke with Kim. informed her that based on
review of available information, the Department agrees with proposal of installation of filter sock
in affected well MW-2, but recommends sock in well MW-4 also as had product in past. Kim agrees
with it and proposes to monitor wells twice a month at beginning and modify frequency based on
monitoring results. asked Kim to send email including proposed well monitoring frequency. also
asked her to submit revised RAWP as site development plans have changed. 05/10/17-Hiralkumar Patel.
3:51 PM:- received email from Kim. she mentioned that based on the recent inspections at the site,
the majority of free-phase petroleum product has been removed via weekly purging efforts. remnants
of free-phase product are visible on product removal tubing over the last four rounds of removal,
which appears to be only from product coating on the PVC piping. Kim proposed installation of an
absorbent sock for monitoring wells MW2 and MW4 where free-phase product has previously been
detected. the socks at each well will be inspected on a bi-monthly basis. during each inspection, a
groundwater interface probe will be used to identify the presence of any free-phase product within
each of the wells. any free-phase product will subsequently be pumped out and drummed on-site. Kim
mentioned that there is no proposed cellar in the revised redevelopment plans; therefore, she will

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

be submitting a revised Remedial Action Workplan shortly. 3:58 PM:- received email from Kim
including link to revised redevelopment plans. 05/11/17-Hiralkumar Patel. 8:39 AM:- received email
from Kim including results of weekly well gauging conducted on 05/05/17. found 0.02 ft of product
in well MW2. Kim mentioned about report dated 04/27/17, but email included report for 03/16/17.
05/19/17-Hiralkumar Patel. 2:10 PM:- sent email to Kim and asked her to submit missing well
monitoring report for 04/27/17. 05/22/17-Hiralkumar Patel. 7:57 AM:- received email from Kim
including well gauging report for 04/27/17. found 0.01 ft of product in well MW2. 1:36 PM:- left
message for Kim. informed her that based on all available information, the Department agrees with
proposal to place absorbent socks in wells MW2 and MW4 and monitor those on bi-monthly basis.
inquired her about revised remedial action work plan.
06/14/17-Hiralkumar Patel. 9:41 AM:- received
email from Kim including well gauging report for 06/07/17. found 0.02 ft of product in well MW2.
absorbent socks were installed in wells MW2 and MW4.
07/11/17-Hiralkumar Patel. received email from
Kim (at 4:31 PM on 07/10/17) including link to revised redevelopment plans (previously submitted).
received email from Kim (at 4:37 PM on 07/10/17) including copy of a revised stipulation list (OER
document). summary: - revised stipulation list serves as an addendum to the RAWP - proposed
building will no longer feature a cellar level - excavation will be limited to approx. 3 ft bg
across the site for structural footings/pile caps, and to a 5 ft for an elevator pit - first floor
will feature a residential lobby and a retail/commercial unit - the mezzanine level above the first
floor will feature a mechanical room, retail space and an outdoor retail terrace - second through
fourth floors will features residential units - delineation and remediation of two hotspots: 1)
mercury hotspot at sample B6, and 2) SVOC hotspot at sample B8 - a composite cover (comprised of
concrete foundation/slabs) will be placed over the entire footprint of the site - collection and
analysis of four (4) end-point samples from the bottom of the excavation to evaluate the
performance of the remedy with respect to attainment of Track 4 SCOs - a 20-mil waterproofing
membrane/vapor barrier will be installed beneath the structure’s slab and along foundation
sidewalls the revised stipulation list (addendum to RAWP) does not include any discussion about
remediation of petroleum contaminated materials noted in area around wells MW2 and MW4. 12:18 PM:-
spoke with OER Shaminder and OER Horace and discussed submitted revised stipulation list. informed
Shaminder that the department requires remediation of petroleum

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

contaminated materials noted in
area around MW2/MW4, collection of endpoint samples after remediation in area around MW2/MW4 and
installation of SSDS (if required by NYSDOH) based on known petroleum impact beneath the site.
12:31 PM:- sent email to OER Shaminder and OER Horace including above discussion. asked them to
provide a revised RAWP including the missing info. 07/13/17-Hiralkumar Patel. received email from
OER Shaminder (at 12:28 PM on 07/12/17) including updated briefing. he has asked EBC to prepare a
new RAWP including DEC requirements listed in email dated 07/11/17. email was copied to DOH Nathan
inquiring about SSDS requirement. 3:38 PM:- received email from DOH Nathan. he mentioned that SSDS
is not needed based on the fact that the structure will be slab on grade, proposed excavation of
hot spots, minimal detects in GW and soil vapor results.
08/04/17-Hiralkumar Patel. 11:09 AM:-
received email from OER Shaminder including revised draft RAWP. plan proposes excavation for
development to 3 feet across entire site; three hotspots removal for mercury, SVOCs and petroleum
soil; collection/analysis of endpoint samples; and installation of vapor barrier and an active
SSDS. 09/20/17-Hiralkumar Patel. 9:58 AM:- sent email to OER Shaminder and informed him that no
comments from DEC. asked him to submit final copy of RAWP and work schedule. email copied to OER
Horace. 09/28/17-Hiralkumar Patel. 10:36 AM:- received email from Kim. she mentioned that
developers will be commencing excavation in near future, but they are concerned about structural
integrity of existing foundation wall (which will remain as part of redevelopment) during
excavation of petroleum impacted soils. Kim proposed to either excavate soil in slope (which will
leave contamination in area of SBD6 in-place) or dug near the foundation wall to a depth of
groundwater and immediately backfill the excavation. Kim inquired about any further remediation
needed if excavation extends to the groundwater and chemical oxidant applied in excavation prior to
backfilling. 12:48 PM:- spoke with Kim and recommended her to excavate to water table near the
foundation, only if it is safe (or using shoring). informed her that remediation of any remaining
soil contamination beneath the water table may not be needed based on available soil and
groundwater data. Kim will discuss excavation options with site developer. 11/01/17-Hiralkumar
Patel. 1:07 PM:- received email from Kim including soil sample results summary table. she mentioned
that the area of petroleum soil was excavated last week. soil endpoint samples were collected from
the base of the excavation (10.5ft) and sidewalls. the excavation was extended to the north by 2-3

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

ft where initial endpoint samples failed to meet soil cleanup objectives. soil endpoint samples from the western sidewall and bottom sample also failed to meet soil cleanup objectives; these locations could not be excavated further without compromising the structural integrity of the adjacent foundation wall. the final depth of the excavation was completed to 10.5 ft. no staining was apparent on soils from the 10 ft below grade interval. prior to backfilling, a chemical oxidant was applied to the base of the excavation. report will be submitted soon. as per sample result summary table, endpoint sample from north sidewall showed presence of contamination which was removed via further excavation. some contamination noted in endpoint sample from west sidewall (3,390 ppb total BTEX) and bottom (305 ppb total BTEX). 11/30/17-Hiralkumar Patel. 12:33 PM:- Kim sent spill closure report via DEC's file transfer service. 12/06/17-Hiralkumar Patel. after reviewing all available information (product removal from impacted wells, removal of contaminated soil, results of endpoint samples, proposed installation of vapor barrier and an active SSDS), no further investigation/remediation is required in area around well MW2 where petroleum impact was noted. spill case can be closed upon receipt of confirmation for installation of proposed vapor barrier and SSDS, unless contamination noted in other areas during site's redevelopment. 10:07 AM:- left message for Kim. 10:17 AM:- sent email to Kim. informed her that no further investigation/remediation is required in the area around well MW2 where petroleum impact was noted. also informed her that the subject spill case can be closed upon receipt of confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact noted in other areas during site s redevelopment. asked her to provide estimated schedule for installation of vapor barrier/SSDS. email copied to Mr. Finnican, OER Shaminder and DOH Nathan. 10:30 AM:- received email from Kim stating that Patrick Recio will be managing this project. Patrick Recio EBC Ph. (631) 504-6000 email: precio@ebcincny.com 08/09/18-Hiralkumar Patel. 10:59 AM:- sent email to Patrick inquiring project update. email copied to Mr. Finnican, OER Shaminder and OER Samantha. 12:04 PM:- received email from Patrick. he mentioned that there has not been much activity at the site since December of 2017. there was minimal excavation of the elevator pits towards the front of the site that were lined with Graceprufe 300R waterproofing/vapor barrier and inspected by EBC. a few trucks of soil were removed from the site since beginning of 2018 and that material had no evidence of petroleum contamination. the SSDS and the vapor barrier

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

have not yet been installed.
07/16/20-Hiralkumar Patel. 11:31 AM:- sent email to Patrick inquiring updates. email copied to OER
Shaminder, OER Samantha, Kim and Mr. Finnican. 11:48 AM:- received email from Charlie Sosik from
EBC stating that Robert Bennett is currently managing project at EBC.
07/21/20-Hiralkumar Patel.
9:51 AM:- sent email to Robert inquiring updates. email copied to Charlie, OER Shaminder and OER
Samantha. Robert Bennett EBC Ph. (631) 504-6000 Ext. 116 email: rmbennett@ebcincny.com
07/22/20-Hiralkumar Patel. 9:07 AM:- received email from OER Shaminder. he mentioned that
remediation at the site started in October 2017 and development work was completed by January 2020.
OER recently (July 10th) reviewed final report and sent back comments. OER will send revised report
once available. 02/25/21-Hiralkumar Patel. 2:08 PM:- sent email to Robert and asked him to submit
report. email copied to OER Shaminder and Charlie. 2:21 PM:- received email from OER Shaminder
stating that they have provided comments on revised RAR last month and waiting on final report
soon. 04/14/21-Hiralkumar Patel. received email from OER Shaminder (at 3:52 PM on 04/13/21)
including link to remedial action report and requesting spill closure.
he mentioned that following
activities occurred at the site: - performed Waste Characterization on July 17, 2017 - following
excavations were performed: excavation to 3 ft bg across the site. the elevator pit was excavated
to a final depth of 5 ft. in addition, a 6 ft by 6ft area around EP 1 (mercury hotspot) was
excavated an additional 6 inches and a 6 ft by 6 ft area around EP2 (SVOC hotspot) was excavated an
additional foot. - free product removal: from May 27 2016, to June 7, 2017, monitoring wells MW2
and MW4 were gauged weekly and any free-phase product present in the monitoring wells was removed
by bailer and containerized in a 55-gallon drum. absorbent socks were installed in both monitoring
wells on June 7, 2017, and weekly product removal efforts were decreased to bi-monthly until Site
excavation commenced - petroleum impacted soil removal: on October 23, 2017, the area delineated as
the petroleum hotspot was excavated using a track-mounted excavator to the fullest extent possible.
a 3 ft setback from the western foundation wall was required in order not to compromise the
integrity of the adjacent foundation wall. the final excavation area was approximately 22 ft by 22
ft. petroleum impacted soil was excavated to approximately 4 to 10.5 ft below grade. no odors or
staining were observed at the 8-10 ft below grade interval. EBC collected four sidewall endpoint
soil samples (Hot Spot S, Hot Spot W, Hot Spot E, Hot Spot N) and a bottom endpoint soil sample

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

(Hot Spot Bottom) from the petroleum hotspot excavation. to address the residual VOCs detected in
the endpoint soil samples, a powdered chemical oxidant was applied directly to the residual soil
and raked in with the excavator before backfilling - collected and analyzed seventeen (17) endpoint
samples from bottom of excavations and from hotspot areas to determine the performance of the
remedy with respect to attainment of Track 4 Site-Specific SCOs - track 4 remedy was achieved -
Composite cover - Vapor barrier; and - site management plan as per the report, a 20-mil thick vapor
barrier was installed beneath the building/elevator pits. the report also states that on
05/16/2019, OER determined that an active SSDS was no longer required at the site.
---------- 04/19/21-Hiralkumar Patel. 5:04 PM:- sent email to OER Shaminder and asked him
to call back to discuss reason for not installing SSDS. email copied to OER Samantha.
04/23/21-Hiralkumar Patel. 12:38 PM:- received email from OER Shaminder. he mentioned that OER
reevaluated soil and soil vapor contamination and agreed with development team that implemented
remedy (only vapor barrier and no SSDS) is protective of environment and public health. he also
stated that the development team will obtain one round of indoor and outdoor air samples prior to
spill closure. OER plans to issue Notice of Satisfaction this week for building occupancy and
Notice of Completion will be issued after spill is closed.
04/30/21-Hiralkumar Patel. as per the
RAR, remedial actions begun on 10/13/2017 and was completed on 01/06/2020. all endpoint samples
were collected in Oct. 2017 and those results were previously submitted in spill closure report
dated Nov. 2017. based on those samples results, the property owner/consultant were informed via
email on 12/06/2017 that no further investigation/remediation is required in the area around well
MW2 where petroleum impact was noted, and the subject spill case can be closed upon receipt of
confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact
noted in other areas during site s redevelopment . OER reevaluated sample results and agreed not to
install a SSDS. a vapor barrier has been installed beneath the building. 10:25 AM:- sent email to
OER Shaminder. informed him that the submitted Remedial Action Report dated March 2021 includes
result of endpoint samples collected in/around Oct. 2017 and these sample results were already
submitted in the Spill Closure Report dated Nov. 2017. based on these sample results and other
information available at that time, an email was sent to Kim at EBC (copied to NYSDOH, NYCOER and
property owner) on 12/06/2017 stating Based on review of all available

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

information, the Department
does not require further investigation/remediation in the area around well MW2 where petroleum
impact was noted. Please note that the subject spill case can be closed upon receipt of
confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact
noted in other areas during site s redevelopment. informed OER Shaminder that as NYCOER determined
no need for SSDS and a vapor barrier has been installed beneath the building, the Department will
wait for results of indoor/outdoor air sampling during the next heating season prior to considering
spill closure. asked him to provide air sampling schedule, once available. email copied to OER
Samantha and Kevin (EBC). 12:37 PM:- received copy of Notice of Satisfaction from NYC OER.
08/04/21-Hiralkumar Patel. 9:05 AM:- received email from OER Shaminder including an indoor air
sampling report. summary: - one indoor air (IA1) and one outdoor air (OA1) were collected - sample
IA1 was collected in the breathing zone at a height of 3-4 ft above the floor, from the rear of the
commercial space of the 202 N 10th St building - petroleum VOCs (max. 41.7 ug/m3 of Xylene) and PCE
(1.25 ug/m3) were noted in indoor air sample; similar compounds were also noted in outdoor air
sample 08/05/21-Hiralkumar Patel. 1:36 PM:- forwarded indoor air sampling report to DOH Nathan for
review. 08/06/21-Hiralkumar Patel. 10:28 AM:- received email from DOH Nathan stating that based on
remediation conducted at the site and the low levels of VOCs detected in indoor air, he does not
believe additional sampling will be necessary; however, should odors appear at a later date or
during the heating season, additional sampling may be warranted. 08/12/21-Hiralkumar Patel. case
closed based on review of all available information. 12:14 PM:- sent email to OER Shaminder and
informed him about spill closure. email copied to OER Samantha.

Remarks: Phase 2 revealed contaminated groundwater and soil. Clean up is pending OER approval.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	001
Tank Id:	12688

STAR SOAP - CANDLE CO (Continued) **U003387855**

Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None

Tank Location: Partially buried tank (tank with 10% or more below ground).... Tank is less than 90% above grade, partially buried.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 12/01/1948
Capacity Gallons: 3000
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 01/01/2014

CON ED (Continued) **S108638588**

DEC Memo: 6/29/07 - Raphael Ketani. The site is at the corner of 12 Street and Driggs Avenue in Brooklyn. It is a vacant lot that had 2 tanks in a vault. The tanks were pulled many months ago and contaminated soil was found. Otherwise, there are no other significant issues with the site. The PBS registration is for 432 Driggs Avenue (one of the alternate addresses). The PBS is #2-282464. A 3000 gal. tank with #2 oil was closed in place on 12/1/69. (I had thought I saw 2 tanks during my site visit months ago.) The site is block and lot 02291 and 0017. The owners are 432 Driggs Avenue Corp., 432 Driggs Avenue, Brklyn, 11211-1116. Other listed owners are Edward H. Freiberger, 9 Prospect Park West, Brklyn., 11215, and Gary R. Goldberg, 11 Woodlawn Avenue, Great Neck, NY, 11023. The attorney for the owners is Dave Yudelson (212) 421-2150/cell (917) 295-6449 at Sive Paget & Riesel, P.C., 460 Park Avenue, NY, 10022-1906. 7/16/07 - Raphael Ketani. Mr. Yudelson called me. Soil samples were taken in the vault area and they came back with oil contamination. He said that the parking lot has the tank vault area amd it will be dug up, and end-point samples taken. I told him I wanted to see the site when everything is dug up and fresh soil is exposed. He said that there is a small building adjacent to the site and this will also be knocked down. He added that I will be called to see the site once the soil and building are removed. 10/2/07 - Raphael Ketani. I tried to contact Mr. Yudelson, but could only leave a message. 10/3/07 - Raphael Ketani. I received an e-mail from Mr. Yudelson stating that DEP just gave permission to do the digging and that he will let me know when they will start. 11/28/07 - Raphael Ketani. I tried to contact Mr. Yudelson, but could only leave a message. Mr. Yudelson called me back. He said that they are waiting until they get all of the building plans before any work takes place. The documents have to be submitted to the City before anything can happen. 1/9/08 - Raphael Ketani. I tried to contact Mr. Yudelson at (212) 421-2150, but could only leave a message. 1/10/08 - Raphael Ketani. Mr. Yudelson sent me an e-mail that the owner is presently demolishing the building and will begin excavation in the next 3 weeks. He will let me know when the excavation starts. 4/8/08 - Raphael Ketani. I tried to contact Mr. Yudelson, but could only leave a voice mail on his cell (917) 295-6449. 4/17/08 - Raphael Ketani. Mr. Yudelson called. He said that excavation at the site will probably take place in 2 to 3 weeks. He said that getting the permits from the City was holding things up. The financing for the project will also come along in 2 to 3 weeks. 8/18/08 - Raphael Ketani. The case is being prepared for transfer due to a case

CON ED (Continued) **S108638588**

realignment within the unit.
The case manager needs to make followup calls to check on the progress of the investigation and
remediation. The DEC needs to receive the investigation/remediation report and the revised PBS
registration for two tanks. 11/18/11-Vought-Received email from EBC Sosik that My understanding was
that DEC was going to close the spill on this one. Its still shown as open on the database. Please
advise. Thanks. Vought replied that must admit this may be one of the sites that I assisted
Veronica Zhune (who is the current PM) on. Please remind us of the site status and any discussions
you, possibly I and Veronica had. I checked the Spill notes and no mention of prior conversations
were noted so please refresh us'. Vought cc'd DEC Zhune on reply.
08/22/12- DEC-Jeff Vought,
DEC-Veronica Zhune and OER- Shaminder had a conference call to discuss futher actions to this site.
Shaminder will sent the Remedial Action Plan to DEC and the NYCDOH for review. 08/28/12- Hannah
Moore sent the Remedial Action Plan dated 02/15/12. The Department has no objections to the
Remedial Action Work Plan prepared by Environmental Business Consultants dated February 15, 2012.
After discussion with Randy, the Department will be keeping the spill open until we receive a
Remedial Action Report (including the confirmation soil sample analyticals) as per Path 1 of
Addendum to the MOA between DEC and OER. 12/27/13-Vought-Called and spoke to OER Chawla and soil
vapor samples were collected and results reviewed by NYCDOH as part of NYC BCP and as such passive
SSDS accetable to DEC and no indoor air monitoring or sampling required by DEC. Spill closed as per
Jeff Vought.

Remarks: RAPHAEL KATENI FROM DEC REGION 2 OBSEVED TANKS BEING REMOVED SEVERAL MONTHS AGO WITH NO PROBLEMS, RECENT SOIL SAMPLES SUGGEST CONTAMINATION: RAPHAEL KATENI WAS ADVISED ROUGHLY 1/2 HOUR AGO:

DEC Memo:	6/5/23 - Kim - Desk Duty - Yu Associates performed a site investigation as this is an OER E-designated site. The Phase II investigation was performed on 5/15 and 5/16. During the field investigation, it was noted that soil sampled during boring installation exhibited petroleum odors. Yu Assoc. collected soil and groundwater samples. Based on their review, soil samples contained BTEX exceeding residential SCOs and groundwater samples contained BTEX exceeding TOGS standards. Copy of lab report and, when available, Phase II report were requested via email. chang@yu-associates.com 06/06/23-Hiralkumar Patel. downloaded Phase I from NYC OER EPIC database. 10:30 AM:- DEC Kim forwarded email from Chengyu Hang including site map and sample results. Chengyu Hang YU & Associates PH. (201) 873-7543 email: chang@yu-associates.com

213 NORTH 8TH STREET (Continued) **S130464691**

06/13/13-Hiralkumar Patel.
alternate address: 211-215 N 8th St no PBS or other spills found.
summary of Phase I dated Aug.
2021: - as per historical maps, the subject site consisted of one (1)
3-story residential building,
one (1) 2-story wagon shed building and one (1) 3-story retail store
building from 1887-1942.
between 1942 and 1951, there was a 2-story building with a gasoline
UST (near N 8th St) and a
3-story retail store building. the 2-story building was maintained
from 1951 until now. the 2-story
building was used as a manufacturer from 1951 to 1965 and became a
wastepaper recycling facility
between 1965 and 2007, the 3-story retail store building was
demolished after 1965 and used as a
parking lot until 1991 and became part of building addition.
currently, the site is a
winery/restaurant - site has 'E' designation - nearest surface water
body is East River which is
about 0.5 mile away to the west 08/04/23-Hiralkumar Patel. received
email from Chengyu (at 3:39 PM
on 08/03/23) including link to RIR and draft RAWP. summary of RIR
dated July 2023: - currently, the
site is vacant and contains a partial basement located at the
south-east portion of the site -
proposed future use of the site will consist of a six-story mixed use
commercial-residential
building with a full cellar - existing building will be demolished
prior to redevelopment - the
entire lot will be excavated to the groundwater level, which is
approx. 9-10 ft bg for the
construction of the cellar - elevation of property ranges from 15 to
15.9 ft - GPR survey did not
identify any USTs - installed six (6) soil borings (SB-1 through SB-6)
were advanced to the
groundwater level, which is approx. 9-10 ft bg - stratigraphy of the
site, from surface down,
consists of approx. 5 ft of fill material underlain by 5-10 ft of
brown fine silty sand - soil
samples from each boring were collected at surface level (0-2 ft bg)
and subsurface level (highest
PID or 2 ft above groundwater interface) - elevated PID readings were
detected in SB-1, SB-2 and
SB-5 with max readings at the groundwater smear zone - strong
petroleum odors and higher PID
readings (79.4 to 280.7 ppm with max at 8-9 ft bg) were noted in
boring SB-1 - strong petroleum
odors and higher PID readings (94.6 to 238.7 ppm with max at 9-10 ft
bg) were noted in boring SB-2
- strong petroleum odors and higher PID readings (62.5 to 176 ppm with
max at 9-10 ft bg) were
noted in boring SB-5 - total twelve (12) soil samples were analyzed
soil analyticals (in ppb):
----------SB-2---------SB-3--------SB-5 8-10 ft 7-9
ft 7-9 ft
Ethylbenzene----------3,500--------2,700-------8,300
Xylene----------2,600--------5,100------18,000

213 NORTH 8TH STREET (Continued) **S130464691**

1,2,4-Trimethylbenzene----------15,000------18,000 - installed three (3) 1-inch diameter
temporary wells (GW-1 through GW-3) with 10 ft of screen - temporary wells were installed by
over-drilling soil borings approx. 4-5 ft below the groundwater table - well GW-1 was installed in
boring SB-1 - well GW-2 was installed in boring SB-6 - well GW-3 was installed east of boring SB-2
- depth to groundwater ranges from 8.77 to 9.74 ft bg - groundwater flow is generally to south-west
- total three groundwater samples were analyzed groundwater analyticals (in ppb):
----------GW-3 Ethylbenzene----------360
Xylene----------320
1,2,4-Trimethylbenzene-------320 - installed five (5) soil-vapor probes to the two ft above
groundwater level interval (appox. 7-9 ft bg) and collected five soil-vapor samples for analysis -
detected 1,1,1-Trichloroethane (540 ug/m3) and TCE (12 ug/m3) in sample SV-1 the draft RAWP
proposes: - excavation of entire footprint of site to the groundwater level for development
purposes - over-excavation in area where petroleum-impacted soil is observed from the excavation
bottom extending up to 3-5 ft below groundwater level - excavation of small portion of property to
the depth of 15 ft bg for elevator pits - removal of any USTs found during excavation - application
of ORC for in-situ bioremediation to treat on-site groundwater contamination - on-site groundwater
monitoring after ORC application - collection and analysis of endpoint samples - construction of
6-inch thick concrete building slab - installation of 46-mil vapor barrier beneath the building
slab and 32-mil vapor barrier outside all sub-grade foundation sidewalls review of available data
indicates presence of petroleum contamination in soil near the groundwater interface and in
groundwater along the upgradient side of the site, which could be result of off-site release. as
such, further groundwater investigation is needed via installation of permanent monitoring wells
(including one upgradient of SB-5, one at GW-3, one at SB-3 and at least one downgradient of the
site/grossly contaminated zone) prior to any comment on proposed ORC application/on-site monitoring
(off-site monitoring may also be needed based on delineation data/endpoint sampling results). 11:21
AM:- spoke with Chengyu and asked him to provide property owner's contact info. 11:38 AM:- received
email from Chengyu including property owner's contact info. LC & LH Realty Corp. **property owner**
923 60th Street Brooklyn, NY 11219 Attn: Cheng Kin Chau PH. (917) 642-0899 email:
kincheng668@yahoo.com 1:54 PM:- sent email to Chengyu. informed him that review of available
sampling data indicates presence of petroleum contamination in soil

213 NORTH 8TH STREET (Continued) **S130464691**

near the groundwater interface
and in groundwater along the upgradient side of the site, but source of such contamination has not
been defined yet. as such, the Department requires further subsurface soil and groundwater
investigation via installation of permanent monitoring wells (including one upgradient of SB-5, one
at GW-3, one at SB-3 and at least one downgradient of the site/grossly contaminated zone) prior to
finalizing a remedial action work plan. asked him to submit an investigation work plan, including
schedule for field work/report submission. email copied to OER Shaminder, Mr. Chau and Sixuan Wang
(swang@yu-associates.com). 10/17/23-Hiralkumar Patel. received email from Chengyu (at 3:31 PM on
09/27/23) including a supplemental investigation work plan. Chengyu didn t propose permanent wells
since the owner will demolish and redevelop the site later. if permanent monitoring wells are
warranted after the supplemental remedial investigation, they will be installed in the basement of
the proposed new building after the construction is completed. the regional groundwater flow
direction is obtained from the adjacent properties investigation reports. summary: - as per the
remedial investigation reports for the adjacent properties (207 N 8th St, 219-233 N 8th St and
212-218 N 9th St), regional groundwater flow direction is towards northwest --------- - five test
borings will be advanced to the groundwater level - depth of groundwater is expected at approx.
9-10 ft bg - boring MW-1/B-1 is proposed at upgradient of previous boring SB-4 - boring MW-2/B-2 is
proposed at previous boring SB-5 - boring MW-3/B-3 is proposed at previous well GW-3 - boring
MW-4/B-4 is proposed at previous boring SB-3 - boring MW-5/B-5 is proposed at downgradient of the
site/grossly contaminated zone - upto two soil samples will be collected from each five test
boring: one sample will be collected at the groundwater smear zone (approx. 8-10 ft bg) and second
soil sample may be collected from above groundwater level if elevated PID readings and/or visual
and olfactory observations are noted - five 2-inch diameter temporary monitoring wells will be
installed in five test borings - wells will be installed to approx. 5 ft below the water table with
10 ft of screen the work plan needs to be revised as missing collection of soil samples at highest
PID/observation of contamination and more specific schedule for report submission.
10/20/23-Hiralkumar Patel. 1:15 PM:- sent email to Chengyu and asked him to submit a revised work
plan including collection of soil samples at highest PID/observation of contamination and deepest
dry, and more specific schedule for submission of investigation report. email copied to OER

213 NORTH 8TH STREET (Continued) **S130464691**

Shaminder, Ms. Wang and Mr. Chau. 10/27/23-Hiralkumar Patel. received email from Chengyu (at 4:15
PM on 10/26/23) including a revised work plan. 11/03/23-Hiralkumar Patel. 9:14 AM:- sent email to
Mr. Chau including approval letter for work plan dated 10/26/23. asked him to submit investigation
report by COB 12/22/2023. email copied to OER Shaminder, Chengyu and Ms. Wang. 12/15/23-Hiralkumar
Patel. received email from Chengyu (at 3:17 PM on 12/14/23) including copy of supplemental
investigation report. 12/21/23-Hiralkumar Patel. 10:59 AM:- received email from Chengyu including
link to a draft RAWP. 01/04/24-Hiralkumar Patel. reviewed previously submitted investigation report
and draft RAWP. summary of supplemental investigation report dated 12/14/23: - geophysical survey
was performed on 11/10/23 - total of five (5) soil borings (B-1 through B-5) were advanced -
borings B-1 to B-4 were installed to 15 ft bg - boring B-5 was installed to 5 ft below basement
slab - soil samples were collected at 2 ft above groundwater (8-10 ft bg) interval and at the
location of the highest PID reading - total of seven (7) soil samples were analyzed - SVOCs
detected in majority of samples, with higher level in samples from boring B-3 - found some
contamination in soil samples from boring B-3 (7,20 ppb Xylene, 72,000 ppb Naphthalene) - five (5)
2-inch diameter temporary monitoring wells (MW-1 to MW-5) were installed with 10 ft of screen and 5
ft of riser - one groundwater sample was collected from each of the temporary well groundwater
analyticals (in ppb):
----------MW-2------MW-3------MW-4------MW-5
Benzene----------22--------72--------37
Toluene----------9--------76
Ethylbenzene----------33-------500--------11--------11
Xylene----------160-------750--------28--------44
1,2,4-Trimethylbenzene---------100-------200--------40--------54
1,3,5-Trimethylbenzene----------20--------50
Naphthalene----------1,100-----5,100-------120-------920
summary of draft RAWP dated Dec. 2023: - proposed future use of the site will consist of a six-story mixed use
commercial-residential building with a full cellar - retail space, sprinkler room, utility/gas
meter rooms, and storage rooms in the cellar - retail space, residential lobby, an office and a car
elevator on the first floor - 14 parking spaces on second floor - residential units on the
third-sixth floor - existing building will be demolished prior to redevelopment - the entire lot
will be excavated to the groundwater level, which is approx. 9-10 ft bg, for the construction of
the cellar - over excavation will be performed where petroleum-impacted soil is observed from the
excavation bottom extending up to 3-5 ft below groundwater level -

213 NORTH 8TH STREET (Continued) **S130464691**

petroleum-stained soils in the
northeast portion of the site should be over-excavated to approx. 3-5 ft below groundwater level or
to the extent practical - small portion of the property will be excavated to the depth of 15 ft bg
for elevator pits - removal of all USTs that encounters during construction - confirmatory endpoint
sampling of soil and groundwater should be conducted - in-situ enhanced aerobic bioremediation will
be implemented to treat the on-site groundwater petroleum contamination - ORC will be directly
applied at the excavation bottom where petroleum-impacted soils are observed - on-site groundwater
monitoring after in-situ chemical oxidation will be implemented - total of three
monitoring/injection wells will be constructed at the site - construction of a 6-inch thick
concrete building slab for the entire site - 46-mil vapor barrier will be installed beneath the
slab - 32-mil vapor barrier will be installed outside all sub-grade foundation sidewalls -
dewatering will occur - a 7-month remediation period is anticipated
1:07 PM:- spoke with Chengyu.
informed him about missing geoprobe number in boring logs included in the supplemental
investigation report. asked him to submit revised logs. also informed him about missing
site-specific SCOs in section 4.2 of the draft RAWP. also discussed use of ORC. informed him that
ORC application will be discussed after review of endpoint soil and groundwater sample results.
1:22 PM:- sent email to Chengyu and asked him to submit revised boring logs and signed/dated RAWP.
email copied to OER Shaminder and Mr. Chau. Madeleine Frank NYC OER PH. (212) 442-8342 email:
mfrank@dep.nyc.gov 01/17/24-Hiralkumar Patel. received email from Chengyu (at 4:22 PM on 01/16/24)
including revised boring logs and signed RAWP. RAWP proposes track 2 residential use soil cleanup
objectives, but will use track 4 restricted residential use if track 2 SCO's can't be achieved.
RAWP also proposes ORC application if over-excavation confirmatory endpoint sampling of soil and
groundwater still indicates elevated petroleum contamination. the RAWP proposes submission of a
remedial action report in seven (7) months from beginning of remedial action (which is not
specified in the plan). 01/30/24-Hiralkumar Patel. 1:48 PM:- sent email to Mr. Chau. informed him
that based on review of all available information the Department approves the proposed work plan
except implementation of bioremedial measures. asked him to submit results of post-excavation
samples for review prior to any comments/discussion on the proposed bioremediation. also asked him
to submit more specific schedule for field activities and report submission as the work plan

213 NORTH 8TH STREET (Continued) **S130464691**

proposes submission of a remedial action report within twenty-eight (28) weeks from beginning of remedial action, but it does not specify when the remedial action will start. email copied to OER Shaminder, OER Madeleine, Chengyu and Ms. Wang. 02/07/24-Hiralkumar Patel. 10:57 AM:- received email from Mr. Chau including a revised RAWP with some minor edits required by NYC OER, but no changes in remediation part. 02/15/24-Hiralkumar Patel. 10:39 AM:- sent email to Mr. Chau and Chengyu. informed them that based on review of all available information, the Department agrees with the proposed scope of work except implementation of bioremedial measures. asked them to submit post-excavation endpoint sample results for review prior to any discussion/comment on bioremedial measures. also asked to provide more specific work schedule for field activities and report submission. email copied to OER Shaminder, OER Madeleine and Ms. Wang. 02/16/24-Hiralkumar Patel. 11:25 AM:- received email from Ms. Wang including a re-revised RAWP with more specific remediation schedule. she mentioned that construction will begin in early March and an approx. 4 month remediation period is anticipated. 12/04/24-Hiralkumar Patel. received email from Steven Bai (baixyy@gmail.com, at 10:35 PM on 12/03/24) responding back to OER inquiry on update. Steve mentioned that they are still working on the neighbors agreement and insurance; and are looking for partial demo by the end of this month and start digging beginning of next year. **construction has not begun as of end of Nov. 2024**

Remarks: Prior Commercial property(winery resturaunt). Found petroleum impact in soil and groundwater email: chang@yu-associates.com

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The

Site Description: "Location: The site is located in the Williamsburg section of Brooklyn. The site is bounded by Havemeyer Street to the northwest, North 6th Street to the southwest, Macri Triangle Park to the southeast, and North 8th Street to the northeast. Site Features: The site is completely covered with buildings in the northwest section; and covered with asphalt, concrete, and open park space in the southeast section. The site is bisected by an elevated portion of I 278 (the Brooklyn Queens Expressway (BQE)) adjacent to the park. The former footprint of the Ansbacher Color & Dye Factory was identified to extend to Lot 9, Lot 20, Lot 45, portions of I 278 (Brooklyn Queens Expressway (BQE) and parts of Macri Triangle Park. Current Zoning and Land Use: The site is zoned for residential, manufacturing, and commercial uses. Lot 20 is currently developed with a residential building, Lot 9 is under development as a residential building, and Lot 45 is developed with a Charter School. Past Use of the Site: According to Sanborn maps, the former Ansbacher Color & Dye Factory (Ansbacher) occupied multiple buildings along North 6th Street, North 7th Street, and Metropolitan Avenue from approximately 1887 to approximately 1945. The assumed use of the facility was to manufacture paints and/or pigments for commercial and industrial use. In the early 1950s, the buildings in the southeastern section of the site were torn down to make room for the construction of the BQE. It is believed that during this construction, waste material and debris from the former Ansbacher plant may have been used as fill material in the project area. A Phase II type investigation was conducted by the New York State Department of Transportation (NYSDOT) in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of

BQE/ANSBACHER COLOR & DYE FACTORY (Continued) **S106780917**

arsenic, lead and cyanide in the groundwater within the footprint of the BQE. During the reconstruction of the BQE in the early 1990s, NYSDOT completed an IRM (soil removal) within the project's right of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed by the New York State Department of Environmental Conservation (NYSDEC) in 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. In 2015, the NYSDEC initiated an investigation on the perimeter of the site to identify the origin of chlorinated solvents found in groundwater beneath the sidewalk as part of routine sampling. Site Geology and Hydrogeology: The site is underlain by fine to medium sands with limited quantities of coarse sand, gravel, and silt throughout the site at varying intervals. Groundwater is approximately 9.5-12.5' below grade. Flow direction in shallow groundwater is toward the west southwest, while deeper groundwater appears to flow towards the east. This may be due to the presence of the L train subway tunnel underneath North 7th Street."

Env Problem: "Nature and Extent of Contamination: Soil: Sampling was completed in multiple stages from 1988 to 2016. The primary contaminants of concern in soil at this site are arsenic, lead, and mercury. During the Preliminary Site Assessment (PSA) from July to September 1999, the NYSDEC investigated the area of the former Arsenate of Lead building in the southeast portion of the Site in the footprint of the current BQE. Arsenic was found at concentrations up to 7,500 ppm, well above the cleanup objective for commercial use (16 ppm). This soil failed for EP Toxicity (48 mg/l, 5.0 mg/l criteria), indicating the soil was hazardous. Lead was found at concentrations up to 10,600 ppm, well above the cleanup objective for commercial use (1,000 ppm). This soil failed for EP Toxicity (20.3 mg/l, 5.0 mg/l criteria), indicating the soil was hazardous. Mercury was also found at 294 ppm, well above the cleanup objective for commercial use (2.8 ppm). These results are documented in the PSA Report dated March 2000. An additional investigation was completed during 2015 and 2016 under a NYSDEC call out order and documented in the Additional Subsurface Investigation Report, dated May 2016. The investigation identified arsenic in soil up to 97.1 ppm, chromium up to 466 ppm and lead up to 566 ppm located on sidewalk adjacent to Lot 20 (former Lot 9, which was delisted in 2000). In 2018, data was obtained for Lot 45 which was redeveloped into a charter school (Williamsburg Northside School). Arsenic was found up to 67.5 ppm, and barium was found up to 1,160 ppm above the cleanup objective for commercial use (410 ppm), lead up to 383 ppm, and mercury up to 14.6 ppm. Groundwater: Sampling has been completed in multiple stages from 1988 to 2015. The primary contaminants of concern in groundwater are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 15,500 ppb, well above the Class GA standard of 25 ppb. Lead has been found at concentrations up to 431 ppb, above the Class GA standard of 25 ppb. Mercury has been found at concentrations up to 75 ppb, well above the Class GA standard of 0.7 ppb. These concentrations were all found in the vicinity of the former Arsenate Of Lead building in the southeast area of the site, which is now located in the footprint of the BQE. Significant Threat- The site does not constitute a significant threat

BQE/ANSBACHER COLOR & DYE FACTORY (Continued) **S106780917**

	to public health or the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. Portions of the former factory have been redeveloped into commercial and/or residential buildings."
Health Problem:	"The site has been investigated. Based on the available data, the site does not pose a significant threat to public health."

DEC Memo:	12/30/14-Vought-This spill reassigned from DEC Zhune to Vought as Vought also working on spill 1216805 with NYCOER Chawla and Moore which is two lots away and upgradient from this site. See that spill also for further information. Vought copied following notes from Spill 1216805: 12/19/14-Vought-Sent reply to OER Moore with cc to OER Chawla that Hannah, According to the reports for 1216805 and the block/lot maps the most contaminated groundwater flows from 223 North 8th towards 207 North 8th. I would call in a spill for the following reasons: -Down-gradient VOC

207 NORTH 8TH STREET (Continued) **S117394139**

concentrations are ten times higher at 207 North 8th suggesting an on-site source.-Prior site use of 207 North 8th as a private garage suggesting petroleum use and possible storage. -Groundwater concentrations at 207 North 8th will require at least quarterly monitoring via installation of sidewalk wells (if the site is to be developed) to ensure a decreasing VOC trend attributable to attenuation. -PCE in soil vapor may require DOH review and possible SSDS (unless this site has been reviewed with Jane O or Bob C during OER/DEC routine meetings). As I manage the almost adjacent site, it would make most sense for me to manage 207 North 8th as well. As such I would much appreciate if the spill caller to the hotline was to mention my name be placed in DEC Remarks. Hope this helps and feel free to forward this email onto the developer/responsible parties. Submission of a Remedial Action Report (RAR) that describes the remedial activities, certifies that the remedial requirements have been achieved, defines the Site boundaries, lists any changes from this RAWP, and describes all ECs and ICs to be implemented at the Site. 12/29/14-Vought-Sent email to OER Moore as to if spill at 207 North 8th was called into Spills Hotline. OER Moore replied that she would return call to Vought to discuss. Vought had teleconference with OER Chawla, Moore and Wong and they noted that 207 would be excavated to below groundwater and Vought noted DEC would require collection of groundwater sample from excavation during development of that site under separate spill number. OER Moore will have spill called in to hotline and note Vought as PM so that Vought could manage both spill sites due to proxmity. Construction and maintenance of an engineered composite cover consisting of a 4 inch thick concrete slab across the southern 70 feet of the Site and a 4 inch thick concrete patio across the northern 30 feet of the Site to prevent human exposure to residual soil/fill remaining under the Site. The entire Site will be capped, there will be no exposed soils, vegetation, or landscaping; 12/30/14-Vought-Sent email to OER Moore with cc to Chawla and Morris that Hannah, The Spill is indeed assigned to me and I look forward to the collection of the groundwater sample post excavation and dewatering. I would much appreciate if you could forward me any pertinent reports NYCOER received so I can review them as well as complete our files. I would also appreciate if you could forward or send the owner/developer contact information (I will hold off on contacting them as you are facilitating our requirements for the collection of samples). Please note as well that after further thought we should also collect soil sidewall endpoint samples (if possible) to ensure complete site

207 NORTH 8TH STREET (Continued) **S117394139**

characterization as well as to ensure no
vapor intrusion from possibly contaminated soil sidewalls. If needed I can formalize this in a
letter to the developer. Thanks as always, -Jeff 8/19/16-Vought-Sent letter to OER Moore with cc to
OER Chawla that Hannah, We just received a FOIL request for the above site and I see there are no
updates since my last notes of 12/30/14 where I noted that Sent email to OER Moore with cc to
Chawla and Morris that Hannah, The Spill is indeed assigned to me and I look forward to the
collection of the groundwater sample post excavation and dewatering. I would much appreciate if you
could forward me any pertinent reports NYCOER received so I can review them as well as complete our
files. I would also appreciate if you could forward or send the owner/developer contact information
(I will hold off on contacting them as you are facilitating our requirements for the collection of
samples). Please note as well that after further thought we should also collect soil sidewall
endpoint samples (if possible) to ensure complete site characterization as well as to ensure no
vapor intrusion from possibly contaminated soil sidewalls. If needed I can formalize this in a
letter to the developer. Thanks as always, -Jeff And my requirements at that time were DEC
Requires: 1)Submission of a RAP including collection of bottom groundwater sample and soil
sidewalls (if possible) as development of site includes excavation to groundwater as per NYCOER
12/29/14. 2)Submission of reports submitted to NYCOER as per email dated 12/29. 3)Vapor or moisture
mitigation into new development. 4)cc to OER Chawla/Moore/Morris and PW Grosser. I have attached
the spill notes for your reference as well and would much appreciate any updates you have or
resending those updates if already sent. Thanks. OER Moore replied Hi Jeff we re looking into it
and will get back to you. Thanks. 8/19/16-Vought-Received email reply from OER Chawla with cc to
OER Moore/Glass that Since the spill was called in during investigations back in 2014, development
project has been stalled and no work is ongoing. See email from consultant below. Kate Glass is
managing this site for us. RIR and RAWP were finalized in 2014. Kate will be voiding their NTP.
Give me call if you need any additional info. In below email string was email from PW Grosser
Almskog to OER Glass dated 2/17/16 that Katherine, I look forward to working with you on this and
other OER projects in the future. The project redevelopment has been on hold for the past few years
and no development or excavation activities have taken place since the remedial investigation and
the Remedial Action Plan were submitted to OER. The property owner is evaluating proposed

207 NORTH 8TH STREET (Continued) **S117394139**

development design plans and is hoping to start construction activities in 2017 at this site. Once the redevelopment plans are finalized, I will be in contact with you to determine if a revised RAWP or addendum is needed based upon modifications. Please let me know if you have any additional questions. Thanks 8/22/16-Vought-Reviewed Remedial Investigation Report (PW Grosser Jennifer Lewis) dated May 2014. Vought added report to D2. Report prepared for: North Eight NY, LLC 900 Grant Avenue Brooklyn, NY 11211 Remedial Investigation Report (PW Grosser)-May 2014: The development project consists of a new six story residential building with a cellar. The lot size of the property is 25 feet by 100 feet and the first through six floors of the building will occupy the south 25 feet by approximately 55 feet. The first floor will be underlain by the cellar which will extend an additional approximate 15 feet north into an open air areaway and sump pump room. The remaining 30 feet north of the cellar will remain near sidewalk grade and will exist as a concrete paved courtyard. The cellar level will consist of utility rooms, a laundry room, a boiler room, the areaway, and an accessory room to a first floor dwelling unit. The site will be excavated to a maximum depth of approximately 15 feet below sidewalk level for the installation of the elevator pit and step footings. Site E designated with NYCOER. Former oil tank on site as per NYCDOB permit in 1992. Scope of work included five soil borings with collection of eleven soil samples, installation of three monitoring wells and five soil vapor probes with three samples collected for analysis. Water in monitoring wells is 7-11'bg but may be perched. Groundwater flow to the northwest and soils are 3-10'of historic fill underlain by sandy clay. Generally, the soil beneath the site consists of approximately 3 feet of historic fill material overlaying a layer of brown to black sandy clay that extended to a minimum depth of 30 feet. Anomaly noted during GPR survey in rear portion of property. Soil analyses showed up to 460ppb xylene(SB-2 20-23'bg). Groundwater analyses showed up to 1.2ppb benzene(MW1), 31ppb ethylbenzene(MW1), 11ppb xylene(MW2), and 250ppb naphthalene(MW2). Soil vapor analyses show up to: 15ug/m3 PCE(SV002), 19.8ug/m3 benzene(SV001), 144ug/m toluene(SV001), 31.4ug/m3 ethylbenzene(SV001), 113ug/m3 xylene(SV001). PWGC recommends that a Remedial Action Work Plan be prepared and submitted to address the proper handling of on-Site soils and groundwater and the installation of appropriate engineering controls based upon the development plans and the quality of the soil to remain in place following development. In appendix was Phase I from PW Grosser noting performance of GPR survey with

207 NORTH 8TH STREET (Continued) **S117394139**

detection of anomaly in rear of
property. Remedial Action Work Plan Stipulation List (PW
Grosser)-10/3/14. Vought added RAWP and
Stipulation List to D2. P.W. Grosser Consulting (the consultant)
hereby submits a Remedial Action
Work Plan (RAWP) Stipulation List for the 207 North 8th Street (the
Site) to the New York City
Office of Environmental Remediation (OER) on behalf of North Eight NY,
LLC. This letter serves as
an addendum to the RAWP to stipulate additional content, requirements,
and procedures that will be
followed during the Site remediation. The contents of this list are
added to the RAWP and will
supersede the content in the RAWP where there is a conflict in purpose
or intent. The Site will be
excavated to a maximum depth of approximately 15 feet below sidewalk
level for the installation of
the elevator pit and step footings beneath the cellar for an
approximate 850 cubic yards of
off-site soil removal. Groundwater is estimated at approximately 7 to
11 feet below grade and
excavation for the cellar will require excavation into the
groundwater. RAWP includes CAMP,
establishment of restricted residential SCOs. The rear yard area
(northern 30 feet of the Site)
will be excavated approximately 0.5 feet below sidewalk grade for the
installation of the concrete
patio. Approximately, 1,000 tons of soil will be excavated and removed
from this Site. Collection
and analysis of end-point samples to determine the performance of the
remedy with respect to
attainment of SCOs. Installation of a vapor barrier system beneath the
building slab and outside
foundation sidewalls below grade. The vapor barrier will consist of a
combination of Grace
Construction Products Preprufe 300R for horizontal applications and
Preprufe 160R for vertical
applications. Both vapor barriers are constructed of a high density
polyethylene film; Preprufe
300R is 46 mils thick and Preprufe 160R is 32 mils thick. A letter
from the manufacturer stating
the compatibility of the vapor barrier with observed on-Site
contaminants and manufacturer s cut
sheets for the vapor barrier are included in Appendix B. A RAR will be
submitted to OER following
implementation of the remedial action defined in this RAWP. The RAR
will document that the remedial
work required under this RAWP has been completed and has been
performed in compliance with this
plan. 8/22/16-Vought-Sent letter approving of RIR and RAWP and
Stipulation list pending inclusion
of quarterly groundwater sampling, use of Unsrestricted SCOs, and
collection of bottom groundwater
endpoint sample. Letter added to D2 and sent to North Eighth with cc
to OER Chawla and Moore with
email that Kris, Please see the Department s attached review letter of
the RIR and RAWP and

207 NORTH 8TH STREET (Continued) **S117394139**

Stipulation list for the above referenced site. An original of the letter is in the mail to North Eighth LLC. Please provide an update on the status of the site. Thanks 9/6/16-Vought-Received hardcopy of DEC requirement letter returned to DEC from US postal service and envelope noted insufficient address and unable to forward . No resending of letter via US mail as Vought in active correspondence with consultant. DEC Requires: 1)Confirmation of RP's mailing address as last DEC letter returned as undeliverable . 1)Update on development plans for site as per the RAWP and RIR 2)Continuation of quarterly sampling of groundwater. 3)Use of Unrestricted SCO's as per CP-51 versus NYCOER using Restricted SCOs 4)Collection of groundwater sample from excavation to examine for possible attenuation after source removal 5)cc to OER Chawla/Moore/Morris and PW Grosser (Kris Almskog) as site E designated 12/19/2017 - Austin - Project transferred from Vought to Lakhani - end 08/08/18 - Lakhani OER Shaminder informed that the new project manager for the site is Alysha Alfieri. No work has occurred on the site. The site has been simply fenced in. 08/05/19 - Lakhani - Spill being transferred to Lin. 4/22/2020-Lin-Reviewed August 2018 groundwater results. No exceedances for VOC in groundwater samples. Groundwater contamination attenuated since samples were last taken in 2014. 11/8/21-Lin-Recieved groundwater sample results. There are three groundwater monitoring wells on site. The most recent groundwater sample results (one round of sampling in 2018 and two rounds of sampling in 2021) came back without exceedances of NYSDEC Ambient water quality standards for VOC. Case closed.

Remarks: historical spill requesting Jeff out of long island be assigned to this spill

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	1/10/14: Mahat DEC made an attempt to contact Mr. Doug Harm (Brinkerhoff Environmetal @

COMMERCIAL LOT (Continued) **S116156582**

732.223.2225 : 732.674.4064) inquiring more information about the site. A voice message was left to Mr. Harm to call back DEC for more information. 8/18/2014: Another voice message was left to Mr. Doug Harm inquring more information about the nature of the spill. 9/17/14: Mahat DEC Mahat received a call from Mr. Shawn Harrison from Brinkerhoff Environmental mentioning that a closure report is ready and will be submitted to the Department. DEC is waiting for a closure report. 6/6/16: Mahat t/c : DEC Mahat contacted Mr. Shawn Harrison inquiring about the closure report on the spill case. He mentioned that the report has been all completed and will be submitted to the Department promptly. 6/9/16: Mahat t/c : DEC Mahat talked to Mr. Shawn and he mentioned that the Closure Report in under internal review. It will be submitted to the Department as soon as possible. 10/6/2016: Rashad Spill will be reassigned to DEC Omar from DEC Mahat. 10/11/2016: Rashad 502 Metropolitan Avenue does not have an alternate address. No additional spills or PBS registrations found for site. No documents found in D2. Emailed Sean Harrison about status of closure report. 10/13/2016: Rashad Sean replied on 10/12 and will check the status of report. 11/1/2016: Rashad Received report from Sean Harrison, it has been uploaded to D2. Review of UST closure report is as follows: During excavation activities on 2/6/14, three fuel oil USTs were encountered. The site is currently being redeveloped and is E-Designated. Impacted soils and strong petroleum odors were identified in the northwest corner of the site, adjacent to the intersection of Rodney Street and Metropolitan Avenue. Brinkerhoff collected five soil samples to delineate the extent of the petroleum impacted soil. The northern most UST was filled with liquid consisting of a water-sludge mixture, the two southernmost USTs were filled in with concrete. The tank was pumped, cleaned and removed, the other 2 USTs were also removed. A total of 280 tons of soil was excavated and properly disposed of. On 9/29/14 additional impacted soil was identified within the location of the former USTs. On 10/6/14 the material was excavated, and one sample was taken, almost 25 tons of soil was removed. The site is currently being redeveloped as a 14 story mixed use building (hotel rooms and residential apartments). Additionally the site development consists of underground parking and underground and ground floor retail space. In conclusion, Brinkerhoff is requesting spill closure. Review of 2/4/14 sample data: Minor SVOC exceedances in SB-2 (5.5-6ft). VOC exceedances in SB-4 (5.5-6ft): Xylene-2.8ppm, Toluene-.96ppm, benzene-.18ppm Review of 2/28/14 sample data (similar locations to SB): Minor SVOC exceedances in PE-2

COMMERCIAL LOT (Continued) **S116156582**

(10-10.5ft). Minor SVOC
exceedances in PE-3 (10-10.5ft) Review of 10/6/14 sample S-9 taken at the base of the excavation at
12 ftbgs yielded no exceedances in VOCs or SVOCs. Review of 1/6/15 sample EP-7 taken as Endpoint
bottom sample at 15 ftbgs yielded no exceedances in VOCs and SVOCs. Area of concern SB-4 which
recorded the highest VOC values was further excavated as reflected by sample S-9 and EP-7 which
were in the same area. Spill will be closed as final sampling shows no elevations of VOCs or SVOCs
after excavation activities. In addition USTs have been removed and decommissioned. Closure letter
will be prepared and sent to owner as per tax records: 475 Keap Street, LLC 512 7th Ave Ny, NY
10018 Letter will also be emailed to Sean Harrison of Brinkerhoff. Closure letter uploaded to D2.
Spill closed

Remarks: 3 tanks found during excavation/clean up pending

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 11/1/99 On site. All tanks out. Station covered with fresh concrete already. Two 55 gallon drums on side of station need to be disposed. All tanks off site. No stockpile of soil. Spill 9909344 reported by anonymous citizen. 11/2/99 Spoke to Butch (516) 831-2982 - beeper? from ITAR Tanks. Dr. Munroe was on site to collect samples from the excavation. NO soil was removed. Concrete slab was removed. PBS needs to be updated - tanks listed as temporarily-out-of-service. Site visit 10/5/05 - Site abandoned. No drums present.

Remarks: underground storage tanks were being removed and contaminated soil was discovered - site assessment will be done and the owner will decide what he wants to do for clean up

Town: New York City
Record Added Date: 12/03/2014
Record Updated Date: 12/31/2021
Update By: RKCORCOR
Site Description: "Location: The site is located in the Williamsburg section of the borough of Brooklyn, NY. The site has approximately 175 feet of frontage along Driggs Avenue and 100 feet of frontage along North 8th Street. Site Features: The site prior to remediation was occupied by a parking lot and an attendant booth. After remediation, the site has been redeveloped with an eight to eleven story building the footprint of which occupies the entire site. Current Zoning and Land Use: The property is currently a vacant parking lot. The site is zoned commercial/industrial/high density residential (M1 2/R6A and R6B). Allowable uses include light manufacturing, warehouses, wholesalers, and multi story residential buildings. Past use of the Site: Based on a map dated 1855, the property is believed to have been occupied by a manufactured gas plant (MGP). The MGP was demolished by 1887. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by a food warehouse circa 1991. Both buildings were demolished in 2006 and replaced with a parking lot parking lot. Geology and Hydrogeology: Soil at the site is described as historic fill materials to a depth of about 15 feet below the surface followed by native brown fine sand with silt and some clay. Groundwater is present at about 12 feet below ground surface, and flows to the northeast."
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soils were petroleum VOCs, Chlorinated VOCs (CVOCs) and naphthalene. Non-aqueous phase liquids (NAPL) were present at the site. On site groundwater was contaminated with SVOCs and CVOCs.Pure solvent was detected in groundwater in the

FORMER STERLING TRANSFORMER CORP. (Continued) **S128906179**

	southern portion of the site. CVOCs including vinyl chloride were detected in soil vapor at the site. Remedial actions (excavation and disposal of contaminated soil) have successfully achieved soil cleanup objectives for Unrestricted Residential Use. "
Health Problem:	"Remedial actions are complete and no exposures are expected to residual contamination as the site has been remediated to unrestricted use."

SWIS:	2401
Town:	New York City
Record Added Date:	10/05/2016
Record Updated Date:	08/09/2019
Update By:	RKCORCOR
Site Description:	"The area of concern subject to this work is considered off-site from BCP site C224203 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224203 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The site is located in the Williamsburg section of the borough of Brooklyn, NY. Driggs Avenue bounds the property to the southeast, N 8th Street bounds the property to the southwest, and N 9th Street bounds the property to the north. The site is bound to the west by various mixed-use

FORMER STERLING TRANSFORMER CORP. - OFF-SITE (Continued) **S128906195**

residential buildings. Site Features: The site consists of multiple tax lots including a paved parking lot and mixed-use residential buildings. Current Zoning and Land Use: The site is currently zoned commercial/industrial/high density residential and general residence (M1-2/R6A and R6B). Allowable uses include light manufacturing, warehouses, wholesalers, and multi-story residential buildings. Past Use of Site: Based on a map dated 1855, the property is believed to have been occupied by a manufactured gas plant (MGP). The MGP was demolished by 1887. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by food warehouse around 1991. Both buildings were demolished in 2006 and replaced with the existing parking lot. Geology and Hydrogeology: Soil at the site is described as historic fill materials to a depth of about 15 feet below the surface followed by native brown fine sand with silt and some clay. Groundwater is present at about 12 feet below ground surface, and flows to the northeast."

Env Problem:	"Nature and Extent of Contamination: Based upon the remedial investigation at the BCP site #C224203, the primary contaminants of concern are expected to be naphthalene, vinyl chloride, and cis-1,2-dichloroethene which were found in the BCP site soil, groundwater, and soil vapor. The BCP site soils also contained some semi-volatile organic compounds (SVOCs), such as benzo(a)pyrene, benzo(a) anthracene and benzo(b)fluoranthene, chrysene, dibenz[a,h]anthracene. The off-site investigation has not begun, therefore this section will be updated to reflect the investigation results as data become available."
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

DEC Memo:	Consultant was hired to do a Phase 2 on this property for City Little e designation. They found small amounts of SVOC and Pesticides in shallow soil borings (2ft depth) 3/5/08 - Raphael Ketani. I looked up the site in the PBS, but it wasn't listed. The block and lot are 2312 and 22. According to ACRIS, the owners are Tadeusz and Krystina Zablocki, 75 Berry Street, Brooklyn, 11211-1917, and Michael Lichtman, 132 Greene Street, New York, 10013. The environmental company is Environmental Building Solutions. The contact is Michael Borello (917) 217-7334. I sent a CSL to the owners. 3/11/08 - Raphael Ketani. Today I received a letter from Joseph Horowitz, PE, 76-06 137 St., Flushing, 11367 ((718) 544-5105). The letter stated that a Phase II was currently taking place. Previously, a Phase I was performed for the site and submitted and approved by NYC DEP. NYC DEP is involved because the site has an E designation. Mr. and Mrs. Zablocki plan to construct a four story building. The building will require a foundation which is 10 feet deep. Excavation will be at least to a depth of 10 feet. Clearance sampling will take place and the remediation work will be incorporated into the construction work. Mr. Horowitz stated that DEC will get a copy of the Phase II ESA and the Phase III Work Plan. Mr. Horowitz stated that he, Mr. and Mrs. Zablocki, Michael Borello, Principal, Environmental Building Solutions, LLC, 295 Madison Avenue, Suite 1826, NY, 10017, and Innocent Taziva, NYC DEP ((718) 595-3585) should all be copied on any correspondence from DEC. The NYC DEP reference number is 08DEPTECH159K/04DCP003K. 3/12/08 - Raphael Ketani. I left a message for Mr. Horowitz that the DEC would like the contaminated soil to be removed immediately and that we would like the end point soil sample analytical results. Mr. Horowitz called me back. He said that the site is half an open yard and half a garage. He said he is waiting for the necessary permits to demolish the garage. Otherwise, they can't move forward. He said that the owners are as anxious as DEC to move foreward and get rid of the

506 DRIGGS AVENUE - DOB JOB NO. NB-310021311 (Continued) **S109060194**

contaminated soil. Groundwater
samples were taken and he is waiting to receive the analytical results. 3/18/08 - Raphael Ketani.
Today I received the Phase I for the site from Mr. Horowitz. I reviewed the document. The entire
document was lightly reproduced as it may have been printed from a copy of a copy of the Phase I
document. The pages in appendices IV and V were too light to read. However, these were mostly maps
and neighboring property descriptions, respectively. I had no other comments regarding the Phase I.
3/24/08 - Raphael Ketani. I received a call today from John Zablocki, one of the owners (646)
361-6839. He said that the engineer he had hired was billing him for all kinds of things. He also
wanted to know if he needed to contact DEC before doing the site excavation for the contaminated
soil. I told him he didn't have to wait for DEC's approval, but he would need to provide DEC with
documentation that he had characterized the soil, and had sent it to the appropriate disposal site.
I added that DEC would also need manifests for the loads of soil. I told him that soil borings
would have to be taken to delineate the extent of the contamination, unless he already knows this.
I told him that DEC had already received some information regarding the level of the contamination.
He asked whether he can take the soil samples himself in order to save money. I told him he could
and I explained the entire process of soil contamination delineation, sending the samples to a
laboratory, submitting a soil sampling plan to be approved by DEC before the work starts, the
analytical methods to be used and other details. In the end of our 45 minute conversation, I
informed him that hiring an environmental professional, particularly a person with a PE might be
the best way to go, even if it is expensive. I told him that this person will know what to do and
the ins and outs of the process. I added that the bank may cut his funding if a PE doesn't oversee
the job. I told him to be careful as regards what he does with his project. He said he plans on
building a 6 family apartment building. I told him that he should be very careful that the work is
done properly. He thanked me for all of the information and the conversation ended. 3/26/08 -
Raphael Ketani. I received the (Draft) Subsurface Soil and Groundwater Investigation report dated
3/13/08 from Environmental Building Solutions, LLC. I reviewed the report. I finished my review of
the report. The soil analyticals showed that there were hits for SVOCS in the soil. These were the
combustion series of analytes in the 0' to 2' sample and the 14' to 16' sample for B3. There were
low level exceedences of TAGM for the 0' to 2' sample. Only a small number of hits were present in

506 DRIGGS AVENUE - DOB JOB NO. NB-310021311 (Continued) **S109060194**

the other samples. The samples were almost entirely non-detect for SVOCs. Almost all of the samples were also non-detect for VOCs. Most of the hits were in B-2 in the 0' to 2' sample. The groundwater sample had only some low level SVOC exceedences of TAGM. The boring location map shows that the drilling sites were widely spaced. I wrote a letter to Mr. Horowitz stating that there should be more borings. 3/27/08 - Raphael Ketani. I spoke to Mr. Horowitz (718) 544-5105 about the site. He said that the Zablockis received the DEC letter requesting 3 additional borings and soil samples. He said that he doesn't want to try to do the borings and get the analytical results for the soil samples as this will take a lot of time. He said that the City program they are involved with gives them a tax break for constructing on their property, but only if they have the foundation under construction before the end of June 2008. He said that what DEC is asking for will take too much time. He said that all of the soil will be dug up anyway and handled as hazardous material due to the pesticide hits. I told him that is fine, but DEC still doesn't know what the subsurface conditions are. I told him that the site is 100 feet long and that 3 borings are just not enough to characterize the subsurface. I told him that he doesn't have to go down any further than 15 feet and that the analytical results just need to show the 12 most common VOCs and the 12 most common SVOCs. I told him that there are dozens of environmental and remediation companies and that someone has to have equipment available to do a few borings on short notice. He said that he will call me back later. Mr. Horowitz called a half hour later and asked how many soil samples would be needed. I told him to send off the 3 dirtiest ones. He said nothing is really dirty. I told him that is fine. He asked that he be allowed to order testing via STARS for VOCs and SVOCs. I told him that will be fine. He said that he will talk to the Zablockis and get back to me. Later, Mr. Horowitz sent me an e-mail memorializing the agreement between him, the Zablockis, and DEC. The agreement stated in the e-mail is: borings will take place March 31 or April 1, 3 borings opposite the existing locations will go down to 16', the dirtiest sample will be collected, analyses will be done via STARS methods 8260 and 8270, results will be presented in an Addendum to the Phase II.
4/1/08 - Raphael Ketani. Mr. Horowitz sent me an e-mail containing a DRAFT letter for Mr. Taziva of NYC DEP. He asked me to comment on the parts of the letter mentioning correspondences between him and me. The statements regarding the correspondences appeared accurate. A made a copy of the DRAFT letter and put it in the paperfile. His DRAFT letter also mentions

506 DRIGGS AVENUE - DOB JOB NO. NB-310021311 (Continued) **S109060194**

that the 3 additional borings
were performed on April 1, 2008 and soil samples were sent to the laboratory for 24 hour turn
around. 4/4/08 - Raphael Ketani. Today I received the final Subsurface Soil and Groundwater
Investigtion report dated March 13, 2008 from Mr. Horowitz. The report was accompanied by a cover
letter to Mr. Taziva of DEP dated 4/2/08. The cover letter states that a vapor barrier will be
installed. The report did not include the soil analyses for the 3 additional borings that were
requested by DEC. I had no comments regarding the letter, nor the report. 4/8/08 - Raphael Ketani.
I received the analytical results for the 3 additional borings that were performed. The respective
samples were B-6, B-7, and B-8. All of the results for VOCs and SVOCs were completely non-detect. I
spoke to Mr. Horowitz regarding the analytical results. I asked him why the numbering order goes 6,
7, and 8. He said that he was just following the numbering system from the previous reports. He
said that no samples were missing. I asked him why the analytical sheets say that the sample type
is GRAB when they are supposed to be the soil cores. He said that the samples are from the soil
borings. 4/9/08 - Raphael Ketani. Yesterday, I received the Subsurface Soil Investigation Addendum
dated 4/4/08 from Mr. Horowitz. I reviewed the document. The analytical results for borings B-6,
B-7, and B-8 were the same as the ones I had previously reviewed on 4/8/08. However, borings B-1
and B-3 were in different locations than in the 3/13/08 report. Also, the Addendum depicts boring
B-4 at the location of B-2 and boring B-5 is at the location of B-3. The Addendum puts B-3 at the
location of B-1 of the 3/13/08 report. Additionally, I never received the analyticals for B-4 and
B-5. I tried to contact Mr. Horowitz to discuss this, but could only leave a message. 4/10/08 -
Raphael Ketani. Mr. Borello of Environmental Building Solutions, LLC (646) 290-5925, exr 25 called
me back. He said he was sorry for the confusion. He e-mailed me the three different site plans
showing the different stages and placements of the series of borings and the well. He also e-mailed
me the analytical results for 3 composite samples that were taken to characterize the soil. The
analytical results were mostly non-detect with only a handle of low hits of SVOCs. 4/11/08 -
Raphael Ketani. Mr. Horowitz sent me the entire analytical package from Environmental Testing
Laboratories for the 3 composite samples, along with copies of the Chain of Custody Forms and the 3
different boring location site plans. I reviewed the package and had no comments. Based upon the
analytical results in the March 13, 2008 Phase II, the analytical results in the Addendum to the

506 DRIGGS AVENUE - DOB JOB NO. NB-310021311 (Continued) **S109060194**

Phase II dated April 4, 2008, and the April 10, 2008 soil characterization testing results package,
I am closing the spill case. I sent an NFA letter to Mr. Horowitz, with a c-c to Innocent Taziva of DEP.

Update By: WBBENNET
Site Description: "The area of concern subject to this work is considered off-site from BCP site C224242 and reflects the investigation and possible remediation of contamination that may have migrated from that site. Please see below and C224242 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The site is located at 12 Eckford Street in an urban area in the Greenpoint neighborhood of Brooklyn, New York. The approximately 21,630-square foot site is bounded by a former commercial building currently being used as a construction office for the site and residential buildings to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest. Site Features: An eight story residential building including at-grade parking and a lobby on the ground floor and apartments above. An open air dog run is located in the northwestern portion of the lot. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses) and is currently vacant. This zoning is consistent with the proposed use of the site. The surrounding area is developed primarily with residential and commercial properties. Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1 and have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Geology and Hydrogeology: The stratigraphy of the site from the surface down consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the historic fill is a native sand, gravel, and silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations. Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site."
Env Problem: "The site is currently being investigated under the state Superfund program for soil vapor intrusion impacts emanating from the New 470 Project Brownfield Cleanup Program (BCP) site (C224242)."
Health Problem: "People who enter the site could contact contaminants in the soil by walking on the site, digging, or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this

NEW 470 PROJECT - OFF-SITE (Continued) **S121933800**

	contamination. Volatile organic compounds in the soil vapor may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not currently represent a concern. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in the event the site is re-occupied. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in off-site structures."

NEW 470 PROJECT (Continued) **S118950508**

Site Description: "Location: The site is located at 12 Eckford Street in an urban area in the Greenpoint neighborhood of Brooklyn, New York. The approximately 21,630-square foot site is bounded by a former commercial building currently being used as a construction office for the site and residential buildings to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest. Site Features: An eight story residential building including at-grade parking and a lobby on the ground floor and apartments above. An open air dog run is located in the northwestern portion of the lot. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). This zoning is consistent with the use of the site. The surrounding area is developed primarily with residential and commercial properties. Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1 and have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Geology and Hydrogeology: The stratigraphy of the site from the surface down consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the historic fill is a native sand, gravel, and silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations. Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concerns were lead in soil and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Code: 531164
Site Description: "Location: The site is located at 12 Eckford Street in an urban area in the Greenpoint neighborhood of Brooklyn, New York. The approximately 21,630-square foot site is bounded by a former commercial building currently being used as a construction office for the site and residential buildings to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest. Site Features: An eight story residential building including at-grade parking and a lobby on the ground floor and apartments above. An open air dog run is located in the northwestern portion of the lot. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). This zoning is consistent with the use of the site. The surrounding area is developed primarily with residential and commercial properties. Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1 and have now been merged into Lot 33. According to historic Sanborn fire insurance

NEW 470 PROJECT (Continued) **S118950508**

maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Geology and Hydrogeology: The stratigraphy of the site from the surface down consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the historic fill is a native sand, gravel, and silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations. Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concerns were lead in soil and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

DEC Memo:	12/02/08-Zhune visited the site. The Metropolitan Avenue Subway Station has a police precinct. I spoke to Hannay from Transit Brooklyn Task Force he said early in the morning there was a very strong gasoline smell. We noticed gasoline smell for almost a year when the gas station fill up the tanks with gasoline but today it has been the worst. Passengers were complaining. they called 911. By the time that I got there the smell was gone. On 433 Union Ave, Brooklyn NY there is a Getty gasoline station. The station have 3 USTs, one regular, one diesel and one premium. USTs were installed in 1982. One AST installed in 2004. Tanks are steel tanks. In the top sump of premium a leak of apporximately 25 gallons of gasoline was found. In the top sump of diesel there are diesel and in the top sump of regular there are a mixture of gasoline and water. The sensors in the sumps were not place touching the bottom of the sump. The fuel alarm did not went off becouse the sensors were placed incorrectly. The last time the tanks were tested was on 03/11/08 they passed the test. the lines are doubled walled lines. Dispenser 1-2 probably are leaking. The gravel in the sumps are wet and there is petroleum smell. Benjamin Leonen (718)999-2460 from FFD (Bulk Fuel Safety) shut the station down. DEC Requires 1) Tanks tightness test and lines test 2) Copies of 10 Days Reconcilation Report 3) Copies of Corrosion Protection test and stage I and II test. 12/04/09-

GAS STATION - IND-G LINE (Continued) **S109374210**

Zhune. Received the Tank and line test results performed by Certified Tank CTT Testing. The results
showed that the three tanks (Diesel, Premium and Regular) and the three lines passed the test.
01/26/09-Zhune. Received the stage I and II test results and passed test. 02/10/09- Zhune called
Frank Cifuentes (718)999-2516 (DCI) Deputy Chief Inspector of the Bulk Fuel Safety. He said the
station was closed on 12/02/09 by Benjamin Leonen. On 12/08/09 Frank witnessed the precision test
tanks and passed. The station open to service on 12/10/09.
02/10/09-Vought-Called and spoke to NYCT
Varley as per DEC Austin and no further monitoring of station being performed and no complaints
received to date since original spill. Phase II received by DEC. DEC Zhune will review and discuss
with DEC Austin for transfer to Petroleum Remediation Unit due to presence of free product and
necessity of long term remediation. PHASE II Report. A Total of 4 soil boring (B1-B4) were
performed during the Subsurface investigation. The location of Groundwater water correspond to the
same location of the soil boring. samples were collected by installing temporary wells. SOIL. No
VOCs were detected in any of the four shallow soil samples B1(0-2ft), B2(0-2ft), B3(0-2fl)and
B4(0-2ft)at concentrations above TAGM guidance levels. Elevated concentrations of Ethyl-benzene,
Toluene, o-Xylene, p&m-xylene, 1,2,4 trimethyl-benzene in the deep soil samples Bi(8-10ft),
B2(10-12ft)and B3(10-12ft). No VOCs were detected at B4(10-12ft) at concentrations aboveTAGM
guidance levels. SVOCs above the guidance levels were detected in B1(0-2ft), B2(0-2ft),
B3(8-10ft)and B4(0-2ft). The elevated compounds include Benzo(a)anthracene, Benzo(b)fluoranthene,
Benzo(a)pyrene, Benzo(K)fluorenthene, Chrysene and Dibenzo(a,h)anthracene. Metals. Zinc, cooper and
cadmiun were detected at elevated concentrations. Zinc in each soil sqmples excep B2(10-12ft) and
B4(10-12ft). Cooper in B2(0-2ft) andB3(8-10ft) and Calcium in B2(10-12ft). GROUNDWATER. Benzene,
Toluene, Ethyl-benzene and p&M Xylene were detected at concentrations above NYSDEC GQSs in B1 and
B4. Free floating product was recovered from B2 and B3. No SVOCs were detewcted at concentrations
above NYSDEC CQSs. Only B1-B4 was analyzed for SVOCs PCB-1254 was detected at a concentration of
12.2 ug/L in B2. Metals. Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Magnesium,
Nickel, Sodium, and Selenium were detected above their respective NYSDEC GQSs. 02/20/09- Zhune. As
per Randy Austin this case has been tranferred to Mark TIbbe for long term remediation. 02/24/2009:
This spill case was transferred to A. Doronova. - AD 04/09/2009:
Received a pdf copies of Orders on
Consent: one signed by responsible party and second signed by

GAS STATION - IND-G LINE (Continued) **S109374210**

consultant, who was fined due to
falure to report the spill. DL copies to eDocs. AD 04/23/2009:
Received an email from V. Brevdo. He
forwarded me a copy of the investigation work plan, which was
requested in the CAP of the signed
Order on Consent. Reviewed the work plan. AD 04/27/2009: Called and
spoke with Charles Sosik of EBC
(consultant). Requested to re-submit the work plan. Revised WP should
state all spill cases
associated with this property (spill 0809794 is missing) and
references to the consent order and
the corrective action plan. They did not performed any weekly gauging
and recovery visits required
under Paragraph 1 of the CAP because there are not any permanent
monitoring wells at the site.
Discussed locations of the proposed permanent GW monitoring wells.
Asked why EBC did not propose to
install permanent wells in the vicinity of soil borings B-2 and B-3
(product sheen was detected in
these temporary wells in December 2008). According to Mr. Sosic, the
redevelopmet plan includes
excavation to 12' bgs for a hotel construction with a full basement,
so they proposed wells only
along the site borders to monitor off-site migration of the
contamination. The revised WP will be
submitted till the end of this week. AD 04/30/2009: Called and spoke
with Mr. Sosic regarding
submission of the revised WP. According to the information obtained
from him today, the start date
of a re-development project is unknown. Told him that due to the
postponement of the project, two
additional permanent monitoring wells should be installed in the
vicinity of the temporary wells
B-2 and B-3, or two of the proposed wells should be relocated. Mr.
Sosic requested to put all this
requirements in writing. Prepared an e-mail for Mr. Sosic. Discussed
the site with J. Kolleeny.
Later received an e-mail from Mr. Sosic saying: Ainyra, Attached is
the revised RIWP reflecting the
changes you requested earlier in the week (add subway spill number and
consent order info in
introduction section) as well as those requested earlier today (move
the locations of 2 MWs). Hard
copy is going out today as well. I do not have the PBS inspection
report, but as I mentioned you
should be able to obtain that from Veronica. Call with questions.
Charles B. Sosik, P.G. Principal
EBC Will review. AD 05/04/2009: Reveiwed the revised work plan. It
proposes additional subsurface
investigation at the site, including advancing and sampling of seven
soil borings and eight
temporary groundwater sampling points, and installation of six
permanent groundwater monitoring
wells. The diameter of the proposed permanent wells planned to be - 1
inch. Groundwater samples
will be analyzed for VOCs. The work plan's Figure 4 (proposed
monitoring well locations) indicates

GAS STATION - IND-G LINE (Continued) **S109374210**

only 5 wells of proposed 6. Figure 3 has two different versions in the same plan and Figure 2 is
abcent. A remedial investigation report summarizing all findings with conclusions and
recommendations will be prepared and submitted to DEC. Called and spoke with Mr. Sosik of EBC.
requested to correct figures and resubmit the work plan. Later received an e-mail from him saying:
Revised as discussed. Corrected spill number on Page 1 and correct Figure 3 and 4 shown. In
reviewing again I eliminated the monitoring well within the service bay due to the potential for
spills. A well was added near the sign as discussed and the text changed from 6 wells to 5. If OK
we will send out new hard copy. Charles B. Sosik, P.G. Principal EBC Figures were corrected. But
now EBC proposes 5 monitoring wells instead of 6 previously proposed due to spill potential for
wells in the vivinity of the service bay. AD 05/05/2009: Discussed the work plan with J. Kolleeny
of DEC. Issued and sent an approval letter with some modifications to Mr. Mohan Dhillon (site
owner) and copies to J. Kolleeny-DEC and C. Sosic (EBC), DL e-copy to eDocs. Investigation report
is due August 6, 2009. AD 05/26/2009: Received an e-mail from C. Sosik of EBC saying: Ainura, We
are attempting to schedule the drilling for tomorrow. Let me know if you have any problems with
this. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph:
631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927
csosik2@optonline.net Spoke with him. Scheduled
the site visit. AD 05/27/2009: Received a phone call from Mr. Sosik. He said that fieldwork was
canceled due some scheduling issues, and promised to inform me on a new date for investigation
work. AD 06/11/2009: Did not receive any notifications from Mr. Sosik. Sent him an e-mail saying:
Hi Charles, Do you already have a new schedule for drilling at the site? I did not hear from you
since you canceled May 27th field work. Please notify me in advance. Thank you. Ainura Doronova AD
06/12/2009: Received an e-mail from C. Sosik of EBC: We expect to reschedule for late next week.
I'll let you know Monday. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants
Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 AD 06/17/2009: Spoke with C. Sosik regarding
fieldwork schedule. He told me that it scheduled for week of June 28. AD 07/2009: The site visit
was canceled again. AD 07/14/2009: Received an e-mail from C. Sosik of EBC: Ainura, The attorney is
asking for an extension on the field work till September due to issues with the insurance company.
Please let me know if this is acceptable. Thank you. Charles B. Sosik, P.G. AD 07/15/2009: Spoke
with Mr. Sosik, told him that deadline extension can be approved by

GAS STATION - IND-G LINE (Continued) **S109374210**

the Department in accordance
with the CAP of the Concent Order. Requested to submit an official letter request for extension. AD
07/17/2009: Received the letter. DL to eDocs. Will review. AD
07/21/2009: Reviewed the letter. EBC
asks for 45-day deadline extention. Discussed it with J. Kolleeny of DEC. AD 07/22/2009: Sent a
letter with 30-day deadline extension approval. CC to J. Kolleeny of DER and J. Urda of DEC. DL to
eDocs. The Investigation report submission is due September 4, 2009. AD 08/19/2009: Received an
e-mail C. Sosik of EBC which stated that EBC will start site investigation tomorrow. Will visit the
site. AD 08/20/2009: Visited the site. Met at the site with C. Sosik. EBC was subcontracted to
perform soil boring and wells installation. The highest PID reading at MW-1 boring location was
1300 ppm (13'), at SB-6 PID was 15 ppm (8'-12') and at SB-5 it was 650 ppm (12'-13'). Observed soil
and groundwater sampling. There was some gasoline odor noted during installation of MW-1 and SB-5.
The investigation summary report will be submitted. Later in the day received an e-mail from C.
Sosik saying: Ainura, All sampling completed. Product was encountered in MW-3. Not measurable but a
heavy black film on water in the bailer. Not enough for a sample, but will try again next week
after it settles. Could not get the boring at b7 due to rejection and proximity to lines and tanks.
Pea gravel encountered. I'm in the office tomorrow. Call to discuss. AD 08/26/2009: Called and
spoke with C. Sosik. He said that they will return to the site later this week to survey the wells
and to collect free product sample if feasible. A soil and GW contamination was also encountered in
the vicinity of well MW-1. AD 09/04/2009: Received an e-mail from Mr. SosiK saying: Ainura, The RI
Report is attached. A hard copy will follow early next week. Let me know if you have any questions
or if additional hard copies are needed. Thanks and enjoy the weekend. Charles B. Sosik, P.G.
Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell:
631.357.4927 csosik2@optonline.net DL the report to eDocs. AD 09/14/2009: Received a hard copy of
the report. Will review. AD 10/20/2009: Reviewed the report. AD 11/02/2009: Called and spoke with
C. Sosik of EBC. Asked him to check all wells for free product and to sample permanent monitoring
wells. RAP should be submitted with current GW data no later than December 1, 2009. AD 12/08/2009:
Called and spoke with Mr. Sosik of EBC regarding RAP submission. He is out of town. He will be back
tommorow. AD 12/19/2009: Received an e-mail from Mr. Sosik saying: Ainura, See attached Remedial
Plan for the project. We need to coordinate with the NYC Office of Environmental remediation in

GAS STATION - IND-G LINE (Continued) **S109374210**

order to obtain building permits as the site also has an E-designation. I will be sending hardcopies of the RAP and attachments to you and NYCOER on Monday. Call me with questions or to discuss. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 DL to eDosc. Will review. AD 01/25/2010: Reviewed the RAP. It states that the site will be re-developed through the construction of a new 6-story, 53-room hotel. The hotel will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth of 12' bsg. The RAP proposes removal of 3 USTs, excavation of contaminated soil, and application of chemical oxidant into the excavation pit. As a preventine measure, a vapor barrier will be installed beneath the foundation slab of the cellar and sub-cellar areas of the building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 5 on-site wells. AD 02/02/2010: Called and spoke with C. Sosik of EBC regarding the RAP. Asked if one additional well can be installed at the site. Also clarified statement regarding installation of new tanks at the property. A revised RAP will be submitted shortly. AD 02/08/2010: Received an e-mail from Mr. Sosik: Ainura, see revised RAP, attached. We added 1 monitoring well, and changed section 3.1.4 as discussed. We also added section 2.5 to discuss dewatering options and modified section 3.1.5 to discuss a waterproofing membrane for the cellar level and a vapor barrier for the sub-cellar level. Building permits, demolition and construction, must be obtained before work can start and MTA must also approve the plans. To obtain building permits we will need a NTP from NYCOER. We have submitted the RAP to OER and their issuance of an NTP is contingent upon written approval of the RAP from DEC. Call to discuss or if you have any other questions. Thanks. Charles B. Sosik, P.G. Dl the revised RAP to eDocs. Will review. AD 02/11/2010: Reviewed the revised plan. Discussed it with J. Kolleeny. Will send an approval letter with a comment. AD 02/17/2010: Issued and sent a RAP approval letter with a comment that: if post-remediation groundwater monitoring results do not indicate significant improvement of groundwater quality at the site, then additional remedial actions may be required by DEC. DL to eDocs. AD 04/2010: Spoke with Mr. Sosik regarding the RAP implementations. He said that they are waiting for OER. Asked him to send me an e-mail: Ainura, the NYCOER project contact is listed below. We sent him your approval letter on February 17. We cannot obtain building permits to remove the tanks without a Notice to Proceed from OER. I do not know what the hold up is. Andrew M. D'Amico Jr. Project Manager

GAS STATION - IND-G LINE (Continued) **S109374210**

Office of Environmental
Remediation Mayor's Office of Operations 253 Broadway, 14th Floor New York, NY 10007 Tel: (212)
341-2135 Fax: (212) 788-2941 Charles B. Sosik, P.G. Principal EB C Environmental Business
Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net AD
07/27/2010: Called and spoke with C. Sosik of EBC. He told me that they were required to make some
changes in the RAP by OER. A revised RAP will be submitted to us as well. Asked him to send me a
summary e-mail regarding this matter. AD 10/06/2010: Received an e-mail from Mr. Sosik: Ainura, see
revised redline version which incorporates changes requested by NYCOER. Let me know if DEC has any
problems with the changes. We intend to re-submit the hard copy with the rest of the OER required
submittals (full size architectural plans, letter from waterproofing manufacturer, letter from
project architect etc.) by Friday. We will send a hardcopy of the revised plan to you as well.
Thanks. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000
Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net 10/12/2010: Reviewed the revised
version. And as it states in the e-mail, no particular changes were made to the RAP itself, which
was approved by DEC in February 2010. It states that the site will be re-developed through the
construction of a new 5-story, 52-room hotel (instead of 6-story hotel in previous RAP). The hotel
will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth
of 13' bsg (instead of 12'). The RAP proposes removal of 3 USTs, excavation of contaminated soil,
and application of chemical oxidant into the excavation pit. As a preventine measure, a waterproof
membrane will be installed beneath the foundation slab of the cellar and sub-cellar areas of the
building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 6 wells. The
proposed sampling interval of 30 feet for end-point soil samples is questionable. AD 10/14/2010:
Called and spoke with Mr. Sosik regarding the soil sampling interval concerns and some typo on page
10 in the work plan. It was agreed that number and locations for soil samples will be decided after
excavation will be completed, based on the site conditions (shorings, shape of final excavation, GW
in the pit and such). A revised pdf copy of the RAP with corrected page 10 was submitted by e-mail.
Discussed the RAP with J. Kolleeny. Later issued an approval letter. DL pdf copy of the letter to
eDocs. AD 08/23/2011: Called and spoke with C. Sosik regarding site status update info. He will
send an e-mail with this info shortly. AD 08/25/2011: Received an e-mail from C. Sosik saying:

GAS STATION - IND-G LINE (Continued) **S109374210**

Ainura, As an update on progress at the site: I met with the developers about 2 weeks ago and they indicated that the MTA had finally approved the plans. I believe the project can now go back to DOB and they should be able to obtain approved plans. We will be meeting with the developer, architect and general contractor within the next couple of weeks to plan the work sequence and logistics. I ll let you know when the have DOB approvals and when we have a firm schedule. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870 Cell: 631.357.4927 csosik@ebcincny.com AD 12/22/2011: Sent an e-mail to C. Sosik requesting site status update. AD 12/29/2011: Did not receive any response. AD 01/17/2012: Sent an e-mail to Mr. Sosik requesting site status update. AD 01/18/2012: Received an e-mail from Mr. Sosik stating that they just cut utility service to the building and expect to begin demolition next week. Tanks removal will follow. AD 03/12/2012: Sent an e-mail to Mr. Sosik with a request for site status update. AD Later in the day received the following response: Ainura, I have been notified that the UST removal is starting on this project. We will have someone on-site today to observe. The plan is to remove the tanks, backfill and demo the building and infrastructure first,.close out the demo permit and then install shoring and begin excavation of impacted soil as part of the building foundation. We will send you an udate on the short term schedule after we have a chance to confer with the tank removal contractor. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870 Cell: 631.357.4927 csosik@ebcincny.com 04/17/2012: Called and spoke with Mr. Sosik. He said that the tanks were removed, and they are planning to remove a concrete pad underneath the former tanks to collect soil samples. Soil samples will be also collected after removal of dispensers and fill lines. Mr. Sosik will keep me informed. AD 06/12/2012: Sent an e-mail to Mr. Sosic with a request for site status update. Later received the following response from Mr. Sosic: Ainura, They expect to start excavation this week. I will get an update from the contractor and get back to you. Charles B. Sosik, P.G. AD 11/14/2012: Called and left a message to Mr. Sosik. AD 01/14/2013: Called and spoke with C. Sosik regarding site status update reports. He informed that excavation started at the site about a month ago. The site has E designation, so they send also reports to MOER. The project manager in OER for this site is Breanna Gribble. Mr. Sosik will sent update reports to DEC. Requested him to inform me about soil sampling date. Later in the day received a daily reports from Kevin

GAS STATION - IND-G LINE (Continued) **S109374210**

Brusee of EBC. The reports
states that on December 19, 2012 EBC began excavation of the top 5 feet of the soil from the
northern tip of the lot. On December 21, 2012 limited soil disturbing activities were conducted to
grade the site to allow access of the pile auger rig to the bottom of the 5ft deep excavation. On
December 27, 2012 a total of 5 truck loads of soil were excavated and transported to CEC. For the
next 2 weeks, EBC planned that the auger pile machine will be installing piles within the open
excavation. No soil disturbing activities will be performed while the piles are being installed.
According to EBC, significantly contaminated petroleum contaminated soil has not yet been
encountered, so odor has not been an issue and the soil is very wet right now, resulting in no
on-site dust. AD 02/14/2013: Sent an e-mail to Mr. Sosik with a request for remediation status
update. later in the day received the following e-mail from Kevin Brussee: Ainura, I had previously
sent you copies of all of the Daily Status Reports for 447 Union. No work has been performed at the
Site since those reports. Over the last few weeks, no excavation work has been performed at the
Site. Work has been limited to installation of a few steel piles and follow up load tests on the
piles. Excavation is expected to begin again possibly next week or the following week. I'll be sure
to CC you on any future daily status reports. Kevin Brussee Project Manager AD 04/18/2013: Received
the following e-mail from : Attached is the daily status report for 447 Union Avenue for Wednesday,
4/17/2013. Soil was excavated from the west side of the site down to approximately 16 feet. Eight
(8) truck loads of non hazardous soil were sent to Clean Earth of Carteret. No additional soil
excavation is planned until early next week and planned activities include installation of footings
on the west and north sides of the site. Thanks, Chawinie Miller DL the daily report to the folder.
AD 05/16/2013: Received the following e-mail from EBC: Attached is the daily status report for 447
Union Avenue for Wednesday, 5/16/2013. Four (4) truck loads of petroleum contaminated soil were
sent to Clean Earth of Carteret in NJ. Additional soil transport planned for 5/17. Thanks, Chawinie
Miller Project Manager / Industrial Hygienist EBC DL the report to the folder. AD 10/07/2013: Sent
an e-mail to Mr. Sosik with a request for site status update info. Later in the day received the
following response from Mr. Sosik: Ainura, 447 Union was completed and the building is under
construction. We will send a completion report shortly. 150-17 Cross Island: 1st injection
performed and we are planning a second application. Charles B. Sosik, P.G. Principal EB C RAR is

GAS STATION - IND-G LINE (Continued) **S109374210**

due. AD 11/12/2013: Did not received the report. Called and spoke with C. Sosik. Requested to submit the summary report ASAP. The report submission is due 12/01/2013. AD 12/13/2013: Called and spoke with C. Sosik of EBC. He told me that they are waiting for the cement capping around the building to be finished, to include info on in in the report, as per OER's request. The report will be finished and submitted around end of December 2013. AD 02/11/2014: Called and left a message to C. Sosik regarding report submission. AD 03/04/2014: Called and spoke with C. Sosik. Required to submit the remediation summary report ASAP. Later in the day received a link to DL the report. Will review. AD 03/06/2014: The file submitted by EBC is more than 100 Mb. The size of the report should be changed and the report should be re-submitted to DEC. AD 03/26/2014: Reviewed the remedial action report. It states that dispensers, two 3,000 gallon underground gasoline tanks, one 3,000 gallon underground diesel tank and associated piping were removed off-site from April 11, 2012, to April 17, 2012. The product/gasoline was pumped out by the service station owner prior to the UST removal, leaving only tank sludge within the tanks. The tank sludge within the three tanks was thoroughly removed using a wiper blade and containerized in 55-gallon USDOT drums and transported by Aarco Environmental to CleanWater located at 1329 Richmond Terrace, Staten Island, NY. The steel tanks were then transported to a local metal recycling facility for proper disposal. On April 18, 2013, EBC inspected the soil immediately below the former location of the tanks for evidence of contamination. No olfactory of PID evidence of contamination was observed. No USTs excavation endpoint samples were collected following removal of the three underground storage tanks since the area below and around the tanks was planned to be excavated for construction of the new building's cellar. Remedial excavation: From December 19, 2012, to May 29, 2013, contaminated soil was excavated and live loaded into trucks for transport to Clean Earth of Carteret. The total number of tons of non-hazardous soil excavated and transported to Clean Earth of Carteret was 2,819.56.
Construction of the hotel building's cellar level required excavation to a depth of approximately 12 feet below grade for the entire footprint of the building. Soil sampling: In accordance with the RAP, EBC collected 8 endpoint soil samples from across the Site from the final excavation needed for the new building's basement. Endpoint soil samples were collected at the approximate rate of one endpoint sample per 900 ft2 of excavation base as excavation within each section was completed.
Soil data: Gasoline related VOCs were detected above Unrestricted Use

GAS STATION - IND-G LINE (Continued) **S109374210**

SCOs in endpoint soil samples
EP3 through EP8. The highest concentrations were reported in EP3, EP5 and EP8. Only methyl ethyl
ketone (1,200 ppb) and o-xylene (440 ppb) were detected above Unrestricted Use SCOs in EP4,
m&pxylenes(330 ppb) in EP6, and 1,2,4-trimethylbenzene (3,600 ppb), acetone (150 ppb), and
m&pxylenes(260 ppb) in EP7. Based on the elevated results reported in soil samples EP3, EP5 and
EP8, additional excavation of approximately 1 foot was conducted within the collection area of each
of the three samples. Following the additional excavation, EBC collected endpoint samples EP3A,
EP5A and EP8A. The laboratory results of the follow-up endpoint soil samples showed significant
decreases in gasoline related VOCs in the area of endpoint soil sample EP5/EP5A. Significant
reductions were not observed in the area of endpoint soil samples EP3/EP3A and EP8/EP8A. GW
sampling: On June 28, 2013, EBC collected one groundwater grab sample from groundwater that had
accumulated within the open excavation pit. Gasoline related VOCs were detected within the
groundwater sample at concentrations above GQS, including 1,2,4-trimethylbenzene (34 ppb),
1,3,5-trimethylbenzene (8.5 ppb), benzene (16 ppb), ethylbenzene (43 ppb), isopropylbenzene (13
ppb), m&p-xylenes (49 ppb), naphthalene (25 ppb), npropylbenzene (32 ppb), o-xylene (16 ppb), and
toluene (15 ppb). However, these concentrations are lower than the VOC concentrations originally
reported during the 2009 Remedial Investigation, which indicates the contaminated soil removed as
part of redevelopment was effective in addressing on-site petroleum contamination. Chemical
oxidation: Prior to pouring the concrete cellar slab, EBC applied sodium persulfate and FeEDTA
powder directly into the open excavation to reduce VOC concentrations in groundwater and to treat
any residual VOCs in soil below the building slab. The chemical oxidant was added at a ratio of 9
lbs of FeEDTA powder to each 55 lb bag of sodium persulfate for a total of 550 lbs of sodium
persulfate. The activated sodium persulfate powder was thoroughly mixed and worked into the
subsurface soil and groundwater utilizing an excavator bucket. Waterproofing Membrane: Since the
building's cellar level was installed below the static groundwater level, a waterproofing system
was required beneath the cellar slab and behind the foundation walls. The waterproofing membrane
was installed by Sunny Builders Corp. An EBC field inspector was on-Site during various stages of
the installation of the waterproofing membrane beneath the cellar slab and behind the foundation
walls. The water proofing membrane installed behind the foundation walls consisted of the Bituthene

GAS STATION - IND-G LINE (Continued) **S109374210**

3000 self-adhesive polyethylene waterproof membrane manufactured by Grace Construction Products.
The waterproofing membrane installed below the concrete slab consisted of Preprufe 300R. Site
Capping: The entire Site has been capped with concrete. This includes an 8 thick concrete cellar
slab beneath the entire building, and a 4 inch thick concrete slab in grade-level open spaces. A
work plan for monitoring wells installation is due. AD 04/04/2014: called and spoke with C. Sosik
of EBC. Required to re-submit the report. AD 04/09/2014: Sent an e-mail to Mr. Sosik with a
remainder to submit the RIR and with a request to submit in a timely manner a work plan for
installation of monitoring wells for post-remediation GW monitoring. AD 04/17/2014: Received the
following e-mail from K. Brussee: Ainura, As you requested, the following is attached. 1) Figure 4
2) GW Monitoring Plan Kevin Brussee Senior Project Manager EB C Environmental Business Consultants
Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review.
AD 04/20/2014: Reviewed the GW monitoring work plan. It proposes installation of four 1 GW
monitoring wells and quarterly GW sampling. Previously, DEC approved RAP proposed 6 monitoring
wells for GW sampling program. It looks like number of the sampling wells was reduced due to the
changes to the footprint of the constructed building. The diamert of the proposed wells is
questionable. Will discuss work plan with J. Kolleeny. AD 04/22/2014: Discussed the work plan with
J. Kolleeny. Called and spoke with C. Sosik regarding diameter of the proposed wells. According to
Mr. Sosik installation of 1 size wells is common for their company and that they do not install 2
wells. AD 04/23/2014: Approved the work plan. Sent the letter. AD 09/23/2014: Sent an e-mail to
Kevin Brussee with a request to submit the summary report. AD 10/20/2014: Called and spoke with K.
Brussee regarding report submission. He said that they were not able to install wells due to the
scaffolding at the site till the beginning of October. The wells were installed approximately two
weeks ago and the GW samples are in the lab. Report will be submitted in a few weeks. Requested to
send me a summary e-mail. AD 01/14/2015: Called and spoke with Kevin of EBC. He said that EBC was
able to install two out of four proposed wells. One well was dry and another well was not installed
due to the obsticles. EBC sampled GW from two installed wells and in a process of a report
preparation. Requested to submit the report. Decision regarding further actions at the site will be
based on the GW results. AD 06/30/2015: Called and spoke with Kevin Brussee regarding report
submission. He said that it was postponed due to some issues with his

GAS STATION - IND-G LINE (Continued) **S109374210**

client. The newly installed
wells were sampled. He will submit the report in two weeks. AD
07/18/2015: Received the following
e-mail from K. Brussee: Ainura, Sorry for the lengthy delay. As
previously discussed, I ve attached
a brief groundwater sampling report requesting closure of NYSDEC Spill
No. 0809794. Please review
and let me know if you have any questions. Thanks, Kevin Brussee
Senior Project Manager EB C
Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax:
631.924.2870 Cell: 631.338.1749
Kbrussee@ebcincny.com Will review. AD 08/07/2015: Reviewed the
groundwater well installation and
sampling report. The report states that groundwater quality monitoring
was proposed from four
monitoring wells in the Post- Remedial Groundwater Monitoring Plan
(EBC, April 2014). However, one
monitoring well proposed on the east side of the new hotel building
could not be installed due to
the subway and utility connections. The other three monitoring wells
(MW-6, MW-7, and MW-8) were
installed on the west side of the building within the Keap Street
sidewalk on Thursday, October 9,
2014. All three monitoring wells were installed at a depth of 25 feet
and were constructed of 1
inch diameter PVC consisting of 15 feet of screen and 10 feet of
riser. On October 17, 2014
groundwater samples was collected from monitoring MW-7 and MW-8
utilizing disposable polyethylene
tubing and a peristaltic pump with disposable peristaltic pump tubing.
A groundwater sample could
not be collected from MW-6 because this monitoring well was dry. Lab
data: The laboratory results
were compared to New York State 6NYCRR Part 703.5 Class GA groundwater
quality standards (GQS). No
VOCs were detected in MW-7, which is located off the northwest corner
of the building. Low
concentrations of VOCs were detected in MW-8, which is located
immediately west of the former tank
pad. VOCs detected include 1,2,4-trimethylbenzene (1.5 ppb),
1,3,5-trimethylbenzene (0.45 ppb),
benzene (1.1 ppb), ethylbenzene (1.4 ppb), m&p-xylenes (1.8 ppb), MTBE
(0.77 ppb), naphthalene
(0.48 ppb), and n-propylbenzene (0.42 ppb). Conclusions and
Recommendations: As previously stated
in the Closure Report (EBC, January 2014), excavation of petroleum
contaminated soil from below the
groundwater interface was conducted in the former tank/spill area.
During excavation, a groundwater
sample was collected from the groundwater within the open excavation.
Relatively low concentrations
of gasoline related VOCs were detected in the groundwater grab sample.
To treat residual
soil/groundwater, a chemical oxidant was applied into the open
excavation and exposed groundwater
prior to backfilling. The two monitoring wells (MW-7 and MW-8)
installed down gradient of the

GAS STATION - IND-G LINE (Continued) **S109374210**

source were sampled in October of 2014. Little or no VOCs were detected in either groundwater sample. Therefore, based on the remedial activities performed at the site and post-remediation groundwater sampling results, EBC recommends closure of NYSDEC Spill No. 08-11706. Will discuss the closure request with J. Kolleeny of DEC. AD 08/18/2015: Discussed the closure request with J. Kolleeny of DEC. Based on the remedial activities performed at the site such as: - Removal of USTs and associated piping; - Excavation and removal of approximately 2,819.56 tons of soil; - Application of chemical oxidant into the open excavation pit; - Cleanfill with crushed stone, imported to the site from a NYSDEC Active Registered Construction and Demolition Processing Facilities for use as backfill below the slab. - Installation of a water proofing membrane consisting of a Bituthene 3000 and Preprufe 300R - Capping the entire site with a concrete slab, and taking into consideration the latest post-remediation groundwater sampling results, which indicate very low or non-detect TVOC concentrations, DEC decided to approve the spill closure request for this site. Case closed. Letter was issued to Verru Dhillon of Union Hotel Park, LLC. AD

Remarks: CALLER STATES THAT THERE IS LEAKING FUEL TANKS THAT ARE LEAKING TO THE SUBWAY LINE. SUBWAY HAS NOT BEEN SHUT DOWN AT THIS TIME. FDNY IS ON SCENE.

DEC Memo:	12/02/08-Zhune visited the site. The Metropolitan Avenue Subway Station has a police precinct. I spoke to Hannay from Transit Brooklyn Task Force he said early in the morning there was a very strong gasoline smell. We noticed gasoline smell for almost a year when the gas station fill up the tanks with gasoline but today it has been the worst. Passengers were complaining. they called 911. By the time that I got there the smell was gone. On 433 Union Ave, Brooklyn NY there is a Getty gasoline station. The station have 3 USTs, one regular, one diesel and one premium. USTs were installed in 1982. One AST installed in 2004. Tanks are steel tanks. In the top sump of premium a leak of apporximately 25 gallons of gasoline was found. In the top sump of diesel there are diesel and in the top sump of regular there are a mixture of gasoline and water. The sensors in the sumps were not place touching the bottom of the sump. The fuel alarm did not went off becouse the sensors were placed incorrectly. The last time the tanks were tested was on 03/11/08 they passed the test. the lines are doubled walled lines. Dispenser 1-2 probably are leaking. The gravel in the sumps are wet and there is petroleum smell. Benjamin Leonen (718)999-2460 from FFD (Bulk Fuel Safety) shut the station down. DEC Requires 1) Tanks tightness test and lines test 2) Copies of 10 Days Reconcilation Report 3) Copies of Corrosion Protection test and stage I and II test. 12/04/09- Zhune. Received the Tank and line test results performed by Certified Tank CTT Testing. The results showed that the three tanks (Diesel, Premium and Regular) and the three lines passed the test.

GAS STATION - IND-G LINE (Continued) **S109374210**

01/26/09-Zhune. Received the stage I and II test results and passed test. 02/10/09- Zhune called
Frank Cifuentes (718)999-2516 (DCI) Deputy Chief Inspector of the Bulk Fuel Safety. He said the
station was closed on 12/02/09 by Benjamin Leonen. On 12/08/09 Frank witnessed the precision test
tanks and passed. The station open to service on 12/10/09.
02/10/09-Vought-Called and spoke to NYCT
Varley as per DEC Austin and no further monitoring of station being performed and no complaints
received to date since original spill. Phase II received by DEC. DEC Zhune will review and discuss
with DEC Austin for transfer to Petroleum Remediation Unit due to presence of free product and
necessity of long term remediation. PHASE II Report. A Total of 4 soil boring (B1-B4) were
performed during the Subsurface investigation. The location of Groundwater water correspond to the
same location of the soil boring. samples were collected by installing temporary wells. SOIL. No
VOCs were detected in any of the four shallow soil samples B1(0-2ft), B2(0-2ft), B3(0-2fl)and
B4(0-2ft)at concentrations above TAGM guidance levels. Elevated concentrations of Ethyl-benzene,
Toluene, o-Xylene, p&m-xylene, 1,2,4 trimethyl-benzene in the deep soil samples Bi(8-10ft),
B2(10-12ft)and B3(10-12ft). No VOCs were detected at B4(10-12ft) at concentrations aboveTAGM
guidance levels. SVOCs above the guidance levels were detected in B1(0-2ft), B2(0-2ft),
B3(8-10ft)and B4(0-2ft). The elevated compounds include Benzo(a)anthracene, Benzo(b)fluoranthene,
Benzo(a)pyrene, Benzo(K)fluorenthene, Chrysene and Dibenzo(a,h)anthracene. Metals. Zinc, cooper and
cadmiun were detected at elevated concentrations. Zinc in each soil sqmples excep B2(10-12ft) and
B4(10-12ft). Cooper in B2(0-2ft) andB3(8-10ft) and Calcium in B2(10-12ft). GROUNDWATER. Benzene,
Toluene, Ethyl-benzene and p&M Xylene were detected at concentrations above NYSDEC GQSs in B1 and
B4. Free floating product was recovered from B2 and B3. No SVOCs were detewcted at concentrations
above NYSDEC CQSs. Only B1-B4 was analyzed for SVOCs PCB-1254 was detected at a concentration of
12.2 ug/L in B2. Metals. Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Magnesium,
Nickel, Sodium, and Selenium were detected above their respective NYSDEC GQSs. 02/20/09- Zhune. As
per Randy Austin this case has been tranferred to Mark TIbbe for long term remediation. 02/24/2009:
This spill case was transferred to A. Doronova. - AD 04/09/2009:
Received a pdf copies of Orders on
Consent: one signed by responsible party and second signed by consultant, who was fined due to
falure to report the spill. DL copies to eDocs. AD 04/23/2009:
Received an email from V. Brevdo. He
forwarded me a copy of the investigation work plan, which was

GAS STATION - IND-G LINE (Continued) **S109374210**

requested in the CAP of the signed
Order on Consent. Reviewed the work plan. AD 04/27/2009: Called and spoke with Charles Sosik of EBC
(consultant). Requested to re-submit the work plan. Revised WP should state all spill cases
associated with this property (spill 0809794 is missing) and references to the consent order and
the corrective action plan. They did not performed any weekly gauging and recovery visits required
under Paragraph 1 of the CAP because there are not any permanent monitoring wells at the site.
Discussed locations of the proposed permanent GW monitoring wells. Asked why EBC did not propose to
install permanent wells in the vicinity of soil borings B-2 and B-3 (product sheen was detected in
these temporary wells in December 2008). According to Mr. Sosic, the redevelopmet plan includes
excavation to 12' bgs for a hotel construction with a full basement, so they proposed wells only
along the site borders to monitor off-site migration of the contamination. The revised WP will be
submitted till the end of this week. AD 04/30/2009: Called and spoke with Mr. Sosic regarding
submission of the revised WP. According to the information obtained from him today, the start date
of a re-development project is unknown. Told him that due to the postponement of the project, two
additional permanent monitoring wells should be installed in the vicinity of the temporary wells
B-2 and B-3, or two of the proposed wells should be relocated. Mr. Sosic requested to put all this
requirements in writing. Prepared an e-mail for Mr. Sosic. Discussed the site with J. Kolleeny.
Later received an e-mail from Mr. Sosic saying: Ainyra, Attached is the revised RIWP reflecting the
changes you requested earlier in the week (add subway spill number and consent order info in
introduction section) as well as those requested earlier today (move the locations of 2 MWs). Hard
copy is going out today as well. I do not have the PBS inspection report, but as I mentioned you
should be able to obtain that from Veronica. Call with questions.
Charles B. Sosik, P.G. Principal
EBC Will review. AD 05/04/2009: Reveiwed the revised work plan. It proposes additional subsurface
investigation at the site, including advancing and sampling of seven soil borings and eight
temporary groundwater sampling points, and installation of six permanent groundwater monitoring
wells. The diameter of the proposed permanent wells planned to be - 1 inch. Groundwater samples
will be analyzed for VOCs. The work plan's Figure 4 (proposed monitoring well locations) indicates
only 5 wells of proposed 6. Figure 3 has two different versions in the same plan and Figure 2 is
abcent. A remedial investigation report summarizing all findings with conclusions and

GAS STATION - IND-G LINE (Continued) **S109374210**

recommendations will be prepared and submitted to DEC. Called and spoke with Mr. Sosik of EBC.
requested to correct figures and resubmit the work plan. Later received an e-mail from him saying:
Revised as discussed. Corrected spill number on Page 1 and correct Figure 3 and 4 shown. In
reviewing again I eliminated the monitoring well within the service bay due to the potential for
spills. A well was added near the sign as discussed and the text changed from 6 wells to 5. If OK
we will send out new hard copy. Charles B. Sosik, P.G. Principal EBC Figures were corrected. But
now EBC proposes 5 monitoring wells instead of 6 previously proposed due to spill potential for
wells in the vivinity of the service bay. AD 05/05/2009: Discussed the work plan with J. Kolleeny
of DEC. Issued and sent an approval letter with some modifications to Mr. Mohan Dhillon (site
owner) and copies to J. Kolleeny-DEC and C. Sosic (EBC), DL e-copy to eDocs. Investigation report
is due August 6, 2009. AD 05/26/2009: Received an e-mail from C. Sosik of EBC saying: Ainura, We
are attempting to schedule the drilling for tomorrow. Let me know if you have any problems with
this. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph:
631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927
csosik2@optonline.net Spoke with him. Scheduled
the site visit. AD 05/27/2009: Received a phone call from Mr. Sosik. He said that fieldwork was
canceled due some scheduling issues, and promised to inform me on a new date for investigation
work. AD 06/11/2009: Did not receive any notifications from Mr. Sosik. Sent him an e-mail saying:
Hi Charles, Do you already have a new schedule for drilling at the site? I did not hear from you
since you canceled May 27th field work. Please notify me in advance. Thank you. Ainura Doronova AD
06/12/2009: Received an e-mail from C. Sosik of EBC: We expect to reschedule for late next week.
I'll let you know Monday. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants
Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 AD 06/17/2009: Spoke with C. Sosik regarding
fieldwork schedule. He told me that it scheduled for week of June 28. AD 07/2009: The site visit
was canceled again. AD 07/14/2009: Received an e-mail from C. Sosik of EBC: Ainura, The attorney is
asking for an extension on the field work till September due to issues with the insurance company.
Please let me know if this is acceptable. Thank you. Charles B. Sosik, P.G. AD 07/15/2009: Spoke
with Mr. Sosik, told him that deadline extension can be approved by the Department in accordance
with the CAP of the Concent Order. Requested to submit an official letter request for extension. AD
07/17/2009: Received the letter. DL to eDocs. Will review. AD

GAS STATION - IND-G LINE (Continued) **S109374210**

07/21/2009: Reviewed the letter. EBC asks for 45-day deadline extention. Discussed it with J. Kolleeny of DEC. AD 07/22/2009: Sent a letter with 30-day deadline extension approval. CC to J. Kolleeny of DER and J. Urda of DEC. DL to eDocs. The Investigation report submission is due September 4, 2009. AD 08/19/2009: Received an e-mail C. Sosik of EBC which stated that EBC will start site investigation tomorrow. Will visit the site. AD 08/20/2009: Visited the site. Met at the site with C. Sosik. EBC was subcontracted to perform soil boring and wells installation. The highest PID reading at MW-1 boring location was 1300 ppm (13'), at SB-6 PID was 15 ppm (8'-12') and at SB-5 it was 650 ppm (12'-13'). Observed soil and groundwater sampling. There was some gasoline odor noted during installation of MW-1 and SB-5.
The investigation summary report will be submitted. Later in the day received an e-mail from C.
Sosik saying: Ainura, All sampling completed. Product was encountered in MW-3. Not measurable but a heavy black film on water in the bailer. Not enough for a sample, but will try again next week after it settles. Could not get the boring at b7 due to rejection and proximity to lines and tanks.
Pea gravel encountered. I'm in the office tomorrow. Call to discuss. AD 08/26/2009: Called and spoke with C. Sosik. He said that they will return to the site later this week to survey the wells and to collect free product sample if feasible. A soil and GW contamination was also encountered in the vicinity of well MW-1. AD 09/04/2009: Received an e-mail from Mr. SosiK saying: Ainura, The RI Report is attached. A hard copy will follow early next week. Let me know if you have any questions or if additional hard copies are needed. Thanks and enjoy the weekend.
Charles B. Sosik, P.G.
Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net DL the report to eDocs. AD 09/14/2009: Received a hard copy of the report. Will review. AD 10/20/2009: Reviewed the report. AD 11/02/2009: Called and spoke with C. Sosik of EBC. Asked him to check all wells for free product and to sample permanent monitoring wells. RAP should be submitted with current GW data no later than December 1, 2009. AD 12/08/2009: Called and spoke with Mr. Sosik of EBC regarding RAP submission. He is out of town. He will be back tommorow. AD 12/19/2009: Received an e-mail from Mr. Sosik saying: Ainura, See attached Remedial Plan for the project. We need to coordinate with the NYC Office of Environmental remediation in order to obtain building permits as the site also has an E-designation. I will be sending hardcopies of the RAP and attachments to you and NYCOER on Monday. Call me with questions or to

GAS STATION - IND-G LINE (Continued) **S109374210**

discuss. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph:
631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 DL to eDosc. Will review. AD 01/25/2010: Reviewed
the RAP. It states that the site will be re-developed through the construction of a new 6-story,
53-room hotel. The hotel will have a cellar and a sub-cellar. The cellar and sub-cellar will
require excavation to a depth of 12' bsg. The RAP proposes removal of 3 USTs, excavation of
contaminated soil, and application of chemical oxidant into the excavation pit. As a preventine
measure, a vapor barrier will be installed beneath the foundation slab of the cellar and sub-cellar
areas of the building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 5
on-site wells. AD 02/02/2010: Called and spoke with C. Sosik of EBC regarding the RAP. Asked if one
additional well can be installed at the site. Also clarified statement regarding installation of
new tanks at the property. A revised RAP will be submitted shortly. AD 02/08/2010: Received an
e-mail from Mr. Sosik: Ainura, see revised RAP, attached. We added 1 monitoring well, and changed
section 3.1.4 as discussed. We also added section 2.5 to discuss dewatering options and modified
section 3.1.5 to discuss a waterproofing membrane for the cellar level and a vapor barrier for the
sub-cellar level. Building permits, demolition and construction, must be obtained before work can
start and MTA must also approve the plans. To obtain building permits we will need a NTP from
NYCOER. We have submitted the RAP to OER and their issuance of an NTP is contingent upon written
approval of the RAP from DEC. Call to discuss or if you have any other questions. Thanks. Charles
B. Sosik, P.G. Dl the revised RAP to eDocs. Will review. AD 02/11/2010: Reviewed the revised plan.
Discussed it with J. Kolleeny. Will send an approval letter with a comment. AD 02/17/2010: Issued
and sent a RAP approval letter with a comment that: if post-remediation groundwater monitoring
results do not indicate significant improvement of groundwater quality at the site, then additional
remedial actions may be required by DEC. DL to eDocs. AD 04/2010: Spoke with Mr. Sosik regarding
the RAP implementations. He said that they are waiting for OER. Asked him to send me an e-mail:
Ainura, the NYCOER project contact is listed below. We sent him your approval letter on February
17. We cannot obtain building permits to remove the tanks without a Notice to Proceed from OER. I
do not know what the hold up is. Andrew M. D'Amico Jr. Project Manager Office of Environmental
Remediation Mayor's Office of Operations 253 Broadway, 14th Floor New York, NY 10007 Tel: (212)
341-2135 Fax: (212) 788-2941 Charles B. Sosik, P.G. Principal EB C

GAS STATION - IND-G LINE (Continued) **S109374210**

Environmental Business
Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927
csosik2@optonline.net AD
07/27/2010: Called and spoke with C. Sosik of EBC. He told me that they were required to make some
changes in the RAP by OER. A revised RAP will be submitted to us as well. Asked him to send me a
summary e-mail regarding this matter. AD 10/06/2010: Received an e-mail from Mr. Sosik: Ainura, see
revised redline version which incorporates changes requested by NYCOER. Let me know if DEC has any
problems with the changes. We intend to re-submit the hard copy with the rest of the OER required
submittals (full size architectural plans, letter from waterproofing manufacturer, letter from
project architect etc.) by Friday. We will send a hardcopy of the revised plan to you as well.
Thanks. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000
Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net 10/12/2010: Reviewed the revised
version. And as it states in the e-mail, no particular changes were made to the RAP itself, which
was approved by DEC in February 2010. It states that the site will be re-developed through the
construction of a new 5-story, 52-room hotel (instead of 6-story hotel in previous RAP). The hotel
will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth
of 13’ bsg (instead of 12’). The RAP proposes removal of 3 USTs, excavation of contaminated soil,
and application of chemical oxidant into the excavation pit. As a preventine measure, a waterproof
membrane will be installed beneath the foundation slab of the cellar and sub-cellar areas of the
building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 6 wells. The
proposed sampling interval of 30 feet for end-point soil samples is questionable. AD 10/14/2010:
Called and spoke with Mr. Sosik regarding the soil sampling interval concerns and some typo on page
10 in the work plan. It was agreed that number and locations for soil samples will be decided after
excavation will be completed, based on the site conditions (shorings, shape of final excavation, GW
in the pit and such). A revised pdf copy of the RAP with corrected page 10 was submitted by e-mail.
Discussed the RAP with J. Kolleeny. Later issued an approval letter. DL pdf copy of the letter to
eDocs. AD 08/23/2011: Called and spoke with C. Sosik regarding site status update info. He will
send an e-mail with this info shortly. AD 08/25/2011: Received an e-mail from C. Sosik saying:
Ainura, As an update on progress at the site: I met with the developers about 2 weeks ago and they
indicated that the MTA had finally approved the plans. I believe the project can now go back to DOB

GAS STATION - IND-G LINE (Continued) **S109374210**

and they should be able to obtain approved plans. We will be meeting with the developer, architect
and general contractor within the next couple of weeks to plan the work sequence and logistics. I
ll let you know when the have DOB approvals and when we have a firm schedule. Charles B. Sosik,
P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870
Cell: 631.357.4927 csosik@ebcincny.com AD 12/22/2011: Sent an e-mail to C. Sosik requesting site
status update. AD 12/29/2011: Did not receive any response. AD 01/17/2012: Sent an e-mail to Mr.
Sosik requesting site status update. AD 01/18/2012: Received an e-mail from Mr. Sosik stating that
they just cut utility service to the building and expect to begin demolition next week. Tanks
removal will follow. AD 03/12/2012: Sent an e-mail to Mr. Sosik with a request for site status
update. AD Later in the day received the following response: Ainura, I have been notified that the
UST removal is starting on this project. We will have someone on-site today to observe. The plan is
to remove the tanks, backfill and demo the building and infrastructure first,.close out the demo
permit and then install shoring and begin excavation of impacted soil as part of the building
foundation. We will send you an udate on the short term schedule after we have a chance to confer
with the tank removal contractor. Charles B. Sosik, P.G. Principal EB C Environmental Business
Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870 Cell: 631.357.4927 csosik@ebcincny.com
04/17/2012: Called and spoke with Mr. Sosik. He said that the tanks were removed, and they are
planning to remove a concrete pad underneath the former tanks to collect soil samples. Soil samples
will be also collected after removal of dispensers and fill lines. Mr. Sosik will keep me informed.
AD 06/12/2012: Sent an e-mail to Mr. Sosic with a request for site status update. Later received
the following response from Mr. Sosic: Ainura, They expect to start excavation this week. I will
get an update from the contractor and get back to you. Charles B. Sosik, P.G. AD 11/14/2012: Called
and left a message to Mr. Sosik. AD 01/14/2013: Called and spoke with C. Sosik regarding site
status update reports. He informed that excavation started at the site about a month ago. The site
has E designation, so they send also reports to MOER. The project manager in OER for this site is
Breanna Gribble. Mr. Sosik will sent update reports to DEC. Requested him to inform me about soil
sampling date. Later in the day received a daily reports from Kevin Brusee of EBC. The reports
states that on December 19, 2012 EBC began excavation of the top 5 feet of the soil from the
northern tip of the lot. On December 21, 2012 limited soil disturbing

GAS STATION - IND-G LINE (Continued) **S109374210**

activities were conducted to grade the site to allow access of the pile auger rig to the bottom of the 5ft deep excavation. On December 27, 2012 a total of 5 truck loads of soil were excavated and transported to CEC. For the next 2 weeks, EBC planned that the auger pile machine will be installing piles within the open excavation. No soil disturbing activities will be performed while the piles are being installed. According to EBC, significantly contaminated petroleum contaminated soil has not yet been encountered, so odor has not been an issue and the soil is very wet right now, resulting in no on-site dust. AD 02/14/2013: Sent an e-mail to Mr. Sosik with a request for remediation status update. later in the day received the following e-mail from Kevin Brussee: Ainura, I had previously sent you copies of all of the Daily Status Reports for 447 Union. No work has been performed at the Site since those reports. Over the last few weeks, no excavation work has been performed at the Site. Work has been limited to installation of a few steel piles and follow up load tests on the piles. Excavation is expected to begin again possibly next week or the following week. I'll be sure to CC you on any future daily status reports. Kevin Brussee Project Manager AD 04/18/2013: Received the following e-mail from : Attached is the daily status report for 447 Union Avenue for Wednesday, 4/17/2013. Soil was excavated from the west side of the site down to approximately 16 feet. Eight (8) truck loads of non hazardous soil were sent to Clean Earth of Carteret. No additional soil excavation is planned until early next week and planned activities include installation of footings on the west and north sides of the site. Thanks, Chawinie Miller DL the daily report to the folder. AD 05/16/2013: Received the following e-mail from EBC: Attached is the daily status report for 447 Union Avenue for Wednesday, 5/16/2013. Four (4) truck loads of petroleum contaminated soil were sent to Clean Earth of Carteret in NJ. Additional soil transport planned for 5/17. Thanks, Chawinie Miller Project Manager / Industrial Hygienist EBC DL the report to the folder. AD 10/07/2013: Sent an e-mail to Mr. Sosik with a request for site status update info. Later in the day received the following response from Mr. Sosik: Ainura, 447 Union was completed and the building is under construction. We will send a completion report shortly. 150-17 Cross Island: 1st injection performed and we are planning a second application. Charles B. Sosik, P.G. Principal EB C RAR is due. AD 11/12/2013: Did not received the report. Called and spoke with C. Sosik. Requested to submit the summary report ASAP. The report submission is due 12/01/2013. AD 12/13/2013: Called and

GAS STATION - IND-G LINE (Continued) **S109374210**

spoke with C. Sosik of EBC. He told me that they are waiting for the cement capping around the
building to be finished, to include info on in in the report, as per OER's request. The report will
be finished and submitted around end of December 2013. AD 02/11/2014: Called and left a message to
C. Sosik regarding report submission. AD 03/04/2014: Called and spoke with C. Sosik. Required to
submit the remediation summary report ASAP. Later in the day received a link to DL the report. Will
review. AD 03/06/2014: The file submitted by EBC is more than 100 Mb. The size of the report should
be changed and the report should be re-submitted to DEC. AD 03/26/2014: Reviewed the remedial
action report. It states that dispensers, two 3,000 gallon underground gasoline tanks, one 3,000
gallon underground diesel tank and associated piping were removed off-site from April 11, 2012, to
April 17, 2012. The product/gasoline was pumped out by the service station owner prior to the UST
removal, leaving only tank sludge within the tanks. The tank sludge within the three tanks was
thoroughly removed using a wiper blade and containerized in 55-gallon USDOT drums and transported
by Aarco Environmental to CleanWater located at 1329 Richmond Terrace, Staten Island, NY. The steel
tanks were then transported to a local metal recycling facility for proper disposal. On April 18,
2013, EBC inspected the soil immediately below the former location of the tanks for evidence of
contamination. No olfactory of PID evidence of contamination was observed. No USTs excavation
endpoint samples were collected following removal of the three underground storage tanks since the
area below and around the tanks was planned to be excavated for construction of the new building's
cellar. Remedial excavation: From December 19, 2012, to May 29, 2013, contaminated soil was
excavated and live loaded into trucks for transport to Clean Earth of Carteret. The total number of
tons of non-hazardous soil excavated and transported to Clean Earth of Carteret was 2,819.56.
Construction of the hotel building's cellar level required excavation to a depth of approximately
12 feet below grade for the entire footprint of the building. Soil sampling: In accordance with the
RAP, EBC collected 8 endpoint soil samples from across the Site from the final excavation needed
for the new building's basement. Endpoint soil samples were collected at the approximate rate of
one endpoint sample per 900 ft2 of excavation base as excavation within each section was completed.
Soil data: Gasoline related VOCs were detected above Unrestricted Use SCOs in endpoint soil samples
EP3 through EP8. The highest concentrations were reported in EP3, EP5 and EP8. Only methyl ethyl
ketone (1,200 ppb) and o-xylene (440 ppb) were detected above

GAS STATION - IND-G LINE (Continued) **S109374210**

Unrestricted Use SCOs in EP4,
m&pxylenes(330 ppb) in EP6, and 1,2,4-trimethylbenzene (3,600 ppb), acetone (150 ppb), and
m&pxylenes(260 ppb) in EP7. Based on the elevated results reported in soil samples EP3, EP5 and
EP8, additional excavation of approximately 1 foot was conducted within the collection area of each
of the three samples. Following the additional excavation, EBC collected endpoint samples EP3A,
EP5A and EP8A. The laboratory results of the follow-up endpoint soil samples showed significant
decreases in gasoline related VOCs in the area of endpoint soil sample EP5/EP5A. Significant
reductions were not observed in the area of endpoint soil samples EP3/EP3A and EP8/EP8A. GW
sampling: On June 28, 2013, EBC collected one groundwater grab sample from groundwater that had
accumulated within the open excavation pit. Gasoline related VOCs were detected within the
groundwater sample at concentrations above GQS, including 1,2,4-trimethylbenzene (34 ppb),
1,3,5-trimethylbenzene (8.5 ppb), benzene (16 ppb), ethylbenzene (43 ppb), isopropylbenzene (13
ppb), m&p-xylenes (49 ppb), naphthalene (25 ppb), npropylbenzene (32 ppb), o-xylene (16 ppb), and
toluene (15 ppb). However, these concentrations are lower than the VOC concentrations originally
reported during the 2009 Remedial Investigation, which indicates the contaminated soil removed as
part of redevelopment was effective in addressing on-site petroleum contamination. Chemical
oxidation: Prior to pouring the concrete cellar slab, EBC applied sodium persulfate and FeEDTA
powder directly into the open excavation to reduce VOC concentrations in groundwater and to treat
any residual VOCs in soil below the building slab. The chemical oxidant was added at a ratio of 9
lbs of FeEDTA powder to each 55 lb bag of sodium persulfate for a total of 550 lbs of sodium
persulfate. The activated sodium persulfate powder was thoroughly mixed and worked into the
subsurface soil and groundwater utilizing an excavator bucket. Waterproofing Membrane: Since the
building's cellar level was installed below the static groundwater level, a waterproofing system
was required beneath the cellar slab and behind the foundation walls. The waterproofing membrane
was installed by Sunny Builders Corp. An EBC field inspector was on-Site during various stages of
the installation of the waterproofing membrane beneath the cellar slab and behind the foundation
walls. The water proofing membrane installed behind the foundation walls consisted of the Bituthene
3000 self-adhesive polyethylene waterproof membrane manufactured by Grace Construction Products.
The waterproofing membrane installed below the concrete slab consisted of Preprufe 300R. Site

GAS STATION - IND-G LINE (Continued) **S109374210**

Capping: The entire Site has been capped with concrete. This includes an 8 thick concrete cellar slab beneath the entire building, and a 4 inch thick concrete slab in grade-level open spaces. A work plan for monitoring wells installation is due. AD 04/04/2014: called and spoke with C. Sosik of EBC. Required to re-submit the report. AD 04/09/2014: Sent an e-mail to Mr. Sosik with a remainder to submit the RIR and with a request to submit in a timely manner a work plan for installation of monitoring wells for post-remediation GW monitoring. AD 04/17/2014: Received the following e-mail from K. Brussee: Ainura, As you requested, the following is attached. 1) Figure 4 2) GW Monitoring Plan Kevin Brussee Senior Project Manager EB C Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review. AD 04/20/2014: Reviewed the GW monitoring work plan. It proposes installation of four 1 GW monitoring wells and quarterly GW sampling. Previously, DEC approved RAP proposed 6 monitoring wells for GW sampling program. It looks like number of the sampling wells was reduced due to the changes to the footprint of the constructed building. The diamert of the proposed wells is questionable. Will discuss work plan with J. Kolleeny. AD 04/22/2014: Discussed the work plan with J. Kolleeny. Called and spoke with C. Sosik regarding diameter of the proposed wells. According to Mr. Sosik installation of 1 size wells is common for their company and that they do not install 2 wells. AD 04/23/2014: Approved the work plan. Sent the letter. AD 09/23/2014: Sent an e-mail to Kevin Brussee with a request to submit the summary report. AD 10/20/2014: Called and spoke with K. Brussee regarding report submission. He said that they were not able to install wells due to the scaffolding at the site till the beginning of October. The wells were installed approximately two weeks ago and the GW samples are in the lab. Report will be submitted in a few weeks. Requested to send me a summary e-mail. AD 01/14/2015: Called and spoke with Kevin of EBC. He said that EBC was able to install two out of four proposed wells. One well was dry and another well was not installed due to the obsticles. EBC sampled GW from two installed wells and in a process of a report preparation. Requested to submit the report. Decision regarding further actions at the site will be based on the GW results. AD 06/30/2015: Called and spoke with Kevin Brussee regarding report submission. He said that it was postponed due to some issues with his client. The newly installed wells were sampled. He will submit the report in two weeks. AD 07/18/2015: Received the following e-mail from K. Brussee: Ainura, Sorry for the lengthy delay. As

GAS STATION - IND-G LINE (Continued) **S109374210**

previously discussed, I ve attached
a brief groundwater sampling report requesting closure of NYSDEC Spill No. 0809794. Please review
and let me know if you have any questions. Thanks, Kevin Brussee
Senior Project Manager EB C
Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749
Kbrussee@ebcincny.com Will review. AD 08/07/2015: Reviewed the groundwater well installation and
sampling report. The report states that groundwater quality monitoring was proposed from four
monitoring wells in the Post- Remedial Groundwater Monitoring Plan (EBC, April 2014). However, one
monitoring well proposed on the east side of the new hotel building could not be installed due to
the subway and utility connections. The other three monitoring wells (MW-6, MW-7, and MW-8) were
installed on the west side of the building within the Keap Street sidewalk on Thursday, October 9,
2014. All three monitoring wells were installed at a depth of 25 feet and were constructed of 1
inch diameter PVC consisting of 15 feet of screen and 10 feet of riser. On October 17, 2014
groundwater samples was collected from monitoring MW-7 and MW-8 utilizing disposable polyethylene
tubing and a peristaltic pump with disposable peristaltic pump tubing. A groundwater sample could
not be collected from MW-6 because this monitoring well was dry. Lab data: The laboratory results
were compared to New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). No
VOCs were detected in MW-7, which is located off the northwest corner of the building. Low
concentrations of VOCs were detected in MW-8, which is located immediately west of the former tank
pad. VOCs detected include 1,2,4-trimethylbenzene (1.5 ppb), 1,3,5-trimethylbenzene (0.45 ppb),
benzene (1.1 ppb), ethylbenzene (1.4 ppb), m&p-xylenes (1.8 ppb), MTBE (0.77 ppb), naphthalene
(0.48 ppb), and n-propylbenzene (0.42 ppb). Conclusions and Recommendations: As previously stated
in the Closure Report (EBC, January 2014), excavation of petroleum contaminated soil from below the
groundwater interface was conducted in the former tank/spill area. During excavation, a groundwater
sample was collected from the groundwater within the open excavation. Relatively low concentrations
of gasoline related VOCs were detected in the groundwater grab sample. To treat residual
soil/groundwater, a chemical oxidant was applied into the open excavation and exposed groundwater
prior to backfilling. The two monitoring wells (MW-7 and MW-8) installed down gradient of the
source were sampled in October of 2014. Little or no VOCs were detected in either groundwater
sample. Therefore, based on the remedial activities performed at the site and post-remediation

GAS STATION - IND-G LINE (Continued) **S109374210**

groundwater sampling results, EBC recommends closure of NYSDEC Spill No. 08-11706. Will discuss the closure request with J. Kolleeny of DEC. AD 08/18/2015: Discussed the closure request with J. Kolleeny of DEC. Based on the remedial activities performed at the site such as: - Removal of USTs and associated piping; - Excavation and removal of approximately 2,819.56 tons of soil; - Application of chemical oxidant into the open excavation pit; - Cleanfill with crushed stone, imported to the site from a NYSDEC Active Registered Construction and Demolition Processing Facilities for use as backfill below the slab. - Installation of a water proofing membrane consisting of a Bituthene 3000 and Preprufe 300R - Capping the entire site with a concrete slab, and taking into consideration the latest post-remediation groundwater sampling results, which indicate very low or non-detect TVOC concentrations, DEC decided to approve the spill closure request for this site. Case closed. Letter was issued to Verru Dhillon of Union Hotel Park, LLC. AD

Remarks: CALLER STATES THAT THERE IS LEAKING FUEL TANKS THAT ARE LEAKING TO THE SUBWAY LINE. SUBWAY HAS NOT BEEN SHUT DOWN AT THIS TIME. FDNY IS ON SCENE.

SWIS: 2401
Town: New York City
Record Added Date: 04/22/2019
Record Updated Date: 12/22/2021
Update By: AMSERVIS
Site Description: "Location: The site is located in the Williamsburg neighborhood of Brooklyn, NY and is comprised of a single tax lot totaling 8,800 square feet (0.20 acres). The site is irregular shaped and is bounded on the north by Bayard Street and on the east by Graham Avenue. The west and south sides of the property are bordered by residential buildings. Site Features: The redevelopment currently underway

LOT 18,TAXBLOCK 2724 (Continued) **S108076347**

consists of the construction of a new 6 story mixed use (commercial/residential) building with a cellar that will cover the entirety of the Site. Current Zoning and Land Use: The site is currently zoned M1-2/R6A (manufacturing with residential overlay). Surrounding land use to the west along Bayard Street are one- and two-family residential buildings. The adjacent properties to the south along Graham Avenue consist of three-story residential multi-family walk-up buildings and a three-story mixed residential and commercial building. To the north of the site, across Bayard Street, there are multiple residential one- and two-family buildings and two three-story mixed residential and commercial buildings. To the east of the property, across Graham Avenue, are several residential multi-family walk-up buildings and a single-story garage structure. Past Use of the Site: The site has been developed since at least 1887, with multiple dwellings fronting Bayard Street and multiple mixed-use storefronts along Graham Avenue. The site was identified with a manufacturing use on Sanborn maps from 1965 through 2007. The site was redeveloped between 1965 and 1978 with the recently demolished one-story building. A certificate of occupancy from NYC Buildings Department indicated the on-site manufacturing building completed construction in April 1972. The recently demolished building was last occupied by a floor manufacturing company which used/stored wood stains, varnishes, paint, paint thinners, floor sealants, and floor oil. Site Geography and Geology: Subsurface soils at the site consist of historic fill materials to a depth of approximately 6 feet below grade, followed by native silty-sand and clay. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the site is approximately 20 feet above mean sea level. The topography within the immediate area slopes gradually from east to west. Groundwater occurs beneath the site at a depth of approximately 7.5-9.5 feet below grade. Based on groundwater flow maps, the flow direction is generally toward the southeast. "

Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz[a,h]anthracene, ideno(1,2,3-cd)pyrene, barium, lead, mercury, arsenic, chromium, DDT, DDD, DDT, chlordane, and xylene (mixed) in soil, and methyl-tert-butyl ether (MTBE) in groundwater. Remedial actions have successfully achieved soil cleanup objectives for unrestricted residential use. No residual contamination remains on-site."
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

DEC Memo:	12/22/2004 - Sangesland - 4,000 gal gasoline tank - PBS # 2-069140 1/14/2005 TTF letter sent to: United Ambulette 2428 East 18th St, Brooklyn, NY 11222 2/22/05 Reassigned from Rommel to Foley. Spoke to Bob Arcaro, American. He will be submitting documentation and passing test results. No release to environment. 2/28/05 Received passing tightness test results for system. Bob Arcaro to submit affidavit. 3/7/05 Received affidavit. Between 1/31/05 and 2/11/05, American Resource Technology excavated part of the tank system, isolated the tank and piping and the retested. All components tested tight but the condition of the cathodic protection isolating union on the stage 1 was worn and could have compromised the integrity of the line. There was no evidence of contamination in the excavation but the isolating unions were replaced on the stage 1 line, the suction line, the fill line and vent line as a preventative measure. On 2/15/05, a tightness test of the tank system was performed with the piping still exposed and was witnessed by FDNY who had witnessed the tightness test failure on 12/17/04. The system tested tight.
Remarks:	RECOMMEND: GAS TANK HAS A WET LEAK: HAS BEEN REPORTED TO FIRE DEPT;

DEC Memo:	Site is being excavated under an E designation with the city because of lead contamination. One of the dump trucks hit a pylon and ruptured a diesel saddle tank. Area was soil, but was contained as best they could. ABC Pumped out the puddles & scraped up the contaminated soils. The area is being excavated and end point samples will be taken. Kevin Brussee will forward a spill closure report to DEC within the next couple of weeks. 05/21/14-Hiralkumar Patel. found report dated 05/06/10. as per the report, about 100 gal diesel spilled into construction site due to puncture in saddle tank on dump truck. contaminated soil was removed and endpoint samples were collected. no contmaination found in endpoint samples. based on available information, case closed administratively.
Remarks:	A dump truck drove over a obstacle puncturing its fuel tank spilling

95 BEDFORD LLC (Continued) **S109373000**

its fuel onto the soil. A vac truck is enroute, and soil will be removed at a later date.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 10/10/95: This is additional information about material spilled from the translation of the old spill file: CONTAM MONITORING. 402 Metropolitan Avenue, Brooklyn Owner: Estate of James J. Mannix and Joseph M. Mattone Leased by: Joseph Macchia - Northland Marketing Spill #8907310 reported on 10/24/89 when four 550 gallon underground storage tanks (USTs) failed a tank test. Spill #9212269 was reported on 1/28/93 when Soil Mechanics (hired by the Estate of James Mannix and Joseph Mattone) installed three on-site monitoring wells and encountered 3 1/4 feet of gasoline in MW3. Spill # 9213355 reported on 3/2/93 when six 550 USTs failed a tightness test. Repairs were

402 METROPOLITAN AVE. (Continued) **S100494817**

made to the stick box and vent lines and the tanks passed a retest on 4/2/93 3/9/93 Case No. R2-0941-93-03 initiated. 12/6/94 Order on Consent No. R2-0966-93-03 signed by Joseph Macchia. All three spill numbers cited in Schedule B - Petroleum Discharge and Clean-Up Violations. After the signing of the Consent Order, Macchia contracted Berninger Environmental as their consultant. Including the three wells installed by Soil Mechanics, there is now a total of thirteen monitoring wells both on and off-site. The site is currently on a monthly monitoring and bailing schedule. According to the February 2001 Monitoring Report, the hottest well is MW-3 (in the middle of the property, downgradient of the tank mat) with a total of .97 feet of floating product. The report also indicates that a total of 304 gallons of free product has been bailed from the site wells during these monthly visits. In numerous meetings and letters dated 8/12/98 and 1/22/99 and 9/30/97, DEC required Northland to periodically perform Vacuum Enhanced Fluid Recovery (VEFR) until the tanks are removed and a permanent remediaton system installed. According to DEC's file, VEFR was only performed on five occasions with a total of 267 gallons of free product recovered. 9/12/03 Letter mailed to Joe Macchia requiring additional investigation and remediation. 09/23/03 Reassigned from Rommel to Sun. 02/12/04-Sun-File Update by Sun: -On 09/22/03, Joe Sun sent and also faxed a letter and Stipulation Agreement to Joseph Macchia, Jr. of Northland Marketing Corp. requesting complete delineation of petroleum contamination, submittal of Investigation Summary Report followed by a submittal of a Remedial Action Plan. The investigation must include, but not limited to the following: (1) Confirm groundwater flow direction by surveying site wells, (2) Install additional wells to delineate the contamination to the west, (3) Implemenmt a sampling program, on a quarterly basis, for all non-product monitoring wells and analyze for EPA Method 8270 B/N and 8021 including MTBE, (4) Determine the type of product in MW-9 via product ID analysis, (5) Repair MW-3. Currently the cap for the 2 PVC casing cannot be placed due to insufficient clearance between top of casing and its manhole cover. The PVC casing needs to be shortened. The Department set a deadline of October 3, 2003 for signing of the Stipulation Agreement by the Respondent. -Monthly Monitoring Report (January 2004, by Berninger Environmental, Inc. (Water Berninger, 631-588-2251): The monitoring wells were gauged on 12/22/03. The free phase products were detected on three monitoring wells: 0.59 feet on MW-1, 0.93 feet on MW-3 and 1.20 feet on MW-6. Snow/ice covered the following monitoring wells:MW-7, MW-8, MW-12 and Mw-13, and thus those wells were not gauged. Consultant's Report stated that it appears that other contractors are working on site, areas fenced off with locked gates, thus denying access to monitoring wells, for at least the sixth time drum for bailing product is missing, various utility mark outs, missing well designation markings etc. -02/12/04-Joe Sun called the Manager of the current Used Car4 Services on-site (Alex Tulchistka, 718-388-2424) about what kind of construction activities are being performed onsite. He replied that no new construction activity is performed and no fence or locked gate was installed onsite as far as he knew. Joe Sun then called Walter Berninger again and informed him the conflict information from the Car Service Manager. Berninger will take the picture next time when they perform the monitoring activity and provide more details on gauging the monitoring wells. 12/30/04 File Update by Sun: On 12/21/04, Joe Sun mailed a letter to Kenneth Raisch and Christopher

402 METROPOLITAN AVE. (Continued) **S100494817**

Todd of The Estate of James Mannix and Joseph Matton informing them that the Remedial Action Plan (RAP) submitted by their consultant, Advanced Site Restoration (ASR)has been reviewed by the Department and has the following comments: - ASR proposed two remedial approached for managing the petroleum-contaminated soil to be excavated on site. The first approach, transport off-site and proper disposal, is approved by the Department. The alternative, stabilization/solidification approach, is not approved as proposed. If ASR still wishes to pursue this approach the Department has the following comments and requirements which need to be addressed and a revised RAP needs to be resubmitted for review: 1. To evaluate the effectiveness of the proposed remedial process on the subject site, the horizontal hydraulic gradient at the site must be determined, and the hydraulic conductivity and porosity of the soil must be estimated. The seepage velocity and direction of the ground water flow must be calculated. 2. Redraft the Soil Remediation section (page 5) for clarity, and refer to the product as cold mix asphalt as is done in the applicable Beneficial Use Determination (BUD) approvals. 3. The use of the term cement based (page 6, second to last paragraph) is potentially confusing. The 2001 amendment to BUD Approval 93-0007 allows for the addition of Portland Cement to improve the physical properties of the product, but the petroleum contamination is still stabilized with asphalt emulsion. 4. The sampling schedule required by the BUD (sampling method, analytical method, number of samples and timing of samples) should be tabulated and included in the RAP. 5. The proposed uses for the cold mix asphalt (see page 6, second to last paragraph) are not consistent with the BUD (see 2001 amendment to BUD Approval 93-0007, Operational Requirements, bullet 2). Use of this material as a substitute for conventional asphalt pavement would be a more appropriate application. The Department has the following comments regarding the proposed free product recovery and groundwater remediation. These issues must be addressed in the revised RAP: 1. Provide the formula used to calculate the amount of BioRem required. 2. The plan to periodically re-inoculate the site with BioRem is troubling. If conditions are suitable for the constituent bacteria in BioRem to grow, re-inoculation would be unnecessary. If conditions are unsuitable for growth, the addition of more of the same bacteria will not change things. BioRem should be contacted to learn the optimum conditions for growth, and the acceptable concentrations. A sampling plan to determine if conditions on the site are within these ranges should be provided for review. BioRem should also provide information about the terminal electron acceptors utilized by their proprietary bacteria so the attenuative capacity of the site can be estimated, and compared to the concentration of residual contamination. This comparison is best done with TPH data, rather than the STARS list of compounds for gasoline spills that is usually requested. 3. There is a potential for LNAPL to be present in areas outside the limits of the proposed excavation. If this is confirmed, depending upon the estimated amount of LNAPL, another technology in addition to BioRem may be required for remediation. 4. The 8 to 18 month time frame allotted for bio-remediation is considerably longer than the 7 to 14 weeks stated in the BioRem H-10 Specification Sheet. A soil and ground water monitoring plan to track the bio-remediation should be developed, and included for review in the re-drafted RAP 5. The RAP should have a provision that samples will be collected and analyzed at the discretion of the ASR site supervisor (see page 9, second to

402 METROPOLITAN AVE. (Continued) **S100494817**

last paragraph) or the direction of the DEC project manager. 6. If soil excavation does not commence soon after the product is removed from the wells with the vac-truck, the wells should be monitored daily for free product and the vac-truck recalled when appropriate. 03/01/05 File Update by Sun: On 02/28/05, Sun sent a letter to the property owner informing him that the Department has reviewed the revised remedial action plan (RAP), prepared by Advanced Site Restoration, LLc dateted February 17, 2005. ASR proposed to excavate the contaminated soil and dispose of property off-site and use Bio Rem product H-10 for subsurface bioremediation of hydrocarbon contamination in groundwater. ASR also proposed to remove the free product with a vacuum truck if free-floating hydrocarbons are detected. The Department approves the revised RAP proposed in Reference 1, as noted below: 1. Collection of Soil Samples: As per DER-10 Section 5.4, soil samples must be collected from the bottom of each sidewall for every 30 linear feet of sidewall and one sample from the bottom for every 900 square feet of bottom area. In all cases, samples should be biased toward locations of highest expected contamination as indicated by field evidence or PID measurements. 2. Salvage of Existing Groundwater Monitoring Wells: Page 4 of the revised RAP in Reference 1 under Section 5.0 Groundwater Remediation stated that ASR will attempt to salvage any groundwater observation wells still existing on the site. If addition wells are needed, they will be installed strategically, to maximize the data that can be obtained. It should be noted that according to the historical data, free product was detected in monitoring wells MW-1, MW-3, MW-6 and MW-11. These four monitoring wells and other existing wells must be restored at the same locations or at the locations to be consulted with the Department if they were destroyed during excavation. 11/11/05: Sun received UST Closure Report for the subject site, dated 11/07/05. 11/23/05: Review of the monthly report dated 10/19/05 indicated that Total BTEX ranged from <MDL to 20,900 ppb, and MTBE ranged from <NDL to 6,300ppb. A total of 16 Monироring wells were gauged and sampled. Only one well (MW-11) had free phased product with thickness of 0.23 feet. (Sun) 12/13/05: Review of the monthly report dated 11/10/05 indicated that Total BTEX ranged from <MDL to 20,900 ppb (October, 2005), and MTBE ranged from <NDL to 6,300ppb (October, 2005). A total of 16 Monироring wells were gauged and sampled. Only two wells (MW-11 & MW-12) had free phased product with max thickness of 0.49 feet. (Sun) 02/21/06: Review of the monthly report dated 02/10/06 indicated that Total BTEX ranged from <MDL to 13,060 ppb (December, 2005), and MTBE ranged from <NDL to 10,000ppb (December, 2005). A total of 16 Monироring wells were gauged and sampled. Only two wells (MW-11 & MW-12) had free phased product with max thickness of 0.27 feet. (Sun) 11/14/06-Sun: Based on the Quarterly Report, dated 9/11/06, BTEX ranged 5,258 to 11,180 ppb, and MTBE ranged from 170 ppb to 8000 ppb. (Sun) 04/13/07-Sun: Sun the following email to Chris Tomasello: Hi Chris, I have reviewed the Remediation Progress Report, submitted by ASR, dated January 2007. The Department approves the following recommendations: 1. Stop sampling MW-4, MW-5, MW-6, MW-8, MW-10, MW-12, MW-13. and MW-16. 2. Continue to sample and monitor the remaining groundwater monitoring wells for VOCs only using EPA 8260 method. 3. Continue to monitor the concentrations of BTEX, MTBE, and Total VOCs from MW-1, MW-2, MW-3, MW-11, and MW-14. 4. Continue to monitor the plate counts to determine the colony count for the bacteria. Upon review of the analytical results of new round of groundwater sampling data, the

402 METROPOLITAN AVE. (Continued) **S100494817**

Department will determine if quarterly sampling event shall continue or petition for a NFA is warranted. The Department requires five days advanced notice of any remedial and/or monitoring events at the site. (Sun) 07/17/07-Sun: Review of the Remediation Progress report dated June 2007 prepared by Advanced Site Restoration, LLC (ASR) indicated that a total of five (5) groundwater monitoring wells were sampled on 5/2/07. Of the five (5) samples analyzed, four (4) indicated a total BTEX concentration of between 150 and 6,700 parts per billion (ppb), and the remaining one (1) well had total BTEX concentrations of non-detect level. MTBE was detected above the New York State Water Quality Standards in two (2) of the five (5) groundwater monitoring wells. The concentration of the MTBE in both of these two (2) groundwater monitoring wells, was the lowest ever recorded during the twenty month samplin period. High levels of dissolved hydrocarbons have historically been detected in MW-14. MW-14 continues to show the highest levels of dissolved hydrocarbons, although they are at the lowest levels recoreded during twenty month history of sampling the site. Low levels of dissolved hydrocarbons also appeared in MW-1, MW-2.MW-3. AST proposes to monitor the concentration of BTEX, MTBE, and total VOCs by collecting and analyzing groundwater samples frm Mw-1, MW-2, MW-3, Mw-11 and MW-14. ASR will continue to monitor the heterotrophic plate counts to determine the colony count for the bacteria. ASR will continue to document the downward of the residual contamination, to demonstrate that concentrations will continue to acceptable TAGM 4046 Groundwater Standards. 07/20/07-Sun: Review of the groundwater sampling report dated July 14, 2007 prepared by Advanced Site Restoration, LLC (ASR) indicated that the groundwater sample collected from MW-14 wells on 7/12/07 indicated a total BTEX concentration at 318 parts per billion (ppb), including Benzene concentration at 52 ppb, and MTBE concentration at 340 ppb. MW-14 has been historically the hot spot with highest BTEX and MTBE concentrations. Based on these low concentratiuons of BTEX and MTBE and continued downward trend in concentrations of BTEX and MTBE, the spill is closed and NFA letter will be issued. (Sun) 08/16/07-NFA letter was sent to RP and ASR. (Sun)

Town:	New York City
Record Added Date:	07/03/2017
Record Updated Date:	09/18/2024
Update By:	RKCORCOR
Site Description:	"Location The Site is located in the Greenpoint neighborhood of Brooklyn, New York. The Site is identified as Block 2698, Lot 32 and 10,376 square feet (approximately 0.24 acres) in area. The Site is bound to the north by a site under residential development (65 Eckford Street, BCP Site No. C224218), to the east by Eckford Street, to the south by a 3-story residential building (68 Engert Avenue) and eight interconnected 5-story residential buildings (49 Engert Avenue), and to the west by 1-story warehouse building (488 Leonard Street) and a parking garage. Site Features The partially developed Site is occupied by a 6-story unfinished steel frame construction with concrete foundations. A partial basement is located beneath the southern portion of the unfinished construction. It is covered with

55 ECKFORD ST LLC (Continued) **S121488681**

bare soil and concrete footings. A partially constructed elevator pit is located in the northern portion of the unfinished basement. Overhead scaffolding is seen along the sidewalk at the entrance of the Site. The rest of the property is covered with overgrown bushes. Current Zoning and Land Use The Site is currently inactive and located in the Greenpoint-Williamsburg Special Mixed-Use District (MX-8) of Brooklyn, New York in an area zoned for residential (R6A, R6B), light manufacturing (M1-2). The following land surround the site: North: 65 Eckford Street, in the NYSBCP, C224218, currently under residential development.. South: 3-story residential building located at 68 Engert Avenue and eight interconnected 5- story residential buildings, at 49 Engert Avenue. East: Eckford Street, residential housing across Eckford Street. West: A 1-story warehouse building located at 488 Leonard Street and a parking garage. The proposed construction will be as-of-right and will be consistent with applicable zoning regulations. Past Use of the Site Records from 1887 show the Site as four abutting vacant undeveloped lots. By 1905, the Site is shown as being part of Meisel Danowitz & Co. woodworking operation and contained four 1- to 2-story buildings identified as moulding shed , planning & moulding lumber racks , kiln house , and an office. By 1916, the structures remain but were identified as vacant and dilapidated ; by 1942 identified as wool & rags sorting and baling ; and from 1951 until 1992 identified as electric plating, storage, lacquer spraying . NYC Department of Finance (DOF) records showed the Site was owned by the Berkman Family. Between 1993 and 2004, the structures remain but the use was unknown. By 2003, the Berkman Family sold the property to Blue Diamond Development, LLC. In August 2005, the NYC Department of Buildings (DOB) issued a demolition, and buildings were later demolished. By 2009, the property was sold to 55 Eckford Street Brooklyn LLC / Madison Realty Capital L.P. Between 2009 and 2015, construction permits were issued by NYCOB for the Site redevelopment into residential apartments. By 2016, a stop work order has been issued for the Site, and construction has been paused since then. According to the previous investigations performed at the Site, the Site was entered into the BCP under Site No. C224168 in 2017, with the Applicant, TCJ Construction, deemed a Volunteer. By the time of the BCP Application in May 2024, the Site contains a 6-story steel structure for an unfinished building and the property is surrounded by a construction fence. Records from as early as 1887 show the surrounding areas to the north, west and east of the Site as subdivided vacant interspersed with 2- to 3-story dwellings. The property to the south of the Site is shown with several 1-to 2-story story buildings labeled as Plastering Hair Manufacturing Co. . By early 1900s until the mid-2000s, the surrounding vicinity saw denser development with multiple 2 to 3-story -story dwellings and several manufacturing and commercial facilities (e.g., cooperage, lumber yards, moving pictures, cab company, garage, printing, furniture manufacturing, etc.). By late 2000s, the manufacturing properties were redeveloped into multi-story residential apartments. By July 16, 2015, the property that abuts the Site to the north (Former Carter Spray Finishing Corp. at 65 Eckford Street), was entered into the BCP under Site No. C224218 with documented contamination in soil related to historical operations and fuel storage in underground tanks. In summary, the past occupants operations of woodworking and electroplating, storage and lacquer spraying as possible sources of contamination. Site Geology and Hydrogeology Based on our review of

55 ECKFORD ST LLC (Continued) **S121488681**

	the 1776-7 Original High and Low Grounds, Salt Marsh and Shorelines in the City of Brooklyn Map, the Subject Property lies within the edge of the shoreline (blue) of where the original salt marsh land (green) is located (i.e., the current McCarren Park). Based on our experience in the area, fill used to raise grades is underlain by clayey silts and silty sands. Based on Bedrock Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey, dated 1990, the bedrock near the Subject Property consists of interbedded units of gray thinly laminated muscovite-biotite-quartz schist, and white to pinkish with light green weathering gneiss. We anticipate bedrock to be encountered at approximately El. -150 feet NAVD88, which is over 100 feet below ground surface (bgs). Based on previous investigations performed at the Site, groundwater measurements range from approximately 7 to 13 feet bgs. However, the localized direction of groundwater flow near the Site might vary because of underground utilities, subsurface preferential pathways, variations in weather or heterogeneous geological and/or anthropogenic conditions. "
Env Problem:	"Information submitted with the BCP application (data from 2011-2012) regarding the environmental condition at the site include that: Soils across the site contain primarily metals (arsenic - max. = 15 mg/kg, copper = 1,020 mg/kg, lead = 2,980 mg/kg, mercury = 27.4 mg/kg and nickel = 1,030 mg/kg) above their respective restricted-residential soil cleanup objectives (RRSCOs) from at least 0-2 and 6-15 feet below ground surface (ft bgs). RRSCOs for arsenic = 16 mg/kg, copper = 270 mg/kg, lead = 400 mg/kg, mercury = 0.81 mg/kg and nickel = 310 mg/kg. Groundwater across the site exhibits metals (arsenic - max. 2,360 ug/L, silver - max. 73 ug/L, lead - max. 294 ug/L and selenium -max. 22 ug/L in exceedance of their respective NYS ambient water quality standards (AWQS) of 25 ug/L for arsenic and lead, 25 ug/L for silver and 10 ug/L for selenium. Iron, manganese and sodium also exceed AWQSs, however, these metals are naturally occurring. Soil vapor at the site is contaminated, primarily with TCE (ranging from 30-1,700 ug/m3). "
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

DEC Memo:	TTF sent to property manager: Mr. Martin Gurshon 233 Broadway - Suite 2704 New York, NY 10279 11/20/09. J.Krimgold reviewed the letter

NORTHSIDE SENIOR CENTER (Continued) **U003835965**

report submitted by Pro Test Enviro and dated 10/30/09. According to the letter the tank system failed the test due to a leak in the supply and/or return lines. The damaged portions of these line were replaced and the tank system retested and passed. During excavation of piping contaminated soil was encountered. This soil was excavated, drummed and properly disposed of. End point samples show no contaminant above TAGM limits. Case closed.

Remarks: 1518 The caller advised dispatch the tank has failed their test and requested to obtain a spill number. No water ways have been affected. This was just a tank test failure. The owner will be incharge of the fixing of the system. At this time chemicals have spilled. 4000 gallon underground tank.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 9/23/03, ROSSAN; DDO: Tank test failure letter was prepared and sent to: Mr. Frank Dross F N W Mechanical 139 North 10th Street Brooklyn, NY 11211 Ed. 10/3/05: CBN Called Phil Fazin, the tank tester and was told he would get back to DEC with more info. 9/22/06 ttf letter sent to owner: Sandra Maislen San Ten Raz LLC 120 Pleaseant St., Apt. 2 Brookline, MA 02446 bf 11/13/06 On 10/12/06, received letter from Sandra Maislen in response to ttf letter. Reviewed letter and the attachments. The fill line, stick line, and vent line failed. I called Petroleum Tanks to see if they remember detecting any contamination when lines were replaced. I was told Mark Salamack was the person in charge of the tank repairs. He was in a meeting at the time of the call and I left a message for him to call me. Mr. Salamack (718-624-4842) called me back and told me that there was no observed contamination and no elevated reading on the PID meter used at the time of the repairs. NFA. bf

DEC Memo:	01/27/2006 Kuldeep received the Fax from Brumer, but again information not adequate and need more follow up. 01/23/2006 Kuldeep sent a letterfor more information. 01/09/2006 Kuldeep Gupta- Facility Faxed on -01/06/2006 copy of consent Order. Region 2 Nick Lombardo on 01/09/2006 Faxed Report of 5000 gallon Tank Test report of 01/05/2004. 01/06/06 Kuldeep Gupta talked to Ms. Jill Huey and she need a letter in writing what document we need. She wanted to fax it at 1-718-486-6862. DEC Faxed the letter as requested. Kuldeep discussed with Philip Lodico Senior Attorney DEC and found Consent order signed on 03/24/2003 for not this spill. Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE Does not appear on PBS database. Called Jill Huey. She stated that she received a Consent Order to bring the facility in compliance with state laws. The tank is 5000 gallons. 3/11/2003 ars. DEC Sigona sent TTF notice on March 14, 2003. 9/11/06 This case was transfered from Albany to Region 2. Zhune spoke to Jill Huey (ph: 718-9052) She doesn't want phone calls. She wants every thing by writing. 9/11/06 A TTF letter was sending to : Jill Huey 498 Leonard Street Brooklyn, NY 11222 09/18/06 Ms. Huey sent a package of documents the passing tank test from 2003 was missing. 09/19/06 I sent a letter requesting her the tank test results from 2003. 09/22/03 Ms. Huey sent a package of 8 pages including the passing tank test results from 2003, letters stated the fallowing: The system test passed. After the system test failed in October due to a vent bad line, we decided to replace all pipes just to be sure we would pass. Also we would like to convey to your department that no contamination was detected in our system. What was the cause of the tank test failure on March 3, 2003? Water in tank issue. Piping needed to be replaced was replaced and systems test passed as a result of replacement. 09/27/06 This case was closed for V. Zhune in accordance with J. Vought.

Spiller Company:	JOHN HULEY
Spiller Address:	498 LEONARD ST
Spiller Company:	999
Contact Name:	EZGY KARAYEL
Latitude:	Not reported
Longitude:	Not reported
DEC Memo:	Sangesland spoke to Ezgy (As-Gee). (See eDocs for Phase 2 Report) She said the property is a 2 story industrial building being sold to a developer who will tear it down for a new residential building. City has placed an e-designation on the property because it's changing from industrial to

BRUMAR SHEET METAL INC (Continued) **S108076226**

residential. Problem is associated with leaking from a 5,000 gal buried oil tank. Hydro Tech was hired by the potential buyer and found contamination. Hydro Tech will continue to work on the site and come up with a plan to solve the spill problems and close them out. 6/12/13-Vought-Received call from and spoke to OER Chawla (212-442-3007) and the groundwater is 12-13'bg and proposed full excavation to the water table as part of redevelopment however contamination extends down to 30'bg. They are willing to do additional remedial action but would not like to excavate into groundwater and developer needs to decide by today or he will walk away. Three other developers walked away from site (was previously HydroTech). Former use of site is a plating site. Site was discussed with DEC Cozzy as per Chawla and Cozzy noted that it did not qualify for State BCP and Cozzy did talk to Demeo re site as per OER Chawla. Vought spoke to DEC Demeo and this spill transferred from Demeo to Patel for followup. 06/12/13-Hiralkumar Patel. little 'E' desgination for Hazmat ----------
alternate address: 498-502 Leonard Street PBS #: 2-608752. as per PBS record, the site has oe 5,000 gal #2 oil UST, in-service, installed in Jan. 1929. tank system was tested on 01/20/2010. other spills: 0212132, 1206982 spill # 0212132 was reported on 03/10/2003 due to tank test failure. tank system failed test due to bad vent line. lines were changed and system passed. no contamination found. case closed. spill # 1206982 was reported on 10/16/2012 due to tank test failure of 5,000 gal #2 oil UST. case is still open. 2:02 PM:- left message for Mr. Chawla at NYC OER. asked him to submit available reports. 2:39 PM:- received email from William Wong from NYC OER including link to reports. William H. Wong Ph. (212) 341-0659 Fax (212) 788-1482 email: WiWong@dep.nyc.gov reviewed available information:
--*-

BRUMAR SHEET METAL INC (Continued) **S108076226**

early 1900s with one 3-story and two 1-story buildings and stable. more buildings were developed in
the following years at the subject property. these buildings were demolished prior to 1978. the
subject property was then redeveloped with one 2-story commercial building - sanborn map 1942-1965
shows one 2-story and seven 1-story building used for carpet dyeing and cleaning. a gasoline tank
is located on the southwestern portion of the site --------- 2) 08/17/2012: Phase II Environmental
Site Assessment: - UST found in southwestern of the property and is approx. 12 ft long and 6 ft
wide - installed four borings (SP-1 through SP-4) in vicinity of the existing UST - borings were
installed to 12 ft bg - general soil type consists of fill material - one soil sample was collected
from each boring - found VOC contamination in soil samples - found high PID readings in all borings
PID values (in ppm) depth
(ft)--------SP-1------SP-2------SP-3------SP-4
6-8------------------------1,413
8-10----------------------1,342-------405--------14
10-12--------------896-----------------610-------702 soil analyticals:
----------------------SP-1-------SP-2-------SP-3-------SP-4 9-11 ft
6-8 ft 10-12 ft 10-12 ft
Benzene------------------310*------------------240
Ethylbenzene----------------------------------4,000------1,000
Xylene-------------------820*----------------2,600
1,2,4-Trimethylbenzene----------------------4,800--------300
1,3,5-Trimethylbenzene----------------------1,300
Naphthalene----------------------------------6,500------3,600
Isopropylbenzene-------2,100--------280------6,700------1,300
n-Butylbenzene---------8,200------3,600------9,400------2,500
sec-Butylbenzene------13,000------6,800-----14,000------3,000
n-Propylbenzene--------3,700--------270-----12,000------2,900 3) 12/13/2012: DEC Demeo sent letter
requiring documents regarding tank test failure. 4) 02/12/2013: Phase I Environmental Site
Assessment: - proposed plan is to demolish the existing structure and construct a multi-story
residential building that includes a 65 ft by 74 ft basement - the building was purchased in 1979
and turned into a steel manufacturing company, but this is not indicated on the map
---------- 5) 06/24/2013: Remedial Investigation Report: - Phase II conducted by Hydrotech in
Oct. 2012 identified the presence of elevated SVOCs, metals and pesticides in surficial soil
samples collected from the depth of 0-2 ft bg and elevated VOCs, SVOCs, metals and pesticides in
soil samples collected from 10-12 ft bg - in Oct. 2012, Hydrotech installed 13 wells on the site
and adjacent sidewalk. groundwater table elevations were measured between 14.77 and 15.71 ft
---------- - stratigraphy of the site from surface down consists of a layer of historic fill
material from approx. 0 to 12 ft bg, sand, gravel and silty with heavy

BRUMAR SHEET METAL INC (Continued) **S108076226**

petroleum impacts from 12-16
ft bg, visible petroleum staining from 16-30 ft bg in the area of the UST and an impacted layer of
highly compressible organic peat, clay and silt from 16-28 ft bg and highly compressible layer of
clay/silt at approx. 28-34 ft bg - schools within 0.2 miles to the south ---------- - in Feb.
2013, GRANT installed five soil borings (SB-01 to SB-05) surrounding the UST in the southwest
portion of the site and only visual inspection of the borings were performed (no samples were
collected) ---------- - in Apr. 2013, GRANT installed seven soil borings (SB-06 to SB-12) across
the entire site and collected 19 soil samples; 7 of 19 soil samples were analyzed for finger
printing - borings SB-01 through SB-12 exhibited visual evidence of a petroleum discoloration layer
from approx. 4 to 30 ft bg and free product observed from approx. 10 to 12 ft bg - free product
noted on between 12 and 24 ft bg in borings SB-02, SB-03, SB-04 and SB-05, these borings were
located around the UST ---------- - elevated PID readings were observed ranging from 455 ppm to
895 ppm in borings SB-7 through SB-12 - in Apr. 2013, GRANT installed 3 temporary wells (TWP-01 to
TWP-03) towards the northwestern, northeastern and southeastern portions of the site, respectively
- temporary wells were installed to a depth of 20 ft bg, with 10 ft of screen (means there were no
screen above water table) ---------- - in Apr. 2013, GRANT installed 3 soil vapor probes (SVP-01
to SVP-03) and collected 3 samples - depth to groundwater was present at approx. 10 ft bg
---------- - groundwater flow direction is generally from the south towards the north
---------- - found mostly sec/n/tert-Butylbenzene in soil samples - high metals found in samples
--*-

BRUMAR SHEET METAL INC (Continued) **S108076226**

owner/developer to discuss remedial method to address remaining contamination underneath the proposed excavation depth. Mr. Chawla mentioned that DEC Cozzy has reviewed and approved plans to address metals in subsurface. Mr. Chawla mentioned that based on new proposed excavation depth, OER requires endpoint soil sampling and installation of vapor/moisture barrier and SSDS. they will review soil-vapor data to determine if active or passive SSDS needed. Mr. Chawla will send further details after meeting with property owner. 12/06/13-Hiralkumar Patel. 10:46 AM:- spoke with Mr. Chawla. discussed about free product in groundwater. Mr. Chawla will submit a RAWP which discuss about installation of wells. asked him to submit property owner's contact info, missing appendices of Feb. 2013 Phase I and investigation report for work done by HydroTech in Oct. 2013. discussed with DEC Jane regarding metal/PCBs in soil/groundwater samples. she and DEC Cozzy have discussed data with Mr. Chawla and NYC OER will manage remediation of metal/PCB contamination. 11:20 AM:- spoke with Mr. Fung, property owner. he mentioned that they are planning to build a four (4) story apartment building with one-level basement. the basement floor will be at 7.5 ft bg. they will excavate site to 10 ft bg for foundation work. currently, there is a vacant one-story warehouse at the site. scheduled a site inspection at 10:30 AM on 12/09/13. East Star Realty LLC. **property owner** 1740 East 27th Street Brooklyn, NY 11229 Attn.: Tin See Fung PH. (917) 662-3803 email: jacktinfung@gmail.com 12/09/13-Hiralkumar Patel. 10:20 AM:- visited site. met Mr. Fung. found multiple wells on-site. the tank is located under the floor, in area of one of the rolling door. found fill port and vent pipe at the foundation wall. suggested Mr. Fung to pump out the tank and seal the fill port to prevent any misdelivery and possible spill from tank. asked Mr. Fung to gauge all the wells and implement IRM, if product exists in well. he will contact his environmental contractor. found RAWP on NYC OER website. abstract of RAWP: - proposed plan to demolish the existing structure and construct a multi-story residential building that is expected to include a 65 ft by 74 ft cellar - the proposed building is planned to constructed starting from the property line along the length of Leonard St and extending east - depth to groundwater was present at approx. 10 ft bg - HydroTech installed thirteen (13) monitoring wells - wells were surveyed and groundwater table elevations were measured between 14.77 and 15.71 ft - groundwater flow direction is generally from the south towards the north - soil excavation below the water table is anticipated for the area surrounding the UST in the southwest portion

BRUMAR SHEET METAL INC (Continued) **S108076226**

of the site - will collect
endpoint samples - will install a vapor barrier and an active SSDS beneath the proposed building
11:13 AM:- spoke with Stephen Morse at Grant Engineering. inquired him about spill remediation work
plan, that he mentioned as attachement F in RAWP for NYC OER. Steve mentioned that such work plan
is not ready yet. discussed about well gauging and implementation of IRM. Steve will talk to Mr.
Fung and try to conduct well gauging prior to meeting with NYC OER on 12/13/13. Stephen Morse Grant
Engineering Ph. (212) 464-8689 email: smorse@grantpllc.com 11:25 AM:- left message for Mr. Chawla.
12/10/13-Hiralkumar Patel. 11:40 AM:- left message for Steve inquiring about well gauging, prior to
upcoming meeting on 12/13/13. 12/17/13-Hiralkumar Patel. 1:17 PM:- left message for Steve. 1:18
PM:- left message for Mr. Chawla. 12/20/13-Hiralkumar Patel. 10:01 AM:- spoke with Steve. they met
with NYC OER on 12/13/13 and discussed remedial action plan. Steve mentioned that owner has not
hired his firm to gauge wells and remove any product in well(s). 10:05 AM:- spoke with Mr. Fung.
informed him that the Department requires gauging of all existing wells and immediate removal of
any product in well(s). he will talk to Steve. 1:04 PM:- received call from Andrew from Grant
Engineering inquiring about what work needs to be done. informed him that the Department requires
well gauging and removal of any free product from wells, until permanent remediation system is
installed. informed him that well gauging must be done by end of 12/27/13. also recommended
removing oil from the UST. Andrew Rizk Grant Engineering Ph. (212) 464-8689 Ext. 2 email:
arizk@grantpllc.com 01/08/14-Hiralkumar Patel. 10:01 AM:- received call from Andrew. they gauged 12
out of 13 wells installed for the subject project. one well was installed across the site which is
inside construction zone and was not accessible for gauging. out of 12 wells, free phase product
found in 3 wells. about 4 inch product found in one of the well and less than 1 inch product found
in remaining two wells. Andrew will submit memo, once he gets previous well survey data from
record. Andrew confirmed that the on-site tank was also pumped out last week. informed Andrew that
the department requires implementation of interim remedial measures until permanent remedial system
in in operation. 01/09/14-Hiralkumar Patel. received email from Andrew (at 6:59 PM on 01/08/14)
including well gauging data. total of 13 wells (MW-1 through MW-13) were installed previously by
Hydrotech. well MW-7 is located on west sidewalk of Leonard St, across from the site. well MW-7 was
inaccessible due to the presence of green construction fence directly over top of the well. out of

BRUMAR SHEET METAL INC (Continued) **S108076226**

12 remaining wells, product found in three wells (MW-1, MW-2 and MW-8) between 2 and 4 inches.
01/13/14-Hiralkumar Patel. 12:49 PM:- left message for Mr. Fung. 12:50 PM:- left message for Mr.
Chawla. 01/27/14-Hiralkumar Patel. 11:12 AM:- received email from Mr. Chawla including owner's
letter and OER briefing. property owner Mr. Fung stated that the entire site will be excavated down
to 13 ft bg (into groundwater table). Mr. Chawla included copy of ORC application plan. 4:09 PM:-
sent email to Mr. Chawla and informed him that the Department has not received any ORC treatment
work plan and such plan is not approved prior to reviewing tank removal report with endpoint sample
results. email copied to Mr. Wong at OER. 01/28/14-Hiralkumar Patel. 9:12 AM:- left message for Mr.
Chawla. 9:41 AM:- received call from Mr. Chawla and Mr. Wong from NYC OER. Mr. Chawla mentioned
that they received a revised RAWP and ready to issue Notice to Proceed letter. he wanted to know
any requirements from DEC, prior to sending letter to property owner. revised RAWP will be
forwarded for review. 12:29 PM:- received email from Mr. Chawla including link to RAWP Stipulation
List. abstract of RAWP Stipulation List to NYC OER: - entire site will be excavated to 13 ft bg,
with additional excavation in locations where further pockets of contamination is observed -
collection and analysis of 22 endpoint samples from the bottom of excavation will be collected - a
minimum of 20-millimeter vapor barrier will be installed beneath te structure's slab and along
foundation wall - dewatering will be performed - excavation of the impacted soil will be performed
following the removal of existing tanks abstract of site-specific groundwater treatment and
monitoring plan dated 01/21/14: - remaining product from 5,000 gal tank was pumped from the tank on
12/27/13 - proposes to mitigate the contamination in three stages: 1) the existing site will be
remediated via purging of product from the existing wells on a monthly basis, 2) site will be
excavated to approx. 13 ft bg, or deeper in locations where contamination is present and the open
excavation will be treated with chemical application, and 3) monitoring wells and contingency
injection wells will be installed in the cellar level of the proposed development to allow for
future chemical injections, if necessary - prior to construction, the assessment of groundwater
quality will include the collection of groundwater samples from the existing wells
01/29/14-Hiralkumar Patel. 12:46 PM:- sent letter to Mr. Fung requiring bi-weekly monitoring of
wells, product removal from impacted wells and monthly submission of well monitoring reports.
informed him that the department only approves tank removal work (as

BRUMAR SHEET METAL INC (Continued) **S108076226**

listed in appendix 1 of RAWP
Stipulation List submitted to NYC OER) and required submission of tank removal report. also
informed him that the department may require additional investigation, after reviewing the tank
removal report, prior to any comment on in-situ remediation, if needed. letter emailed to Mr. Fung,
Mr. Chawla, Mr. Wong, Steve and Andrew. 12:53 PM:- spoke with Mr. Fung and informed him about
letter sent in email. he will discuss with Grant Engineering.
02/20/14-Hiralkumar Patel. 1:06 PM:-
received email from Andrew. he mentioned that while drilling borings for geotechnical
investigation, a second UST was found, directly east of the existing 5,000 gal UST. unknown UST had
about an inch of product. he confirmed that product from 5,000 gal tank was pumped out on 12/27/13.
they pumped out product from impacted wells (MW1, MW2 and MW) on 02/07/14. 03/04/14-Hiralkumar
Patel. 1:32 PM:- received email from Andrew including interim remedial measure letter report.
between 1 and 6 inches of product noted in three wells (MW-1, MW-2 and MW-8). 04/09/14-Hiralkumar
Patel. received email from Steve (at 5:39 PM on 04/08/14) including interim remedial measure letter
report. wells were monitored on 03/07/14 and 03/21/14. between 2.5 and 6.6 inches of product noted
in three wells (MW-1, MW-2 and MW-8). 04/18/14-Hiralkumar Patel. received email from Steve (at 8:09
PM on 04/17/14). he mentioned that bi-weekly groundwater gauging, monitoring and reporting will not
be conducted this week due to the building currently undergoing asbestos abatement activities. he
also mentioned that the existing building will be immediately demolished once the abatement work is
completed. Steve mentioned that well gauging will resume, if demolition does not occur.
04/28/14-Hiralkumar Patel. 3:33 PM:- sent email to Steve inquiring updates. 04/29/14-Hiralkumar
Patel. 10:15 AM:- received email from Steve. he mentioned that currently, the building is under a
stop work order and full vacate order. the owner and asbestos abatement contractor are taking steps
to address this. 08/19/14-Hiralkumar Patel. 11:58 AM:- received message from Ray Kahn from ESPL.
08/22/14-Hiralkumar Patel. 2:39 PM:- spoke with Mr. Kahn. ESPL has been hired for required work at
the site and they are ready to start soil excavation. asked Mr. Kahn to provide work schedule for
site work. he will send email. 11/14/14-Hiralkumar Patel. 10:16 AM:- left message for Mr. Kahn.
11/18/14-Hiralkumar Patel. 12:04 PM:- received call from Mr. Kahn. he mentioned that site
excavation has not begun yet as owner has planned to change design of new building. Mr. Kahn will
talk to property owner about required well gauging/product removal.
12/17/14-Hiralkumar Patel. 1:21

BRUMAR SHEET METAL INC (Continued) **S108076226**

PM:- spoke with Mr. Kahn. he mentioned that property owner has met with NYC OER and planning to
start excavation on 01/05/15. he mentioned that well monitoring/gauging/product removal has not
been conducted yet since Feb. 2014. 1:22 PM:- left message for Mr. Wong at NYC OER. 1:44 PM:- spoke
with Shaminder Chawla at NYC OER and informed him about property owner's failure to comply with the
well monitoring/report submission requirements as per the letter dated 01/29/14. informed him that
the case may be referred for legal enforcement. Mr. Chawla has no objection to DEC's enforcement.
01/07/15-Hiralkumar Patel. 11:52 AM:- spoke with Mr. Kahn. after discussion on 12/17/14, ESPL
installed a test pit next to the UST. the test pit was dug down to 9 ft bg, where groundwater was
found. free phase product was noted on groundwater and product recovered using absorbent pads.
asked Mr. Kahn to submit letter summarizing test pit work and monitoring data. Mr. Kahn mentioned
about chemical treatment of contamination. informed him that the department does not approve
chemical treatment at this time and requires submission of endpoint soil and groundwater samnple
results prior to finalizing a remedial method. 01/21/15-Hiralkumar Patel. 9:08 AM:- received email
from Mr. Kahn including test pit letter report. three test pits were excavate on 12/19/14 to a
depth of 11 ft bg (2 ft below groundwater) and 8 ft wide. product found on water in test pit #1
which is located east of the tank farm. product is being collected using absorbent pads. on
01/12/15, a stop work order was issued by NYC DOB. interim cleanup will continue by capturing the
product using adsorption pads and pump-out methods until the actual tank removal and spill clean-up
can be conducted. 9:11 AM:- sent email to Mr. Kahn and asked him to submit a scaled site map with
existing well, tank and test pit locations. email copied to Mr. Chawla. 01/23/15-Hiralkumar Patel.
received email from Mr. Kahn (at 8:16 PM on 01/22/15) including site map. he also mentioned that
the stop work order was removed and the shoring conctractor is driving the beams into the ground in
the west and north side of the site. 01/28/15-Hiralkumar Patel. received email from Mr. Kahn (at
2:54 PM on 01/25/15) including test pit/UST plan and shoring plan. he mentioned that two USTs were
exposed on 01/23/15 to prepare the site location plan. both tanks were found containing water.
01/29/15-Hiralkumar Patel. 9:58 AM:- received call from Mr. Kahn. today they pumped out and removed
two tanks. excavation was about 9 ft bg and groundwater was not found in the excavation. due to
structural safety of the adjoining building, they have to backfill the excavation. Mr. Kahn
mentioned that contaminated soils will be removed once underpinning

BRUMAR SHEET METAL INC (Continued) **S108076226**

for adjoining building is done
(possibly within two weeks depends on weather). 02/05/15-Hiralkumar Patel. 2:14 PM:- received email
from Mr. Chawla. William Wong of OER visited site and noted petroleum odors while tank piping being
removed. 02/06/15-Hiralkumar Patel. 10:30 AM:- visited site. met with on-site supervisor. crew was
underpining adjacent building in area where the USTs were located. no petroleum odors noted in work
zone. 02/11/15-Hiralkumar Patel. 1:32 PM:- received message from Mr. Kahn. 02/12/15-Hiralkumar
Patel. 10:03 AM:- received call from Mr. Kahn. during underpining operation, crew found set of ten
(10) 1,000 gal tanks in rear portion of the site. Mr. Kahn spoke with neighbours and reviewed
sanborn maps. maps shows location of ten tanks. Mr. Kahn has collected liquid samples from these
ten tanks. asked him to send site map with these tank location, sanborn map and tank removal plan.
also asked him to submit results of liquid samples from the tank, once available.
03/03/15-Hiralkumar Patel. 10:38 AM:- received email from Mr. Kahn including link to UST removal
report. abstract: - previously known USTs # 1 & 2 were removed on 01/29/15 - during underpinning of
the adjacent structure, two additional tanks (UST # 3 & 4 - size: 5.5 ft dia x 7 ft long) were
discovered approx. 3 ft bg on 02/09/15, which were removed - during further work, an additional
eight (8) USTs were identified (UST # 5, 6, 7, 8, 9, 10, 11 & 12) on 02/11/15; these tanks were
buried vertically approx. 2.5 ft bg - USTs # 5-12 were identified on 1942-1965 Sanborn Maps - USTs
5-12 were encased in concrete - based on site history and shape of tanks # 5-12 and interior
structure, it was concluded that the tanks could have been used for mixing operation which is
consistent with the site history of a carpet dying operation during 1940’s and 1960’s - dimensions
of tanks # 5-12 varied: 5 ft dia x 6 ft long (1,000 gal) & 5 ft dia x 4 ft long (500 gal) -
additional soil excavation will continue Mr. Kahn included copy of PBS application form (signed on
02/11/15) to register previously unknown tanks, but no records found in PBS record.
03/31/15-Hiralkumar Patel. 9:06 AM:- received call from Mr. Kahn. he mentioned that soil from
almost entire footprint of the site has been removed to a depth of approx. 11 ft bg. they removed
about 3,028 tons of soil. currently, the site excavation is filled with groundwater. the north and
south sidewall of the excavations are concrete underpining under adjacent buildings and there is a
shoring along the west sidewall to pretect the sidewalk. asked Mr. Kahn to collect endpoint soil
samples from east sidewall, water sample from excavation pool and groundwater samples from

BRUMAR SHEET METAL INC (Continued) **S108076226**

monitoring wells on sidewalk. asked him to analyze all samples for full list VOCs/SVOCs. informed Mr. Kahn that the department does not approve application of any chemical prior to reviewing soil/groundwater samples. he mentioned that the new foundation will be at around 9.5 ft bg. 04/01/15-Hiralkumar Patel. 8:45 AM:- went to site for inspection, but site was closed. looked through opening in construction fence. the entire excavation was filled with water. no petroleum sheen or odors were observed. 04/09/15-Hiralkumar Patel. 10:55 PM:- received email from Mr. Kahn including status report. abstract: - composite soil sample was collected from east sidewall - groundwater samples were collected from excavation pool and wells MW-5 and MW-6 - no contamination found in any sample based on available documents/information, no further work is needed and case is closed. 3:01 PM:- spoke with Mr. Chawla at NYC OER and informed him about case closure. Mr. Chawla confirmed that a moisture/vapor barrier will be installed underneath the new building. 3:19 PM:- sent spill closure letter to Mr. Fung. letter emailed to Mr. Fung, Mr. Chawla and Mr. Kahn. **also refer to spill #: 1206982.**

Remarks: tank is in place, soil samples confirm contamination

Hazardous Waste Summary:
Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Program:	BCP
Site Code:	619056
Acres:	Not reported

CARTER SPRAY FINISHING CORP FORMERLY (Continued) **1000400665**

HW Code:	C224218A
SWIS:	2401
Town:	New York City
Record Added Date:	05/13/2021
Record Updated Date:	12/14/2023
Update By:	RKCORCOR
Site Description:	"The area of concern subject to this work is considered off-site from BCP site C224218 (Former Carter Spray Finishing Corp.) and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224218 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The offsite investigation is located adjacent to 65 Eckford Street in the Greenpoint section of Brooklyn, NY. Site Features: The site consists of offsite areas/properties adjacent to 65 Eckford. Site Geology and Hydrogeology: The regional geologic setting consists of bedrock overlain by layers of unconsolidated sediments (generally sand, gravel and silty clays) deposited by glacial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low-lying areas. Based on Remedial Investigation (RI) work completed at 65 Eckford, soil at that site consists of historic fill material that extends to 13 feet below grade in some areas, underlain by grey silty clay. According to the United States Geographical Survey (USGS) topographic map for the area (Brooklyn Quadrangle), the elevation of the offsite area is about 16-18 feet above mean sea level. The area topography gradually slopes downward to the north and west. Groundwater in the area is present at a depth of 11 to 12 feet below grade. Regional groundwater flow is to the northwest."
Env Problem:	"Off-site environmental conditions are unknown at this time. We are currently investigating the areas off-site to determine extent of impact, if any, to the off-site area. Contaminants of concern at the associated 65 Eckford property include volatile organic compounds (VOCs) - petroleum-related and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals in site soils, as well as VOCs (petroleum-related and chlorinated solvents) and SVOCs in site groundwater. Data does not indicate any off-site impacts in groundwater related to this site. Soil vapor at the site is impacted with VOCs (petroleum-related and chlorinated solvents). "

BROWNFIELDS:

Name:	FORMER CARTER SPRAY FINISHING CORP.
Address:	65 ECKFORD STREET
City,State,Zip:	BROOKLYN, NY 11222
Program:	BCP
Site Code:	507618
Acres:	0.230
HW Code:	C224218
SWIS:	2401
Town:	New York City
Record Added Date:	05/08/2015
Record Updated Date:	11/27/2024
Update By:	AMSERVIS
Site Description:	"Location: The site is located at 65 Eckford Street in the Greenpoint section of Brooklyn, NY. The site is 10,200-square feet (0.23 acres) in size and is identified as Block 2698, Lot 26 on the New York City tax map. The site is bound to the north by a four-story residential building; to the east by Eckford Street followed by residential apartment buildings; to the south by a vacant, partially constructed

FORMER CARTER SPRAY FINISHING CORP. (Continued) **S117936657**

building (enrolled in the NYSDEC BCP Program as Site Number C224168); and to the west by a four-story residential building and a one-story industrial building. Site Features: The site is an irregular-shaped parcel that is currently under development for use as a 5-story residential building. Current Zoning: The land is currently located within a MX-8 Special Mixed-Use District (MX) and zoned as M1-2/R6A for medium-density apartment house districts, which allows for residential use. Past Use of the Site: The Site was developed in 1905 and improved with several one-story manufacturing buildings occupied by the Meisel Danowitz & Co. woodworking operation. The Site was redeveloped by 1916 with a one to two-story building and had been utilized by several industrial operations including a machine shop, wood box manufacturing facility, automobile parking garage, and metal finishing facility. Records indicate that former metals finishing facility utilized two 275-gallon aboveground storage tanks (ASTs) that contained trichloroethene (TCE) and were located in the northeast portion of the Site. The Site was occupied by the Carter Spray Finishing Corporation from 1960 to 2008 which used the building for metal finishing and spraying. The building was razed in 2015. Site Geology and Hydrogeology: The site was initially excavated to a depth of 6 feet below sidewalk grade. Stratigraphy, from the current ground surface down, consists of urban fill generally consisting of brown to dark brown, medium to fine silty sand with varying amounts of loose gravel, asphalt, brick, cinders, and plastic was observed from current grade to depths extending approximately 10 to 15 feet below sidewalk grade. The urban fill layer is underlain by a potential native layer consisting of gray to dark gray medium to fine silty sand with varying amounts of coarse sand and clay to depths extending approximately 16 to 17 feet below sidewalk grade. Following this native layer is an organic/peat layer observed up to the terminus depth of each soil boring, ranging from 20 to 21 feet below sidewalk grade. According to the United States Geographical Survey (USGS) topographic map for the area (Brooklyn Quadrangle), the elevation of the property is about 14 feet above mean sea level. The area topography gradually slopes downward to the north and west. Groundwater is present beneath the Site at a depth of 12 to 13 feet below sidewalk grade. Regional groundwater flow is to the west-northwest."

Env Problem:

"Post Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site were metals (arsenic, lead and mercury) and semi-volatile organic compounds (SVOCs)- primarily poly-aromatic hydrocarbons (PAHs) - present site-wide in historic fill material and deeper soil. Also, petroleum-related VOCs and chlorinated VOCs (CVOCs) in groundwater and CVOCs in soil vapor samples. During remediation, site-wide soils were excavated to depths ranging from 25 to 30 ft below sidewalk grade (ft bsg) and approximately 18,000 tons of soil/fill were transported offsite for disposal. No further soil remediation was required as no soil contamination remains at the site - all soils beneath the final excavation depths met Unrestricted Use soil cleanup objectives (UUSCOs) across the property. In addition, groundwater dewatering activities during excavation, as well as the installation of a secant pile wall along the entire site perimeter have addressed groundwater contamination with no VOC exceedances in site groundwater detected at the completion of remedial activities. In addition, the removal of all contaminated soils to depth has addressed onsite soil vapor. Additionally, a vapor/waterproofing barrier was installed

FORMER CARTER SPRAY FINISHING CORP. (Continued) **S117936657**

around and beneath the newly constructed building foundation. The site allowed future uses include unrestricted, residential, restricted residential, commercial or industrial. Prior to Remediation: A Remedial Investigation (RI) and Supplemental RI were completed at the site in 2016 and 2022, respectively. Nature and Extent of Contamination: Soils: Soil samples were analyzed for VOCs, SVOCs, metals, PCBs, pesticides, and the emerging contaminants 1,4-dioxane and Per- and Polyfluoroalkyl Substances (PFAS). Numerous metals, SVOCs and VOCs were detected in soil samples at levels above UUSCOs in the majority of samples throughout the site. Several metals and SVOCs were present at levels exceeding restricted residential SCOs (RRSCOs). Contamination sitewide ranged from the surface to approximately 20-feet below grade. No VOC detections exceeded RRSCOs. Metals detected above RRSCOs: arsenic was detected at up to 40.2 parts per million (ppm), exceeding its RRSCO of 16 ppm; lead at up to 2,790 ppm (RRSCO 700 ppm), mercury at up to 73.1 ppm (RRSCO 0.81 ppm), barium at up to 818 ppm (RRSCO 400 ppm) and copper at up to 938 ppm (RRSCO 270 ppm). SVOCs exceeding RRSCOs: benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenzo(a,h)anthracene, indeno(1,2,3-c,d)pyrene. The maximum SVOC detection was chrysene at 6.6 ppm, exceeding its RRSCO of 3.9. In 2018, a 550-gallon underground storage tank (UST) located in the southeast corner of the site was removed and disposed of offsite. Previous sampling in the area of this tank did not indicate evidence of a release. Groundwater: Groundwater samples were analyzed for VOCs, SVOCs, PCBs, metals, pesticides, 1,4-dioxane and PFAS compounds. Fourteen VOCs were detected in groundwater samples at concentrations at or above the NYS AWQS. Ten petroleum VOCs were detected at or above AWQS: 2-isopropyltoluene at up to 88 ppb (AWQS 5 ppb); isopropylbenzene at up to 100 ppb (AWQS 5 ppb); n-Propylbenzene at up to 130 ppb (AWQS 5 ppb); sec-Butylbenzene (at up to 36 ppb (AWQS 5 ppb)); tert-Butylbenzene at up to 10 ppb (AWQS 5 ppb); 1,2,4,5-Tetramethylbenzene at up to 41 ppb (AWQS 5 ppb); n-Butylbenzene at up to 97 ppb (AWQS 5 ppb); 1,2,4-Trimethylbenzene at up to 31 ppb (AWQS 5 ppb); benzene at 1 ppb (AWQS 1 ppb) and p/m-xylene at 10 ppb (AWQS 5 ppb). Four CVOCs detected at or above AWQS: cis-1,2-dichloroethene at 69 ppb (AWQS 5 ppb); chloroethane at up to 130 ppb (AWQS 5 ppb); trichloroethene at up to 6.2 ppb (AWQS 5 ppb); and vinyl chloride at 51 ppb (AWQS 2 ppb). Four metals were detected in groundwater samples above AWQS: Arsenic at 79.9 ppb (AWQS 25 ppb) in one sample. Iron, manganese and sodium exceeded AWQS in the majority of groundwater samples however, these metals are naturally occurring in areawide groundwater and are not indicative of contamination. Perfluorooctanoic acid (PFOA) was detected in all five groundwater monitoring wells at values ranging from 27 parts per trillion (ppt) up to 110 ppt. Perfluorooctanesulfonic acid (PFOS) was detected in groundwater up to 4.01 ppt at the site. The NYS AWQ Guidance value for PFOA is 6.7 ppt and for PFOS is 2.7 ppt. Both compounds exceed, however, groundwater in this area is not used as drinking water. Perfluoropentanoic Acid (PFPeA), Perfluorobutanoic Acid (PFBA), and Perfluorohexanoic acid (PFHxA) were detected up to 14.4 ppt, 10.2 ppt, and 11.6 ppt at the site, respectively. The maximum total PFAS compound detection in any monitoring well at the site was 113 ppt. The sitewide presence of PFAS indicates an area-wide groundwater condition that is not specifically site-related. 1,4-dioxane was detected in two monitoring wells at a maximum concentration of 2.78 ppb, exceeding the NYS AWQ Guidance

FORMER CARTER SPRAY FINISHING CORP. (Continued) **S117936657**

	Value of 0.35 ppb. Soil Vapor: Soil vapor samples were analyzed for VOCs. The following contaminants were found: CVOCs and petroleum-related VOCs were detected in all soil vapor samples throughout the site. The highest CVOC detections were all at one sample location, SV-05: Trichloroethene (TCE) was detected at up to 9,670 micrograms per cubic meter (ug/m3). Cis-1,2-dichloroethene was detected at up to 2,750 ug/m3, tetrachloroethene (PCE) and vinyl chloride were detected at up to 171 ug/m3 and 177 ug/m3, respectively. "
Health Problem:	"Remedial actions are complete, the site was cleaned up to meet unrestricted use, and all known exposure pathways were addressed by the remedy for the site."

DEC Memo: DEC Piper left message for Danny at Don Carlo. Site is in NYC BCP and OER is involved. Assigned to DEC Zhune. 1/14/16-Vought-This spill transferred from DEC Zhune to DEC Omar as per DEC Demeo. 1/15/2016: Rashad 173 Bayard Street does not have an alternate address. No spill or PBS registration found for site. No documents found in D2. 5/16/2016: Rashad Received email from Shaminder (forwarded from Kumar): Development Update: End point samples after the tank removal were collected and this portion of the site was excavated down to 12 feet and EBC collected additional RAWP end points in this area. Tank end point sample results are attached. We are waiting on final report. In the mean time see attached end point results. They might have already be provided to you previously. Chawinie Reilly creilly@ebcincny.com at EBC is managing this project. Attached was analytical results from end points, they were uploaded to D2, and all results are ND. 5/17/2016: Rashad Replied to Shaminder: Thank you for the soil data. I look forward to receiving the report. Thank you. 11/28/2016: Rashad Emailed Shaminder asking about completed report. Chawinie of EBC replied saying that project is coming to an end and report should be submitted within a couple of months. 1/13/2017 Austin This spill report is being transferred from Rashad Omar to Pratik Lakhani end. 2/7/17-Vought-Copied on email from OER Chawla to DEC Omar that Rashad: We are reviewing the final report for the above spill. Draft report can be downloaded from the link below. Development on this site is complete. Post excavation sample results are attached. We are looking to close this spill. Let us know if you need additional info. Thanks, . Vought sent reply to OER Chawla that Shaminder, This spill is now being managed by Pratik Lakhani who is out this week taking his 40 Hour Hazwoper training. He will be in on Monday and will put the report in his que for review, Thanks. 02/13/17 - Lakhani Remedial Action Report (EBC - Ariel Czemerinski, 01/2017) - The redevelopment consists of two (2) new 4-story residential buildings with full cellars. The new buildings cover 70% of the lot. The Site is equipped with a 30 x 40 rear yard. A 112 x 16 deck was installed in the rear yard of each building. No residential units are located on in the cellar. Cellars are equipped with storage for units on the 1st floor, sprinkler rooms, and electrical rooms. Soil was excavated to a depth of approx. 12’bg for the first 80’ of the property to construct the foundation and footings for the new buildings. The slab of the new building is installed at a depth of approx. 12’bg which required excavation to approx. 12’ for footings and

171-173 BAYARD STREET (Continued) **S117852202**

installation of the SSDS. A total of approx. 1787.25 tons of non-hazardous fill material was excavated for construction of the new building. 171 Bayard Street included a 1-story building occupied by a coal & oil company, wood workshop, syrup manufacturer/distributor, tech company, iron works, contracting company, window/door manufacturer, and most recently an art studio. At 173 Bayard the 1-story building was occupied by a refrigerator manufacturer. In 1958 the NYCFD approved a permit for a gasoline storage tank. Site inspection revealed the potential presence of a UST(s). Depth to groundwater ranges from 9.35' to 12.85' at the Site. Groundwater flow is generally to northeast. Five (5) soil borings were installed across the entire project Site, and collected ten (10) soil samples and one duplicate soil sample. Installed two (2) groundwater wells throughout the Site and used one existing monitoring well to establish groundwater flow and collected six (6) groundwater samples and one duplicate groundwater sample. Installed one (1) sub-slab soil vapor probes and four (4) soil vapor probes around Site perimeter and collected five (5) samples. Soil samples are as such: 1,2,4 - trimethylbenzene 5000 ppb(B4,11'-13'bg). Groundwater samples were as such: MTBE 30 ug/L(GW1), MTBE 14 ug/L(MW1), MTBE 14 ug/L(duplicate). Soil vapor results are as such: PCE 773 ug/m3(SG-1), PCE 218 ug/m3(SG-3), PCE 104 ug/m3(SG-4), PCE 50.1 ug/m3(SG-2), PCE 74.6 ug/m3(SG-5), TCE 7.63 ug/m3(SG-4), benzene 32900 ug/m3(SG-1), ethylbenzene 4860 ug/m3(SG-1), m,p-xylene 9760 ug/m3(SG-1), o-xylene 3580 ug/m3(SG-1), toluene 65900 ug/m3(SG-1), o-xylene 3.95 ug/m3(SG-3), o-xylene 4.99 ug/m3(SG-4), m,p-xylene 7.85 ug/m3(SG-3), m,p-xylene 10.5 ug/m3(SG-4), ethylbenzene 3.78 ug/m3(SG-3), ethylbenzene 5.47 ug/m3(SG-4), 1,3,5-trimethylbenzene 2.36 ug/m3(SG-2), 1,3,5-trimethylbenzene 2.65 ug/m3(SG-3), 1,3,5-trimethylbenzene 3.59 ug/m3(SG-4), 1,2,4-trimethylbenzene 6.39 ug/m3(SG-2), 1,2,4-trimethylbenzene 6.63 ug/m3(SG-3), 1,2,4-trimethylbenzene 5.55 ug/m3(SG-4). one (1) 1080 gallon UST was removed from the Site. Installed and operating an active SSDS, installed beneath the cellar slab. Exhaust is located a min. of 10' from the window and ventilation inlets. Installed a vapor barrier system behind all foundation walls and the new 4 concrete slab beneath the cellar slab of the building. SSDS to be inspected monthly by superintendent and inspected annually by Qualified Environmental Professional. Sent RAR to NYSDOH Nathan Walz to determine whether there are any concerns with the active SSDS. Nathan responded I reviewed the RAR, it appears that they SSDS is performing as designed based on the pressure differential readings that were provided. If OER is

171-173 BAYARD STREET (Continued) **S117852202**

receiving and reviewing the annual
reports I don t see a need to be copied on them. I have no comments on the SMP for the site. The
following email was sent to OER Chawla: I have reviewed the RAR and everything seems fine. The
spill is closed. Please let the property owner and the QEP know to include the DEC on the
inspection and monitoring reports for the SSD system. As per DEC Vought, spill is closed. Spill
closure with residual soil contamination letter was sent to owner.
04/28/17 - Lakhani FactSheet
uploaded to OER EPIC stating that OER has determined that the cleanup requirements to address
contamination at the site have been met.

Remarks: tank removal - found product in soil - clean up pending

DEC Memo:	4/24/2009 TTF letter sent to: NYC Dept of Field Operations Fuel Division Mr. James Merlo 44-36 Vernon Blvd Long Island City, NY 11101 6/12/09. J.Krimgold reviewed and approved the proposed scope of work outlined in the letter report submitted by TRC and dated June 2, 2009. 01/28/10. J.Krimgold reviewed the SIR dated 08/07/09 and concurs with conclusions and recommendations of the report. However, requested closure of waste oil tank and submittal of appropriate Bulk Storage Application. 02/17/11 - LZ The waste oil tank was permanently closed in place (edocs), which meets DEC requirements. An application was submitted to change the status of the tank. However, it has been returned to the applicant since the tightness test for another tank at the facility is overdue. The spill case is closed.

Tank Info:

Tank Number:	002
Tank Id:	214061
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

G02 - Tank Secondary Containment - Vault (w/access)
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
E00 - Piping Secondary Containment - None
F01 - Pipe External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I02 - Overfill - High Level Alarm

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

K01 - Spill Prevention - Catch Basin
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
J02 - Dispenser - Suction Dispenser
L00 - Piping Leak Detection - None
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	05/19/2006
Capacity Gallons:	5000
Tightness Test Method:	34
Date Test:	06/30/2023
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

DEC Memo:	3/21/2005 There was an earlier tank test failure spill number (0004062-DeMeo) which has now been closed out in favor of this new spill number. Earth Tech believes that the old tank was relined after the tank failed the prior tank test several years ago, however no work was ever done to remediate the contamination which occurred because of that leak. Earth Tech believes that approx 2 years ago this buried tank was taken out of service. Since that time the building has been supplied by an above ground 5,000 gal tank. Unknown if the buried tank was ever emptied. Earth Tech recently did soil borings around the UST area and came back with high contamination levels. This information was forwarded to the City SCA (SCA Contact:Lee Guterman 718-472-5802) SCA has now decided to removed the UST and excavate out the contaminated soil around it. Earth Tech is modifying the standard city bid package to site specific conditions and will work

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

with the city as they put the
excavation/remediation work out to bid. Bid package should go out
around April 1st, 2005. Work
should be done summer 2005. 04/13/06- Case was transferred from Jake
Krimgold to Koon Tang.

7/9/07: Reassigned from Koon Tang to Kartik Chanda (Chanda) 7/18/07:
Kartik Chanda of DEC reviewed
all documents regarding this spill case. On 7/18/07, Chanda sent a
letter to Ms. Lee Guuterman,
Manager IEH Department, NYC School Construction Authority, requiring
that the following documents
be submitted to the DEC for review by 9/4/07. 1. An explanation of the
cause of the tank system
failure; 2. Either a description of the work performed to restore the
integrity of the tank system
(including retesting results), or a description of the work performed
to close (decommission) the
tank; 3. Information regarding petroleum contamination found at the
site and cleanup activities (if
any) associated with a release from this tank system; 4. Any available
documentation (i.e.,
invoices, bills, sampling analysis reports, etc.) pertaining to the
work performed at this site
associated with this violation. 10/29/07: Chanda called Mr. Drew
Pardus(NYCSCA) to get updated
information regarding this spill site. He stated that NYCSCA is
finding the information regarding
this spill. NYCSCA will send an investigation report shortly. 12/6/07:
Chanda received an email
(see edocs) from Ms. Lee Guterman, NYCSCA. She stated that The
Investigation Summary Report for
Automotive Trade HS has been prepared and is under my review. A
Remedial Action Plan is being
prepared and is anticipated to be completed by 12/15/07. 2/12/08:
Chanda received a Subsurface
Investigation Summary Report from NYCSCA, prepared by TRC Engineers,
Inc. (TRC), dated November 9,
2007. 2/28/08: Chanda has reviewed the Subsurface Investigation
Summary Report and has the
following comments: -Subsurface investigation report regarding the
20,000-gallon #4 fuel oil UST. -
About two years ago, a tank tightness test was performed and the tank
failed. At that time UST was
taken out of service and a temporary 5,000-gallon AST was installed to
supply #2 fuel oil to the
boiler. - The soil data indicated that the UST had leaked and had
contaminated the surrounding
soils near the UST and the supply line to the building. VOCs and SVOCs
were detected in soil
samples. The greatest impacts appear to be in the immediate vicinity
of the UST and just below the
depth of UST near the water table. -VOC were not detected in
groundwater beneath the site. Several
SVOCs were detected in groundwater beneath the site. -The results of
finger print analysis indicate

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

that the impacts are associated with #4 fuel oil. - The groundwater table has been measured between 10 and 11 feet bgs. - Removal of UST and associated impacted soil could potentially damage the adjacent school building and concrete vehicle access ramp. 3/3/08: Chanda discussed with Joe Sun (supervisor),and sent a letter with Stips and generalized Corrective Action Plan via certified mail to RP (Ms. Lee Guterman) and Mr. Drew Pardus (NYCSCA). The Department requires installation of permanent monitoring wells to determine the correct groundwater flow direction at the site. The signed STIP must be submitted to DEC by 3/25/08. 3/24/08: The Stipulation Agreement was signed by the RP (The New York City Department of Education). 3/31/08: Chanda sent a fully executed STIP to the RP and required that a Subsurface investigation and monitoring well installation report be submitted to DEC by 6/2/08 for review and approval. 4/3/08: Chanda received a Subsurface Investigation Work Plan from NYCSCA, prepared by TRC Engineers, Inc. (TRC)dated March 18, 2008.
4/4/08: Chanda has reviewed the Subsurface Investigation Work Plan and has the following comments:
-TRC will advance ten (10) soil borings across the Site as part of monitoring well installation.
Soil samples will be analyzed for the STARS volatile organic compounds (VOCs) and STARS SVOCs. -TRC will install nine (9) two-inch diameter and one (1) four inch diameter flush mounted permanent groundwater monitoring wells. The wells will be screened approximately 5 feet above the water table and 10 feet below the water table. The samples will be analyzed for STARS VOCs and STARS SVOCs.
4/7/08: Chanda sent the work plan approval letter to Ms. Lee Guterman, NYCSCA and her consultant (TRC Engineers Inc.), requiring that an Investigation Report must be submitted to the Department by June 2, 2008 for review and approval. 4/17/08: Chanda received the following email from Mr. Drew Pardus, NYCSCA: TRC is scheduled to start preforming the field work for the investigation on April 24, 2008. We will provide the investigation report as soon as it is available. Please feel free to contact me if you have any questions or comments. Sincerely, Drew Pardus 6/2/08: Chanda received an email from Mr. Bob Kanaparthi, NYCSCA, regarding one week time extension to submit the Investigation Report for this site. Chanda sent an extension approval letter to Ms. Guterman, NYCSCA. The Deadline is extended to 6/9/08. 6/9/08: Chanda received a Site Investigation Report from NYCSCA, prepared by TRC Engineers, Inc., dated June 6, 2008. (see eDocs) 7/3/08: Chanda has reviewed the site investigation report and has the followings: -The site consists of a three-story public school building with basement, and asphalt-paved parking and

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

landscaped areas. -The results
of the analyses of the soil samples revealed detectable concentrations
of VOCs and SVOCs. -
Permanent flush mounted ten (10)GW monitoring wells were installed at
the site. -The depth to
groundwater measured at the Site is approximately 8 to 10 feet bgs.
-No SVOCs detected in GW at
concentrations exceeding Class GA Values. -Several VOCs were detected
in GW samples. -NAPL was not
encountered in any of the GW monitoring wells during gauging with an
oil /water interface probe.
-Based on GW table surface elevation measurements, only a slight
gradient, indicating a predominant
inward flow direction, exists beneath the site. Based on the results
of site investigation, and
considering the result of previous investigation, TRC concluded that
there is a potential damage of
school building that could result from attempting to remove the
20,000-gallon UST from the site.
TRC recommended the following: * Permanently close-in-place the
20,000-gallon UST; * In-service
waste oil UST identified during the geophysical survey is registered,
operated and maintained in
accordance with applicable regulations; * Close or take out of service
the concrete vault in
accordance with applicable regulations; * Monthly monitoring of the
permanent groundwater
monitoring wells for light NAPL to confirm that it is not present; *
Implement a program to ensure
proper maintenance of the asphalt pavement in the vicinity of the UST
and impacted subsurface soil;
7/9/08: Chanda discussed with Joe Sun, NYSDEC regarding the findings
of the Site Investigate
Report. It is concluded that the Department (DEC) requires that a
Remedial Action Work Plan to
remove all contaminated media from this subject site. 7/11/08: Chanda
sent a letter to RP (Ms. Lee
Guterman, NYCSCA) and her consultant (TRC) requiring that a Remedial
Action Plan (RAP) be submitted
to DEC by 9/11/08 for review and approval. 8/1/08: A meeting was held
on 7/30/08 among DER staff,
NYCSCA and TRC Environmental Consultant Inc. (TRC) to discuss the site
investigation results and
Remedial Action Plan (RAP) to remediate all the contaminated media.
The meeting s consensus was
that a RAP be submitted to DEC by 9/11/2008 for review and approval.
9/11/08: A follow-up meeting
was held on 9/10/08 among DER Staff, Mr. Drew Pardus(NYCSCA), and Mr.
David Glass (TRC
Environmental) regarding the findings of the recent inspection of the
school building basement for
this site. As agreed at the meeting, NYCSCA will conduct the following
activities associated with
the Site: Clean the 20,000-gallon UST in accordance with applicable
regulation but leave it
unfilled to use a monitoring point for a short time. Clean the
standing oil into the concrete

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

vault. Evaluate the size and structure of the concrete vault and determine the piping layout
associated with the vault. Also, determine if the pumping system is still in operation or needs to
be. Clean the oil strains inside the basement areas and tank vault area to see if they return.
Advance several monitoring wells in the vicinity of the 20,000-gallon UST. Prepare and submit a
brief work plan with borings and monitoring well locations. Include an implementation schedule.
9/11/08: Chanda sent a letter to Ms. Lee Guterman requiring that a brief work plan be submitted to
DEC by 10/12/08 for review and approval. 10/10/08: Chanda received a Site Investigation and Interim
Remedial Scope of Work from NYCSCA prepared by TRC Engineers, Inc., dated 10/7/08. Chanda reviewed
the work plan. The work plan has the following: * Investigation of Concrete Valt *Removal and
Monitoring of Seeps * UST and Vault Cleaning and Inspection *Geophysical Survey * Four groundwater
Monitoring Wells Installation and Sampling in the vicinity of the 20,000-gallon UST 10/31/08: A
meeting was held on 10/21/08 between DER staff and NYCSCA to discuss the project status and
investigation work plan regarding this site. On 10/30/08, DEC approved the work plan. Chanda sent a
letter to NYCSCA and Consultant (TRC) requiring that a report summarizing the findings of the
investigation be submitted to the Department by December 30,2008. 05/13/2009: This spill case was
transferred to A. Doronova. - AD Reviewed the file. The investigation summary report requested by
Kartik Chanda of DEC was not submitted yet. AD 12/04/2009: Received a RAP. Will review. PDF copy is
missing. To request its submission. AD 12/08/2009: Received a pdf copy. DL to eDocs. AD 12/30/2009:
Reviewed the RAP. It states that based on previous investigations, evidence of a UST defect was not
found; free product is present in soil and GW in the vicinity of UST, and is apparently being
conveyed to the concrete vault via subsurface drainage system beneath the building basement;
dissolved phase impacts to GW from the release are minimal and limited to the immediate vicinity of
the UST. The RAP proposes the following: closure-in-place of 20,000-gallon UST and annual
inspection of a concrete vault, the pump pit in the boiler room, and monitoring wells with removal
of accumulated oil (if present). Proposed course of actions is questionable. To discuss the RAP
with J. Kolleeny. AD 01/06/2010: Discussed the RAP with J. Kolleeny of DEC. Called and spoke with
D. Pardus of SCA regarding the RAP and vault investigation. He requested a meeting with DEC.
Scheduled the meeting for January 21, 2010. AD 01/21/2010: I and J. Kolleeny of DEC met with Drew
Pardus and Bob Kanaparthi of NYCSCA and Charles Guder of TRC.

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

Discussed the proposed RAP. It was agreed that two additional soil borings will be adwanced in the vicinity of the concrete vault, and based in the field observation of the soil samples, one boring will be finished as a permanent monitoring well. It was decided that gauging of the site monitoring wells and vault pumping will be performed quarterly and GW sampling will be semi-annually. Addendum to the RAP will be submitted to DEC for review and approval. AD 04/30/2010: Called and spoke with D. Pardus regarding submission of the addendum to the RAP. He said that it was prepared and is now under review for budgetary approval. AD 06/20/2011: Received an e-mail from Drew Pardus saying: Ainura, In order to continue progress at Automotive Trade HS to remediate DEC Spill 0413160 and in light of constrained City budgets, an inspection of the out-of-service pump station where oil accumulates was performed. TRC s observations of this inspection and removal of oil from the out-of-service pump station (by PTC on behalf of DSF) are provided below. Another site inspection and visual monitoring of the permanent wells will be performed in approximately three months to determine if free product is observed. If no free product is observed after multiple inspections, SCA will request that the fuel oil tank may filled (i.e., closed via abandonment) and no further action for Spill Case 0413160. Please feel free to contact me at 646-577-8280 if you have any questions. Sincerely, Drew Pardus DL the attached document to eDocs. AD 03/27/2012: Received an e-mail from S. Kline of SCA saying: Ms. Doronova- As per your request, our consultant (TRC) has prepared the attached remediation action work plan addendum for the above referenced spill case. Our consultant will proceed with the scope of work described in the attached documents as soon as we have NYSDEC approval and we have secured funding for these additional remedial measures. Since Drew Pardus is no longer working on this project, I will be the SCA point of contact for this project moving forward. Please contact me with and questions or comments. Regards- Stephen Kline, P.E. NYC School Construction Authority IEH Division 30-30 Thomson Avenue Long Island City, NY 11101 Cell (347) 242-7109 Stephen.kline@gza.com DL the attached report and letter to eDocs. Will review. AD 04/20/2012: Reviewed the work plan. It states that TRC proposes to do site investigation via advancing two soil borings with collection of soil sampling; installation on one monitoring well; quarterly groundwater monitoring and free product recovery. Soil sampling will include the following: TRC will advance two (2) soil borings (TRC-SB-1 and TRC-SB-2) adjacent to the subsurface drainage pipe between the concrete vault and the

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

building (refer to Figure 1 for the boring locations). Geologic descriptions of the soil and field screening results will be recorded in field logs. One groundwater monitoring well (TRC-MW15) will be installed in one of the boreholes. The well will be installed in TRC-SB-1 as shown if no evidence of contamination is observed during the subsurface investigation. If contamination is observed, the monitoring well will be installed in the borehole showing the highest evidence of contamination. Quarterly groundwater monitoring will be performed for a period of one year. - Monitoring wells TRC-MW-1, TRC-MW-2, TRC-MW-3, TRC-MW-4, TRC-MW-5, TRC-MW-6, TRC-MW-7, TRC-MW-8, TRC-MW-9, TRC-MW-10, TRC-MW-11, TRC-MW-12, TRCMW-13, TRC-MW-14, and TRC-MW-15 will be inspected and gauged. Any wells found to be damaged will be assessed for re-installation. - The entire monitoring well network will be gauged and sampled during the first quarterly monitoring event. If LNAPL is present in a well, groundwater will not be analyzed from that monitoring well. If the results of the analyses of groundwater from monitoring wells TRC-MW- 6, TRC-MW-8, and TRC-MW-10 (upgradient wells) from the first quarterly sampling round are below Class GA Values, these wells will not be sampled during subsequent quarterly events. However, all wells will be gauged during each quarterly event. A quarterly monitoring report with conclusions and recommendations for further actions, if necessary, will be submitted to DEC. Vault Inspections and Product Removal: TRC will perform the following activities under this task: - periodic inspections and product removal at the concrete vault for a period of one year. For the first quarter, TRC anticipates performing 6 events (three during the first month, two during the second month, and one during the third month). Inspections/product removal events will occur once per quarter thereafter. - If oil is present in the vault, the procedure below will be followed: - The depth to the oil will be gauged and recorded; - The thickness of the oil and the thickness of the water will be gauged and recorded; and, - The oil and water will be removed from the vault by a vacuum truck for off-Site disposal. If no oil is detected in the concrete vault, the depth to the liquid in the vault will be gauged and recorded. - Similarly the boiler room pump pit and on-Site monitoring wells will be gauged for oil. If oil is detected in a groundwater monitoring well, the depth and thickness (if possible) of the oil will be measured and recorded, and the oil will be removed by a vacuum truck for off-Site disposal. If oil is detected in the boiler room pump pit, the pump system will be immediately shut down and the NYCDOE Division of School Facilities and the NYCSCA will

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

be contacted to determine the
appropriate course of action. - Waste generated will be properly transported off-Site for disposal
in accordance with applicable laws and regulations. - The information collected during the vault
inspections/product removal will be submitted with the quarterly monitoring reports. AD 04/24/2012:
Discussed the work plan with J. Kolleeny of DEC. AD 04/25/2012: issued and sent an approval letter
to L. Guterman of SCA. DL pdf copy of the letter to eDocs. AD 12/21/2012: Received a Project
Progress Report #1 from TRC. DL the report to eDocs. Will review. AD 02/01/2013: Reviewed the
report. It states that field activities were conducted at the Site between July 14 and October 18,
2012. During this period, the following activities were completed at the site: In-place closure of
the 20,000-gallon underground storage tank (UST); A 20,000-gallon UST, which is located beneath an
asphalt paved parking lot north of the school building, was formerly used to store No. 4 and No. 6
fuel oil for the school s boiler and was taken out-of-service in 2003 and was cleaned in 2009. In
accordance with the NYSDEC-approved RAP and RAP Addendum, the 20,000-gallon UST was permanently
closed in-place in accordance with the applicable requirements of the NYSDEC and the FDNY on July
26, 2012. Prior to closing the UST in place, the UST was inspected to verify that the UST did not
require additional cleaning. The UST was observed to contain a small amount of water but there was
no evidence of residual product. The remaining contents of the 20,000-gallon UST were removed
utilizing a vacuum truck and the UST and concrete hatch were then completely filled with concrete
slurry. Geophysical survey; Subsurface soil investigation and installation of a permanent
monitoring well; A hollow stem auger rig was used to retrieve soil samples. Soil samples were
collected and screened for evidence of field contamination continuously from the ground surface to
the boring completion depth. No visual or olfactory indications of contamination were observed in
any of the soil samples collected. Soil boring TRC-SB-1/MW15 was advanced, east of and adjacent to
the subsurface drainage pipe, to approximately 21 feet bgs. One discrete soil sample, collected
from 9 to 11 feet bgs, was selected for laboratory analysis. Groundwater was encountered at
approximately 11 feet bgs in TRC-SB-1/MW15. Soil boring TRC-SB-2 was advanced, west of and adjacent
to the subsurface drainage pipe, to approximately 21 feet bgs. One discrete soil sample, collected
from 9 to 11 feet bgs, was selected for laboratory analysis. Groundwater was encountered at
approximately 11 feet bgs in TRC-SB-2. Soil boring location TRC-SB-1/MW15 was converted into a

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

permanent monitoring well and soil boring location TRC-SB-2 was patched at the surface with concrete. VOCs and SVOCs were not detected in any of the soil samples at concentrations above the SCLs for Fuel Oil Contaminated Soil found in Table 3 of CP-51. One round of Quarterly groundwater sampling; The first round of quarterly groundwater samples were collected from existing permanent monitoring wells TRC-MW1, TRC-MW3, TRC-MW4, TRC-MW-5, TRC-MW6, TRC-MW7, TRC-MW8, TRCMW9, and TRC-MW10, and from newly installed permanent monitoring well TRC-MW15 on July 26, 2012, July 30, 2012 and August 2, 2012. LNAPL was present in monitoring wells TRC-MW2, TRCMW11, TRC-MW12, TRC-MW13, and TRC-MW14 and these wells were therefore not sampled. The thickness of LNAPL in these monitoring wells could not be accurately gauged due to the viscosity of the LNAPL. An obstruction (debris) was encountered in TRC-MW9 on July 26, 2012, which was cleared by TRC on July 27, 2012 using one-inch PVC well screen. The well was redeveloped by TRC on July 30, 2012 and an inspection of the well and purge water indicated that the well was suitable for sampling. TRC-MW9 was sampled on August 2, 2012. The results of the analysis of groundwater sampling indicate that MTBE was the only VOC detected at a concentration exceeding the corresponding Class GA Value. MTBE was detected at a concentration of 8.3 ug/l in well TRC-MW8, which slightly exceeds the Class GA Value of 5 ?g/L for MTBE. Monitoring well TRC-MW8 is upgradient of the Site and TRC concludes that the concentration of MTBE in the well is likely attributable to an off-site source and not to an on-site release. No other VOCs were detected in any of the groundwater samples at concentrations exceeding Class GA Values. SVOCs were not detected in any of the groundwater samples at concentrations exceeding Class GA Values. With the exception of a marginal exceedance of MTBE in TRC-MW8, which is attributable to an off-site source or regional conditions, VOCs and SVOCs were not detected in groundwater samples collected. Therefore, TRC recommends that upgradient monitoring wells TRC-MW6 and TRC-MW10 will not be sampled during subsequent quarterly groundwater sampling rounds. Four months of concrete vault and boiler room pump pit inspections; Four months of monitoring well gauging; and Four months of light non-aqueous phase liquid (LNAPL) recovery events. The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 26, August 2, August 9, September 5, September 26, and October 18, 2012 by TRC. LNAPL was present during these events in the concrete vault and monitoring wells TRC-MW2, TRC-MW11,

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

TRC-MW12, TRC-MW13, and
TRC-MW14. The thickness of the LNAPL could not be accurately determined due to the high viscosity
of the oil identified in the concrete vault and monitoring wells. However, based on observations
noted using a bailer, monitoring well TRC-MW11 was observed to contain only minimal amounts of
LNAPL. LNAPL was not present in monitoring wells TRC-MW1, TRC-MW3 through TRC-MW10, TRC-MW15 and in
the boiler room pump pit. LNAPL Product Recovery Periodic recovery of LNAPL on behalf of the NYCSCA
has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of
the school building and groundwater monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and
TRC-MW14 on July 26, August 2, August 9, September 5, September 26, and October 18, 201. During the
recovery events, the thickness of the LNAPL could not be accurately determined due to the high
viscosity of the LNAPL; however, based on observations noted using a bailer, the thickness of the
LNAPL was estimated to be less than 6 inches. LNAPL was removed from the concrete vault and
groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the Site
consisted of the following: The contents of the bottom of the concrete vault were removed below the
elevation of the subsurface drainage pipe. This allowed LNAPL present in the pipe to flow into the
concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The
vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL
(TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14). Since monitoring well TRC-MW11 was observed to contain
only minor amounts of LNAPL, an oil absorbent sock was placed in this well for product recovery.
The oil absorbent sock was removed and replaced during each recovery event and containerized in a
55-gallon steel drum which is staged on site. Approximately 15,604 gallons of LNAPL and water has
been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12,
TRC-MW13, and TRC-MW14) from July through October 2012. Table 5 presents the amount of LNAPL and
water recovered during each extraction event. The following activities are planned by TRC during
the second quarter. - Quarterly inspections and product removal of the concrete vault and
monitoring wells TRCMW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 will continue. Progress Report
#2 will be submitted to the NYSDEC following the next inspection and product removal event, which
will be performed in January 2013. - The entire monitoring well network will be gauged during
subsequent quarterly events. Quarterly sampling of the monitoring well network (with the exception

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

of upgradient monitoring wells TRC-MW6, TRC-MW10, and any monitoring well which contains LNAPL)
will continue. Progress Report #2 will include groundwater sampling results from the next round of
groundwater sampling, which was performed in October 2012. AD 03/04/2013: Received a project
progress Report # 2. DL the report to eDocs. Will review. AD 04/08/2013: Reviewed the report. It
states that TRC performed field activities at the site between October 18, 2012 and January 25,
2013. During this period, the following activities were completed: - Two rounds of quarterly
groundwater sampling (October 2012 and January 2013); - Concrete vault and boiler room pump pit
inspection (January 2013); - Monitoring well gauging (January 2013); and - LNAPL recovery event
(January 2013). Quarterly Groundwater Sampling: Groundwater samples were collected from 8 permanent
monitoring wells: TRC-MW1, TRC-MW3, TRCMW4, TRC-MW5, TRC-MW7, TRC-MW8, TRC-MW9, and TRC-MW15 on
October 17 and 18, 2012 and on January 21 and 22, 2013. LNAPL was present in 5 monitoring wells:
TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 and therefore, these wells were not sampled.
The results of the analysis of groundwater sampling indicate the VOC methyl tert-butyl ether (MTBE)
was the only VOC detected at a concentration exceeding the corresponding Class GA Value during the
October 2012 and January 2013 sampling events in well TRC-MW8: MTBE - 12ppb in October 2012 -
5.1ppb in January 2012 Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging:
The concrete vault north of the school building, the boiler room pump pit, and the groundwater
monitoring well network were inspected and gauged for the presence of LNAPL on January 21, 2013 by
TRC. LNAPL was present in the concrete vault and in 5 monitoring wells: TRC-MW2, TRC-MW11, TRCMW12,
TRC-MW13, and TRC-MW14. LNAPL was not present in the boiler room pump pit or in monitoring wells
TRC-MW1, TRC-MW3 through TRC-MW9, and TRC-MW15. The thickness of the LNAPL cannot be accurately
determined due to the high viscosity of the oil identified in the concrete vault and monitoring
wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW2,
TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 on January 21, 2013. An oil/water interface probe was
used to measure the thickness of LNAPL by lowering the probe to the depth of LNAPL, then submerging
the probe into the water until the sound indicated the presence of water, then raising the probe
until the oil indicator sounded. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of
the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete
vault north of the school building and groundwater monitoring wells

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

TRC-MW2, TRC-MW12, TRC-MW13,
and TRC-MW14 on January 21, 2013, consistent with the NYSDEC-approved RAP and RAP Addendum. During
the recovery event, the thickness of the LNAPL in the concrete vault could not be accurately
determined due to the high viscosity of the LNAPL. LNAPL was removed from the concrete vault and
groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the Site
consisted of the following: - The contents of the concrete vault were removed below the elevation
of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete
vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. - The vacuum
truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW2,
TRC-MW12, TRC-MW13, and TRC-MW14). The oil absorbent sock present in TRC-MW11 was saturated with
LNAPL and was removed and replaced. The saturated sock was containerized in a 55-gallon steel drum
which is staged on site. Approximately 3,650 gallons of LNAPL and water was removed from the
concrete vault and monitoring wells containing LNAPL (TRC-MW2,
TRC-MW12, TRC-MW13, and TRC-MW14) on
January 21, 2013. A total of approximately 40 gallons of LNAPL and water were removed from each
monitoring well and approximately 3,490 gallons of LNAPL and water were removed from the concrete
vault for offsite disposal. The LNAPL and water removal was performed by Brookside under the
supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York
(Clean Water) for disposal. Approximately 19,254 gallons of LNAPL and water has been removed from
the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and
TRC-MW14) from July 2012 to January 2013. Table 3 presents the amount of LNAPL and water recovered
during each extraction event. Although accurate measurements of LNAPL thicknesses in the wells were
not able to be obtained during previous events, based on measurements obtained during the January
2013 extraction event, previous observations made via bailing and also during the extraction
events, TRC states that the LNAPL thicknesses in the wells appear to be decreasing. TRC will
continue with quarterly inspection and LNAPL removal from the concrete vault and monitoring wells.
Progress Report #3 will be submitted to the NYSDEC following the next inspection and product
removal event, which will be performed in April 2013. AD 05/24/2013: Received the following e-mail
from TRC: Ainura, Attached is Progress Report #3 for Spill Case No. 0413160 (Automotive Trade High
School). Please review and contact me with any questions or comments. Thank you, Charles Guder

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

Senior Project Manager DL the report to eDocs. Will review. AD 08/30/2013: Reviewed the report. It states that TRC performed field activities at the Site between April 9 and April 19, 2013. During this period, the following activities were completed: - Quarterly groundwater sampling; - Concrete vault and boiler room pump pit inspection; - Removal of ancillary tank gauges and piping from the boiler room; - Monitoring well gauging; and - LNAPL recovery. Quarterly Groundwater Sampling; Groundwater samples were collected from monitoring wells TRC-MW1, TRC-MW2, TRC-MW3, TRC-MW4, TRC-MW5, TRC-MW7, TRC-MW8, TRC-MW9, TRC-MW11, TRC-MW14, and TRC-MW15 on April 18 and 19, 2013. TRC did not collect a groundwater sample from monitoring wells TRC-MW2, TRC-MW11 and TRC-MW14 during previous sampling events (October 2012 and January 2013) due to the presence of LNAPL in the monitoring wells. LNAPL was not present in these wells during this sampling event. In accordance with procedures detailed in the NYSDEC-approved RAP and RAP Addendum, sampling of upgradient monitoring wells TRC-MW6 and TRC-MW10 were discontinued after the initial quarterly groundwater sampling event. In addition, LNAPL was present in monitoring wells TRC-MW12 and TRC-MW13, therefore, these wells were not sampled. The results of the analysis of groundwater sampling indicate there were no VOCs or SVOCs detected at concentrations exceeding their corresponding Class GA Values. Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging: - The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on April 9, 2013 by TRC. Also on April 9, 2013, remnant gauges and piping associated with the closed-in-place 20,000-gallon UST were removed and wall pipe openings were sealed with cement. LNAPL was present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14, and TRC-MW15. As indicated previously, LNAPL was previously measured in monitoring wells TRC-MW2, TRC-MW11 and TRC-MW14 during the previous gauging events (October 2012 and January 2013). The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW12 (0.07') and TRC-MW13 (0.1') on April 9, 2013. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

groundwater monitoring wells
TRC-MW12 and TRC-MW13 on April 9, 2013. LNAPL was removed from the concrete vault and groundwater
monitoring wells using a vacuum truck. Approximately 3,600 gallons of water mixed with LNAPL was
removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on
April 9, 2013. A total of approximately 25 gallons of water mixed with LNAPL were removed from each
of monitoring wells and approximately 3,550 gallons of water mixed with LNAPL were removed from the
concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside
Environmental, Inc. under the supervision of TRC and transported to Clean Water of New York, Inc.,
of Staten Island, New York (Clean Water) for disposal. Although accurate measurements of LNAPL
thicknesses in the wells were not able to be obtained during previous events, three wells which
previously contained LNAPL do not currently contain LNAPL and observations made during bailing and
the extraction events indicate that LNAPL thicknesses in the wells are decreasing. TRC is planning
the following activities for the fourth quarterly LNAPL removal and groundwater sampling event: -
Quarterly inspection and LNAPL removal from the concrete vault and monitoring wells. An additional
vacuum truck will be used during the next LNAPL removal event to ensure LNAPL present in the
building underdrain pipe will flow out of the pipe and be removed from the vault. - Progress Report
#4 will be submitted to the NYSDEC following the next inspection and product removal event, which
will be performed in July 2013. - The monitoring well network will be gauged during the 4th
quarterly event. Quarterly sampling of the monitoring well network (with the exception of
upgradient monitoring wells TRC-MW6, TRC-MW10, and any monitoring well which contains LNAPL) will
be performed during this event. No response needed. AD 09/06/2013: Received a Progress Report # 4
for the site. DL the report to eDocs. Will review. AD 10/15/2013: Reviewed the report. It states
that between July 19 and July 24, 2013 TRC conducted at the site following field activities:
-Quarterly groundwater sampling; -Concrete vault and boiler room pump pit inspection; -Monitoring
well gauging; -LNAPL recovery. Groundwater samples were collected from permanent monitoring wells
TRC-MW1 through TRC-MW5, TRC-MW7 through TRC-MW9, and TRC-MW11 through TRC-MW15 from July 22
through July 24, 2013. Monitoring wells TRC-MW12 and TRC-MW13 contained LNAPL at minimal
thicknesses (approximately 0.03 feet) when gauged on July 19, 2013; however, following vacuum
extraction, measurable LNAPL was not detected, and these wells were sampled. The results of the

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

analysis of groundwater sampling indicate that there were no VOCs or SVOCs detected at
concentrations exceeding their corresponding Class GA Values. Concrete Vault/Boiler Room Pump Pit
Inspections and Monitoring Well Gauging: The concrete vault north of the school building, the
boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the
presence of LNAPL on July 19, 2013 by TRC. LNAPL was present in the concrete vault and monitoring
wells TRC-MW12 and TRC-MW13. LNAPL was not present in the boiler room pump pit or in monitoring
wells TRC-MW1 through TRCMW11, TRC-MW14, and TRC-MW15. The thickness of the LNAPL could not be
accurately determined due to the high viscosity of the oil identified in the concrete vault and
monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring
wells TRC-MW12(0.03') and TRC-MW13(0.03) on July 19, 2013 with an oil/water interface probe. LNAPL
Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site
since July 2012. LNAPL was removed from the concrete vault north of the school building and
groundwater monitoring wells TRC-MW12 and TRC-MW13 on July 19, 2013 using a vacuum truck. The
procedure for removal of LNAPL at the Site consisted of the following: The contents of the concrete
vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present
in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete
vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the
monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13). The oil absorbent sock present in
TRC-MW11 was removed and was placed in a 55-gallon steel drum on-site. A new oil absorbent sock was
replaced in this well. Approximately 5,626 gallons of water mixed with LNAPL was removed from the
concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on July 19, 2013. A
total of approximately 25 gallons of water mixed with LNAPL were removed from each of monitoring
wells and approximately 5,576 gallons of water mixed with LNAPL were removed from the concrete
vault for offsite disposal. The LNAPL and water waste was transported to Clean Water of New York,
Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 28,480 gallons of water
mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL
(TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to July 2013. In accordance with the
NYSDEC-approved RAP and RAP Addendum, quarterly groundwater monitoring, inspections, and product
recovery have been completed for a period of one year. The source of

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

LNAPL at the site - the former
20,000-gallon UST, has been closed-in-place in accordance with 6 NYCRR Part 614. Approximately
28,480 gallons of groundwater/LNAPL mixture have been removed from the concrete vault and
monitoring wells. At the initiation of the LNAPL removal program, measurable LNAPL was present in
five monitoring wells (TRC-MW2, TRC-MW11, TRCMW12, TRC-MW13, and TRC-MW14). As of July 2013, there
is measurable LNAPL in only two (2) monitoring wells (TRC-MW12 and TRC-MW13), at minimal
thicknesses (approximately 0.03 feet). According to TRC, the results of groundwater sampling
conducted to date show that, with the exception of the concentration of MTBE detected in well
TRC-MW-8 during one sampling round, VOCs and SVOCs have not been detected at concentrations above
Class GA Values. Therefore, the remaining residual LNAPL in the area of the closed-in-place UST and
in the building under drain system is not impacting groundwater at the Site. TRC recommends the
following: - Based on the analytical results, sampling of the monitoring well network is no longer
required. - Bi-annual inspection and gauging of the monitoring well network should be performed.
Absorbent socks should be placed (and replaced, as necessary) in monitoring wells containing
measurable LNAPL. - Bi-annual (twice yearly) inspection and LNAPL removal from the concrete vault
should continue until LNAPL is no longer observed for two consecutive six month periods. AD
03/17/2014: Reveived Received a Progress Report #5 for the site. DL the report to eDocs. Will
review. AD 04/24/2014: Reviewed the report. It states that field activities were conducted at the
site on January 20, 2014 and consisted of the following: Concrete vault and boiler room pump pit
inspection; Monitoring well gauging; and LNAPL recovery. The concrete vault north of the school
building, the boiler room pump pit, and the groundwater monitoring well network were inspected and
gauged for the presence of LNAPL on January 20, 2014 by TRC. LNAPL was present in the concrete
vault and monitoring wells TRC-MW-12 and TRC-MW-13, which is consistent with historic data. LNAPL
was not present in the boiler room pump pit or in monitoring wells TRC-MW-1 through TRC-MW-11,
TRC-MW-14, and TRC-MW-15. The thickness of the LNAPL could not be accurately determined due to the
high viscosity of the oil identified in the concrete vault and monitoring wells. However, an
oil/water interface probe was used to approximate the thickness of LNAPL by lowering the probe to
the depth of LNAPL, then submerging the probe into the water until the sound indicated the presence
of water, then raising the probe until the oil indicator sounded.
According to the data: TRC-MW-12

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

- 0.03' of free product; TRC-MW-13 - 0.09' of free product. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW-12 and TRC-MW-13 on January 20, 2014. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the site consisted of the following: The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13). The oil absorbent sock present in TRC-MW-11 was removed and was placed in a 55-gallon steel drum on-site. A new oil absorbent sock was replaced in this well. Approximately 3,703 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13) on January 20, 2014. A total of approximately 35 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 3,633 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside Environmental, Inc. under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 32,183 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-2, TRC-MW-12, TRC-MW-13, and TRC-MW-14) from July 2012 to January 20, 2014. PLANNED ACTIVITIES: The following activities are planned for the next bi-annual inspection and LNAPL removal event: The monitoring well network will be gauged. Inspection and LNAPL removal from the concrete vault and monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing measurable LNAPL. Project progress Report #6 will be submitted to the DEC following the next inspection and product removal event, which will be performed in July 2014. AD 10/20/2014: Reveived Received a Progress Report #6 for the site. Will review. AD 12/10/2014: Reviewed the report. It states that field activities were conducted at the site on July 28, 2014 and consisted of the following: Concrete vault and boiler room pump pit inspection; Monitoring well gauging; and LNAPL recovery. The concrete vault north of the school building, the boiler room pump pit,

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

and the groundwater
monitoring well network were inspected and gauged for the presence of LNAPL on July 28, 2014 by
TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW-12 and TRC-MW-13, which is
consistent with historic data. LNAPL was not present in the boiler room pump pit or in monitoring
wells TRC-MW-1 through TRC-MW-11, TRC-MW-14, and TRC-MW-15. The thickness of the LNAPL could not be
accurately determined due to the high viscosity of the oil identified in the concrete vault and
monitoring wells. However, an oil/water interface probe was used to approximate the thickness of
LNAPL by lowering the probe to the depth of LNAPL, then submerging the probe into the water until
the sound indicated the presence of water, then raising the probe until the oil indicator sounded.
According to the data: TRC-MW-12 - 0.02' of free product; TRC-MW-13 - 0.05' of free product. LNAPL
Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site
since July 2012. LNAPL was removed from the concrete vault north of the school building and
groundwater monitoring wells TRC-MW-12 and TRC-MW-13 on July 28, 2014. LNAPL was removed from the
concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of
LNAPL at the site consisted of the following: The contents of the concrete vault were removed below
the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into
the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck.
The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL
(TRC-MW-12 and TRC-MW-13). New oil absorbent socks were replaced in these wells. Approximately
3,119 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells
containing LNAPL (TRC-MW-12 and TRC-MW-13) on July 28, 2014. A total of approximately 35 gallons of
water mixed with LNAPL were removed from each of monitoring wells and approximately 3,049 gallons
of water mixed with LNAPL were removed from the concrete vault for off-site disposal. The LNAPL and
water removal was performed by Brookside Environmental, Inc. under the supervision of TRC and
transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for
disposal. Approximately 35,302 gallons of water mixed with LNAPL have been removed from the
concrete vault and monitoring wells containing LNAPL (TRC-MW-2, TRC-MW-12, TRC-MW-13, and
TRC-MW-14) from July 2012 to July 28, 2014. PLANNED ACTIVITIES: The following activities are
planned for the next bi-annual inspection and LNAPL removal event: The monitoring well network will

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

be gauged. Inspection and LNAPL removal from the concrete vault and monitoring wells will continue.
Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing
measurable LNAPL. Project progress Report #7 will be submitted to the DEC following the next
inspection and product removal event, which will be performed in January 2015. NRN. AD 02/12/2015:
Received the following e-mail from C. Guder: Ainura Attached is Progress Report #7 for Spill Case
No. 0413160 associated with Automotive Trades High School, Brooklyn, NY. Please review and contact
us with any questions or comments. Thank you, Charles Guder Senior Project Manager Will review. AD
03/24/2015: Reviewed the report. It states that field activities were conducted at the Site on
January 19, 2015 and consisted of the following: - Concrete vault and boiler room ejector pit
inspection; - Monitoring well gauging; and - LNAPL recovery. Concrete Vault/Boiler Room Ejector Pit
Inspections and Monitoring Well Gauging: The concrete vault, located north of the school building,
the boiler room ejector pit, and the groundwater monitoring well network were inspected and gauged
for the presence of LNAPL on January 19, 2015 by TRC. LNAPL was present in the concrete vault and
monitoring wells TRC-MW12 and TRC-MW13, which is consistent with historic data. LNAPL was not
present in the boiler room ejector pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14,
and TRC-MW15. The thickness of the LNAPL could not be accurately determined due to the high
viscosity of the oil identified in the concrete vault and monitoring wells. LNAPL has only been
measured in monitoring wells TRC-MW12 and TRC-MW13 since April 2013. The LNAPL thickness measured
in wells TRC-MW12 and TRC-MW13 have also decreased since April 2013. The LNAPL thickness
measurements (feet) recorded in monitoring wells TRC-MW12 and TRC-MW13 in April 2013 were 0.07 and
0.10, respectively. LNAPL Product Recovery: Periodic recovery of LNAPL has been performed at the
Site since July 2012. LNAPL was removed from the concrete vault north of the school building and
groundwater monitoring wells TRC-MW12 and TRCMW13 on January 19, 2015 using a vacuum truck. The
procedure for removal of LNAPL at the Site consisted of the following: - The contents of the
concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL
present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the
concrete vault into the vacuum truck. - The vacuum truck was then used to pump oil and water from
the monitoring wells containing measurable LNAPL (TRC-MW12 and TRC-MW13). - The oil absorbent socks
present in the monitoring wells around the closed-in-place UST

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

(i.e.,TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW-13, TRC-MW14) were found to be saturated with oil. With the exception of monitoring wells TRC-MW12 and TRC-MW13, measurable LNAPL was not identified in the monitoring wells after removal of the oil absorbent socks. The oil absorbent socks present in the monitoring wells were removed and replaced with new ones. Approximately 5,724 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on January 19, 2015. A total of approximately 25 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 5,674 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. Approximately 41,026 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to January 2015. PLANNED ACTIVITIES: In connection with the NYSDEC approval letter dated October 15, 2013, the following activities are planned for the next bi-annual inspection and LNAPL removal event: - The monitoring well network will be gauged. - Inspection and LNAPL removal from the concrete vault and monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing LNAPL. - Project Progress Report #8 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in July 2015. AD 08/12/2015: Received a Progress Report # 8. Will review. AD 10/02/2015: Reviewed the report. It states that field activities were conducted at the Site on July 27, 2015 and consisted of the following: - Concrete vault and boiler room ejector pit inspection; - Monitoring well gauging; and - LNAPL recovery. Concrete Vault/Boiler Room Ejector Pit Inspections and Monitoring Well Gauging: The concrete vault, the boiler room ejector pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 27, 2015 by TRC. LNAPL was only present in the concrete vault and wells TRC-MW12 and TRC-MW13, which is consistent with historic data. LNAPL was not present in the boiler room ejector pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14, and TRC-MW15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. LNAPL has only been measured in monitoring wells TRC-MW12 and TRC-MW13 since April 2013. The LNAPL thickness measured in wells TRC-MW12 and TRC-MW13 have also decreased since April 2013. The LNAPL thickness measurements (feet) recorded in monitoring wells TRC-MW12 and

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

TRC-MW13 in July 2015 were 0.03 and 0.03, respectively. LNAPL Product Recovery: Periodic recovery
of LNAPL has been performed at the site since July 2012. LNAPL was removed from the concrete vault
north of the school building and groundwater monitoring wells TRC-MW12 and TRCMW13 on July 27, 2015
using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: -
The contents of the concrete vault were removed below the elevation of the building underdrain
pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was
then pumped from the concrete vault into the vacuum truck. - The oil absorbent socks present in the
monitoring wells TRC-MW12, TRC-MW-13 were found to be saturated with oil and removed. A vacuum
truck was then used to pump LPAPL and water from TRC-MW12 and TRC-MW13. After pumping was complete,
new oil absorbent socks were placed into TRC-MW12, TRC-MW13. Approximately 2,606 gallons of water
mixed with LNAPL was removed from the concrete vault and monitoring wells (TRC-MW12 and TRC-MW13)
on July 27, 2015. Approximately 50 gallons of water mixed with LNAPL were removed from each of
monitoring wells and approximately 2,506 gallons were removed from the concrete vault for off-site
disposal. Approximately 43,632 gallons of water/LNAPL mixture have been removed from the site for
the period from July 2012 to July 2015. PLANNED ACTIVITIES: The following activities are planned
for the next bi-annual inspection and LNAPL removal event: - The monitoring well network will be
gauged. - Inspection and LNAPL removal from the concrete vault and monitoring wells will continue.
Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing LNAPL. -
Project Progress Report #9 will be submitted to the NYSDEC following the next inspection and
product removal event, which will be performed in January 2016. AD 02/17/2016: Received Progress
Report #9. Will review. AD 03/29/2016: Reviewed the report. It states that field activities were
conducted at the site on on January 18, 2016 and consisted of the following: Concrete vault and
boiler room ejector pit inspection; Monitoring well gauging; and LNAPL recovery. Concrete
Vault/Boiler Room Ejector Pit inspections and Monitoring Well Gauging: The concrete vault (located
north of the school building), the boiler room ejector pit, and the groundwater monitoring well
network were inspected and gauged for the presence of LNAPL on January 18, 2016 by TRC. LNAPL was
only present in the concrete vault and monitoring wells TRC-MW 12 and TRCMW-13, which is consistent
with inspection results since April 9, 2013. The oil absorbent socks present in monitoring wells
TRC-MW 12 and TRC-MW 13 we re also found to be saturated with oil.

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

LNAPL was not present in the
boiler room ejector pit or in monitoring wells TRC-MW-1 through
TRC-MW-11, TRCMW-14, and TRC-MW-15.
An oil/water interface probe was used to approximate the thickness of
LNAPL by lowering the probe
to the depth o f LNAPL, then submerging the probe into the water until
the sound indicated the
presence of water, then raising the probe until the oil indicator
sounded. The thickness of the
LNAPL could not be accurately determined due to the high viscosity of
the oil identified in the
concrete vault and monitoring wells. Since April 201 3, only
monitoring wells TRC-MW12 and TRC-MW13
have had measureable LNAPL. The LNAPL thicknesses measured in
monitoring wells TRC-MWl2 and TRCMW13
have decreased since April 2013. The LNAPL thickness measurements
recorded in monitoring wells
TRC-MW12 and TRC-MWl3 in April 201 3 were 0.07 and 0.10 feet,
respectively. Periodic recovery of
LNAPL has been performed at the Site since July 201 2. LNAPL was
removed from the concrete vault
north of the school building and groundwater monitoring wells TRC-MW
12 and TRCM W 13 on January
18, 2016 using a vacuum truck. The procedure for measurement and
removal of LNAPL at the Site
consisted of the following: - The contents o f the concrete vault were
removed below the elevation
of the building under drain pipe. This allowed LNAPL present in the
pipe to flow into the concrete
vault. LNAPL and water were then pumped from the concrete vault into
the vacuum truck. - The oil
absorbent socks present in monitoring wells TRC-MW12 and TRC-MW13 were
found to be saturated with
oil and we re removed. A vacuum truck was then used to pump LNAPL and
water from monitoring wells
TRC-MW12 and TRC-MW13. After pumping of LNAPL and water from
monitoring wells TRC-MW12 and TRC-MW13
was complete, new oil absorbent socks were placed into monitoring
wells TRC-MW12 and TRC-MW13. A
total of approximately 3,248 gallons o f water mixed with LNAPL was
removed from the concrete vault
and monitoring wells containing LNAPL (TRC-MWl2 and TRC-MW13) on
January 18, 2016. Approximately 25
gallons of water mixed with LNAPL were removed from each of the
monitoring wells and approximately
3,198 gallons of water mixed with LNAPL were removed from the concrete
vault for off-site disposal.
Approximately 46,880 gallons of water mixed with LNAPL have been
removed from the concrete vault
and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13,
and TRC-MW14) from July 2012 to
January 2016. In connection with the NYSDEC approval letter dated
October 15 , 20 13, the following
activities are planned for the next bi-annual inspection and LNAPL
removal event: The monitoring
well network will be gauged. Inspection of and LNAPL removal (if
required) from the concrete vault

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

and monitoring wells. Absorbent socks will be replaced, as necessary, in monitoring wells
containing LNAPL. Project Progress Report #10 will be submitted to the NYSDEC following the next
inspection and product removal event, which will be performed in July 2016. AD. 08/20/2016:
Received progress Report #10. Will review. AD 09/29/2016: Reviewed the report. It states that field
activities were conducted at the Site on July 5, 2016 and consisted of the following: - Concrete
vault and boiler room ejector pit inspection; - Monitoring well gauging; and - LNAPL recovery. The
concrete vault (located north of the school building), the boiler room ejector pit, and the
groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 5,
2016 by TRC. LNAPL was only present in the concrete vault and monitoring wells TRC-MW12 and
TRC-MW13, which is consistent with inspection results since April 9, 2013. The oil absorbent socks
present in monitoring wells TRC-MW12 and TRC-MW13 were also found to be partially saturated with
oil. LNAPL was not present in the boiler room ejector pit or in monitoring wells TRC-MW1 through
TRCMW11, TRC-MW14, and TRC-MW15. A minimal amount of LNAPL was recovered by the oil absorbent socks
installed in monitoring wells TRC-MW2, TRC-MW11, and TRC-MW14. An oil/water interface probe was
used to approximate the thickness of LNAPL in TRC MW-12 and TRC MW-13 by lowering the probe to the
depth of LNAPL, then submerging the probe into the liquid until the sound indicated the presence of
water, then raising the probe until the oil indicator sounded. The thickness of the LNAPL could not
be accurately determined due to the high viscosity of the oil identified in the concrete vault and
monitoring wells. Since April 2013, only monitoring wells TRC-MW12 and TRC-MW13 have had
measureable LNAPL. The LNAPL thicknesses measured in monitoring wells TRC-MW12 and TRC-MW13 have
decreased since April 2013. The LNAPL thickness measurements recorded in monitoring wells TRC-MW12
and TRC-MW13 during the previous event on January 18, 2016 were 0.03 and 0.03 feet, respectively.
Thickness measurements on April 9, 2013 were 0.07 feet in TRC-MW12 and 0.10 feet in TRC-MW13. LNAPL
recovery: Periodic recovery of LNAPL has been performed at the Site since July 2012. LNAPL was
removed from the concrete vault north of the school building and groundwater monitoring wells
TRC-MW12 and TRC-MW13 on January 18, 2016 using a vacuum truck. The procedure for measurement and
removal of LNAPL at the Site consisted of the following: The contents of the concrete vault were
removed below the elevation of the building under-drain pipe. This allowed LNAPL present in the
pipe to flow into the concrete vault. LNAPL and water were then pumped

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

from the concrete vault into
the vacuum truck. The oil absorbent socks present in monitoring wells TRC-MW12 and TRC-MW13 were
found to be partially saturated with oil and were removed. A vacuum truck was used to pump LNAPL
and water from monitoring wells TRC-MW12 and TRC-MW13. After pumping of LNAPL and water from
monitoring wells TRC-MW12 and TRC-MW13 was complete, new oil absorbent socks were placed into
monitoring wells TRC-MW12 and TRC-MW13. Approximately 2,862 gallons of water mixed with LNAPL were
removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on
July 5, 2016. Approximately 50 gallons of water mixed with LNAPL were removed from each of the
monitoring wells and approximately 2,762 gallons of water mixed with LNAPL were removed from the
concrete vault for off-site disposal. Approximately 49,472 gallons of water mixed with LNAPL have
been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12,
TRC-MW13, and TRC-MW14) from July 2012 to July 2016. Planned activities: In connection with the
NYSDEC approval letter dated October 15, 2013, the following activities are planned for the next
bi-annual inspection and LNAPL removal event: The monitoring well network will be gauged.
Inspection of and LNAPL removal (if required) from the concrete vault and monitoring wells.
Absorbent socks will be replaced, as necessary, in monitoring wells containing LNAPL. Project
Progress Report #11 will be submitted to the NYSDEC following the next inspection and product
removal event, which will be performed in January 2017. AD 05/05/2017: Had a conversation with TRC,
Philip Castellano requested a meeting with DEC to discuss the site. TRC thinks that the site is
ready for closure. Discussed the dates with J. Kolleeny. Sent the invitation to TRC. Booked the
conference room for May 9, 2017. AD 05/09/2017: J. Kolleeny and I had a meeting with Lee Guterman
and Bob Kanaparthi of NYCSCA and their consultants Philip Castellano of TRC and Michael Sherwood of
Sherwood Environmental. Lee Guterman said that they performed extensive remediation at the site, it
was effective, and only two site wells now have 0.01' of free product. According to Ms. Guterman,
NYCSCA had exhausted their funds for further remediation at this site, and questions its
effectiveness. We discussed the remediation performed at the site, site specific conditions and
what further actions should be taken. Since the last gauging event was in January 2017, it was
agreed that TRC will remove absorbent socks from the monitoring wells and will gauge them few weeks
after for LNAPL presence. Final closure report will be prepared with case closure request

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

justification, stating all the performed remedial activities, site specific conditions, sensitive receptors survey and other related data. Jon and I had discussed the above-referenced site and request for spill case closure with Vadim Brevdo. He agreed with the proposed course of actions such as: removing absorbent socks from the monitoring wells and gauging them few weeks after for LNAPL presence and preparing final closure report. Sent an e-mail to Ms. Guterman confirming Vadim's agreement with the proposed course of actions. AD 06/29/2017: Received the following e-mail from Bob Kanaparthi: Dear Ms. Doronova, Attached please find the requested Spill Closure Report for Automotive Trades High School, Spill Case No. 04-13160. Please contact me with any questions or comments. Thank you, Bob Kanaparthi Industrial Hygienist C Industrial and Environmental Hygiene Division New York City School Construction Authority 30-30 Thomson Ave, Long Island City, New York 11101 Email: skanaparthi@nycsca.org Telephone: (718) 472-8620 Fax: (718) 472-8500 Will review. AD 07/05/2017: Reviewed the submitted report. It states that on May 10, 2017 the oil-absorbent socks installed in monitoring wells around the perimeter of the closed-in-place UST were removed. The socks, previously installed on January 16, 2017, were stained but were not saturated with LNAPL. Following removal of the socks, monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 were gauged. No measurable quantities of LNAPL were present in the wells. On May 24, 2017, two (2) weeks following removal of the socks, the wells were gauged again, and no LNAPL was present in the wells. CONCLUSIONS: Based on the information collected during remedial efforts conducted on-site to date, the following can be concluded: - Gauging data collected since 2012 has demonstrated that there is no potential for migration of LNAPL off Site. - Since July 2014 (5 gauging events), LNAPL has been detected in only two wells, with measured thicknesses less than 0.05 feet. - LNAPL was not detected in the wells adjacent to the UST on May 10, 2017 following removal of the oil-absorbent socks installed on January 16, 2017. - LNAPL was not detected in the wells adjacent to the UST, two (2) weeks after sock removal, on May 24, 2017. - Based on the age of the release, the absence of dissolved phase groundwater impacts, and observations during remedial measures conducted to date, mobile petroleum-related impacts are not present at the Site. Considering the above conclusions, TRC recommends closure of Spill No. 04-13160. Will discuss with J. Kolleeny of DEC. AD 07/07/2017: Discussed the site with J. Kolleeny. Based on the newly submitted data regarding absence of the LNAPL in the all site wells,

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

performed remediation, nature
of the product (#6 oil) and absence of dissolved phase, it was decided to approve case closure
request. Issued and sent an approval letter to Lee Guterman. Case closed. AD

Remarks: OLD TANK THAT WAS INSTALLED AND WANTED IT TO BE REOVED. THEY TOOK TESTS AND FOUND THAT THE TANK HAS LEAKED. THE TANK HAS FAILED MANY TIMES BEFORE. TOOK TESTS FROM THE SOIL. HAS NOT BEEN CLEANED OR REMOVED. OUTSIDE UNDERGROUND TANK. 20,000 GAL CAPACITY.

HW Code:	C224216A
SWIS:	2401
Town:	New York City
Record Added Date:	01/18/2018
Record Updated Date:	09/22/2023
Update By:	AMSERVIS
Site Description:	"This site is the off-site area associated with the following BCP site: Location: The 432 Rodney Street site is located in an urban area in the Williamsburg neighborhood of Brooklyn, Kings County. The site consists of 4 tax parcels bordered by Ainslie Steet to the north, Keap Street to the east, Hope Street to the south, and Rodney Street to the west. Site Features: The site occupies an area of about 27,160 square feet (0.62 acres) and is developed with a multi-story residential/commercial building and garages. Current Zoning and Land Use: The site is designated for contextual moderate to higher density residential development (R6A) and manufacturing (M-1/M-2). In addition, the site is situated within a Special Mixed Use District for Greenpoint-Williamsburg (MX-8), which allows for new residential and non-residential uses to be developed as-of-right and within the

432 RODNEY STREET - OFF-SITE (Continued) **S121933794**

same building structures. All lots have also been assigned an E-designation (E-138) for Underground Gasoline Storage Tanks Testing Protocol as part of the Greenpoint-Williamsburg Rezoning. Past Use of the Site: Past uses include residential, an automotive garage, a poultry market, a store, smoked fish production, transportation and a warehouse. Site Geology and Hydrogeology: The area of Brooklyn, New York where the property is located is highly developed and topped by infrastructure, including paved roads, walkways and buildings. Subsurface strata at the Brownfield site consists of historic urban fill characterized by loose brown to black medium-grained sand with varying amounts of brick and concrete extending to depths of up to 14 feet below grade surface (bgs). The historic urban fill is underlain by brown sand with varying amounts of clay. Bedrock consists of the metamorphic schist and quartzite of the pre-Cambrian Manhattan Schist Formation. The soils in the area of the property are classified as Urban Land. Depth to groundwater ranges from 15.80 to 17.34 feet bgs. Groundwater flow direction is to the northeast. "

Env Problem: "Impacts associated with contaminants of concern for BCP Site No. C224216 were not identified in off-site areas. Soil: Volatile Organic Compounds (VOCs) were not detected in off-site soil above Unrestricted Use Soil Cleanup Objectives (UUSCOs), except for acetone which is a commonly known laboratory contaminant and not a contaminant of concern for the site. Groundwater: Off-site groundwater samples did not contain VOCs above Ambient Water Quality Standards (AQS). Soil Vapor: The detected off-site soil vapor analytical concentrations for tetrachloroethene (PCE), trichloroethene (TCE), and cis-1,2-dichloroethene (cis-1,2-DCE) were 11.2 microgram per meter cubed (ug/m^3), 4.54 ug/m^3, and 1.17 ug/m^3 respectively. At these levels, no mitigation actions are needed to address soil vapor intrusion off-site. The results of the off-site investigation indicate that target contaminants of concern associated with BCP Site No. C224216 are not impacting off-site properties. No further investigation or action is currently needed. "

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Town:	New York City
Record Added Date:	05/08/2015
Record Updated Date:	06/14/2024
Update By:	WBBENNET
Site Description:	"Location: The 432 Rodney Street site is located in an urban area in the Williamsburg neighborhood of Brooklyn, Kings County. The site consists of 4 tax parcels bordered by Ainslie Steet to the north, Keap Street to the east, Hope Street to the south, and Rodney Street to the west. Site Features: The site occupies an area of about 27,160 square feet (0.62 acres) and is developed with a multi-story residential/commercial building and garages. Current Zoning and Land Use: The site is designated for contextual moderate to higher density residential development (R6A) and manufacturing (M-1/M-2). In addition, the site is situated within a Special Mixed Use District for Greenpoint-Williamsburg (MX-8), which allows for new residential and non-residential uses to be developed as-of-right and within the same building structures. All lots have also been assigned an E-designation (E-138) for Underground Gasoline Storage Tanks Testing Protocol as part of the Greenpoint-Williamsburg Rezoning. Past Use of the Site: Past uses include residential, an automotive garage, a poultry market, a store, smoked fish production, transportation and a warehouse. Site Geology and Hydrogeology: The area of Brooklyn, New York where the property is located is highly developed and topped by infrastructure, including paved roads, walkways and buildings. Subsurface strata at the Brownfield site consists of historic urban fill characterized by loose brown to black medium-grained sand with varying amounts of brick and concrete extending to depths of up to 14 feet below grade surface (bgs). The historic urban fill is underlain by brown sand with varying amounts of clay. Bedrock consists of the metamorphic schist and quartzite of the pre-Cambrian Manhattan Schist Formation. The soils in the area of the property are classified as Urban Land. Depth to groundwater ranges from 15.80 to 17.34 feet bgs. Groundwater flow direction is to the northeast."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were chlorinated- and petroleum-related volatile organic compounds (VOCs). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and have eliminated the potential for contact with site-related contaminants on-site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site."

DEC Memo: 3-2-16 - obligado - Desk duty - I spoke to Jennifer Lewis. She said this was part of a limited
Phase II. A previous PHase 2 was already performed at the site for OER. They gauged 2 wells and
they found free product in one well at 0.09 ft. Another well had a sheen. They suspect the product
to be gasoline but are not sure yet. They collected a sample of the product and may send it to a
lab for laboratory analysis. She said the neighboring property has an open spill #1411729 - 65
Eckford Street. She will send me an email regarding the product they found today and also the prior
phase II. 3-3-16 - obligado - I received the Phase II from Jennifer. This spill is assigned to
Kumar Patel. 03/03/16-Hiralkumar Patel. alternate address: none site has little E designation for
'hazmat' (# 14EHAZ403K). ---------- NYC VCP #: 15CVCP034K ---------- no other spills
found. PBS #: 2-607449. as per the PBS record, the site has one (1) 250 gal waste oil AST in
contact with soil, in-service, installed in Jan. 2002. PBS registration expired on 02/25/2007.
03/07/16-Hiralkumar Patel. found remedial investigation report and remedial action work plan on
NYCOER database. RIR included copy of former Phase I and Phase II conducted in 2013 by MIB
Environmental Consulting. abstract of Phase I by MID Env. Consulting dated 08/06/2013: - report
does not include historical use of the property - site has two (2) 275 gal waste oil tanks under
stairway to mezzanine - hydrocarbon stains on concrete slabs - south parcel at #65 (possibly 65
Eckford St) was a metal plating shop for about 30 years ---------- abstract of Phase II dated
07/25/2013: - four soil borings (S1, S2, S4 and S6) were drilled - one soil sample was collected
from each boring at 10 ft depth - groundwater sample was collected from boring S1 and S6, at
11.5-12 ft depth ---------- - report is missing lab report abstract of RIR dated Mar. 2014: - block
#: 2698 / lot #: 25 - elevation of the property ranges from 15 to 20 ft - depth to groundwater
ranges from 11.5 to 12.5 ft bg - groundwater flow is generally from northwest to the East River -
currently, the site is used for an auto repair shop and contains a one-story building, built to the
property lines - the existing one story building will be partially demolished and a four story
building with a penthouse and cellar is to be constructed - proposed future use of the site will
consist of four-story residential building, with the first floor used

75 ECKFORD STREET (Continued) **S118636463**

for retail, a cellar used for
mechanical and storage and a rear yard - cellar will be approx. 10 ft bg and will be used to house
the building's utilities and storage space - excavation is not anticipated to go below the water
table, since the water table is approx. 12 ft bg ---------- - based on the available sanborn
maps dated from 1887 to 2007, the site was developed after to 1887 for use as sash storage in 1905.
from at least 1942 to 1951, the site was a poultry market. the site was developed as a welding and
auto repair from 1965 to present (more details provided in report dated 07/08/16; listed below)
-------- - a GPR survey was conducted on 03/05/14 which identified anomalies in the area near the
front bathroom and office ---------- - installed five (5) soil borings (SB-1 through SB-5) to a
maximum depth of 18-19 ft bg and collected ten soil samples - found high PID readings and petroleum
odors in almost all five borings - petroleum odors were detected from 8-16 ft in SB-1; 12-16 ft in
SB-2; and 8-12 ft in SB-3, SB-4 and SB-5 - discrete grab soil samples from 0-2 ft and 16-18 ft were
collected - no petroleum VOCs were detected in shallow soil samples - method detection limits for
petroleum VOCs were much higher than cleanup standard for soil samples from deeper zone except for
boring SB-5 ---------- - found TCE in soil samples (620 ppb in 0-2 ft sample from SB-2 and
1,800 ppb in 0-2 ft sample from SB-5) ---------- - installed two (2) 1-inch diameter
groundwater monitoring wells (MW-1 and MW-2) in soil borings SB-1 and SB-2, with 10 ft of screen -
collected two groundwater samples for analysis - no contamination noted in groundwater samples -
installed three soil-vapor probes (SVP-1 through SVP-3) to a depth of 18 ft bg and collected three
soil-vapor samples (at 0-2 ft from SVP-1, at 0-4 ft from SVP-2 and at 8-12 ft from SVP-3), one
indoor air sample and one ambient sample for analysis - found chlorinated solvent contamination
(TCE: 66 ug/m3 and PCE: 92.2 ug/m3) in sample from SVP-1 (0-2 ft depth) as per RAWP dated Sep.
2014, a minimum 20 mil thick vapor barrier will be installed beneath the building slab and outside
foundation walls below grade. an active SSDS will also be installed.

03/08/16-Hiralkumar Patel. 1:39 PM:- spoke with Jennifer at PW Grosser. she mentioned that Canton K
& J LLC. has recently purchased the property and is modifying the redevelopment plans. as required
by OER, PW Grosser conducted further groundwater investigation via installation of two additional
monitoring wells MW-3 and MW-4. Jennifer believes that contamination was not noted in soil phase
during installation of monitoring wells. they collected groundwater samples for metal analysis as

75 ECKFORD STREET (Continued) **S118636463**

required by OER. during investigation, 0.09 ft of product noted in well MW-4. product sample was collected for fingerprint analysis. groundwater sample from MW-4 was collected for VOC analysis also. informed Jennifer that based on review of all available information, the department requires resampling of all four monitoring wells at the site for VOCs (full list) and SVOCs; and survey of existing wells to define site-specific groundwater flow direction. Jennifer will submit results of recent sampling and schedule for well survey and re-sampling, by end of this week. PW Grosser will submit revised redevelopment plans and addendum to RAWP. informed Jennifer that the Department may require a Phase I investigation, as available Phase I report (dated Aug. 2013) is not complete.
Canton K & J LLC. 900 Grand Street Brooklyn, NY 11211 Attn.: Howard Ng PH. (917) 628-3318 email: howard.ng@gmail.com Jennifer Lewis P.W. Grosser Consulting PH. (631) 589-6353 Fax (631) 589-8705 email: jenniferl@pwgrosser.com 03/25/16-Hiralkumar Patel. 3:24 PM:- sent email to Jennifer inquiring updates. 04/12/16-Hiralkumar Patel. 10:04 AM:- left message for Jennifer.
04/18/16-Hiralkumar Patel. received email from Jennifer (at 5:23 PM on 04/15/16). she spoke with OER and waiting for copy of the RIR for 65 Eckford Street.
06/10/16-Hiralkumar Patel. 12:48 PM:- left message for Jennifer. 12:54 PM:- sent email to Jennifer inquiring about additional investigation report. email copied to OER Shaminder. found Mr. Ng's email address on DOB permit.
12:57 PM:- forwarded former email to Jennifer, to Mr. Ng. 1:44 PM:- received email from Jennifer. she is gathering some additional information regarding the neighboring properties and has FOILed OER for their files related to 498 Leonard St as this site appeared to be another likely source of the LNAPL that has migrated onto the subject site. she requested copies of documents that DEC has related to 498 Leonard St. 1:53 PM:- received call from Jennifer. she mentioned that they got results of additional investigation required by OER and result of fingerprint analysis. asked her to submit these results immediately. she mentioned that due to possibilities of off-site source for LNAPL found in well at the site, they are looking for more information on neighboring properties. as such they have not re-sampled existing wells or defined site-specific groundwater flow direction as discussed on 03/08/16. informed Jennifer that the Department requires well survey/re-sampling prior to commenting on possibilities of off-site source. asked her to submit schedule for well survey/re-sampling by 06/14/16. also asked her to submit FOIL request for any documents related to neighboring properties. 2:09 PM:- sent email to Jennifer and asked her

75 ECKFORD STREET (Continued) **S118636463**

to immediately submit
results of additional investigation conducted at the site. also asked her to submit schedule for
well survey/re-sampling by the end of 06/14/16. email copied to Mr. Ng and OER Shaminder.
06/14/16-Hiralkumar Patel. 9:43 AM:- received email from Jennifer. she mentioned that they went to
the site yesterday to collect groundwater samples from all accessible wells and surveyed the wells.
06/22/16-Hiralkumar Patel. received email from Jennifer (at 4:55 PM on 06/21/16). she mentioned
that they have not received SVOC results yet. 06/28/16-Hiralkumar Patel. 11:33 AM:- spoke with
Jennifer. they are still waiting for SVOC results for sampling conducted on 06/14/16. she will
follow-up with the lab. Jennifer mentioned that during well survey, they found 0.02 ft difference
on water table between on-site wells. as such, they will use water table data from neighbouring
sites to define regional groundwater flow direction. informed Jennifer that available sampling
results and well survey data should be submitted by tomorrow and SVOC data can be submitted later,
once available. 07/11/16-Hiralkumar Patel. received email from Jennifer (at 4:56 PM on 07/08/16)
including spill closure request report. she mentioned that based upon the investigation work that
was conducted on-site, the evidence points to the LNAPL being from off-site source, likely the
spill at neighbouring property at 65 Eckford St. abstract of spill closure request report: -
construction of cellar has been removed from the renovation plans --------- - on 02/25/16, two
monitoring wells (MW-3 and MW-4) were installed within the existing building - contractor returned
on 03/02/16 for well gauging and sampling. during the well gauging, an unidentified LNAPL was
identified in MW-4 - product sample was collected for lab analysis which indicated that the LNAPL
is an unresolved complex mixture (UCM) similar to a mineral spirits, paint thinner, or Stoddard
solvent type of product. also present was a lesser UCM that was extremely weathered; therefore, a
quantitative identification could not be determined ---------- - after collecting product
sample from MW-4, the well was purged and groundwater sample was collected from MW-3 and MW-4 - all
four wells were surveyed and resampled in June 2016 - during well gauging in June, a thin layer of
LNAPL was identified in MW-4 - after purging wells, groundwater samples were collected from all
four wells for full list VOCs and SVOCs - groundwater flow direction was inconclusive due to the
small size of the property and the relatively flat gradient across the site. based upon regional
groundwater flow direction and the groundwater flow direction indicated on neighbouring sites, the

75 ECKFORD STREET (Continued) **S118636463**

presumed groundwater flow direction at the site is towards the north or northwest ----------
- as per Sanborn maps, subject site was undeveloped in 1887, used as sash storage in 1905, an
unknown use with a gasoline tank in 1916, a poultry market from at least 1942 through 1951, welding
from at least 1965 through 1991, and an auto repair shop from at least 1993 to when it ceased
operations around 2013 report included summary of record review for neighbouring site at 65 Eckford
St: - site 65 Eckford St was most recently known as Carter Spray Finishing Corp. - site 65 Eckford
St was a conditionally exempt small quantity generator that generated wastes such as spent
halogenated solvents used in degreasing (waste code F001) and spent non-halogenated solvents (waste
codes F003 and F005) - there were two (2) 275 gal ASTs containing TCE at site 65 Eckford St which
were removed/closed in place in 1998 - air emissions in excess of 9,000 pounds per year of
1,1,1-trichloroethane related to the activities conducted under Carter Spray Finishing Corp. -
according to sanborn maps, site 65 Eckford St was undeveloped in 1887, identified as
Meisel-Danowitz Company (a manufacturer of millwork and hardwood trim) in 1905, Eckford Garage from
at least 1916 to 1942 which contained a gasoline tank near the northern property boundary, wood box
manufacturing and lacquer spraying in 1951, and a metal finishing company (Carter Spray Finishing
Corp.) from at least 1965 through 1989 - as per certificate of occupancy from 1963 and 1973
indicate that a paint spraying booth for metals were present at 65 Eckford St based on following,
PW Grosser recommends closure of the subject spill case: - site 75 Eckford St is located
hydraulically down-gradient of site 65 Eckford St - there is no known historic use of mineral
spirits, paint thinner, or Stoddard solvent at 75 Eckford St - there is a long historic usage
related to lacquering and painting at 65 Eckford St - subject property will continue redevelopment
activities, including proper soil management practices and the installation of a SSDS under the
oversight of NYC OER reviewed remediation database and found an active BCP case for site 65 Eckford
St (#: C224218). 07/12/16-Hiralkumar Patel. 10:57 AM:- sent email to Jennifer and asked her to
submit missing boring/well logs for MW3 and MW4. email copied to Mr. Ng and OER Shaminder. 1:07
PM:- spoke with DEC Conor Shea, BCP case manager. informed him about possible off-site impact from
site 65 Eckford St. 1:38 PM:- received boring logs and well construction log from Jennifer. total
borehole depth during installation of MW-3 and MW-4 was 18.5 ft. soil was screened from 0 to 10 ft
bg in both boreholes where no odors or PID readings were noted, and as

75 ECKFORD STREET (Continued) **S118636463**

such soil samples were not
collected. after that, wells were installed with direct push method. wells were installed with 10
ft of screen from 8 to 18 ft bg. summary: - during remedial investigation (report dated Mar. 2014),
five soil borings (SB-1 through SB-5) were installed - borings SB-1 and SB-2 were installed to a
depth of 16 ft bg - borings SB-3, SB-4 and SB-5 were installed to a depth of 12 ft bg - petroleum
odors with higher PID readings (112 to 1,180 ppm) were detected in 8-12 ft interval (and below if
borings installed to deeper zone) in soil borings SB-1 through SB-4 - two soil samples were
collected from all five borings: one from shallow zone (0-2 ft bg) and one from deeper zone (8-12
ft bg) - no petroleum VOCs noted in soil samples from shallow zone - TCE found in shallow samples
from two borings: SB-2 (620 ppb) and SB-5 (1,800 ppb) - petroleum VOCs were non-detect in deeper
soil samples, but reporting limits were much higher than cleanup standards for soil samples from
SB-1 through SB-4 - chlorinated solvent contamination noted in soil-vapor samples (TCE: 1.34 to 66
ug/m3; PCE: 1.08 to 92.2 ug/m3) - two wells (MW-1 and MW-2) were installed in borings SB-1 and SB-2
- two additional wells (MW-3 and MW-4) were installed during further investigation conducted in
Feb. 2015 - in June 2016, all four wells on the property were surveyed and groundwater was found
between 11.45 and 13.95 ft bg based on available information, petroleum odors/PID readings were
detected at/near/below water table and LNAPL noted in upgradient well (MW-4) on the property.
discussed case with DEC Jane regarding TCE contamination in shallow soil. as site has
e-designation, she is going to discuss with OER on how to handle remediation of TCE impacted
material. she requested site maps with sample analyticals. 2:54 PM:- sent email to DEC Jane
including site maps with sample analyticals. email copied to DEC Austin. 08/01/16-Hiralkumar Patel.
12:09 PM:- received message from Jennifer. discussed with DEC Jane. after discussing with DEC Cozzy
and OER Shaminder, based on available information, DEC Jane asked to transfer case to her name
after sending P-site memo. 3:14 PM:- spoke with Jennifer and asked her to contact DEC Jane.
09/20/16-Hiralkumar Patel. sent p-site memo to DEC Jane. 10/14/16-Hiralkumar Patel. after
discussing with DEC Jane, case assigned to her. 6/7/19: Site was remediated under oversight of
NYCOER’s Voluntary Cleanup Program (site no. 15CVCP034K). Site development includes the
construction of a 4-story mixed-use residential and commercial building with commercial space, two
apartments, and two parking spaces. There is no basement and no open space. Remedy included: 1)

75 ECKFORD STREET (Continued) **S118636463**

Excavation: soil was removed to a depth of 4 feet from grade beneath the full area of the new
building, 4 to 5 feet in the AOC-1 and AOC-3 hotspots, and to a depth of 12 feet in the AOC-2
hotspot. A total of 483.4 tons of soil/fill was excavated and removed from the property. 2)
Collected and analyzed 14 end-point samples (6 in AOC-1, 3 in AOC-2, 4 in AOC-3 and I in general
area) to determine attainment of SCOs. Additional excavation was required in two hotspot areas to
achieve Track 4 SCOs. All end point sample results were below the Site Specific Track 4 SCOs. 3)
Engineering Controls: a. Installed a Vapor Barrier System; b. Constructed an engineered Composite
Cover System consisting of 8 to 14 inches of concrete slab c. Installed and are operating an active
Sub-Slab Depressurization System (SSDS) consisting of one horizontal branch installed beneath the
centerline of the building, running east to west 5) Institutional Controls: a. Deed Restrictions
are placed on property. b. E Designation for future permits c Site Management Plan Based on the
remediation completed, the spill is closed. (JHO)

Remarks: contamination found during testing

DEC Memo:	07/14/17 - Lakhani Spoke to PWG Jennifer who informed that the site is an OER VCP site. The site is going to be redeveloped. During waste characterization, PWG installed fifteen (15) borings. Soils from one (1) of the borings was returned contaminated by petroleum. PWG previously completed a groundwater investigation which revealed no contamination to the groundwater. OER PM is Sarah Pong. Jennifer will be sending data. 07/17/17 - Lakhani OER Shaminder sent the following email: Hi Pratik Nathan and Jeff: During waste characterization sampling at above address, an anomaly and oil like material was encountered at around 4 feet and above spill was called in and assigned to you. Approved Remedy (before Spill called in) components are listed below. This Site is in New York City Voluntary Cleanup Program. Redevelopment requires excavation to depths of 10 feet below grade. RIR and RAWP was prepared on this Site. Remedy was discussed with Mr. Bob Cozzy in January. A copy of briefing is attached here. You can access the RIR and RAWP at our website through the link below:

to get these documents. Please note that Pre-construction meeting is being held today and remediation will begin soon. Please let us know if you have any additional requirements for Spill remediation. Approved Remedy (before Spill called in) includes: 1. Excavation and removal of soil/fill exceeding Track 4 Site-Specific SCOs. 2. For development purposes, the entire site, excluding the existing partial basement and the narrow concrete walkway at the rear of the building, will be excavated to a depth of 10 feet below grade. A 5 foot by 5 foot hot-spot excavation will be conducted around the existing basement pit. The concrete walkway will be excavated to a depth of 2 feet below grade. Additional excavation will be required for footings, including within the existing basement. 3. Excavation and removal of soils within the hotspot basement pit. If the pit integrity was compromised and grossly contaminated material is observed beneath it; additional hot-spot excavation may be required to meet Track 4 Site-Specific SCOs. 4. Installation of a vapor barrier system below the concrete slab of the building as well as around foundation walls of the proposed building. 5. Construction and maintenance of an engineered

722 METROPOLITAN AVENUE (Continued) **S121100522**

composite cover consisting of a minimum 18-inch thick concrete building slab. If you need any other
info, please call my project manager Sarah Pong at 212?442?8342 or call me. Thanks, Shaminder RIR
(PWGC, 01/2017) - Currently, the ground level floor is being cleared out and was most recently
utilized in the manufacturing of umbrellas. The upper level floors are currently utilized as loft
apartments. The proposed future use of the Site will consist of the renovation of the existing
buildings and the construction of additional floors on both buildings to create one 7-story
mixed-use commercial and residential building. The cellar level will consist of a stacking car park
system, storage, a gym, a children s recreation room, and the lower floors of eight duplex
apartments. The existing partial basement on Lot 14 will be enlarged to encompass the entire
footprint of both buildings on Lots 13 and 14. The final depth of the entire basement will be
approximately 10 feet below grade; therefore, excavation in the existing basement will be limited
to approximately 2 feet for new footings and excavation beneath the rest of the building will be
between 10 to 12 feet for the basement and footings. The water table is expected at approximately
20 feet below grade surface (bgs) [between 21' and 26'bg]. Historic usage of the Site included
metal manufacturing, finishing and utilization as an oil and grease warehouse including the use of
solvents. This usage reportedly included the presence of a solvent vault. The Site contained a
vault in the basement with a 3,000 gallon #2 fuel oil aboveground storage tank. The vault was
inaccessible. A 550 gallon AST reportedly observed during HTEC s walkthrough was not observed in
PWGC s walkthrough. No soil sample exceedances. No groundwater exceedances except in GW001 where
PCE 17 ug/L. There were many VOC soil vapor exceedances. Maximum concentrations of PCE and TCE were
29.8 ug/m3 and 1.12 ug/m3 respectively. RAWP (PWGC, 06/2017) - Work plan includes the following:
(1) Excavation and removal of soil/fill exceeding Track 4
Site-Specific SCOs. For development
purposes, the entire site, excluding the existing partial basement and the narrow concrete walkway
at the rear of the building, will be excavated to a depth of 10 feet below grade. A 5 foot by 5
foot hot-spot excavation will be conducted around the existing basement pit. The concrete walkway
will be excavated to a depth of 2 feet below grade. Additional excavation will be required for
footings, including within the existing basement. Approximately 2,500 cubic yards of soil will be
removed from the Site and properly disposed of at an appropriately licensed or permitted facility,
(2) Excavation and removal of soils within the hotspot basement pit.

722 METROPOLITAN AVENUE (Continued) **S121100522**

If the pit integrity was
compromised and grossly contaminated material is observed beneath it; additional hotspot excavation
may be required to meet Track 4 Site-Specific SCOs, (3) Removal of all underground storage tanks
encountered during soil/fill removal actions, (4) Installation of a vapor barrier system below the
concrete slab of the building as well as around foundation walls of the proposed building, (5)
Construction and maintenance of an engineered composite cover consisting of a minimum 18-inch thick
concrete building slab underlain by native material or a suitable sub-base material (to avoid
damage to the vapor barrier) to prevent human exposure to residual soil/fill remaining under the
Site. DEC Vought responded to OER Shaminder's email: Shaminder, I took a look at the attached site
briefing and groundwater at the site is 21-26 bg and has up to 17ppb PCE suggesting that there is
indeed a soil contamination pathway down to the water and hence soil contamination, albeit possible
minimal contamination, under the proposed concrete slab with vapor barrier. Also as the site will
only be excavated to 10 there may be potential for SVI. As such I will defer to Nathan via this
email as to whether an SSDS is warranted. I have also attached PBS registration for the site
showing an in-service 3000-galllon #2 fuel oil AST that has not been closed, has no tank testing
data, and will need resubmission reflecting the AST closure associated with redevelopment. It is
also possible that any buried lines with associated with this AST may have resulted in petroleum
contamination. Pratik will review the EPC reports as well and may have additional requirements. You
noted that the pre-construction meeting is today and remediation will begin soon. Please keep in
mind for that with approximately 70 cases and an active schedule, Pratik needs as much time as
possible to review the reports in EPIC and I have a feeling Nathan will concur with this sentiment
on timeliness. So future sites, please give as us much time as possible to review and respond.
Regardless, thank though for your email and seeking our feedback. Nathan, Do you think the vapor
mitigation efforts are sufficient or do we need an SSDS installed? NYSDOH Nathan responded: I
quickly reviewed the Decision Document (DD) and briefing document. My concern with this as Jeff
brought up is that SVI could be a concern at this location, I haven t yet had a chance to review
the RIR. However, the DD states that a portion of the cellar level will be used for a gym and child
recreation room, this is an SVI exposure concern. The DOH does not concur that installation of
vapor barrier alone is adequate to mitigate vapor intrusion. My recommendation at this point is to

722 METROPOLITAN AVENUE (Continued) **S121100522**

have an SSDS installed in those areas that will contain the gym and child recreation room, or
verify that the AMV air handling system is creating a positive pressure in those areas to mitigate
the potential for vapor intrusion to occur. This will need to be verified thru pressure
differential testing and seasonal air sampling to make sure SVI is not occurring. ***THE NYSDOH
DOES NOT CONCUR THAT INSTALLATION OF VAPOR BARRIER ALONE IS ADEQUATE TO MITIGATE VAPOR INTRUSION.
NYSDOH RECOMMENDS TO HAVE AN SSDS INSTALLED IN THOSE AREAS THAT WILL CONTAIN THE GYM AND CHILDREN'S
RECREATION ROOM, OR VERFIY THAT THE AMV AIR HANDLING SYSTEM IS CREATING A POSITIVE PRESSURE IN
THOSE AREAS TO MITIGATE THE POTENTIAL FOR VAPOR INTRUSION TO OCCUR.***
OER PM is Sarah Pong.
07/21/17 - Lakhani Conference call with OER Sarah Pong, OER Shaminder, and NYSDOH Nathan Walz to
discuss potential vapor issues at the site along with further delineation of soil and groundwater
contamination. OER reports that the 300 gallon AST and 550 gallon AST are located in the
northwestern portion of Lot 14. OER also believes that the historic solvent tank is in the vicinity
of the ASTs, however an exact location is unknown. Groundwater at the site was not measured,
however a regional groundwater flow direction was measured and there are no wells downgradient from
the ASTs and solvent tank. Therefore, the DEC and NYSDOH proposes two (2) sampling locations for
all three (3) phases north of SP-3/GP-3. Both of these sampling locations would be located
downgradient of the two ASTs: one (1) of these two (2) locations would be located on the sidewalk.
Furthermore, the DEC requires endpoint sampling beneath the two (2) ASTs as they are planned to
closed. Pit 1 is the presumed location of the solvent tank as the soils indicated elevated
concentrations of metals. Therefore, the Pit 1 area is referred to as a hotspot. There is soil
vapor concern as the initial soil vapor sampling completed was not done during normal occupancy of
the building. Therefore, NYSDOH has required a follow-up SVI study due to the gym and children's
rec room. NYSDOH required an SSDS to be installed beneath the gym and rec room. However, OER
reported that the developer was reluctant to do so. RAWP will be revised with the submission of a
stipulation letter. OER Shaminder reports that a subway line runs beneath the sidewalk and one (1)
of the sampling locations is not possible. Waste characterization data, which was used to report
the spill, indicates petroleum compound exceedances in SB-6: 1,2,4-trimethylbenzene 10000 ppb(SB-6,
8'-12'bg), naphthalene 13000 ppb(SB-6, 8'-12'bg). Conference call with PWGC Jennifer Lewis, OER,
and NYSDOH regarding additional sampling. Two (2) sampling locations

722 METROPOLITAN AVENUE (Continued) **S121100522**

are not feasible as the subway
runs beneath the sidewalk. Therefore, one (1) sampling location 10' north of SP-3 will completed.
At this location, a well will be installed, soil vapor will be sampled and the highest PID soil
sample will be analyzed. NYSDOH also requires another soil vapor sample to be collected at SV003,
the location of the gym and rec room. 08/02/17 - Lakhani PWGC Janelle Cooley, Field Hydrogeologist,
clarified that WC003 (8-12) is a composite sample from all those soil borings in the WC003 area on
the figure. SB-6 (8-12) is just a sample of the soil from SB-6 (8-12). They both share the same
discrete VOC sample grab which was taken from SB-6 (8-12). 09/15/17 - Lakhani PWG Jennifer emailed
informing that well installation and sampling work will take place once the pile work is completed
in a few weeks. A site plan with sample location and a scope of work will be submitted to the DEC
beforehand. 10/04/17 - Lakhani PWGC Jennifer Lewis emailed the site plan with proposed sample
locations. The scope of work includes: - Conduct soil borings via Geoprobe approx. 20' north of
SP-3 boring - terminate at groundwater table (estimated at 21'-26' below sidewalk level - Collected
one (1) soil sample from the 2' intercal above the water table and collect one (1) soil sample from
the 2' interval exhibiting the highest PID reading or evidence of petroleum impact (if applicable).
Samples to be analyzed for VOC and SVOCs, CP-51 - Convert soil boring into a 2 diameter monitoring
well with a 10' screen that will be installed 5' into the groundwater table. Gauge the well for
LNAPL. If LNAPL is present, try to sample it for fingerprint analysis. If not, sample the water for
VOCs full list - Install two (2) sub-slab vapor probes, 2 hour regulators, sample for VOCs TO-15
10/12/17 - Lakhani PWGC Jennifer Lewis informed that work will be conducted on 10/20/17. 10/19/17 -
Lakhani PWGC Jennifer Lewis emailed to inform that the work has been postponed. She will inform DEC
of the new date. 12/01/17 - Lakhani PWGC Lewis confirmed that work will resume on 12/13/17.
12/14/17 - Lakhani PWGC Jennifer emailed to inform that the well installation will be conducted on
Friday, 12/22/17. 01/31/18 - Lakhani On 01/17/18, PWGC made an addendum to the RAWP, proposing to
replace the proposed vapor barrier system with an EPro system. The underslab protection will be
provided by E.Proformance, a three (3) layer barrier that is constructed of an 18 mil thick E.Base
205 membrane, a 60 mil thick E.Spray layer, and an 18 mil thick E.Shield 205 membrane. Spec for the
EPro system revealed that a limitation of the EPro vapor barrier is that a sub-slab vapor
collection, passive or active, is suggested in addition to E.Proformance for site impacted with

722 METROPOLITAN AVENUE (Continued) **S121100522**

contamination. DEC Lakhani could not approve the EPro without sufficient proof that the SSDS is not needed. NYSDOH Nathan Walz concurs with the DEC. As per NYSDOH, neither of the individual components of the composite system alone meet the requirements of a vapor barrier. Nathan recommends that the area within the basement that will have the children's play area and gym have SSDS piping and pressure monitoring/sampling ports installed. SVI testing after the building is completed and the heating system is running can be used to determine whether the system needs to be made active. DEC concurs with NYSDOH's recommendation. PWGC Jennifer Lewis responded with the following message: We are going to revise the RAWP Addendum. Instead of the ESpray system on the foundation walls, the EProformance will be the only barrier used, both beneath the slab and on the foundation walls. Regarding the SSDS installation, since the concern is related to the children s recreation room which no longer exists, we propose to install a passive SSDS beneath the residential areas of the basement that could be used for long-term usage as opposed to short-term usage rooms like maintenance rooms or the trash room or the parking garage area which will have its own ventilation system. Please see the attached marked up plan with the proposed horizontal piping location. I have also attached copies of the revised cellar and first floor plans the most notable change is that the parking garage area footprint has increased to include a portion of the western half of the building. If the proposed coverage area is ok with everyone, we will begin preparing the SSDS design and include it in the revised RAWP addendum letter which I would be looking to get to you by next week. The SSDS will have a contingency to be converted to active, if necessary, which will be determined by sub-slab and indoor air sampling after construction of the cellar is substantively completed. The gym is still in place and the SSDS will cover it. 02/14/18 - Lakhani PWGC Jennifer Lewis submitted the revised RAWP Addendum with the SSDS design. The SSDS will consist of two legs of 4 inch diameter slotted HDPE corrugated piping installed horizontally in a minimum 12 inch deep trench of gravel beneath the southwestern section of the building. The area encompassing the residential units will be completed with a 6 inch layer of gravel beneath the concrete slab to increase permeability of the area. The slotted piping will be connected to a 4 inch diameter solid ductile pipe which will be routed towards the western wall of the building towards a utility chase. The piping will then be connected to a vertical 4 inch solid cast iron pipe that will penetrate the concrete slab and extend up to above the

722 METROPOLITAN AVENUE (Continued) **S121100522**

roofline. The vertical pipe
will be completed with a 6 inch diameter turbine ventilator and will be installed a minimum of 10
feet from windows, doors, air intakes, louvers, vents, or other building openings on the subject
property or neighboring properties. Two vapor monitoring points will be installed within the vented
zone to a depth of 6 inches below the concrete slab and will be constructed of 1 inch diameter
schedule 40 slotted PVC well screen. The vapor monitoring points will also be used for collecting
sub?slab vapor samples. To determine if the SSDS should be converted to an active system, sub?slab
and indoor air sampling will be completed. Sub?slab samples will be collected from the two vapor
monitoring points and two indoor air samples will be collected adjacent to the sub?slab monitoring
points. NYSDOH Nathan Walz finds the RAWP and SSDS design plans acceptable. 03/13/18 - Lakhani PWGC
Jennifer Lewis informed that a 3000 gallons fuel oil tank was uncovered last week in the vicinity
of the spill. Jennifer claims that it apparently does look like it’s a fairly old tank. The tank
will be pumped out and removed on 03/14/18. 05/07/18 - Lakhani PWGC Jennifer Lewis submitted the
updated PBS form following removal of the 3000 gallon fuel oil UST. A hard copy will be mailed to
Region 2 DEC. 10/24/18 - Lakhani PWG Jennifer Lewis emailed: A second tank was found. This tank is
approximately 120 gallons and was located on the far west side of the property. Please see the
attached site plan and pictures. It looks like the tank may have been previously abandoned and was
approximately half filled with water. There was a slight petroleum odor from inside the tank. The
tank was resting on a 3 inch piece of concrete with a thin layer of soil sandwiched between the
tank and concrete. There were no indications of a release from the tank. A sample of the sandwiched
soil was collected and, while moving the tank out of the way for excavation, some of the water
spilled on exposed soils, so a sample of that soil was collected, as well. Due to the potential for
the tank to have been a waste oil tank, the sample beneath it is being analyzed for VOCs CP-51,
SVOCs CP-51, and RCRA metals. The sample from the spilled water is just being sampled for VOCs and
SVOCs, CP-51. I ll share the results when they come in next week. The tank and the soil with the
spilled water (~2 cubic yards) have been isolated and placed on poly sheeting. 08/05/19 - Lakhani -
Spill being transferred to Lin. 09/13/23-Lin-No petroleum related compounds exceedances were found
in the soil or groundwater. The entire site was excavated down to 12’ bgs. A hotspot for heavy
metal (mercury, copper, and lead) was excavated down to 6’ bgs. Two (2) USTs were discovered during

722 METROPOLITAN AVENUE (Continued) **S121100522**

excavation. One 3,000 gallon fuel oil UST and one 120 gallon waste oil tank. Contaminated soil was
excavated down to 12' bgs and the waste oil tank was excavated down to 4' bgs. Three (3) endpoint
samples were collected from the UST locations. The endpoint samples came back clean. Eleven (11)
endpoint samples were collected across the site and came back clean. A passive SSDS, vapor barrier,
and a composite cover were installed as engineering controls for the site. Case closed.

Remarks: Spill in the soil. Unknown amount. Samples came back from a boaring.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO TTF letter sent to Mr. Wersocki at 187 Bedford Ave Bklyn 11211 12/3/05: CBN Called Alex Wersocki (718) 963-2659 and left a message for hm to call me back, but haven't heard from him yet. 12/1/08 bf: Sent ttf old spill letter to: Alexander Wersocki 187 Bedford Avenue Brooklyn, NY 11211 10/14/14-Hiralkumar Patel. reviewed available information for DEC DeMeo. alternate address: none no other spills found. PBS #: 2-608263. as per PBS record, the site has one 2,000 gal #2 oil UST, in-service, installed in Jun. 1983. as per documents available on PBS database, the tank system was found tight during test on 11/26/2008 and 01/31/2014. Alexander Wersocki **property owner** 187 Bedford Avenue Brooklyn, NY 11211 PH. (718) 963-2659 (646) 287-6165 email: dg.nycbdrs@gmail.com 2/12/15 TJD Spill reassigned from DeMeo to Patel 03/24/15-Hiralkumar Patel. 10:35 AM:- went to site for inspection, but no one was available to provide access to the basement. found a color coded fill port and vent pipe

187 BEDFORD AVE - TTF (Continued) **S106123807**

by the building wall, at the southeast corner of the building (adjacent to building 189 Bedford Ave). 10:43 AM:- spoke with Mr. Wersocki. he mentioned that he doesn't remember the actual cause of test failure in 2003, but the tank system was tested tight after 2003. he confirmed no spill inside building. 10:47 AM:- spoke with Richard (917-647-6475), who maintains the boiler system at the site. he confirmed that the site has an underground tank which was found tight during recent testing. he also confirmed no signs of oil spill within building. in accordance with R2 TTF closure protocol, this spill is being closed due to no indication of a current release, no information indicating that there may have been a historical release, no information that this tank test failure will be an issue in the future and the tank system was found tight during subsequent testing.

Record Updated Date:	12/01/2022
Update By:	AMSERVIS
Site Description:	"Location: The site is located at 118-138 Hope Street in a primarily residential and commercial area within the Williamsburg neighborhood of Brooklyn. The 0.575-acre site is bounded by Hope Street to the north followed by residential buildings; Keap Street to the east followed by residential buildings; residential buildings followed by Grand Street to the south; and Rodney Street to the west. Site

HOPE STREET PROJECT (Continued) **S127012990**

Features: The site has been remediated and is undergoing redevelopment (summer 2022) with construction of a multi-story, affordable, senior living residential building. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). The surrounding area is developed primarily with residential and commercial properties. Past Uses of the Site: The site was originally comprised of several lots developed with one- and two-story structures on the eastern portion and by a foundry with a molding shop on the western portion by 1887. By 1905, a coal company was present with coal sheds on the southwestern portion of the site, a wagon shed on the central portion, and a wheel wright shop with a lumber shed and wagon painting on the western portion. During the 1940s and 1950s the site had various uses and structures including two garages with two or more underground storage tanks (USTs), a trucking company, and a steel warehouse and service company. During the 1960s and 1970s occupants included a taxi company, a plumbing and heating company, an electrical manufacturing company, and a scientific instrument manufacturer and laboratory supplier. An upholsterer was present from 1976 to1992, followed by a machinery shop from 1997 to 2014, a dry cleaner from 2000 to 2005, and a metal fabricator from 2000 to 2014. The site was most recently occupied by a dry cleaner in 2010. Site Geology and Hydrogeology: Surface topography at the site slopes downward approximately four feet toward the northeast. Subsurface materials consist of approximately 8 to 15 feet of historical fill material comprised of sand with varying amounts of gravel, silt, clay, brick, concrete, and cinders. An approximately 3.5 to 10-foot layer of brown and gray organic silt and clay was observed beneath the historical fill material, which is in turn underlain by glacial till. Bedrock in this area of Brooklyn is presumed to be between approximately 150 and 200 feet below grade. The depth to groundwater is approximately 10 to 11 feet below grade and generally flows northwesterly toward the East River, which is approximately 0.8-mile from the site. However, groundwater flow has also been observed at the site flowing in an easterly direction. An adjacent remedial site (No. C224216) has also showed conflicting flow directions. Groundwater flow may be influenced locally by subsurface utilities and structures as well as nearby pumping activities. There are no surface water bodies or streams on or immediately adjacent to the site. There are no public or private drinking water supply wells within a one-half mile radius of the site and Brooklyn is supplied with public water."

Env Problem: "Nature and Extent of Contamination Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soil were the volatile organic compounds (VOCs) tetrachloroethene (PCE) and trichloroethene (TCE), petroleum-related VOCs, semi-volatile organic compounds (SVOCs) in historic fill across the site and the metals; arsenic, lead and mercury. Remedial actions have successfully achieved soil cleanup objectives for Track 1, unrestricted use. The primary contaminants of concern in groundwater had been petroleum-related VOCs and PCE, cis-1,2-dichloroethylene (cis-1,2-DCE) and vinyl chloride."

Health Problem: "Remedial actions are complete. Human exposures to site contamination are not expected since the site has been cleaned up to unrestricted use and local codes (Article 141 of the NYCDOH code) prohibit potable use of groundwater."

Dump: False

Structure: False

DEC Memo:	Spill remediation is being tracked under spill no. 90-07766. See also spill nos. 05-08671 and 07-10898. 11/6/2000: Reassigned from Sullivan to Sigona. PBS records indicate that 14 x 550-gallon, 1 x 4,000-gallon and 1 x 1,000-gallon USTs were either closed in-place or removed from this site. (Sigona) 12/12/2003: Reassigned from Roberts to Harrington (central office) for management. (Rommel) 5/6/2005: Sent letter to Exxon Mobil approving off-site RI work plan. (Harrington) 7/18/2005: Sent letter to Exxon Mobil approving revised RAP. EFR events @ MW-3 and MW-4 will be conducted semi-annually. FS to address dissolved BTEX @ MW-3 will be submitted along with off-site RI report. (Harrington) 10/7/2005: Sent e-mail to Exxon Mobil approving the sensitive receptor survey. (Harrington) 11/28/2005: Sent Exxon Mobil letters approving the SI report and the supplemental SI work plan for the off-site plume delineation. Additional work was required due to the discovery of free product west of McGuinness Boulevard. (Harrington) 7/31/2006: Approved supplemental SI report. Monthly EFR events will now be conducted at wells MW-3, MW-4, MW-11, MW-12, and MW-15A. Work plan for recovery well installation near MW-15 is expected in October. (Harrington) 10/14/2006: Sent an e-mail to Exxon Mobil approving the SI work plan. Plan calls for the installation of six (6) monitoring wells along the west side of McGuinness Boulevard between Bayard and Newton Streets in order to fully delineate and recover the free product observed in this area. (Harrington) 3/2/2007: Sent e-mail to Exxon Mobil approving the UST divestiture and excavation work plan. EM will be removing all USTs, distribution lines, vent lines, hydraulic lifts, and contaminated soil identified during this effort. (Harrington) 4/20/2007: Sent e-mail to Exxon Mobil approving the SI report which documented the off-site work completed along McGuiness Boulevard in support of LPH recovery efforts. (Harrington) 6/22/2007: PM visited the site along with Kleinfelder personnel. Excavation work has been completed. Report expected in the Fall. (Harrington) 10/29/2007: Sent e-mail to Exxon Mobil approving the Tank Excavation Assessment Report. The revised RAP will be submitted in mid-December. (Harrington) 12/4/2007: PM approved the feasibility testing work plan during a site visit with Kleinfelder personnel. SVE/AS and chem-ox injection technologies will be evaluated. (Harrington) 12/13/2007: PM conducted a site visit during monitoring well installation as part of the recently-approved FS work plan. Field work began on December 10th. (Harrington) 1/15/2008: Kleinfelder encountered LPH in a newly-installed monitoring well on-site during pilot testing efforts. Kleinfelder personnel contacted the PM, who instructed them to call it in as a spill. The spill number (07-10898) was administratively closed by Region 2 personnel. (Harrington) 5/1/2008: PM sent an

MOBIL S/S #17-FX9 (Continued) **S118953716**

e-mail to Exxon Mobil approving the off-site subsurface investigation work plan. This effort will begin to fully delineate the free-product plume west of McGuinness Boulevard. (Harrington) 5/6/2008: PM conducted a site meeting with Exxon Mobil's consultant (Kleinfelder East, Inc.). During the meeting, the PM approved the IRM work plan, which calls for excavation of soils in the area of the former dispenser islands. Given that this area is adjacent to McGuinness Boulevard, sheeting and shoring will be required. (Harrington) 6/24/2008: PM conducted a site visit with Exxon Mobil personnel (Drake) and their consultant (Kleinfelder) in order to discuss recent developments. Apparently, Exxon Mobil has been denied further access to the site by the owner thus delaying implementation of the IRM. Additional off-site investigation will be required due to the continued presence of LPH along McGuinness Boulevard. This will involve well installation further west along Newton Street. (Harrington) 9/7/2008: PM sent an e-mail to Exxon Mobil approving the updated version of the IRM work plan. Work plan calls for additional excavation of petroleum-contaminated soils on-site and post-excavation sampling. Work is scheduled to begin on September 15th. (Harrington) 4/3/09 - Haggerty: approved Excavation Report. With this excavation, over 7000 tons of contaminated soil has been removed from the site. My comments were as follows: 1. A No Further Action letter can not be granted for just the on-site soils. If the replacement monitoring wells are installed and groundwater meets with DEC approval, a No Further Action letter will be issued for the spill 90-07766 and I will re-open spill 05-08671 for the off-site contamination. 2. Resend the Off-Site Investigation Work Plan under a separate cover. Dave Harrington disregarded the 8/29/08 RRAP and therefore I have not been able to review the work plan contained therein. After I have approved it, I will forward the DOT sidewalk permit letter. 3. I have spoken with the Developer's consultant. The Developer's consultant, George Kavrakis, states the layout of the station has been approved and is not subject to change. Therefore, proceed with the installation of the on-site replacement wells within the next 60 days. I also informed him that if the monitoring wells are damaged during the construction of the new station, it will be their responsibility to re-install them. I have attached the site plan for the new station which appears to match the layout provided in your report. 4. I spoke with the BEST Squad Demolition Supervisor who was holding up the redevelopment at the property and wrote him a letter (attached) requesting he allow redevelopment to begin. Once he receives the letter, he states construction can proceed. According to George Kavrakis, once they receive permission from the BEST Squad, construction will begin. Please coordinate with Mr. Kavrakis (516 298 2355) 6/19/09 - Haggerty: had conference call with Ken Drake (ExxonMobil) and Kleinfelder. New station under construction and will not be completed for the next month. Installation of on-site and off-site MW's will be completed at the same time once construction of the new station is complete. June 2010 - required additional delineation of MTBE plume August 2010 - received Supplemental Subsurface Investigation Work Plan. Under review 11-4-10 - Austin - Had a discussion with Sally Dewes of DEC/Albany - Sampling at this site recently yielded the discovery of ethanol, indicating that there may be a new release on this site - we agreed that this would be called in as a new spill report, for investigation by Region 2 Spills - end March 2011 - reviewed SIR and sent comment email requiring work plan to remediate off-site LPH. EFR events over the past 3 years have

MOBIL S/S #17-FX9 (Continued) **S118953716**

not reduced LPH thickness May 2011 - Work plan overdue June 2011 - approved plan to increase efficiency of LPH removal using HIT events. Also, the new owner had a Spill called in under the his name due to ethanol detections November 2011 - Feasibility Report due in December December 2011 - Feasibility Report under review January 2012 - using VER events. percent level vapors were being collected. Considering this is ~200ft for the site, it appears a plume of product has broken off for the source. Remedial alternatives being evaluated March 2012 - met with new Project Manager, Heather Cloud, from GES and discussed project. A plume of free product has broken off from the site and is slowly moving across Humboldt. We discussed the fact that the plume will be persistant for years. She requested 2 months to meet internally as to the next step. I told to look for a possible locations for a SVE system shed in the adjacent properties May 2012 - nothing substantive regarding a solution has been proposed. Conference call required June 2012 - approved EMs soil boring/sampling work plan along McGuiness where the product has been consistant for years December 2012 - GES proposed excavating the sidewalk on McGuiness Blvd into the groundwater to remove the product beneath it. EM fully excavated the station and the remaining contamination has detached from the original site. Even if they did excavate the sidewalk which a don't believe the DOT would allow, more product may migrate below the sidewalk October 2013 - approved EM work plan to perform 2 DPE events to determine the vapor mass in the subsurface. Groundwater is only 10fbg and free product is present near buildings with basements April 25, 2014: Haggerty - Conference call including: EM territory manager Laurie McCarthy, EM legal Counsel Andrew Torrent, EM consultant GES, OGC Scott Caruso, Jim Moras and PM. We discussed the fact that EM was not in compliance with the Consent Order over the past seven months. PM approved a work plan to perform 2 Dual-Phase Extraction events 9/24/13 to determine the vapor mass in the subsurface as well as to estimate how fast the vapor mass is rebounding. Only one DPE event was conducted and it took seven months to receive the report. As this point, it may be necessary to involve the DOH. EM scheduled another conference for a week later (5/2/14) with proposals to deal with the vapor mass as well as remediation of the Spill. May 2, 2014 - Haggerty - EM agreed to install SVE/AS system across McGuiness Blvd. at 179 Bayard Street. May 13, 2014 - Haggerty - approved revised CAP with supersedes the original CAP with the Consent Order. 7/29/14 - Haggerty: RAP to install SVE/AS system approved 11/16/15 - Haggerty: AS pilot test work plan approved. 12/3/15 - Haggerty: SVE/AS pilot test conducted to determine requirements to treat influent vapor concentrations. 2/17/16 - Haggerty: Spill management transferred to Caroline Eigenbrodt. Caroline, Haggerty and Section Chief, Sally Dewes, had a conference call with GES project manager, Michael DeGloria, to facilitate the transition. We reviewed the SVE/AS installation schedule provided by DeGloria and discussed logistical issues to operate the system (access agreement with the adjacent property owner, potential building modifications, permit requirements, etc.) System operation proposed for the winter of 2016. 9/1/16 - Haggerty: Spill management transferred back to Haggerty 4/3/17 - Haggerty: Approved revised schedule provide 3/17/17. System will not be operational until December 2017 at best (3.5 years after RAP approval). PM required quarterly 1-day soil vapor extraction events as an interim remedial measure (IRM) until the system is operational. Please submit a letter IRM work plan within 30 days. 6/30/2022-M.

MOBIL S/S #17-FX9 (Continued) **S118953716**

Hoque: As per discussion and communication between Vadim Brevdo and Mike Haggerty, spill case manager reassigned from Mike Haggerty to MD Hoque effective June 30, 2022. (MDH) 7/11/2022-M. Hoque: A site update email below received from the consultant: From: Douglas Ferraiolo Sent: Monday, July 11, 2022 9:36 AM To: Haggerty, Michael J (DEC) Cc: Wood, Ben ; Brian Morrissey ; Dana Hignell ; Hoque, MD S (DEC) ; Alysha Alfieri ; Adesa Boja Subject: RE: Former Mobil Station #17-FX9 Quarterly Monitoring Report Mike, Thank you for informing us of the management change. As an update on the DOB permit, Bohler has met with the NYC DOB NOW Plan Examiner and revised the system permit application based on their comments. The revised application is currently in the NYC DOB NOW Plan Examiner s queue for review. We expect to receive the approved system permit application shortly as the shed permit application has been approved and we hope to begin installation of the AS/SVE system this summer. Let me know if you have any questions or comments at this time. Thank you again for assistance on this project, Mike and we re looking forward to working with you, MD. Douglas Ferraiolo - Project Geologist - Roux 209 Shafter Street, Islandia, New York 11749 Main: 631.232.2600 - Direct: 631.630.2421 - Mobile: 631.806.0689 -MD 8/12/2022-M. Hoque: On August 12, DEC received a 2nd quarter 2022 monitoring report. Wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and groundwater samples were collected from the wells MW-15A, MW-16A, MW-17, MW-18, MW-19, MW-21, MW-22, MW-28, MW-30, MW-31, MW-33, MW-34, MW-35, and SVE-2 for VOCs analysis. LNAPL was detected at MW-17 during the gauging event with thickness of 0.01 feet and during initiation of the IRM event at MW-17 with thickness of 0.09 feet. BETX in groundwater were detected slightly above standards. Rous will continue IRM events on a quarterly basis, including monitoring well gauging, LNAPL recovery (as necessary), and SVE operations. (MDH) 11/17/2022-M. Hoque: DEC reviewed a 3rd quarter 2022 site status update report. Eighteen (18) monitoring wells were gauged during the 3rd Quarter of 2022. LNAPL was detected at MW-15B and MW-17 at thicknesses of 0.24 foot and 0.10 foot, respectively. LNAPL was also detected during initiation of the IRM event at MW-15B and MW-17 with LNAPL thicknesses of 0.28 foot and 0.09 foot, respectively. Thirteen (13) monitoring wells (MW-15A, MW-16A, MW-18, MW-19, MW-21, MW-22, MW-28, MW-30, MW-31, MW-33, MW-34, MW-35, and SVE-2) were sampled on August 25, 2022. Well MW-17 was not sampled due to the detection of LNAPL during gauging. BETX were fond from non-detect to 150 ug/L in well MW-22. MTBE was detected ranging from 1.6 ug/L in MW-22 to 440 ug/L in MW-21. The product was recovered by VEFR. Roux will continue quarterly well gauging, product recovery, and reporting. (MDH) 2/3/2023-M. Hoque: On February 3, 2023, DEC received a 4th quarter 2022 SSUR. 2/8/2023-M. Hoque: DEC reviewed a 4th quarter 2022 site status update report. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged on December 22, 2022. LNAPL was detected at concentrations of 0.08-foot 0.34 foot in MW-15B and 0.08 foot to 0.11 foot in MW-17. LNAPL was also detected during initiation of the IRM event at MW-15B and MW-17 with LNAPL thicknesses of 0.34 feet and 0.08 feet, respectively. Quarterly groundwater sampling were conducted in monitoring wells MW-15A, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 was conducted on December 22, 2022. MW-17 was not sampled due to the detection of LNAPL during gauging. BETX were

MOBIL S/S #17-FX9 (Continued) **S118953716**

fond from non-detect to 200 ug/L in well MW-33. MTBE was detected 440 ug/L in MW-21. The product was recovered from MW-15 by VEFR. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 5/16/2023-M. Hoque: On May 3, 2023, DEC received a 1st quarter 2023 site status update report. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and sampled monitoring wells MW-15A, MW-17, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 on March 16, 2023. No measurable LNAPL was detected in any of the monitoring wells during the 1st Quarter of 2023. BETX were detected benzene ND to to 5.3 ug/L (MW-33), ethylbenzene from ND to 280 ug/L (MW-22), toluene from ND to 0.54 J ug/L (MW-17), xylenes ranged from ND to 230 ug/L (MW-22); and MTBE from 0.59 J ug/L (MW-22) to 550 ug/L (MW-21). Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 6/9/2023-M. Hoque: Roux informed DEC that the shed permit renewal received from the DOB. Construction of the equipment shed is scheduled to resume on Monday, 6/12. Roux will notify DEC once the shed construction has been completed. Roux still awaiting receipt of the remediation system permit and will notify DEC once the remediation system permit application has been approved. (MDH) 7/7/2023-M. Hoque: On July 7, 2023, Roux updated DEC that the equipment shed construction and the remediation system equipment transport into the shed were completed on 6/30/23. Roux still awaiting receipt of the remediation system permit from NYCDOB to startup the remediation system. (MDH) 8/2/2023-M. Hoque: ROn August 1, 2023, DEC received a 2nd quarter 2023 site monitoring report. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells MW-15A, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 were sampled on June 29, 2023. LNAPL was detected thickness ranging from 0.01 foot to 0.02 foot in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 8.5 ug/L in well MW-34, ethylbenzene ranging from ND to 290 ug/L in well MW-22, toluene 2 ug/L in well MW-34, xylenes from ND to 570 ug/L in well MW-34, and MTBE 540 ug/L in MW-21. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. The existing SVE system is comprised of three monitoring wells in MW-15B, MW-21, and MW-22. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 11/2/2023-M. Hoque: A 3rd quarter 2023 monitoring report received on 11/2/2023. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells MW-15A, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 were sampled in September 2023. LNAPL was detected thickness of 0.04 foot in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 1.6 ug/L in well MW-33, ethylbenzene ranging from ND to 87 ug/L in well MW-22, and xylenes from ND to 42 ug/L in well MW-33. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. The existing SVE system is comprised of three monitoring wells in MW-15B, MW-21, and MW-22. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 2/5/2024-M. Hoque: A 4th quarter 2023 monitoring report received on 2/2/2024. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22,

MOBIL S/S #17-FX9 (Continued) **S118953716**

MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells MW-15A, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 were sampled on December 8, 2023. LNAPL was detected thickness of 0.01 foot in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 32 ug/L well MW-34, ethylbenzene ranging from ND to 140 ug/L in well MW-22, and xylenes from ND to 93 ug/L in well MW-34. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. The existing SVE system is comprised of three monitoring wells in MW-15B, MW-21, and MW-22. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 5/9/2024-M. Hoque: A 1st quarter 2024 monitoring report received on 5/8/2024. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells (MW-15A, , MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2) were sampled on March 26, 2024. LNAPL was detected thickness of 0.04 foot in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 1.5 ug/L in well MW-18, ethylbenzene ranging from ND to 230 ug/L in well MW-22, and xylenes from ND to 140 ug/L in well MW-22. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. The existing SVE system is comprised of three monitoring wells in MW-15B, MW-21, and MW-22. After multiple correspondences with the NYC DOB NOW plan examiner, the remediation system permit application was approved and the PAA plans were obtained on February 2, 2024. Electrical upgrades required to run the remediation system equipment (single phase to 3-phase) were completed from March 28, 2024 to March 29, 2024. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 8/21/2024-M. Hoque: On 8/15/2024, DEC received a 2nd quarter 2024 site status update report. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells (MW-15A, MW-16A, MW-18, MW-19, MW-21, MW-22, MW-28, MW-30, MW-31, MW-33, MW-34, MW-35, and SVE-2 on June 27, 2024. LNAPL was detected thickness of 0.01 foot in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 3.2 ug/L in well MW-18, ethylbenzene ranging from ND to 16 ug/L in well MW-22, and xylenes from ND to 22 ug/L in well SVE-22. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. The existing SVE system is comprised of three monitoring wells in MW-15B, MW-21, and MW-22. After multiple correspondences with the NYC DOB NOW plan examiner, the remediation system permit application was approved and the PAA plans were obtained on February 2, 2024. Electrical upgrades required to run the remediation system equipment (single phase to 3-phase) were completed from March 28, 2024 to March 29, 2024. Due to the delays attempting to find another contractor that had ICE equipment, the IRM event was not completed during the Second Quarter 2024 and instead, was completed on July 30, 2024. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 11/12/2024-M. Hoque: On 11/5/2024, DEC received a 3rd quarter 2024 monitoring report. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells MW-15A, MW-17, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 were

MOBIL S/S #17-FX9 (Continued) **S118953716**

sampled during this quarter. A trace amount of LNAPL was detected in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 1.8 ug/L in well MW-33, ethylbenzene ranging from ND to 110 ug/L in well MW-22, and xylenes from ND to 56 ug/L in well MW-33. Five soil vapor monitoring points (RSV-1 through RSV-5) were installed on the Bayard Street and McGuinness Boulevard sidewalks on October 1 and October 2, 2024. These monitoring points were installed approximately one to two feet off the building structures on Bayard Street and McGuinness Boulevard at two to three feet below land surface (ft bls) to closely represent the sub-slab conditions within the adjacent businesses. Three of the monitoring points (RSV-2 through RSV-4) were installed directly adjacent to wells (MW-15B, MW-21, and MW-22) where elevated concentrations in soil vapor have been observed in the past. The other two monitoring points (RSV-1 and RSV-5) were installed to the north and south of the MW-15B, MW-21, and MW-22 area on the McGuiness and Bayard Street sidewalks, respectively. the soil vapor monitoring points were sampled 24 hours after installation on October 3, 2024. Low concentrations of petroleum-related VOCs were detected throughout the soil vapor samples. The Third Quarter 2024 IRM event was completed September 17, 2024. The GAC drum used during the July 30, 2024, and September 17, 2024. The construction contractor, United Industries & Construction Corp., is currently prepared to pull the NYC DOB permit to continue AS/SVE system installation. However, upon review of the soil vapor sampling results and the groundwater sampling results from the Third Quarter 2024 sampling event, the basis for the system installation was re-evaluated by Roux/ExxonMobil. The BTEX and MTBE groundwater concentrations within the proposed system treatment area have been consistently decreasing up to an order of magnitude below the highest concentrations. no immediate human health or safety issues have been identified and ExxonMobil proposes revising the treatment remedy to monitored natural attenuation (MNA) to address the residual petroleum contamination. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH)

Remarks: LINE TEST ONLY, PETRO TITE, LEAK RATE -.011GPH, WILL EXCAVATE, REPAIR & RETEST (REPAIRS BY ALVIN PETROLEUM).

DEC Memo:	This is a new spill at the site of an old ongoing spill case. A newly called in spill number usually means there is a new owner/operator. The old owner is cleaning up the old case and does not want to be held responsible for the new spill. Cross Ref Spill #9007766. Call Kleinfelder to determine why this is a new spill and what is being done to clean it up. 3/11/11-Called Kleinfelder and left a message to the operator to call back. Case Manager: Viki Creteur (631 281 0612 Ext 220) 10/27/11 - Austin - Transferring this case from Ahmed to Ketani - end 07/11/2013 - Case is transferred from Ketani (Section C) to Feng (Section of Spill Prevention and Response) as per DER Region 2 decision. V. Brevdo 06/27/2014: This spill case was transferred to A. Doronova. - AD 08/05/2014: Sent the following e-mail to Sunoco contact - Russell Hammond (e-mail: rhammond@sunocoinc.com) and copied to Anthony Fiorentine (afiorentine@cg-env.com): Dear Mr. Hammond: My name is Ainura Doronova. I am a NYSDEC project manager for the following spill cases, which were recently transferred to me: 1. Spill No. 1011266, 550 Humbolt Street, Brooklyn; 2. Spill No. 0913725, 1626 Steelwell Avenue, Brooklyn; 3. Spill No. 0809869, 42-02 21st Streeet, Queens; 4. Spill No. 0708451, 972 Remsen Avenue, Brooklyn; 5. Spill No. 0502868, 1781 Bay Ridge Parkway, Brooklyn; 6. Spill No. 0407558, 5 Flatbush Avenue, Brooklyn; 7. Spill No. 0304033, 805 65th Street, Brooklyn; 8. Spill No. 9909665, 175-33, Horace Harding Expressway, Queens; 9. Spill No. 9900619, 1650 Forest Avenue, Staten Island; 10. Spill No. 9808686, 188-06 Hillside Avenue, Queens; 11. Spill No. 9711173, 2310 Tillotson Avenue, Bronx; 12. Spill No. 9609282, 1781 Arthur Kill Rd., Staten Island; 13. Spill No. 9501327, 2701 Knapp Stret, Brooklyn; 14. Spill No. 8905358, 32-32 Queens Boulevard, New York; 15. Spill No. 8904831, 38-15 Queens Boulevard, Queens; 16. Spill No. 8904151,

MOBIL OIL CORP SS #FX9 (Continued) **1000553844**

161-15 46th Avenue, New York; 17. Spill No. 8808987, 135-45 Cross Bay Boulevard, Queens; 18. Spill
No. 8706272. 2052 Victory Boulevard, Staten Island. From now on, please submit all your future
documentation (letters, reports, work plans, RAPs) related to these spill cases to my attention.
Please note, that you should submit one hard copy of the document (report/work plan) and e-copy on
a CD by regular mail. Please, do not submit large size documents via e-mail, since we have limited
storage capacity, so it should be used only for correspondence. Feel free to contact me if you have
any questions. Thank you. Sincerely, Ainura Doronova Environmental Engineer 1 Division of
Environmental Remediation NYS Department of Environmental Conservation Region 2 (718) 482-6453 AD
02/2015: Contacted Mr. Fiorentine of Clean Globe Environmental (Sunoco's consultant) regarding
general Sunoco's sites meeting. Requested list of the Sunoco sites managed by Clean Globe Anv. AD
03/20/2015: Received the following response from Mr. Fiorentine: Hello Ms. Doronova, Clean Globe
Environmental is currently responsible for the following 11 Sunoco spill sites: 2319 Tillotson
Avenue, Bronx 32 Highland Boulevard, Brooklyn 805 65th Street, Brooklyn 1781 Bay Ridge Parkway,
Brooklyn 161-15 46th Avenue, Flushing 38-15 Queens Boulevard, Long Island City 32-32 Queens
Boulevard, Long Island City 135-45 Cross Bay Boulevard, Ozone Park 1650 Forest Avenue, Staten
Island 1781 Arthur Kill Road, Staten Island 2052 Victory Boulevard, Staten Island Let me know if
you have any dates that are free so that we may set up a meeting to review the status of these
sites. Thank you , Tony Fiorentine Anthony M. Fiorentine / Principal / CGE / P.O. Box 446, Kings
Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax / afiorentine@cg-env.com
03/24/2015: The meeting was scheduled for April 23, 2015. AD
04/23/2015: DEC met with a Sunoco
representative - Russel Hummond and Sunoco s consultants: Tony Fiorentino of Clean Globe Env.
(CGE), and Todd Painter of Environmental assesment and Remediation (EAR) to discuss the current
status of each site, go over historical monitoring and recovery data, and discuss further actions
to help expedite closure of the spills. DEC received updated remedial progress and monitoring
reports. High-priority sites and potential spill closure candidates were discussed. Sunoco s
consultants reported overall progress in reducing BTEX levels in soil and groundwater at the sites.
It was agreed that reports recommending spill closure will be prepared for several sites. On this
meeting, DEC was informed by the Sunoco representative that this particular site is not Sunoco's.
Will look for the RP info. AD 05/12/2015: Looked for the site info in

MOBIL OIL CORP SS #FX9 (Continued) **1000553844**

ACRIS database. Due to the
issues with Java, it was not possible to see documents on ACRIS. AD
06/16/2015: Looked for info on
PBS database. According to the file, the site owner is: Bolla
Operating Corp. Mailing address is:
Bolla Operating Corp. 7300 W. Friendly Avenue, MS F-76 Greensboro, NC
27420 Site owner address:
Bolla Operating Corp. 809 Stewart Avenue Garden City, NY 11530 There
is no name of the emergency
contact person, only phone numbers: (516) 512-6125 (800) 253-8054 AD
06/23/2015: Looked into the
old spill case associated with this property # 9007766. It is active
and under remediation. The PM
for the older spill case is Michael Haggerty. According to the DEC
remarks, Ethanol was detected in
on-site monitoring well MW-34 on June 3 and September 3, 2010. A DEC's
PM for the old spill had a
discussion with Sally Dewes of DEC/Albany, stating that GW sampling at
this site recently yielded
the discovery of ethanol, indicating that there may be a new release
on this site, so it was agreed
that this would be called in as a new spill report, for investigation
by Region 2 Spills . Looked
into 2010 GW monitoring report for the Spill # 9007766. Ethanol was
detected in MW-34 on June 3
(273ppb) and September 3, 2010 (307ppb). Total BTEX were 147ppb and
173ppb accordingly. This is the
only well with detected Ethanol. Tried to reach Michael Haggerty - a
PM for the older spill. AD
06/24/2015: Called and spoke with Michael Haggerty regarding the site.
Asked him for the recent GW
data. Later in the day received a report for the March of 2015.
According to the data, no Ethanol
was found in the well MW-34, but three other wells showed elevated
Ethanol levels only in this
sampling round: 1. MW-12 - 1,320ppb; 2. MW-36 - 544ppb; 3. MW-37 -
110ppb. These wells are located
far apart throughout the property, and wells in between them do not
indicate Ethanol contamination,
which does not support idea about single source of contamination. This
looks like a bad
housekeeping issues with small spills. Discussed the site with J.
Kolleeny. AD 06/30/2015: Called
and spoke with Paul Pingile of Bolla Operating Corp. His phone number
is: (516) 240-8657. Explained
to him why the new spill was called in on this property. Requested to
check the last time when the
tank system was tightness tested and tightness of the wells' covers at
the site. AD 05/12/2017:
Received a phone call from Mr. Haggerty from Albany office. He said
that latest data indicate low
levels of contamination in the on-site wells. We discussed
closure/consolidation options for this
more recent spill case, since the site is remediated under his
management for older spill. Later in
the day, received the following e-mail from Mr. Haggerty: Hi Ainura,
As we discussed, I ve attached

MOBIL OIL CORP SS #FX9 (Continued) **1000553844**

the most recent quarterly report. The report includes a request to stop sampling the on-site wells which I agree with. The Spill assigned to you (1011266) was called in due to elevated ethanol concentrations but it was never associated with a release of gasoline. This Spill was called in during the current owner s operation. The Spill I manage (9007766) is related to the former operation of the property as ExxonMobil station. Mobil conducted a large-scale excavation of the gas station property so the remaining contamination requiring remediation is off-site. If you agree, I propose you transfer Spill 1011266 to me, I closed it, allow Mobil to abandon the on-site wells and continue off-site remediation under Spill 9007766. Please contact me with any questions. Thanks, Mike Michael Haggerty, Q.E.P. Project Manager Division of Environmental Remediation New York State Department of Environmental Conservation 625 Broadway, Albany, NY 12233-7016 P: (518) 402-9767 - michael.haggerty@dec.ny.gov www.dec.ny.gov Discussed the case transferring option with J. Kolleeny. He agreed to it. Sent an e-mail to Mr. Haggerty confirming spill case transfer. Transferred the spill case. AD 8/28/17 - Haggerty: Spill closed. The Spill was called in due to the presence of elevated ethanol concentrations in on-site monitoring wells. The monitoring wells were part of a ExxonMobil well network related to Spill 9007766. ExxonMobil remediated the property via excavation and were conducting post-remediation groundwater monitoring when the ethanol was detected. Groundwater has been monitoring quarterly for years and the ethanol detected was never tied to another release. Off-site contamination will continue to be remediated under Spill 9007766.

Remarks: test data show NEW release/9007766

DEC Memo:	Tank test failure. PBS file shows tank in service, but next tank tes due prior to the date of this spill. PBS registration expired in 2000. Need to follow up. 9/22/06 left message for attorney found on deed to contact Williamsburgh Square LLC (new owner as of 2003). address:154 N. 7th St., Brooklyn 11211. deed had no individual's name (only corporation). bf 4/30/08 Sent Old TTF letter to: Jerry Lebedowicz Williamsburg Square LLC 52-47 Browvale Lane Little Neck, NY 11362 Address obtained from tank closure application. bf 5/2/08 Received message from J. Lebedowitz to call him back. bf 5/5/089 Received call from J. Lebedowitz tank was closed. Athena Environmental sampled after tank was removed. bf 6/18/08 Yesterday, recieved message from Spiro of (Name not clear) Environmental Services. He requested call back to (718)784-7490. I called the number today, but number is not in service at this time and no further informatuion is available. Review of PBS file shows tank was closed in 2008. They should have closure report. Called Jerry Lebedowicz and left message to call me back. His number (from PBS application) is (718)784-7490. Mr. lebedowicz hand-delivered sampling results from Athenica Environmental Services. One contaminant was above soil clean-up objectives to protect gw quality: chrysene (690 ppb) in sample B-3. Faxed nfa letter to Mr. Lebedowicz. Fax: (718)229-7111. Also mailed letter to him at address above. NFA. bf
Remarks:	3K TANK FAILED PETRO TITE WITH A LEAK RATE OF -.161GPH.

DEC Memo:	100 eckert street. During a regular delivery to 100 eckert, the owner of 101 eckert asked the driver for a delivery to his house. That homeowner actually used Consumers oil and screwed up the various oil company names. Homeowner said he had a 550 gal tank (it was really a 275gal) At 240gal the tank overfilled. 3gal came out on cement driveway, 2 gal on solid sealed cement floor in basement. All cleaned within 1 hour.
Remarks:	STORAGE TANK OVERFILL DUE TO WRONG DELIEVRY AND IS ALL CLEANED UP

Updated By:	YXPALUMB
Site Description:	"Location: The site is located in an urban area in the Williamsburg neighborhood of Brooklyn, NY. The approximately 35,942 square-foot (0.825-acre), irregularly shaped site is bounded to the north by North 12th Street, to the east by Berry Street, to the west by a warehouse building used by the Brooklyn Brewery, and to the south by North 11th Street and two buildings containing residential apartments. Site Features: The site is developed with an L-shaped, seven-story residential building that fronts Berry and North 12th Streets, with an open courtyard area located behind the building in the central portion of the site. A basement level parking garage is located under the building and courtyard, with an entrance ramp located on North 11th Street. A small, street-level valet parking lot is also located on North 11th Street, immediately east of the garage entrance ramp. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). The surrounding area is developed primarily with residential and commercial properties. Past Use of the Site: Historic records indicated that the site was developed with industrial and manufacturing uses, including the New York Quinine and Chemical Works between 1887 and 1951. After 1951, the site was used for freight loading and parking of vehicles. Sanborn maps from 1965 to 2006 (after decommissioning of the quinine factory) depict a large 2-story freight loading facility and warehouse in the western portion of the site, a 2-story truck repair facility/warehouse and a 4-story unspecified manufacturing facility in the southwestern portion of the site, and a parking lot in the eastern portion of the site containing two gasoline tanks of unspecified capacity. All on-site buildings were demolished starting in April 2008, and construction of the existing residential structure started in June 2008. Building construction was completed in early 2009. Site Geology and Hydrogeology: The surface topography in the surrounding area is flat, gradually sloping northwest towards the East River, which is located approximately 1,100 feet from the site. The site lies at an elevation of approximately 20 feet above sea level. Prior to development, shallow subsurface soils included urban

34 BERRY STREET (Continued) **S121933779**

fill material containing brick, asphalt, and concrete fragments to approximately 6 to 10 feet below ground surface (bgs), underlain by apparent native silty sand and silt. Most of the fill was removed during development to construct the current structure. Depth to bedrock at the site is expected to be approximately 100 feet bgs. The dominant groundwater flow direction at the site is to the north and northeast, with some variations to the northwest. Groundwater is present at depths ranging from approximately 5 to 8 feet below the basement garage floor, which corresponds to approximate depths of approximately 11 to 14 feet bgs. There are no surface water bodies or streams on or immediately adjacent to the site. "

Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were Light Non-Aqueous Phase Liquid (LNAPL) associated with fuel oil leaks from USTs and volatile organic compounds (VOCs) namely 1,2-dichloroethane (DCA). The VOCs were detected in groundwater at concentrations exceeding ambient water quality standards. Remedial actions have successfully achieved the site cleanup objectives under a track 4 cleanup which included a site cover, enhanced recovery of the LNAPL through injection of a surfactant blend and biological treatment of the groundwater to reduce VOC contamination. Sub-slab/soil vapor is not a concern at the site. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: During the Remedial Investigation soil and groundwater were sampled and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Sub-slab soil vapor and indoor air were analyzed for VOCs. Based upon the investigations conducted, the primary contaminants of concern were identified as petroleum in the form of Light Non-Aqueous Phase Liquid (LNAPL)and chlorinated VOCs. Soil - The investigation documented that VOC contamination in soil is present in two distinct contaminant zones: 1,2-dichloroethane (DCA) on the eastern side of the site, and petroleum LNAPL on the western side of the site. Fingerprint analysis completed during a previous investigation identified the LNAPL as fuel oil. Since 2009 the NAPL has been managed by a collection system, which was upgraded as an IRM during the Spring of 2019. Quarterly gauging of monitoring wells indicates the extent and thickness of the plume has been reduced by the LNAPL collection system. One VOC, 1,2-DCA, was detected at a concentration in excess of its restricted residential soil cleanup objective (RRSCO) at a depth of 14 to 15 feet below garage basement grade (bbg) (the water table is at 6ft-bbg), at a concentration of 7.9 parts per million (ppm) compared to a RRSCO of 3.1 ppm and the applicable protection of groundwater SCO (PGWSCO) of 0.02 ppm. 1,2-DCA was not detected in any other soil sample collected during the RI, or all the previous investigations at the site, that would indicate any additional source areas. Trivalent chromium was found at a concentration of 251 ppm, which exceeds the applicable RRUSCO of 180 ppm. This metal appears to be attributable to historic fill. Fourteen per- and polyfluoroalkyl substances (PFAS) were detected in one or more soil samples at concentrations ranging from an estimated 0.017 parts per billion (ppb) to 0.12 ppb. None of the detected PFAS compounds had concentrations above the screening level of 1 ppb. Perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.12 ppb and perfluorooctanoic acid (PFOA) was

34 BERRY STREET (Continued) **S121933779**

detected at a maximum of 0.039 ppb. 1,4-dioxane was not detected in soil samples. No SVOCS, PCBs or pesticides were detected at concentrations exceeding the unrestricted use SCOs. Data does not indicate any off-site impacts in soil related to this site.
Groundwater - Eight VOCs were detected at concentrations above their respective Ambient Water Quality Standards (AWQS) in one or more samples. These included the petroleum VOCs related to the LNAPL zone, and chlorinated solvents. The petroleum VOCs include benzene at a maximum concentration of 430 ppb compared to the AWQS of 1 ppb and toluene at a maximum concentration of 17 ppb (AWQS is 5 ppb). Chlorinated VOCs include 1,2-DCA at a maximum concentration of 660 ppb (AWQS is 0.6 ppb), 1,2-dichloropropane at a maximum concentration of 160 ppb (AWQS is 1.0 ppb), trichloroethene (TCE) at a maximum concentration of 21 ppb (AWQS is 5.0 ppb), chlorobenzene at a maximum concentration of 5.7 ppb (AWQS is 5.0 ppb), chloroform at a maximum concentration of 34 ppb (AWQS is 7.0 ppb), and tetrachloroethene (PCE) at a maximum concentration of 13 ppb (AWQS is 5.0 ppb). PFOS and PFOA were detected at concentrations above the NYSDEC screening level of 10 parts per trillion (ppt) each with the maximum PFOA concentration of 130 ppt and the maximum PFOS concentration of 47.7 ppt. 1,4-Dioxane was detected at a maximum concentration of 0.69 ppb, below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Measures are in place to prevent exposures to remaining contaminants. "

Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site. "

Updated By:	YXPALUMB
Site Description:	"Location: The site is located in an urban area in the Williamsburg neighborhood of Brooklyn, NY. The approximately 35,942 square-foot (0.825-acre), irregularly shaped site is bounded to the north by North 12th Street, to the east by Berry Street, to the west by a warehouse building used by the Brooklyn Brewery, and to the south by North 11th Street and two buildings containing residential apartments. Site Features: The site is developed with an L-shaped, seven-story residential building that fronts Berry and North 12th Streets, with an open courtyard area located behind the building in the central portion of the site. A basement level parking garage is located under the building and courtyard, with an entrance ramp located on North 11th Street. A small, street-level valet parking lot is also located on North 11th Street, immediately east of the garage entrance ramp. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). The surrounding area is developed primarily with residential and commercial properties. Past Use of the Site: Historic records indicated that the site was developed with industrial and manufacturing uses, including the New York Quinine and Chemical Works between 1887 and 1951. After 1951, the site was used for freight loading and parking of vehicles. Sanborn maps from 1965 to 2006 (after decommissioning of the quinine factory) depict a large 2-story freight loading facility and warehouse in the western portion of the site, a 2-story truck repair facility/warehouse and a 4-story unspecified manufacturing facility in the southwestern portion of the site, and a parking lot in the eastern portion of the site containing two gasoline tanks of unspecified capacity. All on-site buildings were demolished starting in April 2008, and construction of the existing residential structure started in June 2008. Building construction was completed in early 2009. Site Geology and Hydrogeology: The surface topography in the surrounding area is flat, gradually sloping northwest towards the East River, which is located approximately 1,100 feet from the site. The site lies at an elevation of approximately 20 feet above sea level. Prior to development, shallow subsurface soils included urban fill material containing brick, asphalt, and concrete fragments to approximately 6 to 10 feet below ground surface (bgs), underlain by apparent native silty sand and silt. Most of the fill was removed during development to construct the current structure. Depth to bedrock at the site is expected to be approximately 100 feet bgs. The dominant groundwater flow direction at the site is to the north and northeast, with some variations to the northwest. Groundwater is present at depths ranging from approximately 5 to 8 feet below the basement garage floor, which corresponds to approximate depths of approximately 11 to 14 feet bgs. There are no surface water bodies or streams on or immediately adjacent to the site. "
Env Problem:	"Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were Light Non-Aqueous Phase Liquid (LNAPL) associated with fuel oil leaks from USTs and volatile organic compounds (VOCs) namely 1,2-dichloroethane (DCA). The VOCs were detected in groundwater at concentrations

34 BERRY STREET (Continued) **S121933779**

exceeding ambient water quality standards. Remedial actions have successfully achieved the site cleanup objectives under a track 4 cleanup which included a site cover, enhanced recovery of the LNAPL through injection of a surfactant blend and biological treatment of the groundwater to reduce VOC contamination. Sub-slab/soil vapor is not a concern at the site. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: During the Remedial Investigation soil and groundwater were sampled and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Sub-slab soil vapor and indoor air were analyzed for VOCs. Based upon the investigations conducted, the primary contaminants of concern were identified as petroleum in the form of Light Non-Aqueous Phase Liquid (LNAPL)and chlorinated VOCs. Soil - The investigation documented that VOC contamination in soil is present in two distinct contaminant zones: 1,2-dichloroethane (DCA) on the eastern side of the site, and petroleum LNAPL on the western side of the site. Fingerprint analysis completed during a previous investigation identified the LNAPL as fuel oil. Since 2009 the NAPL has been managed by a collection system, which was upgraded as an IRM during the Spring of 2019. Quarterly gauging of monitoring wells indicates the extent and thickness of the plume has been reduced by the LNAPL collection system. One VOC, 1,2-DCA, was detected at a concentration in excess of its restricted residential soil cleanup objective (RRSCO) at a depth of 14 to 15 feet below garage basement grade (bbg) (the water table is at 6ft-bbg), at a concentration of 7.9 parts per million (ppm) compared to a RRSCO of 3.1 ppm and the applicable protection of groundwater SCO (PGWSCO) of 0.02 ppm. 1,2-DCA was not detected in any other soil sample collected during the RI, or all the previous investigations at the site, that would indicate any additional source areas. Trivalent chromium was found at a concentration of 251 ppm, which exceeds the applicable RRUSCO of 180 ppm. This metal appears to be attributable to historic fill. Fourteen per- and polyfluoroalkyl substances (PFAS) were detected in one or more soil samples at concentrations ranging from an estimated 0.017 parts per billion (ppb) to 0.12 ppb. None of the detected PFAS compounds had concentrations above the screening level of 1 ppb. Perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.12 ppb and perfluorooctanoic acid (PFOA) was detected at a maximum of 0.039 ppb. 1,4-dioxane was not detected in soil samples. No SVOCS, PCBs or pesticides were detected at concentrations exceeding the unrestricted use SCOs. Data does not indicate any off-site impacts in soil related to this site. Groundwater - Eight VOCs were detected at concentrations above their respective Ambient Water Quality Standards (AWQS) in one or more samples. These included the petroleum VOCs related to the LNAPL zone, and chlorinated solvents. The petroleum VOCs include benzene at a maximum concentration of 430 ppb compared to the AWQS of 1 ppb and toluene at a maximum concentration of 17 ppb (AWQS is 5 ppb). Chlorinated VOCs include 1,2-DCA at a maximum concentration of 660 ppb (AWQS is 0.6 ppb), 1,2-dichloropropane at a maximum concentration of 160 ppb (AWQS is 1.0 ppb), trichloroethene (TCE) at a maximum concentration of 21 ppb (AWQS is 5.0 ppb), chlorobenzene at a maximum concentration of 5.7 ppb (AWQS is 5.0 ppb), chloroform at a maximum concentration of 34 ppb (AWQS is 7.0 ppb), and tetrachloroethene

34 BERRY STREET (Continued) **S121933779**

(PCE) at a maximum concentration of 13 ppb (AWQS is 5.0 ppb). PFOS and PFOA were detected at concentrations above the NYSDEC screening level of 10 parts per trillion (ppt) each with the maximum PFOA concentration of 130 ppt and the maximum PFOS concentration of 47.7 ppt. 1,4-Dioxane was detected at a maximum concentration of 0.69 ppb, below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site. "

below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Measures are in place to prevent exposures to remaining contaminants. "

Dt rec updated: 09/09/2024
Updated By: YXPALUMB
Site Code: 564025
Site Description: "Location: The site is located in an urban area in the Williamsburg neighborhood of Brooklyn, NY. The approximately 35,942 square-foot (0.825-acre), irregularly shaped site is bounded to the north by North 12th Street, to the east by Berry Street, to the west by a

34 BERRY STREET (Continued) **S121933779**

warehouse building used by the Brooklyn Brewery, and to the south by North 11th Street and two buildings containing residential apartments. Site Features: The site is developed with an L-shaped, seven-story residential building that fronts Berry and North 12th Streets, with an open courtyard area located behind the building in the central portion of the site. A basement level parking garage is located under the building and courtyard, with an entrance ramp located on North 11th Street. A small, street-level valet parking lot is also located on North 11th Street, immediately east of the garage entrance ramp. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). The surrounding area is developed primarily with residential and commercial properties. Past Use of the Site: Historic records indicated that the site was developed with industrial and manufacturing uses, including the New York Quinine and Chemical Works between 1887 and 1951. After 1951, the site was used for freight loading and parking of vehicles. Sanborn maps from 1965 to 2006 (after decommissioning of the quinine factory) depict a large 2-story freight loading facility and warehouse in the western portion of the site, a 2-story truck repair facility/warehouse and a 4-story unspecified manufacturing facility in the southwestern portion of the site, and a parking lot in the eastern portion of the site containing two gasoline tanks of unspecified capacity. All on-site buildings were demolished starting in April 2008, and construction of the existing residential structure started in June 2008. Building construction was completed in early 2009. Site Geology and Hydrogeology: The surface topography in the surrounding area is flat, gradually sloping northwest towards the East River, which is located approximately 1,100 feet from the site. The site lies at an elevation of approximately 20 feet above sea level. Prior to development, shallow subsurface soils included urban fill material containing brick, asphalt, and concrete fragments to approximately 6 to 10 feet below ground surface (bgs), underlain by apparent native silty sand and silt. Most of the fill was removed during development to construct the current structure. Depth to bedrock at the site is expected to be approximately 100 feet bgs. The dominant groundwater flow direction at the site is to the north and northeast, with some variations to the northwest. Groundwater is present at depths ranging from approximately 5 to 8 feet below the basement garage floor, which corresponds to approximate depths of approximately 11 to 14 feet bgs. There are no surface water bodies or streams on or immediately adjacent to the site. "

Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were Light Non-Aqueous Phase Liquid (LNAPL) associated with fuel oil leaks from USTs and volatile organic compounds (VOCs) namely 1,2-dichloroethane (DCA). The VOCs were detected in groundwater at concentrations exceeding ambient water quality standards. Remedial actions have successfully achieved the site cleanup objectives under a track 4 cleanup which included a site cover, enhanced recovery of the LNAPL through injection of a surfactant blend and biological treatment of the groundwater to reduce VOC contamination. Sub-slab/soil vapor is not a concern at the site. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: During the Remedial Investigation soil and groundwater were sampled and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, polychlorinated biphenyls (PCBs),

34 BERRY STREET (Continued) **S121933779**

pesticides, and emerging contaminants (ECs). Sub-slab soil vapor and indoor air were analyzed for VOCs. Based upon the investigations conducted, the primary contaminants of concern were identified as petroleum in the form of Light Non-Aqueous Phase Liquid (LNAPL)and chlorinated VOCs. Soil - The investigation documented that VOC contamination in soil is present in two distinct contaminant zones: 1,2-dichloroethane (DCA) on the eastern side of the site, and petroleum LNAPL on the western side of the site. Fingerprint analysis completed during a previous investigation identified the LNAPL as fuel oil. Since 2009 the NAPL has been managed by a collection system, which was upgraded as an IRM during the Spring of 2019. Quarterly gauging of monitoring wells indicates the extent and thickness of the plume has been reduced by the LNAPL collection system. One VOC, 1,2-DCA, was detected at a concentration in excess of its restricted residential soil cleanup objective (RRSCO) at a depth of 14 to 15 feet below garage basement grade (bbg) (the water table is at 6ft-bbg), at a concentration of 7.9 parts per million (ppm) compared to a RRSCO of 3.1 ppm and the applicable protection of groundwater SCO (PGWSCO) of 0.02 ppm. 1,2-DCA was not detected in any other soil sample collected during the RI, or all the previous investigations at the site, that would indicate any additional source areas. Trivalent chromium was found at a concentration of 251 ppm, which exceeds the applicable RRUSCO of 180 ppm. This metal appears to be attributable to historic fill. Fourteen per- and polyfluoroalkyl substances (PFAS) were detected in one or more soil samples at concentrations ranging from an estimated 0.017 parts per billion (ppb) to 0.12 ppb. None of the detected PFAS compounds had concentrations above the screening level of 1 ppb. Perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.12 ppb and perfluorooctanoic acid (PFOA) was detected at a maximum of 0.039 ppb. 1,4-dioxane was not detected in soil samples. No SVOCS, PCBs or pesticides were detected at concentrations exceeding the unrestricted use SCOs. Data does not indicate any off-site impacts in soil related to this site. Groundwater - Eight VOCs were detected at concentrations above their respective Ambient Water Quality Standards (AWQS) in one or more samples. These included the petroleum VOCs related to the LNAPL zone, and chlorinated solvents. The petroleum VOCs include benzene at a maximum concentration of 430 ppb compared to the AWQS of 1 ppb and toluene at a maximum concentration of 17 ppb (AWQS is 5 ppb). Chlorinated VOCs include 1,2-DCA at a maximum concentration of 660 ppb (AWQS is 0.6 ppb), 1,2-dichloropropane at a maximum concentration of 160 ppb (AWQS is 1.0 ppb), trichloroethene (TCE) at a maximum concentration of 21 ppb (AWQS is 5.0 ppb), chlorobenzene at a maximum concentration of 5.7 ppb (AWQS is 5.0 ppb), chloroform at a maximum concentration of 34 ppb (AWQS is 7.0 ppb), and tetrachloroethene (PCE) at a maximum concentration of 13 ppb (AWQS is 5.0 ppb). PFOS and PFOA were detected at concentrations above the NYSDEC screening level of 10 parts per trillion (ppt) each with the maximum PFOA concentration of 130 ppt and the maximum PFOS concentration of 47.7 ppt. 1,4-Dioxane was detected at a maximum concentration of 0.69 ppb, below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent

34 BERRY STREET (Continued) **S121933779**

commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site. "

Site Code: 564025
Site Description: "Location: The site is located in an urban area in the Williamsburg neighborhood of Brooklyn, NY. The approximately 35,942 square-foot (0.825-acre), irregularly shaped site is bounded to the north by North 12th Street, to the east by Berry Street, to the west by a warehouse building used by the Brooklyn Brewery, and to the south by North 11th Street and two buildings containing residential apartments. Site Features: The site is developed with an L-shaped, seven-story residential building that fronts Berry and North 12th Streets, with an open courtyard area located behind the building in the central portion of the site. A basement level parking garage is located under the building and courtyard, with an entrance ramp located on North 11th Street. A small, street-level valet parking lot is also located on North 11th Street, immediately east of the garage entrance ramp. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). The surrounding area is developed primarily with residential and commercial

34 BERRY STREET (Continued) **S121933779**

properties. Past Use of the Site: Historic records indicated that the site was developed with industrial and manufacturing uses, including the New York Quinine and Chemical Works between 1887 and 1951. After 1951, the site was used for freight loading and parking of vehicles. Sanborn maps from 1965 to 2006 (after decommissioning of the quinine factory) depict a large 2-story freight loading facility and warehouse in the western portion of the site, a 2-story truck repair facility/warehouse and a 4-story unspecified manufacturing facility in the southwestern portion of the site, and a parking lot in the eastern portion of the site containing two gasoline tanks of unspecified capacity. All on-site buildings were demolished starting in April 2008, and construction of the existing residential structure started in June 2008. Building construction was completed in early 2009. Site Geology and Hydrogeology: The surface topography in the surrounding area is flat, gradually sloping northwest towards the East River, which is located approximately 1,100 feet from the site. The site lies at an elevation of approximately 20 feet above sea level. Prior to development, shallow subsurface soils included urban fill material containing brick, asphalt, and concrete fragments to approximately 6 to 10 feet below ground surface (bgs), underlain by apparent native silty sand and silt. Most of the fill was removed during development to construct the current structure. Depth to bedrock at the site is expected to be approximately 100 feet bgs. The dominant groundwater flow direction at the site is to the north and northeast, with some variations to the northwest. Groundwater is present at depths ranging from approximately 5 to 8 feet below the basement garage floor, which corresponds to approximate depths of approximately 11 to 14 feet bgs. There are no surface water bodies or streams on or immediately adjacent to the site. "

Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were Light Non-Aqueous Phase Liquid (LNAPL) associated with fuel oil leaks from USTs and volatile organic compounds (VOCs) namely 1,2-dichloroethane (DCA). The VOCs were detected in groundwater at concentrations exceeding ambient water quality standards. Remedial actions have successfully achieved the site cleanup objectives under a track 4 cleanup which included a site cover, enhanced recovery of the LNAPL through injection of a surfactant blend and biological treatment of the groundwater to reduce VOC contamination. Sub-slab/soil vapor is not a concern at the site. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: During the Remedial Investigation soil and groundwater were sampled and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Sub-slab soil vapor and indoor air were analyzed for VOCs. Based upon the investigations conducted, the primary contaminants of concern were identified as petroleum in the form of Light Non-Aqueous Phase Liquid (LNAPL)and chlorinated VOCs. Soil - The investigation documented that VOC contamination in soil is present in two distinct contaminant zones: 1,2-dichloroethane (DCA) on the eastern side of the site, and petroleum LNAPL on the western side of the site. Fingerprint analysis completed during a previous investigation identified the LNAPL as fuel oil. Since 2009 the NAPL has been managed by a collection system, which was upgraded as an IRM during the Spring of 2019. Quarterly gauging of monitoring wells indicates the extent and

34 BERRY STREET (Continued) **S121933779**

thickness of the plume has been reduced by the LNAPL collection system. One VOC, 1,2-DCA, was detected at a concentration in excess of its restricted residential soil cleanup objective (RRSCO) at a depth of 14 to 15 feet below garage basement grade (bbg) (the water table is at 6ft-bbg), at a concentration of 7.9 parts per million (ppm) compared to a RRSCO of 3.1 ppm and the applicable protection of groundwater SCO (PGWSCO) of 0.02 ppm. 1,2-DCA was not detected in any other soil sample collected during the RI, or all the previous investigations at the site, that would indicate any additional source areas. Trivalent chromium was found at a concentration of 251 ppm, which exceeds the applicable RRUSCO of 180 ppm. This metal appears to be attributable to historic fill. Fourteen per- and polyfluoroalkyl substances (PFAS) were detected in one or more soil samples at concentrations ranging from an estimated 0.017 parts per billion (ppb) to 0.12 ppb. None of the detected PFAS compounds had concentrations above the screening level of 1 ppb. Perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.12 ppb and perfluorooctanoic acid (PFOA) was detected at a maximum of 0.039 ppb. 1,4-dioxane was not detected in soil samples. No SVOCS, PCBs or pesticides were detected at concentrations exceeding the unrestricted use SCOs. Data does not indicate any off-site impacts in soil related to this site. Groundwater - Eight VOCs were detected at concentrations above their respective Ambient Water Quality Standards (AWQS) in one or more samples. These included the petroleum VOCs related to the LNAPL zone, and chlorinated solvents. The petroleum VOCs include benzene at a maximum concentration of 430 ppb compared to the AWQS of 1 ppb and toluene at a maximum concentration of 17 ppb (AWQS is 5 ppb). Chlorinated VOCs include 1,2-DCA at a maximum concentration of 660 ppb (AWQS is 0.6 ppb), 1,2-dichloropropane at a maximum concentration of 160 ppb (AWQS is 1.0 ppb), trichloroethene (TCE) at a maximum concentration of 21 ppb (AWQS is 5.0 ppb), chlorobenzene at a maximum concentration of 5.7 ppb (AWQS is 5.0 ppb), chloroform at a maximum concentration of 34 ppb (AWQS is 7.0 ppb), and tetrachloroethene (PCE) at a maximum concentration of 13 ppb (AWQS is 5.0 ppb). PFOS and PFOA were detected at concentrations above the NYSDEC screening level of 10 parts per trillion (ppt) each with the maximum PFOA concentration of 130 ppt and the maximum PFOS concentration of 47.7 ppt. 1,4-Dioxane was detected at a maximum concentration of 0.69 ppb, below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of

34 BERRY STREET (Continued) **S121933779**

sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site. "

Site Code: 564025
Site Description: "Location: The site is located in an urban area in the Williamsburg neighborhood of Brooklyn, NY. The approximately 35,942 square-foot (0.825-acre), irregularly shaped site is bounded to the north by North 12th Street, to the east by Berry Street, to the west by a warehouse building used by the Brooklyn Brewery, and to the south by North 11th Street and two buildings containing residential apartments. Site Features: The site is developed with an L-shaped, seven-story residential building that fronts Berry and North 12th Streets, with an open courtyard area located behind the building in the central portion of the site. A basement level parking garage is located under the building and courtyard, with an entrance ramp located on North 11th Street. A small, street-level valet parking lot is also located on North 11th Street, immediately east of the garage entrance ramp. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). The surrounding area is developed primarily with residential and commercial properties. Past Use of the Site: Historic records indicated that the site was developed with industrial and manufacturing uses, including the New York Quinine and Chemical Works between 1887 and 1951. After 1951, the site was used for freight loading and parking of vehicles. Sanborn maps from 1965 to 2006 (after decommissioning of the quinine factory) depict a large 2-story freight loading facility and warehouse in the western portion of the site, a 2-story truck repair facility/warehouse and a 4-story unspecified manufacturing facility in the southwestern portion of the site, and a parking lot in the eastern portion of the site containing two gasoline tanks of unspecified capacity. All on-site buildings were demolished starting in April 2008, and construction of the existing residential structure

34 BERRY STREET (Continued) **S121933779**

started in June 2008. Building construction was completed in early 2009. Site Geology and Hydrogeology: The surface topography in the surrounding area is flat, gradually sloping northwest towards the East River, which is located approximately 1,100 feet from the site. The site lies at an elevation of approximately 20 feet above sea level. Prior to development, shallow subsurface soils included urban fill material containing brick, asphalt, and concrete fragments to approximately 6 to 10 feet below ground surface (bgs), underlain by apparent native silty sand and silt. Most of the fill was removed during development to construct the current structure. Depth to bedrock at the site is expected to be approximately 100 feet bgs. The dominant groundwater flow direction at the site is to the north and northeast, with some variations to the northwest. Groundwater is present at depths ranging from approximately 5 to 8 feet below the basement garage floor, which corresponds to approximate depths of approximately 11 to 14 feet bgs. There are no surface water bodies or streams on or immediately adjacent to the site. "

Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were Light Non-Aqueous Phase Liquid (LNAPL) associated with fuel oil leaks from USTs and volatile organic compounds (VOCs) namely 1,2-dichloroethane (DCA). The VOCs were detected in groundwater at concentrations exceeding ambient water quality standards. Remedial actions have successfully achieved the site cleanup objectives under a track 4 cleanup which included a site cover, enhanced recovery of the LNAPL through injection of a surfactant blend and biological treatment of the groundwater to reduce VOC contamination. Sub-slab/soil vapor is not a concern at the site. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: During the Remedial Investigation soil and groundwater were sampled and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Sub-slab soil vapor and indoor air were analyzed for VOCs. Based upon the investigations conducted, the primary contaminants of concern were identified as petroleum in the form of Light Non-Aqueous Phase Liquid (LNAPL)and chlorinated VOCs. Soil - The investigation documented that VOC contamination in soil is present in two distinct contaminant zones: 1,2-dichloroethane (DCA) on the eastern side of the site, and petroleum LNAPL on the western side of the site. Fingerprint analysis completed during a previous investigation identified the LNAPL as fuel oil. Since 2009 the NAPL has been managed by a collection system, which was upgraded as an IRM during the Spring of 2019. Quarterly gauging of monitoring wells indicates the extent and thickness of the plume has been reduced by the LNAPL collection system. One VOC, 1,2-DCA, was detected at a concentration in excess of its restricted residential soil cleanup objective (RRSCO) at a depth of 14 to 15 feet below garage basement grade (bbg) (the water table is at 6ft-bbg), at a concentration of 7.9 parts per million (ppm) compared to a RRSCO of 3.1 ppm and the applicable protection of groundwater SCO (PGWSCO) of 0.02 ppm. 1,2-DCA was not detected in any other soil sample collected during the RI, or all the previous investigations at the site, that would indicate any additional source areas. Trivalent chromium was found at a concentration of 251 ppm, which exceeds the applicable RRUSCO of 180 ppm. This metal appears to be attributable to historic fill. Fourteen per- and polyfluoroalkyl

34 BERRY STREET (Continued) **S121933779**

substances (PFAS) were detected in one or more soil samples at concentrations ranging from an estimated 0.017 parts per billion (ppb) to 0.12 ppb. None of the detected PFAS compounds had concentrations above the screening level of 1 ppb. Perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.12 ppb and perfluorooctanoic acid (PFOA) was detected at a maximum of 0.039 ppb. 1,4-dioxane was not detected in soil samples. No SVOCS, PCBs or pesticides were detected at concentrations exceeding the unrestricted use SCOs. Data does not indicate any off-site impacts in soil related to this site.
Groundwater - Eight VOCs were detected at concentrations above their respective Ambient Water Quality Standards (AWQS) in one or more samples. These included the petroleum VOCs related to the LNAPL zone, and chlorinated solvents. The petroleum VOCs include benzene at a maximum concentration of 430 ppb compared to the AWQS of 1 ppb and toluene at a maximum concentration of 17 ppb (AWQS is 5 ppb). Chlorinated VOCs include 1,2-DCA at a maximum concentration of 660 ppb (AWQS is 0.6 ppb), 1,2-dichloropropane at a maximum concentration of 160 ppb (AWQS is 1.0 ppb), trichloroethene (TCE) at a maximum concentration of 21 ppb (AWQS is 5.0 ppb), chlorobenzene at a maximum concentration of 5.7 ppb (AWQS is 5.0 ppb), chloroform at a maximum concentration of 34 ppb (AWQS is 7.0 ppb), and tetrachloroethene (PCE) at a maximum concentration of 13 ppb (AWQS is 5.0 ppb). PFOS and PFOA were detected at concentrations above the NYSDEC screening level of 10 parts per trillion (ppt) each with the maximum PFOA concentration of 130 ppt and the maximum PFOS concentration of 47.7 ppt. 1,4-Dioxane was detected at a maximum concentration of 0.69 ppb, below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Measures are in place to prevent exposures to remaining contaminants. "

Record Updated Date:	12/06/2022
Update By:	AMSERVIS
Site Description:	"Location: The site is located in an urban area in the Williamsburg neighborhood of Brooklyn, NY. The approximately 35,942 square-foot (0.825-acre), irregularly shaped site is bounded to the north by North 12th Street, to the east by Berry Street, to the west by a warehouse building used by the Brooklyn Brewery, and to the south by North 11th Street and two buildings containing residential apartments. Site Features: The site is developed with an L-shaped, seven-story residential building that fronts Berry and North 12th Streets, with an open courtyard area located behind the building in the central portion of the site. A basement level parking garage is located under the building and courtyard, with an entrance ramp located on North 11th Street. A small, street-level valet parking lot is also located on North 11th Street, immediately east of the garage entrance ramp. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). The surrounding area is developed primarily with residential and commercial properties. Past Use of the Site: Historic records indicated that the site was developed with industrial and manufacturing uses, including the New York Quinine and Chemical Works between 1887 and 1951. After 1951, the site was used for freight loading and parking of vehicles. Sanborn maps from 1965 to 2006 (after decommissioning of the quinine factory) depict a large 2-story freight loading facility and warehouse in the western portion of the site, a 2-story truck repair facility/warehouse and a 4-story unspecified manufacturing facility in the southwestern portion of the site, and a parking lot in the eastern portion of the site containing two gasoline tanks of unspecified capacity. All on-site buildings were demolished starting in April 2008, and construction of the existing residential structure started in June 2008. Building construction was completed in early 2009. Site Geology and Hydrogeology: The surface topography in the surrounding area is flat, gradually sloping northwest towards the East River, which is located approximately 1,100 feet from the site. The site lies at an elevation of approximately 20 feet above sea level. Prior to development, shallow subsurface soils included urban fill material containing brick, asphalt, and concrete fragments to approximately 6 to 10 feet below ground surface (bgs), underlain by apparent native silty sand and silt. Most of the fill was removed during development to construct the current structure. Depth to bedrock at the site is expected to be approximately 100 feet bgs. The

34 BERRY STREET (Continued) **S121933779**

dominant groundwater flow direction at the site is to the north and northeast, with some variations to the northwest. Groundwater is present at depths ranging from approximately 5 to 8 feet below the basement garage floor, which corresponds to approximate depths of approximately 11 to 14 feet bgs. There are no surface water bodies or streams on or immediately adjacent to the site. "

Env Problem:

"Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were Light Non-Aqueous Phase Liquid (LNAPL) associated with fuel oil leaks from USTs and volatile organic compounds (VOCs) namely 1,2-dichloroethane (DCA). The VOCs were detected in groundwater at concentrations exceeding ambient water quality standards. Remedial actions have successfully achieved the site cleanup objectives under a track 4 cleanup which included a site cover, enhanced recovery of the LNAPL through injection of a surfactant blend and biological treatment of the groundwater to reduce VOC contamination. Sub-slab/soil vapor is not a concern at the site. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: During the Remedial Investigation soil and groundwater were sampled and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Sub-slab soil vapor and indoor air were analyzed for VOCs. Based upon the investigations conducted, the primary contaminants of concern were identified as petroleum in the form of Light Non-Aqueous Phase Liquid (LNAPL)and chlorinated VOCs. Soil - The investigation documented that VOC contamination in soil is present in two distinct contaminant zones: 1,2-dichloroethane (DCA) on the eastern side of the site, and petroleum LNAPL on the western side of the site. Fingerprint analysis completed during a previous investigation identified the LNAPL as fuel oil. Since 2009 the NAPL has been managed by a collection system, which was upgraded as an IRM during the Spring of 2019. Quarterly gauging of monitoring wells indicates the extent and thickness of the plume has been reduced by the LNAPL collection system. One VOC, 1,2-DCA, was detected at a concentration in excess of its restricted residential soil cleanup objective (RRSCO) at a depth of 14 to 15 feet below garage basement grade (bbg) (the water table is at 6ft-bbg), at a concentration of 7.9 parts per million (ppm) compared to a RRSCO of 3.1 ppm and the applicable protection of groundwater SCO (PGWSCO) of 0.02 ppm. 1,2-DCA was not detected in any other soil sample collected during the RI, or all the previous investigations at the site, that would indicate any additional source areas. Trivalent chromium was found at a concentration of 251 ppm, which exceeds the applicable RRUSCO of 180 ppm. This metal appears to be attributable to historic fill. Fourteen per- and polyfluoroalkyl substances (PFAS) were detected in one or more soil samples at concentrations ranging from an estimated 0.017 parts per billion (ppb) to 0.12 ppb. None of the detected PFAS compounds had concentrations above the screening level of 1 ppb. Perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.12 ppb and perfluorooctanoic acid (PFOA) was detected at a maximum of 0.039 ppb. 1,4-dioxane was not detected in soil samples. No SVOCS, PCBs or pesticides were detected at concentrations exceeding the unrestricted use SCOs. Data does not indicate any off-site impacts in soil related to this site. Groundwater - Eight VOCs were detected at concentrations above their

34 BERRY STREET (Continued) **S121933779**

respective Ambient Water Quality Standards (AWQS) in one or more samples. These included the petroleum VOCs related to the LNAPL zone, and chlorinated solvents. The petroleum VOCs include benzene at a maximum concentration of 430 ppb compared to the AWQS of 1 ppb and toluene at a maximum concentration of 17 ppb (AWQS is 5 ppb). Chlorinated VOCs include 1,2-DCA at a maximum concentration of 660 ppb (AWQS is 0.6 ppb), 1,2-dichloropropane at a maximum concentration of 160 ppb (AWQS is 1.0 ppb), trichloroethene (TCE) at a maximum concentration of 21 ppb (AWQS is 5.0 ppb), chlorobenzene at a maximum concentration of 5.7 ppb (AWQS is 5.0 ppb), chloroform at a maximum concentration of 34 ppb (AWQS is 7.0 ppb), and tetrachloroethene (PCE) at a maximum concentration of 13 ppb (AWQS is 5.0 ppb). PFOS and PFOA were detected at concentrations above the NYSDEC screening level of 10 parts per trillion (ppt) each with the maximum PFOA concentration of 130 ppt and the maximum PFOS concentration of 47.7 ppt. 1,4-Dioxane was detected at a maximum concentration of 0.69 ppb, below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Measures are in place to prevent exposures to remaining contaminants. "

Update By:	yywong
Site Description:	"This is a new BCP application which pertains to properties located at 285 and 291 Metropolitan Ave., Brooklyn, Kings County. This site is approximately 0.25 acres in size in an urban area. Surrounding uses are commercial and residential. Directly to the north, across the street from the site on North 4th Street, is a public school. The site consists of an automobile repair facility (former gas station) and a neighboring garage with residential uses on the second floor. The future use for this site is residential and commercial. Suspected and known contaminants are petroleum and metals and MTBE which are impacting the soil and groundwater. This BCP application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility. Review of application terminated since the applicant is no longer an entity authorized in NYS to make the application. Following termination of the BCP application, the site was referred back for investigation and remediation under spill no. 0607903. "
Env Problem:	"A limited investigation was performed on 291 Metropolitan Ave in October 2006 and spill number 0607903 was assigned. From four soil borings, one soil sample was collected from each. From another two soil borings, two samples were collected from each. From two borings, a grab groundwater was collected in each. The groundwater was contaminated with BTEX compounds and MTBE. Additional investigation will be required to define the extent of contamination."

DEC Memo: Phase 2 - soil samples have contamination in it - Owner wants to move this to brownfields. 7/23/07
- Raphael Ketani. I have heard nothing in a long time regarding this site as to whether it is part
of the voluntary cleanup program (VCP). So I talked to Jocelyn Shapiro, EG I of unit A of DER
Region 2, as she is involved in some VCP projects. She said it wasn't her site and directed me to
Jane O'Connell or the unit head, Dan Walsh, EG III. I spoke to Mr. Walsh. He said that there was a
pre-application meeting in January 2007, but nothing else happened. I looked for the site in the
DER database and found nothing. Therefore, I am going to start the process of investigating this
site as a spill location and I will send out a CSL. The block and lot are: 02353 and 0013. The main
address is 291 Metropolitan Avenue. The alternate addresses are: 146 Roebling Street and 206 to 212
North 4th Street. The site has two PBS records, #2-145726 and #2-455083. #2-145726 is a closed case
with the name as Arvy Service Station Inc./Getty. Six 550 gas tanks are listed as administratively
closed on 4/1/95. #2-455083 is active with the name G&A Auto Repair. One 250 waste oil tank is in
service with the other six gas tanks listed as closed in place. There are two owners: C&H Holding
Corp., 1394 Third Avenue, NY, 10021; 291 Metropolitan Avenue, LLC, 861 Manhattan Avenue, Suite 14,
Brooklyn, NY, 11222. I sent out the CSLs to both owners. 7/26/07 - Raphael Ketani. Eva Krocka of
Minnow Associates (291 Metropolitan Avenue, LLC) called to say that the site is part of the
brownfield program. I told her that the DEC doesn't have anything confirming this and that their
site does not appear in the DEC Remediation database. She said that Advanced Site Restoration Co.
(212) 809-1110 was remediating the site and was supposed to take care of everything. She said that
DEC was sent reports. I told her that we have nothing in our files regarding the site. She said she
will get back to me. A new search of the Remediation database revealed that 291 Metropolitan Avenue
has made an application to be part of the BCP. The case number is C224124. The case manager is
Sondra Martinkat of DER Region 2 Unit A. I spoke to her and she said that the site is not yet
approved for the BCP, but she expected them to be so very soon. She said that she was willing to
accept the spill case. I spoke to Randall Austin, Chief of the Spills Unit, and he told me to
change the case manager to Ms. Martinkat. I changed the case manager to her name. 8/5/09: BCP

G&A AUTO REPAIR (Continued) **S108294903**

termination letter sent by OGC (D. Tuohy) - see eDocs. Management of site reverts back to Region 2
spills. Transferred to R. Ketani. (JHO) 8/6/09 - Raphael Ketani. I was assigned the spill case
yesterday. So I talked to the former case manager, Brian (York) Wong from Unit A of Region 2 DER.
He said that he was waiting for the project to be accepted into the BCP, but this never happened as
the corporation fell apart. He said that no cleanup or development has taken place regarding the
case since 2007. I made an unannounced site visit and took several pictures (see E-docs). The site
consists of a service station. There is an old, small, three story walk up apartment building to
the west of the service station. The service station has a sign that displays G&A Auto Diagnostic
Center (718) 486-3700. The apartment building is the other property that the corporation had owned.
I met a person who worked at the service station. He said that a waste oil UST and the gas USTs
were closed in place with cement. He showed me the many cement filled boring locations that are on
site. He said that there were no problems. I asked him who he was, but he just said that he was
someone who works here. However, he did say that C&H owned the site. After this I left. 8/7/09 -
Raphael Ketani. I tried to contact Chris Tomasello of ASR (212) 809-1110 regarding the site and its
ownership, but could only leave a message. I reviewed the October 2006 ISR. The elevation of the
site is at 23' above mean sea level. Groundwater was encountered at a depth of 17' to 20' below
grade. However, Section 9 of the ISR states that groundwater is 9' to 10' below grade. Groundwater
flow direction is unknown. There is a school directly across the street to the northeast. Soil
contamination that exceeds TAGM was present at SB-5 at 10' to 16.' Groundwater contamination with
high exceedences was found at SB-2 and SB-3. There is also a page with case manager notes that
refer to wells marked AOC and TW, but there are no diagrams depicting these wells in the case file.
8/10/09 - Raphael Ketani. Mr. Tomasello returned my call. He talked about the site. He mentioned
that the partnership broke up and the property was sold about a year ago. The former owner was
Robert Vigorito of C&H Holding Corp., 1394 Third Avenue, NY, 10021. Mr. Tomasello has had no
contact with the former or present owners since then. I looked up the property ownership on
Property Shark and on ACRIS. The property was sold on 9/6/09 or 9/15/09, respectively. The new
owner is: 291 Metropolitan Avenue, LLC, 861 Manhattan Avenue, Suite 14, Brooklyn, NY, 11222. I
wrote a revised CSL for the sole owner, 291 Metropolitan Avenue, LLC, and sent it out with a green
return card. 9/10/09 - Raphael Ketani. The deadline for a response to

G&A AUTO REPAIR (Continued) **S108294903**

the CSL was today and there
has been no response from the owners of the site. I have not received the green return card,
either. I will wait until 9/17/09 before sending a more strongly worded letter to the owners.
9/14/09 - Raphael Ketani. The CSL came back unopened and marked Unclaimed/Unable to Forward on the
envelope. I checked PBS record #2-455083 for any contact information. The record showed the name
Ismael Cisneros, Jr. (718) 384-4141. I spoke to Mr. Cisneros. He said that the owner had moved to
Manhattan. I asked him who the owner was. He didn't want to say. However, he said that if I sent a
letter directly to the service station, then he will forward it to the owners. I told him that I
will do this. I resent the CSL to G&A Auto Repair, 291 Metropolitan Avenue, Brklyn, 11211 by
regular mail and by green return card. However, according to the property database ACRIS, 291
Metropolitan Avenue LLC at 861 Manhattan Avenue is still listed as the owner. 9/21/09 - Raphael
Ketani. I received the green return receipt card signed by Mendes. 10/29/09 - Raphael Ketani. The
owners of the site failed to respond to the CSL by the deadline of October 14, 2009. So I drafted a
strongly worded letter stating that the DEC will take legal action if the investigation plan is not
received by November 13, 2009. The draft letter was submitted to Randall Austin, Chief of the
Spills Unit, for his approval. 11/2/09 - Raphael Ketani. I spoke to Mr. Austin about the case and
the letter that I wanted to send. He said that I should submit a Case Initiation Package. 11/3/09 -
Raphael Ketani. I put together the Case Initiation Package and submitted it to Mr. Austin for his
signature. Mr. Austin signed the CIP and it was hand delivered to the legal department. 4/26/10 -
Raphael Ketani. John Urda, Assistant Regional Attorney for Region 2 of DEC, sent Jerrietta
Hollinger, a principal of 291 Metropolitan LLC, a STIP agreement today by e-mail. Her address is:
Jerrietta R. Hollinger, Esq. Ganz & Hollinger 1394 Third Avenue New York, New York 10075 Ms.
Hollinger responded back by e-mail that she will submit the document to her members and get back to
Mr. Urda in a week. 5/13/10 - Raphael Ketani. Ms. Hollinger sent the following e-mail to Mr. Urda:
I expect to review the Stip with Mr. Cisneros next Tues. I am out of office tomorrow and Monday and
will contact you by middle of next week. 5/20/10 - Raphael Ketani. Ms. Hollinger requested a change
in the STIP package CAP that was sent to her by Mr. Urda. She wanted the deadline for submission of
the Remedial Investigation Work Plan changed from 15 days to 30 days (paragraph one). Mr. Urda
agreed to the change and sent her a STIP with a CAP wherein the owners have 30 days to submit the

G&A AUTO REPAIR (Continued) **S108294903**

RIWP (see E-docs). 5/24/10 - Raphael Ketani. The owners of the site signed the STIP. 5/25/10 -
Raphael Ketani. The Region 2 director signed the STIP and, thus, it was fully executed and in
effect (see E-docs). 7/14/10 - Raphael Ketani. To date, the owners of the site have not submitted
the RIWP. The deadline was July9 25, 2010. I drafted a letter to Ms. Hollinger for the review of
John Urda of the Office of General Counsel. Mr. Urda reviewed the letter and it was sent out today.
7/15/10 - Raphael Ketani. Ms. Hollinger called me today. She said that P.W. Grosser (the consulting
company) is supposed to get back the groundwater analytical data for the site. They will send the
DEC a report soon. 7/27/10 - Raphael Ketani. Ms. Hollinger called today. She said that Mr. Wenskus
of P.W. Grosser is working on the analytical report for DEC and should submit it in the very near
future. The report will state that the soil is alright, but that the groundwater is contaminated. I
told Ms. Hollinger that, at the very least, the groundwater contamination needs to be delineated.
8/3/10 - Raphael Ketani. I reviewed the July 30, 2010 P.W. Grosser Phase II ESA report. The scope
of the work was based on P.W. Grosser's 6/21/10 proposal and Advanced Site Restoration's October
2006 ISR. The tanks have fuel oil, waste oil, and gasoline. In October 2006, the site was operated
only as a car repair shop. Groundwater is at about 18' to 20' below grade and flows
north-northwest. ASR found contamination in soil borings at SB-1, 3, 5, and 6. There were also
elevated levels of arsenic, cadmium and lead at SB-1. There was elevated groundwater contamination
at SB-2 and SB-3. There had been no subsequent investigations or remedial efforts since ASR's 2006
investigation. P.W. Grosser did a Phase II in July 2010. The locations of SB-1, 3, 5, and 6 were
utilized for this investigation. P.W. Grosser took soil samples to 20' below grade. Groundwater was
sampled from SB-1 to SB-3. The soil results for VOCs and SVOCs were below TAGM RSCOs. Arsenic,
cadmium, and lead were below the RSCOs. However, mercury was above its respective RSCO. The
groundwater results from SB-6 (downgradient) were completely non-detect. However, there was 22 ppb
of naphthalene at SB-3 and 392 ppb of naphthalene at SB-2, with several other low exceedences. MTBE
was 421 ppb at SB-1 and 1370 ppb at SB-3. SB-2 had 112,000 ppb of MTBE and 6 other VOC exceedences
above 1,000 ppb. P.W. Grosser recommends removing the tanks and quarterly monitoring. I sent an
e-mail to Mr. Wenskus (631) 589-6353 with the following questions and comments: 1) why wasn't a
boring done in the vicinity of the fuel oil tank to the northwest? 2) is the fuel oil tank a UST or
an AST? 3) was staining observed in the vicinity of the fuel oil tank?

G&A AUTO REPAIR (Continued) **S108294903**

4) why wasn't a boring conducted directly to the northwest of the gasoline tanks? 5) why weren't borings conducted next to the waste oil tank? The DEC concurs with the removal of the gas and oil tanks. Groundwater should be collected from SB-2 in order to reduce the MTBE concentration at this location. 8/6/10 - Raphael Ketani. Mr. Wenskus responded back by e-mail today: 1) Due to the presence of debris in the area, PWGC was unable to access the immediate vicinity of the fuel oil tank. During the inspection, PWGC did not see evidence of an AST in the area of the fuel oil tank as identified on the figure. Additionally, PWGC utilized the figure that was provided in the 2006 ASR Phase II for approximate locations of borings and other site conditions. 2) This is unknown at this time; however, according to the ASR report, the fuel oil tank is a UST. As stated above, there was no evidence of an AST in that vicinity. PWGC will contact the property owner to confirm the presence of the fuel oil tank. 3) No staining was observed in the area where the fuel oil tank is reportedly located. 4) As stated above, Mr. Cisneros wanted to confirm the findings of the 2006 Phase II and requested that only the impacted borings from that Phase II be re-sampled. 5) The exact location of the Waste oil UST was unknown and PWGC placed the boring SB-1 in the vicinity of the former boring. The location of SB-1 in the PWGC site plan; however, is incorrect. In addition, the tank locations on our site plan are approximate, based upon the ASR Phase II site plan. The site plan will be corrected to show the correct location of boring SB-1. I responded back and stated that the DEC still wants a boring performed to the northwest of the gas USTs, next to the waste oil tank, and next to the fuel oil UST to the northwest. Also, P.W. Grosser must submit a site plan which is to scale and which shows the actual location of all appertenances, tanks and pump islands. Mr. Wenskus replied back that the borings will be performed. 8/12/10 - Raphael Ketani. Mr. Wenskus sent me an e-mail that he informed the owners about DEC's request for additional investigative work. However, he has not heard back from them. 8/18/10 - Raphael Ketani. Mr. Wenskus sent me an e-mail that the drilling for the three additional borings will take place on 8/24/10. 9/27/10 - Raphael Ketani. I received the Supplemental Phase II Environmental Site Assessment report dated 9/22/10 from P.W. Grosser. I began my review. 9/28/10 - Raphael Ketani. I finished my review of the Supp. Phase II. There was no soil contamination above TAGM standards. However, groundwater was found to be impacted. LNAPL was found near the waste oil tank and oil based liquids in the tank. Concentrations of total VOCs were

G&A AUTO REPAIR (Continued) **S108294903**

detected up to 128,988 ppb in the immediate vicinity of the gas USTs. SB-2 was the most contaminated groundwater location. SB-3 had elevated groundwater contamination. P.W. Grosser recommends the following: proper closure of the gas and waste oil USTs removal and disposal of all impacted soil injection of oxidants to breakdown the contamination collection of end point samples installation of groundwater wells removal of LNAPL quarterly groundwater monitoring I sent an e-mail to Mr. Wenskus asking him to proceed with the remediation as soon as possible. 11/19/10 - Raphael Ketani. Mr. Wenskus sent the November 2010 Remedial Action Plan by e-mail. I reviewed the plan and it formalized and expanded the remediation plan that was initially described in the Supplemental Phase II. The RAP looked fine, but they weren't planning to install a monitoring well downgradient of the waste oil UST. So I let Mr. Wenskus know that the DEC wanted a well installed in this location and to submit a revised site map showing this well. Mr. Wenskus responded back that a well will be installed downgradient of the waste oil UST. 2/25/11 - Raphael Ketani. I spoke to Mr. Wenskus (631) 589-6353 and asked him about progress on the site. He said that the owners had received P.W. Grosser's proposal. They told him that they needed to secure funding for the project. However, that was back a couple of months ago. Mr. Wenskus hasn't heard anything since. I asked Mr. Wenskus to contact the owners anyway and to try and find out what is happening. Ms. Hollinger sent me an e-mail asking whether there was any type of funding that could be obtained for doing the additional work. I wrote that there wasn't and to commence the work immediately. 3/2/11 - Raphael Ketani. Today I received the January 27, 2011 investigation and remediation work proposal and cost estimate from Mr. Wenskus at P. W. Grosser. I reviewed the proposal and it seemed to cover the work that the DEC had asked to be performed. I spoke to Mr. Wenskus (631) 589-6353 and told him that the DEC found the proposal to be acceptable. I asked him whether he had heard from Ms. Hollinger. He said that he hadn't. I told him to call her and to let her know that the DEC is concerned that no progress is being made. He said that he will. 3/3/11 - Raphael Ketani. Mr. Wenskus sent Ms. Hollinger an e-mail (with me as a c-c) stating that the DEC had the approved work plan. He also wrote in the e-mail that P.W. Grosser was ready to go to work on the site as soon as a retainer is submitted. 3/7/11 - Raphael Ketani. Mr. Wenskus said that he hasn't received approval yet to start the work. 4/5/11 - Raphael Ketani. I received an e-mail today from Mr. Wenskus as a c-c. In the e-mail, Mr. Wenskus stated that he hasn't heard from Ismael Cisneros,

G&A AUTO REPAIR (Continued) **S108294903**

Jr. in two weeks. In response, I sent an e-mail to Mr. Urda of DEC Region 2 stating that it appears as if work at the site has come to a standstill for this spill. 4/22/11 - Raphael Ketani. Mr. Wenskus sent an e-mail to M I Mechanical requesting a startup date for the work at the site. Ms. Hollinger responded back by e-mail that Mr. Cisneros was out of town, but would be back next week. Once he is back, Ms. Hollinger wrote, Mr. Cisneros will set up a starting date. 4/27/11 - Raphael Ketani. I sent an e-mail to Ms. Hollinger asking whether Mr. Cisneros had returned and whether a starting date had been picked. 5/17/11 - Raphael Ketani. Mr. Wenskus sent me an e-mail that the work will re-start during either later June or early July 2011. 6/6/11 - Raphael Ketani. Mr. Wenskus sent me an e-mail that work will resume at the site on July 18. 7/7/11 - Raphael Ketani. Mr. Wenskus (631) 589-6353 sent me an e-mail that work will start on July 18. He expects the work to take 2 weeks. 7/14/11 - Raphael Ketani. Jerry Hickson of G. Construction Enterprises (631) 206-3700 ext 100 called. His company will be pulling 7 tanks on either tuesday or wednesday. They will remove 3 gas tanks, 3 diesel tanks, and 1 waste oil tank. 7/20/11 - Raphael Ketani. I received the following e-mail today from Mr. Wenskus: The implementation of the approved RAP began today. The site activities today included the following: Expose the seven onsite 550-gallon tanks to determine their current condition, Assess the tanks to determine their contents (each contained oily water) Pump the tanks out approximately 2,200 gallons removed Each tank, with the exception of the waste oil tank was encased in concrete. No tanks were removed from the ground today; excavation of the tanks will continue tomorrow. 7/22/11 - Raphael Ketani. Mr. Wenskus (631) 589-6353 called me in a conference call with Jen Lewis of P.W. Grosser. He said that the 7 USTs had been removed. There was a concrete slab beneath them. The tanks were all in good shape. However, there were signs of a little associated pipe leaking. The contractor had excavated 15 feet down to remove the contaminated soil, but there still was contamination and he hadn't reached the water table, which is at 18 feet below grade. Mr. Wenskus and Ms. Lewis were asking whether the digging could stop as the contractor would have to get a larger machine, and this would take time, and as he would also have to get special permits for digging deeper. Mr. Wenskus added that the contractor had dug pretty close to the building and the sidewalk and they didn't want to jeopardize their integrity. I told Mr. Wenskus that the contractor could either install shoring to hold up the sides of the hole or backfill and

G&A AUTO REPAIR (Continued) **S108294903**

do treatment solution injections where there still is contamination deep down and under the sidewalk. Mr. Wenskus opted to backfill and treat. I asked him whether the contractor could dig out more contamination laterally. Ms. Lewis said that he could. I told Mr. Wenskus and Ms. Lewis to do all of the calculations necessary, including permeability, to determine what it will take to effectively treat the remaining contamination. They said that they will. Later, Mr. Wenskus (631) 589-6353 called me back. He said that he talked to his supervisor about the treatment solution injections proposed for the contaminated dry soil. They agreed that the solutions would work initially, but that they would stop as soon as they would dry out and, therefore, wouldn't be very effective. Mr. Wenskus will have the contractor get a larger excavator and dig deeper. I asked him about the contamination under the sidewalk. I added that this couldn't be left in place. He said that he wasn't sure where the contamination will end. I told him to keep field screening with a PID meter and to eventually take end points to determine whether they needed to excavate further. He said that he will. 9/12/11 - Raphael Ketani. I tried to contact Mr. Wenskus (631) 589-6353, but I could only leave a message regarding progress at the site. 9/13/11 - Raphael Ketani. Mr. Wenskus called me back. He said that the work at the site has stopped as P.W. Grosser isn't getting paid. The owners, 291 Metropolitan LLC, want to save some money with the remediation project and want to put in fewer wells and do less soil removal. He said that 80 tons have already been removed, as best as he can guess (he doesn't have the disposal manifests). A large covered soil pile is sitting at the site. Mr. Wenskus said he told them that the DEC had approved the work plan and so any changes were not likely to be accepted. After this, the conversation ended. 9/15/11 - Raphael Ketani. I reviewed the November 2010 RAP for the work schedule. While the tanks (item 1) had been removed, the soil excavation was not completed by the allotted time as more soil needed to be removed than had been previously estimated. I sent Mr. Wenskus an e-mail requesting a revised work schedule. 10/13/11 - Raphael Ketani. I contacted Mr. Wenskus (631) 589-6353. He said that 291 Metropolitan LLC still hasn't paid P.W. Grosser for the rest of the work. So nothing is happening. Mr. Wenskus said that he had spoken with Ms. Hollinger about a couple of weeks ago, but she gave no indication that payments would be forthcoming. He said that he will try contacting her today. As no work had been taking place for over a month, I drafted a letter to 291 Metropolitan, LLC stating that they were in violation of the STIP and the environmental law. The

G&A AUTO REPAIR (Continued) **S108294903**

letter was sent to Mr. Urda
and approved. I sent it out today with an October 28 deadline for
re-starting the work, or else
legal action will be taken. 10/20/11 - Raphael Ketani. Ms. Hollinger
(212) 517-5500 called
regarding the soil excavation and planned well installation. She said
that P.W. Grosser dug out a
lot more dirt than had been planned and that this has become very
expensive. She asked what could
be done about this and whether the number of planned groundwater
monitoring wells could be reduced
in order to save money. I told her that contaminated soil has to be
dug out to the extent practical
and that if they have to remove the sidewalks to do it, then that's
what is necessary. I added that
P.W. Grosser should be screening the soil with a PID meter as they go
so that they can see whether
there is more contaminated soil to remove. Then, once they have very
low PID hits or no hits, they
can take end point samples and have them analyzed to be sure that they
have removed all of the soil
with elevated contamination. Ms. Hollinger asked whether one or two
wells could be cut out from the
plan. I told her that the DEC didn't ask for more wells than were
necessary in order to monitor the
groundwater contamination. I added that if contaminated soil is left
in place and the groundwater
starts circulating through it, then the groundwater will carry
weathered gasoline and vapors
downgradient to the school behind the service station. I said that, so
far, there are no vapors in
the school, but this can still happen if contaminated soil is left. I
mentioned that there are kids
in the school. She said that she was just concerned about how much
soil was removed because it was
truck loads and truck loads. I told her that P.W. Grosser was removing
what was necessary and that
this is good. Ms. Hollinger said that she will talk to Mr. Wenskus and
discuss the issue. Then she
will get back to me. Later, Ms. Hollinger sent me the following
e-mail: After we spoke, I had a
telephone call with Rocky. He said he was in the middle of finishing
another project but would
review the test results and call you next week to see if it is
possible to amend the plan to be
more economical and to make certain contamination is cleared. The
necessary wells will then be
installed. As mentioned the work done to date cost more than twice the
estimated amount. Soil Safe
carted away 447.2 tons of soil. 10/26/11 - Raphael Ketani. Mr. Wenskus
(631) 589-6353 called with a
progress update. He said that, right now, work still has not resumed.
He said that he had spoken to
Ms. Hollinger about the site and the soil contamination that still
exists. He said that the
concentrations of the individual analytes is in the hundreds of
thousands of parts per billion for

G&A AUTO REPAIR (Continued) **S108294903**

the soil in the sidewall of the pit that is next to the sidewalk. I told him that this soil, the soil under the sidewalk and possibly the soil under the street must come out. Mr. Wenskus said that the additional remediation will be performed as in the approved RAP. He mentioned possibly collecting the contaminated groundwater. I told him that it would probably be cheaper to dig out the contaminated soil and get rid of the contamination once and for all. Then he wont have to worry about groundwater contamination. I also told Mr. Wenskus that I will let Mr. Urda know about the impass with Ms. Hollinger. 10/27/11 - Raphael Ketani. I made an unannounced site visit today. I took 3 pictures. I could see a gravel area where the gasoline USTs used to be and a sandy soil area where the waste oil UST used to be. There was no other changes to the site conditions. So I left the site. 10/28/11 - Raphael Ketani. A Case Initiation package was signed by Hassan Hussein, Supervisor of the RCRA-Remediation Unit, and sent to the Office of General Counsel. 11/29/11 - Raphael Ketani. Ms. Hollinger (212) 517-5500 sent me an e-mail that the well installations will take place soon. I responded back that the excavation also needed to resume. 12/27/11 - Raphael Ketani. Nick Pressly of Pressly & Associates Inc. (607) 264-9521/cell (607) 435-9589 called. He said that he has been retained by Ms. Hollinger to continue the work at the site. We discussed the present site status and what still needed to be done. Mr. Pressly said that the DEC will receive a work plan by January 9, 2012. 1/18/12 - Raphael Ketani. Mr. Pressly sent me the 1/9/12 work plan by e-mail. The plan called for the installation of 6 soil borings and the construction of 4 monitoring wells. Some of the wells would be constructed in such a manner as to allow their use for SVE or air sparging. I found the locations of two of the proposed wells to be unacceptable as they are not downgradient of the former gasoline UST locations and the waste oil tank location. Also, if some wells are used for SVE or air sparging, then they can't be used for groundwater monitoring. So more wells are needed. They also did not mention continuing the excavation both deeper and under the sidewalk. Lastly, they did not mention sending the DEC the manifests for the soil that has been excavated, nor product collection or quarterly groundwater sampling and reporting. I sent an e-mail to Mr. Pressly indicating the disapproval and the need for including the above comments in a new work plan. Mr. Pressly sent me the manifests for the soil that had already been removed. I spoke to Mr. Pressly (607) 264-9521/cell (607) 435-9589 about the above comments. There is a 1 inch well next to the waste oil tank. He believes that there is a lot of oil on

G&A AUTO REPAIR (Continued) **S108294903**

the water table. Due to the
waste oil, air sparging will not be possible. The waste oil will be addressed in a separate plan.
Mr. Pressly will add two additional wells due to the presence of the LNAPL. The other well
positions can be adjusted to be downgradient. SVE wells will be installed near the sidewalk in an
upgradient position. Borings will be done right up against the sidewalk. Wells for just monitoring
during SVE or air sparging will be installed. He will resubmit the work plan next week. Also, he
expects to start the work by January 30, 2012. I told him that will be fine. 1/25/12 - Raphael
Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 sent me the 1/20/12 Revised Subsurface
Investigation Work Plan for installing SVE wells, AS wells and monitoring wells. I reviewed the
work plan. 1/30/12 - Raphael Ketani. I finished my review of the 1/20/12 work plan. There was one
proposed monitoring well far upgradient of the waste oil UST and no well directly downgradient of
the waste oil UST. I determined that they should install wells at positions that are a short
distance downgradient of the waste oil UST and the former tank field. I also stated that there
should be separate monitoring wells at P.W. Grosser's SB-7 boring, which had NAPL, and at P.W.
Grosser's SB-3, which had contaminated groundwater. I added that groundwater extraction should take
place at SB-3 and product collection should take place at SB-7 before AS or SVE takes place.
Lastly, I asked for the details of the proposed AS and SVE systems: soil permeability, air flow or
vacuum calculations, material specs and the design layouts.I sent a letter disapproving the work
plan and including the above comments. The due date for the revised work plan was set at February
29. Mr. Pressly sent me a revised map/plan for the locations of the proposed monitoring wells. I
responded back that the well for the waste oil UST should be more upgradient than sidegradient. I
asked him to fix this and then the plan would be fine. Also, he will hold off installing the SVE
and AS wells for now. 2/1/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 sent
me an e-mail containing the second revision of the Revised Subsurface Investigation Work Plan. Four
instead of five wells were proposed, but the locations were as requested in DEC's 1/30/12 letter.
However, there was no mention of extracting contaminated groundwater at SB-2 and product at SB-7. I
responded back and let him know about the deficiencies. Mr. Pressly wrote back that, presently
there were no wells at SB-3 and SB-7, these were only former soil boring locations. However, a well
will be installed at the former location of SB-3. He asked that installing a well at SB-7 for

G&A AUTO REPAIR (Continued) **S108294903**

product collection be put on hold for now so that the work plan can be approved and work can
proceed. I responded back that the DEC was approving the 2/1/12 work plan and to proceed with the
investigation. Mr. Pressly wrote that the work is tentatively scheduled to start on February 8.
2/3/12 - Raphael Ketani. Mr. Pressly sent me an e-mail that the drilling will definitely start on
February 6. 2/6/12 - Raphael Ketani. Mr. Pressly called today. He said that he was at the site, but
that there was a problem. He stated that the downgradient well for the waste oil UST would be right
against the wall of the building. So it can't be drilled right there. He suggested moving the
well's locations to where the A in LNAPL (for SB-7) is on revision 4 of the map which is attached
to the 2/1/12 work plan. This would still put the well in a downgradient position. I told him this
would be fine. 2/8/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 called today
with an update. First, he stated that P.W. Grosser's boring SB-7 was found to be much closer to the
waste oil UST than was drawn on the map. He put in a new well mid-way between the building and the
UST about 3 feet from SB-7. However, no oil was found, only a sheen. Mr. Pressly believes that the
oil that was found at SB-7 was very localized and that maybe P.W. Grosser hit the edge of the tank
pit that was holding the free oil. Once the pit was nicked, the oil flowed to the location of SB-7.
I told Mr. Pressly this was possible. He responded by saying that he will re-drill SB-7 and put in
a 2 inch recovery well. Also, there was no odor of gasoline at SB-7 and that it looks like there
are 2 plumes. One for the gasoline that is flowing due north, and another plume that is flowing
more northwest. A boring was done through the sidewalk. It was found to be a gasoline contamination
hot spot. So an extra sparge well was installed in the center of the former UST field. A well was
put in at SB-3, but no odors of gasoline were found. Another well by the building had gasoline
odors. A well couldn't be put in far downgradient inside the building as the geoprobe wouldn't fit.
The soil profile is from 6 to 8 feet of silt and clay, then glacial till, and finally at 19 feet
below grade there is gravelly brown sand. Groundwater is at about 22 feet below grade. 2/9/12 -
Raphael Ketani. Mr. Pressly called me today. He said that they had overdrilled SB-7 and found a
black slime on their augers when they pulled them up. He believes that the slime is sludge from the
waste oil tank. Next, they moved the rig over to where the waste oil tank used to be and drilled
another hole. However, they didn't find oil, but hit a cavernous spot many feet down. When the
equipment was pulled out, he could see pieces of metal in the cavern.

G&A AUTO REPAIR (Continued) **S108294903**

Another hole was drilled and
they hit gasoline contaminated groundwater. Mr. Pressly said that it smelled like weathered
gasoline. 3/9/12 - Raphael Ketani. I spoke to Mr. Pressly (607)
264-9521 today. He said that he
found 1500 to 2000 ppb of MTBE in the perimeter wells. He recommended to the client to have more
wells put in. Two sparge wells have been installed. He also recommended to the client to have the
site capped very soon. The other wells don't have MTBE, but do have BTEX. Groundwater appears to go
northwest. An upgradient well was installed, but the MTBE is about 1500 ppb. However, the southeast
part of the property is full of concrete urban fill. The waste oil tank is above the fill. They
broke tools trying to drill in the southeast part of the property.
3/14/12 - Raphael Ketani. I
received the 3/8/12 Subsurface Investigation Report from Pressly & Associates. I began my review.
3/16/12 - Raphael Ketani. I finished reviewing the SIR. The investigation work took place from
2/6/12 to 2/13/12. Monitoring wells MW-1 to MW-3, SVE-1 and HVE-1 were constructed of 2 inch PVC.
MW-4 was constructed of 1 inch PVC. Refusal was hit at 3 locations to the southeast of MW-3. There
was native soil at MW-1 to MW-3 and at SVE-1 down to 18 feet bgs. The soil consisted of fine to
medium sand with silt and clay. Urban fill was encountered at MW-4 and HVE-1 to 15 feet bgs. Below
15 feet, there was native sand. Groundwater was encountered at 18 feet bgs (elevation 80' to 83').
SB-7 had a 1 inch PVC riser with oil sludge at the bottom. HVE-1 was installed within the footprint
of the waste oil UST excavation patch. Waste oil was not detected within the former waste oil tank
area (MW-4 and HVE-1). A 3 inch band of oily soil was observed at 19 feet bgs. MW-2 had 113 ppm of
total VOC vapors at the 15 to 20 foot interval. SVE-1 had from 173 ppm to 332 ppm of total VOC
vapors from 5 to 20 feet below grade. The soil sample from SVE-1 had the highest total VOCs at
112910 ppb. Groundwater total VOC concentrations varied from a low of 927 ppb at MW-1 to a high of
21,169 ppb at SVE-1. NAPL was not seen on the water table at any location. A subsurface release was
not detected in the soil and the groundwater within the former waste oil UST area. The elevated VOC
concentrations at SVE-1 correspond to the former location of a fill line. The higher concentrations
at SVE-1 and lower concentrations at MW-2 suggest that the source is upgradient near the sidewalk.
The MTBE concentrations suggest that it has migrated beyond SVE-1 and MW-2. The sludge at SB-7 is
considered to be an anomalie by Mr. Pressly. In the report, it is recommended that another
monitoring well be installed to the northwest in order to monitor the MTBE. The pavement should be

G&A AUTO REPAIR (Continued) **S108294903**

replaced at the location of the excavation in order to prevent groundwater mounding and infiltration. Additional wells should be installed for the SVE/AS system for recovering the MTBE. Lastly, the SVE/AS system should be installed to remove the VOCs. A letter was drafted for the review of Hassan Hussein, EE 3 and head of the Hazardous Materials Unit. The letter was addressed to Mr. Pressly and approved the SIR and the recommendations. However, the DEC requested that soil samples be taken upgradient of SVE-1 in order to fully delineate the extent of the contamination. A deadline of April 20 was set for starting the work. 3/22/12 - Raphael Ketani. The letter was approved by Mr. Hussein and was sent out today to Mr. Pressly and to Ms. Hollinger. 4/25/12 - Raphael Ketani. Mr. Pressly (607) 264-9521 left me a message today. He said that he needed more time to contract a drilling company and mobilize to start the work that was requested in the 3/22/12 letter. I gave him until 5/25/12 to start the work. 5/9/12 - Raphael Ketani. Mr. Pressly sent me an e-mail. He stated that the additional monitoring wells will be installed on May 29 and the piping and other parts of the SVE/AS system will be installed during the same week. 6/19/12 - Raphael Ketani. Mr. Pressly sent me an e-mail stating that the new monitoring wells and the SVE/AS system had been installed. A report containing the system results will be forthcoming in the near future. 8/7/12 - Raphael Ketani. I reviewed the Pressly & Associates 7/23/12 Supplemental Subsurface Investigation Report. The supplemental investigation took place during 6/5/12 to 6/14/12. MW-5 was installed to the north and downgradient. MW-6 was installed to the southeast of SVE-1 through the sidewalk that runs parallel to Metropolitan Avenue. The SVE system consists of 3 SVE wells (SVE-1 to SVE-3) and 5 AS wells (AS-1 to AS-5). The SVE wells averaged 60 scfm, 40 psi with a ROI of 20 feet. The AS wells averaged 4 scfm, 4 psi with a ROI of 10 feet. Total VOCs at MW-5 were 13.1 ppb. Total VOCs at MW-6 were 22,530 ppb. The system was started on 7/20/12. The AS operating pressure was 3 psi with a flow rate of 4 scfm. The SVE well head vacuum was 45 inches of water and a total flow rate of 120 scfm. A grab air sample was taken with a summa canister and the results will be available in two weeks. Pressly & Associates recommends collecting system PID, flow and pressure data from individual SVE/AS wells on a quarterly basis and the collection of well head vacuum readings from on site wells to evaluate the effective ROI of the system and the collecting of SVE off gas samples on a quarterly basis. Quarterly reporting will be made to the DEC for the system. I found the SSIR to be acceptable and drafted an approval

G&A AUTO REPAIR (Continued) **S108294903**

letter for the review of Mr.
Hussein. The requirement that confirmatory soil samples be taken once remediation by the SVE/AS is
deemed complete was added to the letter. A deadline of October 31, 2012 was set for the submission
of the first quarterly SVE/AS system report. The letter was approved and was sent out. 8/16/12 -
Raphael Ketani. Jay Stockwell of Blue Zs Realestate, LLC (212) 965-0298 called. He said that he was
a real estate developer and he was interested in buying the property. He said that the present
owners are trying to sell it again. He said that he was interested in putting up an apartment
building with stores in the first floor. He asked how long it would take for the SVE/AS system to
remediate the site. I told him that they started the system during July 2012. So it has not been
running long. I told him that my best estimate for how long it will take to clean up the site is
one year. However, every site is different and there is a lot of contamination under the sidewalk
and the street. Mr. Stockwell said that this was what he had expected. With that, the conversation
ended. 11/9/12 - Raphael Ketani. I tried to contact Mr. Pressly (607) 264-9521 by e-mail regarding
the first quarterly SVE/AS remediation report was due on 10/31/12, but the e-mails bounced back. I
then left a message on his voice mail. I tried contacting Mr. Pressly at his cell phone (607)
435-9589, but I could only leave a message. Next, I tried to contact Ms. Hollinger (212) 517-5500,
but, again, I could only leave a message. Later, Ms. Hollinger called me back. She said that she
thought the September 2012 quarterly report had been submitted. She said that he was paid for the
report. She will try calling him later to see what happened to the report. 11/12/12 - Raphael
Ketani. Ms. Hollinger sent me an e-mail stating that Mr. Pressly was sending me the report.
11/26/12 - Raphael Ketani. I received the 11/26/12 SVE/AS OM&M Status Report. I reviewed the
report. An exhaust sample was collected on 7/19/12. There were 8 VOC hits in the sample. Another
exhaust sample was collected on 9/22/12. There was only 1 hit of 41 ug/m3 of methylene chloride.
The next site visit will be on December 4, 2012. I had no comments and approved the report.
11/28/12 - Raphael Ketani. Ms. Hollinger sent a letter to John Urda, Region 2 Assistant Regional
Attorney, stating that the ownership of the property had been transferred to 291 Metropolitan
Realty, LLC. Also, Mr. Pressly sent me an e-mail stating that he was still balancing the SVE/AS
system. 12/4/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 called today. He
said that he was going to meet with the attorney for the new owner, Joel Grunfeld, 277 Classon

G&A AUTO REPAIR (Continued) **S108294903**

Avenue, Brooklyn, 11238, (917) 470-3650, jig@sygrealties.com. He will try to explain to him that
the SVE/AS process has to continue and that the DEC wants the site cleaned up. Regarding the SVE
and AS system. There is an SVE well and a monitoring well next to the sidewalk hotspot. The radius
of influence of each SVE well is assumed to be 20 ft. The radius of inlfuence for each AS well is
assumed to be 15 to 20 ft. However, a pilot test was never done to find out the real radius of
influence. The estimated radius was taken from information regarding a sandy soil. I told Mr.
Pressly to keep the DEC informed regarding what transpires at his meeting and whether he will be
retained. I added that Ms. Hollinger should be told that her client is still responsible for the
contamination. Mr. Pressly said that he told her this. 12/5/12 - Raphael Ketani. Mr. Pressly
called. He met with Mr. Grunfeld. Mr. Grunfeld said that he wanted to remediate the site as quickly
as possible so that he can build a new building there. Mr. Pressly brought up the idea of solution
injection to treat the contamination. He also explained that whether solution injection is used or
excavation, the additional remedial actions may cost from $50,000 to $100,000. Mr. Grunfeld was
concerned about the range of pricing, but he told Mr. Pressly that he wanted things to move
forward. Mr. Pressly explained to me that he will send a work plan for installing a well in the
sidewalk and a well in the road in order to find out what the concentrations of the contaminants
are at these locations. He added that the SVE and AS functioning will be modified in order to try
and remove more of the contaminants. 12/7/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell
(607) 435-9589 called. He said that the owner wants to build his building quickly and has contacted
the NYC OER in order to move the process along for the remediation of the site. Mr. Pressly stated
that the drilling contractor is hesitant to drill in the street due to logistical reasons and would
prefere to install wells in the adjacent sidewalk and across the street in the distant sidewalk.
Mr. Pressly added that he would like to install additional wells in the sidewalk in order to
laterally delineate the contamination. After this, he would install SVE/AS wells in the edge of the
sidewalk where it meets the road which have a 20 foot radius of influence (the road is 40 feet
wide) in order to remove any contamination under the road. I told him that this sounded fine. He
said that he will talk to the owner about this and put together a work plan. 12/27/12 - Raphael
Ketani. Shaminder Chawla of the NYC OER (212) 442-3007/ shaminderc@dep.nyc.gov/100 Gold Street, 2nd
Floor, New York, NY 10038 sent me the following e-mail: 291

G&A AUTO REPAIR (Continued) **S108294903**

Metropolitan Avenue property has a new
developer/owner who has approached us to enter NYC Voluntary Cleanup program. Previous owner has a
stip agreement and an approved RAP (with multiple SVE points)from you. Their development/ remedy
has changed and includes excavation of entire property to at least 10 to 12 feet depths. OER is
sending them back to field to conduct additional soil, soil vapor and groundwater investigation.
OER informed them that they need to approach you and get spill approvals exclusively from DEC. We
will accept your approved RAP and add additional requirement that we need to issue Notice to
Proceed. I forwarded this information to Mr. Pressly and he responded with the e-mail below: Hi
Rafiel, The last time I emailed Joel Gruenfeld was about a week ago and he said he was going to get
back to me regarding a proposal I sent about 2 -3 weeks ago to investigate the road and the
sidewalk. For this I had proposed 5 soil borings with 3 to be completed as MWs to get lateral and
southern extent. I had also advised him to get OER involved sooner than later. I have not heard
back from him. since. I also gave him options to clean the on-site groundwater problem quicker
using chemical oxidation with direct push (20 points) to facilitate building construction. In
addition, I had proposed SVE AS system as possible remedy for sidewalk/ road to be incorporated
into any new building construction. NYC VCP may be good to make this an engineering/institutional
control? The building design was recommended to include a special XP equipment room for this
purpose in the basement. I'll give him a call and let you know what I find out. Best, Nik 12/28/12
- Raphael Ketani. Charles Sosik, PG, Environmental Business Consultants (631) 504-6000, ext
112/csosik@ebcincny.com called me today. 1/2/2013 - Raphael Ketani. I spoke to Mr. Sosik today
about the remediation of the site. He said that he has been in contact with the NYC OER and they
told him to talk to me about what should be done. We discussed the site history and what Mr.
Pressly's company had been doing regarding SVE and AS. Mr. Sosik said that he went to the site to
see what the present conditions were and found that the SVE air blower and other equipment was
missing. Mr. Sosik also asked for the P.W. Grosser 9/22/10 Supplemental Phase II and the Pressly
and Associates 3/8/13 Subsurface Investigation Report. I sent him the reports. Later, he sent me
the EBC 12/28/12 Phase II Work Plan. I reviewed the work plan. Four soil borings will be installed:
B1 to B4. Soil samples will be taken from 0 to 2 feet below grade and from 10 to 12 feet below
grade. The soil and groundwater samples will be tested via methods 8260, 8270, 8082 for PCBs, 8081

G&A AUTO REPAIR (Continued) **S108294903**

for pesticides and methods 6010 and 7471 for metals. Temporary well MW-6 will be installed at
boring B4. Wells MW-1 to MW-3 and MW-6 will be sampled for groundwater. Soil vapor testing will be
performed at 4 locations at 12 feet below grade. Subslab, soil gas and indoor air sampling will
take place for VOCs. I drafted a letter approving the work plan with comments. First, soil sampling
should take place at the most contaminated horizon. If no contamination is found at the boring
location, then a sample should be taken just above the water table. Soil borings must also be
performed at the locations of the Pressly & Associates wells SVE-1 (extremely high total VOCs) and
MW-6 (high total VOCs) and to the south of MW-6 to confirm the contaminant concentrations. All
results should be compared to the CP-51 standards for soil and the TOGS 1.1.1 standards for
groundwater. Additionally, TCLP method 1311 must be used to test for lead and the results must be
compared to the limits in Part 371.3(e). A revised work plan must be submitted by January 31, 2012.
The letter was sent to Mr. Hussein for his review. 1/3/13 - Raphael Ketani. Mr. Hussein approved
the letter and it was sent out. According to deed dated 11/27/12 shown in ACRIS, the new owner for
291 Metropolitan Avenue, Brooklyn, 11211 (block and lot 2353/13) is 291 Metropolitan Realty, LLC,
199 Lee Avenue, Ste 693, Brklyn, 11211. Another company is also at this address, 64 St. James
Realty, LLC. Later, Mr. Sosik sent me an e-mail stating that the boring work will start on 1/4/13.
Later, Mr. Sosik sent me a revised Phase II Work Plan dated 1/3/13 which was also a Scope of Work.
This work plan incorporated the comments from the DEC 1/3/13 letter. Otherwise, it was the same
work plan. However, more comments were generated. These were that the Department still wanted a
boring in the street south of MW-6. Also, subslab soil vapor sampling must take place at three (3)
locations along the west wall of the garage and at two (2) locations along the east wall of the
garage. The extra boring location and the extra soil vapor sampling locations were indicated on two
attachments to the DEC work plan approval letter. Lastly, all seven wells must be sampled during
the same sampling event and well redevelopment should take place if necessary for the older wells.
The letter was submitted to Mr. Hussein for his review. 1/14/13 - Raphael Ketani. Mr. Hussein
approved the letter and it was sent out with an attachment indicating where the Department wanted a
boring in the street and additional soil vapor samples within the garage footprint. Later, Mr.
Sosik sent me the following e-mail: The work plan was approved with conditions on 1/3/13. We
accepted those conditions and returned the revised plan as requested

G&A AUTO REPAIR (Continued) **S108294903**

the same day. The work has already been completed. Eight soil gas samples is a lot of samples for a property this size. Also we cannot access the 3 western locations you are requesting. As you know the bulk of the contamination is in front of the building in the former tank area. There is no difference between conditions beneath the garage and those outside of the building as all are taken at the basement level depth. The four samples provide good coverage across the site and will be representative of conditions. The highest concentrations will be in the SG2 location and will represent a worst case condition. Subsequent to this, I called Mr. Sosik (631) 504-6000, ext 112. We discussed the soil vapor sampling. He said that the issue was that he could not get a piece of equipment into the garage, due to its low clearance, that can bore down 12 feet to take soil gas samples. I told Mr. Sosik that he didn't need to go down 12 feet. That the Department simply wanted more information regarding what the vapors may be in the shallow subsurface. Mr. Sosik responded that he could have holes drilled by hand and then have samples taken. I told him this would be fine. He said he will do this, but that he thought there were too many vapor sampling locations for a site this size. I told him that, from my professional experience, the number of sampling locations were alright. Mr. Sosik agreed to do the work. 2/6/13 - Raphael Ketani. I spoke to Mr. Sosik today. He said that the vapor sampling took place, but the street boring hasn't been done. A permit is needed to perform this boring. 3/8/13 - Raphael Ketani. I received 3 documents for the site from Shaminder Chawla of the NYC Office of Environmental Remediation. These documents included a pdf containing Tables 2 to 11, which consisted of soil, groundwater and vapor data. The second pdf contained boring logs for borings B1 to B5. The last pdf contained 6 maps with soil, groundwater and soil gas data. I looked at all of the information. The data tables showed that there were significant soil exceedences at borings B1, B2 and B5 for VOCs and SVOCs when compared to the CP-51 standards. Some metals, such as lead and mercury also had significant exceedences in samples from the shallow subsurface, but the results were for total metals, not TCLP analysis. So it was not clear whether these results were a concern. Groundwater exceedences of the TOGS 1.1.1 standards were present in samples from MW-2 and MW-6. Mr. Chawla wrote that the site will be excavated down to 11 feet below grade. However, this doesn't address the contamination under Metropolitan Avenue to the south of MW-6. 3/12/13 - Raphael Ketani. A conference call took place between Mr. Chawla, Hannah Moore (engineer) and myself. We

G&A AUTO REPAIR (Continued) **S108294903**

discussed the site and the environmental issues present. It was mentioned that excavation will take
place down to 11 or 12 feet below grade. This will remove all of the shallow contamination.
However, there is contamination at the water table which is 18 to 20 feet down. Ms. Moore and Mr.
Chawla stated that this will be addressed by the injection of treatment solutions at depth. I told
them that the most contaminated areas are B1, B2, B5, MW-2 and MW-6. They said that these areas
will be targeted. I also stated that more investigation needed to take place south of MW-6 to see
how much contamination is under the street. I asked that a treatment and investigation work plan be
submitted by Mr. Sosik. They said the DEC will receive the work plan. 3/18/13 - Raphael Ketani. I
reviewed the February 2013 Remedial Investigation Report that was submitted by Environmental
Business Consultants. It was a compilation of the reports that had been submitted by the previous
consultants and also contained many Sanborn maps. The only new information was the soil vapor and
sub-slab vapor data. BTEX was found at a maximum of 21.29 ug/m3 in the soil vapor. The sub-slab
vapor reached a maximum of 31.07 ug/m3. PCE concentrations at all 4 soil vapor sites and in the 3
sub-slab vapor sites varied from 4.13 ug/m3 to 37.8 ug/m3. TCE was present in 1 of the 4 soil vapor
locations at 0.537 ug/m3 and in 1 of the 3 sub-slab vapor locations at 4.89 ug/m3. According to the
report, the results were below NYS DOH monitoring levels for the soil vapor guidance matrix. Next,
I reviewed the February 2013 Remedial Action Work Plan. They will do community air monitoring,
remove all tanks, remove soil and fill exceeding the restricted residential standards, sample and
have analyzed all excavated material, collect and analyze the end point samples, install a vapor
barrier, generally excavate to 12 feet below grade - though they will excavate deeper in the UST
and pump island areas, if necessary, inject chemical oxidants to reduce groundwater contamination.
The health and safety plan was included in the document. A Remedial Action Report will be submitted
by the EBC. I found both the Remedial Investigation Report and the Remedial Action Work Plan to be
acceptable. However, I noted in the letter that they must compare all of the soil analytical
results to the unrestricted residential standards in CP-51 and the groundwater results to TOGS
1.1.1. Also, all contaminated soil which is found at 12 feet below grade which exceeds the
unrestricted standards will have to be removed. 3/19/13 - Raphael Ketani. Mr. Hussein approved the
letter and it was sent out. 4/11/13 - Raphael Ketani. I received and reviewed the EBC 4/11/13
additional 3 borings report. The borings were conducted in the

G&A AUTO REPAIR (Continued) **S108294903**

vicinity of MW-6. They were designated as B6 to B8. B6 was just to the west of MW-6. B7 was about 17 feet west of B6. B8 was about 13 feet east of MW-6. Sampling was continuous from grade to 20 feet bgs. The sample with the highest PID detection in the respective boring and the sample at the bottom of each boring were retained and sent to the lab for analysis. The total VOCs ranged from 432 ppb in the 18 to 20 foot sample from B7 to 113,100 ppb in the 18 to 20 foot sample from B6. B6 had the most contamination in the 18 to 20 foot sample with the highest analyte concentration as 32,000 ppb of total xylenes. B7 had the most contamination in the 3 to 5 foot sample with the highest analyte concentration as 4160 ppb total xylenes. B8 had the most contamination in the 13 to 15 foot sample with the highest analyte concentration as 8400 ppb of ethylbenzene. The SVOC results were mostly non-detect with many low benzo series hits in the 3 to 5 foot sample from B7. However, naphthalene hits were present in the 18 to 20 foot sample from B6 and in both samples from B8. I drafted a letter approving the report and stating that the Department required the remediation of the contamination at the locations of B6 to B8 and MW-6. The letter was submitted to Mr. Hussein for his approval.
4/17/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out with a due date of May 24, 2013 for the submission of the work plan for remediating the contamination under the sidewalk and the street. 4/24/13 - Raphael Ketani. Mr. Sosik submitted an addendum to the 3/2/13 RAWP dated April 24, 2013. The only change from the previous RAWP was that treatment solution injections will take place in the vicinity of MW-6 in order to remediate the soil contamination at this location. I approved the addendum and responded via e-mail, but I strongly warned Mr. Sosik that he and 291 Metropolitan Realty were responsible for obtaining all of the necessary permits to conduct the injections and must consult with Con Edison, the NYC DEP, the NYC DOT and other concerned parties regarding the work he intends to perform. I also warned him that confirmatory soil samples and groundwater samples will need to be taken in each treatment area and that if the results are still well above the CP-51 standards and the TOGS 1.1.1 standards, then solution injections will have to be done again. I told him to make sure that the solutions travel to the contamination under the road. 6/14/13 - Raphael Ketani. I called Mr. Sosik (631) 504-6000, ext 112 regarding progress at the site. He said that the service station building will be demolished next week. This will be followed by the site excavation the following week.
8/12/13 - Raphael Ketani. I

G&A AUTO REPAIR (Continued) **S108294903**

called Mr. Sosik today to find out what progress had been made at the site. He said that the
building had been demolished and test pits had been performed to characterize the waste. The soil
results indicated that they could dispose of the material at either Clean Earth of Soil Safe.
However, the excavation contractor has not made contact with Mr. Sosik in some time. The permits
are in place and NYC OER has given the go ahead to do the work and to construct the building. I
told Mr. Sosik that the permits have expiration dates. So he should get ahold of the contractor and
start the work before they expire. Mr. Sosik said that he knows this and he will call the
contractor and find out what the hold up is regarding doing the excavation. Mr. Sosik said that he
will send an e-mail when he has a definite start date. I told him that will be fine. 8/27/13 -
Raphael Ketani. A meeting took place today at the office of the NYC OER. In attendance were Mr.
Grunfeld, Mr. Sosik, and Dan Walsh, Mr. Chawla and Ms. Moore (212) 442-6372 of the NYC OER, and
myself. The meeting was held in order to iron out some of the details of the work that will take
place and associated matters. The topics discussed included: excavating the site down to 12 feet
below grade, treating all of the hot spots (both within the building footprint and under the
Metropolitan Avenue sidewalk) with solution injections, monitoring truck traffic and dust,
monitoring odors and noise during the excavating and construction, the submission of a work plan
for the excavating and solution injections to the DEC for approval and sending progress updates to
OER and DEC. Mr. Grunfeld stated that digging should start tomorrow and continue for two to three
months. An estimated 3,000 cu. yds. of soil will be removed. The soil will go to Soil Safe in
Carteret, NJ and Prospect Park, NJ. Soil Safe will supply all of the trucks. Manifests will be
received by EBC for each load of soil. A vapor barrier, VB20, will be installed as part of the
building construction. Mr. Sosik stated that there will be 8 injection points. I mentioned that
confirmatory soil samples and groundwater samples will need to be taken 1 month after each
injection round. Mr. Sosik said that this will be done. One of Mr. Grunfeld's assistants mentioned
that the floor of the excavation will remain as open dirt until the soil treatment is finished.
After this, a concrete slab will be poured. I mentioned that removing as much of the soil
contamination was important because VOCs can get washed down into the groundwater by the rain, make
there way under the school which is downgradient and result in vapors coming up into the school.
Mr. Grunfeld said that they will make sure that the soil is treated.

G&A AUTO REPAIR (Continued) **S108294903**

He also stated that the school
will be notified about the excavation plan. I asked whether the community board had been notified
about the impending work. Mr. Chawla said that they had been. One of Mr. Grunfeld's assistants
stated that the dirt trucks will enter and leave the site from Metropolitan Avenue, not the street
next to the school. Work will start at 7:30AM and end at 3:30PM. I suggested that both dust and
noise monitoring take place during the excavating in particular. I also added that the soil results
must meet the unrestricted residential standards and the groundwater must meet the TOGS 1.1.1
standards for the case to be closed. Everyone agreed that they understood what was to take place
and the meeting adjourned. 10/18/13 - Raphael Ketani. I spoke to Kevin Brussee and Mr. Sosik (631)
504-6000, ext 112 by phone regarding progress at the site. They mentioned that the construction
crew had been working at the site for only 6 full days. They had to do some site preparation work
before conducting the excavating. The excavating is taking place starting at the rear of the
property and they will work towards the front. Right now, they are digging just to make the pit for
the building. They will dig to remove the contamination later. The crew is putting in the footings,
but only in the back. Progress reports are being sent to the NYC OER and will be sent to the DEC. I
received 9 Daily Status Report documents for the period from 9/11/13 to 10/15/13. They indicated
that the contaminated soil was being sent to Soil Safe in New Jersey and that the clean soil was
being sent to the Malanka Landfill in New Jersey. Pictures of the clean soil showed red brown
glacial till with a few boulders and cobbles and a good percentage of fines. The north half of the
site had been excavated by 10/15/13. A vapor barrier was installed under the footings. Concrete
buttoning up had been done in the northwest corner where the neighboring building was still
standing. Other pictures showed rebar form work taking place in the northeast corner by 10/15/13. I
had no comments about the reports. Later, Mr. Brussee sent me the following documents: Soil Safe
8/28/13 approval letter for receiving excavated soil from 0 to 6 feet below grade Fill Material
Certification Letter dated 9/3/13 for the Malanka Landfill for soil originating from greater than 6
feet below grade Test Pit location map with the 7/16/13 soil analytical report I reviewed the
documents, but had no comments. 10/28/13 - Raphael Ketani. Mr. Brussee sent me some pictures of a
previously unknown UST that was uncovered under the southeast corner of the property. He explained
in the e-mail that: One 275-gallon UST was encountered at 291 Metropolitan Avenue today. I will

G&A AUTO REPAIR (Continued) **S108294903**

prepare an updated PBS application once excavation is completed just in case we find another one later. Although there were some rust holes in the tank, it does not appear as though the tank leaked. The tank is still full and no contaminated soil below the tank was observed. A tank removal company will be retained to cut and clean the tank, and I'll be sure they issue a NYCFD tank removal affidavit. I responded back by e-mail that a site map from ASR dated 8/6/09 shows the existence of a waste oil UST at the same location. I added that people need to look at the old maps and see where other features may be in order to avoid tearing them open and creating a spill. 10/29/13 - Raphael Ketani. I reviewed the October 28, 2013 Daily Status Report. Seventeen truck loads of contaminated soil were sent to Soil Safe. Excavation in the southeast corner of the site went down from 0' to 6' below grade. The foundation wall was installed in the northern part of the site. Troy Cutter came and removed the 275 gal. tank after it had been cleaned out. Picture 4 of the report shows a worker shoveling out thick sludge from the tank. The tank appears to have been filled completely with sludge. The air monitoring results were within ambient air limits. I approved the report. However, I sent an e-mail to EBC stating that the DEC wanted confirmation that the area where the UST had been emptied was clean. Later, Mr. Brussee sent me 3 photos showing the handling of the tank and the work area after the tank was emptied and removed. The floor in the area looked clean. 11/4/13 - Raphael Ketani. Mr. Brussee sent me copies of the tank removal paperwork. 12/2/13 - Raphael Ketani. I spoke to Mr. Brussee (631) 504-6000 regarding progress at the site. He said that they had basically dug down 12 feet below grade throughout the site. However, there is one corner with gray soil. He added that they want to remove this area of gray soil and then bring in a geoprobe to put in the injection wells. The construction crew may be putting in footings now. Otherwise, nothing else significant is happening. 12/18/13 - Raphael Ketani. I had a phone conversation with Mr. Sosik (631) 504-6000, ext 112. He said that the contractor is presently removing the contaminated soil in the excavation pit. Also, a drilling rig was lowered into the pit in order to drill holes for treatment solution injection. I told Mr. Sosik that the contractor should follow the soil contamination in order to remove as much contamination as possible. 2/12/14 - Raphael Ketani. I tried to contact Mr. Sosik regarding progress at the site, but I could only send an e-mail. 2/24/14 - Raphael Ketani. I made an unannounced site visit today to see the physical status of the site. I took a few pictures. A large

G&A AUTO REPAIR (Continued) **S108294903**

pit had been excavated. The
building was being constructed. The steel frame had been partially completed. Workers were pouring
concrete and doing masonry work. The sidewalk did not appear to have been dug up in order to remove
the contamination at the location of MW-6 and borings B-6 to B-8. In fact, the plywood wall along
the sidewalk obscured the location of MW-6 and B-6 to B-8. There were viewing portals in the
plywood walls, but there was nothing else to see except the construction that was taking place. So,
I left the site. 2/26/14 - Raphael Ketani. I spoke to Mr. Sosik (631) 504-6000, ext 112 today
regarding the submission of the remediation report. He told me that the remediation hadn't been
completed yet and that is why DEC didn't get the report. He added that the contaminated soil was
dug out from under the sidewalk. End point samples were taken about 2 months ago in the excavation
pit. The injection points were installed, but the solution injections have not taken place yet. He
wasn't sure why. Mr. Sosik will send the NYC OER Interim report. However, he was not sure when this
report will be completed as he has to follow a very specific format and there is a lot of
information to include in the report. 5/20/14 - Raphael Ketani. As progress reports have not been
submitted. I sent Mr. Sosik (631) 504-6000, ext 112 an e-mail requesting the NYC OER Interim
Report. 5/21/14 - Raphael Ketani. Mr. Sosik responded by e-mail stating that there will not be an
Interim Report. A Final Report to OER will be submitted. Mr. Sosik added that it will take several
weeks to put the report together. 6/23/14 - Raphael Ketani. As I hadn't received the Final Report
from Mr. Sosik (631) 504-6000, ext 112/(631) 357-4927, I left a voice message on both of his phones
requesting this report. 8/25/14 - Raphael Ketani. Since my last voice message to Mr. Sosik, we had
discussed the submission of a final report for the site. He had told me weeks ago that the NYC OER
had a rigid format that must be followed regarding report submission and what each report must
contain. So, he couldn't submit the final report at the time. However, he had told me that he would
send it eventually. As the report still hasn't been received, I sent him [(631) 504-6000, ext
112/csosik@ebcincny.com] an e-mail requesting it. 11/25/14 - Raphael Ketani. As Mr. Sosik hasn't
sent the final report, I sent him another e-mail requesting the report. 11/26/14 - Raphael Ketani.
Mr. Sosik responded by e-mail today that the site is on his list of projects to finish. He added
that there were endpoints taken from the sidewalk and injections performed. 3/10/15 - Raphael
Ketani. I sent an email to Mr. Sosik (631) 504-6000, ext 112/(631) 357-4927 /csosik@ebcincny.com

G&A AUTO REPAIR (Continued) **S108294903**

requesting the closure report. 6/26/15 - Raphael Ketani. As there has been no response from Mr. Sosik in some time, I sent an email to Ms. Hollinger (jrhollinger@juno.com) stating that the Department was owed the closure report as part of the requirements of the Stipulation Agreement in order to close the spill case. Ms. Hollinger responded back that she was waiting to hear from the R.P.'s attorney. 6/29/15 - Raphael Ketani. I made an unannounced site visit today. The building had been completely constructed. It appeared that they had finished construction just recently as the planting areas between the sidewalks and the street were still just areas of dirt. I saw some construction workers standing outside the front of the building (which faces the school). They were not going into the building and the building itself was locked and dark. I took a picture of the building and the sidewalk along Metropolitan Avenue which still had access ports for 3 wells. After this, I left the site. 9/16/15 - Raphael Ketani. The excavation within the footprint of the new building was deep enough (about 20 feet) to remove the great majority of the soil contamination and almost all of the groundwater contamination. The only soil contamination which remained was in the area of the former remote fill port, which was under the utilities and could not be removed easily or treated. Given the present condition of the site, I determined that the spill had effectively been remediated and that the residual contamination was not a threat to the public or the environment. Therefore, I closed the spill case effective today.

Hazardous Waste Summary:

Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D039
Waste Description:	Tetrachloroethylene
Waste Code:	D040
Waste Description:	Trichloroethylene
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Town:	New York City
Record Added Date:	06/01/2015
Record Updated Date:	03/20/2024
Update By:	WBBENNET
Site Description:	"Location: The off-site area is located in the immediate vicinity of the 555 Grand Street Brownfield Cleanup Program (BCP) site and includes the area southwest and northwest from the intersection of Grand Street and Lorimer Street in Kings County, New York. Site Features: The off-site area includes multi-storied commercial & residential structures and paved areas including sidewalks. Current Zoning and Land Use: The general area of the BCP on-site area is zoned for R7A residential with a C2-4 commercial overlay. The off-site area is currently a combination of commercial and residential, as well as utility right-of-ways. Past Use of the Site: The BCP on-site site was most recently used as a dry cleaner between 1999 and 2013. The surrounding area has/is used for residential and commercial purposes. Site Geology and Hydrogeology: Off-site area yet to be investigated. However subsurface soils at the BCP site consist of a mixture of silty non-native fill, to a depth of approximately 2 feet below basement slab grade followed by sandy-silt to a depth of approximately 4 feet below basement slab grade. Groundwater depth in the immediate vicinity of the site is approximately 22.5 feet below the ground surface and is expected to flow easterly. "
Env Problem:	"There is currently no information available for the off-site area associated with the BCP site; this section will be revised as additional information becomes available."
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Description:	"Site Location: The site is located in the Williamsburg section of Brooklyn, Kings County. The site is approximately 100 feet west of the intersection of Grand Street and Lorimer Street on the north side of the Grand Street. Site Features: The site has approximately 25 feet of frontage on Grand Street and is .058 acres. Currently the site is re-developed as a six story building which is used for both residential and commercial purposes. The entire lot was previously developed with a three-story mixed use (residential and commercial)

555 GRAND STREET (Continued) **S109942443**

building; there was a basement which occupied approximately 65 percent of the building and the remaining 35 percent of the building was slab on grade. The former structure was built in 1887. As part of re-development excavation of basement was done down to eleven feet below grade (16 feet for elevator pit). Currently the site is re-developed as a six story building which is used for both residential and commercial purposes. Current Zoning and Land Use: The site is zoned for R7A residential with a C2-4 commercial overlay. The surrounding parcels are currently used for a combination of commercial and residential, and utility right-of-ways. Past Use of the Site: The site was most recently used as a dry cleaner between 1999 and 2013, and also had residential tenants on the second and third floor. Various retail stores operated on the property between 1934 and 1992. According to the regulatory database, the site was listed as a RCRA SQG (small quantity generator). Site Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of silty non-native fill, to a depth of approximately 2 feet below basement slab grade followed by sandy-silt to a depth of approximately 4 feet below basement slab grade. Groundwater depth is approximately 22.5 feet below the ground surface and is expected to flow easterly. "

Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds(VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s restricted residential, commercial, and industrial use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and sub-slab depressurization system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and the media-specific requirements necessary to ensure these controls remain in place and effective."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

The former structure was built in 1887. As part of re-development excavation of basement was done down to eleven feet below grade (16 feet for elevator pit). Currently the site is re-developed as a six story building which is used for both residential and commercial purposes. Current Zoning and Land Use: The site is zoned for R7A residential with a C2-4 commercial overlay. The surrounding parcels are currently used for a combination of commercial and residential, and utility right-of-ways. Past Use of the Site: The site was most recently used as a dry cleaner between 1999 and 2013, and also had residential tenants on the second and third floor. Various retail stores operated on the property between 1934 and 1992. According to the regulatory database, the site was listed as a RCRA SQG (small quantity generator). Site Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of silty non-native fill, to a depth of approximately 2 feet below basement slab grade followed by sandy-silt to a depth of approximately 4 feet below basement slab grade. Groundwater depth is approximately 22.5 feet below the ground surface and is expected to flow easterly. "
Env Problem:	"Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds(VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s restricted residential, commercial, and industrial use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and sub-slab depressurization system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and the media-specific requirements necessary to ensure these controls remain in place and effective."

555 GRAND STREET (Continued) **S109942443**

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and sub-slab depressurization system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and the media-specific requirements necessary to ensure these controls remain in place and effective."
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 489692
Site Description: "Site Location: The site is located in the Williamsburg section of Brooklyn, Kings County. The site is approximately 100 feet west of the intersection of Grand Street and Lorimer Street on the north side of the Grand Street. Site Features: The site has approximately 25 feet of frontage on Grand Street and is .058 acres. Currently the site is re-developed as a six story building which is used for both residential and commercial purposes. The entire lot was previously developed with a three-story mixed use (residential and commercial) building; there was a basement which occupied approximately 65 percent of the building and the remaining 35 percent of the building was slab on grade. The former structure was built in 1887. As part of re-development excavation of basement was done down to eleven feet below grade (16 feet for elevator pit). Currently the site is re-developed as a six story building which is used for both residential and commercial purposes. Current Zoning and Land Use: The

555 GRAND STREET (Continued) **S109942443**

site is zoned for R7A residential with a C2-4 commercial overlay. The surrounding parcels are currently used for a combination of commercial and residential, and utility right-of-ways. Past Use of the Site: The site was most recently used as a dry cleaner between 1999 and 2013, and also had residential tenants on the second and third floor. Various retail stores operated on the property between 1934 and 1992. According to the regulatory database, the site was listed as a RCRA SQG (small quantity generator). Site Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of silty non-native fill, to a depth of approximately 2 feet below basement slab grade followed by sandy-silt to a depth of approximately 4 feet below basement slab grade. Groundwater depth is approximately 22.5 feet below the ground surface and is expected to flow easterly. "

Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds(VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s restricted residential, commercial, and industrial use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and sub-slab depressurization system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and the media-specific requirements necessary to ensure these controls remain in place and effective."
