DEC Memo:	10/25/17 TJD Spill assigned to Rick Lin as per Vought. 10/26/17- Lin - Received emails from Vought with reports. No alternate address or PBS registration found. Review reports with Vought: Remedial Investigation Report (Langan October 2017 Draft) prepared for RedSky Capital, 3 Hope Street, Brooklyn, NY 11211. The Site is 5,000-square feet and is bounded by North 4 Street followed by Public School 017, which consists of a five-story public use building and open air playground, to the north, a four-story mixed use residential/commercial building to the south, a two-story manufacturing building to the east, and Driggs Avenue followed by an open-air parking lot to the west. Currently, the Site is an asphalt-paved lot used for storage of stone slab building materials and is enclosed by a perimeter fence along the property boundary. The proposed future use of the Site will consist of a six-story mixed-use commercial and residential building, with a single below-grade cellar level. The building s below-grade cellar will be used for storage (including residential tenant storage), pet grooming, and building mechanical equipment rooms. Parking proposed for second floor. Excavation will be performed as part of construction of the cellar to a depth of approximately 15.5-feet below sidewalk grade across the entire Site footprint; an elevator pit in the south-central portion of the lot will be excavated to approximately 19.5-feet below sidewalk grade. Work performed under remedial investigation: Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.). Installed five soil borings across the entire project Site, and collected 10 soil samples for chemical analysis from the soil borings to evaluate soil quality. Installed three temporary groundwater monitoring wells throughout the Site to establish groundwater flow and collected three groundwater samples for chemical analysis to evaluate groundwater quality. Installed three soil vapor probes around Site perimeter and collected three samples for chemical analysis. Environmental findings: Elevation of

625 DRIGGS AVENUE (Continued) **S121119942**

the property ranges from 24 to 26-feet with respect to the North American Vertical Datum of 1988
(NAVD 88). Depth to groundwater ranges from 18.5- to 21-feet below existing site grade at the Site.
Groundwater flow is inferred to be from southeast to northwest beneath the Site. The stratigraphy
of the site, from the surface down, consists of approximately 5.5- to 10-feet of historic fill
material underlain by native sands with varying amounts of gravel and silt. The bottom of the sand
unit and bedrock was not encountered during the RI. Data (Soil) 1,2,4-trimethylbenzene 16,000 ppb

ug/l(LMW-3) 10/27/2017 -Lin/Vought- Redevelopment of the property is anticipated to begin in 2017.
A Remedial Action Work Plan to address the hazardous material portion of the E-Designation will be
provided within one week of the submittal of this Remedial Investigation Report. DEC possibly
requires: 1) Air Monitoring due to adjacent playground/school 2)

625 DRIGGS AVENUE (Continued) **S121119942**

Submission of Transaction Screen
Environmental Site Assessment Report prepared by LCS Inc for M&T bank on behalf of RedSky Capital
dated June 2015 as per the RIR. 3) Hotspot excavation, if found, as groundwater is contaminated and
no vertical pathway has been found to date in soil sample. 4) Soil vapor mitigation after
discussion with NYSDOH Walz due to up to 250 ug/m^3 TCE 5) Question on presence of underground
gasoline tanks due to consultant review of transaction Screen
Environmental Site Assessment Report
11/1/2017- Lin/Vought- Lin and Vought had the conference call with Walz from NYSDOH and
Samantha/Shaminder from OER. Per Shaminder, the consultant estimated that only 22'' between the
foundation and the water table, so there might not be enough room to install a SSDS (subslab
depressurization system). Installation of a vapor barrier. PID during excavation and hot spot
excavation. Remedial action plan with community air monitoring plan will come in this week. Nathan
suggested a permanent air monitoring set up in the direction of the school. 8/23/21-Lin-Depth to
groundwater is at 18.5' to 21'. The groundwater flow direction is to the northwest toward east
river. Two (2) 275 gallon and one (1) 550 gallon USTs were removed. Since the tanks were found near
the site boundary, three (3) sidewall soil samples toward the site boundary were taken. All three
(3) soil samples came back clean. Soil on site was excavated to a depth of 15' to 16' bgs. A
hotpsot identified during the RI was excavated down to 20' bgs. Five (5) endpoint bottom samples
were taken across the site and two of the samples were taken in the hotspot area. All five (5)
endpoint soil samples came back clean. Dissolved contamination in the groundwater is expected to
attenuate over time as no contaminated soil remains on site. An engineering composite and vapor
barrier system were installed. An active SSDS was installed. Case closed.

Remarks: cleanup pending - would like to have assigned to Ricky Linn

DEC Memo:	Question is this TCE (PERC) or is it Petroleum? Is this managed by DEC Spills? - Depends on the quantity Case is now being worked on by Tyree - Matt Boeckel 631-249-3150 ext 241 04/25/12 Three hydraulic lifts were removed. End point samples were taken from surrounding the lifts.Some SVOCs exceedances observed in lab analytical data.One VOC TCE was detected(1800 ppb)above DEC guidelines(1300 PPB)in one sample.This detected level is not too high.Therefore,case is closed.(sr)
Remarks:	1800ppb on soil samples. No odor no staining

Acres:	0.279
HW Code:	C224230
SWIS:	2401
Town:	New York City
Record Added Date:	12/07/2015
Record Updated Date:	01/02/2018
Update By:	BXANDERS
Site Description:	"Location: The Former F&S Central Manufacturing site is located at 103 North 13th Street, identified as Block 2279, Lot 34 in the Greenpoint section of Brooklyn. Site Features: The site is comprised of a single tax parcel totaling 12,500 square feet (0.29 acres), and is currently vacant. The exterior walls and concrete slab of a former one-story manufacturing building remain, with the slab approximately 3 feet above sidewalk grade. Current Zoning and Land Use: The site is zoned as a M1-2 district which allows both commercial and light industrial use. The surrounding parcels are used for a combination of commercial and light industrial. Prior to acceptance into the BCP, the site was used for commercial warehouse space. The nearest residential area is approximately 1000 feet to the south. Past Use of the Site: The site was undeveloped prior to 1905. From 1916 to 1930, the site was developed with three small one-story sheds/storage rooms and a portion of a single-story commercial building. The former one-story warehouse/manufacturing building was constructed in 1930. The building was used as an iron pipe warehouse (1940s 1950s), a paper storage warehouse (1960s), metal pipe hanger manufacturing facility (1970s), contractor s storage facility (1990s) and a food storage warehouse (2000s). Site Geography and Hydrogeology: Bedrock in this area of Brooklyn is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth as great as 13 feet below the existing building slab (10 feet below sidewalk grade), followed by a native grey (wet) sandy silt. Bedrock was not encountered at the site. The elevation of the site is approximately 14 feet above mean sea level and gradually slopes to the northwest. The depth to groundwater beneath the site is approximately 7 feet below sidewalk grade. The groundwater flows to the north-northwest."
Env Problem:	"Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzene, ethylbenzene, total xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benz(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, chromium, lead, arsenic and mercury in soil; and 1,1,1-trichloroethane and trichloroethene (TCE) in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and PCB/pesticides. Based upon investigations conducted to date, the primary contaminants of concern include benzene, ethylbenzene, total xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benz(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, chromium, lead, arsenic and mercury in soil; and

FORMER F&S CENTRAL MANUFACTURING CORP. SITE (Continued) **S118372394**

1,1,1-trichloroethane and trichloroethene (TCE) in soil vapor. Soil - The VOCs found in subsurface soils were predominantly in the shallower soils (0-5 feet bgs). Concentrations were found as high as 0.2 ppm for benzene; 7.1 ppm for ethylbenzene, and 31 ppm for total xylene. Both 1,2,4-trimethylbenzene (24 ppm) and 1,3,5-trimethylbenzene (23 ppm) were found in deeper soils at 7 to 11 feet bgs. Offsite investigations were not conducted as the adjacent properties are fully built out with existing structures. The SVOCs were found in the shallower soils. These were found as high as 2.4 ppm for benz(a)anthracene; benzo(a)pyrene (1.7 ppm); benzo(k)fluoranthene (1.5 ppm); and chrysene (3.8 ppm). The exception to this was in the southwest corner of the site, where the same SVOC constituents were found at concentrations approximately 12 to 15 times higher at 12 to 16 feet bgs. The metal constituents were also found mostly in the shallower soils. Chromium was found as high as 381 ppm; lead at 37,500 ppm; barium at 6,840 ppm; and mercury at 11.4 ppm. Hazardous levels of lead (as high as 14.9 mg/L TCLP) were found between 4 and 13 feet bgs in the western half of the site. All soil borings were drilled to 20 feet bgs, and there were no detections of any contaminant below 13 feet bgs. Bedrock was not encountered during the investigation. Groundwater - Both lead and chromium were found to slightly exceed groundwater standards on-site, as well as naturally occurring metals including, sodium, manganese and iron. There were no VOC or SVOC constituents detected in groundwater. Soil Vapor - Soil vapor was sampled at depths ranging from 5 to 6 feet below ground surface (bgs) and low levels of petroleum-related VOCs were noted. Also, TCE and 1,1,1-trichloroethane were detected as high as 173 micrograms per cubic meter (ug/m3) and 2,090 ug/m3 respectively, and are attributed to a suspected off-site source."

Health Problem:	"Remedial actions are complete and have eliminated the potential for contact with site-related contaminants. "

DEC Memo:	On July 10, 2001, RGM Liquid Waste Removal provides NYSDEC with end-point sample results collected on July 3, 2001. 07/11/2001, nysdec notes that the TANK PULLED,SOIL EXCAVATED AND STOCKPILED WAITING FOR DISPOSAL. END POINT SAMPLES TAKEN. 9/2/03 TIPPLE SENT REQUEST FOR DOCUMENTATION. On September 26, 2003, American Environmental Assessment Corporation provided notarized documentation that the tank was properly removed from the site on July 13, 2001. On November 24, 2003, NYSDEC was provided documentation of two Non-hazardous Material Manifests for the disposal of petroleum-contaminated soil dated July 13, 2005. Also, on November 24, 2003, NYSDEC was provided documentation of six soil sample analyses from the sides of the tank pit and the bottom of the pit, dated July 3, 2001. The samples were analyzed for STARS 8021 and 8270 and are acceptable for closing (per TAGM 4046) Spill No.0103335.
Remarks:	anonymous caller reported tanks being removed and tanks are leaking

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 3/14/2001 - Store front building with 3-4 apartments above. 2-275 gallon #2 oil tanks in the basement service the building. Scaggs & Walsh Oil Company made a delivery (no sign of overfill) Later that day the bottom of one of the tanks (looks like corrosion) gave way and approx 100 gallons went to the basement floor and a drywell floor drain. NYFD on scene emptied most of the 275 gallon tank into overpack drums. Scaggs & Walsh arrived on the scene and pumped out whatever remained. Scaggs & Walsh's insurance would not cover the loss because the tank is the property of the building owner and the tank failed due to corrosion. Scaggs & Walsh hired Milro Associates after a verbal discussion with the building owner (Robert Bak 718-628-9700) that the cost of the clean up was the responsibility of the building owner. 3/16/2001 - Sangesland called Milro to find the cleanup status. Paul (at Milro) said between 3/14 and 3/15 a 5'x8' section of the floor was opened up and dug down 2' and 2 cubic yards of contaminated soil was removed. Milro is not working today (3/16) because Scaggs & Walsh is installing new oil tanks. Milro will return on Monday 3/19 to continue excavation. 3/20/2001 Paul at Milro says the excavation is approx 5' x 10' x 3' deep. Because of access problems they can't really excavate any more and he'll probably spend one more day on site. Paul said he would PID the samples first and if they don't look bad, he'll back fill before the soil samples come back from the lab. 4/5/2001 End point sample from excavation was tested for: TCLP Volatiles 8021/STARS (All results were Non-Detect) TCLP Polynuc, Arom. Hydrocarbons (BN) 8270 - Non-Detect Spill closed 4/5/2001

DEC Memo:	2/4/04 Spill date is estimated as occuring sometime in 1999, based upon data submitted by Shell's consultant, Phoenix Environmental. Summary: DTW 20-25'bgs. Flow east to northeast. 7/90-2/98 MTBE concentrations in onsite wells MW-2 and MW-4 ranged from ND to 986ppb. 2/99-2/03 MTBE concentrations in wells MW-2 and MW-4 ranged from 619ppb to 34400ppb. The highest concentrations of MTBE in wells MW-2 and MW-4 were 34400ppb and 23300ppb respectively. From 1990 to 1991,

SHELL OIL CO (Continued) **1000693997**

concentrations in MW-3 ranged from 24,000ppb to 26,000ppb. Product was detected intermittently in well MW-3 from 1991 to 2003. On March 30, 1998 product was not present and a groundwater sample was collected with an MTBE concentration of 3990ppb. In 2000, MTBE concentrations in MW-3 ranged from 181,000ppb to 842,000ppb. From 1990 to 1991, concentrations in MW-1 ranged from 1600ppb to 24000ppb for MTBE. MW-1 was destroyed during construction in 1993. MTBE concentrations in MW-1 appear to be a minor spike, localized to the tank field area. This is supported by the fact that down gradient MW-2 ranged from 14 to 986ppb until 1999 when MTBE concentrations throughout the site increased significantly. 2/13/04 Stipulation agreement faxed(516-997-3673) and mailed to Cary Wolf, Wolf Petroleum and B. Beck, National Environmental. 2/13/04 Spoke with B. Beck. He expressed concern that Shell will not be held responsible for their spill. I explained that Shell spill #9110815 remains open. He will speak to Cary Wolf on Tuesday 2/17/04 and get back to me. 4/21/04 Received letter from Mr. Wolf's attorney. Reluctant to execute a stipulation because they have info suggesting the detection of increased MTBE is related to an upgradient, off-site discharge . There is a Hess station(810 Metropolitan, spill #9702757) but downgradient. Hess is possibly being affected by Amoco as per groundwater monitoring data from Hess from 2/04. 4/22/04 Spoke to B. Beck. Requested they put deadline extension request in writing with deadline for signing stip. 4/28/04 Received unsigned copy of letter from B. Beck. Report can be transmitted on or before June 4, 2004 assuming sampling is completed soon. Installation of upgradient wells may require more time. Will sample and survey all wells, possibly install upgradient wells, and complete FOIL process. Wish to arrange split sampling and gauging with Shell’s consultant. Does not indicate when or if stipulation will be signed. 4/29/04 Referred to Legal, D. Rubinton. 9/29/04 Met with Barry Cohen(Certilman Balin Attorneys), Bruce Beck(consultant National Env.) with J. Rommel and L. Oliva. Wolf is taking responsibility for spill. B. Beck to send report by 10/1/04. To sign stip in interim of consent order. Changed stip to read 2 Bushwick Ave Corp(Wolf Petroleum) as the respondent. Emailed stip to B. Cohen. STIP due 10/6/04. 10/8/04 Spoke to B. Cohen. He will be bringing stip over to Wolf for signature today. 10/15/04 Received signed stip. Also received passing system test results(Crompco). 10/19/04 Stip fully executed by T. Kunkel. Investigation summary report due 12/19/04. 1/14/05 Received letter from B. Beck of partial completion of investigation which includes sample results for three wells. Results indicate BTEX from

SHELL OIL CO (Continued) **1000693997**

ND(MW-2,4) to 820ppb(MW-3).
MTBE from 102ppb(MW-4) to 590ppb(MW-3). MW-1 has been destroyed.
6/30/05 Received quarterly report.
Sampled three wells(MW-2,3,4) in 4/05. BTEX from ND(MW-4) to
3.4ppb(MW-2). MTBE from 3ppb(MW-4) to
17ppb(MW-2). Report states that construction of MW-4 was rehabilitated
to avoid a nearby self-serve
car wash machine run-off from entering well. MW-3 is mounted in a
2'X2' manhole pit which collects
run-off and is oily . Trace oily product found in MW-3(0.3). 1/31/06:
Case reassigned to Andersen.
Recent monitoring report overdue. MW-2 and MW-4 have low contaminant
concentrations. MW-3 has 0.3
inches product. Sent Bruce Beck an email saying quarterly reports are
overdue. He replied saying
samples were just taken and he would send a report in approximately 4
weeks. 3/13/06: Received
letter from Bruce Beck saying a report will be submitted. 5/19/06:
Consent order meeting with Wolf
scheduled for June 2 at 11am. 6/8/06: Meeting with NYSDEC, Barry Cohen
(Wolf's attorney's) and
Bruce Beck (Wolf's consultant) regarding the consent order. Barry
Cohen indicated that Sunoco may
also be a responsible party. 7/10/06: Emailed Bruce Beck to set up a
meeting to discuss
deliverables required for consent order. 7/13/06: Received update
report dated 3/3/06. MW-4 was
repaired. Groundwater samples collected on 1/30/06. MW-3 has a sheen,
heavy oil staining, and a PVC
pipe that connects it to MW-4 (probably used for recovery). Benzene
6.9 ppb in MW4. MTBE 73 in MW4.
NEMA proposed: 1) clean all wells with Biosolve, 2) cleanout MW3
manway casing and seal well at
top, 3) install a monitoring well in the location of former MW1, 4)
sample wells quarterly
(starting after Biosolve use. Approved proposed remedial methods.
8/2/06: Meeting with Bruce Beck
on 7/25/06 to discuss deliverables. Shell is also a potential
responsible party for this spill.
9/28/06: Received email from Bruce Beck: Why was Shell released from
the spill? The numbers
presented by them prior to the 'MTBE spike' were not near closure. The
MTBE spike was a single
event and the post spike concentrations returned to pre-spike
concentrations immediately
afterwards. 1/11/07: Received update report. MW1 redrilled. MW3
cleaned with Biosolve. Wells
sampled on 11/14/06. No product detected. Max BTEX 250 ppb (MW3), max
MTBE 171 ppb (MW3). Quarterly
sampling. 5/1/07: Emailed Bruce Beck to followup on submission date
for next report. 5/10/07: Left
phone message for Bruce Beck to followup on overdue quarterly report.
5/16/07: Reviewed update
report. Wells sampled in February 2007. Trace LNAPL in MW3. Low
dissolved concentrations in all
wells. 8/6/07: Consent order effective 7/27/07. Update report due
10/25/07. 9/12/07: Consent order

SHELL OIL CO (Continued) **1000693997**

modified, RAP due 10/27/07. 2/28/08: Reviewed September 2007 - November 2007 Quarterly Monitoring
Report dated January 10, 2008. VEFR conducted from MW 3 on November 14, 2008. 50 gallons recovered.
Wells sampled on November 14, 2007. 0.05 ft LNAPL in MW3. Relatively low concentrations in other
wells. Wells were gauged but groundwater flow direction was not determined. 3/20/08 - Carlson:
Meeting with Bruce Beck at 10am. A letter-report, titled Final report on Remedial Action, dated
March 18, 2008, was submitted at the meeting. Groundwater samples were not collected, groundwater
flow direction was not determined, and VEFR recovery volume and waste disposal manifests were not
included. Continuation of weekly VEFR events was recommended. 3/24/08 - Carlson: Reviewed report
dated March 18, 2008. Report stated that weekly VEFR events have been conducted since Novemebr 17,
2007. However, no documentation on these events was provided in the report. Sent letter requiring
documentation of VEFR events, quarterly groundwater sampling and gauging, and quarterly reporting.
5/8/08 - Carlson: Reviewed December 2007 - February 2008 Quarterly Monitoring Report dated March
31, 2008, received on May 7, 2008. Gauging and VEFR events were conducted once in November and
December, three times in January, and twice in February. Trace product was found in MW3 in
November, December, and February. Groundwater samples were collected on February 28, 2008. Maximum
BTEX concentration was 3,380 ppb (MW3). Maximum MTBE concentration was 22 ppb (MW1). VEFR events
will continue. 7/24/08: Reviewed Quarterly Report dated June 20, 2008. Weekly gauging of all wells.
A sheen was present in all wells at some point this quarter. Weekly VEFR upgraded to all wells.
Wells sampled in May 2008. MW-3 not samples because a sheen was present. Low dissolved
concentrations. Review effectiveness of VEFR. 8/11/08 - Carlson: Reviewed report dated 8/8/08.
Weekly VEFR ongoing. Sheen present in MW3 and MW 4 in June 2008. Groundwater sampling data was not
included. 8/20/08 - Carlson: Meeting on 8/19/08 with Bruce Beck and Tracy Wall. The Department
requests additional delineation. Workplan due by 10/08. 9/24/08 - Carlson: Reviewed Final Report
dated 8/8/08. 10/30/80 - Carlson: Reviewed June 2008 - August 2008 Quarterly Monitoring Report.
Wells sampled on August 14, 2008. Sheen present in MW3 and MW4. Maximum BTEX concentration 189 ppb
(MW1), maximum MTBE concentration 17 ppb (MW1). Weekly VEFR from MW3, and MW4 if necessary.
Delineation workplan was not received. 11/19/08 - Carlson: Meeting with NEMA. IP due by end of
year. 12/18/08 - Carlson: Received FOIL request for 95-02757, IP deadline extended to 1/30/09 to
allow for review of FOIL request. 2/20/09 - Carlson: DEC Leung

SHELL OIL CO (Continued) **1000693997**

returned case file because FOIL
officer did not get a response from NEMA. Reviewed Quarterly Report dated January 4, 2009. Wells
gauged weekly. Weekly VEFR. Sheen present in every well throughout quarter. Groundwater flow
direction was not indicated on the site plan. IP overdue. Received letter dated January 25, 2009
requesting reduction in VEFR from weekly to twice-monthly. 2/23/09: Received request for extension
from tracy wall. Replied how long of an extension she is requesting (it is already three weeks
overdue, and they have had one extension already). 4/8/09 - Carlson: Reviewed December 2008 -
February 2009 Quarterly Report and Investigation Workplan dated March 22, 2009. Wells sampled on
March 5, 2009. Sheen present in MW1 and MW2. Maximum BTEX concentration 254 ppb (MW3), maximum MTBE
concentration 611 ppb (MW3). Weekly VEFR ongoing. Discuss effectivess of VEFR at the upcoming
meeting. Investigation workplan proposes installation of two downgradient wells on Humbolt Street.
Is it possible to install a well in the parking lot at 358 Humbolt Street? Left voice message for
Tracy Wall. 4/29/09 - Carlson: Met with Bruce Beck. He will pursue access agreement with owner of
parking lot. Revised workplan due 5/30/09. 6/3/09 - Carlson: Received email from Bruce Beck. Access
agreement in progress. Extension needed for workplan submittal. 7/2/09 - Carlson: Received email
from Bruce Beck - access agreement will be sent to off-site owner. 7/8/09 - Carlson: Reviewed March
2009 - May 2009 Quarterly Monitoring Report. Wells sampled on May 28, 2009. Weekly VEFR ongoing.
Sheen in every well throughout quarter. Low dissolved concentrations. 10/7/09 - Carlson: Received
update report. LNAPL in MW 2,3,4. Weekly VEFR ongoing. Revised investigation plan overdue. 10/13/09
- Carlson: Received email from Bruce Beck: sidewalk wells will be installed this week. Revised IP
required for well in private parking lot, they are working on access to the private parking lot.
11/18/2009 - Carlson: Meeting with Bruce Beck. IP for well installation overdue. RIR for sidewalk
well installation due 1/30/2010. Wolf's attorney Barry Cohen will work on access for well
installation in private parking lot. 1/7/2010 - Carlson: Approved extension for investigation and
quarterly report submittal to 1/31/2010. 2/11/2010 - Carlson: Received RIR. Two sidewalk wells are
clean, but soil samples were not collected. Received email - they can go back and do soil borings
to delineate soil. IP for well in private parking lot overdue. 2/17/2010 - Carlson: Portfolio
review meeting with Bruce Beck. NYSDEC to issue letter requiring delineation work plan. 3/4/2010 -
Carlson: Issued letter requiring delineation work plan for soil borings adjacent to monitoring

SHELL OIL CO (Continued) **1000693997**

wells MW5 and 6, and a proposed mw in private parking lot to the SW of the property. Due 4/5/2010.
4/7/2010 - Carlson: Received cc of access request to adjacent property owner. 4/20/2010 - Carlson:
Reviewed update report and investigation work plan. 4/21/2010 - Carlson: Approved work paln for
installation of one off-site monitoring well (in the adjacent private parking lot), and three soil
borings. RIR due in 60 days. 7/16/2010 - Carlson: Reviewed RIR and QMR. Three soil borings
performed adjacent to MW's 3,5,6. Low level soil impact present in boring adjacent to MW3. Sheen
present in MW3. Off-site soil boring in private parking lot was not installed. Weekly VEFR ongoing.
1/14/11 - Obligado - I received a letter from Impact requesting monthly instead of weekly gauging,
since product has not been encountered for the past 3 months. I approved this request. 4/6/11 -
Obligado - I reviewed the 1Q11 update report. BTEX concentrations of 16,760 ug/L were detected in
MW3. No product detected. GW is 22 feet below grade. I reviewed some historical reports to gain
information related to free product and subway tunnel. According to a 1990 Handex report, there is
a subway easement in the northeast corner of the site. The bottom of the tunnel is 26 feet bgs. The
top of the tunnel is approximately 7 feet below grade. Therefore the tunnel cuts across the water
table and probably acts as a ground water barrier. The subway contains a sump-pump system for
seepage along length of the tunnel and two pump stations located within the vicinity of the site.
9/27/11 - Obligado - I reviewed the 2Q11 update report. No product detected. 6201 ug/L BTEX in MW3.
They recommend returning to quarterly gauging due to continued lack of product. Meeting held on
1/30/2012 with Christine Camardella and Kevin Kleaka of Impact Environmental, Barry Cohen of
Certilman Balin, and Carlson, Kolleeny and Urda of NYSDEC. IWP to be submitted in 30 days for an
additional on-site well in the NE portion of the site. May not be feasible because the subway is
located directly adjacent to the site. 3/16/2012 - Carlson: Reviewed 4th quarter 2011 update
report. MW1 not sampled - inaccessible. MW2 - MW4 sampled only. No LNAPL noted. Large decrease in
VOC concentration in MW3 since last sampling. Significant VOC concentration in MW1 in 9/26/11
sampling event. IWP for on-site delineation overdue - as discussed during 1/30/12 meeting. 3/29/12
- Carlson: Reviewed IWP, delineation not accessible due to subway. MNA proposed. 9/11/12 - Carlson:
Reviewed 2nd quarterly update report dated 7/17/12. The report documents groundwater gauging and
sampling conducted in June 2012. Volatile organic compounds are present above the Departments
standards in three wells. 9/12/12 - Carlson: Issued RAWP required

SHELL OIL CO (Continued) **1000693997**

letter. RAWP due 10/12/12.
11/8/12 - Carlson: Received email from Christine Camardella on 9/14/12. Remediation not possible because MW-3 is located 13 feet from the subway tunnel. No intrusive work allowed within 20 feet of subway tunnel (this includes chemical injection). Replied to email - how about waterloo oxygen emitters? 07/15/13 - Spill Case is transferred from Sarah Carlson (Section C) to Brevdo (Section B) as per DER Region 2 decision. VB 07/30/2013 - Spill Case is re-assigned to Alex Zhitomirsky.
Re-assignment of Wolf cases to Alex Zhitomirsky discussed between Alex Zhitormirsky and Vadim Brevdo on 7/29/2013 and via Brevdo's e-mails of 7/17/2013 and 7/29/2013. VB 11-15-2013 Received an e-mail from Christine Camardella dated 11-13-2013: Alex, This is to inform you that we are proceeding with the installation of one soil boring at the above-referenced Site on Monday, November 18th. The soil data will be used to determine the effectiveness of the soil vapor extraction system that operated at the Site pursuant to our previous request for no further action in which the NYSDEC requested current soil data. If you have any questions please do not hesitate to contact me. Thank you. Christine Camardella IMPACT ENVIRONMENTAL T - 631.269.8800 I left a message requesting info regarding location of the planned boring. AZ 2-10-2014 Reviewed a 2nd quarter 2013 monitoring report received on August 16, 2013. The report stated that total VOCs ranged 10 ppb to 853 ppb in MW-3. Contamination found in MW-3 is due to residual contamination from the original spill number. Impact conducted a vacuum enhanced fluid recovery (EFR)event on June 6, 2013. Approximately 84 gallons of water was removed from two wells. AZ 3-30-2014 Reviewed a subsurface investigation report dated April 18, 2014. A soil boring was advanced and exhibited no contamination. Groundwater was sampled. Well MW-3 exhibited 1,305 ppb of total VOCs. Previous reading was 841 ppb (contamination increased). I have discussed the site with Christine Camardella.
SVE system existed at the site, apparently installed by Tyree. No background soil sampling results exist. The system doesn't exist anymore. Apparently, no soil samples were taken after the operation of the system discontinued. Ms. Camardella will contact Tyree and try to obtain soil data. Also, ORC socks will be installed. AZ 10-9-2014 Discussed the site with C. Camardella. She stated that there is a residual contamination in MW-3, ABOUT 1500 PPB of total VOC. It was decided that Impact will consider re drilling and and reinstalling this well. AZ 3-27-2015 Reviewed a subsurface investigation report dated August 8, 2014. Impact conducted a vacuum enhanced fluid recovery event

SHELL OIL CO (Continued) **1000693997**

on June 6, 2013. Aproximately 84 gallons of water was removed from MW-3 and MW-4. In addition, as recommended by DEC, two oxygen release compund filter socks were installed in MW-3 on June 17, 2014. Groundwater was sampled. Well MW-5 exhibited 1,562 ppb of total VOCs. AZ 4-6-2015 Reviewed the 1st Quarter Monitoring Report and closure request dated March 5, 2015. SVE system was operated at the site in the early 1990's. A vacuum enhanced fluid recovery was conducted on June 6, 2013. ORC socks were installed in 2014. Monitoring well M-13 was air lifted and re-developed in an effort to remove particles that may be clogging the screen. Based on the current groundwater and soil conditions, Impact requested no further action for this spill. 4-7-2015 The following e-mail was sent to C. Camardello and V. Brevdo: Dear Christine, I have reviewed the 1st Quarter Monitoring Report and Spill Closure Request dated 03/05/2015. The site has been a gasoline service station since at least the early 1930 s. Spill #0330060 was opened due to a spike of MTBE in monitoring well MW-3. Soil investigation was performed in 2010. Analytical results indicated that concentrations of benzene, toluene, ethyl benzene and total xylenes and MTBE were ranging from 5 ppb to 68 ppb. Concentrations of semi-volatile organic compounds (SVOCs) were non-detect in al soil samples taken. One soil probe was advanced in 2013, and showed no exceedances of NYSDEC Recommended Soil CLeanup Guidance Values. Groundwater samples were collected in February 2015. Concentrations of total Volatile Organic Compounds (VOCs) ranged from below reporting limit to 5.4 ppb. Based upon results of the sampling, Impact recommended closure of spill #0330060. I concur with this request. All wells should be checked for the presence of free phase product prior to decommissioning. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts may need to be taken to fully prevent vapor

SHELL OIL CO (Continued) **1000693997**

intrusion into any site development
and to ensure human health and safety. This spill closure does not exempt the Responsible Parties
from compliance with any applicable laws and regulations. Please be advised that you should
maintain a permanent file of all documentation and correspondence regarding this case for future
use as the Department's files may not be maintained indefinitely.
Sincerely, Alex Zhitomirsky -
Engineering Geologist 2 NYS Department of Environmental Conservation
47-40 21st Street, Long Island
City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov
1-7-2016 Reviewed a letter by Impact Env., dated 5-15-2015, confirming well decommissioning. The
letter stated that five monitoring wells were properly decommissioned and abandoned by Impact
Environmental. AZ

Remarks: MTBE spike detected during groundwater monitoring for spill #9110815. Possible new release. Currently an Amoco station owned by Wolf Petroleum.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was K FOLEY SITE IS NOW AN AMOCO, OWNED NY WOLF PETROLEUM, PBS #2-1904112. DTW:22-24': GWF:NE. PRODUCT IN MW-2 AND MW-3. 8/5/99 mtg: EnviroTrac will review and submit all historical data related to this site going back to the early 1990's. EnviroTrac will also review the contamination in well #3 and propose a clean up system (possibly biological) 11/03 Reassigned from Sangesland to K Foley. 11/20/03 E-mail from Steve Sangesland to Rob Rule: It requires opening up a new spill for Amoco before closing out the old Shell spill case for the site. I believe Shell has made it's case that the present problem is due to Amoco's action, but Kerry will need to take action on it. 2/4/04 Spoke to Rob Rule. Requested he send actual historic concentration data. Data from post-1999 is indicative of a new release,

SHELL OIL CO (Continued) **1000693997**

however Shell needs to prove their case that concentrations were decreasing toward and close to groundwater standards. Rob indicated they have previously tried to come to an agreement with Wolf Petroleum but had no response. 2/6/04 Received email from P. Sherwood, Phoenix Environmental. He attached copy of 6/6/03 letter to S. Sangesland requesting closure. Shell sold property to Wolf in April 1992. A product recovery pump and SVE system were operated by Shell from 1993 to 1994 to address residual hydrocarbons. Groundwater sampling continued until January 2000. Samples were collected and analyzed for VOCs and SVOCs in February 2003. From July 1990 to Februrary 1998, MTBE concentrations in on-site wells MW-2 and MW-4 ranged from non-detect to 986ppb. From Februrary 1999 to February 2003, MTBE concentrations in wells MW-2 and MW-4 ranged from 619ppb to 34,400ppb. Highest concentrations of MTBE in wells MW-2 and MW-4 were 34,400ppb and 23,300ppb, respectively. From 1990 to 1991, MTBE concentrations in MW-3 ranged from 24,400ppb to 26,000ppb. Product was detected intermittently in MW-3 from 1991 to 2003. On March 30, 1998 product was not present and a groundwater sample was collected with MTBE conc at 3,990ppb. In the most recent groundwater sampling results of MW-3, collected in 2000, MTBE ranged from 181,000ppb to 842,000ppb. In 1990 and 1991, groundwater samples were collected from MW-1 and analyzed for MTBE. Concentrations ranged from 1,600ppb to 24,000ppb. MW-1 was destroyed in 1993. MTBE concentrations in MW-1 appear to be a minor spike, localized to the tank field area. This is supported by the fact MTBE concentrations in downgradient well MW-2 ranged from 14ppb to 986ppb until 1999, when concentrations increased significantly. 6/8/04 Meeting with Shell. They agreed to keep monitoring gw until legal issues have been resolved with Wolf for spill #0330060. DEC expects resolution in 6-12 months. 11/23/04 Met with P. Sherwood, B. Hoashi(Phoenix) and R. Rule(Shell). Samples collected 8/30/04 showed 0.38' free product in MW-3. BTEX ranged from 3ppb(MW-2) to 20ppb(MW-4). MTBE from 18ppb(MW-2) to 251ppb(MW-4). Requesting closure due spill under new owner. See spill #0330060.

Remarks: PRODUCT IN SITE WELL MW3. WAS SULLIVAN SPILL. RE ASSIGNED TO MULQUEEN 4/18/95. SHELL ADDRESSING PROBLEM AT SITE, SEE FILE

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Update By:	BXANDERS
Site Description:	"BCP Denial Letter signed by DER Div Director on 2/19/14. Site Location: The proposed 94 N. 13th Street BCP site is located in the Williamsburg section of Brooklyn, Kings County. The site is made up of two tax parcels and is bordered by Wythe Avenue, N. 12th Street, and N. 13th Street. Site Features: The site is developed with two-one story commercial/industrial buildings which were built in the 1960's and are occupied. There is a small parking area and buildings cover most of the site area, which is approximately 1.147 acres in size. Current Zoning and Land Use: The site is zoned M1-2 which includes light industrial uses and is currently used by a manufacturer of clear plastic bags, and a manufacturer of wooden pallets. Past Uses of the Site: Previous uses were manufacturing and include the storage of manufactured gas and also as a plating facility. Site Geology and Hydrogeology: The geologic setting of Long Island is well documented and consists of crystalline bedrock overlain by layers of unconsolidated deposits. The bedrock in this area is igneous intrusive classified as the ravenwood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisteing of dredge spoils, rubble and/or other materials have historically been used to raise and improve the drainage of low lying areas. Subsurface soils consist of a mixture of a silty non-native fill, to a depth of approximately 12 feet below grade followed by sand and gravel. The elevation of the site is 15 feet above National Geodetic Vertical Datum (NGVD) and the area topography gradually slopes to the northwest. Groundwater is present at a depth

94 N. 13TH STREET (Continued) **S116041508**

	of approximately 7 feet below the surface and is expected to flow north. "
Env Problem:	"Nature of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include benzene, toluene, ethylbenzene and xylene (BTEX), napthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene; various SVOCs (PAHs), including benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene; and several metals (lead, mercury, barium, nickel, zinc and copper). Soil- Subsurface soil contains maximum concentrations of BTEX (944 ppm), napthalene (280 ppm), total PAHs (218 ppm), lead (920 ppm), mercury (18 ppm). The metals concentrations were 920 ppm for lead, 18 ppm for mercury, 160 ppm for copper, 52 ppm for nickel, 2,300 ppm for zinc, and 2,400 ppm for barium. Groundwater- On-site groundwater contained low levels of PAHs, with a maximum concentration of total PAHs of 7 ug/L. Lead was detected at a maximum concentration of 254 ug/L. Off-site groundwater contained BTEX concentrations as high as 6,480 ug/L, 1,600 ug/L of napthalene, total PAHs of 1,670 ug/L, 600 ug/L of 1,2,4-trimethylbenzene,and 160 ug/L of 1,3,5-trimethylbenzene. DEC Memo:	06/27/14-Hiralkumar Patel. alternate addresses: 94-102 North 13th Street, 45-59 Wythe Ave, 103-109 North 12th Street 3:51 PM:- DEC Vought sent copy of email he received from DEC Rivera. DEC Rivera received inquiry from Lisa Bloodgood. Ms. Bloodgood visited site on 06/26/14 and noted awful odors at the site. 4:30 PM:- visited site. noted very strong odors in and around the subject site. at the time of inspection, site construction activities were not happening, but a groundwater treatment system was running. site soil has been disturbed and some areas have been excavated to groundwater which is about 10-15 ft bg. met with Terrance, person who is monitoring groundwater treatment system. he mentioned that system will operate 24/7. noted white smoke from pump on the treatment system. spoke with Raphael Rivera (973-417-4467), person who has rented the treatment system. he mentioned that the system uses biodegradable oil and smoke from the system is not hazardous. spoke with Mordy Steinfeld (on-site) and Charles Sosik (over the phone). they are working to get contractor to resolve odor issue. also spoke with John Brooks (over the phone), attorney representing the site owner/developer. he will discuss with National Grid. Mordy Steinfeld **site developer** Level Hotel Ph. (718) 599-1145 (o) (432) 363-5377 (c) Email: mordy@levelhotel.com John Brook **attorney for site owner/developer** PH. (516) 455-0215 received call from Mr. Brook. he mentioned that developer's crew will cover site excavation area with tarp to control any odors from open excavation. while waiting for response from property owner/developer's crew, met with Mr. Morang from GEI, around 7 PM. at this time, the site was locked and no access provided to GEI. GEI represents National Grid. Mr. Morang mentioned that GEI has four air monitoring stations within the property, along the perimeter. he noted that there were no PID readings during work hours today. but after site work was completed, the groundwater treatment system was turned on. he also mentioned that the treatment system was installed recently. Mr. Morang suspects odors due to

94 N. 13TH STREET (Continued) **S116041508**

improper installation of the treatment system, but it can not be confirmed as no site access
available. alongwith Mr. Morang, we checked air quality near corner of Wythe Ave and N 13th Street
(where the treatment system is located) and found PID readings around 0.4 ppm. at this time, air
quality was improved, but there were still some pockets of strong odors. Mr. Morang mentioned that
from next week, GEI will use foam to abate any odors from the site. Russell Morang GEI Consultants,
Inc. Ph. (860) 368-5416 (O) (860) 608-1438 (C) Email: rmorang@geiconsultants.com Donald Campbell
National Grid Ph. (718) 963-5453 (O) (347) 452-5983 (C)
06/30/14-Hiralkumar Patel. 9:40 AM:-
visited site. noted tarp in deeper excavation areas where groundwater was visible during earlier
site visit. also noted a tarp on the entire frac tank. some odors noted near the intersection of
Wythe Ave and N 13th St. DEC Scott Deyette (BCP # C224186) is managing this former MGP site. after
discussing with DEC Austin, case closed. refer to BCP # C224186.
07/01/14-Hiralkumar Patel. 2:37
PM:- spoke with DEC Scott. informed him that as per Mr. Morang, GEI was planning to use foam to
abate odors. Scott has discussed with involved parties and mentioned that GEI is there only for air
monitoring and property owner is responsible to address any environmental issues. Scott asked to
provide his cell phone number (518-461-3721) to whoever has any inquiry about remediation.

Remarks: Lisa Bloodgood went to site on 06/26/14 and noted odors at the site.

Program:	BCP
Site Code:	551700
Acres:	0.650
HW Code:	C224262
SWIS:	2401
Town:	New York City
Record Added Date:	06/14/2017
Record Updated Date:	12/26/2024
Update By:	AAOBLIGA
Site Description:	"Location: The site is comprised of two parcels designated as block 2279, lots 1 and 9, totaling 0.65 acres, and is located at 29-41 Wythe Avenue and 180 North 14th Street in the Williamsburg neighborhood of Brooklyn, NY. Site Features: Lot 1 was improved with a 1-2 story industrial building constructed circa 1925. Lot 9 was improved with a 1-story industrial building constructed circa 1950. Both buildings were recently demolished. Current Zoning and Land Use: The site is currently zoned M1-1 (manufacturing). M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. The site is currently vacant, with concrete covering the entire site. The land use in the immediate vicinity of the site includes an industrial manufacturing building and new development project to the west, a new hotel and retail shops to the south, new construction, a high school and an existing office building to the east, and an industrial/manufacturing property to the north. Past Use of the Site: A portion of Lot 1 was occupied by a varnish factory beginning sometime prior to 1887. The varnish works expanded to cover the entirety of Lot 1 by 1942. Records show that,

FORMER DUTCH MASTERS PAINT AND VARNISH CO. (Continued) **S121493079**

by 1951, this lot was occupied by the Dutch Masters Paint and Varnish company until 2007. This lot was also used as a manufacturer of typewriter ribbon, a clothing warehouse, a motorcycle repair shop and art studio. A portion of Lot 9 was used as a foundry for the manufacture of window weights from 1902 through 1916. By 1942, the property was used as a bed spring manufacturer. Dutch Masters Paint and Varnish took a mortgage on this lot in 1969. Later, the property was used as a warehouse for typewriter ribbons and a clothing warehouse. In 2009, it was rented out as music studios. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of approximately 8 to 10 feet below the surface, followed by native silty-sand and clay layers. The elevation of the property is approximately 12-13 feet above mean sea level. The area topography gradually slopes to the north toward the East River. Groundwater is 7.5-11.8 feet below grade under water table conditions and flows to the north east toward the East River. The entire site is located within a designated moderate risk flood zone area with a portion of Lot 1 in a high-risk flood area. "

Env Problem: "Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides, and emerging contaminants (per and polyfluorinated alkyl substances, or PFAS, and 1,4-dioxane) in groundwater. Soil vapor samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include trichloroethene (TCE), and petroleum related SVOCs. Soil - TCE was found in shallow soil across the site. The maximum concentration of trichloroethene was 3.1 parts per million (ppm), which exceeds the applicable protection of groundwater soil cleanup objective (0.47 ppm). Historic fill material has been identified across the site to depths of 15-17 feet. Analysis of the material showed benzo(a)anthracene at 32 ppm, benzo(a)pyrene at 31 ppm, benzo(b)fluoranthene at 24 ppm, chrysene at 51 ppm compared the unrestricted SCO of 1 ppm, and indeno(1,2,3-CD)pyrene at 18 ppm compared to the unrestricted SCO of 0.5 ppm. Data does not indicate any off-site impacts in soil related to this site. Groundwater - TCE was also found in groundwater at the site at a maximum concentration of 8.7 parts per billion (ppb), which slightly exceeds the groundwater standard of 5 ppb. Petroleum related SVOCs were detected across both lots on the site, including benzo(a)anthracene at 66 ppb, benzo(a)pyrene at 61 ppb, benzo(b)fluoranthene at 31 ppb, chrysene at 58 ppb, and indeno(1,2,3-CD)pyrene at 26 ppb, all above the standard of 0.002 ppb. Several metals were detected above standards, including iron, magnesium, manganese and sodium in the majority of samples. These exceedances are not considered contaminants of concern and are likely naturally occurring. Emerging contaminants (i.e., PFAS) were detected at maximum combined concentration of 134.37 parts per trillion. There were no PCBs, pesticides detections above standards. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - Petroleum related VOCs were detected at low levels in soil vapor samples across the site. TCE was detected in soil vapor at concentrations ranging from 0.24 micrograms per cubic meter (ug/m3) to 320 ug/m3. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Access to the site is restricted, which prohibits public access. Persons who enter the site could contact contaminated soil or groundwater by disturbing the surface materials. Contaminated

FORMER DUTCH MASTERS PAINT AND VARNISH CO. (Continued) **S121493079**

groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are currently no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern. However, the potential exits for the inhalation of site contaminants for any future onsite development and occupancy. Environmental sampling indicates that soil vapor intrusion is not a concern for offsite buildings. ''

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN
10/28/2005: Project
reassigned from Sun to Andersen. Reviewed the triannual report dated
8/19/2005, there is local
contamination around MW-4. A stip needs to be sent out to begin
remediation. 12/6/05: Reviewed the
tri-annual report dated 11/29/05. Three MW's sampled on October 11,
2005. Max BTEX is 2,318ppb
(MW4) and max MTBE is 91 (MW2). Fluctuating concentrations. Sent RAP
required letter. 1/3/06: Spoke
with Gail Russo of Quantum. I gave verbal approval for the RAP
received. Installation for SVES/AS
system scheduled for January 4-5, 2006. 1/4/06: Letter with RAP
approval mailed. SVE/AS data sheets
are required to be submitted. 1/26/06: 1/25/06 meeting with Quantum,
NYSDEC, and ET. SVE/AS wells
have been installed. Three short term SVE/AS events will be performed.
5/19/06: Sent Gail Russo an
email to followup on overdue update report. 6/8/06: Received update
report dated June 2, 2006.
Three extended-period SVE/AS events performed in first third 2006. ORM
socks installed in wells
MW-2 and MW-4. Wells sampled on 2/24/2006. MAX BTEX 1,662 ppb (Mw4),
max MTBE 447ppb (MW-2).
Decreasing BTEX trend and slight increase in MTBE. Three additional
extended-period SVE/AS events
will be performed in the second third 2006, and new ORM socks
installed. 7/5/06: Meeting on 6/28/06
with Hess, Quantum, NYSDEC, EnviroTrac and GSC. Short term SVE/AS is
effective. 8/29/06: Received
update report dated 8/21/06. Short term SVE/AS on wells MW4, SVE1,
AS1, AS2 on June 16 and June 22
2006. Groundwater sampled on June 29 2006. Max BTEX 16 (MW4), max MTBE
1,420 (MW2). ORM socks
installed in MW2 and MW4 following the SVE/AS event on June 16 2006.
Large decrease in BTEX in MW4.
MW2 still shows significant MTBE contamination. Report states
concentrations in MW2 will continue
to be evaluated to determine if these concentrations attenuate
naturally or require remedial action
. This site is on a triannual sampling plan. 1/17/07: Meeting on
1/16/07 with Hess, Delta, NYSDEC.
1/23/07: Received update report. Wells sampled on 10/7/06. Max BTEX
156 ppb (MW4), max MTBE 523 ppb
(MW2). ORC socks in MW 2 and 4. 4/26/07: Received update report. Wells
sampled on 2/23/07. Max BTEX
175 ppb (MW4), max MTBE 690 ppb (MW2). ORC socks in use. 8/17/07:
Reviewed update report. Wells
sampled on 6/11/07. Max BTEX 295 ppb (MW4), max MTBE 110 ppb (MW2).
Two extended period portable
sve/as events were conducted in June around MW4. ORC socks were
installed in MW2 and MW4. Sent
email requesting that air flow rate and effluent PID be measured when
conducting portable SVE/AS
events, and that the total petroleum recovered then be calculated.
2/11/08: Reviewed August 2007 -

MERIT METROPOLITAN (Continued) **1000263777**

November 2007 Site Status Report. Wells sampled on October 5, 2007. Max BTEX 350 ppb (MW4), max MTBE 100 ppb (MW2), benzene ND in all wells. No further action requested. 5/6/08 - Carlson: Reviewed first triannual 2008 update report dated April 28, 2008. Wells sampled on 2/12/08. Maximum BTEX concentration 96 ppb in MW4. Maximum MTBE concentration 2 ppb (MW2). ORC socks in use in MW2 and MW4. Meeting scheduled for 5/7/08. 9/8/08 - Carlson: Reviewed August 2008 Update Report. Wells sampled on June 13, 2008. Low dissolved concentrations. Sent email to Hess/Envirotrac - remove ORC socks from MW-2 and MW-4. 9/15/08 - Carlson: Received email notification that ORC socks removed on 9/11/08. 10/22/08 - Carlson: Meeting with Hess/Envirotrac. They have recent soil data from SVE/AS well installation. They will submit a petition for closure. 1/8/09 - Carlson: Reviewed closure request dated 12/12/08. Three soil borings were completed. Impacted soil present in SB3. Delineation workplan required for soil borings/monitoring wells on Bushwick Avenue. (Wolf Bushwick Avenue site is directly downgradient). Workplan due 2/8/09. 1/9/09 - Carlson: Reviewed update report. Low level groundwater impact remains. 1/22/09 - Carlson: Approved workplan for the installation of two sidewalk wells. 2/27/09 - Carlson: Received email request from Ed Russo to delay quarterly sampling by one month in order to include new wells. Report will be submitted in April as planned. Request approved. 3/18/09 - Carlson: Meeting with Hess and Envirotrac. Delineation not possible due to subway. RAP will be submitted in April 2009. Quarterly gauging requested. 5/7/09 - Carlson: Reviewed April 2009 update report. RAP overdue. Emailed John Schenkewitz about overdue report. 5/11/09 - Carlson: Received email from Ed Russo, RAP will be submitted in August 2009. 8/7/09 - Carlson: Reviewed update report. Low dissolved concentrations. Workplan to address residual soil impact will be submitted by end of the month. 8/10/09 - Carlson: Received work plan for installation of four on-site wells. 8/19/09 - Carlson: Meeting with Hess and Envirotrac. 8/27/09 - Carlson: Issued approval letter for installation of four on-site monitoring wells. 11/17/09 - Carlson: Reviewed update report. Low dissolved concentrations. New wells were not installed yet. 12/10/09 - Carlson: Reviewed second closure petition. Four additional confirmatory borings were installed. 1/27/2010 - Carlson: Meeting with Hess. NYSDEC to review case file internally. 5/20/2010 - Carlson: Meeting with Hess. NYSDEC still requires additional borings around SB3. 5/28/2010 - Carlson: Reviewed update report. Low dissolved concentrations. 8/15/2010 - Carlson: Reviewed July 2010 update report. Low dissolved

MERIT METROPOLITAN (Continued) **1000263777**

concentrations. Report states Hess to
delineate after receipt of NYCTA permits. Delineation work plan was
not submitted. 8/31/11 -
Obligado - I reviewed the 2Q11 report. BTEX is ND. They are still
trying to get permit to do the
soil delineation work. 11/14/11 - Carlson: Reviewed October 2011
update report. Hess still waiting
for permit approval from NYCTA for delineation. 4/24/2012 - email from
Joe Rennie of EnviroTrac
Please be advised that we are tentatively scheduled to conduct
drilling at the above referenced
location on Tuesday May 1, 2012 as per the attached NYSDEC approval
letter. Please note that this
project has been delayed due to New York City Transit Authority
permitting requirements as this
location is in close proximity to the New York City subway system. As
discussed previously with
NYSDEC case managers Mark Tibbe and Sarah Carlson, Hess expects that
if soil and groundwater
sampling data from this drilling is favorable, that closure of NYSDEC
spill # 95-02757 will be
granted by NYSDEC. If you have any questions, please do not hesitate
to contact me at (631)
924-3001. 6/19/2012 - reviewed 1Q2012, 4/30/2012, by EnviroTrac. DTW
9.88' to 22.24' bg. Flows to
southwest. 5 wells were sampled. MW-4, 4.4 ug/L BTEX, 8.3 ug/L MTBE.
others are ND. Proposes to
abandon monitoring wells MW-1, MW-2, MW-3 and MW-5. Next sampling
event will be in 5/2012.
6/20/2012 - comments to Hess/EnviroTrac. 1) need to have the newly
installed wells data in order to
make the call whether or not to abandon the wells; 2) the requirement
on the petition for closure:
site use history; show all the investigation; show all the
remediation; show all the remediation
results; and the sensitive receptors information. reply form Edward
Russo thanks for getting back
to us. The data from the newly completed soil borings/wells indicated
positive results, so we are
working on the request for closure now. The request for closure will
incorporate your
comments/requests below. You can disregard the request to abandon MWs
1, 2, 3, and 5. The closure
request will be submitted to you within the next couple of weeks.
7/18/2012 - reviewed the Request
for Spill Closure Letter (the Letter) dated June 29, 2012, prepared by
EnviroTrac Enviromental
Services (EnviroTrac) on behalf of Hess Corporation (Hess). The Letter
summarizes the Site s
history and requests site closure. Denies the spill closure request
due to the uninvestigated and
unremediated residual contamination at the Site. see the letter for
details on the required
additional work to be done. Response by 8/20/2012. 10/4/2012 -
Reviewed the response letter dated
8/20/2012 from Hess/EnviroTrac. Basically, they responded on DEC
comments. The soil contamination

MERIT METROPOLITAN (Continued) **1000263777**

is either infeasible to treat and the previous investigation has delineated the extent of the
mentioned soil contamination location. Hess/EnviroTrac request for spill closure. 10/15/2012 -
presented the case to the Section committee. Spill closure is denied based on: see the memo in eDoc
for more details. 1) Residual contaminated soil was present in the former remote fills area at
depth of 2 feet below ground surface. Confirmatory soil samples are required. As-built drawing and
utilities mark out map shall be provided to prove infeasibility to remediate the area. 2) The
confirmatory soil boring SB-3 exhibits soil contamination exceeds CP-51 SCOs at depth of 29-30
feet. Additional remediation and confirmatory sampling shall be required. email to Hess/EnviroTrac
requiring a work plan to address the above concerns/requirement by November 2012.
5/3/13-Vought-During Regional Spill Engineers meeting in Albany with DEC Hale and DEC Farrar, RSE
and Paul John concurrence with email dated 4/24/13 from DEC Hale was confirmed regarding this site.
As per email dated 4/24/13 from DEC Hale (with attached Powerpoint presentation) with cc to DEC
Farrar, Ottoway and Regional Director and RSE, soil exceedences observed were moderate and further
excavation is not warranted and spill closure is warranted due to: clean downgradient monitoring
wells for numerous years; age of spill and fact that wells are have shown no increase in
groundwater contamination for numerous years and as such there is no likelihood for downward
migration of soil contamination through the soil column to the water table; excavation of UST
systems and large amount of contaminated soil removed from site; Spills Database as an
institutional control to account for possible future changes in site use as none reported to date;
and addition of soil contamination notification in Spill Closure Letter. This spill to be closed by
Feng or to be closed by Vought after transfer to Vought by Feng.
5/6/2013 - As per DEC Jeff
Vought's directives, spill is closed.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site Description:	"Location: The 828 Metropolitan Avenue site is addressed at 808-834 Metropolitan Avenue, Brooklyn, NY 11211. The site is located in Kings County, New York and is identified as Brooklyn Block 2916, Lot 14. A lot merger was filed with the Department of Finance in June 2022 which consolidated Lots 8, 14, 16 and 17 into a new Lot 14. The site is approximately 0.53 acres in size. The site is bounded to the north by Metropolitan Avenue, to the west by Bushwick Avenue, to the south by multi-family residential developments, and to the east by a four-story residential building. The site is located within an urban area of East Williamsburg characterized predominately by multi-story commercial and residential buildings. The Metropolitan Transit Authority (MTA) subway L line is located to the west under Bushwick Avenue. Site Features: A new 9-story building with a full cellar level is currently under construction on the site. The building will be used for mixed residential (including affordable housing) and commercial purposes. The gross square footage of the new development is 127,355.45 sq ft. The cellar encompasses the approximately 20,420-sq-ft Site footprint and extends to a depth of 15 to 16 feet below ground surface ft bgs). About 136 dwelling units are proposed, of which about 32 units will be designated as affordable housing. Current Zoning and Land Use: The site is located within a residential and commercial zoning district (R7A and R6-B with a Commercial C2-4 overlay). A new 9-story building with a full cellar level s currently under construction. The building will be used for mixed residential (including affordable housing) and commercial purposes. The gross square footage of the new development is 127,355.45 sq ft. The cellar encompasses the approximately 20,420-sq-ft Site footprint and extends to a depth of 15 to 16 feet below ground surface (ft bgs). About 136 dwelling units are proposed, of which about 32 units will be designated as affordable housing. Past Land Use: The site was formerly improved with several multi-story commercial and residential buildings as early as 1910 through the mid-1960s. In the mid-1960s, the former structures on the western half of the site were razed and redeveloped with a single-story commercial building utilized for used car sales with parking. Residential buildings were constructed as early as 1910 on the eastern half of the site. By the late 1970s, various tax lots in the western portion of the site were consolidated into one tax lot (former Lot 8) and occupied by a gasoline filling station, developed with a single-story shed and an overhead canopy with a single-story kiosk. The petroleum filling station on the

828 METROPOLITAN AVENUE (Continued) **S129112350**

western portion of the site was active from the late 1970s until April 2022. The remainder of the subject site remained unchanged until April 2022 when the residential buildings on former Lot 16 were demolished. Site Geology and Hydrogeology: The site is underlain by fill material predominantly consisting of brown to dark brown coarse to fine sand with varying amounts of gravel, concrete, brick, asphalt, and silt. Fill was observed to extend to depths of 5 feet below ground surface (ft bgs). Below the fill is a layer of various graded sands with intermittent clay lenses that extends to at least as deep as 35 ft bgs. "

Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were acetone, benzo(a)anthracene benzo(b)fluoranthene, chrysene, lead, mercury, PCBs, Pesticides, Perfluorooctanoic acid (PFOA), perfluorooctanesulfonic acid (PFOS), 1,4-Dioxane, in soil, benzene, methyl tert-butyl ether, benzo(a)anthracene, benzo(b)fluoranthene, chrysene, PCBs, PFOA, 1,4-Dioxane in groundwater, tetrachloroethene and trichloromethane in soil vapor. No residual contamination of concern remains. Remedial actions have successfully achieved the soil cleanup objectives for unrestricted use. "
Health Problem:	"Remedial actions are complete and addressed the potential for contact with site-related contamination."

Site Description:	"Location: The 828 Metropolitan Avenue site is addressed at 808-834 Metropolitan Avenue, Brooklyn, NY 11211. The site is located in Kings County, New York and is identified as Brooklyn Block 2916, Lot 14. A lot merger was filed with the Department of Finance in June 2022 which consolidated Lots 8, 14, 16 and 17 into a new Lot 14. The site is approximately 0.53 acres in size. The site is bounded to the north by Metropolitan Avenue, to the west by Bushwick Avenue, to the south by multi-family residential developments, and to the east by a four-story residential building. The site is located within an urban area of East Williamsburg characterized predominately by multi-story commercial and residential buildings. The Metropolitan Transit Authority (MTA) subway L line is located to the west under Bushwick Avenue. Site Features: A new 9-story building with a full cellar level is currently under construction on the site. The building will be used for mixed residential (including affordable housing) and commercial purposes. The gross square footage of the new development is 127,355.45 sq ft. The cellar encompasses the approximately 20,420-sq-ft Site footprint and extends to a depth of 15 to 16 feet below ground surface ft bgs). About 136 dwelling units are proposed, of which about 32 units will be designated as affordable housing. Current Zoning and Land Use: The site is located within a residential and commercial zoning district (R7A and R6-B with a Commercial C2-4 overlay). A new 9-story building with a full cellar level s currently under construction. The building will be used for mixed residential (including affordable housing) and commercial purposes. The gross square footage of the new development is 127,355.45 sq ft. The cellar encompasses the approximately 20,420-sq-ft Site footprint and extends

828 METROPOLITAN AVENUE (Continued) **S129112350**

to a depth of 15 to 16 feet below ground surface (ft bgs). About 136 dwelling units are proposed, of which about 32 units will be designated as affordable housing. Past Land Use: The site was formerly improved with several multi-story commercial and residential buildings as early as 1910 through the mid-1960s. In the mid-1960s, the former structures on the western half of the site were razed and redeveloped with a single-story commercial building utilized for used car sales with parking. Residential buildings were constructed as early as 1910 on the eastern half of the site. By the late 1970s, various tax lots in the western portion of the site were consolidated into one tax lot (former Lot 8) and occupied by a gasoline filling station, developed with a single-story shed and an overhead canopy with a single-story kiosk. The petroleum filling station on the western portion of the site was active from the late 1970s until April 2022. The remainder of the subject site remained unchanged until April 2022 when the residential buildings on former Lot 16 were demolished. Site Geology and Hydrogeology: The site is underlain by fill material predominantly consisting of brown to dark brown coarse to fine sand with varying amounts of gravel, concrete, brick, asphalt, and silt. Fill was observed to extend to depths of 5 feet below ground surface (ft bgs). Below the fill is a layer of various graded sands with intermittent clay lenses that extends to at least as deep as 35 ft bgs. "

Summary: "Remedial actions are complete and addressed the potential for contact with site-related contamination."

Summary: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were acetone, benzo(a)anthracene benzo(b)fluoranthene, chrysene, lead, mercury, PCBs, Pesticides, Perfluorooctanoic acid (PFOA), perfluorooctanesulfonic acid (PFOS), 1,4-Dioxane, in soil, benzene, methyl tert-butyl ether, benzo(a)anthracene, benzo(b)fluoranthene, chrysene, PCBs, PFOA, 1,4-Dioxane in groundwater, tetrachloroethene and trichloromethane in soil vapor. No residual contamination of concern remains. Remedial actions have successfully achieved the soil cleanup objectives for unrestricted use. "

Control Code:	J
Control Type:	INST
Dt record added:	11/29/2017
Dt rec updated:	06/10/2024
Updated By:	GHPRATT
Site Code:	503484
Site Description:	"Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site is bounded by Wythe Avenue to the east, N 13th Street to the north, Kent Avenue to the west, and N 12th Street to the south. Site Features: The site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts include light industrial uses although offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned major oil storage facility (MOSF); however, both of these sites are slated for redevelopment as parks. Past Use(s) of the Site: Beginning in roughly 1867, the site was part of a large, multi-block petroleum refinery known as the Pratt works. Sanborn fire insurance maps dated 1887 and 1916 show numerous storage tanks related to the Pratt Works, and to paint manufacturing facilities. Subsequent land uses include manufacturing, lumber storage, and a scrap metal yard. Most recently, the property was used for storage and maintenance of heavy construction equipment. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in association with underground storage tank (UST) removals. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: Regional maps show bedrock as an igneous intrusive known as the Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River. "

Env Problem: "Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Both the VOCs and SVOCs

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

appear to be derived from former petroleum tank locations. Soil Vapor: TCE (ND-16.2 ug/m3) PCE (ND-245 ug/m3) and TCA (ND-284 ug/m3) were detected in soil vapor samples collected from the site. These COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 503484
Site Description: "Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site is bounded by Wythe Avenue to the east, N 13th Street to the north, Kent Avenue to the west, and N 12th Street to the south. Site Features: The site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts include light industrial uses although offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned major oil storage facility (MOSF); however, both of these sites are slated for redevelopment as parks. Past Use(s) of the Site: Beginning in roughly 1867, the site was part of a large, multi-block petroleum refinery known as the Pratt works. Sanborn fire insurance maps dated 1887 and 1916 show numerous storage tanks related to the Pratt Works, and to paint manufacturing facilities. Subsequent land uses include manufacturing, lumber storage, and a scrap metal yard. Most recently, the property was used for storage and maintenance of heavy

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

construction equipment. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in association with underground storage tank (UST) removals. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: Regional maps show bedrock as an igneous intrusive known as the Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River. "

Env Problem: "Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Both the VOCs and SVOCs appear to be derived from former petroleum tank locations. Soil Vapor: TCE (ND-16.2 ug/m3) PCE (ND-245 ug/m3) and TCA (ND-284 ug/m3) were detected in soil vapor samples collected from the site. These COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

residual contamination remaining at the site."

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or

KI-TOV LAMP CO (Continued) **1004760312**

More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Updated By: WBBENNET
Site Description: "Location: The Williamsburg Works Manufactured Gas Plant (MGP) site is located in a commercial/industrial area in the Williamsburg section of Brooklyn, New York. The site is approximately six acres in size and is composed of four parcels of land located on the east bank of the East River between North 11th and North 12th Streets on the west and east sides of Kent Avenue. Site features: Site features include a vacant asphalt paved lot and the foundation slab for the recently demolished document storage warehouse on the west side of Kent Avenue and a two -story commercial building on the east side of Kent Avenue. Current zoning and land use: The land uses in the area surrounding the MGP site are currently a mix of industrial, commercial, residential, and parkland uses. The privately-owned document storage warehouse was in active use until it was destroyed in a fire on January 31, 2015 and subsequently demolished. The former building's slab remains and is surrounded by a lockable chain link fence. The vacant lot at 50 Kent Ave. is owned by the NYC Department of Parks and Recreation and used as an outdoor music venue, flea market and skate park and surrounded by a chain link fence. The two-story commercial building on the east side of Kent Avenue is privately owned and in active use. The nearest residential properties are located to the east and south approximately 1 block from the site. Past use of the site: A manufactured gas plant operated on the site from circa 1850 until approximately 1930. Following the decommissioning of the MGP, the lot was occupied by a NYC Department of Sanitation Garage that was demolished around 2000. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till, and lenticular clay more than 100 feet in thickness. The groundwater table is approximately 5 feet below ground surface. Groundwater flows to the west, toward the East River. "
Env Problem: "The Remedial Investigation of the site has not been fully completed, since large portions of the site are occupied by buildings. However, the work that has been completed has identified significant coal tar contamination in the subsurface. Soils beneath the vacant lot at 50 Kent Avenue are heavily impacted. Design work is currently under way for an excavation IRM on this parcel during the 2015 field season, and tar collection wells have been completed around the perimeter of this property. Tar removal from these wells is taking place on a continuing basis. Tar contamination has moved off site to the north but does not appear to have reached the shoreline in that area. A

K - WILLIAMSBURG WORKS (Continued) **S109209078**

	large portion of the former plant footprint lies beneath the former document storage warehouse. Test borings around the perimeter of this building confirm the presence of MGP tars in the area, and off site migration of this tar has taken place, leading to contamination of sediments beneath adjacent areas of the East River."
Health Problem:	"The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review. "

SHWS:
Name: FORMER GOODMAN BROTHERS STEEL DRUM CO.
Address: 18 DIVISION PLACE
City,State,Zip: BROOKLYN, NY 11222
Program: HW
Site Code: 505634
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 0.670
HW Code: 224211
Record Add: 03/18/2015
Record Upd: 01/18/2024
Updated By: HMDUDEK
Site Description: "Location: The 0.67 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the south side of Division Place between Kingsland and Debevoise Avenues. Site Features: The site is mostly covered with one-story buildings, with a storage yard located on the south side along Richardson Street. Current Zoning and Land Use: The site is zoned for manufacturing. The site is currently used for storage and light manufacturing. Numerous commercial, industrial, and residential properties surround the site. Past Use of the Site: Goodman Brothers began operations in 1909 as a re-conditioner and recycler of used steel drums for re-use or disposal. The Department's initial involvement with the facility was a RCRA inspection conducted in September 1982, as the company was a large quantity generator of hazardous waste above a sole-source aquifer. The company went out of business in June 2002. During the last 20 years of its operation, Goodman Brothers entered into one consent order with the USEPA (1983), and two consent orders with the Department (1987 and 2003), and agreed to pay penalties in the overall amount of $28,000 for numerous violations. Site Geology and Hydrogeology: The site is underlain by a sand/silty sand unit (~15-35' thick), a discontinuous sand/gravel unit within the sand/silty sand unit (~5' thick), a discontinuous clayey silt unit within the sand/silty sand unit (~5' thick), and a sand unit below. Groundwater is approximately 15-20' below grade in the immediate vicinity of the site. Groundwater below the site flows toward the east in the direction of Newtown Creek (~3,600' away)."
Env Problem: "Nature and Extent of Contamination: - Groundwater The primary contaminants in groundwater are Volatile Organic Compounds or VOCs and Per/ polyfluoroalkyl substances (PFAS). For example, the chlorinated VOC, cis-1,2 dichloroethene (DCE) was detected up to 61,000 parts per billion or ppb, compared to groundwater standard of 5 ppb. The PFAS compound Perfluorooctanoic acid (PFOA) was detected up to 5,100 parts per trillion or ppt, compared to a groundwater standard of 10 ppt. - Soil The primary contaminants in soil are VOCs and Polychlorinated Biphenyls (PCBs). For example, the chlorinated VOC, tetrachloroethene (PCE) was detected up to 1,200 parts per million or ppm. This exceeds the commercial Soil Cleanup Objective (SCO) of 150 ppm. Total PCBs were detected up on 130 ppm, which

GOODMAN BROS STEEL DRUM CO-18DIVISIONPL (Continued) **1000190383**

	exceeds the commercial SCO of 1 ppm. Soil Vapor: Numerous VOCs were detected in soil vapor. For example, DCE was detected up to 5,600,000 micrograms per cubic meter (ug/m3). Numerous Significant Threat: The site poses a significant environmental threat due to ongoing releases of PCE (and its breakdown products), BTEX compounds, and PCBs from source areas into soil groundwater and soil vapor."
Health Problem:	"Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion in on-site and off-site structures exists and should be evaluated and may need to be evaluated for off-site structures. "

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Classification:	P
Region:	2
Acres:	0.145
HW Code:	224397
Record Add:	05/11/2023
Record Upd:	07/05/2023
Updated By:	WBBENNET

Site Description: "Site Location: The proposed site is located at 9 North 15th Street in Kings County, and is identified as Block 2614, Lot 16 on the New York City Tax Map. Site Features: The site is a 0.145-acre lot including one-story warehouse building. Current Zoning and Land Use: The site is zoned M102 (manufacturing district) and is currently unoccupied. The site was used by Linaire Sheet Metal Corp. between 1994 to 2021. The surrounding parcels are currently used for a combination of light manufacturing, commercial uses, and parking. Past Uses: The existing building was constructed in early 1930 s.

FORMER PRESTO ELECTROPLATING (Continued) **S130462534**

Previous industrial uses include manufacturing, a construction company, a garage, and a sheet metal facility. From 1976 to 1995, the site was listed as a RCRA generator (EPA ID no. NYD001486885) of corrosive wastes, chromium, and electroplating treatment sludges. The facility operated as V E 2 Plating and as Presto Electro Plating Corp. Historically the electroplating operations extended onto the adjacent BCP site, 12 Franklin Street (C224286). Site Geology and Hydrogeology: The depth to groundwater is approximately five to nine feet below grade, based on groundwater elevations at sites in the surrounding area. Groundwater flows to the west/southwest through the site toward Bushwick Inlet but may be tidally influenced."

Env Problem: "Soil, groundwater, soil vapor, and indoor air samples were collected at the site under an investigation overseen by NYC Office of Environmental Remediation between February and April of 2022. Nineteen soil borings were installed. Elevated levels of tetrachloroethene (PCE) and trichloroethene (TCE) were detected, with maximum concentrations of 100 parts per million (ppm) and 400 ppm respectively compared to their respective protection of groundwater soil cleanup objectives (POGSCOs) of 1.3 ppm and 0.47 ppm. Several semi-volatile organic compounds (SVOCs) and metals were detected above their respective unrestricted use SCOs (UUSCOs). One emerging contaminant, perfluorooctanesufonic acid (PFOS) (max. 9.6 ppb), was found above its protection of groundwater guidance value. Six permanent monitoring wells and three temporary monitoring wells were installed at the site. Groundwater flows west/southwest towards Bushwick Inlet, which is located approximately 250 feet from the site. Chlorinated Volatile Organic Compounds (CVOCs) were detected at concentrations exceeding ambient water quality standards including PCE (max. 570 parts per billion, or ppb), TCE (max. 65 ppb), cis-1,2-dichloroethene (max. 60 ppb), and vinyl chloride (max 55 ppb). Multiple PFAS compounds were also detected at concentrations exceeding guidance values. Two temporary soil vapor points were installed with co-located indoor air (IA) and sub-slab soil vapor (SV) samples taken at each location. Chlorinated VOCs were detected in both soil vapor and indoor air, including PCE (max. 32,000 micrograms per cubic meter, or ?g/m3 in soil vapor, max. 2.9 ?g/m3 in indoor air), TCE (max. 190,000 ?g/m3 SV, max. 4.2 ?g/m3 IA), cis-1,2-dichloroethene, or DCE (max. 1500 ?g/m3 SV, max. 0.1 ?g/m3 IA), and vinyl chloride (9.0 ?g/m3 SV, max. 0.1 ?g/m3 IA). According to NYSDOH decision matrices, the concentrations of PCE, TCE, and cis-1,2-DCE require mitigation. "

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Update By:	AMSERVIS
Site Description:	"Site Location: 9 North 15th Street, Brooklyn, NY (The Site) is located in the Greenpoint neighborhood of Brooklyn, New York. The Site is identified as Block 2614, Lot 16 and 6,300 square feet (approximately 0.14 acres) in area. The Site is bounded by a 1-story warehouse building to the south (15 North 15th Street), a one-story vacant commercial building to the north (12 Franklin Street, NYSDEC BCP Site No. C224286), a 2-story manufacturing and warehouse building (30 Gem Street) to the east, and a NYCDEP Maintenance Facility with a parking lot and filling station (22 North 15th Street) to the west. Site Features: The Site is currently improved with an approximately 6,950 square-feet one-story industrial warehouse building that was constructed in 1931 and is classified as F5 for Factory and Industrial Buildings Light Manufacturing. The warehouse contains an office space, utility room, and storage room. There is no cellar. The property is bound by concrete sidewalks along the eastern and western sides of the building along Gem Street and North 15th Street. Current Zoning and Land Use: The Site is improved with a 1-story unoccupied warehouse. The Site is located in an M1-2 zoning district in the

FORMER PRESTO ELECTROPLATING (Continued) **S130462534**

Greenpoint neighborhood of Brooklyn, New York. The warehouse is unoccupied and has not been occupied since 2021. The following surrounding land uses were observed during the Phase I ESA Site inspection: North: 12 Franklin Street, a 1-story commercial warehouse building (NYSDEC Site No. C224286) South: 15 North 15th Street, a 1-story warehouse building; East: 30 Gem Street, a 2-story manufacturing and warehouse building, occupied by Acme Smoked Fish; West: 22 North 15th Street, a 2-story building with a parking lot containing a filling station, used a s a NYCDEP Brooklyn Maintenance facility. The proposed construction will be as-of-right and will be consistent with applicable zoning regulations. Past Use of the Site: According to historical topographic maps provided by EDR, the Site was undeveloped since at least until 1931. By 1931 a structure that similar to the structure that exists today appears to have been constructed. According to Sanborn fire insurance maps, the Site was a garage from 1942 until circa at least 1965, when the property was identified as a manufacturing facility. V E 2 Plating and Preto Electro Plating Corp., an industrial plating company, occupied the Site and the northern adjoining property between 1976 to 1992. From 1992 to 1994, the Site was owned by Frank M. DeBono and was operating as a construction company. Between 1994-2021, the Site was occupied by Linaire Sheet Metal Corp., a sheet metal manufacturing company. Since 2021 the Site has not been occupied and there are no current tenants. The current owner of the Site is Haplin Realty Corp. The surrounding vicinity has been developed in an urban area since at least 1887. Historically, the Site vicinity has been occupied by mixed-use light manufacturing operations, commercial stores, and parking facilities. The northern adjoining property (12 Franklin Street) was developed by 1905 and has been occupied by industrial facilities, including the electroplating companies also occupying the Site between 1976 to 1994, and is currently occupied with a commercial building. 12 Franklin Street is currently listed as NYSDEC BCP Site number C224286. The southern adjoining property was developed by 1940 and was occupied by a garage. The property was used for metal parts storage by circa 1950 and has maintained mixed-use industrial and commercial operations. The eastern adjoining property was developed by 1942 as a private garage and was later occupied by food shipping operations from at least 1965. The property has maintained commercial use through the current day. The southwestern adjoining property was developed by 1916 and has maintained various uses including an auto repair shop, drum painting and storage, a service station, and current use as a maintenance and parking facility with a filling station. Site Geology and Hydrogeology: Based on the US Department of Agriculture Soil Conservation Services Web Soil Survey, overburden at the Site consists of Urban Land, tidal marsh substratum, with 0 to 3 percent slopes (UmA), fill. Based on the 1994 US Geological Service (USGS) publication, Bedrock and Engineering Geologic Map of New York County and Parts of Kings and Queens counties, New York, and Parts of Bergen and Hudson Counties, New Jersey (Baskerville 1994), and the USGS online GIS database, bedrock near the Site is categorized as an unconsolidated sequence of glacial and alluvial deposits from the Quaternary era, Hartland formation. This bedrock consists of mostly gray and gray-weathering, fine-grained quartz-feldspar kyanite granulite with minor biotite and garnet. Based on the 2023 USGS publication, Bedrock Surface Elevation and Overburden Thickness Maps of the Five Boroughs, New York City (DeMott, et al. 2023), we anticipate bedrock to be encountered at a

FORMER PRESTO ELECTROPLATING (Continued) **S130462534**

	depth between 100 to 150 feet below ground surface (bgs). Based on the NYC OpenData online GIS database and previous investigations performed at the Site, the estimated depth to groundwater is between approximately five (5) to nine (9) feet bgs. Based on local topography and surface water flow patterns, the inferred direction of groundwater flow is west-southwest toward the Bushwick Inlet and East River. We subsequently refer to upgradient and downgradient properties in this Phase I ESA Report based on the inferred westerly-southwesterly direction of groundwater flow. However, the localized direction of groundwater flow near the Site might vary because of underground utilities, tidal influence, subsurface preferential pathways, variations in weather, or heterogeneous geological and/or anthropogenic conditions. According to the Remedial Investigation Report (RIR) dated May 2022, by Laurel Environmental Geosciences, DPC (Laurel) the depth the groundwater at the Site is nine feet bgs and is assumed to flow in a westerly direction. "
Env Problem:	"Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Updated By:	SXDEYETT
Site Description:	"Location: The CitiStorage site is a 4-acre site located in an urban area of NYC. Site Features: The site is generally flat with a gentle west-northwesterly slope toward the East River. A three-story warehouse occupies most of the site. A Paved parking lot is present on the river side of the warehouse. Current Zoning and Land Use: The site (Block 2294, Lots 1 & 5) is currently inactive and zoned for commercial use. The site and its immediate surrounding areas are zoned Low Performance Manufacturing (M3) by the New York City Department of Planning. Surrounding parcels are currently used for a combination of commercial, light industrial, and parklands. The site is bordered by a NYC park to the south; vacant land known as the former Williamsburg manufactured gas plant (MGP), NYSDEC site number 224055, to the north; various light commercial and hotel operations to the east; and the East River to the west. The nearest residential area is 0.3 miles to the east. Past Use of the Site: Former uses of the site included an oil storage facility operated by the Standard Oil Company Pratt from 1916 to 1954. The site was also occupied by a cooperage, a garage, and a machine shop. The Brooklyn Eastern District Terminal occupied the property from 1942 to 1996 and included several flour storage facilities and their associated structures, chemical storage, and rail lines. The property is currently occupied by the CitiStorage warehouse which was constructed on this lot in the late 1990s. Site Geology and Hydrogeology: Adjacent subsurface investigation show 10-20 feet of historic fill thickening from East to West. Underlain by interbedded silt and sand on the Eastern part of the site and clay and silt on the Western part of the site. "
Env Problem:	"Sample results from a 2006 Site Investigation Report showed soil and groundwater contaminate concentrations exceeded NYS cleanup objectives for petroleum-related volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). A site characterization and investigation is required to determine the presence and nature and extent of contamination at this potential site. The site is located adjacent to parklands, and the anticipated future use of the site is also parkland."
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Site Description:	"Location: The site is located in an urban area at 135 Kent Avenue in the Borough of Brooklyn, Kings County, NY. The site is bordered to the north by North 6th Street, to the west by Kent Avenue, to the south by a vacant 2-story warehouse (see BCP site no. C224159), and to the east by a three story building which appears to consist of a garage on the first floor with residential above. Single and multi-family residential is located across North 6th St. and newly-constructed multi-story residential towers are located across Kent Avenue. Site Features: The Site currently consists of a 11,000 sq. ft. (0.27 acre) 2 story brick building with commercial units on

CLEANER SALES & EQUIPMENT CORP. (Continued) **S103942699**

the first floor and residential units on second floor. Current Zoning/Use(s): The site is currently zoned M1-2 (manufacturing) with an R6A (residential) overlay. The site is located within the Greenpoint-Williamsburg Rezoning District, and is surrounded by mixed commercial and residential uses. The Site has a NYC Restrictive Declaration (similar to E-Designation) for Hazardous Materials (E-138) and Air Quality (E-227). Past Site Use(s): The Site was previously occupied by a warehouse which operated as a commercial dry cleaner supplies distribution facility (Cleaners Sales & Equipment Corp.). This facility operated from about 1958 to 2002. Cleaners Sales & Equipment Corp. has a USEPA ID no. NYR000113480 for hazardous waste generation (tetrachloroethylene, or PCE). Furthermore, the site is a registered Chemical Bulk Storage Facility (CBS No. 2-000353 for a 5,000 gallon aboveground PCE storage tank) and Petroleum Bulk Storage facility (PBS No. 2-608579 for a 3,000 gallon closed-in-place underground storage tank. Site Geology and Hydrogeology: Soil borings installed on a neighboring property identified fill materials consisting of medium-grained sand with some gravel and brick fragments to a depth of approximately 8 feet below grade. Beneath the surface fill layer is sand and gravel to a depth of at least 28 feet below grade. Groundwater is present at a depth of approximately 12 feet below grade. Groundwater flows generally to the west-southwest towards the East River, which is located approximately 550 feet west of the site. Borings done in the sidewalk on N 6th St showed sand to 28 feet followed by a clay layer and then silty sand at 35 feet. Groundwater was at 17 feet below ground surface. This site has been accepted into the Brownfield Cleanup Program and, therefore, investigation and remediation will occur under that program. The site Index is C224177."

Env Problem: "Nature and Extent of Contamination: Recent sampling was conducted as part of the Remedial Investigation for the adjacent BCP site. Soil vapor samples were collected from immediately in front of the loading dock for the former cleaner supply facility, which identified PCE at a concentration of 25,300,000ug/m3, and TCE 10,400 g/m3 and cis-1,2-DCE at 7,060 ug/m3. Significant Threat: Based upon the soil vapor sampling results there is a potential for inhalation of the site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures. The NYSDOH made an evaluation of significant threat for this site. The site was accepted in the Brownfield Cleanup Program (BCP) and the Index # is C224177. "

Health Problem: "Volatile organic compounds related to the site in the groundwater may move into soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures."

Updated By: JHOCONNE
Site Description: "Location: The 2825 square foot site is located at 134 Metropolitan Avenue in the Borough of Brooklyn, Kings County, NY in an urban area. The site is bounded by Metropolitan Avenue to the north, a movie theater to the east, North 1st Street to the south, and a commercial/residential building to the west. Site Features: The Site is approximately 2,825 square-feet and is currently occupied by a two-story commercial building with partial basement (30% of site) and a partial sub-basement. Current Zoning and Land Use: The site is currently zoned as M1-2 (manufacturing) with an R6A (residential) overlay. The on-site building was most recently occupied by a bar/nightclub which closed in 2016. Past Use of the Site: Historic uses at the Site include wire works (prior to 1887), a machine shop (1887-1905), and manufacturing (1951). The current owner plans to add 3 additional floors on the building for residential use. Site Geology and Hydrogeology: According to maps and reports published by the United States Geological Survey (USGS), the Property is situated at approximately 36 feet above mean sea level and is underlain by glaciofluvial deposits of Upper Cretaceous and/or Quaternary age consisting of sand, silt, clay gravel, cobbles and boulders. These deposits rest unconformably on crystalline bedrock of early Paleozoic and/or Precambrian age. Soil borings were completed during the investigation to depths ranging from approximately 20 to 39 feet below land surface. Depth to water readings collected during this investigation indicate shallow groundwater beneath the Site ranges from 19.83 feet below grade at GW-5 to 38.97 feet below grade at GW-1. Based upon regional maps published by the USGS shallow groundwater flow appears to be moving in a westerly direction. "
Env Problem: "Nature and Extent of Contamination: This site was referred to the Department from the NYC Office of Environmental Remediation (OER). A soil vapor intrusion investigation was undertaken on the site under the direction of OER as a result of an environmental e designation on the site. Historic uses at the site include wire works (prior to 1887), a machine shop (1887-1905), and unspecified manufacturing (1951). The site is currently occupied by a two-story commercial building with partial basement and a partial sub-basement. Based on the soil vapor investigation conducted under OER, the chlorinated solvents tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE) and 1,2 dichloroethene (DCE) were detected at maximum concentrations of PCE at 223,000 micrograms per cubic meter (ug/m3), TCE at 203 ug/m3, and DCE at 114 ug/m3. Subsequently, a site

LOT 16,TAXBLOCK 2364 (Continued) **S108076312**

characterization (SC) was conducted under a NYSDEC consent order. Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides and per and polyfluoroalkyl substances (PFAS). Soil vapor was sampled for VOCs. During the SC, the soil vapor concentrations identified in the initial OER investigation were not duplicated. Soil During the site characterization investigation, No PID readings exceeded zero parts per million (ppm) in any of the screened soil samples and no VOCs were detected at concentrations above their respective restricted residential soil cleanup objectives (RRSCOs) and protection of groundwater soil cleanup objectives (PGWSCOs) in soil samples collected at the site. SVOCs were detected at concentrations exceeding the RRSCOs in shallow soil at the site. SVOCs include benzo(a)anthracene (max of 11 ppm; RRSCO is 1 ppm), benzo(a)pyrene (max of 8.7 ppm; RRSCO is 1 ppm), benzo(b)fluoranthene (max of 11 ppm; RRSCO is 1 ppm), dibenzo(a,h)anthracene (max of 1.3 ppm; RRSCO is 0.33 ppm), and Indeno(1,2,3-cd)pyrene (max of 5.5 ppm; RRSCO is 0.5 ppm). Metals were detected above their respective RRSCOs including mercury (max of 1.87 ppm; RRSCO is 0.81 ppm), and lead (max of 475 ppm; RRSCO is 400 ppm). 1,4-dioxane was not detected in any soil samples. PFOA and PFOS were not found at concentrations exceeding either the restricted-residential use or the protection of groundwater guidance values. Data does not indicate any off-site impacts in soil related to this site. Groundwater Chlorinated - VOCs were found in groundwater on the south of the site one off-site well. VOCs exceeding their respective ambient water quality standards (AWQS) include trichloroethene (max 97 parts per billion (ppb); AWQS is 5 ppb), and cis-1,2-Dichloroethene (max 43 ppb; AWQS is 5 ppb). SVOCs detected in groundwater above the AWQS include benzo(a)anthracene at a maximum concentration of 0.12 (AWQS is 0.002 ppb), benzo(a)pyrene at a maximum concentration of 0.11 (AWQS is non-detect), benzo(b)fluoranthene at a maximum concentration of 0.13 (AWQS is 0.002 ppb), benzo(k)fluoranthene at a maximum concentration of 0.04 (AWQS is 0.002 ppb) and chrysene at a maximum concentration of 0.1 (AWQS is 0.002 ppb). In groundwater, lead was detected at a maximum concentration of 45.92 ppb compared to 25 ppb and mercury was at 2.03 ppb compared to 0.7 ppb. Only naturally occurring dissolved metals (manganese, sodium, magnesium) were detected at concentrations exceeding AWQS. PFOS was detected at a maximum concentration of 7.72 parts per trillion (ppt) compared to the Maximum Contaminant Level of 10 ppt, and PFOA at a maximum concentration of 62 ppt (MCL 10 ppt). No Pesticides, PCBs and 1,4 -dioxane were identified above ambient water quality standards in any groundwater samples. Data does not indicate any off-site impacts in groundwater related to this site. Sub-slab soil Vapor and Indoor Air Low-levels of VOCs were detected in on-site sub slab soil vapor. The maximum concentration of tetrachloroethylene (PCE) and trichloroethylene (TCE) were detected in sub slab soil vapor samples at 6.39 micrograms per cubic meter (ug/m3), and 1.2 ug/m3, respectively. PCE was detected in the indoor air at a maximum concentration of 0.346 ug/m3. No TCE were detected in the indoor air. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "People will not come into contact with contaminated soil or groundwater unless they dig below the ground surface. People are not drinking the groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic

LOT 16,TAXBLOCK 2364 (Continued) **S108076312**

compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant and environmental sampling indicates that the potential for exposure to site contaminants due to soil vapor intrusion is not a concern on-site or off-site"

Updated By:	WYZHENG
Site Description:	"Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "
Env Problem:	"Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "
Env Problem:	"Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Updated By: WYZHENG
Site Code: 463657
Site Description: "Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "
Env Problem: "Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "
Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the

CON ED (Continued) **S117742197**

movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Updated By: WYZHENG
Site Code: 463657
Site Description: "Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "
Env Problem: "Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site

CON ED (Continued) **S117742197**

Management Plan. "
Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Site Description: "Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "
Env Problem: "Nature and Extent of Contamination: Post-Remediation: Remediation at

CON ED (Continued) **S117742197**

the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D009
Waste Description:	Mercury
Waste Code:	D010
Waste Description:	Selenium
Waste Code:	D011
Waste Description:	Silver
Waste Code:	D024
Waste Description:	M-Cresol
Waste Code:	P001
Waste Description:	2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

CVS PHARMACY #4958 (Continued) **1014958051**

Waste Code: P042
Waste Description: 1,2-Benzenediol, 4-[1-Hydroxy-2-(Methylamino)Ethyl]-, (R)- (Or) Epinephrine

Waste Code: P075
Waste Description: Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts

Waste Code: P081
Waste Description: 1,2,3-Propanetriol, Trinitrate (R) (Or) Nitroglycerine (R)

Waste Code: P188
Waste Description: Benzoic Acid, 2-Hydroxy-, Compd. With (3as-Cis)-1,2,3,3a,8,8a-Hexahydro-1,3a,8-Trimethylpyrrolo[2,3-B]Indol-5-Yl Methylcarbamate Ester (1:1) (Or) Physostigmine Salicylate

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U034
Waste Description: Acetaldehyde, Trichloro- (Or) Chloral

Waste Code: U129
Waste Description: Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane

Waste Code: U165
Waste Description: Naphthalene

Waste Code: U188
Waste Description: Phenol

Waste Code: U205
Waste Description: Selenium Sulfide (Or) Selenium Sulfide Ses2 (R,T)

Updated By: AABARRAZ
Site Description: "Location: The site is located on the north side of Grand Street, between Bushwick Avenue and Olive Street, in the East Williamsburg section of Brooklyn. The site is approximately 0.19 acres in size, at an elevation of 39 feet above sea level. The neighborhood includes multi-use units with first floor retail use and residential units. Progress High School (K474) is located directly across Grand Street from the site. Site Features: The site was developed with a one-story commercial building with a partial basement. The original building took up the entire parcel. When the building was converted to a laundromat, the front quarter (ten feet) of the building was removed and a parking lot put in its place. The above-ground portion of the building was razed in June 2014, leaving the slab. Current Zoning/Use: The property was used for commercial purposes but an apartment building is being constructed after site cleanup. The site is zoned R-7A residential with a C2-4 commercial overlay. The intended use of the site is restricted-residential. Historic Use: The site was an undeveloped portion of a larger residential property from at least 1888 through 1907. By 1928 the site was developed with a garage, later occupied by a motor freight company. Sanborn maps of the original building identify a buried gas tank located toward the front part of the building. By 1977 the building was occupied by a warehouse and non-specific commercial uses, with tenants including a sanitation company and a coffee distributor. Some time around 2009 the building was converted to its final use as a laundromat/dry cleaner drop-off and retail store. Site Geology and Hydrogeology: Subsurface soils at the site consisted of a silty non-native fill with bricks, wood, and rubble to a depth of up to 6 feet below grade. Below that is native material consisting of brown silty sand. Groundwater is present under water table conditions at a depth of approximately 30 feet below the surface and flows southwest, possibly under the influence of dewatering activities associated with the

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

subway line along Bushwick Avenue."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in various media were as follows: Soil: Soil samples were collected from 12-14 feet below grade at nine borings, and additional deeper samples, up to a maximum depth of 27 feet, were collected from three of the borings. Based on the investigations, soil beneath the site in the vicinity of the historic underground storage tank identified on Sanborn maps was contaminated with petroleum-related VOCs, mostly above the unrestricted use soil cleanup objectives (UUSCOs) but below the restricted-residential SCOs. Contaminated soil in that area is assumed to be present from a depth of at least 15 feet down to the water table at approximately 30 feet below ground. Historic fill (soil mixed with bricks, concrete, and rubble) was found beneath the building slab at one boring location to a depth of six feet, although samples were not collected for analysis. The investigation identified petroleum-related VOCs at concentrations above UUSCOs in soil samples obtained from borings around the reported underground gasoline storage tank. The VOCs driving the remedy were 1,2,4-trimethylbenzene (maximum concentration 56 parts per million [ppm]) and mixed xylenes (maximum concentration 115 ppm). There were no SVOCs or pesticides/PCBs detected above UUSCOs. Manganese was found above the UUSCOs in one sample. Contaminated soil related to the site does not extend off-site. Groundwater: Based on the investigations, groundwater across much of the site was contaminated above standards with petroleum-related VOCs, although no significant groundwater contamination extended off-site. Contaminated groundwater was present both to the northeast and southwest of the contaminated soil, perhaps as a result of dewatering operations at the nearby subway line and station, which may have reversed the natural (to the northeast) groundwater flow gradient. Groundwater samples had concentrations of petroleum-related VOCs above the drinking water standards. These VOCs were the same as those found in the soil samples. 1,2,4-trimethylbenzene (maximum concentration 490 parts per billion [ppb]; drinking water standard 5 ppb) and mixed xylenes (maximum concentration 2,190 ppb; drinking water standard 5 ppb) were found. A few SVOCs were detected in the low part per trillion range in the samples. Soil Vapor: Multiple VOCs, including petroleum-related compounds, were detected in the soil vapor samples at low concentrations across the site with totals ranging from 226.9 micrograms per cubic meter (ug/m3) to 1,960.6 ug/m3. The highest concentrations of petroleum-related compounds were detected in the southeast corner of the property. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil (below a depth of 15 feet in the vicinity of the underground storage tanks) and groundwater is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 485965
Site Description: "Location: The site is located on the north side of Grand Street, between Bushwick Avenue and Olive Street, in the East Williamsburg section of Brooklyn. The site is approximately 0.19 acres in size, at an elevation of 39 feet above sea level. The neighborhood includes multi-use units with first floor retail use and residential units. Progress High School (K474) is located directly across Grand Street from the site. Site Features: The site was developed with a one-story commercial building with a partial basement. The original building took up the entire parcel. When the building was converted to a laundromat, the front quarter (ten feet) of the building was removed and a parking lot put in its place. The above-ground portion of the building was razed in June 2014, leaving the slab. Current Zoning/Use: The property was used for commercial purposes but an apartment building is being constructed after site cleanup. The site is zoned R-7A residential with a C2-4 commercial overlay. The intended use of the site is restricted-residential. Historic Use: The site was an undeveloped portion of a larger residential property from at least 1888 through 1907. By 1928 the site was developed with a garage, later occupied by a motor freight company. Sanborn maps of the original building identify a buried gas tank located toward the front part of the building. By 1977 the building was occupied by a warehouse and non-specific commercial uses, with tenants including a sanitation company and a coffee distributor. Some time around 2009 the building was converted to its final use as a laundromat/dry cleaner drop-off and retail store. Site Geology and Hydrogeology:

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

Subsurface soils at the site consisted of a silty non-native fill with bricks, wood, and rubble to a depth of up to 6 feet below grade. Below that is native material consisting of brown silty sand. Groundwater is present under water table conditions at a depth of approximately 30 feet below the surface and flows southwest, possibly under the influence of dewatering activities associated with the subway line along Bushwick Avenue."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in various media were as follows: Soil: Soil samples were collected from 12-14 feet below grade at nine borings, and additional deeper samples, up to a maximum depth of 27 feet, were collected from three of the borings. Based on the investigations, soil beneath the site in the vicinity of the historic underground storage tank identified on Sanborn maps was contaminated with petroleum-related VOCs, mostly above the unrestricted use soil cleanup objectives (UUSCOs) but below the restricted-residential SCOs. Contaminated soil in that area is assumed to be present from a depth of at least 15 feet down to the water table at approximately 30 feet below ground. Historic fill (soil mixed with bricks, concrete, and rubble) was found beneath the building slab at one boring location to a depth of six feet, although samples were not collected for analysis. The investigation identified petroleum-related VOCs at concentrations above UUSCOs in soil samples obtained from borings around the reported underground gasoline storage tank. The VOCs driving the remedy were 1,2,4-trimethylbenzene (maximum concentration 56 parts per million [ppm]) and mixed xylenes (maximum concentration 115 ppm). There were no SVOCs or pesticides/PCBs detected above UUSCOs. Manganese was found above the UUSCOs in one sample. Contaminated soil related to the site does not extend off-site. Groundwater: Based on the investigations, groundwater across much of the site was contaminated above standards with petroleum-related VOCs, although no significant groundwater contamination extended off-site. Contaminated groundwater was present both to the northeast and southwest of the contaminated soil, perhaps as a result of dewatering operations at the nearby subway line and station, which may have reversed the natural (to the northeast) groundwater flow gradient. Groundwater samples had concentrations of petroleum-related VOCs above the drinking water standards. These VOCs were the same as those found in the soil samples. 1,2,4-trimethylbenzene (maximum concentration 490 parts per billion [ppb]; drinking water standard 5 ppb) and mixed xylenes (maximum concentration 2,190 ppb; drinking water standard 5 ppb) were found. A few SVOCs were detected in the low part per trillion range in the samples. Soil Vapor: Multiple VOCs, including petroleum-related compounds, were detected in the soil vapor samples at low concentrations across the site with totals ranging from 226.9 micrograms per cubic meter (ug/m3) to 1,960.6 ug/m3. The highest concentrations of petroleum-related compounds were detected in the southeast corner of the property. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil (below a depth of 15 feet in the vicinity of the underground storage tanks) and groundwater is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 485965
Site Description: "Location: The site is located on the north side of Grand Street, between Bushwick Avenue and Olive Street, in the East Williamsburg section of Brooklyn. The site is approximately 0.19 acres in size, at an elevation of 39 feet above sea level. The neighborhood includes multi-use units with first floor retail use and residential units. Progress High School (K474) is located directly across Grand Street from the site. Site Features: The site was developed with a one-story commercial building with a partial basement. The original building took up the entire parcel. When the building was converted to a laundromat, the front quarter (ten feet) of the building was removed and a parking lot put in its place. The above-ground portion of the building was razed in June 2014, leaving the slab. Current Zoning/Use: The property was used for commercial purposes but an apartment building is being constructed after site cleanup. The site is zoned R-7A residential with a C2-4 commercial overlay. The intended use of the site is restricted-residential. Historic Use: The site was an undeveloped portion of a larger residential property from at least 1888 through 1907. By 1928 the site was developed with a garage, later occupied by a motor freight company. Sanborn maps of the original building identify a buried gas tank located toward the front part of the building. By 1977 the building was occupied by a warehouse and non-specific commercial uses, with tenants including a

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

sanitation company and a coffee distributor. Some time around 2009 the building was converted to its final use as a laundromat/dry cleaner drop-off and retail store. Site Geology and Hydrogeology: Subsurface soils at the site consisted of a silty non-native fill with bricks, wood, and rubble to a depth of up to 6 feet below grade. Below that is native material consisting of brown silty sand. Groundwater is present under water table conditions at a depth of approximately 30 feet below the surface and flows southwest, possibly under the influence of dewatering activities associated with the subway line along Bushwick Avenue."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in various media were as follows: Soil: Soil samples were collected from 12-14 feet below grade at nine borings, and additional deeper samples, up to a maximum depth of 27 feet, were collected from three of the borings. Based on the investigations, soil beneath the site in the vicinity of the historic underground storage tank identified on Sanborn maps was contaminated with petroleum-related VOCs, mostly above the unrestricted use soil cleanup objectives (UUSCOs) but below the restricted-residential SCOs. Contaminated soil in that area is assumed to be present from a depth of at least 15 feet down to the water table at approximately 30 feet below ground. Historic fill (soil mixed with bricks, concrete, and rubble) was found beneath the building slab at one boring location to a depth of six feet, although samples were not collected for analysis. The investigation identified petroleum-related VOCs at concentrations above UUSCOs in soil samples obtained from borings around the reported underground gasoline storage tank. The VOCs driving the remedy were 1,2,4-trimethylbenzene (maximum concentration 56 parts per million [ppm]) and mixed xylenes (maximum concentration 115 ppm). There were no SVOCs or pesticides/PCBs detected above UUSCOs. Manganese was found above the UUSCOs in one sample. Contaminated soil related to the site does not extend off-site. Groundwater: Based on the investigations, groundwater across much of the site was contaminated above standards with petroleum-related VOCs, although no significant groundwater contamination extended off-site. Contaminated groundwater was present both to the northeast and southwest of the contaminated soil, perhaps as a result of dewatering operations at the nearby subway line and station, which may have reversed the natural (to the northeast) groundwater flow gradient. Groundwater samples had concentrations of petroleum-related VOCs above the drinking water standards. These VOCs were the same as those found in the soil samples. 1,2,4-trimethylbenzene (maximum concentration 490 parts per billion [ppb]; drinking water standard 5 ppb) and mixed xylenes (maximum concentration 2,190 ppb; drinking water standard 5 ppb) were found. Site Code: 485965
Site Description: "Location: The site is located on the north side of Grand Street, between Bushwick Avenue and Olive Street, in the East Williamsburg section of Brooklyn. The site is approximately 0.19 acres in size, at an elevation of 39 feet above sea level. The neighborhood includes multi-use units with first floor retail use and residential units. Progress High School (K474) is located directly across Grand Street from the site. Site Features: The site was developed with a one-story commercial building with a partial basement. The original building took up the entire parcel. When the building was converted to a laundromat, the front quarter (ten feet) of the building was removed and a parking lot put in its place. The above-ground portion of the building was razed in June 2014, leaving the slab. Current Zoning/Use: The property was used for commercial purposes but an

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

apartment building is being constructed after site cleanup. The site is zoned R-7A residential with a C2-4 commercial overlay. The intended use of the site is restricted-residential. Historic Use: The site was an undeveloped portion of a larger residential property from at least 1888 through 1907. By 1928 the site was developed with a garage, later occupied by a motor freight company. Sanborn maps of the original building identify a buried gas tank located toward the front part of the building. By 1977 the building was occupied by a warehouse and non-specific commercial uses, with tenants including a sanitation company and a coffee distributor. Some time around 2009 the building was converted to its final use as a laundromat/dry cleaner drop-off and retail store. Site Geology and Hydrogeology: Subsurface soils at the site consisted of a silty non-native fill with bricks, wood, and rubble to a depth of up to 6 feet below grade. Below that is native material consisting of brown silty sand. Groundwater is present under water table conditions at a depth of approximately 30 feet below the surface and flows southwest, possibly under the influence of dewatering activities associated with the subway line along Bushwick Avenue."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in various media were as follows: Soil: Soil samples were collected from 12-14 feet below grade at nine borings, and additional deeper samples, up to a maximum depth of 27 feet, were collected from three of the borings. Based on the investigations, soil beneath the site in the vicinity of the historic underground storage tank identified on Sanborn maps was contaminated with petroleum-related VOCs, mostly above the unrestricted use soil cleanup objectives (UUSCOs) but below the restricted-residential SCOs. Contaminated soil in that area is assumed to be present from a depth of at least 15 feet down to the water table at approximately 30 feet below ground. Historic fill (soil mixed with bricks, concrete, and rubble) was found beneath the building slab at one boring location to a depth of six feet, although samples were not collected for analysis. The investigation identified petroleum-related VOCs at concentrations above UUSCOs in soil samples obtained from borings around the reported underground gasoline storage tank. The VOCs driving the remedy were 1,2,4-trimethylbenzene (maximum concentration 56 parts per million [ppm]) and mixed xylenes (maximum concentration 115 ppm). There were no SVOCs or pesticides/PCBs detected above UUSCOs. Manganese was found above the UUSCOs in one sample. Contaminated soil related to the site does not extend off-site. Groundwater: Based on the investigations, groundwater across much of the site was contaminated above standards with petroleum-related VOCs, although no significant groundwater contamination extended off-site. Contaminated groundwater was present both to the northeast and southwest of the contaminated soil, perhaps as a result of dewatering operations at the nearby subway line and station, which may have reversed the natural (to the northeast) groundwater flow gradient. Groundwater samples had concentrations of petroleum-related VOCs above the drinking water standards. These VOCs were the same as those found in the soil samples. 1,2,4-trimethylbenzene (maximum concentration 490 parts per billion [ppb]; drinking water standard 5 ppb) and mixed xylenes (maximum concentration 2,190 ppb; drinking water standard 5 ppb) were found. A few SVOCs were detected in the low part per trillion range in the samples. Soil Vapor: Multiple VOCs, including petroleum-related compounds, were detected in the soil vapor samples at low

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

concentrations across the site with totals ranging from 226.9 micrograms per cubic meter (ug/m3) to 1,960.6 ug/m3. The highest concentrations of petroleum-related compounds were detected in the southeast corner of the property. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil (below a depth of 15 feet in the vicinity of the underground storage tanks) and groundwater is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

an elevation of 39 feet above sea level. The neighborhood includes multi-use units with first floor retail use and residential units. Progress High School (K474) is located directly across Grand Street from the site. Site Features: The site was developed with a one-story commercial building with a partial basement. The original building took up the entire parcel. When the building was converted to a laundromat, the front quarter (ten feet) of the building was removed and a parking lot put in its place. The above-ground portion of the building was razed in June 2014, leaving the slab. Current Zoning/Use: The property was used for commercial purposes but an apartment building is being constructed after site cleanup. The site is zoned R-7A residential with a C2-4 commercial overlay. The intended use of the site is restricted-residential. Historic Use: The site was an undeveloped portion of a larger residential property from at least 1888 through 1907. By 1928 the site was developed with a garage, later occupied by a motor freight company. Sanborn maps of the original building identify a buried gas tank located toward the front part of the building. By 1977 the building was occupied by a warehouse and non-specific commercial uses, with tenants including a sanitation company and a coffee distributor. Some time around 2009 the building was converted to its final use as a laundromat/dry cleaner drop-off and retail store. Site Geology and Hydrogeology: Subsurface soils at the site consisted of a silty non-native fill with bricks, wood, and rubble to a depth of up to 6 feet below grade. Below that is native material consisting of brown silty sand. Groundwater is present under water table conditions at a depth of approximately 30 feet below the surface and flows southwest, possibly under the influence of dewatering activities associated with the subway line along Bushwick Avenue."

Env Problem:

"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in various media were as follows: Soil: Soil samples were collected from 12-14 feet below grade at nine borings, and additional deeper samples, up to a maximum depth of 27 feet, were collected from three of the borings. Based on the investigations, soil beneath the site in the vicinity of the historic underground storage tank identified on Sanborn maps was contaminated with petroleum-related VOCs, mostly above the unrestricted use soil cleanup objectives (UUSCOs) but below the restricted-residential SCOs. Contaminated soil in that area is assumed to be present from a depth of at least 15 feet down to the water table at approximately 30 feet below ground. Historic fill (soil mixed with bricks, concrete, and rubble) was found beneath the building slab at one boring location to a depth of six feet, although samples were not collected for analysis. The investigation identified petroleum-related VOCs at concentrations above UUSCOs in soil samples obtained from borings around the reported underground gasoline storage tank. The VOCs driving the remedy were 1,2,4-trimethylbenzene (maximum concentration 56 parts per million [ppm]) and mixed xylenes (maximum concentration 115 ppm). There were no SVOCs or pesticides/PCBs detected above UUSCOs. Manganese was found above the UUSCOs in one sample. Contaminated soil related to the site does not extend off-site. Groundwater: Based on the investigations, groundwater across much of the site was contaminated above standards with petroleum-related VOCs, although no significant groundwater contamination extended off-site. Contaminated groundwater was present both to the northeast and southwest of the contaminated soil, perhaps as a result of dewatering operations at the nearby subway line and

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

	station, which may have reversed the natural (to the northeast) groundwater flow gradient. Groundwater samples had concentrations of petroleum-related VOCs above the drinking water standards. These VOCs were the same as those found in the soil samples. 1,2,4-trimethylbenzene (maximum concentration 490 parts per billion [ppb]; drinking water standard 5 ppb) and mixed xylenes (maximum concentration 2,190 ppb; drinking water standard 5 ppb) were found. A few SVOCs were detected in the low part per trillion range in the samples. Soil Vapor: Multiple VOCs, including petroleum-related compounds, were detected in the soil vapor samples at low concentrations across the site with totals ranging from 226.9 micrograms per cubic meter (ug/m3) to 1,960.6 ug/m3. The highest concentrations of petroleum-related compounds were detected in the southeast corner of the property. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil (below a depth of 15 feet in the vicinity of the underground storage tanks) and groundwater is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

DEC Memo:	Vacant lot, previously used as laundromat and auto repair shop.Gasoline compound in soil samples detected. Phase I and Phase II report will be sent to Kumar Patel.(sr) 06/24/13-Hiralkumar Patel. alternate address: none no PBS or other spill record found. 10:13 AM:- spoke with Charles. he mentioned that current owner baught this property recently and did Phase I and limited Phase II investigation. Charles mentioned that gasoline tank found on old sanborn maps and site was auto repair shop in past. sometime in past, front part of onsite building was demolished to create parking lot. recently the site was used as laundromat and dry cleaning drop-off. currently, site is vacant. asked Charles to submit available environmental reports for review. also asked to provide property owner's contact information. Charles mentioned that property owner is planning to meet DEC Jane to discuss enrollment in BCP. 06/26/13-Hiralkumar Patel. 1:34 PM:- left message for Charles and asked to submit environmental reports/data. 07/03/13-Hiralkumar Patel. 11:06 AM:- left message for Charles. Charles Sosik EBC Ph. (631) 504-6000 (O) (631) 357-4927 (C) email: csosik@ebcincny.com 07/08/13-Hiralkumar Patel. 10:51 AM:- received email from Charles including summary of Phase I, Phase II boring logs, sample results and site map. Charles mentioned that property owner had meeting with DEC Jane (and central office) last week and will submit BCP application. email did not included complete Phase I or Phase II reports. two borings were installed near suspected gasoline UST, to a depth of 15 ft bg. in both borings, 10 ppm recorded on PID

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

in 10 to 15 ft interval only.
no odors or PID readings noted above 10 ft depth. found VOC compounds in soil samples. soil
analyticals: ----------B1----------B2 10-13 ft
13-15 ft

1,3,5-Trimethylbenzene----450----------1,400
Naphthalene----------290----------1,200 07/11/13-Hiralkumar Patel. 12:30 PM:- spoke with
Charles. asked him to submit complete Phase I report. asked him about Phase II report. he mentioned
that borings were installed around tank to find any contamination or not. they received sample
results and discussed with DEC Jane and DEC Cozzy regarding enrollment into BCP. they haven't
prepared any Phase II report. asked Charles to submit written investigation report with all
details. currently, they are preparing BCP application. informed Charles that the department may
require further delineation before even BCP application reviewed. 12:43 PM:- received Phase I
report from Charles. abstract: - block #: 2922 / lot #: 47 - site was an undeveloped portion of a
larger residential property from at least 1888 through 1907. by 1928, the site was developed with a
garage, later occupied by a motor freight company. by 1977, the building was occupied by a
warehouse and non-specific commercial uses, with tenants including a sanitation company and a
coffee distributor. circa 2009, the building was converted to its current use as a laundromat, dry
cleaning drop off facility, and a retail store - one gasoline tank on sanborn maps for the years
1933 through 1967 - gasoline tank presumed to be an UST located at the south-central portion of the
building ---------- - E designation (E-232) for hazmat and noise ---------- - depth to
groundwater at the site is approx. 37 ft bg ---------- - based on regional groundwater contour
maps, groundwater flow is expected to be east-southeast toward English Kills ---------- -
property is currently developed with a one-story commercial building with a partial basement -
building is divided into two commercial/retail units: western unit is occupied by Grand Central
Laundromat, a retail laundromat and dry cleaner; eastern unit is currently vacant, but was most
recently occupied by Interstate Laundry Parts and Equipment - small asphalt-paved parking lot area
is located in front of the building along Grand St - parking lot was formerly covered by the site
building, until site renovations conducted circa 2009 reduced the building footprint to create
customer parking - majority of the building basement extends beneath the far western section of the

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

parking lot - building heated and supplied hot water by natural gas-fired equipment --------- - properties across Grand street to the south have been developed with the existing school, identified as the Northeast Brooklyn High School and reportedly constructed between 1975 and 1980 ---------- - no evidence of ASTs or USTs (e.g., vent or fill lines) was observed on the property - no exterior storm drains were identified on the property and no interior floor drains were observed at the time of inspection - potential buyer: Joel Braver of Express Builders JB, Inc. ---------- 2:20 PM:- sent email to Charles. asked him to submit detailed report of recent Phase II investigation and contact information of property owner/buyer. 07/23/13-Hiralkumar Patel. 12:42 PM:- spoke with Charles. asked him to submit property owner's information. regarding Phase II, Charles mentioned that Phase II report will be preapred after further investigation required under BCP, if application approved. 08/13/13-Hiralkumar Patel. discussed with DEC Jane regarding BCP application. she mentioned that property owner has to conduct required investigation/remediation, even BCP application is rejected. spoke with Charles from Jane's office. Charles submitted BCP application today including investigation work plan. asked Charles to submit property owner's contact information. 2:45 PM:- received email from Charles including property owner's information. 845 Grand Development LLC. **property owner** 11 Hayes Avenue, Suite 201 Monroe, NY 10950 Attn.: Yidal Hirsch 09/10/13-Hiralkumar Patel. discussed with DEC Jane. a BCP application (C224181) has been received and currently it is under review. she mentioned that it will take couple of months (probably end of Dec. 2013) prior to having a signed agreement, if accepted by the department and property owner. sent email to Larry Alden, BCP project manager in Albany. reviewed RIWP submitted in BCP application. abstract: - redevelopment plans for the site include demolishing the existing commercial building and replacing it with a new multi-family residential apartment building with a full basement level - based upon results of previous investigations, subsurface soils at the site consist of a silty non-native fill with bricks, wood and other rubble to approx. 5 to 15 ft bg. a native fine brown silty-sand is present immediately below the fill material - based upon regional groundwater contour maps, and measurements made at adjacent properties, the depth to groundwater beneath the site is approx. 35 ft bg and flows west-northwest toward the East River - according to USGS topographic map, the elevation of the property is 39 ft above the National Geodetic Vertical Datum - propose to conduct geophysical survey of the southern portion

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

of the property in the
vicinity of the former US -propose to install total nine soil borings (four around former UST and
five in other parts of the site), four groundwater wells and six soil-gas probes - four borings
(SB6 through SB9) will be installed in vicinity of former UST. these borings will continue to the
extent of contamination (based on visual or olfactory) or to the water table interface, whichever
comes last. if contamination is not present above the water, borings will be advanced to a minimum
depth of 5 ft below water table interface - five borings (SB1 through SB5) will be installed to the
extent of contamination or to a depth of 15 ft bg, whichever comes last - from borings SB6 through
SB9, soil samples will be collected as: one sample at grounwater interface, one from 12 to 14 ft
interval and one from highest indication of contamination (if present). samples will be analyzed
for VOCs and SVOCs only - one soil sample will be collected from boring SB1 through SB5 for SVOCs,
metals, pesticides and PCBs. these samples will be collected from just below the planned excavation
level of 12 ft bg - four (4) 1-inch monitoring wells will be installed to a depth of 7 ft below
water table, with 10 ft of screen - groundwater samples will be analyzed for VOCs, SVOCs,
pesticides, PCBs and metals - soil vapor samples will be taken from 6 soil-gas locations, and
analyzed via method TO-15 - soil-gas implants at each location will be set at the proposed basement
level of the new building which is approx. 12 ft bg the proposed RIWP needs to be revised for
following reason, if site is not accepted in BCP and requires work under spills: - the plan
proposes not to analyze samples from SB1 through SB5 for VOCs. the department requires all soil and
groundwater samples analyzed for VOCs and SVOCs 09/19/13-Hiralkumar Patel. 11:47 AM:- spoke with
DEC Larry. he mentioned that more data is needed to make determination of the eligibility of the
application. DEC Cozzy sent letter to property owner and asked to conduct proposed Phase II.
reviewed letter. 12:44 PM:- spoke with Larry. informed him that all soil and groundwater samples
should be analyzed for VOCs and SVOCs. Larry stated that as site was only drop-off facility for dry
cleaning business, there is no need for full list analyses. Larry will inform property owner to
analyze all samples for VOCs also. 11/26/13-Hiralkumar Patel. 5:56 PM:- sent email to Larry
inquiring update. 11/27/13-Hiralkumar Patel. 9:21 AM:- received email from Larry. he mentioned that
water sample was collected beneath the area of the former UST, which shows BTEX. Larry mentioned
that the site was accepted into the BCP on 11/18/13.
12/06/13-Hiralkumar Patel. 10:14 AM:- spoke

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

with DEC Larry. as site has been accepted in BCP, case assigned to Larry. **little 'E' designation
for Hazmat/Noise.*** ---------- 8/26/14 - Larry Alden RI work completed at this site and
draft RI report and RAWP have been submitted for review. Draft RAWP calls for excavation of soil in
vicinity of UST to 15 feet below grade, installation of an SVE system, and treatment of residual
groundwater contamination via injection of chemical oxidants and oxygen release compounds.
12/28/2015 - L. Alden. Two 550-gallon underground gasoline tanks were removed as part of the BCP
remediation. Contaminated soil in the vicinity of the tanks was removed to a depth of 15 feet below
the initial ground surface. No VOCs, SVOCs, pesticides, PCBs or metals were detected above
Unrestricted Use SCOs within any of the sidewall or bottom soil samples. However, several gasoline
related VOCs were detected at low concentrations below unrestricted SCOs. Although endpoint samples
were below the unrestricted SCO, an SVE system was installed to treat the unsaturated soil from 15
feet to the water table since initial sampling showed this zone beneath the tanks was impacted by
gasoline-related VOCs. The groundwater was treated with sodium persulfate injections. Groundwater
is currently being monitored under the Site Management Plan. Specifics of the remediation are
included in the Final Engineering Report.

Remarks: contamination based on lab results/clean up pending

Site Description: "Location: The site is located at 871 Grand Street in the Williamsburg section of Brooklyn, NY. The site is comprised of a single tax parcel, Section 3, Block 2922, lot 41 and occupies 0.057 acres. Site Features: The lot is currently developed with a six-story building which occupies the entire lot. The building was constructed in 2015 as part of this Brownfield cleanup. Current Zoning and Land Uses: The site is currently occupied by an apartment building six stories high. The previous building was commercial, but has been demolished. The intended use of the site is residential. The site is zoned R7A. These districts typically produce high-lot coverage, seven- and eight-story apartment buildings, blending with existing buildings in many established neighborhoods. The neighborhood is currently a mix of commercial and residential land uses. Progress High School is across Grand Street from the site. Past Use of the Site: Historical records show the subject site as being developed prior to 1887 with a two-story wheelwright located at the street front, and detached one-story shed located in the rear yard. By 1907, the two- story building was converted for use by a horseshoer, which included two horse stables in the rear yard. In the 1930's through the 1950's, the subject site building was used for paper storage and tile storage. The building was then used in the 1960's and 1970's by a metal products manufacturer, Scientific Fire Prevention Inc., until it was demolished in 1981. The subject site lot was then redeveloped in 1981 with the one-story concrete block commercial building that currently remains at the site. Site Geology and Hydrogeology: Groundwater at the site is present at a depth of approximately 35 feet below grade. Groundwater flows to the southwest. Subsurface

SCIENTIFIC FIRE PREVENTION OFF SITE FORMER (Continued) **1016455578**

	soils at the site consist of a silty non-native fill with bricks, wood and other rubble to approximately 2 feet below grade. A native fine brown silty-sand is present immediately below the fill material to a depth of approximately 15 feet below grade. "
Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and perchlorethylene (PCE) in soil. The solvent contaminated soil was excavated and disposed off-site. Historic fill was also removed from the site. Remedial actions have successfully achieved soil cleanup objectives for residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan Significant Threat: The site no longer presents a significant threat to human health since the source areas have been removed."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Description: "Location: The site is located at 871 Grand Street in the Williamsburg section of Brooklyn, NY. The site is comprised of a single tax parcel, Section 3, Block 2922, lot 41 and occupies 0.057 acres. Site Features: The lot is currently developed with a six-story building which occupies the entire lot. The building was constructed

SCIENTIFIC FIRE PREVENTION OFF SITE FORMER (Continued) **1016455578**

in 2015 as part of this Brownfield cleanup. Current Zoning and Land Uses: The site is currently occupied by an apartment building six stories high. The previous building was commercial, but has been demolished. The intended use of the site is residential. The site is zoned R7A. These districts typically produce high-lot coverage, seven- and eight-story apartment buildings, blending with existing buildings in many established neighborhoods. The neighborhood is currently a mix of commercial and residential land uses. Progress High School is across Grand Street from the site. Past Use of the Site: Historical records show the subject site as being developed prior to 1887 with a two-story wheelwright located at the street front, and detached one-story shed located in the rear yard. By 1907, the two- story building was converted for use by a horseshoer, which included two horse stables in the rear yard. In the 1930's through the 1950's, the subject site building was used for paper storage and tile storage. The building was then used in the 1960's and 1970's by a metal products manufacturer, Scientific Fire Prevention Inc., until it was demolished in 1981. The subject site lot was then redeveloped in 1981 with the one-story concrete block commercial building that currently remains at the site. Site Geology and Hydrogeology: Groundwater at the site is present at a depth of approximately 35 feet below grade. Groundwater flows to the southwest. Subsurface soils at the site consist of a silty non-native fill with bricks, wood and other rubble to approximately 2 feet below grade. A native fine brown silty-sand is present immediately below the fill material to a depth of approximately 15 feet below grade. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and perchlorethylene (PCE) in soil. The solvent contaminated soil was excavated and disposed off-site. Historic fill was also removed from the site. Remedial actions have successfully achieved soil cleanup objectives for residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan Significant Threat: The site no longer presents a significant threat to human health since the source areas have been removed."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

The subject site lot was then redeveloped in 1981 with the one-story concrete block commercial building that currently remains at the site. Site Geology and Hydrogeology: Groundwater at the site is present at a depth of approximately 35 feet below grade. Groundwater flows to the southwest. Subsurface soils at the site consist of a silty non-native fill with bricks, wood and other rubble to approximately 2 feet below grade. A native fine brown silty-sand is present immediately below the fill material to a depth of approximately 15 feet below grade. "
Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and perchlorethylene (PCE) in soil. The solvent contaminated soil was excavated and disposed off-site. Historic fill was also removed from the site. Remedial actions have successfully achieved soil cleanup objectives for residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan Significant Threat: The site no longer presents a significant threat to human health since the source areas have been removed."

SCIENTIFIC FIRE PREVENTION OFF SITE FORMER (Continued) **1016455578**

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

SCIENTIFIC FIRE PREVENTION OFF SITE FORMER (Continued) **1016455578**

single tax parcel, Section 3, Block 2922, lot 41 and occupies 0.057 acres. Site Features: The lot is currently developed with a six-story building which occupies the entire lot. The building was constructed in 2015 as part of this Brownfield cleanup. Current Zoning and Land Uses: The site is currently occupied by an apartment building six stories high. The previous building was commercial, but has been demolished. The intended use of the site is residential. The site is zoned R7A. These districts typically produce high-lot coverage, seven- and eight-story apartment buildings, blending with existing buildings in many established neighborhoods. The neighborhood is currently a mix of commercial and residential land uses. Progress High School is across Grand Street from the site. Past Use of the Site: Historical records show the subject site as being developed prior to 1887 with a two-story wheelwright located at the street front, and detached one-story shed located in the rear yard. By 1907, the two- story building was converted for use by a horseshoer, which included two horse stables in the rear yard. In the 1930's through the 1950's, the subject site building was used for paper storage and tile storage. The building was then used in the 1960's and 1970's by a metal products manufacturer, Scientific Fire Prevention Inc., until it was demolished in 1981. The subject site lot was then redeveloped in 1981 with the one-story concrete block commercial building that currently remains at the site. Site Geology and Hydrogeology: Groundwater at the site is present at a depth of approximately 35 feet below grade. Groundwater flows to the southwest. Subsurface soils at the site consist of a silty non-native fill with bricks, wood and other rubble to approximately 2 feet below grade. A native fine brown silty-sand is present immediately below the fill material to a depth of approximately 15 feet below grade. "

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Description: "Location: The Pratt Refinery site is located in a commercial/industrial area in the Williamsburg section of Brooklyn. The site comprises a single real estate parcel, Block 2277 Lot 1, at 26 N 12th St. It is approximately 7.3-acres in size and is located between Kent Avenue and the East River and between N 12th St. and Bushwick Inlet. Site Features: The site formerly included above ground petroleum bulk storage tanks, a 3-story office building, a one-story cinder block garage, a fuel dispenser island, and a large asphalt paved area. All above ground structures, buildings and storage tanks, were dismantled and removed during the summer of 2019. Current Zoning and Land Use: Currently the site is vacant and covered by concrete slabs and asphalt. The Block and Lot are zoned commercial and future use is anticipated as parkland. The land use in the surrounding area is currently a mix of industrial, commercial, residential, and parkland use. The nearest residential property is located approximately 2 blocks to the south. Past Use of the Site: A petroleum refinery operated on the site from circa 1870 into the early 1900s. Subsequently, the property was utilized as a major petroleum bulk storage facility until the early 2000s. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till and lenticular clay more than 100 feet in thickness. The fluvial marsh silty clay to clay is encountered from approximately 5 to 25 feet below ground surface across the site. The groundwater table is approximately 6 feet below ground surface. Groundwater flows to the

FORMER BAYSIDE FUEL OIL DEPOT CORPORATION - N 12TH ST (Continued) **S117564948**

	north northwest, toward Bushwick Inlet and the East River. "
Env Problem:	"Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, and the emerging contaminants per and polyfluorinated substances (PFAS) and 1,4 dioxane. Based on investigations conducted, the primary contaminants of concern include VOCs and SVOCs, and metals in soil and groundwater. Both Light Non-Aqueous Phase Liquid (LNAPL) and Dense Non-Aqueous Phase Liquid (DNAPL) were encountered in soil borings below the water table and in groundwater wells. "
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

HW Code: 224055A
Record Add: 10/03/2016
Record Upd: 06/06/2022
Updated By: KATHOMPS
Site Description: "Location: The Williamsburg-Pratt Refinery site is located in a commercial/industrial area in the Williamsburg section of Brooklyn. The site comprises a single real estate parcel, Block 2277 Lot 1, at 26 N 12th St. It is approximately 7 acres in size and is located between Kent Ave. and the East River and between N 12th St. and Bushwick Inlet. Site Features: The site formerly included above ground petroleum bulk storage tanks, a 3 story office building, a one story cinder block garage, a fuel dispenser island, and a large asphalt paved area. All above ground structures, buildings and storage tanks, were dismantled and removed during the summer of 2019. Current Zoning and Land Use: Currently the site is vacant covered by concrete slabs and asphalt. The Block and Lot are zoned commercial and future use is anticipated as parkland. The land use in the surrounding area is currently a mix of industrial, commercial, residential, and parkland use. The nearest residential property is located approximately 2 blocks to the south. Past Use of the Site: A petroleum refinery operated on the site from circa 1870 into the early 1900s. Subsequently, the property was utilized as a major petroleum bulk storage facility until the early 2000s. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till and lenticular clay more than 100 feet in thickness. The fluvial marsh silty clay to clay is encountered from approximately 5 to 25 feet below ground surface across the site. The groundwater table is approximately 6 feet below ground surface. Groundwater flows to the north northwest, toward Bushwick Inlet and the East River. "
Env Problem: "Soil sediment and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, and the emerging contaminants per and polyfluorinated substances (PFAS) and 1,4 dioxane. Based on investigations conducted, the primary contaminants of concern include VOCs and SVOCs, and total metals in soil and groundwater. PFAS was found in groundwater samples. Nature and Extent Soil: Sampling results indicated that VOCs, SVOCs, pesticides, PCBs, metals and mercury were detected above the applicable restricted residential use soil cleanup objectives (RRSCOs) or protection of groundwater soi cleanup objectives (PGWSCOs) in soil samples. VOCs: Petroleum VOCs consisting of benzene, toluene, ethylbenzene, total xylenes (collectively BTEX), isopropylbenzene, n propylbenzene, 1, 3, 5 trimethylbenzene, 1, 2, 4 trimethylbenzene, sec butylbenzene, 4 isopropyltoluene, and naphthalene were detected in many samples site wide. The soil boring logs indicate that the petroleum contamination extends from the surface to a depth of approximately 30 ft below ground surface (bgs). Petroleum VOC detections and concentrations increased with depth, a majority of them occurring in the area of the former bulk storage tanks. The highest number of samples containing petroleum VOCs occurred at the water table interface. The highest concentrations occurred at or below the water table (1 to 6 feet bgs) to approximately 25 30 ft below grade. Some samples containing BTEX were found at greater depths, which were associated with coal tar, as noted below. 1,2,4 Trimethylbenzene, naphthalene and BTEX (benzene, toluene, ethylbenzene and xylenes) were found most often and had the

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

highest concentrations exceeding RRSCOs and PGWSOCs. 1,2,4 Trimethylbenzene concentrations ranged from 4.4 to 790 parts per million (ppm), exceeding the PGWSCO of 3.6 ppm. Naphthalene concentrations ranged from 17 to 2,500 ppm, exceeding the PGWSCO of 12 ppm. Benzene concentrations ranged from 0.7 to 19 ppm, exceeding the PGWSCO of 0.7 ppm; toluene concentrations ranged from 0.88 to 59 ppm, exceeding the PGWSCO of 0.7 ppm; ethylbenzene concentrations ranged from 1 to 120 ppm, exceeding the PGWSCO of 1 ppm; total xylenes concentrations ranged from 0.28 to 460 ppm, exceeding the PGWSCO of 0.26 ppm. The petroleum contamination is more prevalent along the southern boundary along 12th Street and around the former bulk storage tanks. This suggests that the site has been impacted by the former petroleum storage and fueling operations. SVOCs: SVOCs, primarily polycyclic aromatic hydrocarbons (PAHs), were detected in a majority of the soil borings site wide, primarily within the shallow soil samples associated with the historic fill (5 to 10 ft below grade), although some occurred at greater depths and were associated with coal tar. PAHs, specifically benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3 c,d)pyrene, accounted for the highest percentage of SVOC samples exceeding RRSCOs or PGWSCOs, as applicable. Concentrations of benzo(a)anthracene (1.1 ppm to 230 ppm) and benzo(a)pyrene (1.1 to 76 ppm) found on site significantly exceed their RRSCO of 1 ppm. Concentrations of benzo(b)fluoranthene (1.1 ppm to 75 ppm) and chrysene (1.1 to 160 ppm) found on site exceed their RRSCO of 3.9 ppm. Concentrations of dibenz(a,h)anthracene (0.36 ppm to 11 ppm) found on site exceed the RRSCO of 0.33 ppm. Concentrations of indeno(1,2,3 c,d)pyrene (0.53 ppm to 34 ppm) found on site exceed the RRSCO of 0.5 ppm. The highest SVOC sample concentrations were phenanthrene, fluorene, fluoranthene, and naphthalene and found within the historic fill. Concentrations of phenanthrene (120 to 3,600 ppm), fluorene (120 to 1,500 ppm), naphthalene (200 to 2,500 ppm) and fluoranthene (160 to 1,600 ppm) found on site significantly exceed their RRSCO of 100 ppm. Coal Tar: The PAH and VOC (BTEX, noted above) analytical results indicate that coal tar was encountered in two borings from 20 to 50 feet, bgs. Coal tar was also identified in the field based upon photoionization detector(PID) readings, olfactory observations, and visual identification. The location of these borings is generally in the southeast and central portion of the site. Metals: Metals consisting of arsenic, barium, cadmium, total chromium, iron, cobalt, copper, lead, mercury, nickel, selenium and zinc were detected above RRSCOs. Metals exceeding the RRSCOs are found primarily within the shallow soils (5 to 10 feet, bgs) site wide within the historic fill. Arsenic, lead, and mercury accounted for the highest percentage of metal exceedances of RRSCOs. Concentrations of arsenic (16.3 to 1,110 ppm) found on the site exceed the RRSCO of 16 ppm. Concentrations of lead (448 to 12,100 ppm) found onsite exceed the RRSCO of 400 ppm. Concentrations of mercury (0.856 to 8.43 ppm) found onsite exceed the RRSCO of 0.81 ppm. While many of the metal values were within the range of their typical background concentrations for urban fill, some were well above these values are likely attributable to the petroleum and coal tar releases previously identified. PCBs and Pesticides: PCBs were detected at 8.9 ppm in one shallow soil boring exceeding the RRSCO of 1 ppm. Pesticides were detected in samples, although no pesticides were detected above RRSCOs. Site-related VOC, SVOC, pesticides and metals were found in Bushwick Inlet and/or East River sediments

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

adjacent to the site. Coal tar DNAPL was observed in one sample in the East River. Petroleum LNAPL, sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick Inlet. This suggests that site contamination has likely migrated off-site into the Bushwick Inlet. Groundwater: Sampling results indicated that VOCs, SVOCs, and metals were detected above the 6NYCRR Part 703 Ambient Water Quality Standards and Guidance Values (AWQSGVs) in groundwater. VOCs: VOCs, including 1,2,4 trimethylbenzene, 1, 3, 5 trimethylbenzene, benzene, chlorobenzene, isopropylbenzene, naphthalene, n propylbenzene, sec butylbenzene, MTBE, and total xylenes were detected at concentrations exceeding AWQSGVs The following VOCs were the highest: naphthalene at 2,100 part per billion (ppb) which exceeds the AWQSGV of 10 ppb; benzene at 160 ppb which exceeds the AWQSGV of 1 ppb; 1,2,4 trimethylbenzene at 260 which exceeds the AWQSGV of 5 ppb; total xylenes at 1,140 ppb which exceeds the AWQSGV of 5 ppb. SVOCs: SVOCs, including acenaphthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3 c,d)pyrene, and phenol were detected at concentrations exceeding NYSDEC AWQSGVs. The following are the maximum concentrations of SVOC found on site in groundwater: acenaphthene at 52 ppb, which exceeds the AWQSGV of 20 ppb; benzo(a)pyrene at 4 ppb, which exceeds the AWQSGV (non detect); benzo(b)fluoranthene at 3 ppb, benzo(k)fluoranthene at 2 ppb, chrysene at 5 ppb and indeno(1,2,3 c,d)pyrene at 2 ppb, which exceed their AWQSGV of 0.002 ppb; and phenol at 2 ppb which exceeds the AWQSGV of 1 ppb. 1,4-Dioxane was not detected above the laboratory reporting limit in any groundwater sample. The elevated concentration of VOCs is likely a reflection of the petroleum contamination as most exceedances occurred in the former petroleum storage and fueling operations. The SVOC contamination is in part the result of the historic fill as most exceedances occurred in the western half of the site. SVOC contamination was also found in borings with observed coal tar in the southeast area of the site along 12th street, suggesting some SVOC groundwater contamination could be attributed to the MGP. Metals: The metals arsenic, barium, beryllium, cadmium, chromium, copper, iron, magnesium, lead, manganese, and sodium were detected at concentrations exceeding AWQSGVs in unfiltered samples. Filtered samples show only iron, magnesium, and sodium exceeding AWQSGVs, which is likely from compounds associated with the East River, which have a hydrogeological connection to groundwater at the Site. The source of the other metals in the unfiltered samples is likely due to the presence of suspended sediments in the sample. PCBs and Pesticides: PCBs and pesticides were not detected above the laboratory reporting limit in any groundwater sample. PFAS Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 160 parts per trillion (ppt) and 17 ppt, respectively, exceeding the Maximum Contaminant Level (MCL, drinking water standard) of 10 ppt in groundwater. The maximum concentration of total PFAS in one sample was 706 ppt. The source of these compounds is thought to be from the on site fire suppression system as the compounds were found in samples taken in the immediate vicinity of the foam house. Non Aqueous Phase Liquid-NAPL NAPL was found in both soil and groundwater samples sitewide. Both LNAPL and DNAPL were found in soil borings below the water table and in groundwater wells. Most groundwater observations were non measurable sheens or blebs. However, some had measurable LNAPL,up to 1.5 feet

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

thick. Sediment: Site-related VOC, SVOC, and metals were found in Bushwick Inlet and/or East River sediments adjacent to the site. Coal tar and petroleum was observed in one sample in the East River. Petroleum sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick Inlet. contamination has migrated off-site. The VOC most often detected in samples and with the highest concentrations was 1,2,4-Trimethylbenzene, concentrations of which ranged from 0.1 to 10 ppm. The SVOC most often detected in samples and with the highest concentrations was Naphthalene, concentrations of which ranged from 3 to 48 ppm. The source of these VOC and SVOC compounds are associated with the site. Unfiltered metals samples show compounds associated with the East River. The source of the other metals in the unfiltered samples is likely due to the presence of suspended sediments in the sample. Sediment gathered show observed coal tar and petroleum contamination in the East River and Bushwick Inlet sediment. Coal tar DNAPL was observed in one sample in the East River adjacent to the site. Petroleum LNAPL, sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick inlet. Based on sediment data below and the tidal influence, contaminated groundwater and LNAPL/DNAPL appear to have migrated off-site into the adjacent waterway. "

Health Problem: "The site is completely fenced, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Sampling indicates soil vapor intrusion is a potential concern for off-site buildings, however this may be attributable to contamination from an off-site source."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL SEE SPILL NUMBER 8908532. 4/12/04-Vought-Spill transferred from Sullivan to Rommel as per Rommel. 2/2/07 - Haggerty - Alphonse Milo (718-388-7575) brought the property shortly after the tank test failures and is still owner today. He states he is will be building a parking lot on the subject property and all soil will be excavated for the foundation. I instructed Mr. Milo to contact the DEC as soon as possible because there is a good chance contamination is present. Spill to remain open 10/4/07 - Haggerty - received Phase II subsurface Investigation report from Al Milo. Phase II completed to satisfy the bank requirement. Report states that all soil samples and groundwater samples are below standards. MW's in the area surrounding the former tank field. No groundwater contamination was detected. PM stated that all tanks must be properly closed out in PBS wether tanks are registered or previously unknown and this spill will remain open until this is resolved. 07/21/08 - Haggerty: Spoke with Mrs. Milo. She stated that the PBS issue has been resovled. I checked the PBS records to confirm. PBS# 2-478075. Spill closed
Remarks:	THREE 550 GALLON TANKS FAIL HORNER-EZY CHEK - LR = -0.11982 GPH. NO DECISION ON ACTION TO BE TAKEN. .

Updated By:	HMDUDEK
Site Description:	"Location The 1.08-acre site is located in the Greenpoint/East Williamsburg industrial section of Brooklyn, NY. The site is located on the southwest corner of the intersection of Vandervoort Avenue and Richardson Street. Please refer to Figures 1 2. Site Features The site is completely covered by a one-story brick building. Numerous other commercial and industrial properties are located to the north, south, and west of the site. The Greenpoint Little League fields and a National Grid energy facility are east of the site across Vandervoort Avenue. A small residential area is located 1-2 blocks north of the site. An eastbound on-ramp to the Brooklyn-Queens

FORMER KLINK COSMO CLEANERS (Continued) **S109416412**

Expressway (I-278) is located 4 blocks to the north. Current Zoning and Land Use The site is zoned for (M1) manufacturing. Per NYC Planning, M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. The site is currently used for sheet metal fabrication and offices. Past Use of the Site The Department began a Site Characterization in this area in2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, Site ID No. 224121). This property was identified as a potential source of contamination based on its past use. Klink Cosmo Cleaners operated as a commercial dry cleaner from the 1950's to the mid 1990's. During that time, hazardous waste (spent halogenated solvents) was generated under EPA ID no. NYD000824334. Site Geology and Hydrogeology The site is underlain by urban fill unit (0.5-8 feet thick), a sand unit (approximately 100 feet thick) with varying textural features, and the Raritan (clay) Formation approximately 110 feet below ground surface (bgs). Groundwater is present approximately 35 feet bgs and flows north to northeast toward Newtown Creek. "

Env Problem: "Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern include VOCs and metals. Nature and Extent of Contamination: Soil The VOC source area was identified in the northeast corner of the current building at depths from 1 - 35 feet below ground surface (bgs). Tetrachloroethylene (PCE) was detected in soils on-site at concentrations up to 273 parts per million or ppm, exceeding the soil cleanup objective (SCO) for commercial use (150 ppm) and for the protection of groundwater (1.3 ppm). Trichloroethene (TCE) was detected in two on-site samples which slightly exceed the protection of groundwater SCO (0.47 ppm). PCE contaminated soil exceeding the protection of groundwater SCO extends off-site approximately ten feet to the north and east below the adjacent sidewalks of Vandervoort Avenue and Richardson Street. Metals contamination associated with urban fill was detected in shallow soil on-site. For example, lead was detected up to 2,680 ppm (exceeding the commercial SCO of 1,000 ppm) and arsenic up to 38.7 ppm (exceeding the commercial SCO of 16 ppm). The data does not indicate any off-site metal impacts in soil related to this site. Groundwater Based on the investigations conducted to date, the primary contaminants of concern detected in groundwater include PCE and trichloroethene (TCE). PCE has been found in shallow groundwater at concentrations up to 46,000 parts per billion or ppb (exceeding the groundwater standard of 5 ppb). PCE has also been found in deep groundwater (atop the Raritan clay) up to 4,500 ppb. TCE, a daughter product of PCE, was detected up to 2,100 ppb (exceeding the groundwater standard of 5 ppb). The groundwater plume extends north and east from the site to at least Lombardy street where it becomes co-mingled with contamination originating from other sites. Soil Vapor PCE has been found in soil vapor beneath the site at concentrations up to 2,090,000 micrograms per cubic meter, or ug/m^3. TCE has been found at concentrations up to 7,380 ug/m^3. Soil vapor intrusion sampling has been completed at twenty off-site structures. Actions described in Section 6.2 were needed to address potential exposure at twelve structures. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the site is covered by a building. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by

FORMER KLINK COSMO CLEANERS (Continued) **S109416412**

a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sub?slab depressurization systems (SSDSs) have been installed in twelve off?site residential buildings to prevent the indoor air quality from being affected by the contamination in soil vapor in the area. SSDSs remain available to homeowners in the vicinity of the site who previously rejected the State s offer for a system. The on-site building does not have an SSDS; however, the potential for soil vapor intrusion is being addressed by the soil vapor extraction/air sparge system which is being constructed and will be operated on-site. Record Upd: 02/21/2018
Updated By: GWBURKE
Site Description: "This site has been accepted into the Brownfield Cleanup Program - Site Code C224154. Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing until 2010. The site has a RCRA Closure Work Plan which started to be performed in 2011 and continues in 2014. Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the past ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. In 1999 RGJ contractor closed in place 14 USTs used to store VOCs. RGJ reported soil contamination around the USTs. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001, after Con Edison, the owner of the adjacent property discovered Volatile Organic Compounds (VOCs) under their parking lot and sued Fyn Paint Co. The investigation at the site revealed soil and groundwater highly contaminated with VOCs. After multiple phase investigation in January 2007, an IRM/pump and treatment of the groundwater was installed and operated. The RAWP was approved in 2009, and an excavation of the contaminated soil around six of the USTs constituting the source of VOCs was completed in 2010. Additional remedial design for a dual phase extraction system (DPES) was approved. In June 2014, the DPES was operating at the site. In

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

November 2011, RCRA Closure field work started under EPA supervision and it continued through 2014. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of a layer of antropogenic fill material (0-12 feet and the rest to 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. "

Env Problem: "See also Site No. V00380. Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP)was approved for off site (OU-2)contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed in May- June 2014. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated and the remedial action will be completed under the State Superfund Program. In March 2015, the site was accepted in the Brownfield Cleanup Program (BCP) with the index # C224154."

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Site Description:	"Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."
Env Problem:	"Nature and Extent of Contamination: Remediation at the site is

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Site Description:	"Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."
Env Problem:	"Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater.

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Updated By:	HMDUDEK
Site Description:	"Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."
Env Problem:	"Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Site Code: 502562
Site Description: "Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."
Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Address: 230 KENT AVENUE
City,State,Zip: BROOKLYN, NY 11249
Site Code: 502562
Control Name: Environmental Easement
HW Code: C224154
Control Code: J
Control Type: INST
Dt record added: 03/24/2015
Dt rec updated: 02/07/2024
Updated By: HMDUDEK
Site Code: 502562
Site Description: "Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."
Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Site Code: 502562
Site Description: "Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."
Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil,

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Updated By: IXMUNTEA
Site Code: 56974
Site Description: "Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. "
Env Problem: "Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP)was approved for

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

	off site (OU-2)contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated. In March 2015, a new owner applied and the site was accepted into the Brownfield Cleanup Program under site no. C224154."
Health Problem:	"It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated. "

Updated By: IXMUNTEA
Site Code: 56974
Site Description: "Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. "
Env Problem: "Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP)was approved for off site (OU-2)contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated. In March 2015, a new owner applied and the site was accepted into the Brownfield Cleanup Program under site no. C224154."

Health Problem: "It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated. "

BROWNFIELDS:

Name:	FYN PAINT AND LACQUER CO., INC.
Address:	230 KENT AVENUE
City,State,Zip:	BROOKLYN, NY 11249
Program:	BCP
Site Code:	502562
Acres:	0.125
HW Code:	C224154
SWIS:	2401
Town:	New York City
Record Added Date:	12/04/2014
Record Updated Date:	04/15/2024
Update By:	HMDUDEK
Site Description:	"Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Updated By: JHOCONNE
Site Description: "Location: The 0.49 acre site is located at 98, 100, and 104 South 4th Street in the Borough of Brooklyn, Kings County, NY in an urban area. It was previously known as 98-116 South 4th Street. Site Features: The site consists of three buildings: 98-102 (now 98), 104-114 (now 100) and 116 (now 104) South 4th Street. Occupying almost the entirety of the site is a multi-story structure made up of a 7 story structure in the center (100 South 4th St.) flanked by two smaller 1 story structures. Two of the buildings were constructed in 1910 and the third was constructed in 1950. All three buildings were renovated in the early 2000s. The 7 story structure is a residential building with approximately 74 units. Current Zoning and Land Use: The site is currently zoned as M1-2/R6 and is surrounded by residential, commercial and industrial uses. It is identified as a single tax lot, Block 2443, Lot 13 and is a rectangular shaped parcel along the southern side of South 4th St., between Berry St. and Bedford Ave. Past Use of the Site: The site previously had a variety of manufacturing uses, including an adhesives factory (98 S. 4th St, formerly 98-102 S 4th St), an electroplating operation, a laboratory (100 S. 4th St, formerly 104-114 S 4th St), and a dye factory (116 S 4th St). Carmin Industries was identified as a Large Quantity Generator of hazardous wastes, including undefined hazardous wastes, ignitable hazardous wastes, corrosive hazardous wastes, reactive hazardous wastes, chromium, lead and cyanides. Site Geology and Hydrogeology: Soil borings conducted in 1996 identified fill materials to a depth of approximately 7 feet below grade from the first floor of 98 S. 4th St and to a depth of approximately 6 feet below the basement floor of 100 S. 4th St. Beneath the surface fill layer is sand and silt to a depth of at least 17 feet below grade. Groundwater is present at a depth of approximately 15-17 feet below grade."
Env Problem: "Nature and Extent of Contamination: A subsurface investigation was performed in 1997 in support of an application to participate in the Voluntary Cleanup Program (see site no. V00094). Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and polychlorinated biphenyls (PCBs). Groundwater samples were analyzed for VOCs only. Soil A total of nine soil borings were advanced throughout buildings 2 and 3 (access to building 1 was precluded by structural deficiencies). Samples were collected from nine soil borings. Various VOCs were detected at concentrations exceeding the unrestricted use soil cleanup objectives (SCOs), including: tetrachloroethylene (PCE) at a maximum concentration of 5.5 parts per million (ppm); trichloroethene (TCE) at 3.7 ppm; and toluene at 1.4 ppm. SVOCs were also detected above the unrestricted use SCOs including: fluoranthene at a maximum concentration of 14 ppm; phenanthrene at 19 ppm; and pyrene at 19 ppm. The majority of the contaminants appear to be found beneath building 3 (the western one-story building). Groundwater Groundwater samples were collected from 3 locations on-site. PCE was detected at a maximum concentration of 86 parts per billion (ppb), TCE at 100 ppb, and toluene at 28 ppb. In addition, groundwater samples collected from a property immediately adjacent to the south of the site (BCP site no. C224233) identified PCE at a maximum concentration of 71.4 ppb and TCE at 27.2 ppb. Soil Vapor No soil vapor samples

FORMER EL PUENTE (Continued) **S121933853**

	were collected. Groundwater samples collected from a property immediately adjacent to the south of the site (BCP site no. C224233) identified PCE at a maximum concentration of 2870 micrograms per cubic meter (ug/m3) and TCE at 3510 ug/m3. Further delineation of the soil vapor was performed at 2 residential buildings located to the west of the Site on Berry Street identified the need for mitigation. See also site no. C224260."
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Site Description:	"Location: The 1.01 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the east side of

95 LOMBARDY ST./ACME ARCH. PRODS., INC. (Continued) **U003652054**

Vandervoort Avenue between Anthony and Lombardy Streets. Site Features: The site is completely covered by one (1) two-story and three (3) one-story brick buildings. The site is surrounded by other commercial and industrial properties. Sergeant William Dougherty Playground is located immediately north of the site across Anthony Street, and the eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located one block to the north. A small residential area is located one block south of the site. Current Zoning/Use(s): The site is zoned for manufacturing. The site is currently used as a granite warehouse and showroom at 95 Lombardy Street, and a paper distribution office and a kitchen cabinet warehouse/showroom at 46 Anthony Street. Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was utilized as a metal fabricator and painting facility from the 1930's to the late 2000's, and a Department database which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing). Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site."

Env Problem: "Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is trichloroethene (TCE). TCE has been found on-site in shallow groundwater at concentrations up to 66,000 ppb, and in deep groundwater at concentrations up to 70,000 parts per billion or ppb, exceeding Part 703.5 class GA standards (5 ppb). Concentrations of tetrachloroethene (up to 8,000 ppb) and 1,2-dichloroethene (3,200 ppb) have also been found above their respective Part 703.5 class GA standards (5 ppb each). - Soil TCE was detected in soil at 2.3 parts per million or ppm in one sample (exceeding the unrestricted Soil Cleanup Objective). - Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 3,100 ug/m^3. Concentrations of TCE in soil vapor have been found up to 4,500 ug/m^3, and in indoor air up to 13 ug/m^3. Significant Threat: The site poses a significant environmental threat due to ongoing releases of TCE from source areas into soil and groundwater."

Health Problem: "Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available. "

Site Description: "Location: The 0.51 acre site is located at 313-315 Kingsland Avenue in the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. Site Features: The site is completely covered by multiple buildings of varying construction and height. Numerous other commercial and industrial properties are located to the north, east, and west of the site. A large residential area is located immediately south of the site, and extends south along both Kingsland Avenue and Monitor Street. A large sewage treatment plant is located approximately 1/2 mile north of the site. Current Zoning/Use(s): The site is zoned for both residential and light manufacturing. The site is partially occupied, and is utilized for a variety of purposes (residential, warehousing, etc.). Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the mid-1960's. The Meeker Avenue Plume Trackdown Site Characterization in the area of this site was conducted in several phases, and was completed in the Summer of 2009. Operable Units: The site was divided up into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU-01) consists of the on-site source area which includes the sidewalk adjacent to 315 Kingsland Avenue. All remaining off-site contamination will be investigated and remediated separately as Operable Unit 2 (OU-02). 300 Kingsland Avenue is suspected to be part of the former Spic and Span operation and will be addressed as part of OU-02.. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-10' thick), a stratified sand unit with some to no fines (over 120' thick), a discontinuous glacial till unit within the sand unit (0.5-50' thick), a discontinuous clayey silt unit within the sand unit (0.5-25' thick), and the Raritan Formation (approximately 138.5' below ground surface). Groundwater is approximately 11-25' below

FORMER SPIC AND SPAN CLEANERS (Continued) **S109416408**

	ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 1,300' northeast of the site."
Env Problem:	"Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 39,000 ppb, and in deep groundwater at concentrations up to 170,000 ppb, exceeding the Part 703.5 class GA standard of 5 ppb. PCE DNAPL has also been found on-site at concentrations up to 1,000,000 ppm (100%) in deep monitoring wells. Trichloroethene (up to 5,000 ppb), cis-1,2-dichloroethene (up to 14,000 ppb), and vinyl chloride (up to 3,200 ppb) have also been found in shallow groundwater at concentrations above their respective Part 703.5 class GA standards (5 ppb each). - Soil PCE has been found in soil up to 290,000 ppm, well above the soil cleanup objective for unrestricted use (1.3 ppm). -Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 8,200,000 ug/m^3, and in indoor air up to 170 ug/m^3. Concentrations of TCE in soil vapor have been found up to 32,000 ug/m^3, and in indoor air up to 12 ug/m^3. Significant Threat: The site poses a significant threat to public health and the environment."
Health Problem:	"Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available. DEC Memo:	6/9/2014: During investigation work being conducted at a State Superfund site (Former Spic and Span Cleaners, DEC Site ID No. 224129), a UST was discovered beneath the southern portion of a vacant warehouse during pre-clearing activities. DEC PM (Harrington) directed the standby consultant (URS Corporation) to call in a spill for this site. Soils surrounding the tank have been found to contain visual and olfactory evidence of petroleum contamination. (Harrington) 6/9/2014: H. Patel (DEC - Region 2) received spill from dispatch. Patel contacted D. Harrington (DEC PM - Central Office) to discuss the case, and subsequently assigned it to him. 6/16/2014: URS personel have uncovered a portion of the UST located inside the property (vacant

FORMER SPIC AND SPAN CLEANERS (Continued) **S109416408**

warehouse located at 315
Kingsland Avenue/260 Norman Avenue). Tank appears to be oriented long-way north to south, and is
approximately 10' in length. Tank was approximately 14 below grade. Through a hole in the top of
the tank, it was observed to be single-walled steel approximately 1/4 thick, and approximately 4'
in diameter. There appears to be ~6 of an unidentified liquid at the bottom of the tank. Contents
smelled like a mixture of weathered petroleum and solvents such as paint thinner or wood stripper.
(Harrington) 6/17/2014: URS personnel collected a product sample from the UST and submitted it to
the lab. Product will be analyzed for VOCs, SVOCs, PCBs, RCRA characteristics, viscosity, surface
tension, and specific gravity. (Harrington) 11/21/2014: PM requested URS to generate report
detailing the findings of investigation surrounding the UST inside the building. Report will
include sampling results from soil and product samples, and a tank removal estimate. (Harrington)
12/26/2014: PM sent an e-mail to URS Corporation commenting on the draft UST data summary report
for the work done inside the vacant building at 315 Kingsland Avenue. Numerous changes need to be
made before the report can be finalized. (Harrington) 1/24/2015: PM sent an e-mail to URS
Corporation approving the revised UST data summary report on 1/9/15. This report was distributed to
interested parties (including Community Board 1 and Greenpoint branch of Brooklyn Public Library)
on 1/21/15. (Harrington) 3/30/2015: PM sent an e-mail to URS Corp. requesting budget estimate for
IRM regarding DNAPL recovery and oversight work related to the removal of the UST inside the
building (which will be handled separately under response call-out with Island Pump and Tank).
(Harrington) 5/18/2015: The Department sent a WA Issuance/Notice to Proceed letter to URS
Corporation for the development of the Schedule 2.11 budget package regarding the IRM work
assignment. This package is due to the Department in mid-June. (Harrington) 7/21/2015: DEC sent the
WA Approval Letter to URS Corporation for the initiation of this IRM work assignment. IRM covers
both UST removal and DNAPL recovery at the site. Call-out for tank removal to be completed by PM
shortly. (Harrington) 7/31/2015: DEC PM issues call-out 124051 to Island Pump and Tank (IPT) for
the completion of UST removal within the abandoned warehouse building at 315 Kingsland Avenue/260
Norman Avenue. Site visit with IPT and URS to be completed week of August 17th. (Harrington)
8/19/2015: DEC PM conducted kick-off meeting with URS and IPT personnel regarding the UST removal
from the site building. IPT to confirm the permits needed before initiating work. URS will be

FORMER SPIC AND SPAN CLEANERS (Continued) **S109416408**

providing scope for structural support of roof to IPT shortly. (Harrington) 9/21/2015: IPT mobilizes to the site to complete tank pull. Wall pockets are cut into the south, east, and west walls for placement of structural steel to support the building roof. Bobcat, mini-excavator, scissor lift, and steel brought to the site. (Harrington) 9/22/2015: IPT places the structural steel beams (W12x30) in place (one east-west beam supported by east and west wall pockets, and two north-south beams supported by southern wall pockets and east-west beam). Roof made placement difficult as there is a 5 sag in the middle, as well as numerous sprinkler lines (one of which was cut and capped). (Harrington) 9/23/2015: IPT welds the steel beams together, and seals up the wall pockets with brick and mortar mix. The scissor lift is removed from the site. UST top is exposed at the southern end. There appears to be ~11 of liquid in the tank. It smells like a mix of gasoline and paint stripper. Vent and fill lines are noted heading east from the tank toward the sidewalk. Tank appears to be at an angle descending to the north. (Harrington) 9/24/2015: IPT vacuum truck removes 225 gallons of a Class 3 flammable liquid (ID Number 1993). Tank is removed from the ground and cleaned. There were a lot of holes in the tank bottom; leaks were minimized by clay soils beneath tank. Stained soils evident beneath tank. Soil samples collected by URS. IPT over-excavated the area and stockpiled contaminated soil for shipment off-site. (Harrington) 9/25/2015: IPT completed soil excavations in the UST area to the extent feasible given conditions. URS collected confirmatory samples. MJ Engineering and Land Surveying completed an updated survey of the building interior, UST location, sample locations, and excavation boundaries. (Harrington) 9/28/2015: IPT completes backfill of excavation with clean fill, then finishes by saw-cutting the rough edges in the floor and capping the backfill with a 6 layer of concrete (with wire mesh) to match the surrounding floor. IPT demobilizes from the site. (Harrington) 12/28/2015: IPT has submitted paperwork regarding their efforts to remove the UST at the property. This paperwork was approved in an e-mail to IPT. Reporting on the overall effort will be received from URS in late January-early February 2016. (Harrington) 3/4/2016: URS submitted the UST closure report. Confirmatory soil sampling indicates all contaminated soil has been removed from the site. Spill closed. (Harrington)

Remarks: Unknown UST (4’x10’) discovered during test borings and contaminated soil found. DEC Dave Harrington out of Albany Ofc is aware and project manager. Cleanup is pending. Tank still in the ground.

Updated By: JHOCONNE
Site Description: "Location: The Site is located at 152 Graham Avenue in the Borough of Brooklyn, Kings County, NY. The site is located in the East Williamsburg section of Brooklyn, New York. The property is bordered by Graham Avenue on the west, by a three-story mixed commercial/residential building to the north, by a four-story mixed commercial/residential building and a three-story mixed commercial/residential building to the south, and by a four-story residential building to the east. The three-story building located to the southeast of the site also has a dry cleaner on the first floor. Site Features: The 2,500 square foot (0.057 acre) site parcel is occupied by a three-story building built in 1920. The site parcel also contains an open yard area behind (east of) the structure. The first floor is occupied by a dry cleaner and the upper two floors are occupied by residential apartments. Current Zoning and Land Use: The current site use is a dry cleaner (Top Hat Cleaners) on the first floor with residential apartments on the second and third floors. Past Use of the Site: According to the historical records, a dry cleaner has occupied the 152 Graham Ave location since approximately 1960. A Phase I study at the adjacent property (154 Graham Avenue) identified current and prior occupants of the ground floor retail space (pastry shop, shoe retailer and moving company, among others) which were not likely to be a source for chlorinated VOC impacts beneath the site. The report identifies the dry cleaner at 152 Graham Avenue (Top Hat Cleaners) as the most likely source of the contaminants identified in soil vapor. Site Geology and Hydrogeology: The site elevation is approximately 27 feet above mean sea level. Soil lithology consists of two main types of soils. The first soil type was fill material that consisted of fine to medium sand to silt with fine to coarse gravel and traces of brick and other miscellaneous debris. The second type was natural material composed of fine to coarse sand to silt with fine to coarse gravel and little clay. Groundwater was encountered between 17.5 feet and 22.5 feet below ground surface. Groundwater flow was determined to be in the north to northwest direction. Site is transferred and being remediated under BCP Site No. C224208."
Env Problem: "Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs). Based upon investigations conducted to date, the primary contaminant of concern is tetrachloroethene (PCE). Soil - Sampling of soil beneath and behind the site structure was limited due to inability to access the area with a drill rig. Sample results from other media indicate that a source area of higher contaminant concentrations may be present beneath the site structure. Two detections of PCE were observed in soil borings advanced during the Site Characterization. PCE was detected at MW-02 (0.0036 ppm 17 19) and MW-04 (0.0017 ppm 5 6). Both detections are below the NYCRR Part 375 Soil Clean-up Objective of 1.3 ppm for PCE meeting both Unrestricted Use and Protection of Groundwater objectives. Groundwater - PCE was found in groundwater at two of the three boring locations advanced into the water table. Concentrations in contravention of the Class GA Groundwater standard of five (5) ppb were observed at 56 ppb and 10 ppb. Each of these exceedances were located in the public sidewalk immediately off the site parcel. Soil Vapor & Indoor Air A Vapor Intrusion Investigation

TOP HAT CLEANERS (Continued) **1004758111**

	was performed at the adjacent building to the north (154 Graham Avenue) as part of a real estate transaction. As part of that investigation two sub-slab vapor samples, one basement indoor air sample, and one ambient air sample were collected. At sub-slab location SG2, 43,399 ug/m3 of PCE was detected in soil vapor. (Note that the concentration reported is from a sample that was diluted 600 times. The concentration of PCE in the undiluted sample was 10,171 ug/m3, which exceeded the calibration range of the equipment.) Trichloroethylene (TCE) was detected at 1074 ug/m3 in the diluted sample and at 1504 ug/m3 in the undiluted sub-slab vapor sample. Cis-1,2-dichlorothylene (cis-1,2-DCE) was detected at 2180 ug/m3 in the diluted sample and at 1110 ug/m3 in the undiluted sub-slab vapor sample. Indoor air sampling results identified 44.1 ug/m3 of PCE and 0.43 ug/m3 of TCE in the basement air sample. See site no. C224208 for additional updates."
Health Problem:	"People may contact contaminated soil or groundwater if they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion on-site. Additional investigation of the potential for soil vapor intrusion to occur off-site is needed."

Program: HW
Site Code: 588258
Classification: N
Region: 2
Acres: 0.630
HW Code: 224296
Record Add: 05/09/2019
Record Upd: 03/04/2021
Updated By: KALEWAND
Site Description: "Location: The subject site consists of 7 separate tax lots (block 3046, lots 22, 24, 26, 27, 47, 48 and 49) and is an irregularly shaped parcel. The following addresses are associated with the Site: 254-258 and 262-264 Scholes Street, and 249-257 Meserole Street. The Site fronts the south side of Scholes Street, extending south to Meserole Street, between Bushwick Avenue and Waterbury Street. The total Site area is approximately 27,500 square feet (0.63 acres). The site is currently used for vehicle maintenance for an armored car service. Site Features: The Site lots are currently occupied with warehouse-style buildings and a surface parking area. The site is surrounded by commercial properties to the south and east, Scholes Street to the north and a playground to the west. Current Zoning and Land Use: The site is zoned M1-1 (light manufacturing/industrial) and

RAPID ARMORED CORPORATION (Continued) **S123661630**

	is located in an industrial business zone. Past Use of the Site: Historically, the site used for auto repair, machine repair, machine shops, printing, unspecified manufacturing and textile/knitting mill. Site Geology and Hydrogeology: The site is underlain by fill and sands extending to the groundwater interface. Fill layer ranges from 2 to 30 ft thick and consists of brown to red silty sand with concrete, brick and glass fragments. The sand is fine with few cobbles at shallower depths. Groundwater was measured below 32 ft depth."
Env Problem:	"Nature and Extent of Contamination: A limited subsurface investigation performed in early 2019 consisted of collection of soil, groundwater and soil vapor samples. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and PBCs. Soil No VOCs, SVOCs, metals, pesticides or PCBs were detected at concentrations exceeding the unrestricted use soil cleanup objectives. Groundwater VOCs were detected in groundwater at concentrations exceeding the applicable ambient water quality standards (AWQS), including: trichloroethene (TCE) at 16 parts per billion (ppb) compared to the AWQS of 5 ppb; cis-1,2-dichloroethene (DCE) at 220 ppb (AWQS is 5 ppb); vinyl chloride at 150 ppb (AWQS is 5 ppb); 1,2-dichlorobenzene at 410 ppb (AWQS is 3 ppb); and 1,4-dichlorobenzene at 160 ppb (AWQS is 3 ppb). Sub-slab soil vapor VOCs were detected at elevated concentrations including: tetrachloroethene (PCE) at 104 micrograms per cubic meter (ug/m3); TCE at 83 ug/m3; and chloroform at 33 ug/m3. "

Matthew Carroll Tenen Environmental 646-606-2332 3/7/2019 - Feng - Received email from Matthew Carroll that he is away on vacation and will call back on Monday. 3/11/2019 - Feng - Call back from Matt Carroll of Tenen Environmental. The site is currently used as an armored car facility. A realty broker company hired him to do a due diligent investigation to know the environmental liability. Unknown there is any development schedule. They installed soil borings. The groundwater samples collected revealed dissolved

RAPID ARMORED CORPORATION (Continued) **S123661630**

residual contamination and some chlorinated solvent, not too bad. Because of the cVOCs, they want
to consider different program, maybe BCP. They will have a meeting tomorrow. He will update me on
the owner's information, sending the Phase 1 and Phase 2 reports and decide whether to enter BCP.
03/13/19-Hiralkumar Patel. received Phase I and II reports from Matt.
POM Realty Holdings, Inc.
property owner 160 Oak Drive Syosset, New York 11791 Attn.: James L. Shreero Ph. (516) 880-8641
email: JShreero@payomatic.com during Phase I, review of available records revealed no evidence of
recognized environmental conditions excepts following: - current use of portion of site for vehicle
maintenance - historical use of the site for machine repair, machine shops, printing, unspecified
manufacturing and textile/knit mill - historical use of the adjoining properties for machine shops,
brass works, manufacturing, blacksmithing, auto wrecking, chemical filling, knit good processing
and industrial-sized brewing facilities - presence of a large quantity generator of ignitable
hazardous waste on an adjoining property summary of Phase II: - site includes lots # 22, 24, 26,
27, 47, 48 and 49 on block # 3046 - site lots are currently occupied with warehouse-style
buildings, used for armored car activities including vehicle maintenance, and surface parking areas
- site is underlain by fill and sands extending to the groundwater interface. fill layer ranges
from 2 to 30 ft thick and consists of brown to red silty sand with concrete, brick and glass
fragments. the sand is fine with few cobbles at shallower depths - installed six (6) soil borings
(SB-1 through SB-6) to a depth of 35 ft bg, except boring SB-1 which was installed to a depth of 40
ft bg - signs (staining/odor/PID) of contamination were noted in boring SB-1 only - one soil sample
was collected from each boring except boring SB-1 where two soil samples were collected - soil
sample from 13-15 ft bg (with highest PID of 595.8 ppm) from SB-1 was lost in transit to the lab,
so only one sample from 7-9 ft bg from SB-1 was analyzed - no contamination was noted in soil
samples (even with 411.7 ppm on PID in sample from SB-1) - three (3) 1-in temporary wells (MW-1
through MW-3) were installed in soil borings SB-1, SB-2 and SB-3, respectively - well MW-1 was
installed to a depth of 45 ft bg; wells MW-2 and MW-3 were installed to a depth of 40 ft bg -
groundwater was measured at depths ranging from approx. 32.43 ft bg in MW-2 to 37.31 ft bg in MW-1
- measured 271.6 ppm on PID in headspace of well MW-1 - no visual evidence of petroleum impacts was
observed in purged groundwater - minute petroleum VOC contamination (max. 26 ppb Xylene in MW-2)
was noted in groundwater samples (even with 271.6 ppm in headspace of

RAPID ARMORED CORPORATION (Continued) **S123661630**

well MW-1) - installed four
(4) soil-vapor points: probes SS-1 through SS-3 were installed within the existing buildings and
probe SV-1 was installed in the exterior parking lot along Meserole St - soil-vapor probes were
installed approx. 6 inches below the bottom of the existing concrete or asphalt slabs - minor
petroleum VOCs noted in soil-vapor samples (max. 43.3 ug/m3 of Xylene in SS-1) - chlorinated VOCs
noted in groundwater and soil-vapor samples groundwater analyticals (in ppb):
----------MW-1-----MW-2-----MW-3

Updated By:	HMDUDEK

Site Description: "Location: The site is located at 513 Porter Avenue in the Greenpoint section of the Borough of Brooklyn. It is bounded by Cherry Street to the north, Porter Avenue to the east, and Anthony Street to the south. Site Features: The site was once occupied by 5 contiguous, 1-story masonry construction buildings with an area of 39,000 sq. ft. (181.95 ft. x 200 ft.) constructed in 1950 (now demolished). The eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located immediately north of the site. A small residential area is located two blocks south of the site. Current Zoning and Land Use: The site is located in a manufacturing area. The site was used as a staging area for equipment and materials as part of the Kosciuszko Bridge replacement project and now functions as a public access park (Sergeant William Dougherty Park). Past Use of the Site: The site was operated by the ACME Steel Partition Company until 2007 when operations at the property ceased. The property was acquired via eminent domain by the NYSDOT as part of the Kosciuszko Bridge replacement project. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick) with discontinuous glacial till units, and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site. "

Env Problem: "Prior to remediation, the primary contaminants were related to historic urban fill and the property's former history as a metal fabricator. Soil - Tetrachloroethene or PCE was detected in on-site soils at concentrations up to 2.2 parts per million or ppm, exceeding the soil cleanup objective for unrestricted use (1.3 ppm). Lead was detected up to 6,400 ppm, exceeding the soil cleanup objective for unrestricted use (63 ppm). Lead-hazardous soils were also identified on-site. Groundwater - PCE was detected up to 70 parts per billion or ppb, compared to a groundwater standard of 5 ppb. Lead was detected up to 254 ppb, compared to a groundwater standard of 25 ppb. Soil Vapor - PCE has been found in soil vapor at concentrations up to 11,000 micrograms per cubic meter (ug/m3). Post-remediation: Remediation at the site is complete. Residual contamination will be managed through the use of engineering and institutional controls. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual contamination at the site."

Site Code: 494893
Site Description: "Location: The site is located at 513 Porter Avenue in the Greenpoint section of the Borough of Brooklyn. It is bounded by Cherry Street to the north, Porter Avenue to the east, and Anthony Street to the south. Site Features: The site was once occupied by 5 contiguous, 1-story masonry construction buildings with an area of 39,000 sq. ft. (181.95 ft. x 200 ft.) constructed in 1950 (now demolished). The eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located immediately north of the site. A small residential area is located two blocks south of the site. Current Zoning and Land Use: The site is located in a manufacturing area. The site was used as a staging area for equipment and materials as part of the Kosciuszko Bridge replacement project and now functions as a public access park (Sergeant William Dougherty Park). Past Use of the Site: The site was operated by the ACME Steel Partition Company until 2007 when operations at the property ceased. The property was acquired via eminent domain by the NYSDOT as part of the Kosciuszko Bridge replacement project. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick) with discontinuous glacial till units, and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site. "
Env Problem: "Prior to remediation, the primary contaminants were related to historic urban fill and the property's former history as a metal fabricator. Soil - Tetrachloroethene or PCE was detected in on-site soils at concentrations up to 2.2 parts per million or ppm, exceeding the soil cleanup objective for unrestricted use (1.3 ppm). Lead was detected up to 6,400 ppm, exceeding the soil cleanup objective for unrestricted use (63 ppm). Lead-hazardous soils were also identified on-site. Groundwater - PCE was detected up to 70 parts per billion or ppb, compared to a groundwater standard of 5 ppb. Lead was detected up to 254 ppb, compared to a groundwater standard of 25 ppb. Soil Vapor - PCE has been found in soil vapor at concentrations up to 11,000 micrograms per cubic meter (ug/m3). Post-remediation: Remediation at the site is complete. Residual contamination will be managed through the use of engineering and institutional controls. "

FORMER ACME STEEL PARTITION CO. (Continued) **S118950564**

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual contamination at the site."

BROWNFIELDS:
Name: 210 GREENPOINT AVENUE REDEVELOPMENT

HESS#32516 (Continued) **1000263799**

Address:	210 GREENPOINT AVENUE
City,State,Zip:	BROOKLYN, NY 11222
Program:	BCP
Site Code:	628709
Acres:	0.306
HW Code:	C224348
SWIS:	2401
Town:	New York City
Record Added Date:	11/23/2021
Record Updated Date:	01/02/2025
Update By:	AMSERVIS
Site Description:	"Site Location: The Site s address is 210 Greenpoint Avenue, Brooklyn, NY 11222. The Site is located in Kings County, New York and is identified as Block 2576 Lot 7. The Site is located in a mixed-use residential and commercial section of the Greenpoint neighborhood of Brooklyn, NY on the south side of Greenpoint Avenue between McGuinness Boulevard and Eckford Street. The Site is located approximately 0.5 miles west of Newtown Creek. The Site is bounded by Greenpoint Avenue followed by mixed-use commercial and residential buildings to the north, McGuinness Boulevard followed by a commercial building, Key Foods Grocery Store , to the east, a mixed-use commercial and residential building to the south, and a residential apartment building to the west. The Site is 13,339.69 square feet (0.306 acres) in size. Site Features: The Site previously was improved with two one-story buildings; one of which was utilized for storage, and the other as a retail building/office space. The buildings did not include cellar levels. There were five 4,000-gallon gasoline/ethanol gasoline USTs and two 550-gallon tanks removed from the Site. Construction for the new development is ongoing and, when completed, the site will be improved with a nine-story mixed-use commercial/residential, mixed-income building with one full cellar level. Current Zoning and Land Use: The Site was occupied by an active retail petroleum station and is zoned R7-A and R6-B for residential use with a commercial C2-4 overlay. The surrounding properties are currently used for commercial and residential purposes. The nearest residential buildings are directly adjoining to the south and west of the Site. The proposed development of this property is consistent with the current zoning. As a result of the CEQR process, Block 2576 Lot 7 was assigned an environmental E-Designation (E-287) 209-231 McGuinness Boulevard Rezoning Action, for hazardous materials, noise (window wall attenuation & alternate means of ventilation), and air (HVAC fuel limited to natural gas & exhaust stack location limitations) resulting from a CEQR effective 10 December 2012 (CEQR 10DCP024K). Satisfaction of the E-Designation requirements is subject to review and approval by the NYCOER to obtain a NTP or NNO prior to obtaining building permits. Past Land Use: The Site was developed in the late 1800s and was occupied by commercial, residential, and vacant properties until the early 1940s, from the early 1940s to the late 1970s the Site operated as several auto-related facilities, from the late 1970s through the present the Site has operated as a gasoline filling station. Site Geology and Hydrogeology: The stratigraphy of the Site, from the surface down, consisted primarily of urban fill extending to approximately 5.5 ft bgs (terminus of each soil boring). Groundwater was recorded at approximately 4.2 to 9 ft bgs. Groundwater flow is assumed to flow toward the northeast. The site has since been remediated to Track 1 with excavation depths extending 7 ft bgs sitewide and up to 12 - 33

HESS#32516 (Continued) **1000263799**

Env Problem:

ft bgs at localized excavation areas. "
"Post-Remediation Remediation at the site is complete. Remedial actions have successfully achieved Track 1 Unrestricted Use soil cleanup objectives. Prior to Completion of Remediation Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs (primarily PAHs), and metals. Soil: Exceedances of the Unrestricted Use Soil Cleanup Objectives (UUSCOs) and in some cases Protection of Groundwater Soil Cleanup Objective (PGWSCOs) were primarily found in the historic fill layer which extends from 9 - 13 ft. across the site. In general, the highest concentrations were detected in the upper 10 ft. of site soils. However, elevated concentrations of VOCs and metals did extend into deeper soils (28 - 30 ft.) at SB-1 in the western portion of the site. VOCs detected at levels exceeding UUSCOs and PGWSCOs include: acetone up to 0.09 mg/kg (UUSCO of 0.05 mg/kg), benzene up to 1.4 mg/kg (UUSCO and PGWSCO of 0.6 mg/kg), ethylbenzene up to 74 mg/kg (UUSCO of 1 mg/kg, PGWSCO of 5.5 mg/kg, and RRSCO of 41 mg/kg), isopropyl benzene up to 16 mg/kg (PGWSCO of 2.3 mg/kg), naphthalene up to 69 mg/kg (PGWSCO of 13 mg/kg), n-butylbenzene up to 13 mg/kg (PGWSCO of 12 mg/kg), n-propyl benzene up to 40 mg/kg (PGWSCO of 3.7 mg/kg), toluene up to 12 mg/kg (PGWSCO of 1.5 mg/kg), 1,3,5-trimethylbenzene up to 140 mg/kg (PGWSCO of 3.3 mg/kg), 1,2,4-trimethylbenze up to 340 mg/kg (PGWSCO of 13 mg/kg), and xylenes up to 320 mg/kg (PGWSCO of 1.2 mg/kg). SVOCs detected at levels exceeding UUSCOs and PGWSCOs from 0 - 10 ft. bgs. include: benzo(a)anthracene up to 7.5 mg/kg (PGWSCO of 3 mg/kg), benzo(a)pyrene up to 6.2 mg/kg (PGWSCO 1.1 mg/kg), benzo(b)fluoranthene up to 6.3 mg/kg (PGWSCO of 1.1 mg/kg), benzo(k)fluoranthene up to 1.6 mg/kg (PGWSCO of 1.1 mg/kg), chrysene up to 5.8 mg/kg (PGWSCO of 0.4 mg/kg), dibenzo(a,h)anthracene up to 0.76 mg/kg (UUSCO of 0.33 mg/kg), indeno(1,2,3-cd)pyrene up to 3.8 mg/kg (PGWSCO of 3.2 mg/kg), and naphthalene up to 21 mg/kg (PGWSCO of 13 mg/kg). Metals detected at levels exceeding UUSCOs include: arsenic at a concentration of 13.2 mg/kg (UUSCO of 13 mg/kg), copper up to 77.2 mg/kg (UUSCO of 50 mg/kg), lead up to 590 mg/kg (UUSCO of 63 mg/kg), mercury up to 2.67 mg/kg (UUSCO of 0.18 mg/kg), zinc up to 1,230 mg/kg (UUSCO of 109 mg/kg). The PFAS compounds perfluorooctanoic acid (PFOA) was detected in soil at concentrations above the respective unrestricted use guidance value of 0.66 parts per billion (ppb) at a concentration of 0.695 ppb. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: VOCs detected above Class GA Ambient Water Quality Standards (AWQS) include: benzene up to 240 parts per billion (ppb) with an AWQS value of 1 ppb, ethylbenzene up to 5,100 ppb, isopropyl benzene up to 320 ppb, naphthalene up to 660 ppb, n-propyl benzene in one sample at 540 ppb, o-xylene up to 6,800 ppb, p/m-xylene up to 18,000 ppb, sec-butylbenzene up to 11 ppb, tert-butylbenzene up to 6.3 ppb, toluene up to 9,100 ppb, 1.2.4-Tetramethylbenzene in one sample at 140 ppb, 1,2,4-Trimethylbenzene up to 3,3300 ppb, and 1,3,5-Trimethylbenzene in one sample at 790 ppb, all with an AWQS value of 5 ppb. SVOCs detected above AWQS include: acenaphthene with one sample at 110 ppb (AWQS of 20 ppb), naphthalene up to 470 ppb (AWQS of 10 ppb), benzo(a)anthracene up to 0.27 benzo(a)anthracene,

HESS#32516 (Continued) **1000263799**

benzo(a)pyrene up to 0.13 benzo(a)pyrene, benzo(b)fluoranthene up to 0.19 ppb benzo(k)fluoranthene up to 0.06 ppb, chrysene up to 0.15 ppb, and indeno(1,2,3-c,d)pyrene up to 0.09 ppb, all with an AWQS of 0.002 ppb. Excluding naturally occurring minerals, no metals were detected above their respective AWQS. No pesticides or PCBs were detected above their AWQS either. For PFAS compounds, PFOA and PFOS were reported at concentrations up to 92.2 parts per trillion (ppt) and 55 ppt respectively, exceeding the Maximum Contaminant Levels (MCLs)(drinking water standard) of 10 ppt each in groundwater. The compound 1,4- dioxane was not detected above the MCL of 1 ppb. There are no public water supply wells within a half a mile and there is a municipal prohibition for use of groundwater at the site. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: The total cumulative maximum concentrations for benzene, toluene, ethylbenzene, and xylenes (BTEX) compounds was 190.7 micrograms per cubic meter (ug/m3). Multiple VOCs were detected in soil vapor samples collected throughout the site. The most elevated concentrations detected were collected from SG-1 near the former USTs on the west side of the site. This includes: n-hexane, benzene, cyclohexane, 2,2,4-trimethylpentane, and heptane which were detected with maximum concentrations of 356,000 ug/m3, 45,400 ug/m3, 328,000 ug/m3, 2,120,000 ug/m3, and 107,000 ug/m3 respectively. Data does not indicate any off-site impacts in soil vapor related to this site."

Health Problem: "Remedial actions are complete, the site was cleaned up to meet unrestricted use, and all known exposure pathways were addressed by the remedy for the site."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 12/23/05- Andersen - Reviewed quarterly report dated 11/7/05. Eight MW sampled on September 23, 2005. Max BTEX 729ppb (MW5), max MTBE 352ppb (MW3). SVE system shut down May 5, 2005 due because low influent vapors. RAP required for remaining contamination. 12/29/05: RAP required letter sent. RAP due 2/9/06. 1/26/06: 1/25/06 meeting with Quantum, NYSDEC, and ET. A sensitive receptor survey and soil vapor survey will be performed, and then site closure will be considered. A kiosk vapor abatement system is in place. 2/2/06: Reviewed the fourth 2005 quarterly report. Max BTEX 497 ppb (MW5), max MTBE 351 ppb (MW6). A sensitive receptor survey will be prepared. 6/30/06: Meeting on 6/28/06 with Hess, Quantum, NYSDEC, EnviroTrac and GSC. Will submit request for closure. Sub slab vapor sampling conducted. 7/25/06: Received the results of sub-slab sampling and a sensitive receptor survey. Two sub slab samples were collected from beneath the kiosk on site. MTBE and BTEX were not detected above method detection limits. The sensitive receptor survey revealed that residential houses with basements are located within 1,000 ft of the site. Closure was requested. 10/6/06: Emailed Dawn Coughlin to followup on quarterly report. Received email from Ed Russo: the site was sampled on August 15, 2006. Results indicated concentrations that we feel warrant closure, especially due to the positive results of the soil-gas sampling and sensitive receptor survey. The report was just finalized yesterday, so you should be receiving it by the middle of next week. 11/1/06: Received closure request. Max benzene 158ppb in MW3, MTBE 338 in MW3. Continued groundwater sampling required. 1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. 1/23/07: Received update report. Wells samples on 11/8/06. Max BTEX 63 (MW3), max MTBE 222 (MW6). 4/20/07: Reviewed update report. Max BTEX 12.3 ppb (MW1). As reportedin the sensitive receptor survey, soil vapor sampling showed soil gas MTBE and BTEX concentrations ND. ND concentrations in downgradient wells. NFA issued.
Remarks:	SOIL FOUND IN TANK PULL - SOIL BEING STODE PILED.

Updated By:	AMSERVIS
Site Description:	"Site Location: The Site s address is 210 Greenpoint Avenue, Brooklyn, NY 11222. The Site is located in Kings County, New York and is identified as Block 2576 Lot 7. The Site is located in a mixed-use residential and commercial section of the Greenpoint neighborhood of Brooklyn, NY on the south side of Greenpoint Avenue between McGuinness Boulevard and Eckford Street. The Site is located approximately 0.5 miles west of Newtown Creek. The Site is bounded by Greenpoint Avenue followed by mixed-use commercial and residential buildings to the north, McGuinness Boulevard followed by a commercial building, Key Foods Grocery Store , to the east, a mixed-use commercial and residential building to the south, and a residential apartment building to the west. The Site is 13,339.69 square feet (0.306 acres) in size. Site Features: The Site previously was improved with two one-story buildings; one of which was utilized for storage, and the other as a retail building/office space. The buildings did not include cellar levels. There were five 4,000-gallon gasoline/ethanol gasoline USTs and two 550-gallon tanks removed from the Site. Construction for the new development is ongoing and, when completed, the site will be improved with a nine-story mixed-use

HESS#32516 (Continued) **1000263799**

commercial/residential, mixed-income building with one full cellar level. Current Zoning and Land Use: The Site was occupied by an active retail petroleum station and is zoned R7-A and R6-B for residential use with a commercial C2-4 overlay. The surrounding properties are currently used for commercial and residential purposes. The nearest residential buildings are directly adjoining to the south and west of the Site. The proposed development of this property is consistent with the current zoning. As a result of the CEQR process, Block 2576 Lot 7 was assigned an environmental E-Designation (E-287) 209-231 McGuinness Boulevard Rezoning Action, for hazardous materials, noise (window wall attenuation & alternate means of ventilation), and air (HVAC fuel limited to natural gas & exhaust stack location limitations) resulting from a CEQR effective 10 December 2012 (CEQR 10DCP024K). Satisfaction of the E-Designation requirements is subject to review and approval by the NYCOER to obtain a NTP or NNO prior to obtaining building permits. Past Land Use: The Site was developed in the late 1800s and was occupied by commercial, residential, and vacant properties until the early 1940s, from the early 1940s to the late 1970s the Site operated as several auto-related facilities, from the late 1970s through the present the Site has operated as a gasoline filling station. Site Geology and Hydrogeology: The stratigraphy of the Site, from the surface down, consisted primarily of urban fill extending to approximately 5.5 ft bgs (terminus of each soil boring). Groundwater was recorded at approximately 4.2 to 9 ft bgs. Groundwater flow is assumed to flow toward the northeast. The site has since been remediated to Track 1 with excavation depths extending 7 ft bgs sitewide and up to 12 - 33 ft bgs at localized excavation areas. "

Summary: "Remedial actions are complete, the site was cleaned up to meet unrestricted use, and all known exposure pathways were addressed by the remedy for the site."

Summary: "Post-Remediation Remediation at the site is complete. Remedial actions have successfully achieved Track 1 Unrestricted Use soil cleanup objectives. Prior to Completion of Remediation Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs (primarily PAHs), and metals. Soil: Exceedances of the Unrestricted Use Soil Cleanup Objectives (UUSCOs) and in some cases Protection of Groundwater Soil Cleanup Objective (PGWSCOs) were primarily found in the historic fill layer which extends from 9 - 13 ft. across the site. In general, the highest concentrations were detected in the upper 10 ft. of site soils. However, elevated concentrations of VOCs and metals did extend into deeper soils (28 - 30 ft.) at SB-1 in the western portion of the site. VOCs detected at levels exceeding UUSCOs and PGWSCOs include: acetone up to 0.09 mg/kg (UUSCO of 0.05 mg/kg), benzene up to 1.4 mg/kg (UUSCO and PGWSCO of 0.6 mg/kg), ethylbenzene up to 74 mg/kg (UUSCO of 1 mg/kg, PGWSCO of 5.5 mg/kg, and RRSCO of 41 mg/kg), isopropyl benzene up to 16 mg/kg (PGWSCO of 2.3 mg/kg), naphthalene up to 69 mg/kg (PGWSCO of 13 mg/kg), n-butylbenzene up to 13 mg/kg (PGWSCO of 12 mg/kg), n-propyl benzene up to 40 mg/kg (PGWSCO of 3.7 mg/kg), toluene up to 12 mg/kg (PGWSCO of 1.5 mg/kg),

HESS#32516 (Continued) **1000263799**

1,3,5-trimethylbenzene up to 140 mg/kg (PGWSCO of 3.3 mg/kg), 1,2,4-trimethylbenze up to 340 mg/kg (PGWSCO of 13 mg/kg), and xylenes up to 320 mg/kg (PGWSCO of 1.2 mg/kg). SVOCs detected at levels exceeding UUSCOs and PGWSCOs from 0 - 10 ft. bgs. include: benzo(a)anthracene up to 7.5 mg/kg (PGWSCO of 3 mg/kg), benzo(a)pyrene up to 6.2 mg/kg (PGWSCO 1.1 mg/kg), benzo(b)fluoranthene up to 6.3 mg/kg (PGWSCO of 1.1 mg/kg), benzo(k)fluoranthene up to 1.6 mg/kg (PGWSCO of 1.1 mg/kg), chrysene up to 5.8 mg/kg (PGWSCO of 0.4 mg/kg), dibenzo(a,h)anthracene up to 0.76 mg/kg (UUSCO of 0.33 mg/kg), indeno(1,2,3-cd)pyrene up to 3.8 mg/kg (PGWSCO of 3.2 mg/kg), and naphthalene up to 21 mg/kg (PGWSCO of 13 mg/kg). Metals detected at levels exceeding UUSCOs include: arsenic at a concentration of 13.2 mg/kg (UUSCO of 13 mg/kg), copper up to 77.2 mg/kg (UUSCO of 50 mg/kg), lead up to 590 mg/kg (UUSCO of 63 mg/kg), mercury up to 2.67 mg/kg (UUSCO of 0.18 mg/kg), zinc up to 1,230 mg/kg (UUSCO of 109 mg/kg). The PFAS compounds perfluorooctanoic acid (PFOA) was detected in soil at concentrations above the respective unrestricted use guidance value of 0.66 parts per billion (ppb) at a concentration of 0.695 ppb. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: VOCs detected above Class GA Ambient Water Quality Standards (AWQS) include: benzene up to 240 parts per billion (ppb) with an AWQS value of 1 ppb, ethylbenzene up to 5,100 ppb, isopropyl benzene up to 320 ppb, naphthalene up to 660 ppb, n-propyl benzene in one sample at 540 ppb, o-xylene up to 6,800 ppb, p/m-xylene up to 18,000 ppb, sec-butylbenzene up to 11 ppb, tert-butylbenzene up to 6.3 ppb, toluene up to 9,100 ppb, 1.2.4-Tetramethylbenzene in one sample at 140 ppb, 1,2,4-Trimethylbenzene up to 3,3300 ppb, and 1,3,5-Trimethylbenzene in one sample at 790 ppb, all with an AWQS value of 5 ppb. SVOCs detected above AWQS include: acenaphthene with one sample at 110 ppb (AWQS of 20 ppb), naphthalene up to 470 ppb (AWQS of 10 ppb), benzo(a)anthracene up to 0.27 benzo(a)anthracene, benzo(a)pyrene up to 0.13 benzo(a)pyrene, benzo(b)fluoranthene up to 0.19 ppb benzo(k)fluoranthene up to 0.06 ppb, chrysene up to 0.15 ppb, and indeno(1,2,3-c,d)pyrene up to 0.09 ppb, all with an AWQS of 0.002 ppb. Excluding naturally occurring minerals, no metals were detected above their respective AWQS. No pesticides or PCBs were detected above their AWQS either. For PFAS compounds, PFOA and PFOS were reported at concentrations up to 92.2 parts per trillion (ppt) and 55 ppt respectively, exceeding the Maximum Contaminant Levels (MCLs)(drinking water standard) of 10 ppt each in groundwater. The compound 1,4- dioxane was not detected above the MCL of 1 ppb. There are no public water supply wells within a half a mile and there is a municipal prohibition for use of groundwater at the site. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: The total cumulative maximum concentrations for benzene, toluene, ethylbenzene, and xylenes (BTEX) compounds was 190.7 micrograms per cubic meter (ug/m3). Multiple VOCs were detected in soil vapor samples collected throughout the site. The most elevated concentrations detected were collected from SG-1 near the former USTs on the west side of the site. This includes: n-hexane, benzene, cyclohexane, 2,2,4-trimethylpentane, and heptane which were detected with maximum concentrations of 356,000 ug/m3, 45,400 ug/m3, 328,000 ug/m3, 2,120,000 ug/m3, and 107,000 ug/m3 respectively. Data does not indicate any off-site impacts in soil vapor related to this site."

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Updated By: HMDUDEK
Site Description: "Location: The 1.21 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the east side of Porter Avenue between Anthony and Lombardy Streets. Site Features: The site consists of one 1-story brick building, three 1-story metal sheds, two truck parking areas and a bus parking lot. The site is surrounded by other commercial and industrial properties. A large National Grid energy facility is located one block south of the site across Lombardy Street. Sergeant William Dougherty Playground is located one block northwest of the site across Anthony Street, and the elevated Brooklyn-Queens Expressway (I-278) is located one block to the north. A small residential area is located one block southwest of the site. Current Zoning/Use(s): The site is zoned for manufacturing. The site is currently used as a marble and granite distribution warehouse and and a City-Wide truck maintenance shop at 498 Porter Avenue. Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was utilized as a brass foundry from the 1960's to 1993, and a Department database which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing). This investigation was conducted in several phases, and was completed in the Summer of 2009. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~110' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~130-135' below ground surface). Groundwater is approximately 45-55' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,000' northeast of the site."
Env Problem: "Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been detected up to 1,800 parts per billion or ppb (compared to a

ACME STEEL/BRASS FOUNDRY (Continued) **S118950559**

	groundwater standard of 5 ppb). - Soil PCE has been found in on-site soils at concentrations up to 220 parts per million or ppm (compared to a commercial use soil cleanup objective of 150 ppm). - Soil Vapor Concentrations of PCE have been found up to 19,000 ug/m^3. Concentrations of TCE have been found up to 1,300 ug/m^3. "
Health Problem:	"Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available. DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL Contaminated soil letter. This spill was reassigned from Sigona to Rommel on 4/7/2004. Transfer

BROOKLYN TERMINAL (Continued) **S104275564**

	to E. Hampston as part of Greenpoint Petroleum Remediation Project work on 6/17/09. R-2 to review spill files to determine if any records exist. Follow up with ExxonMobil staff on Greenpoint Project for other details. (EH 6/09). Consolidate under 8800244. Exxon has provided draft characterization report for former MOSF property and former refinery property still under ownership of Exxon. Spill to be addressed under MOSF/refinery characterization and remediation steps. (EH 9/09).

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
Registry ID: 110013752313

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial

CARBONA PRODUCTS CO (Continued) **1000164221**

enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Program:	HW
Site Code:	617384
Classification:	P
Region:	2
Acres:	0.230
HW Code:	224323
Record Add:	03/24/2021
Record Upd:	01/18/2024
Updated By:	HMDUDEK
Site Description:	"Location: The property is a 0.23 acre property located on the east side of Apollo Street between Nassau Avenue and Norman Avenue. The site is surrounded by commercial and manufacturing properties. Site Features: A one-story commercial building is present on the property. Current Zoning and Land Use: The site is zoned M1-2 (commercial and light manufacturing). The site is currently vacant. Past Use of the Site: A Phase I Environmental Site Assessment identified previous on-site commercial/industrial uses including an adhesives manufacturer. Site Geology and Hydrogeology: On-site geology information is limited. Borings installed in the adjacent sidewalk revealed urban fill in the upper 5ft underlain primarily by fine sand with stratified layers of silt and gravel to groundwater interface at approximately 30ft below grade. Groundwater flow is the area in controlled by large-scale dewatering from the ExxonMobil Greenpoint Petroleum Remediation Project (NYSDEC Site No. S224150)."
Env Problem:	"Nature and extent of contamination based on the initial site characterization: Soil Semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and metals contamination were detected in shallow soil. For example, the SVOC - benzo(a)anthracene was detected at 1.5 parts per million or ppm (compared to the restricted-residential Soil Cleanup Objective [SCO] of 1 ppm), the metal mercury was detected at 2.01 ppm (compared at the restricted-residential SCO of 0.81 ppm, and total PCBs was detected at 1.2 ppm (compared to the restricted-residential SCO of 1 ppm. Groundwater Elevated petroleum concentrations were encountered in groundwater. For example, benzene was detected at 2,200 parts per billion or ppb (compared to the groundwater standard of 1 ppb). Dissolved-phase petroleum contamination may be related to NYSDEC Site No. S224150: ExxonMobil Greenpoint Petroleum Remediation Project. Soil Vapor Elevated chlorinated solvent concentrations were encountered in soil vapor. For example, trichloroethene (TCE) was detected up to 31,300 micrograms per cubic meter. "
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

DEC Memo:	9/30/2021 - Feng - Desk Duty in office. Spoke to Craig Purta of CP Engineering. It is a construction site. They did investigation and collected soil vapor and soil samples. Some of the parameters were elevated. No BCP program was applied. They did the geotechnical soil borings today and found odorous soil. Then they stop to go further. The odorous soil location matches the location where they found contamination during the previous investigation. They believe the contamination is from off site. The site near the Green Point site. And adjacent to the site is the New York Fuel Oil at 94 Hausman Street. They will submit the RIR and RAWP. Briefed to Rick Lin and assigned the spill to him. Craig Purta CP Engineering 917-952-8216 Craig@CPEngineeringPC.com
Remarks:	uncovered old oil. cleanup pending.

DEC Memo:	6/3/15: Mahat t/c: DEC Mahat left a voice message to Rebecca Tummon @ 212.464.8689 to call back with more information about the spill and its progress. 6/9/15: Mahat DEC Mahat received a call from Rebecca Tummon providing more information about the spill case. The site is a e-designated site. Excavation has been perforemed and end point samples will be

OER SITE- 13CVCP155K (Continued) **S117973783**

taken. A complete report with
manifest, lanboratory analysis, conclusion , and recomendation will be submitted to DEC for closure
review. DEC is waiting for a report. 8/21/15:Mahat t/c: DEC Mahat left a voice message Steve @
grant engineering to call back with more information on the site. 10/1/15: Mahat DEC Mahat left a
phone message with Emily @ Grant for a call back from the case manager. DEC Mahat received a call
back from Steve and he will provide a closure report as soon as he can. 10/1/15: Mahat e/c: DEC
Mahat received an email update: Email : Hi Santosh Good speaking with you earlier. I am writing
this email so you have my contact information. We are working on the Spill Closure memo as
discussed over the phone. Thanks, Stephen Morse, PE 139 Fulton Street - Suite 907 - New York, NY
10038 Office - 212.464.8689 Mobile - 917.273.8236 www.GRANTpllc.com DEC is waiting for a spill
closure report. 12/08/15: Mahat DEC Mahat left a voice message to Mr. Morse to call back with more
information. 10/6/2016: Rashad Spill will be reassigned to DEC Omar from DEC Mahat. 10/11/2016:
Rashad 50 Greenpoint Ave has an alternate address of 50-54 Greenpoint Ave. No additional spills
found. PBS# 2-612463 found for site, there are 5 550 gallon gasoline USTs removed in 2015 and 1 550
gallon waste oil UST removed in 2015. No documents found in D2. 11/4/2016: Rashad As per PBS 80
West Street may also be alternate address. Brief review of RIR and RAWP found on OER Repository is
as follows: The site is currently undeveloped vacant and uncapped, the lot is currently being used
for container storage. The site will be redeveloped with a 6 story apartment building. It will
include a full cellar which will be used for parking, storage, and utility rooms. The site will be
excavated to a depth of 10.5 feet below grade, elevator pits will extend to 15 ftbgs. A Phase 1
conducted by Hydrotech identified the site as a gas station and repair facility from 1942-1965.
Depth to groundwater ranges from 9-10 feet, groundwater flows northeast to southwest. Soil samples
detected PCE at 1700ppb and various SVOCs, no VOCs were found above standards. TCE was detected in
groundwater at a max of 13ppb, and several SVOCs were also detected. Soil vapor samples recorded a
max concentration of PCE-983ug/m3, it was also detected in all 5 samples. TCE was also detected in
all 5 samples, with the max being 865-ug/m3. VOCs were also found in soil vapor samples. Brief
Review of RAWP is as follows: Site is in NYCVCP program and the remedial plan consists of
collecting 5 endpoint samples, installation of an SSDS, a waterproof vapor barrier, and an
engineered composite layer. I emailed Stephen Morse to obtain closure report/memo with regards to

OER SITE- 13CVCP155K (Continued) **S117973783**

the tanks and samples found. Email: smorse@grantpllc.com. 11/8/2016: Rashad Received email from
Emily of Grant with closure documentation. Closure report, analytical results, and manifests have
been uploaded to D2. Review of closure report is as follows: This site is registered NYCVCP and
E-designated site. Excavation at the site in grid A1 was ongoing when the first fuel tank was found
and punctured by the excavator releasing an estimated 5-15 gallons of fuel into the soil.
Excavation of the soil was stopped and three additional tanks were found that day. On June 1, 2015
AB Environmental was on site to drain the contents from the 4 550 gallon USTs. AB removed a total
of 1310 gallons of petroleum contaminated water from the tanks. On June 2, 2015 one additional fuel
tank was found during excavation in grid A1. AB also drained and removed the 5th tank. End point
samples were advanced on June 9, 2015. The samples taken from grid A1 within the excavated area
beneath the spill. Nine end point samples were taken from grid A1.
Soil sample SC-1: ND VOCs,
exceedances in SVOCs SC-2 - SC-5 VOCs, SVOCs ND EPC1-1 - EPC1-4 VOCs, SVOCs ND. Spill will be
closed based on the following; site is a NYCOER VCP site as well as E-Designated, the new
development will have an SSDS as well as vapor barrier and engineered composite layer. The
petroleum spill associated with the 5 discovered tanks has been remediated as per end point samples
in submitted closure report and the tanks have been registered with the Department, see
PBS#2-612463. Closure letter prepared and mailed to property owner as well as emailed to Stephen
Morse. Letter uploaded to D2.

Remarks: 550 gal ust/found 4 tanks during excavation/clean up underway

Name:	K - GREENPOINT MGP - ENERGY CENTER
Address:	287 MASPETH AVENUE
City,State,Zip:	BROOKLYN, NY 11211
Program:	HW
Site Code:	372971
Classification:	Significant threat to the public health or environment - action required.
Region:	2
Acres:	117.000
HW Code:	224052
Record Add:	11/02/2006
Record Upd:	12/04/2023
Updated By:	HMDUDEK

Site Description: "Location: The site is a large parcel located along Newtown Creek at 287 Maspeth Avenue in Brooklyn,NY in Kings County. It is bounded by Newtown Creek to the east, Maspeth Ave. to the south, Vandevoort Ave. to the west, and Lombardy St. to the north. This is a large property at 117 acres. Site Features: The site is currently known as the Greenpoint Energy Center and houses a major liquefied natural gas storage facility and compressor station, an operations center for KeySpan's distribution and service units, and a warehouse facility. Current zoning and land uses: Surrounding land uses are mixed industrial, residential, and commercial. The nearest residential land use is located adjacent to the northwest corner of the site. Past use of the site: A large manufactured gas plant (MGP) and byproduct coking operation operated on the site from 1928 until 1952. Coal tar has been found in subsurface soils, but the full extent of contamination has not yet been established. The surrounding neighborhood has also been subject to a large petroleum spill, apparently unrelated to the MGP. A Voluntary Cleanup Agreement (VCA) (site No. V00631) was entered into in 2005. An Interim Remedial Measure (IRM) was performed in 2006 to remove impacted soil in the northeast corner of the property to allow for upgrades to the Liquid Natural Gas (LNG) facility. The VCA was replaced by a Multi-Site Consent Order in 2007, modified in 2008. A site-wide remedial investigation (RI) began in the summer of 2012, which was conducted in three phases. The RI was substantially complete by 2019. Supplemental investigations to address data gaps and inform remedial design were subsequently conducted at the site. Site Geology/hydrogeology: The site is underlain by fill and heterogeneous glacial deposits that include outwash sands with till and lenticular silt deposits. Bedrock is approximately 200 feet below the ground surface. Groundwater flows northeasterly, toward the Newtown Creek."

Env Problem: "A remedial investigation (RI) of the site was performed in a phased approach based on geography and the proximity to adjacent or nearby water bodies. Phases 1 and 2 of the RI were located on the eastern and southern boundaries of the site, respectively, and were implemented between October 2011 and March 2016. Phase 3 encompassed

GREENPOINT (Continued) **S104787368**

the remainder of the site and was implemented between April 2016 and July 2019. An earlier pre-design investigation (PDI) and supplemental PDI were performed to evaluate the potential need for an interim remedial measure (IRM) for non-aqueous phase liquid (NAPL) containment along the Newtown Creek loading platform. The PDI findings indicated that there were no identified subsurface NAPL migration pathways from the site to Newtown Creek sediment, and potentially mobile NAPL was not identified. Throughout the course of site investigations, soil, groundwater, and sediment samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals and cyanide. In addition, soils were analyzed for pesticides, herbicides, hexavalent chromium and total organic carbon while groundwater was analyzed for per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Sediment analysis also included pesticides, herbicides, ammonia, hexavalent chromium, dioxins and furans, total petroleum hydrocarbons (TPH), diesel range organics (DRO), black carbon, pH, sulfide, total nitrogen, total organic carbon, total phosphorus, normal alkanes and isoprenoid hydrocarbons. Soil vapor and indoor air have been analyzed for VOCs and naphthalene. Nature and Extent of Contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Areas of potentially NAPL-saturated soil were generally isolated to the southern portion of the Loading Platform Area and in the vicinity of Holder 1 along Maspeth Avenue. Three wells have accumulated recoverable coal tar; two in the loading platform area and one along Maspeth Avenue. No visual observations of potentially NAPL-saturated soil have been identified in the borings advanced within the site interior and no measurable NAPL has been visually observed in any of the wells installed within the interior. Soil: Soil concentrations above the Industrial Use Soil Cleanup Objectives (IUSCOs) primarily included PAHs. In the shallow zone, PAH exceedances of the IUSCOs were identified throughout the site; PAH concentrations generally decreased with depth and were largely identified in areas with noted physical impacts, particularly the Loading Platform Area where PAH exceedances of IUSCOs continued into the deep zone. The maximum concentration of total PAHs was observed near the Loading Dock Area at a concentration of 67,350 mg/kg in a sample collected from three to four feet below grade (ft bg). Concentrations of BTEX above the IUSCOs were identified in a limited number (total of three) samples sitewide. The maximum total BTEX concentration detected was 2,137.4 mg/kg from a sample collected from 15-16 ft bg along the Maspeth Alignment. Detections of metals in soil were mostly limited to the shallow zone. Detections in the intermediate or deep zones were limited to sporadic and relatively low detections of arsenic. Detections of cyanide were few and relatively low in concentration. The cyanide detections were generally limited to the site interior and were confined to the shallow soil zone. The maximum cyanide concentration detected was 29.4 mg/kg from three to four ft bg in the area of the former purifiers. There have been no detections of pesticides or herbicides above the IUSCOs. There were no PCB detections in soil above IUSCOs. Groundwater: Groundwater exceedances of standards and guidance values primarily included total BTEX, PAHs,

GREENPOINT (Continued) **S104787368**

chlorinated volatile organic compounds (CVOCs) and metals; cyanide and PCBs were detected in exceedance less frequently. The areas of elevated BTEX and PAH concentrations were primarily located near the southern Loading Platform Area in the vicinity of the identified soil impacts and along the southern property boundary along Maspeth Avenue. Elevated CVOC concentrations were generally found along the northern and western site perimeters and can be attributed to off-site sources. Total BTEX in groundwater ranged from non-detect (ND) to 455,100 parts per billion (ppb). Total PAHs in groundwater ranged from ND to 12,459 ppb. Numerous metals were detected above their corresponding standards, including arsenic, iron, lead, magnesium, manganese, and sodium, likely associated with regional conditions rather than historical site operations. Total cyanide concentrations in groundwater ranged from ND to 1,060 ppb. PCB exceedances were limited to three of the 148 groundwater samples analyzed, with a maximum total concentration of 1.54 ppb. Groundwater results were non-detect for 1,4-dioxane. While perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were occasionally detected in groundwater above guidance values, total PFAS concentrations were not detected in any well above guidance values. The maximum PFOS concentration detected was 57.9 parts per trillion (ppt) while the maximum PFOA concentration was 97.5 ppt and maximum total PFAS concentration was 256.17 ppt. These PFAS concentrations are not indicative of a source area and concentrations are likely associated with off-site sources. Soil Vapor: Sub-slab vapor and indoor air samples were collected during 2018 and 2019. Results varied across the site from no further action (nine buildings) to identifying sources and resampling (two buildings) to mitigation recommendations (three buildings). Additional SVI sampling is to take place during the 2021 heating season."

Health Problem:	"Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of fish and shellfish from Newtown Creek is restricted based on fish advisories for the East River, which apply to Newtown Creek as a tributary."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. Per Bart Polozzitti of Keyspan(516-545-5511), major renovations have occurred at the site. The tank may have been removed, he will forward relevant information when gathered. 01/02/07-Zhune got an e-mail from Bart Polozzitti requesting additional time to get the information. He said hopefully he will get it by 02/17/07. Bart Polozzitti cell # 646-2350403 01/09/07 Bart sent the information a tightness test report from Tanknology Corp. and a letter is included. The letter state the following: The subject underground storage tank (361A)located at 287 Maspeth Ave. Brooklyn, New York was tightness tested unsuccessfully on january 7, 1993. The other three fuel thanks on the same facility (Nos. 363, 364 &365) were tested tight on the same day. After repairing the vent connections causing the ullage leak above the level of product, the tank was retested on January 25, 1993 and passed. There was no release at any time to the surrounding environment. Spill Closed

DEC Memo:	05/23/17-Hiralkumar Patel. 1:17 PM:- spoke with Brittany. they are removing two USTs: one 4,000 gal gasoline and one 1,000 gal diesel UST. during removal of diesel tank, crew noted some odors and upto 100 ppm on PID in soil. the tanks were located on concrete pad at 9 ft bg. crew has removed concrete pad and noted groundwater at bottom of excavation at approx. 10 ft bg. no sheen or product noted on groundwater. D&B will remove tank piping and dispenser islands and will collect endpoint soil and groundwater samples. two new tanks will be installed at the same location. Brittany Gaddy D&B Engineering and Architects, P.C. Ph. (516) 364-9890 Ext. 3439 email: bgaddy@db-eng.com National Grid **site operator** 175 East Old Country Road Hicksville, NY 11801 Attn.: Michael Lauro Environmental Engineering Ph. (516) 545-2562 email: michael.lauro@nationalgrid.com 1:39 PM:- sent letter to Mr. Lauro requiring submission of spill cleanup report by the end of 06/30/17. letter emailed to Mr. Lauro and Brittany. case assigned to DEC Zhune. 8/1/17-Brittany email-As discussed, attached to this email is analytical data, tables and an end point sample location map for NYSDEC review for Spill No. 1701762. Below is a detailed summary of the work that is taking place during the removal and installation of two USTs at the National Grid Greenpoint Energy Center, located at 287 Maspeth Avenue in Brooklyn. National Grid is in the process of removing a 4,000-gallon gasoline UST and a 1,000-gallon diesel UST. Upon removal of the USTs, the

GREENPOINT (Continued) **S104787368**

Contractor will install 27
concrete filled piles, pour a bottom slab and install two new
10,000-gallon USTs in the same
location. Existing piping will be removed after the new tanks are in
place and the excavation
backfilled. End point samples will also be collected for piping
excavation as requested by DEC. On
May 23, 2017 during excavation related to existing tank removal, some
soils were identified that
appeared to be impacted due to elevated PID readings and a diesel
odor. D&B notified the NYSDEC of
a historical petroleum release at the site and a spill case initiated.
Soil with elevated PID
readings was segregated. Upon removal of the USTs, 14 end point
samples were collected and analyzed
for the tank excavation. Please see attached for a site plan of the
existing fueling station that
has been marked with approximate end point sample locations. Table 1,
which provides a summary of
the removed tanks is attached for reference. Table 2, which provides a
summary of PID Readings is
also attached for reference. Analytical data related to the endpoint
sampling indicates that all
VOCs were non detect with the exception of sample GBN which has one
exceedance. For sample GBN,
benzene was detected at a concentration of 250 ug/kg which exceeds for
unrestricted use. This
concentration of benzene does not exceed for restricted industrial
use. There were several SVOC
exceedances for unrestricted and restricted use; however, the Site is
known to contain historic
fill. Soil borings taken from the area near the USTs show historic
fill present up to 12-17 feet
below grade. Additionally, the National Grid Greenpoint Energy Center
is a former MGP site and is
adjoined by Newtown Creek, a designated Superfund site to the east. As
the DEC has requested that
the tank closure report include piping excavation endpoint samples,
the report cannot be finalized
until the new tank installation is complete. However, due to the
results of the endpoint sampling
below the old USTs, we are requesting NYSDEC review/approval of
analytical data provided to close
Spill No. 1701762 at this time. A groundwater sample was collected
from the base of the former UST
excavation. The groundwater sample indicate one VOC (1500 ug/lt
Naphathalene)and multiple SVOCs
exceedance their repective NYSDEC GWGS. Following the product piping,
vent piping and dispensers
island removal, five (5) soil sample were collected from those
respective areas. All VOC
conccentrations were determined to be below their respective SCO’s
limits. However, the two (2)
samples analyzed via EPA Methos 8270, sample 2 and sample 4, exhibited
concentrations of several
SVOCs above their respective SCOs. On July 30, 2018 I received an
email from John Miller and I

GREENPOINT (Continued) **S104787368**

spoke with him. The email stated that My name is John Miller and I am the NYSDEC project manager
for Greenpoint MGP Site (224052). I was informed recently that National Grid is hoping to close out
a spill at the site. My understanding is that any contamination that remains related to the spill
would be address under the MPG program. I only just to heard of this issue last week, but after
speaking with Grid it sounds like reasonable approach. I wanted to confirm with you whether you
agree or not. Do you have any issues or concern?. Based on John Miller's email that any
contamination that remains related to the spill would be addressed under the MPG program # 224052
this spill is closed. Spill closed.

MGP:
Site ID: 224052
Name: K - GREENPOINT MGP - ENERGY CENTER
Address: 287 MASPETH AVENUE
City,State,Zip: BROOKLYN, NY 11211
Region: 2
Class: This classification is assigned to a site at which: 1.The disposal of hazardous waste has been confirmed and the presence of such hazardous waste or its components or breakdown products represents a significant threat to public health or the environment: or 2. Hazardous waste disposal has not been confirmed, but the site has been listed on the Federal National Priorities List (NPL).
Swis Code: 2401
Town: New York City
Disp Start: Not reported
Disp Term: Not reported
Acres: 117
Fuse: Industrial
Description: Location: The site is a large parcel located along Newtown Creek at 287 Maspeth Avenue in Brooklyn,NY in Kings County. It is bounded by Newtown Creek to the east, Maspeth Ave. to the south, Vandevoort Ave. to the west, and Lombardy St. to the north. This is a large property at 117 acres. Site Features: The site is currently known as the Greenpoint Energy Center and houses a major liquefied natural gas storage facility and compressor station, an operations center for KeySpan's distribution and service units, and a warehouse facility. Current zoning and land uses: Surrounding land uses are mixed industrial, residential, and commercial. The nearest residential land use is located adjacent to the northwest corner of the site. Past use of the site: A large manufactured gas plant (MGP) and byproduct coking operation operated on the site from 1928 until 1952. Coal tar has been found in subsurface soils, but the full extent of

GREENPOINT (Continued) **S104787368**

contamination has not yet been established. The surrounding neighborhood has also been subject to a large petroleum spill, apparently unrelated to the MGP. A Voluntary Cleanup Agreement (VCA) (site No. V00631) was entered into in 2005. An Interim Remedial Measure (IRM) was performed in 2006 to remove impacted soil in the northeast corner of the property to allow for upgrades to the Liquid Natural Gas (LNG) facility. The VCA was replaced by a Multi-Site Consent Order in 2007, modified in 2008. A site-wide remedial investigation (RI) is being conducted at the site. Additional data collection is being completed to better refine the delineation of the nature and extent of contamination. Site Geology/hydrogeology: The site is underlain by fill and heterogeneous glacial deposits that include outwash sands with till and lenticular silt deposits. Bedrock is approximately 200 feet below the ground surface. Groundwater flows northeasterly, toward the Newtown Creek.

Assess Env: A remedial investigation (RI) of the site is being performed in a phased approach based on geography and the proximity to adjacent or nearby water bodies. Phases 1 and 2 of the RI were located on the eastern and southern boundaries of the site, respectively, and were implemented between October 2011 and March 2016. Phase 3 encompassed the remainder of the site and was implemented between April 2016 and July 2019. Additional data collection is being completed to refine the delineation of the extent of contamination. Throughout the course of site investigations, soil, groundwater, and sediment samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals and cyanide. In addition, soils were analyzed for pesticides, herbicides, hexavalent chromium and total organic carbon while groundwater was analyzed for per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Sediment analysis also included pesticides, herbicides, ammonia, hexavalent chromium, dioxins and furans, total petroleum hydrocarbons (TPH), diesel range organics (DRO), black carbon, pH, sulfide, total nitrogen, total organic carbon, total phosphorus, normal alkanes and isoprenoid hydrocarbons. Soil vapor and indoor air have been analyzed for VOCs and naphthalene. Nature and Extent of Contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Areas of potentially NAPL-saturated soil were generally isolated to the southern portion of the Loading Platform Area and in the vicinity of Holder 1 along Maspeth Avenue. Three wells have accumulated recoverable coal tar; two in the loading platform area and one along Maspeth Avenue. No visual observations of potentially NAPL-saturated soil have been identified in the borings advanced within the site interior and no measurable NAPL has been visually observed in any of the wells installed within the interior. Soil: Soil concentrations above the Industrial Use Soil Cleanup Objectives (IUSCOs) primarily included PAHs. In the shallow zone, PAH exceedances of the IUSCOs were identified throughout the site; PAH concentrations generally decreased with depth and were largely identified in areas with noted physical impacts, particularly the Loading Platform Area where PAH exceedances of IUSCOs continued into the deep zone. The maximum concentration of total PAHs was observed near the Loading Dock Area at a concentration of 67,350 mg/kg in a sample collected from three

GREENPOINT (Continued) **S104787368**

to four feet below grade (ft bg). Concentrations of BTEX above the IUSCOs were identified in a limited number (total of three) samples sitewide. The maximum total BTEX concentration detected was 2,137.4 mg/kg from a sample collected from 15-16 ft bg along the Maspeth Alignment. Detections of metals in soil were mostly limited to the shallow zone. Detections in the intermediate or deep zones were limited to sporadic and relatively low detections of arsenic. Detections of cyanide were few and relatively low in concentration. The cyanide detections were generally limited to the site interior and were confined to the shallow soil zone. The maximum cyanide concentration detected was 29.4 mg/kg from three to four ft bg in the area of the former purifiers. There have been no detections of pesticides or herbicides above the IUSCOs. There were no PCB detections in soil above IUSCOs. Groundwater: Groundwater exceedances of standards and guidance values primarily included total BTEX, PAHs, chlorinated volatile organic compounds (CVOCs) and metals; cyanide and PCBs were detected in exceedance less frequently. The areas of elevated BTEX and PAH concentrations were primarily located near the southern Loading Platform Area in the vicinity of the identified soil impacts and along the southern property boundary along Maspeth Avenue. Elevated CVOC concentrations were generally found along the northern and western site perimeters and can be attributed to off-site sources. Total BTEX in groundwater ranged from non-detect (ND) to 455,100 parts per billion (ppb). Total PAHs in groundwater ranged from ND to 12,459 ppb. Numerous metals were detected above their corresponding standards, including arsenic, iron, lead, magnesium, manganese, and sodium, likely associated with regional conditions rather than historical site operations. Total cyanide concentrations in groundwater ranged from ND to 1,060 ppb. PCB exceedances were limited to three of the 148 groundwater samples analyzed, with a maximum total concentration of 1.54 ppb. Groundwater results were non-detect for 1,4-dioxane. While perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were occasionally detected in groundwater above guidance values, total PFAS concentrations were not detected in any well above guidance values. The maximum PFOS concentration detected was 57.9 parts per trillion (ppt) while the maximum PFOA concentration was 97.5 ppt and maximum total PFAS concentration was 256.17 ppt. These PFAS concentrations are not indicative of a source area and concentrations are likely associated with off-site sources. Soil Vapor: Sub-slab vapor and indoor air samples were collected during 2018 and 2019. Results varied across the site from no further action (nine buildings) to identifying sources and resampling (two buildings) to mitigation recommendations (three buildings).

Assess Doh: Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of fish and shellfish from Newtown Creek is restricted based on fish advisories for the East River, which apply to Newtown Creek as a tributary.

Town:	New York City
Record Added Date:	04/17/2018
Record Updated Date:	05/18/2023
Update By:	AAOBLIGA
Site Description:	"Location: The 100 Union Avenue site is located in an urban area at 100 Union Avenue, Brooklyn, NY. It is bordered by Middleton Street to the north, a small parking area and multi-story residential building to the south/southeast, Union Avenue to the west, and a New York City Transit (NYCT) substation and multi-story residential buildings to the east. Site Features: The site is 10,566 square feet (0.24 acres) in area and is currently vacant. Surface cover is mostly concrete with patches of vegetation throughout the site, and it is surrounded by a plywood fence along the two bounding streets. Current Zoning and Land Use: The site is zoned R6A (residential district) with C2-4 commercial overlay and is currently vacant. Past Use of the Site: The site was historically occupied by a church and by residential dwellings from 1887 through 1935. The site was vacant by 1950. The site was used for auto sales between 1965 and 1991 and then as an auto repair shop and junk yard from 1992 until 2014. Site Geology and Hydrology: The site is generally level and is at an elevation of approximately 16 feet above sea level. The topographic gradient of the site and the surrounding area gradually slopes west northwest towards the East River. Fill composed of brown medium sand, some medium gravel and cinders were identified throughout the site between 0 to 8 feet below ground surface (ft-bgs). Gray silty sand was also identified throughout the site between 8 and 15 ft-bgs. A layer of

100 UNION AVENUE REDEVELOPMENT SITE (Continued) **S117676130**

localized peat was identified in the northeastern area of the site at depths of 8 to 9.5 ft-bgs. A confining clay layer was observed at between 9 and 15 ft-bgs. Bedrock was not encountered. Groundwater was found to flow in a south/southeast direction. Groundwater was encountered between approximately 6.76 and 8.49 ft-bgs. "

Env Problem: "Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor samples were analyzed for VOCs. Based upon investigations conducted at the Site, the primary contaminants of concern are chlorinated solvents, specifically tetrachloroethylene (PCE) and trichloroethene (TCE). Soil: No VOCs were detected at concentrations exceeding the restricted residential soil cleanup objectives (RRSCO) or the applicable protection of groundwater SCOs. SVOCs were detected at concentrations above RRSCOs in the upper 2 feet of soil only including benzo(a)anthracene at 7.47 parts per million (ppm), benzo(a)pyrene at 5.16 ppm and benzo (b) fluoranthene at 5.7 ppm, all above their respective RRSCO of 1 ppm. Indeno(1,2,3-cd)pyrene was detected at 2.2 ppm (RRSCO of 0.5 ppm), dibenz[a,h]anthracene at 0.95 ppm (RRSCO of 0.33 ppm), and chrysene and benzo(k)fluoranthene at 5.66 ppm and 5.07 ppm, respectively (RRSCO of 3.9 ppm). Metals exceeding RRSCOs include lead detected at a maximum concentration of 900 ppm (RRSCO of 400 ppm) and mercury at a maximum of 7.28 ppm (RRSCO of 0.81 ppm). Data does not indicate any off-site impacts in soil related to the site. Groundwater: PCE exceeded the NYSDEC Ambient Water Quality Standards and Guidance Values (AWQSGV) with a maximum concentration of 19 parts per billion (ppb)compared to the AWQSGV of 5 ppb. The SVOCs mentioned above exceeded AWQSGV in four samples with concentrations an order of magnitude higher than the standard of 0.002 ppb including benzo(a)pyrene at 0.03 ppm and benzo(b)fluoranthene at 0.02 ppm. Dissolved metal exceedances included iron, manganese, selenium and sodium which are likely naturally occurring and are not considered to be site-specific contaminants. Perfluorooctanoic acid (PFOA) exceeded the AWQSGV of 6.7 parts per trillion (ppt) with a maximum concentration of 199 ppt and perfluorooctanesulfonic acid (PFOS) exceeded the AWQSGV of 2.7 ppt with a maximum concentration of 106 ppt. Data does not indicate any off-site impacts in groundwater related to the site. Soil Vapor: PCE and TCE were detected at elevated concentrations across the northern portion of the Site where groundwater exceedances were also identified. PCE concentrations ranged from 37 to 1450 micrograms per cubic meter (ug/m3) and TCE ranged from 1.34 to 61.3 ug/m3. Data indicates the potential for off-site impacts in soil vapor related to the site. "

Health Problem: "The site is completely fenced or boarded which restricts public access. Persons who enter the site can contact contaminants in the soil by walking through or digging below surface soil or otherwise disturbing soil beneath the concrete cover. Contaminated groundwater at the site is not used for drinking or other purposes, since the site is served by a public water supply that obtains its water from a source not affected by site contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion is not a current concern on-site because the site is vacant;

100 UNION AVENUE REDEVELOPMENT SITE (Continued) **S117676130**

	however, the potential exists for the inhalation of site contaminants due to soil vapor intrusion in any future on-site buildings. Soil vapor intrusion is a potential exposure concern for site-related contaminants off-site."

HW Code: 224182
Record Add: 09/17/2013
Record Upd: 01/17/2024
Updated By: HMDUDEK
Site Description: "Location: The approximately 1/2 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the northeast corner of the intersection of Lombardy Street and Varick Avenue. Site Features: The site is completely covered by two (2) masonry block buildings. Current Zoning and Land Use(s): The site is zoned for manufacturing. The site is currently utilized as a warehouse. Numerous commercial and industrial properties are located to the north, east, and west of the site. A National Grid energy facility is located south of the site across Lombardy Street. The Brooklyn-Queens Expressway (I-278) is located 1 block north of the site. A residential area is located 2 blocks southwest of the site. Newtown Creek is located 4 blocks east of the site. Past Use(s) of the Site: The Department began a Site Characterization in this area during the Summer of 2011 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular area was specifically targeted for investigation based on its previous use as a lacquer storage facility in the 1930s, as a soap manufacturer from the early 1950s to 1989, and on data collected by the Department during investigations conducted at an adjacent site between 2007-2009 (ACME Steel - Brass Foundry) which indicated the presence of an additional source area along Varick Avenue between Anthony and Lombardy Streets. Site Geology and Hydrogeology: The site is underlain by a sand unit (~110' thick) with a discontinuous clayey silt/silty sand unit within the sand unit, and the Raritan formation. Groundwater is present at a depth of approximately 45-50' below ground surface in the vicinity of the site. Groundwater flows north towards Newtown Creek, which lies approximately 1,600' northeast of the site."
Env Problem: "Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 8,400 ppb, and in deep groundwater up to 20,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. - Soil PCE has been found in soil up to 23,000 ppm @ 1-1.5' below grade adjacent to a site-related cesspool, which is well above the soil cleanup objective for unrestricted use (1.3 ppm). Significant Threat: The site poses a significant environmental threat due to the ongoing release of PCE from source areas into soil and groundwater and a significant threat to public health due to the concentrations of PCE detected in groundwater and soil, in conjunction with the proximity of occupied structures."
Health Problem: "Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The

CHLORAL GROUP (Continued) **S102637940**

potential for soil vapor intrusion to occur in on-site structures should be evaluated. In addition, off-site sampling indicates soil vapor intrusion is a concern for off-site buildings."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/27/2025
Date Data Arrived at EDR: 04/01/2025
Date Made Active in Reports: 04/24/2025
Number of Days to Update: 23

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/27/2025
Date Data Arrived at EDR: 04/01/2025
Date Made Active in Reports: 04/24/2025

Next Scheduled EDR Contact: 07/07/2025
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/27/2025

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/20/2024

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

ENV RES DECL: Environmental Restrictive Declarations

The Environmental Restrictive Declarations (ERD) listed were recorded in connection with a zoning action against the noted Tax Blocks and Tax Lots, or portion thereof, and are available in the property records on file at the Office of the City Register for Bronx, Kings, New York and Queens counties or at the Richmond County Clerk's office. They contain environmental requirements with respect to hazardous materials, air quality and/or noise in accordance with Section 11-15 of this Resolution.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/02/2025

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

UTM Y (Meters):	4507695.0
Elevation:	16 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

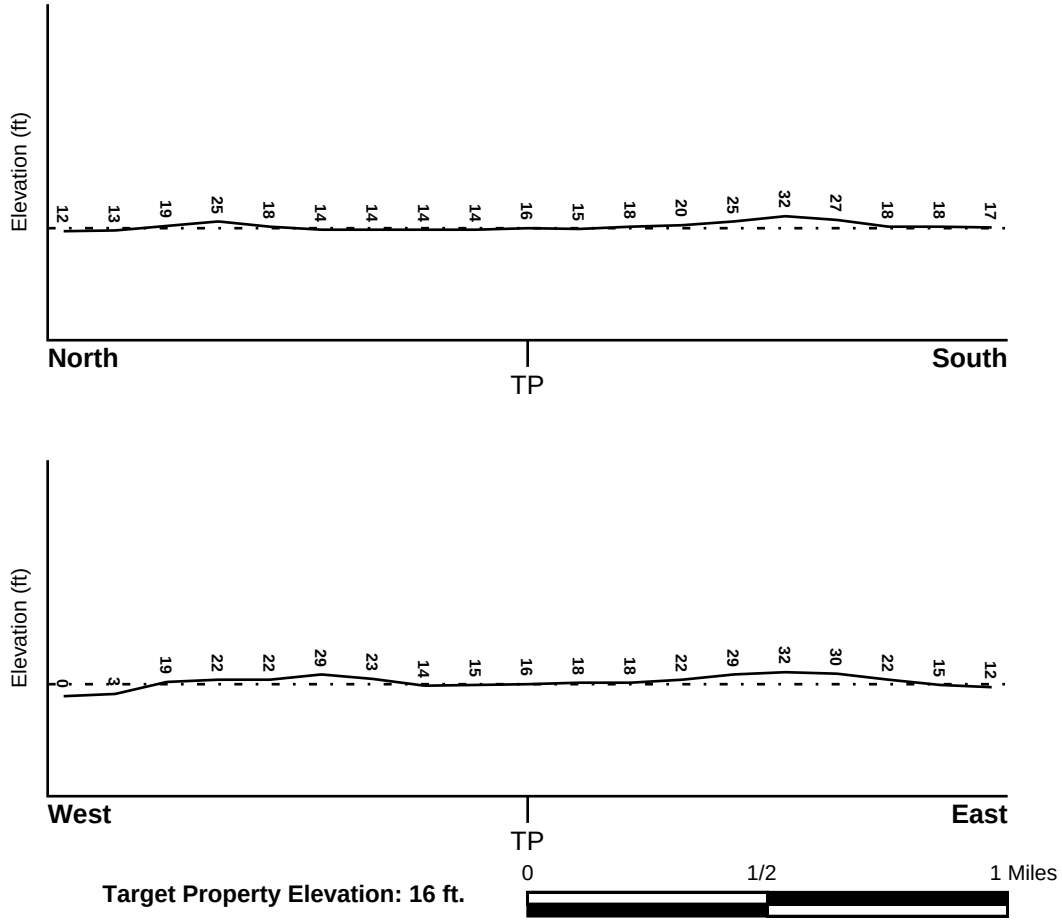
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 16 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970204F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

3604970208F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Kings County, New York
Survey Area Data: Version 15, Aug 29, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 1, 2023—Sep 1, 2023

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
UmA	Urban land, tidal marsh substratum, 0 to 3 percent slopes	5.6	89.4%
UtA	Urban land, till substratum, 0 to 3 percent slopes	0.7	10.6%
Totals for Area of Interest		**6.3**	**100.0%**

Form 54-35M-701421(51) 114

DEPARTMENT OF [redacted] BUILDINGS

BOROUGH OF BROOKLYN, CITY OF NEW YORK

No. 182711

Date OCT 16 1958

CERTIFICATE OF OCCUPANCY

(Standard form adopted by the Board of Standards and Appeals and issued pursuant to Section 646 of the New York Charter, and Sections C.26-181.0 to C26-187.0 inclusive Administrative Code 2.1.3.1. to 2.1.3.7. Building Code.)

This certificate supersedes C. O. No.

To the owner or owners of the building or premises:

THIS CERTIFIES that the [redacted]—altered—[redacted]—building—premises located at

36 Frost Street, South Side, 125' West of Lorimer Street

Block 2736 Lot 21, 22.

, conforms substantially to the approved plans and specifications, and to the requirements of the building code and all other laws and ordinances, and of the rules and regulations of the Board of Standards and Appeals, applicable to a building of its class and kind at the time the permit was issued; and

CERTIFIES FURTHER that, any provisions of Section 646F of the New York Charter have been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent.

[redacted] Alt. No.—2154/1958 Construction classification—vacant land

Occupancy classification—parking lot Height - stories, - feet.

Date of completion—constr. 10/10/58 plumb. 9/29/58 Located in Unrestricted Use District.

B Area . Height Zone at time of issuance of permit

This certificate is issued subject to the limitations hereinafter specified and to the following resolutions of the Board of Standards and Appeals: (Calendar numbers to be inserted here)

PERMISSIBLE USE AND OCCUPANCY

STORY	LIVE LOADS Lbs. per Sq. Ft.	PERSONS ACCOMMODATED			USE
		MALE	FEMALE	TOTAL	
first	ground	-	-	-	parking lot for motor vehicles
	TOTAL -	Parking Lot (conjunctive use with trucking company at 40 Frost Street)			

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

www.dec.ny.gov

RE: PUBLIC RECORDS REQUEST of 4/30/2025, Reference # W146562-043025

Date: 05/06/2025

Dear Gabrielle Castro,

In response to your Freedom of Information Law (FOIL) request seeking:

> *Information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products and installation or removal of aboveground or underground storage tanks at 36 Frost Street, Brooklyn, New York (Block 2736, Lot 20). The property is additionally identified as 34 and 38 Frost Street.*

Please be advised that a diligent search of the files maintained by DEC produced no responsive records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

FOIL Appeals Officer
Office of General Counsel
New York State Department of Environmental Conservation
625 Broadway, 14th Floor
Albany, NY 12233-1500

Your FOIL request is now closed. For further assistance, please call (718) 482-4912 and reference FOIL #W146562-043025, or simply reply to this email. Thank you.

Sincerely,

Region 2 FOIL Coordinator

E and RD Property Search

Instructions: Please enter the Borough, Block, and Lot for the property you are interested in, and then hit search. If you do not know the Block and Lot of the property, please refer to NYC Department of City Planning's Geographic Online Address Translator (https://a030-goat.nyc.gov/Goat/). Please also search the original lot configuration if the property has been merged, subdivided, or affected. To identify the original lots, please use the NYC Digital Tax Map (http://gis.nyc.gov/taxmap/) and the NYC Department of Buildings Building Information System (BIS) (http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp).

Once you've identified the E-Designation and/or Restrictive Declaration information you are interested in, please consult the CEQR Documents section of OER's website (https://www.nyc.gov/site/oer/remediation/city-environmental-quality-review.page) and CEQR Access (https://a002-ceqraccess.nyc.gov/ceqr/) to identify Site-specific requirements. Please also visit the NYC Department of City Planning's (E) Designations - Frequently Asked Questions (http://www.nyc.gov/html/dcp/html/env_review/e_designation_faqs.shtml) page.

Remediation (FNOS) Date: **N/A**	

Disclaimer: The E and RD Property Search is a tool designed to assist with determining whether properties have Environmental Restrictions also known as E-Designations and Restrictive Declarations. The most updated list of properties with E-designations and Restrictive Declarations is maintained by the NYC Department of City Planning in Appendix C of the Zoning Resolution: E-Designations in Table 1 (https://zr.planning.nyc.gov/appendix-c-table-1-city-environmental-quality-review-ceqr-environmental-requirements-e-designations) and Restrictive Declarations in Table 2 (https://zr.planning.nyc.gov/appendix-c-table-2-city-environmental-quality-review-ceqr-environmental-requirements-environmental).

Please note that Appendix C and the E/RD Search tool may not reflect all merged, subdivided or condo (e.g., 7501) lots. This may lead to temporarily incorrect entries regarding environmental restrictions in the NYC Department of Buildings' Buildings Information System (http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp). According to the Zoning Resolution (ZR 11-15), when lots with an environmental restriction are merged, subdivided or affected, the resulting lots also carry the environmental restrictions. To confirm the results of this tool, we strongly recommend checking Appendix C Table 1 (https://zr.planning.nyc.gov/appendix-c-table-1-city-environmental-quality-review-ceqr-environmental-requirements-e-designations) and Table 2 (https://zr.planning.nyc.gov/appendix-c-table-2-city-environmental-quality-review-ceqr-environmental-requirements-environmental) to determine if the original lot configuration before the merging, subdivision, or condo conversion has an environmental restriction. Please see the instructions for additional information on identifying the original lot configuration. If you have questions about a property or you identify an error in either Appendix C of the Zoning Resolution or in the E and RD Property Search Tool, please contact OER.

New York City Office of Environmental Remediation 100 Gold Street, 2nd Floor New York, NY 10038. Our general phone number is: (212) 788-8841

[OpenRecords] Request FOIL-2025-002-00419 Closed

1 message

donotreply@records.nyc.gov <donotreply@records.nyc.gov> Fri, May 2, 2025 at 9:29 AM
Reply-To: foil-oer@cityhall.nyc.gov
To: gabriellecastro@touchstoneenvironmental.com

The Mayor's Office of Environmental Remediation (OER) has **denied** your FOIL request FOIL-2025-002-00419 for the following reasons:

- A diligent search for records responsive to your request did not locate any such records. Accordingly, your request is denied.
- General information about E-Designation E-138 is available on OER's website at https://www.nyc.gov/site/oer/remediation/ceqr-documents.page?borough=Brooklyn

Please visit FOIL-2025-002-00419 to view additional information and take any necessary action. You may appeal the decision to deny access to material that was redacted in part or withheld in entirety by contacting the agency's FOIL Appeals Officer: foil-oer@cityhall.nyc.gov within 30 days.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

INNOVATIVE AFFORDABLE ENVIRONMENTAL SOLUTIONS

RACHEL ATAMAN, PG
PRESIDENT

SUMMARY OF EXPERIENCE

Having worked in the environmental field since 2003, I have a vast understating of the Environmental world in New York State. I have worked on multiple projects ranging from Phase I ESAs, Phase II ESAs, Mold Investigations to New York State Brownfield Cleanup Projects. Additionally, I have worked closely with clients to meet their specific project needs such as deadlines, project grants and program requirements. Using my vast experience I also assisted clients in cost estimates for future investigations or remediations.

RELEVANT PROJECT EXPERIENCE

- Recently completed the investigation and Remedial Design for a 3-story building on Moffat Street in Brooklyn. The investigation included the installation and sampling of a series of soil probes, monitoring wells and soil vapor probes. The remedial design included the excavation and property disposal of soils within the foundation and the installation of a vapor barrier beneath the foundation. The Investigation and Remedial Design were approved by the New York City Office of Environmental Projection since the site is going through a zoning variance.
- Was instrumental in entering the first site (Pelham Parkway) into New York City Brownfield Cleanup program (BCP) and bringing Mayor Bloomberg to the Site to announce the start of the City's BCP. I then managed the environmental requirements of the site including City Environmental Quality Review, Phase I ESAs, Site Investigations, Remedial Action Work Plans and the Site Remedation during development.
- Managed a large variety of New York City Brownfield Cleanup Projects including the preparation of the Site Investigation Work Plans, implementation of the fieldwork, the preparation of Site Investigation Report and Remediation Action Plans. Also successfully managed the implementation of Remedial Action Plans during fieldwork. On a site location on North 8th Street in Brooklyn, New York, supervised the removal of 10,000 tons of contaminated soil and the installation of a vapor barrier and sub-slab depressurization system.
- Knowledgeable in the characterization of soil for disposal. On a NYC BCP site located on Third Avenue in the Bronx I successfully investigated and managed the disposal of over 2,000 tons of hazardous soil.
- Successfully investigated and managed the closure of hundreds of NYSDEC Spill Sites. For example she recently completely the closusre of a Spill on Anthony Avenue by investigating soils and determining a subsurface impact was not identified. Additionally, successfully remediated a site on Burnside Avenue in Inwood through the removal of three underground storage tanks (USTs), over 100 tons of petroleum contaminated soil, the injection of Oxygen Releasing Compounds (ORC) and the performance of monthly monitoring and quarterly sampling of

groundwater over a 2 year period. The remediation was successful in reducing the levels of contamination in groundwater and the NYSDEC Spill number was closed.

- Supervised the removal of four underground storage tanks for the Rockland County Sewer District and continue to work with the RCSD on the update of the Sewer Plants from underground storage tanks to above ground storage tanks.
- Performed hundreds of Phase I ESA site inspections and has reviewed and written hundreds of Phase I ESAs as well. Based upon the results of the Phase I ESA, determined the proper scope of work for the Phase II ESAs, prepared Phase II ESA scopes of work and proposals and then properly implemented the Phase II ESA.

Technical Responsibilities:
Coordinates work with regulatory agencies and organizes project schedules with clients, project geologists, and field managers.
Phase I and Phase II Environmental Site Assessments
Design and Management of Site Investigations
"E"-Designations
Site Supervision and Remediation
Environmental Assessment Statements
Mold testing
Air Quality/control
Technical review of assessment reports, remedial action plans, mold investigations
Remedial Action:
Implemented numerous Remedial Action Plans. Supervised the construction and managed the operation of numerous hydrocarbon and chlorinated solvent remediation systems for soil and groundwater.

EDUCATION
BS Geology, SUNY Stony Brook, 2001
Affiliations/Certifications:
New York State Professional Geologist License #000900
Certified GPR Operator (Subsurface Interface Radar in Engineering)
10-Hour OSHA Hazard Recognition Training for The Construction Industry Course on 2/13/2018
Certified by ASTM for the E-1527 Phase I ESA

INNOVATIVE AFFORDABLE ENVIRONMENTAL SOLUTIONS

Gabrielle Castro
Senior Project Manager for Touchstone Environmental Geology, P.G.

SUMMARY OF EXPERIENCE

Working in various sections of environmental sciences throughout the course of my career has provided me with an understanding of the local environment in New York State. I have worked on projects including Phase I and Phase II Environmental Site Assessments as well as New York Brownfield Cleanup Projects and investigations for the New York City Office of Environmental Remediation. Throughout my career, I have worked effectively to meet deadlines and program requirements and to ensure accuracy in the data I have collected and analyzed.

RELEVANT PROJECT EXPERIENCE

- Recently completed waste characterization testing as part of a Phase II Investigation on Fulton Street in Brooklyn, New York. The investigation included the installation, sampling, and collection of a series of soil probes. The investigation and Remedial Design were approved by the New York City Office of Environmental Remediation.
- Written a number of for Phase I Environmental Site Assessments (ESAs). Recommendations for Phase II ESAs were then based upon the results of the Phase I ESAs and Phase II ESAs were then properly implemented.
- Knowledgeable in soil disposal characterization. Supervised the excavation and disposal of soil at a site on Jericho Turnpike in Queens, New York.
- Performed a Phase I ESA site inspection at 88 North 1st Street in Brooklyn, New York. Based upon the results of the Phase I ESA, the proper scope of work for a Phase II ESA was determined and a Phase II ESA scope of work and proposal was prepared.
- Managed a variety of New York City Brownfield Cleanup Projects including the preparation of the Remedial Investigation Work Plans, Remedial Action Work Plans, and implementation of the fieldwork.
- Successfully managed the implementation of Remedial Action Plans during fieldwork.

TECHNICAL RESPONSIBILITIES

- Compile information on properties for Phase I and Phase II Environmental Site Assessments.
- Conduct Phase I and Phase II Environmental Site Assessments.
- Management of site investigations and site supervision.
- Conduct air quality/dust monitoring control.
- File Freedom of Information Act (FOIA) Requests with various agencies to collect further information about the properties in order to assess the environmental quality.
- Create reports to evaluate the potential environmental impacts associated with the Subject Properties.

- Supervise disposal of excavated soil.
- Collect indoor and outdoor air samples, soil vapor samples, and soil probe samples for laboratory analyses.
- Air Quality/Control

EDUCATION

Master of Science Integrated Biology, *Hofstra University*, Hempstead, NY, December 2019
Bachelor of Science Biology, *SUNY University at Albany*, Albany, NY, May 2014
