OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Elevation:	16 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

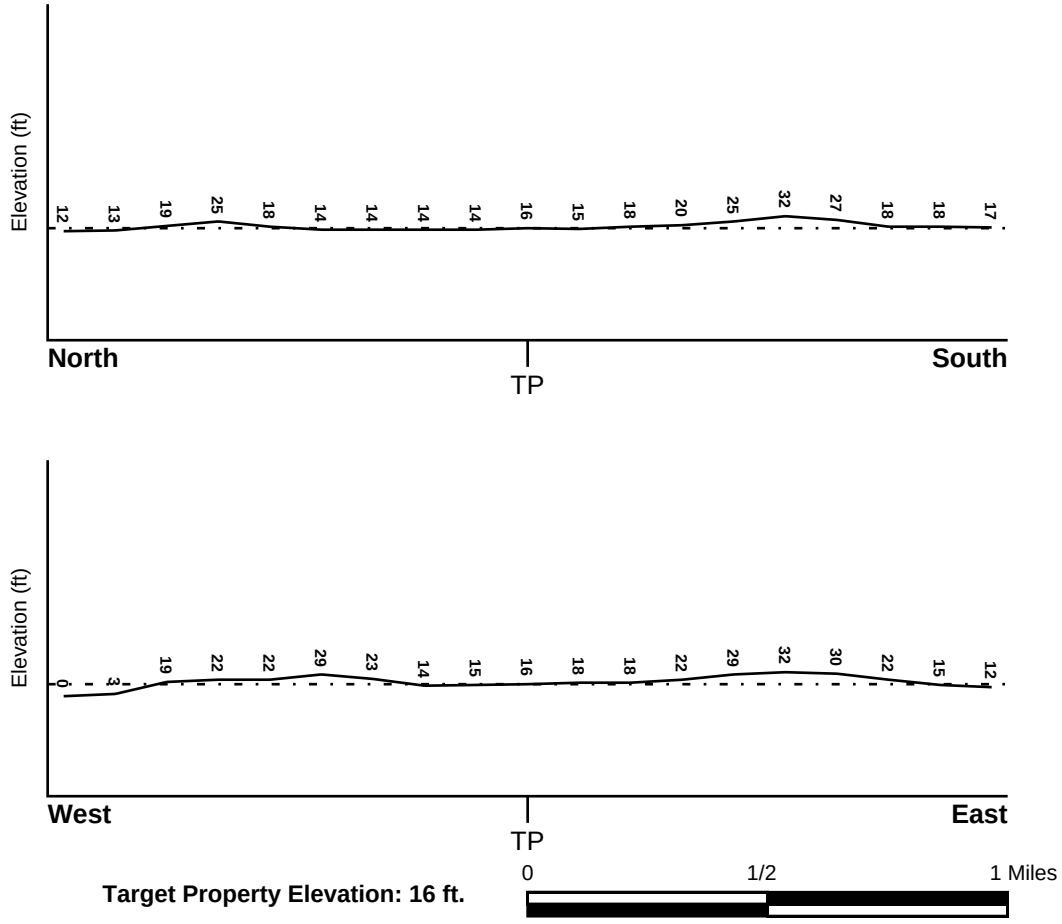
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 16 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970204F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

3604970208F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

FED USGS **USGS40000829364**

Organization ID:	USGS-NY	Organization Name:	USGS New York Water Science Center
Monitor Location:	K 889. 1	Type:	Well
Description:	Not Reported	HUC:	02030201
Drainage Area:	Not Reported	Drainage Area Units:	Not Reported
Contrib Drainage Area:	Not Reported	Contrib Drainage Area Unts:	Not Reported
Aquifer:	Northern Atlantic Coastal Plain aquifer system		
Formation Type:	Glacial Aquifer, Upper	Aquifer Type:	Not Reported
Construction Date:	Not Reported	Well Depth:	74
Well Depth Units:	ft	Well Hole Depth:	74
Well Hole Depth Units:	ft		

Ground water levels,Number of Measurements:	265	Level reading date:	1985-10-01
Feet below surface:	Not Reported	Feet to sea level:	3.53
Note:	Not Reported

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Kings County, New York
Survey Area Data: Version 15, Aug 29, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 1, 2023—Sep 1, 2023

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
UmA	Urban land, tidal marsh substratum, 0 to 3 percent slopes	5.6	89.4%
UtA	Urban land, till substratum, 0 to 3 percent slopes	0.7	10.6%
Totals for Area of Interest		**6.3**	**100.0%**

Form 54-35M-701421(51) 114

DEPARTMENT OF [redacted] BUILDINGS

BOROUGH OF BROOKLYN, CITY OF NEW YORK

No. 182711

Date OCT 16 1958

CERTIFICATE OF OCCUPANCY

(Standard form adopted by the Board of Standards and Appeals and issued pursuant to Section 646 of the New York Charter, and Sections C.26-181.0 to C26-187.0 inclusive Administrative Code 2.1.3.1. to 2.1.3.7. Building Code.)

This certificate supersedes C. O. No.

To the owner or owners of the building or premises:

THIS CERTIFIES that the [redacted]—altered—[redacted]—building—premises located at

36 Frost Street, South Side, 125' West of Lorimer Street

Block 2736 Lot 21, 22.

, conforms substantially to the approved plans and specifications, and to the requirements of the building code and all other laws and ordinances, and of the rules and regulations of the Board of Standards and Appeals, applicable to a building of its class and kind at the time the permit was issued; and

CERTIFIES FURTHER that, any provisions of Section 646F of the New York Charter have been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent.

[redacted] Alt. No.—2154/1958 Construction classification—vacant land

Occupancy classification—parking lot Height - stories, - feet.

Date of completion—constr. 10/10/58 plumb. 9/29/58 Located in Unrestricted Use District.

B Area . Height Zone at time of issuance of permit

This certificate is issued subject to the limitations hereinafter specified and to the following resolutions of the Board of Standards and Appeals: (Calendar numbers to be inserted here)

PERMISSIBLE USE AND OCCUPANCY

STORY	LIVE LOADS Lbs. per Sq. Ft.	PERSONS ACCOMMODATED			USE
		MALE	FEMALE	TOTAL	
first	ground	-	-	-	parking lot for motor vehicles
	TOTAL -	Parking Lot (conjunctive use with trucking company at 40 Frost Street)			

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

[OpenRecords] Request FOIL-2025-826-02064 Closed

1 message

donotreply@records.nyc.gov <donotreply@records.nyc.gov> Tue, May 6, 2025 at 9:34 AM
Reply-To: foil@dep.nyc.gov
To: gabriellecastro@touchstoneenvironmental.com

The Department of Environmental Protection (DEP) has **closed** your FOIL request FOIL-2025-826-02064 for the following reasons:

- A diligent search for records responsive to your request did not locate any such records. Accordingly, your request is denied.

You may appeal the decision to deny access to material that was redacted in part or withheld in entirety by contacting the agency's FOIL Appeals Officer: foilappeals@dep.nyc.gov within 30 days.

Please check your email inbox's spam folder to ensure you received all records provided by the agency.

www.dec.ny.gov

RE: PUBLIC RECORDS REQUEST of 4/30/2025, Reference # W146562-043025

Date: 05/06/2025

Dear Gabrielle Castro,

In response to your Freedom of Information Law (FOIL) request seeking:

> *Information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products and installation or removal of aboveground or underground storage tanks at 36 Frost Street, Brooklyn, New York (Block 2736, Lot 20). The property is additionally identified as 34 and 38 Frost Street.*

Please be advised that a diligent search of the files maintained by DEC produced no responsive records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

FOIL Appeals Officer
Office of General Counsel
New York State Department of Environmental Conservation
625 Broadway, 14th Floor
Albany, NY 12233-1500

Your FOIL request is now closed. For further assistance, please call (718) 482-4912 and reference FOIL #W146562-043025, or simply reply to this email. Thank you.

Sincerely,

Region 2 FOIL Coordinator

E and RD Property Search

Instructions: Please enter the Borough, Block, and Lot for the property you are interested in, and then hit search. If you do not know the Block and Lot of the property, please refer to NYC Department of City Planning's Geographic Online Address Translator (https://a030-goat.nyc.gov/Goat/). Please also search the original lot configuration if the property has been merged, subdivided, or affected. To identify the original lots, please use the NYC Digital Tax Map (http://gis.nyc.gov/taxmap/) and the NYC Department of Buildings Building Information System (BIS) (http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp).

Once you've identified the E-Designation and/or Restrictive Declaration information you are interested in, please consult the CEQR Documents section of OER's website (https://www.nyc.gov/site/oer/remediation/city-environmental-quality-review.page) and CEQR Access (https://a002-ceqraccess.nyc.gov/ceqr/) to identify Site-specific requirements. Please also visit the NYC Department of City Planning's (E) Designations - Frequently Asked Questions (http://www.nyc.gov/html/dcp/html/env_review/e_designation_faqs.shtml) page.

Remediation (FNOS) Date: **N/A**	

Disclaimer: The E and RD Property Search is a tool designed to assist with determining whether properties have Environmental Restrictions also known as E-Designations and Restrictive Declarations. The most updated list of properties with E-designations and Restrictive Declarations is maintained by the NYC Department of City Planning in Appendix C of the Zoning Resolution: E-Designations in Table 1 (https://zr.planning.nyc.gov/appendix-c-table-1-city-environmental-quality-review-ceqr-environmental-requirements-e-designations) and Restrictive Declarations in Table 2 (https://zr.planning.nyc.gov/appendix-c-table-2-city-environmental-quality-review-ceqr-environmental-requirements-environmental).

Please note that Appendix C and the E/RD Search tool may not reflect all merged, subdivided or condo (e.g., 7501) lots. This may lead to temporarily incorrect entries regarding environmental restrictions in the NYC Department of Buildings' Buildings Information System (http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp). According to the Zoning Resolution (ZR 11-15), when lots with an environmental restriction are merged, subdivided or affected, the resulting lots also carry the environmental restrictions. To confirm the results of this tool, we strongly recommend checking Appendix C Table 1 (https://zr.planning.nyc.gov/appendix-c-table-1-city-environmental-quality-review-ceqr-environmental-requirements-e-designations) and Table 2 (https://zr.planning.nyc.gov/appendix-c-table-2-city-environmental-quality-review-ceqr-environmental-requirements-environmental) to determine if the original lot configuration before the merging, subdivision, or condo conversion has an environmental restriction. Please see the instructions for additional information on identifying the original lot configuration. If you have questions about a property or you identify an error in either Appendix C of the Zoning Resolution or in the E and RD Property Search Tool, please contact OER.

New York City Office of Environmental Remediation 100 Gold Street, 2nd Floor New York, NY 10038. Our general phone number is: (212) 788-8841

Reply-To: foil-oer@cityhall.nyc.gov
To: gabriellecastro@touchstoneenvironmental.com

The Mayor's Office of Environmental Remediation (OER) has **denied** your FOIL request FOIL-2025-002-00419 for the following reasons:

- A diligent search for records responsive to your request did not locate any such records. Accordingly, your request is denied.
- General information about E-Designation E-138 is available on OER's website at https://www.nyc.gov/site/oer/remediation/ceqr-documents.page?borough=Brooklyn

Please visit FOIL-2025-002-00419 to view additional information and take any necessary action. You may appeal the decision to deny access to material that was redacted in part or withheld in entirety by contacting the agency's FOIL Appeals Officer: foil-oer@cityhall.nyc.gov within 30 days.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

INNOVATIVE AFFORDABLE ENVIRONMENTAL SOLUTIONS

RACHEL ATAMAN, PG
PRESIDENT

SUMMARY OF EXPERIENCE

Having worked in the environmental field since 2003, I have a vast understating of the Environmental world in New York State. I have worked on multiple projects ranging from Phase I ESAs, Phase II ESAs, Mold Investigations to New York State Brownfield Cleanup Projects. Additionally, I have worked closely with clients to meet their specific project needs such as deadlines, project grants and program requirements. Using my vast experience I also assisted clients in cost estimates for future investigations or remediations.

RELEVANT PROJECT EXPERIENCE

- Recently completed the investigation and Remedial Design for a 3-story building on Moffat Street in Brooklyn. The investigation included the installation and sampling of a series of soil probes, monitoring wells and soil vapor probes. The remedial design included the excavation and property disposal of soils within the foundation and the installation of a vapor barrier beneath the foundation. The Investigation and Remedial Design were approved by the New York City Office of Environmental Projection since the site is going through a zoning variance.
- Was instrumental in entering the first site (Pelham Parkway) into New York City Brownfield Cleanup program (BCP) and bringing Mayor Bloomberg to the Site to announce the start of the City's BCP. I then managed the environmental requirements of the site including City Environmental Quality Review, Phase I ESAs, Site Investigations, Remedial Action Work Plans and the Site Remedation during development.
- Managed a large variety of New York City Brownfield Cleanup Projects including the preparation of the Site Investigation Work Plans, implementation of the fieldwork, the preparation of Site Investigation Report and Remediation Action Plans. Also successfully managed the implementation of Remedial Action Plans during fieldwork. On a site location on North 8th Street in Brooklyn, New York, supervised the removal of 10,000 tons of contaminated soil and the installation of a vapor barrier and sub-slab depressurization system.
- Knowledgeable in the characterization of soil for disposal. On a NYC BCP site located on Third Avenue in the Bronx I successfully investigated and managed the disposal of over 2,000 tons of hazardous soil.
- Successfully investigated and managed the closure of hundreds of NYSDEC Spill Sites. For example she recently completely the closusre of a Spill on Anthony Avenue by investigating soils and determining a subsurface impact was not identified. Additionally, successfully remediated a site on Burnside Avenue in Inwood through the removal of three underground storage tanks (USTs), over 100 tons of petroleum contaminated soil, the injection of Oxygen Releasing Compounds (ORC) and the performance of monthly monitoring and quarterly sampling of

groundwater over a 2 year period. The remediation was successful in reducing the levels of contamination in groundwater and the NYSDEC Spill number was closed.

- Supervised the removal of four underground storage tanks for the Rockland County Sewer District and continue to work with the RCSD on the update of the Sewer Plants from underground storage tanks to above ground storage tanks.
- Performed hundreds of Phase I ESA site inspections and has reviewed and written hundreds of Phase I ESAs as well. Based upon the results of the Phase I ESA, determined the proper scope of work for the Phase II ESAs, prepared Phase II ESA scopes of work and proposals and then properly implemented the Phase II ESA.

Technical Responsibilities:
Coordinates work with regulatory agencies and organizes project schedules with clients, project geologists, and field managers.
Phase I and Phase II Environmental Site Assessments
Design and Management of Site Investigations
"E"-Designations
Site Supervision and Remediation
Environmental Assessment Statements
Mold testing
Air Quality/control
Technical review of assessment reports, remedial action plans, mold investigations
Remedial Action:
Implemented numerous Remedial Action Plans. Supervised the construction and managed the operation of numerous hydrocarbon and chlorinated solvent remediation systems for soil and groundwater.

EDUCATION

SUMMARY OF EXPERIENCE

Working in various sections of environmental sciences throughout the course of my career has provided me with an understanding of the local environment in New York State. I have worked on projects including Phase I and Phase II Environmental Site Assessments as well as New York Brownfield Cleanup Projects and investigations for the New York City Office of Environmental Remediation. Throughout my career, I have worked effectively to meet deadlines and program requirements and to ensure accuracy in the data I have collected and analyzed.

RELEVANT PROJECT EXPERIENCE

- Recently completed waste characterization testing as part of a Phase II Investigation on Fulton Street in Brooklyn, New York. The investigation included the installation, sampling, and collection of a series of soil probes. The investigation and Remedial Design were approved by the New York City Office of Environmental Remediation.
- Written a number of for Phase I Environmental Site Assessments (ESAs). Recommendations for Phase II ESAs were then based upon the results of the Phase I ESAs and Phase II ESAs were then properly implemented.
- Knowledgeable in soil disposal characterization. Supervised the excavation and disposal of soil at a site on Jericho Turnpike in Queens, New York.
- Performed a Phase I ESA site inspection at 88 North 1st Street in Brooklyn, New York. Based upon the results of the Phase I ESA, the proper scope of work for a Phase II ESA was determined and a Phase II ESA scope of work and proposal was prepared.
- Managed a variety of New York City Brownfield Cleanup Projects including the preparation of the Remedial Investigation Work Plans, Remedial Action Work Plans, and implementation of the fieldwork.
- Successfully managed the implementation of Remedial Action Plans during fieldwork.

TECHNICAL RESPONSIBILITIES

- Compile information on properties for Phase I and Phase II Environmental Site Assessments.
- Conduct Phase I and Phase II Environmental Site Assessments.
- Management of site investigations and site supervision.
- Conduct air quality/dust monitoring control.
- File Freedom of Information Act (FOIA) Requests with various agencies to collect further information about the properties in order to assess the environmental quality.
- Create reports to evaluate the potential environmental impacts associated with the Subject Properties.

- Supervise disposal of excavated soil.
- Collect indoor and outdoor air samples, soil vapor samples, and soil probe samples for laboratory analyses.
- Air Quality/Control

Re: Phase II Environmental Site Investigation
36 Frost Street
Brooklyn, New York 11211
Block 2736 Lot 20

Dear Mr. Kaykov:

This report presents results of the Phase II Environmental Site Investigation (Phase II ESI) conducted by GZA for the property located at 36 Frost Street, Brooklyn, New York (Site). This Phase II ESI was performed in accordance with the scope of work outlined in GZA's proposal, dated June 2, 2025.

Should you have questions, please do not hesitate to contact Victoria Whelan at (631) 793-8821.

Very truly yours,
GZA GEOENVIRONMENTAL OF NEW YORK

1.0 INTRODUCTION

36 Frost Street LLC (Client) retained GZA GeoEnvironmental of New York (GZA) to conduct a Phase II Environmental Site Investigation (ESI) to evaluate the subsurface conditions of the industrial property, located at 36 Frost Street, Brooklyn, New York (hereafter referred to as "the Site"). A Site location map is included as **Figure 1**. GZA performed the field activities on June 6 and June 9, 2025, consistent with the scope of work outlined in GZA's proposal, dated June 2, 2025. This Phase II ESI Report (Report) was prepared in accordance with the limitations presented in **Appendix A**.

1.1 OBJECTIVE

The objective of this Phase II ESI was to collect and analyze soil, groundwater, and soil vapor samples to evaluate Recognized Environmental Conditions (RECs) identified in the May 2025 Phase I Environmental Site Assessment (2025 Phase I ESA), prepared by Touchstone Environmental Geology, PC, on behalf of 36 Frost Street LLC.

GZA performed the sampling in general accordance with the New York State Department of Environmental Conservation (NYSDEC), Division of Environmental Remediation (DER) Technical Guidance for Site Investigation and Remediation, dated May 2010 (DER-10), and in general accordance with the ASTM E1903-19 guidance for Phase II Site Assessments.

1.2 SCOPE OF SERVICES

GZA's Environmental scope of services included the following activities:

- Review of previous environmental assessment performed at the Site;
- Performance of a geophysical survey of the accessible portions of the Site;
- Advancement of five (5) soil borings to a depth of 10-16 feet below ground surface (bgs);
- Field screen soils encountered and collection of two (2) soil samples from each soil boring;
- Installation of three (3) temporary soil vapor probes to a depth of 3 feet bgs;
- Collection of one soil vapor sample from each soil vapor probe;
- Conversion of two (2) select soil borings into two (2) temporary wells;
- Field screen groundwater and collection of two (2) groundwater samples for laboratory analysis; and
- Preparation of this report.

2.0 PROJECT BACKGROUND

2.1 SITE LOCATION AND DESCRIPTION

The Site is located at 36 Frost Street in the Williamsburg neighborhood of Brooklyn, New York. A Site Location Map is attached as **Figure 1** and a current Aerial Map is attached as **Figure 2**. The 7,487-square foot Site is identified as Block 2736, Lot 20 on the New York City Tax Map. The Site is zoned for manufacturing and residential (M1-2/R6B). The Site is bounded by a residential building (55 Withers Street) to the south, an industrial/manufacturing building occupied by a recording studio (40 Frost Street) to the east, residential buildings to the north along Frost Street, and a residential building to the west (32 Frost Street). The Site is developed with a building that covers the entire tax lot parcel. The Site is currently unoccupied. Representative photographs of the Site are included in **Appendix B**. A Sample Location Map is included as **Figure 3**.

2.2 PREVIOUS ENVIRONMENTAL REPORTS

The 2025 Phase I ESA identified the following RECs at the Site:

- *Rec-1 - Historical Usage of the Site* - City Directory records indicate the Site has been occupied by residential tenants (1934-1970), Wexler Tool & Die Corp (1976), Carlyle Products Inc (1985), Caccamo Woodworking Corp (1992-2005), and Response Electric (2020-2017). Historical Sanborn Fire Insurance Maps show the development of residential and commercial/storage buildings from at least 1887 through 1942 including a rag storage building, and an accessory garage building in circa 1942, residential buildings and a parking lot in at least 1965, and the current building layout in 1972. Additionally, a review of New York City Department of Buildings records indicates the Site was used for metal fabrication in at least 1976. Based on the historical operation of the property for light industrial uses, including Wexler Tool & Tie Corp (1976), Caccamo Woodworking Corp (1992-2005) and Metal Fabrication (1976) the historical use of the Site may have impacted upon its environmental quality and Touchstone considered these historical uses to represent a REC.
- *REC-2 E-Designation of the Site* - An E-designation (E-138) for Hazardous Materials and Air Quality was assigned to the Site by the New York City Department of City Planning (NYCDCP) as part of the Greenpoint-Williamsburg Rezoning (City Environmental Quality Review [CEQR] No. 04DCP003K). E-Designation E-138 established a notice of environmental requirements pertaining to hazardous materials and air quality (No operable window and/or air intakes limitations; Underground Gasoline Storage Tanks* Testing Protocol) that must be addressed to the satisfaction of the New York City (NYC) Office of Environmental Remediation (OER) prior to obtaining building permits for future alteration/redevelopment. The E-138 documentation indicates the E-Designation was determined based on the presence of a historic motor freight station/auto repair shop on-Site. Touchstone submitted a Freedom of Information Law (FOIL) request to the NYC OER for further information regarding the E-Designation listing. Touchstone did not receive a response from the NYC OER. The E-Designation at the Site is considered to represent a REC.

In addition, the 2025 Phase I ESA identified other potential on-Site environmental concerns (i.e., considered as non-scope items under ASTM 1527-21) including:

- A limited visual screening survey for the presence of asbestos-containing materials (ACM) at the Site. Touchstone identified friable ACM in the form of sheetrock/joint compound composite material, and non-friable suspect ACM in the form of vinyl floor tile and associated mastic, sheet vinyl flooring and associated mastic, and various construction mastics and caulking. These materials were observed to be undamaged and in good condition at the time of assessment. Please note that the survey was limited to visual observations of accessible areas and that the scope of work for the assessment did not include the collection and laboratory analysis of bulk samples of suspect ACM. Additional sampling, removal, and disposal arrangements may be necessary should building construction or renovation activities be conducted. Asbestos is a consideration outside the scope of ASTM E 1527-21 and is not considered a REC.

3.0 ENVIRONMENTAL SETTING

The following subsections provide information regarding the general physiographic, hydrologic, and soil conditions at the Site.

3.1 REGIONAL PHYSIOGRAPHY

As shown on **Figure 1**, the United States Geological Survey (USGS) 7.5 Minute topographic map (Brooklyn, New York Quadrangle 2023), the Site is located at an approximate elevation of 16 feet above mean sea level (MSL)

based on the North Vertical Datum of 1988 (NAVD88). The topography gradient near the Site slopes gradually downward to the north/northwest. The nearest water body is the East River, which is located approximately 0.8 miles west of the Site.

3.2 GEOLOGIC, HYDROGEOLOGIC, AND HYDROLOGIC CONDITIONS

Based on the 2023 USGS publication, Bedrock – Surface Elevation and Overburden Thickness Maps of the Five Boroughs (DeMott, et al, 2023) and the Bedrock and engineering geologic maps of New York County and parts of Kings and Queens counties, New York, and parts of Bergen and Hudson Counties, New Jersey (Baskerville et.al., 1992), bedrock is over 100 feet below MSL NAVD88, and consist of calcitic dolomite marble (Inwood Marble) and gray quartz, and amphibolite (Ravenswood Granodiorite) in the vicinity of the Site.

During sampling activities, GZA encountered subsurface conditions consisting of historic fill that included light-dark brown fine to medium sand, gravel, and miscellaneous material (e.g., brick, asphalt, etc.) to a maximum depth of 5 feet bgs.

During sampling activities, GZA encountered groundwater between 8 and 10 feet bgs. Based on local topography and anticipated surface water flow patterns, the inferred direction of groundwater flow is to the west/northwest towards the East River. However, the localized direction of groundwater flow near the Site might vary from its inferred direction because of underground utilities, subsurface preferential pathways, variations in weather or heterogeneous geological and/or anthropogenic conditions.

4.0 SITE INVESTIGATION ACTIVITIES

This section describes the field methodologies employed during the site investigation performed on June 6 and June 9, 2025. The exploration locations are shown on **Figure 3**. Representative photographs of the field investigation activities are included in **Appendix B**.

4.1 GEOPHYSICAL SURVEY

GZA contracted Coastal Environmental Solutions, Inc. (Coastal) of Holbrook, New York (Coastal) to perform a geophysical survey utilizing an Impulse Radar PinPointR UWB dual band 400/800 megahertz antenna Ground Penetrating Radar (GPR), Vivax-Metrotech vLoc3-Pro utility locator and a handheld TW-6 Pipe and Cable locator. The geophysical survey was performed on June 6, 2025, to assess for the potential presence of subsurface obstructions such as, underground storage tanks, subsurface piping, and utility lines within a 10-foot radius of each proposed drilling location. Coastal detected a passive tone (assumed to be an electrical line) running into the Site, however the signal dropped off. All other proposed drilling locations were cleared and the geophysical did not detect any other findings. Identified utilities were marked in the field. A copy of the Geophysical Investigation Report is included in **Appendix C**.

4.2 SOIL BORING ADVANCMENT AND SOIL SAMPLING

GZA contracted Coastal to advance five soil borings (designated as GZ-01 through GZ-05) on June 6, 2025. The borings were advanced using a Geoprobe® 6620DT direct-push technology (DPT) track-mounted drill rig to a depth of 10-16 feet bgs. The drill rig was equipped with a 2-inch inside diameter MacroCore® soil sampling unit with an acetate liner sleeve.

GZA personnel screened the soil cores for the presence of total organic vapors using a Photo-Ionization Detector (PID) equipped with a 10.6 eV lamp, visually observed the soils for staining, and classified recovered soil using the modified Burmister soil classification system. Soil boring logs are provided in **Appendix D**.

GZA collected two samples for laboratory analysis from each soil boring (from soil with evidence of contamination based on visual, olfactory, and PID screening results). The soil samples were collected in laboratory-supplied glass containers, placed on ice, and submitted to an analytical laboratory under standard chain-of-custody procedures for laboratory analyses for the following parameters:

Matrix	Analytical Parameter
Discrete Soil Samples (GZ-01 to GZ-05; 0-2 feet and 6-8 feet bgs)	Volatile Organic Compounds (VOCs) by United States Environmental Protection Agency (EPA) Method 8260B Semi-volatile Organic Compounds (SVOCs) by EPA Method 8270 Total Metals by EPA Method 6010 /7000

4.3 TEMPORARY MONITORING WELL INSTALLATION AND GROUNDWATER SAMPLING

Coastal converted two soil borings (GZ-01 and GZ-02) into temporary monitoring wells (TMW-01 and TMW-02) that were installed so that each well screen spans the water table. The wells were developed with a peristaltic pump until the water reached the turbidity guidance value of approximately 50 Nephelometric Turbidity Units (NTU), the water was visibly clear, and/or 5 well volumes have been removed, whichever occurred first.

GZA collected one groundwater sample from each temporary monitoring well using low-flow sampling methods with the intake placed at the approximate midpoint of the screened interval. Pumping rates were typically less than 0.13 gallons per minute (gpm) and the pumping rate was set as not to significantly lower the water level in the well greater than 0.33 feet. At the ground surface, the water passed through a sealed flow-through cell containing probes which measured water quality parameters, including water temperature, pH, specific conductivity, oxidation-reduction potential (ORP), dissolved oxygen (DO), and turbidity. The groundwater purge logs are included in **Appendix E**.

The groundwater samples were collected in laboratory-supplied glass containers, placed on ice, submitted to an analytical laboratory under proper chain-of-custody procedures, and analyzed for the following list of parameters:

Matrix	Analytical Parameter
Groundwater Sample (TMW-01 and TMW-02)	VOCs by EPA Method 8260B SVOCs by EPA Method 8270 Total and Dissolved Metals by EPA Method 6010 /7000

4.4 SOIL VAPOR PROBE INSTALLATION AND SAMPLING

Coastal installed three soil vapor probes (SV-01 through SV-03) using the Geoprobe® drill rig equipped with a 2-inch diameter hammer rod to a depth of approximately 3 feet bgs at each location. GZA collected each soil vapor sample using methods consistent with the New York State Department of Health (NYSDOH) Soil Vapor Intrusion (SVI) Guidance Policy using 6-liter Summa canisters equipped with 2-hour flow regulators. The soil vapor samples were submitted to a NYSDOH ELAP laboratory for VOC analysis (by EPA method TO-15). Soil vapor sampling locations are shown on **Figure 3**. The soil vapor sampling logs are presented in **Appendix F.**

5.0 SITE INVESTIGATION RESULTS

The laboratory analytical results from the Phase II ESI are summarized in the following subsections and the laboratory analytical reports are included in **Appendix G**.

5.1 SOIL SAMPLE ANALYTICAL RESULTS

The soil sample analytical results were summarized and compared to the NYSDEC Part 375-6 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted-Residential Use Soil Cleanup Objectives (RRUSCOs), and the Protection of Groundwater Use SCOs (PGWSCOs). The soil analytical results are presented in **Table 1 through Table 3** and are summarized on **Figure 4**.

- VOCs were either not detected or were detected at concentrations below their respective NYSDEC Part 375, UUSCOs, RRUSCOs, and PGWSCOs. Elevated PID readings were detected at GZ-04 and GZ-5, as shown on the boring logs (see **Appendix D**). The analytical results from the soil samples collected at GZ-04 did not have any detections of VOCs above any of the UUSCOs, but did have trace levels of petroleum-related VOCs detected in the sample collected from 0-2 feet bgs. Similarly, trace levels of chlorinated VOCs (cVOCs) specifically Tetrachloroethylene (PCE) and Trichloroethylene (TCE) were detected in the sample collected from GZ-05 at 0-2 feet bgs.

- SVOCs were detected above their respective UUSCOs, RRUSCOs, and/or PGWSCOs:
    - Benzo(a)anthracene - 9.61 mg/kg in GZ-01 (0-2), 8.59 mg/kg in GZ-03 (0-2), 6.25 mg/kg in GZ-04 (0-2), and 7.63 mg/kg in GZ-05 (0-2)
    - Benzo(a)pyrene - 7.96 mg/kg in GZ-01 (0-2), 7.7 mg/kg in GZ-03 (0-2), 10.6 mg/kg in GZ-04 (0-2), and 7.87 mg/kg in GZ-05 (0-2)
    - Benzo(b)fluoranthene - 9.68 mg/kg in GZ-01 (0-2), 5.97 mg/kg in GZ-03 (0-2), 7.42 mg/kg in GZ-04 (0-2), and 6.1 mg/kg in GZ-05 (0-2)
    - Benzo(k)fluoranthene - 6.03 mg/kg in GZ-01 (0-2), 2.81 mg/kg in GZ-03 (0-2), 6.82 mg/kg in GZ-04 (0-2), and 5.99 mg/kg in GZ-05 (0-2)
    - Chrysene - 8.69 mg/kg in GZ-01 (0-2), 8.57 mg/kg in GZ-03 (0-2), 6.59 mg/kg in GZ-04 (0-2), and 7.25 mg/kg in GZ-05 (0-2)
    - Dibenzo(a,h)anthracene - 1.7 mg/kg in GZ-01 (0-2), 1.11 mg/kg in GZ-03 (0-2), 2.09 mg/kg in GZ-04 (0-2), and 1.33 mg/kg in GZ-05 (0-2)
    - Indeno(1,2,3-cd)pyrene - 4.14 mg/kg in GZ-01 (0-2), 4.77 mg/kg in GZ-03 (0-2), 5.6 mg/kg in GZ-04 (0-2), and 4.46 mg/kg in GZ-05 (0-2)
- Metals were detected above their respective UUSCOs, RRUSCOs, and/or PGWSCOs:
    - Arsenic - 15.7 mg/kg in GZ-03 (0-2) and 17.8 mg/kg in GZ-05 (0-2)
    - Barium - 1,660 mg/kg in GZ-03 (0-2) and 375 mg/kg in GZ-04 (0-2)
    - Cadmium - 15.5 mg/kg in GZ-03 (0-2) and 7.39 mg/kg in GZ-05 (0-2)
    - Copper - 405 mg/kg in GZ-02 (0-2), 647 mg/kg in GZ-03 (0-2), 74.9 mg/kg in GZ-03 (6-8), 2,050 mg/kg in GZ-04 (0-2), and 3,990 mg/kg in GZ-05 (0-2)

- Lead - 490 mg/kg in GZ-02 (0-2), 1,780 mg/kg in GZ-03 (0-2), 1,610 mg/kg in GZ-04 (0-2), and 1,020 mg/kg in GZ-05 (0-2)), mercury (1.18 mg/kg in GZ-02 (0-2), 2.06 mg/kg in GZ-03 (0-2), 1.32 mg/kg in GZ-04 (0-2), and 3.69 mg/kg in GZ-05 (0-2)
- Nickel - 46.8 mg/kg in GZ-03 (0-2)
- Silver - 2.59 mg/kg in GZ-05 (0-2)
- Zinc - 592 mg/kg in GZ-02 (0-2), 262 mg/kg in GZ-02 (6-8), 1,670 mg/kg in GZ-03 (0-2), 225 mg/kg in GZ-03 (6-8), 1,940 mg/kg in GZ-04 (0-2), and 5,320 mg/kg in GZ-05 (0-2)

5.2 GROUNDWATER SAMPLE ANALYTICAL RESULTS

The groundwater sample analytical results were summarized and compared to the NYSDEC Technical Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS). The groundwater analytical results are presented in **Table 4 through Table 6** and are summarized on **Figure 5**.

- VOCs were either not detected or were detected at concentrations below their respective NYSDEC TOGS 1.1.1 AWQS. However, trace levels of cVOCs specifically PCE and TCE were detected in the sample collected from TMW-01.

- SVOCs, specifically benzo(a)anthracene, benzo(b)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene were detected in one groundwater sample (TMW-02) at concentrations above NYSDEC TOGS 1.1.1 AWQS.

- Metals showed total and dissolved concentrations of manganese and sodium above NYSDEC TOGS 1.1.1 AWQS in both TMW-01 and TMW-02 samples, and selenium above NYSDEC TOGS 1.1.1 AWQS in sample TMW-02 only.

5.3 SOIL VAPOR SAMPLE ANALYTICAL RESULTS

New York State does not have standards, criteria, or guidance values for VOCs in soil vapor samples. However, as a screening tool, the soil vapor analytical results were summarized compared to concentrations of VOCs in NYSDOH SVI Decision Matrices Sub-Slab Soil Vapor Concentrations for "No Further Action." The soil vapor analytical results are presented in **Table 7** and are summarized on **Figure 6**.

- The following petroleum related VOCs and cVOCs were detected at concentrations above the NYSDOH Decision Matrices:
  - 1,1,1-trichloroethane (SV-01 and SV-03 at concentrations of 140 micrograms per cubic meter ($\mu g/m^3$) and 500 $\mu g/m^3$, respectively).
  - 1,1-dichloroethylene (SV-02 and SV-03 at concentrations of 160 $\mu g/m^3$ and 12 $\mu g/m^3$, respectively).
  - 1,2,4-trimethylbenzene (SV-02 only at a concentration of 140 $\mu g/m^3$).
  - 1,3,5-trimethylbenzene (SV-02 only at a concentration of 79 $\mu g/m^3$).
  - Benzene (SV-02 only at a concentration of 390 $\mu g/m^3$).
  - Carbon tetrachloride (SV-01 and SV-03 at concentrations of 17 $\mu g/m^3$ and 150 $\mu g/m^3$, respectively).
  - Cis-1,2-Dichloroethylene (SV-01, SV-02, and SV-03 at concentrations of 55 $\mu g/m^3$, 710 $\mu g/m^3$, and 630 $\mu g/m^3$, respectively).
  - Cyclohexane (SV-01 and SV-02 at concentrations of 80 $\mu g/m^3$ and 280 $\mu g/m^3$, respectively).
  - Methylene chloride (SV-02 only at a concentration of 320 $\mu g/m^3$).

- n-Hexane (SV-02 only at a concentration of 650 µg/m^3).
- o-Xylene (SV-02 only at a concentration of 650 µg/m^3).
- p- & m- Xylenes (SV-02 only at a concentration of 460 µg/m^3).
- PCE (SV-01, SV-02, and SV-03 at concentrations of 2,600 µg/m^3, 850 µg/m^3, and 19,000 µg/m^3, respectively).
- TCE (SV-01, SV-02, and SV-03 at concentrations of 3,200 µg/m^3, 2,100 µg/m^3, and 41,000 µg/m^3, respectively).
- Vinyl chloride (SV-02 only at a concentration of 1,400 µg/m^3).

Note that NYSDOH Decision Matrices were used as reference only. Additional collocated indoor air samples (for future redevelopment) would need to be collected and analyzed to better understand soil vapor intrusion concerns at the Site.

6.0 SUMMARY OF FINDINGS

GZA conducted a Phase II ESI at 36 Frost Street, Brooklyn, New York. The findings are summarized below:

- The subsurface conditions at the Site consist of fill, which includes fine to medium sand, gravel, and miscellaneous fill material to a maximum depth of 5 feet bgs, with native fine to medium sands and silts to the maximum terminal depth of 16 feet bgs.
- GZA encountered groundwater at depths of approximately 8 to 10 feet bgs.
- Soil samples reported concentrations of SVOCs and metals at concentrations above UUSCOs, RRUSCOs and/or PGWSCOs.
- Groundwater samples reported SVOCs in one sample (TMW-02) and metals in both groundwater samples at concentrations above NYSDEC TOGS 1.1.1 AWQS.
- Soil vapor samples reported petroleum-related VOCs and cVOCs, specifically PCE and TCE, at elevated concentrations.

7.0 CONCLUSIONS AND RECOMMENDATIONS

Based upon the results of this Phase II ESI, GZA provides the following conclusions:

- The GPR did not reveal the presence of anomalies indicative of USTs at the Site.
- Laboratory analysis of ten (10) soil samples collected throughout the Site reported elevated concentrations of contaminants, including SVOCs and metals, in unsaturated soils in exceedance of their UUSCOs, RRUSCOs, and/or PGWSCOs. This is typical of fill material found in the five boroughs of NYC and is not necessarily indicative of a reportable quantity for a spill or release at the Site.
- Laboratory analysis of two (2) groundwater samples did not reveal results indicative of reportable quantity for a spill or release at the Site.

- New York State does not have standards, criteria, or guidance values for VOCs in soil vapor samples. However, as a screening tool, the soil vapor analytical results were summarized compared to concentrations of VOCs in NYSDOH Decision Matrices. Laboratory analysis of the three (3) soil vapor samples did report elevated concentrations of both petroleum-related VOCs and cVOCs (specifically PCE and TCE).

Based upon the above, GZA provides the following recommendations:

- GZA recommends an additional investigation be completed to further investigate and potentially delineate the source of the elevated cVOCs identified in the soil vapor samples.

- Future Site redevelopment activities might encounter residual contamination in soil or groundwater related to historic fill, and historic uses. Impacted material, if encountered, must be managed either on or off the Site in conformance with applicable federal, state, and local regulations.

- The Site has an E-designation for Hazardous Materials and Air Quality. The designations do not affect current property usage, but certain requirements would have to be satisfied before new construction could commence. Taking the Site through the NYC OER E-designation program will address the identified RECs in accordance with approvals by the governing regulatory agencies, and the Site will have to receive a “Notice of Satisfaction” from NYC OER prior to receiving a Certificate of Occupancy from the NYC Department of Buildings.
- GZA recommends meeting with the NYC OER to discuss the finding of this report and the additional requirements prior to future redevelopment of the Site.

Table Notes:

--: No guidance value.
mg/kg: Milligrams per Kilogram.
U: Not detected at the reported detection limit for the sample.
J: Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL).
E: Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Table Notes:

--: No guidance value.
mg/kg: Milligrams per Kilogram.
U: Not detected at the reported detection limit for the sample.
J: Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL).
E: Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Table Notes:

--: No guidance value

mg/kg: Milligrams per Kilogram

D: The result is from an analysis that required a dilution.

U: Not detected at the reported detection limit for the sample

J: Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL)

Analyte exceeds the NYSDEC Part 375 Unrestricted Use and Restricted-Residential Use SCOs.

Analyte exceeds the NYSDEC Part 375 Unrestricted Use, Restricted-Residential Use, and Protection of Groundwater SCOs.

TABLE NOTES:

Analyte exceeds the New York State Department of Health (NYSDOH) Indoor Air Guideline Values (AGV) and Matrix A, B, and C Subslab Vapor "No Further Action" Concentration (May 2017).

Analyte exceeds the NYSDOH Indoor AGV and Matrix D, E, and F Subslab Vapor "No Further Action" Concentration (February 2024).

U : Not detected at the reported detection limit for the sample.

D: The result is from an analysis that required a dilution.

ug/m^3: micrograms per cubic meter.

-- : No Standards or Guidance Value.

APPENDIX A - LIMITATIONS

USE OF REPORT

1. GZA GeoEnvironmental of New York (GZA) prepared this report on behalf of, and for the exclusive use of our Client for the stated purpose(s) and location(s) identified in the Proposal for Services and/or Report. Use of this report, in whole or in part, at other locations, or for other purposes, may lead to inappropriate conclusions; and we do not accept any responsibility for the consequences of such use(s). Further, reliance by any party not expressly identified in the agreement, for any use, without our prior written permission, shall be at that party's sole risk, and without any liability to GZA.

STANDARD OF CARE

2. GZA's findings and conclusions are based on the work conducted as part of the Scope of Services set forth in the Proposal for Services and/or Report and reflect our professional judgment. These findings and conclusions must be considered not as scientific or engineering certainties, but rather as our professional opinions concerning the limited data gathered during the course of our work. Conditions other than described in this report may be found at the subject location(s).

3. GZA's services were performed using the degree of skill and care ordinarily exercised by qualified professionals performing the same type of services, at the same time, under similar conditions, at the same or a similar property. No warranty, expressed or implied, is made. Specifically, GZA does not and cannot represent that the Site contains no hazardous material, oil, or other latent condition beyond that observed by GZA during its study. Additionally, GZA makes no warranty that any response action or recommended action will achieve all of its objectives or that the findings of this study will be upheld by a local, state or federal agency.

4. In conducting our work, GZA relied upon certain information made available by public agencies, Client and/or others. GZA did not attempt to independently verify the accuracy or completeness of that information. Inconsistencies in this information which we have noted, if any, are discussed in the Report.

SUBSURFACE CONDITIONS

5. The generalized soil profile(s) provided in our Report are based on widely-spaced subsurface explorations and are intended only to convey trends in subsurface conditions. The boundaries between strata are approximate and idealized, and were based on our assessment of subsurface conditions. The composition of strata, and the transitions between strata, may be more variable and more complex than indicated. For more specific information on soil conditions at a specific location refer to the exploration logs. The nature and extent of variations between these explorations may not become evident until further exploration or construction. If variations or other latent conditions then become evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

6. Water level readings have been made, as described in this Report, in and monitoring wells at the specified times and under the stated conditions. These data have been reviewed and interpretations have been made in this report. Fluctuations in the level of the groundwater however occur due to temporal or spatial variations in areal recharge rates, soil heterogeneities, the presence of subsurface utilities, and/or natural or artificially induced perturbations. The observed water table may be other than indicated in the Report.

COMPLIANCE WITH CODES AND REGULATIONS

7. We used reasonable care in identifying and interpreting applicable codes and regulations necessary to execute our scope of work. These codes and regulations are subject to various, and possibly contradictory, interpretations. Interpretations and compliance with codes and regulations by other parties is beyond our control.

SCREENING AND ANALYTICAL TESTING

8. GZA collected environmental samples at the locations identified in the Report. These samples were analyzed for the specific parameters identified in the report. Additional constituents, for which analyses were not conducted, may be present in soil, groundwater, surface water, sediment and/or air. Future Site activities and uses may result in a requirement for additional testing.

9. Our interpretation of field screening and laboratory data is presented in the Report. Unless otherwise noted, we relied upon the laboratory's QA/QC program to validate these data.

10. Variations in the types and concentrations of contaminants observed at a given location or time may occur due to release mechanisms, disposal practices, changes in flow paths, and/or the influence of various physical, chemical, biological or radiological processes. Subsequently observed concentrations may be other than indicated in the Report.

INTERPRETATION OF DATA

11. Our opinions are based on available information as described in the Report, and on our professional judgment. Additional observations made over time, and/or space, may not support the opinions provided in the Report.

ADDITIONAL INFORMATION

12. In the event that the Client or others authorized to use this report obtain additional information on environmental or hazardous waste issues at the Site not contained in this report, such information shall be brought to GZA's attention forthwith. GZA will evaluate such information and, on the basis of this evaluation, may modify the conclusions stated in this report.

ADDITIONAL SERVICES

13. GZA recommends that we be retained to provide services during any future investigations, design, implementation activities, construction, and/or property development/ redevelopment at the Site. This will allow us the opportunity to: i) observe conditions and compliance with our design concepts and opinions; ii) allow for changes in the event that conditions are other than anticipated; iii) provide modifications to our design; and iv) assess the consequences of changes in technologies and/or regulations.

APPENDIX C – GEOPHYSICAL SURVEY REPORT

Coastal Environmental Solutions, Inc.

GEOPHYSICAL INVESTIGATION REPORT

36 Frost Street, Brooklyn, NY
Date of Investigation: 6/6/2025

Prepared for:

GZA
104 W 29th St, 10th Fl
New York, NY 10001

Prepared By:

Eric Schnopp
GPR Technican
Coastal Environmental Solutions, Inc.
PO Box 342
Medford, New York 11763

1.0 INTRODUCTION

On 6/6/2025, Coastal Environmental Solutions, Inc (Coastal) personnel performed a limited Geophysical Investigation at 36 Frost Street, Brooklyn, NY. The area of interest included the inside of a building at 36 Frost Street, as indicated by the client. Surface conditions consisted of concrete.

2.0 SCOPE OF WORK

1. Locate and mark detectable underground utilities and other subsurface anomalies within accessible areas throughout the property for the purpose of clearing soil boring locations.

3.0 EQUIPMENT

ImpulseRadar PinPointR Ultra-Wide Band (UWB) Penetrating Radar System

Ground Penetrating RADAR (GPR) is a non-destructive geophysical method that produces a continuous cross-sectional profile of subsurface features in real time. GPR operates by transmitting both high and low frequency electromagnetic wave pulses down into the ground through a transmitter in the antenna. The transmitted electromagnetic waves reflect off materials with contrasting dielectric properties from surrounding medium such as underground storage tanks, utilities, distinct contacts between different earth materials, and other various subsurface objects. The antenna receiver collects the reflected electromagnetic waves which are then interpreted by the operator.

The ImpulseRadar PinPointR UWB GPR utilizes a dual band 400/800 MHz HS antenna mounted to a stroller frame which rolls over the surface. The total depth of penetration achieved with the antenna can be up to 10 feet but widely varies based on site-specific subsurface conditions. Conductive materials in the soil attenuate the GPR signal causing a decrease in effective depth of penetration and clarity.

Vivax-Metrotech vLoc3-Pro Receiver/Transmitter

The vLoc3-Pro Receiver is a hand-operated antenna capable of detecting electromagnetic (EM) fields emitted from a source. The EM antenna can detect pipes and cables in the ground at depths of up to 20 feet using active or passive tracing techniques. Passive tracing is the act of locating an underground utility through the detection of electrical or radio signals travelling along conductive utilities. Active tracing is used in conjunction with the Transmitter that is directly connected to the target utility or to a conductive rodder within a non-conductive line. A signal is sent through the utility at a specific frequency that can be detected by the Receiver. The detectability of a target utility depends on many factors including access to the target utility, grounding, depth of utility, conductivity, and other site-specific factors.

TW-6 Pipe and Cable Locator

The TW-6 Pipe and Cable locator is a handheld magnetometer which utilizes a transmitter-receiver pair attached to opposite ends of a handle and carried approximately 1-2ft from the surface. The magnetometer induces an electromagnetic (EM) field into the ground that is generated by the transmitter. Once the induced EM field passes through a buried metallic object, it generates a secondary EM field which is detected by the receiver, generating an audible tone. Based on the

calibration of the magnetometer, the audible tone reflects the strongest response as the highest pitched sound, trailing off on all sides of the peak. This piece of technology can be used to detect subsurface features such as metallic USTs, large diameter conductive pipes, and buried manholes, especially in areas in which traditional GPR methods cannot be utilized, such as overgrown or uneven surfaces.

4.0 METHODOLOGY

1. A subsurface investigation was performed in close proximity to the client proposed soil boring locations. Active and passive detection methods were utilized with the VLoc3-Pro receiver/transmitter. Coastal personnel directly connected to all accessible and traceable pipes, conduits, valve covers, and any other surface feature throughout the site. A passive scan was performed throughout the site to detect any potential underground utilities that could not be located with active scan.
2. The TW-6 was utilized (if applicable) to sweep any accessible areas for suspect locations in 3-to-5-foot spacings for readings that may represent a buried metallic anomaly. Upon detection of a reading, the approximate size and shape of the anomalous area was marked on the surface to be investigated further with GPR.
3. GPR was utilized to further characterize the approximate dimensions, depth, and shape of the anomalies located with the TW-6. The remainder of the areas around suspect locations (if applicable) were scanned with GPR in 3-to-5-foot spacing to locate any anomalous features not previously detected such as non-conductive piping and former excavations.
4. All findings were marked on the surface utilizing the American Public Works Association (APWA) recommended color code, seen below:

WHITE	Proposed Excavation
PINK	Temporary Survey Markings (Approximate UST Locations, Soil Boring Locations)
RED	Electric Power Lines, Cables, Conduit and Lighting Cables
YELLOW	Gas, Oil, Steam, Petroleum or Gaseous Materials
ORANGE	Communication, Alarm or Signal Lines, Cables or Conduit
BLUE	Water (Domestic and Fire Lines)
PURPLE	Irrigation, Slurry, Reclaimed Water
GREEN	Sewers and Drain Lines

5.0 SUMMARY OF FINDINGS

Subsurface Investigation

Coastal personnel conducted a limited Subsurface Investigation within all accessible areas of concern. The main purpose of this investigation was clearing all utilities for 5 soil boring locations inside the building. A gas line connected from in the street to the building but connected overhead once inside the building. Electric lines ran overhead as well but a passive tone was picked up running through the ground and marked out until the signal dropped off. The waterline was marked out in blue, and the sewer was marked out on the sidewalk in green, but didn't interfere with any proposed boring locations.

Further scanning was conducted throughout the interior space using both active and passive methods to verify the absence of subsurface obstructions. Interior concrete slabs were assessed for embedded conduits or rebar interference, but no conflicting features were identified. The investigation confirmed that all boring locations were free of both surface and subsurface hazards, allowing for safe advancement.

Limitations

The effective depth of GPR penetration was limited to approximately 5 feet below the concrete. The limiting factor was likely due to soil conductivity attenuating the GPR signal, shallow bedrock containing moisture, or non-conductive materials utilized for the utilities. The TW-6 is unable to be utilized within close proximity to parked vehicles and exterior walls, or on top of reinforced concrete. Due to the shallow depth to groundwater, subsurface features within soils below approximately 5 feet deep were too saturated to be clearly seen with GPR.

Disclaimer

The subsurface investigation was performed by Coastal after considering the limits of the scope of work and the time constraint for the investigation. The investigation that is described in this report was undertaken in accordance with current accepted standards and practices of the geophysical survey industry. The results and interpretations that are presented are based on professional judgment and are as accurate as can reasonably be achieved. However, no geophysical equipment can accurately depict all subsurface features due to the geology and environmental conditions of the subsurface. Any intrusive work in proximity to identified anomalies should be carefully considered and cross-referenced with all available site-specific documentation. Coastal is not liable for the use, interpretation, or application of the data and information in this report.

PHOTOS & GPR SCREENSHOTS

Photo 1 – SB-1 cleared of all utilities and safe for drilling. A 4x4 box was marked to perform drilling and give options.

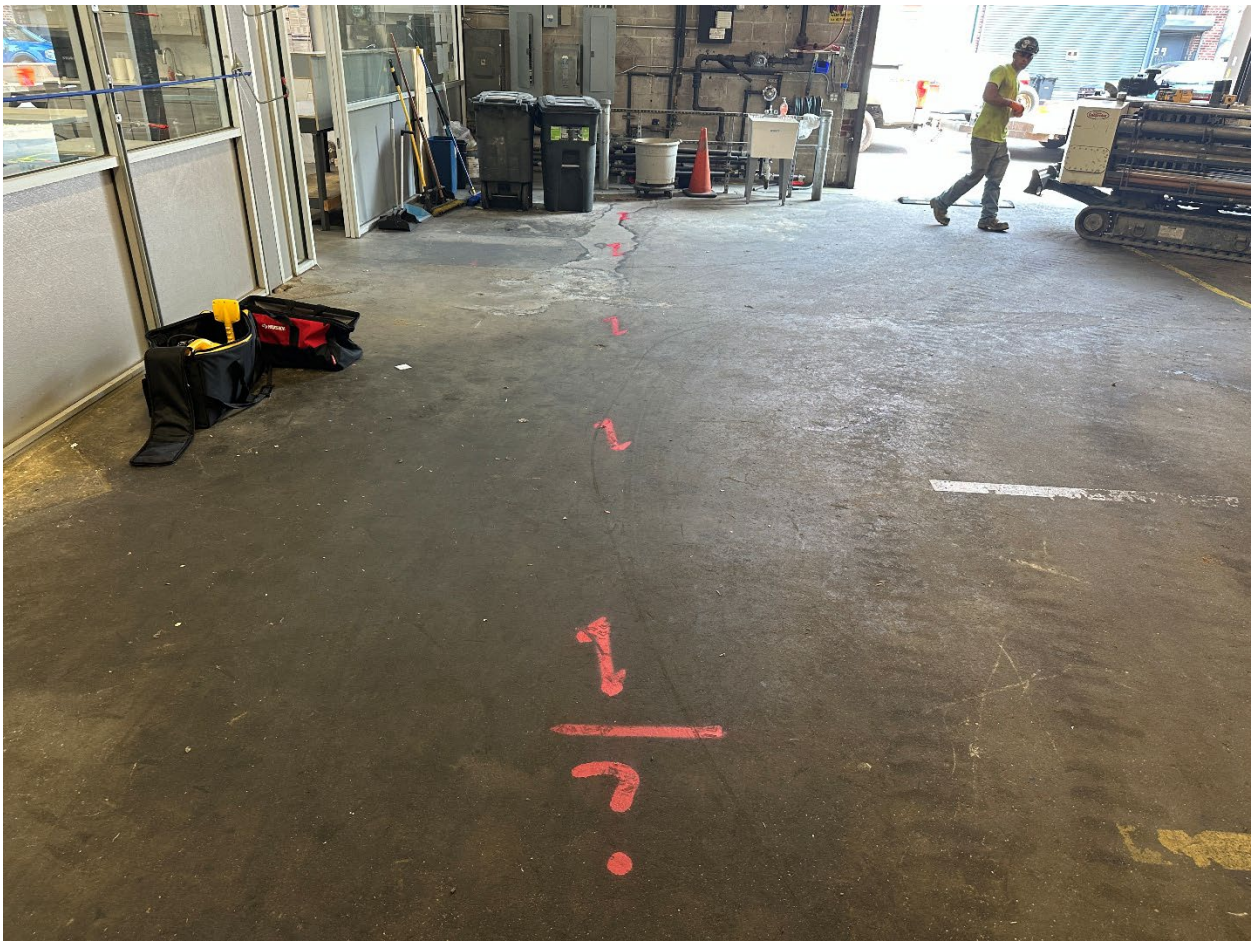

Photo 2 – Electric line detected but its signal dropped off midway through the building. It was marked out in red paint and labeled ‘E’.

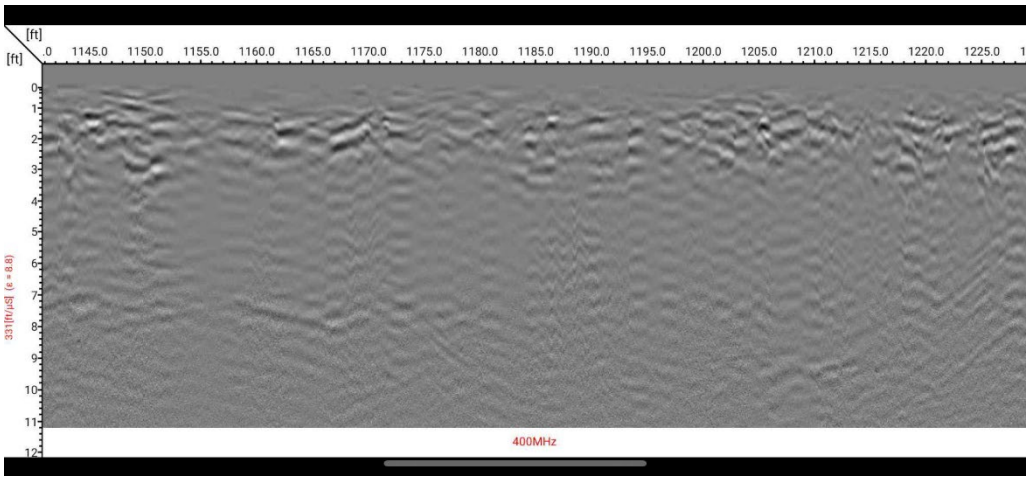
Photo 3 – Gas service line detected connecting from the road to the building. Once the gas line connected to the main it ran overhead.

Photo 4 – View of the waterline connecting to the bathrooms inside of the building. The line ran directly to the bathrooms from the street and did not branch off to any other locations.

Photo 5 - Sewer line connecting from the street to the side of the building. A vent is visible in the photo which the sewer line was traced out leading directly to.



GPR Screenshot – Scans taken near the proposed boring locations. No utilities were detected in the immediate area surrounding the borings.

REMARKS

Field Screening performed with PID equipped with a 10.6 eV lamp calibrated to a 100 ppm isobutylene standard.
All depth measurements are approximate. Stratification lines represent approximate boundary between soil types, transitions may be gradual. Water level readings have been made at times and under conditions stated.
Fluctuations of groundwater may occur due to other factors than those present at the time measurements were made.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 09, 2025 and listed below. The project was identified as your project: **36 Frost Street Phase II**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
25F0569-01	TMW-01	Ground Water	06/09/2025	06/09/2025
25F0569-02	TMW-02	Ground Water	06/09/2025	06/09/2025

General Notes for York Project (SDG) No.: 25F0569

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

S-08	The recovery of this surrogate was outside of QC limits.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 09, 2025 and listed below. The project was identified as your project: **36 Frost Street Phase III**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25F0592

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

CAL-E The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 06, 2025 and listed below. The project was identified as your project: **36 Frost Street Phase II**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25F0476

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

REMARKS

1 - Non-stabilized water table encountered at approximately 9 feet.
2 - Temporary 1-inch groundwater monitoring well installed to grab water sample.

Field Screening performed with PID equipped with a 10.6 eV lamp calibrated to a 100 ppm isobutylene standard.
All depth measurements are approximate. Stratification lines represent approximate boundary between soil types, transitions may be gradual. Water level readings have been made at times and under conditions stated.
Fluctuations of groundwater may occur due to other factors than those present at the time measurements were made.

REMARKS

Field Screening performed with PID equipped with a 10.6 eV lamp calibrated to a 100 ppm isobutylene standard.
All depth measurements are approximate. Stratification lines represent approximate boundary between soil types, transitions may be gradual. Water level readings have been made at times and under conditions stated.
Fluctuations of groundwater may occur due to other factors than those present at the time measurements were made.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments and solids are reported on a dry weight basis unless otherwise noted. Tissues are reported "as received" or on a wet weight basis, unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Pace Project Manager and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Cristin Walker

Project Number:	41.0163452.00	**Report Date:**	08/11/25

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	36 FROST STREET	**Lab Number:**	L2547375
Project Number:	41.0163452.00	**Report Date:**	08/11/25

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	36 FROST STREET	**Lab Number:**	L2547375
Project Number:	41.0163452.00	**Report Date:**	08/11/25

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Pace Analytical Services performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Pace Analytical Services shall be to re-perform the work at it's own expense. In no event shall Pace Analytical Services be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Pace Analytical Services.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility – 8 Walkup Dr. Westborough, MA 01581
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol, Azobenzene; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility – 320 Forbes Blvd. Mansfield, MA 02048
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
MADEP-APH.
Nonpotable Water: EPA RSK-175 Dissolved Gases
Biological Tissue Matrix: EPA 3050B

Mansfield Facility – 120 Forbes Blvd. Mansfield, MA 02048
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Nonpotable Water: EPA RSK-175 Dissolved Gases

The following test method is not included in our New Jersey Secondary NELAP Scope of Accreditation:

Mansfield Facility – 320 Forbes Blvd. Mansfield, MA 02048
Determination of Selected Perfluorinated Alkyl Substances by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry Isotope Dilution (via Alpha SOP 23528)

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility – 8 Walkup Dr. Westborough, MA 01581

Sample Delivery Group Summary

Pace Job Number : L2547375

Account Name : GZA GeoEnvironmental, Inc.
Project Number : 41.0163452.00
Project Name : 36 FROST STREET

Received : 29-JUL-2025
Reviewer : Craig Sloma-Green

Delivery Information

Samples Delivered By : Pace Courier

Chain of Custody : Present

Cooler Information

Cooler	Seal/Seal#	Preservation	Temperature(°C)	Additional Information
A	Absent/	Ice	3.0	

Condition Information

1) All samples on COC received?	**YES**
2) Extra samples received?	**NO**
3) Are there any sample container discrepancies?	**NO**
4) Are there any discrepancies between COC & sample labels?	**NO**
5) Are samples in appropriate containers for requested analysis?	**YES**
6) Are samples properly preserved for requested analysis?	**YES**
7) Are samples within holding time for requested analysis?	**YES**
8) All sampling equipment returned?	**NA**

Volatile Organics/VPH

1) Reagent Water Vials Frozen by Client?	**NO**
