EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) completed a Phase I Environmental Site Assessment (ESA) of the property consisting of an approximately 20,094-square-foot or 0.461-acre parcel on Block 4430, future Lot 5 (current portion of Lot 1) on Flatlands Avenue in the East New York neighborhood of Brooklyn, New York (the "subject property") under the authorization of Gotham Property Acquisitions LLC ("Client" and the "user").

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence related to a potential transaction involving the subject property.

Subject Property Layout

The subject property is an approximately 20,094-square-foot or 0.461-acre parcel located to the north of the Christian Cultural Center building, along Flatlands Avenue between Alabama Avenue and Malta Street. The subject property is described as a portion of Block 4430 Lot 1 in Brooklyn, NY. A RP602 form has been filed with the New York City Department of Finance (NYCDOF) to reapportion this portion of Lot 1 into future Lot 5. Based on the review on Sanborn Fire Insurance Maps, the addresses range for the property includes 12028 to 12048 Flatlands Avenue and historically (before 1967) was identified as 28 to 48 Fairfield Avenue. However, the subject property has not yet been assigned a new address since it was just recently subdivided into its own lot; however, it is anticipated that the subject property will have a Flatlands Avenue address. The subject property is comprised of an asphalt paved parking lot.

Subject Property Current Use

The subject property currently consists of a portion of the asphalt paved parking lot and a portion of the concrete paved walkway associated with the Christian Cultural Center, which is located adjacent to the south. Landscaped islands, garbage bins, and two monitoring wells were all observed on the subject property. Storm drains were observed throughout the subject property, and four dry wells are present in the northwestern portion of the subject property.

Subject Property History

The subject property originally consisted of marshlands which was landfilled during the early 1900's with ash and waste from the city solid waste incinerator. Historical site operations included automotive wrecking and dismantling (between 1954 and 1981).

Conclusions

Langan completed a Phase I ESA of the subject property using the scope guidelines and inherent limitations of ASTM E1527-21. Table ES-1 presents the conclusions of the Phase I ESA.

Table ES-1 Conclusions, Findings and Opinions

ASTM E1527-21 Scope Items
Recognized Environmental Conditions (RECs)
Former On-Site Automobile Junkyard: Based on the review of historical aerial photographs, automobile junkyards were identified on the subject property between 1954 and 1981. Due to this historical site use, the potential exists for adverse environmental impacts to the subsurface due to the potential cumulative effect of unreported releases of hazardous materials associated with these operations, including petroleum products, solvents, leaching metals, and polyfluoroalkyl substances (PFAS); therefore, historical automobile junking operations is identified as a REC.
Historical Site Filling and Presence of Contaminated Fill: Based on the review of historical topographic maps the subject property historically consisted of marshland that was filled in the early 1900's with ash and waste from the city's solid waste incinerator. During the May 2018 Phase II EI, fill material was observed in the subsurface between 0 and 15 feet below site grade and laboratory analytical results for soil revealed the presence of elevated concentrations of semi-volatile organic compounds (SVOCs) and metals above the NYSDEC Unrestricted Use SCOs between 0 and 15 feet below site grade. PFAS are also known to be present in landfills; since the subject property was historically filled with material of unknown origin, it is possible that PFAS substances are present. The presence of contaminated fill containing impacts exceeding state regulatory cleanup objectives represents a REC.
Controlled Recognized Environmental Conditions (CRECs)
Langan did not identify CRECs.
Historical Recognized Environmental Conditions (HRECs)
Langan did not identify HRECs.
De Minimis Conditions
Langan did not identify de minimis conditions.
Business Environmental Risks (BERs)
Surrounding Sites: Current and historical operations conducted at the adjoining properties involving the use of USTs, spills, dry cleaners, and the generation and disposal of hazardous waste were identified in the regulatory database review. Based on the review of the historical Sanborn Maps and aerial photographs, automobile junkyard operations were identified at all adjoining properties from at least 1954 through 1981; a gasoline filling station was identified on the adjacent property to the north from 1950 through 1969; and auto repair operations were documented on the adjacent property to the north from 1967 through 2022. The potential exists for adverse environmental impacts to the subsurface of the subject property due to the potential cumulative effect of the historical auto junking operations at the adjacent properties. As such, historical operations at adjoining properties is identified as a business environmental risk due to the potential for offsite migration of contaminants to impact soil, groundwater, and/or soil vapor below the subject property.
Hazardous Materials E-Designation: An E-Designation for Hazardous Materials was assigned to tax lots associated with the subject property due to historical site filling and confirmation of contamination during previous investigations completed on and in the vicinity of the subject property. Air Quality and Noise Attenuation E-designations were also assigned. As such, any site redevelopment activities will need to be completed under New York City Office of Environmental Remediation (NYC OER) oversight. Obligations associated with the E-Designation of the site represents a BER.
Potential Presence of Undocumented Underground Heating Oil Storage Tanks: While no evidence or records confirming use of fuel oil tanks was observed during the site inspection or noted during this ESA, small one-story structures were historically identified on the subject property associated with historic site use for auto junking/dismantling. These structures included a one-story building of unspecified use identified on the 1967 through 1969 Sanborn Maps and a one-story office building identified on the 1977

ASTM E1527-21 Scope Items
through 1981 Sanborn Maps. Due to the presence of these structures and this historical use of the site, it is the opinion of the environmental professional that the potential presence of heating oil USTs beneath the lot or adjacent sidewalks associated with these former buildings represents a business environmental risk. Preparation and implementation of a contingency plan to address the presence of any USTs that may be encountered during site excavation activities would adequately address this issue.
Significant Data Gaps
Langan did not identify significant data gaps.

1. INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) completed a Phase I Environmental Site Assessment (ESA) of the property located in the north-central portion of Block 4430, portion of Lot 1 on Flatlands Avenue in the East New York neighborhood of Brooklyn, New York (the "subject property") under the written authorization of Gotham Property Acquisitions LLC ("Client" and the "user"). A Subject Property Location Map is provided in Appendix A (Figure 1).

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence associated with a potential transaction involving the subject property.

1.1 Purpose

The purpose of this Phase I ESA is to identify recognized environmental conditions (REC) associated with the subject property. This purpose also includes identifying controlled recognized environmental conditions (CREC), historical recognized environmental conditions (HREC), de minimis conditions, business environmental risks (BERs) and significant data gaps. The definitions of REC, CREC, HREC, de minimis condition, BERs, and other select ASTM terms used in this report are in Section 8.

1.2 Scope of Services

Langan's scope of services consisted of the completion of a Phase I ESA following the guidelines of ASTM E1527-21. Langan's scope of services as it pertains to the elements of a Phase I ESA as specified in ASTM E1527-21 is described below.

On 8 July 2024, the US EPA final rule designating two per- and polyfluoroalkyl substances (PFAS) – perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) including their salts and structural isomers – as hazardous substances under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) became effective. Because of the complex and varied historical use of PFAS in various industries; limited prior disclosures of PFAS content on product specification sheets, Material Safety Data Sheets (MSDS), and Safety Data Sheets (SDS); the complex chemistry and chemical transformations associated with some PFAS; and the ever-growing and varied list of state regulations, it is not feasible to evaluate PFOA and PFOS without also considering other PFAS. As such, absent analytical data, Langan incorporated a review of PFAS as a general class into this Phase I ESA.

PFAS and other CERCLA hazardous substances and petroleum products have been detected in background environmental samples across the globe, including in areas removed from specific recognized sources. This Phase I ESA was not intended to evaluate background concentrations of CERCLA hazardous substances or petroleum products, regardless of whether the source is naturally occurring or anthropogenic. The objective of Langan's scope of services was to identify the presence, likely presence, and/or material threat of a release of CERCLA hazardous substances and petroleum products related to specific property uses that are generally recognized as known or potential sources of such substances and products.

1.2.1 Records Review and Local Government Interviews

Langan contracted a third-party provider to search environmental regulatory databases and provide historical records. The database search included select federal, state, local and tribal standard source environmental databases within the approximate search radii specified by ASTM E1527-21.

Langan submitted Freedom of Information Act (FOIA) requests to supplement environmental database listing information. The FOIA requests were submitted to the New York State Department of Environmental Conservation (NYSDEC) Region 2, New York State Department of Health (NYSDOH), New York City Department of Environmental Protection (NYCDEP), and New York City Department of Health and Mental Hygiene (NYCDOHMH). Langan also reviewed online records including the US EPA, United States Fish and Wildlife Service (US FWS), NYSDEC, New York City Department of City Planning (NYC DCP), New York City Mayor's Office of Environmental Coordination (NYC MOEC), New York City Office of Environmental Remediation (NYC OER), New York City Department of Buildings (NYC DOB), New York City Department of Finance (NYC DOF), and Fire Department of New York (FDNY) databases. Agency FOIA-requested information, where received, did not reveal responsive records for the subject property. If any additional pertinent information is provided subsequent to issuance of this report that will change the conclusions of this report, it will be provided as an addendum. Copies of government correspondence are provided in Appendix B.

Langan supplemented the third-party-provided historical records with review of online historical record sources including Google Earth Pro.

1.2.2 Site Reconnaissance and Owner/Operator/Occupant Interviews

Langan completed the site reconnaissance on 17 November 2025. The site reconnaissance focused on the spatial extent of the subject property and associated structures, and progressed to the adjoining and surrounding properties. The adjoining properties were observed from the subject property or from public right-of-ways. Limiting conditions encountered during the site reconnaissance, if any, are discussed in Section 1.4. Photographs from the site reconnaissance are provided in Appendix C.

1.2.3 Evaluation, Report and Parts Used in Concert

Langan evaluated the pieces of information obtained from the records reviews, site reconnaissance and interviews described above, and from the user as described in Section 1.3 in concert with each other. Langan's findings, opinions, and conclusions are discussed throughout this report. Significant assumptions, or deletions, deviations or exceptions to ASTM E1527-21 are noted in Section 1.4.

1.2.4 Non-ASTM Scope Services

The scope of services for the Phase I ESA did not include non-scope ASTM considerations.

1.3 User Responsibilities

Langan requested that the user provide the results of tasks the user is responsible for completing in order to satisfy the requirements of AAI. The tasks include: searching for known environmental liens and activity and use limitations (AULs) filed or recorded against the subject property, and provision of information related to specialized knowledge or experience of the user or the degree of obviousness relative to conditions indicative of releases or threatened releases; actual

knowledge of the user regarding environmental liens or AULs related to the subject property; specialized knowledge or experience of the user; reasons for significantly lower purchase prices, and commonly known or reasonably ascertainable information within the local community about the subject property. Langan also requested that the user state the reason the Phase I ESA was requested. A summary of the user's responses is provided in Appendix D and relevant information provided by the user is discussed in applicable sections of this report.

Unless specifically included in the scope of services, Langan did not complete a title search or a search for environmental liens or AULs, as that is the responsibility of the user. If the user requested that Langan complete such searches on the user's behalf, the information was supplied to Langan by a vendor, and to the vendor by government sources; therefore, neither Langan nor the vendor can verify the completeness or accuracy of the title search, or AUL searches.

1.4 Limiting Conditions/Deviations

Langan did not delete or deviate from the ASTM E1527-21 guidelines during this Phase I ESA.

1.5 Data Gaps

Data gaps that are not considered significant data gap are discussed below.

- Data gaps over 5 years were encountered during the review of historic resources. However, the area historically consisted of marshlands and was landfilled in during the early 1900s and remained undeveloped until becoming occupied by automotive wrecking and dismantling operations between 1967 and 1981; the subject property consisted of an asphalt-paved parking lot associated with the Christian Cultural Center thereafter. The use of the property is generally consistent between the 5-year data gaps. Based on knowledge of the area, it is unlikely that the subject property was used for industrial purposes prior to the earliest historical record of the area in 1897. Therefore, operations on the site between these ±5-year data gaps will not detrimentally affect the identification of potential RECs.

2. SUBJECT PROPERTY DESCRIPTION AND CURRENT USE

2.1 Location, Legal Description, and Ownership

The approximately 20,094-square-foot or 0.461-acre subject property is located to the northeast of the Christian Cultural Center building and to the southwest of the intersection of Georgia Avenue and Flatlands Avenue. The subject property is described as a portion of Lot 1 on tax Block 4430 along Flatlands Avenue in Brooklyn, New York. A RP602 form has been filed with the New York City Department of Finance (NYCDOF) to reapportion this portion of Lot 1 into future Lot 5. Based on the review on Sanborn Fire Insurance Maps, the historical addresses range for the subject property includes 12028 to 12048 Flatlands Avenue and historically (before 1967) was identified as 28 to 48 Fairfield Avenue. However, the subject property has not yet been assigned a new address since it was recently subdivided into its own lot; however, it is anticipated that the subject property will have a Flatlands Avenue address. The subject property is currently owned by Christian Cultural Center, Inc.

A Subject Property Location Map (Figure 1) is included in Appendix A of this report.

2.2 Physical Setting

The physical setting that includes the geologic, hydrogeologic, hydrologic, and topographic characteristics of the subject property and surrounding area is discussed below.

2.2.1 Topography

The 2019 United States Geological Survey (USGS) 7.5-minute quadrangle topographic map for Brooklyn depicts the subject property at an elevation of approximately 13 feet above mean sea level (amsl) with a gentle slope downward toward the south. The regional topography slopes downward toward the south and Fresh Creek and Jamaica Bay, which is located approximately 840 feet southwest of the subject property.

2.2.2 Geology

The "Surficial Geologic Map of New York" by the New York State Museum State Geological Survey indicates that the surficial geology at the site consists of outwash sand and gravel which is generally a well-rounded and stratified layer of coarse to fine gravel with sand. According to the "NYS Geological Survey Map & Chart Series Number 15" by the New York State Museum Publications Department, geology at the site consists of coastal plain deposits of the Monmouth Group, Matawan Group, and the Magothy Formation.

Soil borings were completed at the subject property during a Phase II Environmental Investigation (EI) in 2018, which was conducted by Langan. The site subsurface conditions documented during this investigation consisted of at least a 15-foot-thick layer of miscellaneous fill generally consisting of brown, white, or black fine to coarse sand with varying proportions of fine to coarse gravel, silt, and miscellaneous debris including brick, concrete, asphalt, wood, rubber tires, metal, and glass. Native material and competent bedrock were not encountered in any of the soil borings advanced during the 2018 EI.

2.2.3 Hydrogeology

Surface water bodies are not present within the boundary of the subject property. The nearest surface water body is Fresh Creek, which leads to the Jamaica Bay; Fresh Creek is located

approximately 740 feet to the southwest of the subject property. Based on topographic gradient, it is expected that groundwater generally flows to the south.

A review of the Geocheck section of the LightBox Environmental Data Resources (EDR) Regulatory Database Report (Appendix F), historical reports, and site reconnaissance observations identified two groundwater monitoring wells on the subject property, which were installed as part of a recent subsurface investigation. No monitoring wells were installed during the 2018 Environmental Investigation; however, monitoring wells were installed elsewhere on Lot 1, which are discussed in further detail in Section 3.3 below. The EDR report also identified two monitoring wells within an eighth-mile of the subject property, however the available installation logs did not indicate the depth to groundwater.

2.3 Subject Property Description

The subject property is comprised of an asphalt paved parking lot (Tax Block 4430 Lot 1 [portion]). A RP602 form has been filed with the New York City Department of Finance (NYCDOF) to reapportion this portion of Lot 1 into future Lot 5.

A Subject Property Layout Map is provided in Figure 2 of Appendix A. Photographs of the subject property and a checklist documenting Langan's observations relative to the features, activities, uses and conditions outlined in Section 9.4 of ASTM E1527-21 are in Appendix C.

2.4 Current Subject Property Use

The subject property currently consists of a portion of the asphalt paved parking lot and a portion of the concrete paved walkway associated with the Christian Cultural Center located adjacent to the south. Staining was observed in the parking lot; however, the pavement in the vicinity of the staining appeared to be in good condition. Landscaped islands, garbage bins, and two monitoring wells were all observed on the subject property outside of the Christian Cultural Center building. Storm drains were also observed throughout the subject property. According to a previous discussion with Mr. Horace Gordon, a representative for Christian Cultural Center, the drains on the subject property are connected to the municipal sewer system. However, in addition to the storm drains, four manholes in the northwestern portion of the subject property were observed with green spray paint question marks on each lid. Based on the review of site drainage plans dated December 1999 and prepared for construction of the Christian Cultural Center, these four manholes are dry wells for stormwater management.

The following table summarizes subject property utility providers.

Table 2-1 Utility Providers

Utility	Providers
Electricity	Consolidated Edison
Sewer	New York City Municipal

Table 2-2 Local Utility Providers

Utility	Providers
Electricity	Consolidated Edison
Natural gas	Consolidated Edison
Water	New York City Municipal
Sewer	New York City Municipal

2.5 Hazardous Substances and Petroleum Products

2.5.1 Underground Storage Tanks (USTs)

Langan did not observe or identify evidence of current USTs at the subject property.

2.5.2 Aboveground Storage Tanks (ASTs)

Langan did not observe or identify evidence of current ASTs at the subject property.

2.5.3 Drums, Totes, and Intermediate Bulk Containers

Langan did not observe any drums, totes, or intermediate bulk containers at the subject property.

2.5.4 Other Chemical Storage, Containers, or Equipment

Langan did not observe any other chemical storage, containers, or equipment at the subject property.

2.6 Air Emissions

Langan did not observe any sources of air emissions at the subject property.

2.7 Waste Management

2.7.1 Hazardous Waste

Langan did not observe hazardous waste generation at the subject property.

2.7.2 Non-Hazardous Waste

Solid waste trash cans were observed at the subject property. Langan observed the non-hazardous waste containers to be intact without obvious indications of a release or material threat of a future release.

2.7.3 Fill Areas or Solid Waste

Based on the review of the 2003 Phase I ESA prepared by Soil Mechanics Environmental Services, which was prepared for the entire 10-acre Christian Cultural Center redevelopment property, the subject property was reportedly landfilled with ash and waste from the city solid waste incinerator. During the 2018 Phase II EI, fill material was observed in the subsurface to a depth between 0 and 15 feet below grade, with an ash layer from 10 to 14.5 feet below grade, and laboratory analytical results for soil revealed the presence of elevated concentrations of semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs) and/or metals above the NYSDEC Unrestricted Use Soil Cleanup Objectives (SCOs) between 0 and 15 feet below site grade. The presence of contaminated fill containing impacts exceeding state regulatory cleanup objectives represents a REC.

2.8 Wastewater

Langan did not observe or identify evidence of septic systems or cesspools at the subject property.

2.9 Storm Water

Storm water at the subject property flows to the dry wells that were observed during site reconnaissance and discussed in Section 2.4, is collected via the onsite stormwater drainage system into the municipal storm sewer system, percolates through pervious areas, or sheet flows to the adjoining roadways into the municipal storm sewer system. Since the dry wells were designed in 1999 for construction of the current Christian Cultural Center building to manage stormwater for typical parking lot operations, they do not represent a REC.

3. SUBJECT PROPERTY HISTORY AND RECORDS REVIEW

3.1 Historical Summary

Langan compiled the following summary of the subject property history based on a review of readily available and reasonably ascertainable sources and interviews. Historical resources are provided in Appendix E. In addition to those provided in Appendix E, historical aerial photographs were also reviewed from between 1954 and 2022 as maintained online by Nationwide Environmental Title Research, LLC (NETR) of Tempe, Arizona.

Table 3-1 Subject Property History

Time Period	Historical Discussion
1890's – 1950	The 1897 and 1898 topographic maps show the subject property and the surrounding vicinity as near or contained within marshlands through the 1947 topographic map. The 1924 aerial photograph shows the subject property as farmland. Based on Sanborn Fire Insurance maps, the subject property is undeveloped from 1908 through 1928 but mapped with multiple tax parcels. Alabama Avenue is mapped on the eastern portion of the subject property, running from north to south. No changes are shown in the 1950 Sanborn Map.
1950's – 1990's	The 1956 through 1994 topographic maps show that the subject property and surrounding area has been filled, and the marshlands are no longer shown. The 1951 aerial photograph shows the subject property as undeveloped and vacant; however, the 1954 aerial photograph appears to show vehicle storage on the north, east, central, and south sides of the subject property and a cleared area in the western portion of the subject property. The 1962, 1966, and 1976 aerial photographs appear to show vehicles storage across the subject property. On the 1967 through 1969 Sanborn Maps, the subject property is labeled as auto junk with a one-story building of unspecified use located along the frontage of Flatlands Avenue. On the 1977 through 1981 Sanborn Maps, the one-story building of unspecified use is no longer shown and a one-story office building is shown at the corner of Malta Avenue and Flatlands Avenue, extending onto the adjoining property to the west. Vehicle storage is visible on the 1980 aerial photograph; however, on the 1984 aerial photograph, the subject property is vacant and the land appears to have been disturbed or reworked and the subject property is shown as undeveloped on the 1983 Sanborn Map. On the 1994 aerial photograph, a pathway is cleared in the southwest portion of the subject property. No changes are depicted through the 1996 Sanborn Map. No site use information is shown on the topographic maps between 1956 and 1994. The subject property and the adjacent property to the east were identified in the City Directory as Flatlands Auto Wrecking & Parts at 12044-12050 Flatlands Avenue between 1960 and 1976. The subject property and the adjacent property to the west were identified in the City Directory as Iso Auto Wreckrs at 12026 Flatlands Avenue between 1960 and 1976.
2000 – Present	While the 2001 through 2007 Sanborn Maps depict the subject property as being vacant, the 2004 aerial photograph shows the subject property as an asphalt-paved parking lot. No changes are shown through the 2022 aerial photograph. No site use information is shown on the topographic maps between 2013 and 2023.

Based on the review of Sanborn Maps, historical aerial photographs, and the City Directory Abstract, vehicle storage associated with automobile junkyard operations were identified at the subject property from 1954 through 1981. Due to this historical site use, the potential exists for adverse environmental impacts to the subsurface due to the potential cumulative effect of unreported petroleum releases associated with these operations; therefore, historical automobile junking operations is identified as a REC.

3.2 Regulatory Database Review

The subject property address was not specifically identified in the regulatory database review. However, records associated with the original 10-acre Tax Block 4430 Lot 1 and which may be associated with the subject property were identified including a record listed as 12020 Flatlands Avenue (likely referring to the extents of Tax Block 4430 Lot 1 prior to the recent reapportionment) in the NYC Land Use database which is provided by the NYC Department of City Planning and includes publicly available information related to the zoning and land use. This database does not provide any information on the generation or disposal of hazardous wastes or the storage or use of petroleum products at the subject property; as such, this listing is not considered a REC or BER.

The subject property is also likely associated with the following listings:

- As Flatlands Ave and Louisiana Ave in the NY Solid Waste Facility/Landfill (SWF/LF) database and the Inactive Landfill Initiative (ILI) database as an inactive solid waste facility and/or landfill; and,
- As ISO Auto Service for 12026 Flatlands Avenue in the EDR Hist Auto database as a gasoline service station between 1969 and 1975. This address is associated with the adjoining property to the west however based on the review of Sanborn Maps, the operations at 12026 Flatlands Avenue extended onto the subject property during that timeframe.

These database listings are consistent with the historical automobile dismantling operations documented on the Sanborn Maps and historical aerial photographs, which were identified as a REC and discussed in Section 3.1.

Based on a review of historical documentation discussed in Section 3.1, operations by a gasoline service station were not otherwise identified on the subject property. The gasoline service station listing may be associated with historical operations elsewhere on the overall development parcel and not within the boundary of the subject property. As such, the gasoline service station is not identified as a REC or BER.

3.3 Prior Report Review

The subject property is identified as a small portion of a 10-acre proposed development consisting of the property at 12020 Flatlands Avenue (designated as Block 4430, Lot 1 and Block 4434, Lots 1, 10, and 100 prior to the recent reapportionment) located in Brooklyn, New York, and is specifically located on a 0.461-acre portion of Block 4430 Lot 1, newly designated as Lot 5. The subject property location with relation to the Christian Cultural Center building and the proposed development site extents is presented on Figure 3 in Appendix A.

The following environmental assessment and investigation reports prepared for the 10-acre proposed development site were reviewed as part of this Phase I ESA and are summarized below:

- *Fresh Creek Estates, Technical Memorandum to the Draft Environmental Impact Statement (DEIS)*, prepared by AKRF, Inc., dated June 1991;
- *Subsurface Investigation and Report*, prepared by Soil Engineering Services, Inc. (SESI), dated March 1994;
- *Phase I Environmental Site Assessment (ESA)*, prepared by Soil Mechanics Environmental Services (SMES), dated July 1997;
- *Phase I ESA for Flatlands Ave. & Pennsylvania Ave.,* prepared by Soil Mechanics Environmental Services (SMES), dated April 2003;
- *Phase I ESA*, prepared by Langan, dated March 2018;
- *Limited Due Diligence Phase II Environmental Investigation,* completed by Langan, dated May 2018; and,
- Final Environmental Impact Statement (FEIS), prepared by VHB, dated 30 September 2022.

Fresh Creek Estates, Technical Memorandum to the Draft Environmental Impact Statement (DEIS), AKRF, Inc., June 1991

According to the Technical Memorandum, AKRF, Inc. (AKRF) prepared a comprehensive environmental assessment of the proposed Fresh Creek Estates Site which consisted of current Block 4430 Lot 1, Block 4431 Lot 70, and Block 4434 Lots 1, 10, 60, 75, and 100. The Technical Memorandum identified that the Site was originally marshlands and was landfilled during the early 1900's using ash and residue from a city solid waste incinerator. Prior to 1950, a gasoline filling station was located on the northeast portion of the Site at the intersection of Pennsylvania Avenue and Flatlands Avenue, which corresponds to the eastern portion of Block 4434, Lot 10. Potential subsurface impacts to soil, groundwater, and soil vapor due to historical Site use and historic filling operations were investigated by completion of an electromagnetic survey, excavation of three test pits, installation of ten soil borings, five groundwater monitoring wells, collection of 34 soil vapor samples, 24 soil samples, and five groundwater samples. Based on the sample location plan provided, none of the test pits, soil borings, or groundwater monitoring wells were installed on the north-central portion of Block 4434, Lot 1 (the Site). Although a soil vapor sample location map was not provided for review, the sampling methodology discussion identified that all 34 soil vapor samples were collected from the former gasoline filling station and were likely located within Block 4434, Lot 10, to the east of the Site.

The AKRF Technical Memorandum was reviewed by Soil Mechanics Environmental Services (SEMS) and a summary of the AKRF Technical Memorandum investigation and findings was included in the SEMS April 2003 Phase I ESA, as discussed below. According to the 2003 Phase I ESA, the AKRF soil vapor survey was completed within the extents of the former gasoline station, likely referring to Block 4434, Lot 10. Results of the soil vapor survey did not indicate elevated VOCs with the exception of methane, which was presumed to be associated from organic material in historic fill and/or underlying marsh deposits. Based on the presence of elevated methane concentrations in soil vapor, AKRF recommended that a Health and Safety Plan (HASP) be implemented including air monitoring protocols during intrusive activities for proposed Site development.

The Technical Memorandum concluded that the Site is underlain by unconsolidated fill containing varying amounts of sand, gravel, clay, bricks, organic material, concrete, glass, and asphalt. Groundwater was encountered at depths that ranged from 12.67- to 22.82-feet below existing grades. Soil sample analytical results revealed TPH in soil at concentrations ranging from 91 parts-per-million (ppm) to 25,900 ppm over the entire proposed Fresh Creek Estates development Site; however, TPH results specific to the Site were not provided.

Subsurface Investigation and Report, Soil Engineering Services, Inc. (SESI), March 1994

SESI completed a subsurface investigation that included installation of eight soil borings to depths that ranged from 26- to 51.5-feet below existing grade at the entire CCC property for the purposes of evaluating geotechnical conditions and providing recommendations for foundation design and general Site development. As the report provided was not complete and a geotechnical boring location plan was not provided for review, only general Site-wide subsurface conditions are discussed below. The Site is underlain by a layer of miscellaneous fill of unspecified thickness followed by native medium-dense, medium to fine grained sand. The geotechnical report identified that the bottom of planned excavation at the time, likely for the existing church, was approximately 10-feet below grade and would be within the layer of miscellaneous fill.

Phase I ESA, SMES, July 1997

SMES prepared a Phase I ESA on behalf of Legacy General Contracting Corp. for the intent of constructing an approximately 100,000-square-foot two-story building, presumably what became the current CCC building. Based on the descriptions of the subject property and adjacent properties in the SMES Phase I ESA report, it appears that this Phase I ESA was completed for Block 4434, Lot 1 and may have included the Site. The Phase I ESA concluded that leaking USTs and an Inactive Hazardous Waste Disposal Site identified within the vicinity of the subject property were not a concern. Notably, only the odd-numbered pages of the report were provided for review.

Phase I ESA for Flatlands Ave. & Pennsylvania Ave., SMES, April 2003

The April 2003 SMES Phase I ESA was completed for the entire CCC property consisting of current Block 4430, Lot 1 and Block 4434, Lots 1, 10, and 100. Previous environmental reports prepared for the subject property that were reviewed to assist in the identification of RECs included the June 1991 Technical Memorandum to the DEIS prepared by AKRF, Inc., the 1994 Subsurface Investigation and Report prepared by SESI Consulting Engineers, and the 1997 Phase I ESA prepared by SMES, each of which is discussed in detail above.

The Phase I ESA did not specifically identify RECs associated with the environmental findings discussed above, but recommended completion and adherence to a Health and Safety Plan (HASP) and installation of a soil capping system provided in the Technical Memorandum to the DEIS should be strictly followed and noted that a methane mitigation system may be required as part of any future building construction. Soil Mechanics also recommended that future Site activities be conducted under the oversight of the New York City Department of Environmental Protection (NYCDEP) or New York State Department of Environmental Conservation (NYSDEC) and that all underground storage tanks (USTs) encountered during redevelopment be removed in accordance with all applicable laws. The report also identified that proper removal of all miscellaneous waste that was observed on the subject property including an abandoned crane, rubber tires, and demolition debris, and completion of a groundwater investigation to evaluate for potential impacts from hydraulically upgradient properties of concern would be required.

Phase I ESA, Langan (March 2018)

Langan prepared a Phase I ESA for the 10-acre CCC property in March 2018 for GO UCL, LLC. The following RECs and BERs relevant to the subject property were identified:

- REC-2: Former On-Site Automobile Junkyards: Based on the review of historic Sanborn Maps, automobile junkyards were identified on the northern portion the subject property along Flatlands Avenue between Louisiana and Pennsylvania Avenues between 1967 and 2001. However, based on the review of the historical aerials, vehicles appear to be staged on the Site in 1954 and 1980. Due to this historical site use, the potential exists for adverse environmental impacts to the subsurface due to the potential cumulative effect of unreported petroleum releases associated with these operations; therefore, historical automobile dismantling operations was identified as a REC.
- REC-3: Presence of Methane in Subsurface: An historical soil gas investigation conducted in the northeastern portion of the subject property in 1991 revealed the presence of methane and recommended that a methane mitigation system may be required for any future building construction. A methane venting/mitigation system is present at the Christian Cultural Center. As the presence of methane had not been evaluated or investigated on the remainder of the subject property, the potential for methane to be present below the subject property was identified as a REC.
- BER-1: Potential Presence of Historical Urban Fill: Based on the evaluation of the historical Sanborn Maps and topographic maps, the subject property historically consisted of marshland and was filled in the early 1900s with ash and waste from the city's solid waste incinerator. Subsurface investigations completed in 1991 and 1994 also revealed an 18- to 35-foot-thick layer of historic fill and elevated concentrations of total petroleum hydrocarbons, volatile organic compounds, semi-volatile organic compounds, and metals. The presence of fill requires implementation of soil handling and management procedures to address excavation, reuse, handling, and possible offsite disposal of this material if the subject property were to be redeveloped; therefore, the potential presence of historic fill was identified as a BER.
- BER-2: Potential Presence of Undocumented Underground Heating Oil Storage Tanks associated with small one-story structures throughout the subject property associated with historic use for auto junking/dismantling.
- BER-3: Surrounding Sites: Potential impacts from current and historical operations conducted at adjacent and nearby properties involving auto wrecking/dismantling sites, auto repair, gasoline filling stations, dry cleaners, the use of USTs, spills, and the generation and disposal of hazardous waste were identified as a business environmental risk due to the potential for offsite migration of contaminants to impact sub-slab soil and/or groundwater below the subject property.

The following RECs and BERs were also identified for the 10-acre CCC property:

- REC-1: Former On-Site Gasoline Filling Station identified in the northeastern portion of the subject property; however, this REC is located approximately 650-feet feet to the northeast of the Site.

Limited Due Diligence Phase II Environmental Investigation, Langan (May 2018)

A Limited Due Diligence Phase II EI was completed on the 10-acre CCC property for the purposes of due diligence and to evaluate if potential subsurface impacts exist associated with historical site use as an automobile junkyard and automobile dismantling facilities and historical gasoline filling station operations at nearby sites, if subsurface impacts exist associated with the presence

of historic fill, and if methane identified during previous investigations is present in the subsurface which would require mitigation of soil vapor intrusion into proposed site buildings.

Within the subject property extents, the Limited Due Diligence Phase II EI included installation of one soil boring to approximately 20 feet below sidewalk grade and the collection of two soil samples for laboratory analysis. The deeper sample collected at 13 to 15 feet below sidewalk level (bsl) was collected to characterize an ash layer that was observed from 10 to 14.5 feet bsl.

Field observations during the soil boring activities revealed the presence of a fill layer, which is described in detail in Section 2.2.2. Odors and elevated photoionization detector (PID) readings were not observed within the boring advanced on the subject property.

Soil analytical results identified elevated concentrations of polycyclic aromatic hydrocarbon (PAHs), PCBs, and/or metals detected in fill material from 0 to 15 feet below sidewalk level at the subject property exceeding the NYSDEC Unrestricted Use SCOs. PAHs and metals were also detected in fill material exceeding the Restricted-Residential, Commercial, and/or Industrial Restricted Use SCOs (RUSCOs), which are attributed to historical operations and/or the quality of contaminated fill material of unknown origin.

Groundwater monitoring wells were not installed within the subject property extents. Groundwater was instead measured elsewhere at the development site, and was measured between 15 and 18.5 feet below current site grade in the southern portion of the site and at approximately 13.5 feet below current site grade in the northern portion of the 10-acre CCC property. Groundwater analytical results identified elevated concentrations of SVOCs, PCBs, and metals at the monitoring well installed at the adjoining property to the east, which were attributed to likely sediment entrainment of contaminated fill material of unknown origin in the groundwater samples. Dissolved metal exceedances were attributed to naturally occurring background concentrations.

A temporary soil vapor/methane monitoring point was installed at the subject property at a depth of 8 feet below current site grade. A Honeywell MultiRae was connected to the tubing and methane readings were collected every 30 seconds for five minutes. Methane was not detected at the sample location. The soil vapor/methane field screening results did not identify the presence of methane in the subsurface.

Langan concluded that based on the soil and groundwater analytical results, the subsurface has been impacted from historical subject and adjoining property operations and contaminated fill containing elevated concentrations of SVOCs and metals has been identified.

FEIS, VHB (September 2022)

As part of the City Environmental Quality Review (CEQR) rezoning process, a FEIS was prepared (CEQR No. 20DCP057K) and reviewed by NYCDCP. In order to mitigate potential significant adverse impacts associated with the anticipated redevelopment, the FEIS proposed that an (E) designation be placed on the Development Site as well as a Restricted Declaration to codify commitments made in the FEIS related to environmental review. The full Development Area consisted of, at the time, Block 4430 Lot 1 and Blocks 4434 Lots 1 and 10; however, it should be noted that Block 4434 Lot 10 was later subdivided in 2024. The FEIS proposed that the Developmental Site (which includes the subject property) receive an (E) designation (E-679) for Noise, Air Quality and Hazardous Materials. The following is a description of the requirements set forth in the FEIS for the subject property. These requirements must be satisfied in order to receive a Notice to Proceed letter from the NYC OER, the regulatory agency responsible for the oversight of the redevelopment of (E) designated properties. This letter is required by the NYC DOB prior to issuance of any building permits (including foundation permits).

Hazardous Materials Requirements

As identified the FEIS, the extents of Block 4430 Lot 1 prior to the recent reapportionment was recommended for an (E)-designation for hazardous materials based on the presence of historic fill and other contamination due to the historical use of a former auto wrecking facility. The FEIS states that any potential RECs would follow the (E) Designation protocol for additional investigation and potential remedial action, which would include the submission of a Remedial Investigation Workplan (RIWP), a Remedial Investigation Report, and Remedial Action Work Plan (RAP), as necessary, to NYC OER.

Air Quality Requirements

As identified in the FEIS for Building 6, any new residential or mixed-use development on the above-referenced property, if using fossil-fuel fired HVAC or hot water systems, must exclusively use natural gas and be fitted low-NOx (up to 41 ppm) burners and have a stack at least 172.8 feet above grade to avoid any significant adverse air quality impacts.

Noise Attenuation Requirements

As identified in the FEIS for Building 6, in order to ensure an acceptable interior noise environment, future residential uses must provide a closed-window condition with a minimum of 28 dBA window/wall attenuation on the facades facing Flatland Avenue and the facades facing Pennsylvania Avenue within 50 feet of Flatland Avenue and the facades facing Louisiana Avenue within 50 feet of Flatland Avenue to maintain an interior noise level not greater than 45 dBA for residential uses as illustrated in the EIS. To maintain a closed-window condition, an alternate means of ventilation must also be provided. Alternate means of ventilation includes, but is not limited to, air conditioning.

Notice to Proceed Letter

Due to the presence of the (E) designation on the subject property, a Notice to Proceed letter is a NYC DOB requirement. Upon approval of an NYC OER RAP for site remediation to address the Hazardous Materials (E) designation and a RAP to address the Air Quality and Noise (E) designations, the NYC OER will issue the Notice to Proceed letter to the NYC DOB. Upon receipt, the NYC DOB will be allowed to issue a building permit with respect to the (E) designation of the subject property.

Following review and approval of the Remedial Action Report and Installation Reports, the NYC OER will issue a Notice of Satisfaction letter to the NYC DOB which will allow for the issuance of a Certificate of Occupancy for the building.

Summary

The review of historical reports revealed historical automobile junkyard operations on the subject property, historical filling of the 10-acre proposed development including ash and waste from the city's solid waste incinerator, the presence of methane in the subsurface resulting from the marsh deposits, potential presence of USTs associated with former onsite buildings, the presence of contaminated fill to at least 15 feet below ground surface on the subject property, and the E-designation assigned to the tax lot on which the subject property is located. Methane monitoring was completed during the 2018 Phase II investigation, at which time no methane was detected in the subsurface at the subject property and throughout the proposed development site. It is the opinion of the environmental professional that historical automobile junkyard operations, historical site filling, and the presence of contaminated fill represents RECs. The potential presence of USTs in the subsurface and the Hazardous Materials E-designation represents BERs.

4. ADJOINING PROPERTIES AND SURROUNDING AREA

4.1 Current Use of Adjoining Properties and Surrounding Area

The adjoining properties were observed from the subject property or from public right-of-ways. Due to the dense urban nature of the surrounding areas, a limited line of sight was available to assess adjoining properties. The use of adjoining and surrounding properties is summarized as follows:

Table 4-1 Current Use of Adjoining Properties and Surrounding Area

Direction	Adjoining Properties	Surrounding Area
North	Flatlands Avenue followed by a flea market (12025-12033 Flatlands Avenue) and a one-story autobody repair building (12041 Flatlands Avenue)	Commercial/office and manufacturing/industrial
East	3-story religious institution identified as the Christian Cultural Center (12020 Flatlands Avenue) and associated paved parking lot	Residential buildings
South	3-story religious institution identified as the Christian Cultural Center (12020 Flatlands Avenue) and associated paved parking lot	Residential buildings
West	3-story religious institution identified as the Christian Cultural Center (12020 Flatlands Avenue) and associated paved parking lot	Commercial buildings

Based on the current and/or historic use of the adjoining properties to the north as automobile repair facilities and a gasoline filling station, the adjoining properties to the north are an environmental concern for the subject property, as discussed in detail in Sections 4.2 and 4.3.

4.2 Adjoining Properties and Surrounding Area History

Langan compiled the following summaries of the adjoining properties and surrounding area history based on a review of historical resources and interviews. Historical resources are provided in Appendix E.

Table 4-2 Historical Use of Adjoining Properties

Direction	Adjoining Properties
North	Based on topographic maps between 1897 and 1947, Sanborn Fire Insurance maps between 1908 and 1928, and the 1924 historical aerial photograph, the northern adjoining properties are undeveloped and depicted as in the immediate vicinity of marshlands and vacant undeveloped land, with the exception of 41-47 Flatlands Avenue. One residential building with a basement is identified on the 1908 Sanborn Map at 12041 Flatlands Avenue (then 41 Fairfield Avenue). In the 1928 Sanborn Map, the lots at 12041 to 12047 Flatlands Avenue (then 41 to 47 Fairfield Avenue) have merged and a shed, garage, and two buildings of unspecified use are now shown in addition to the residential building. The 1950 Sanborn Map shows the northern properties at 12027 to 12039 Flatlands Avenue as undeveloped. Additionally, a gasoline filling station is shown at 12041-12047 Flatlands Avenue in the 1950 through 1969 Sanborn Maps. Fairfield Avenue is renamed as Flatlands Avenue on the 1967 Sanborn Map. In the 1966 aerial photograph, the adjacent lots to the north are shown as vehicle storage. In the 1967 Sanborn Map, the northern adjoining

Direction	Adjoining Properties
	properties at 12029 through 12033 Flatlands Avenue are identified as an auto junk yard and used auto sales facility with a one-story office building and a one-story building of unspecified use. No changes are shown through 1969. In the 1977 Sanborn Map, the gasoline filling station is now labeled as an auto junk yard. No changes are shown through 1987. In the 1989 Sanborn Map, the auto junk yard at 12041-12047 Flatlands Avenue is now labeled as an auto repair and used auto sales facility. No changes are shown through the 2007 Sanborn Map. Site conditions shown on the aerial photographs through 2022 are consistent with the 1992 Sanborn Map. The northern adjoining properties were identified in the EDR City Directory as 12047 Flatlands Avenue as A&R Service Center in 1960, ISO Service Station in 1965, ISO Auto Wreckrs between 1973 and 1976, J&J Complete Auto Repr in 1985, and US1 Auto Sales & Repair in 2005.
East, South, and West	The 1898 topographic map shows the adjacent properties to the east, south and west as partially consisting of marshlands through the 1947 topographic map. The 1956 through 2019 topographic maps show that properties have been filled and the marshlands are no longer shown. No site use information is shown on the topographic maps between 1956 and 2019. The 1908 Sanborn map shows the adjoining property to the east, south, and west as being undeveloped but mapped with multiple tax parcels, Malta Avenue, and Alabama Avenue. The 1928 Sanborn Map shows a one-story shed and one-story residential building to the southwest and a one-story building of unspecified use in the Malta Street roadway, however these structures are no longer shown as of the 1950 Sanborn Map. On the 1967 Sanborn Map, the western adjoining property is labeled as auto junk and the eastern adjoining property is labeled as auto junk with a one-story office building located along the frontage of Flatlands Avenue. In 1977 through 1981, the multiple tax lots are no longer shown and the adjoining properties are shown as large tax blocks. The subject property is shown to be on the same lot as the adjoining property to the west and the one-story office building discussed in Section 3.1 also extends onto the adjoining property to the west. On the 1983 Sanborn Map, the eastern adjoining property is shown to be vacant and no longer used for auto junk. On the 2001 Sanborn Map, the two-story building currently identified as the Christian Cultural Center is shown as under construction and as completed on the 2002 Sanborn Map. The adjoining property to the west is also shown to be merged with the subject property as of 2001. No changes are shown through 2007. The eastern, southern and western adjacent properties consist of undeveloped and possibly vegetated or forested land on the 1924 aerial photograph with what appears to be cleared lands along Flatlands Avenue. On the 1951 aerial photograph the full extents of the properties appear to be cleared and undeveloped. Between 1954 and 1980, the adjacent properties appear to be used for vehicle storage, consistent with the auto junking operations documented on the Sanborn Maps. On the 1984 aerial photograph, the properties are vacant and the land appears to have been disturbed or reworked. A roadway and cleared area to the northwest, south, and northeast of the subject property is shown on the 1994 aerial photograph, and the current Christian Cultural Center and associated parking lot is shown in 2006. No changes are shown through 2019. The adjacent properties to the east, south and west were also identified in the City Directory as Iso Auto Wreckrs for 12026 Flatlands Avenue between 1960 and 1976 and Flatlands Auto Wrecking & Parts for 12044-12050 Flatlands Avenue in 1960.

The surrounding area was undeveloped in the late 1800s and 1960s. Between the 1970s and 2000s, the area became increasingly developed with commercial and industrial development in the surrounding area to the north and west of the subject property and multi-story residential and commercial buildings in the surrounding area to the east and south.

Automobile junkyard operations were identified at all adjoining properties from 1954 through at least 1981, a gasoline filling station was identified on the adjacent property to the north from 1950 through 1969, and auto repair operations were documented on the adjacent property to the north from 1967 through 2022; as such, the potential exists for adverse environmental impacts to the subsurface of the subject property due to the potential cumulative effect of unreported petroleum releases associated with these operations; therefore, historical gasoline filling and automobile dismantling and repair operations at adjoining properties is identified as a BER.

4.3 Regulatory Database Review

Langan reviewed the environmental database report to evaluate if adjoining or surrounding area properties identified in the database report are suspected to represent an environmental concern for the subject property (see Section 8.2). Langan did not consider the request and review of regulatory agency files or submitting FOIA requests necessary to supplement the database listings and evaluate potential RECs for the subject property unless discussed in Section 4.3.1 or 4.3.2 below.

According to records maintained online by NYSDEC for the surrounding site located at 12074 Flatlands Avenue (discussed in further detail in Section 4.3.1 below), monitoring wells installed between 2018 and 2023 and surveyed as part of the 2023 Remedial Investigation (RI) for that site revealed groundwater between 10.4 and 19.8 feet below ground surface, corresponding to elevations between 2.01 and 3.5 NAVD88. Based on the groundwater elevations recorded during the 2023 RI, groundwater flows to the south toward Fresh Creek and Jamaica Bay. This groundwater flow direction was used as part of the summaries included in Sections 4.3.1 and 4.3.2 below.

4.3.1 Adjoining Properties

Database listings for adjoining properties are summarized as follows.

120-33 Flatlands Avenue (northern adjoining, inferred upgradient)

The 120-33 Flatlands Avenue site is identified as an automotive parts business and is identified as 120-33 Flatlands Avenue in the NY Spills database for a release reported to the department on 4 October 1998 and assigned NYSDEC Spill No. 9808202 due to a reportedly deliberate release of waste oil. According to the case narrative provided by EDR, waste oil was deliberately dumped onto the roadway on 24 September 1998. No additional information is provided, and the case was administratively closed on 30 October 1998. The address associated with this spill corresponds to the location of an auto junkyard and used automobile sales facility identified on the Sanborn Maps from 1967 through 2007. Due to the surficial nature of this listing and the closed regulatory status, it is in the opinion of the environmental professional that the potential for adverse impacts to the subject property from this spill case is low. However, it should be noted that based on the close proximity of this site to the subject property, historical auto junking operations performed, and the potential for unreported releases associated with former site use may have a cumulative effect on regional groundwater and/or soil vapor quality.

U.S.-1 Auto Sales & Repair, Inc. – 12047 Flatlands Avenue (northern adjoining, inferred upgradient)

The U.S.-1 Auto Sales & Repair, Inc. site located adjacent to the north and hydraulically upgradient from the subject property at 12047 Flatlands Avenue is identified in the NY AST database for one 275-gallon waste oil AST that is currently in service. Based on the lack of violations or releases reported for this facility, it is in the opinion of the environmental professional that the potential for adverse impacts to the subject property from this site is low.

4.3.2 Surrounding Area

Langan evaluated each of the database listings for surrounding area properties (see Section 8.2). Those warranting further discussion in the context of potential to represent an environmental concern for the subject property are discussed below.

Ultimate Used Auto Parts Inc. – 12049 Flatlands Avenue (approximately 176-feet north-northeast, inferred upgradient)

Ultimate Used Auto Parts Inc. is identified in the NY SWF/LF database as an active vehicle dismantling facility. This site is identified as auto junking on historical Sanborn Maps.

Based on the lack of violations or releases reported for this facility, it is in the opinion of the environmental professional that the potential for adverse impacts to the subject property from this site is low. However, it should be noted that based on the close proximity of these sites to the subject property, historical auto junking and/or dismantling operations performed, and the potential for unreported releases associated with former site use may have a cumulative effect on regional groundwater and/or soil vapor quality.

Kent Cleaner / Kent Dry Cleaners / Ruddy Cleaners – 1118 Flatlands Avenue (approximately 231-feet southwest, inferred downgradient)

The Ruddy Cleaners site is identified in the NY Drycleaners database with an earliest registration date in 1998 and a reported final expiration date of 2017. It is not identified if this facility is shutdown or currently operational. The property is also identified in the following databases:

- EDR Hist Cleaner database as a garment pressing and cleaners' agents facility between 1986 and 2011.
- Resource Conservation and Recovery Act (RCRA) Very Small Quantity Generator (VSQG) database for forms received by the United States Environmental Protection Agency (USEPA) on 1 January 2007 classifying the site as a VSQG for the generation of waste impacted with hazardous concentrations of chromium, lead, tetrachlorethylene (PCE), and trichloroethylene (TCE) and an unspecified hazardous waste. Historical generator information includes forms received by the USEPA on 26 June 1987 classifying the site as a VSQG on 27 April 1998, 1 January 2006, and 1 January 2007. No violations are reported for this facility.
- NY Manifest database for the disposal of spent halogenated solvents in 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2010, 2011, 2013, 2015, 2016, 2017, and 2018; for waste containing hazardous concentrations of chromium in 2007, 2008, 2010, 2011, 2013, 2015, 2016, 2017, and 2018; for waste containing hazardous concentrations of PCE and TCE in 2007, 2008, 2010, 2011, and 2015; for waste containing hazardous concentrations of 1,1-dichloroetheylene (1,1-DCE) in 2010 and 2011; for waste containing hazardous concentrations of hexachlorobutadiene and 2,4-dinitrotoluene in 2016.

Based on the distance of the active drycleaning operations from the subject property, it is the opinion of the environmental professional that the potential for adverse impacts to the subject property from these sites is low. However, it should be noted that any unreported releases associated with these facilities may contribute to an adverse impact on regional groundwater and/or soil vapor quality.

<u>12074 Flatlands Avenue - 12074 Flatlands Avenue (approximately 295-feet northeast, inferred crossgradient)</u>

12074 Flatlands Avenue is identified in the NYC OER database for having been assigned an (E) Designation (NYC OER Project No. 23EHAN210K) and for having been enrolled in the NYSDEC BCP for remediation that is currently ongoing under BCP Site No. C224353. During the investigations completed as part of the BCP, fill material containing ash and miscellaneous debris was observed in the subsurface and laboratory analytical results for soil revealed the presence of elevated concentrations of VOCs, SVOCs, metals, pesticides, PCBs, and PFAS above the NYSDEC SCOs and/or guidance values between 0 and 26 feet below site grade. The ongoing remediation is being completed in accordance with a Final RAWP dated 1 May 2024 that was approved by NYSDEC in the Decision Document dated May 2024. The approved remedy includes the excavation and off-Site disposal of impacted fill material.

This site is currently being remediated under the direct oversight of NYSDEC. No off-site impacts were identified based on the result of any of the investigations completed and remediation at the site includes extensive excavation and removal of contaminated fill material. As such, this database listing does not represent a BER or REC.

<u>12096 Flatlands Avenue - 12096 Flatlands Avenue (approximately 527-feet east-northeast, inferred upgradient)</u>

12096 Flatlands Avenue is identified in the NY Brownfields database for being accepted into the NYSDEC BCP for remediation that is currently ongoing under BCP Site No. C224290. During the investigations completed as part of the BCP, fill material containing ash was observed in the subsurface and laboratory analytical results for soil revealed the presence of elevated concentrations of SVOCs, metals, pesticides, PCBs, and PFAS above the NYSDEC SCOs and/or guidance values between 0 and 22.5 feet below site grade. The ongoing remediation is being completed in accordance with a Final RAWP dated 18 December 2023 that was approved by NYSDEC in the Decision Document dated January 2024. The remedy included the excavation and off-Site disposal of impacted fill material. The property is also identified in the following databases:

- NY PFAS database as BCP Site No. C224290. The NY PFAS database includes the same information on the site history and nature and extent of contamination as the NY Brownfields database; however, due to the presence of PFOA and PFAS detected in groundwater samples collected during the previous investigations, the site is also listed in the NY PFAS database.
- RCRA Large Quantity Generator (LQG) database for forms received by the USEPA on 19 March 2024 classifying the site as a large quantity generator for the generation of waste impacted with hazardous concentrations of lead. No historical generator forms are reported for the site. No violations are reported for the site.

This site was remediated under the direct oversight of NYSDEC and a Certificate of Completion was issued on 25 June 2025. No off-site impacts were identified based on the result of any of the investigations completed and remediation at the site included extensive excavation and removal of contaminated fill material. As such, these database listings do not represent a BER or REC.

NYCHA - Vandalia Avenue Houses – 47 Vandalia Avenue (approximately 527-feet south-southeast, inferred upgradient)

NYCHA - Vandalia Avenue Houses is identified in the Resource Conservation and Recovery Act (RCRA) NonGen/NLR database for forms received by the USEPA on 1 January 2007 classifying the site as a non-generator for the generation of ignitable waste. Historical generator information includes forms received by the USEPA on 12 August 1999 classifying the site as a small quantity generator (SQG) and on 1 January 2006 classifying the site as a non-generator. No violations are reported for the facility. The site is also identified in Facility Index System (FINDS) and Environmental Compliance & History (ECHO) databases for being active in the RCRA program.

This property is also identified as Vandalia Avenue, Vandalia Houses, NYC Housing Building, and NYCHA – Penn Wortman located at 17 Vandalia Avenue in the following databases:

- UST and UST Finder as active PBS Facility No. 2-474088 for one 15,000-gallon No. 2 fuel oil UST that was installed on 1 May 1983 and is reportedly in-service and was last tested on 20 November 2024.
- NY LTANKS database for a release reported to the department on 23 January 1991 and assigned NYSDEC Spill No. 9011231 due to an overspill. According to the case narrative provided by EDR, approximately 15 gallons of No. 2 fuel oil spilled from a vent pipe onto the soil and NYCHA personnel were reportedly going to cleanup and dispose of the material. No additional information is provided, and the case was administratively closed on 6 July 1993.
- NY LTANKS database for a release reported to the department on 3 September 2024 and assigned NYSDEC Spill No. 2405188. According to the case narrative provided by EDR, the 15,000-gallon fuel oil tank failed a tank tightness test. The tank was taken out of service for further testing, and the issue was identified as faulty sensor piping, which was replaced. After retesting, the tank passed. The case was administratively closed on 22 November 2024.
- NY Spills database for a release reported to the department on 13 February 2003 and assigned NYSDEC Spill No. 0211342 due to equipment failure. According to the case narrative provided by EDR, approximately 20 gallons of No. 2 fuel oil was spilled and contained into a pit. No soil or water was identified as impacted and cleanup was reportedly completed. No additional information is provided, and the case was administratively closed on 13 March 2003.
- NY Spills database for a release reported to the department on 23 January 2003 and assigned NYSDEC Spill No. 0210638 due to equipment failure. According to the case narrative provided by EDR, a spill involving approximately 120 gallons of oil was found in a sump pit in the boiler room and vertical check pipe. Possible impacts to the sewer were reported to NYC DEP, and a vacuum truck was sent for cleanup. No additional information is provided, and the case was administratively closed on 4 November 2005.
- NY Spills database for a release reported to the department on 16 January 2004 and assigned NYSDEC Spill No. 0311656 due to equipment failure. According to the case narrative provided by EDR, boiler room equipment failed resulting in a 3-gallon release of No. 2 fuel oil and a cleanup crew was dispatched. No additional information on the cleanup is provided. The case was administratively closed on 13 January 2006.

- RCRA NonGen/NLR database for forms received by the USEPA on 1 January 2007 classifying the site as a non-generator of hazardous waste. Historical generator information includes forms received by the USEPA on 27 February 1998 classifying the site as a SQG and on 3 April 1998 and 1 January 2006 classifying the site as a non-generator. No violations are reported for the facility.
- FINDS and ECHO databases for being active in the RCRA program.

Potential impacts from current and historical operations conducted at this site involving the use of USTs, spills, and the generation and disposal of hazardous waste were identified as a business environmental risk due to the potential for offsite migration of contaminants to impact soil and/or groundwater below the subject property.

5. CONCLUSIONS, FINDINGS, AND OPINIONS

Langan completed a Phase I ESA consistent with the scope and limitations of ASTM E1527-21 for the subject property at Block 4430, future Lot 5 (current portion of Lot 1) on Flatlands Avenue, Brooklyn, New York. Exceptions to, or deletions from, ASTM E1527-21 are described in Section 8 of this report. This assessment has revealed the RECs, CRECs, HRECs, de minimis conditions, and significant data gaps presented in Table 5-1.

Table 5-1 Conclusions, Findings, and Opinions

ASTM E1527-21 Scope Items
Recognized Environmental Conditions (RECs)
Former On-Site Automobile Junkyard: Based on the review of historical aerial photographs, automobile junkyards were identified on the subject property between 1954 and 1981. Due to this historical site use, the potential exists for adverse environmental impacts to the subsurface due to the potential cumulative effect of unreported releases of hazardous materials associated with these operations, including petroleum products, solvents, leaching metals, and polyfluoroalkyl substances (PFAS); therefore, historical automobile junking operations is identified as a REC.
Historical Site Filling and Presence of Contaminated Fill: Based on the review of historical topographic maps the subject property historically consisted of marshland that was filled in the early 1900's with ash and waste from the city's solid waste incinerator. During the May 2018 Phase II EI, fill material was observed in the subsurface between 0 and 15 feet below site grade, with an ash layer from 10 to 14.5 feet below grade, and laboratory analytical results for soil revealed the presence of elevated concentrations of semi-volatile organic compounds (SVOCs) and metals above the NYSDEC Unrestricted Use SCOs between 0 and 15 feet below site grade. PFAS are also known to be present in landfills; since the subject property was historically filled with material of unknown origin, it is possible that PFAS substances are present. The presence of contaminated fill containing impacts exceeding state regulatory cleanup objectives represents a REC.
Controlled Recognized Environmental Conditions (CRECs)
Langan did not identify CRECs.
Historical Recognized Environmental Conditions (HRECs)
Langan did not identify HRECs.
De Minimis Conditions
Langan did not identify de minimis conditions.
Business Environmental Risks (BERs)
Surrounding Sites: Current and historical operations conducted at the adjoining properties involving the use of USTs, spills, dry cleaners, and the generation and disposal of hazardous waste were identified in the regulatory database review. Based on the review of the historical Sanborn Maps and aerial photographs, automobile junkyard operations were identified at all adjoining properties from at least 1954 through 1981; a gasoline filling station was identified on the adjacent property to the north from 1950 through 1969; and auto repair operations were documented on the adjacent property to the north from 1967 through 2022. The potential exists for adverse environmental impacts to the subsurface of the subject property due to the potential cumulative effect of the historical auto junking operations at the adjacent properties. As such, historical operations at adjoining properties is identified as a business environmental risk due to the potential for offsite migration of contaminants to impact soil, groundwater, and/or soil vapor below the subject property.
Hazardous Materials E-Designation: An E-Designation for Hazardous Materials was assigned to tax lots associated with the subject property due to historical site filling and confirmation of contamination during previous investigations completed on and in the vicinity of the subject property. Air Quality and Noise

ASTM E1527-21 Scope Items
Attenuation E-designations were also assigned. As such, any site redevelopment activities will need to be completed under New York City Office of Environmental Remediation (NYC OER) oversight. Obligations associated with the E-Designation of the site represents a BER.
Potential Presence of Undocumented Underground Heating Oil Storage Tanks: While no evidence or records confirming use of fuel oil tanks was observed during the site inspection or noted during this ESA, small one-story structures were historically identified on the subject property associated with historic site use for auto junking/dismantling. These structures included a one-story building of unspecified use identified on the 1967 through 1969 Sanborn Maps and a one-story office building identified on the 1977 through 1981 Sanborn Maps. Due to the presence of these structures and this historical use of the site, it is the opinion of the environmental professional that the potential presence of heating oil USTs beneath the lot or adjacent sidewalks associated with these former buildings represents a business environmental risk. Preparation and implementation of a contingency plan to address the presence of any USTs that may be encountered during site excavation activities would adequately address this issue.
Significant Data Gaps
Langan did not identify significant data gaps.

6. ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and I have the specific qualifications based on my education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

8. LIMITATIONS AND DEFINITIONS

This Phase I ESA report was prepared for Client and is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. The Client is the sole intended beneficiary of the report. The user requested no special terms or conditions regarding this Phase I ESA.

Langan's scope of services, which is described in Section 1.2 and in the contract executed between Langan and the Client, was limited to that agreed to with the Client/user and no other services beyond those explicitly stated are implied. To the extent possible, the services performed and agreed upon for this Phase I ESA are consistent with the guidelines of ASTM E1527-21.

This report is not intended to be an exhaustive assessment of the subject property. The purpose of the Phase I ESA is to reduce uncertainty about unknown conditions at the subject property. No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a subject property. Therefore, Langan cannot "verify", "insure", "certify", or "guarantee" that the subject property is free of environmental concerns.

No expressed or implied representation or warranty is included or intended in this report, except that our services were completed using the care and skill ordinarily followed by professionals providing similar services under similar circumstances in similar locations at the same point in time.

The conclusions provided in this report are based solely on information obtained through completing the standard activities required by ASTM E1527-21 and are intended exclusively for the purpose stated herein, at the specified subject property, as it existed at the point in time the assessment was completed. The conclusions provided in this report do not apply to conditions and features of which Langan was not made aware of through good faith efforts to complete the activities required by ASTM E1527-21 and did not have the opportunity to evaluate.

8.1 ASTM Definitions

The following definitions are provided in ASTM E1527-21 and presented below for reference. This section is not a comprehensive list of definitions provided in ASTM E1527-21 and is intended to summarize those pertinent to this Phase I ESA report.

Activity and use limitations (AULs): legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effective-ness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls, are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

Adjoining properties: any real property or properties the border of which is contiguous partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them.

All Appropriate Inquiries: that inquiry constituting all appropriate inquiries into the previous ownership and uses of the subject property consistent with good commercial and customary

practice as defined in CERCLA, 42 U.S.C.§ 9601(35)(B) and 40 C.F.R. Part 312, that will qualify a party to a commercial real estate transaction for one of the threshold criteria for satisfying the LLPs to CERCLA liability (42U.S.C. §§ 9601(35)(A) & (B), § 9607(b)(3), § 9607(q), and§ 9607(r)), assuming compliance with other elements of the defense.

Approximate minimum search distance: the area for which records must be obtained and reviewed pursuant to ASTM E1527-21 Section 8 subject to the limitations provided in that section. This may include areas outside the subject property and shall be measured from the nearest subject property boundary. This term is used in lieu of radius to include irregularly shaped properties.

Business environmental risk (BER): a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations.

Controlled recognized environmental condition (CREC): recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

Data gap: a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

De minimis condition: a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.

Engineering controls: physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or groundwater on a property. Engineering controls are a type of activity and use limitation (AUL).

Environment: environment shall have the same meaning as the definition of environment in CERCLA 42 U.S.C. § 9601(8).

Historical recognized environmental condition (HREC): previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).A historical recognized environmental condition is not a recognized environmental condition.

Institutional controls (IC): a legal or administrative mechanism (for example, "deed restrictions," restrictive covenants, easements, or zoning) on the use of, or access to, a site or facility to (1) reduce or eliminate potential exposure to hazardous substances or petroleum products in the

soil or groundwater on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. An institutional control is a type of activity and use limitation (AUL).

Key site manager: the person identified by the owner or operator of a subject property as having good knowledge of the uses and physical characteristics of the subject property.

Material threat: obvious threat which is likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment.

Obvious: that which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer.

Property use limitation: limitation or restriction on current or future use of a property in connection with a response to a release, in accordance with the applicable regulatory authority or authorities that allows hazardous sub-stances or petroleum products to remain in place at concentrations exceeding unrestricted use criteria.

Reasonably ascertainable: information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.

Recognized environmental conditions: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. For the purposes of this definition, "likely" is that which is neither certain nor proved, but can be expected or believed by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinions given therein.

Release: a release of any hazardous substance or petroleum product shall have the same meaning as the definition of "release" in CERCLA 42 U.S.C. § 9601(22). There are a number of statutory exclusions from the definition of release that may impact the environmental professional's opinions and conclusions, such as the normal application of fertilizer.

Significant data gap: a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Site reconnaissance: that part that is contained in Section 9 of ASTM E1527-21 and addresses what should be done in connection with the site visit. The site reconnaissance includes, but is not limited to, the site visit done in connection with such a Phase I Environmental Site Assessment.

Site visit: the visit of the subject property during which observations are made constituting the site reconnaissance section of this practice.

Subject property: the property that is the subject of the environmental site assessment described in this practice.

User: the party seeking to use ASTM E1527-21 to complete an environmental site assessment of the subject property.

8.2 Standard Environmental Record Sources

Langan reviewed an environmental database search report prepared by an environmental database search provider for the subject property and surrounding area. The database search report includes a listing of properties identified on select federal, state, local and tribal standard source environmental databases within the approximate minimum search radii outlined in ASTM E1527-21. This information was supplied to Langan by the environmental database search provider, and to the environmental database search provider by government sources; therefore, neither Langan nor the environmental database search provider can verify the completeness and accuracy of the database information. Appendix F contains a copy of the report, with specific source and property descriptions, and the dates of the last update for each database searched. Langan reviewed the database search report on a record-by-record basis to evaluate if certain properties identified in the database report are likely to represent an environmental concern for the subject property. The evaluation criteria included factors such as distance, groundwater gradient, nature of the listing, and regulatory status. Unless specifically discussed in the body of this report, the facilities listed on the database do not appear to represent an environmental concern to the subject property.

Agency Records and Other Reports

From: donotreply@records.nyc.gov
Sent: Tuesday, October 14, 2025 6:49 AM
To: Ashley Sandve
Subject: [OpenRecords] Request FOIL-2025-826-04971 Acknowledged

The Department of Environmental Protection (DEP) has **acknowledged** your FOIL request FOIL-2025-826-04971.

You can expect a response on or about Tuesday, January 20, 2026.

Please visit FOIL-2025-826-04971 to view additional information and take any necessary action.

FOIL Control #: 2025FR01294

Dear Ashley Sandve,

The NYC Department of Health and Mental Hygiene (DOHMH) acknowledges receipt of your Freedom of Information Law request. It has been assigned the above-noted control number and has been forwarded to the following bureau for processing:

Environmental Health Services

Sheba Taylor-Medina, e-mail: staylor2@health.nyc.gov

Healthy Homes Program, Ben DelPercio, e-mail: bdelperc@health.nyc.gov

You should receive a response from the program/bureau within twenty(20) business days. Please note that as of January 1, 2019, the Department charges the statutorily allowable fee of 25¢ per page for FOIL responses of records maintained in hard copy format only. You will be advised by the program/bureau of the fee that is due and, upon receipt of your payment by check or money order, the copies will be forwarded to you.
All inquiries about the status of your request should be made with the program/bureau and control number noted above.

Thank you,

FOIL Administration

Brooklyn, New York

Supplemental Address(es):

Dear Sir / Madam:

After a thorough search of our files, we did not find documents for the following reason:

☐ **A) No Records for the (Child / ren) have been located on the Lead Poisoning Prevention Programs's system.**

☒ **B) No Environmental Records were found for the address (es) and / or apartment requested.**

☐ **C) Printout of child's blood lead level, (copy attached), is the only information in the Lead Poisoning Prevention Program's system.**

Sincerely,

Ben Del Percio

Subject: FOIL Request :: W154756-101325

Dear Ashley:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 10/13/2025 and given the reference number FOIL #W154756-101325 for tracking purposes. You may expect the Department's response to your request no later than **11/12/2025**.

Record Requested: **Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, groundwater sampling, asbestos abatement, radon, hazardous materials and any other documents that your department may have regarding the property at 12020 Flatlands Avenue Building 6 (Block 4430, Lot 1 [Portion]) Brooklyn, NY**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Click here to login to the FOIL Center.

USGS Quad: BROOKLYN

If your project or action is within or near an area with a rare animal, a permit may be required if the species is listed as endangered or threatened and the department determines the action may be harmful to the species or its habitat.

If your project or action is within or near an area with rare plants and/or significant natural communities, the environmental impacts may need to be addressed.

The presence of a unique geological feature or landform near a project, unto itself, does not trigger a requirement for a NYS DEC permit. Readers are advised, however, that there is the chance that a unique feature may also show in another data layer (ie. a wetland) and thus be subject to permit jurisdiction.

Please refer to the "Need a Permit?" tab for permit information or other authorizations regarding these natural resources.

Disclaimer: If you are considering a project or action in, or near, a wetland or a stream, a NYS DEC permit may be required. The Environmental Resources Mapper does not show all natural resources which are regulated by NYS DEC, and for which permits from NYS DEC are required. For example, Regulated Tidal Wetlands, and Wild, Scenic, and Recreational Rivers, are currently not included on the maps.

RE: PUBLIC RECORDS REQUEST of 10/13/2025, Reference # W154756-101325

Date: 11/04/2025

Dear Ashley Sandve,

In response to your Freedom of Information Law (FOIL) request seeking:

> *Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, groundwater sampling, asbestos abatement, radon, hazardous materials and any other documents that your department may have regarding the property at 12020 Flatlands Avenue Building 6 (Block 4430, Lot 1 [Portion]) Brooklyn, NY*

Please be advised that a diligent search of the files maintained by DEC produced no responsive records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

> FOIL Appeals Officer
> Office of General Counsel
> New York State Department of Environmental Conservation
> 625 Broadway, 14th Floor
> Albany, NY 12233-1500

Your FOIL request is now closed. For further assistance, please call (718) 482-4912 and reference FOIL #W154756-101325, or simply reply to this email. Thank you.

Sincerely,

Region 2 FOIL Coordinator

NEW YORK STATE | Department of Health

RE: FOIL Records Request of October 13, 2025, Reference # R005075-101325

Dear Ashley Sandve,

The NYS Department of Health received a FOIL request from you on October 13, 2025. You requested:

""Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, groundwater sampling, asbestos abatement, radon, hazardous materials and any other documents that your department may have regarding the property at 12020 Flatlands Avenue Building 6 (Block 4430, Lot 1 [Portion]) Brooklyn, NY""

Your request is acknowledged by the Records Access Office of the New York State Department of Health and, if appropriate, will be forwarded to the responsive program area(s) to identify documents that are responsive to your request.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days, on November 13, 2025. We will notify you in writing if the responsible program area(s) should require additional time to locate, assemble and review documents that may be responsive to your request.

Sincerely,

David J. Harvey, Records Access Officer

NYS Department of Health

RE: FOIL Records Request of October 13, 2025, Reference # R005075-101325

Dear Ashley Sandve,

The NYS Department of Health received a FOIL request from you on October 13, 2025. You requested:

Record Type: Environmental Records
Records Requested: "Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, groundwater sampling, asbestos abatement, radon, hazardous materials and any other documents that your department may have regarding the property at 12020 Flatlands Avenue Building 6 (Block 4430, Lot 1 [Portion]) Brooklyn, NY"
External Tracking #:

Please be advised this Office is unable to respond to your request by the date previously given to you. We are working diligently to identify or redact records responsive to your request.

The Records Access Office now expects to complete its process by December 29, 2025. The Department will notify you in writing when/if the responsive materials are available for release or if the time needed to complete your request extends beyond the above date.

Please note that the office is working through a significant backlog of FOIL requests and asks for your patience. If you need additional information or can provide additional information to assist this office you may respond directly to this automated message and we will attempt to answer your inquiry within two business days.

Should you require additional information or wish to discuss this matter further, please do not hesitate to contact the Records Access Office at (518) 474-8734.

Sincerely,

NYS Department of Health

To monitor the progress or update this request please log into the FOIL Records Access Center

Project Name: 12020 Flatlands Avenue Building 6 (Block 4430, Lot 1 [Portion]) Brooklyn, NY

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological

evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

https://www.fws.gov/sites/default/files/documents/endangered-species-consultation-handbook.pdf

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts, see https://www.fws.gov/program/migratory-bird-permit/what-we-do.

It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures, see https://www.fws.gov/library/collections/threats-birds.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit https://www.fws.gov/partner/council-conservation-migratory-birds.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Code in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Attachment(s):

- Official Species List

OFFICIAL SPECIES LIST

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Long Island Ecological Services Field Office
340 Smith Road
Shirley, NY 11967-2258
(631) 286-0485

PROJECT SUMMARY

Project Code: 2026-0003961
Project Name: 12020 Flatlands Avenue Building 6 (Block 4430, Lot 1 [Portion]) Brooklyn, NY
Project Type: Acquisition of Lands
Project Description: Phase I ESA
Project Location:

The approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@40.65131135,-73.88887476776205,14z

Counties: Kings County, New York

ENDANGERED SPECIES ACT SPECIES

There is a total of 5 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

MAMMALS

NAME	STATUS
Tricolored Bat *Perimyotis subflavus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/10515	Proposed Endangered

BIRDS

NAME	STATUS
Piping Plover *Charadrius melodus* Population: [Atlantic Coast and Northern Great Plains populations] - Wherever found, except those areas where listed as endangered. There is **final** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/6039	Threatened
Roseate Tern *Sterna dougallii dougallii* Population: Northeast U.S. nesting population No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/2083	Endangered
Rufa Red Knot *Calidris canutus rufa* There is **proposed** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/1864	Threatened

INSECTS

NAME	STATUS
Monarch Butterfly *Danaus plexippus* There is **proposed** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/9743	Proposed Threatened

CRITICAL HABITATS

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

YOU ARE STILL REQUIRED TO DETERMINE IF YOUR PROJECT(S) MAY HAVE EFFECTS ON ALL ABOVE LISTED SPECIES.

E and RD Property Search

Instructions: Please enter the Borough, Block, and Lot for the property you are interested in, and then hit search. If you do not know the Block and Lot of the property, please refer to NYC Department of City Planning's Geographic Online Address Translator (https://a030-goat.nyc.gov/Goat/). Please also search the original lot configuration if the property has been merged, subdivided, or affected. To identify the original lots, please use the NYC Digital Tax Map (http://gis.nyc.gov/taxmap/) and the NYC Department of Buildings Building Information System (BIS) (http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp).

Once you've identified the E-Designation and/or Restrictive Declaration information you are interested in, please consult the CEQR Documents section of OER's website (https://www.nyc.gov/site/oer/remediation/city-environmental-quality-review.page) and CEQR Access (https://a002-ceqraccess.nyc.gov/ceqr/) to identify Site-specific requirements. Please also visit the NYC Department of City Planning's (E) Designations - Frequently Asked Questions (http://www.nyc.gov/html/dcp/html/env_review/e_designation_faqs.shtml) page.

Disclaimer: The E and RD Property Search is a tool designed to assist with determining whether properties have Environmental Restrictions also known as E-Designations and Restrictive Declarations. The most updated list of properties with E-designations and Restrictive Declarations is maintained by the NYC Department of City Planning in Appendix C of the Zoning Resolution: E-Designations in Table 1 (https://zr.planning.nyc.gov/appendix-c-table-1-city-environmental-quality-review-ceqr-environmental-requirements-e-designations) and Restrictive Declarations in Table 2 (https://zr.planning.nyc.gov/appendix-c-table-2-city-environmental-quality-review-ceqr-environmental-requirements-environmental).

Please note that Appendix C and the E/RD Search tool may not reflect all merged, subdivided or condo (e.g., 7501) lots. This may lead to temporarily incorrect entries regarding environmental restrictions in the NYC Department of Buildings' Buildings Information System (http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp). According to the Zoning Resolution (ZR 11-15), when lots with an environmental restriction are merged, subdivided or affected, the resulting lots also carry the environmental restrictions. To confirm the results of this tool, we strongly recommend checking Appendix C Table 1 (https://zr.planning.nyc.gov/appendix-c-table-1-city-environmental-quality-review-ceqr-environmental-requirements-e-designations) and Table 2 (https://zr.planning.nyc.gov/appendix-c-table-2-city-environmental-quality-review-ceqr-environmental-requirements-environmental) to determine if the original lot configuration before the merging, subdivision, or condo conversion has an environmental restriction. Please see the instructions for additional information on identifying the original lot configuration. If you have questions about a property or you identify an error in either Appendix C of the Zoning Resolution or in the E and RD Property Search Tool, please contact OER.

New York City Office of Environmental Remediation 100 Gold Street, 2nd Floor New York, NY 10038. Our general phone number is: (212) 788-8841

Description:

A FOIL request is a request for any "record" under NY's Freedom Information Law (Article 6 of the Public Officers Law). Section 86 defines a "record" as: "any information kept, held, filed, produced reproduced by, with or for an agency or the state legislature, in ar physical form whatsoever including, but not limited to, reports, statements, examinations, memoranda, opinions, folders, files, bo manuals, pamphlets, forms, papers, designs, drawings, maps, pho letters, microfilms, computer tapes or discs, rules, regulations or codes. NYSDEC maintains records in a variety of forms, or media, as in hard copy (on paper), as recordings, as photographs, in elect form, etc.

Contact E-Mail:

asandve@langan.com

Type of Record(s) Requested:*

Environmental Site Assessment

Description of Record(s) Requested:*

Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, groundwater sampling, asbestos abatement, radon, hazardous materials and any other documents that your department may have regarding the property at 12020 Flatlands Avenue Building (Block 4430, Lot 1 [Portion]) Brooklyn, NY

NYSDEC Office processing the Request:*

- ○ Central Office (Albany) Covers the entire state
- ○ Region 1 (Long Island) Covers the counties of Nassau and Suffolk
- ● Region 2 (New York City) Covers the counties of Brooklyn Bronx Manhattan Queens and Staten Island
- ○ Region 3 (Lower Hudson Valley) Covers the counties of Dutchess Orange Putnam Rockland Sullivan Ulster and Westchester
- ○ Region 4 (Capital Region Northern Catskills) Covers the counties of Albany Columbia Delaware Greene Montgome Otsego Rensselaer Schenectady and Schoharie
- ○ Region 5 (Eastern Adirondacks Lake Champlain) Covers th counties of Clinton Essex Franklin Fulton Hamilton Saratog Warren and Washington
- ○ Region 6 (Western Adirondacks Eastern Lake Ontario) Cov the counties of Herkimer Jefferson Lewis Oneida and St. Lawrence
- ○ Region 7 (Central New York) Covers the counties of Broom Cayuga Chenango Cortland Madison Onondaga Oswego T and Tompkins
- ○ Region 8 (Western Finger Lakes) Covers the counties of Chemung Genesee Livingston Monroe Ontario Orleans Schuyler Seneca Steuben Wayne and Yates
- ○ Region 9 (Western New York) Covers the counties of Allega Chautauqua Cattaraugus Erie Niagara and Wyoming coun

If your request pertains to just one Region, select that Region. If your request pertains to more than one Region, select Central Office. If you're unsure which Region your request pertains to, select Central Office. The Department will route your request to the appropriate Region(s)

Preferred Method to Receive Records:*

- (●) Electronic copies
- ( ) Pick-up Copies
- ( ) Inspect in Office
- ( ) Copies by Fax
- ( ) Express Mail (UPS)
- ( ) Regular Surface Mail (USPS)

NYSDEC will use its best efforts to provide records via the method you select. However, in some cases a particular delivery method is not feasible. In such cases NYSDEC will deliver the records via an alternative method

Please note not all public documents are available in electronic format. If the document(s) requested are not available electronically, we will make them available for inspection or by paper copy in accordance with the Public Records Law.

Note: The maximum total file size per attachment is 80MB.

Submit a FOIL Request

Account:

asandve@langan.com

The Freedom of Information Law (Public Officers Law, Article 6) (FOIL) grants members of the public access records of government in accordance with its provisions. For more information about FOIL and the Persona Privacy Protection Law (Public Officers Law, Article 6-A), please visit the New York State Committee on Ope Government's website. (http://www.dos.ny.gov/coog/index.html)

Please be advised that GovQA has experienced intermittent acknowledgment errors, which may ha prevented an acknowledgment letter from being sent for your request. The Department is actively working with GovQA to resolve this issue.

If you require an acknowledgment letter for your records, you may request one manually. Rest assured, the Department has received your request and is processing it in the normal course of business.

Type of Records:*

FOIL Logs/Stats

Our office can provide you with a log that includes a FOIL request number, description, requestor name, a date the FOIL was received by our office. To receive this log, please provide a timeframe.

Records Timeframe:

Describe the Record(s) Requested:*

"Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, groundwater sampling, asbest abatement, radon, hazardous materials and any other documents that your department may have regarding the property at 2020 Flatlands Avenue Building 6 (Block 4430, Lot 1 [Portion]) Brooklyn, NY"

Please be specific with your request to narrow our search and respond to you quickly and efficiently.

Preferred Method to Receive Records:*

Electronic via Records Center

Please note not all public documents are available in electronic format. If the document(s) requested are not availa electronically, we will make them available for inspection or by paper copy in accordance with the FOIL Records La

APPENDIX D

User Provided Information

Clear Form

ASTM E1527-21 User Questionnaire

Please complete the below form and return to Langan.

Providing the following information (if available) to the environmental professional (Langan) is one of the requirements to qualify for one of the Landowner Liability Protections (LLP) offered under CERCLA. Missing or incomplete information for questions 1 through 6 could result in a determination that "all appropriate inquiry" is not complete. Additional information should be provided for "Yes" answers where relevant.

General Information

User/Client Names: _____

Reason for the Phase I ESA: _____

Type of property: _____

Type of property transaction (e.g. sale, purchase, exchange): _____

Subject property address (provide documentation of subject property boundary): _____

_____

Site Contact and Contact Information: _____

Relying Party(ies): _____

Required Information

(1.) Environmental liens that are filed or recorded against the subject property (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the subject property under federal, tribal, state or local law?

Yes ○ No ○

(2.) Activity and use limitations that are in place on the subject property or that have been filed or recorded against the subject property (40 CFR 312.26(a)(1)(v) and (vi)).

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded against the subject property under federal, tribal, state or local law?

Yes ○ No ○

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ○ No ○

(4.) Relationship of the purchase price to the fair market value of the subject property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this subject property reasonably reflect the fair market value of the subject property?

Yes ○ No ○

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject property?

Yes ○ No ○

(5.) Commonly known or reasonably ascertainable information about the subject property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? **Yes** ○ **No** ○

For example,

(a.) Do you know the past uses of the subject property? **Yes** ○ **No** ○

(b.) Do you know of specific chemicals that are present or once were present at the subject property? **Yes** ○ **No** ○

(c.) Do you know of spills or other chemical releases that have taken place at the subject property? **Yes** ○ **No** ○

(d.) Do you know of any environmental cleanups that have taken place at the subject property? **Yes** ○ **No** ○

(6.) The degree of obviousness of the presence or likely presence of contamination at the subject property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of releases at the subject property? **Yes** ○ **No** ○

Do you have knowledge or experience with the subject property that may be pertinent to the environmental professional (for example, copies of any available prior environmental site assessment reports, documents, correspondence, etc., concerning the property and its environmental condition)? **Yes** ○ **No** ○

(7.) Proceedings Involving the Subject Property Questions (Section 10.9 of ASTM E1527-21 and Section 10.10 of ASTM E2247-16)

Do you know of:

(a.) Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property? **Yes** ○ **No** ○

(b.) Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, at, or from the subject property? **Yes** ○ **No** ○

(c) Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? **Yes** ○ **No** ○

Signature

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Langan will evaluate and rely on this information in the development of the final Phase I ESA report.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Certified Sanborn® Map Report

11/13/25

Site Name:

CCC Building 6
12020 Flatlands Avenue
Brooklyn, NY 11207
EDR Inquiry # 8171977.3

Client Name:

Langan
300 Kimball Drive, 4th Floor
Parsippany, NJ 07054-2172
Contact: Jessica Friscia

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn® Library search results

Certification #: ADEC-4B64-89EA

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Langan (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT. Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Langan were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# 100688808

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 401 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity

generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are 3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EPA ID:: NYD981082217

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/04/2025 has revealed that there are 7 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 06/04/2025 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/03/2025 has revealed that there are 19 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 12 NY UST sites within approximately 0.25 miles of the target property.

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF UST site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 08/03/2025 has revealed that there are 12 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/02/2025 has revealed that there are 26 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS RCRA MANIFEST: To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

A review of the PFAS RCRA MANIFEST list, as provided by EDR, and dated 06/23/2025 has revealed that

there is 1 PFAS RCRA MANIFEST site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 21 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 12 UST FINDER sites within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 06/02/2025 has revealed that there are 12 E MANIFEST sites within approximately 0.25 miles of the target property.

NY PFAS: DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

A review of the NY PFAS list, as provided by EDR, has revealed that there is 1 NY PFAS site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Agency Which Determined Violation: State
Violation Short Description: Generators - General
Date Violation was Determined: 19911114
Actual Return to Compliance Date: 19920330
Return to Compliance Qualifier: Observed
Violation Responsible Agency: State
Scheduled Compliance Date: 19920319
Enforcement Identifier: 000
Date of Enforcement Action: 19911114
Enforcement Responsible Agency: State
Enforcement Docket Number: Not reported
Enforcement Attorney: Not reported
Corrective Action Component: No
Appeal Initiated Date: Not reported
Appeal Resolution Date: Not reported
Disposition Status Date: Not reported
Disposition Status: Not reported
Disposition Status Description: Not reported
Consent/Final Order Sequence Number: Not reported
Consent/Final Order Respondent Name: Not reported
Consent/Final Order Lead Agency: Not reported
Enforcement Type: WRITTEN INFORMAL
Enforcement Responsible Person: NYSAN
Enforcement Responsible Sub-Organization: R2
SEP Sequence Number: Not reported
SEP Expenditure Amount: Not reported

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	DAY TANK
Tank Id:	65438
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

J05 - Dispenser - On Site Heating System (Supply/Return)
G12 - Tank Secondary Containment - Double-Walled (AG only)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
I00 - Overfill - None
K00 - Spill Prevention - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
C01 - Pipe Location - Aboveground
E01 - Piping Secondary Containment - Diking (AG only)

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	04/01/2002
Capacity Gallons:	100

Hazardous Waste Summary:
Waste Code: D008
Waste Description: Lead

Waste Code: D009
Waste Description: Mercury

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

MTA NYCT- COZINE AVENUE IRON SHOP (Continued) **1000219148**

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

DEC Memo:	4/2/2015 - Feng - Duty Desk. Called Laurel Environmental (631-673-0612) and Carla Sullivan just left for the day. The receptionist said they have received lab results and preparing a report. The report is not ready yet. Carla is the only one who can provide further information. They will return my call tomorrow. 4/3/2015 - Talked to Carla Sullivan of Laurel Environmental (CSullivan@LaurelEnv.com). The property was in real estate transaction. The buyer hired a environmental company to do an investigation and found contamination. the seller did not trust the results and hired another environmental company to do another investigation and found no contamination. Laurel Environmental was brought in to do investigation and to confirm whether there is or no contamination. Laurel Environmental found contamination in soil where VOCs exceeded CP-51. The building was builit in 1963. The tank, i.e. 2,500-gallon fuel oil UST, was beneath the slab of the building and now is noted abandoned. There is no fillport, no vent pipe. They mapped it out in the GPR survey. The soil smell like diesel. She is not sure about the current use of the property nor the future use of the property. The soil borings went to groundwater, but they did not collect any groundwater samples. I advised her that DEC may require groundwater sampling if soil contamination is found. Searched PBS- 1) PBS 2-604377, Alabama Ave Realty Inc 980 Alabama Ave, Brooklyn (1) 2,500-gallon steel #2 fuel oil UST, in service, next test 9/2/2014 2) PBS 2-360643 LADS Associates 960 Alabama Ave, Brooklyn (1) 5,000-gallon steel #2 fuel oil UST, closed-in-place email from Carla Sullivan. The former owner: Mayer Berkovitz mayerberkovitz@gmail.com cell: 917-854-8098 Brief to V.Zhune and transferred the spill to V.Zhune. 6/9/15-Vought-DEC Zhune away from office on extended leave. Vought received call from and spoke to Dotty (ABC Tank) that the tank has been removed and they are installing shoring and soil borings have been performed and results were sent to DEC Zhune. They will begin excavation and send report, including endpoint sample analyses, to DEC Zhune. 6/16/15-Vought-Received call from Donna from ABC Tank and they have

966 -988 ALABAMA AVE (Continued) **S117851771**

reached structural limitations. Donna will send in endpoints results with site and recommendations
for further action. Vought discussed need for delineation of soil contamination (such as possible
groundwater sample collection to residence) and possible of installation of sub-slab venting system
and excavation will be covered with plastic. Donna will send soil endpoint results to DEC and will
also send them to a consultant (eg Preferred Envioronmental) for review and further
recommendations. 8/14/15-Donna from ABC Tank Repair & Lining Inc. sent the spill closure report.
Spill Closed. 8/14/15-Donna emailed the Phase II prepared for Laurel Environmental Associates.
Laboratory analysis of soil samples collected from eight(8) borings within the proximity of the
2500 gallon UST found levels of VOC above NYSDEC CP-51 in four of the borings locations (SB-4,
SB-5, SB-7 and SB-8). 8/14/15-Donna emailed the spill closure letter and the analytical results.
ABC Tank broke up the cement & dug up to expose the top of the buried (1) 2500 gallon tank. The
tank was filled with sand & improperly abandoned by others. The top of the tank was cut open and
all product (oily sand) was removed from the interior of the tank & placed in (30) drums for proper
disposal. All lines on top of the tank has been cut and removed during the abandonment by others.
ABC tank cut and removed the existing (1) 2500 gallon buried tank from the site. ABC dug up the
contaminated soil from the affected area and placed all the contaminated soil in (16) drums for
proper disposal. ABC tank was able to remove the existing contaminated soil from around the
footing. ABC tank obtained(4) end-point soil samples labeled North East, North West, South East &
South West. Each sample was obtained 10’ to 16’ below grade level. The soil analytical results were
below the NYSDEC CP-51 unrestricted residential soil standard.

Remarks: soil samples done twice in the past by two different companies, 1st time contamination found, 2nd time no contamination found, today new test doneconfirms contamination. Tank present under slab

NYC HOUSING BULDING (Continued) **S132373225**

DEC Memo: 09/03/24-Hiralkumar Patel. 12:47 PM:- spoke with Ryan at NYCHA. on-site 15,000-gal #2 fuel oil UST (PBS #: 2-474088) has failed a tightness test in a dry portion. the tank currently has 32 inches of project. NYCHA is going to remove remaining product and taking tank system out-of-service for further testing. Ryan McPherson NYCHA Ph. (929) 459-4788 email: Ryan.McPherson@nycha.nyc.gov 1:07 PM:- emailed TTF letter to Ryan. email copied to DEC Kim. case assigned to DEC Kim. 11/22/24 - Kim - I received a follow up tank test report and photo of the fill box and vent pipe. Uploaded to Dec Docs. NYCHA McPherson informed the Department that the issue that caused the failed tightness test 9/3/24 was the sensor piping. NYCHA had the sensor piping replaced. The tank system was retested and passed on 11/20/24. Spill case closed - end

Remarks: Tank test failure

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Federal Waste Generator Description: Not a generator, verified
State District Owner: Ny
Large Quantity Handler of Universal Waste: No
Recognized Trader Importer: No
Recognized Trader Exporter: No
Spent Lead Acid Battery Importer: No
Spent Lead Acid Battery Exporter: No
Current Record: Yes
Non Storage Recycler Activity: Not reported
Electronic Manifest Broker: Not reported

Receive Date: 19990812
Handler Name: NYCHA - VANDALIA AVENUE HOUSES
Federal Waste Generator Description: Small Quantity Generator
State District Owner: Ny
Large Quantity Handler of Universal Waste: No
Recognized Trader Importer: No
Recognized Trader Exporter: No
Spent Lead Acid Battery Importer: No
Spent Lead Acid Battery Exporter: No
Current Record: No
Non Storage Recycler Activity: Not reported
Electronic Manifest Broker: Not reported

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

12096 FLATLANDS AVENUE (Continued) **S126369653**

Control Type: INST
Dt record added: 03/27/2025
Dt rec updated: 06/09/2025
Updated By: SXWU
Site Code: 580601
Site Description: Site Location: The site is located in an urban area and is bounded to the north by Flatlands Avenue followed by a gasoline filling station, automotive repair facility, carwash, and Sheffield Avenue, to the east by Pennsylvania Avenue followed by a vacant landscaped lot and the northern courtyard of a twenty story residential building (part of the Starrett City Complex), to the south by a twelve story multi-family residential building, and to the west by the western extents of the gravel lot currently used for surplus parking. Site Features: The site has completed remedial field work and is currently undergoing redevelopment. Current Zoning and Land Use: The site is zoned as R7-2 (residential) with a C2-4 (commercial) overlay, which allows for the development of 100% income based affordable housing and higher density buildings. Past Use of the Site: Historical site use and features include a former gasoline filling station, former operations for automotive dismantling/wrecking, and historical filling during the early 1900s using ash and residue from a municipal solid waste incinerator. Historical uses of adjacent and nearby properties include gasoline filling stations and automotive repair to the north between 1950 and 2007 and automotive junk yards adjacent to the west from 1967 through 2001. Site Geology and Hydrogeology: Based on the Remedial Investigation (RI), the subsurface strata at the site consists of historic fill generally consisting of brown, gray, or black fine to coarse sand with varying proportions of fine to coarse gravel, silt, clay, ash, and miscellaneous debris including brick, concrete, asphalt, wood, and glass to depths ranging from approximately 13.5 to at least 30 feet below grade. The fill is underlain by a native brown to dark brown or dark grey sand unit with varying proportion of gravel, silt and clay that extended to the determination depths of all borings, which ranged from 20 to 77 feet below grade. An ash layer was also identified within the historic fill layer during the 2018 and 2021 environmental investigations. During the 2018 Phase II investigation, the top of a 2 to 12 foot thick ash layer was encountered in all soil borings at depths ranging from 6 to 10 feet below existing grade in the northern and central portions of the Site, and at approximately 18 feet below existing grade in the southern portion of the Site. Two separate ash layers were observed within two of the soil borings in the northern portion of the Site. During the 2021 investigation, the top of a 0.5 to 2 foot thick ash layer was encountered within the eastern, southwestern and western portions of the site in four of eight soils borings at depths ranging from 4 to 10 feet below existing grade across the site. Groundwater was encountered between 12.13 and 17.44 feet below ground surface during the RI. Based on area topography, observed water level measurements, and the proximity of the site to Fresh Creek, groundwater flow is to the south toward Fresh Creek and Jamaica Bay.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern for the site include SVOCs and metals in soil. Nature and Extent of Contamination Prior to Remediation: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per and polyfluoroalkyl substances

12096 FLATLANDS AVENUE (Continued) **S126369653**

(PFAS), and pesticides. Soil No VOCs were detected exceeding the applicable unrestricted use soil cleanup objectives (UUSCOs). SVOCs including benzo(a)pyrene were detected at maximum concentrations of 3.63 parts per million (ppm) compared to UUSCO of 1 ppm. Dibenzo(a,h)anthracene was detected at maximum concentrations of 0.729 ppm compared to UUSCO of 0.33 ppm. Benzo(a)anthracene was detected at maximum concentrations of 4.12 ppm compared to UUSCO of 1 ppm. Lead was detected at maximum concentrations of 4,030 ppm compared to the UUSCO of 63 ppm. Mercury was detected at a maximum concentration of 5.92 ppm compared to the UUSCO of 0.18ppm. PCB was detected at a maximum concentration of 2.39 ppm compared to UUSCOs of 1 ppm. Perfluorooctanesulfonic acid (PFOS) was detected in soil at a maximum concentration of 2.14 parts per billion (ppb) compared to the unrestricted use guidance value of 0.88 ppb. Perfluorooctanoic acid (PFOA) was detected at a maximum concentration of 1.09 ppb compared to guidance value of 0.66 ppb. Pesticide 4,4' DDT at the central region of the site was detected at maximum concentration of 0.0117 ppm (approximate concentration) compared to the UUSCO of 0.00333 ppm. 4,4' DDE was detected at maximum concentration of 0.0134 ppm (approximate concentration) compared to the UUSCO of 0.0033 ppm. Data does not indicate any off site impacts in soil related to the site. Groundwater During the Phase II investigation in 2018, Benzo(a)anthracene was found at a concentration of 0.0632 ppb compared to Ambient Water Quality Standards and Guidance Values (AWQSGVs) of 0.002 ppb. Subsequent sampling done during the RI phase in this location and other locations throughout the site showed no exceedances of VOCs, SVOCs, pesticides, or PCBs above AWQSGVs. Barium (dissolved) was detected in groundwater at a maximum concentration of 1270 parts per billion (ppb) compared to AWQSGV of 1000 ppb. No other dissolved metals were detected in groundwater above AWQSGVs besides naturally occurring metals such as iron, manganese, and sodium. PFOS was detected in groundwater at a maximum concentration of 27.5 parts per trillion (ppt) compared to AWQSGV of 2.7 ppt. PFOA was detected at highest concentrations at 169 ppt compared to AWQSGV of 6.7 ppt. Data does not indicate any off site impacts in groundwater related to the site. Soil Vapor Cis 1,2 dichloroethene was detected at a maximum concentration of 7.3 micrograms per cubic meter (ug/m3). Vinyl Chloride was detected at a maximum concentration of 22 ug/m3. Data does not indicate any off site impacts to soil vapor related to the site.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming into contact with remaining site contamination.

Name: 12096 FLATLANDS AVENUE
Address: 30 INSPIRATION LANE (F/K/A 12096 FLATLANDS AVE. &
City,State,Zip: BROOKLYN, NY 11207
Site Code: 580601
Control Name: Environmental Easement
HW Code: C224290
Control Code: J
Control Type: INST
Dt record added: 03/27/2025
Dt rec updated: 06/09/2025
Updated By: SXWU
Site Code: 580601
Site Description: Site Location: The site is located in an urban area and is bounded to the north by Flatlands Avenue followed by a gasoline filling station, automotive repair facility, carwash, and Sheffield Avenue, to the east by Pennsylvania Avenue followed by a vacant landscaped lot and the northern courtyard of a twenty story residential building (part of the Starrett City Complex), to the south by a twelve story multi-family residential building, and to the west by the western extents of the gravel lot currently used for surplus parking. Site Features: The site has completed remedial field work and is currently undergoing redevelopment. Current Zoning and Land Use: The site is zoned as R7-2 (residential) with a C2-4 (commercial) overlay, which allows for the development of 100% income based affordable housing and higher density buildings. Past Use of the Site: Historical site use and features include a former gasoline filling station, former operations for automotive dismantling/wrecking, and historical filling during the early 1900s using ash and residue from a municipal solid waste incinerator. Historical uses of adjacent and nearby properties include gasoline filling stations and automotive repair to the north between 1950 and 2007 and automotive junk yards adjacent to the west from 1967 through 2001. Site Geology and Hydrogeology: Based on the Remedial Investigation (RI), the subsurface strata at the site consists of historic fill generally consisting of brown, gray, or black fine to coarse sand with varying proportions of fine to coarse gravel, silt, clay, ash, and miscellaneous debris including brick, concrete, asphalt, wood, and glass to depths ranging from approximately 13.5 to at least 30 feet below grade. The fill is underlain by a native brown to dark brown or dark grey sand unit with

12096 FLATLANDS AVENUE (Continued) **S126369653**

varying proportion of gravel, silt and clay that extended to the determination depths of all borings, which ranged from 20 to 77 feet below grade. An ash layer was also identified within the historic fill layer during the 2018 and 2021 environmental investigations. During the 2018 Phase II investigation, the top of a 2 to 12 foot thick ash layer was encountered in all soil borings at depths ranging from 6 to 10 feet below existing grade in the northern and central portions of the Site, and at approximately 18 feet below existing grade in the southern portion of the Site. Two separate ash layers were observed within two of the soil borings in the northern portion of the Site. During the 2021 investigation, the top of a 0.5 to 2 foot thick ash layer was encountered within the eastern, southwestern and western portions of the site in four of eight soils borings at depths ranging from 4 to 10 feet below existing grade across the site. Groundwater was encountered between 12.13 and 17.44 feet below ground surface during the RI. Based on area topography, observed water level measurements, and the proximity of the site to Fresh Creek, groundwater flow is to the south toward Fresh Creek and Jamaica Bay.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern for the site include SVOCs and metals in soil. Nature and Extent of Contamination Prior to Remediation: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per and polyfluoroalkyl substances (PFAS), and pesticides. Soil No VOCs were detected exceeding the applicable unrestricted use soil cleanup objectives (UUSCOs). SVOCs including benzo(a)pyrene were detected at maximum concentrations of 3.63 parts per million (ppm) compared to UUSCO of 1 ppm. Dibenzo(a,h)anthracene was detected at maximum concentrations of 0.729 ppm compared to UUSCO of 0.33 ppm. Benzo(a)anthracene was detected at maximum concentrations of 4.12 ppm compared to UUSCO of 1 ppm. Lead was detected at maximum concentrations of 4,030 ppm compared to the UUSCO of 63 ppm. Mercury was detected at a maximum concentration of 5.92 ppm compared to the UUSCO of 0.18ppm. PCB was detected at a maximum concentration of 2.39 ppm compared to UUSCOs of 1 ppm. Perfluorooctanesulfonic acid (PFOS) was detected in soil at a maximum concentration of 2.14 parts per billion (ppb) compared to the unrestricted use guidance value of 0.88 ppb. Perfluorooctanoic acid (PFOA) was detected at a maximum concentration of 1.09 ppb compared to guidance value of 0.66 ppb. Pesticide 4,4’ DDT at the central region of the site was detected at maximum concentration of 0.0117 ppm (approximate concentration) compared to the UUSCO of 0.00333 ppm. 4,4’ DDE was detected at maximum concentration of 0.0134 ppm (approximate concentration) compared to the UUSCO of 0.0033 ppm. Data does not indicate any off site impacts in soil related to the site. Groundwater During the Phase II investigation in 2018, Benzo(a)anthracene was found at a concentration of 0.0632 ppb compared to Ambient Water Quality Standards and Guidance Values (AWQSGVs) of 0.002 ppb. Subsequent sampling done during the RI phase in this location and other locations throughout the site showed no exceedances of VOCs, SVOCs, pesticides, or PCBs above AWQSGVs. Barium (dissolved) was detected in groundwater at a maximum concentration of 1270 parts per billion (ppb) compared to AWQSGV of 1000 ppb. No other dissolved metals were detected in groundwater above AWQSGVs besides naturally occurring metals such as iron, manganese, and sodium. PFOS was detected in groundwater at a maximum concentration of 27.5 parts

12096 FLATLANDS AVENUE (Continued) **S126369653**

per trillion (ppt) compared to AWQSGV of 2.7 ppt. PFOA was detected at highest concentrations at 169 ppt compared to AWQSGV of 6.7 ppt. Data does not indicate any off site impacts in groundwater related to the site. Soil Vapor Cis 1,2 dichloroethene was detected at a maximum concentration of 7.3 micrograms per cubic meter (ug/m3). Vinyl Chloride was detected at a maximum concentration of 22 ug/m3. Data does not indicate any off site impacts to soil vapor related to the site.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming into contact with remaining site contamination.

Site Code: 580601
Site Description: Site Location: The site is located in an urban area and is bounded to the north by Flatlands Avenue followed by a gasoline filling station, automotive repair facility, carwash, and Sheffield Avenue, to the east by Pennsylvania Avenue followed by a vacant landscaped lot and the northern courtyard of a twenty story residential building (part of the Starrett City Complex), to the south by a twelve story multi-family residential building, and to the west by the western extents of the gravel lot currently used for surplus parking. Site Features: The site has completed remedial field work and is currently undergoing redevelopment. Current Zoning and Land Use: The site is zoned as R7-2 (residential) with a C2-4 (commercial) overlay, which allows for the development of 100% income based affordable housing and higher density buildings. Past Use of the Site: Historical site use and features include a former gasoline filling station, former operations for automotive dismantling/wrecking, and historical filling during the early 1900s using ash and residue from a municipal solid waste incinerator. Historical uses of adjacent and nearby properties include gasoline filling stations and automotive repair to the north between 1950 and 2007 and automotive junk yards adjacent to the west from 1967 through 2001. Site Geology and Hydrogeology: Based on the Remedial Investigation (RI), the subsurface strata at the site consists of historic fill generally consisting of brown, gray, or black fine to coarse sand with varying proportions of fine to coarse gravel, silt, clay, ash, and miscellaneous debris including brick, concrete, asphalt, wood, and glass to depths ranging from approximately 13.5 to at least 30 feet below grade. The fill is underlain by a native brown to dark brown or dark grey sand unit with varying proportion of gravel, silt and clay that extended to the determination depths of all borings, which ranged from 20 to 77 feet below grade. An ash layer was also identified within the historic fill layer during the 2018 and 2021 environmental investigations. During the 2018 Phase II investigation, the top of a 2 to 12 foot thick ash layer was encountered in all soil borings at depths ranging from 6 to 10 feet below existing grade in the northern and central

12096 FLATLANDS AVENUE (Continued) **S126369653**

portions of the Site, and at approximately 18 feet below existing grade in the southern portion of the Site. Two separate ash layers were observed within two of the soil borings in the northern portion of the Site. During the 2021 investigation, the top of a 0.5 to 2 foot thick ash layer was encountered within the eastern, southwestern and western portions of the site in four of eight soils borings at depths ranging from 4 to 10 feet below existing grade across the site. Groundwater was encountered between 12.13 and 17.44 feet below ground surface during the RI. Based on area topography, observed water level measurements, and the proximity of the site to Fresh Creek, groundwater flow is to the south toward Fresh Creek and Jamaica Bay.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern for the site include SVOCs and metals in soil. Nature and Extent of Contamination Prior to Remediation: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per and polyfluoroalkyl substances (PFAS), and pesticides. Soil No VOCs were detected exceeding the applicable unrestricted use soil cleanup objectives (UUSCOs). SVOCs including benzo(a)pyrene were detected at maximum concentrations of 3.63 parts per million (ppm) compared to UUSCO of 1 ppm. Dibenzo(a,h)anthracene was detected at maximum concentrations of 0.729 ppm compared to UUSCO of 0.33 ppm. Benzo(a)anthracene was detected at maximum concentrations of 4.12 ppm compared to UUSCO of 1 ppm. Lead was detected at maximum concentrations of 4,030 ppm compared to the UUSCO of 63 ppm. Mercury was detected at a maximum concentration of 5.92 ppm compared to the UUSCO of 0.18ppm. PCB was detected at a maximum concentration of 2.39 ppm compared to UUSCOs of 1 ppm. Perfluorooctanesulfonic acid (PFOS) was detected in soil at a maximum concentration of 2.14 parts per billion (ppb) compared to the unrestricted use guidance value of 0.88 ppb. Perfluorooctanoic acid (PFOA) was detected at a maximum concentration of 1.09 ppb compared to guidance value of 0.66 ppb. Pesticide 4,4' DDT at the central region of the site was detected at maximum concentration of 0.0117 ppm (approximate concentration) compared to the UUSCO of 0.00333 ppm. 4,4' DDE was detected at maximum concentration of 0.0134 ppm (approximate concentration) compared to the UUSCO of 0.0033 ppm. Data does not indicate any off site impacts in soil related to the site. Groundwater During the Phase II investigation in 2018, Benzo(a)anthracene was found at a concentration of 0.0632 ppb compared to Ambient Water Quality Standards and Guidance Values (AWQSGVs) of 0.002 ppb. Subsequent sampling done during the RI phase in this location and other locations throughout the site showed no exceedances of VOCs, SVOCs, pesticides, or PCBs above AWQSGVs. Barium (dissolved) was detected in groundwater at a maximum concentration of 1270 parts per billion (ppb) compared to AWQSGV of 1000 ppb. No other dissolved metals were detected in groundwater above AWQSGVs besides naturally occurring metals such as iron, manganese, and sodium. PFOS was detected in groundwater at a maximum concentration of 27.5 parts per trillion (ppt) compared to AWQSGV of 2.7 ppt. PFOA was detected at highest concentrations at 169 ppt compared to AWQSGV of 6.7 ppt. Data does not indicate any off site impacts in groundwater related to the site. Soil Vapor Cis 1,2 dichloroethene was detected at a maximum concentration of 7.3 micrograms per cubic meter (ug/m3). Vinyl Chloride was detected at a maximum concentration of 22 ug/m3. Data does not indicate any off site impacts to soil vapor related to the

12096 FLATLANDS AVENUE (Continued) **S126369653**

site.
Health Problem: Remedial actions are complete and measures are in place to prevent people from coming into contact with remaining site contamination.

Groundwater During the Phase II investigation in 2018, Benzo(a)anthracene was found at a concentration of 0.0632 ppb compared to Ambient Water Quality Standards and Guidance Values (AWQSGVs) of 0.002 ppb. Subsequent sampling done during the RI phase in this location and other locations throughout the site showed no exceedances of VOCs, SVOCs, pesticides, or PCBs above AWQSGVs. Barium (dissolved) was detected in groundwater at a maximum concentration of 1270 parts per billion (ppb) compared to AWQSGV of 1000 ppb. No other dissolved metals were detected in groundwater above AWQSGVs besides naturally occurring metals such as iron, manganese, and sodium. PFOS was detected in groundwater at a maximum concentration of 27.5 parts per trillion (ppt) compared to AWQSGV of 2.7 ppt. PFOA was detected at highest concentrations at 169 ppt compared to AWQSGV of 6.7 ppt. Data does not indicate any off site impacts in groundwater related to the site. Soil Vapor Cis 1,2 dichloroethene was detected at a maximum concentration of 7.3 micrograms per cubic meter (ug/m3). Vinyl Chloride was detected at a maximum concentration of 22 ug/m3. Data does not indicate any off site impacts to soil vapor related to the site.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming into contact with remaining site contamination.

BROWNFIELDS:

Name:	12096 FLATLANDS AVENUE
Address:	30 INSPIRATION LANE (F/K/A 12096 FLATLANDS AVE. &
City,State,Zip:	BROOKLYN, NY 11207
Program:	BCP
Site Code:	580601
Acres:	1.572
HW Code:	C224290
SWIS:	2401
Town:	New York City
Record Added Date:	12/19/2018
Record Updated Date:	06/18/2025
Update By:	AAOBLIGA
Site Description:	Site Location: The site is located in an urban area and is bounded to the north by Flatlands Avenue followed by a gasoline filling station, automotive repair facility, carwash, and Sheffield Avenue, to the east by Pennsylvania Avenue followed by a vacant landscaped lot and the northern courtyard of a twenty story residential building (part of the Starrett City Complex), to the south by a twelve story multi-family residential building, and to the west by the western extents of the gravel lot currently used for surplus parking. Site Features: The site has completed remedial field work and is currently undergoing redevelopment. Current Zoning and Land Use: The site is zoned as R7-2 (residential) with a C2-4 (commercial) overlay, which allows for the development of 100% income based affordable housing and higher density buildings. Past Use of the Site: Historical site use and features include a former gasoline filling station, former operations for automotive dismantling/wrecking, and historical

12096 FLATLANDS AVENUE (Continued) **S126369653**

filling during the early 1900s using ash and residue from a municipal solid waste incinerator. Historical uses of adjacent and nearby properties include gasoline filling stations and automotive repair to the north between 1950 and 2007 and automotive junk yards adjacent to the west from 1967 through 2001. Site Geology and Hydrogeology: Based on the Remedial Investigation (RI), the subsurface strata at the site consists of historic fill generally consisting of brown, gray, or black fine to coarse sand with varying proportions of fine to coarse gravel, silt, clay, ash, and miscellaneous debris including brick, concrete, asphalt, wood, and glass to depths ranging from approximately 13.5 to at least 30 feet below grade. The fill is underlain by a native brown to dark brown or dark grey sand unit with varying proportion of gravel, silt and clay that extended to the determination depths of all borings, which ranged from 20 to 77 feet below grade. An ash layer was also identified within the historic fill layer during the 2018 and 2021 environmental investigations. During the 2018 Phase II investigation, the top of a 2 to 12 foot thick ash layer was encountered in all soil borings at depths ranging from 6 to 10 feet below existing grade in the northern and central portions of the Site, and at approximately 18 feet below existing grade in the southern portion of the Site. Two separate ash layers were observed within two of the soil borings in the northern portion of the Site. During the 2021 investigation, the top of a 0.5 to 2 foot thick ash layer was encountered within the eastern, southwestern and western portions of the site in four of eight soils borings at depths ranging from 4 to 10 feet below existing grade across the site. Groundwater was encountered between 12.13 and 17.44 feet below ground surface during the RI. Based on area topography, observed water level measurements, and the proximity of the site to Fresh Creek, groundwater flow is to the south toward Fresh Creek and Jamaica Bay.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern for the site include SVOCs and metals in soil. Nature and Extent of Contamination Prior to Remediation: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per and polyfluoroalkyl substances (PFAS), and pesticides. Soil No VOCs were detected exceeding the applicable unrestricted use soil cleanup objectives (UUSCOs). SVOCs including benzo(a)pyrene were detected at maximum concentrations of 3.63 parts per million (ppm) compared to UUSCO of 1 ppm. Dibenzo(a,h)anthracene was detected at maximum concentrations of 0.729 ppm compared to UUSCO of 0.33 ppm. Benzo(a)anthracene was detected at maximum concentrations of 4.12 ppm compared to UUSCO of 1 ppm. Lead was detected at maximum concentrations of 4,030 ppm compared to the UUSCO of 63 ppm. Mercury was detected at a maximum concentration of 5.92 ppm compared to the UUSCO of 0.18ppm. PCB was detected at a maximum concentration of 2.39 ppm compared to UUSCOs of 1 ppm. Perfluorooctanesulfonic acid (PFOS) was detected in soil at a maximum concentration of 2.14 parts per billion (ppb) compared to the unrestricted use guidance value of 0.88 ppb. Perfluorooctanoic acid (PFOA) was detected at a maximum concentration of 1.09 ppb compared to guidance value of 0.66 ppb. Pesticide 4,4’ DDT at the central region of the site was detected at maximum concentration of 0.0117 ppm (approximate concentration) compared to the UUSCO of 0.00333 ppm. 4,4’ DDE was detected at maximum concentration of 0.0134 ppm (approximate concentration) compared to the UUSCO of 0.0033 ppm. Data

12096 FLATLANDS AVENUE (Continued) **S126369653**

	does not indicate any off site impacts in soil related to the site. Groundwater During the Phase II investigation in 2018, Benzo(a)anthracene was found at a concentration of 0.0632 ppb compared to Ambient Water Quality Standards and Guidance Values (AWQSGVs) of 0.002 ppb. Subsequent sampling done during the RI phase in this location and other locations throughout the site showed no exceedances of VOCs, SVOCs, pesticides, or PCBs above AWQSGVs. Barium (dissolved) was detected in groundwater at a maximum concentration of 1270 parts per billion (ppb) compared to AWQSGV of 1000 ppb. No other dissolved metals were detected in groundwater above AWQSGVs besides naturally occurring metals such as iron, manganese, and sodium. PFOS was detected in groundwater at a maximum concentration of 27.5 parts per trillion (ppt) compared to AWQSGV of 2.7 ppt. PFOA was detected at highest concentrations at 169 ppt compared to AWQSGV of 6.7 ppt. Data does not indicate any off site impacts in groundwater related to the site. Soil Vapor Cis 1,2 dichloroethene was detected at a maximum concentration of 7.3 micrograms per cubic meter (ug/m3). Vinyl Chloride was detected at a maximum concentration of 22 ug/m3. Data does not indicate any off site impacts to soil vapor related to the site.
Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming into contact with remaining site contamination.

Jamaica Bay.

Summary: Remedial actions are complete and measures are in place to prevent people from coming into contact with remaining site contamination.

Summary: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern for the site include SVOCs and metals in soil. Nature and Extent of Contamination Prior to Remediation: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per and polyfluoroalkyl substances (PFAS), and pesticides. Soil No VOCs were detected exceeding the applicable unrestricted use soil cleanup objectives (UUSCOs). SVOCs including benzo(a)pyrene were detected at maximum concentrations of 3.63 parts per million (ppm) compared to UUSCO of 1 ppm. Dibenzo(a,h)anthracene was detected at maximum concentrations of 0.729 ppm compared to UUSCO of 0.33 ppm. Benzo(a)anthracene was detected at maximum concentrations of 4.12 ppm compared to UUSCO of 1 ppm. Lead was detected at maximum concentrations of 4,030 ppm compared to the UUSCO of 63 ppm. Mercury was detected at a maximum concentration of 5.92 ppm compared to the UUSCO of 0.18ppm. PCB was detected at a maximum concentration of 2.39 ppm compared to UUSCOs of 1 ppm. Perfluorooctanesulfonic acid (PFOS) was detected in soil at a maximum concentration of 2.14 parts per billion (ppb) compared to the unrestricted use guidance value of 0.88 ppb. Perfluorooctanoic acid (PFOA) was detected at a maximum concentration of 1.09 ppb compared to guidance value of 0.66 ppb. Pesticide 4,4' DDT at the central region of the site was detected at maximum concentration of 0.0117 ppm (approximate concentration) compared to the UUSCO of 0.00333 ppm. 4,4' DDE was detected at maximum concentration of 0.0134 ppm (approximate concentration) compared to the UUSCO of 0.0033 ppm. Data does not indicate any off site impacts in soil related to the site. Groundwater During the Phase II investigation in 2018, Benzo(a)anthracene was found at a concentration of 0.0632 ppb compared to Ambient Water Quality Standards and Guidance Values (AWQSGVs) of 0.002 ppb. Subsequent sampling done during the RI phase in this location and other locations throughout the site showed no exceedances of VOCs, SVOCs, pesticides, or PCBs above AWQSGVs. Barium (dissolved) was detected in groundwater at a maximum concentration of 1270 parts per billion (ppb) compared to AWQSGV of 1000 ppb. No other dissolved metals were detected in groundwater above AWQSGVs besides naturally occurring metals such as iron, manganese, and sodium. PFOS was detected in groundwater at a maximum concentration of 27.5 parts per trillion (ppt) compared to AWQSGV of 2.7 ppt. PFOA was detected at highest concentrations at 169 ppt compared to AWQSGV of 6.7 ppt. Data does not indicate any off site impacts in groundwater related to the site. Soil Vapor Cis 1,2 dichloroethene was detected at a maximum concentration of 7.3 micrograms per cubic meter (ug/m3). Vinyl Chloride was detected at a maximum concentration of 22 ug/m3. Data does not indicate any off site impacts to soil vapor related to the site.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary

AMOCO-57130126005 (Continued) **1000556257**

sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	O'Dowd Notes(KMF): 10/93 Tyree removed 3X4K and 6X550s(filled with concrete), found contaminated soil. Tyree prepared a Tank Removal Assessment Report. High soil contamination in old 4K excavation. Not as bad in 550 excavation. DEC requested at least 4 test borings in areas of existing soil contamination. 9/6/95 Tyree performed a subsurface investigation utilizing a Geoprobe. MW-1 is upgradient well. Strong petroleum odors in W-1, 3 & 4. B-1 at 10-12'bgs and B-4 at 11-13'bgs had very high soil contamination. Due to the shallow water table and high levels of contamination in soil, it's likely GW is impacted. DTW 11-13'bgs. Tyree will install 5 MWs to delineate. 7/10/96 Meeting- Amoco will test USTs(MtBE too high), will install 2 addtional MWs, determine GW flow, develop wells and sample. Pilot test for EFR. Long term will have to go offsite on Flatlands & Pennsylvania Ave. DTW 10-11'bgs. Baltec intends to perform a sensitive receptor survey of adjacent properties and investigate potential off-site sources of petroleum. Baltec anticipates installing a number of MWs at the site to completely define the horizontal and vertical extent. 12/96-1/97 Baltec to install additional MWs. Currently the vertical and horizontal delineation has not been attained. Installation of addtional wells necessary. Baltec intends to schedule in 2Q97. 1/97-3/97 MW-5 had 0.03-0.1' LPH. Baltec will conduct EFR at site. 4/97-6/97 MW-5 has 0.03-0.1' LPH. 7/97 EFR has been performed over the past 4months. Baltec intends to continue EFR on a monthly basis to determine if it will be effective to address contamination. On 10/9/97, EFR was performed on MW-5 for approx 3.5hrs. An estimated 1470gal of GW was treated and 5.3lbs combustible vapors removed from well. On 11/14/97, EFR was performed on MW-5 and MW-1 for approx 2 and 3hrs respectively. An estimated 1155gal of GW was treated adn

SPARTAN AMOCO STATION (Continued) **S103478415**

1.39lbs of combustible vapors
removed from both. On 12/5/97 EFR was performed on MW-2 and MW-1 for approx 2 and 3hrs
respectively. 190gal of GW treated, 0gal LNAPL recovered, 1.35lbs of vapors removed. No LNAPL has
been detected in MW-5 subsequent to EFR. Additionally, BTEX/MTBE concentrations are declining.
Baltec intends to gauge and sample the MWs on a quarterly basis. In addition, EFR will be conducted
every other month. 1/12/98 EFR performed on MW-2 for approx 5.5hrs. 1022gal GW treated, approx
0.84lbs vapors removed. To date, an estimated 5101gal fluids have been treated and 10.95lbs vapors
removed. No LNAPL has been detected on site since 4/97. BTEX/MTBE declining. Quarterly gauging and
gw smapling semi-annually. Conducting EFR regularly. 4/25/05 Reassigned from Sun to Foley. Due to
notes found, address was changed from 810 Metropolitan(Hess) to 1130 Pennsylvania. File found with
Amoco sites. 7/11/01 Quarterly Monitoring report submitted by Impact Env. for Spartan Petroleum
Corp. Impact installed five one inch wells by Geoprobe along Pennsylvania Ave for ORC injection
points. Screened from 5-20'bgs. Injected 100lbs of ORC on 7/6/01. Range of concentrations in gw
have gone relatively unchanged, with the exception of MW-5. Detection of contaminants at increased
concentrations is the result of the bacteria breaking the adhesion bonds of the contaminants to the
soil at the GW interface. Subsequent analysis needed. Impact intends to submit an investigation
plan to delineate the detected contamination in the vicinity of MW-5. 4/25/05 Requested Kevin
Kleaka, Impact Env, investigate if this site is still under Spartan Petroleum. 5/17/05 Spoke to K.
Kleaka, Impact Env. He stated that this site was lost when Keith Franzen passed away. He will
arrange to sample wells and submit a baseline report. 8/17/05 Received baseline report. DTW
measured at 9.38-10.73'bgs on 6/6/05. BTEX ranged from ND(MW-3) to 3264ppb(MW-5). MTBE from
19ppb(MW-1) to 150(MW-5). Report recommends that a remedial action plan be submitted. 3/22/06
Reassigned from Foley to Tang. (KMF) 4/5/06 - spoke to Mr. Wenqing Fang of Impact Environmental and
told him that this is a site that they should go do whatever necessary to clean up the spill but
DEC can not provide constant oversight and approval letter for every step of the remediation
process. When they beleive the site should be closed according the DER-10 guide line, they should
submit a closure petition report to DEC and request for closure. DEC will be available to
providetechnical support and guidance via phone calls. - KST 4/19/06 Spoke to Hal Benjamin, Impact
Env., who is requesting stipulation in order to discharge under the MOU. (KMF) 04/15/09: Tibbe

SPARTAN AMOCO STATION (Continued) **S103478415**

visited the site to determine the current status. The site is currently an active station. 10/04/2012 Called Impact Environmental 631-269-8800, spoke to James. James stated that Impact seems still a consultant of record for this project. I have my contact information: telephone and e-mail address. James said he will inform his superiors about my inquiry and Impact will get back to me. I stated that within a week or two I would like to hear from Impact and hopefully to move this project forward. V. Brevdo 01/09/2012 Called Impact Environmental 631-269-8800, left voice mail to James Cressy, stated that during our phone conversation on October 4, 2012 he advised me he would inform his superiors about my inquiry and Impact will get back to me, and I do not belive I ever heard back from James or anyone else at Impact. Left my phone number and requested to return my call. V. Brevdo 01/16/2013 V. Brevdo REceived a call from Impact Environmental followed by e-mail: Dear Mr. Brevdo, Pursuant to this morning s telephone conversation, we will prepare and submit electronic quarterly monitoring reports for 2012 for the abovementioned Site, on the behalf of David Oil Corp. If preferred, we will prepare an annual monitoring report this Site, which will contain quarterly groundwater sampling data collected during all four quarters, along with tabulated water table gauging measurements and groundwater water table isocontour maps, and our recommended/proposed course of action based upon an evaluation of the data. We expect to have said report(s) submitted electronically to your attention within the next 2 to 3 weeks. Please contact me if you have any questions and/or concerns. Best Regards, Michael A. Bluight Project Manager IMPACT ENVIRONMENTAL welcome to solid ground www.impactenvironmental.com Corporate Headquarters 170 Keyland Court - Bohemia - NY - 11716 T - 631.269.8800 F - 631-269-1599 C - 631-334-4349 01/16/2013 - Replied to e-mail from Impact Environmental: Dear Mr. Bluight, This is to acknowledge receipt of your 1/16/2013 11:37 AM e-mail. The Department would like the monitoring report to contain recommendations regarding further course of action for the spill case site. Respectfully, Vadim Brevdo 03/15/2013 - V. Brevdo Reviewed 2012 Annual Groundwater Monitoring Report dated March 14, 2013. It appears that concentrations in all wells are at acceptable levels. In MW-5 they are higher but hot very high and indicate site can be a candidate for closure. Wanted to discuss my findings with consultant. Consultant recommends removing wells MW-2 and MW-3 from monitoring program, and continue monitoring for MW-1, -4, and -5. I left telephone message to Michael Bluight, Project Manager from Impact environmental (631-269-8800), said I want to

SPARTAN AMOCO STATION (Continued) **S103478415**

discuss report and further course
of action and how to bring this spill case to a closure. Waiting for a return call from Mr.
Bluight. V. Brevdo. 04/26/2013 - V. Brevdo Letter to Impact Environmental April 26, 2013 Mr.
Michael A. Bluight Project Manager Impact Environmental 170 Keyland Court Bohemia, NY 11716 Re:
NYSDEC Spill Case #9309012 1130 Pennsylvania Avenue Brooklyn, New York Dear Mr. Bluight: The New
York State Department of Environmental Conservation (Department) reviewed Groundwater Monitoring
Report, 2012 Annual Report dated March 14, 2013 (Report). Report was prepared by Impact
Environmental on behalf of David Oil Corp of New Hyde Park, New York. Report recommends
continuation of quarterly sampling from onsite monitoring wells MW-1, MW-4 and MW-5 and removal of
monitoring wells MW-2 and MW-3 from the monitoring profile. The Department disagrees with the
aforementioned recommendations. Contaminant concentrations in monitoring well MW-5 remain at levels
of concern. In order to expedite site cleanup and accomplish closure of this spill case, the
Department requests that the Responsible Party develop and utilize the additional, more effective
remedial measures and submit work plan for additional remediation to the Department for approval.
All monitoring wells should remain functional and available for groundwater sampling until the
Department concludes that the site remediation is completed and closes the spill case. I look
forward to continue working with you and Responsible Party towards completing site remediation,
advancing this project into a spill closure mode, and closing spill case. If you have questions,
please contact me. Sincerely, Vadim Brevdo Section Chief NYS Dept. of Environmental Conservation
12/02/2013 - V. Brevdo Impact Environmental submitted Groundwater Monitoring Report dated November
27, 2013 which indicated their concurrence to prepare work plan for additional remedy. VB
12/04/2013 - V. Brevdo Issued letter of concurrence with November 27, 2013 monitoring report and
requested to prepare work plan for additional remedy and submit by no later than January 20, 2014.
Sent letter and e-mail. V. Brevdo. 12/04/2013 - V. Brevdo Project Summary: Amoco Service Station,
1130 Pennslvania Avenue, Brooklyn (Spill No. 9309012) The site is currently used as an Amoco brand
gasoline filling and service station. Five USTs are utilized on-site for the storage and sale of
gas to the public. The site was used as gas station for at least fifty years. The spill case was
opened due to tank failure and involves gasoline contamination of the soil and groundwater on the
site. Several remedial actions have been performed at the subject site between 1997 and 2009 which

SPARTAN AMOCO STATION (Continued) **S103478415**

included enhanced fluid recovery (EFR) events, bio-venting pilot testing, injection of oxygen release compounds (ORCs), bio-augmentation (BioCritter) subsurface injections, and in-situ chemical oxidation (RegenOx) injections. Groundwater monitoring commenced in 2005 and is ongoing.
Implemented remedial measures lead to a significant decline of gasoline related contaminant concentrations in all five on-site monitoring wells. However, elevated concentrations of remaining VOCs began to re-appear in groundwater samples collected from one well in December 2008. On April 26, 2013, due to persistent VOCs detected in groundwater samples collected from the aforementioned groundwater monitoring well, the Department requested development and implementation of an additional remedy in order to expedite site cleanup and accomplish closure of spill case. In July 2013, Impact Environmental, an engineering consultant for the Responsible Party (David Oil Corp.) collected additional geochemical data from monitoring well showing elevated VOCs. Impact Environmental is evaluating additional remedial alternatives to address elevated VOCs and intends to submit a remedial work plan to the Department. In addition, on December 2, 2013, Impact Environmental submitted second 2013 Semi-Annual Groundwater Monitoring Report (Report) dated November 27, 2013. The Department has reviewed the Report, issued letter of concurrence, and requested submission of the work plan for additional remedy no later than January 20, 2014.
12/04/2013 - V. Brevdo Called Juliana de le Fuente of Impact Environmental, left message on voice mail. I thanked Ms. de la Fuente for her December 3, 2013 e-mail confirming receipt of my e-mail and letter which were e-mailed earlier December 3, 2013. In my message I stated I am calling to make sure that evertying is clear in my e-mail and letter, and whether we are on the same page with regard to the course of action to move this project towards completion of the remedy and closing spill case. Asked to return my call, provided direct line phone number. VB. 01/09/2014 - V. Brevdo
Received a call from Juliana De la Fuente of Impact Environmental. They discussed project with their client. Impact states that there is a pit layer that retains contamination and doing additonal chemical oxidaton may turn to be ineffective. Impact Environmental wants to do three soil boring near MW-5 do delineate extent of contamination. This delineation will help them to prepare Remedial Action Plan which would be more effective. Impact Environemental anticipates to do shoring around MW-5 and excavate contaminated soil. Impact Environmental, therefore, is asking for an extention of the January 20, 2014 due date for submission of the RAWP.

SPARTAN AMOCO STATION (Continued) **S103478415**

Extention is approximately
30 days which will allow Impact to complete delineation and prepare RAWP for a more effective
remedy. Brevdo expressed general concurrence with the proposal and extension request, but requested
an e-mail describing the nature of the extension request, and purpose and scope of
investigative/delineation work proposed to precede preparation of the RAWP. Ms. de la Funete stated
she will prepare requested e-mail and send it to me shortly. Brevdo asked whether there is
cooperation on the RP's part for this work. Ms. de la Fuente responded affirmatively, stating that
her clinet stated get it out , meaning they agreed to all necessary work and removal of suspected
unmitigated source of contamination. Taking into consideration that several remedial measures have
been previously conducted on this project, and that the remediation around MW-5 is expected to be a
conclusive remedial step leading to a spill closure, and RP is cooperating, I (V.Brevdo) decided
that it is not necessary to send stipulatin agreement for this remaining phase of remediation. VB
01/09/2014 - V. Brevdo E-Mail from Impact Environmental: Hello Vadim, Per our conversation this
morning, we are requesting a 30-day extension for submittal of the Remedial Action Work Plan (RAWP)
for Amoco (BP) Service Station, 1130 Pennsylvania Avenue, Brooklyn, New York (NYSDEC Spill No.
9309012) from January 20, 2014 to February 20. 2014. We have evaluated and discussed remedial
options with the property owner. Due to the presence of a peat layer at the water table interface,
oxidant injections do not appear to be feasible as a remedy since the peat would act as a sink for
the oxidant. We would like to perform a small remedial investigation which includes utility mark
outs and advancement of three soil borings to 15 feet below existing grade proximate to monitoring
well MW-5 using a Geoprobe prior to submittal of the RAWP. The proposed soil boring locations are
shown on the attached figure. The utility mark out information will assist in determining to what
extent an excavation can be performed in the area of monitoring well MW-5, and the analytical data
for soil samples collected from these borings will allow us to better define the area for
excavation to the extent practicable and obtain waste characterization data for disposal. Please
let me know if you have questions regarding this request. Best Regards, Julie Juliana de la Fuente
Project Manager IMPACT ENVIRONMENTAL welcome to solid ground www.impactenvironmental.com Corporate
Headquarters 170 Keyland Court - Bohemia - NY - 11716 T - 631.269.8800 C - 631.704.5920 F -
631.269.1599 01/09/2014 - V. Brevdo E-Mail to Impact Environmental: January 9, 2014 The Department

SPARTAN AMOCO STATION (Continued) **S103478415**

reviewed your request for the 30-day extension of the due date for submission of the Remedial
Action Work Plan (RAWP) for the subject spill site from January 20, 2014 to February 20, 2014. The
Department also reviewed the rationale and the scope of limited remedial investigation and utility
mark-outs. The Department understands that the purpose of said limited remedial investigation and
utility mark-outs is to assist Impact Environmental in determining the extent of future remedial
excavation in the impacted area of the site - in the vicinity of groundwater monitoring well MW-5 -
and to ensure that such remedial excavation is conducted in a safe manner. This investigation will
also help to obtain waste characterization data for future disposal of excavated impacted soil. The
Department concurs with the nature and scope of the aforementioned limited remedial investigation.
Your 30-day extension request for submission of the RAWP is hereby approved. New due date for
submission of RAWP is February 20, 2014. Please contact me if you have questions. Sincerely, Vadim
Brevdo 02/20/2014 - Impact Environmental submitted RAWP. 02/24/2014 - Department approved RAWP.
08/25/2015 - V. Brevdo Current Site Status and Spill Case Closure Decision. Amoco Service Station,
1130 Pennslvania Avenue, Brooklyn (Spill No. 9309012) The site is currently used as an Amoco brand
gasoline filling and service station. Five USTs are utilized on-site for the storage and sale of
gas to the public. The site was used as gas station for at least fifty years. The spill case was
opened due to tank failure and involves gasoline contamination of the soil and groundwater on the
site. Several remedial actions have been performed at the subject site between 1997 and 2009 which
included enhanced fluid recovery (EFR) events, bio-venting pilot testing, injection of oxygen
release compounds (ORCs), bio-augmentation (BioCritter) subsurface injections, and in-situ chemical
oxidation (RegenOx) injections. Groundwater monitoring commenced in 2005 and is ongoing.
Implemented remedial measures lead to a significant decline of gasoline related contaminant
concentrations in all five on-site monitoring wells. However, elevated concentrations of remaining
VOCs began to re-appear in groundwater samples collected from one well in December 2008. On April
26, 2013, due to persistent VOCs detected in groundwater samples collected from the aforementioned
groundwater monitoring well, the Department requested development and implementation of an
additional remedy in order to expedite site cleanup and accomplish closure of spill case. In July
2013, Impact Environmental, an engineering consultant for the Responsible Party (David Oil Corp.)
collected additional sampling data from monitoring well showing

SPARTAN AMOCO STATION (Continued) **S103478415**

elevated VOCs. In addition, on December 2, 2013, Impact Environmental submitted second 2013 Semi-Annual Groundwater Monitoring Report (Report) dated November 27, 2013. The Department has reviewed the Report, issued letter of concurrence, and requested submission of the work plan for additional remedy. On February 20, 2014, Impact Environmental submitted Remedial Action Work Plan (RAWP). RAWP proposed hot spot excavation and proper disposal of petroleum contaminated soils to the extent practicable, treatment and proper disposal of groundwater that is generated during excavation, and monitoring of groundwater conditions following completion of the excavation. The Department approved RAWP on February 24, 2014. On August 21, 2015, Impact Environmental submitted Remedial Action Report and Petition to have spill case closed. A remedial excavation in the area of environmental contamination was completed at the depth of 16.5 feet below ground surface. Soil excavation work was performed between November 3, 2014 and November 7, 2014. A VEFR was performed in the excavation and approximately 106 gallons of groundwater/petroleum mixture were evacuated from the excavation area. Post-excavation verification end point soil samples were collected to confirm that the remedial objectives for soil have been met. A total of 83.6 tons of contaminated soil was generated during the excavation work. Excavated material was loaded into containers and transported to Clean Earth of North Jersey Facility located in Kearny, NJ for treatment and disposal. No measurable free phase product was observed in any of the monitoring wells as of April 2015. Groundwater monitoring was completed in April 2015. Residual contaminants have been detected in both soil and groundwater at low levels that demonstrate substantial improvement of environmental conditions at the site and are acceptable to the Department. A receptor evaluation and exposure pathway assessment concluded that no exposure threat exists unless soil is re-excavated within immediate vicinity of the excavation area to the depth greater than 10 to 13 feet below ground surface. Based on exposure analysis, site appears to pose no further threat to sensitive receptors, human health and the environment. Previous remedial activities performed at the site included enhanced fluid recovery, application of ORCs, bioventing, and in-situ chemical oxidation. The contaminant mass was removed to the extent feasible. Low-level residual soil and groundwater contamination does not pose a significant threat to public health and the environment. The Department determined that the site meets spill closure criteria and closed the spill case on August 25, 2015. VB

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D008
Waste Description:	Lead
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Hazardous Waste Summary:

Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents

L & M OPTICAL DISC (Continued) **1004763065**

Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. This spill site has been consolidated under Spill No. 9409298. RE: Spill Investigation Nos. 9409298, 9612806 & 9913633, Conoco Phillips - Former ExxonMobil S/S,108-04 Flatlands Avenue, Brooklyn, N.Y. - Petroleum Bulk Storage (PBS) No. 2-218006. Reassigned from DEC O'Dowd on March 2000 to Sigona. DEC's comments

EXXONMOBIL (Continued) **S104495237**

regarding a site visit on February 24, 2003, to evaluate proposed investigatory work and facility compliance with State and Federal PBS regulations. The DEC has also reviewed the results of the Subsurface Investigation Report (SIR) from Groundwater & Environmental Services (GES), dated September 4, 2002. The results of the PBS inspection were documented by this Department, and a notice regarding those results have been forwarded to Conoco Phillips in a separate letter, dated April 3, 2003. The results of the SIR indicates there are elevated levels of Volatile Organic Compounds (VOCs), which have already impacted the groundwater at this site. This indicates the need for further investigation. In addition, the DEC's records indicate there are at least two (2) additional unresolved spill cases recorded under Spill Nos. 9409298 and 9612806, which require investigation. 03/29/06: Talked with Bill Simmons from ECS about any progress. He said that our request for three additional wells would be implemented in April, and that one well would have to be shifted slightly due to utilities. I said that was fine. - SK Spill No. 9409298 - Soil contamination discovered during removal of former 1,000 gallon Underground Storage Tank (UST) which stored used oil. Spill No. 9612806 - 4,000 gallon double-walled Buffide tank was reported to have a leak in the primary tank, and super unleaded gasoline was pumped from the secondary containment in January 1997. A letter was sent to DEC on January 30, 1997, indicating that Exxon would inform DEC of its actions regarding the disposition of this tank. 10/25/2004: DEC Lead transferred from J. Rommel to D. Harrington. 11/23/2004: Sent letter to Cumberland Farms requiring work plan for additional investigation and an environmental site history. (Harrington) 1/12/2005: Approved SI work plan (installation of four (4) new monitoring wells). Harrington 6/14/05: This spill case transferred from Harrington (Central Office) to J. Kolleeny (Region 2). - JK 6/30/05: Reviewed Site Status Update letter from ECS, dated May 6, 2005. Letter states that ECS completed a subsurface investigation at the site in April 2005, installing 4 monitoring wells. Results of soil and groundwater sampling will be presented in an upcoming Subsurface Investigation Report, and ECS will continue quarterly groundwater monitoring. - J. Kolleeny 11/2/05: Transferred from J.Kolleeny to S.Kraszewski. Reviewed Subsurface Investigation Report from ECS for work performed in April and May 2005. 4 MWs were installed in addition to 3 other MWs installed in 2000 by ATC Associates for a subsurface investigation. Soil samples were taken from each of the four borings before they were converted to MWs. PID readings from MW-4 and MW-5 ranged from 496ppm

EXXONMOBIL (Continued) **S104495237**

to 2807ppm. Multiple VOCs were
detected from the soil sample analyses: MW-4 ranged from 1.6% to 56% concentrations of BTEX and
other VOCs. GW samples exhibited elevated levels of VOCs also. ECS will continue quarterly
monitoring and reporting. Received and reviewed Site Status Update Report July - Sept 2005 with
most recent GW sample analysis on 9/19/05. Presence of VOCs remain in all wells but most
concentrations have dropped dramatically. Elevated levels of MTBE, ethylbenzene and benzene remain
in several wells suggesting that plume may be still migrating in proximity to residential and
educational units. May require several more wells to ensure complete delineation of plume. - SK
12/21/05: DEC sent letter sent to A.Pinmental at Cumberland Farms and W.Simmons at ECS requesting
further investigation. Asked for 3 MWs to delineate contamination plume. Investigation report
should be submitted with recommendations for remedial action. - SK
03/31/06: Reviewed
Oct.2005-Dec.2005 Quarterly Update Report from ECS. 7 MWs were gauged and samples collected for
analysis. 5 of the 7 MWs exhibited BTEX and or MTBE in concentrations exceeding TAGM AWQS. GW flow
direction is generally north to northeast. Overall, most concentrations have remained consistently
elevated for almost all contaminated wells. One noticeable change was the concentration of benzene
in MW-6: an increase from 5.3 ppb to 103 ppb since the last quarterly report from September. Also,
MW-1 now exhibits benzene whereas in all previous samplings since June 2003 none was ever detected.
Based on the data, the dissolved plume seems to be extending East towards 108th Street and North
towards Flatlands Avenue. ECS mentions that the Departments request for additional MWs will be
implemented in April 2006. ECs recommends continued quarterly gauging, sampling and reporting. - SK
05/16/06: Reviewed Site Status Update Report from ECS prepared on April 30, 2006. Included in this
investigation, ECS performed GW flow direction gauging and GW sampling from seven MWs. GW flow
direction seems to be heading N - NE towards Flat-lands Avenue. BTEX and MTBE concentrations remain
mostly consistent with the past several sampling events. MW-7, which has no previous exceedances
now shows MTBE at 11 ppb. MW-7 seemed isolated from the GW plume but more sampling is necessary.
ECS recommends continued quarterly gauging, sampling and reporting. - SK 05/25/06: ECS installed 3
on-site wells on 5/11/06 and collected soil data. ECS will sample all GW wells in early June. - SK
08/22/06: Reviewed the On-Site Subsurface Investigation Report submitted on July 10, 2006 by ECS.
By request of the department, ECS installed three new MWs, MW-8,9,10 on-site to further delineate

EXXONMOBIL (Continued) **S104495237**

the dissolved contamination plume. Boring samples revealed PID hits as high as 623ppm from 10-17 fbg for MW-8. MW-9 and MW-10 had no PID hits. Soil samples from MW-8 show highly elevated VOC levels at the GW. MW-9 showed trace VOC contamination in the soil. MW-10 exhibited only xylene as high as 3ppm in the soil. GW ranges from 9 to 10 fbg on-site. No free product detected from any wells. All MWs including newly installed wells were sampled for GW contamination. MWs 4,5,6,8,9 and 10 all detected elevated BTEX, MTBE or both in GW samples. Based on the historic monitoring data, the dissolved plume seems to be migrating with the GW flow direction. The highest readings are located from the corner of East 108th Street along the sidewalk bordering Flatlands Avenue. ECS recommends continued quarterly GW monitoring and reporting from all wells except MW-1,2,3 and 7 due to the continued absence of minor concentration os VOCs. SK discussed the work plan with JK. DEC requests that ECS provide alternatives to the monitoring recommendation, i.e. more active remedial approach. SK sent letter disapproving monitoring and requesting a new remedial proposal. ECS may discontinue quarterly sampling from MW-3 and MW-7. The proposal is due before the next quarterly report. - SK 02/05/2007: This spill is transferred from SK to A. Doronova. - AD. JK sent e-mail to Bill Simmons of ECS regarding current situation on the site. 02/06/07: Received e-mail from B. Simmons saying that they have continued quarterly sampling and monitoring the site, that now they are in a process of preparation of remedial strategy proposal and that there is meeting scheduled with CFI. Sent e-mail to B. Simmons with request to submit all outstanding quarterly reports ASAP and remedial strategy proposal later this month. 02/14/2007: Received Site status update report (09/06-12/06) from ECS. They gauged ten MW and sampled eight MW on September and December 2006. MWs 1, 2, 5, 6 and 9 detected elevated BTEX, MBTE or both in GW samples. Maximum increase of total BTEX from 13,800ug/L to 14,853ug/L was detected in GW sample from MW-8; also there was increase of total BTEX from 276.4ug/L to 916.4ug/L in samples from MW-10. ECS will submit feasibility proposal of more active remedial measures by the end of February 2007. AD 03/01/2007: Spoke to B. Simmons regarding remedial feasibility proposal for this site. He told me that proposal is not ready yet and will be submitted in the end of March. AD 05/10/2007: Received an email from B. Simmons.They still work on Remedial Feasibility Report (RFR). Bill wrote that they will probably need air sparge and soil vapor extraction system to address soil and groundwater contamination at the site. They would like to postpone submittal of RFR till June 2007. AD 05/11/2007:

EXXONMOBIL (Continued) **S104495237**

Spoke with B. Simmons
regarding RAP submission, he said it will be ready in the beginning of June. AD 06/29/2007:
Received RAP from ECS. Soil and groundwater analytical data indicate that elevated VOC
concentrations still present in northern and north-western portion of the site. RAP proposes
in-situ chemical oxidation in the vicinity of monitoring wells MW-2, MW-4 and MW-8, combined with
monitored natural attenuation as a remedial approach at the site. AD 07/16/2007: Sent a letter to
Chris Johnson of CFI approving RAP with the request to extend ISCO treatment area in order to
include wells MW-5 and MW-10 in the remedial program. AD 08/28/2007: Visited the site to observe
application of chemical oxidant (sodium persulfate)via injection wells. Michelle Spilter (chemist
of ESC) was at the site with two technicians. Depth of the injection wells - 20 feet. Depth to GW -
10-12 ft. They were mixing sodium persulfate with water in 100 gallons container and injecting 2
full volumes of container in each injection point. The consultant plans to inject a total of 2,000
gallons of the oxidant at 10 temporary well points. Subsequent injection events may be scheduled
pending evaluation of quarterly groundwater monitoring data. AD 04/09/2008: Received an email from
B. Simmons of ECS saying: Hi Ainura, Please find attached the electronic pdf version of the
Remedial Action GW Evaluation Update Report (June 2007-March 2008) for Cumberland Farms Inc. 108-04
Flatlands Avenue, Brooklyn, NY Spill#9409298 that was mailed to you that you should receive
shortly. Thank you. William A. Simmons Senior Project Manager/Associate DL the Remedial Action
Groundwater Evaluation Update Report to eDocs. Will review. Later received a hard copy of the
report. AD 05/14/2008: Reviewed the Remedial Action Groundwater Evaluation Update Report submitted
on April 9, 2008 by ECS. During August 27-29, 2007, ECS performed chemical oxidation program via
injection. Chelated iron complex (Fe-EDTA) catalyzed Sodium Persulfate (Na2S2O8) was mixed and
injected in a total of ten borings. On March 5, 2008, all wells were surveyed. Depth to GW ranges
from 10 to 12 fbg on-site. A general GW flow direction towards the west to northwesterly across the
site. Groundwater monitoring: On September 13, December 13, 2007 and March 13, 2008, EDC gauged and
sampled up to 10 monitoring wells. No free product was detected in any of the wells. Groundwater
samples results revealed VOCs ranged from 7,269 ppb in well MW-8 to 14,7 ppb in MW-7. GW analytical
data show decreasing trend in VOCs concentrations in wells: MW-1, MW-2, MW-5, MW-6, and MW-10.
Increase in VOCs level were noted in wells: MW-4 (from 4.2ppm to 2,908ppm), MW-8 (from 7,120ppb to

EXXONMOBIL (Continued) **S104495237**

7269ppb) and MW-9 (from 73.7ppm to 86.1ppm). The highest GW contamination is located on the north, north-west portion of the property, from the corner of East 108th Street along the sidewalk bordering Flatlands Ave. ECS will continue quarterly GW monitoring for all wells except MW-7 due to the absence of concentration of VOCs. April - September Update Report will be prepared and submitted. No response is needed. AD 10/20/2008: Received a Groundwater Evaluation Update report for April-September 2008, prepared by ECS. DL to eDocs. Will review. AD 12/04/2008: Reviewed the report. Groundwater monitoring: On June and September 2008, EDC gauged and sampled nine monitoring wells. No free product was detected in any of the wells. Groundwater samples results revealed VOCs ranged from 11.9 ppb in well MW-1 to 3,952.3 ppb in MW-4 (June 2008) and from 50.9 ppb in well MW-9 to 9,357 ppb in MW-8 9September 2008). GW analytical data for this monitoring period indicated increasing trend in VOCs concentrations in wells: MW-1(11.9-997.13), MW-4(3,952-4091), MW-5(47.3-166.8), MW-6(255.7-1350), MW-8(7,266-9,357), MW-9(11-50.9)and MW-10(745-1353). Decrease in VOCs level were noted in only one well: MW-2(from 42.16ppm to ND. The highest GW contamination appeares to be located on the north, north-west, southwest and westerly portions of the property. ECS suggests that this increasing trend in VOCs may be due to the migration of the dissolved-phase plume. ECS will continue quarterly GW monitoring for all wells except MW-3 due to the absence of concentration of VOCs. Have to speak with B. Simmons of ECS regarding effectiveness of the performed remediation. And also will request ECS to submit historical total VOCs table for all site's wells. ECS calculates BTEX and other VOCs separatly, which makes it difficult to track changes in total VOC concenrations over time. AD 06/19/2009: Received an e-mail from B. Simmons saying: Hi Ainura, Please find attached the Groundwater Evaluation Update Report for period October 2008 through April 2009 for SP No. 9409298 for the Cumberland Farms Inc. property at 108-04 Flatlands Avenue, Brooklyn, NY. The original is in the mail. Thank you. Bill William A. Simmons II DL the pdf copy to eDocs. Will review. AD 07/23/2009: Reviewed the report. On January 8 and April 8, 2009, EDC sampled eight monitoring wells. No free product was detected in any of the wells. Groundwater sampling results revealed VOCs ranged from ND ppb in wells MW-1 to 4,725,9 ppb in MW-4 (April 2009). GW analytical data for this monitoring period indicate decreasing trend in VOCs concentrations in 6 wells: MW-1, MW-2, MW-5, MW-6, MW-8, and MW-10. Significant increase in VOCs level was noted in well MW-4(from 2,529ppb to 4,725ppb). The highest

EXXONMOBIL (Continued) **S104495237**

GW contamination appeares to
be located on the north of the property in hte vicinity of wells
MW-4(4,725ppb) and MW-8(3,027ppb).
The rest of the wells exhibited low levels of VOCs. ECS will continue
quarterly GW monitoring,
which will include field analysis for groundwater geochemical
parametrs (DO, temperature, redox
potential, specific conductivity and pH levels). No response is
needed. AD 02/02/2010: Received an
e-mai;l from Mr. Simmons of ECS saying: Hi Ainura, Please find
attached the electronic pdf version
of the Groundwater Update Report and Remedial Action Plan Addendum for
the Cumberland Farms Inc
Facility # 70226 located at 108-04 Flatlands Avenue, Brooklyn, NY for
Spill # 94-09298. The hard
copy is in the mail. Thank you. Bill William A. Simmons II DL the
report to eDocs. AD 09/13/2010:
Received an e-mail from B. Simmons: Hi Ainura, Please find attached
the electronic pdf version of
the Groundwater Update Report and Remedial Action Plan Status for the
period January June 2010 for
the Cumberland Farms Inc Facility # 70226 located at 108-04 Flatlands
Avenue, Brooklyn, NY for
Spill # 94-09298. The hard copy is in the mail. Thank you. Bill DL the
report to eDocs. AD
09/15/2010: Received a hard copy of the Groundwater Update Report and
Remedial Action Plan Addendum
for the Cumberland Farms Inc Facility # 70226 located at 108-04
Flatlands Avenue, Brooklyn, NY for
Spill # 94-09298 for a period of January - June 2010. Will review. AD
10/28/2010: Reviewed the
report. On February 9, 2010 ORC sock were installed in wells: MW-4,
MW-5, MW-6, MW-8 and MW-10. On
February 25, 2010 one monitoring well MW-11 was installed across the
Flatlands Avenue in the
sidewalk, as was required by DEC. On January 18, 2010 EDC sampled
eight monitoring wells, and on
May 13, 2010 - nine wells were sampled. No free product was detected
in any of the wells.
Groundwater sampling results revealed VOCs ranged from ND ppb in wells
MW-9 and MW-11, to low
levels in wells MW-1 (29ppb), MW-2 (12.5ppb) and MW-6 (122ppb)to
significant concentrations of VOCs
in wells: MW-4 (5364ppb), MW-5 (1595ppb), MW-8 (9719ppb) and MW-10
(1638ppb). GW analytical data
for this monitoring period indicate decreasing trend in VOCs
concentrations in 3 wells: MW-1, MW-2
and MW-6. Significant increase in VOCs level was noted in well
MW-5(from 696ppb in January to
1595ppb in May). The highest GW contamination appeares to be located
on the west part of the
property in the vicinity of wells MW-4(5364ppb) and MW-8(9719ppb).
Newly installed well MW-11 had
ND results for VOCs. ECS will continue quarterly GW monitoring, which
will include field analysis
for groundwater geochemical parametrs (DO, temperature, redox
potential, specific conductivity and

EXXONMOBIL (Continued) **S104495237**

pH levels). AD 03/21/2011: Received a hard copy and pdf copy of the Groundwater Evaluation Update
and Remedial Action Plan Status Report for a period of July-December 2010. DL e-copy to eDocs. Will
review. AD 04/29/2011: Reviewed the report. On August 12 and November 8, 2010 ECS gauged and
collected GW samples from 8 wells. No free product was detected in any of the wells. Groundwater
sampling results revealed TVOCs ranged from ND ppb in wells MW-2, MW-9 and MW-11, to low levels in
wells MW-1 (8ppb), and MW-6 (120ppb)to significant concentrations of VOCs in wells: MW-8 (8,737ppb
from 9719ppb in May 2010) and MW-10 (885ppb from 1638ppb in May 2010). GW analytical data for this
monitoring period indicate decreasing trend in VOCs concentrations in 3 wells: MW-1, MW-4 and MW-5.
Significant increase in VOCs level was noted in well MW-8 (from 3,357ppb in August to 8,737ppb in
November 2010). The highest GW contamination appeares to be located in the vicinity of wells
MW-10(885ppb) and MW-8(8,737ppb). Newly installed well MW-11 had ND results for VOCs. ECS will
continue quarterly GW monitoring, which will include field analysis for groundwater geochemical
parametrs (DO, temperature, redox potential, specific conductivity and pH levels). AD 08/18/2011:
Received a Groundwater Evaluation Update and RAP Status Report for period of January - June of
2011. DL pdf copy to eDocs. Will review. AD 09/29/2011: Reviewed the report. On February 8 and May
12 2011 ECS gauged and collected GW samples from 8 wells. No free product was detected in any of
the wells. Groundwater sampling results revealed TVOCs ranged from ND ppb in wells MW-1, MW-2, MW-9
and MW-11, to low levels in wells MW-5 (25.68ppb), and MW-6 (7.78ppb) to significant concentrations
of VOCs in wells: MW-8 (6,067ppb and 4,726ppb in February and May 2011) and MW-4 (1,327ppb in May
2011 from 164ppb in February 2011). GW analytical data for this monitoring period indicate
decreasing trend in VOCs concentrations in 2 wells: MW-1 and MW-5. Significant decrease in VOCs
level was noted in well MW-8 (from 8,737ppb in November 2010 to 4,726ppb in May 2011). The highest
GW contamination appeares to be located in the vicinity of wells MW-10(444ppb), MW-8(4,726ppb) and
well MW-4 (1,327ppb). Newly installed well MW-11 had ND results for VOCs. ECS will continue
quarterly GW monitoring, which will include field analysis for groundwater geochemical parametrs
(DO, temperature, redox potential, specific conductivity and pH levels). Next semi-annual report is
due. AD 03/23/2012: Received a Groundwater Evaluation Update and RAP Status Report for period of
July - December of 2011. No pdf copy was submitted. To request its submission. Will review the
report. AD 05/03/2012: Received requested PDF copy of the report. DL

EXXONMOBIL (Continued) **S104495237**

the report to eDocs. Reviewed
the report. It states that on August 9 and December 1, 2011, ECS gauged all Site-related monitoring
wells and collected groundwater samples from up to eight (MW-1, MW-2, MW-4, MW-5, MW-6, MW-8, MW-9,
MW-10 and off-site well MW-11) and submitted the samples for analysis of VOCs. Samples collected
from wells MW-2, MW-4, MW-5, MW-8 and MW-10 were submitted for analysis of dissolved iron, nitrates
and sulfates. No free product was detected in any of the wells. Depth to water on August 9, 2011 as
measured from grade ranged from approximately 10.32 fbg in MW-4 to 11.79 fbg in well MW-1. Depth to
water on December 1, 2011 as measured from grade ranged from approximately 10.04 fbg in well MW-2
to 11.45 fbg in well MW-1. The December 1, 2011 gauging data was used to calculate the groundwater
flow direction that was determined to trend towards well MW-4 due to a slight elevation anomaly in
the area of well MW-4 as compared to all other on-site wells. If well MW-4 is removed from the
calculations, groundwater flow is towards the west. August 2011 sampling: Groundwater sampling
results revealed TVOCs ranged from ND ppb in wells MW-9 and MW-11, to low levels in wells MW-1
(51.6ppb), MW-6 (13.1ppb) to moderate levels in MW-2 (182.9ppb), MW-5 (216ppb) and MW-10 (195ppb)
to significant concentrations of TVOCs in wells: MW-8 (5, 775ppb from 4,726ppb in May 2011) and
MW-4 (2,611ppb from 1,327ppb in May 2011). December 2011 sampling: Groundwater sampling results
revealed TVOCs ranged from ND ppb in 4 wells: MW-1, MW-2, MW-6, and MW-9, to low levels in wells
MW-4 (29.75ppb), MW-5 (75.47ppb) to moderate levels in MW-10 (263.2ppb), to significant
concentrations of TVOCs in well MW-8 (4,709.5ppb from 5, 775ppb in August 2011). Evaluation of the
August and December 2011 groundwater data indicate fluctiation trend in VOCs concentrations in 6
wells: MW-1, MW-2, MW-4, MW-5 and MW-6. Fluctuation in VOCs level was noted also in well MW-8 (from
4,726ppb in May 2011 to 5, 775ppb in August 2011 to 4,709.5ppb in December 2011). The highest GW
contamination appeares to be located in the vicinity of well MW-8(4,709ppb). Well MW-10 indicated
slight increase in VOCs concentrations from 195ppb in August 2011 to 263ppb in December 2011.
Overall decreasing VOCs levels historical trend noted at the site. ECS will continue to perform
quarterly groundwater monitoring that will consist of depth to groundwater gauging of all
Site-related wells, field analysis for groundwater geochemical parameters (i.e. DO, ORP, specific
conductivity, temperature, and pH levels) of all wells that are sampled, and the collection of
groundwater samples from monitoring wells MW-1, MW-2, MW-4, MW-5, MW-6, MW-8, and MW-10 for VOCs

EXXONMOBIL (Continued) **S104495237**

according to USEPA Method 8260 NYSDEC STARS gasoline-related compounds. ORC socks will continue to be utilized in wells MW-4, MW-5, MW-6, MW-8 and MW-10 and changed out as necessary. AD 09/26/2012: Received a Groundwater Evaluation Update and RAP Status Report for period of January - June of 2012. DL pdf copy to eDocs. Will review the report. AD 11/07/2012: Reviewed the report. It states that on February 15 and May 2, 2012, ECS gauged all eleven site-related monitoring wells and collected groundwater samples from eight (MW-1, MW-2, MW-4, MW-5, MW-6, MW-8, and MW-10). Samples collected from wells MW-2, MW-4, MW-5, MW-8 and MW-10 on February 15, 2012 were also submitted for analysis of dissolved iron, nitrates and sulfates. Evaluation of the February and May 2012 groundwater data indicates continued decreasing VOC concentrations to the lowest levels since sampling began, with certain various VOCs in wells MW-2, MW-5, MW-6, MW-8, and MW-10 above NYSDEC TOGS Groundwater Quality Standards (GWQS). February 2012 sampling - TVOCs (ppb) - MTBE (ppb): 1. MW-1 - ND - 2; 2. MW-2 - ND - 9; 3. MW-4 - 7 - ND; 4. MW-5 - 143 - 21; 5. MW-6 - 3.3 - 8.7; 6. MW-8 - 4,186 - 2.6; 7. MW-10 - 25 - 14. Groundwater sampling results revealed TVOCs ranged from ND ppb in wells MW-1 and MW-2, to low levels in wells MW-4 (7ppb), MW-6 (3.3ppb) and MW-10 (25ppb) to moderate levels in MW-5 (143ppb) to significant concentrations of TVOCs in well MW-8 (4,186ppb) May 2012 sampling - TVOCs (ppb) - MTBE (ppb): 1. MW-1 - ND - 7; 2. MW-2 - ND - 14; 3. MW-4 - ND - ND; 4. MW-5 - 10.6 - 8.5; 5. MW-6 - 2.3 - 15.4; 6. MW-8 - 1,546 - 3; 7. MW-10 - 97 - 60. May groundwater sampling results revealed TVOCs ranged from ND ppb in 3 wells: MW-1, MW-2 and MW-4, to low levels in wells MW-5 (10.6ppb), MW-6 (2.3ppb) to moderate levels in MW-10 (97ppb), to significant concentrations of TVOCs in well MW-8 (1,546ppb which is a decrease from 4,709.5ppb in February 2012). Depth to water on February 15, 2012 as measured from grade ranged from approximately 10.8 fbg in MW-4 to 12.11 fbg in well MW-1. Depth to water on May 2, 2012 as measured from grade ranged from approximately 10.43 fbg in well MW-2 to 11.93 fbg in well MW-1. The May 2, 2012 gauging data was used to calculate the groundwater flow direction that was determined to trend towards the west. ECS will continue to perform quarterly groundwater monitoring that will consist of depth to groundwater gauging of all Site-related wells, field analysis for groundwater geochemical parameters (i.e. DO, ORP, specific conductivity, temperature, and pH levels) of all wells that are sampled, and the collection of groundwater samples from monitoring wells MW-1, MW-2, MW-4, MW-5, MW-6, MW-8, and MW-10 for VOCs according to USEPA Method

EXXONMOBIL (Continued) **S104495237**

8260 NYSDEC STARS
gasoline-related compounds. AD 03/27/2013: Received the following e-mail from B. Simmons: Hi
Ainura, Please find attached the electronic pdf version of the Site Status Update and Remedial
Action Plan Status Report for SPILL # 94-09298 for period July-December 2012 for the Cumberland
Farms. Inc (CFI) Facility # 70226 located at 108-04 Flatlands Avenue, Brooklyn, NY. A hard copy and
a CD are also being mailed to you. Thank you. Bill William Simmons Senior Project Manager/Associate
DL the report to eDocs. Will review. AD 04/18/2013: Reviewed the report. It states that ECS visited
the site on August 6 and November 28, 2012. Depth to water on August 6, 2012 as measured from grade
ranged from approximately 10.34 fbg in RW-2 to 11.26 fbg in well MW-6. Depth to water on November
28, 2012 as measured from grade ranged from approximately 10.43 fbg in well RW-2 to 11.15 fbg in
well MW-6. The November 28, 2012 gauging data was used to calculate the groundwater flow direction.
The contours indicated a very flat gradient with several flow pattern variations. The August and
November 2012 data indicated no VOC concentrations above TOGS GWQS in wells MW-1, MW-4, and MW-6,
and only MtBE just above the TOGS GWQS in well MW-2. The highest VOC concentrations continue to be
present in well MW-8 but comparison of this current data to the historical high concentrations
correlates to an approximate 92-94% decrease in total BTEX concentrations, and an 80-81% decrease
in total other VOC concentrations. GW - August - November 2012 sampling - TVOCs (ppb): 1. MW-1 - ND
- ND; 2. MW-2 - ND - ND; 3. MW-4 - ND - ND; 4. MW-5 - 40 - 135; 5. MW-6 - ND - ND; 6. MW-8 - 3,379
- 2,848; 7. MW-10 - 40 - 184. ECS will continue to perform quarterly gauging of Site-related wells,
and collect groundwater samples from wells MW-2, MW-4, MW-5, MW-8, and MW-10 for VOCs. If
evaluation of the next two rounds of groundwater samples collected from on-site wells MW-2 and MW-4
continue to indicate similar VOC concentrations below the TOGS GWQS and/or the absence of VOC
concentrations, ECS will propose either eliminating these wells from the quarterly monitoring
program or reducing sampling of these wells to semi-annually. ORC socks will continue to be
utilized in wells MW-4, MW-5, MW-6, MW-8 and MW-10 and changed out as necessary. AD 09/06/2013:
Received the Site Status Update and Remedial Action Plan Status Report for SPILL # 94-09298 for
period January - June 2013. DL the report to eDocs. Will review. AD 10/07/2013: Reviewed the
report. It states that on February 14 and May 15, 2013, ECS gauged eleven site-related monitoring
wells and collected groundwater samples from five (5) wells: MW-2, MW-4, MW-5, MW-8, and MW-10.

EXXONMOBIL (Continued) **S104495237**

Evaluation of the February and May 2013 groundwater data indicates continued decreasing VOC concentrations to the lowest levels since sampling began, with certain various VOCs in wells MW-2, MW-5, MW-8, and MW-10 above NYSDEC Technical and Operational Guidance Series (TOGS) Groundwater Quality Standards (GWQS). GW - February - May 2013 sampling - TVOCs (ppb): 1. MW-2 - ND - ND; 2. MW-4 - ND - ND; 4. MW-5 - 64.34 - 127; 5. MW-6 - NS - NS; 6. MW-8 - 954 - 1,252; 7. MW-10 - 332 - 304. Evaluation of groundwater data collected since 2003 indicates the MNA program has been demonstrating biodegradation of petroleum constituents as evidenced by the lowest overall total BTEX and other various VOC concentrations in Site-related wells since monitoring began in June 2003. The current 2013 data indicated only a concentration of MtBE in well MW-2 during the February 2013 sampling event just above the TOGS GWQS, and the continued absence of VOCs above TOGS GWQS in samples collected from well MW-4 for the sixth (6) consecutive sampling event (Table 1). The highest VOC concentrations continue to be present in well MW-8 but are at the lowest concentrations since sampling began in June 2006, and comparison of this current data to the historical high concentrations correlates to an approximate 98% decrease in total BTEX concentrations, and an approximate 83% decrease in total other VOC concentrations. Based on the MNA program that had been demonstrating biodegradation of petroleum constituents, ECS concluded that the continued collection of groundwater samples for nitrate, iron, and sulfate analysis was determined to not be critical for future evaluation of the effectiveness of the MNA program and these analyses would no longer be performed. As discussed in previous submittals, the addition of the ORC socks have allowed sustained increased dissolved oxygen concentrations within the aquifer in the vicinity of these wells to allow for aerobic respiration of residual petroleum hydrocarbons present in groundwater.
ORC socks were left in well MW-6 even though this well is no longer sampled. ORC socks will continue to be utilized in wells MW-4, MW-5, MW-8 and MW-10, and periodically replaced. based on the continued absence of VOCs in groundwater samples collected from on-site wells MW-2 and MW-4 ECS propose eliminating these wells from the quarterly monitoring program. ECS will continue to to perform quarterly gauging of the site related wells and will sample MW-5, MW-8 and MW-10 for TVOCs.
ORC socks will be left in MW-2 and MW-4, even these wells are proposed to no longer be sampled. ORC socks will continue to be utilized in wells MW-5, MW-8 and MW-10 and peridically replaced. AD
04/17/2014: Received the Site Status Update and Remedial Action Plan

EXXONMOBIL (Continued) **S104495237**

Status Report for SPILL #
94-09298 for period January - June 2013. DL the report to eDocs. Will review. AD 05/16/2013:
Reviewed the report. It states that on August 12, 2013 ECS gauged the eleven (11) Site-related
monitoring wells and collected groundwater samples from five (5) (MW-2, MW-4, MW-5, MW-8, and
MW-10). On November 1, 2013 ECS gauged the eleven (11) Site-related monitoring wells and collected
groundwater samples from three (3) (MW-5, MW-8, and MW-10). Depth to water on August 12, 2013 as
measured from approximate surface grade ranged from approximately 9.27 fbg in MW-4 to 11.26 fbg in
well MW-1. Depth to water on November 1, 2013 as measured from approximate surface grade ranged
from approximately 10.26 fbg in well MW-2 to 11.74 fbg in well MW-1. The November 1, 2013 gauging
data was used to update the groundwater flow direction. The contours indicated a very flat gradient
with several flow pattern variations similar to historic trends due to slight elevation anomalies
in certain on-site wells (MW-4 and MW-5). GW - August - November 2013 sampling - TVOCs (ppb): 1.
MW-2 - ND - ND; 2. MW-4 - ND - ND; 4. MW-5 - 41 - 32 5. MW-6 - NS - NS 6. MW-8 - 639 - 869 7. MW-10
- 42 - 45 Evaluation of the August and November 2013 groundwater data indicate certain various VOCs
in wells MW-2, MW-5, MW-8, and MW-10 above NYSDEC TOGS GWQS. Most contaminated well MW-08 indicated
fluctiating trend in VOC concentrations. Conclusions and recommendations: According to ECS,
evaluation of the current 2013 groundwater data indicates the lowest overall total BTEX and other
various VOC concentrations in Site-related wells since monitoring began in June 2003. ECS proposes
transitioning the quarterly sampling program to semi-annual to include the gauging of all
site-related wells and the sampling of wells MW-5, MW-8, and MW-10 for analysis of VOCs according
to USEPA Method 8260 NYSDEC STARS gasoline-related compounds. Field analysis for groundwater
geochemical parameters (i.e. DO, ORP, specific conductivity, temperature, and pH levels) will also
be measured in the wells that are sampled. ORC socks will be left in wells MW-4 and MW-6 even
though these wells are no longer sampled. ORC socks will continue to be utilized in wells MW-5,
MW-8 and MW-10, and periodically replaced. The data will be evaluated in the subsequent Semi-Annual
Site Status Update and RAP Status Reports. AD 03/06/2015: Received the following e-mail from B.
Simmons: Hi Ainura, Please find attached the electronic pdf version of the Site Status Update and
Remedial Action Plan Status Report for Spill# 94-09298 for period July-December 2014 for the
Cumberland Farms. Inc (CFI) Facility # 70226 located at 108-04 Flatlands Avenue, Brooklyn, NY.

EXXONMOBIL (Continued) **S104495237**

Based on the small size of this document, we will not mail you a CD unless you require one. If so, please just let us know. Thank you. Bill William Simmons Senior Project Manager/Associate Environmental Compliance Services, Inc. 296 Nonotuck Street Florence, MA 01060 Tel: 413-789-3530 Ext. 339 Fax: 413-789-2776 Cell: 413-519-0769 wsimmons@ecsconsult.com www.ecsconsult.com Will review. AD 04/08/2015: Reviewed the report. It states that historical depth to groundwater ranges from approximately 10 to 11.5 feet below grade (fbg). Groundwater flow direction has historically been determined to have fluctuating flow patterns in certain areas of the Site with predominantly westerly patterns which is evidenced by evaluation of historical groundwater dissolved-phase contaminant migration patterns. On November 13, 2014, ECS gauged the ten (10) on-site wells and collected groundwater samples from three wells (MW-5, MW-8, and MW-10). Evaluation of the 2014 groundwater data indicates continued decreasing VOCs to the lowest levels in wells MW-5, MW-8 and MW-10 since sampling began, with certain various VOCs in all three wells above NYSDEC TOGS Groundwater Quality Standards (GWQS). GW data: May - November 2014 sampling - TVOCs (ppb): 1. MW-2 - NS - NS; 2. MW-4 - NS - NS; 4. MW-5 - ND - 5 5. MW-6 - NS - NS 6. MW-8 - 573 - 707 7. MW-10 - 137 - 31 Evaluation of the current November 2014 groundwater data indicates the lowest overall total BTEX and other various VOC concentrations in on-site wells MW-5, MW-8 and MW-10. ECS proposes continued semi-annual gauging of site-related wells and the sampling of wells MW-5, MW-8, and MW-10 for analysis of VOCs according to USEPA Method 8260 NYSDEC STARS gasoline-related compounds. Field analysis for groundwater geochemical parameters (i.e. DO, ORP, specific conductivity, temperature, and pH levels) will also be measured in the wells that are sampled. ORC socks will be left in wells MW-4 and MW-6 even though these wells are no longer sampled. ORC socks will continue to be utilized in wells MW-5, MW-8 and MW-10, and periodically replaced. The data will be evaluated in the subsequent Semi-Annual Site Status Update and RAP Status Reports. AD 07/13/2015: Received the following e-mail from Bill Simmons: Hi Ainura, Please find attached the electronic pdf version of the Site Status Update Report & Spill No. 94-09298 Closure Request for period January-June 2015 for the Cumberland Farms. Inc (CFI) Facility # 70226 located at 108-04 Flatlands Avenue, Brooklyn, NY. We will be mailing you a CD & a hard copy. Please let me know if you have any questions. Thank you. Bill William Simmons Senior Project Manager/Associate Environmental Compliance Services, Inc. 296 Nonotuck Street Florence, MA 01060 Tel: 413-789-3530 Ext. 339 Fax:

413-789-2776 Cell: 413-519-0769
wsimmons@ecsconsult.com www.ecsconsult.com Will review. AD 07/14/2015: Reviewed the report. It
documents a summary of historical response actions performed at the site during 2000-2015 as well
as the most recent groundwater sampling results collected on May 22, 2015. GW sampling: On May 22,
2015, ECS gauged the ten (10) on-site monitoring wells (except well MW-3 that was covered by a
vehicle) and collected groundwater samples from three (3) (MW-5, MW-8, and MW-10). Samples were
submitted to Test America of Nashville, Tennessee, for analysis of VOCs by USEPA Method 8260 NYSDEC
STARS List for gasoline-related compounds. Evaluation of the May 2015 groundwater data indicates
continued decreasing VOC concentrations to the lowest levels in wells MW-5, MW-8 and MW-10 since
sampling began, with certain various VOCs in wells MW-8 and MW-10 above NYSDEC TOGS GWQS. GW data:
May - 2015 sampling - TVOCs (ppb): 1. MW-2 - NS; 2. MW-4 - NS; 4. MW-5 - ND; 5. MW-6 - NS 6. MW-8 -
408; 7. MW-10 - ND. Based on the historical data evaluation, including the May 2015 groundwater
data, it indicate continued decreasing VOC concentrations to the lowest levels in wells MW-5, MW-8
and MW-10 since sampling began, with certain various VOCs in wells MW-8 and MW-10 remaining above
the TOGS GWQS. Based on the data presented in this report, ECS does not recommend any additional
monitoring and/or remedial actions. ECS respectfully requests closure of Spill No. 94-09298. Will
discuss the closure request with J. Kolleeny of DEC. AD 07/21/2015: Discussed the closure request
with J. Kolleeny of DEC. Taking into consideration the actions performed at the site, such as: 1.
Several site investigation with delineation of contamination plume; 2. In-situ chemical oxidation
in 2007; 3. Installation of ORC sock into most contaminated wells in 2010; 4. Quarterly groundwater
monitoring and reporting, and most recent data provided which concludes that: 1. There is no
off-site migration of contamination; 2. Approximate 98% decrease in total VOCs in groundwater
comparing to historical data; 3. Absence of free product, it was decided to approve the spill
closure request. Case closed. AD

Remarks: REMOVED U/G TANK FOUND CONTAMINATED SOIL POSSIBLE DUE TO OVERFILLS OVER TIME-SAMPLES SENT IN-WILL CONTINUE CLEANUP.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

WALGREENS (Continued) **1000305385**

Waste Code: D027
Waste Description: 1,4-Dichlorobenzene

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: P001
Waste Description: 2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

Waste Code: P075
Waste Description: Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U035
Waste Description: Benzenebutanoic Acid, 4-[Bis(2-Chloroethyl)Amino]- (Or) Chlorambucil

Waste Code: U044
Waste Description: Chloroform (Or) Methane, Trichloro-

Waste Code: U058
Waste Description: 2h-1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide

Waste Code: U072
Waste Description: Benzene, 1,4-Dichloro- (Or) P-Dichlorobenzene

Waste Code: U122
Waste Description: Formaldehyde

Waste Code: U129
Waste Description: Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U165
Waste Description: Naphthalene

Waste Code: U201
Waste Description: 1,3-Benzenediol (Or) Resorcinol

WALGREENS (Continued) **1000305385**

Waste Code: U205
Waste Description: Selenium Sulfide (Or) Selenium Sulfide Ses2 (R,T)

Waste Code: U211
Waste Description: Carbon Tetrachloride (Or) Methane, Tetrachloro-

Waste Code: U240
Waste Description: 2,4-D, Salts & Esters (Or) Acetic Acid, (2,4-Dichlorophenoxy)-, Salts & Esters (Or) Dichlorophenoxyacetic Acid 2,4-D

Waste Code: U279
Waste Description: U279

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY TRANSFERRED FROM Y.KRIMGOLD. The spill Lead_DEC Field is I. Islam with effect from 02/02/05. 4/20/05- The site is under remediation by LiRo Engineers. Reviewed quarterly report (Nov./04-Jan./05). Soil remediation ended up. Groundwater contamination persists in 2 wells only. ORC socks installation has been recommeded in those two wells. Quarterly groundwater monitoring to continue. - II 7/11/05- Reviewed the Feb.-Apr./05 monitoring report.Presented data reveal that low level GW contamination persists in two wells (MW-4 and MW-27) only. However ORC socks have been installed in these two wells in Mar/05. Quarterly sampling of these wells is to continue. Installed the report in the eDoc Folder. - II. 10/11/05- Reviewed the May-July/05 monitoring report dt. Sept. 6/05. All of a sudden in June/05, free product was identified in MW-27 and measured at 0.06' on June 1 and 0.03' on June 14. The product was identified through fingerprinting as kerosene/diesel fuel mixture. Most recent (Sept1/05) monitoring revealed a sheen only in this well, and LiRo comments this product as transient. Recent GW results showed low level contamination at well EW-19, and wells MW-4 and MW-14 showed no detections of petroleum compounds. However LiRo recommends continuing GW sampling at wells EW-19, MW-4 and MW-27 and quarterly reporting. Filed the report in the eDoc Folder.-II 11/15/05- Sept/05 GW sampling results were presented by the consultant in the meeting (11/10/05) with DDC and DEC. Most of site wells were eliminated from the monitoring program based on repeated compliances with GW standards. GW sample (Sept/05)from well MW-27 showed TVOCs of 139ppb while

BROOKLYN EAST 16 DOS -DDC (Continued) **S104621535**

historical data from the well show generally lower than 100ppb. Based on these, Koon gave a
decision to close the spill, and it is closed today. - II

Remarks: LEAK DETECTOR IN TANK MALFUNCTIONED. DURING REPAIR FOUND 1200 GAL, MISSING - SUSPECT BROKEN LINE. 10/7/93-TANK TEST FAILURE. 11/4/93-SOIL FOUND IN TANK PULL. 11/11/93 CONTAMINATED SOIL FOUND. See spill #s 9308251, 9309753, 9309468.

I04 - Overfill - Product Level Gauge (A/G)

Tank Number:	015
Tank ID:	36551
Tank Status:	Closed - Removed
Material Name:	Closed - Removed
Capacity Gallons:	550
Install Date:	12/01/1982
Date Tank Closed:	12/01/1993
Registered:	True
Tank Location:	Underground
Tank Type:	Steel/carbon steel
Material Code:	9999
Common Name of Substance:	Other
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Pipe Model:	Not reported
Modified By:	MJGRIFFI
Last Modified:	05/09/2022

Equipment Records:

G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
H00 - Tank Leak Detection - None
I04 - Overfill - Product Level Gauge (A/G)

Tank Number:	016
Tank ID:	56437
Tank Status:	In Service
Material Name:	In Service
Capacity Gallons:	4000
Install Date:	03/01/1999
Date Tank Closed:	Not reported
Registered:	True
Tank Location:	Underground
Tank Type:	Equivalent technology
Material Code:	2710
Common Name of Substance:	Biodiesel

DSNY BK 16 GARAGE (Continued) **U004062537**

Tightness Test Method: 34
Date Test: 06/27/2022
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: nFormUpd
Last Modified: 09/07/2023

Equipment Records:

C03 - Pipe Location - Aboveground/Underground Combination
F04 - Pipe External Protection - Fiberglass
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring
L07 - Piping Leak Detection - Pressurized Piping Leak Detector
E04 - Piping Secondary Containment - Double walled UG
G04 - Tank Secondary Containment - Double-Walled (Underground)
J01 - Dispenser - Pressurized Dispenser
A00 - Tank Internal Protection - None
B04 - Tank External Protection - Fiberglass
D06 - Pipe Type - Fiberglass Reinforced Plastic (FRP)
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I02 - Overfill - High Level Alarm
I03 - Overfill - Automatic Shut-Off
K01 - Spill Prevention - Catch Basin

Tank Number: 016A

Tank Info:

Tank Number: 001
Tank Id: 14158
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

J02 - Dispenser - Suction Dispenser
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
I04 - Overfill - Product Level Gauge (A/G)

Tank Location: Aboveground in subterranean vault with access for inspections.....
Tank in subterranean vault but accessible for inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/02/1962
Capacity Gallons: 7500
Tightness Test Method: 34
Date Test: 07/03/2024
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: LABATIST
Last Modified: 08/21/2024

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code:	F006
Waste Description:	Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.
Waste Code:	F007
Waste Description:	Spent Cyanide Plating Bath Solutions From Electroplating Operations.

PARKER HANNIFIN CORP IDEAL DIV (Continued) **1000268840**

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F010
Waste Description: Quenching Bath Residues From Oil Baths From Metal Heat Treating Operations In Which Cyanides Are Used In The Process.

Waste Code: F012
Waste Description: Quenching Wastewater Treatment Sludges From Metal Heat Treating Operations In Which Cyanides Are Used In The Process.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined

Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

STANITA SERVICE CORP - VACANT LOT (Continued) **1001961664**

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD Tank Test Failure letter sent to: Sunnydale Farms Inc. 400 Stanley Ave Brooklyn, NY 11207 Attn: Raymond Kearney 5/10/05. J.Krimgold spoke to Mark Turoff (Energy Tank & Environmental Services) at 917-750-1843. He has done a site assessment at this site. Most likely the site will require spill investigation due to the contamination found so far. He will submit a report this week. Owner wants to have a CO or stip for this site. Owner: Stanley Eisenberg phone 561-414-7221 400 Stanley Ave Brooklyn, NY 11207 08/09/05. - spoke to Mark Turoff. (E-mail address- ENVCOM3@aol.com) there are four 5,000 gallon fuel tanks with some containing diesel. there are are four 10,000 gallon heating oil tanks, mostly no. 2 and was some No. 4. Mark will send me the address of the property owner so that a stipulated agreement can be sent. S. Scharf 08/10/05 - Spoke to Stanley Eisenberg. I sent Stanley a stipulation agreement. Accountant: Daphne Stasco (Email: Dstasco@optline.net DJSpergamentadvisors.com) 115 Quaker ridge Manhasset, NY 11030 08/12/05- Spoke to Stanley Eisenberg. He will sign the stipulation agreement and send it back in to me. He has hired a company called Pro-Test (ENVCOM30@AOL.COM) that will: Submit the required I&R work plan for 400 stanley ave. For 383-389 Stanley ave there are tanks also. they will test, and if fail get new spill nubmer and will address all the tanks at once. 400 stanley Ave has 4-5,000 tanks for gasoline to be removed, and 4-10,000 fuel oil tanks of which three have already been closed ad the 4th on requires closure.- S. scharf 383-389 Stanley Ave will also require remediation. 09/20/05- Called Pro Test to talk to either John or tom (son)Liddy. Not in Told worker that Eisenberg signed the stipulation and we are waiting for the work plan to attache to it.-S.Scharf. John Leddy calls back same day. will submit the required work plan. 09/23/05- John Leddy from Pro-Test called. He will be submitting a work plan. proTest wants to start on the 4-10,000 gallon tanks on the north end. Pro-Test Inc 410 Lexington Ave North Babylon, NY 11704 (631)-321-4670 10/07/05 Several calls with John Leddy. Overall, Pro-Test has removed the concrete cover on the 4-10,000 gallon fuel oil tanks. Three of the four tanks were previously abandoned in place with slurry. removed the fourth tank, washed it and cut it up for removal. Oil contaminated soils on north and south side and under abondoned tanks. So far, Protest has removed 275 yards of soil and are segregating contaminated versus non-contaminated. He will assess the situation monday and make a decision as to whether to pull the abandoned ones in order to complete remediation.- Steven scharf- PM. Thursday and Friday 10/20-1/05 have tested stockpiled soils and will have allied Waste remove this week. Week of 10/31/05- On tuesday took out contaminated soils from a back hoe delivered by Stanley Eisenberg. Work has started on the 5-4,000 gallon gasoline tanks. Four are diesel and one is gasoline. The tank contents have been pumped out by petroleum tanks cleaners. The Gas tanks will be cleaned on monday.- S. Scharf 11/29/05- In the area of the 5-4,000 gallon motor fuel tanks, two additional tanks were identified. All the motor fuel tanks were cleaned, cut up and removed from the site. All the soils from the heating oil tanks were tested, manifiested and removed from the site. Spoke to both John Leddy of Protest and Ray Carney. A status report is coming ASAP and there is a request to fill in the pit around the former 10,000 gallon tanks.- S. Scharf 12/02/05- Spoke with John Leddy. Need to put in two monitoring wells for northern heating oil tank removal. GW is evident at the bottom of the pit and need to

STANITA SERVICE CORP - VACANT LOT (Continued) **1001961664**

Remarks:	confirm that all the heating oil is out. Therefore, put one well on either side and fill in the pit.- S. Scharf 12/05/05- Spoke to Ray Carney of Red Banana Inc. Will approve the monitoring wells so that filling in pits can proceed. Already has soil stockpiled.- S. Scharf 12/07/05-spoke to John leddy of Pro Test. I will get him MW approval letter and he will put it on the work schedule. S. Scharf 12/13/05- Letter sent to ProTest summerizing work ot date, need for wells on north and need for further investigation on south.- S. Scharf January 2006. brought in a cotractor to do a magnetonmetry survey. found eight 550 gallon tanks. Search of NYC records confirmed the eight tanks installed in 1958. Contractor was brought in to remove the eight tanks, that were all empty. confirmatory sampling showed no problems in these areas. Sunnydale made a proposal to offsite dispose of the excavated materials, fill in the excavation and install monitoring wells and insitu injecction wells. approval was granted on this action for the northern tanks 2/06- S. Scharf 2-3/06-The five-4,000 fuel tanks were removed and several hundred yards of dirt. Adjacent tanks, eight-550 gallon tanks were discovered and removed. additional soils were stockpiled. The removed tanks were deconned, cut up and removed for Scrap. All the stockpiled soils were tested, manfiested and properly disposed offsite. I reviewed the proposal to back fill the holes and install monitoring wells and wells that chemox can be injected in. I approve plan and Red Banana will be submitting the remediation plan. S. Scharf 3/06- Holes have been backfilled and wells have been installed. per converartion with Ray Carney.- S. Scharf 6/06- Send letter to Ray Carney that the wells need to be monitored now and in near future for detemination whether to close spill or use chem-ox. 7/06- Mark turo calls as Sunnydale Farms Env. consultant. 917-750-1843. He will sample wells for Stars on 7/11/06.-S. Scharf 9/06- Energy, Tank and Environmental Services Inc. report on the groundwater sampling is approved and the spill is officially closed by correspondence on 9/7/06. S. Scharf 5 tanks tested all failed Tanks 4 and 5 are also 4000 gallons and were tested with the same test method as the other 3 tanks.

DEC Memo:	This spill is associated with a former spill from the site #0404235 which was closed out in Sept 2006 by Steve Scharf (DEC Albany). Region 2 just got this new spill report (0706859) for the site at 400 Stanley Ave Brooklyn. Delta Environmental has done some new drilling on the site (Phase 2 ?) and has found problems with soil and water. Since this site already had a spill that was investigated and closed out, we should probably try to compare the previous sample results to the current results and determine what we'll do with this site. 9/21/2007 Steve Scharf - DEC Albany - Forwarded the following response to a request for a hard copy of the Aug 2006 report. All the reports were filed together here in the Central office by spill number and then shipped back to the region. There were a number of 550 gallon tanks and soils removed and sent offsite. Also two of the three 10,000 fuel oil tanks were removed, the other had filled with concrete a while back and was abandoned onsite. Monitoring well data did not show any offsite

STANITA SERVICE CORP - VACANT LOT (Continued) **1001961664**

impacts from the removed source
area(s). What part of the site was Delta drilling on when this was
found? DEC needs to: 1) Connect
with Delta Environmental & determine what work was done, what work
they intend to do, etc. 2)
Review the old & new sample results to determine what work needs to be
done. 01/23/08- Rec'd Phase
II Acquisition Subsurface Assessment Report prepared by Delta
Consultants.The report was prepared
in response to a request by the client(Stanley Realty & Malta
Realty,LLC) to assess and document
subsurface environmental conditions on the subject site.On July 2007,
four borings were advanced on
the subject site to a depth of 10 to 19 ft.Soil samples were taken
from both above the soil water
interface and below the soil water interface.Samples were analyzed for
VOCs/SVOCs according to EPA
Methods 8260/8270.Three of the four soil borings were converted to
temporary monitoring wells for
ground water sampling purpose.Delta collected three GW samples from
the three wells.Light non
aqueous phase liquid(LNAPL) was not detected in any of the temporary
wells.Laboratory analysis of
soil and ground water showed minor exceedances of one or two VOC/SVCOs
which are residual in
nature, and do not warrant further remediation.Considering non
residential nature of the
property,extent of the residual contaminaton,absence of sensitive
receptor, this spill case is
closed.(SR)

DEC Memo:	6/20/05- Reassigned to Benjamin 1/20/10. J.Krimgold reviewed the case and found that the initialy report address Williams Street does not exists in NYC. Most likely the address is Williams Avenue. This address corresponds with PS 260 and this facility has a UST that stors #4 oil. TTF letter was sent to: Raymond Correa NYC Board of Education 28-11 Queens Plaza North, L.I.C., NY 11101 08/13/12 - LZ As Randy Austin requested, the spill has been reassigned to Tim DeMeo 10/09/14-Hiralkumar Patel. reviewed available documents for DEC DeMeo. alternate address: 857-897 Williams Ave, 342-352 Stanley Ave no other spills found. PBS #: 2-354309. as per PBS record, the site has two (2) 7,500 gal #4 oil USTs, in-service, installed in Aug. 1953. NYC Department of Education Field Operations - Fuel Division 44-36 Vernon Blvd. Long Island City, NY 11101 Attn.: Munendra Sharma Ph. (718) 349-5752 as per tank testing record, on PBC edocs, both #4 oil tanks failed a tightness test on 04/13/1995 (subject spill) and both tanks passed the test on 06/16/1995. 11/18/14 TJD File review - as per above, both tanks failed tightness tests on 4/13/95 and passed subsequent tightness tests on 6/16/95. Test reports uploaded to DECDOCS from PBS EDOCS. No further information available regarding cause of failure or repairs performed. Spill administratively closed.

DEC Memo:	12/09/05: This spill transferred from J.Kolleeny to S.Kraszewksi. 07/28/06: NYCHA update summary states that on 20K UST installed in 1972 and stored #4 and #6 oil currently stores #2 oil. Both as scheduled for a retest in 2008. No recovery system or MWs on site. NYCHA will provide DEC with a site assessment. - SK 06/10/08 : site reassigned to J.Kann. Spill 0207201 closed and consolidated with this spill at the same address. J.Kann 3/1/12: J.Kann - rcvd iwp 2/28/12 and edoced today. 1/23/14: J.Kann - email sent to NYCHA requesting

PENN WORTMAN HOUSES -NYCHA (Continued) **S102555812**

some info on Dec. 30, 2013. Received info on Jan. 9 and reviewed it today. Email approving IWP with mods sent out today and edoced. SIR due July 23, 2014. 11/5/14: J.Kann - visited site during field work on September 4, 2014. Reminded NYCHA to collect a sample in the area of the former mobile boiler. Two young trees and grass were thriving in the area of the former mobile boiler. Observed soil samples collected around the tank. No visible impacts noted. Received the SIR on 10/15/14. Reviewed the report. No exceedences of CP-51 or TOGS 1.1.1 for VOCs in groundwater or soil (with the exception of MTBE in one gw sample at 13 ppb (10ppb standard)). Minor SVOC impacts were detected in three soil locations. SB-4 in area of former mobile boiler contained no VOCs and minor SVOC (1200-1400 ppb of 4 constiuents with guidances of 800-1000 ppb). Location SBFL2 contained slightly higher SVOCs attributed to asphalt in the soil (poor quality fill). Benzo(a)anthracene was detected in gw at two locations with a concentration of 0.06ppb (guidance of 0.002 ppb). Based on the site investigation, no additional investigation is warranted and the spill closed.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY THE MOBILE BOILER WITH THE LEAKY GAUGE WAS SITUATED ON AN AREA WITH GRASS AND EXPOSED EARTH, OUTSIDE BOILER ROOM. AFTER REMOVAL OF THE BOILER, AN AREA OF STAINED SOIL ABOUT 7 BY 10 FEET WAS REVEALED. ON APRIL 29, 2003, MARIC PIPING OF LONG ISLAND CITY (CONTRACTOR WHO INSTALLED THE MOBILE BOILER WITH FAULTY GAUGE) EXCAVATED CONTAMINATED SOIL, DIGGING OUT AN AREA ABOUT 12 FEET LONG, 8 FEET WIDE, AND FOUR FEET DEEP. PID SCREENDING OF EXCAVATION SIDEWALLS AND BOTTOM SUGGESTED SOME SUBSTANTIAL RESIDUAL CONTAMINATION REMAINS. FIVE END-POINT SAMPLES WERE TAKEN; DEPENDING ON LAB RESULTS, ADDITIONAL WORK MAY BE REQUIRED. - JK 11/04/05: This spill transferred from J.Kolleeny to S.Kraszewski. 07/07/06: NYCHA summary report states that no wells exist on-site. Soil/GW conditions unknown. NYCHA will provide a site assessment to the Department. - SK 02/06/07 - J.Kann - site reassigned from S. Kraszewski to J.Kann. 06/10/08: J.kann - site closed and consolidated with 9614567.
Remarks:	broken guage on mobile boiler. cleanup in progress.

Latitude:	40.6515113
Longitude:	-73.8955538
DEC Memo:	12/07/05: This spill transferred from J.Kolleeny to S.Kraszewski. 03/23/06: This spill transferred to K.Tang - SK 08/04/08: J.kann - Spill transferred to J.Kann. Investigative work plan received on 7/29/08. 06/15/09: J.Kann - Investigation Report submitted on 6/10/09. Work performed without DEC approval of work plan. 5/25/12: J.kann - briefly scanned report and noticed NYCHA requests closure. Therefore, I identified the site as a P1. 06/105/17: J.Kann - after file review, some shallow contamination needs to be removed as per the SIR submitted in 2009 prior to closure. NYCHA was informed of that in the 2/14/17 meeting (see notes). Spill reassigned to Andre Obligado. 3/22/21 - Obligado - I reviewed the 2009 Site Investigation Report. Several soil

BREUKELEN HOUSES (Continued) **U001840686**

borings were advanced around
the tank system down to the water table at approximatley 10 ft. The
report concluded that there was
a small area of shallow impact bewteen 2 and 4 ft on the west side of
Tank 3. SEveral PAH compounds
were detected in excess of CP51 unrestricted value. However, no VOCs
were detected above CP51 in
soil or ground water. Based on my review of the report, there does not
appear to have been a
significant release at this site that would be a threat to human
health or the environment. The
level of impact does not warrant remedial action. This spill is
closed.

Remarks: DURING TANK REMOVAL - CONTAMINATED SOIL FOUND - SOIL BEING STOCKPILED - CONTRACTOR IS AQUA X

Control Type:	INST
Dt record added:	05/15/2008
Dt rec updated:	07/13/2009
Updated By:	SMMARTIN
Site Code:	58389
Site Description:	Location: The site is located at 107-23 Farragut Rd. in the Canarsie section of Brooklyn, NY, and is known as the former Duralab Equipment Corporation Facility. It is identified on the Kings County Tax Map as Section 24, Block 8156, Lot 1. The 6.6 acre site is bordered on the south by Farragut Rd., on the east by East 108th St., on the north by the Long Island Railroad and on the west by East 105th St. Site

FEDERAL EXPRESS CORP (Continued) **1000148573**

Features: The site contains a parking lot and a 165,000 square foot building that was built in 1971, with an addition constructed in 1986. Current Zoning: The property is owned by New York City and subleased by Federal Express through Cargex Corp. The building and parking lot are used by Fed Ex as a shipping facility and major distribution center. The surrounding area is composed of residential, industrial and commercial uses. Institutional controls (deed restrictions) were executed in April 2006 that prohibit residential usage on the property. Historical Use: From 1971 to 1997 a cabinet manufacturer operated on the site and used trichloroethene as a degreaser. Site Geology and Hydrogeology: Approximately 10 feet of fill materials overlay glacial outwash deposits of fine to medium sand with little silt. These deposits extend to a depth of approximately 175 ft bgs and reportedly become coarser with depth. Bedrock occurs at approximately 400 feet bgs. The groundwater table was encountered at approximately 10 ft bgs in the glacial outwash aquifer. Groundwater flow direction is towards the east-northeast.

Env Problem: Nature and Extent of Contamination: The site was contaminated with trichloroethylene (TCE) which was used as a degreaser at the former Duralab facility located on the site. TCE was detected in groundwater in the range of 100 to 240,000 ppb when the site underwent an investigation in 1998. A Soil Vapor Extraction and Air Sparging (SVE/AS) system was operated for more than two years and remediated a large portion of the groundwater contamination. The system was shut down after the mass of TCE contamination in groundwater was reduced to asymptotic levels. Post remedial groundwater monitoring was performed and indicated that the residual groundwater contamination is not migrating from the site. After five years of monitoring for natural attenuation, residual contamination remains in the groundwater and is being evaluated.

Health Problem: There are no known human exosure pathways for chemicals in the on-site subsurface soil. Although groundwater is contaminated, public water serves the surrounding community. The NYSDOH and NYSDEC will be evaluating the need to conduct additional investigations to determine the potential for soil vapor intrusion into structures on or near the site.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 10/08/93: REPLACED ELBOW RETESTED AND PASSED 4/19/93 NO CONTAMINATION FOUND. 04/16/04-File Update by Sun: - TRi-nnual Report-September 2003 through 2004, prepared by William Schaefer of GSC-Twelve (12) wells were gauged and sampled on 12/30/04, including (MW-1 through MW-4, MW-7. MW-9 through MW-14, MW-18, and SVE-1). Groundwater depths ranged from 10.35 feet to 12.82 feet. Groundwater flow direction was towards southwest. MW-10 had the maximum Benzene concentration of 730 ug/l. MW-13 had the maximum MTBE concentration of 77 ug/l. An SVE/AS system is now operating on site. 08/22/05-File Update by Sun: Also refer to Spill #98-10899 at the same location. (Sun) 10/28/05: Project reassigned from Sun to Andersen. Reviewed the triannual report dated 6/2/05. The site is making good progress with the SVE system currently in use. 1/26/06: 1/25/06 meeting with Quantum, NYSDEC, and GSC/Kleinfelder:SVE will be turned off and a remedial action plan developed for peak in MW-8 (may use ORC), there can't be additional release because this station is not an active station). 3/9/06: Reviewed monitoring report dated 2/27/06. Max BTEX 17,770 (MW8), max MTBE 66 (MW2). Depth to water 10 ft. Eleven wells sampled on 12/14/05. SVE will be shut off and bioremediation used in MW8. Request to remove sampling of MW3 was approved. 6/23/06: Received triannual monitoring report dated 6/14/06. SVE/AS shutoff. Max BTEX 17,730ppb (MW8) and max MTBE 40ppb (MW2). RAP required for MW's:1,4,7,8,10,11,14. Discuss during meeting scheduled for 6/28/06. 6/30/06: Meeting on 6/28/06 with Hess, Quantum, NYSDEC, EnviroTrac and GSC. An RAP utilizing regenox will be submitted. An upgradient source in MW-11 is suspected, from Exon or Mobil. 7/11/06: RAP

MERIT STANLEY (Continued) **S103574868**

workplan for bioremediation using RegenOx conditionally approved. Workplan proposed RegenOx application only to MW-8. Groundwater sampling showed rebounding in MW-10 and MW-11 following shut down of the SVE/AS system in February 2006. Conditional RAP approval required RegenOx application to MW-10 and MW-11. 9/6/06: Received cc of a letter requesting permission from current property owner to inject regenox. 10/16/06: Received email from Gail Helfrick: Despite several attempts, we have not been able to contact the property owner in order to revise the access agreement to allow for this work scope. Currently, we are trying to obtain contact information through the currrent tenant. 10/20/06: Sent letter to Mr. Karron, current owner, to request access. 11/1/06: Reviewed triannual report dated October 25, 2006. Groundwater sampled on August 10, 2006. Rebounding in MW 1, 4, 10, 11. High residual concentrations in MW 8. Regenox use planned in MW 8, 10, 11, but access is problematic. 11/10/06: Letter to Mr. Karron returned to sender. 11/16/06: Emailed Gail Helfrick to confirm Mr. Karron's address. 12/11/06: Sent email to Hess to followup on access for implementation. 12/18/06: Received email from Aaron Lapine of Delta: We are not sure of the property owner's address. When Kleinfelder sent (via certified mail) the access letter to the address they had, the letter could not be delivered. Kleinfelder was not sure if it was because the property owner moved or just that no one was home to sign the certified letter receipt. Kleinfelder then dropped off a copy of the access letter and recently the NYSDEC letter to the tenant and requested that the tenant forward the letters to the property owner. Until site access is confirmed with the property owner, the injection event cannot be occur. Delta will work with Kleinfelder to confirm access by obtaining the owner's correct address and confirming with the tenant that the information was delivered to the owner. 1/17/07: Meeting on 1/16/07 with Hess, Delta, and NYSDEC. Mr. Karrons address is still unknown. 2/22/07: Received email from Aaron Lapine : Access has not yet been granted. We have not been able to locate the property owner. We performed a review of NYC tax records and the owner is listed as 810-820 Pennsylvania Avenue Corporation and the mailing address given is the site address. I have called the current tenant (Buddy's Car Wash) numerous times and have only been able to get a hold of the manager once. The manager would not give me the owner's mailing address only his name (Boris Thomas), but stated if I called back the same day after 2pm Boris would be at the car wash. When I called back, I was told they did not know anyone by the name of Boris Thomas. I have been unable to contact the manager since then. Although we were trying to locate the owner's current address, we re-sent the access agreement via FedEx to the car wash property. 3/5/07: Resent access required letter to Mr. Karron at: 70 Curtis Avenue Manasquana, NJ 08736 and 810-820 Pennsylvania Avenue Corp. c/o Soloman and Bernstein 1178 Broadway, 5th Floor New York, NY 10001-5404 3/6/07: Reviewed the Site Status Report. Wells sampled on 12/1/06. Fluctuating concentrations. Max BTEX 13,520 ppb (MW11), max MTBE 40 ppb (MW2). RAP not implemented because of access issues. 3/14/07: Letter to 810-820 Pennsylvania Avenue returned to sender. 3/20/07: Spoke to Mr. Karron (site owner) (914-960-9213, akarron@optonline.net). He will provide access for RAP implementation. 5/24/07: Received email from Aaron Lapine: We are currently working with property owner for access. We have discussed the possibility of mobile AS/SVE treatment event(s) as an alternative to RegenOx, since it is less intrusive than the injections. 7/6/07: Reviewed update report. Groundwater

MERIT STANLEY (Continued) **S103574868**

sampled on 4/27/07. Fluctuating groundwater concentrations. Max BTEX 614 (MW8). Mobile short term SVE/AS proposed and approved. The mobile AS/SVE event would utilize air sparge points SP-6, SP-7, SP-9, and SP-9, and SVE wells MW-4, MW-8, MW-10, and MW-11. One 8 hour event will be performed, and used as a pilot test for this technology. 8/3/07: Approved use of method TO3 to analyse air effluent samples. 10/16/07: Spoke to Tim Fisher. Mobile SVE/AS will be conducted on 10/17/07. Effluent air sample will be collected. Report willbe submitted by the end of the month. 12/3/2007 - Feng - Reviewed update report, 10/26/2007. The monitoring wells were gauged and sampled on 8/15/2007. DTW 9.95' to 12.19' bg. Flows to south. No LNAPL. Max BTEX 3,340 ppb (MW-4). Max MTBE 20 ppb (MW-2). Mobile SVE/AS event on 10/17/2007. Next round sampling will be in 12/2007. (RJF) 2/13/08 - Carlson - Reviewed October 2007 - January 2008 Site Status Update Report. A mobile AS/SVE event was conducted on October 17, 2007. The event indicated extractable hydrocarbons are still present in the subsurface. Hess plans on restarting the existing SVE/AS system. Groundwater sampled on December 21, 2007. Max BTEX 5,050 ppb (MW11), max MTBE 12 ppb (MW2). 5/7/08 - Carlson: May 7th meeting with Hess and Envirotrac. They ordered parts to repair and restart system. Upgradient delineation required. 7/7/08 - Carlson: Reviewed June 2008 Update Report. Wells sampled on 4/9/08. Fluctuating concentration in some wells. Maximum BTEX concentration 12,291 ppb (MW4). Maximum MTBE concentration 8 ppb (MW2). Sent to email to Erin Quell: when will system be restarted, IP required for upgradient well as per may 7th meeting. 10/22/08 - Carlson: Meeting with Hess, NYSDEC, and Envirotrac. Delineation workplan due 2/09. When will system be restarted? Do not connect all wells to system when it is restarted. 11/17/08 - Carlson: Reviewed update report dated October 2008. Wells sampled on 8/21/08. MW4 was not sampled - no reason provided. Maximum BTEX concentration 4,729 ppb (MW11). System has not been restarted yet. 11/19/08 - Carlson: Emailed Ed Russo - When will system be restarted? 12/11/08 - Carlson: Received email from Ed Russo: the system was re-activated on 12/3/08. The SVE system was activated first and PID readings were recorded as a range from ND to 2.5 ppm. The air sparge system was then activated and PID readings increased to 183 ppm. We are evaluating ways to optimize the performance of the system and will do so in order to maximize recovery from the areas of the most impact. We are scheduled for another round of O&M next week and then system O&M will continue on a monthly basis thereafter. Results of system O&M events will be submitted within all future site update reports. 2/20/09 - Carlson: Reviewed January 2009 Update Report. System restarted on 12/3/08. Wells sampled on 11/26/08. Maximum BTEX concentration 3,545 ppb (MW4). 3/18/09 - Carlson: Meeting with Hess and Envirotrac. IP deadline extended to May 2009. Hess notes that there are many potential upgradient sources in the area (Wendys). 5/6/09 - Carlson: Reviewed April 2009 update report. AS/SVE system was restarted. Wells sampled on 2/27/09. Maximum BTEX concentration 5,414 ppb (MW11). Dissolved concentrations are still fluctuating. 8/10/09 - Carlson: Reviewed update report. SVE/AS restarted, low PID, is it effective? Report states hess will propose an investigation plan. 8/19/09 - Carlson: Meeting with Hess. Work plan will be submitted. 10/8/09 - Carlson: Reviewed IP. Hess states that upgradient Mobil spill is off-site source, Mobil should install additional downgradient wells 11/10/09 - Carlson: Emailed DEC Haggerty requesting Mobil install an additional well downgradient of MW15. 11/17/09 - Carlson: Reviewed update report, SVE/AS in

MERIT STANLEY (Continued) **S103574868**

operation. only trace PID recovered from SVE/AS system. 1/27/2010 - Carlson: Meeting with Hess. Off-site delineation issue has not been resolved. Review case file and null IP internally. 2/5/2010 - Carlson: Reviewed 4th Quarter 2009 Update Report. SVE/AS in operation. 5/20/2010 - Carlson: Meeting with Hess. NYSDEC to review file and discuss delineation with upgradient exxonmobile site. 5/27/2010 - Carlson: Reviewed update report. SVE to be shut down due to low recovery. 8/13/2010 - Carlson: Reviewed July 2010 Update Report. SVE/AS shutdown. Hess to provide soil data to determine if an off-site plume is affecting property. 11/10/11 - Carlson: Reviewed October 2011 Update Report. SVE/AS shutdown. General increase in dissolved concentrations in several upgradient wells. Need to review case file for potential ugradient sources. 2/6/2012 - Carlson: Spoke to Joseph Rennie. LNAPL in two wells. Weekly bailing to occur. NEED TO REVIEW CASE FILE FOR SOIL POTENTIAL UPGRADIENT SOURCES. Significant soil impact was left after tank removal in 1998. 2/22/2012 - Carlson: Left message for DEC Michael Haggerty 518-402-9768 (Central Office PM for upgradent Mobil Spill 9406497). Recent reports are not in edocs. Spoke to Michael Haggerty - recent Mobil reports were uploaded to edocs. Left message for Joe Rennie - need to ask him: 1) was recent product ID'd, 2) which wells recently had product, and 3) were soil borings completed since SVE/AS was shut down to see if system successfully remediated soil impact? 2/23/2012 - Carlson: Spoke to joe rennie. Product was not sent to a lab for fingerprinting. LNAPL is bring recovered. Recommended installing soil borings to see how much soil impact remains after SVE/AS treatment. 3/14/2012 - case review and discussed with DEC Raphael Ketani and Hassan Hussein. Need proof on whether there are upgradient sources impacting the Hess site. A letter sent to Hess requiring additional delineation in upgradient. Work Plan by 4/13/2012. Wendy's property resident: Penbrow Inc., 1916 Linden Blvd, Brooklyn, NY 11207 Wendy's property owner: Briad Wenco LLC, 30 Vreeland Road, Apt #A, Florham Park, NJ 07932-1904 7/17/2012 - 1Q2012, 4/30/2012, by EnviroTrac. LNAPL in some wells. MW-7, 0.21' on 2/2/2012, 0.21' on 2/7/2012 and 0.17' on 2/14/2012. MW-10, 0.84' on 2/7/2012, 0.72' on 2/14/2012. MW-11, 0.52' on 2/2/2012, 0.39' on 2/7/2012 and 0.28' on 2/14/2012. Groundwater sampled on 2/2/2012. MW-4, 2,239.5 ug/L BTEX, MTBE ND. MW-10, 7,723.9 ug/L BTEX, MTBE ND. MW-1, 2,018 ug/L BTEX, MTBE ND. MW-9, 4,384.7 ug/L BTEX, MTBE ND. MW-18, 18,330 ug/L BTEX, MTBE ND. MW-2, 1,575.9 ug/L BTEX, MTBE ND. Hand bailed LNAPL from the 3 wells MW-7, MW-10 and MW-11 on 2/27/2012 and 2/14/2012. Placed absorbent socks in monitoring wells MW-7 and MW-11 to enhance product recovery. email to Hess/EnviroTrac We reviewed the 1Q2012 report. Product was present in some of the monitoring wells, MW-7, MW-10 and MW-11. I see that the product was hand bailed twice during this quarter. Based on the thickness of the product, you need to have a more aggressive product removal method. I don't find any history of the occurrence of product in the report. Is this the first time product show up in these wells? As I can see from the hydrographs, water table also drops 1-2 feet during this quarter and the product show up. Have the LNAPL sampled? If not, please do so. And according to our notes, we required some work plan for upgradient delineation. How is that going? 10/19/2012 - 2Q2012, 7/31/2012, by EnviroTrac. The groundwater was sampled on 5/8/2012. Gauged on 3/27/2012, LNAPL in MW-10 and MW-11, removed and replaced absorbent socks from MW-7, MW-10 and MW-11. Gauged on 4/5/2012, LNAPL in MW-7, MW-10 and MW-11, removed and replaced an absorbent sock in monitoring well MW-11. Gauged on

MERIT STANLEY (Continued) **S103574868**

and 5/8/2012, LNAPL in MW-8, MW-10 and MW-11. DTW 12.51 to 14.94. Flows to southeast. MW-8, 0.35' LNAPL. MW-10, 0.36' LNAPL. MW-11, 0.40' LNAPL. MW-4, 6,469 BTEX, MTBE ND. MW-1, 3,025 BTEX, 7.7 MTBE. MW-9, 543.5 BTEX, 0.69J MTBE. MW-7, 4,619 BTEX, 6.6J MTBE. MW-2, 1,166.3 BTEX, 1.8J MTBE. AS/SVE shutdown due to no recovery. Continue monthly gauging and product bailing and quarterly sampling. The next sampling will be in August 2012. 10/24/2012 - STIP along with a comment letter on case reivew was sent to Hess/EnviroTrac. DEC required: 1) fingerprint the product. 2) more aggressive product removal. 3) provide all previous soil borings/monitoring wells installation information. 4) upgradient delineation. 5) explain the discrepancies in between the PBS record and the reported removed tanks. Need signed STIP by 11/23/2012. 1/18/2013 - 3Q2012, 10/31/2012, by EnviroTrac. 6/6/2012 and 7/12/2012, LNAPL in MW-10, hand bailed. Removed and replaced absorbent socks from MW-7, MW-8, MW-10 and MW-11. Groundwater was sampled on 8/2/2012. No LNAPL in the August sampling event. DTW 11.67 to 13.92 bg. Flows to southeast. MW-4, 4,695.4 BTEX, MTBE ND. MW-11, 18,053.8 BTEX, MTBE ND. MW-1, 8,440 BTEX, MTBE ND. MW-10, 24,207.7 BTEX, MTBE ND. MW-9, 2,484.7 BTEX, MTBE ND. MW-7, 6,467.5 BTEX, MTBE ND. MW-2, 482.3 BTEX, MTBE ND. 9/23/2013 - 4Q2012, 1/31/2013, by EnviroTrac. Groundwater was sampled on 11/15/2012. DTW 10.74 to 13.11 feet. Flows to south-southeast. NO LNAPL. Removed and replaced absorbent socks from MW-7, MW-8, MW-10 and MW-11 on 9/5/2012. MW-11, 4,140.5 BTEX. MW-4, 1,051.1 BTEX. MW-1, 12,527 BTEX. MW-10, 31,762 BTEX. MW-8, 7,838.2 BTEX. MW-9, 157.3 BTEX, 2.2 MTBE. MW-7, 315.2 BTEX, 4.8 MTBE. MW-2, 299.88J BTEX, 5.8 MTBE. Hess reiterates its request to have Exxon Mobil complete a full delineation of its plume to include the Wendy's property located north of the former Merit Station. 1Q2013, 4/30/2013, by EnviroTrac. Groundwater was sampled on 2/14/2013. DTW 10.13 to 11.33 feet. Flows to south-southeast. NO LNAPL. MW-11, 678.8 BTEX. MW-1, 3,761 BTEX, 7 MTBE. MW-10, 11,024 BTEX. MW-8, 64.4 BTEX. MW-9, 62.4 BTEX, 2.2 MTBE. MW-2, 85.68J BTEX, 7 MTBE. Hess reiterates its request to have Exxon Mobil complete a full delineation of its plume to include the Wendy's property located north of the former Merit Station. 2Q2013, 7/31/2013. Work performed on 5/23/2013. DTW 10.71 to 13.04 feet. Flows to south-southeast. MW-11, 1735.47J BTEX. Mw-4, 3,566 BTEX. MW-10, 4,990.9 BTEX. MW-1, 2,961 BTEX. MW-8, 1,759 BTEX. Mw-9, 55.7 BTEX. MW-2, 272.7 BTEX. 10/30/2013 - DEC K. Hale, J. Vought, S. Mahat and J. Feng conducted site visit. Met with the carwash owners Richie Krause and Mannuel Viegas. The carwash has been there for 30 years and the building has been there for 15 years. According to the owners, there is a pumping well for the carwash operation and the well water has been used for the bathroom. The owners do not know the location of the pumping well and the water from the well has never been sampled. They have agreement with Hess that Hess will take care of the spill. 11/14/2013 - Reviewed the monitoring data trend with R. Austin and J. Vought. DEC will send letter to Wendy's for information. 11/22/2013 - Letter was sent to Wendy's property owner: Pennbrow, Inc, at 181-06 Tudor Road, Jamaica, NY 11432. DEC requires: 1) Submission of a detailed site history including: previous site usage; current and historical petroleum storage (including tank removals and abandonments; location, sizes of tanks removed/abandoned and types of product stored); tightness test results, the number of tanks; associated spill numbers if any; and the Petroleum Bulk Storage (PBS) Registration and Record. 2) Submission of any records or information regarding subsurface

MERIT STANLEY (Continued) **S103574868**

investigations that have been done at the property (e.g. a subsurface investigation that would have been done for the purpose of a property transaction). Response by 30 days. 11/5/2014 - 1Q2014, 4/30/2014. Monitoring on 11/13/2013. DTW 11.02 to 13.31 feet. Flows to south-southeast. MW-1, 2,745.2 BTEX. MW-10, 5,841.5 BTEX. MW-2, 64.7 BTEX. 2Q2014, 7/31/2014. Groundwater monitoring on 5/31/2014. DTW 10.12 to 12.48 feet. Flows to south-southeast. AS/SVE shutdown due to non-detected recovery. MW-11, 913 BTEX. MW-4, 29.5 BTEX. Mw-10, 608.8 BTEX. MW-1, 1,601.2 BTEX. MW-8, 1,594 BTEX. Hess reiterates its request to have ExxonMobil complete a full delineation of its plume to include the Wendy's property located north of the former Merit Station. 11/17/2014 - 3Q2014, 11/7/2014. AS/SVE shutdown due to non-detect recovery. 8/31/2014, sampled groundwater. DTW 0.67 to 13.05 feet. Flows to south-southeast. MW-11, 379.12J BTEX. MW-4, 4,218.3 BTEX. MW-10, 5,690.6J BTEX. MW-1, 2,493.5 BTX. MW-8, 4,786 BTEX. 3/30/2016 Feng This spill is transferred from J. Feng to V. Brevdo as per J. Vought 3/30/16 - Raphael Ketani. This spill case has been assigned to me effective today. According to ACRIS, the owner of the property is 810-820 Pennsylvania Avenue Corp., c/o Solomon & Bernstein, 351 Broadway, Third Floor, NY, NY, 10013. The block and lot are 4346 and 12. PBS case record #2-297372 lists Perrier Auto Wash, Inc. as the owner. Their address is 810 Pennsylvania Avenue. One 275 gallon waste oil tank is in service. One 4000 gallon UST was closed in place. Eight USTs of various sizes were closed and removed on 2/1/98. According to a 10/24/12 case note, a Stipulation was sent to HESS with a return date of 11/23/12. Also, the DEC required that the product be fingerprinted, more aggressive removal take place, provide all prior soil boring and well installation information, upgradient delineation, and explain the discrepancies between the PBS record and the reported tank removals. The Stipulation was never returned. The case notes indicate the following total VOCs concentrations for the groundwater samples: date very high results high results 8/2/12 MW-10, 11 MW-1, 4, 7, 9 11/15/12 MW-1, 10 MW-4, 8, 11 2/14/13 MW-10 MW-1 5/23/13 MW-1, 4, 8, 10, 11 11/13/13 MW-1 and 10 5/31/14 MW-1 and 8 8/31/14 MW-1, 4, 8 10 Speedway/Hess contact: Matthew Butler, (732) 738-2924, MButler1@Speedway.com Consultants: Edward Russo (EnviroTrac), (631) 924-3001, EDR@EnviroTrac.com Joseph Rennie (EnviroTrac), (631) 924-3001, JoeR@EnviroTrac.com Mr. Butler's mailing address is: Speedway, LLC, 500 Speedway Drive, Enon, OH 45323. Other spill cases for the site include: 8801521: name = 810 Penn. Ave., tank overfill, 150 gals. of gas into the sewer, sewer was flushed and there was no sign of gasoline, case closed 9/30/88 8801651: name = Merit, tank test failure (which tank not indicated), closed 11/2/88 9010161: name = 810 Penn. Ave., 2000 gal. and 4000 gal. tanks failed their integrity tests, will excavate, isolate and retest, closed 7/22/94 and referred to spill 9214515 9301033: name = 810 Penn. Ave., tank overfill, contained with Speedi-Dri, closed 5/24/93 9810899: name = Merit Station, digging for a foundation and found contaminated soil, closed 8/22/05 and referred to 9214515 According to a 10/30/13 case note, a site visit was made. As part of the visit, staff asked about the water supply well. Personnel at the site stated that the water was used for the bathroom. However, the location of this well was unknown. An 11/22/13 case note indicates that a letter was sent to the owners of the Wendy's restaurant. In the letter, the owners were asked to provide all historical records and records of any previous investigations. A response date was set by DEC as 12/22/13. - There is no documentation in the case file

MERIT STANLEY (Continued) **S103574868**

regarding Wendy's. The 11/5/14 case note regarded the second quarter 2014 report. In the report, it was stated that the AS/SVE system had been turned off because the results were non-detect. 4/11/16 - Raphael Ketani. As there has been no communication nor report submissions by the representatives of Speedway or EnviroTrac since the submission of the third quarter 2014 quarterly report, I sent an email to Mr. Butler, Mr. Russo and Mr. Rennie requesting the latest groundwater report. I also wrote that they were in violation of the Stipulation Agreement as it was never returned. Lastly, I included that they must respond to the DEC requirements as described in the 10/24/12 case note. 4/25/16 - Raphael Ketani. I received the below email from Mr. Russo: This correspondence is in response to your email below regarding the former Hess/Merit station 32STA. Please note that Speedway/EnviroTrac was conducting quarterly sampling, monitoring, and reporting up until October 2014. In October 2014, Speedway LLC (Speedway) purchased the retail assets of Hess Corporation and is now the responsible party with respect to New York State Department of Environmental Conservation (NYSDEC) Spill # 92-14515. As a result of this sale, we now longer have access to the property. On December 15, 2014, EnviroTrac notified the NYSDEC case manager via email of this situation that site access is pending a new access agreement. An access agreement is currently being pursued between the current property owner and Speedway, and as a result, we cannot conduct any work on the subject property until access is finalized. Quarterly sampling, monitoring, and reporting will resume immediately upon obtaining access. Please be advised that we have consistently been in communication with the NYSDEC regarding updates on the status of NYSDEC s up-gradient investigations, as follows: 2/6/2012 EnviroTrac/Hess submitted a FOIL request to review NYSDEC case files regarding the up-gradient Mobil spill case and there have been numerous follow up correspondences between NYSDEC and EnviroTrac/Hess on FOIL status. 4/3/2012 - Speedway emailed NYSDEC case manager to respectfully request that the NYSDEC allow Hess to complete a detailed file review of the NYSDEC's documents prior to moving forward with or committing to any additional actions. 10/24/2012 NYSDEC letter to Hess. 11/21/2012 EnviroTrac/Hess response to 10/24/2012 NYSDEC letter. 1/10/2013 NYSDEC provided reports to EnviroTrac/Hess regarding the Mobil spill case. 11/22/2013 NYSDEC sent a letter to Pennbrow Inc/Wendy s asking for a detailed site history and a summary of investigations performed on their property. 8/15/2014 EnviroTrac requested via email with NYSDEC case manager a status of Pennbrow Inc./Wendy's subsurface investigation and followed up with the NYSDEC on 1/29/15, 11/16/15, and 1/4/16. 12/15/2014 EnviroTrac notified NYSDEC case manager via email that site access is pending new access agreement. 4/2/2015 - EnviroTrac received email correspondence from NYSDEC noting that they have received a Phase 1 from the adjacent up-gradient Wendy's property (former service station), and that NYSDEC is working on a determination on who will conduct an investigation. 7/7/2015 - Ed Russo (ETNY) spoke to June Feng (NYSDEC case manager). June stated that she will look into Wendy's progress related to a Phase 2 ESA that the NYSDEC required of Wendy's and she will get back to us re: the status. To our knowledge to date, there has been no up gradient delineation by Mobil or any correspondence from Pennbrow (the Wendy s property owner). Please be advised that Speedway reiterates its request to have Mobil complete a full delineation of its plume to include the Wendy s property located north of the Former Merit Station. Copies of any correspondence can

MERIT STANLEY (Continued) **S103574868**

be provided, upon request. Product Removal/Fingerprint Pending site access, and if product is present, Speedway and EnviroTrac will aggressively remove product during future monitoring events. PBS/Tank Removal Discrepancies Speedway/EnviroTrac to research PBS records and tank removal reports and will rectify discrepancies.
****
********** I checked the UIS database for the former service station address at 1916 Linden Boulevard, Brooklyn. However, I did not find a spill case listing, nor a PBS case listing. The NYC Department of Buildings database also lists various alternative addresses for this location. So I checked addresses 1918 to 1938 Linden Boulevard, 786 to 196 Pennsylvania Avenue and 787 to 797 Sheffield Avenue. However, no Spills cases nor any PBS cases were found in the UIS system. The ESA Phase I for the Wendy's property was archived in the DECdocs system. The Phase I was written by Executive Environmental Group, Inc. at 1373 Coney Island Avenue in Brooklyn, (718) 677-1007. The date of the Phase I is 11/26/03. There is a cover letter attached dated 12/4/13 from Natalie Gurin of Eiseman Levine Lehrhaupt and Kakoyiannis at 805 Third Avenue, NY, 10022, (212) 752-1000. According to the Phase I the present Wendy's property contained dwellings up until 1967. From 1967 to 1981 the property was occupied by a filling station. The Phase II still hasn't been received by the Department. I will write a letter to Ms. Gurin requesting that some type of subsurface investigation take place at the Wendy's property. 4/26/16 - Raphael Ketani. I sent a letter to Ms. Gurin (representing Pennbrow, Inc.)requesting the submission of a Phase II RIWP by June 3, 2016. The latest address in ACRIS for Penbrow, Inc. is 331 Madison Avenue, NY, 10017 - according to a 3/10/11 UCC-1 document. However, there is a deed from the nineteen nineties which shows the address Penbrow, Inc., 181-06 Tudor Road, Jamaica, NY 11432. The property is block and lot 4346 and 6. A UCC-3 Continuation document in ACRIS shows the party Briad Wenco, LLC, c/o The Briad Group, 78 Okner Parkway, Livingston, NJ, 07039. 5/24/16 - Raphael Ketani. Wayne Lehrhaupt (212) 752-1000, the attorney for Norman Bobrow of Penbrow, Inc., called inquiring about the DEC's 4/26/16 letter requesting the Phase II RIWP. He explained that Ms. Gurin had received the letter shortly after 4/26/16, but he hadn't received it until yesterday. He asked how the DEC came to the conclusion that an investigation was necessary. I told him that, based upon my review of the case file and the case notes, information was found that indicated the existence of a source of contamination. I added that the information also suggested the existence of an upgradient source. Lastly, I stated that Ms. Feng (the previous DEC case manager) had requested a Phase II Report. However, the Phase II was never done. Mr. Lehrhaupt said that he understood what I was saying. He asked whether a magnetic survey would be required. I told him that if one hadn't been done before, then one should be done now. Mr. Lehrhaupt mentioned that he was used to working with a private individual out on Long Island who does environmental work. I told Mr. Lehrhaupt that the DEC would require a report with a site map to scale with surveyed locations, surveyed water table elevation data, a groundwater flow map, soil sample descriptions, the full suite of VOC and SVOC analyses and more. I asked whether his environmental person was knowledgeable about what would be included in a Phase II. He said that he wasn't sure. He asked whether the DEC could recommend a company which is familiar with the area. I told him that the DEC doesn't make recommendations, but there are dozens of environmental

MERIT STANLEY (Continued) **S103574868**

companies in the metropolitan area from which to choose. Lastly, Mr. Lehrhaupt asked for an extension of the Phase II RIWP submission date. I asked him whether July 11th would be alright. He said he will call me back today with the answer. With that, the conversation ended. 5/25/16 - Raphael Ketani. Today I received the green return card for the 4/26/16 letter I had sent Ms. Gurin. 6/16/16 - Raphael Ketani. Today Dave Yudelson of Sieve Paget and Riesel (law firm; (212) 421-2150/ cell (917) 295-6449) called regarding the DEC's 4/26/16 letter requesting the Phase II investigation for the Wendy's facility. He said that he had been hired by Wendy's (1916 Linden Blvd.) and needed the documents from the case file for the HESS station site. He said that he was aware there was an indication that the groundwater contamination was coming from upgradient. I retrieved the documents from the DECdocs system that I thought would be useful to Mr. Yudelson for his review and put them on my Desktop. However, I sent him an email that he needed to make a formal FOIL request since this was the DEC policy. Later, I looked through one report for the site and came across two spill case numbers. The first was for a MOBIL station and was #9406497. The second was for an EXXON station and was #9409096. I also found an air photo in the latest report for the site. It showed that the MOBIL station was due north of the site on the north side of Linden Blvd. (1935 Linden Blvd.). The EXXON station was to the northeast and on the other side of Linden Blvd. Its address is 765 Pennsylvania Avenue. The EXXON spill case was closed on 7/27/11. However, the MOBIL station spill case was still active. The latest case notes for the MOBIL case indicated that the air sparge system had been restarted during 2014. A 2011 report for the MOBIL site showed that there still were very high total BTEX concentrations in the groundwater both onsite and off site to the south. 6/28/16 - Raphael Ketani. Mr. Yudelson (212) 421-2150/ cell (917) 295-6449) had made a FOIL request for the reports associated with the site. The request number was W008818-062116. The date of the request was 6/21/16. 7/8/16 - Raphael Ketani. Mr. Yudelson (law firm; (212) 421-2150/ cell (917) 295-6449) sent me an email requesting an extension of the deadline for responding to the Department's requirement that an investigation take place at the Wendy's location. I set the new deadline as August 1, 2016. 8/1/16 - Raphael Ketani. I received the August 2016 P.W. Grosser (PWGC) SIWP for the Wendys property at 1916 Linden Boulevard, Brooklyn. The plan was dated 8/1/16. I began my review. The work plan really takes the form of a historical review of the spills at the MOBIL station (#9406497; 1935 Linden Blvd.), the former EXXON (now Gulf) station (#9409096; 1939 Linden Blvd.) and at the subject former HESS station. In the beginning and the latter parts of the work plan, PWGC stated that much more documentation is needed from the EPA, the State and the City regarding all 3 sites, along with specific documents from the spill files for each site, so that they can create a Preliminary Conceptual Site Model (PCSM) before they undertake an investigation of the Wendy's Restaurant property. The reason for this, they state, is to that a better focused plan of action can be created and so that data gaps can be identified. Even after all of this information is obtained, they intend to further refine their PCSM in order to improve their focus and plan of action. Only after all of this has been done will they initiate an investigation. They did not indicate when this investigation would eventually take place. The notes below form a synopsis of this work plan. PWGC states that the owners of the former HESS station (hereafter referred to as the HESS station)

MERIT STANLEY (Continued) **S103574868**

stated that the contamination below their site was coming from the upgradient MOBIL station site and the upgradient former EXXON station site (hereafter referred to as the EXXON station). No investigation will take place by Pennbrow until all of the available documentation regarding the sites can be evaluated. They believe that a review of this documentation will support the conclusion that the sources of the contamination are the HESS station, the MOBIL station and the EXXON station. The depth to groundwater is from 10 to 12 feet below grade. The regional groundwater flow varies from the southeast to the southwest. PWGC performed site visits at all 3 sites on 7/19/16. The MOBIL station had the components of a remedial system, but they were uncertain whether is was operating. The EXXON station had a remedial system, but it appeared to be abandoned. The HESS station remedial system was not operating. The Wendy's property was used as a gas station from 1967 to 1981. After this period, a new building was constructed as the Wendy's Restaurant. A gas station was present at the HESS location from 1949 to 1988. In 1988, HESS changed from a gas station to an auto repair service and a car wash. A filling station existed at the EXXON location from 1928 to 1950. An EnviroTrac September 2009 report indicated that the HESS pumps, USTs and piping were removed during January and February of 1998. Soil was removed to 5 feet beyond the limits of the tank field and from 2 to 6 feet below the pipes and fills. Residual soil contamination was identified from 5 to 12 feet below grade. LNAPL was present in the HESS MW-7, 8, 10 and 11 wells to July 2012 (the case notes from the previous DEC case manager, June Feng, indicate that there was no NAPL in these wells from 2014 onward). A quarterly report for HESS stated that there was very high groundwater MTBE contamination up to 120,000 ppb. Figure 3 indicated the thickness of the LNAPL at the monitoring wells on the HESS site during 2012 as well as the extent of the residual LNAPL in the soil. The information was presented in the work plan for wells MW-1 to MW-3, 7, 8 and 18 for the period June 1995 to August 2000. The data concerned only the MTBE concentrations. The results were up to 120,000 ppb. Figure 4 presented the dimensions of the core of an MTBE plume that appears to have migrated from the MOBIL site. Historical BTEX concentrations had been greatest at MW-8 (34,200 ppb)during March 2003, at MW-10 ((31,762 ppb) during November 2011 and at MW-11 (34,420 ppb) during April 2002. The available information in the case record included groundwater sampling results through August 2014. EnviroTrac in their September 2009 report indicated their concerns that the contamination was from the MOBIL site. In this report, it was requested that the DEC ask MOBIL to further delineate the contamination. The report also indicted that the DEC requested HESS to investigate the potential upgradient sources. The Stipulation Agreement (Stip) sent to HESS required HESS to have the LNAPL fingerprinted that was found in the wells during 2012, implement a more aggressive LNAPL removal program, provide all previous soil boring/monitoring well installation data and related information, conduct an upgradient delineation and explain the discrepancies between the PBS record and the reported tank removal performed during 1998. According to PWGC, it was not clear whether the Stip was executed or if the requested information had been provided. Correspondences in the DEC case file indicated that HESS requested multiple times that EXXON and MOBIL fully delineate the MTBE plume and include the Wendy's property. It was unknown whether this was done. During January 2013, the DEC provided reports to HESS and EnviroTrac regarding the MOBIL site spill case. In addition, it

MERIT STANLEY (Continued) **S103574868**

was discovered that the car wash utilizes a pumping well to supply water. However, the location is not known. MOBIL site spill #9406497 is still active. The ARCADIS November 2011 report indicated that 18 wells had been sampled in connection with the October 1997 Stip. The depth to groundwater was found to be from 11 to 12.5 feet below grade and to be flowing to the southeast. Two non-potable wells were located within 300 meters to the south-southeast. Fifteen USTs had been removed during 1989 and were replaced with five 4000 gallon USTs. During January 2008, the report indicated that LNAPL was found in MW-18 (south of the dispensers) during August 2006. The LNAPL recovery system operated from January 1985 to March 20, 1992. The AS/SVE system operated from April 1995 to October 1998. EFR events took place from August 2005 to June 2008. From May 2009 to February 2010, RegenOx injections took place. On 6/4/08, the DEC approved the removal of MW-12, 14, 17 and 20 from the sampling array. MW-9 and MW-11 contained MTBE at up to 95,000 ppb from January 1995 to September 1997. According to PWGC, this indicated that the spill had occurred prior to 1995. MTBE was detected in MW-13 during October 1998 at 23,000 ppb. PWGC stated in the work plan that the EXXON site spill case #9409096 was still open. However, this spill case was closed on 7/27/11. A Preliminary Conceptual Site Model (PCSM) had been developed in order to obtain a general understanding of the Wendy's property. The PCSM considered the site history and context, including the fate and transport, potential sources, release mechanisms and the physical and chemical mechanisms controlling fate and transport. PWGC stated that there is ongoing source contamination originating from HESS. They also stated that there is source contamination at MOBIL and that it is affecting HESS. They indicated the location and extent of the MTBE plume from MOBIL in Figure 4 of the work plan. PWGC stated that data gaps were identified through the PCSM in connection with the quality and source of the groundwater that is flowing onto and off of the site (HESS). Before the site investigation is undertaken, the data gaps should be addressed to the extent practicable so that the PCSM can be refined and the site investigation focused. PWGC defined the data gaps as the need to obtain all work plans, reports and documents concerning the HESS site, including the Stipulation Agreement, fingerprint analysis, PBS record discrepancy resolution documentation, pumping well documents, soil boring logs, well installation logs, groundwater results since August 2014, access to all wells, and specific reports in the UIS system from the MOBIL and EXXON case files. The objective of the Site Investigation Work Plan (SIWP) is to reduce the uncertainty regarding the quality and source of the groundwater that is flowing onto and off of the Wendy's site as it relates to known sources of contaminated soil and groundwater. The scope of work includes: sampling up gradient MOBIL site wells MW-12 to MW-16 and HESS downgradient wells MW-4 and MW-11. PWGC will gauge and collect the usual field measurements and collect additional data via the documents for the HESS site, the MOBIL site and the EXXON site for a more comprehensive scope of work. Upon receipt of these documents, PWGC would review them for additional data gaps. A Remedial Investigation Report (RIR) will be sent to the DEC. Figure 3. There is a pool of product in the northeast quarter of the HESS site with the center of the pool being 0.84' of product. Wells MW-7, 8, 10 and 11 (upgradient) had from 0.21' to 0.56' (the data is from 2012 as no product is present in the wells since 2014). However, the figure does not indicate that any USTs were ever in this area. Figure 4. An MTBE

MERIT STANLEY (Continued) **S103574868**

plume is depicted as emanating from MOBIL wells MW-9 and MW-11. As drawn, it extends from the MOBIL station, then under the Wendy's location and ends under the HESS site. Groundwater flow is southeast. The Sanborn maps were at the end of the work plan. The 1950 map showed a dairy in the northern part of the future Wendy's property and two filling stations across Linden Boulevard and another one to the east of the future HESS site. A metal products manufacturing building was shown to have existed on other maps for many decades in the northwest quarter of the future HESS site. A 1967 map shows a filling station in the exact location of the future Wendy's Restaurant location (the center of this property). The 1977 map was the first to show the filling station and the auto laundry on the future HESS property. It also showed that the previous filling station building did not exist, but another one was constructed at the southern boundary of this property and was adjacent to the metal products building. The 1981 map showed the filling station in the south and east parts of the future HESS property with the metal products facility still present. The 1983 map was the first to show the Wendy's building at its present location. The 2001 map showed that the HESS filling station was now a car wash and that the filling station to the east across Pennsylvania Avenue was also now just a car wash. The last map in the work plan was for 2007 and depicted essentially the same conditions as in the 2001 map. I checked Google Earth and viewed a current photo of the HESS site. The property still contains the car wash and the historical metal products manufacturing building is still there. However, from the emptiness of the parking spaces around this building, it is not clear that there is metal products manufacturing taking place at this location.

---------- Case manager's review notes for the August 2016 P.W. Grosser (PWGC) SIWP : Having reviewed the work plan as submitted by P.W. Grosser Corporation, I determined that it did not follow the work plan format typically used by industry and therefore was deficient. There were no descriptions or figures showing where PWGC would install soil borings and wells on the Wendy's property. Also, there were no statements, nor figures regarding the geophysical methods that would be used to locate any structures (e.g. USTs) that may still exist on site. PWGC indicated in their SIWP that they would look for and review documents concerning the other sites, but not documents for the Wendy's property. In all likelihood, New York City agencies (e.g. Fire Department, Department of Design and Construction, the real property department and the taxation department) must have some types of records which may indicate the former presence of USTs. Also, the various historical societies may have their own records of the general area, if not the Wendy's property itself. Still, PWGC does not mention any intent to review possible Wendy's records at these sources. Lastly, the wording of the SIWP takes the form of a very extensive literature search and review and a modeling exercise. Because of the above deficiencies, I disapproved the SIWP. 8/9/16 - Raphael Ketani. I sent an email to Joe Rennie of EnviroTrac (631) 924-3001 asking whether Speedway had signed a new access agreement for continuing the environmental monitoring work. I added that if they hadn't, then the State will take enforcement action against them. I also called him to give him the above information. Mr. Rennie stated that he will pass the information along to Mr. Butler. I told him that Mr. Butler was the main recipient of the email. Speedway/Hess contact: Matthew Butler,

MERIT STANLEY (Continued) **S103574868**

(732) 738-2924, MButler1@Speedway.com Consultants: Edward Russo (EnviroTrac), (631) 924-3001, EDR@EnviroTrac.com Joseph Rennie (EnviroTrac), (631) 924-3001, JoeR@EnviroTrac.com Michael Haggerty (518) 402-9688 in the DEC Central Office in Albany is the case manager for the MOBIL spill (#9406497). He sent me the ARCADIS August 2016 Receptor Evaluation Report dated 8/8/16 for the MOBIL station. I reviewed the report. The AS/SVE system was restarted on 8/28/14, but the VOC concentrations temporarily exceeded the capacity of the catalytic oxidizer. In light of this, the AS part of the system was shut down. However, it was restarted on 12/11/14 after the system logics were reprogrammed. A total of 14.71 lbs. of BTEX and 1898 lbs. of total petroleum hydrocarbons were recovered since the system had been restarted on 8/28/14. The system was shut down during February 2016 as per DEC approval in order to check for contaminant rebound. The depth to groundwater varies from 10 to 12 feet bgs and the flow direction is to the south. The latest groundwater monitoring took place on 6/13/16. Groundwater samples were collected from MW-1 to 7, 9, 11, 13, and 15 to 19. The samples were analyzed for BTEX, MTBE and ethanol. The analytical results for the groundwater samples from well MW-3 had 320 ppb of ethylbenzene and some low hits. The sample from MW-4 had 1100 ppb ethylbenzene and 1300 ppb total xylenes, along with a few low results. Both wells MW-3 and MW-4 are on site in the southeast corner of the MOBIL station. The results for the groundwater samples from the other on site wells were either entirely non-detect or had non-detects and low hits. The samples from off site down gradient wells MW-13, 15 and 16 were entirely non-detect, except for 8 ppb of MTBE in the sample from MW-13. All of the above results suggest that any contamination that is in the groundwater under the Former HESS site IS NOT from the MOBIL site spill. I sent a copy of the ARCADIS August 2016 Receptor Evaluation Report to Mr. Rennie and Mr. Russo at EnviroTrac. Mr. Russo called me up afterwards and stated that HESS is no longer involved in the project. He added that the access issue was between the owner, 810-820 Pennsylvania Avenue Corporation, and Speedway and that I should contact Mr. Butler and send him the report. Hearing this, I sent Mr. Butler at the ARCADIS report. I also asked Mr. Butler to expedite the access agreement. Later, I looked up the ownership of the Speedway property. The CEO is Abraham Karron at 810-820 Pennsylvania Avenue Corp., 70 Curtis Avenue, Manasquan, NJ, 08736. 8/11/16 - Raphael Ketani. I sent a letter and 4 reports by email to Mark Chertok of Sive Paget & Riesel (SPR), Joyce E. Kung of SPR and to Richard T. Kampf of P.W. Grosser Consulting Engineer & Hydrogeologist, PC. The letter explained that the Department was sending the EnviroTrac first to third quarter 2014 groundwater monitoring reports as requested by P.W. Grosser. I added that we were also including the August 2016 groundwater monitoring report for the up gradient MOBIL station. I explained in the letter that the data in the MOBIL report indicated that the contamination at monitoring wells MW-13, 15 and 16 was very low. So, there was little or no contaminated groundwater coming from this site. In addition, I stated, that the data did not provide evidence of an MTBE plume. I also stated that staff at the Department had noticed that the only wells which had high groundwater contamination at the former HESS site were MW-1, 4, 8 and 10, which were located up gradient from the tank field. I mentioned that the groundwater samples from the wells down gradient had very low analyte concentrations. Continuing, I stated that, given the above information, it was the Department's determination that the contaminated groundwater was coming from the

MERIT STANLEY (Continued) **S103574868**

Wendy's property. In light of this, the Department was requiring the submission of a new investigation work plan which will include a geophysical survey of the property, soil borings and the installation of groundwater wells. I set a deadline of 9/9/16 for the submission of this work plan. Pennbrow, Inc. latest address is: 488 Madison Avenue, 19th Floor, NY, 10022 Mark Chertok's contact information at SPR Law is: mchertok@sprlaw.com; (212) 421-2150 Ms. Kung's contact information is: 460 Park Avenue, 10th Floor, NY, 10022;jkung@sprlaw.com/(212) 421-2150/(646) 378-7288 Mr. Kampf's contact information is: Richard T. Kampf, PG, Director, rkampf@pwgrosser.com 8/16/16 - Raphael Ketani. Mr. Butler (732) 738-2924/MButler1@Speedway.com sent me an email today stating that Speedway has been granted access to the site. A groundwater monitoring report will be submitted during September. 8/17/16 - Raphael Ketani. Mr. Kampf (212) 786-7420/rkampf@pwgrosser.com called me today. He said that the geophysical survey of the Wendy's property will take place on 8/23/16. I told him that the DEC would like the footprint of the Wendy's Restaurant to also be investigated. He said that he didn't know how this could be done. I told him that an acoustic instrument survey may work through the restaurant floor. He said that he will see what can be done. I added that the DEC would like a cover letter explaining what will take place and a map showing the where the geophysical transects will be run. Mr. Kampf stated that the transects will just be whatever the width of the instrument is and they will run as many transects as necessary. I told him this would be fine. Additionally, Mr. Kampf asked for any well construction logs from previous EnviroTrac reports and any soil contamination delineation reports. I told him that I will look and see what we have. With that, the conversation ended. 8/18/16 - Raphael Ketani. Mr. Kampf called me earlier today and stated that he could not find a company which could do a geophysical survey within the Wendy's as the tables and chairs are fixed to the floor. I told Mr. Kampf that if he can't find a geophysical service that can do the work, then he should just say so in a cover letter to the geophysical survey plan. Mr. Kampf stated that he would do this. Later, as the soil borings report and the well construction report were not in the electronic archive, I searched for them in the paper file. However, they were not in the paper file, either. As a result, I sent letters to Merit Oil Corporation and HESS Corporation requesting these documents. The letters were sent to the following addresses: Manager, Environmental Management Division, Merit Oil Corporation, 551 West Lancaster Avenue, Haverford, PA, 19041-1419. Dawn M. Coughlin, Manager, Marketing and Refining Remediation, HESS Corporation, 1 HESS Plaza, Woodbridge, NJ, 07095. 8/22/16 - Raphael Ketani. On 8/19/16, I received an email from Mr. Kampf memorializing and adding to our discussion over the phone on 8/17/16 regarding the Wendy's property. In his 8/19/16 email, Mr. Kampf wrote that his client has authorized P.W. Grosser to move ahead with the geophysical survey of the Wendy's property. The owner of the Wendy's has stated that there is no basement and the building is heated by gas. The geophysical survey will be conducted both outside and inside the building. A contractor will be hired to conduct the survey. A Fischer TW-6 metallic locator (type RD8000 pipe and cable locator) will be used to detect buried tanks and other ferrous anomalies. Any detections will be followed up with a GPR survey. A cart mounted GPR device will be used at a 2 to 3 foot spacing in both directions. A mini-GPR will be used inside the restaurant in order to locate objects directly below the building. I

MERIT STANLEY (Continued) **S103574868**

approved the geophysical plan. In the latter part of his email, Mr. Kampf again asked for any contamination delineation information and any well construction information for the former HESS site. He also asked for information regarding the MOBIL site. I responded by email and wrote that staff had looked in both our electronic archive and our file cabinets for any records concerning the contamination and the wells at the HESS site. However, we had not found such documentation. I explained that letters had been sent to MERIT and HESS requesting any documents that concerned the soil contamination and well construction. I added that the MOBIL site is managed in our Albany office and that he should make a FOIL request. I sent him the FOIL website address. 8/23/16 - Raphael Ketani. I received a call from Mr. Kampf (212) 786-7420 (rkampf@pwgrosser.com) today. The GPR survey took place as scheduled. However, nothing was found. Mr. Kampf explained that the GRPR was done outside the restaurant and inside the restaurant. They were able to move the tables and chairs in the dining area. So they were successful in their attempt to look under the slab the restaurant sits on, though the kitchen area was not as well surveyed as it was tight quarters. Mr. Kampf added that it was possible that tanks were still there as the GPR could look only 3 feet down. He commented that he was not sure the geophysical survey would be able to pick up any tanks. He stated that they may try electrical resistivity as a deeper sensing tool. He has been speaking with a contractor for this service and they told him that the signal penetrated as deep as 29 feet at one site. Mr. Kampf added that he thought the restaurant was sitting on historical fill. I told him that I wasn't sure the contractor would be able to get a clear picture regarding whether tanks were underground or not. I added that I thought they would come up with just a lot of interference because of the fill. Mr. Kampf stated that he will have to discuss this with the contractor before trying the method to see under the restaurant. The client stated that if no tanks are found, then he wants the spill case to close. A request was sent to the Fire Department for any records regarding USTs under the property. I asked Mr. Kampf what he would do if the resistivity machine sensed one object her and then one somewhere else, but nothing else. He said he wasn't sure what he would do next. I told him that the best investigative method may be to do a series of soil borings with wide spacing just to see whether any contamination is present underground. Mr. Kampf asked whether he should forego the resistivity testing and just do soil borings. I told him that I wasn't sure. He commented that they would be doing an investigation based on a contamination concentration gradient. He added that he will get back to me regarding the resistivity testing method. With that, the conversation ended. 8/25/16 - Raphael Ketani. Mr. Kampf (212) 786-7420 (rkampf@pwgrosser.com) sent me the below email today with an attachment showing the draft proposed boring plan: As discussed earlier this week, the geophysical survey performed at the above-referenced property on August 23rd did not indicate evidence of the presence of underground storage tanks (USTs). Pursuant to our subsequent discussions, we understand that NYSDEC does not believe that performing an electrical resistivity (ER) survey is likely to provide any additional useful information with regard to locating USTs beneath the building. Based upon discussions with our contractors, we have come to a similar conclusion. As such, we are finalizing a work plan that includes soil sampling, and, if warranted based on the soil sampling results, groundwater sampling. As discussed, the objective of the soil

MERIT STANLEY (Continued) **S103574868**

sampling investigation would be to evaluate whether the Wendy's restaurant may be the source of the dissolved-phase petroleum hydrocarbon (gasoline) - related constituents in groundwater observed in monitoring wells at the former Hess property. As previously presented in the August 2016 Subsurface Investigation Work Plan we submitted to NYSDEC, the data indicate that the former Hess property is the source of these dissolved-phase constituents given the presence of residual LNAPL on that property resulting form Hess' failure to characterize and remove contaminated soil in the northern portion of its property during the 1998 UST removal action. As discussed, based on the conceptual site model presented in the August 2016 Subsurface Investigation Work Plan, we have prepared a sampling approach that will evaluate concentration gradients of gasoline-related total petroleum hydrocarbons along two transects (A - A' and A - A'') that extend from the approximate center of the residual LNAPL mass and former UST locations on the former Hess property and which extend to the north / north west across the Wendy's property. Soil samples would be analyzed for TPH-GRO (total petroleum hydrocarbons - gasoline range organics). Please find attached a figure that presents the proposed sampling locations. Please note that extensive coordination will be required with Wendy's to ensure that there is minimal disruption to their business operations. Please let me know if you agree with this approach or if have any questions or comments and would like to discuss the proposed scope of work in greater detail. We intend to finalize the work plan and re-submit for your approval next week. We intend to perform the work as quickly as possible, pursuant to contractor availability.

---------- I responded to Mr. Kampf's email with the following comments: I have reviewed the draft proposed boring plan. Let me first say that I am not sure whether doing a contaminant concentration gradient analysis will definitively point to one location or the other (former HESS site) as being the source. However, the choice is yours to do this. We will simply review the data and make our own conclusions. Secondly, any initial investigation should include more borings at the Wendy s property than have been depicted. We suggest conducting the additional borings as we have indicated on our revised plan (see attached). We make this suggestion as there is no record regarding where the USTs or the pump islands used to be during the time that the property contained the filling stations. Additionally, all soil and groundwater analyses should conform to methods 8260B and 8270C. We ask for the expanded lists in order to see which volatiles and SVOCs will show up. If only a limited number of VOCs and SVOCs appear in the initial samples, then we would allow the testing to be for a limited suite of analytes the STARS list of 14 VOCs and 16 SVOCs. Lastly, the boring map you have sent me shows old information for the subsurface conditions at the former HESS site. We had sent P.W. Grosser the third quarter 2014 EnviroTrac groundwater monitoring report. In this report, they indicate that there is no NAPL in wells MW-7, 8, 10 and 11. 8/30/16 - Raphael Ketani. Mr. Kampf (212) 786-7420 (rkampf@pwgrosser.com) called me today. He said that P.W. Grosser and the client agreed to the extra borings requested by DEC. He also said that he wanted to have the soil and groundwater samples analyzed just for the STARS list of VOCs since this was a gas station and also since the HESS site was being tested only for VOCs. I told Mr. Kampf that this would be fine and to send the Department a cover letter confirming our

MERIT STANLEY (Continued) **S103574868**

agreement about doing only VOC analyses and about conducting the additional borings. He said he would. 8/31/16 - Raphael Ketani. Today I received the letter that I had sent to Merit Oil Corp. in which I had requested copies of any documents they may have regarding the site. The envelope was unopened and marked by the U.S. Post Office Not Deliverable as Addressed. The sticker was dated 8/27/16. The address I used for Merit appeared to be a legitimate one that I had copied from Merit's web page. 9/7/16 - Raphael Ketani. I reviewed the revised investigative boring work plan which was submitted by Mr. Kampf by email on 9/6/16. Eleven soil borings will be performed through the Wendy's property. Eight of these boring locations were chosen by P.W. Grosser. Three were chosen by the DEC. Each borings will be drilled to 20 feet bgs. The soil samples will be analyzed for CP-51 Table 2 VOCs (14 VOCs) and TPH GRO. The work will take place on 9/13/16 and on 9/14/16. I sent Mr. Kampf an email approving the work plan. 9/12/2016 - Colton McPartland. Scanned paper file for DEC Raphael Ketani and placed on computer desktop for future bulk upload once naming convention is received from DEC Jane Obrecht. 9/13/16 - Raphael Ketani. Mr. Kampf (212) 786-7420/(716) 392-4933 (rkampf@pwgrosser.com) called me early this morning to say that 2 borings situated in the drive-thru lane had been completed to 13.5 and 15.5 feet below grade, respectively. He added that some dark stained soil was collected which had petroleum odors. The samples will be sent to the lab for analysis. 9/19/16 - Raphael Ketani. I received an email from Mr. Kampf on 9/16/16. The email stated the following: Pursuant to the work plan approved by NYSDEC on September 7, 2016 regarding 1916 Linden Blvd, we performed the Subsurface Investigation this week which included advancing a total of 12 soil borings to approximately 20 ft bgs. Please refer to the attached sketch, which shows a site plan, including the location of the 12 soil borings. The groundwater table was present at approx 11.5 to 13 ft bgs. Boring logs indicate the presence of a petroleum hydrocarbon-related smear zone approximately 8 to 10 ft thick (approx. 12 - 13 to 20 - 23 ft bgs) at the three soil borings that were advanced farthest south along the boundary between the Wendy s and former Hess property (SB003, SB008, and SB009). Moving north, on the western side of the restaurant, the smear zone thickness decreased to approximately 5.5 ft (approx. 13.5 to 19 ft bgs) at SB001 and SB002) and to about 5 ft thick at SB012. PID readings also generally decreased with distance from the boundary of the former Hess gas station. SB010 and SB011, located further to the west, did not indicate any evidence of petroleum contamination. On the eastern side of the restaurant, also north of the former Hess property, the smear zone thickness decreased to approximately 6 ft (approx. 11.5 to 17.5 ft bgs) at SB004 and SB007, 3.5 ft at SB005 (approx. 11.5 to 15 ft bgs), and 1ft thick at SB006 (approx.. 13 to 14 ft bgs). PID readings also generally decreased with distance from the boundary of the former Hess gas station. There was no evidence of petroleum hydrocarbon-related constituents compounds above the water table at any boring location, no indication of the presence of any USTs, and no evidence that a petroleum hydrocarbon release has taken place on the Wendy's property. In summary, a total of 17 samples were collected for analysis from 12 borings. The observed thinning out of the smear zone from south, along the former Hess property boundary, to north, across the Wendy's property, supports the conclusion that the petroleum hydrocarbon material observed in borings at the Wendy's property originated from spill(s) that took place at the former Hess

MERIT STANLEY (Continued) **S103574868**

property. We will have analytical results next week. I reviewed the Site Plan keeping in mind the text of Mr. Kampf's associated email. It seemed reasonable that the smear zone should be thickest at the border with the former HESS station. This was because HESS wells MW-8, 10 and 11 did have free product up to 2012. I sent a response email to Mr. Kampf stating that he should send the DEC a report with analytical summary tables, the raw data package, boring logs, a description of the work which had taken place and any other information which is pertinent. 9/27/16 - Raphael Ketani. I reviewed the EnviroTrac 9/27/16 August 2016 Update Report. On 8/17/16, 12 wells were gauged and sampled. The wells gauged and sampled were MW-1, 2, 4, 7 to 14 and 18. Product was not detected in any of the wells. Groundwater was found at 10.71 to 13.04 feet. Flow was southeasterly. The groundwater analytical results for the samples from MW-2, 9, 12 to 14 and 18 were either completely non-detect for BTEX or were mostly non-detect with only one or a few very low hits. MW-1, 4, 7, 8, 10 and 11 had BTEX concentrations that varied from 737.5 ppb to 5884 ppb. These wells were located either in the former UST area (MW-7) or in the northern part of the site where soil contamination had been extensive and where AS/SVE actions had been concentrated. The benzene results were either low or moderate in concentration for the high BTEX samples. The AS/SVE system remained shut down due to non-detect recovery. Speedway intends to conduct a pilot test during the fourth quarter of 2016 to evaluate the efficiency of the mobile AS/SVE system and the inactive remediation system. Operation and maintenance take place monthly and groundwater sampling takes place quarterly. The next sampling round will take place during November 2016. I approved the report without comment. 11/1/16 - Raphael Ketani. I reviewed the P.W. October 2016 Grosser Site Investigation Report dated 10/28/16 for the Wendy's Restaurant property. A gas station operated at 1916 Linden Boulevard from 1950 to 1967 and then from 1969 to 1977. Between 1981 and 1983, a new commercial building was constructed. The INTRODUCTION section of the report states that, according to the DEC, a lot of contaminated soil was left under the HESS site after the tanks were removed during 1998. It is also stated that the extent of the soil contamination was not fully delineated. Additionally, P.W. Grosser states that the petroleum contamination from HESS had migrated under the Wendy's property. The P.W. Grosser investigation did not find USTs under the property nor petroleum contamination above the water table. The smear that was found decreased in thickness away from the HESS site. Following the INTRODUCTION, the report explains in detail the history of the investigation and remediation work at the HESS site. Information is also provided regarding the environmental monitoring by EnviroTrac. Depth to groundwater is from 11 to 15 feet bgs and flow is to the south. In Section 4.0 - Subsurface Investigation Activities, it is explained that EnviroProbe Services Inc. performed a geophysical survey on 8/23/16. A cart mounted GPR and an RD unit were utilized. The GPR penetration depth was generally 3 feet with a penetration depth of 3.5 feet in the rear (far parking lot) of the property. Tanks, piping, anomalies and utilities were looked for. The survey took place in a grid pattern. Rebar and possible steel mesh were detected at 4 inches below grade. However, no tanks or piping were found. From 9/13/16 to 9/14/16, 12 soil borings were installed from 16 to 24 feet below grade. A Geoprobe machine was used to conduct the borings. Soil samples were generally collected from the interval above the water table, or the interval with the highest PID

MERIT STANLEY (Continued) **S103574868**

reading. Nine of the 12 borings showed signs of petroleum contamination. The depth to groundwater was from 11.5 to 13.5 feet bgs. A smear zone was discovered from 7.5 to 10.5 feet in thickness in the 3 borings that were located along the property boundary with the former HESS station (SB003, SB008 and SB009). A Preliminary Conceptual Site Model (PCSM) was incorporated into the Site Investigation Work Plan which was previously submitted. The PCSM considered site history and context, including factors incluencing distribution and fate and transport. The factors included the potential sources, release mechanisms and the physical-chemical mechanisms that control fate and transport. The CSM was refined based upon the information obtained via the site investigation. P.W. Grosser then explained how LNAPL would behave in the subsurface (i.e. how it might migrate) as is typically stated in a hydrogeology textbook and included a typical diagram. Their explanation amounted to them building a case for the contamination having come from the former HESS site. They used information from the historical reports for the site. In the CONCLUSIION section of the report, they list 16 points to support their claim that the Wendy's property does not have a spill and that the contamination below ground at 1916 Linden Boulevard is entirely from the spill at the former HESS station. Table 1 listed the soil analytical results for the samples that had been collected. The set of analytes were the STARS list of 16 gasoline VOCs. The great majority of the VOC sample results were either very low or had very low to low hits with high exceedences for only total xylenes. The samples from SB004, SB005, SB007, the shallow sample from SB008 and the shallow sample from SB009 had high to very exceedences for one or both trimethylbenzene analytes and total xylenes. Only the samples from SB005 and SB007 had high naphthalene exceedences. Figures 1 to 5 were the same figures as were presented in previous P.W. Grosser reports. Figure 6 showed a cross section of the smear zone from SB003 to SB012. The smear zone was shown to decrease in thickness from 10 feet to 3 feet, respectively. The total BTEX concentrations decreased from 8.59 ppm at SB003 to 0.075 ppm at SB012, with the exception of 142.51 ppm in the deeper sample from SB002. Figure 7 showed that the smear zone decreased in thickness from about 6 feet at SB009 to about 3 feet at SB005. The total BTEX concentrations were 1301.3 ppm in the shallow sample and 1.0201 ppm in the deep sample from SB009, respectively. The lowest concentration was 1.68 ppm at SB006 along this transect. However, the shallow and deep results for the middle location at SB007 were 1158.4 ppm and 1575.5 ppm, respectively. The shallow and deep samples from SB004 (between SB009 and SB007) were 84.02 ppm and 396.3 ppm, respectively. Figure 8 showed the BTEX results for soil samples taken from the 12 borings locations. Most of the results were either entirely non-detect, or had only low hits, or had moderate to high total xylene exceedences with the other analytes being low to moderate in concentration. The shallow soil sample at SB009 had 3 high exceedences. The shallow soil sample at SB007 had 110 ppb of ethylbenzene and 970 ppb of total xylenes. The deep soil sample at SB007 had 210 ppb of ethylbenzene and 1300 ppb of total xylenes. Sanborn maps were included as Attachment 1. No tanks were depicted on the maps for the Wendy's property. Attachment 2 contained NYC PBS search documentation. Attachment 3 showed the extent of the soil excavation at the former HESS site. Attachment 4 showed the soil vapor extraction and air sparge piping layout for the former HESS site. Attachment 5 contained the groundwater gauging and elevation

MERIT STANLEY (Continued) **S103574868**

data. Attachment 6 contained the BTEX-MTBE-groundwater elevation graphs. Attachment 7 contained the Enviroprobe Service report dated 8/23/16. The information in this report had been included in the body of the text for the SIR. Attachment 8 contained the borings logs. In general, fill material extended from 0 to 5 feet below grade. Natural sediments consisting of either silty sand, sand or gravelly sand start at depths from 4 to 7 feet below grade. The zone of contamination (smear zone or gray to dark gray sand zone) typically extended from 13 to 17 feet below grade. At some boring locations, the gray zone with petroleum odors extended continuously from 12 or 13 feet below grade to total depth at 20 or 24 feet. The York Analytical Laboratories Inc. 9/21/16 analytical report was Attachment 9. 11/8/16 - Raphael Ketani. The information in the October 2016 P.W. Grosser report appeared to have been generated by methods which are typically used by the environmental industry. The resulting data was coherent and consistent. So I approved the SIR. However, a deeper penetrating geophysical survey would have been more definitive. 11/9/16 - Raphael Ketani. I contacted Mr. Kampf by phone (212) 786-7420/(716) 392-4933 (rkampf@pwgrosser.com) and discussed whether there were any other geophysical methods which could definitely penetrate deeper below the Wendy's property, given the subsurface conditions. Mr. Kampf stated that he had discussed this issue with several geophysical companies and none could guarantee that their instruments could give results for depths below about several feet (about 3 to 4 feet below grade). As a result of our conversation, I sent a letter to Penbrow, Inc. at 488 Madison Avenue, 19th Floor, Manhattan, New York, 10022. In the letter, I stated that, in consideration of the information in the SIR, the Department has determined that the Wendy's property is not a source of environmental contamination. A pdf file of the letter was sent by email and a hard copy was sent to Penbrow. 2/2/17 - Raphael Ketani. I reviewed the EnviroTrac January 2017 Quarterly Update Report dated 1/31/17. On 11/29/16, 12 wells were gauged and sampled. The wells gauged and sampled were MW-1, 2, 4, 7 to 14 and 18. Product was not detected in any of the wells. Groundwater was found at 10.95 to 13.11 feet. Flow was southeasterly. The groundwater analytical results for the samples from MW-9, 12, 14 and 18 were non-detect for BTEX. The samples from MW-2 and MW-13 had a few low hits. For the other samples, the BTEX concentrations were 2475 ppb (19 ppb benzene) at MW-1, 2834.4 ppb (5.4 ppb benzene) at MW-4, 138.1 ppb at MW-7, 529.8 ppb (234 ppb benzene) at MW-8, 3508.1 ppb (4.1 ppb benzene) at MW-10, and 7130 ppb (non-detect benzene) at MW-11. The AS/SVE system remained shut down due to non-detect recovery. 4/28/17 - Raphael Ketani. Today I received an email from Mr. Butler that he is leaving Speedway. He stated that John Engdahl [jjengdahl@speedway.com (732) 738-2923] will take over his duties. 5/2/17 - Raphael Ketani. I reviewed the EnviroTrac April 2017 Quarterly Update Report dated 4/28/17. On 2/21/17, 12 wells were gauged and sampled. The wells gauged and sampled were MW-1, 2, 4, 7 to 14 and 18. Product was not detected in any of the wells. Groundwater was found at 10.63 to 12.79 feet. Flow was southeasterly. The groundwater analytical results for the samples from MW-9, 12 to 14 and 18 were either entirely non-detect for BTEX or had one very low hit. The sample from MW-2 had 35.5 ppb of BTEX. For the other samples, the BTEX concentrations were 1901.2 ppb (23.2 ppb benzene) at MW-1, 8497.8 ppb (17.8 ppb benzene) at MW-4, 228.3 ppb at MW-7, 6312 ppb (906 ppb benzene) at MW-8, 6639.1 ppb (4.1 ppb benzene) at MW-10, and 141.1 ppb (non-detect benzene) at MW-11. I

MERIT STANLEY (Continued) **S103574868**

approved the report without comment. 8/1/17 - Raphael Ketani. I reviewed the EnviroTrac July 2017 Quarterly Update Report dated 7/28/17. On 5/19/17, 12 wells were gauged and sampled. The wells gauged and sampled were MW-1, 2, 4, 7 to 14 and 18. Product was not detected in any of the wells. Groundwater was found at 11.74 to 14.03 feet below grade. Flow was southeasterly. The groundwater analytical results for the samples from MW-2, 9, 12 to 14 and 18 were either entirely non-detect for BTEX or had a low concentration. For the other samples, the BTEX concentrations were 2257.2 ppb (40.2 ppb benzene) at MW-1, 16,130 ppb (110 ppb benzene) at MW-4, 473 ppb at MW-7, 1560.8 ppb (345 ppb benzene) at MW-8, 5222.4 ppb (3.4 ppb benzene) at MW-10, and 3829 ppb (non-detect benzene) at MW-11. 10/31/17 - Raphael Ketani. I reviewed the EnviroTrac October 2017 Quarterly Update Report dated 10/30/17 for the period June to August 2017. During August 8th and 9th, the remediation system was dismantled and removed. On 8/15/17, 12 wells were gauged and sampled. The wells gauged and sampled were MW-1, 2, 4, 7 to 14 and 18. Product was not detected in any of the wells. Groundwater was found at 11.47 to 14.11 feet below grade. Flow was southeasterly. The groundwater analytical results for the samples from MW-12 to 14 and 18 were either entirely non-detect for BTEX or had a low concentration. For the other samples, the BTEX concentrations were 4654 ppb (100 ppb benzene) at MW-1, 215.2 ppb (77.5 ppb benzene) at MW-2, 5562.9 ppb (49.9 ppb benzene) at MW-4, 2658 ppb (248 ppb benzene) at MW-7, 423.6 ppb (17.1 ppb benzene) at MW-8, 186.4 ppb (3.3 ppb benzene) at MW-9, 10,580.7 ppb (10.7 ppb benzene) at MW-10, and 14,201.3 ppb (1.3 ppb benzene) at MW-11. 1/23/18 - Raphael Ketani. I reviewed the EnviroTrac January 2018 Update Report dated 1/23/18 for the period September to November 2017. On 11/22/17, 9 wells were gauged and sampled. The wells gauged and sampled were MW-1, 2, 4, 7, 9 to 12 and 14. Product was not detected in any of the wells. Groundwater was found at 12.05 to 14.26 feet below grade. Flow was south-southeasterly. The groundwater analytical results for the samples from MW-12 and 14 were either entirely non-detect for BTEX or had a low concentration. For the other samples, the BTEX concentrations were 4684 ppb (140 ppb benzene) at MW-1, 1446.4 ppb (788 ppb benzene) at MW-2, 63.6 ppb (1.4 ppb benzene) at MW-4, 1061.2 ppb (195 ppb benzene) at MW-7, 219.6 ppb (6.7 ppb benzene) at MW-9, 9350.1 ppb (10.1 ppb benzene) at MW-10, and 8183.7 ppb (3.7 ppb benzene) at MW-11. 05/01/2018: This spill case was transferred to A. Doronova - AD. AD Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com DL the report to DDocs. Will review. AD 05/27/2018: Reviewed the report. the spill case was opened due to tank test failure reported on March 31, 1993. This report covers monitoring period: December 2017 February 2018. On February 7, 2018 - the consultant gauged and sampled twelve monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Wells Containing LNAPL: None Groundwater Depth: 11.02 feet to 13.30 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Maximum Benzene Concentration: 900 ug/L (MW-2) Maximum MTBE Concentration: 2.3 ug/L (MW-8 & MW-13) BTEX: MW-2 (1,000ppb), MW-8 (4,300ppb), MW-10 (6,500ppb) and MW-11 (17,000ppb) Speedway will continue with quarterly groundwater

MERIT STANLEY (Continued) **S103574868**

sampling. The next groundwater sampling event is scheduled for May 2018. An update report summarizing these activities will be submitted to NYSDEC in July 2018. IRM should be proposed for the site. AD 07/20/2018: Received the following e-mail from Mr. Rennie of EnviroTrac: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 07/31/2018: Reviewed the report. It states that this spill was assigned to the site in March 1993 and associated with the onsite underground storage tank (USTs) system. The USTs were excavated and removed from the former Merit Station in January-February 1998. In the process, 595.11 tons of soil was excavated and transported offsite for disposal. A Soil Vapor Extraction and Air Sparge (SVE/AS) Remediation System was installed and operated on the former Merit Station from February 2000 to February 2006 and then from December 2008 through April 2010. In April 2010, based on the conclusion that asymptotic mass removal rates had been achieved the system was shut down. Beginning in the first quarter of 2010, Hess began documenting its concern of the presence of upgradient offsite sources of petroleum hydrocarbons and the influence on the former Merit Station conditions to the NYS DEC. Hess reiterated its concerns about offsite upgradient contributions to the former Merit Station in January 2011, when it requested the NYS DEC require ExxonMobil to delineate the petroleum hydrocarbon dissolved phase ground water plume associated with its station located at 1935 Linden Boulevard, which was assigned NYS DEC Spill # 94-06497 (the Mobil Station). Subsurface Investigation - 1916 Linden Boulevard, Brooklyn, NY In October 2016, in response to an April 26, 2016 NYS DEC request, P.W. Grosser, on behalf of the property owner (Pennbrow, Inc.), completed a subsurface investigation of the property located immediately to the north of the former Merit Station (the site). - 1916 Linden Boulevard operated as a gasoline service station from sometime between 1950 and 1967. A new gasoline station was constructed between 1969 and 1977. Sometime between 1981 and 1983 the property use changed from gasoline station to the its current use as a fast food restaurant. - Regional ground water flow direction is southeast - southwest (see Section 2.4), which would make the Mobil station assigned NYS DEC Spill # 94-06497 hydraulically upgradient of 1916 Linden Boulevard (see Section 2.7.1.). Based on the referenced ground water flow direction, the site would be hydraulically downgradient of the Mobil Station and 1916 Linden Boulevard. Looked into reports for 1916 Linden Blvd (Wendy's restaurant-adjacent to the site) and 1935 Linden Blvd (Mobil station across the road). There are 4 wells along the Linden Blvd which belongs to Mobil station site. These wells located across the Linden Blvd from the Mobil station, along the Wendy's restaurant property line on a sidewalk. No elevated BTEX concentration were detected in these wells except for well MW-15 with 98 ppb (BTEX) in December 2017. There are also wells MW-4, MW-8 and MW-11 which are located along the property line between Wendy's and Hess station (the site) and belong to Hess station. GW data February 2018 (BTEX ppb): MW-4 - 421 MW-8 - 4,335 MW-11 - 16,811 Called to Mr. Rennie to discuss the site. Left a message. Called and spoke with Mobil Stations PM from Albany - Mike Haggerty. He provided with most recent GW report for his site (Mobile station - possible source of an off-site contamination according to Speedway's claim). AD 08/02/2018: Discussed the site and an off-site source claim with

MERIT STANLEY (Continued) **S103574868**

J. Kolleeny. Discussed two up-gradient sites (Wendy's and Mobil). Since GW data from Mobil site (from 12/2017) indicate ND concentrations of BTEX for all site wells except for one well (MW-4) and no off-site migration of dissolved phase confirmed by the off-site wells (ND for BTEX) located across the Linden Boulevard, Wendy's site could be a probable source attributing to the contamination in the Speedway northern wells. AD 08/03/2018: Had a conference call with Speedway (John Engdal) and EnviroTrac (Ed Russo) regarding their report with an off-site source claim. Discussed the site; asked questions regarding: - free product in wells MW-4, MW-8 and MW-11. LNAPL was last time detected in these wells in 2012. - end-point soil samples in the northern part of the UST and dispenser island field; - distance between Mobil and former Hess stations; - surveying of the site wells; - is there any UST present at the site; It was decided that EnviroTrac will make historical groundwater diagrams and will re-send UST closure report (due to the poor quality of the submitted one). One additional wells may be will be installed at the property boundary to get more soil and GW data. Down-gradient wells with elevated levels of BTEX should be addressed. AD 08/07/2018: Had a meeting with V. Brevdo and J. Kolleeny to discuss the claim, neighboring sites and all site-related data. It was decided that based on the following: - the most recent report for Mobil station, which indicate that the local groundwater flow direction is from north to south (and ND levels of petroleum contamination in monitoring wells close to the southern property boundary and off-site wells); - the most recent groundwater monitoring report from Speedway, which indicate that the local groundwater flow direction is from north to south (and high levels of petroleum contamination in monitoring wells close to the northern property boundary; - Sanborn Fire Insurance Maps indicating that a gasoline filling station was formerly located on Wendy's restaurant property; - a subsurface investigation performed in 2016 by P.W. Grosser confirmed the presence of petroleum contamination in soil on 1916 Linden Blvd' it is possible that petroleum impacts on 1916 Linden blvd. property may be contributing to the contamination observed in wells on the Speedway property, near its boundary. No groundwater samples were collected on 1916 Linden Blvd. during the 2016 investigation by P.W. Grosser, and thus no local groundwater flow direction has been established at the site. Therefore, it was agreed that a letter will be issued to the Wendy's property owner with a request that a groundwater investigation be performed on his property by installing monitoring wells at the locations where the highest levels of soil contamination were identified by P.W. Grosser in 2016 borings SB003, SB004, SB005, SB007, SB008 and SB009. The newly installed wells should be surveyed to establish groundwater flow direction at the site, and groundwater samples should be collected to evaluate groundwater quality. Speedway consultant - EnviroTrac was advised to install additional well at the property boundary to confirm an off-site source claim. AD 08/08/2018: Issued and sent a certified letter (#7016 1370 0001 8372 0385) to Norman Bobrow of Pennbrow Inc. (Wendy's site owner) with a request to perform a GW investigation at his property. A work plan for such investigation should be submitted by October 8, 2018. AD 08/31/018: DEC was contacted by Mark Chertok, the attorney for the Wendy s property owner, who asked that DEC provide reports related to the former Hess station. After consulting with DEC s Regional Attorney Patrick Foster, the requested documents were sent to Mr. Chertok. AD

MERIT STANLEY (Continued) **S103574868**

10/04/2018: DEC received a letter from P. W. Grosser which argued that there is no basis for the requested groundwater investigation. Spoke with Patrick Foster - DEC Regional Attorney regarding this case. AD 10/12/2018: I, Vadim Brevdo and Jonathan Kolleeny met with the Regional Attorney to discuss P.W. Grosser s response and to consider further actions. It was agreed that the RA would issue a letter to the Wendy s site owner insisting that a groundwater investigation be performed. AD 10/29/2018: Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joe Rennie Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 11/13/2018: Reviewed the submitted 3rd quarter 2018 report. It states that EnviroTrack on August 21, 2018, gauged and sampled eleven monitoring wells at the site. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7 through MW-10, MW-12 through MW-14 & MW-18. Wells Containing LNAPL: None. Groundwater Depth: 10.77 feet to 13.10 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7 through MW-10, MW-12 through MW-14, & MW-18. GW data: Maximum Benzene Concentration: 563 ug/L (MW-8) Maximum MTBE Concentration: 1.4 ug/L (MW-14 & MW-18) Total VOCs Range: 21,122.6 ug/L (MW-4) Recommendations: Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for November 2018. An update report summarizing these activities will be submitted to NYSDEC in January 2019. - According to the latest GW sampling results, BTEX concentrations increased in the following wells: MW-4 from 1,800ppb to 16.930ppb; MW-10 from 10,500ppb to 11,680ppb and MW-8 from 3,290ppb to 7,602ppb. All of these wells are located up-gradient of the former USTs field, two of them are on the property line. AD 11/20/2018: At Mr. Chertok s request, I and Jon Kolleeny met with PW Grosser representative - Mr. Richard Krampf to discuss technical aspects of DEC s requirements for the Wendy s groundwater investigation. DEC requested installation, surveying and sampling of a minimum of three on-site monitoring wells to obtain additional data to help evaluate the off-site source claim. P. W. Grosser agreed to discuss this request with their client and his attorney, and will get back to DEC soon with their response. AD 11/20/2018: After the meeting with Mr. Krampf called and spoke with Mr. Rennie of EnviroTrack regarding missing soil data along the property line. He will look for the info in their archive. AD 11/30/2018: Received a message from Joe Rennie of Envirotrack regarding DEC requirement for soil sampling data along the property line from monitoring wells. According to him, they were unable to locate such data in their archive. Additional soil and groundwater investigation may be needed. AD 12/05/2018: Called and left a message to Ed Russo. Later in the day received a call from Joe Rennie. He said that they will look into Speedway files to find soil data for the up-gradient wells. AD 12/13/2018: called and left a message to Ed Russo. AD 01/18/2019: I was informed by EnviroTrac that Speedway representative - John Engdahl is no longer with the company and that new representative was not appointed yet. 01/30/2019: Received the following e-mail from Ed Russo: Ainura attached is the most recent update report for your review/files. Let us know if you have any questions or comments. Thanks. Edward Russo - Senior Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - 516.523.6714 (Cell) -

MERIT STANLEY (Continued) **S103574868**

edr@envirotrac.com Will review. AD 02/25/2019: Reviewed the report. It states that the current site status - Car Wash/Auto Detailing Center. For the monitoring period: September 2018 November 2018, the following work was performed at the site: - November 6, 2018 - Gauged and sampled eleven monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7 through MW-12, MW-14, & MW-18 Wells Containing LNAPL: None Groundwater Depth: 10.31 feet to 12.51 feet. Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7 through MW-12, MW-14, & MW-18 Maximum Benzene Concentration: 21.6 ug/L (MW-4) Maximum MTBE Concentration: 1.3 ug/L (MW-14) Total VOCs Range: ND (non-detect) 7,365.7 ug/L Recommendations: Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for February 2019. An update report summarizing these activities will be submitted to NYSDEC in April 2019. AD Also received the following e-mail from Ed Russo regarding new Speedway contact person for NY sites: Ainura, As requested, please direct NYSDEC correspondence for the above referenced spill to: Brian C. Davis - Environmental Representative Advanced - Speedway LLC 500 Speedway Drive, Enon, OH 45323 (937) 863-6919 Office - (937) 207-7722 Cell - (937) 863-6078 Fax - bcdavis@speedway.com Thanks, Joe Rennie Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com AD 04/30/2019: Received a 1st quarter 2019 monitoring report. Will review. AD 05/20/2019: Reviewed the report. It states that for the monitoring period: December 2018 February 2019, the following work was performed at the site: - February 15, 2019 - Gauged and sampled twelve monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Wells Containing LNAPL: None Groundwater Depth: 10.32 feet to 12.59 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Maximum Benzene Concentration: 9.4 ug/L (MW-1) Maximum MTBE Concentration: 4.7 ug/L (MW-14) Total VOCs Range: ND (non-detect) 4,045.4 ug/L Well 02/2019 (TVOCs in ppb) MW-1 1,432 MW-4 2,377 MW-8 481 MW-10 4,045 MW-11 1,562 Recommendations: Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for May 2019. An update report summarizing these activities will be submitted to NYSDEC in July 2019. AD 07/30/2019: Received the following e-mail from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. report. It states that the current site status - Car Wash/Auto

MERIT STANLEY (Continued) **S103574868**

Detailing Center. Historically, the following remediation activities were performed at the site: - February 2000 Air sparge (AS)/Soil Vapor Extraction (SVE) system in operation. - February 2006 AS/SVE system was shut down. - December 2008 AS/SVE system is re-activated and monthly operations and maintenance (O&M) begins. - April 2010 AS/SVE system was shut down due to non-detect recovery. For the monitoring period: December 2019 February 2020, the following work was performed at the site: - February 12, 2020 - Gauged and sampled twelve monitoring wells. Wells Containing LNAPL: None Groundwater Depth: 10.64 feet to 12.97 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Maximum Benzene Concentration: 125 ug/L (MW-8) Maximum MTBE Concentration: ND (non-detect) all wells Total VOCs Range: ND 7,240.5 ug/L Well 02/2019 05/2019 08/2019 11/2019 02/2020 (TVOCs in ppb) MW-1 1,432 1,407 1,342 2,088 1,511 MW-2 110 ND MW-4 2,377 298 5,225 3,014 4,336 MW-7 103 ND MW-8 481 5,542 6,084 15,254 4,141 MW-9 ND ND MW-10 4,045 3,560 6,122 4,717 7,240 MW-11 1,562 3,607 6,321 5,449 3,202 MW-12 ND ND MW-13 3 120 MW-14 1 23 MW-18 ND ND All 5 site well with high TVOCs are wells up-gradient from the former USTs field and located near property line with the neighboring site. TVOC in these wells show fluctuating trends. Recommendations: Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for May 2020. An update report summarizing these activities will be submitted to NYSDEC in July 2020. 07/30/2020: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 -

report. It states that the current site status: Car Wash/Auto Detailing Center. The following Site Remediation Activities were historically performed at the site: February 2000 Air sparge (AS)/Soil Vapor Extraction (SVE) system in operation. February 2006 AS/SVE system was shut down. December 2008 AS/SVE system is re-activated and monthly operations and maintenance (O&M) begins. April 2010 AS/SVE system was shut down due to non-detect recovery. For the reported monitoring period: March May 2020, the following work was performed at the site: - May 1, 2020 - Gauged and sampled twelve monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Wells Containing LNAPL: None Groundwater Depth: 10.41 feet to 12.91 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Maximum Benzene Concentration: 472 ug/L (MW-8) Maximum MTBE Concentration: 1.1 ug/L (MW-8) Total VOCs Range: ND 10,539.5 ug/L Recommendations: Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for August 2020. An update report summarizing these activities will be submitted to NYSDEC in October 2020. Some ITR is needed to expedite site cleanup. Current Site Status: Car Wash/Auto Detailing Center. For the reported monitoring period: June August 2020, the following work was performed at the site: - August 26, 2020 - Gauged and sampled eleven monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7 through MW-12, MW-14, & MW-18 Wells Containing LNAPL: None Groundwater Depth: 10.69 feet to 12.58 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7 through MW-12, MW-14, & MW-18 Maximum Benzene Concentration: 360 ug/L (MW-8) Maximum MTBE Concentration: ND (non-detect) all wells Total VOCs Range: ND 8,947.2 ug/L Well 02/2019 05/2019 08/2019 11/2019 02/2020 05/2020 08/2020 (TVOCs in ppb) MW-1 1,432 1,407 1,342 2,088 1,511 606 1,251 MW-2 110 ND ND ND MW-4 2,377 298 5,225 3,014 4,336 2,698 8,947 MW-7 103 ND 63 ND MW-8 481 5,542 6,084 15,254 4,141 10,539 6,051 MW-9 ND ND 38 23 MW-10 4,045 3,560 6,122 4,717 7,240 1,527 5,310 MW-11 1,562 3,607 6,321 5,449 3,202 4,708 262 MW-12 ND ND ND ND MW-13 3 120 33 NS MW-14 1 23 227 ND MW-18 ND ND ND ND All 4 site well with highest TVOCs are wells up-gradient from the former USTs field and located near property line with the neighboring site. TVOC in these wells show fluctuating trends. Recommendations: Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for November 2020. An update report summarizing these activities will be submitted to NYSDEC in January 2021. AD 12/21/2020: Received the following email from Mr. DiVincent: Good afternoon Ainura, I am inquiring about the status of the investigation of off-site impacts in regards to the above referenced site. Specifically, I wanted to know if any information has been provided in regards to the off-site impacts associated with the Wendy s Restaurant property located at 1916 Linden Blvd, Brooklyn, NY (former gasoline station from 1967 to 1981), pursuant to the attached letter. If you could please let me know the status of the investigation of the off-site impacts that may be impacting the Hess site, that would be greatly appreciated. Happy holidays. Thanks, Nick Nicholas DiVincent Maser Consulting 400 Valley Road - Suite 304 - Mt. Arlington, NJ 07856 C: 551-206-0638 P: 973-398-3110 ext: 4571 www.maserconsulting.com AD 12/22/2020: Called and spoke with Mr. DiVincent. His company was hired by the site owner. Discussed the site conditions, off-site contamination claim and further actions needed. Later in the day called and spoke with Mr. Rennie of the EnviroTrack. He also received an email from Mr. DiVincent yesterday, but did not contact him yet. Mr. Rennie told me that there were talks about selling the site. He will contact the Speedway representative and will update DEC. AD 01/04/2021: Received an email from Mr. DiVincent: Good morning Ainura, As a follow up to our phone conversation on 12/22, can you please send me a copy of the soil investigation report for the upgradient Wendy s Restaurant property located at 1916 Linden Blvd, Brooklyn, NY? Thank you, Nick Nicholas DiVincent Maser Consulting C: 551-206-0638 P: 973-398-3110 ext: 4571 AD 01/05/2021: Called and left a message to Mr. DiVincent asking to send me an official request with his client information on whose behalf he is making this request. Later in the day received the following response from Mr. DiVincent: Hi Ainura, To clarify, we have been hired by the property owner for the subject property located at

MERIT STANLEY (Continued) **S103574868**

810 Pennsylvania Ave., Brooklyn, NY and are requesting a copy of the report on their behalf. Thank you, Nick Nicholas DiVincent Maser Consulting C: 551-206-0638 P: 973-398-3110 ext: 4571 AD 01/28/2021: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager Office: Yaphank, New York phone: 631.924.3001 Will review. AD 11/15/2024: Reviewed the 3rd quarter 2024 report. It states that the following remediation activities were historically performed at the site: February 2000 Air sparge (AS)/Soil Vapor Extraction (SVE) system in operation. February 2006 AS/SVE system was shut down. December 2008 AS/SVE system is re-activated and monthly operations and maintenance (O&M) begins. April 2010 AS/SVE system was shut down due to non-detect recovery. Current Site Status: Car

MERIT STANLEY (Continued) **S103574868**

Wash/Auto Detailing Center. For the reported monitoring period: June August 2024, the following work was performed at the site: - August 6, 2024 - Gauged and sampled twelve (12) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7, MW-8, MW-9 through MW-14, MW-18 Wells Containing LNAPL: None Groundwater Depth: 10.12 feet to 12.4 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7, MW-8, MW-9 through MW-14, MW-18 Maximum Benzene Concentration: 99.0 ug/L (MW-13) Maximum MTBE Concentration: Non-Detect (ND) all wells Total VOCs Range: ND 4,996.3 ug/L Historical GW data (TVOCs) Well 05/2022 08/2022 11/2022 02/2023 05/2023 08/2023 12/2023 02/2024 05/2024 08/2024 MW-1 71 239 418 63 33 186 90 34 13.5 26.3 MW-2 ND ND ND ND ND ND ND ND ND ND MW-4 1,526 5,110 1,379 256 296 11,528 5,161 7,026 5,004 4,993 MW-7 ND ND ND 2 ND ND 1.6 ND 1 ND MW-8 2,967 8,668 NS 8,745 6,646 2,987 7 240 2,113 29 MW-9 ND ND ND ND ND ND ND ND ND ND MW-10 2,770 6,354 5,454 5,748 2,098 3,502 1,860 2,222 2,535 2,926 MW-11 753 1,056 9,604 626 976 2,179 9,981 855 5,566 662 MW-12 ND ND ND 5 ND ND ND ND ND ND MW-13 NS 125 NS 190 39 227 NS 16 1 126 MW-14 39 8 3 27 57 NS ND ND ND 8.5 MW-18 ND ND ND ND ND ND ND NS ND ND Well MW-4 indicated decrease in TVOCs from 7, 026 ppb to 5,004ppb to 4,993ppb. TVOCs in well MW-11 also decreased from 5,566 ppb to 662 ppb. Wells MW-4, 8, 10 and 11 continuously show sharply fluctuating trends in VOCs levels. Five wells were ND. Recommendations: Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for November 2024. An update report summarizing these activities will be submitted to NYSDEC in January 2025. AD 01/27/2025: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager Office: Yaphank, New York phone: 631.924.3001 Will review. AD 11/15/2024: Reviewed the 4th quarter 2024 report. It states that the following remediation activities were historically performed at the site: February 2000 Air sparge (AS)/Soil Vapor Extraction (SVE) system in operation. February 2006 AS/SVE system was shut down. December 2008 AS/SVE system is re-activated and monthly operations and maintenance (O&M) begins. April 2010 AS/SVE system was shut down due to non-detect recovery. Current Site Status: Car Wash/Auto Detailing Center. For the reported monitoring period: September - December 2024, the following work was performed at the site: - December 2, 2024 - Gauged and sampled twelve (12) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7, MW-8, MW-9 through MW-14, MW-18 Wells Containing LNAPL: None Groundwater Depth: 10.20 feet to 13.07 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7, MW-8, MW-9 through MW-14, MW-18 Maximum Benzene Concentration: 7.2 ug/L (MW-8) Maximum MTBE Concentration: Non-Detect (ND) all wells Total VOCs Range: ND 1,358.4 ug/L (MW-10) istorical GW data (TVOCs) Well 08/2022 11/2022 02/2023 05/2023 08/2023 12/2023 02/2024 05/2024 08/2024 12/2024 MW-1 239 418 63 33 186 90 34 13.5 26.3 77 MW-2 ND ND ND ND ND ND ND ND ND ND MW-4 5,110 1,379 256 296 11,528 5,161 7,026 5,004 4,993 1,026 MW-7 ND ND 2 ND ND 1.6 ND 1 ND 33 MW-8 8,668 NS 8,745 6,646 2,987 7 240 2,113 29 124 MW-9 ND ND ND ND ND ND ND ND ND 16 MW-10 6,354 5,454 5,748 2,098 3,502 1,860 2,222 2,535 2,926 1,358 MW-11 1,056 9,604 626 976 2,179 9,981 855 5,566 662 NS MW-12 ND ND 5 ND ND ND ND ND ND NS MW-13 125 NS 190 39 227 NS 16 1 126 74 MW-14 8 3 27 57 NS ND ND ND 8.5 88 MW-18 ND ND ND ND ND ND NS ND ND 56 Well MW-4 indicated decrease in TVOCs from 5,004ppb to 4,993ppb to 1,026ppb. TVOCs in well MW-10 also decreased from 2,926ppb to

MERIT STANLEY (Continued) **S103574868**

1,358ppb. Eight wells were ND or had low TVOCs. Recommendations: 7-Eleven site will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for February 2025. An update report summarizing these activities will be submitted to NYSDEC in April 2025. AD 04/29/2025: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager Office: Yaphank, New York phone: 631.924.3001 Will review. AD 05/28/2025: Reviewed the 1st quarter 2025 report. It states that the following remediation activities were historically performed at the site: February 2000 Air sparge (AS)/Soil Vapor Extraction (SVE) system in operation. February 2006 AS/SVE system was shut down. December 2008 AS/SVE system is re-activated and monthly operations and maintenance (O&M) begins. April 2010 AS/SVE system was shut down due to non-detect recovery. Current Site Status: Car Wash/Auto Detailing Center. For the reported monitoring period: December 2024 February 2025, the following work was performed at the site: - February 12, 2025 - Gauged and sampled eleven (11) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7, MW-8, MW-9 through MW-14, MW-18 Wells Containing LNAPL: None Groundwater Depth: 11.14 feet to 13.41 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7, MW-8, MW-9 through MW-12, MW-14 & MW-18 Maximum Benzene Concentration: 58.0 ug/L (MW-8) Maximum MTBE Concentration: Not Accessible (NA) all wells Total VOCs Range: ND 3,004.7 ug/L (MW-10) Recommendations: Continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for May 2025. An update report summarizing these activities will be submitted to NYSDEC in July 2025. AD

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 11/25/97 mmm:PBS RECORDS INDECATE THAT TANKS OVERDUE FOR TESTING BY 3 YEARS. SPILL # 88-00531 ALSO ACTIVE FOR THE SITE, FOR TANK #4 FAILING TT ON 4/16/88 (SULLIVAN). SULLIVAN SPILL WILL BE CLOSED AND THIS SPILL NUMBER WILL REMAIN ACTIVE FOR THE SITE. 1/2/2004 Reassigned from Mulqueen to Sun. 12/16/2005 - Feng - Reassigned from Sun to Feng as per Sun. (RJF) 10/30/06 Reassigned from Tang to Sun. (MS) 11/16/06 Sun sent Outstanding Violation/Tank Test Failure letter to Eric S. Miller, owner of Arnold's Service Station at 1868 Linden Blvd on 11/09/06, requiring the following to be received by December 9, 2006: 1. An explanation of the cause of the tank system failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation. (JS/MS) 1/4/07: Above letter was returned (no such name). Found a recent tank renewal application for same address and sent letter (same as above) to Mr. Tzali Hirschler on 1/3/07. (JS/MS) 3/7/07: Received some documents associated with a UST upgrade including invoices and confirmation from tank installation company. Reviewing, however submittal is not pertaing to tank test failure. (JS/MS) 8/1/07: ACRIS search also indicates Mr. Eric Miller as person responsible for satisfaction of morgage. Need to further research current and accurate contact info and telephone number. (JS/MS) 1/24/08: Sol Hirschler at 516.901.1666. 4/24/08: 2nd clean up letter sent to Eric Miller (2x, different addr for Ham II Realty) and Tzali. 2006 tank test report and 1995 soil boring logs + GW data does not address this 1997 spill. (JS/MM) 5/12/08: Sent 2nd letter + SIWP for subsurface investigation report. (JS/MM) 5/14/08: Dean Sommer (518-438-9907 x236) called; representing Tzali Hirschler. Trying to put documents together, not quite sure who is responsible.(JS/MM) 5/20/08: JS received voicemail from Jeff Ruderman, attorney for Eric Miller; Miller bought property but had an agreement with the previous owner. Previous owner would be responsible for all environmental concerns. Sent email to Jeff for clarification. (JS/MM) 5/21/08: Extension granted to Miller/Ruderman. Due 7/23/08. (JS/MM) 7/16/08: Preferred Environmental retained, requesting extension and FOIL request. SIWP due 9/7/08. (JS/MM)

ANAR SERVICE CENTER (Continued) **S102959961**

08/05/08: Transferred to Kolleeny/Mandac. - JK 10/8/08: PES late with SIWP. (JK/MM) 12/30/08: Spoke with Jill Haimson. She said they have been trying to get a road opening permit. I told her I didn't have any documents from her and the last correspondence was Preffered's request for an extension for the SIWP. She said she will pull the file and see what documents she has. (JK/KG) 01/06/09: Rec'd following email from Bill Schlageter. SIWP under review. Kathleen: As requested, attached is the Site Investigation Work Plan to be conducted by Preferred Environmental Services at the Citgo Station at 1868 Linden Boulevard, Brooklyn, NY. We are currently obtaining the required sidewalk opening permit and anticipate receipt of same sometime next week. As soon as we have a set schedule, I will update you. In the interim, please do not hesitate to contact me or Jill. Thank You, Bill (JK/KG) 01/07/09: SIWP approved and letter sent to Eric Miller. SIR due 03/31/09. Scope of work includes installation of 6 borings, collection of soil and GW samples, and submission of SIR. DEC approved the work plan with the following modifications: GW samples must be collected from exisitng accessible wells, any damaged wells should be replaced, permanent wells should be installed where contamination is encountered, additional borings/wells should be installed as necessary to fully delineate contamination plume, new and existing wells should be surveyed, and soil and GW samples should be collected at all boring locations. (JK/KG) 01/27/09: Rec'd phone call from Bill concerning modifications requested by DEC to the approved work plan. He stated all of the existing wells are in bad condition and will not be able to collect samples from them. DEC requested wells to be installed where contamination was encountered. Instead of installing permanent wells the day the borings are conducted he would like to first submit the soil and GW samples for lab analysis. Then, based on the lab results, Preferred will submit a report with recommendations for well locations. After the wells are installed they will be surveyed. I told him that was okay. Groundwater and soil samples will be collected from all 6 borings. He expects to get the sidewalk permits this week and anticipates work to commence next week. (JK/KG) 02/09/09: Rec'd email from Bill on 02/06/09 stating that site work is tentatively scheduled for 02/12/09. (JK/KG) 04/08/09: Rec'd email from Bill: I apologize, but the report for 1868 Linden Boulevard, Brooklyn has been delayed between revisions between our office and the client's attorney. We expect to have the report to your office in the next few days. Pleas bear with us and I apologize for the inconvenience. Pdf of report was submitted on 4/8/09; under review. (JK/KG) 04/16/09: Investigation on 2/12/09 included 6 borings and collection of soil and groundwater samples. GW results: GW-1: Total VOCs plus oxygenates - 46,318.4 ug/L GW-2: Total VOCs plus oxygenates - 33,290.0 ug/L GW-3: Total VOCs plus oxygenates - 39,638.4 ug/L GW-4: Total VOCs plus oxygenates - 144.76 ug/L GW-5: Total VOCs plus oxygenates - 427.3 ug/L GW-6: Total VOCs plus oxygenates - 25.74 ug/L Soil: VOCs detected above TAGM RSCOs in SB-2(8-10') and SB-3(8-10'). Preferred has indicated that a RAP is necessary. A letter was sent to the RP requiring a RAP be submitted by 6/5/09. At a minimum the RAP will propose installation of permanent monitoring wells, delineation of the groundwater contaminant plume, a groundwater elevation survey, and installation of a soil and groundwater treatment system. (JK/KG) 06/01/09: Rec'd a call from Bill Schlageter requesting a 2 week extension to submit the RAP. I asked him to send an email requesting an extension. Kathleen: As we discussed, Preferred is respectfully requesting that the NYSDEC

ANAR SERVICE CENTER (Continued) **S102959961**

grant us an extension on the June 5, 2009 deadline to prepare the NYSDEC-required Remedial Action Plan (RAP) for the above-referenced property. We are in the process of developing a scope of work to address the remaining on-site impacts and need some more time to finalize the specifics of same. I thank you in advance for your patience. Regards, Bill Bill, Your request for an extension is granted. The new deadline for submission of the RAP is June 19, 2009. Feel free to contact me if you have any questions. Thanks, Kathy (JK/KG) 06/22/09: I spoke to Bill Shlageter and he said he sent Mr. Miller a proposal for two different remedial options and is waiting for his approval. (JK/KG) 07/06/09: Rec'd the following email from Jill Haimson: We have been conferring with Mr. Miller relative to the above parcel and have provided him with various remedial options that the NYSDEC would find acceptable. He has indicated that he is having internal meetings and will make a decision by the end of the week. We will reach back out to you early next week to confirm a conceptual scope and overall schedule for implementation. Thanks and we will talk to you shortly. Jill S. Haimson 08/05/09: Sent an email to Jill requesting an update on the status of the RAP. (JK/KG) 08/06/09: Rec'd email from Jill: The client has decided to contract with us for the preparation of the RAP - he has been out of the country for the last two weeks and will be back in 1-2 weeks. At that time, he will execute our contract and we can set a schedule for the submission of the RAP. We're getting there! Jill S. Haimson (JK/KG) 08/31/09: Spoke to Jill Haimson, she said Mr. Miller accepted Preferred's proposal. She will call Mr. Miller and get back to me next week. (JK/KG) 09/30/09: Follow up with Haimson and Miller. RAP is past due. (JK/KG) 11/03/2009: This spill case was transferred to A. Doronova. - AD 12/15/2009: PDF copy of the RAP was submitted. DL to eDocs. AD 12/28/2009: Received a hard copy of the RAP. Will review. Changed site priority from P0 to P1. AD 01/07/2009: Reviewed the RAP. Preferred Env. proposes application of a bioremediation agent. The proposed remediation will consist of the in-situ soil and GW treatment using a bioremediation technology by MicroBac International, Inc. This involves injection of natural bacteria. Scope of work includes: - installation of one injection well and rehabilitation of four existing wells for use in application of MicroBac injection; - installation of three permanent monitoring wells; - application of MicroBac and associated nutrients via 5 injection wells; - monthly sampling of DO, ferrous iron and other relevant parametrs. - quarterly GW sampling for one year with reporting to DEC. The GW contamination is not delineated at the site. Additional wells should be installed. Discussed the RAP with J. Kolleeny of DEC. Called and spoke with Bill Schlageter of Preferred Env. Requested to submit a revised work plan for monitoring wells installation only. Two additional wells should be installed at the site. Off-site wells MW-6 and MW-7 should be sampled if feasible, if not - they should be replaced. After all wells will be installed, surveyed and sampled, RAP can be reviewed by DEC. Response is due January 19, 2010. AD 02/17/2010: Received an e-mail from B. Schlageter of Preferred Env. saying: Bill Schlageter 2/17/2010 6:15 PM Ms. Doronova: We spoke relative to this project a few weeks ago as the NYSDEC has additional requirements other than those set forth in the Remedial Action Work Plan submitted by Preferred on behalf of the property owner. Could you please send a letter or e-mail documenting these additional requirements so that we may pass them on to the property owner as an additional scope specifically required by NYSDEC

ANAR SERVICE CENTER (Continued) **S102959961**

beyond what was proposed in our RAWP? Thank You Bill William J. Schlageter Operations Manager/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES Certified Port Authority of New York and New Jersey (PANYNJ), NYS and NYC Women-Owned Business Enterprise (WBE) 323 Merrick Avenue North Merrick, New York 11566 Tel: (516) 546-1100 ext. 22 Fax: (516) 213-8213 Cell: (917) 715-0752 AD 02/18/2010: Sent an e-mail to Mr. Schlageter: Dear Mr. Schlageter: As we discussed it previously, DEC opinion is that the groundwater contamination is not delineated at the site. Additional wells should be installed. A revised work plan for monitoring wells installation only, should be submitted to DEC for review and approval. Two additional wells should be installed at the site. Off-site wells MW-6 and MW-7 should be sampled if feasible, if not - they should be replaced. After all wells will be installed, surveyed and sampled, a investigation summary report with a proposed remedial actions can be reviewed by DEC. Response is time sensitive. 06/22/2010: Called and spoke with Bill Schlageter regarding submission of the report. He said that the owner of the site was out of contry, so they were not able to discuss with him new scope of work. he will contact the owner and will send a status update info till July 1, 2010. AD 07/15/2010: Called and left a message to Mr. Schlageter. Later spoke with B. Schlageter. Mr. Schlageter aked for an official letter from DEC with an additional investigation request. Requsted him to send a recent contact info of the owner including his e-mail address. AD 07/21/2010: Received an e-mail from B. Schlageter saying: Ms. Doronova: As you requested, the current property owner information is as follows: Mr. Eric Miller Iberia World Foods 1900 Linden Boulevard Brooklyn, New York 11207 Please copy me on any correspondence with the property owner. Thank you, Bill William J. Schlageter Operations Manager/Senior Hydrogeologist AD 07/26/2010: Issued a letter with a request for additional investigation. Mr. Schlageter does not have e-mail address of the owner. Sent the letter to Mr. Schlageter, so he can forward it to Mr. Miller. DL pdf copy to eDocs. Response is due August 16, 2010. AD 08/13/2010: Received an e-mail from B. Shlageter: Ainura: I am requesting a few more days on the work plan for 1868 Linden Boulevard, Brooklyn, NY. I have spoken to the property owner and provided him with our proposal, but he is not available this afternoon, and I feel that I won t have his authority by Monday to submit our work plan to you. Thank you for your patience and cooperation. Bill William J. Schlageter Operations Manager/Senior Hydrogeologist . AD 08/16/2010: Received an e-mail from Bill: Ainura: As required by the NYSDEC, attached is the investigation work plan for the above-referenced property for your review. Please contact me with any comments. Regards, Bill William J. Schlageter DL the work plan to eDocs. Will review. AD 08/27/2010: Reviewed the work plan. It proposes installation of up to eight (8) two-inch diameter groundwater monitoring wells. If the off-site groundwater monitoring wells MW-6 and MW-7 are located, only six wells will be installed and wells 6 and 7 will be rehabilitated; The investigation work plan also includes: Collection and laboratory analysis of up to 12 soil samples for VOCs; Survey, gauging and sampling of all installed groundwater monitoring wells (up to eight) with groundwater samples submitted for VOCs plus fuel oxygenates by USEPA Method 8260. A summary investigation report to be submitted to NYSDEC including boring logs, groundwater flow map, data table and a proposed remedial action. AD 09/01/2010: Issued and sent an approval letter with a comment regarding a soil sampling interval. DL pdf copy to eDocs. AD

ANAR SERVICE CENTER (Continued) **S102959961**

06/24/2011: called and spoke with Bill Schlageter of Preferred regarding implementation of the RAP. He said that because the site owner travel a lot, and spends majority of the year outside of the country, it if difficult to get hold of him and schedule a field work at the site. Asked Bill to provide an info for the owner's assistant, to whom I can sent a letter requiring expedition of the site remediation. This info will be submitted shortly. AD 08/2011: Did not receive any information from Preferred. AD 01/12/2012: called and spoke with Bill Shlageter. There was no any changes in the site status. Issued and sent a letter to the owner by certified mail (#7006 0100 0006 2620 3504)with a reqirement to perform site investigation and to submit a summary report by March 8, 2012. DL the pdf copy of the letter to eDocs. AD 02/14/2012: Received a call from B. Schlageter of Preferred. He said that the site owner contacted them to proceed with site investigation. Bill asked for a copy of the letter sent to the owner. Sent him the copy. AD 02/16/2012: Received the following e-mail from Bill saying: Ainura : We have scheduled the field activities for the Thursday and Friday February 23-24, 2012. Please let me know if you will attend the delineation activities. Regards, Bill William J. Schlageter Operations Manager/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES AD 02/17/2012: Received an e-mail from B. Schlageter saying: Ainura: We are planning on conducting the sampling and well installation activities next week February 23-24, 2012. As we will not receive lab data until March 7, 2012 and need some time to evaluate data and discuss results with the client, we are respectfully requesting that the NYSDEC grant us a three (3) week extension of the deadline to submit the subsurface investigation summary report from March 8, 2012 to March 29, 2012. Please let me know if this request is granted. Thank you, Bill Sent him an e-mail granting deadline extension till March 29, 2012. AD 04/03/2012: Received the following e-mail from Bill: Ms. Doronova: Attached is the report on the soil and groundwater delineation conducted by Preferred Environmental Services on behalf of the Property Owner for 1868 Linden Boulevard, Brooklyn, New York. Please review and feel free to contact me to discuss. An original copy and CD will follow by mail. Regards, Bill DL the report to eDocs. AD 04/09/2012: Received a hard copy of the report. Will review. AD 05/16/2012: Reviewed the Soil and Groundwater Delineation report. It states that the purpose of the February - March 2012 investigatory activities were to further delineate the extent of previous gasoline-related impacts identified in soil and groundwater at the subject property. Additional subsurface investigation was conducted on February 12, 2009 by Preferred which consisted of the following: Installation of six soil borings at the site via a Geoprobe; Collection and laboratory analysis of nine soil samples; Installation of six temporary groundwater monitoring wells utilizing the Geoprobe; Collection and laboratory analysis of six groundwater samples; and Completion of an elevation survey and the development of a groundwater flow map. Based on the results of subsurface investigation is was concluded that petroleum-related impacts to soil and groundwater are present at the site and the highest concentrations of gasoline-related organic compounds and gasoline-related fuel oxygenates were identified adjacent to the in-service USTs. Eight monitoring wells were installed at the site. Upon installation, the 8 new groundwater monitoring wells, and 3 existing groundwater monitoring wells (MW-1, MW-2 and MW-4) were gauged for the presence of free-phase product. Upon gauging of the

ANAR SERVICE CENTER (Continued) **S102959961**

wells, free phase product was present in 5 wells: MW-1, MW-2, MW-13, MW-14 and MW-16/MW-7. All of these wells are located south of and proximate to historic dispensing areas, and/or USTs (such as MW-2). The three out of five wells with the thickest free phase product were identified as: MW-13 (1.41 feet); MW-1 (1.01 feet); MW-2 (0.81 feet). These three wells are located immediately south and adjacent to the historic and current gasoline dispensing areas. The six monitoring wells that did not contain free product (MW-4, MW-9, MW-10, MW-11, W-12 and MW-15/MW-6) were subsequently developed and sampled. TVOCs ranged in concentrations from 10.93 ug/L in MW-12 to 11,820 ug/L in MW-11. With the exception of MTBE at a concentration of 120 ug/L in MW-15/MW-6, no fuel oxygenates were detected above their MDLs in any of the six groundwater samples. Based upon the above, Preferred recommends a product recovery via a Vacuum Enhanced Fluid Recovery (VEFR) program. The VEFR program should consist of the periodic and repeated sustained use of a vacuum truck, exerting a strong vacuum on these wells to remove free phase product. Product recovery testing should be performed in tandem with these efforts, to ascertain the actual product thickness, and to assess the best available and most appropriate technology to address this issue. Additionally, a means to eliminate the continued introduction of gasoline from fueling operations should be developed and implemented in tandem with the VEFR. Upon the successful removal of free phase product to minimal and non-recurring levels, a subsequent remedial program should be designed to address the remainder of residual gasoline related impacts (e.g., dissolved phase) on and off-site. AD 05/17/2012: Called and spoke with B. Schlageter of Preferred. Requested to submit a detailed pilot study work plan for the proposed EFR. he asked for an official letter for RP to get their approval. Will issue a letter. AD 07/02/2012: Issued and sent a recommendation approval letter addressed to Mr. Miller with a request to submit a brief work plan for EFR. DL pdf copy of the letter to eDocs. AD 08/20/2012: Received an IRM work plan for EFR. It states that according to the results of subsurface investigation, petroleum-related impacts to soil and groundwater are present at the site and that the highest concentrations of gasoline-related compounds and LNAPL were identified in the vicinity of the in-service USTs. Preferred proposes a Vacuum Enhanced Fluid Recovery (VEFR) on a weekly basis as an interim remedial measure to remove free product from five site wells. Upon the successful removal of free phase product, remedial action will be proposed to address the remaining residual gasoline related impacts on and off-site. additional delineation of free product plume is needed. AD 08/27/2012: Discussed the IRM work plan with J. Koleeny of DEC. called and talked with B. Shlageter of Preferred. He agreed to additional delineation. Issued and sent a letter which approves the IRM work plan with the following comments: - A brief work plan for delineation of the free product plume should be prepared and submitted to DEC for review and approval; - Groundwater sampling should be performed at the site on a quarterly basis. DL pdf copy of the letter to eDocs. AD 01/24/2013: Called to B. Schlageter of Preferred Env. regarding report submission. He informed me that the report is ready and he will submit it soon. AD 03/05/2013: Received an e-mail from J. Haimson of Preferred with an attached report. DL the report to eDocs. Will review. AD 05/01/2013: Reviewed the report. It is a summary of continued monitoring, and prior pump down tests and product recovery activities conducted by Preferred Environmental Services (Preferred) from August 2012 through February 2013 at the

ANAR SERVICE CENTER (Continued) **S102959961**

site. From August 2012 through February 2013, Preferred implemented remedial activities including the Vacuum Enhanced Fluid Recovery (VEFR) program, monitoring and a pump down test. On-site and off-site monitoring wells were gauged using an oil-water interface probe, to identify wells needing product recovery. When the VEFR program was initiated, a vacuum truck was utilized to exert a strong vacuum on monitoring wells identified to have free-phase product within them. EFR: The first VEFR event was performed on August 31, 2012. A total of 398 gallons was recovered from groundwater monitoring wells 1, 2, 4, 7, 10, 11, 13, and 14. All monitoring wells had a non-measurable thickness of free floating product with the exception of off-site monitoring well MW-7, which reported a thickness of 0.65 feet. The second VEFR event was performed on October 8, 2012. A total of 95 gallons was recovered from MW-7. Again, MW-7 had the only measurable free floating product, with a thickness of .03 feet. Waste manifests were obtained for each VEFRs and are provided as an attachment. Evaluation of the ongoing monitoring after the VEFRs noted the continued absence or very limited measurable product from Mid October 2012, November - December 2012 (no measurements were done in this time frame due to Tropical Storm Sandy and inability to access wells due to snow piles), and through January 30, 2013. As of January 30, 2013, no measurable free phase product was present at MW-1, MW-2, MW-4, MW-6 to MW-14. Pump Test: During the initial VEFR event on August 31, 2012, a time-rated product recovery test on selected groundwater monitoring wells was performed to ascertain the actual product thickness and associated product and groundwater elevation recovery rate. Monitoring wells 7, 14, 13, 1, 2, and 11 were selected due their specific characteristics and historic product levels. Groundwater monitoring well, MW-7, had the greatest product recovery rate with .01 feet of product recovered at intervals greater than ten (10) minutes. However, no more than a total of .04 feet of product was observed to have been recovered from the MW-7 while Preferred was on-site performing the product recovery test. Conclusions and recommendations: From August 2012 through February 2013, remedial activities and/or continued monitoring efforts were conducted at the site. The results of this effort are summarized below: An initial scope of multiple VEFR and product recovery test events were completed; Continued monitoring of the site has proved that a drastic reduction of free-floating product levels had occurred on all on-site monitoring wells to non-measurable levels as of January 30, 2013; The only groundwater monitoring well to periodically exhibit free floating product is the off-site MW-7 monitoring well. The recovery rate of product within the well is greater than .001 ft of product/minute. No product was measurable as noted in January 30, 2013; Based upon the removal of free-phase product and the non-resurgence of significant measurable product over the last few months (inclusive of the potential effects from Tropical Storm Sandy flooding), it appears that the product phase was likely trapped and may not re-occur. Based upon the results of the VEFR, continued monitoring program and absence of free phase product, in order to develop a final remedy for this property, Preferred proposes to conduct an updated round of groundwater sampling, inclusive of those wells that have not been sampled before, wherein product was present. This will enable a determination of what level of remediation is still required, as well as the best available and most appropriate technology to address the remaining dissolved phase impacts present in deep soils and groundwater. If agreeable, a new round of

ANAR SERVICE CENTER (Continued) **S102959961**

groundwater sampling will be conducted as soon as feasible. AD 06/03/2013: Called and spoke with B. Shlageter of Preferred regarding GW report submission. He said that they sampled the wells few weeks ago and are in a process of preparing the report. It will be submitted to DEC approximately by June 14, 2013. AD 09/09/2013: Received the following e-mai from J. Haimson: Hi Ainura please find attached: Summary Monitoring Report & Update for NYSDEC Spill 97-09774, Service Station - 1868 Linden Blvd, Brooklyn, New York 11207. A hard copy is being sent as well. Thanks and best regards. Jill S. Haimson, CGWP, PG Principal PREFERRED ENVIRONMENTAL SERVICES 323 Merrick Avenue North Merrick, New York 11566 DL the report to eDocs. Will review. AD 10/09/2013: Reviewed the report. It states that from April 2013, remedial activities and/or continued monitoring efforts conducted at the commercial property at 1868 Linden Blvd, Brooklyn, NY. The results of this effort are summarized below: Continued monitoring of the Subject Property has proved that a drastic reduction of free floating product levels had occurred on all on-site monitoring wells to non-measurable levels as of January 30, 2013; The only groundwater monitoring well to periodically exhibit free floating product is the off-site MW-7 monitoring well. The recovery rate of product within the well is greater than 0.001 ft of product/minute. No free phase product was measurable as noted in January 30, 2013; Based upon the removal of free-phase product and the non-resurgence of significant measurable product over the last few months (inclusive of the potential effects from Tropical Storm Sandy flooding), it appears that the product phase was likely trapped and may not re-occur; and Based upon the results of the VEFR, continued monitoring program and absence of free phase product, in order to develop a final remedy for this property, Preferred proposed to conduct an updated round of groundwater sampling, inclusive of those wells that have not been sampled before, wherein product had formerly been present. This will enable a determination of what level/type of spill remediation is still required, as well as the best available and most appropriate technology to address the remaining dissolved phase impacts present in deep soils and groundwater. As per this recommendation, a new round of groundwater sampling was conducted on April 11, 2013, which is documented in this report. Groundwater samples were collected from ten (10) monitoring wells (MW-1, MW-2, MW-4, MW-6 (MW-15), and MW-9 to MW-14) on April 11, 2013. MW-7 (MW-161) was not sampled due to the presence of an intermittent sheen. Subsequent to the groundwater sampling of the existing wells across the study area, a measurement of water levels were recorded. During January 30, 2013 and April 11, 2013, no free phase floating product was identified in any of the ten (10) monitoring wells (MW-1, 2, 4, 6 (a.k.a. MW-15), MW-7 (a.k.a. MW-16), 9, 10, 11, 12, 13 and 14) evaluated, with the exception of the very limited and intermittent product noted at MW-7 (sheen to 0.01 foot). Depth to water ranged from 10.75 feet below grade surface (bgs) to 12.60+ feet bgs in April 2013. The highest concentrations of residual petroleum impacts to groundwater were detected in samples MW-1 (3,388 u/L), MW-13 (3,361 ug/L), MW-14 (2,509 ug/L), MW-2 (1,046 uL), MW-11 (1,989 u/L), with lower TVOC concentrations reported at the other wells. Preferred concludes that there is a clear correlation with the presence of remaining elevated TVOCs with respect to wells with prior history of free-phase product as measured in March 2, 2012. This specifically includes MW-1, MW-2, MW-13 and MW-14. Three wells are located next to each other and all are hydrogeologically downgradient

ANAR SERVICE CENTER (Continued) **S102959961**

of the dispenser islands. It is common for wells that previously contained free-phase floating product to continue to demonstrate slightly elevated concentrations due to the propensity for the former product to have coated the interior of the well screen and surface of the sand pack. A comparison of VOC concentrations in groundwater from April 2013 to the prior sampling round in March 2012 noted the following significant information: TVOCs decreased dramatically at MW-4 (from 184 ug/L to 27 ug/L); decreased to non-detect at MW-9; decreased from 1,476 ug/L to 327 ug/L at MW-10 with no oxygenates detected historically; a ten-fold decrease was reported at MW-11 from 11,820 ug/L down to 1,989 ug/L, with a low level new detection MTBE; very slight increase in MW-12 (less than one order of magnitude) of VOCs and oxygenates; decreased from 1,328 ug/L to 628 ug/L at MW-15 (MW-6), including a decrease in oxygenate concentrations. An evaluation of the April 2013 groundwater data with comparison to historical data clearly demonstrates a significant reduction in the presence of any residual floating product coupled with a large decrease in dissolved phase gasoline constituents. Based upon this information, Preferred recommens continuing monitoring of groundwater conditions on a semi-annual basis as an appropriate next step in the remedial process for this property. As free-phase floating product has virtually diminished, and dissolved phase concentrations have also decreased substantially due to the removal of product and continued natural attenuation, the next groundwater sampling round is proposed for October 2013. 07/14/2014: Called and spoke with B. Schlageter regarding site status update. He will contact site owner and get back to us. AD 01/2015: called and left a message to Mr. Schlageter. AD 06/28/2017: called and spoke with B. Schlageter. They did not work for the site for a long time. Will send a letter. AD 01/2018: Called and left a message to Mr. Schlageter. AD 06/2019: Called and left a message to Mr. Miller on 718-649-0045. AD 03/11/2021: Called and spoke with Mr. DeLa Llero (site operator - 718-649-0045; PBS# 2-269050). Spoke with him and explained that this old spill is still open and that they need to sample all site wells to gain some info regarding current site status and plan for further steps. Mr. DeLa Llero will contact the site owner and will get back to DEC. AD 12/15/2021: Called and spoke with Mr. DeLa Llero. He will contact site owner. Later in the day received a phone call from Dan of Preferred Env. He was contacted by the RP and was interested what are the DEC requirements for the site. Told him to sample all site wells to see the current GW situation at the site and to propose further actions based on the numbers. AD 02/22/2022: Received an email from Jonathan Agosta from DEC's Legal Department regarding preparation on getting the long-term open spill cases with no cooperation from RP under Order/Stipulation. Included this case into the list. AD 04/04/2022: Received a message from Mr. Agosta regarding scheduling a meeting for the spills in the list for Order/Stipulation. It was agreed to schedule the meeting for April 20th, 2022 at 11 AM. AD 04/20/2022: Met with Mr. Agosta to discuss the CAP for the Order. It was agreed that the prepared CAP is adequate and will be sent to the RP with the Order. AD 05/10/2022: Received the following email from Bill Schlageter of Preferred Env.: Hi Ainura: I wanted to follow-up with you. I know that Dan was speaking to you with respect to this site, but he is no longer with us. I have a note from Dan in our file that he spoke to you about our round of quarterly groundwater sampling completed at the property in February 2022. We are preparing the report and will have it over to

ANAR SERVICE CENTER (Continued) **S102959961**

you later this week. Can you call me to discuss, the owner received a violation notice from the NYSDEC and wants to know why? Regards, Bill William J. Schlageter, NYS Licensed PG Vice President/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES NYS, NYC, PANY/NJ, New York City School Construction Authority-certified WBE 323 Merrick Avenue North Merrick, New York 11566 516 546 1100 fax 516 213 8213 05/11/2022: Called and spoke with Bill. Explained to him that the order was issued for the RP because they were not cooperating with the site cleanup. He said that according to the latest GW data, the most contaminated site well has around 4,000 ppb of TVOCs. Told Bill that with these levels, they need to prepare a RAP. He will talk with his client. The report will be submitted shortly. AD 05/16/2022: Received the email from Bill: Good Morning Ms. Doronova: Attached please find the Quarterly groundwater sampling report for the recent groundwater sampling conducted in the First Quarter of 2022. Please review. We are proposing to conduct another round of groundwater sampling (2nd Quarter 2022) prior to developing an approach for future activities. Ms. Allana Miller, owner representative for the Subject Property has requested to be copied on all correspondence associated with this property. She is copied on this e-mail. Thank you, Bill William J. Schlageter, NYS Licensed PG Vice President/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES NYS, NYC, PANY/NJ, New York City School Construction Authority-certified WBE 323 Merrick Avenue North Merrick, New York 11566 516 546 1100 fax 516 213 8213 Will Review. AD Later in the day received the following email from the site owner: Hello Ms. Doronova: I first want to emphasize that, as second generation ownership, we take this matter very seriously. If Bill s below proposal for additional testing is accepted, and therefore, a proposed remedial action cannot be submitted until August, we would like to request an extension to respond to the Consent Order in the anticipation that we would like to narrow the scope of the Consent Order once we have agreed on the realm of an acceptable remedial action plan. Please confirm if this is acceptable to the NYSDEC. We appreciate the consideration. Alanna Alanna F. Miller, Esq. General Counsel Iberia Foods Corp./Brooklyn Bottling 1900 Linden Blvd. Brooklyn, NY 11207 Email: alanna.miller@iberiafood.com AD 05/26/2022: Reviewed the report. It states that on February 10, 2022, the consultant performed sampling of monitoring wells to evaluate current groundwater quality and assess any residual petroleum impacts associated with NYSDEC Spill No. 97-09774. Preferred mobilized to the Subject Property on February 10, 2022 to attempt to collect groundwater samples from the eleven (11) groundwater monitoring wells. During the sampling events, MW-7 (a.k.a. MW-16) was unable to be sampled as an inoperable truck was parked above the well. Monitoring wells MW-9, MW-10, and MW-13 could not be located and appear to have been paved over. Preferred was able to successfully sample 7 out of 11 wells: MW-1, MW-2, MW-4, MW-6, MW-11, MW-12 and MW-14 on February 10, 2022. One or more petroleum-related VOCs were detected within all seven (7) groundwater monitoring wells at concentrations above their applicable laboratory MDLs. One (1) or petroleum-related VOCs were reported in each of groundwater samples at concentrations in exceedance of their associated NYSDEC Class GA SGVs. Total Volatile Organic Compounds (TVOCs) ranged in concentration from 5.97 micrograms per liter (ug/L) at MW-2 (cross/upgradient), to 3,981.6 ug/L at MW-1, the location of a well which had formerly contained free phase floating product in 2012. One (1) fuel oxygenate compound, Methyl tert-butyl ether (MTBE)

ANAR SERVICE CENTER (Continued) **S102959961**

was detected (at a concentration of 23 ug/L in mW-1) in exceedance of its respective Class GA SGV. A comparison was made of TVOs detected in groundwater during the February 10, 2022 sampling event to historic groundwater data available for the Subject Property (March 2012, April 2013, and August 2014). A decrease in TVOCs were noted in samples collected from MW-1, MW-2, MW-6, MW-11 and MW-12. A slight increase in TVOCs was noted in the sample collected form MW-4 compared to the prior TVOCs were slighted elevated in MW-4 above the as compared to the most recent sampling data available from MW-4 (April 2013). The TVOC increase was minor and since MW-4 is considered an upgradient well this slight increase in TVOCs concentrations is not considered significant. The concentration of TVOCs in MW-4 reported in February 2022 was however, lower than that reported in 2012. The February 2022 laboratory data indicates that there continues to be an area of residual petroleum impacts in groundwater in the vicinity of wells MW-1, MW11, MW-14 and extending off-site to MW-6. This area is in the immediate proximity of existing and historic underground storage tanks (USTs) and is downgradient of dispensing areas. A decrease in petroleum-related VOCs were noted across the Subject Property (with the exception of the upgradient well (MW-4)) indicating that natural bacteria present within the aquifer are actively breaking down the residual petroleum compounds. Additional efforts may be required to achieve compliant groundwater conditions at the Subject Property. If acceptable to the NYSDEC, the next round of quarterly groundwater sampling will be completed in June of 2022, with a Summary Report provided in July of 2022. A remedial determination will be made based upon the data collected in June 2022 and if necessary a Remedial Action Work Plan (RAWP) can be provided in August 2022. AD 06/01/2022: Received the following email from Ms. Miller: Hello Ms. Doronova: I would like to follow up on both my below request and Bill s request. Appreciate it. Alanna Alanna F. Miller, Esq. General Counsel Iberia Foods Corp./Brooklyn Bottling 1900 Linden Blvd. Brooklyn, NY 11207 Email: alanna.miller@iberiafood.com Sent her the following response: Dear Ms. Miller, The Department approves your proposal for additional groundwater sampling in the second quarter of 2022 to gain more information. Please note that, based on the data provided from February 2022 sampling event, a RAP will be required to be prepared for the site. Feel free to contact me if you have questions or comments regarding this matter. Sincerely, Ainura Doronova - Environmental Engineer AD 06/16/2022: Received a notice from Mr. Agosta that the Order for this site was fully executed. AD 07/21/2022: Received the following email from Bill Schlageter: Good Morning Ainura: Attached please find the 2nd Quarter 2022 QGSR for Spill No. 97-09744 at 1868 Linden Boulevard, Brooklyn, New York. Please feel free to contact me to discuss. Regards, Bill William J. Schlageter, NYS Licensed PG Vice President/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES NYS, NYC, PANY/NJ, New York City School Construction Authority-certified WBE 323 Merrick Avenue North Merrick, New York 11566 516 546 1100 fax 516 213 8213 Will review. AD 08/18/2022: Reviewed the 2nd quarter 2022 report. It states that quarterly groundwater sampling was completed by Preferred on behalf of Arnold s Service Station to evaluate current groundwater quality and assess any residual petroleum impacts associated with NYSDEC Spill No. 97-09774. Preferred mobilized to the Subject Property on June 27, 2022, to collect groundwater samples from the eleven (11) groundwater monitoring wells. During the sampling event, MW-7 (a.k.a.

ANAR SERVICE CENTER (Continued) **S102959961**

MW-16) was unable to be sampled as an inoperable truck was parked above the well. As indicated in the May 2022 Quarterly Groundwater Sampling Report (QGSR), monitoring wells MW-9, MW-10, and MW-13 could not be located and appear to have been paved over. Preferred was able to successfully sample wells MW-1, MW-2, MW-4, MW-6, MW- 11, MW-12 and MW-14 on June 27, 2022. Prior to sampling, all monitoring wells were gauged with a sonic oil/water interface probe. Depth to groundwater measurements on February 10, 2022 ranged from 10.97 to 17.23 feet below grade surface (bgs). No free phase petroleum (floating product) was detected at any of the groundwater monitoring well locations during June 27, 2022 sampling event. Comparison of the depth-to-water measurements to the casing elevations confirms a southeasterly groundwater flow direction, which is consistent with historic groundwater information. During the sampling, a minimum of three-to-five screen interval volumes of water was purged at each well location prior to the collection of a representative sample, in accordance with the protocols established in NYSDEC DER-10. The containerized groundwater samples were immediately placed into an ice-filled cooler and transported to the laboratory. A petroleum sheen was noted on purge water generated from MW-1. All purge water was run through a carbon bucket prior to discharge to the ground surface. All groundwater samples were submitted for laboratory analysis to York Analytical Laboratories, a NELAP/NYSDOH ELAP certified laboratory for NYSDEC CP-51 VOCs by EPA Method 8260 plus MTBE and Fuel Oxygenates. Samples were transported to the lab in an ice-packed cooler, and were submitted under appropriate Chain of Custody (COC) protocols. Groundwater analytical results were then compared to the NYSDEC Ambient Water Quality Standards and Guidance Values (SGVs) and Groundwater Effluent Limitations for Class GA potable groundwater. One (1) or more petroleum-related VOCs were detected within all seven (7) groundwater monitoring wells at concentrations above their applicable laboratory MDLs. With the exception of the groundwater sample collected form MW-2, one (1) or more petroleum-related VOCs were reported in each of groundwater samples at concentrations in exceedance of their associated NYSDEC Class GA SGVs. TVOCs ranged in the site wells from 1.57 ug/L at MW-2 (cross/upgradient), to 3,9992.50 ug/L at MW-1, the location of a well which had formerly contained free phase floating product in 2012. One (1) fuel oxygenate compound, tert-Amyl Methyl Ether(TAME) was detected (at a concentration of 57 ug/L in MW-14) in exceedance of its respective Class GA SGV. A comparison was made of TVOCs detected in groundwater during the June 27, 2022 to historic groundwater data available for the subject property (March 2012, April 2013, August 2014 and February 2022). A general decrease in TVOCs has been noted in in samples collected form all wells since 2014. Of note, during the most recent rounds of groundwater sampling (February and June of 2022), a significant decrease in TVOCs was noted in the samples collected from MW-2 to as low as 1.57 ug/L. The June 2022 laboratory data indicates that there continues to be an area of residual petroleum impacts in groundwater in the vicinity of wells MW-1, MW-11, MW-14 and extending off-site to MW-6. This area is in the immediate proximity of existing and historic underground storage tanks (USTs) and is downgradient of dispensing areas. A decrease in petroleum-related VOCs were noted across the site indicating that natural bacteria present within the aquifer are actively breaking down the residual petroleum compounds. Conclusions and recommendations: Although TVOCs have decreased from prior sampling

ANAR SERVICE CENTER (Continued) **S102959961**

event, based upon the detected concentrations of TVOCs in groundwater (ranging from 1.57 ug/L to 3,992.5 ug/L), remedial efforts may be warranted to continue to reduce TVOCs concentrations to acceptable concentrations. A remedial approach is being evaluated to address the residual impacts. In accordance with the approved revised Corrective Action Plan associated with NYSDEC Spill No. 97-09774, a Remedial Action Work Plan (RAWP) will be prepared and submitted within 45 days of the approval of this Quarterly Groundwater Sampling report. A RAWP is due. AD 03/2023: Received a call from Mr. Schlageter. Discussed the site. a RAWP is needed to be submitted. Bill needs a confirmation from DEC regarding submitted report in order to proceed with RAWP preparation. Later, received the following email from Bill: HI Ainura: It was nice speaking to you today. Can you reply confirming that you have received the monitoring report form July 2022 and it is accepted by the NYSDEC. Regards, Bill William J. Schlageter, NYS Licensed PG Vice President/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES NYS, NYC, PANY/NJ, New York City School Construction Authority-certified WBE 323 Merrick Avenue North Merrick, New York 11566 516 546 1100 fax 516 213 8213 Sent him the following email: Hi Bill, I confirm that the report dated July 2022 was received and reviewed by DEC. Based on the results of the sampling performed at the site, a Remedial Action Work Plan should be prepared and submitted to the Department for review and approval. Please follow the CAP schedule for all submissions to DEC. Feel free to contact me if you have questions regarding this matter. Sincerely, Ainura Doronova - Environmental Engineer AD 05/12/2023: Received the following email from Bill Schlageter: Hi Ainura: I am requesting a week extension to provide the RAWP to address the gasoline-impacts associated with the above-referenced spill. Please confirm that we will be afforded the week s extension with the new due date of May 22, 2023. Regards, Bill The extension request was granted. AD 05/25/2023: Received the following email from Bill: HI Ainura: The client s attorney is reviewing the draft RAWP at this moment. As soon as I get their review back, I will send the RAWP in. Hopefully by early next week. Bill William J. Schlageter, NYS Licensed PG AD 06/05/2023: Received the following email from Bill: Hi Ainura: Attached please find the Remedial Action Work Plan to address the gasoline-related impacts to soils and groundwater at the property located at 1868 Linden Boulevard, Brooklyn, NY associated with NYSDEC Spill No. 9709774. Please review and feel free to contact me with any questions or comments. Regards, Bill William J. Schlageter, NYS Licensed PG Vice President/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES 323 Merrick Avenue North Merrick, New York 11566 516 546 1100 fax 516 213 8213 Will review. AD 07/05/2023: Reviewed the work plan. The RAWP has been prepared to reduce contaminants present in soil and groundwater concurrently with the continued operation of the existing gasoline service station located at 1868 Linden Boulevard, Brooklyn, New York (the site). More specifically, the Remedial Action will include the application of an In-situ Chemical Oxidant technology (RegenOx) into soils and groundwater via temporary injection points at targeted areas across the site. The site consists of 20,000 square foot commercial lot occupied by three (3) contiguous buildings at the southern portion. These buildings are currently occupied as a convenience store, subway sandwich shop and miscellaneous storage building. An active gasoline station consisting of three (3) dispensing islands, an overhead canopy and four (4) Underground Storage Tanks (USTs) are located at

ANAR SERVICE CENTER (Continued) **S102959961**

the central and northern portions of the site. The property is serviced with municipal water and sewer. The current NYSDEC Petroleum Bulk Storage Registration (ID No. 2-269050) indicates that there are four (4) USTs registered to the site (Tank Nos. 001 through 004). Tank No. 001 is a 4,000 gallon double wall steel/carbon steel/iron diesel UST, Tank No. 002 is a 2,000-gallon gasoline/ethanol UST, Tank No. 003 is a 2,000-gallon double wall steel/carbon steel/iron diesel UST and Tank No. 004 a 2,000-gallon gasoline/ethanol UST. A total of sixteen (16) groundwater monitoring wells (MW-1 through MW-16) have been installed historically on and adjacent to the site. The results of the most recent groundwater sampling activities reported elevated concentrations of gasoline-related VOCs in groundwater ranging in concentrations from 1.57 ug/L (MW-2) to 3,992.50 ug/L (MW-1). No free product was detected in any of the sampled wells with the exception of the trace amount (0.01 foot) in well MW-7 during the April 2013 sampling event. Based upon the results of the most recent (June 2022) groundwater sampling event, the NYSDEC has requested that a remedial program be implemented at the Subject Property to address residual fuel oil impacts. ISCO Application was selected as the Preferred's remedy option for this project. This remedial option is the most cost effective and will involve the least site disturbance and/or business interruption at the site, while at the same time effectively remediating the gasoline-related impact to soil and groundwater at the site. It will include: - Installation of three (3) groundwater monitoring well; - Application of 3,270 pounds of RegenOx Part A/Part B ISCO in 5% solution via temporary injection points; - Conduct three (3) rounds of RegenOx Application; - Obtain a NYCDOT Hydrant permit for water supply during application events; and - Conduct four (4) rounds of post application quarterly groundwater sampling. Scope of Work The scope of work is to inject a total of 9,810 pounds of the Chemical Oxidant RegenOx into soils and groundwater across the Subject Property. Prior to the applications, three (3) new two (2) inch diameter groundwater monitoring wells will be installed at the site. The wells will be installed to replace former wells MW-9 (MW-9R), MW-10 (MW-10R) and as a sentinel well downgradient of MW-7/MW-16 (MW-17). The wells will be installed via hollow stem auger drilling technology and drill cuttings will be placed into 55-gallon drums for off-site transportation and disposal. The ISCO (RegenOx) is proposed to be applied via 22 injection points in three (3) separate events in three (3) targeted areas at the site: Area # 1 Southwest of UST Farm Treatment Interval: Seven (7) to seventeen (17) feet bgs - Treatment Area: 1,100 square feet +/- - Injection Points: 11 Temporary Injection Points - RegenOx amount: 1,686 pounds per injection event - Water amount: 2,050 gallons per injection event Area # 2 Northeast of UST Farm - Treatment Interval: Seven (7) to seventeen (17) feet bgs - Treatment Area: 300 square feet +/- - Injection Points: 3 Temporary Injection Points - RegenOx amount: 405 pounds per injection event - Water amount: 510 gallons per injection event Area # 3 Northern portion and upgradient - Treatment Interval: Seven (7) to seventeen (17) feet bgs - Treatment Area: 800 square feet +/- - Injection Points: 8 Temporary Injection Points - RegenOx amount: 1,179 pounds per injection event - Water amount: 1,435 gallons per injection event Injection Monitoring: Prior to and during injection events, each of the groundwater monitoring wells will be gauged utilizing a sonic oil/water interface probe, depth to product, depth to water and depth to bottom readings will be recorded at each groundwater monitoring well at the site. Should any free-phase

ANAR SERVICE CENTER (Continued) **S102959961**

floating product be detected in any of the groundwater monitoring wells, the ISCO application will be postponed. In addition to gauging, wells MW-1, MW-2, MW-12, MW-14, MW-15 (MW-6), MW-16 (MW-7) and MW-17 will be monitored for pH, conductivity, ORP and dissolved Oxygen (D.O.). During injection events, if pH readings exceed 11, ISCO will be temporarily halted and a fresh water application will be injected until pH readings drop below 11. Once below 11, the ISCO application will resume. Each ISCO application event will take between seven (7) and nine (9) days. ISCO Application Events are to be implemented two (2) months apart from each other providing for a four (4) month schedule for application. One (1) month after the third ISCO application, the first quarterly sampling event will be completed to evaluate the effectiveness of the remedy. As part of the quarterly groundwater sampling, wells MW-1, MW-2, MW4, MW-9R, MW-10R, MW-11, MW-12, MW-15 (MW-6), MW-16 (MW-7) and MW-17 will be purged and sampled. AD 07/13/2023: Issued and sent a RAWP approval letter to Ms. Miller. AD 02/01/2024: Received the following email from Mr. Zweier: Good Morning Ms. Doronova, Attached please find a summarized update of work completed to date at the above-referenced property including the first round of ISCO injections as part of the remedial scope approved in the document dated June 2023. Please don't hesitate to reach out with any questions or comments during your review. A second round of injections at the site is planned for February 2024. We will notify the NYSDEC upon the start of the second round. Best, Christopher P. Zweier Project Manager, Environmental Scientist PREFERRED ENVIRONMENTAL SERVICES 323 Merrick Avenue North Merrick, New York 11566 work: 516 546 1100 cell: 516 729 3293 fax: 516 213 8156 Will review. AD 03/05/2024: Reviewed the report. It summarizes the first round of in-situ chemical oxidation (ISCO) events conducted by Preferred Environmental Services (Preferred) in relation to the NYSDEC Spill No. 97-09774 at Arnold s Service station located at 1868 Linden Boulevard, Brooklyn, NY (Subject Property). The ISCO event was completed in accordance with the approved Remedial Action Work Plan (RAWP) prepared by Preferred for the Subject Property, dated June 2023. Geophysical Survey and Well Installation: On October 17 and 18, 2023, Preferred mobilized to the site with Coastal Environmental Solutions (Coastal). Coastal mobilized a ground-penetrating radar and magnetometer to complete a geophysical survey, and additionally mobilized a Geoprobe equipped with hollow-stem augurs for the installation of three (3) wells - MW-9R and MW-10R, and MW-17. All three (3) proposed well locations were cleared by the geophysical survey, which detected no subgrade obstructions in the area of any of the proposed wells. During this geophysical survey, all proposed ISCO application locations were also cleared to prepare for the subsequent injections. All three (3) wells were successfully installed to a depth of 20 ft bgs, consisting of a 10-foot screen and 10-foot riser, and were finished with an 8-inch diameter steel manhole cover. Soils generated during well installation were screened and logged by Preferred s geologist for lithological characteristics and field evidence of petroleum impact. All soil cuttings generated during drilling were placed in 55-gallon drums pending future disposal. After installation, each well was purged of an appropriate volume of groundwater to clear fines from the completed well and reduce groundwater turbidity. Twelve (12) gallons were purged from MW-9R, fifteen (15) gallons were purged from MW-10R, and twenty (20) gallons were purged from MW-17. A sheen was detected in purge water from all three wells, and a slight layer of free product was observed at

ANAR SERVICE CENTER (Continued) **S102959961**

MW-17. Purge water was additionally placed in 55-gallon drums pending future disposal. Pre-Clearing: From December 11 through December 14, 2023, Preferred and Coastal mobilized to the site to pre-clear the proposed injection point (IP) locations. Upon clearing each location, all areas were backfilled using the soil generated from hand-clearing, and all asphalt surfaces were patched. In areas where subgrade obstructions were encountered, IP points were relocated as needed and pre-clearing re-commenced. RegenOx Injection: From December 15 to December 28, 2023, Preferred mobilized to the site for injections of the RegenOx compound. Prior to and during each injection event, each of the groundwater monitoring wells were gauged using a sonic oil/water interface probe. Depth to product, depth to water, and depth to bottom readings were recorded for each well. Each well was additionally monitored for pH, conductivity, oxidation-reduction potential (ORP), and DO throughout the span of injections. Throughout this round of injection events, a total of 3,256 lbs of the RegenOx compound were injected across all areas during this round. Upon any occurrence of the injection material daylighting in the injection points or ground surface, injection was temporarily halted or relocated. A second round of injections will be conducted in February 2024, with a third and final round of injections to be scheduled two (2) months after the completion of the second round. AD 05/10/2024: Received the following email from Mr. Zweier: Good afternoon, Ms. Doronova, Attached please find a summarized update of work completed to date at the above-referenced property including the third round of ISCO injections as part of the remedial scope approved in the document dated June 2023. Please don't hesitate to reach out with any questions or comments during your review. The first round of post-injection groundwater sampling at the site is planned for May 27, 2024. Best, Christopher P. Zweier Project Manager, Environmental Scientist PREFERRED ENVIRONMENTAL SERVICES NYS, NYC, PANY/NJ, New York City School Construction Authority-certified WBE 323 Merrick Avenue North Merrick, New York 11566 work: 516 546 1100 cell: 516 729 3293 fax: 516 213 8156 Will review. AD 06/04/2024: Reviewed the report. It summarizes the third round of in-situ chemical oxidation (ISCO) events conducted by Preferred at Arnold s Service station located at 1868 Linden Boulevard, Brooklyn, NY (site). The ISCO event was completed in accordance with the approved Remedial Action Work Plan (RAWP) prepared by Preferred for the Subject Property, dated June 2023. RegenOx Injection: From April 15 to April 23, 2024, Preferred mobilized to the site for injections of the RegenOx compound, a chemical oxidation technology produced by Regenesis, which includes a sodium percarbonate oxidizer complex activated by a surface catalyst system. During the first round of injections in December 2023, all IP locations were pre-cleared to 6 ft bgs by saw cutting through the asphalt at grade surface and using a stainless-steel hand auger, an air knife, and a utilivac to ensure that no subgrade obstructions were present in any proposed IP location. Upon clearing each location, all areas were backfilled using the soil generated from hand-clearing, and all asphalt surfaces were patched. In areas where subgrade obstructions were encountered, IP points were relocated as needed and pre-clearing re-commenced. During the second and third round of injections, each ISCO Injection Point was located in the same locations precleared during the first injection event. Prior to and during each injection event, each of the groundwater monitoring wells were gauged using a sonic oil/water interface probe. Depth to

ANAR SERVICE CENTER (Continued) **S102959961**

product, depth to water, and depth to bottom readings were recorded for each well. Each well was additionally monitored for pH, conductivity, oxidation-reduction potential (ORP), and dissolved oxygen (DO) throughout the span of injections. Throughout this round of injection events, RegenOx compound was injected in a mixture of water, mixed in a ratio of 1 pound of RegenOx compound in 1.25 gallons of water. Total quantities injected were as follows: - Zone 1: 1648 lbs of RegenOx compound in 2060 gallons of water, among eleven (11) ISCO injection points - Zone 2: 408 lbs of RegenOx compound in 510 gallons of water, among three (3) ISCO injection points - Zone 3: 1200 lbs of RegenOx compound in 1500 gallons of water, among eight (8) ISCO injection points. A total of 3,256 lbs of the RegenOx compound were injected across all areas during this round. Upon any occurrence of the injection material daylighting in the injection points or ground surface, injection was temporarily halted or relocated. This was the final round of injections. A groundwater sampling event will be scheduled with the completion of this final round. AD

Remarks: TANK TEST FAILED - TANK TO BE PUMPED OUT AND RE-TESTED.

DEC Memo:	10/6/06 sent ttf letter to: Michael Quinn, Director, Facilities Engineering NYCDEP Bureau of Wastewater 96-05 Horace Harding Expressway Corona, NY 11368 bf 10/25/06 received response to 10/6/06 letter from Jerry Fragias, Chief, Div. of Facilities Planning. Will isolate, excavate, and retest. If any questions, contact Ioannis Iliopoulis (718)595-4845. bf 3/8/07 On 2/22/07, received letter from Tak Cheun Chin, Environmental Engineer Intern, NYCDEP. Letter contains tank tightness test reports for test on 2/8/07 and requests closing of spill. Called Mr. Chan and requested a third party letter explaining what happened. Mr. Chan told me manhole cover was loose causing failure. Cover fitting was tightened and then tank passed. He said he will get letter and send to me. Action Environmental did the repair work. bf 4/4/07 received call from Mr. Chin on 4/3 re:letter response regarding failure. Called him back today. letter was sent certified mail. Could not find. He will email the packege as a pdf file to me today. bf 4/9/07 reviewed letter from Mr. Chin. Tank tested and passed. Manway need new bolts and gasket. No mention of contaminated soil found or not found. Sent email to Mr. Chan requesting a third party letter regarding soil contamination. bf 4/27/07 Received call from Mr. Chin. He will email a copy of leeter from contractor regarding soil contamination. bf 5/7/07 Received phots by email from mr. Chan showing manholes which can be inspected for no petroleumn contamination. NFA. bf
Remarks:	Ullage failure. Manway covers are not bolted down properly . Caller can hear air coming from there.

DEC Memo:	need to send CSL to DEP PBS #2-456489 Nov 25, 2005 A Contaminated Soil Letter was sent to: Mr. Gopalakrishnan NYC-DEP Bureau of Watewater 96-05 Horace Harding Expressway Corona, NY 11368 03/06/06 Sharif Rahman- I spoke with Harold Monchik who was the spill caller from DEP. He told me the spill was cleaned up and the line was repaired but he does n't have much information about who did the work/any paper work. He suggested me to contact Paul Adams or

26TH WARD WPCP (Continued) **S105135339**

Toma, Senior Stationary
Engineers@718-642-7705. They are out on field right at this moment. Need to call back later.Later
on today, I called again and left messege to Frank Sebastiano. 07/20/06 Rahman- I spoke with Maria
Duran@212.860.9315/9350 who works under Joe Reddington of safety division. She will look into it
and send DEC the available paper works for review. 08/11/06 Rahman- Spill ocurred due to leak on
return line while doing soil borings.Approx. 800 gallons of #4 oil spilled on the ground through
the damaged pipe.The spill was confined to the area above the buried encasement.There are no
adjacent waterways.A total of 769 tons of oil water mixture were vacuumed to a vac truck and 59
tons of petroleum contaminated soil was removed in the vicinity of the fuel oil supply line to a
depth of approx. 10 ft below the grade.One composite end point sample was taken from four locations
at 15 ft spacing in the area of the spill.Soil analyticals are non detect for voc and there are
slight exceedances for SVOC which do not warranty further remediation.Waste disposal manifest are
attached.NFA required. 11/30/2006 Rep from Engineering firm (who?) called to say that they have
rediscovered another problem at the site. The prior problem was limited to the fill line. Now they
are removing the tank and the area under the old tank is heavily contaminated. They want to install
a new tank vault and tank system. They need to come up with a plan as soon as possible to deal
withthis problem. The rep will contact Sharif Rahman within next 1-2 days. ****Sangesland reopened
this spill.**** Jerry Fragias@(718)595-4968 is the contact at DEP. Spill#0610043 was assigned as
tanks were being removed.Hence, spill #0509695 is closed.

Remarks: BROKEN LINE ON RETURN LINE

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY PBS No. is 2-456489. - JK 9/27/05 06/13/08: Received Spill Closure Request dated 6/2/08 from Renee Wong of Roux Assoc. (in eDocs); letter report with attached PBS info notes that a second spill number, 9900503, was issued when the same 10,000-gallon heating oil UST failed another tightness test, so this older spill case should be closed. Also points out that tank was removed in September 2006. [See spill nos. 0509695 and 0610043 for further info regarding UST closure] I concur with Ms. Wong's recommendation; this spill case is closed to consolidate with open spill case 9900503. - J. Kolleeny

26TH WARD WRRF (Continued) **S102239955**

involved in this spill were removed in 2006; one end-point sample had some high levels of VOCs. Ryan Piper of Spill Response was at site, directed DEP to do addt'l work; they then took 14 addt'l soil samples and 2 GW grab samples (see data in eDocs). [For add'tl info regarding this site, including UST closure rpt, see spill no. 0610043, Ryan Piper, and spill no. 0509695, Sharif Rahman.] In 2008, Takcheun Chan of DEP contacted me about closure of this spill. I asked if any of addt'l 14 soil and/or 2 GW samples were collected near hot end-pt sample, and if any kind of remediation was done. On 8/6/09, Mr. Chan submitted documents via email showing that one of 14 soil samples (sample 3B) was near hot end-pt. sample (G2), but lab result showed much lower levels of VOCs; GW samples showed no significant impact to GW. Also, docs indicated that ORC advanced was applied to open excavation to enhance bioremediation of residual contamination. Mr. Chan's email, with my earlier email to him and all supporting documents are in eDocs. Based on submitted information, no further action is warranted and spill case is closed. - JK

Remarks: caller stated he received a call from dec stating that they never got a spill number for this failed tank test. caller is calling it in now per dec.

DEC Memo:	Spill during delivery. Tank is inside a sealed vault and surrounded with pea gravel. 280 gal of oil was spilled into the pea gravel. Contractor (PTC ?) has been hired to suck out all the gravel and clean the vault. 7/19/12- DECPiper spoke with Joe Reddington. Work is progressing though they had to remove the tank. There is anotther tank in the vault which has to be shored off for stability. Once they reach clean gravel, they will call for inspection. 2/6/15- DEC Piper received and reviewed spill closre report. Based on work to date, this spill is

DEC Memo:	TTF was sent out to Amber Court of Brooklyn 650 E 104TH ST BROOKLYN, NY 11236-2504 Attn: George Berger 11/28/11 Tank test failure report is in e-docs under PBS file (2-611067). bf 07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 08-03-2018 As per Remediation Section B Chief Vadim Brevdo, this spill case is reassigned from Vadim Brevdo to MD. S. Hoque as project manager effective on August 3, 2018. -MDH 8-13-2018-M. Hoque I spoke to Ms. Carrie of Advanced Tank Services (ATS) spill contactor for this spill.I explained her about the open spill case and requested submit the TTF report to the Department. She told that the client did not contact them for further investigation. The tank test was conducted on 11/21/2011 and the test was failed. She sent the TTF report. I saved the report in DecDoc. MDH 8-30-2018-M.Hoque: Spoke to Amber Court Brooklyn's representative and sent an email: From: Hoque, MD S (DEC) Sent: Thursday, August 30, 2018 1:10 PM To: sol@ambercourtal.com Cc: Brevdo, Vadim (DEC) Subject: Spill#1110371.2018.08.30-Amber Court of Brooklyn- 650 East 104th Street. Dear Sir: Thank you for taking time this morning to discuss project for the Amber Court Brooklyn, 650 East 104th Street, Brooklyn, Spill#1110371. It is my understanding from our conversation that you are not aware of this project and want to review the spill report and previous documents/correspondences made between the Department and Amber Court Brooklyn . As per your request, attached please find pdf copies of NYSDEC files concerning subject project. This spill case has been open for a long time, and the Department needs to receive an updated information whether the appropriate course of action was taken to address this spill case or not. I would appreciate if you could acknowledge receipt of my e-mail and attachments. I look forward to hearing from you at your earliest convenience. Please contact me if you have questions. Thanks, MD S. Hoque, P.E Project Manager 5/16/2019-M.Hoque: An email sent to George Berger on 5/15 and then called him on 5/16. Gave my phone number to the front desk office to call me back. (MDH) 5/24/2019-M.Hoque: A tank testing report received and is being reviewed. The tank testing was conducted by Genard Palmer of All Boro Tank Testing(718-975-3963 .)(MDH) 6/13/2019-M.Hoque: An email received from the contractor who performed the tank test: From: Chris Q Sent: Thursday, June 13, 2019 12:24 PM To: 'md.hogue@dec.ny.gov' Subject: 650 East 104th Street Brooklyn Hi please find a copy of the requested tank test report. I ve also included a picture of the site. The customer stated that he repaired this tank in the past after the spill incident. The concrete does look like its been replaced in a section. Neither the repairs nor any other work was performed by my company, just this year s testing. If you need anything further please don t hesitate to

AMBER COURT OF BROOKLYN (Continued) **S111319276**

contact me at any time. Christopher Quintana President & CEO, All Boro Tank p: 718-285-8680 a: 656 Atkins Avenue Brooklyn, NY 11208 7/5/2019-M.Hoque: Rational for closure of the spill: Presently, the site is a multi-storied residential building. In November 2011, the spill was reported when a 10,000-gallon No. 2 fuel oil tank integrity test failed. In August 2018, DEC contacted the RP s contractor ATS and received a tank test report. The report stated that a bubbling was found during the testing and the contractor recommended isolation for retesting the tank. On June 13, 2019, the RP s contractor (All Boro Tank Testing) submitted a 2019 tank test report. DEC asked the contractor whether this report is for the same tank or for a new tank. The contractor confirmed DEC that the report is for the same tank. Contractor also confirmed that the tank was repaired and retested with an entire system consisting of all associated piping in the past following the spill incident. No product was leakage into the subsurface and tank test failure was not in risk for the environment. No contamination was found in soil and groundwater. The underground storage tank has been in operation since repaired. The Department determined that the site no longer poses threat to human health or the environment for the current use as residential building. The Department reviewed the tank test report and concluded that the spill case closure is appropriate at this time. The Department closed spill case on July 5, 2019. A spill closure letter sent to the client(Decdoc). (MDH)

Remarks: TANK TEST FAIL

SANGESLAND 5/9/03 - ROSSAN, DDO - Called Terrence Byrnes at (631) 735-1688 only to hear fron phone company (virzon) that this is a not working number. Called Virzon for Atlantic States Lubrication #. They replied; this company does not exist. Called Virzon again for Starrett City Power Auth: they replied this company does not exist. Discussed with Steve who recommends closure. END

Remarks: driver was filling tank - the person watching the tank was not paying attention and the wistle didn't work either - spill contaned in a containment area -

DEC Memo:	4/12/17 TJD Teleconference with John Friel (Director, Power Plant) at Spring Creek Towers (STARRETT CITY POWER STATION). He states the facility is a MOSF, currently undergoing an upgrade and fuel conversion from #6 to #2 FO and is in the testing phase after the retrofit on the first of four boilers was completed. Spill was caused by a leaking union on 2 inch pipe suction line from 1 of 4 20K #2 UST's on site. There is also one 10K #2 UST at this site. Upon discovery of the leak, equipment was secured and an estimated 5 gallons of #2 FO was contained and cleaned from the affected concrete surfaces. No drains or soils were reported to have been affected by petroleum discharge. Mr. Friel ten stated he retained the services of ABC Tank who responded and completed the cleanup. As Mr. Freil stated the spill was cleaned prior to hiring a contractor, DeMeo reviewed all information provided a second time and requested a copy of the internal document summarizing the spill response. An email was received at 7:04PM with the requested information as follows: Mr.

STARRETT CITY POWER PLANT (Continued) **S102239579**

DeMeo, I apologize for missing your call. I understand from my Director that you wanted a copy of the e-mail I wrote, recapping the event of this afternoon. That e-mail follows below. Should you have any questions, please do not hesitate to call. Sincerely, David Stone Assistant Director, Power Plant Spring Creek Towers 165 Elmira Loop Brooklyn, NY 11239 (718) 942-0433 (917) 804-3178 Cell From: David Stone Sent: Wednesday, April 12, 2017 17:20 To: A.S. Qureshi Cc: John Friel; James Jaskiewicz; Mark B. Muir; William Fallon Subject: Fuel Oil Spill Salim, At about 3:25 this afternoon, an oil leak was discovered in the fuel oil pit of the Power Plant. #2 fuel oil was found on the floor of the pit. There was evidence of leakage, but no I saw no sign that oil sprayed out under pressure. Staff took immediate measures to secure the source of the leak, which appears at this time to be one or more fittings on the #2 fuel oil lines. The leak looks to be on the new piping that was installed in support of the NOxRACT project. ABC Tank was contacted at approx. 3:45 PM, and they dispatched a vacuum truck to our location. The truck arrived at 4:00 PM, and clean-up began immediately. Oil was vacuumed from the floor the fuel oil pit, and that stage of the clean up was completed by 4:30. ABC then used soap solution to clean the remaining film of oil from the floor, and vacuumed up the used soap solution. By 5:00 PM, all clean up activities were complete. In accordance with NYS DEC regulations, I called this event into the DEC Spill Hotline at about 5PM. Spill #1070403 was assigned. In speaking with the DEC rep on the phone, I stressed that the spill was contained, the source immediately controlled, and clean-up was already completed, all within 2 hours of discovery. Before operating the new fuel oil pumps again, I would request AKS be brought on-site to evaluate and correct the source of the leak. - Dave David Stone Assistant Director, Power Plant Spring Creek Towers 165 Elmira Loop Brooklyn, NY 11239 (718) 942-0433 (917) 804-3178 Cell Based upon the information provided the spill is closed. Last inspection was 5/16/13. Tank #9 is 378,000 gallon #6 oil tank. Informed PBS/MOSF (Zielinski) of reported spill.

Remarks: Union failed on line and spilled onto concrete. Cleanup is complete.

BROOKLYN, NY 11239
Enforcement Action Type: Notice of Violation
Facility County: KINGS
Program System Acronym: AIR
Enforcement Action Forum Desc: Administrative - Informal
EA Type Code: NOV
Facility SIC Code: 6514
Federal Facility ID: Not reported
Latitude in Decimal Degrees: 40.647476

STARRETT CITY POWER STA CO-GENERATION (Continued) **1000368739**

Longitude in Decimal Degrees: 73.8843135
Permit Type Desc: Not reported
Program System Acronym: NY0000002610500263
Facility NAICS Code: 531110
Tribal Land Code: Not reported

US AIRS (AFS):
Region Code: 02
County Code: NY047
Programmatic ID: AIR NY0000002610500263
Facility Registry ID: 110001570773
D and B Number: Not reported
Facility Site Name: Starrett City Power Plant
Primary SIC Code: 6514
NAICS Code: 531110
Default Air Classification Code: MAJ
Facility Type of Ownership Code: Not reported
Air CMS Category Code: TVM
HPV Status: ADDRESSED HPV

US AIRS (AFS):
Region Code: 02
Programmatic ID: AIR NY0000002610500263
Facility Registry ID: 110001570773
Air Operating Status Code: OPR
Default Air Classification Code: MAJ

Air Program: 40 CFR Part 63 Area Sources

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

STARRETT CITY POWER STA CO-GENERATION (Continued) **1000368739**

THE ELECTRONIC GREENHOUSE GAS REPORTING TOOL (E-GGRT) IS ACCESSIBLE THROUGH AN EPA WEB PAGE AND USED TO SUBMIT ANNUAL REPORTS IN SUPPORT OF THE EPA RULE FOR MANDATORY REPORTING OF GREENHOUSE GASES (GHG) FROM LARGE GHG EMISSIONS SOURCES. IMPLEMENTATION OF 40 CFR PART 98 IS REFERRED TO AS THE GREENHOUSE GAS REPORTING PROGRAM (GHGRP). THIS COMPREHENSIVE, NATIONWIDE EMISSIONS DATA WILL PROVIDE A BETTER UNDERSTANDING OF THE SOURCES OF GHGS AND WILL GUIDE DEVELOPMENT OF THE POLICIES AND PROGRAMS TO REDUCE EMISSIONS. THE PUBLICALLY AVAILABLE DATA WILL ALLOW REPORTERS TO TRACK THEIR OWN EMISSIONS, COMPARE THEM TO SIMILAR FACILITIES, AND AID IN IDENTIFYING COST EFFECTIVE OPPORTUNITIES TO REDUCE EMISSIONS IN THE FUTURE.

Record Add: 07/16/2013
Record Upd: 02/14/2017
Updated By: MJKOMORO
Site Description: Location: The 50,000 square foot (1.38 acre) site is located at 350 DeWitt Avenue, Brooklyn, NY in an urban area. The site is bordered by DeWitt Avenue and single-family residential units to the north, by Hinsdale Street to the east, by a one story industrial/manufacturing building to the south, and by Snediker Avenue and single- and multi-family residential units to the west. Site Features: The site is occupied by a 1 story manufacturing facility. There is asphalt-oaved parking along the east side of the site building. Current Zoning/Use(s): The site is zoned as M1-1, and is surrounded by industrial, commercial and residential uses. Historical Use(s): The Site is an industrial building that houses manufacturing of plumbing and lighting fixtures, bathroom accessories and hardware for commercial and residential markets. A former employee at Watermark reported that the company was illegally dumping industrial waste into the New York City sewer system. During the metal-plating process, waste water containing metals such as Copper, Zinc, Chromium, and Silver is generated. Proper disposal of the waste water requires a costly, multi-step process that ensures any solid toxic materials be removed by a regulated waste-hauler. Watermark instead disposed of the industrial waste water, which included the hazardous metals, through a hose inserted in a floor drain. NYCDEP obtained water samples from within the floor drain and the results showed high levels of metals including but not limited to Copper, Zinc, Chromium, and Silver. NYCDEP personnel noted that when they went to sample the floor drain, they encountered soil in the drain, suggesting that the drain is physically compromised and partially open to the underlying soil. Site Topography, Geology and Hydrogeology: Fill material is encounted to five feet bgs, underlain by layers of fine to medium silty sand and silt. Groundwater is encountered at about 10-12 feet bgs. In general, groundwwater flow direction is southerly of the site.
Not reported
Env Problem: Nature and Extent of Contamination: Information is based on the results of water samples collected by NYCDEP during the preliminary investigation of the site. TCLP lead was found at concentrations of up to 53.8 ppm and TCLP nickel was found at concentrations of up to 5.5 ppm. Analysis for total metals found cyanide at up to 107 ppm, lead at up to 500 ppm, chromium at up to 327 ppm, selenium at up to 372 ppm, nickel at up to 53.6 ppm, arsenic at up to 4.4 ppm, and barium at up to 124 ppm. The floor drain s discharge line was traced in July 2012 and found to enter the main house trap and discharges to the municipal sewer on the northern side of the site. In September 2013, a preliminary site characterization was completed in accordance with the NYSDEC required scope of work. Work was completed within the time frame specified in the scope of work. Seven borings were completed along the drain line, and soil and groundwater samples were collected to determine subsurface conditions in this portion of the site. All samples were analyzed for VOCs and metals (total and dissolved). In general, fill material was encounted to five feet bgs, underlain by layers of fine to medium silty sand and silt. Groundwater was encountered at 10-12 feet bgs. No VOCs were detected in the soil samples above the 6 NYCRR Part 375 industrial SCOs. Only TCE exceeded the groundwater standard at one location (9.8 ug/l). No metals were detected in the soil samples above the industrial SCOs. Total metals in groundwater were generally above the standards, but

350 DEWITT AVE (Continued) **U000406087**

dissolved metals were well below the standards. The exception to the groundwater results was iron, manganese and sodium, where results for dissolved metals were above the groundwater standards. This is typical for groundwater in this area. Based on these data results, the site classification was changed from P to N . Significant Threat: Based on the data results discussed above, it was determined that no significant threat exsits at the site and no further action is warranted at this time.

Site Description: Location: The 0.14 acre (6,000 square feet) site is located at 458 East 99th Street in the Borough of Brooklyn, Kings County, NY in an urban area. It is situated approximately 180 feet northwest of the intersection of East 99th Street and Foster Avenue. The site is bordered to the northeast by East 99th Street followed by Whisky Shippers & Movers and a manufacturing/warehouse type building; to the southwest by Home Deco Design; to the southwest by Gotham Steel Supply and Saba Live Poultry; and to the northwest by Affordable Glass Auto Inc. and United Trading. Site Features: The Site currently consists of a single story commercial building totaling approximately 5,000 square feet. The building is constructed to the near lot line and abutted by concrete-paved land to the northeast and northwest. The building is slab-on-grade, steel-frame construction with walls of concrete masonry units and brick. The building includes a small office area, a storage room and restrooms. The remainder of the building is used for warehouse purposes. Current Zoning and Land Use: The site is currently zoned as manufacturing M1-1 and is surrounded by warehouses, auto repair and commercial uses. The nearest residential properties are located 350 feet away to the southeast. Past Use of the Site: Historical records identified the property as occupied by a dry cleaning chemicals warehouse from at least 1966 through 1973. It is not known if chlorinated solvents were stored at the property. Building records identified an oil burner application and there is a possible UST at the site. The site is currently

458 EAST 99TH STREET (Continued) **S121933847**

occupied by Pinnacle Lift of New York, a fork lift sales, service, parts and rental establishment. The identified contamination is likely attributed to the former dry cleaner chemical warehouse usage. Site Geology and Hydrogeology: Three soil borings conducted in 2016 identified soil consisting mainly of brown medium-fine sand from 5 feet to 16 feet below ground surface (ft-bgs), which was the boring terminus. The first 1 foot consisted of the concrete slab (5) followed by brown black fill. Groundwater was encountered at 11 ft-bgs. General flow is to the east-southeast.

Env Problem: Nature and Extent of Contamination: Thus far a limited Phase II and soil vapor intrusion sampling have been conducted. Soils and groundwater were analyzed for volatile organic compounds (VOCs) only. Contaminants of concern identified by these limited investigations are tetrachloroethylene (PCE) and its daughter compounds trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), and trans-1,2-DCE. In addition, the chlorinated VOC 1,1-dichloroethane (1,1-DCA) was also identified in groundwater. Soil Samples were collected from 10 to 11 ft-bgs at two of the borings and from 1.5 to 2.5 ft-bgs at the third boring based on observations and field screening. Low concentrations of VOCs were detected in the soil samples, specifically 0.054 ppm of PCE, 0.0147 ppm TCE, 0.0568 ppm of cis-1,2 DCE, and 0.00147 ppm of trans-1,2 DCE which are well below the applicable soil cleanup objectives for those compounds. Groundwater PCE was detected in all three wells above the applicable groundwater standards, at a maximum concentration of 20.4 ppb. Other exceedances include cis-1,2 DCE at a maximum concentration of 15.8 ppb, and 1,1-DCA at a maximum concentration of 22.1 ppb. Soil Vapor No soil vapor samples were taken as part of the Phase II ESI. Sub-slab vapor (SSV), indoor and ambient air samples were subsequently taken on December 28, 2016 and the analytical results revealed PCE (990 g/m3), TCE (154 g/m3), acetone (543 g/m3), n-hexane (225 g/m3), propylene (145 g/m3), isopropanol (119 g/m3) and ethanol (137 g/m3). Indoor air had elevated concentrations of acetone (1680 g/m3), isopropanol (1530 g/m3), toluene (1670 g/m3), m,p xylenes (275 g/m3), and PCE (28.3 g/m3). Ambient air had acetone (45.1 g/m3), isopropanol (47.2 g/m3) and toluene (26.6 g/m3).

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description:	Location: The site is located on the southwest side of East 99th Street and Foster Avenue in Brooklyn, NY. The surrounding area is generally commercial and industrial along East 99th Street and the surrounding neighborhood. The surrounding area consists of manufacturing, commercial and warehouse facilities. Site Features: The site is a single lot, 6,000 square foot, parcel, improved by a one (1) story office/ warehouse building, with no basement, and an alleyway on the north side of the subject building. The subject building covers the majority of the lot, with the exception of the alleyway. Past Uses of the Site: The site was unimproved land as early as 1907 through at least 1950 and developed with the existing structure by 1952. The subject site was occupied by a dry-cleaning chemical warehouse between at least 1966 and 1973. Current Zoning and Land Use: The site is zoned El-Warehouse. The building is currently occupied by Euro Wood Working and is used for wood working, assembling of cabinets, etc. There is no manufacturing conducted at the site. Site Geology and Hydrology: Based on site-specific sampling, the depth to groundwater is approximately 11 feet below grade. Based upon topographic map interpretation and site observations, the shallow groundwater in the vicinity of the subject site, the inferred direction of groundwater flow is to the east-southeast.
Env Problem:	The laboratory analytical report from June 2016 indicated that PCE was detected in ground water samples GW-1, GW-2, and GW-3 at concentrations exceeding the state standard. Additionally, 1,1-DCA

458 EAST 99TH STREET (Continued) **S121933847**

	and cis-1,2-DCE were detected in ground water sample GW-3 at concentrations exceeding state standards. The sampling conducted during this investigation indicates that impact to the subsurface at the subject site has occurred. Low concentrations VOCs were detected in soil and elevated concentrations of VOCs exceeding NYSDEC water quality standards were detected in three ground water samples. The soil vapor and ambient air sampling procedure was conducted in conformance with the New York State Department of Health (NYS DOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York , dated October 2006: - Carbon Tetrachloride - No Further Action - Tetrachloroethylene - Monitor / Mitigate - 1,1,1 - Trichloroethane (1,1,1 - TCA) - No Further Action - Trichloroethene (TCE) - Monitor
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Site Code: 571135
Site Description: Location: The site is located on the southwest side of East 99th Street and Foster Avenue in Brooklyn, NY. The surrounding area is generally commercial and industrial along East 99th Street and the surrounding neighborhood. The surrounding area consists of manufacturing, commercial and warehouse facilities. Site Features: The site is a single lot, 6,000 square foot, parcel, improved by a one (1) story office/ warehouse building, with no basement, and an alleyway on the north side of the subject building. The subject building covers the majority of the lot, with the exception of the alleyway. Past Uses of the Site: The site was unimproved land as early as 1907 through at least 1950 and developed with the existing structure by 1952. The subject site was occupied by a dry-cleaning chemical warehouse between at least 1966 and 1973. Current Zoning and Land Use: The site is zoned El-Warehouse. The building is currently occupied by Euro Wood Working and is used for wood working, assembling of cabinets, etc. There is no manufacturing conducted at the site. Site Geology and Hydrology: Based on site-specific sampling, the depth to groundwater is approximately 11 feet below grade. Based upon topographic map interpretation and site observations, the shallow groundwater in the vicinity of the subject site, the inferred direction of groundwater flow is to the east-southeast.
Env Problem: The laboratory analytical report from June 2016 indicated that PCE was detected in ground water samples GW-1, GW-2, and GW-3 at

458 EAST 99TH STREET (Continued) **S121933847**

concentrations exceeding the state standard. Additionally, 1,1-DCA and cis-1,2-DCE were detected in ground water sample GW-3 at concentrations exceeding state standards. The sampling conducted during this investigation indicates that impact to the subsurface at the subject site has occurred. Low concentrations VOCs were detected in soil and elevated concentrations of VOCs exceeding NYSDEC water quality standards were detected in three ground water samples. The soil vapor and ambient air sampling procedure was conducted in conformance with the New York State Department of Health (NYS DOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York , dated October 2006: - Carbon Tetrachloride - No Further Action - Tetrachloroethylene - Monitor / Mitigate - 1,1,1 - Trichloroethane (1,1,1 - TCA) - No Further Action - Trichloroethene (TCE) - Monitor

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

The sampling conducted during this investigation indicates that impact to the subsurface at the subject site has occurred. Low concentrations VOCs were detected in soil and elevated concentrations of VOCs exceeding NYSDEC water quality standards were detected in three ground water samples. The soil vapor and ambient air sampling procedure was conducted in conformance with the New York State Department of Health (NYS DOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York , dated October 2006: - Carbon Tetrachloride - No Further Action - Tetrachloroethylene - Monitor / Mitigate - 1,1,1 - Trichloroethane (1,1,1 - TCA) - No Further Action - Trichloroethene (TCE) - Monitor
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Site Description: Location: The site is located on the southeast corner of Elton Street and Wortman Avenue, Brooklyn, NY 11208. The full extent of the site is unknown. Site Features: The full extent of the site has yet to be identified. Current Zoning and Land Use: The building was formerly used as a machine shop. The building is now used as a warehouse and for air freshener manufacturing. Past Use of the Site: 465-479 Wortman Avenue was formerly used as a machine shop from 1965 to 2007. Site Geology and Hydrogeology: The site is located over the Long Island aquifer system, which underlies all of Nassau, Suffolk, Kings(Brooklyn), and Queens Counties. The unconsolidated aquifer formations form a southward-dipping wedge that attains a maximum thickness in Kings County about 800 feet in the southeast area of Brooklyn. Overlying bedrock is the Lloyd, Magothy, Jameco, and Upper Glacial aquifer systems. The lithologic description of sediments from soil borings identifies the material as fill to approximately five feet below grade, underlain by layers of fine to medium silty sands and silt. Groundwater at the site is encountered at approximately 11 feet below grade. Groundwater beneath the property is class GA denoting potential use as potable water. The site lies within New York City, which utilizes reservoirs from upstate New York as sources of potable water.

Env Problem: Groundwater: Wells were installed in Fall of 2014 to assess the off-site plume of Brownfield Cleanup program(BCP) site C224139, Former Watermark Design Facility (FWDF). During baseline sampling in November 2014, monitoring well MW-13S returned concentrations of Chlorinated Volatile Organic Compounds (CVOCs). Among the CVOCs returned within the analysis were dissolved phase Trichloroethylene, 1,1,1-trichloroethane, and 1,1-dichloroethane. Since the aforementioned CVOCs were not characteristic of FWDF and nature of the FWDF plume is sinking prior to MW-13s, this potential site was created. MW-13S was analyzed for CVOCs in April 2016 and October 2016 as well. Each sample collected showed increasing concentrations of Trichloroethylene, 1,1,1-trichloroethane, and 1,1-dichloroethane. In the spring of 2017 additional wells MW-17S and MW-17I were installed on the north side of Wortman Avenue near the corner of Wortman and Elton Street. Two (2) additional nested wells (MW-18 and MW-19) were installed with a shallow, intermediate and deep interval along Cleveland Avenue, south of Wortman Avenue Eight (8) new monitoring wells and eighteen (18) existing monitoring wells were sampled for VOCs including 1-4 Dioxane. Twelve (12) of the twenty-six monitoring

ELTON STREET GW (Continued) **S120706234**

wells were sampled for PFAS. With regards to the contaminants of concern (Trichloroethylene, 1,1,1-trichloroethane, and 1,1-dichloroethane) concentrations were highest in MW-17I and MW-17S.A plume track down was performed to delineate the source of a 1,1,1-TCA and 1,1-DCE plume. Soil: During the installation of monitoring well clusters, MW-17 through MW-19, soil was logged and subject to head space analysis for VOCs. Samples were collected from each monitoring well cluster from the groundwater interface and the highest recorded PID reading. All soil samples returned lower than Commercial Soil Cleanup Objective levels. Vapor: Six (6) soil vapor points were collected in the vicinity of MW-13S. One (1) ambient air sample was also collected in conjunction with the soil vapor samples. Soil vapor ranged from 1,027 ug/m3 Total VOCs in VMP-2 to 86 ug/m3 Total VOCs in VMP-6. 32 ppb Total VOCs were detected in the ambient air. VMP-2 returned a concentration of 430 ug/m3 for TCE.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: Location: The site is located at 491 Wortman Ave in the Spring Creek section of Brooklyn, a mixed industrial and manufacturing area. Site Features: The site is occupied by a one story commercial building that occupies the entire lot and is comprised of three warehouse sections referred to as Building 1, Building 2 and Building 3. The building is approximately 19,000 square feet and the site is 0.44 acres in size. Current Zoning: Manufacturing and industrial buildings surround the site to the north, south, east and west. The closest residential units are 0.08 miles to the west-southwest. Historical Uses: The site was formerly utilized as a metal etching company, a steel tube manufacturing company, and a plumbing faucet/fixture company. Since approximately 1985, the site has been owned and operated by Watermark Designs Ltd. to manufacture, store, package, and ship decorative fixtures, bathroom accessories, and hardware. Manufacturing processes on the property included cleaning, painting, plating, etching, polishing, and specific machining of metals and metal products. Cleaning agents such as TCE and PCE were "routinely used" by Watermark Designs to fine clean and polish metals and metal products. The site is currently leased to a religious group that gathers at the site several times per week. Watermark Designs Ltd. relocated to a new location, 350 Dewitt Avenue, Brooklyn in or around 2007. In 2008, the site was put on the "open market" for sale. Site Geology and Hydrogeology: Subsurface geology is comprised of historic fill materials overlying native sands. Groundwater is approximately 15 ft below ground surface. The direction of groundwater flow can not be determined after one round of groundwater measurements. Other: One TCE degreasing tank was removed from the site however details including the tank size and dates of removal have not been determined. There are no PBS or CBS registrations for the site. One fuel oil AST of unknown size encased in concrete blocks is also located in the basement of the site. Also, floor drains were observed in the building. The following reports have been submitted to date: Supplemental Subsurface Investigation Report dated December 2008; Limited Subsurface Investigation Report dated February 2009; a Phase II Environmental Site Assessment dated January 2009 and a Environmental Services Report Proposed Corrective Action and Remedial Investigation Work Plan dated July 2009. A final Site Characterization work plan was approved in February of 2011. Draft

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

	Site characterization reports have been reviewed. The Department and site owner executed a "P site" investigation Order on Consent and Adminstrative Settlement. For more information, see Site # C2-24-139
Env Problem:	A site characterization (SC) was performed in 2011. Results detailed in the draft SC Report indicate soil, groundwater and soil vapor are impacted by chlorinated volatile organic compounds (CVOCs) and, to a much lesser extent, petroleum-related compounds. Concentrations of CVOCs in soil samples collected in 2011 are below commercial soil cleanup objectives (SCOs) but exceed the protection of groundwater SCOs. Concentrations of CVOCs in groundwater samples collected in 2011 significantly exceed groundwater standards with magnitudes greater than 1 ppm in half of the monitoring locations and a maximum concentration of 3.5 ppm for PCE and 2.3 ppm for TCE. Based on concentrations of CVOCs at the site boundaries, contamination likely is migrating off-site. Concentrations of CVOCs (primarily TCE) in multiple subslab soil vapor samples exceed 100,000 ug/m^3. TCE appears to be migrating into the on-site building as results from indoor air samples show detections between 140 and 250 ug/m^3. The magnitude of CVOC concentrations in the groundwater indicate the potential for DNAPL at the site. Previous phase II investigations indicated magnitudes of contamination in soil and groundwater to be an order of magnitude or two higher.

Site Description: Site Location: The Former Watermark Designs Facility (site) is located at 491 Wortman Avenue in Brooklyn, NY. It is identified as block 4384, lots 31 and 36 on the Kings County Tax Maps and is approximately 0.436 acres in size. It is bounded by a one-story building to the north, Wortman Avenue to the south, Essex Street to the east, and Linwood Street to the west. The nearest body of water is Hendrix Creek, which is about 0.5 miles southwest of the site. Site Features: The site consists of a one story brick and steel building, with a partial basement that occupies the entire area of the property. The majority of the building, except for the partial basement, rests on concrete slab. The interior of the building is divided by a wall into east and west areas. No exposed soil or vegetation is present on the subject property. Current Zoning and Land Use: The site is located in an urban setting characterized by industrial buildings to the north, east, and south and residential buildings one block to the west. Land use within a half mile of the site is primarily industrial and residential, but also includes public parks, public institutions, day care centers, and school facilities. The site is zoned for industrial/manufacturing uses. Currently, the western portion of the site building is used as a warehouse to store sound equipment, and the eastern portion is unoccupied. There is no current plan for redevelopment of the site. Past Use of the Site: US Tube and Foundry Company, Inc. operated at the site between 1945 and 1973. The National Hanger Company, Inc. operated at the site in 1976. J and H Holding Company, LLC has owned the property since 1983 and manufacturing activities continued until 2007. The site previously manufactured, stored, packaged, and shipped decorative fixtures and hardware for bathrooms and kitchens. Processes involved cleaning, painting, plating, etching, polishing, and specific machining of metals and metal products. A cleaning and degreasing area was located along the west side of the building. Chlorinated solvents, specifically trichloroethene (TCE) and tetrachloroethene (PCE) were used in the manufacturing process to clean various products. Site Geology and Hydrogeology: The soil profile at the site generally consists of 2 to 5 feet of miscellaneous fill underlain by medium to fine sand with some gravel. The estimated depth to groundwater is about 10 feet below grade surface (bgs). Based on local topography, groundwater is expected to flow to the southwest towards Hendrix Creek.
Env Problem: For OU1: On-Site Areas Nature and Extent of Contamination: Soil and

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations and an interim remedial measure (IRM) conducted to date, the primary contaminants of concern include trichloroethene (TCE) and tetrachloroethene (PCE) in groundwater, sub-surface soil and soil vapor at the site and at some near-field off-site locations. An off-site investigation conducted further downgradient of the site determined that VOC contamination in groundwater and soil vapor in the far-field locations is not related to the site. (A characterization of the far-field contamination is currently being conducted by the Department as part of a separate remedial program.) In 2013, based on initial investigations and data, NYSDEC and NYSDOH determined that the site presented a significant threat to public health and the environment. Soil: In 2013, site-wide soil sampling was completed. The maximum concentration of TCE was detected at 12,000 parts per million (ppm) at one location from within the truck scale pit area, at a depth of 0 to 2.5 feet. This exceeded the TCE commercial use soil cleanup objective (SCO) of 200 ppm. Arsenic, lead and mercury also exceeded the commercial use SCOs in samples collected from the pit area samples at 0 to 2 feet deep. All other contaminants were below the commercial use SCOs. No impacts to off-site soils were detected. As part of the on-site IRM, the pit area was backfilled with flowable fill, followed by pea gravel and four inches of concrete as a cover. Groundwater: In 2015, the highest concentrations of TCE (1,800 ppb) and PCE (750 ppb) were detected at two shallow wells near the truck scale pit area. At the near-field off-site wells, which are both shallow wells, the maximum concentration of TCE was 780 ppb and PCE was 710 ppb. Concentrations of PCE and TCE have decreased at all on-site and near-field monitoring wells since implementation and on-going operation of the air sparging / soil vapor extraction (AS/SVE) system. As of July 2017, the maximum PCE and TCE concentrations in groundwater were 490 ppb and 240 ppb, respectively, at a near-field off-site well. Adjustments were made, and will continue to be made, to the AS/SVE system to address the elevated concentrations of TCE and PCE at any on-site and near-field off-site locations. Soil Vapor, Sub-Slab Vapor and Indoor Air: Prior to implementation of the AS/SVE system in 2015, at on-site locations, the maximum PCE and TCE concentrations in sub-slab samples were 9,200 ug/m3 at SV-3 and 2,300,000 ug/m3 at SV-2, respectively. The maximum PCE and TCE concentrations in indoor air samples were 10.3 ug/m3 at IA-003 and 214 ug/m3 at IA-002, respectively. The indoor air result at IA-002 for TCE was above the NYSDOH Guideline Value of 2 ug/m3. In addition, at the off-site near field locations, the maximum TCE concentration in soil vapor was 72,000 ug/m3 and PCE was 32,000 ug/m3, both at location SV-8. Access was not granted to any off-site buildings for sub-slab and indoor air sampling. Post-Remediation: Remediation at the site is complete. The site cover is in-place and to date, the AS/SVE system is effectively decreasing concentrations of chlorinated VOCs in groundwater and soil vapor. After implementation of the AS/SVE system, sub-slab and soil vapor samples were collected at on-site and near-field locations. In August 2017, the maximum PCE and TCE concentrations in sub-slab samples were 442 ug/m3 and 5,080 ug/m3, respectively, both on-site locations. Indoor air samples were not collected since the building is currently used only for storage. However, the Site Management Plan (SMP) has a provision for evaluation of the potential for soil vapor

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

	intrusion for any occupied buildings on the site, including a provision for implementing actions recommended to address exposures related to soil vapor intrusion.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description:	Site Location: The Former Watermark Designs Facility (site) is located at 491 Wortman Avenue in Brooklyn, NY. It is identified as block 4384, lots 31 and 36 on the Kings County Tax Maps and is approximately 0.436 acres in size. It is bounded by a one-story building to the north, Wortman Avenue to the south, Essex Street to the east, and Linwood Street to the west. The nearest body of water is Hendrix Creek, which is about 0.5 miles southwest of the site. Site Features: The site consists of a one story brick and steel building, with a partial basement that occupies the entire area of the property. The majority of the building, except for the partial basement, rests on concrete slab. The interior of the building is divided by a wall into east and west areas. No exposed soil or vegetation is present on the subject property. Current Zoning and Land Use: The site is located in an urban setting characterized by industrial buildings to the north, east, and south and residential buildings one block to the west. Land use within a half mile of the site is primarily industrial and residential, but also includes public parks, public institutions, day care centers, and school facilities. The site is zoned for industrial/manufacturing uses. Currently, the western portion of the site building is used as a warehouse to store sound equipment, and the eastern portion is unoccupied. There is no current plan for redevelopment of the site. Past Use of the Site: US Tube and Foundry Company, Inc. operated at the site between 1945 and 1973. The National Hanger Company, Inc. operated at the site in 1976. J and H Holding Company, LLC has owned the property since 1983 and manufacturing activities continued until 2007. The site previously manufactured, stored, packaged, and shipped decorative fixtures and hardware for bathrooms and kitchens. Processes involved cleaning, painting, plating, etching, polishing, and specific machining of metals and metal products. A cleaning and degreasing area was located along the west side of the building. Chlorinated solvents, specifically trichloroethene (TCE) and

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

tetrachloroethene (PCE) were used in the manufacturing process to clean various products. Site Geology and Hydrogeology: The soil profile at the site generally consists of 2 to 5 feet of miscellaneous fill underlain by medium to fine sand with some gravel. The estimated depth to groundwater is about 10 feet below grade surface (bgs). Based on local topography, groundwater is expected to flow to the southwest towards Hendrix Creek.

Env Problem: For OU1: On-Site Areas Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations and an interim remedial measure (IRM) conducted to date, the primary contaminants of concern include trichloroethene (TCE) and tetrachloroethene (PCE) in groundwater, sub-surface soil and soil vapor at the site and at some near-field off-site locations. An off-site investigation conducted further downgradient of the site determined that VOC contamination in groundwater and soil vapor in the far-field locations is not related to the site. (A characterization of the far-field contamination is currently being conducted by the Department as part of a separate remedial program.) In 2013, based on initial investigations and data, NYSDEC and NYSDOH determined that the site presented a significant threat to public health and the environment. Soil: In 2013, site-wide soil sampling was completed. The maximum concentration of TCE was detected at 12,000 parts per million (ppm) at one location from within the truck scale pit area, at a depth of 0 to 2.5 feet. This exceeded the TCE commercial use soil cleanup objective (SCO) of 200 ppm. Arsenic, lead and mercury also exceeded the commercial use SCOs in samples collected from the pit area samples at 0 to 2 feet deep. All other contaminants were below the commercial use SCOs. No impacts to off-site soils were detected. As part of the on-site IRM, the pit area was backfilled with flowable fill, followed by pea gravel and four inches of concrete as a cover. Groundwater: In 2015, the highest concentrations of TCE (1,800 ppb) and PCE (750 ppb) were detected at two shallow wells near the truck scale pit area. At the near-field off-site wells, which are both shallow wells, the maximum concentration of TCE was 780 ppb and PCE was 710 ppb. Concentrations of PCE and TCE have decreased at all on-site and near-field monitoring wells since implementation and on-going operation of the air sparging / soil vapor extraction (AS/SVE) system. As of July 2017, the maximum PCE and TCE concentrations in groundwater were 490 ppb and 240 ppb, respectively, at a near-field off-site well. Adjustments were made, and will continue to be made, to the AS/SVE system to address the elevated concentrations of TCE and PCE at any on-site and near-field off-site locations. Soil Vapor, Sub-Slab Vapor and Indoor Air: Prior to implementation of the AS/SVE system in 2015, at on-site locations, the maximum PCE and TCE concentrations in sub-slab samples were 9,200 ug/m3 at SV-3 and 2,300,000 ug/m3 at SV-2, respectively. The maximum PCE and TCE concentrations in indoor air samples were 10.3 ug/m3 at IA-003 and 214 ug/m3 at IA-002, respectively. The indoor air result at IA-002 for TCE was above the NYSDOH Guideline Value of 2 ug/m3. In addition, at the off-site near field locations, the maximum TCE concentration in soil vapor was 72,000 ug/m3 and PCE was 32,000 ug/m3, both at location SV-8. Access was not granted to any off-site buildings for sub-slab and indoor air sampling. Post-Remediation: Remediation at the site is complete. The site cover is in-place and to date, the AS/SVE system is effectively

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

	decreasing concentrations of chlorinated VOCs in groundwater and soil vapor. After implementation of the AS/SVE system, sub-slab and soil vapor samples were collected at on-site and near-field locations. In August 2017, the maximum PCE and TCE concentrations in sub-slab samples were 442 ug/m3 and 5,080 ug/m3, respectively, both on-site locations. Indoor air samples were not collected since the building is currently used only for storage. However, the Site Management Plan (SMP) has a provision for evaluation of the potential for soil vapor intrusion for any occupied buildings on the site, including a provision for implementing actions recommended to address exposures related to soil vapor intrusion.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

unoccupied. There is no current plan for redevelopment of the site. Past Use of the Site: US Tube and Foundry Company, Inc. operated at the site between 1945 and 1973. The National Hanger Company, Inc. operated at the site in 1976. J and H Holding Company, LLC has owned the property since 1983 and manufacturing activities continued until 2007. The site previously manufactured, stored, packaged, and shipped decorative fixtures and hardware for bathrooms and kitchens. Processes involved cleaning, painting, plating, etching, polishing, and specific machining of metals and metal products. A cleaning and degreasing area was located along the west side of the building. Chlorinated solvents, specifically trichloroethene (TCE) and tetrachloroethene (PCE) were used in the manufacturing process to clean various products. Site Geology and Hydrogeology: The soil profile at the site generally consists of 2 to 5 feet of miscellaneous fill underlain by medium to fine sand with some gravel. The estimated depth to groundwater is about 10 feet below grade surface (bgs). Based on local topography, groundwater is expected to flow to the southwest towards Hendrix Creek.

Env Problem: For OU1: On-Site Areas Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations and an interim remedial measure (IRM) conducted to date, the primary contaminants of concern include trichloroethene (TCE) and tetrachloroethene (PCE) in groundwater, sub-surface soil and soil vapor at the site and at some near-field off-site locations. An off-site investigation conducted further downgradient of the site determined that VOC contamination in groundwater and soil vapor in the far-field locations is not related to the site. (A characterization of the far-field contamination is currently being conducted by the Department as part of a separate remedial program.) In 2013, based on initial investigations and data, NYSDEC and NYSDOH determined that the site presented a significant threat to public health and the environment. Soil: In 2013, site-wide soil sampling was completed. The maximum concentration of TCE was detected at 12,000 parts per million (ppm) at one location from within the truck scale pit area, at a depth of 0 to 2.5 feet. This exceeded the TCE commercial use soil cleanup objective (SCO) of 200 ppm. Arsenic, lead and mercury also exceeded the commercial use SCOs in samples collected from the pit area samples at 0 to 2 feet deep. All other contaminants were below the commercial use SCOs. No impacts to off-site soils were detected. As part of the on-site IRM, the pit area was backfilled with flowable fill, followed by pea gravel and four inches of concrete as a cover. Groundwater: In 2015, the highest concentrations of TCE (1,800 ppb) and PCE (750 ppb) were detected at two shallow wells near the truck scale pit area. At the near-field off-site wells, which are both shallow wells, the maximum concentration of TCE was 780 ppb and PCE was 710 ppb. Concentrations of PCE and TCE have decreased at all on-site and near-field monitoring wells since implementation and on-going operation of the air sparging / soil vapor extraction (AS/SVE) system. As of July 2017, the maximum PCE and TCE concentrations in groundwater were 490 ppb and 240 ppb, respectively, at a near-field off-site well. Adjustments were made, and will continue to be made, to the AS/SVE system to address the elevated concentrations of TCE and PCE at any on-site and near-field off-site locations. Soil Vapor, Sub-Slab Vapor and Indoor Air: Prior to implementation of the AS/SVE system in 2015,

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

at on-site locations, the maximum PCE and TCE concentrations in sub-slab samples were 9,200 ug/m3 at SV-3 and 2,300,000 ug/m3 at SV-2, respectively. The maximum PCE and TCE concentrations in indoor air samples were 10.3 ug/m3 at IA-003 and 214 ug/m3 at IA-002, respectively. The indoor air result at IA-002 for TCE was above the NYSDOH Guideline Value of 2 ug/m3. In addition, at the off-site near field locations, the maximum TCE concentration in soil vapor was 72,000 ug/m3 and PCE was 32,000 ug/m3, both at location SV-8. Access was not granted to any off-site buildings for sub-slab and indoor air sampling. Post-Remediation: Remediation at the site is complete. The site cover is in-place and to date, the AS/SVE system is effectively decreasing concentrations of chlorinated VOCs in groundwater and soil vapor. After implementation of the AS/SVE system, sub-slab and soil vapor samples were collected at on-site and near-field locations. In August 2017, the maximum PCE and TCE concentrations in sub-slab samples were 442 ug/m3 and 5,080 ug/m3, respectively, both on-site locations. Indoor air samples were not collected since the building is currently used only for storage. However, the Site Management Plan (SMP) has a provision for evaluation of the potential for soil vapor intrusion for any occupied buildings on the site, including a provision for implementing actions recommended to address exposures related to soil vapor intrusion.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

There is no current plan for redevelopment of the site. Past Use of the Site: US Tube and Foundry Company, Inc. operated at the site between 1945 and 1973. The National Hanger Company, Inc. operated at the site in 1976. J and H Holding Company, LLC has owned the property since 1983 and manufacturing activities continued until 2007. The site previously manufactured, stored, packaged, and shipped decorative fixtures and hardware for bathrooms and kitchens. Processes involved cleaning, painting, plating, etching, polishing, and specific machining of metals and metal products. A cleaning and degreasing area was located along the west side of the building. Chlorinated solvents, specifically trichloroethene (TCE) and tetrachloroethene (PCE) were used in the manufacturing process to clean various products. Site Geology and Hydrogeology: The soil profile at the site generally consists of 2 to 5 feet of miscellaneous fill underlain by medium to fine sand with some gravel. The estimated depth to groundwater is about 10 feet below grade surface (bgs). Based on local topography, groundwater is expected to flow to the southwest towards Hendrix Creek.

Env Problem: For OU1: On-Site Areas Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations and an interim remedial measure (IRM) conducted to date, the primary contaminants of concern include trichloroethene (TCE) and tetrachloroethene (PCE) in groundwater, sub-surface soil and soil vapor at the site and at some near-field off-site locations. An off-site investigation conducted further downgradient of the site determined that VOC contamination in groundwater and soil vapor in the far-field locations is not related to the site. (A characterization of the far-field contamination is currently being conducted by the Department as part of a separate remedial program.) In 2013, based on initial investigations and data, NYSDEC and NYSDOH determined that the site presented a significant threat to public health and the environment. Soil: In 2013, site-wide soil sampling was completed. The maximum concentration of TCE was detected at 12,000 parts per million (ppm) at one location from within the truck scale pit area, at a depth of 0 to 2.5 feet. This exceeded the TCE commercial use soil cleanup objective (SCO) of 200 ppm. Arsenic, lead and mercury also exceeded the commercial use SCOs in samples collected from the pit area samples at 0 to 2 feet deep. All other contaminants were below the commercial use SCOs. No impacts to off-site soils were detected. As part of the on-site IRM, the pit area was backfilled with flowable fill, followed by pea gravel and four inches of concrete as a cover. Groundwater: In 2015, the highest concentrations of TCE (1,800 ppb) and PCE (750 ppb) were detected at two shallow wells near the truck scale pit area. At the near-field off-site wells, which are both shallow wells, the maximum

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

concentration of TCE was 780 ppb and PCE was 710 ppb. Concentrations of PCE and TCE have decreased at all on-site and near-field monitoring wells since implementation and on-going operation of the air sparging / soil vapor extraction (AS/SVE) system. As of July 2017, the maximum PCE and TCE concentrations in groundwater were 490 ppb and 240 ppb, respectively, at a near-field off-site well. Adjustments were made, and will continue to be made, to the AS/SVE system to address the elevated concentrations of TCE and PCE at any on-site and near-field off-site locations. Soil Vapor, Sub-Slab Vapor and Indoor Air: Prior to implementation of the AS/SVE system in 2015, at on-site locations, the maximum PCE and TCE concentrations in sub-slab samples were 9,200 ug/m3 at SV-3 and 2,300,000 ug/m3 at SV-2, respectively. The maximum PCE and TCE concentrations in indoor air samples were 10.3 ug/m3 at IA-003 and 214 ug/m3 at IA-002, respectively. The indoor air result at IA-002 for TCE was above the NYSDOH Guideline Value of 2 ug/m3. In addition, at the off-site near field locations, the maximum TCE concentration in soil vapor was 72,000 ug/m3 and PCE was 32,000 ug/m3, both at location SV-8. Access was not granted to any off-site buildings for sub-slab and indoor air sampling. Post-Remediation: Remediation at the site is complete. The site cover is in-place and to date, the AS/SVE system is effectively decreasing concentrations of chlorinated VOCs in groundwater and soil vapor. After implementation of the AS/SVE system, sub-slab and soil vapor samples were collected at on-site and near-field locations. In August 2017, the maximum PCE and TCE concentrations in sub-slab samples were 442 ug/m3 and 5,080 ug/m3, respectively, both on-site locations. Indoor air samples were not collected since the building is currently used only for storage. However, the Site Management Plan (SMP) has a provision for evaluation of the potential for soil vapor intrusion for any occupied buildings on the site, including a provision for implementing actions recommended to address exposures related to soil vapor intrusion.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Site Location: The Former Watermark Designs Facility (site) is

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

located at 491 Wortman Avenue in Brooklyn, NY. It is identified as block 4384, lots 31 and 36 on the Kings County Tax Maps and is approximately 0.436 acres in size. It is bounded by a one-story building to the north, Wortman Avenue to the south, Essex Street to the east, and Linwood Street to the west. The nearest body of water is Hendrix Creek, which is about 0.5 miles southwest of the site. Site Features: The site consists of a one story brick and steel building, with a partial basement that occupies the entire area of the property. The majority of the building, except for the partial basement, rests on concrete slab. The interior of the building is divided by a wall into east and west areas. No exposed soil or vegetation is present on the subject property. Current Zoning and Land Use: The site is located in an urban setting characterized by industrial buildings to the north, east, and south and residential buildings one block to the west. Land use within a half mile of the site is primarily industrial and residential, but also includes public parks, public institutions, day care centers, and school facilities. The site is zoned for industrial/manufacturing uses. Currently, the western portion of the site building is used as a warehouse to store sound equipment, and the eastern portion is unoccupied. There is no current plan for redevelopment of the site. Past Use of the Site: US Tube and Foundry Company, Inc. operated at the site between 1945 and 1973. The National Hanger Company, Inc. operated at the site in 1976. J and H Holding Company, LLC has owned the property since 1983 and manufacturing activities continued until 2007. The site previously manufactured, stored, packaged, and shipped decorative fixtures and hardware for bathrooms and kitchens. Processes involved cleaning, painting, plating, etching, polishing, and specific machining of metals and metal products. A cleaning and degreasing area was located along the west side of the building. Chlorinated solvents, specifically trichloroethene (TCE) and tetrachloroethene (PCE) were used in the manufacturing process to clean various products. Site Geology and Hydrogeology: The soil profile at the site generally consists of 2 to 5 feet of miscellaneous fill underlain by medium to fine sand with some gravel. The estimated depth to groundwater is about 10 feet below grade surface (bgs). Based on local topography, groundwater is expected to flow to the southwest towards Hendrix Creek.

Env Problem: For OU1: On-Site Areas Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations and an interim remedial measure (IRM) conducted to date, the primary contaminants of concern include trichloroethene (TCE) and tetrachloroethene (PCE) in groundwater, sub-surface soil and soil vapor at the site and at some near-field off-site locations. An off-site investigation conducted further downgradient of the site determined that VOC contamination in groundwater and soil vapor in the far-field locations is not related to the site. (A characterization of the far-field contamination is currently being conducted by the Department as part of a separate remedial program.) In 2013, based on initial investigations and data, NYSDEC and NYSDOH determined that the site presented a significant threat to public health and the environment. Soil: In 2013, site-wide soil sampling was completed. The maximum concentration of TCE was detected at 12,000 parts per million (ppm) at one location from within the truck scale pit area, at a depth of 0 to 2.5 feet. This exceeded the TCE

The site is zoned for industrial/manufacturing uses. Currently, the western portion of the site building is used as a warehouse to store sound equipment, and the eastern portion is unoccupied. There is no current plan for redevelopment of the site. Past Use of the Site: US Tube and Foundry Company, Inc. operated at the site between 1945 and 1973. The National Hanger Company, Inc. operated at the site in 1976. J and H Holding Company, LLC has owned the property since 1983 and manufacturing activities continued until 2007. The site previously manufactured, stored, packaged, and shipped decorative fixtures and hardware for bathrooms and kitchens. Processes involved cleaning, painting, plating, etching, polishing, and specific machining of metals and metal products. A cleaning and degreasing area was located along the west side of the building. Chlorinated solvents, specifically trichloroethene (TCE) and tetrachloroethene (PCE) were used in the manufacturing process to clean various products. Site Geology and Hydrogeology: The soil profile at the site generally consists of 2 to 5 feet of miscellaneous fill underlain by medium to fine sand with some gravel. The estimated depth to groundwater is about 10 feet below grade surface (bgs). Based on local topography, groundwater is expected to flow to the southwest towards Hendrix Creek.
Env Problem: For OU1: On-Site Areas Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations and an interim remedial measure (IRM) conducted to date, the primary contaminants of concern include trichloroethene (TCE) and tetrachloroethene (PCE) in groundwater, sub-surface soil and soil vapor at the site and at some near-field off-site locations. An off-site investigation conducted further downgradient of the site

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

determined that VOC contamination in groundwater and soil vapor in the far-field locations is not related to the site. (A characterization of the far-field contamination is currently being conducted by the Department as part of a separate remedial program.) In 2013, based on initial investigations and data, NYSDEC and NYSDOH determined that the site presented a significant threat to public health and the environment. Soil: In 2013, site-wide soil sampling was completed. The maximum concentration of TCE was detected at 12,000 parts per million (ppm) at one location from within the truck scale pit area, at a depth of 0 to 2.5 feet. This exceeded the TCE commercial use soil cleanup objective (SCO) of 200 ppm. Arsenic, lead and mercury also exceeded the commercial use SCOs in samples collected from the pit area samples at 0 to 2 feet deep. All other contaminants were below the commercial use SCOs. No impacts to off-site soils were detected. As part of the on-site IRM, the pit area was backfilled with flowable fill, followed by pea gravel and four inches of concrete as a cover. Groundwater: In 2015, the highest concentrations of TCE (1,800 ppb) and PCE (750 ppb) were detected at two shallow wells near the truck scale pit area. At the near-field off-site wells, which are both shallow wells, the maximum concentration of TCE was 780 ppb and PCE was 710 ppb. Concentrations of PCE and TCE have decreased at all on-site and near-field monitoring wells since implementation and on-going operation of the air sparging / soil vapor extraction (AS/SVE) system. As of July 2017, the maximum PCE and TCE concentrations in groundwater were 490 ppb and 240 ppb, respectively, at a near-field off-site well. Adjustments were made, and will continue to be made, to the AS/SVE system to address the elevated concentrations of TCE and PCE at any on-site and near-field off-site locations. Soil Vapor, Sub-Slab Vapor and Indoor Air: Prior to implementation of the AS/SVE system in 2015, at on-site locations, the maximum PCE and TCE concentrations in sub-slab samples were 9,200 ug/m3 at SV-3 and 2,300,000 ug/m3 at SV-2, respectively. The maximum PCE and TCE concentrations in indoor air samples were 10.3 ug/m3 at IA-003 and 214 ug/m3 at IA-002, respectively. The indoor air result at IA-002 for TCE was above the NYSDOH Guideline Value of 2 ug/m3. In addition, at the off-site near field locations, the maximum TCE concentration in soil vapor was 72,000 ug/m3 and PCE was 32,000 ug/m3, both at location SV-8. Access was not granted to any off-site buildings for sub-slab and indoor air sampling. Post-Remediation: Remediation at the site is complete. The site cover is in-place and to date, the AS/SVE system is effectively decreasing concentrations of chlorinated VOCs in groundwater and soil vapor. After implementation of the AS/SVE system, sub-slab and soil vapor samples were collected at on-site and near-field locations. In August 2017, the maximum PCE and TCE concentrations in sub-slab samples were 442 ug/m3 and 5,080 ug/m3, respectively, both on-site locations. Indoor air samples were not collected since the building is currently used only for storage. However, the Site Management Plan (SMP) has a provision for evaluation of the potential for soil vapor intrusion for any occupied buildings on the site, including a provision for implementing actions recommended to address exposures related to soil vapor intrusion.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Name: FORMER WATERMARK DESIGNS FACILITY
Address: 491 WORTMAN AVENUE
City,State,Zip: BROOKLYN, NY 11208
Site Code: 464693
Control Name: Environmental Easement
HW Code: C224139
Control Code: J
Control Type: INST
Dt record added: 04/04/2017
Dt rec updated: 03/26/2021
Updated By: MKMEDWID
Site Code: 464693
Site Description: Site Location: The Former Watermark Designs Facility (site) is located at 491 Wortman Avenue in Brooklyn, NY. It is identified as block 4384, lots 31 and 36 on the Kings County Tax Maps and is approximately 0.436 acres in size. It is bounded by a one-story building to the north, Wortman Avenue to the south, Essex Street to the east, and Linwood Street to the west. The nearest body of water is Hendrix Creek, which is about 0.5 miles southwest of the site. Site Features: The site consists of a one story brick and steel building, with a partial basement that occupies the entire area of the property. The majority of the building, except for the partial basement, rests on concrete slab. The interior of the building is divided by a wall into east and west areas. No exposed soil or vegetation is present on the subject property. Current Zoning and Land Use: The site is located in an urban setting characterized by industrial buildings to the north, east, and south and residential buildings one block to the west. Land use within a half mile of the site is primarily industrial and residential, but also includes public parks, public institutions, day care centers, and school facilities. The site is zoned for industrial/manufacturing uses. Currently, the western portion of the site building is used as a warehouse to store sound equipment, and the eastern portion is unoccupied. There is no current plan for redevelopment of the site. Past Use of the Site: US Tube and Foundry Company, Inc. operated at the site between 1945 and 1973. The National Hanger Company, Inc. operated at the site in 1976. J and H Holding Company, LLC has owned the property since 1983 and manufacturing activities continued until 2007. The site previously manufactured, stored, packaged, and shipped decorative fixtures and hardware for bathrooms and kitchens. Processes involved cleaning, painting, plating, etching, polishing, and specific machining of metals and metal products. A cleaning and degreasing area was located along the west side of the building. Chlorinated solvents, specifically trichloroethene (TCE) and tetrachloroethene (PCE) were used in the manufacturing process to clean various products. Site Geology and Hydrogeology: The soil profile at the site generally consists of 2 to 5 feet of miscellaneous fill underlain by medium to fine sand with some gravel. The estimated depth to groundwater is about 10 feet below grade surface (bgs). Based on local topography, groundwater is expected to

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

flow to the southwest towards Hendrix Creek.

Env Problem: For OU1: On-Site Areas Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations and an interim remedial measure (IRM) conducted to date, the primary contaminants of concern include trichloroethene (TCE) and tetrachloroethene (PCE) in groundwater, sub-surface soil and soil vapor at the site and at some near-field off-site locations. An off-site investigation conducted further downgradient of the site determined that VOC contamination in groundwater and soil vapor in the far-field locations is not related to the site. (A characterization of the far-field contamination is currently being conducted by the Department as part of a separate remedial program.) In 2013, based on initial investigations and data, NYSDEC and NYSDOH determined that the site presented a significant threat to public health and the environment. Soil: In 2013, site-wide soil sampling was completed. The maximum concentration of TCE was detected at 12,000 parts per million (ppm) at one location from within the truck scale pit area, at a depth of 0 to 2.5 feet. This exceeded the TCE commercial use soil cleanup objective (SCO) of 200 ppm. Arsenic, lead and mercury also exceeded the commercial use SCOs in samples collected from the pit area samples at 0 to 2 feet deep. All other contaminants were below the commercial use SCOs. No impacts to off-site soils were detected. As part of the on-site IRM, the pit area was backfilled with flowable fill, followed by pea gravel and four inches of concrete as a cover. Groundwater: In 2015, the highest concentrations of TCE (1,800 ppb) and PCE (750 ppb) were detected at two shallow wells near the truck scale pit area. At the near-field off-site wells, which are both shallow wells, the maximum concentration of TCE was 780 ppb and PCE was 710 ppb. Concentrations of PCE and TCE have decreased at all on-site and near-field monitoring wells since implementation and on-going operation of the air sparging / soil vapor extraction (AS/SVE) system. As of July 2017, the maximum PCE and TCE concentrations in groundwater were 490 ppb and 240 ppb, respectively, at a near-field off-site well. Adjustments were made, and will continue to be made, to the AS/SVE system to address the elevated concentrations of TCE and PCE at any on-site and near-field off-site locations. Soil Vapor, Sub-Slab Vapor and Indoor Air: Prior to implementation of the AS/SVE system in 2015, at on-site locations, the maximum PCE and TCE concentrations in sub-slab samples were 9,200 ug/m3 at SV-3 and 2,300,000 ug/m3 at SV-2, respectively. The maximum PCE and TCE concentrations in indoor air samples were 10.3 ug/m3 at IA-003 and 214 ug/m3 at IA-002, respectively. The indoor air result at IA-002 for TCE was above the NYSDOH Guideline Value of 2 ug/m3. In addition, at the off-site near field locations, the maximum TCE concentration in soil vapor was 72,000 ug/m3 and PCE was 32,000 ug/m3, both at location SV-8. Access was not granted to any off-site buildings for sub-slab and indoor air sampling. Post-Remediation: Remediation at the site is complete. The site cover is in-place and to date, the AS/SVE system is effectively decreasing concentrations of chlorinated VOCs in groundwater and soil vapor. After implementation of the AS/SVE system, sub-slab and soil vapor samples were collected at on-site and near-field locations. In August 2017, the maximum PCE and TCE concentrations in sub-slab samples were 442 ug/m3 and 5,080 ug/m3, respectively, both on-site locations. Indoor air samples were not collected since the building

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

	is currently used only for storage. However, the Site Management Plan (SMP) has a provision for evaluation of the potential for soil vapor intrusion for any occupied buildings on the site, including a provision for implementing actions recommended to address exposures related to soil vapor intrusion.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Processes involved cleaning, painting, plating, etching, polishing, and specific machining of metals and metal products. A cleaning and degreasing area was located along the west side of the building. Chlorinated solvents, specifically trichloroethene (TCE) and tetrachloroethene (PCE) were used in the manufacturing process to clean various products. Site Geology and Hydrogeology: The soil profile at the site generally consists of 2 to 5 feet of miscellaneous fill underlain by medium to fine sand with some gravel. The estimated depth to groundwater is about 10 feet below grade surface (bgs). Based on local topography, groundwater is expected to flow to the southwest towards Hendrix Creek.

Env Problem: For OU1: On-Site Areas Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations and an interim remedial measure (IRM) conducted to date, the primary contaminants of concern include trichloroethene (TCE) and tetrachloroethene (PCE) in groundwater, sub-surface soil and soil vapor at the site and at some near-field off-site locations. An off-site investigation conducted further downgradient of the site determined that VOC contamination in groundwater and soil vapor in the far-field locations is not related to the site. (A characterization of the far-field contamination is currently being conducted by the Department as part of a separate remedial program.) In 2013, based on initial investigations and data, NYSDEC and NYSDOH determined that the site presented a significant threat to public health and the environment. Soil: In 2013, site-wide soil sampling was completed. The maximum concentration of TCE was detected at 12,000 parts per million (ppm) at one location from within the truck scale pit area, at a depth of 0 to 2.5 feet. This exceeded the TCE commercial use soil cleanup objective (SCO) of 200 ppm. Arsenic, lead and mercury also exceeded the commercial use SCOs in samples collected from the pit area samples at 0 to 2 feet deep. All other contaminants were below the commercial use SCOs. No impacts to off-site soils were detected. As part of the on-site IRM, the pit area was backfilled with flowable fill, followed by pea gravel and four inches of concrete as a cover. Groundwater: In 2015, the highest concentrations of TCE (1,800 ppb) and PCE (750 ppb) were detected at two shallow wells near the truck scale pit area. At the near-field off-site wells, which are both shallow wells, the maximum concentration of TCE was 780 ppb and PCE was 710 ppb. Concentrations of PCE and TCE have decreased at all on-site and near-field monitoring wells since implementation and on-going operation of the air sparging / soil vapor extraction (AS/SVE) system. As of July 2017, the maximum PCE and TCE concentrations in groundwater were 490 ppb and 240 ppb, respectively, at a near-field off-site well. Adjustments were made, and will continue to be made, to the AS/SVE system to address the elevated concentrations of TCE and PCE at any on-site and near-field off-site locations. Soil Vapor, Sub-Slab Vapor and Indoor Air: Prior to implementation of the AS/SVE system in 2015, at on-site locations, the maximum PCE and TCE concentrations in sub-slab samples were 9,200 ug/m3 at SV-3 and 2,300,000 ug/m3 at SV-2, respectively. The maximum PCE and TCE concentrations in indoor air samples were 10.3 ug/m3 at IA-003 and 214 ug/m3 at IA-002, respectively. The indoor air result at IA-002 for TCE was above the NYSDOH Guideline Value of 2 ug/m3. In addition, at the off-site near field locations, the maximum TCE concentration in soil vapor was

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

72,000 ug/m3 and PCE was 32,000 ug/m3, both at location SV-8. Access was not granted to any off-site buildings for sub-slab and indoor air sampling. Post-Remediation: Remediation at the site is complete. The site cover is in-place and to date, the AS/SVE system is effectively decreasing concentrations of chlorinated VOCs in groundwater and soil vapor. After implementation of the AS/SVE system, sub-slab and soil vapor samples were collected at on-site and near-field locations. In August 2017, the maximum PCE and TCE concentrations in sub-slab samples were 442 ug/m3 and 5,080 ug/m3, respectively, both on-site locations. Indoor air samples were not collected since the building is currently used only for storage. However, the Site Management Plan (SMP) has a provision for evaluation of the potential for soil vapor intrusion for any occupied buildings on the site, including a provision for implementing actions recommended to address exposures related to soil vapor intrusion.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 464693
Site Description: Site Location: The Former Watermark Designs Facility (site) is located at 491 Wortman Avenue in Brooklyn, NY. It is identified as block 4384, lots 31 and 36 on the Kings County Tax Maps and is approximately 0.436 acres in size. It is bounded by a one-story building to the north, Wortman Avenue to the south, Essex Street to the east, and Linwood Street to the west. The nearest body of water is Hendrix Creek, which is about 0.5 miles southwest of the site. Site Features: The site consists of a one story brick and steel building, with a partial basement that occupies the entire area of the property. The majority of the building, except for the partial basement, rests on concrete slab. The interior of the building is divided by a wall into east and west areas. No exposed soil or vegetation is present on the subject property. Current Zoning and Land Use: The site is located in an urban setting characterized by industrial buildings to the north, east, and south and residential buildings one block to the west. Land use within a half mile of the site is primarily industrial and residential, but also includes public parks, public institutions, day care centers, and school

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

facilities. The site is zoned for industrial/manufacturing uses. Currently, the western portion of the site building is used as a warehouse to store sound equipment, and the eastern portion is unoccupied. There is no current plan for redevelopment of the site. Past Use of the Site: US Tube and Foundry Company, Inc. operated at the site between 1945 and 1973. The National Hanger Company, Inc. operated at the site in 1976. J and H Holding Company, LLC has owned the property since 1983 and manufacturing activities continued until 2007. The site previously manufactured, stored, packaged, and shipped decorative fixtures and hardware for bathrooms and kitchens. Processes involved cleaning, painting, plating, etching, polishing, and specific machining of metals and metal products. A cleaning and degreasing area was located along the west side of the building. Chlorinated solvents, specifically trichloroethene (TCE) and tetrachloroethene (PCE) were used in the manufacturing process to clean various products. Site Geology and Hydrogeology: The soil profile at the site generally consists of 2 to 5 feet of miscellaneous fill underlain by medium to fine sand with some gravel. The estimated depth to groundwater is about 10 feet below grade surface (bgs). Based on local topography, groundwater is expected to flow to the southwest towards Hendrix Creek.

Env Problem: For OU1: On-Site Areas Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations and an interim remedial measure (IRM) conducted to date, the primary contaminants of concern include trichloroethene (TCE) and tetrachloroethene (PCE) in groundwater, sub-surface soil and soil vapor at the site and at some near-field off-site locations. An off-site investigation conducted further downgradient of the site determined that VOC contamination in groundwater and soil vapor in the far-field locations is not related to the site. (A characterization of the far-field contamination is currently being conducted by the Department as part of a separate remedial program.) In 2013, based on initial investigations and data, NYSDEC and NYSDOH determined that the site presented a significant threat to public health and the environment. Soil: In 2013, site-wide soil sampling was completed. The maximum concentration of TCE was detected at 12,000 parts per million (ppm) at one location from within the truck scale pit area, at a depth of 0 to 2.5 feet. This exceeded the TCE commercial use soil cleanup objective (SCO) of 200 ppm. Arsenic, lead and mercury also exceeded the commercial use SCOs in samples collected from the pit area samples at 0 to 2 feet deep. All other contaminants were below the commercial use SCOs. No impacts to off-site soils were detected. As part of the on-site IRM, the pit area was backfilled with flowable fill, followed by pea gravel and four inches of concrete as a cover. Groundwater: In 2015, the highest concentrations of TCE (1,800 ppb) and PCE (750 ppb) were detected at two shallow wells near the truck scale pit area. At the near-field off-site wells, which are both shallow wells, the maximum concentration of TCE was 780 ppb and PCE was 710 ppb. Concentrations of PCE and TCE have decreased at all on-site and near-field monitoring wells since implementation and on-going operation of the air sparging / soil vapor extraction (AS/SVE) system. As of July 2017, the maximum PCE and TCE concentrations in groundwater were 490 ppb and 240 ppb, respectively, at a near-field off-site well. Adjustments were made, and will continue to be made, to the AS/SVE

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

system to address the elevated concentrations of TCE and PCE at any on-site and near-field off-site locations. Soil Vapor, Sub-Slab Vapor and Indoor Air: Prior to implementation of the AS/SVE system in 2015, at on-site locations, the maximum PCE and TCE concentrations in sub-slab samples were 9,200 ug/m3 at SV-3 and 2,300,000 ug/m3 at SV-2, respectively. The maximum PCE and TCE concentrations in indoor air samples were 10.3 ug/m3 at IA-003 and 214 ug/m3 at IA-002, respectively. The indoor air result at IA-002 for TCE was above the NYSDOH Guideline Value of 2 ug/m3. In addition, at the off-site near field locations, the maximum TCE concentration in soil vapor was 72,000 ug/m3 and PCE was 32,000 ug/m3, both at location SV-8. Access was not granted to any off-site buildings for sub-slab and indoor air sampling. Post-Remediation: Remediation at the site is complete. The site cover is in-place and to date, the AS/SVE system is effectively decreasing concentrations of chlorinated VOCs in groundwater and soil vapor. After implementation of the AS/SVE system, sub-slab and soil vapor samples were collected at on-site and near-field locations. In August 2017, the maximum PCE and TCE concentrations in sub-slab samples were 442 ug/m3 and 5,080 ug/m3, respectively, both on-site locations. Indoor air samples were not collected since the building is currently used only for storage. However, the Site Management Plan (SMP) has a provision for evaluation of the potential for soil vapor intrusion for any occupied buildings on the site, including a provision for implementing actions recommended to address exposures related to soil vapor intrusion.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Site Location: The Former Watermark Designs Facility (site) is located at 491 Wortman Avenue in Brooklyn, NY. It is identified as block 4384, lots 31 and 36 on the Kings County Tax Maps and is approximately 0.436 acres in size. It is bounded by a one-story building to the north, Wortman Avenue to the south, Essex Street to the east, and Linwood Street to the west. The nearest body of water is Hendrix Creek, which is about 0.5 miles southwest of the site. Site Features: The site consists of a one story brick and steel building, with a partial basement that occupies the entire area of the property. The majority of the building, except for the partial basement, rests on concrete slab. The interior of the building is divided by a wall into east and west areas. No exposed soil or vegetation is present on the subject property. Current Zoning and Land Use: The site is located in an urban setting characterized by industrial buildings to the north, east, and south and residential buildings one block to the west. Land use within a half mile of the site is primarily industrial and residential, but also includes public parks, public institutions, day care centers, and school facilities. The site is zoned for industrial/manufacturing uses. Currently, the western portion of the site building is used as a warehouse to store sound equipment, and the eastern portion is unoccupied. There is no current plan for redevelopment of the site. Past Use of the Site: US Tube and Foundry Company, Inc. operated at the site between 1945 and 1973. The National Hanger Company, Inc. operated at the site in 1976. J and H Holding Company, LLC has owned the property since 1983 and manufacturing activities continued until 2007. The site previously manufactured, stored, packaged, and shipped decorative fixtures and hardware for bathrooms and kitchens. Processes involved cleaning, painting, plating, etching, polishing, and specific machining of metals and metal products. A cleaning and degreasing area was located along the west side of the building. Chlorinated solvents, specifically trichloroethene (TCE) and tetrachloroethene (PCE) were used in the manufacturing process to clean various products. Site Geology and Hydrogeology: The soil profile at the site generally consists of 2 to 5 feet of miscellaneous fill underlain by medium to fine sand with some gravel. The estimated depth to groundwater is about 10 feet below grade surface (bgs). Based on local topography, groundwater is expected to flow to the southwest towards Hendrix Creek.
Env Problem: For OU1: On-Site Areas Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations and an interim remedial measure (IRM) conducted to date, the primary contaminants of concern include trichloroethene (TCE) and tetrachloroethene (PCE) in groundwater, sub-surface soil and soil vapor at the site and at some near-field off-site locations. An off-site investigation conducted further downgradient of the site determined that VOC contamination in groundwater and soil vapor in the far-field locations is not related to the site. (A characterization of the far-field contamination is currently being conducted by the Department as part of a separate remedial program.) In 2013, based on initial investigations and data, NYSDEC and NYSDOH determined that the site presented a significant threat to public

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

health and the environment. Soil: In 2013, site-wide soil sampling was completed. The maximum concentration of TCE was detected at 12,000 parts per million (ppm) at one location from within the truck scale pit area, at a depth of 0 to 2.5 feet. This exceeded the TCE commercial use soil cleanup objective (SCO) of 200 ppm. Arsenic, lead and mercury also exceeded the commercial use SCOs in samples collected from the pit area samples at 0 to 2 feet deep. All other contaminants were below the commercial use SCOs. No impacts to off-site soils were detected. As part of the on-site IRM, the pit area was backfilled with flowable fill, followed by pea gravel and four inches of concrete as a cover. Groundwater: In 2015, the highest concentrations of TCE (1,800 ppb) and PCE (750 ppb) were detected at two shallow wells near the truck scale pit area. At the near-field off-site wells, which are both shallow wells, the maximum concentration of TCE was 780 ppb and PCE was 710 ppb. Concentrations of PCE and TCE have decreased at all on-site and near-field monitoring wells since implementation and on-going operation of the air sparging / soil vapor extraction (AS/SVE) system. As of July 2017, the maximum PCE and TCE concentrations in groundwater were 490 ppb and 240 ppb, respectively, at a near-field off-site well. Adjustments were made, and will continue to be made, to the AS/SVE system to address the elevated concentrations of TCE and PCE at any on-site and near-field off-site locations. Soil Vapor, Sub-Slab Vapor and Indoor Air: Prior to implementation of the AS/SVE system in 2015, at on-site locations, the maximum PCE and TCE concentrations in sub-slab samples were 9,200 ug/m3 at SV-3 and 2,300,000 ug/m3 at SV-2, respectively. The maximum PCE and TCE concentrations in indoor air samples were 10.3 ug/m3 at IA-003 and 214 ug/m3 at IA-002, respectively. The indoor air result at IA-002 for TCE was above the NYSDOH Guideline Value of 2 ug/m3. In addition, at the off-site near field locations, the maximum TCE concentration in soil vapor was 72,000 ug/m3 and PCE was 32,000 ug/m3, both at location SV-8. Access was not granted to any off-site buildings for sub-slab and indoor air sampling. Post-Remediation: Remediation at the site is complete. The site cover is in-place and to date, the AS/SVE system is effectively decreasing concentrations of chlorinated VOCs in groundwater and soil vapor. After implementation of the AS/SVE system, sub-slab and soil vapor samples were collected at on-site and near-field locations. In August 2017, the maximum PCE and TCE concentrations in sub-slab samples were 442 ug/m3 and 5,080 ug/m3, respectively, both on-site locations. Indoor air samples were not collected since the building is currently used only for storage. However, the Site Management Plan (SMP) has a provision for evaluation of the potential for soil vapor intrusion for any occupied buildings on the site, including a provision for implementing actions recommended to address exposures related to soil vapor intrusion.

Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

DEC Memo:	08/15/09-HRAHMED- As per PropertyShark records: Street address: 491 Wortman Ave Primary address: 1009 Linwood St Zip 11208 Borough Brooklyn Block & lot 04384-0036 First 3 alt addresses 481-491 Wortman Ave, 1009-1019 Linwood St 1/26/10-Vought-File review by Vought: Supplemental Subsurface Investigation Report (PW Grosser-John Eichler-Ph;631-589-6353)-12/9/08. Sent to: Mr. Jack Abel Watermark Designs 350 Dewitt Avenue Brooklyn, NY 11207 Site has one commercial building that covers entire area of property. Site formerly used as a metal etching company, steel tube manufacturing company and a plumbing faucet/fixture company. Possible plating pit in northwest corner of building. Phase II shows elevated TCE in soil collected from northwest portion of building . Attempts made to dye flush test floor drain in bathroom but drain was blocked but drain appeared to lead to a sewer connection pit which discharges to the municipal sewer . Fuel oil AST encased in concrete block in the basement and soil samples below AST shows that

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

soils were not impacted .
Plating pit later discovered to be a loading/bay truck scale. Based on conversations with the
current owner of the property, the sources of TCE appears to have been a TCE degreasing tank with
was formerly located directly to the south of the former loading bay/truck scale. Report recommends
additional soil and groundwater investigation via soil borings. Proposal of soil boring
investigation to delineate contamination via Geoprobe collection of soil and groundwater samples.
Delineation will also include vertical profile of groundwater contamination to a depth of 50'bg
(i.e collection of vertical groundwater samples at 10 foot intervals from 10-50'bg to study DNAPL).
Cost estimate included in proposal. EnviroTrac Limited Subsurface Investigation Report
(EnviroTrac-David Lorthior-631-924-3001)-2/1/09. Seven soil boring and one well were installed
including collection of five groundwater samples. Borings installed via Geoprobe. Fill from 6-8'bg
and sand below. Soil analyticals show: 2400ppb TCE (B2 8-10'bg), 20000ppb TCE (B3(0-5'bg), 8800ppb
TCE(B4 6'bg), 140000ppb TCE(B7 2-5'bg), 5000ppb PCE(B7 2-5'bg), 4400ppb TCE(B8 3-5'bg), 3300ppb
TCE(B8 7-7.5'bg). PCE not used at site and suggests that a possible source associated with the
prior usage of he building could be repsonsible for the impacted soil in this area. Depth to
groundwater is 12'bg. Groundwater analyticals show:54ppb TCE(B2 15'bg), 91ppb PCE(B2 15'bg),
5700ppb TCE(B5 15'bg), 510ppb PCE(B5 15'bg), 36ppb TCE(B5 25'bg), 97ppb PCE(B5 25'bg), 14ppb TCE(B5
35'bg), 26ppb PCE(B5 35'bg), 18ppb TCE(B5 45'bg), 38ppb PCE(B5 45'bg). Report recommends submission
of a Remedial Investigation Work Plan. No petroleum contamination found at site. Phase II
Environmental Site Assessment (PW Grosser John Eichler Ph:631-589-6353)-1/13/09. Seven soil borings
were installed at site in Nov 2008 via Geoprobe. Groundwater at 10'bg and two samples collected for
analysis. Groundwater flow estimated to south. Fuel and vent noted leading to AST in basement. One
boring installed adjacent to UST with no petroleum staining observed. Floor drain dye test resulted
in determination drain was clogged. Boring B-02 was located in the reported vicinity of a former
TCE degreasing tank. Based on this, the degreasing tank appears to be the source of TCE in the soil
. Soil analyticals show: 201ppb MTBE (GP2 8-10'bg), 18900ppb TCE(GP-02 0-2'bg), 63100ppb TCE(GP-02
8-10'bg). Groundwater analyticals show: 24000ppb TCE(GP1), 544ppb PCE(GP1) 7ppb DCE(GP1), 78ppb
PCE(GP4), 24ppb TCE(GP4). Report recommends further investigation to delineate contaminaton and
that indoor air quality be evaluated and that AST be properly closed. Environmental Services Report

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

Proposed Corrective Action and Remedial Investigation Work Plan(Impact Environmental-Tony
Kloss-Ph:908-534-8820)-7/10/09. Prepared for Watermark Designs. Onsite building has three sections
and properly is currently vacant and unoccupied. Building owned by Watermark Designs for past 25
years to manufacture, store, package and ship hardware, bathroom fixtures. Onsite processes
included painting, plating, etching, polishing, and machining. Cleaning agents, such as
trichloroethylene(TCE) and tetrachlorethylene(PCE) were routinely used by Watermark Designs, Ltd.
at the subject property to fine clean and polish metals and metal products. Watermark purchased new
property at 350 Dewitt Avenue and moved and looking to sell this site. Proposal to isolate each
building section and excavated contaminated soil. It is estimated that a total of approximately 400
tons of chlorinated VOC contaminated soil will be excavated from two designated work areas in
Building 1... . Work activities will include the evacuation of as much chlorinated VOC contaminated
groundwater as is safe and practical with estimates of removal of 18,000 gallons of contaminated
groundwater. Proposal to collect endpoint soil and bottom groundwater samples and submit results
report. Email from Abel to DEC Ahmed-12/3/09. I'm following-up on our most recent conversation
about the NYSDEC Spill Case No. 0809879 assigned to 491 Wortman Avenue, Brooklyn, NY. Were you able
to identify and/or obtain a copy of the NYSDEC correspondence issued to Mr. Jack Abel from
Watermark Designs Ltd. for the subject property? Watermark Designs Ltd. received some type of
NYSDEC correspondence about the subject property but misplaced the letter. The NYSDEC
correspondence would have been dated late October 2009 or early November 2009. Our firm advised
Watermark Designs Ltd. that the subject property is the first site assigned to a new program within
the NYSDEC system for hazardous TCE and DNAPL type contaminant investigation and corrective action.
As a responsible party and environmental steward, Watermark Designs Ltd. is prepared to move
forward with the scope of work presented in the Proposed Corrective Action and Remedial
Investigation Work Plan prepared by our firm and dated 10 July 2009. Watermark Designs Ltd. would
like to start the project as soon as possible. Please provide our firm and/or Mr. Jack Abel at
Watermark Designs Ltd. withan update concerning the project at your earliest convenience. I
included Jack Abel's contact information below. Thank you for your time and attention to the
matter. Mr. Jack Abel Watermark Designs Ltd. (p) 718.257.2800, Ext. 20 (f) 718.257.2144 (e)
jabel@watermark-designs.com Email from Impact (Kloss) to DEC

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

Ahmed-1/5/10. We spoke approximately four (4) weeks ago concerning thecorrective action project for Watermark Designs Ltd. at 491 Wortman Avenue, Brooklyn, NY. Did you have an opportunity to issue an update letter or e-mail to Mr. Jack Abel from Watermark Designs Ltd concerning the project? Also, what is the status of the consent order for the project? When last we spoke in early December 2009, you indicated that the consent order would be issued to Mr. Jack Abel within three (3) to four (4) weeks. DEC possibly requires: 1)P-Site letter 2)Check PBS for AST registration 3)delineation of chlorinated solvent soil and groundwater contamination 4)possible approval of proposal to evaluate indoor air (property vacant as per 7/09 report). 1/26/10-Vought-Meeting with DEC Krimgold and Austin. Spill reassigned from Ahmed to Vought. 1/28/10-Vought-Received email from Abel that Good morning. I'm following up on our conversation yesterday morning and the internal NYSDEC meeting you had for the contaminated soil and groundeater project at 491 Wortman Avenue, Brooklyn, NY. When you have a moment today (Thursday, 28 January 2010), please provide a brief update for the proposed project at the subject property. The update can be forwarded to me and/or Mr. Jack Abel of Watermark Designs Ltd. Contact information for Mr. Jack Abel is below. 02/2/10-Vought-Received message from Kloss (908-534-8820) and returned call and left message. 02/5/10-Vought-Received message from Impact (Kloss) and returned call and left message to return call. 02/10/10-Vought-DEC O'Connnell preparing Class II package. Site code received from DEC Spath as: Site Remediation Code:224139 T&A Code:65335 2/11/10-Vought-Received message from Impact (Kloss cell:908-623-0310) and returned call and spoke to Kloss and informed him of reclassification of site as Class II site. Vought also provided him contact info for DEC Oliva for further information regarding Class II CO and possibly beginning of soil excavation. Kloss noted that he had suspected the site would be listed as Class II and has already prepared Watermark Designs for such possibilities. Vought to complete Remediation Database so that DEC O'Connell can designate new Section A project manager. Received email from Impact (Kloss) that again, thank you for the phone call concerning the latest administrative information for 491 Wortman Avenue, Brooklyn, NY. The initial information is very much appreciated and will be a great help to our client (Watermark Designs Ltd.). Our firm will be reviewing the information with the client tomorrow morning. 2/12/09-Vought-Obtained Lat and Long from Google Earth as:40deg39min40secN and 73deg52min32sec W. Note Google earth based on same datum as DEC GIS system

FORMER WATERMARK DESIGNS FACILITY (Continued) **S109374287**

used by DEC 0'Connell. Area of lot is .44 acres as per Report and .218 acres when using dimensions
from 491 Wortman deed only. Vought to use acreage as per Report as site may encompass other
addresses in addition to 491 Wortman. Vought spoke to DEC Barrie and provided acreage of .44 acres
and she also will transfer E-docs into UIS database.
02/15/10-Vought-Recevied email from Kloss to
DEC Oliva that Late last week I spoke with Mr. Jeffery Vought (NYSDEC Liaison at this point)
concerning the NYSDEC Remediation Case Site Code 224139 assigned to the hazardous waste site
project at 491 Wortman Avenue, Brooklyn, NY. Mr. Vought provided a much anticipated update and
NYSDEC agency contact information. During the conversation Mr. Vought requested that the
owner/operator of the subject property (Mr. Jack Abel - Watermark Designs Ltd.) contact you to
discuss a Stipulation Agreement/Consent Order for the project. I was informed that Mr. Abel is out
of his office this week and will return on Monday, 22 February 2010. I'm certain Mr. Abel will
contact you shortly after his return to the office. 3/11/10-Vought-DEC Oliva sent draft CO to Kloss
and Abel. 3/15/10-Vought-Meeting with DEC O'Connell and DEC Austin and spill manager transferred to
DEC O'Connell for further action. 3/01/2019 - Site owner entered into a Brownfields Cleanup
Agreement as a participant to address the chlorinated solvents in groundwater, soil and soil vapor
at the site. BCP Site #C224139. Remedial Investigation completed. Air Sparge/Soil Vapor Extraction
(AS/SVE) Interim Remedial Measure construction completed 8/25/2016. Remedial Action Work Plan
approved and Decision Document issued on June 1, 2017. Remedy includes an ongoing operation of
AS/SVE along with a site cover, SSDS when AS/SVE complete, site management plan and environmental
easement. BCP Certificate of Completion issued on 10/24/2017. Site management and monitoring
ongoing.

Remarks: CALLER STATES THAT THEY RECIEVED SOIL BORING SAMPLES BACK TODAY INDICATING CONTAMINATED SOIL AND GROUND WATER. CLEAN UP IS PENDING.

Site Description:	Location: The site is on the eastern side of Linwood Street between Wortman Street and Stanley Street, Brooklyn, NY 11208. The full

LINWOOD STREET GW (Continued) **S125465259**

extent of the site is unknown. Site Features: The full extent of the site has yet to be identified. Current Zoning and Land Use: This plume track down is being conducted in an area that is currently and historically an industrial and commercial area. The full extent of the site has yet to be identified and the specific zoning and land use of the site are unknown. Past Use of Site: The full extent of the site has yet to be identified; the surrounding neighborhood has a history of industrial use. Site Geology and Hydrogeology: The site is located over the Long Island aquifer system, which underlies all of Nassau, Suffolk, Kings (Brooklyn), and Queens Counties. The unconsolidated aquifer formations form a southward-dipping wedge that attains a maximum thickness in Kings County about 800 feet in the southeast area of Brooklyn. Overlying bedrock is the Lloyd, Magothy, Jameco, and Upper Glacial aquifer systems. Subsurface geology is comprised of historic fill material overlying native sands. Groundwater at a nearby site is approximately 15 feet below ground surface. Groundwater flow in the neighborhood has been observed flowing in a southwesterly direction.

Env Problem: During the investigation for Brownfield Cleanup Program site C224139, monitoring well 19 (MW-19) was installed up gradient of the site. The ground-water from the well was sampled and returned high levels of PCE (2,600 g/L), TCE (2,100 g/L), and Cis-1,2-Dichloroethene (35 g/L). Additional data need to be collected in order to determine the extent of the site and the nature of the plume.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: Location: The 0.23-acre site is located at 673 Livonia Avenue in Brooklyn, Kings County, NY in an urban area. Site Features: The site currently consists of a vacant, 8,300 square foot, one-story, slab-on-grade, concrete warehouse building with a concrete driveway to the north. A former UST below the northwest corner of the driveway was closed and removed sometime prior to 1991. Current Zoning and Land Use: The site is currently zoned as R6 (medium-density residence district) with a C2-3 (local retail/service district) overlay and is surrounded by other residential and retail commercial parcels. The site is bound to the north by Dumont Avenue, to the east by Wyona Street, to the south by Livonia Avenue as well as the MTA 2 and 3 aboveground subway lines, and to the west by Vermont Street. Past Use of the Site: The current building was constructed between 1954 1966 and was most recently occupied by Fleetwood Cabinet Co for furniture manufacturing and spray-painting operations from 1985 2017. Historical on-site uses include a knitting mill, textile processing, and dry-cleaning. Site reconnaissance during June 2021 observed a vent pipe reportedly connected to an out-of-service 2,500-gallon #2 fuel oil UST under the northern driveway. An empty 55-gallon drum and two active 250-gallon aboveground storage tanks were observed inside the building as well as evidence of spray-painting on the walls and floor slab in the southeast corner. Site Geology and Hydrogeology: Sub-surface samples collected in June 2021 identified soil consisting of red-brown sand and brown sandy silt. Groundwater was encountered at approximately 22.5 feet below grade and flows at a slight gradient (0.001 ft/ft) to the southeast.

Env Problem: Nature and Extent of Contamination: SOIL No VOCs were detected at concentrations exceeding the applicable protection of groundwater soil cleanup objectives (PGSCO). PCE was detected at a maximum concentration of 0.17 parts per million (ppm) compared to the PGSCO of 1.3 ppm, and TCE at a maximum concentration of 0.11 ppm (PGSCO is 0.47 ppm). One SVOC, benzo(a)pyrene, was identified as exceeding the restricted commercial (RC) SCO of 1 ppm at a maximum of 1.69 ppm. One RCRA metal, barium, was detected at a maximum concentration of 723 ppm (RCSCO is 400 ppm). GROUNDWATER PCE was detected at concentrations exceeding the applicable Ambient Water Quality Standard (AWQS) of 5 parts per billion (ppb) at a maximum concentration of 8.98 ppb. Chloroform was detected at a maximum of 28 ppb (AWQS is 7 ppb). Detected TCE concentrations did not exceed the AWQS of 5 ppb at a maximum of 0.95 ppb. PFOS was detected at a

673 LIVONIA AVENUE (Continued) **S129982655**

maximum concertation of 0.0747 ppb (AWQS is 0.01 ppb) and PFOA at a maximum of 0.0635 ppb (AWQS is 0.01 ppb). SOIL VAPOR PCE and TCE were detected at maximum concentrations of 180,000 micrograms per cubic meter (ug/m3) and 52,700 ug/m3, respectively. Additionally, the degradation compounds cis-1,2-dichloroethene and trans-1,2-dicholorethene were detected at maximum concentrations of 16,500 ug/m3 and 1,870 ug/m3. Several petroleum-related VOCs were also detected, including benzene (max. 94 ug/m3), toluene (max. 1,800 ug/m3), ethylbenzene (max. 170 ug/m3), and total xylene (max. 800 ug/m3). --- Significant Threat: No evaluation has been made thus far to determine if the contaminants represent a significant environmental threat.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Updated By:	AMSERVIS
Site Description:	Location: The site is located at 869 Stanley Avenue, Brooklyn, NY. Site Features: The site is covered by a commercial/industrial building. Surrounding properties include a railyard across the street to the west, commercial/industrial buildings across the street to the south and east, and an Amazon Flex courier facility to the north. Current Zoning and Land Use: The site is in a district zoned M1-1. M1-1 zoning is identified as light manufacturing (high performance) which may be developed as manufacturing, commercial, or community facility. The building on site is currently used for commercial/industrial purposes and is currently occupied by an ambulance center, Seniorcare Emergency Medical Services. Past Use of Site: Specific past use of the site is unknown at this time. The

869 STANLEY AVENUE (Continued) **S131354999**

larger neighborhood has an industrial history. Site Geology and Hydrogeology: The site is located over the Long Island aquifer system. Subsurface geology is comprised of historic fill material overlying native sands. Groundwater at a nearby site is approximately 15 feet below ground surface. Groundwater flow in the neighborhood has been observed flowing in a southwesterly direction.

Env Problem: Groundwater and soil vapor sampling was conducted in the surrounding area along Linwood and Stanley Avenues as part of two plume track down investigations related to site Nos. 224250 and 224301. A shallow groundwater well, HRP-MW-22S, located immediately adjacent and downgradient from 869 Stanley Avenue, had elevated levels of total chlorinated volatile organic compounds (CVOCs); the total COVCs in HRP-MW-22S were 115,990 parts per billion (ppb). Detections in a second well (HRP-MW-20S) located approximately 200ft downgradient from HRP-MW-22S had a total CVOC level of 5,539 ppb. Soil vapor intrusion sampling found elevated vapor levels for PCE (19,000 ug/m^3), TCE (23,000 ug/m^3), and DCE (400 ug/m^3) under the building immediately downgradient of the site (Sample location 4384-1). NYSDOH matrices indicate mitigation is required for the downgradient building. The basis for this proposal is observed concentrations of total CVOCs in shallow groundwater and soil vapor immediately adjacent and downgradient from the site, specifically trichloroethene. Analytical data strongly suggests the disposal of hazardous waste on the site.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with building foundation, pavement, or sidewalk. Persons who dig below the ground surface may come into contact with contaminants in subsurface soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in currently occupied on-site buildings, or buildings that are occupied in the future. A sub-slab depressurization system (system that ventilates / removes the air beneath a building) has been installed at an off-site structure to address soil vapor intrusion. The potential for people to contact site-related contamination will continue to be evaluated on and off-site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Data Release Frequency: Semi-Annually

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database
EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2025

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248

Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

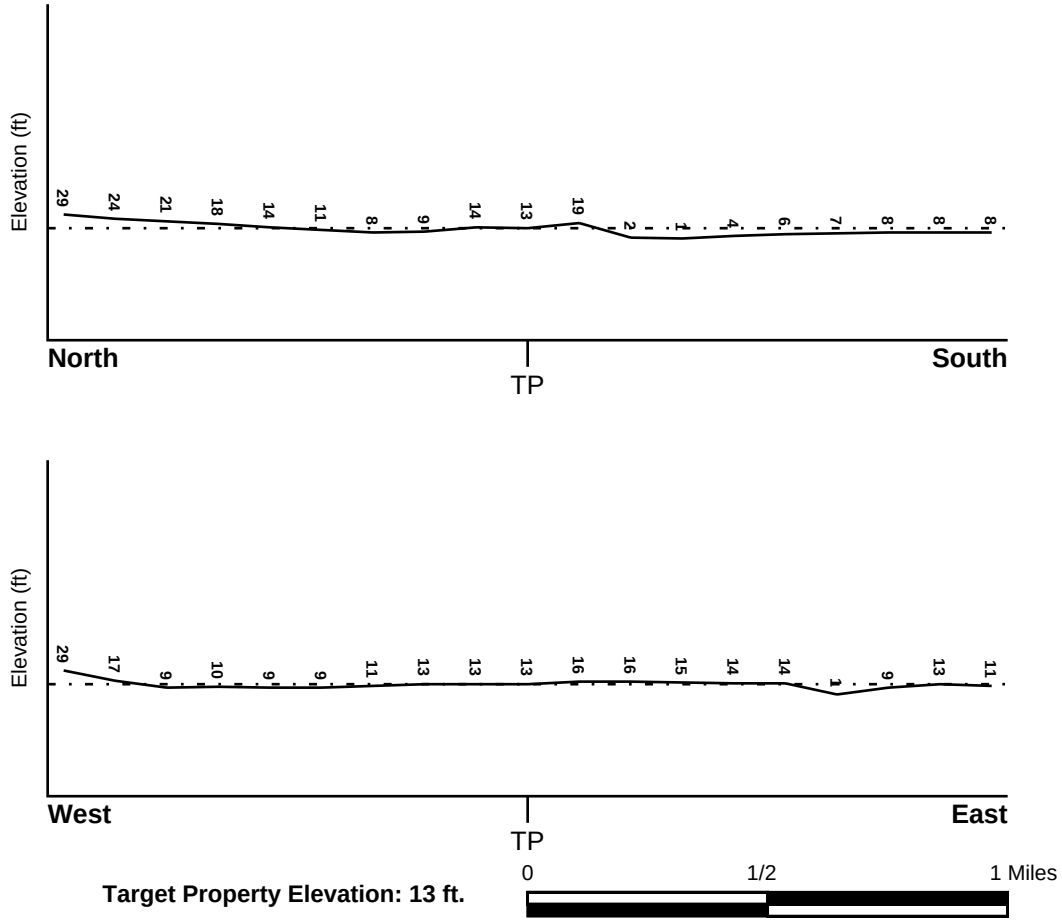
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 13 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile SE
Site Name:	PENNSYLVANIA/FOUNTAIN AVE LF
Site EPA ID Number:	NY6141790018
Groundwater Flow Direction:	TOWARD JAMAICA BAY.
Measured Depth to Water:	approximately 5 to 10 feet above mean sea level.
Hydraulic Connection:	Detailed hydraulic connection information is not available. The site is underlain by silt, sand, and gravel to a depth of approximately 55 feet. The Gardiners Clay unit underlies the upper silt, sand, and gravel, and is estimated to be 20 feet thick.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Resumes of Environmental Professionals

ELA KUSMIERZ

STAFF SCIENTIST

ENVIRONMENTAL ENGINEERING

Ms. Kusmierz is a recent graduate of the University of Michigan. She has experience with a variety of site exploration activities including, contaminated site investigation and remediation work; soil and groundwater sampling; vapor intrusion investigation; data management, processing, and evaluation; and report preparation. She has also conducted Phase I site investigations and New York State Department of Environmental Conservation (NYSDEC) Stormwater Pollution Prevention Plan (SWPPP) inspections.

EDUCATION

B.S., Earth and Environmental Sciences
University of Michigan, Ann Arbor

SELECTED PROJECTS

- 1487 First Avenue Development, New York, NY
- 363 Bond Street, Brooklyn, NY
- 40 Quay Street, Brooklyn, NY
- 46 Crown Street, Brooklyn, NY
- Carlyle Residential, Multiple Locations, NY
- Christian Cultural Center, Brooklyn, NY
- Remediation Services, Montville, NJ
- 1 Nassau Place, Staten Island, NY
- 308 Dyckman St, New York, NY

JESSICA FRISCIA, PE

SENIOR PROJECT ENGINEER

ENVIRONMENTAL ENGINEERING

Ms. Friscia's 13 years of experience includes field work and office work on environmental investigation and remediation projects across New Jersey and New York. Her field work experience includes soil, soil vapor, and groundwater sampling; drilling oversight; air monitoring; soil management; and remediation oversight, including excavation, zero-valent iron injections, air sparge/SVE system installation, MPE system installation, and SSDS installation. Her office work experience includes EQuIS database management, data evaluation, remedial design, and report work, including, but not limited to, Phase I ESAs, Preliminary Assessment/Site Investigations, Remedial Investigation Reports, Remedial Action Work Plans, and Remedial Action Reports.

SELECTED PROJECTS

AMANDA FORSBURG, CHMM

ASSOCIATE PRINCIPAL

BROWNFIELD REDEVELOPMENT, DUE DILIGENCE AND SITE INVESTIGATION, REMEDIAL ACTIONS

Ms. Forsburg has 17 years of experience primarily focused on providing environmental support to redevelopment sites within the metropolitan New York area. She has experience with projects in the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) and Spill Programs, New York City Office of Environmental Remediation (NYCOER) E-Designated and New York City Voluntary Cleanup Program (VCP) sites, and New York City Department of Environmental Protection (NYCDEP) remediation sites. Her field experience includes implementation and management of all phases of environmental projects involving soil, groundwater, and soil vapor contamination including Phase I inspections, Phase II site investigations, Remedial Investigations, and Remedial Actions.

During her tenure at Langan, Ms. Forsburg's experience has included schematic-, design-, and construction-phase project team involvement on numerous large scale construction projects requiring multi-disciplinary coordination and collaboration across different Langan teams and offices.

SELECTED PROJECTS
