Parameter	ppbv Result	ppbv RL	ug/m3 Result	ug/m3 RL	Date/Time	By	Dilution

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sample Criteria Exceedances Report

GCT58244 - VEKTOR

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Ezgi

I am not sure, but do know that all regulators are checked prior to be packaged up here.

The lab supervisor said this can happen:

Sometimes with soil vapor samples, the ground can be compacted so they can't pull

Subject: Air samples did not collect *please read*

Good afternoon Ezgi~

Hope you are doing well. I am reaching out today on the two samples you made notations about that the gauge didn't change during collection on. Once these samples arrived at our lab , our Air Lab Supervisor inspected them and these two samples SV2 and SV6 (Phoenix ID 58244 & 58245) did not collect sample.

These two samples will be removed from the work order, we can't report results on these two.

Please LMK if you have any questions.

Bobbi

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on October 30, 2025 and listed below. The project was identified as your project: **2425 Atlantic Ave**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
25J1850-01	SS-1	Soil Vapor	10/30/2025	10/30/2025
25J1850-02	SS-2	Soil Vapor	10/30/2025	10/30/2025

General Notes for York Project (SDG) No.: 25J1850

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

TO-CCV	The value reported is ESTIMATED for this compound due to its behavior during continuing calibration verification (>30% Difference from initial calibration).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

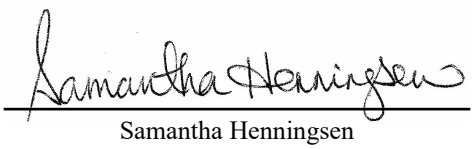
Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on December 22, 2025 and listed below. The project was identified as your project: **2425 Atlantic Brooklyn 10034**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.



The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25L1273

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

/\ Analyte is not certified but the state of sample origination offer certification for the Analyte

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Re: Data Validation Report
2425 Atlantic Avenue
October-December 2025 Soil Vapor and Ground Water Sampling Events

Dear Ms. Keenan,

The Data Usability Summary Reports are attached to this letter for the 2425 Atlantic Avenue site, October-December 2025 soil vapor and ground water sampling events. The data for ALS Environmental, SDG numbers 25J1850, 25L1272, and 25L1273 and Phoenix Environmental Laboratories, Inc., SDG number GCT58244 are mostly acceptable, with issues that are identified in the DUSRs and QA/QC review summaries. There are data that are rejected, unusable (R) in data pack 25L1272. The DUSR and QA/QC reviews outlines the reasons for rejecting the data. The data are rejected based solely on the validation guidance criteria. The rejected data may be determined to be acceptable to the user based on additional information that is not contained in the data validation criteria.

A list of data validation acronyms and qualifiers is attached to assist you in interpreting the data validation reviews. If you have any questions concerning the work performed, please contact me at (518) 348-6995. Thank you for providing us an opportunity with vEKtor consultants.

Sincerely,
Alpha Geoscience

Donald Anné

Alpha Geoscience: Acronyms and Definitions

Data Validation Acronyms

AA	Atomic absorption, flame technique
BHC	Hexachlorocyclohexane
BFB	Bromofluorobenzene
CCB	Continuing calibration blank
CCC	Calibration check compound
CCV	Continuing calibration verification
CN	Cyanide
CRDL	Contract required detection limit
CRQL	Contract required quantitation limit
CVAA	Atomic adsorption, cold vapor technique
DCAA	2,4-Dichlophenylacetic acid
DCB	Decachlorobiphenyl
DFTPP	Decafluorotriphenyl phosphine
ECD	Electron capture detector
FAA	Atomic absorption, furnace technique
FID	Flame ionization detector
FNP	1-Fluoronaphthalene
GC	Gas chromatography
GC/MS	Gas chromatography/mass spectrometry
GPC	Gel permeation chromatography
ICB	Initial calibration blank
ICP	Inductively coupled plasma-atomic emission spectrometer
ICV	Initial calibration verification
IDL	Instrument detection limit
IS	Internal standard
LCS	Laboratory control sample
LCS/LCSD	Laboratory control sample/laboratory control sample duplicate
MSA	Method of standard additions
MS/MSD	Matrix spike/matrix spike duplicate
PID	Photo ionization detector
PCB	Polychlorinated biphenyl
PCDD	Polychlorinated dibenzodioxins
PCDF	Polychlorinated dibenzofurans
QA	Quality assurance
QC	Quality control
RF	Response factor
RPD	Relative percent difference
RRF	Relative response factor
RRF(number)	Relative response factor at concentration of the number following
RT	Retention time
RRT	Relative retention time
SDG	Sample delivery group
SPCC	System performance check compound
TCX	Tetrachloro-m-xylene
%D	Percent difference
%R	Percent recovery
%RSD	Percent relative standard deviation

Data Validation Qualifiers Used in the QA/QC Reviews for USEPA Region II

U	=	Not detected. The associated number indicates the approximate sample concentration necessary to be detected significantly greater than the level of the highest associated blank.
R	=	Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.
N	=	Tentative identification. Analyte is considered present. Special methods may be needed to confirm its presence or absence during future sampling efforts.
J	=	Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.
J-	=	Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.
J+	=	Analyte is present. Reported value may be biased high andassociated with a higher level of uncertainty than is normally expected with the analytical method.
UJ	=	Not detected, quantitation limit may be inaccurate or imprecise.

Note: These qualifiers are used for data validation purposes. The data validation qualifiers may differ from the qualifiers that the laboratory assigns to the data. Refer to the laboratory analytical report for the definitions of the laboratory qualifiers.

Polyfluorinated Alkyl Substances (PFAS) Acronyms

PFBA	Perfluorobutanoic acid
PFPeA	Perfluoropentanoic acid
PFHxA	Perfluorohexanoic acid
PFHpA	Perfluoroheptanoic acid
PFOA	Perfluorooctanoic acid
PFNA	Perfluorononanoic acid
PFDA	Perfluorodecanoic acid
PFUnA	Perfluoroundecanoic acid
PFDoA	Perfluorododecanoic acid
PFTriA or PFTrDA	Perfluorotridecanoic acid
PFTeA or PFTA	Perfluorotetradecanoic acid
PFBS	Perfluorobutanesulfonic acid
PFPeS	Perfluoropentanesulfonic acid
PFHxS	Perfluorohexanesulfonic acid
PFHpS	Perfluoroheptanesulfonic acid
PFOS	Perfluorooctanesulfonic acid
PFNS	Perfluorononanesulfonic acid
PFDS	Perfluorodecanesulfonic acid
FOSA	Perfluorooctane Sulfonamide
NMeFOSAA	N-methyl perfluorooctane sulfonamidoacetic acid
NEtFOSAA	N-ethyl perfluorooctane sulfonamidoacetic acid
4:2 FTS or 4:2	1H, 1H, 2H, 2H-perfluorohexanesulfonic acid
6:2 FTS or 6:2	1H, 1H, 2H, 2H-perfluorooctanesulfonic acid or 6:2 Fluorotelomersulfonate
8:2 FTS or 8:2	1H, 1H, 2H, 2H-perfluorodecanesulfonic acid or 8:2 Fluorotelomersulfonate

Data Usability Summary Report for
ALS Environmental, SDG: 25J1850

4 Soil Vapor Samples
Collected October 30, 2025

Prepared by: Donald Anné
February 12, 2026

The data packages contain the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results for 4 soil vapor samples analyzed for TO-15 volatiles.

The overall performances of the analyses are acceptable. ALS Environmental did fulfill the requirements of the method for TO-15 volatiles.

The data are acceptable with some minor issues that are identified in the accompanying data validation review. There were no data that were qualified either rejected (R) or estimated; therefore, all data are considered usable. Detailed information on data quality is included in the data validation review.

QA/QC Review of Method TO-15 Volatiles Data
for ALS Environmental, SDG: 25J1850

4 Soil Vapor Samples
Collected October 30, 2025

Prepared by: Donald Anné
February 12, 2026

Holding Times: Samples were analyzed within recommended USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010), as required.

The %RSDs for 1,2,4-trichlorobenzene and 1,4-dichlorobenzene were above the allowable maximum (30%) for TO15_AIR3 on 10-13-25. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %D for 1,2,4-trichlorobenzene was above the allowable maximum (30%) on 11-03-25 (TV033612.D). The %D for carbon tetrachloride was above the allowable maximum (30%) on 11-04-25 (TV033641.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The percent recoveries for target compounds were within QC limits for air/vapor samples BK50145-BS1 and BK50255-BS1.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Compound ID: Checked compounds were within quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Canister Pressure: The laboratory reported "received" pressure for samples below zero (residual vacuum), as required.

Data Usability Summary Report for
ALS Environmental, SDG: 25L1272

4 Ground Water Samples and 1 Trip Blank
Collected December 19-22, 2025

Prepared by: Donald Anné
February 12, 2026

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 4 ground water samples and 1 trip blank analyzed for volatiles and the results of 4 ground water samples analyzed semi-volatiles and SIM semi-volatiles.

The overall performances of the analyses are acceptable. ALS Environmental did fulfill the requirements of the analytical methods.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The "not detected" semi-volatile results for 4-nitrophenol and pyridine were qualified as "rejected, unusable" (R) for samples 25MW-2 and 25MW-3 because 2 of 2 percent recoveries for 4-nitrophenol and pyridine were below QC limits and below 30% in the associated aqueous LCS/LCSD.

- The "not detected" semi-volatile results for pyridine were qualified as "rejected, unusable" (R) for samples 25MW-1 and 25MW-4 because 2 of 2 percent recoveries for pyridine were below QC limits and below 30% in the associated aqueous LCS/LCSDs.

- The "not detected" semi-volatile results for 4-nitrophenol and hexachlorocyclopentadiene were qualified as "rejected, unusable" (R) for sample 25MW-4 because 1 or 2 percent recoveries for 4-nitrophenol and hexachlorocyclopentadiene were below QC limits and below 30% in the associated aqueous LCS/LCSD.

- The "not detected" semi-volatile results for 14 acid extractable compounds were qualified as "rejected, unusable" (R) for sample 25MW-1 because 2 of 3 acid extractable surrogate recoveries for sample 25MW-1 were below control limits and one below 10% in the sample.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The “not detected” semi-volatile results for 31 base/neutral compounds were qualified as “estimated” (UJ) for sample 25MW-1 because 2 of 3 base/neutral surrogate recoveries for sample 24MW-1 were below control limits, but not below 10% in the sample.

- The “not detected” semi-volatile results for 13 acid extractable compounds were qualified as “estimated” (UJ) for sample 25MW-4 because 2 of 3 acid extractable surrogate recoveries for sample 24MW-4 were below control limits, but not below 10% in the sample.

- The “not detected” semi-volatile results for 30 base/neutral compounds were qualified as “estimated” (UJ) for sample 25MW-4 because 2 of 3 base/neutral surrogate recoveries for sample 24MW-4 were below control limits, but not below 10% in the sample.

- The “not detected” SIM semi-volatile results for n-nitrosodimethylamine were qualified as “rejected, unusable” (R) for all 4 ground water samples because the percent recoveries for n-nitrosodimethylamine were below QC limits and below 30% in the associated aqueous LCSs.

- The positive volatile results for tetrachloroethylene were qualified as “estimated, biased low” (J-) for all 4 ground water samples because 2 of 2 percent recoveries for tetrachloroethylene were below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

- The “not detected” volatile result for tetrachloroethylene was qualified as “estimated” (UJ) for the trip blank because 2 of 2 percent recoveries for tetrachloroethylene were below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

- The “not detected” volatile results for 1,3-dichlorobenzene, 1,4-dichlorobenene, and p-ethyltoluene were qualified as “estimated” (UJ) for all 4 ground water samples and the trip blank because 1 of 2 percent recoveries for 1,3-dichlorobenzene, 1,4-dichlorobenzene, and p-ethyltoluene were below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

- The positive volatile results for acetone were qualified as “estimated” (J) for samples 25MW-1, 25MW-2, and 25MW-4 because %D for acetone was above the allowable maximum in the associated continuing calibration.

- The positive volatile results for acrolein and chloromethane were qualified as "estimated" (J) for sample 25MW-4 because %Ds for acrolein and chloromethane were above the allowable maximum in the associated continuing calibration.

All data that are not qualified rejected (R) are considered usable with estimated (J-, J, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

4 Ground Water Samples and 1 Trip Blank
Collected December 22, 2025

Prepared by: Donald Anné
February 12, 2026

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for applicable compounds were above the method minimums, as required.

The average RRFs for target compounds were above the allowable minimums, as required.

The %RSDs for bromomethane and dichlorodifluoromethane were above the allowable maximum (30%) for VOA No.8 on 12-17-25. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for applicable compounds were above the method minimums, as required. The %Ds for 8 compounds (highlighted yellow on attached FROM VII) were above the method maximum on 12-24-25 (V8-009361a.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 8 compounds (highlighted yellow on attached FROM VII) and acrolein were above the allowable maximum (20%) on 12-24-25 (V8-009361a.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank BL51715-BLK1 contained traces of hexachlorobutadiene (0.250 ug/L), and methylene chloride (0.700 ug/L). Positive results for methylene chloride that are less than 10 times the method blank level should be reported as not detected (U) in associated samples. Positive results for hexachlorobutadiene that are less than 5 times the method blank level should be reported as not detected (U) in associated samples.

www.alphageoscience.com

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples and trip blank.

Laboratory Control Sample: The relative percent differences (RPDs) for target compounds were below the allowable maximum, but 2 of 2 percent recoveries (%Rs) for 1,1-dichloroethylene, chloroethane, and dichlorodifluoromethane and 1 of 2 %Rs for bromomethane were above QC limits, but not below 30% for aqueous samples BL51715-BS1/BSD1. Positive results for these compounds should be considered estimated, biased high (J+) in associated aqueous samples.

Two of two %Rs for tetrachloroethylene and 1 of 2 %Rs for 1,3-dichlorobenzene, 1,4-dichlorobenzene, and p-ethyltoluene were below QC limits, but not below 30% for aqueous samples BL51715-BS1/BSD1. Positive results for these compounds should be considered estimated, biased low(J-) and "not detected" results estimated (UJ) in associated aqueous samples.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270E Semi-Volatiles Data
for ALS Environmental., SDG: 25L1272

4 Ground Water Samples
Collected December 22, 2025

Prepared by: Donald Anné
February 12, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRF for hexachlorobenzene was below the method minimum, but not below 0.010 for BNA#1 on 12-09-25. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %RSD or average RRF criteria, provided the average RRFs are not below 0.010.

The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRF for hexachlorobenzene was below the method minimum, but not below 0.010 on 12-27-25 (BNA1-037744.D. The RRF for hexachlorobenzene was below the method minimum, but not below 0.010 on 12-29-25 (BNA1-037768.D. The %Ds for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, bis(2-chloroisopropyl)ether, and hexachlorocyclopentadiene were above the method maximum on 12-27-25 (BNA1-037744.D). The %Ds for 2,4-dinitrophenol, 3,3'-dichlorobenzidine, 4,6-dinitro-2-methylphenol, bis(2-chloroisopropyl)ether, and hexachlorocyclopentadiene were above the method maximum on 12-29-25 (BNA1-037768.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, bis(2-chloroisopropyl)ether, and hexachlorocyclopentadiene were above the allowable maximum (20%) on 12-27-25 (BNA1-037744.D). The %Ds for 2,4-dinitrophenol, 3,3'-dichlorobenzidine, 4,6-dinitro-2-methylphenol, bis(2-chloroisopropyl)ether, and hexachlorocyclopentadiene were above the allowable maximum (20%) on 12-29-25 (BNA1-037768.D). Positive results for these compounds should be considered estimated (J) in associated samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: One of three base/neutral surrogate recoveries for samples 25MW-2 and 25MW-3 was below control limits, but not below 10%. No action is taken on one surrogate recovery per fraction outside control limits, provided no recovery is less than 10%.

Two of three base/neutral surrogate recoveries for samples 25MW-1 and 25MW-4 were below control limits, but not below 10%. Positive results for base/neutral compounds should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) for samples 25MW-1 and 25MW-4.

Two of three acid extractable surrogate recoveries for sample 25MW-4 were below control limits, but not below 10%. Positive results for acid extractable compounds should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) for sample 25MW-4.

Two of three acid extractable surrogate recoveries for sample 25MW-1 were below control limits and one below 10%. Positive results for acid extractable compounds should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) for sample 25MW-1.

Laboratory Control Sample: The relative percent differences (RPDs) for target compounds were below the allowable maximum, and 2 of 2 percent recoveries (%Rs) for benzaldehyde were above QC limits for aqueous samples BL51708-BS1/BSD1. Positive results for benzaldehyde should be considered estimated, biased high (J+) in associated aqueous samples.

Two of two %Rs for 4-nitrophenol and pyridine were below QC limits and below 30% for aqueous samples BL51708-BS1/BSD1. Two of two %Rs for hexachlorocyclopentadiene, and pyridine and 1 of 2 %Rs for 4-nitrophenol were below QC limits and below 30% for aqueous samples BL51786-BS1/BSD1. Positive results for these compounds should be considered estimated, biased low (J-); and "not detected" results rejected, unusable (R) in associated aqueous samples.

The RPDs for 33 compounds (highlighted yellow on attached FORM III) were below the allowable maximum for aqueous samples BL51786-BS1/BSD1. Positive results for these compounds should be considered estimated (J) in associated aqueous samples.

Compound ID: Checked surrogate results were within quantitation limits. The analyses of the ground samples reported target compounds as not detected.

QA/QC Review of Method 8270E SIM Semi-Volatiles Data
for ALS Environmental, SDG: 25L1272

4 Ground Water Samples
Collected December 22, 2025

Prepared by: Donald Anné
February 12, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010) and the %Ds were below the allowable maximum (20%), as required.

Blanks: Method blank BL51787-BLK2 contained a trace of bis(2-ethylhexyl)phthalate (0.864 ug/L). Positive results for bis(2-ethylhexyl)phthalate that are less than 10 times the method blank level should be reported as not detected (U) in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The percent recoveries (%Rs) for n-nitrosodimethylamine were below QC limits and below 30% for aqueous samples BL51710-BS2 and BL51787-BS2. Positive results for n-nitrosodimethylamine should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in the associated aqueous samples.

The %Rs for hexachloroethane were above QC limits for aqueous samples BL51710-BS2 and BL51787-BS2. Positive results for hexachloroethane should be considered estimated, biased high (J+) in in the associated aqueous samples.

Compound ID: Checked compound results were within quantitation limits.

Data Usability Summary Report for
ALS Environmental, SDG: 25L1273

8 Soil Vapor Samples
Collected December 22, 2025

Prepared by: Donald Anné
February 12, 2026

The data packages contain the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results for 8 soil vapor samples analyzed for TO-15 volatiles.

The overall performances of the analyses are acceptable. ALS Environmental did fulfill the requirements of the method for TO-15 volatiles.

The data are acceptable with some minor issues that are identified in the accompanying data validation review. There were no data that were qualified either rejected (R) or estimated; therefore, all data are considered usable. Detailed information on data quality is included in the data validation review.

QA/QC Review of Method TO-15 Volatiles Data
for ALS Environmental, SDG: 25L1273

8 Soil Vapor Samples
Collected December 22, 2025

Prepared by: Donald Anné
February 12, 2026

Holding Times: Samples were analyzed within recommended USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010), as required.

The %RSDs for 1,2,4-trichlorobenzene and benzyl chloride were above the allowable maximum (30%) for TO15_AIR3 on 12-05-25. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010) and the %Ds were below the allowable maximum (30%), as required.

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The percent recoveries for target compounds were within QC limits for air/vapor samples BL51732-BS1 and BL51829-BS1.

Compound ID: Checked compounds were within quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Canister Pressure: The laboratory reported "received" pressure for samples below zero (residual vacuum), as required.

Data Usability Summary Report for
Phoenix Environmental Laboratories, Inc.
SDG: GCT58244

4 Soil Vapor Samples
Collected June 20, 2025

Prepared by: Donald Anné
February 12, 2026

The data packages contain the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results for 4 soil vapor samples analyzed for TO15 volatiles.

The overall performances of the analyses are acceptable. Phoenix Environmental Laboratories, Inc. did fulfill the requirements of the analytical method.

The data are acceptable with some minor issues that are identified in the accompanying data validation review. The following data were qualified:

- The "not detected" volatile results for 1,2,4-trichlorobenzene and naphthalene were qualified as "estimated" (UJ) for all 4 soil vapor samples because the percent recoveries for 1,2,4-trichlorobenzene and naphthalene were below QC limits, but not below 25% in the associated air/vapor LCS.

All data are considered usable with estimated (UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation review.

QA/QC Review of Method TO-15 Volatiles Data
for Phoenix Environmental Laboratories, Inc.
SDG: GCT58244

4 Soil Vapor Samples
Collected June 20, 2025

Prepared by: Donald Anné
February 12, 2026

Holding Times: Samples were analyzed within recommended USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %D for 1,2,4-trichlorobenzene (SIM) was above the allowable maximum (30%) on 06-23-25 (0623_03.D). Positive results for 1,2,4-trichlorobenzene should be considered estimated (J) in associated samples.

Blanks: The analysis of the method blank reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the air samples.

Laboratory Control Sample: The percent recoveries for 1,2,4-trichlorobenzene and naphthalene were below QC limits, but not below 25% for air/vapor sample CT57893 LCS. Positive results for these compounds should be considered estimated, biased low (J-), and "not detected" results estimated (UJ) in associated air/vapor samples.

Canister Pressure: The laboratory reported "received" pressures for soil gas samples were below zero (residual vacuum), as required.

Compound ID: Checked compounds were within quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Re: Data Validation Report
2425 Atlantic Avenue
June-December 2025 Soil Sampling Events

Dear Ms. Keenan,

The Data Usability Summary Reports are attached to this letter for the 2425 Atlantic Avenue site, June-December 2025 soil sampling events. The data for ALS Environmental, SDG numbers 25F1387, 25J1851, 25L1023, and 25L1201 are mostly acceptable, with issues that are identified in the DUSRs and QA/QV review summaries. There are data that are rejected, unusable (R) in data pack 25F1387. The DUSR and QA/QC reviews outlines the reasons for rejecting the data. The data are rejected based solely on the validation guidance criteria. The rejected data may be determined to be acceptable to the user based on additional information that is not contained in the data validation criteria.

A list of data validation acronyms and qualifiers is attached to assist you in interpreting the data validation reviews. If you have any questions concerning the work performed, please contact me at (518) 348-6995. Thank you for providing us an opportunity with vEKtor consultants.

Sincerely,
Alpha Geoscience

Donald Anné

Alpha Geoscience: Acronyms and Definitions

Data Validation Acronyms

AA	Atomic absorption, flame technique
BHC	Hexachlorocyclohexane
BFB	Bromofluorobenzene
CCB	Continuing calibration blank
CCC	Calibration check compound
CCV	Continuing calibration verification
CN	Cyanide
CRDL	Contract required detection limit
CRQL	Contract required quantitation limit
CVAA	Atomic adsorption, cold vapor technique
DCAA	2,4-Dichlophenylacetic acid
DCB	Decachlorobiphenyl
DFTPP	Decafluorotriphenyl phosphine
ECD	Electron capture detector
FAA	Atomic absorption, furnace technique
FID	Flame ionization detector
FNP	1-Fluoronaphthalene
GC	Gas chromatography
GC/MS	Gas chromatography/mass spectrometry
GPC	Gel permeation chromatography
ICB	Initial calibration blank
ICP	Inductively coupled plasma-atomic emission spectrometer
ICV	Initial calibration verification
IDL	Instrument detection limit
IS	Internal standard
LCS	Laboratory control sample
LCS/LCSD	Laboratory control sample/laboratory control sample duplicate
MSA	Method of standard additions
MS/MSD	Matrix spike/matrix spike duplicate
PID	Photo ionization detector
PCB	Polychlorinated biphenyl
PCDD	Polychlorinated dibenzodioxins
PCDF	Polychlorinated dibenzofurans
QA	Quality assurance
QC	Quality control
RF	Response factor
RPD	Relative percent difference
RRF	Relative response factor
RRF(number)	Relative response factor at concentration of the number following
RT	Retention time
RRT	Relative retention time
SDG	Sample delivery group
SPCC	System performance check compound
TCX	Tetrachloro-m-xylene
%D	Percent difference
%R	Percent recovery
%RSD	Percent relative standard deviation

Data Validation Qualifiers Used in the QA/QC Reviews for USEPA Region II

U	=	Not detected. The associated number indicates the approximate sample concentration necessary to be detected significantly greater than the level of the highest associated blank.
R	=	Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.
N	=	Tentative identification. Analyte is considered present. Special methods may be needed to confirm its presence or absence during future sampling efforts.
J	=	Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.
J-	=	Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.
J+	=	Analyte is present. Reported value may be biased high andassociated with a higher level of uncertainty than is normally expected with the analytical method.
UJ	=	Not detected, quantitation limit may be inaccurate or imprecise.

Note: These qualifiers are used for data validation purposes. The data validation qualifiers may differ from the qualifiers that the laboratory assigns to the data. Refer to the laboratory analytical report for the definitions of the laboratory qualifiers.

Data Usability Summary Report for
ALS Environmental, SDG: 25F1387

16 Soil Samples, 1 Field Duplicate,
1 Field Blank, and 1 Trip Blank
Collected June 20, 2025

Prepared by: Donald Anné
February 17, 2026

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 16 soil samples, 1 field duplicate, and 1 trip blank analyzed for volatiles; results of 16 soil samples and 1 field duplicate analyzed semi-volatiles, pesticides, PCBs, and TAL metals; results of 1 soil sample and 1 field blank analyzed for PFAS, and the results for 1 soil sample analyzed for 1,4-dioxane.

The overall performances of the analyses are acceptable. ALS Environmental did fulfill the requirements of the analytical methods.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive PCB result for aroclor 1262 was qualified as "estimated, biased high" (J+) for sample SB-4 (6-8) because the %Diff for dual column quantitation of aroclor 1262 was above the allowable maximum, but not above 70% and the higher result was reported.

- The positive metal results for chromium, copper, and vanadium were qualified as estimated, biased high (J+) for all 16 soil samples and the field duplicate because the percent recoveries for chromium, copper, and vanadium were above control limits in the associated soil spike sample.

- The positive metal results for barium, iron and manganese were qualified as estimated (J) for all 16 soil samples and the field duplicate because the relative percent differences for barium, iron, and manganese were above the allowable maximum in the associated soil duplicate sample.

- The "not detected" metal results for antimony were qualified as estimated (UJ) for all 16 soil samples and the field duplicate because the percent recovery for antimony was below control limits, but not below 10% in the associated soil spike sample.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The positive metal results for beryllium were qualified as estimated (J) for the following samples because the relative percent difference for beryllium was above the allowable maximum in the associated soil duplicate sample.

SB-1 (0-2)	SB-1 (6-8)	SB-2 (10-12)	SB-3 (8-10)	SB-3 (10-12)
SB-4 (0-2)	SB-4 (6-8)	SB-5 (0-2)	SB-5 (6-8)	SB-6 (8-10)
SB-6 (10-12)	SB-8 (8-10)	SB-8 (10-12)	DUP-1	

- The positive metal results for the following metals were qualified as estimated (J) for all 16 soil samples and the field duplicate because the %Ds for these metals were above the allowable maximum in the associated soil serial dilution sample and the results were above the MRLs.

aluminum	calcium	cobalt	lead
magnesium	nickel	potassium	sodium
zinc			

- The positive pesticide result for 4,4'-DDD was qualified as "estimated, biased high" (J+) for sample SB-7 (8-10) because the %Diff for dual column quantitation of 4,4'-DDD was above the allowable maximum, but not above 70% and the higher result was reported.

- The positive pesticide result for 4,4'-DDD was qualified as "estimated, presumptive evidence" (JN) for sample SB-4 (0-2) because the %Diff for dual column quantitation of 4,4'-DDD was above the allowable maximum and above 70%, but not above 100%.

- The "not detected" PFAS result for PFMPA was qualified as "rejected, unusable" (R) for sample FB-1 because percent recovery for PFMPA was below QC limits and below 30% in associated aqueous LCS.

- The "not detected" PFAS result for PFBA was qualified as "rejected, unusable" (R) for samples SB-8 (10-12) and FB-1 because the percent recovery for the surrogate used to quantitate PFBA was below QC limits and below 10% in the samples.

- The "not detected" semi-volatile results for 2,4-dimethylphenol, 2,4-dinitrophenol, 4-nitroanilne, caprolactam, hexachlorocylopentadiene, and pentachlorophenol were qualified as "rejected, unusable" (R) for sample SB-3 (8-10) because the percent recoveries for these compounds were below QC limits and below 10% in the associated soil LCS.

- The positive semi-volatile results for 9 compounds were qualified as estimated (J) for samples SB-3 (8-10) and DUP-1 because the relative percent differences for these 9 compounds were above the allowable maximum for the soil field duplicate pair SB-3 (8-10)/DUP-1.

- The "not detected" semi-volatile results for pentachlorophenol were qualified as "rejected, unusable" (R) for samples SB-1 (0-2), SB-1 (6-8), SB-2 (8-10), and SB-2 (10-12) because the average RRF for pentachlorophenol was below the allowable minimum in the associated initial calibration.

- The positive semi-volatile results for di-n-butyl phthalate were qualified as "estimated" (J) for sample SB-6 (10-12) and SB-7 (8-10) because %D for di-n-butyl phthalate was above the allowable maximum in the associated continuing calibration verification sample.

- The "not detected" semi-volatile results for the 15 acid extractable compounds were qualified as "rejected, unusable" (R) for sample SB-7 (8-10) because 2 of 3 acid extractable surrogate recoveries were below control limits and one below 10% in the sample.

- The positive volatile result for acetone was qualified as "estimated" (J) for sample SB-7 (8-10) because the %D for acetone was above the allowable maximum in the associated continuing calibration verification sample.

- The "not detected" volatile results for bromodichloromethane, dibromomethane, and tert-butylbenzene were qualified as "estimated" (UJ) for samples SB-6 (8-10), SB-7 (8-10), and SB-8 (8-10) because 1 or 2 percent recoveries for these compounds were below QC limits, but not below 10% in the associated soil LCS/LCSD.

- The "not detected" volatile results for bromoform, cyclohexane, and hexachlorobutadiene were qualified as "estimated" (UJ) for sample TB-1 because 1 or 2 percent recoveries for these compounds were below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

- The positive volatile results for tetrachloroethylene were qualified as "estimated, biased low" (J-) for samples SB-2 (8-10) and SB-4 (6-8) because 1 of 2 percent recoveries for tetrachoroethylene was below QC limits, but not one below 10% in the associated soil LCS/LCSD.

- The "not detected" volatile results for tetrachloroethylene were qualified as "estimated" (UJ) for the following samples because 1 of 2 percent recoveries for tetrachloroethylene was below QC limits, but not one below 10% in the associated soil LCS/LCSD.

SB-1 (0-2)	SB-1 (6-8)	SB-2 (10-12)	SB-3 (8-10)	SB-3 (10-12)
SB-4 (0-2)	SB-5 (0-2)	SB-5 (6-8)	SB-6 (10-12)	SB-7 (10-12)
SB-8 (10-12)	DUP-1			

- The "not detected" volatile results for MTBE, ethylbenzene, o-xylene, styrene, and TBA were qualified as "estimated" (UJ) for the following samples because 1 or 2 percent recoveries for these compounds were below QC limits, but not one below 10% in the associated soil LCS/LCSD.

SB-1 (0-2)	SB-1 (6-8)	SB-2 (8-10)	SB-2 (10-12)	SB-3 (8-10)
SB-3 (10-12)	SB-4 (0-2)	SB-4 (6-8)	SB-5 (0-2)	SB-5 (6-8)
SB-6 (10-12)	SB-7 (10-12)	SB-8 (10-12)	DUP-1	

All data that are not qualified rejected (R) are considered usable with estimated (J-, J, J+, JN, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of Method 8260D Volatiles Data
for ALS Environmental, SDG: 25F1387

16 Soil Samples, 1 Field Duplicate,
and 1 Trip Blank
Collected June 20, 2025

Prepared by: Donald Anné
February 17, 2026

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for 2-butanone, acetone, bromoform, and methyl acetate were below the method minimums, but not below 0.010 for QVOA9 on 06-17-25. The average RRFs for 1,2-dibromo-3-chloropropane, 2-hexanone, and bromoform were below the method minimums, but not below 0.010 for VOA No.3 on 06-19-25. The average RRF for bromoform was below the method minimum, but not below 0.010 for MS VOA No.2 on 06-20-25. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %RSD or average RRF criteria, provided the average RRFs are not below 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %RSDs for 2-hexanone, acetone, bromoform, and hexachlorobutadiene were above the allowable maximum (30%) for QVOA9 on 06-17-25. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for 2-butanone, 2-hexanone, acetone, bromoform, and bromomethane were below the method minimums, but not below 0.010 06-23-25 (QV936366.D). The RRFs for 1,2-dibromo-3-chloropropane, 2-butanone, 2-hexanone, and bromoform were below the method minimums, but not below 0.010 06-24-25 (V31906128.D). The RRFs for bromoform and tetrachloroethylene were below the method minimums, but not below 0.010 06-25-25 (V2-635805.D). The %Ds 6 compounds (marked with a red X on attached FORM VII) were above the method maximum on 06-23-25 (QV936366.D). The %Ds for 2-butanone, cis-1,2-dichlorocethylene, and methylene acetate were above the method maximum on 06-24-25 (V31906128.D). The %Ds for 4-methyl-2-pentanone, acetone, and carbon disulfide were above the method maximum on

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

6-25-25 (V2-635805.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %Ds 10 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 06-23-25 (QV936366.D). The %Ds for 2-butanone, cis-1,2-dichlorocethylene, methylene acetate, and TBA were above the allowable maximum (20%) on 06-24-25 (V31906128.D). The %Ds for 4-methyl-2-pentanone, acetone, carbon disulfide, and TBA were above the allowable maximum (20%) on 6-25-25 (V2-635805.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method and trip blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the soil samples and trip blank.

Laboratory Control Sample: The relative percent differences (RPDs) for target compounds were below the allowable maximum, but 2 of 2 percent recoveries (%Rs) for MTBE and 1 of 2 %Rs for ethylbenzene, o-xylene, styrene, TBA, and tetrachloroethylene were below QC limits, but not below 10% for soil samples BF51608-BS1/BSD1. The RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for dibromomethane and tert-butylbenzene and 1 of 2 %Rs for bromodichloromethane were below QC limits, but not below 10% for soil samples BF51798-BS1/BSD1. Positive results for these compounds should be considered estimated, biased low (J-) and “not detected” results estimated (UJ) in associated soil samples.

The RPD for hexachlorobutadiene was above the allowable maximum and 2 of 2 for cyclohexane and 1 of 2 %Rs for bromoform and hexachlorobutadiene were below QC limits, but not below 30% for aqueous samples BF51641-BS1/BSD1. Positive results for these compounds should be considered estimated, biased low (J-) and “not detected” results estimated (UJ) in associated aqueous samples.

One of two %Rs for TBA was above QC limits for aqueous samples BF51641-BS1/BSD1. Positive results for TBA should be considered estimated, biased high (J+) in associated aqueous samples.

Field Duplicates: The analyses of soil field duplicate pair SB-3 (8-10)/DUP-1 reported target compounds as not detected; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270E Semi-Volatiles Data
for ALS Environmental, SDG: 25F1387

16 Soil Samples and 1 Field Duplicate
Collected June 20, 2025

Prepared by: Donald Anné
February 17, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRF for hexachlorobenzene was below the method minimum, but not below 0.010 for BNA#2 on 06-13-25. The average RRF for hexachlorobenzene was below the method minimum, but not below 0.010 for BNA#6 on 06-19-25. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %RSD or average RRF criteria, provided the average RRFs are not below 0.010.

The average RRF for pentachlorophenol was below the method minimum and below 0.010 for BNA#2 on 06-13-25. This result was not method compliant. All samples associated with this calibration should have been re-analyzed with a method compliant calibration.

The average RRF for pentachlorophenol was below the allowable minimum (0.010) for BNA#2 on 06-13-25. Positive results for pentachlorophenol should be considered estimated (J) and "not detected" results rejected, unusable (R) in associated samples.

The %RSDs for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, benzoic acid, and pentachlorophenol were above the allowable maximum (30%) for BNA#2 on 06-13-25. The %RSD for benzidine was above the allowable maximum (30%) for BNA#6 on 06-19-25. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRF for hexachlorobenzene was below the method minimums, but not below 0.010 on 06-24-25 (SV67636.D). The RRF for hexachlorobenzene was below the method minimums, but not below 0.010 on 06-25-25 (E20026058.D). The RRF for hexachlorobenzene was below the method minimums, but not below 0.010 on 06-25-25 (SV67672.D). The %Ds 13 compounds (marked with a red X on attached FORM VII)

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

were above the method maximum on 06-24-25 (SV67636.D). The %Ds 12 compounds (marked with a red X on attached FORM VII) were above the method maximum on 06-25-25 (E20026058.D). The %Ds 11 compounds (marked with a red X on attached FORM VII) were above the method maximum on 06-25-25 (SV67672.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds 18 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 06-24-25 (SV67636.D). The %Ds 16 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 06-25-25 (E20026058.D). The %Ds 15 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 06-25-25 (SV67672.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank BF51724-BLK1 contained a trace of bis(2-ethylhexyl)phthalate (0.0370 mg/kg). Positive results for bis(2-ethylhexyl)phthalate that are less than 10 times the highest blank level should be reported as not detected (U) in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Surrogate Recovery: One of three acid extractable surrogate recoveries for samples SB-1 (6-8) and SB-3 (10-12) was above control limits. No action is taken on one surrogate recovery per fraction outside control limits, provided no recovery is less than 10%.

Two of three acid extractable surrogate recoveries for sample SB-7 (8-10) were below control limits and one below 10%. Positive results for acid extractable compounds should be considered estimated, biased low (J-) and “not detected” results rejected, unusable (R) in sample SB-7 (8-10).

Matrix Spike/Matrix Spike Duplicate: The percent recoveries for target compounds were within QC limits, but the relative percent difference for 4-nitroaniline was above the allowable maximum for soil MS/MSD sample SB-3 (10-12). Sample SB-3 (10-12) reported 4-nitroaniline as “not detected”; therefore, no action is taken.

Laboratory Control Sample: The percent recoveries (%Rs) for target compounds were within QC limits for soil sample BF51687-BS1.

The %Rs for benzoic acid and pentachlorophenol were above QC limits for soil sample BF51724-BS1. The %R for 4-nitrophenol was above QC limits for soil sample BF51753-BS1. Positive result for these compounds should be considered estimated, biased high (J+) in associated soil samples.

The %Rs for 2,4-dimethylphenol, 2,4-dinitrophenol, 4-nitroanilne, caprolactam, hexachlorocylopentadiene, and pentachlorophenol were below QC limits and below 10% for soil sample BF51753-BS1. Positive result for these compounds should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in associated soil samples.

Field Duplicates: The relative percent differences for 9 compounds were above the allowable maximum (35%) for soil field duplicate pair SB-3 (8-10)/DUP-1 (attached table). Positive results for these 9 compounds should be considered estimated (J) in samples SB-3 (8-10) and DUP-1.

Compound ID: Checked compound and surrogate results were within quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270D SIM 1,4-Dioxane Data
for ALS Environmental, SDG: 25F1387

1 Soil Sample
Collected June 20, 2025

Prepared by: Donald Anné
February 17, 2026

Holding Times: Sample SB-8 (10-12) was extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRF for 1,4-dioxane was above the allowable minimum (0.010) and the %RSD was below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 1,4-dioxane were above the allowable minimum (0.010) and the %Ds were below the allowable maximum (20%), as required.

Blanks: The analysis of the method blank reported 1,4-dioxane as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Surrogate Recovery: The surrogate recovery was above QC limits for sample SB-8 (10-12). Sample SB-8 (10-12) reported 1,4-dioxane as “not detected”; therefore, no action is taken.

Laboratory Control Sample: The percent recovery for 1,4-dioxane was within QC limits for soil sample BF51726-BS1.

Compound ID: The checked surrogate result was within quantitation limits. The analysis of sample SB-8 (10-12) reported 1,4-dioxane as not detected.

QA/QC Review of Method 8081B Pesticide Data for
ALS Environmental, SDG: 25F1387

16 Soil Samples and 1 Field Duplicate
Collected June 20, 2025

Prepared by: Donald Anné
February 17, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method blanks reported target pesticides as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the soil samples.

Laboratory Control Sample: The percent recoveries for target pesticides were within QC limits for soil samples BF51717-BS1 and BF51722-BS1.

Field Duplicates: The analyses of soil field duplicate pair SB-3 (8-10)/DUP-1 reported target pesticides as not detected; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Initial Calibration: The %RSDs for target pesticides were below the allowable maximum (20%) or the Quad CODs were above the allowable minimum (0.99) for both columns, as required.

Continuing Calibration: The %Ds for target pesticides were below the allowable maximum (20%) for both columns, as required.

DDT/Endrin Breakdown Check: The percent breakdowns were below the allowable maximum (15%) for 4,4'-DDT and endrin, as required.

Pesticide Identification Summary for Single Component Analytes: Checked surrogates were within GC quantitation limits. The %Diff for dual column quantitation of 4,4'-DDD in sample SB-7 (8-10) was above the allowable maximum (25%), but not above 70% and the higher result was reported. The result for 4,4'-DDD should be considered estimated, biased high (J+) in the sample SB-7 (8-10).

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The %Diff for dual column quantitation of 4,4'-DDD in sample SB-4 (0-2) was above the allowable maximum (25%) and above 70%, but not above 100%. The result for 4,4'-DDD should be considered estimated, presumptive evidence (JN) in the sample SB-7 (8-10).

Pesticide Identification Summary for Multicomponent Analytes: The analyses of the soil samples reported target multi-component pesticides as not detected.

QA/QC Review of Method 8082A PCB Data
for ALS Environmental, SDG: 25F1387

16 Soil Samples and 1 Field Duplicate
Collected June 20, 2025

Prepared by: Donald Anné
February 17, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method blanks reported target aroclors as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both column for the soil samples.

Laboratory Control Sample: The percent recoveries for aroclor 1016 and aroclor 1260 were within QC limits on both columns for soil samples BF51715-BS2 and BF51721-BS2.

Field Duplicates: The analyses of soil field duplicate pair SB-3 (8-10)/DUP-1 reported target aroclors as not detected; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Initial Calibration: The %RSDs for aroclor 1016 and aroclor 1260 were below the allowable maximum (20%) or the Quad CODs were above the allowable minimum (0.99) for both columns, as required.

Continuing Calibration: The average %Ds for aroclor 1016 and aroclor 1260 were below the allowable maximum (20%), as required.

PCB Identification Summary: Checked surrogate and detected aroclor results were within GC quantitation limits. The %Diff for dual column quantitation of aroclor 1262 in sample SB-4 (6-8) was above the allowable maximum (25%), but not above 70% and the higher result was reported. The result for aroclor 1262 should be considered estimated, biased high (J+) in sample SB-4 (6-8).

QA/QC Review of Method 1633 PFAS Data for
ALS Environmental, SDG: 25F1387

1 Soil Sample and 1 Field Blank
Collected June 20, 2025

Prepared by: Donald Anné
February 17, 2026

Holding Times: The samples were analyzed within USEPA holding times.

Initial Calibration: The Quad COD for target PFAS were above the allowable minimum (0.995), as required.

Low-Concentration Calibration Verification: The %Ds for & PFAS (highlighted yellow on attached form) were above the allowable maximum (30%) for calibration SF50032. Positive results for these PFAS should be considered estimated (J) in associated low level sample results.

Continuing Calibration: The %Ds for NFDHA and PFDoS were above the allowable maximum (30%) on 06-25-25 (QQQ2096865.d). The %Ds for NFDHA and PFDoS were above the allowable maximum (30%) on 06-25-25 (QQQ2096882.d). Positive results for these PFAS should be considered estimated (J) in associated samples.

Blanks: The analyses of the method and field blanks reported target PFAS as not detected.

Internal Standard Area Summary: The internal standard retention times were within control limits.

Surrogate Recovery: One of twenty-four surrogate recoveries for samples FB-1 and SB-8 (10-12) (19.5) was above QC limits. Positive results associated with the surrogate above QC limits should be considered estimated (J) in these samples.

One of twenty-four surrogate recoveries for samples FB-1 and SB-8 (10-12) was below QC limits and below 10%. Positive results associated with the surrogate below QC limits should be considered estimated (J) and "not detected" results rejected, unusable (R) in the samples.

Laboratory Control Sample: The percent recoveries (%Rs) for target PFAS were within QC limits for low level soil sample BF51809-BS2.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The %Rs for 5 PFAS (highlighted yellow on attached FORM III) were above QC limits for low level aqueous sample BF51671-BS2. Positive results for these PFAS should be considered estimated, biased high (J+) in associated aqueous samples.

The %R for PFMPA was below QC limits and below 30% for aqueous sample BF51671-BS2. Positive results for PFMPA should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in associated aqueous samples.

Compound ID: Checked surrogate and PFAS results were within LC quantitation limits.

QA/QC Review of TAL Metals Data for
ALS Environmental, SDG: 25F1387

16 Soil Samples and 1 Field Duplicate
Collected June 20, 2025

Prepared by: Donald Anné
February 17, 2026

Holding Times: Samples were analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% all metals except Hg, 80-120% for Hg), as required.

CRDL Standard: The percent recoveries for applicable metals were within laboratory QC limits for the CRDL samples.

Blanks: Method blank BF51739-BLK1 contained calcium (28.0 mg/kg) and magnesium (12.7 mg/kg) above the RLs. Positive results for calcium and magnesium that are less than 5 times the highest associated blank level should be reported as not detected in associated samples.

ICP Interference Check Sample: The percent recovery for copper was above control limits (80-120%) for the interference check sample S5F2515-IFB1. Positive results for copper should be considered estimated, biased high (J+) in associated samples.

Spike Sample Recovery: The percent recoveries (%Rs) for chromium, copper, and vanadium were above control limits (75-125%) for soil spike sample DUP-1. Positive results for chromium, copper, and vanadium should be considered estimated, biased high (J+) in associated soil samples.

The %R for antimony was below control limits (75-125%), but not below 10% for soil spike sample DUP-1. Positive results for antimony should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Laboratory Duplicate: The relative percent differences for barium, beryllium, iron, and manganese were above the allowable maximum (35%) for soil duplicate sample DUP-1. Positive results for these metals should be considered estimated (J) in associated soil samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Field Duplicates: The relative percent differences for beryllium, iron, lead, manganese, potassium, and sodium were above the allowable maximum (35%) for soil field duplicate pair SB-3 (8-10)/DUP-1 (attached table). Positive results for these 6 metals should be considered estimated (J) in samples SB-3 (8-10) and DUP-1.

Laboratory Control Sample: The percent recovery for copper was above QC limits for soil sample BF51739-SRM1. Positive results for copper should be considered estimated, biased high (J+) in associated soil samples.

Serial Dilution: The %Ds for 16 metals (highlighted on attached form) were above the allowable maximum (15%) for soil serial dilution sample DUP-1. Positive results for these 16 metals that are above the RLs should be considered estimated (J) in associated soil samples.

Detection Limits: The LODs were at or below POQs, as required.

Percent Solids: The percent solids for soil samples were above 50%.

Data Usability Summary Report for
ALS Environmental, SDG: 25J1851
(Sub: Phoenix Environmental Laboratories, SDG: GCU63897)

9 Soil Samples and 1 Trip Blank
Collected October 30, 2025

Prepared by: Donald Anné
February 17, 2026

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 9 soil samples and 1 trip blank analyzed for volatiles.

The overall performances of the analyses are acceptable. ALS Environmental did fulfill the requirements of the analytical method.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The "not detected" volatile results for p-ethyltoluene and tetrachloroethylene were qualified as "estimated" (UJ) for sample TB-1 (10/25) because the percent recoveries for p-ethyltoluene and tetrachloroethylene were below QC limits, but not below 30% in the associated aqueous LCS.

All data are considered usable with estimated (UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation review.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

Comments:

Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Comments:

Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Comments:

Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

Volatile Comment:
There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

Comments:

Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

QA/QC Review of Method 8260D Volatiles Data
for ALS Environmental, SDG: 25J1851
(Sub: Phoenix Environmental Laboratories, SDG: GCU63897)

9 Soil Samples and 1 Trip Blank
Collected October 30, 2025

Prepared by: Donald Anné
February 17, 2026

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for bromodichloromethane and 1,1,2-trichloroethane were below the method minimums, but not below 0.010 for CHEM26 on 10-27-25. The average RRFs for bromodichloromethane, cis-1,3-dichloropropene, trans-1,3-dichloropropene, 1,1,2-trichloroethane, dibromochloromethane, 1,2-dibromomethane, and bromoform were below the method minimums, but not below 0.010 for CHEM31 on 10-13-25. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %RSD or average RRF criteria, provided the average RRFs are not below 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %RSD for bromomethane was above the allowable maximum (30%) for VOA No.8 on 10-29-25. Positive results for bromomethane should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for 1,2-dichloropropane, bromodichloromethane, cis-1,3-dichloropropene, bromoform, trans-1,3-dichloropropene, 1,1,2-trichloroethane, dibromochloromethane, 1,2-dibromomethane, and ethylbenzene were below the method minimums, but not below 0.010 06-24-25 (V31906128.D). The %D for tetrachloroethylene was above the method maximum on 11-03-25 (V8-008301.D). The %D for 1,2-dibromo-3-chloropropane was above the method maximum on 10-31-25 (1031_32.D). The %Ds for all marked compounds (marked +) except acrolein and tert-butyl alcohol were above the method maximum on 11-10-25 (1101_02.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The %D for tetrachloroethylene was above the allowable maximum (20%) on 11-03-25 (V8-008301.D). The %D for acrolein, 1,2-dibromo-3-chloropropane, and tert-butyl alcohol were above the allowable maximum (20%) on 10-31-25 (1031_32.D). The %Ds 13 compounds (marked +) were above the allowable maximum (20%) on 11-01-25 (1101_02.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method and trip blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported results.

Surrogate Recovery: The surrogate recoveries were within control limits for the soil samples and trip blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target compounds were below the allowable maximum and percent recoveries were within QC limits for soil batch MS/MSD sample CU63896 MS-H. No action is taken on batch MS/MSD data alone to qualify or reject an entire set of samples.

Laboratory Control Sample: The relative percent differences (RPDs) for target compounds were below the allowable maximum and the percent recoveries (%Rs) were within QC limits for soil samples CU63896 LCS-H.

The RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for acrolein were above QC limits for soil samples CU63910 LCS. Positive results for acrolein compounds should be considered estimated, biased high (J+) in associated soil samples.

The %Rs for p-ethyltoluene and tetrachloroethylene were below QC limits, but not below 30% for aqueous sample BK50092-BS1. Positive results for these compounds should be considered estimated, biased low (J-) and “not detected” results estimated (UJ) in associated aqueous samples.

The %Rs for methyl acetate was above QC limits for aqueous sample BK50092-BS1. Positive results for methyl acetate should be considered estimated, biased high (J+) in associated aqueous samples.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Data Usability Summary Report for
ALS Environmental, SDG: 25L1023

18 Soil Samples
Collected December 16-17, 2025

Prepared by: Donald Anné
February 17, 2026

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 18 soil samples analyzed for volatiles.

The overall performances of the analyses are acceptable. ALS Environmental did fulfill the requirements of the analytical method.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive volatile results for acetone were qualified as "estimated" (J) for sample 25SB-8 (9-11), 25SB-9 (4-6), 25SB-7 (9-11), and 25SB-7 (13-15) because the %D for acetone was above the allowable maximum in the associated continuing calibration verification sample.

- The "not detected" volatile results for 8 compounds were qualified as "estimated" (UJ) for samples 25SB-1 (4-6), 25SB-1 (8-10), 25SB-1 (14-16), 25SB-5 (5-7), 25SB-5 (9-11), and 25SB-5 (13-15) because the percent recoveries for these 8 compounds were below QC limits, but not below 10% in the associated soil LCS.

- The positive volatile results for tetrachloroethylene were qualified as "estimated, biased low" (J-) for samples 25SB-6 (5-7) and 25SB-9 (4-6) because 2 of 2 percent recoveries for tetrachoroethylene were below QC limits, but not one below 10% in the associated soil LCS/LCSD.

- The "not detected" volatile results for tetrachloroethylene were qualified as "estimated" (UJ) for the following samples because 2 of 2 percent recoveries for tetrachloroethylene were below QC limits, but not one below 10% in the associated soil LCS/LCSD.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

25SB-6 (9-11)	25SB-6 (13-15)	25SB-8 (5-7)	25SB-8 (9-11)
25SB-8 (13-15)	25SB-9 (8-10)	25SB-9 (14-16)	25SB-7 (5-7)
25SB-7 (9-11)	25SB-7 (13-15)		

- The "not detected" volatile results for hexachlorobutadiene and n-butylbenzene were qualified as "estimated" (UJ) for the following samples because 1 or 2 percent recoveries for these compounds were below QC limits, but not one below 10% in the associated soil LCS/LCSD.

25SB-6 (5-7)	25SB-6 (9-11)	25SB-6 (13-15)	25SB-8 (5-7)
25SB-8 (9-11)	25SB-8 (13-15)	25SB-9 (4-6)	25SB-9 (8-10)
25SB-9 (14-16)	25SB-7 (5-7)	25SB-7 (9-11)	25SB-7 (13-15)

All data are considered usable with estimated (J-, J, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation review.

QA/QC Review of Method 8260D Volatiles Data
for ALS Environmental, SDG: 25L1023

18 Soil Samples
Collected December 16-17, 2025

Prepared by: Donald Anné
February 17, 2026

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for 2-butanone, 2-hexanone, and bromoform were below the method minimums, but not below 0.010 for VOA No.3 on 12-21-25. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %RSD or average RRF criteria, provided the average RRFs are not below 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %RSDs for dichlorodifluoromethane and methylene chloride were above the allowable maximum (30%) for VOA#11 on 12-19-25. The %RSDs for acrolein and dichlorodifluoromethane were above the allowable maximum (30%) for VOA No.3 on 12-21-25. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for 2-butanone, 2-hexanone, and bromoform were below the method minimums, but not below 0.010 12-21-25 (V31909121.D). The %Ds for 1,1-dichloroethylene, dichlorodifluoromethane, MTBE, and trans-1,2-dichlorocethylene were above the method maximum on 12-21-25 (V31909121.D). The %Ds 8 compounds (marked with a red X on attached FORM VII) were above the method maximum on 12-22-25 (V11C028891.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The %Ds 10 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 12-22-25 (V11C028891.D). The %Ds for 1,1-dichloroethylene, acrolein, dichlorodifluoromethane, MTBE, and trans-1,2-dichlorocethylenewere above the allowable maximum (20%) on 12-21-25 (V31909121.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the soil samples.

Laboratory Control Sample: The relative percent difference for acrylonitrile was above the allowable maximum and 2 of 2 percent recoveries (%Rs) for chloroethane and 1 of 2 %Rs for 1,1-dichloroethylene and acrylonitrile were above QC limits for soil samples BL51516-BS1/BSD1. Positive results for these compounds should be considered estimated, biased high (J+) in associated soil samples.

The %Rs for 8 compounds (highlighted yellow on attached FORM III) were below QC limits, but not below 10% for soil sample BL51515-BS1. Two of two %Rs for n-butylbenzene and tetrachloroethylene and 1 of 2 %Rs for hexachlorobutadiene were below QC limits, but not below 10% for soil samples BL51516-BS1/BSD1. Positive results for these compounds should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Data Usability Summary Report for
ALS Environmental, SDG: 25L1201

9 Soil Samples
Collected December 18-19, 2025

Prepared by: Donald Anné
February 17, 2026

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 9 soil samples analyzed for volatiles.

The overall performances of the analyses are acceptable. ALS Environmental did fulfill the requirements of the analytical method.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive volatile results for acetone were qualified as "estimated" (J) for sample 25SB-4 (9-11), 25SB-3 (9-11), 25SB-2 (5-7), 25SB-2 (9-11), and 25SB-2 (13-15) because the %D for acetone was above the allowable maximum in the associated continuing calibration verification sample.

- The "not detected" volatile results for n-butylbenzene were qualified as "estimated" (UJ) for all 9 soil samples because 2 of 2 percent recoveries for n-butylbenzene were below QC limits, but not one below 10% in the associated soil LCS/LCSD.

All data are considered usable with estimated (J or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation review.

QA/QC Review of Method 8260D Volatiles Data
for ALS Environmental, SDG: 25L1201

9 Soil Samples
Collected December 18-19, 2025

Prepared by: Donald Anné
February 17, 2026

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for applicable compounds were above the method minimums, as required.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRF for 2-hexanone, trichloroethylene, and bromoform were below the method minimum, but not below 0.010 12-24-25 (V2-639321.D). The %Ds for 1,1-dichloroethylene, acetone, chloromethane, dichlorodifluoromethane, and vinyl chloride were above the method maximum on 12-24-25 (V2-639321.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %Ds for 1,1-dichloroethylene, acetone, acrolein, chloromethane, dichlorodifluoromethane, and vinyl chloride were above the allowable maximum (20%) on 12-24-25 (V2-639321.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Surrogate Recovery: The surrogate recoveries were within control limits for the soil samples.

Laboratory Control Sample: The relative percent differences for target compounds were below the allowable maximum, but 1 of 2 percent recoveries (%Rs) for chloroethane was above QC limits for soil samples BL51661-BS1/BSD1. Positive results for chloroethane should be considered estimated, biased high (J+) in associated soil samples.

Two of two %Rs for n-butylbenzene were below QC limits, but not below 10% for soil samples BL51661-BS1/BSD1. Positive results for these compounds should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

CONTINUING CALIBRATION CHECK

EPA 8260D

Laboratory:	ALS Environmental - Stratford	SDG:	25L1201
Client:	Vektor Consultants	Project:	25030016 2425 Atlantic Brooklyn 10034
Instrument ID:	MS VOA 2	Calibration:	SL50035
Lab File ID:	V2-639321.D	Calibration Date:	12/12/25 00:31
Sequence:	S5L2414	Injection Date:	12/24/25
Lab Sample ID:	S5L2414-CCV1	Injection Time:	07:51

		CONC. (ug/L)		RESPONSE FACTOR			% DIFF / DRIFT		
COMPOUND	TYPE	STD	CCV	ICAL	CCV	MIN (#)	CCV	LIMIT (#)	Q
Tetrachloroethylene	A	50.0	40.8	0.278241	0.2271035	0.2	-18.4	20	
Toluene	A	50.0	42.7	0.9619634	0.822304	0.4	-14.5	20	
trans-1,2-Dichloroethylene	A	50.0	41.0	1.046547	0.8576953	0.1	-18.0	20	
trans-1,3-Dichloropropylene	A	50.0	47.3	0.2736514	0.2586326	0.1	-5.5	20	
Trichloroethylene	A	50.0	40.7	0.2414097	0.1963082	0.2 *	-18.7	20	
Trichlorofluoromethane	A	50.0	47.4	1.586197	1.504962	0.1	-5.1	20	
Vinyl Chloride	A	50.0	36.2	1.027728	0.7450479	0.1	-27.5	20 *	
Xylenes, Total	A	150	141	0.6409471	0.6475523		1.0	20	

Column to be used to flag Response Factor and %Diff/Drift values with an asterisk

* Values outside of QC limits
