VOC	Volatile Organic Compound

CERTIFICATION

I, Hilmi U. Aydin, certify that I am currently a Qualified Environmental Professional as defined in 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 and that this Remedial Investigation Report as prepared in accordance with all applicable statutes and regulations and in substantial conformance with the Division of Environmental Remediation (DER) Technical Guidance for Site Investigation and Remediation (DER-10).

Hilmi U. Aydin
Principal Engineer

1.0 INTRODUCTION

This Remedial Investigation Report (RIR) was prepared on behalf of Haven Junction GP, Inc. (the "Applicant") for the 2425 Atlantic Avenue Site, located at 2425 Atlantic Avenue in Brooklyn, Kings County, New York (the "Site"). An application to enroll in the New York State Brownfield Cleanup Program (BCP) is submitted along with this RIR. The purpose of this remedial investigation (RI) was to characterize the nature and extent of contamination associated with historic operations at the Site; identify potential contaminant source areas; perform a qualitative exposure assessment for current and potential future occupants of the Site and the surrounding community; and provide data necessary to support the evaluation of remedial alternatives.

This Remedial Investigation Report (RIR) provides the data and findings of the RI conducted at the Site on June 20, 2025, October 30, 2025, November 11, 2025, and December 16-18, 2025. The RI was conducted in accordance with the NYSDEC Division of Environmental Remediation (DER) Program Policy: Technical Guidance for Site Investigation and Remediation (DER-10); and the New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York, with revisions (October 2006).

2.0 SITE BACKGROUND

2.1 Site Location and Current Usage

The Site is located at 2425 Atlantic Avenue and 30 Havens Place in the Ocean Hills section in Brooklyn, New York and is identified as Block 1574 and Lots 23 and 24 (previously lot 23) on the New York City Tax Map. Lot 23 was split into two new Lots 23 and 24 in July 2025. The two adjacent tax parcels total approximately 17,533.40 square feet (0.402 acres). At the time of the RI activities, the Site was improved with an unoccupied one-story brick warehouse with a partial cellar that was approximately 8 feet bgs on the southern portion of the property, and a slab on grade metal one-story warehouse on the northern portion of the property. Both warehouses were demolished in February 2026 and currently, only the ground floor slab of the northern extension, and the cellar slab in the south of the property remain onsite. The Site is secured with construction fencing and locked gated entrances.

A Site Location Map is provided in Figure 1.

2.2 Description of Surrounding Property

North	One three-story residential building along Havens Place (18 Havens Place)
South	Atlantic Avenue, followed by commercial and industrial use buildings
West	One two-story commercial building along Atlantic Avenue (2413 Atlantic Avenue) and seven two-story residential buildings along Jardine Place (7 through 19 Jardine Place)
East	Havens Place, followed by a parking lot

The Site is approximately 17,533-square feet cand is bounded by residential buildings to the north, Atlantic Avenue followed by commercial and industrial buildings to the south, Havens Place followed by a parking lot to the east, and residential and commercial buildings to the west.

A Site Boundary and Surrounding Land Usage Map is provided in Figure 2.

The nearest ecological receptors are Highland Park, located approximately 0.33 miles to the northeast of the Site and Jamaica Bay, located approximately 3 miles to the south of the Site. Other sensitive receptors, as defined in DER-10, within a half mile of the Site include the following:

<u>Educational Facilities:</u>

- Bushwick Ascend Middle School (2 Aberdeen Street, Brooklyn, NY 11207)
- Christopher Avenue Community School (51 Christopher Avenue 4th Floor, Brooklyn, NY 11212)
- Achievement First Brownsville CS (2021 Bergen Street RM 149, Brooklyn, NY 11233)
- William H. Maxwell Career and Technical Education High School (145 Pennsylvania Avenue, Brooklyn, NY 11207)

Childcare/Daycare Facilities:

- Trey Whitfield School (17 Hinsdale Street, Brooklyn, NY 11207)
- Christopher Avenue Community School (51 Christopher Avenue, Brooklyn, NY 11212)
- Brooklyn Kindergarten Society (1592 East New York Avenue, Brooklyn, NY 11212)
- Shirley Chisholm Day Care Center #4 (33 Sommers Street, Brooklyn, NY 11233)

Parks and Recreational Areas:

- Hull Street Garden (227 Hull Street, Brooklyn, NY 11233)
- Garden (45 Somers Street, Brooklyn, NY 11233)
- Phoenix Community Garden (2037 Fulton Street, Brooklyn, NY 11233)
- Fish Playground (231 Saratoga Avenue, Brooklyn, NY 11233)
- Thomas Boyland Park (16 Furman Avenue, Brooklyn, NY 11207)
- Granite St. Block Association (28 Granite Street, Brooklyn, NY 11207)
- SH'MA Yisrael (2084 Pacific Street, Brooklyn, NY 11233)
- Ocean Hill Playground (275 Hopkinson Avenue, Brookyln, NY 11233)
- Houston Playground (145 Glenmore Avenue, Brooklyn, NY 11233)
- TLC Sculpture Park Garden (271 Glenmore Avenue, Brooklyn, NY 11207)
- George Walker Jr. Park (57 Vermont Street, Brooklyn, NY 11207)

2.3 Geology and Hydrogeology

Geology

The Site is located in the western portion of Brooklyn, New York, within the Paleozoic Hartland formation of bedrock at a depth of approximately 400 to 500 feet below grade surface. The ground surface elevation at the Site is approximately 90 feet above mean sea level (USGS 7.5-Minute Brooklyn, New York Quadrangle, 2013). The Site is situated in an area historically influenced by glacial activity, with surficial deposits consisting of fill material overlying native glacial and coastal plain sediments.

Near surface geology in heavily developed areas such as the site and its vicinity is considered urban land and is characterized by a non-homogenous distribution of soil and fill types. During the RI, soil/fill onsite was classified as brown fine to medium silty sand from below the slab to 14 feet bgs with some gravel.

Hydrogeology

The average depth to water beneath the Site was identified at approximately 59.46 feet bgs and ranged from 56.75 to 62.16 feet bgs across the Site. Regional groundwater flows generally move from northwest to southeast towards Jamaica Bay.

According to the United States Fish & Wildlife Service National Wetlands Inventory and the NYSDEC regulated wetlands map, there are no wetlands at or adjacent to the Site.

2.4 Redevelopment Plans

The proposed future use of the Site will consist of two new 13-story residential buildings with an open space in the western portion. According to the New York City Planning's Zoning and Land Use Map, the current zoning of the Site is C4-5D, which is generally characterized as commercial contextual zoning district allowing for various commercial, community facility, and residential uses. C4-5D has a residential equivalent of R7D. Contextual zoning districts are required to comply with the Quality Housing Program for residential use. A floor area ratio (FAR) of 4.2 is permitted in C4-5D districts, and height and setback distances are controlled by a sky exposure plan. Accessory parking is permitted in C4-5D districts at a ratio of 1 parking space per 1,000 square feet. The new buildings are subject to mandatory inclusionary housing (MIH) requirements and will provide affordable housing.

3.0 SITE HISTORY

3.1 Past Uses and Ownership

Based on the review of the available historical records, the Site was undeveloped as early as 1888 and consisted of eight adjacent tax parcels. In 1946, five out of the eight tax parcels were merged in the southern portion of the Site (former lot 23), and the southern portion was improved with a one-story building with a basement and utilized as a loft with a spray booth identified in the northwestern corner of the building. Sometime between 1995 and 2007, the southern building was converted to a warehouse, and the spray booth was no longer present. In 2001, the three tax parcels in the northern portion of the Site were merged and the northern portion of the Site was improved with a one-story slab on grade pre-fab structure. In 2007, the northern building was utilized as storage. The Site layout remained unchanged until the recent demolition in February 2026.

The tenants included private residents (1934), Polaray Co. Plastics, Pycolite Plastics Corp, Pilgrim Art Co and Art Quilting Co. (1949), clothing/knitting store (1960-1976), A-I-D Labs of NY Inc. (1980), metal products shop (1985-1997), Active World Solutions and Continental Mailing Incorporated (1999), an archival storage facility (2004-2017) and a mattress fabrication shop identified as Z-Studios (2017-March 2025).

According to the Automated City Register Information System (ACRIS) operated by the New York City Department of Finance, the Site is currently owned by Haven Junction GP Inc. (Atlantic Haven Realty LP and Haven Junction LP).

3.2 Previous Investigations

Phase II Environmental Site Assessment Report by Impact Environmental, July 26, 2001

A Phase II ESA was conducted by Impact Environmental (IE) in 2001 on behalf of Comprehensive Archives, Inc.

The scope of the Phase II consisted of: 1) a remote sensing survey to confirm the presence of any abandoned USTs and 2) an investigation to determine what, if any, contaminants were released to the subsurface soil of the Site as a result of the on-Site operations.

A GPR survey was performed to identify the presence of abandoned USTs. Two subsurface anomalies were identified. One anomaly was detected on the northern side of the existing building immediately adjacent to a structure that contained a heating unit. The other anomaly was detected on the southern side of the building within the basement. Both anomalies had an east-west orientation.

- Five boring locations, designated SP-1 through SP-5, were advanced at the site. One sample each was collected from the two tank areas and one sample each was collected from the four UIW structures for a total of 6 soil samples.

- Analytical results from the SP-2 UST location identified VOCs and total Xylenes above the TAGM #4046 guidelines and sample results from the SP-4 UST location were detected below the applicable guidance criteria.
- UIW sampling results identified exceedances of PAH SVOCs in UIW-1 and UIW-4 and Metals in all four UIW sample locations.

Phase III Environmental Site Assessment Letter Report by Impact Environmental, December 5, 2001

Following the Phase II ESA, IE then conducted closure activities in order to address the contaminated soil associated with the 1,100-gallon fuel oil UST and proper removal of same.

A 1,100-gallon UST and contaminated soil was excavated and removed from the property under the auspices of the NYSDEC. Endpoint samples were collected and the analytical results satisfied the NYSDEC soil cleanup objectives according to TAGM#HR-94-4046 and Spill No. 01-06974 was closed. Impacted sediments detected within the IUWs were excavated and removed from the property in accordance with a remediation plan approved by USEPA. Endpoint samples from the UIWs satisfied NYSDEC soil cleanup objectives according to TAGM#HR-94-4046.

Copies of the previous reports are provided as Appendix A.

Phase I Environmental Site Assessment Report by Middleton Environmental Inc., July 2022

A Phase I Environmental Site Assessment (ESA) Report prepared by Middleton Environmental Inc. (MEI) dated July 2022, indicated that the previous reports prepared by IE were reviewed. At the time of MEI's reconnaissance, the Site was occupied by a mattress fabrication shop identified as Z-Studios. Since 1934, the Site has been utilized for commercial and industrial use (clothing/knitting store (1965-1976), metal products shop (1985-1997), archival storage facility (2004-2017), fabrication shop (2017-March 2025) and residential use. The Middleton Phase 1 ESA also indicated that a Phase 1 ESA prepared by GEI Consultants, dated August 2017, had been provided to MEI for review. According to MEI, the GEI report indicated that the previous actions conducted by IE were classified as HRECs not requiring further action and did not require any immediate testing. However, GEI noted that due to the properties E-Designation status, redevelopment would require detailed soil, groundwater and soil vapor testing as required by the City of New York. MEI concluded that based on the findings of the previous environmental reports, no further action was recommended.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

On behalf of Haven Junction GP Inc., Vektor performed the following scope of work on June 20, 2025, October 30, 2025, November 11, 2025, and December 18-22, 2025:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Performed a geophysical survey to locate unidentified underground storage tanks (USTs) and identify utilities in the vicinity of the boring locations;
3. Installed twenty soil borings across the entire project Site, and collected fifty-three soil samples in addition to one duplicate soil sample for chemical analysis to evaluate soil quality;
4. Installed two off-site monitoring wells in the sidewalk adjacent to the southern and eastern Site boundaries, four on-site monitoring wells, and collected six groundwater samples to evaluate groundwater quality;
5. Installed eleven soil vapor probes throughout the Site and collected nine samples for chemical analysis to evaluate soil vapor quality; and
6. Installed seven sub-slab vapor probes throughout the Site and collected seven samples for chemical analysis to evaluate sub-slab vapor quality.

A summary of the construction details for soil borings and soil vapor points are provided in Table 1 and groundwater well construction details are provided in Table 2. The locations of all soil borings, groundwater monitoring wells, and soil vapor points from the RI are shown on the Sampling Plan which is provided as Figure 3.

4.1 Geophysical Investigation

A geophysical survey was performed by Coastal Environmental Solutions, Inc. (Coastal) of Bohemia, New York at the site on June 20, 2025. The purpose of the geophysical survey was to identify anomalies, located buried utilities, clear boring locations, and identify possible suspect underground storage tank areas. Coastal utilized a Geophysical Survey Systems Inc. SIR-3000 cart mounted Ground Penetrating Radar (GPR) unit with a 400 Mhz antenna, a radio-detection RD7000 precision utility locator, and a Fisher M-Scope TW-6 pipe and cable locator. The geophysical survey was conducted only in the accessible areas of the site. The geophysical scan did not identify any anomalies or areas of concern indicative of potential USTs.

A copy of the geophysical report is provided in Appendix B.

4.2 Soil Investigation

4.2.1 Soil Boring Installation

Coastal Environmental Solutions, Inc. (Coastal) of Bohemia, New York, was retained to install soil borings at the site on June 20, 2025, and October 30, 2025. A direct-push GeoProbe 6011DT was utilized on June 20, 2025 and a direct-push GeoProbe 6620DT was utilized on October 30, 2025.

Eleven borings designated as SB-1 through SB-11 were advanced to depths ranging between 7 to 14 feet bgs. Soil borings SB-1, SB-4, SB-5, and SB-9 were installed from grade in the northern portion of the building on the subject property where SB-1, SB-4, and SB-5 were installed to 8 feet bgs and SB-9 was installed to 10.5 feet. Soil borings SB-2, SB-3, SB-6, SB-7, SB-8, SB-10, and SB-11 were installed in the southern portion of the subject property building in the cellar. The cellar floor was approximately 8 feet below grade surface, and SB-2, SB-3, SB-6, SB-7, SB-8, and SB-11 were installed to 5 feet below the basement grade surface (bbgs) to a depth of approximately 13 feet below grade surface. SB-10 was installed to 6 feet bbgs, or approximately 14 feet below grade surface.

Refusals were encountered at depths of 8 feet bgs in the northern portion of the site and 14 feet bgs in the southern portion of the site. Soil samples were collected continuously into 5-foot acetate sleeves. The soil from each boring was field screened for the presence of volatile organic compounds (VOCs) with a photoionization detector (PID) and were inspected for visual and olfactory indications of contamination. Nominal PID readings ranged between 1.3 and 5.0 parts per million (ppm). Otherwise, no elevated PID readings were detected during soil screening activities. For SB-1 through SB-8, two samples were collected from each soil boring location. One sample was collected from each boring two-foot depth interval immediately below the slab; and one sample was collected from the two-foot depth interval at the bottom of the boring, prior to termination due to refusals. Three soil samples each were collected from SB-9, SB-10 and SB-11, for a total of nine samples. Soils logged during the RI were generally classified as brown fine to medium grained sand with varying amounts of gravel.

Boring logs were prepared by a geologist and are attached in Appendix C.

4.2.2 Supplemental Boring Installation

PG Environmental Services, Inc. (PG) of Commack, New York, was retained to install soil borings at the site on December 16, 2025 through December 19, 2025. A direct-push GeoProbe 7822DT was utilized on December 16, 2025, a direct-push GeoProbe 6712DT was utilized on December 17, 2025, a direct-push GeoProbe 6712DT was utilized on December 18, 2025, and a direct-push Geoprobe 7822DT was utilized on December 19, 2025.

Nine borings designated as 25SB-1 through 25SB-9 were advanced to depths ranging between 10 to 25 feet bgs. Soil borings 25SB-1 and 25SB-9 were installed from grade in the northern portion of the subject property, with 25SB-1 installed to 25 feet bgs and 25SB-9 installed to 20 feet bgs. Soil borings 25SB-2, 25SB-3, 25SB-4, 25SB-5, 25SB-6, 25SB-7, and 25SB-8 were installed in

the southern portion of the former building cellar. The cellar floor was approximately 8 feet below grade surface, and 25SB-3, and 25SB-4 were installed to 25 feet below the basement grade surface (bbgs) to a depth of approximately 33 feet below grade surface. Additionally, 25SB-2, 25SB-5, 25SB-6, 25SB-7, and 25SB-8 were installed to 10 feet bbgs, or approximately 18 feet below grade surface.

It should be noted that during the installation of the supplementary soil borings and soil sample collection, a cellar depth of 5 feet bgs was used for the sample depth intervals. The cellar depth was later revised to 8 feet bgs based on the elevation information provided by the groundwater well survey conducted by Montrose. All sample intervals in the relevant boring logs and within this report text have been revised to account for this change. The laboratory analytical reports and DUSRs have not been revised, and sample ids within those documents contain the original sample depth intervals.

4.2.3 Soil Sampling

Fifty-two soil samples were collected in addition to one duplicate soil sample for chemical analysis during the RI and supplemental RI conducted on June 20, October 30, and December 16, 2025.

Soil samples were collected continuously into 5-foot-long acetate sleeves. Continuous soil samples were collected from each boring and field screened for presence of VOCs with a photoionization detector (PID) and were inspected for visual and olfactory evidence of contamination. Generally, elevated PID readings were not identified during the RI and supplemental RI.

Two or three samples were collected from each soil boring. At each boring location, one soil sample was collected from the shallow soil interval at 0 to 2 feet bbgs from 25SB-1, 25SB-4, 25SB-5, and 25SB-9. One sample was collected from directly above the groundwater interface in 25SB-1 through 25SB-11. Additionally, a third, intermediate depth sample was collected from 25SB-9, 25SB-10 and 25SB-11.

All soil samples were collected using a dedicated, disposable sampling scoop to prevent cross-contamination. VOC samples were collected via a dedicated one-time use 5g Terra-core sampler tool provided by the laboratory for each sample. Soil samples were immediately containerized in pre-cleaned, laboratory-supplied glassware, stored in a chilled cooler (4 °C), and submitted to York Analytical Laboratories, Inc. (York) of Queens, NY, under proper chain of custody procedures.

Approximate corresponding datum depths are as follows:

Sample ID	Sample Intervals
SB-1	0-2 feet bgs, 6-8 feet, bgs
SB-2	8-10 feet bgs, 10-12 feet bgs
SB-3	8-10 feet bgs, 10-12 feet bgs
SB-4	0-2 feet bgs, 6-8 feet bgs
SB-5	0-2 feet bgs, 6-8 feet bgs
SB-6	8-10 feet bgs, 10-12 feet bgs
SB-7	8-10 feet bgs, 10-12 feet bgs
SB-8	8-10 feet bgs, 10-12 feet bgs

Sample ID	Sample Intervals
SB-9	0-2 feet bgs, 6-8 feet bgs, 8-10 feet bgs
SB-10	8-10 feet bgs, 10-12 feet bgs, 12-14 feet bgs
SB-11	8-10 feet bgs, 10-12 feet bgs, 12-13 feet bgs
25SB-1	4-6 feet bgs, 8-10 feet bgs, 14-16 feet bgs
25SB-2	8-10 feet bgs, 12-14 feet bgs, 16-18 feet bgs
25SB-3	8-10 feet bgs, 12-14 feet bgs, 16-18 feet bgs
25SB-4	8-10 feet bgs, 12-14 feet bgs, 16-18 feet bgs
25SB-5	8-10 feet bgs, 12-14 feet bgs, 16-18 feet bgs
25SB-6	8-10 feet bgs, 12-14 feet bgs, 16-18 feet bgs
25SB-7	8-10 feet bgs, 12-14 feet bgs, 16-18 feet bgs
25SB-8	8-10 feet bgs, 12-14 feet bgs, 16-18 feet bgs
25SB-9	4-6 feet bgs, 8-10 feet bgs, 14-16 feet bgs
DUP-1 (from parent sample SB-3)	8-10 feet bgs

Soil samples were analyzed at NYSDOH ELAP-certified laboratory for the presence of Part 375 Target Compound List (TCL) volatile organic compounds (VOCs) by EPA Method 8260, TCL semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides by EPA Method 8081, polychlorinated biphenyls (PCBs) by EPA Method 8082, Target Analyte List (TAL) metals including mercury by EPA Methods 6010 and 7471, 1,4-dioxane by EPA Method 8270SIM, and 40 per- and polyfluoroalkyl substances (PFAS) compounds via EPA Method 1633.

4.3 Groundwater Investigation

4.3.1 Monitoring Well Installation

Two monitoring wells, identified as SW-1 and SW-2, were installed off-Site (located within the sidewalk adjacent to the Site) during the performance of the RI on October 30, 2025. HRF and PG Environmental Services, Inc. utilized a GeoProbe 7822DT to install both wells. The initial 10 feet below grade was cleared via hand auger before direct push methodology was used to install the remainder of the well string. SW-1 was installed to 65.18 feet bgs within the sidewalk on Havens Place and SW-2 was installed to 71.09 feet bgs within the sidewalk on Atlantic Avenue. Both wells were installed with twenty feet of 10-mil slotted screen PVC at the bottom of both wells.

Four additional monitoring wells, 25MW-1 through 25MW-4, were installed by PG Environmental Services, Inc. utilizing a GeoProbe 7822DT during the RI between December 16 and December 19, 2025. 25MW-1 was installed to 75 feet bgs outside of the cellar in the northwest of the Site. 25MW-2 was installed to 68 feet bbgs (below basement grade surface) which is approximately 76 feet bgs. 25MW-3 was installed to 70 feet bbgs which is approximately 78 feet bgs. 25MW-4 was installed to 69.5 feet bbgs which is approximately 77.5 feet bgs. 25MW-1 was installed with fifteen feet of 10-mil slotted screen PVC, and 25MW-2, 25MW-3, and 25MW-4 were installed with twenty feet of 10-mil slotted screen PVC.

Monitoring well construction logs are attached in Appendix D. A map of groundwater elevations with groundwater contours is shown in Figure 4.

Installed Monitoring Well Construction Information

Monitoring Well ID	Gauging Date	TOC** Elevation (NAVD88)	Depth to Water* (Feet)	Groundwater Elevation (NAVD88)	Bottom of Screen* (Feet)	Top of Screen* (Feet)	Total Screen Depth* (Feet)
SW-1	10/30/2025	70.08	56.75	13.33	45.18	65.18	20
SW-2	10/30/2025	69.65	62.16	7.49	71.09	51.09	20
25MW-1	12/22/2025	72.38	63.30	9.08	75.60	55.60	15
25MW-2	12/22/2025	63.11	53.80	9.31	68.00	48.00	20
25MW-3	12/22/2025	63.27	54.95	8.32	70.00	50.00	20
25MW-4	12/22/2025	63.24	54.30	8.94	49.50	69.53	20

* All measurements shown are in feet from grade level.

**TOC: Top of Casing

All monitoring wells were developed following installation, using a submersible pump, until the water was clear and the turbidity was less than 50 Nephelometric Turbidity Units (NTUs). Monitoring wells were gauged and surveyed by Montrose Surveying Co. LLP. Groundwater elevations ranged from el. 8.32 feet North American Vertical Datum 1988 (NAVD88) in 25MW-3 to el. 9.31 feet (NAVD88) in 25MW-2.

4.3.2 Groundwater Sampling

Two groundwater samples and one Field Blank were collected for chemical analysis during the RI on November 11, 2025, utilizing a monsoon pump and high-density polyethylene tubing. Approximately three well volumes were purged from each monitoring well prior to sampling. Due to limited water column recharge, low-flow sampling conditions could not be achieved, and sufficient sample aliquots could not be obtained for all analytical parameters.

On December 22, 2025, four groundwater samples were collected, one from each of the four monitoring wells located on-Site. In addition, one trip blank was also collected. Approximately three well volumes were purged from each monitoring well prior to sampling, utilizing a Grundfos pump. The tubing was changed between each monitoring well to prevent cross-contamination, and the low-flow sampling equipment was cleaned with Alconox and distilled water. Samples were collected with a Grundfos pump with dedicated low-density polyethylene tubing. Groundwater samples were placed into laboratory supplied glassware and stored in a chilled cooler (4 degrees Celsius) and submitted to York Analytical of Stratford, CT, under proper chain of custody procedures.

Groundwater samples collected at groundwater interface were submitted to York Analytical, an ELAP certified laboratory, for analysis for TCL VOCs by EPA Method 8260, TCL SVOCs by EPA Method 8270, pesticides by EPA Method 8081, herbicides via EPA Method 8151, PCBs by EPA Method 8082, and TAL metals including mercury (total and dissolved) via EPA Method 6010 and 7471, 40 per- and polyfluoroalkyl substances (PFAS) compounds via EPA Method 1633, and 1,4-dioxane via 8270SIM.

All groundwater monitoring wells were surveyed to a common datum on February 10, 2026. The monitoring well survey is provided in Appendix E.

4.4 Soil Vapor Investigation

4.4.1 Soil Vapor Point/ Sub-Slab Vapor Point Installation

Six soil vapor probes, identified as SV-1 through SV-6, were installed and four soil vapor samples were collected for chemical analysis during the RI on June 20, 2025. The soil vapor points were installed using the same drilling equipment as the soil borings. SV-1 and SV-4 were installed in the northern portion of the building on the subject property and were installed to 7.5 and 7 feet bgs, respectively. SV-2, SV-3, SV-5, and SV-6 were installed in the southern portion of the building on the subject property, in the cellar. The cellar floor is approximately 8 feet below grade surface. Soil Vapor probe SV-2 was installed 7 feet bbgs, to a total depth of 15 feet bgs while SV-3, SV-5, and SV-6 were installed to 4.5 feet bbgs, to a total depth of 12.5 feet bgs. Due to improperly calibrated flow regulators for two SUMMA canisters, samples could not be collected from SV-2 or SV-6.

Four sub-slab vapor probes, identified as SS-1 through SS-4, were installed and four sub-slab vapor samples were collected for chemical analysis during the RI on October 30, 2025. The sub-slab points were installed using a portable hammer drill. SS-1 was installed adjacent to SB-10 and SV-2, SS-2 was installed adjacent to SV-6, SS-3 was installed adjacent to SB-7, and SS-4 was installed adjacent to SV-5.

Five soil vapor probes, identified as 25SV-1 through 25SV-4 and 25SV-6, were installed and five soil vapor samples were collected for chemical analysis during the supplemental RI on December 22, 2025. The soil vapor points were installed using the same drilling equipment as the borings. 25SV-1, 25SV-2, 25SV-3, 25SV-4, and 25SV-6 were installed within the southern portion of the building, within the cellar footprint, which is approximately 8 feet below grade surface. Soil Vapor probe 25SV-1 was installed 10 feet bbgs (below basement grade surface) to a total depth of 18 feet bgs, 25SV-2 and 25SV-4 were installed to 5 feet bbgs to a total depth of 13 feet bgs, and 25SV-3 and 25SV-6 were installed to 2 feet bbgs to a total depth of 10 feet bgs.

Additionally, three sub-slab vapor probes, identified as 25SS-5, 25SS-7, and 25SS-8, were installed in the southern portion of the site, in the cellar, and three sub-slab vapor samples were collected for chemical analysis during the supplemental RI on December 22, 2025. The sub-slab vapor samples were installed using a portable hammer drill. 25SS-8 was installed within the northwestern corner of the cellar, 25SS-7 was installed within the northeastern corner of the cellar, and 25SS-5 was installed within the southwestern corner of the cellar.

The construction of the vapor points followed the design of the NYSDOH “Guidance for Evaluating Soil Vapor Intrusion in the State of New York” dated October 2006 with updates. For the installation of the soil vapor points, the soil vapor points were connected to ¼ inch outer diameter inert polyethylene, Teflon-lined, tubing which extended above ground surface to allow for purging and sampling. Prior to testing, the integrity of the seal was tested by placing a plastic

shroud over the vapor points to isolate them from ambient air. Then, a helium tracer gas was applied into the shroud and was screened utilizing a helium detector for presence of helium. No helium was detected in any of the vapor points; therefore, the sampling points were confirmed to be sealed properly prior to sampling.

4.4.2 Soil Vapor Sampling

Representative samples were collected for laboratory analysis using 6-liter SUMMA canisters fitted with 2-hour flow controllers set not to exceed 0.2 liters per minute, as established in the NYSDOH Guidance. Upon completion of the vapor sampling, all canisters were labeled properly with sample ID numbers and vacuum pressure readings in the canisters from before and after the sample collected. The vapor samples were submitted to Phoenix Environmental Laboratories, Inc. of Manchester, CT, under proper chain of custody procedures for the RI completed on June 20, 2025. The vapor samples were submitted to York Analytical Laboratories, Inc. of Queens, NY, under proper chain of custody procedures for the supplemental RI completed on October 30 and December 22, 2025. All soil vapor samples during the RI and supplemental RI were analyzed for VOCs via USEPA Method TO-15. Methodologies used for the soil and sub-slab vapor assessments conform to the *NYSDOH Final Guidance on Soil Vapor Intrusion, October 2006.*

Soil vapor sampling logs are included in Table 3.

4.5 Quality Assurance / Quality Control Sampling

During the RI and supplemental RI, field blanks, trip blanks, and duplicate samples were collected and submitted for laboratory analysis. QA/QC samples collected during the RI include the following:

Soil QA/QC:

- June 20, 2025: Duplicate DUP-1 collected from parent sample SB-3(8-10), field blank FB-1, and a trip blank TB-1 were collected.
- October 30, 2025: Trip blank TB-1(10/25) was collected.

Groundwater QA/QC:

- November 11, 2025: Field blank FB-1 and trip blank TB-1 were collected.
- December 19, 2025: Trip blank TRIP BLANK was collected.

Soil and Sub-Slab Vapor QA/QC:

- No QA/QC samples were collected

The duplicates were collected to assess the accuracy of the analytical methods relative to the sample matrix. The duplicates were collected from the same sample media as the primary sample by splitting the volume of the homogenized sample collected in the field into two sample containers.

The trip blanks were collected to assess the potential for contamination of the sample containers and samples during the trip from the laboratory to the field, and back to the laboratory for analysis. Trip blanks contain approximately 40 milliliters of acidic water (doped with hydrochloric acid) that is sealed by the laboratory when the empty sample containers are shipped to the field and unsealed and analyzed by the laboratory when the sample shipment is received from the field. Trip blanks accompanied samples each time they were transported to the laboratory and were analyzed for VOCs.

Field blank samples were collected to determine the effectiveness of the decontamination procedures for the groundwater samplings equipment train and the cleanliness of unused nitrile gloves and acetate liners used to collect soil samples. Field blank samples consisted of deionized, distilled water provided by the laboratory that has passed through the sampling.

4.6 Data Validation

Laboratory reports included ASP Category B deliverables for use in the preparation of a data usability report (DUSR). All analyses were reported using NYSDEC ASP Category B deliverables. Laboratory data for all media (soil, groundwater, soil vapor) during the RI were validated by Alpha Geoscience, a third-party validator. The DUSRs are applicable to all samples collected during the RI. Refer to Section 5.7 for further details.

4.7 Investigation Derived Waste

Investigation-derived wastes (IDW) generated during the RI were minor and deemed non-hazardous. Soil cuttings were returned to their respective bore holes.

5.0 REMEDIAL INVESTIGATION RESULTS

All media, including soil, groundwater, and soil vapor, have been sampled and evaluated in this RIR. Discrete (grab) samples have been used for delineating the nature and extent of contamination and to determine the impact of contaminants on public health and the environment.

Soil results are compared to the 6 NYCRR Part 375 Unrestricted Use SCOs and Restricted Residential Use SCOs.

Groundwater results are compared to the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS 1.1.1) AWQS and Guidance Values published in "Sampling, Analysis and Assessment of PFAS under NYSDEC's Part 375 Remedial Programs".

Soil vapor, sub-slab vapor, and air results were reviewed in conjunction with groundwater and soil data.

5.1 Fish and Wildlife Remedial Impact Analysis

The Site provides no wildlife habitat or food value. There are no natural waterways, wetlands, resources, or critical habitats of endangered species present on or adjacent to the Site. The Site was evaluated in accordance with the Fish and Wildlife Resources Impact Analysis (FWRIA) Decision Key provided in DER-10, Appendix 3C, to determine if an FWRIA was required. It was determined that an FWRIA was not required.

5.2 Geological and Hydrogeological Conditions

5.2.1 Stratigraphy

Near surface geology in heavily developed areas such as the site and its vicinity is considered urban land and is characterized by a non-homogenous distribution of soil and fill types. During the RI, soil/fill onsite was classified as brown fine to medium silty sand from below the slab to 14 feet bgs with some gravel mixed in.

5.2.2 Hydrogeology

The average depth to water beneath the Site was identified at approximately 56.58 feet bgs (el. 8.91 NAVD88) and ranged from 54.30 (el. 8.32 NAVD88) to 63.30 (el. 9.08 NAVD88) feet bgs across the Site. Regional groundwater flows generally from northwest to southeast towards Jamaica Bay.

5.3 Geophysical Investigation Findings

The geophysical survey performed on June 20, 2025, was conducted only in the accessible areas of the site. The geophysical scan did not identify any anomalies or areas of concern indicative of potential USTs.

5.4 Soil Results

Soil/fill sample results were compared to NYSDEC UUSCOs and RRSCOs as presented in 6NYCRR Part 375-6.8. Samples collected during the RI showed:

Volatile Organic Compounds

Two VOCs, acetone (max. of 0.084 ppm in SB-7 (8-10') and trichloroethene (max. of 1.6 ppm in SB-10 (8-10') were identified above the UUSCO of 0.05 ppm and 0.47 ppm, respectively, but below the RRSCO of 100 ppm and 21 ppm, respectively. Acetone is a common laboratory contaminant and is not a contaminant of concern at the site. Acetone, which is a common laboratory artifact, was detected in several samples at low concentrations.

VOCs	Minimum Detected Concentration > SCOs		Maximum Detected Concentration> SCOs		UUSCO (ppm)	RRSCO (ppm)
Acetone	0.052	25SB-2(9-11)	0.084	SB-7(8-10)	0.05	100
Trichloroethene	1.2	SB-11(8-10)	1.6	SB-10(8-10)	0.47	21

- All concentrations are reported in parts per million (ppm).
- Underscored concentrations are above UUSCOs.

Semi-Volatile Organic Compounds

No SVOCs were detected in the soil samples above the UUSCOs or RRSCOs.

Pesticides

Five pesticides, 4,4'-DDD (max. of 0.00382 ppm in SB-7 (8-10')), 4,4'-DDE (max. of 0.0519 ppm in SB-7 (8-10')), 4,4'-DDT (max. of 0.00847 ppm in SB-5 (0-2')), alpha-chlordane (max. of 0.0249 ppm in SB-5 (0-2)), and dieldrin (max. of 0.0121 ppm in SB-5 (0-2')) were detected at concentrations exceeding UUSCOs (0.0033 ppm for 4,4'-DDD, 4,4'-DDE, and 4,4'-DDT and 0,005 ppm for dieldrin) but below RRSCOs (13 ppm for 4,4'-DDD, 8.9 ppm for 4,4'-DDE, 7.9 ppm for 4,4'-DDT, and 0.2 ppm for dieldrin.

Pesticides	Minimum Detected Concentration > SCOs		Maximum Detected Concentration> SCOs		UUSCO (ppm)	RRSCO (ppm)
4,4'-DDD	-	-	0.00382	SB-7(8-10)	0.0033	13
4,4'-DDE	-	-	0.0519	SB-7(8-10)	0.0033	8.9
4,4'-DDT	0.00847	SB-5(0-2)	0.0387	SB-7(8-10)	0.0033	7.9
Alpha-Chlordane	-	-	0.0249	SB-5(0-2)	0.014	0.65
Dieldrin	-	-	0.0121	SB-5(0-2)	0.005	0.2

- All concentrations are reported in parts per million (ppm).

- Underscored concentrations are above UUSCOs.

Polychlorinated Biphenyls

Total PCBs were detected at concentrations exceeding the UUSCO of 0.1 ppm in SB-4 (0-2) (0.118 ppm) and SB-4 (6-8) (0.142 ppm) but below the RRSCO of 1 ppm.

Metals

Three metals, copper (max. of 99.9 ppm in SB-4(0-2')), lead (max. of 159 ppm in SB-4(0-2')), and zinc (max. of 272 ppm in SB-4 (0-2')) were detected at concentrations exceeding the UUSCOs of 50 ppm, 63 ppm, and 109 ppm, respectively but below the RRSCOs of 270 ppm, 400 ppm, and 10,000 ppm, respectively. One metal, manganese (2,100 ppm in the duplicate sample DUP-1, collected from parent sample SB-3 (8-10) was identified at a concentration exceeding the RRSCO of 2,000 ppm).

Contaminant	Minimum Detected Concentration > SCOs		Maximum Detected Concentration > RRSCOs		UUSCO (ppm)	RRSCO (ppm)
Copper	-	-	99.9	SB-4(0-2)	50	270
Lead	64	SB-3(8-10)	159	SB-4(0-2)	63	400
Manganese	-	-	**2,100**	DUP-1	1,600	2,000
Zinc	-	-	272	SB-4(0-2)	109	10,000

- All concentrations are reported in parts per million (ppm).
- Underscored concentrations are above UUSCOs.
- **Bold concentrations are above RRSCOs.**

Emerging Contaminants

No PFAS compounds or 1,4-dioxane were detected in the soil samples above the UUSCOs or RRSCOs. A summary table of data for chemical analyses performed on soil samples is included in Tables 3 through 8. A Soil Exceedance Map is provided as Figure 5. Laboratory Analytical Data Packages for all soil samples are provided as Appendix F.

5.5 Groundwater Results

Groundwater results collected during the RI were compared to the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS 1.1.1) Ambient Water Quality Standards (AWQS) and Guidance Values published in "Sampling, Analysis and Assessment of PFAS under NYSDEC' Part 375 Remedial Programs". Samples collected during the RI showed:

Volatile Organic Compounds

One VOC, benzene, was detected above its respective AWQS in the groundwater samples at the Site as follows:

On-Site Groundwater VOC Analytical Results			
Contaminant (VOC)	**Monitoring Well ID**	**Concentration (ppb)**	**AWQS (ppb)**
Benzene	25MW-4	1.32	1

Two chlorinated VOCs (CVOCs), chloroform and methylene chloride, were detected above their respective AWQS in the off-Site groundwater samples as follows:

Off-Site Groundwater VOC Analytical Results			
Contaminant (VOC)	**Monitoring Well ID**	**Concentration (ppb)**	**AWQS (ppb)**
Chloroform	SW-1	11.8	7
	SW-2	8.78	
Methylene Chloride	SW-1	6.08	5

Semi-Volatile Organic Compounds

No SVOCs were detected in the on or off-site groundwater samples above laboratory reporting limits.

Pesticides

No pesticides were detected in the off-site groundwater samples above laboratory reporting limits.

Polychlorinated Biphenyls

No PCBs were detected in the off-site groundwater samples above laboratory reporting limits.

Total Metals

Six natural occurring total metals, including beryllium, copper, magnesium, manganese, nickel, and sodium, and one heavy metal, chromium, were identified at concentrations exceeding their respective AWQS in the on-Site groundwater samples as follows:

Total Metals	Monitoring Well	Concentration (ppb)	AWQS (ppb)
Beryllium, total	SW-1	3.82	3
Chromium, total		476	50
Copper, total		250	200
Magnesium, total		35,500	35,000
Manganese, total		12,300	300
Nickel, total		368	100
Sodium, total		92,300	20,000

Dissolved Metals

A total of six natural occurring dissolved metals, including beryllium, copper, magnesium, manganese, nickel, and sodium, and one heavy metal, chromium, were identified at concentrations exceeding their respective AWQS in the on-Site groundwater samples as follows:

Total Metals	Monitoring Well	Concentration (ppb)	AWQS (ppb)
Beryllium, total	SW-1	3.41	3
Chromium, total		1,270	50
Copper, total		299	200
Magnesium, total		42,800	35,000
Manganese, total		4,590	300
Nickel, total		258	100
Sodium, total		77,000	20,000

Emerging Contaminants

Emerging contaminants were not sampled during the RI due to limited recharge and high turbidity.

Summary of Groundwater Analytical Results

It should be noted that due to limited groundwater recharge, the groundwater sample collected from the SW-1 groundwater monitoring well location contained a high silt content and after filtration the aliquot for the metals analysis required additional laboratory dilution.

- No SVOCs, PCBs, or pesticides were detected at concentrations exceeding their respective AWQS.
- Three VOCs, chloroform (max. of 11.8 µg/L in SW-1), methylene chloride (max. of 6.08 µg/L in SW-1), and benzene (max. of 1.32 µg/L in 25MW-4) were detected at concentrations exceeding their respective AWQS (7 µg/L for chloroform, 5 µg/L for methylene chloride, and 1 µg/L for benzene). It should be noted that chloroform and methylene chloride are common laboratory contaminants and chloroform was detected at an elevated concentration of 24.4 µg/L in the field blank collected during the sampling event. Chloroform and methylene chloride are not contaminants of concern at this site.
- Seven total metals were detected in SW-1 at concentrations exceeding their respective AWQS. Specifically, chromium (476 µg/L exceeding 50 µg/L), copper (250 µg/L exceeding 200 µg/L), magnesium (35,500 µg/L exceeding 35,500 µg/L), manganese (12,300 µg/L exceeding 300 µg/L), nickel (368 µg/L exceeding 100 µg/L), sodium (92,300 µg/L exceeding 20,000 µg/L), and beryllium (3.82 µg/L exceeding 3 µg/L).
- Seven dissolved metals were detected in SW-1 at concentrations exceeding their respective AWQS. Specifically, chromium (1,270 µg/L exceeding 50 µg/L), copper (299 µg/L exceeding 200 µg/L), magnesium (42,800 µg/L exceeding 35,500 µg/L), manganese (4,590 µg/L exceeding 300 µg/L), nickel (258 µg/L exceeding 100 µg/L),

sodium (77,000 µg/L exceeding 20,000 µg/L), and beryllium (3.41 µg/L exceeding 3 µg/L).

A summary table of data for chemical analyses performed on groundwater samples is included in Tables 9 through 12. A Groundwater Exceedance Map is provided as Figure 6. Laboratory Analytical Data Packages for all soil samples are provided as Appendix G.

5.6 Soil Vapor Results

A summary table of data for chemical analyses performed on soil vapor samples is included in Table 13 for soil vapor and Table 14 for sub-slab soil vapor. A Vapor Detections Map is provided as Figure 7. Laboratory Analytical Data Packages for all vapor samples are provided as Appendix H.

5.6.1 Soil Vapor

Soil vapor results collected during the RI were compared to the compounds listed in Table 3.1 of the Air Guideline Values in the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion dated October 2006, updated February 2024, and the NYSDOH Decision Matrices (A-F).

Soil Vapor (July 2025)

Four soil vapor samples were collected on July 20, 2025. SV-1, SV-3, SV-4 and SV-5. SV-1 and SV-4 were installed to a depth of 7.5 and 7 feet, respectively. SV-2, SV-3, SV-5 and SV-6 were installed in the building cellar which was approximately 8 feet bgs. SV-2 and SV-6 were installed to a total depth of 15 feet and SV-3 and SV-5 were installed to a total depth of 12.5 feet. Two soil vapor samples (SV-2 and SV-6) were not analyzed due to improperly calibrated flow regulators.

- The total concentrations of benzene, toluene, ethyl benzene, and total xylenes (BTEX) ranged from 5.51 micrograms per cubic meter (ug/m^3) in SV-5 to 334 ug/m^3 in SV-1.
- Other petroleum compounds detected included Cyclohexane in SV-3 at 85.3 ug/m^3 in exceedance of the NYSDOH Decision Matrices minimum concentration value of 60 ug/m^3, and Isooctane in SV-4 at 267 ug/m^3 in exceedance of the NYSDOH Decision Matrices minimum concentration value of 60 ug/m^3.
- Concentrations of the chlorinated VOC Tetrachloroethene (PCE) were detected in exceedance of the NYSDOH Decision Matrices minimum concentration value of 100 ug/m^3 in SV-3 at 330 ug/m^3, and 191 ug/m^3 in SV-4. Concentrations of Trichloroethene (TCE) exceeded the NYSDOH Decision Matrices minimum concentration value of 6 ug/m^3 in all four samples, with a maximum concentration of 418 ug/m^3 detected in SV-3. Concentrations of Cis-1,2-Dicholorethene, a common breakdown compound of solvents

like TCE, was detected in exceedance of the NYSDOH Decision Matrices minimum concentration value of 6 ug/m^3 in SV-3 at 13.6 ug/m^3 and in SV-4 at 16.2 ug/m^3.

Soil Vapor (December 2025)

Five soil vapor samples [25SV-1 (10'), 25SV-2 (5'), 25SV-3 (2'), 25SV-4 (5') and 25SV-6 (2')] were collected on December 22, 2025, at varying depths. 25SV-1 (10'), 25SV-2 (5') and 25SV-3 (2') were collected in the building cellar along the western property boundary (adjacent to lot 32) and 25SV-4 (5') and 25SV-6 (2') were collected in the northern portion of the building cellar.

- The total concentrations of benzene, toluene, ethyl benzene, and total xylenes (BTEX) ranged from 136.9 ug/m^3 in 25SV-1 (10') to 501 ug/m^3 in 25SV-4 (5'). Concentrations of ethyl benzene exceeded the NYSDOH Decision Matrices minimum concentration value of 60 ug/m^3 in 25SV-2 (5') at 67 ug/m^3, 25SV-3 (2') at 62 ug/m^3 and 25SV-4 (5') at 88 ug/m^3. Concentrations of p&m-Xylenes exceeded the NYSDOH Decision Matrices minimum concentration value of 200 ug/m^3 in 25SV-2 (5') at 250 ug/m^3, 25SV-3 (2') at 230 ug/m^3 and 25SV-4 (5') at 320 ug/m^3.
- Concentrations of PCE exceeded the NYSDOH Decision Matrices minimum concentration value of 100 ug/m^3 in four samples, with a maximum concentration of 830 ug/m^3 in 25SV-4 (5')
- Concentrations of TCE exceeded the NYSDOH Decision Matrices minimum concentration value of 6 ug/m^3 in all five samples, with concentrations ranging from 560 ug/m^3 in 25SV-1 (10') to 7,800 ug/m^3 in 25SV-4 (5').

The table below outlines the VOCs detected in the soil vapor samples exceeding the minimum concentrations listed on the NYSDOH Decision Matrices.

Matrix	Compound	Minimum Detection (ug/m^3)	Maximum Detection (ug/m^3)
A	Trichloroethene	6.07 (SV-5)	7800 (25SV-4)
	Cis-1,2-Dichloroethene	13.6 (SV-3)	55 (25SV-3)
	Carbon Tetrachloride	-	1.07 (SV-3)
B	Tetrachloroethene	5.49 (SV-5)	680 (25SV-3)
	1,1,1-Trichloroethane	-	7.63 (SV-3)
D	Benzene	7.4 (25SV-2)	37 (SV-3)
	Ethylbenzene	8.03 (SV-4)	88 (25SV-4)
	Cyclohexane	2.7 (25SV-2)	85.3 (SV-3)
	Isooctane (2,2,4-Trimethylpentane)	3.1 (25SV-1)	267 (SV-4)
	1,2,4-Trimethylbenzene	4.1 (25SV-1)	18.3 (SV-4)
	1,3,5-Trimethylbenzene	1.2 (25SV-1)	10.2 (SV-4)
	O-Xylene	9.9 (25SV-1)	50 (25SV-4)
E	M,P-Xylene	5.51 (SV-5)	320 (25SV-4)
	Heptane	13 (25SV-4)	10.3 (SV-4)

	Hexane	2.5 (25SV-3)	32.2 (SV-3)
F	Toluene	13 (25SV-5)	102 (SV-1)

5.6.2 Sub-Slab Vapor Results

Sub-slab vapor results collected during the RI were compared to the compounds listed in Table 3.1 of the Air Guideline Values in the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion dated October 2006 and updated in February 2024 and the NYSDOH Decision Matrices (A-F).

Sub-Slab Vapor (October and December 2025)

Four sub-slab soil vapor samples (SS-1 through SS-4) were collected on October 30, 2025, and three sub-slab soil vapor samples (25SS-5, 25SS-7 and 25SS-8) were collected on December 22, 2025.

- Of the seven sub-slab soil vapor samples collected in October and December 2025, no exceedances of BTEX or other petroleum compounds were identified.
- Concentrations of PCE exceeded the NYSDOH Decision Matrices minimum concentration value of 100 ug/m^3 in all seven samples, with concentrations ranging from 130 ug/m^3 in 25SS-7 to 1,800 ug/m^3 in SS-1 and SS-2.
- Concentrations of TCE exceeded the NYSDOH Decision Matrices minimum concentration value of 6 ug/m^3 in all seven samples, with concentrations ranging from 380 ug/m^3 in 25SS-5 and SS-4 to 12,000 ug/m^3 in SS-2.
- Concentrations of Cis-1,2-Dichloroethene exceeded the NYSDOH Decision Matrices minimum concentration value of 6 ug/m^3 in three samples, with concentrations ranging from 16 ug/m^3 in SS-3 to 100 ug/m^3 in SS-2.

The concentrations of PCE and TCE detected in SS-1 through SS-3 yields a "Mitigate" action for the NYSDOH Indoor Air Matrices A and B, regardless of indoor air concentrations.
The table below outlines the VOCs detected in the sub-slab vapor samples exceeding the minimum concentrations listed on the NYSDOH Decision Matrices.

Matrix	Compound	Minimum Detection (ug/m^3)	Maximum Detection (ug/m^3)
A	Trichloroethene	380 (SS-4/25SS-5)	12,000 (SS-2
	Cis-1,2-Dichloroethene	16 (SS-3)	100 (SS-2)
B	Tetrachloroethene	130 (25SS-7)	1,800 (SS-1/SS-2)
	1,1,1-Trichloroethane	0.94 (25SS-8)	9.2 (SS-1)
D	Benzene	0.55 (25SS-8)	1.1 (SS-4/25SS-5)
	Ethylbenzene	0.94 (SS-4)	44 (25SS-8)
	Cyclohexane	-	6 (SS-1/SS-3)
	1,2,4-Trimethylbenzene	1.6 (SS-4)	9.3 (25SS-7)
	1,3,5-Trimethylbenzene	1 (25SS-5)	3 (25SS-8)

	O-Xylene	1.1 (SS-4)	27 (25SS-8)
E	M,P-Xylene	3.8 (SS-4)	180 (25SS-8)
	Heptane	0.9 (25SS-8)	29 (SS-1)
	Hexane	-	42 (SS-1)
F	Toluene	6 (SS-3)	18 (SS-1)

5.7 Data Usability Summary

New York Analytical Services Protocols (ASP) Category B laboratory reports for the soil groundwater and soil vapor for the RI were provided by York Analytical Laboratories and sent to be validated by Alpha Geoscience, a third-party data validator. The data was reported electronically to the NYSDEC via the Environmental Quality Information Systems (EQuIS). The data was deemed mostly usable. All the data that were not qualified rejected (R) are usable. Below is a summary of the rejected data:

Soil

- Two PFAS compounds were identified as "rejected, unusable" due to percent recoveries below surrogate QC limits.
- Results for multiple SVOCs compounds in three soil samples were identified as "rejected, unusable" due to low surrogate percent recoveries and low average RRF in initial calibration.

Groundwater

- The "not detected" SVOC results in three groundwater samples for 4-nitrophenol, pyridine and hexachlorocyclopentadiene were identified as "rejected, unusable," due to percent recoveries below QC limits and below 30% in the LCS/LCSD.
- The "not detected" SVOC results for 14 acid extractable compounds were identified as "rejected, unusable" for one sample due to surrogate recoveries below control limits and one below 10% in the sample.
- The "not detected" SIM SVOC results for n-nitrosodimethylamine were identified as "rejected, unusable"for all 4 ground water samples because the percent recoveries were below QC limits and below 30% in the associated aqueous LCSs.

Soil Vapor

- No soil vapor data was identified as "rejected, unusable."

The overall performances of the analyses were acceptable.

The DUSRs are provided in Appendix I.

6.0 CONCEPTUAL SITE MODEL

Investigation results were compared to the following applicable standards and guidance values, and three areas of concern were identified:

- NYSDEC Part 375 Unrestricted Use SCOs and Restricted Residential Use SCOs
- NYSDEC TOGS 1.1.1 AWQS and NYSDEC Guidance Values
- NYSDOH Air Guideline Values and Decision Matrices for Sub-Slab Vapor/Indoor Air

6.1 Site Contaminants

The following contaminants of concern were identified at the Site:

- Chlorinated VOC Impacts in Soil Vapor
- Localized Petroleum Contamination in Groundwater

6.1.1 Chlorinated VOC Impacts in Soil Vapor

Soil vapor and sub-slab vapor results showed moderate to elevated concentrations of CVOCs detected across the Site.

Notably, of the five sub-slab soil vapor samples collected during the October 30, 2025, sampling event, the concentrations of PCE and TCE detected in sub-slab soil vapor samples SS-1, SS-2 and SS-3 yielded a mitigation action for the NYSDOH Indoor Air Matrices A and B, regardless of indoor air concentrations. The highest detection of TCE was identified in sub slab soil vapor sample SS-2 located in the western portion of the partial cellar at 12,000 ug/m^3, and in SS-1 located in the northern portion of the partial cellar at 10,000 ug/m^3. Soil vapor samples 25SV-1 (10'), 25SV-2 (5') and 25SV-3 (2') were collected along the western property boundary in the partial cellar, adjacent to the SS-2 sampling location; detections of TCE in these three samples ranged from 3,800 ug/m^3 in 25SV-3 (2') to 3,000 ug/m^3 in 25SV-2 (5') to 560 ug/m^3 in 25SV-1 (10').

Additionally, the CVOC trichloroethylene (TCE) was detected above its UUSCO (max. of 1.6 ppm in SB-10 (8-10') in two soil samples, however, was not detected above its RRSCO. Due to the historical use of the Site, the CVOCs in soil vapor could be attributed to a potential on-Site source.

6.1.2 Localized Petroleum Contamination in Groundwater

One VOC exceedance of benzene (1.3 ppb) was identified in on-Site groundwater monitoring well 25MW-4, slightly above its AWQS of 1 ppb. Based on historical records, this detected benzene is likely attributable to releases associated with former underground storage tanks (USTs). However, based on off-site groundwater data, there is no off-site migration of petroleum contamination. The residual contamination appears limited in extent and is expected to continue decreasing over time through natural attenuation, ultimately reaching asymptotic levels.

7.0 QUALITATIVE EXPOSURE ASSESSMENT

The objective of the qualitative exposure assessment is to identify potential receptors and pathways for human exposure to the contaminants of concern (COC) that are present at, or migrating from, the Site. Human health exposure risk was evaluated in accordance with Appendix 3B NYSDOH Qualitative Human Health Exposure Assessment and Section 3.3(c)4 of the NYSDEC DER-10. The five elements of an exposure pathway are the (1) source of contamination; (2) environmental media and transport mechanisms; (3) point of exposure; (4) route of exposure; (5) receptor population based on past, present or future events. The potentially exposed receptors and how any unacceptable exposures may be eliminated are determined from an assessment of the primary use of the area, actual and potential use of ground and surface waters that are impacted or threatened, and how any potential routes of exposure may be eliminated.

7.1 Contaminant Sources

Based on the results of the RI, on-site contaminants to be evaluated for human health exposure risk include contaminants of concern at the Site which include primarily CVOCs in soil vapor, and localized petroleum contamination in groundwater in the southeastern portion of the Site.

7.2 Current Conditions

The Site is located in a densely developed part of Brooklyn, New York. The Site is currently vacant and is currently covered with the previous building's concrete slab.

Therefore, human exposure to contaminated soil through dermal absorption, inhalation, and ingestion is limited and unlikely under the current conditions.

As groundwater in this area of New York City is not used as a potable water source, a complete exposure pathway to groundwater under current Site conditions is unlikely.

An incomplete exposure pathway to soil vapor is concluded based on the current site use and occupancy. Specifically, the Site is currently vacant and unoccupied. As such, there are no receptors currently present, and no indoor air exposure is occurring since the building was recently demolished.

7.3 Exposure Route

An exposure route is the mechanism by which a receptor comes into contact with a chemical. Three potential primary routes exist by which chemicals can enter the body:

- Ingestion of water, fill, and/or soil;
- Inhalation of vapors and/or particulates; and
- Dermal contact with water, fill, soil, and/or building materials.

7.4 Potential Sensitive Receptors

On-Site Receptors: The Site is currently vacant and capped with the previous building's concrete slab. The Site is secured with construction fencing locked gated entrances. On Site receptors are limited to workers, trespassers, Site representatives and visitors granted access to the property. Under proposed future conditions, potential on-Site receptors include workers, residents, and visitors.

Off-Site Receptors: Potential off-Site receptors within a 500-foot radius of the Site include adult and child residents; commercial and construction workers; pedestrians; students at local schools, and trespassers based on the following land uses within 500 feet of the Site:

1. Commercial Businesses – existing and future
2. Residential Buildings – existing and future
3. Building Construction/ Renovation – existing and future
4. Pedestrians, Trespassers, Cyclists – existing and future
5. Schools – existing and future

Community Air Monitoring Program (CAMP) will be implemented at the Site during intrusive activities to monitor air-quality the public.

7.5 Potential Exposure Pathways

On-Site: The Site is currently capped with the previous building's concrete. Human exposure to contaminated soil through dermal absorption, inhalation, and ingestion is unlikely due to the current Site cover.
As groundwater in this area of New York City is not used as a potable water source, a complete exposure pathway to groundwater under current Site conditions is unlikely. Since the Site is currently vacant and unoccupied, no receptors are present, and as such, a potential exposure pathway for soil vapor is unlikely. No indoor air exposure exists since the building was recently demolished. Once construction activities begin, a potential exposure pathway may exist for construction workers and inspectors to come into direct contact with soil. Any future Site remediation activities would be conducted under a HASP, which would control and limit human exposure to on-Site contaminants.

Off-Site: There is an existing potential exposure pathway from soil gas emanating from on-Site VOCs entering neighboring properties as a result of any floor or wall openings/cracks. Although it is unlikely, the indoor air quality at the adjoining properties may be susceptible to contamination from subsurface vapor intrusion attributable to CVOCs in the area. The potential receptors from such a migration pathway into the building would be to: off-Site construction and commercial workers, adult and child residents, and visitors. The primary route of exposure would be inhalation.

During the redevelopment (excavation activities), the potential exists for off-Site vapor intrusion risk to off-Site receptors. In the absence of a CAMP and HASP, during ground intrusive activities, off-Site receptors could be exposed to particulates and vapors. The implementation of a CAMP

and HASP during intrusive work will monitor and limit off-Site receptor's exposure to particulates and vapors.

As groundwater in this area of New York City is not used as a potable water source, a complete exposure pathway to groundwater under the redeveloped conditions is unlikely.

Once the redevelopment is completed, it is unlikely for a new foundation with the addition of a vapor barrier and sub-slab depressurization system (SSDS) engineering controls to allow for vapor migration into the building. Based on the findings, the evaluation during the remedy will include a provision for implementing actions recommended to address exposures related to soil vapor intrusion.

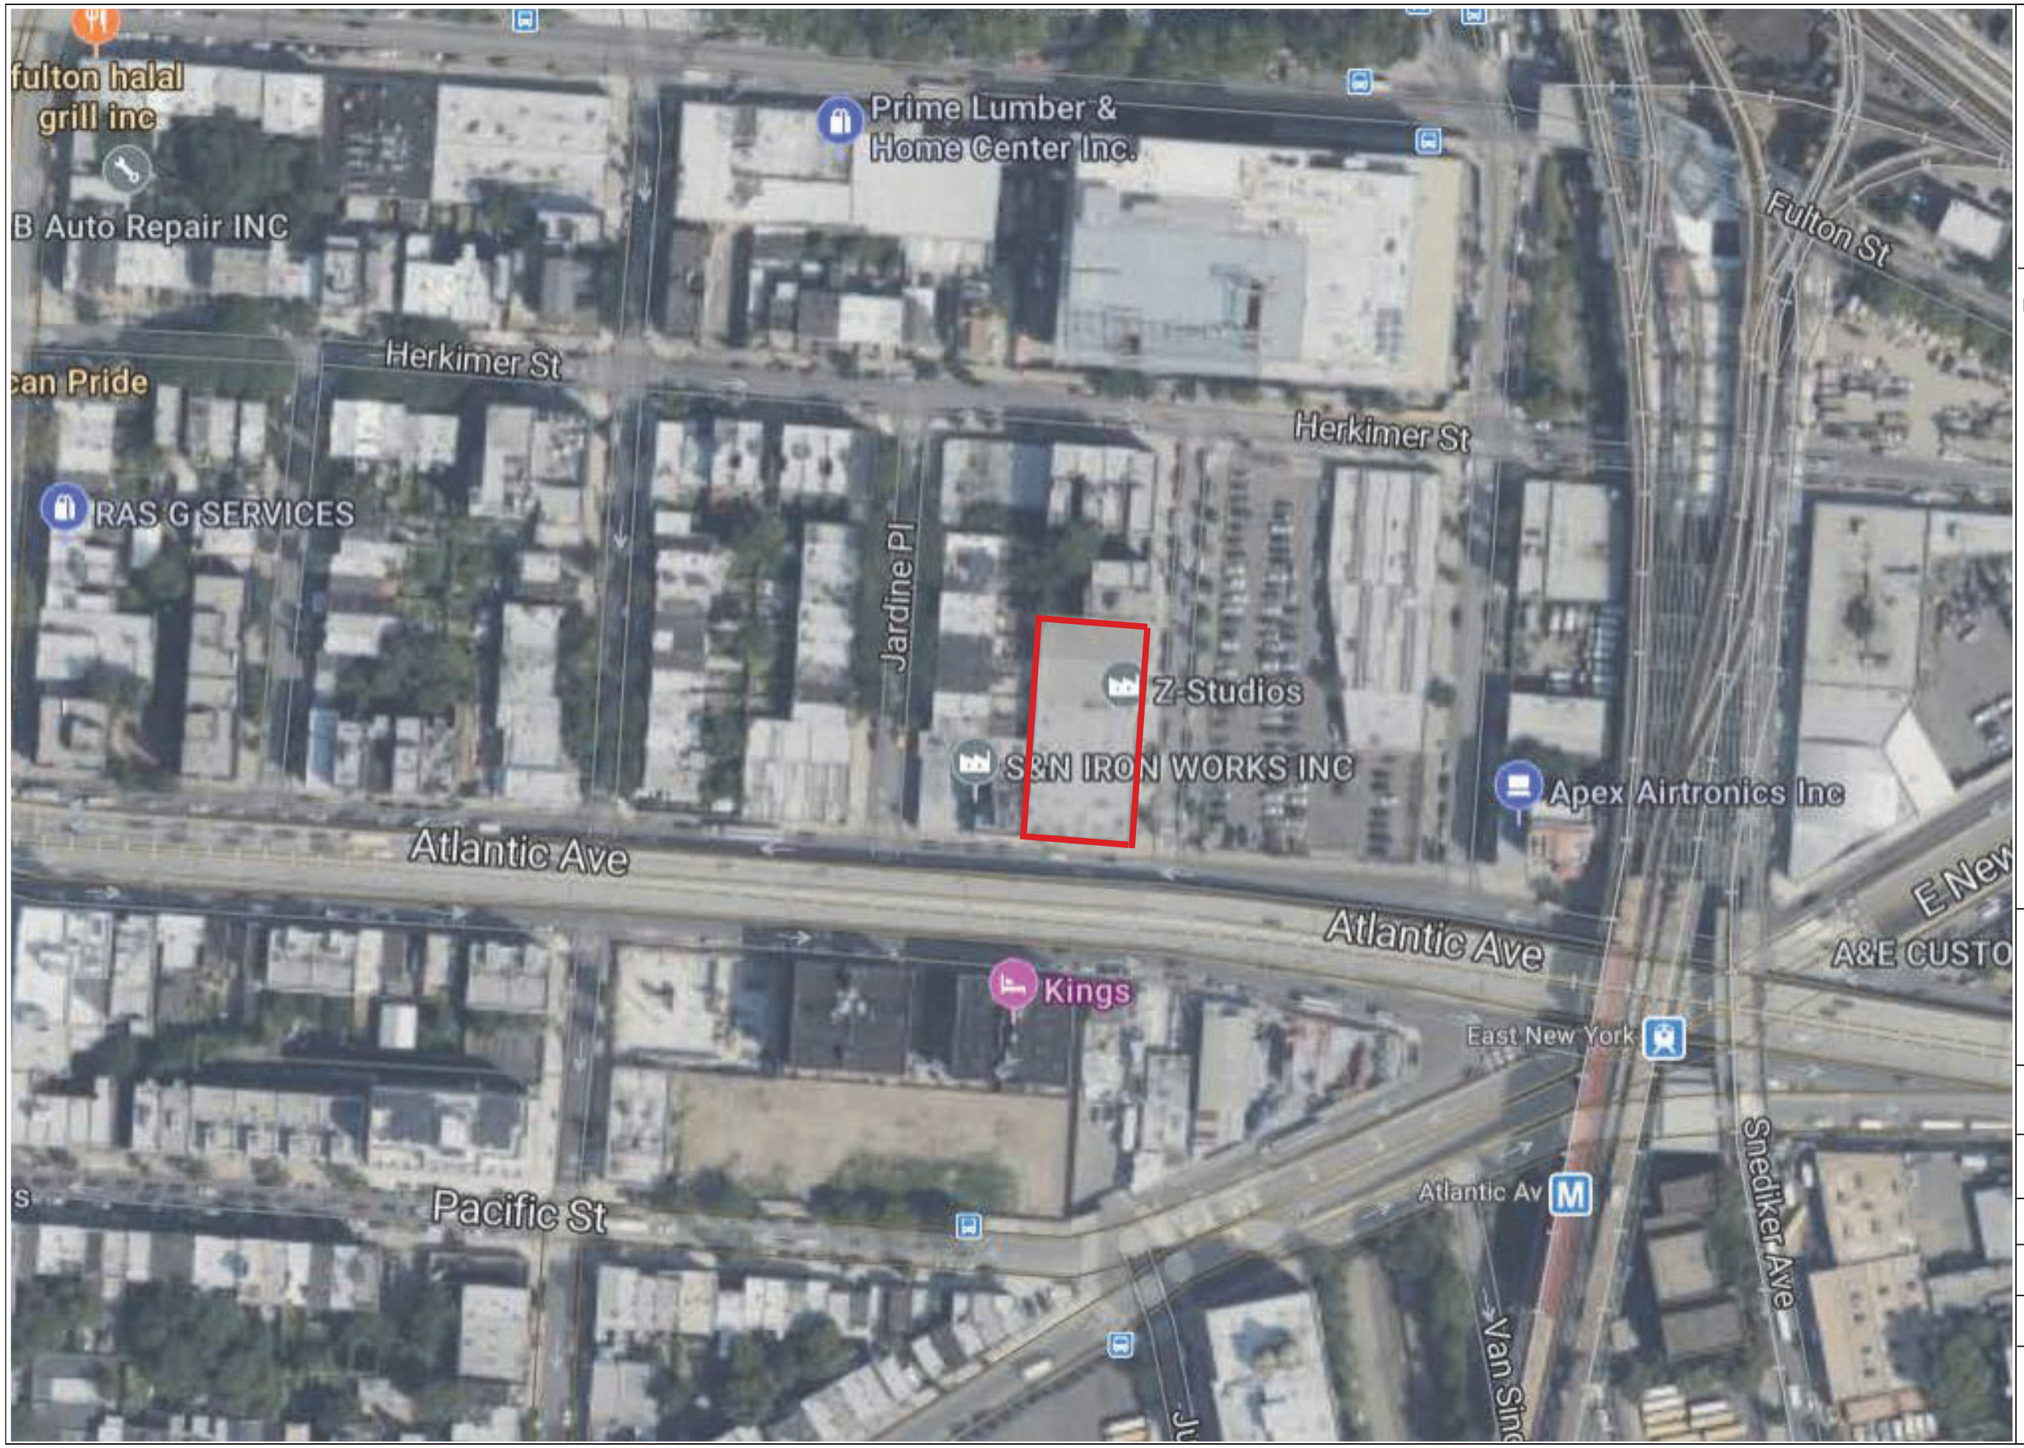
7.6 Exposure Assessment Conclusions and Recommendations

Based upon this analysis, exposure to contaminants in soil and groundwater is not expected under current conditions as the Site is capped with concrete slabs, and groundwater in this area of New York City is not used as a potable water source. The soil intrusion pathway is currently incomplete on-site because there is no building or occupant present. There is an existing potential exposure pathway from soil gas emanating from VOCs entering neighboring properties as a result of any possible floor or wall openings/cracks. Although it is unlikely, the indoor air quality at the adjoining properties may be susceptible to contamination from subsurface vapor intrusion attributable to CVOCs in the area. Once remediation/construction activities start, any potential exposure pathway will be monitored and controlled by implementation of a CAMP and HASP.

During redevelopment (including excavation or other ground-intrusive activities), there is a temporary potential for the generation of dust and volatilized compounds that could result in inhalation exposure to both on-Site workers and off-Site receptors. This potential exposure mechanism would be related to short-term constriction-phase emissions rather than vapor intrusion into enclosed structures. In the absence of a CAMP and HASP, during ground intrusive activities, off-Site receptors could be exposed to particulates and vapors. Monitoring and control measures have been and will continue to be used during any investigation and any future planned remediation to prevent completion of this pathway. Under future conditions, the Site will be remediated, and engineering and institutional controls will be implemented, as necessary, to prevent completion of this pathway.

8.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of the RI, the following conclusions were made:



- Geophysical survey did not identify any areas of concern indicative of anomalies consistent with USTs.
- In general, a limited number of PCBs, pesticides and metals were detected in soil above UUSCOs, and
- one naturally occurring metal, manganese, was detected above its RRSCO in one soil sample.
- One exceedance of benzene was identified in on-Site groundwater monitoring well 25MW-4, slightly above its AWQS.
- The topography of the Site is relatively level, ranging from approximately 70.00 feet (NAVD88) in the southern portion to 72.00 feet (NAVD88) in the northern portion. Average depth to groundwater was observed as 8.91 (NAVD88) during the RI.
- Elevated levels of chlorinated VOCs requiring mitigation have been identified in soil vapor at the Site, with elevated levels extending to at least 12.5 feet below the current partial cellar grade in some sampling locations.

Based on the results of the RI, remedial action will be necessary. Applicable strategies and technologies may include, but are not limited to, excavation of soil in accordance with all applicable laws and regulations, and installation of engineering controls.

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of NYSDEC Part 375 UUSCO

[Conc.] = Exceedance of NYSDEC Part 375 RRSCO

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for this analyte

U = Analyte not detected at or above the level indicated

D = Result is from an analysis that required a dilution

J* = Analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

B = Analyte found in the analysis batch blank

NT = This indicates the analyte was not a target for this sample

R = Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.

J = Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.

J- = Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.

J+ = Analyte is present. Reorted value may be biased high and associated with a higher level of uncertainty than is normally expected with the analytical method.

UJ = Not detected, quantitation limit may be inaccurate or imprecise.

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of NYSDEC Part 375 UUSCO

[Conc.] = Exceedance of NYSDEC Part 375 RRSCO

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for this analyte

U = Analyte not detected at or above the level indicated

D = Result is from an analysis that required a dilution

J* = Analyte detected at or above the MDL (method detection limit) but below the RL (Reporting

B = Analyte found in the analysis batch blank

NT = This indicates the analyte was not a target for this sample

R = Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sar

J = Analyte is present. Reported value may be associated with a higher level of uncertainty than

J- = Analyte is present. Reported value may be biased low and associated with a higher level of u

J+ = Analyte is present. Reorted value may be biased high and associated with a higher level of u

UJ = Not detected, quantitation limit may be inaccurate or imprecise.

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of NYSDEC Part 375 UUSCO

[Conc.] = Exceedance of NYSDEC Part 375 RRSCO

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for this analyte

U = Analyte not detected at or above the level indicated

D = Result is from an analysis that required a dilution

J* = Analyte detected at or above the MDL (method detection limit) but below the RL (Reporting

B = Analyte found in the analysis batch blank

NT = This indicates the analyte was not a target for this sample

R = Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sar

J = Analyte is present. Reported value may be associated with a higher level of uncertainty than

J- = Analyte is present. Reported value may be biased low and associated with a higher level of u

J+ = Analyte is present. Reorted value may be biased high and associated with a higher level of u

UJ = Not detected, quantitation limit may be inaccurate or imprecise.

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of NYSDEC Part 375 UUSCO

[Conc.] = Exceedance of NYSDEC Part 375 RRSCO

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for this analyte

U = Analyte not detected at or above the level indicated

D = Result is from an analysis that required a dilution

J* = Analyte detected at or above the MDL (method detection limit) but below the RL (Reporting

B = Analyte found in the analysis batch blank

NT = This indicates the analyte was not a target for this sample

R = Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sar

J = Analyte is present. Reported value may be associated with a higher level of uncertainty than

J- = Analyte is present. Reported value may be biased low and associated with a higher level of u

J+ = Analyte is present. Reorted value may be biased high and associated with a higher level of u

UJ = Not detected, quantitation limit may be inaccurate or imprecise.

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of NYSDEC Part 375 UUSCO

[Conc.] = Exceedance of NYSDEC Part 375 RRSCO

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for this analyte

U = Analyte not detected at or above the level indicated

D = Result is from an analysis that required a dilution

J* = Analyte detected at or above the MDL (method detection limit) but below the RL (Reporting

B = Analyte found in the analysis batch blank

NT = This indicates the analyte was not a target for this sample

R = Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sar

J = Analyte is present. Reported value may be associated with a higher level of uncertainty than

J- = Analyte is present. Reported value may be biased low and associated with a higher level of u

J+ = Analyte is present. Reorted value may be biased high and associated with a higher level of u

UJ = Not detected, quantitation limit may be inaccurate or imprecise.

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of NYSDEC Part 375 UUSCO

[Conc.] = Exceedance of NYSDEC Part 375 RRSCO

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for this analyte

U = Analyte not detected at or above the level indicated

D = Result is from an analysis that required a dilution

J* = Analyte detected at or above the MDL (method detection limit) but below the RL (Reporting

B = Analyte found in the analysis batch blank

NT = This indicates the analyte was not a target for this sample

R = Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sar

J = Analyte is present. Reported value may be associated with a higher level of uncertainty than

J- = Analyte is present. Reported value may be biased low and associated with a higher level of u

J+ = Analyte is present. Reorted value may be biased high and associated with a higher level of u

UJ = Not detected, quantitation limit may be inaccurate or imprecise.

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of NYSDEC Part 375 UUSCO

[Conc.] = Exceedance of NYSDEC Part 375 RRSCO

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for this analyte

U = Analyte not detected at or above the level indicated

D = Result is from an analysis that required a dilution

J* = Analyte detected at or above the MDL (method detection limit) but below the RL (Reporting

B = Analyte found in the analysis batch blank

NT = This indicates the analyte was not a target for this sample

R = Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sar

J = Analyte is present. Reported value may be associated with a higher level of uncertainty than

J- = Analyte is present. Reported value may be biased low and associated with a higher level of u

J+ = Analyte is present. Reorted value may be biased high and associated with a higher level of u

UJ = Not detected, quantitation limit may be inaccurate or imprecise.

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of NYSDEC Part 375 UUSCO

[Conc.] = Exceedance of NYSDEC Part 375 RRSCO

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for this analyte

U = Analyte not detected at or above the level indicated

D = Result is from an analysis that required a dilution

J* = Analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

B = Analyte found in the analysis batch blank

NT = This indicates the analyte was not a target for this sample

R = Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.

J = Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.

J- = Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.

J+ = Analyte is present. Reorted value may be biased high and associated with a higher level of uncertainty than is normally expected with the analytical method.

UJ = Not detected, quantitation limit may be inaccurate or imprecise.

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of NYSDEC Part 375 UUSCO

[Conc.] = Exceedance of NYSDEC Part 375 RRSCO

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for this analyte

U = Analyte not detected at or above the level indicated

D = Result is from an analysis that required a dilution

J* = Analyte detected at or above the MDL (method detection limit) but below the RL (

B = Analyte found in the analysis batch blank

NT = This indicates the analyte was not a target for this sample

R = Unreliable result; data is rejected or unusable. Analyte may or may not be present

J = Analyte is present. Reported value may be associated with a higher level of uncerta

J- = Analyte is present. Reported value may be biased low and associated with a higher

J+ = Analyte is present. Reorted value may be biased high and associated with a higher

UJ = Not detected, quantitation limit may be inaccurate or imprecise.

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of NYSDEC Part 375 UUSCO

[Conc.] = Exceedance of NYSDEC Part 375 RRSCO

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for this analyte

U = Analyte not detected at or above the level indicated

D = Result is from an analysis that required a dilution

J* = Analyte detected at or above the MDL (method detection limit) but below the RL (

B = Analyte found in the analysis batch blank

NT = This indicates the analyte was not a target for this sample

R = Unreliable result; data is rejected or unusable. Analyte may or may not be present

J = Analyte is present. Reported value may be associated with a higher level of uncerta

J- = Analyte is present. Reported value may be biased low and associated with a higher

J+ = Analyte is present. Reorted value may be biased high and associated with a higher

UJ = Not detected, quantitation limit may be inaccurate or imprecise.

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of NYSDEC Part 375 UUSCO

[Conc.] = Exceedance of NYSDEC Part 375 RRSCO

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for this analyte

U = Analyte not detected at or above the level indicated

D = Result is from an analysis that required a dilution

J* = Analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

B = Analyte found in the analysis batch blank

NT = This indicates the analyte was not a target for this sample

R = Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.

J = Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.

J- = Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.

J+ = Analyte is present. Reorted value may be biased high and associated with a higher level of uncertainty than is normally expected with the analytical method.

UJ = Not detected, quantitation limit may be inaccurate or imprecise.

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of NYSDEC Part 375 UUSCO

[Conc.] = Exceedance of NYSDEC Part 375 RRSCO

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for th

U = Analyte not detected at or above the level indicated

D = Result is from an analysis that required a dilution

J* = Analyte detected at or above the MDL (method detection limit)

B = Analyte found in the analysis batch blank

NT = This indicates the analyte was not a target for this sample

R = Unreliable result; data is rejected or unusable. Analyte may or m

J = Analyte is present. Reported value may be associated with a high

J- = Analyte is present. Reported value may be biased low and associ

J+ = Analyte is present. Reorted value may be biased high and associ

UJ = Not detected, quantitation limit may be inaccurate or imprecise

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of TOGS 1.1.1 AWQS

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for this analyte

U = Analyte not detected at or above the level indicated

D = Result is from an analysis that required a dilution

J* = Analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

B = Analyte found in the analysis batch blank

NT = This indicates the analyte was not a target for this sample

R = Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.

J = Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.

J- = Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.

J+ = Analyte is present. Reorted value may be biased high and associated with a higher level of uncertainty than is normally expected with the analytical method.

UJ = Not detected, quantitation limit may be inaccurate or imprecise.

NOTES:

[Conc.] = Detected Concentration in Sample

Any Regulatory Exceedances are color coded by regulation:

[Conc.] = Exceedance of NYSDOH Decision Matrices Minimum Concentrations

[Conc.] = Exceedance of NYSDOH Air Guideline Values

Q = Laboratory Qualifiers:

~ = This indicates that no regulatory limit has been established for this analyte

U = Analyte not detected at or above the level indicated

UJ = Not detected, quantitation limit may be inaccurate or imprecise.

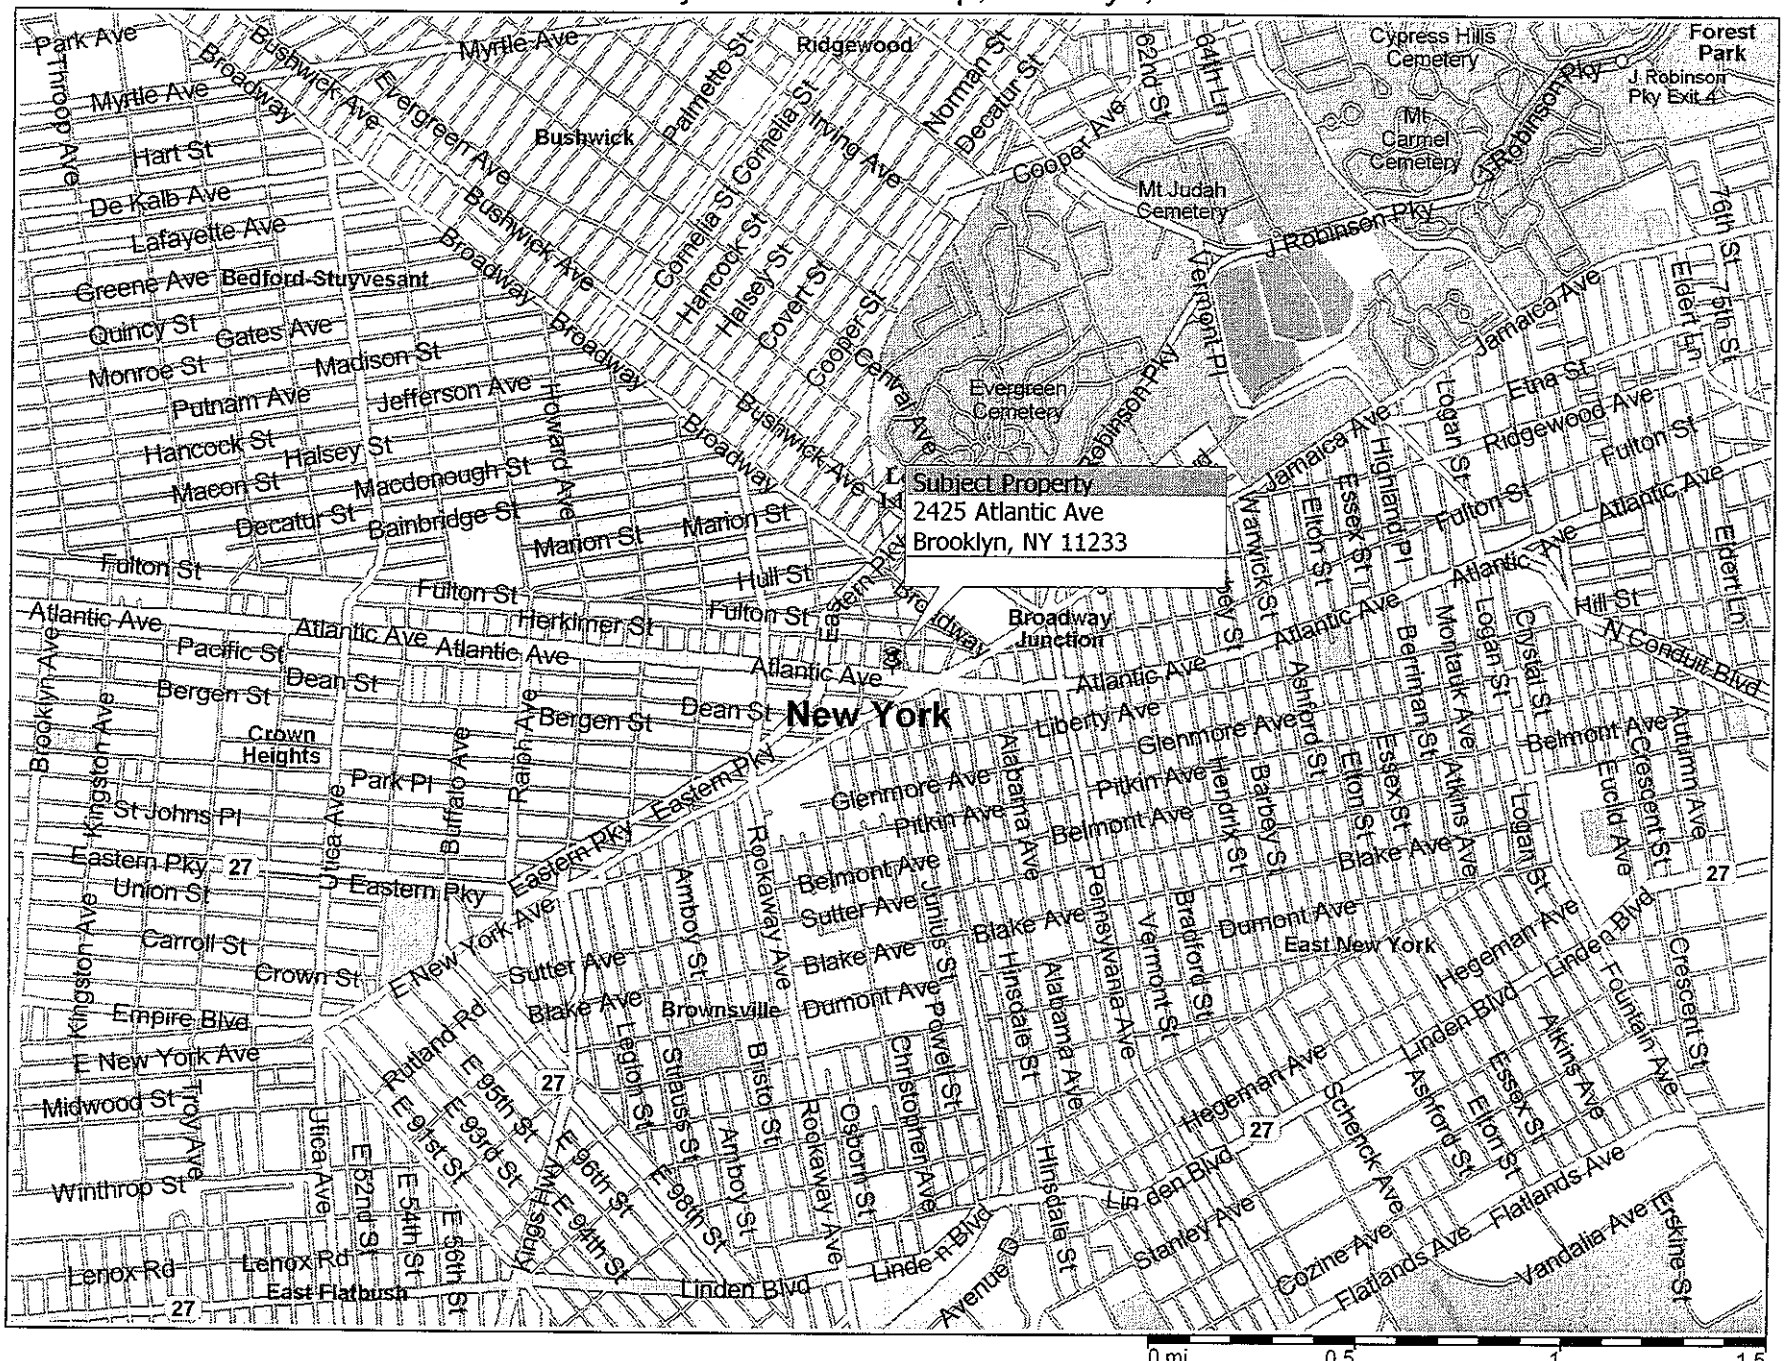
1.0 Purpose & Scope



This Phase II Environmental Site Assessment (ESA) was conducted to define what, if any, contaminants have impacted the environmental quality of the property located at 2425 Atlantic Avenue / 30-42 Havens Place, Brooklyn, New York, herein identified as the subject property. The scope of this investigation was based on the recommendations presented in a Phase I ESA report prepared by Impact Environmental Consulting, Inc., dated July 12, 2001. Said assessment identified issues requiring supplemental data to further define the environmental quality of the subject property.

The investigative protocols used for this assessment were based, in part, upon the following documents: 1) the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; and 2) the New York State Department of Environmental Conservation, Sampling Guidelines and Protocols, Technical Background and Quality Control Assurance for the New York State Department of Environmental Conservation Spill Response Program, dated September 1992. The activities performed under the scope of this investigation have been summarized in this report in the following sections.

- **Site Description**
- **Survey, Sampling and Analysis Plan**
- **Quality Assurance and Control Procedures (QA/QC)**
- **Laboratory Analysis**
- **Evaluation of Results**
- **Conclusions**

Presented herein are the results of the Phase II Environmental Site Assessment conducted by Impact Environmental Consulting, Inc. on the subject property [see **Plate 1:** Project Location Map, *Brooklyn, New York*].

2.0 Site Description

All of the information presented in this section of the report was compiled during the performance of the Phase I ESA.

2.1 Topography

The areal extent of the subject property was approximately 17,500 square feet. The subject property contained one two-story, masonry building with an approximate footprint of 10,600 square feet. The surface area of the subject property consisted of asphalt parking areas, concrete walkways, and scrub vegetation. The subject property exhibited low topographic relief (less than three percent slopes).

2.2 Land Use

The interior of the building was utilized as office and operational space. The interior space was divided to facilitate two tenants. The upper floor was vacant at the time of inspection, but was reportedly last occupied by The Candle Factory, a candle manufacturer. The lower floor was occupied by Active World Solutions, a silk screened clothing distributor. A boiler room was located in the southwestern corner of the lower floor of the building.

2.3 Recognized Environmental Conditions

The Phase I ESA revealed evidence of two inactive underground storage tanks (USTs) on the subject property. No records were available concerning the management of these USTs. This absence of records represents a *recognized environmental condition*. Accordingly, it was recommended that a remote sensing survey be performed to confirm the presence and orientation of any abandoned USTs, and that a limited subsurface investigation be performed to determine if the use of these USTs impacted the environmental quality of the subject property.

The Phase I ESA identified four unpermitted underground injection wells (UIWs). The industrial use of the property has created the potential for these structures to have been polluted from organic and inorganic contaminants. This potential represents a *recognized environmental condition*. Consequently, it was recommended that a limited subsurface investigation be performed to determine if the UIWs have received any discharges that may have impacted the environmental quality of the subject property.

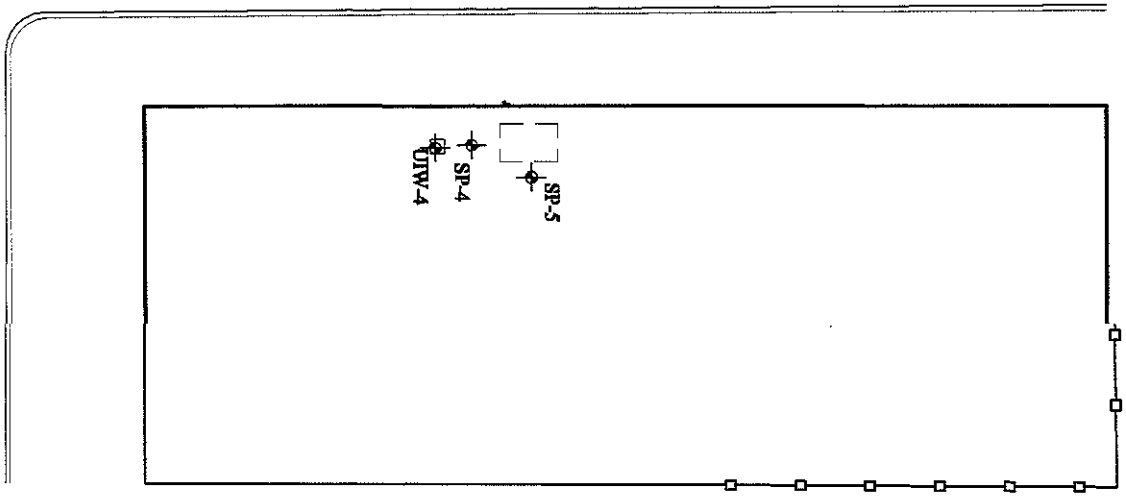
3.0 Survey, Sampling and Analysis Plan

A survey, sampling and analysis program was developed to address the recognized environmental conditions identified in the Phase I ESA. The plan included: 1) a remote sensing survey to confirm the presence of any abandoned USTs; and 2) an investigation to determine what, if any, contaminants were released to the subsurface soil of the subject property as a result of on-site operations. The following work was performed to satisfy the sampling and analysis plan. All locations can be referenced with **Plate 2:** Sample Acquisition Plan, *Brooklyn, New York.*

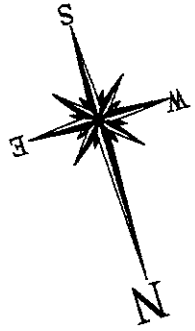
3.1 Remote Sensing Survey

A remote sensing survey was performed over portions of the planimetric surface of the subject property to identify the presence of any abandoned USTs at locations corresponding to information provided in the Phase I ESA. A GSSI model SIR-2 ground penetrating radar (GPR) system equipped with a 400MHz antenna was used to perform the survey. An analysis of the data collected from the survey identified two significant subsurface anomalies.

An anomaly was detected on the northern side of the existing building immediately adjacent to a structure that contained a heating unit. Based on the data collected from the survey in this area, it was anticipated that a UST was situated beneath this heating unit. The UST had an east-west orientation



An anomaly was detected on the southern side of the building within the basement. This anomaly was interpreted to represent a UST beneath the basement slab. The UST had an east-west orientation.



3.1.1 GPR Procedures

A GPR system consists of a radar control unit, control cable and a transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 50 KHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulses into bipolar pulses that are radiated to the subsurface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit represented as color graphic images for interpolation. This system is capable of transmitting electromagnetic energy in the frequency range of 16MHz to 2000MHz.

A qualified Impact Environmental Consulting, Inc. technician specified a coordinate system on the planimetric surface of the site to map any subsurface dielectric anomalies detected on the premises. The operator used

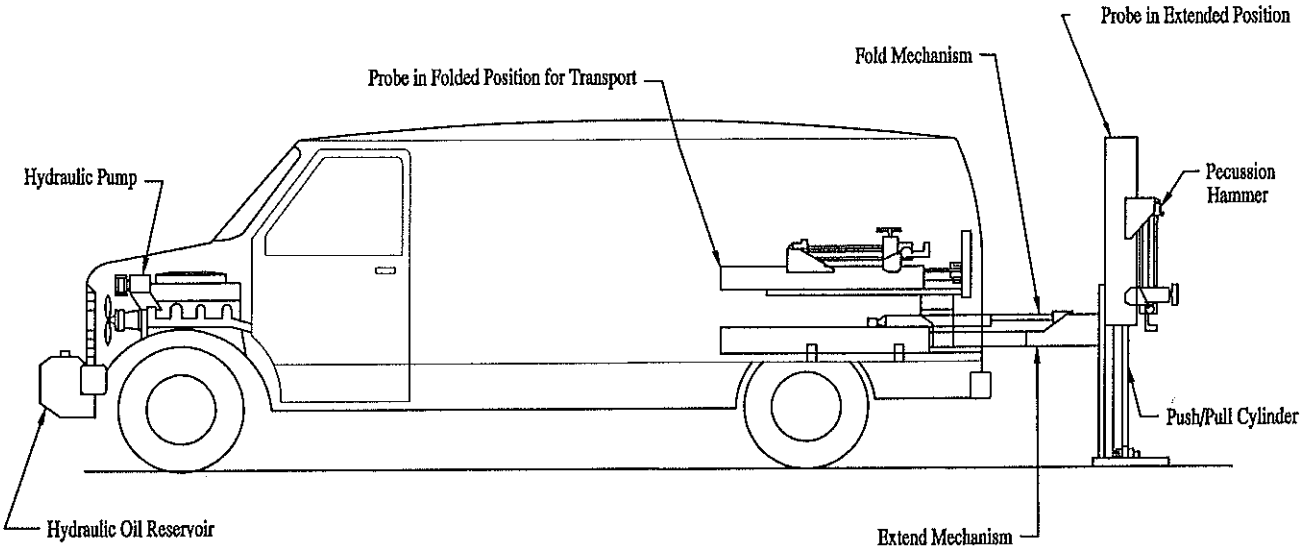

Plate 2: Sample Acquisition Plan

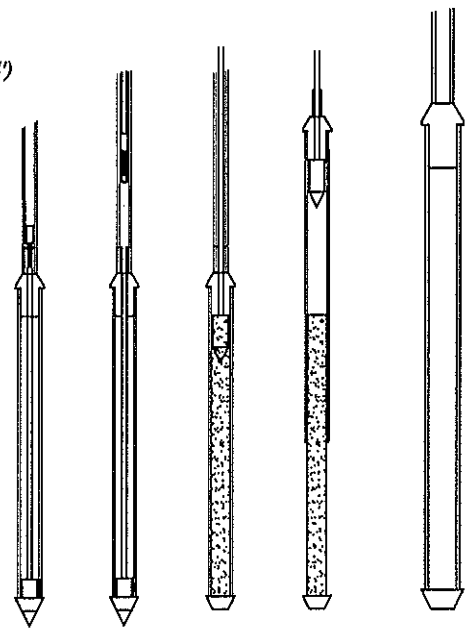
Brooklyn, New York

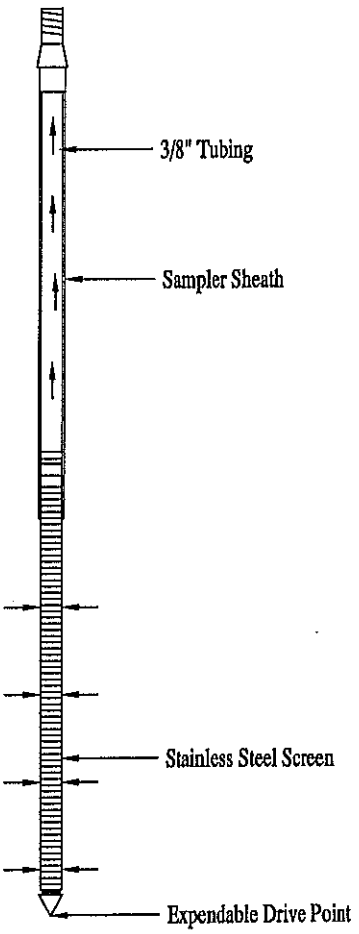
Legend

soil probe node

scale: 1" = 20'



Basics



- Hydraulic powered probe unit isoperated from a engine driven pump.
- Remote vehicle ignition allows operator to start engine from probe unit.
- Belt driven hydraulic pump supplies 10 gpm @ 2000 rpm, 3000 psi operating pressure
- Probe unit folds for transport
- Unit utilizes static weight of vehicle and pecussion hammer to advance probing tools.
- Hydraulic hammer delivers pecussion rate of 30 Hz.
- Probes have greater than 18,000 lbs of down force and 25,000 lbs of retraction force.
- Drives multiple diameter probes (1", 1.25" and 2.25") to depths over 100 feet.

Soil Probing Tool
The tools are advanced and a sample is acquired in a non-reactive plastic sheathing. The system offers two sizes of sample retrieval:

Large bore - 1.5" x 2'
Macro - 2.25" x (2', 3' & 4')

Groundwater SP-15 Sampler
The tool allows a stainless steel, 4' screen to be delivered to the underlying groundwater. At the desired depth, the screen is retracted and samples are obtained via a check valve assembly.

were secured at the desired depths and were contained within a non-reactive transparent plastic sleeve that lined the hollow probe. The plastic sleeves were removed for subsequent inspection and sample aliquot acquisition.

3.3 Headspace Analysis

Headspace analysis was performed on each unsaturated soil sample acquired from probe nodes SP-1, SP-2, SP-3, SP-4 and SP-5 to provide precursory data regarding contamination. Results of the analysis were used to adjust the sample and analysis program to yield the most accurate and representative results. The results of the field analysis are presented in **Table 1**: Field Headspace Analysis Results, *Brooklyn, New York.*

3.3.1 Headspace Analysis Procedure

Headspace analysis was performed on each of the acquired samples utilizing a portable photo ionization detection meter to measure what, if any, hydrocarbon concentrations were present in isolated portions of the secured samples. Headspace analysis was conducted by partially filling a wide-mouth glass container with sample aliquot and sealing the top with aluminum foil, thereby creating a void. This void is referred to as the sample headspace.

To facilitate the detection of any hydrocarbons contained within the head space, the container was agitated for a period of thirty (30) seconds. The probe of the vapor analyzer was then injected through the foil into the headspace to measure the hydrocarbon concentrations present. A Photovac Micro-Tip, photo ionization detection meter (PID) was the organic vapor analyzer selected for the head space analysis. A PID utilizes the principle of photo ionization for detection and measurement of hydrocarbon compounds. A PID does not respond to all compounds similarly; rather, each compound has its own response factor relative to its calibration. For this investigation, the PID was calibrated to isobutylene. Hydrocarbon relative response factors for a PID calibrated to isobutylene are published by the manufacturer.

3.4 Sample Characterization

A visual inspection of all samples recovered during the installation of each of the soil probes was conducted to identify any gross signs of chemical contamination and to classify the sample media. Color classifications were made in accordance with the Munsell Classification System. Gradation classifications were made in accordance with the Unified Soil Classification System.

In general, the samples obtained under the scope of this investigation were found to consist of a brown fine to medium sand with gravel. Odors consistent with petroleum product were noted in samples secured from soil probe node SP-2.

3.5 Laboratory Sample Location and Frequency

The samples secured from probe nodes SP-1, SP-2, SP-3, SP-4 and SP-5 were subjected to headspace analysis. The headspace analysis of the subsurface soil samples secured from SP-2 and SP-4 detected concentrations of hydrocarbons above ambient levels (see Table 1). The soil samples selected for laboratory analysis were intended to represent soil quality based on the highest field headspace analysis or the deepest samples secured where no response was detected from field screening activities.

The samples selected for laboratory analysis with respect to the USTs were labeled for identification purposes as: 01-222A-SP-2 (2'-4') and 01-222A-SP-4 (1'-3).

The samples selected for laboratory analysis with respect to the UIWs were labeled for identification purposes as: 01-222A-UIW-1, 01-222A-UIW-2, 01-222A-UIW-3 and 01-222A-UIW-4.

The soil and groundwater samples selected for laboratory analysis were containerized in the appropriate vessels, preserved at 4ºC in a cooler and transported under proper chain-of-custody procedures to a NYS-DOH certified commercial laboratory for analysis.

4.0 Quality Assurance and Quality Control Procedures (QA/QC)

The following sampling QA/QC protocol is in accordance with the United States Environmental Protection Agency's (USEPA) accepted sampling procedures for hazardous waste streams [Municipal Research Laboratory, 1980, Sampling and Analysis Procedures for Hazardous Material Waste Streams, Office of Emergency and Remedial Response, Cincinnati, Ohio. EPA-600/280-018] and American Society of Testing and Material's (ASTM's) Sampling Procedures.

4.1 Sampling Personnel

The activities associated with the survey, sampling and analysis plan were performed by or under the auspices of a USEPA Office of Emergency and Remedial Response, Certified Sampler for Hazardous Materials. The sample staff (samplers) possessed a minimum of a B.A. Degree in the Earth, Space or Biological Sciences or a B.S. Degree in Engineering. Samplers had a minimum of one (1) year experience in environmental/geological field work. Additionally, all samplers had received mandatory forty-hour Occupational Safety and Health Administration (OSHA) training on working with potentially hazardous materials and appropriate Hazard Communication Program and "Right-To-Know" training.

4.2 Sampling Equipment

Separate QA/QC measures were implemented for each of the instruments used in the performance of the SAP.

4.2.1 Geoprobe

Prior to arrival on the subject property and between sample locations, the probes were decontaminated by washing them with a detergent (Alconox) and potable water solution and rinsing them with distilled water.

4.2.2 Photo Ionization Detector

Calibration of the PID was conducted prior to sampling using a span gas of known concentration. The PID was a Photovac Micro-Tip, photo ionization detection meter.

4.2.3 Sample Vessels

All sample vessels were "level A" certified decontaminated containers supplied by a New York State Certified Commercial Laboratory. Samples analyzed for hydrocarbons were placed in containers with Teflon lined caps. All samples were preserved by cooling them to a temperature of approximately four degrees Celsius.

4.3 Sample Documentation

A sample represents physical evidence. An essential part of liability reduction is the proper control of gathered evidence. To establish proper control, the following sample identification and chain-of custody procedures were followed.

4.3.1 Sample Identification

Sample identification was executed by use of a sample tag, log book and chain-of-custody form. Said documentation provided the following information: 1) the project code; 2) the sample laboratory number; 3) the sample preservation; 4) instrument used for source sample grabs; 5) the composite medium used for source sample grabs; 6) the date the sample was secured from the source media; 7) the time the sample was secured from the source media; and 8) the person who secured the sample from the source media.

4.3.2 Chain-of-Custody Procedures

Due to the evidential nature of samples, possession was traceable from the time the samples were collected until they were received by the testing laboratory. A sample was considered under custody if it: was in a person's possession; it was in a person's view, after being in possession; if it was in a person's possession and they locked it up; or, it was in a designated secure area. When transferring custody, the individuals relinquishing and receiving the samples signed, dated and noted the time on the Chain-of-Custody Form.

4.3.3 Laboratory-Custody Procedures

A designated sample custodian accepted custody of the shipped samples and verified that the information on the sample tags matched that on the Chain-of-Custody Records. Pertinent information as to shipment, pick-up, courier, etc., were entered in the "remarks" section. The custodian entered the sample tag data into a bound logbook.

The laboratory custodian used the sample tag number, or assigned a unique laboratory number to each sample tag, and assured that all samples were transferred to the proper analyst or stored in the appropriate source area. The

laboratory custodian distributed samples to the appropriate analysts. Laboratory personnel were responsible for the care and custody of samples, from the time they were received, until the sample was exhausted or returned to the sample custodian. All identifying data sheets and laboratory records were retained as part of the permanent documentation. Samples received by the laboratory were retained until after analysis and quality assurance checks were completed.

5.0 Laboratory Analysis

5.1 Analytical Test Methods

The samples were transported to a New York State Certified Commercial Laboratory for analysis. Selection of the analytical test methods was based on the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives.

The laboratory analysis performed on the samples secured from probe nodes SP-2 and SP-4 consisted of United States Environmental Protection Agency (USEPA) Test Method 8260 (TAGM) for target volatile organic analytes and USEPA Test Method 8270 (TAGM) for target base-neutral semi-volatile organic analytes.

The laboratory analysis performed on the samples secured from probe nodes UIW-1, UIW-2, UIW-3 and UIW-4 consisted of USEPA Test Method 8260 (TAGM) for target volatile organic analytes, USEPA Test Method 8270 (TAGM) for target base-neutral semi-volatile organic analytes and USEPA Test Method 6010 for target inorganic analytes.

5.2 Analytical Results

The laboratory analysis performed on the subsurface soil samples secured from probe nodes SP-2 and SP-4 detected concentrations of target volatile and semi-volatile organic analytes.

The laboratory analysis performed on the subsurface soil samples secured from probe nodes UIW-1, UIW-2, UIW-3 and UIW-4 detected concentrations of target volatile, semi-volatile organic and inorganic analytes.

Table 2: Detected Analytes, *Brooklyn, New York* presents a summary of the detected concentrations versus the relevant guidance values that apply in New York State. The original laboratory analysis report as prepared by Long Island Analytical Laboratories, Inc. is presented in **Appendix A** of this document.

6.0 Evaluation of Results

A remote sensing survey was performed over portions of the planimetric surface of the subject property to identify the presence of any abandoned USTs at locations corresponding to information provided in the Phase I ESA. A GSSI model SIR-2 ground penetrating radar (GPR) system equipped with a 400MHz antenna was used to perform the survey. An analysis of the data collected from the survey identified two significant subsurface anomalies. An anomaly was detected on the northern side of the existing building immediately adjacent to a structure that contained a heating unit. Based on the data collected from the survey in this area, it was supposed that a UST was situated beneath this heating unit. An anomaly was detected on the southern side of the building within the basement. This anomaly was interpreted to represent a UST beneath the basement slab. These areas were sampled as part of this investigation.

The samples secured from probe nodes SP-1, SP-2, SP-3, SP-4 and SP-5 were subjected to field headspace analysis. The headspace analysis of the subsurface soil samples secured from probe nodes SP-2 and SP-4 detected concentrations of hydrocarbons above ambient levels. The laboratory analysis performed on the subsurface soil samples secured from probe nodes SP-2 and SP-4 detected concentrations of target volatile and semi-volatile organic analytes. Several of the concentrations detected from SP-2 were above the applicable guidance criteria.[1] This data indicates that the former operation and maintenance of the UST identified on the northern side of the existing building actuated a significant release of product to the underlying subsurface soil.

The detected concentrations exhibited from SP-4 were below the applicable guidance criteria.[2] This data indicates that the former operation and maintenance of the UST identified beneath the basement of the existing building has not actuated a significant release of product to the underlying subsurface soil.

The laboratory analysis performed on the subsurface soil samples secured from probe nodes UIW-1, UIW-2, UIW-3 and UIW-4 detected concentrations of target volatile, semi-volatile organic and inorganic analytes. The detected volatile organic analyte concentrations detected were below the applicable guidance criteria.[3] Several of the semi-volatile organic analyte concentrations detected from probe nodes UIW-1 and UIW-4 were above the applicable guidance criteria.[4] Several of the inorganic analyte concentrations detected within samples from probe nodes UIW-1, UIW-2, UIW-3 and UIW-4 were above the applicable guidance criteria.[5]

7.0 Conclusions

Impact Environmental Consulting, Inc. has performed a Phase II Environmental Site Assessment, Selective Sampling Investigation on the subject property in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry. The investigation consisted of the sampling and analysis of subsurface soil and groundwater to further define the environmental quality of the subject property with respect to the recognized environmental conditions outlined in Section 2.3 of this document.

Based upon this assessment, dated July 26, 2001, Impact Environmental Consulting, Inc. concludes that the former operation and maintenance of the UST adjacent to the northern side of the existing building has impacted the environmental quality of the subject property. Accordingly, it is recommended that the UST be properly abandoned and that the NYSDEC be contacted to determine what, if any, actions are necessary to mitigate the detected contaminants.

Further, it has been determined that the UIWs identified within the basement of the building have received discharges that have impacted the environmental quality of the subject property. Accordingly, it is recommended that the detected contaminants within the UIWs be mitigated and that the UIWs be backfilled and permanently sealed. These activities should be performed under the auspices of the USEPA.

DISCLAIMER FOR PHASE II

ENVIRONMENTAL SITE ASSESSMENT

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, Impact Environmental Consulting, Inc. may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to Impact Environmental Consulting, Inc. at the time of the subject property assessment. Although there may have been some degree of overlap in the information provided by these various sources, Impact Environmental Consulting, Inc. did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this subject property assessment.

Observations were made of the subject property and of structures on the subject property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, Impact Environmental Consulting, Inc. renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to non-hazardous or hazardous materials, in that portion of the subject property or structure. In addition, Impact Environmental Consulting, Inc. renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floor, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

Impact Environmental Consulting, Inc. did not perform testing or analyses to determine the presence or concentration of asbestos at the subject property or in the environment of the subject property under the scope of the services performed.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level readings made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the subject property assessment. Where such analyses have been conducted by an outside laboratory, Impact Environmental Consulting, Inc. has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this subject property assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study may be present in soil and/or groundwater at the subject property.

Re: 01-222A, Brooklyn

Dear Mr. Kleaka:

Enclosed please find the Laboratory Analysis Report(s) for sample(s) received on July 23, 2001. Long Island Analytical Laboratories analyzed the samples on July 25, 2001 for the following:

CLIENT ID	ANALYSIS
01-222A-SP-2 (2'-4')	TAGM Volatile and Semi-Volatile Analysis
01-222A-SP-4 (1'-3')	TAGM Volatile and Semi-Volatile Analysis
01-222A-UIW-1	TAGM Volatile and Semi-Volatile Analysis, Total (13) Metals
01-222A-UIW-2	TAGM Volatile and Semi-Volatile Analysis, Total (13) Metals
01-222A-UIW-3	TAGM Volatile and Semi-Volatile Analysis, Total (13) Metals
01-222A-UIW-4	TAGM Volatile and Semi-Volatile Analysis, Total (13) Metals

If you have any questions or require further information, please call at your convenience. Long Island Analytical Laboratories would like to thank you for the opportunity to be of service to you.

Best Regards,

Long Island Analytical Laboratories, Inc.

Ms. Anita Abrams
The Bank of New York
123 Main Street
White Plains, New York

Re: *2425 Atlantic Avenue / 30 - 42 Havens Place, Brooklyn, New York*

Dear Ms. Abrams:

This letter serves as a Phase III Environmental Site Assessment (ESA) report prepared with respect to the above referenced property. This assessment was performed in accordance with recommendations made in a Phase II ESA, Selective Sampling Investigation report performed by Impact Environmental Consulting, Inc. for the subject property, dated July 26, 2001. The Phase II ESA identified several areas of concern that were addressed during the performance of the Phase III ESA.

The Phase II ESA established that the former operation and maintenance of the underground storage tank (UST) adjacent to the northern side of the existing building impacted the environmental quality of the subject property. Consequently, it was recommended that the UST be properly abandoned and that the New York State Department of Environmental Conservation (NYSDEC) be contacted to determine what, if any, actions are necessary to mitigate the detected contaminants. [See the attached UST Closure Report.]

The eleven hundred (1,100) gallon fuel oil UST and the associated contaminated soil was excavated and removed from the subject property under the auspices of the New York State Department of Environmental Conservation (NYSDEC). Laboratory analysis of the endpoint samples secured from the remediated UST excavation, generated data that satisfies the NYSDEC Recommended Soil Cleanup Objectives according to TAGM # HR-94-4046. Accordingly, we have prompted the NYSDEC to close the associated spill file #0106974.

It was determined that the Underground Injection Wells (UIWs) identified within the basement of the building received discharges that impacted the environmental quality of the subject property. Accordingly, it was recommended that the detected contaminants within the UIWs be mitigated and that the UIWs be backfilled and permanently sealed. Additionally, it was recommended that these activities be performed under the auspices of the United States Environmental Protection Agency (USEPA). [See the attached UIW Closure Report.]

The impacted sediments detected within the UIWs were excavated and removed from the subject property in accordance with a Remediation Plan approved by the USEPA. Laboratory analysis of the endpoint samples secured from the remediated UIWs generated data that satisfies the NYSDEC Recommended

Soil Cleanup Objectives according to TAGM # HR-94-4046. Accordingly, we have prompted the USEPA to close the Underground Injection Control file for the subject property.

During the performance of a remote survey, an anomaly was detected on the southern side of the building within the basement. Said anomaly was suspected to represent a UST beneath the basement slab. A destructive survey was performed on October 4, 2001 to investigate the area of detected anomaly for the presence of an underground storage tank. The destructive survey failed to identify an underground storage tank associated with the detected anomaly.

Impact Environmental Consulting, Inc. has performed a Phase III Environmental Site Assessment on the subject property in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry. Based upon the data generated from the performance of the Phase I, II and III Environmental Site Assessments, Impact Environmental Consulting, Inc. concludes that the remedial activities performed have sufficiently mitigated the contaminants that existed on the subject property. Accordingly, no additional activities are required to further define or enhance the environmental quality of the subject property.

Sincerely,
Impact Environmental Consulting, Inc.

Re: Class V Underground Injection Control (UIC) Closeout Letter

Dear Mr. Hamroff:

The Ground Water Compliance Section of the U.S. Environmental Protection Agency (EPA) has reviewed the report prepared by Impact Environmental (dated November 15, 2001), concerning the remediation of the four (4) Class V underground injection wells, UIW-1-EP, UIW-2-EP, UIW-3-EP and UIW-4-EP.

The Class V UIC wells have been remediated to the satisfaction of this office. Based on my review, the UIC Program will now close its file on the above subject matter.

Please be advised that you are under a continuing obligation to comply with all applicable federal, state, and local regulations.

If you have any questions, please contact Margaret Halley of my staff at (212) 637-3092 or at halley.margaret@epamail.epa.gov.

Sincerely,

Robert Ferri

RE:2425 Holding Corp.
2425 ~~Atlantic Ave/30-42~~ Havens Place
Brooklyn, New York

Spill#: 0106974

Dear Mr. Scroope:

Based on the submitted documentation provided to date by Impact Environmental Inc., no further investigation or response will be required concerning the #2 oil tank removal performed at 2425 Atlantic Avenue/30-42 Havens Place Brooklyn, New York, with regard to spill number 0106974.

Notwithstanding this approval, the New York Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary:

I. Due to the off-site migration of petroleum contaminants that was not addressed by this evaluation.

II. Due to environmental conditions related to the Site which were unknown to the Department at the time of this approval.

III. Due to information received, in whole or part, after the Department's approval for inactivation, which indicates that inactivation decision and/or corrective action is not sufficiently protective of human health for the reasonably anticipated use of the site.

IV. Due to fraud in obtaining this approval for inactivation.

Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this release for future property transactions, refinancing, etc. The Department's files regarding this release may not be maintained indefinitely.

Sincerely,

Michelle Tipple

MEI Project #: 22-1346

In accordance with our agreement, Middleton Environmental Incorporated (MEI), has performed a Phase I Environmental Assessment of the above referenced property in accordance with ASTM E 1527-13 Scope of Work. Please find a copy of the report enclosed.

We declare that to the best of our knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR and, we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Thank you for choosing MEI as your consultant for this project. If you have any questions, or if we can be of additional service, please contact us at (631) 321 4300.

Respectfully submitted,

Middleton Environmental Incorporated

1.0 EXECUTIVE SUMMARY

At the request of Maspeth Federal Savings, Middleton Environmental Incorporated (MEI) has performed a Phase I Environmental Site Assessment (ESA) of the property located at 2425-2435 Atlantic Avenue in Brooklyn, New York, herein referred to as the Subject Property. The main objective of this ESA was to identify **Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs)** in connection with the Subject Property, defined in ASTM Practice E 1527-13 as the presence or likely presence of any hazardous substances or petroleum products that indicate an existing release, a past release, or a material threat of a release. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-13. This assessment has identified no evidence of RECs or CRECs in connection with the Subject Property. HRECs pertaining to a closed NYSDEC Spills listing was identified in connection with the Subject Property.

The Subject Property consists of one (1) irregular-shaped parcel with an estimated area of 0.40 acres. The Subject Property is improved with one (1) commercial building with one (1) floor and a basement. This 20,000 square-foot building is occupied by one (1) commercial unit (Z-Studios, non-descript mattress fabrication shop). A review of the New York City Building Department property profile overview indicated that the existing building was constructed circa 1946 and the north portion of the existing building circa 2002. The building occupies the majority of the parcel with landscaped areas bordered by municipal walkways and right-of-ways.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. MEI's Findings and Opinions and Recommendations for further action or investigation (if any), are presented in Section 10.0.

ASSESSMENT SUMMARY TABLE			
Assessment Component	**Section(s)**	**Recommended Actions**	**Estimated Cost**
Historical Review	**5.3, 5.4 & 5.5**	**No Further Action**	
Current Occupants / Operations	**3.3**	**No Further Action**	
Hazardous Substances / Petroleum Products	**7.2**	**No Further Action**	
Drains, Sumps & Storm Water Drywells	**7.2**	**No Further Action**	
Storage Tanks	**7.2**	**No Further Action**	
PCBs	**7.2**	**No Further Action**	
Regulatory Agency / Database Review	**5.1**	**No Further Action**	
Asbestos Containing Materials	**9.1**	**No Further Action**	
Lead Based Paint	**9.2**	**No Further Action**	
Lead in Drinking Water	**9.3**	**No Further Action**	
Radon	**9.4**	**No Further Action**	
Mold	**9.5**	**No Further Action**	
Wetlands	**9.6**	**No Further Action**	

2.0 INTRODUCTION

2.1 Purpose

MEI has performed a Phase I Environmental Site Assessment (Phase I ESA) of property located 2425-2435 Atlantic Avenue in Brooklyn, New York (Subject Property). The purpose of this Phase I Environmental Site Assessment (Phase I ESA) is to investigate and identify Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs) associated with the Subject Property and/or surrounding property. Recognized Environmental Conditions, as defined in the ASTM Standard Practice E 1527-13, including the following:

The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

For the purpose of this Phase I ESA, *recognized environmental conditions (REC's),* may also include the presence or likely presence of other conditions as noted in the Scope of Services.

2.2 Scope of Services

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-13. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-13 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review. The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-13: asbestos-containing materials (ACM), lead-based paint (LBP), lead in drinking water, radon, mold, and wetlands.

2.3 Assumptions and Limitations

There is a possibility that even with the proper application of these methodologies there may exist on the Subject Property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. The information and conclusions contained in this report are based upon work undertaken by trained professional in accordance with generally accepted engineering and scientific practices current at the time the work was performed. MEI believes that the information obtained from the record review and the interviews concerning the Subject Property is reliable. However, MEI cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The methodologies of this assessment are not intended to produce all-inclusive or comprehensive results, but rather to provide the User with information relating to the Subject Property. Due to the nature of this investigation and data available, MEI cannot warrant against undiscovered environmental liabilities. Should any additional information become available which differs significantly from our understanding of conditions or findings represented in this report, we request that this information be supplied to MEI so that MEI may reassess the conclusions provided in this report (if necessary).

The findings, opinions and conclusions of this report contain the limitations inherent in these methodologies that are referred to in ASTM E 1527-13. Specific limitations and exceptions to this ESA are set forth below:

Historical and environmental information pertaining to the Subject Property has been included in this report to the extent that such information is "reasonably ascertainable" as defined in the above-referenced standard practice and in accordance with the project specific timeframes.

MEI reviewed an environmental database search report. MEI's conclusions based on the search report are limited to the accuracy of that report. To the extent possible, MEI's field observations are used to verify the information or identify errors and inconsistencies in the search report regarding the listed facilities in the immediate vicinity of the Subject Property.

With respect to conditions outside the scope of the ASTM Standard, MEI's observations are limited to physical observations and a review of published data. Unless otherwise stated, no sampling for Asbestos Containing Materials, Lead Based Paint, Drinking Water, Radon, Mold or Wetlands was conducted.

2.4 Special Terms and Conditions

This Phase I Environmental Site Assessment ("the report") has been prepared to assist Maspeth Federal Savings in its underwriting of a proposed mortgage loan or financing on the Subject Property. This report can be relied upon by only the parties stated in the transmittal letter at the front of this report. MEI's liability to a purchaser wishing to use this report is limited to the cost of the report. Amendments to MEI's limitations as stated herein that may occur after issuance of the report are considered to be included in this report. Payment for the report is made by, and MEI's contract and report extends Maspeth Federal Savings only, in accordance with MEI Terms and Condition and the MEI Scope of Work.

2.5 Data Gaps

Any data gaps identified herein, as defined by ASTM Practice E 1527-13 are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report.

2.6 Deviations

No deviations from the recommended scope of ASTM Standard E 1527-13 were performed as part of this Phase I ESA with the exception of any additional services noted in Section 2.2 Scope of Services.

2.7 User Reliance

This Phase I Environmental Site Assessment Report is for the benefit of Maspeth Federal Savings and this report may not be relied upon by any other person or entity without the written consent of MEI.

Only if written agreement has been executed granting the right to utilize this report, no third party which obtains all of portion of this report shall have any rights of recourse or recovery under any course of action against MEI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with MEI's Standard Phase I Environmental Site Assessment Contract and this report is for the benefit of Maspeth Federal Savings and its successors and assigns. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of MEI.

3.0 SITE DESCRIPTION

3.1 Ownership and Location

According to the Automated City Register Information System (ACRIS) operated by the New York City Department of Finance, the Subject Property is identified as Block 1574 Lot 23. The Subject Property is owned by 2425 Holding Corp.

The Subject Property is located at 2425-2435 Atlantic Avenue in Brooklyn, New York. MEI did not identify any prior owners or occupants of potential environmental concern in the property records obtained from the NYC Department of Finance.

3.2 Improvements

The Subject Property consists of one (1) irregular-shaped parcel with an estimated area of 0.40 acres. The Subject Property is improved with one (1) commercial building with one (1) floor and a basement. A review of the New York City Building Department property profile overview indicated that the existing building was constructed circa 1946 and the north portion of the existing building circa 2002. The building occupies the majority of the parcel with landscaped areas bordered by municipal walkways and right-of-ways.

3.3 Current Use of the Subject Property

The building is occupied by one (1) commercial unit (Z-Studios, non-descript mattress fabrication shop).

3.4 Services, Utilities and Roadways

Street Address(es): 2425-2435 Atlantic Avenue, (30-42 Havens Place)

City and State: Brooklyn, New York

County: Kings

Owner: New 1024 New York, LLC

Property Size: 0.40 acres

Access Roadway to site: Atlantic Avenue to the south and Havens Place to the east of the Subject Property.

Site Use: The Subject Property is improved with one (1) commercial building with one (1) floor and a basement.

Occupants: The Subject Property is occupied by one (1) commercial unit (Z-Studios, non-descript mattress fabrication shop).

Electricity Provider: Consolidated Edison

Natural Gas Provider: National Grid

Fuel Oil Provider: Not Applicable

Potable Water: Municipal Water Supply System

Sewer Services: Municipal Sewer System

Heating System: Z-Studios is heated by individual natural gas-fired heaters suspended from the ceilings and the mattress shop is heated by a natural gas-fired boiler located in the basement.

3.5 Adjoining Property Usage

The current use of the adjoining properties is mixed. The Subject Property borders are as follows:

North - The property is bordered to the north by a residential building.

South - The property is bordered to the south by Atlantic Avenue and commercial buildings.

East - The property is bordered to the east by Haven Place and a commercial parking lot.

West - The property is bordered to the west by a commercial and residential buildings.

4.0 USER PROVIDED INFORMATION

4.1 Environmental Pre-Survey Questionnaire

Pursuant to ASTM E 1527-13, MEI requested the following site information from the User of this report and from the site contact. The following section summarizes information provided Maspeth Federal Savings with regard to this Phase I Environmental Site Assessment.

ITEM	PROVIDED BY USER	NOT PROVIDED BY USER	DISCUSSED BELOW	DOES NOT APPLY
4.1 Environmental Pre-survey Questionnaire		X		
4.2 Title Records		X		
4.3 Environmental Liens or Activity and Use Limitation	X			
4.4 Specialized Knowledge		X		
4.5 Commonly Known or Reasonably Ascertainable Information		X		
4.6 Valuation Reduction for Environmental Issues		X		
4.7 Identification of Key Site Manager		X		
4.8 Reason for Performing Phase 1 ESA	X			
4.9 Prior Environmental Reports		X		

4.2 Title Records

Title record information associated with the Subject Property has not been provided to MEI by Maspeth Federal Savings. Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

4.3 Environmental Liens or Activity and Use Limitation

The property owner/user/key site personnel did not report any Environmental Liens or Activity/Use Limitations on the site. An environmental lien search was included in the scope of work of this assessment and no Environmental Liens nor Other Activity and Use Limitations (AULs) were identified in connection with the Subject Property.

4.4 Specialized Knowledge

Maspeth Federal Savings provided no specialized knowledge that is material to Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs). MEI was not provided with or made aware of previous environmental assessments or other documentation that is material to RECs, CRECs or HRECs in connection with the Subject Property, except as presented in Section 4.3 of this report.

4.5 Commonly Known or Reasonably Ascertainable Information

Maspeth Federal Savings has provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

4.6 Valuation Reduction for Environmental Issues

Maspeth Federal Savings has provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

4.7 Identification of Key Site Manager

Maspeth Federal Savings provided contact information for the Subject Property owner, manager and/or occupants. The Contact person for site access was Mr. Michael Hamroff.

4.8 Reason for Performing Phase I ESA Report

The purpose of this Phase I Environmental Site Assessment (ESA) was to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E-1527-13) in connection with the Subject Property. This ESA was also performed to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "landowner liability protections," or "LLPs"). ASTM Standard E-1527-13 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

4.9 Prior Environmental Reports

A Phase I ESA prepared by Impact Environmental (IE) dated July 12, 2001, was provided for review pertaining to the Subject Property. IE identified two (2) inactive fuel oil underground tanks which were tentatively identified on the Subject Property with no documentation and therefore represented a REC. IE identified four (4) floor drains on the lower level of the building that reportedly discharge directly to soil and classifiable as underground injection wells. IE indicated that the industrial use of the Subject Property had created the potential for these structures to have been polluted from organic and inorganic contaminated and therefore represented a REC. IE noted several off-site confirmed or potential contamination sources were identified. IE recommended a Limited Subsurface Investigation to determine the presence of any tanks and adverse impacts to the subsurface by the historical use and / or presence of USTs on the Subject Property.

A Phase II ESA prepared by IE dated July 26, 2001, was provided for review pertaining to the Subject Property in order to investigate the evidence of RECs noted in the above referenced IE Phase I. The investigation consisted of sampling and analysis of subsurface soil and groundwater to further define environmental quality of the Subject Property. It was found that former operation and maintenance of the UST adjacent to the north side of the existing building had impacted the environmental quality of the Subject Property and recommended that the UST be properly abandoned and that the NYSDEC be contacted to determine what, if any, actions are necessary to mitigate detected contaminants. It was also determined that discharges within the basement of the building had adversely impacted the environmental quality of the Subject Property. IE recommended that the detected contaminants be mitigated and that the UIWs be backfilled and permanently sealed, and these activities should be performed under the oversite of the USEPA.

A Close Out Letter prepared by IE dated December 5, 2001, was provided for review pertaining to the Subject Property which served as a Phase III ESA to address the IE recommendations in the Phase II ESA. An 1,100-gallon UST and associated contaminated soil was excavated and removed from the Subject Property under the oversite of the NYSDEC. Endpoint sample results from the remediated UST excavation satisfied the NYSDEC Recommended Soil Cleanup Objectives (SCO) according to TAGM # HR-94-4046, and IE prompted the NYSDEC to closed associated spill case file 0106974. The impacted sediments detected within the UIWs were excavated and removed from the Subject Property in accordance with a Remediation Plan approved by the USEPA. Laboratory analysis of endpoint samples secured from the remediated UIW's generated data that satisfied the NYSDEC Recommended Soil Cleanup Objectives (SCO) according to TAGM # HR-94-4046. IE subsequently prompted the USEPA to close the Underground Injection Control file for the Subject Property. An anomaly was detected on the southern side of the building within the basement during a remote survey suspected to represents a UST beneath the basement slap. A destructive survey was performed on October 1, 2001, to investigate the area of the detected anomaly and the destructive survey failed to identify any USTs associated with the detected anomaly. Based on the data generated by the Phase I, II, and II ESAs, IE concluded that remedial activities performed had sufficiently mitigated the contaminants that existed on the Subject Property and no further activities were recommended.

A Phase I ESA prepared by GEI Consultants (GEI) dated August 2017, was provided for review pertaining to the Subject Property. GEI cites the Phase I, II, and III remedial reports conducted by IE, classifying the RECs noted in the Phase I as HRECs not requiring further action. GEI did not recommend any immediate testing pertaining to the Subject Property's status as an E-Designation site. GEI noted that if the property changes, significant and detailed environmental testing that included soil, groundwater, and soil vapor testing will be required by the City of New York prior to any building permits.

Based upon the findings of these previous environmental reports, MEI does not recommend any further action at this time pertaining to the environmental quality of the Subject Property.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

Information from standard Federal and state environmental record sources was provided through EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. This integrated database also contains postal service data in order to enhance address matching. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geocoded locations is approximately +/-300 feet.

In some cases, location information supplied by the regulatory agencies is insufficient to allow the database companies to geocode facility locations. These facilities are listed under the unmappable section within the EDR report. A review of the unmappable facilities indicated that none of these facilities are within the ASTM minimum search distance from the Site. Pertinent regulatory files / records associated with the Subject Property and/or any adjoining site will be requested for review in the event the listing is associated with a facility at which a suspected or confirmed release has occurred that has not yet been closed to the satisfaction of the regulatory agency and/or if the facility represents a REC in connection with the Subject Property.

Regulatory information from the following database sources regarding possible recognized environmental conditions, within the ASTM minimum search distance from the Site, was reviewed. Specific facilities are discussed below if determined likely that a potential recognized environmental condition has resulted at the Site from the listed facilities (see appendix 12.5 for Environmental Database Report).

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS			
Regulatory Database	**Approximate Minimum Search Distance**	**Subject Property Listed**	**Off-site Listing Within Search Distance**
Federal NPL Sites	**1.0 mile**	**No**	**0**
Federal Delisted NPL Sites	**0.5 mile**	**No**	**0**
Federal SEMS Sites (formerly CERCLIS Sites)	**0.5 mile**	**No**	**0**
Federal SEMS Archive Sites (formerly CERCLIS NFRAP)	**0.5 mile**	**No**	**0**
Federal RCRA CORRACTS Sites	**1.0 mile**	**No**	**0**
Federal RCRA Generators Sites	**Property & Adjoining**	**Yes**	**0**
Federal RCRA Non-CORRACTS TSD Sites	**0.5 mile**	**No**	**0**
Federal Engineering / Institutional Control Sites	**Property & Adjoining**	**No**	**0**
Federal ERNS Sites	**Subject Property**	**No**	**0**
State and Tribal equivalent NPL Sites	**1.0 mile**	**No**	**2**
State and Tribal equivalent CERCLIS Sites	**0.5 mile**	**No**	**0**
State and Tribal Leaking Storage Tank Sites	**0.5 mile**	**No**	**25**
State and Tribal Spills Sites	**Property & Adjoining**	**Yes**	**0**
State and Tribal Landfill or Solid Waste Disposal Sites	**0.5 mile**	**No**	**5**
State and Tribal Registered Storage Tank Sites	**Property & Adjoining**	**No**	**0**
State and Tribal Engineering / Institutional Control Sites	**Property & Adjoining**	**No**	**0**
State and Tribal Voluntary Cleanup Sites	**0.5 mile**	**No**	**11**
State and Tribal Brownfield Sites	**0.5 mile**	**No**	**2**

- **Federal National Priority List (NPL) Sites**

The National Priorities List (NPL) is the Environmental Protection Agency (EPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund Program. The Subject Property is not listed as a Federal NPL site. No Federal NPL sites were identified within a mile radius of the Subject Property.

- **Federal Delisted National Priority List (NPL) Sites**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. The Subject Property is not listed as a Federal Delisted NPL site. No Federal Delisted NPL sites are located within a mile radius of the Subject Property.

- **Federal SEMS Sites (formerly CERCLIS Sites)**

The SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the SEMS List and the sites which are in the screening and assessment phase for possible inclusion on the SEMS. The Subject Property is not identified as a Federal SEMS facility. No SEMS facilities were identified within a half mile of the Subject Property.

- **Federal SEMS-ARCHIVE List**

The SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the SEMS List. The Subject Property is not identified as a SEMS-ARCHIVE facility. No SEMS-ARCHIVE facilities were identified within a half mile of the Subject Property.

- **Federal RCRA CORRACTS Sites**

RCRA Corrective Action Tracking System (CORRACTS) is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies Transportation, Storage or Disposal (TSD), facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. The Subject Property was not identified on the RCRA CORRACTS site list. No RCRA CORRACTS sites were identified within a mile radius of the Subject Property.

- **Federal RCRA Hazardous Waste Generators Sites**

Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQGs). A RCRA-LQG is a facility that generates over 1,000 kilograms (Kg) of hazardous waste. A RCRA-SQG is a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month while a RCRA-CESQG generates less than 100 Kg of hazardous waste per month. The Subject Property is not listed as a Federal RCRA Hazardous Waste Generators Site. However, the Subject Property is presently listed as a RCRA NonGen / NLR site. There is a RCRA-LQG listing listed under Handler Name NYCT – 30 Haven's Place during 1994. There are no violations associated with this site. Based on regulatory status, this historic generator is not likely to have an adverse impact on the Subject Property.

No adjacent properties were identified as a Federal RCRA Hazardous Waste Generator Site.

- **Federal RCRA non-CORRACTS TSD Sites**

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) sites are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). The Subject Property is not listed as a Federal RCRA non-CORRACTS TSD site. The Subject Property is not listed as a Federal RCRA non-CORRACTS TSD Site. No Federal RCRA non-CORRACTS TSD sites were identified within a mile radius of the Subject Property.

- **Federal Engineering Control / Institutional Control Sites**

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. Neither the Subject Property nor any of the surrounding properties were listed as a Federal Engineering Control or Institutional Control Site.

- **Federal Emergency Response Notification System (ERNS) Sites**

ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property is not listed as a Federal ERNS site.

- **State and Tribal Equivalent NPL Sites**

State and Tribal equivalent NPL databases were searched for sites located within a mile of the Subject Property. The Subject Property is not listed as a State and Tribal Equivalent NPL Site. Two (2) State and Tribal equivalent NPL sites were identified within 1.0 miles of the Subject Property. Both sites are located greater than 0.100 miles from the Subject Property. Based on distance and the dense urban environment of the surrounding area, the sites are unlikely to have an adverse impact on the Subject Property.

- **State and Tribal equivalent CERCLIS Sites**

State and Tribal equivalent CERCLIS databases were searched for sites located within a half mile of the Subject Property. The Subject Property is not listed as a State and Tribal equivalent CERCLIS Site. No State and Tribal equivalent CERCLIS sites are located within a half mile radius of the Subject Property.

- **State and Tribal Leaking Storage Tank Sites**

Leaking Storage Tank Sites are properties where releases of hazardous substances or petroleum products from underground storage tanks (USTs) and/or aboveground storage tanks (ASTs) have been identified and reported to state, tribal, or local agencies. The Subject Property is not listed as a State and Tribal Leaking Storage Tank site. Twenty-five (25) State and Tribal Leaking Storage Tank Sites were identified within 0.5 miles of the Subject Property. Twenty-two (22) sites are located greater than 0.100 miles from the Subject Property. The three (3) remaining sites have since been remediated and associated spill files closed by the NYSDEC. Based on distance, regulatory status, and the dense urban environment of the surrounding area, the sites are unlikely to have an adverse impact on the Subject Property.

- **State and Tribal Spills Sites**

A review of the State and Tribal Spills database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property is listed as a State and Tribal Spills Site assigned NYSDEC Spill Number 0106974. On October 5, 2001, an equipment failure at 30 Havens Place during the excavation of a 1,000-gallon UST resulted in contaminated soil. The spill was remediated under the oversite of the NYSDEC and carried out by Impact Environmental. A tank closure report dated November 15, 2001, was submitted to PBS and transferred to the NYSDEC on December 3, 2001. The associated spill file was closed by the NYSDEC on December 19, 2005. Based on regulatory status, this site is not likely to have an adverse impact on the Subject Property. This closed NY Spills listing represents a HREC in connection with the Subject Property.

No adjoining properties were listed as a State and Tribal Spills Site.

- **State and Tribal Landfill Sites and Solid Waste Disposal Sites**

The State and Tribal landfill and solid waste disposal site databases identify active or inactive landfill and transfer station facilities, as well as open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. The Subject Property is not listed as a State and Tribal Landfill and Solid Waste Disposal Site. Four (4) State and Tribal Landfill Sites and Solid Waste Disposal sites were identified within a half mile radius of the Subject Property. Three (3) sites are located greater than 0.100 miles from the Subject Property. The last site is located 0.061-miles down-gradient of the Subject Property. Based on distance, presumed hydrogeologic gradient relative to the Subject Property, and the dense urban environment of the surrounding area, the sites are unlikely to have an adverse impact on the Subject Property.

- **State and Tribal Registered Storage Tank Sites**

The Subject Property is not listed as a State and Tribal Registered Storage Tank site. No adjoining properties were listed as a State and Tribal Registered Storage Tank.

- **State and Tribal Engineering Control / Institutional Control Sites**

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property was not listed as a State Engineering Control or Institutional Control Site. However, the Subject Property is listed as an E-Designation Site requiring further evaluation of Air Quality – HVAC fuel limited to natural gas, Hazardous Materials* Phase I and Phase II Testing Protocol, and Window Wall Attenuation & Alternative Ventilation. Any future redevelopments at the Subject Property should be conducted under of the oversite of the New York City Office of Environmental Remediation (NYCOER) to address the E-designation status of the Subject Property. None of the surrounding properties were listed as a State Engineering Control or Institutional Control Site.

- **State and Tribal Voluntary Cleanup Sites**

The Subject Property is not listed as a State and Tribal Voluntary Cleanup site. Eleven (11) State and Tribal Voluntary Cleanup sites were identified within a half mile radius of the Subject Property. Ten (10) sites are located greater than 0.100 miles from the Subject Property. The last site is located 0.059-miles cross-gradient of the Subject Property. Based on distance, presumed hydrogeologic gradient relative to the Subject Property, and the dense urban environment of the surrounding area, the sites are unlikely to have an adverse impact on the Subject Property.

- **State and Tribal Brownfield Sites**

The Subject Property is not listed as a State and Tribal Brownfield site. Two (2) State and Tribal Brownfield sites were identified within a half mile radius of the Subject Property. One (1) site is located greater than 0.100 miles from the Subject Property and the second site is located 0.065-miles down-gradient of the Subject Property.

5.2 Sanborn Fire Insurance Maps

Historical fire insurance maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of available fire insurance maps are presented in Appendix 12.6.

FIRE INSURANCE MAP SUMMARY		
Year	**Issues Noted**	**Observations**
1888	**No**	**Subject Property: The 1888 Sanborn Map shows the Subject Property as undeveloped.**
		Surrounding Area: The 1888 Sanborn Map shows the surrounding properties as undeveloped. However, there is a Long Island Railroad line to the south of the Subject Property.
1908	**No**	**Subject Property: Conditions on the Subject Property are similar to those depicted on the 1888 Sanborn Map.**
		Surrounding Area: Conditions on the surrounding properties are similar to those depicted on the 1888 Sanborn Map. However, the north and west-northwestern lots are developed with dwellings and Atlantic Avenue is depicted to the south of the Subject Property.
1932	**No**	**Subject Property: Conditions on the Subject Property are similar to those depicted on the 1908 Sanborn Map.**
		Surrounding Area: Conditions on the surrounding properties are similar to those depicted on the 1908 Sanborn Map. However, the south adjacent lot is developed with a school and warehouse and the west-southwestern-most adjacent lot is developed with a commercial building depicted as auto building material storage.
1951-1993	**No**	**Subject Property: The 1951 Sanborn Map shows the Subject Property as developed with the existing building. The building is depicted as a loft.**
		Surrounding Area: Conditions on the surrounding properties are similar to those depicted on the 1932 Sanborn Map. However, the south adjacent lot is developed with a school and warehouse and the west-southwestern-most adjacent lot is developed with a commercial building depicted as auto building material storage.
1994-2001	**No**	**Subject Property: Conditions on the Subject Property are similar to those depicted on the 1951 Sanborn Map.**
		Surrounding Area: Conditions on the surrounding properties are similar to those depicted on the 1951 Sanborn Map. However, the east adjacent lot is depicted as a bus storage lot.
2002-2007	**No**	**Subject Property: Conditions on the Subject Property are similar to those depicted on the 1994 Sanborn Map. However, the northern portion of the existing building is now developed and depicted as storage.**
		Surrounding Area: Conditions on the surrounding properties are similar to those depicted on the 1951 Sanborn Map. However, the east adjacent lot is depicted as a bus storage lot.

5.3 Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by researching available historical aerial photographs from and other available resources. Aerial photographs depicting the Subject Property were reviewed and are summarized in the following table:

AERIAL PHOTOGRAPH SUMMARY		
Year	**Issues Noted**	**Observations**
1954	**No**	**Subject Property: The 1954 aerial photograph appears to show the Subject Property as developed with the existing building.**
		Surrounding Area: The 1954 aerial photograph appears to show the surrounding properties as developed with residential buildings to the north, south, and west. There appears to be a school / facility to the east.
1966	**No**	**Subject Property: Conditions on the Subject Property appears to be similar to those depicted on the 1954 aerial photograph.**
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1954 aerial photograph.
1980	**No**	**Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1966 aerial photograph.**
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1966 aerial photograph.
1994	**No**	**Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1980 aerial photograph.**
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1980 aerial photograph.
2004 -2012	**No**	**Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1994 aerial photograph.**
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1994 aerial photograph.
2013-2019	**No**	**Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 2004 aerial photograph.**
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 2004 aerial photograph.

5.4 City Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by MEI and EDR. Historical street directories were reviewed and are summarized in the following table. Copies of the street directories are presented in Appendix 12.6.

CITY DIRECTORY SUMMARY		
Year	Issues Noted	Occupants
1934	No	Grimaldi Inspr
1949	No	Art Quilting Co, Pilgram Art Co, Polary Co Plastics, Pycolite Plastics Corp
1960	No	Grusha Bros Clothing
1965	No	Grusha Bros Clothing, Mc Roth Needles, LTD
1970	No	Grusha Bros Clothing, Rothkopf Mac M & Co Inc.
1973	No	Grusha Bros Clothing
1976	No	Mcgroth Properties, Inc., Grusha Bros Clothing
1980	No	A-I-D Labs of NY, Inc.
1985	No	Swift Sheet Metal Corp
1992	No	Swift Sheet Metal Corp - Louvers Dampers Penthouses Access Doors
1994	No	Energy Metal Products, Inc
1997	No	Energy Metal Products, Inc – Louvers Dampers Penthouses Access Doors
1999	No	Active World Solutions, Inc., Continental Mailing Inc.
2000	No	Residential tenants
2004	No	Comprehensive Archives, Inc
2005	No	Comprehensive Archives, Inc
2009	No	Comprehensive Archives, Inc
2014	No	Comprehensive Archives, Inc
2017	No	2425 Holding Corp, Comprehensive Archives, Inc

5.5 Vapor Encroachment Condition

All readily ascertainable information including all applicable Federal, State, Tribal and local database information, historical usage information, soil and groundwater sources and information from the site reconnaissance were reviewed in order to determine if there is a possibility of a Vapor Encroachment Condition regarding the Subject Property. Based upon the results of the site reconnaissance and review of readily ascertainable information, the Vapor Encroachment Condition survey is described below:

POTENTIAL AREA OF CONCERN	RESULT
Does the Subject Property have a current or past contamination concern?	**None identified**
Does the Subject Property have a suspected contamination concern?	**None identified**
Does an adjacent property have a current or past contamination concern?	**None identified**
Does a nearby property have a have a current or past contamination concern which may impact the Subject Property?	**None identified**
Does a regional groundwater contamination concern exist beneath the Subject Property?	**None identified**
Does there exist the possibility for vapor intrusion on the Subject Property?	**None identified**

Based upon this information, there is no concern for a vapor encroachment condition (VEC) with regard to the Subject Property.

5.6 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the New York City Building Department, the New York City Department of Finance and the New York City Fire Department. Information was reviewed in order to determine the possibility of documented adverse environmental conditions, violations or complaints associated with the Subject Property.

New York City Building Department and New York City Department of Finance

MEI reviewed information listed in the online NYC Building Information System (BIS) provided by the New York City Building Department's website, as well as information from the New York City Department of Finance website, Automated City Register Information System (ACRIS), http://a836-acris.nyc.gov/CP. Specific information provided by these websites includes lot sizes and dimensions, building zoning and usage. These websites also include information pertaining to interior renovations, building improvements and approximate date of construction. The information provided by New York City Department of Finance and New York City Department of Buildings (NYCDOB) did not identify any conditions or reported events that would indicate the presence of a recognized environmental condition. The estimated construction date for the existing building is 1946 and the north portion of the existing building circa 2002.

New York City Fire Department

MEI reviewed information provided by the New York City Fire Department (NYCFD). Specific information obtained from the NYCFD includes any active and/or voided storage tank permits for the Subject Property. A review of the NYCFD storage tank files indicated that there are no "active" tanks at the Subject Property.

6.0 PHYSICAL SETTING

6.1 Topography

The Subject Property and vicinity characteristics listed below were analyzed utilizing a current USGS 7.5 Minute Topographic Map. This information is useful in determining the grade and topography of the Subject Property. The Subject Property is located at an elevation of approximately 71 feet above mean sea level (msl). The topography of the Subject Property is relatively flat and there were no slopes, depressions or rolling hills observed on the Subject Property and slopes on the Subject Property range from 0 to 3 percent. The Subject Property has been graded for residential usage.

6.2 Geology and Soils

No bedrock outcroppings were observed at the Subject Property. Near-surface geology in heavily developed areas such as the Subject Property and vicinity is considered "urban land" and is characterized by a non-homogeneous distribution of soil and fill types. Excavation and backfilling for building foundations, utility conduits, subway systems and other construction results in a varied subsurface profile. In this setting, estimation of local subsurface parameters such as permeability, moisture content, and organic fraction is not feasible without site-specific testing data.

6.3 Hydrogeology and Hydrology

No natural surface water bodies were identified on or adjacent to the Subject Property. The nearest surface water body is Jamaica Bay to the south-east of the Subject Property.

Local groundwater gradient is expected to follow surface topography. Groundwater flow near the Subject Property is expected to flow south-east, towards Jamaica Bay. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Subject Property.

7.0 SUBJECT PROPERTY RECONNAISSANCE

The Subject Property reconnaissance was conducted by Mr. Thomas R. Tompkins, Project Manager, on July 22, 2022. All proper measures were taken by MEI personnel during the site inspection to limit any COVID-19 exposures.

7.1 Methodology and Limited Conditions

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. The basement / mechanical rooms, workshops, and commercial spaces were observed during inspection.

7.2 Physical Observations

- **Underground Storage Tanks**

  MEI did not observe any underground storage tanks at the Subject Property.

- **Aboveground Storage Tanks**

  MEI did not observation aboveground storage tanks at the Subject Property.

- **Hazardous Substances and Petroleum Products**

  MEI did not observe any hazardous substances or petroleum products at the Subject Property.

- **Non-Hazardous Substances and Non-Petroleum Products**

  MEI did not observe any non-hazardous substances or petroleum products at the Subject Property.

- **Unidentified Substances Containers**

  MEI did not observe any unidentified substance containers at the Subject Property.

- **Drains or Storm Water Drywells**

  MEI observed drains in the basement that did not show any signs of chemical staining. MEI did not observe any storm water drywells.

- **Polychlorinated Biphenyls (PCB's)**

  MEI did not observe any PCB-containing equipment at the Subject Property.

- **Stains or Corrosion**

  MEI did not observe any stains or corrosion at the Subject Property.

- **Odors**

  MEI did not observe any strong, pungent or noxious odors at the Subject Property.

- **Pools of Liquid**

  MEI did not observe any pools of liquid at the Subject Property.

- **Stressed Vegetation**

  MEI did not observe any stressed vegetation at the Subject Property.

- **Stained Soil or Pavement**

  MEI did not observe any stained soil or pavement at the Subject Property.

- **Wells**

  MEI did not observe any irrigation wells or ground-water monitoring wells at the Subject Property.

- **Sumps, Pits, Ponds or Lagoons**

  MEI observed one (1) sump in the boiler room that did not show any signs of chemical or petroleum staining. MEI did not observe any pits, ponds, or lagoons at the Subject Property.

- **Waste Water**

  MEI did not observe any improper disposal of waste water into drains, ditches or streams at the Subject Property.

- **Solid Wastes Disposal**

  All solid wastes generated on-site are carted away by a licensed waste hauler to an approved solid waste facility and are not disposed at on-site.

8.0 INTERVIEWS

8.1 Interview with Property Owner and/or Property Manager

A building representative was interviewed as part of the site reconnaissance. The representative did not indicate the presence of any environmental liens or was unaware of any contamination concerns regarding the Subject Property.

9.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-13

9.1 Asbestos Containing Material (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable ACM are those which can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

It should be noted that the limited visual screening survey conducted under the scope of work for this assessment does not constitute a full asbestos inspection, in which all areas of the building would have been thoroughly surveyed and sampled. MEI did not observe any ACM on the heating system. MEI did not observe any spray on fire-proofing in accessible areas of the building. MEI did not observe any ACM pipe-wrap in accessible areas of the building.

9.2 Lead Based Paint (LBP)

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January I, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm') or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

MEI observed that the painted surfaces inside the accessible areas of the building were in good condition, free of obvious flaking or chipping. A review of the New York City Department of Housing Preservation and Development's (NYCHPD) Code Enforcement Database indicated that there are no open lead-based paint violation associated with the Subject Property.

9.3 Lead in Drinking Water

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, the USEPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing such as lead solder, brass, bronze, and other lead containing alloys. The USEPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg/L). MEI did not observe any brass or lead fixtures at the Subject Property. The Property is connected to the municipal water supply provided by the City of New York and is managed by the City of New York Department of Environmental Protection (NYCDEP). According to the New York City Drinking Water Supply and Quality Report (available online from the City of New York at http://www.nyc.gov/html/dep/pdf/wsstate16.pdf), drinking water supplied to the Property is compliant with state and federal standards, including those for lead and copper. Of note, MEI did not conduct sampling of drinking water at the Property for the potential presence of lead.

9.4 Radon

Radon is a colorless, odorless, radioactive gas. Radon comes from the natural decay of uranium that is found in nearly all soils. Radon typically moves through the ground and into building through cracks and openings in the foundation. The USEPA has developed a "Map of Radon Zones" indicating the levels of radon concentrations from testing and aerial surveys conducted in all counties in New York State. The U.S. Environmental Protection Agency's Map of Radon Zones identified the Subject Property as a radon zone Level 3. Level 3 signifies that the average predicted radon level indoors is less than 2 pico-Curies per liter, and this is the lowest level in the state. This level compares favorably with the EPA action level of 4.0 pico-Curies per liter as the guideline (it should be noted that current radon information and EPA Action Levels are designated for residential spaces only and commercial and industrial facilities are not subject to EPA's Action Level of 4 pico-Curies per liter as the guideline and definitive information concerning radon gas in an individual building can only be obtained through long term testing).

9.5 Mold

Molds are a class of fungi and have been found to cause a variety of health problems in humans, including allergic, toxicological, and infectious responses. Molds are decomposers of organic materials and thrive in humid environments. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation and carpeting often play host to such growth.

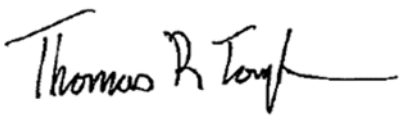
As part of this assessment, MEI performed a limited visual inspection for the conspicuous presence of mold. MEI observed the accessible interior areas of the Subject Property structure(s), including interior walls and ceilings of the building for the presence of conspicuous mold or observed water intrusion or accumulation. This evaluation did not include a review of pipe chases or areas behind enclosed walls and ceilings. MEI did not observe conspicuous visual or olfactory indications of the presence of mold or water damage inside accessible areas of the Subject Property.

9.6 Wetlands

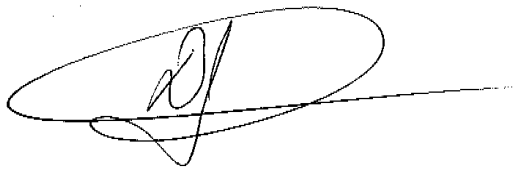
MEI reviewed available information regarding wetlands on the Subject Property, including National Wetlands Inventory online GIS mapping. MEI additionally made general site observations for readily observable potential wetland characteristics. MEI did not observe surface water bodies or any evidence of potential wetlands on or adjacent to the Subject Property.

10.0 FINDINGS, OPINIONS AND RECOMMENDATIONS

MEI has performed this Phase I Environmental Site Assessment of the Subject Property in conformance with the scope and limitations of ASTM Standard E 1527-13. This assessment has identified no evidence of RECs or CRECs in connection with the Subject Property. Evidence of a HREC pertaining to a closed NY Spills listing was identified in connection with the Subject Property.



The site reconnaissance, interviews and review of records have not found the presence or possible presence of hazardous substances or petroleum related products in, on, or at the Subject Property due to any release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.



Lastly, no conditions outside of ASTM E 1527-13 was identified in connection with the Subject Property. It is the opinion of MEI that no further testing (subsurface or otherwise), is warranted on the Subject Property.

11.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

This Phase I Environmental Site Assessment (ESA) Report documents the research methodology used by qualified environmental professionals of MEI to identify recognized environmental conditions using the scope and limitations of ASTM Standard E 1527-13.

2. Income and Expenses

Owners of income-producing properties that have an actual assessed value of more than $40,000 are required to file annual Real Property Income and Expense (RPIE) statements with the Department of Finance(DOF). The DOF uses the information from these statements, or data from comparables, to estimate the market value of a property for tax purposes.

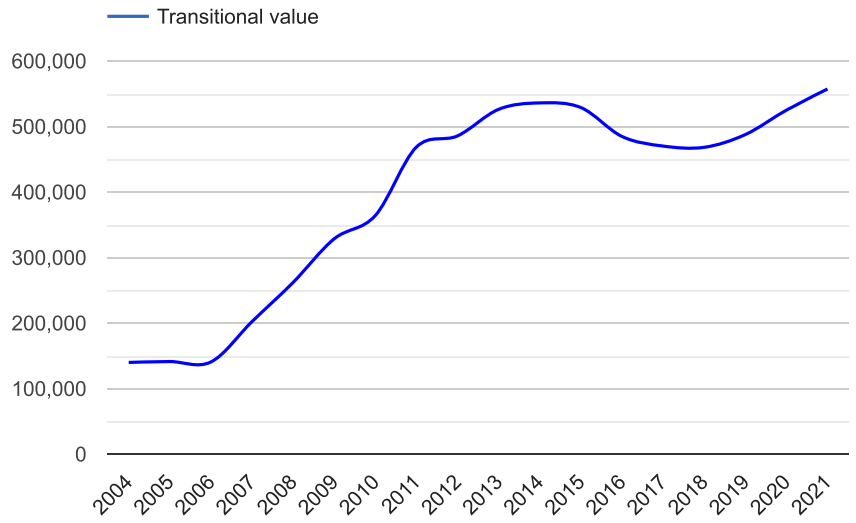
Occupancy

Taxes

1. Tax Bill



Property tax bill for 7/1/2022 to 6/30/2023	**$67,969**

2. Key Values in Calculating the Bill

Tax class	**4**
Market value	**$1,865,000**
Assessed value	**$839,250**
Exemptions granted by city	**$0**
Transitional value	**$631,980**
Transitional exemption value	**$0**
Tax abatements	**$0**

3. Assessed Value Evolution

The state law requires to phase in any changes to the assessed value over a five-year period. In any given year, multiple transitions are being applied to the property, which result in different assessed and transitional values each year. The law requires the use of the lowest value between the two - assessed or transitional - to calculate the property tax bill.Please note that assessment changes due to physical alterations/renovations to the property are not phased in. Additionally, if a tax class change has occurred in the past two years, we are unable to estimate value increases for the next 5 years.

4. Property Tax Calculation

Market Value

The first step is for the City Assessor to determine the *market value* of the property. While the term *market value* would seemingly refer to how much the property would sell for on the open market, in reality the *market value* established by the City Assessor is almost always substantially lower.

Land market value		$438,000
Building market value	+	$1,427,000
Market value	**=**	**$1,865,000**

Assessed Value

Next, the market value is used to compute the assessed value, which is a percentage of the market value. The exact percentage is determined by the tax class of the property. Tax class 1 is assessed at 6% of the market value, and tax classes 2,3 and 4 are assessed at 45%.

Market value		$1,865,000
Assessment ratio	x	45%
Maximum assessed value	**=**	**$839,250**

Transitional Value

To protect property owners from sudden large increases in property tax, the state limits how quickly the city can increase the assessed value. Typically these limits are applied when the City Assessor makes a big increase to the market value. Without the limits the assessed value would increase by a similar percentage. Instead, the change to the assessed value is phased in over a number of years.

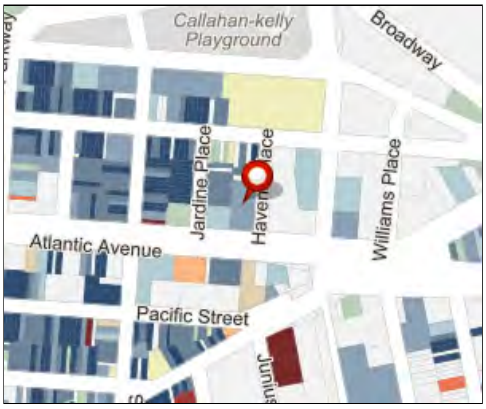
The market value of this property was increased in previous years and the assessed value is currently being phased in. Because this property is in **tax class 4**, the assessment cannot be raised more than 8% from the year before or 30% over five years. Assessed value cannot be raised more than 45% from market value.

Assessed value		$839,250
Exemptions granted by city	-	$0
Net assessed value	**=**	**$839,250**

Transitional value		$631,980
Transitional exemption value	-	$0
Transitional net value	**=**	**$631,980**

Taxable Value

The *taxable value*, for 22/23, is the smaller of the city's net assessed value and the transitional net assessed value.



Taxable value	=	$631,980

Property Tax

Current tax is calculated by multiplying the taxable value (the assessed value minus any exemptions) by the tax rate.
The city also grants some properties incentives called tax abatements, which are subtracted directly from the current tax. This results in the property tax, the amount the current owner pays.

Tax description	Billable value 22/23		Tax rate 22/23		Tax bill 22/23
Current tax	$631,980	x	10.7550%	=	$67,969
Total abatements				-	$0
Property tax				**=**	**$67,969**

For more information, you can view this property's assessment, tax bill, and account statements by clicking here and entering the Borough, Block, & Lot.

This map shows property tax in correlation with square footage of the property.

Above $10.00	$4.00 - $5.00
$9.00 - $10.00	$3.00 - $4.00
$8.00 - $9.00	$2.00 - $3.00
$7.00 - $8.00	$1.00 - $2.00
$6.00 - $7.00	Below $1.00
$5.00 - $6.00	No Data

Property tax	**$67,969**
Tax year	**2022-2023**
Square feet	**20,000**
Tax per sqft	**$3**

5. Exemptions and Tax Abatements

Both the City and State of New York offer property tax reductions through exemptions and abatements for residential property, commercial constructions, and properties used by governmental, industrial, and nonprofit organizations. Exemptions provide tax relief by reducing a property's assessed value, and abatements reduce taxes by applying credits to the amount of tax due. The information in this section presents a summary of the granted amounts and other related values of the benefit programs. Some of this data comes from NYC Department of Housing Preservation and Development (HPD) and the Department of Finance, departments which administer the J-51 Program, 421a Program and the Cooperative and Condominium program .

We believe that no exemptions or abatements currently apply to this property.

Permits

1. Permits

Development

1. Zoning

New York City is divided into three basic *zoning districts:* residential (R), commercial (C) and manufacturing (M). These basic zoning districts are subdivided by the intensity of use. Development is governed by the use, bulk, and parking requirements of the zoning district.

R Residential district
C Commercial district
M Manufacturing district

Rezoning Proposal Active
Rezoning Recently Adopted

This map was created from the NYC Department of City Planning's online zoning map files. It includes updates found in those files through 4/22/2020.

Zoning Designation

Commercial	**C4-5D**
E-Designation	**E-366**

Rezoning Projects

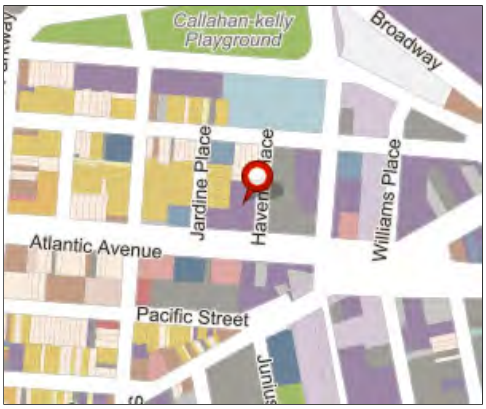
For more information about zoning district regulations, click here.

Parcel Vicinity

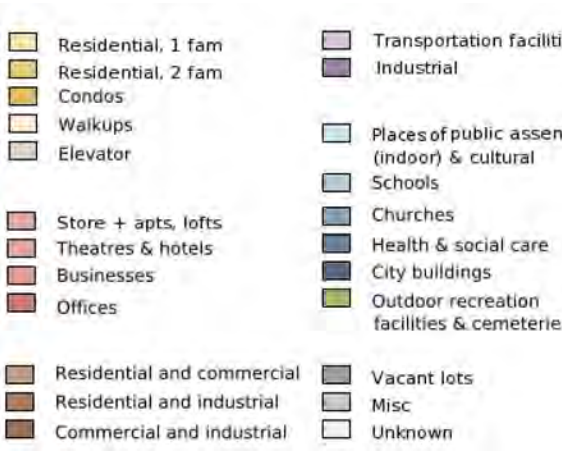
Frontage(s)	**Atlantic Av (narrow)** **Havens Pl (narrow)**
Nearest wide street	**Van Sinderen Av (Wide)**
Distance to wide street	**264 ft**

Commercial — C4-5D



C4 districts are mapped in regional commercial centers, such as Flushing in Queens and the Hub in the Bronx, that are located outside of the central business districts. In these areas, specialty and department stores, theaters and other commercial and office uses serve a larger region and generate more traffic than neighborhood shopping areas. C4-2 - C4-5 districts are mapped in more densely built areas. More info

Map Disclaimer: Our maps are not official zoning maps. The print version of the NYC Zoning Resolution, which includes the zoning maps, together with any amendments adopted by the City Council subsequent to the most recent update to the print version, remains the official version of the Zoning Resolution. All zoning descriptions have been taken from the NYC Planning official source.



2. Building Class

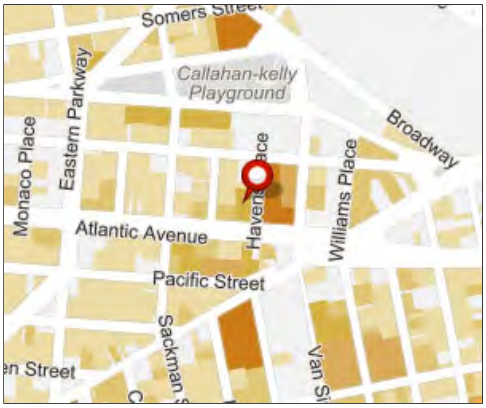
The *building class* specifies how a property is used or what type of building is present on that property. Building classes range from A to Z (excluding X). There are at most 10 different sub-classes within each building class (ranging from 0 to 10). These building classes cover all property uses from residential and commercial to government buildings and parks.

The full list of building classes can be found here.

Building class: **Fireproof Warehouse (E1)**

3. Floor Area Ratio & Air Rights

There are many rules that limit what you can build on a lot and how large it can be. But the most important is the Floor Area Ratio, or FAR. The FAR is expressed as a ratio of the size of the building in square feet to the size of the lot in square feet. For example, if a lot is 2,000 square feet and has an allowable FAR of 4.0, then you cannot build a building larger than 8,000 square feet. Max FAR depends on several factors including zoning, location and use.

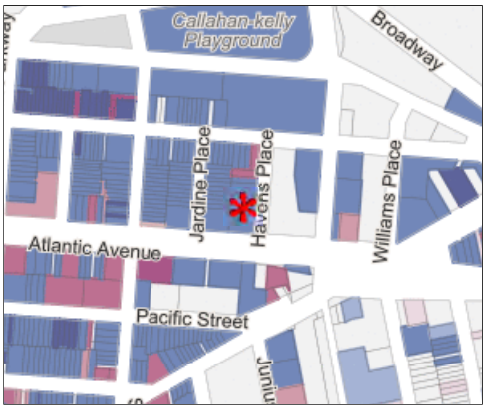


The maximum usable floor area is calculated by multiplying the size of the lot by the larger of the residential or commercial FAR.

Area of lot in square feet		**17,533**
FAR	x	**4.2**
Maximum usable floor area of building	=	**73,639**

Available Air Rights by Parcel

The building on this lot is smaller than the maximum set by the FAR. Thus it may be possible to add to the building (either more floors or an extension) or it may be possible to sell the "air rights" to a developer who owns a nearby lot. (Note: other factors may limit what you can do.)



Maximum usable floor area		**73,639**
Usable floor area	-	**19,988**
Unused buildable square feet ("air rights")	=	**53,651**

Residential FAR	**4.2**
Commercial FAR	**4.2**
Facility FAR	**4.2**
FAR as built	**1.14**

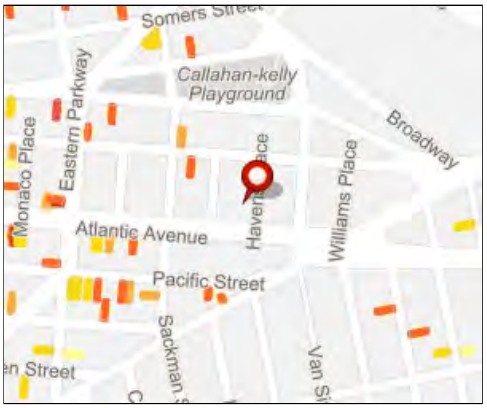
5. Planimetric Map

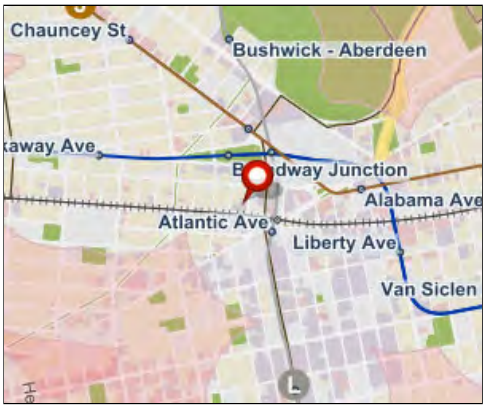
This planimetric map shows features such as retaining walls, sidewalks, medians, curbs, and roadbeds that have been digitized from aerial photography. These features must be taken into consideration when determining how a new building, or extensions to an existing building, are situated within the lot. They can also affect the maximum height that can be built.



BIN	**3042802**
Type	**Building**
Status	**Constructed**
Roof height	**23 ft**
Ground elevation	**72 ft**

6. HPD Alternative Enforcement Program

The HPD Alternative Enforcement Program map is based on the current month's HPD violations in a building divided by the number of units in the building. It takes in consideration the open hazardous and immediately hazardous violations (I/B/C class) in the last 5 years.



For more information, visit the HPD website.

Neighborhood

4. Demographics By Zip Code

Demographic data shown in this section was gathered from the 2020 American Community Survey and refers to zip code **11233**.

Population Demographics

Total population	**79,796**
Female population	**54.3%**
Male population	**45.7%**
Median age	**33.7**
Male median age	**31.5**
Female median age	**35.4**

Education

No highschool	**6.1%**
Some highschool or college	**59.0%**
Bachelors degree	**19.5%**

Other

Citizens	**91.0%**
Citizens born in US	**74.2%**
English speakers	**97.5%**

Journey to Work

Work in a metropolitan area	**100.0%**
Work at home	**5.3%**
Go to work by car	**19.2%**
Go to work after 10 am	**18.6%**

Economic/Employment

Average household income	**$71,104**
White collar	**85.3%**
Blue collar	**14.7%**

Housing

Family households	**57.7%**
Households with kids	**31.1%**
Housing units	**33,791**
Occupied housing units	**31,811**
Owner occupied units	**22.3%**
Average number of people per household	**2.45**
Houses with mortgages	**73.8%**

Wealth

Median value for units with a mortgage	**$968,600**
Median value for units without a mortgage	**$750,400**
Median gross rent	**$1,308**
Median mobile home values	**$0**
Median housing costs per month	**$1,408**
Population in poverty	**26.6%**

Violations

1. HPD Violations

When excessive violations are present, this can adversely affect the support given by The NYC Department of Housing Preservation and Development (HPD). These violations can result in building-wide inspections, fees, and the requirement of extensive repair work to correct underlying conditions. In some cases, outstanding violations may result in a lien being placed on the property. It is also substantially more difficult to mortgage a building with extensive violations.

We do not have any record of violations in our database. Status can be verified here.

2. 311 Complaints

Created	Agency	Type	Descriptor	Disposition	Closed
10/1/2021	NYPD	Encampment		The Police Department visited the location and no Encampment was found.	10/1/2021
6/2/2022	NYPD	Abandoned vehicle	With license plate	The Police Department responded to the complaint and with the information available observed no evidence of the violation at that time.	6/2/2022
8/21/2016	DEP	Water system	Hydrant running (WC3)	The Department of Environmental Protection investigated this complaint and shut the running hydrant.	8/21/2016
1/26/2017	DEP	Water system	Hydrant leaking (WC1)	The Department of Environmental Protection investigated this complaint and shut the running hydrant.	1/27/2017
1/24/2013	DEP	Water system	Leak (use comments) (wa2)	The Department of Environmental Protection has investigated this complaint and a leak, not a city issue, has been resolved by homeowner.	2/4/2013
9/19/2019	DEP	Water system	Hydrant running (WC3)	The Department of Environment Protection inspected your complaint but could not find the problem you reported. If the condition persists, please call 311 (or 212-639-9675 if calling from a non-New York City area code) with more detailed information to submit a new complaint.	9/19/2019

Complaint status can be verified here.

3. DOB Complaints

Date entered	Complaint	Complaint category	Disposition	Inspection
4/7/2017	3597895	Permit - none (building/PA/demo etc.)	Complaint unsubstantiated based on department records	4/12/2017

Complaint status can be verified here.

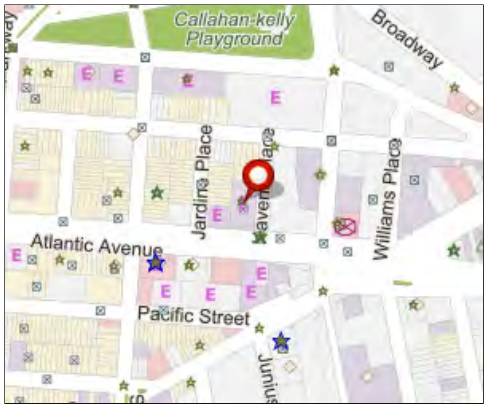
Please note: the NYC Department of Buildings is the only authoritative source for information on DOB violations. Verify the status of the violation on DOB website.

obtains its records from DOB and updates them daily.

5. Neighborhood Complaints

Created	Agency	Type	Descriptor	Disposition	Closed
7/31/2020	DEP	Sewer	Sewer backup (use comments) (sa)		
11/27/2021	DEP	Sewer	Rain garden debris (SRGDBR)		
7/31/2020	DEP	Sewer	Sewer backup (use comments) (sa)	The Department of Environmental Protection investigated this complaint and found there was no sewer back up in the city system at the time of the inspection.	7/31/2020
8/29/2019	NYPD	Illegal parking	Posted parking sign violation	The Police Department responded to the complaint and determined that police action was not necessary	8/29/2019
9/14/2017	DOT	Street condition	Cave-in	The Department of Transportation inspected the condition you reported and found that the condition meets its standards and/or there is a valid permit to conduct work.	9/15/2017
1/5/2010	NYPD	Blocked driveway	No access		1/5/2010
4/29/2014	DPR	Damaged tree	Branch or limb has fallen down	The Department of Parks and Recreation has corrected the condition.	4/30/2014



Risk

1. Toxic Sites

Get a Phase I environmental report Site Assessment or a Home Environmental Database Report for this property directly from Toxics Targeting.

This screening map, provided to by Toxics Targeting, shows environmental hazards such as toxic dumps, garbage landfills, leaking tanks, hazardous waste sites, and pollution discharges reported by local, state and federal government authorities.

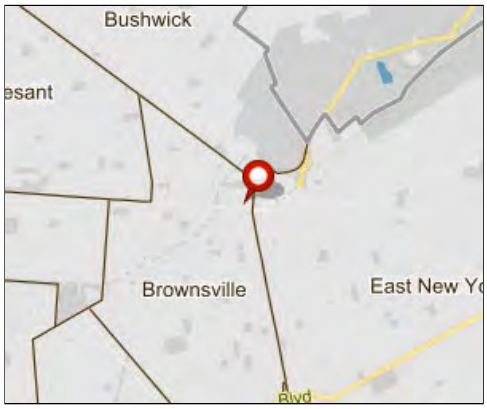
Call 800-2-TOXICS (800-286-9427 NYS only) or 607-273-3391 for more info.

Toxic Sites on the Property

Selected NYC environmental quality review 'E' designation	1
Spill	1
Haz waste generator or transporter	1
Total toxic sites on the property	3

Toxic Sites near the Property

Haz waste generator or transporter	3
Spill greater than 25 gal/lbs	1
Spill	3
Selected NYC environmental quality review 'E' designation	1
Total neighboring toxic sites	8



Map Disclaimer: Mapped locations are approximate; sites are identified based on current and/or historic information. Regulatory status of sites may have changed. Site symbols can refer to large properties, additional toxic sites are not mapped. Contamination problems can impact properties far from toxic sources. Sites include known and potential hazards.

2. FEMA Flood Zones

Use this map to determine if the property is in a flood zone.

Link to the map for this property at **FEMA's Map Service Center** (may not be available in all locations).

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 10 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 4 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/08/2022 has revealed that there are 2 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 03/29/2022 has revealed that there are 5 NY SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 03/15/2022 has revealed that there are

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 14 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that there are 63 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY E DESIGNATION: Lots designation with an ?E? on the Zoning Maps of the City of New York for potential hazardous material contamination, air and/or noise quality impacts.

A review of the NY E DESIGNATION list, as provided by EDR, and dated 03/22/2022 has revealed that there are 10 NY E DESIGNATION sites within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
BELMONT STATION	BELMONT, WILLIAMS, A	SSE 1/2 - 1 (0.551 mi.)	238	778
UNION STATION (CITIZ	ATLANTIC AVE., ASHFO	E 1/2 - 1 (0.989 mi.)	AS241	783

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Contact Name: CALLER
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 1K, UST, FULL HAS BEEN EXCAVATED FROM SITE. UST WAS FULL OF OLD FUEL (SPENT), WAS VACATED OUT, CLEANED, CUT, AND WILL BE REMOVED FROM SITED TODAY. CALLER THINKS CONTAMINATED SOILS ARE DUE TO LINE LEAKING DURING PAST YEARS OF DELIVERER. SOILS ARE BEING EXCAVATED, NO GW REACHED AND SOILS TO BE SAMPLED VIA 4046 TAGM. PART OF SAMPLES WILL BE TAKEN AND CLOSURE REPORT TO BE SUBMITTED TO TIPPLE FOR REVIEW. SPILLER HAS BEEN HOOKED UP TO NG FOR SOME YEARS?. RS DEC Received a tank closure report dated Nov. 15, 2001, submitted to PBS and transferred to DEC (Tipple) on Dec. 3, 2001. Referenced report is not in files, called Impact Environmental to try to obtain second copy. 12/06/05. (Eaton, Albany) No additional files available, closed spill based on tank closure information indicated above. DE"
Remarks: "contaminated soil from leaking u/g tank. cleanup started."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE LOT WAS A REPAIR SHOP. ACCORDING TO NYCT, LOT CONTAINED APPROX. 20 DRUMS OF WASTE OIL. NYCT WAS SUPPOSED TO START USING THE LOT TODAY TO STORE BUSES, WHEN THEY NOTICED THAT MOST OF THE DRUMS WERE GONE EXCEPT FOR A FEW CRUSHED ONES. THERE APPEARED TO BE STAINING AROUND THE STORM WATER DRAIN ON THE PROERTY. NYCT (SANJIV'S PAGER # 917-651-4670) OBSERVED SERVERAL INCHES OF WASTE OIL IN THE STORM WATER DRAIN. DEP NOTIFIED. DEP REQUESTED THAT I NOTIFY ENCON POLICE. 9/29/00 SITE VISIT. MET WITH SANJIV KURAY (NYCT), CECIL MORRIS (CARAVAN TRANSPORTATION), ALDO VASAPOLLI (CONTRACTOR), MARK TIBBE (DEC). MR. VASAPOLLI INFORMED TIBBE THAT THERE WERE SEVERAL DRUMS ONSITE THAT HIS COMPANY TOOK DURING THE CLEANING OF THE LOT. MOST OF THEM WERE EMPTY AND WERE TAKEN BACK TO HIS YARD. ONE CONTAINED WATER, ONE CONTAINED ANTI-FREEZE, ONE CONTAINED WINDSHIELD WASHER FLUID, ONE CONTAINED A LITTLE WASTE OIL AND TWO CONTAINED WHAT APPEARED TO HYDRALIC OR TRANSMISSION FLUID. NONE OF THE DRUMS WERE FULL. ACCORDING TO MR. VASAPOLLI, ALL BUT THE HYDRALIC FLUID WERE DUMPED IN THE STORM WATER DRAIN ON THE PROPERTY. THE HYDRALIC OIL DRUMS WERE PUNCTURED BY THE BACKHOE WHILE IT WAS CLEANING SOME DEBRIS. THE RESULTING SPILL WAS SWEPT INTO THE SAME DRAIN. TIBBE PLACED A CALL TO IRA TURRET (OWNERS ATTORNEY) AND INFORMED HIM THE THE SPILL AND THE DRAIN WOULD HAVE TO BE CLEANED. HE INFORMED TIBBE THAT HE WAS ALREADY WORKING ON GETTING A CONTRACTOR, BUT HE WOULD LIKE A LETTER DIRECTING THEM WHAT TO DO. THE OWNER OF THE PROPERTY IS LAWRENCE GREEN. As per 10/19/00 letter from Ira Turret, the spill was cleaned by Dola Construction."
Remarks:	"PARKING LOT - NYC TRANSIT WAS SUPPOSED TO OCCUPY THIS TODAY, BUT THERE A LOT OF DRUMS ON SITE - SUBJ MAY HAVE DUMPED THE OIL INTO SEWER"

BROWNFIELDS:

Name:	2435 PACIFIC STREET
Address:	2435 PACIFIC STREET
City,State,Zip:	BROOKLYN, NY 11233
Program:	BCP
Site Code:	617184
Acres:	0.800
HW Code:	C224322
SWIS:	2401
Town:	New York City
Record Added Date:	03/17/2021
Record Updated Date:	11/30/2021
Update By:	RKCORCOR
Site Description:	"Location: The property is a 0.8-acre vacant parcel located in an urban setting, comprised of two contiguous tax lots (Lot 46 to the east and Lot 58 to the west) located on the northern side of Pacific Street, between Sackman Street to the west and East New York Avenue to the east. Site Features: The site is comprised primarily of vacant, grassy land. Gravel and paved surface areas are located along the western and southern property borders, respectively. Chain-link fences and concrete block walls define the property borders. Current Zoning and Land Use: The site is currently vacant, and is located in a mixed-use C4-5D/R7D zoning district (a general commercial district with a residential overlay). The adjoining parcels are currently used for a combination of institutional (north), industrial (east), residential (south), and commercial (northeast and west) purposes. Past Uses of the Site: The project Site was undeveloped as early as 1887, and was first developed for commercial and manufacturing use sometime between 1908 and 1928. Known commercial uses have included a large automobile garage (capacity of 130 cars, containing gasoline tanks) on Lot 46, subsequently used as a manufacturing facility for elevators, lamps and clothing, and a warehouse on Lot 58 that was occupied by a clothing manufacturer and several retail stores. On-site buildings were demolished by the 1980s (Lot 58) and 2007 (Lot 46). Site Geology and Hydrogeology: Site soils are derived from glacial materials, which overlie deep glacial deposits of sand, gravel and clay, with bedrock located well below the surface. Neither groundwater nor bedrock was encountered in soil borings extended during the Site investigation, to a maximum depth of 20 feet bgs. The observed site stratigraphy from the surface down consists of approximately 13 feet of historic fill consisting of coarse to medium sand, clay, crushed stone, crushed brick and crushed concrete. Beneath the fill layer is native sand. Shallow groundwater flow in the vicinity of the property is likely to generally follow surficial topography and be in an overall southeasterly direction, toward Jamaica Bay (located approximately 3 miles from the property)."

DEC Memo:	"send TTF letter 01/30/06. Feroze . TTF is sent to: Robert Turrentine Institute For Community Living 40 Rector Street New York, NY 10006. 02/22/06. Feroze, I received a letter from above address that they

INSTITUTE FOR COMMUNITY R (Continued) **S101174394**

found a leak at dry portion of the tank. They will repair the tank and test it again. 02/28/06 Feroze. I received a letter from Mr.Robert Turrentine that they will repair or replace the tank and pipe systems. DEC will be informed about their work progress.\\ 03/15/06. Spill is transferred from Feroze to Kumer Patel. 05/17/06-Hiralkumar Patel. Spoke to Jim at Protest. they haven't heard after they submit proposal. Spoke to Pat Valzalerio as Mr. Turrentine is no longer working at management. Pat will call back with more information. 05/18/06-Hiralkumar Patel. Received call from Pat (Ph. 212-385-3030 Ext. 3222, FAX: 212-385-2380). he suggested refurbishing of tank from inside, but landlord is not agree with that. Pat asked to issue a letter requiring such work. Left message for Pat. 05/19/06-Hiralkumar Patel. Received call from Pat. he has an agreement with landlord which covers repair work. and landlord wants this company to do repair, but Pat thinks that this problem can not be solved by repair work as tank needs either to be replaced or refurbished. he gave me owner's information: Scott Milchman (718) 654-5959 Spoke to Mr. Milchman. he doesn't know anything. sent out TTF letter again at following address to owner. Scott Milchman Eastern Industrial Development Corp. 655 Pelham Parkway North Bronx, NY 10467 Ph. (718) 654-5959 FAX (718) 654-6396 letter faxed to Mr. Milchman and to Pat. 05/24/06-Hiralkumar Patel. REceived message from Scott. left message for Scott. 06/05/06-Hiralkumar Patel. REceived message from Pat. left message for Pat. Received message from Pat. they are planning to remove old tank and to install new tank at same location. left message for Pat. 06/26/06-Hiralkumar Patel. Received call from Mr. Milchman. he has hired Eastmond to remove tank. and after removal Eastmond will take required samples and will send tank closure report. 08/01/06-Hiralkumar Patel. left message for Mr. Milchman. left message for Rene at Eastmond. received call from Mr. Milchman. he asked me to talk to Rene at Eastmond. spoke with Rene. they finished tank removal work last thursday and took endpoint samples. they removed 7-10 yards of contaminated soil. Rene will forward lab results once he gets it. 08/29/06-Hiralkumar Patel. spoke with Isaac at Eastmond. he has everything ready but lab analyticals. once he gets it, he will put together and send final report. 09/25/06-Hiralkumar Patel. spoke with Isaac. he will send final report by end of this week. 10/05/06-Hiralkumar Patel. received closure report from Isaac. they removed tank and removed approx. 10 cubic yard of contaminated soil. excavated area has been backfilled and restored to grade. collected 3 endpoint samples. samples doesn't show any contamination. based on available information, case closed."

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR SYNTHETIC MINOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

APEX AIRTRONICS INC (Continued) **1000438728**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number:	01
Tank Id:	228149
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	G03 - Tank Secondary Containment - Vault (w/o access)
	J02 - Dispenser - Suction Dispenser
	D02 - Pipe Type - Galvanized Steel
	F00 - Pipe External Protection - None
	B00 - Tank External Protection - None
	E03 - Piping Secondary Containment - Vault (without Access)
	C01 - Pipe Location - Aboveground
	L00 - Piping Leak Detection - None
	H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
	K00 - Spill Prevention - None
	I05 - Overfill - Vent Whistle
Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel Tank in Concrete
Tank Status:	Tank Converted to Non-Regulated Use
Pipe Model:	Not reported
Install Date:	01/01/1956
Capacity Gallons:	550
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	MSBAPTIS

DEC Memo:	"contact at Petro is: Sangesland spoke to Mr. Karp. Yesterday during a fuel delivery they noticed oil coming through the wall around the fill line. Probably oil in the soil under the sidewalk cement along the remote fill pipe line. Mr. Karp said that Petro would be repairing the pipe, but Sangesland specifically wanted to know who would do the soil digout/remediation once the sidewalk was opened up and the fill line exposed. Mr. Karp said Petro would come back on Nov 20th to make the repairs. There is a chance that the sidewalk fill line is installed through a coal chute into the basement wall and NOT through soil. When Petro opens up the sidewalk on Nov 20th they will call the DEC to confirm that either No soil was impacted OR there was soil impact and they will hire a company to do the cleanup. 12/19/08 Spoke with Mr. Karp. Mr. Karp told me the spill in the basement was cleaned up with speedy dry.He has no idea about any soil contamination at the site. I told him to find out exactly where was the leak on fill line and if the leaky portion of the line runs underground through the soil.He said he would contact Petro oil to find out the information. Letter was sent to Apex Airtronics Inc 2465 Atlantic Avenue Brooklyn, NY 11207-2305 Attn: Howard Karp (sr)

FACTORY (Continued) **S108956688**

03/31/09 Performed site visit today. Tank is totally vaulted,i.e can't be seen without taking the top cement off.No PBS registration found though the capacity is above 1,100 gallon. Tightness testing required.As per Mr. Karp, the spill was minor quantity from the fill line in the tank room.Spill was on the concrete floor that was cleaned up by Petro Oil.Fill line has been replaced.No evidence of spill exists in the tank room.I told Mr. Karp to register the tank and have the tightness testing done.(sr) ** Case closed as there is no evidence of oil spill present at the site**S.R."

Remarks: "FILL PIPE IS LEAKING AND SEEPED THROUGH THE WALL; PETRO ON SCENE"

DEC Memo:	"4/7/21 - Obligado - 1244pm - I called LI Railroad and left a message to call back the NYDEC. About 100 gallons of diesel spilled leaked on the gravel. Emergency spill contractor is mobilizing. It is an ongoing spill that is being contained with buckets and spill pads. They are trying to get a vactor truck to mobilize. The spill is from an emergency generator with a 275 gallon tank. The spill is in substation. Spill assigned to Veronica Zhune for response. Entrance to the Site is on Van Sinderen Ave. Contact is Magdalen (347) 804-3069. 4/8/21-Zhune- Magdalena Rychtecka sent the following email. Summary of the event on 4/7/21 . On 4/7/21 @ noon: LIRR Substation Department personnel notified LIRR Corporate Safety Department-Environmental Planning and Compliance (LIRR CSD-EPC) of a diesel spill in the East NY Substation that was found during a monthly inspection. The 275-gallon diesel tank connected to an emergency generator was found on its side-dripping diesel through a vent pipe. We are assuming approximately 100 gallons of diesel spill into soil and ballast under the tank. . Initial Spill Response on 4/7/2021: . Long Island personal placed oil absorption pads underneath the dripping vent to minimize the spill to the gravel and soil under the tank . LIRR CSD-EPC: . Called NYSDEC hotline to report the spill & obtained Spill # 2100177 . Coordinated with LIRR Sub station personnel regarding the access, utilities to assess the limiting conditions for emergency response contractor (AB Environmental, referred herein as AB) . Requested AB's spill response team to mobilize to the site. . Mobilize to the site to oversee the spill response activities. . Spill response activities performed by AB Environmental: . AB removed approximately 137 gallons of diesel from the tank utilizing pump truck . AB disconnected the tank from the emergency generator, drained all the associated piping and filter, and placed the empty tank in a secure position. . AB removed 3.8 CY of soil and ballast impacted by the diesel utilizing vactor truck . AB collected (5) endpoint soil samples to be analyzed for contaminants listed in NYSDEC CP-51 table 3 Soil Cleanup levels for Fuel Oil Contaminated Soil. 5/18/21-Zhune-Magdalena Rychtecka sent the following email. To follow up the East NY Substation Spill Response (summarized in the attached email from April 8, 2021 -including photo documentation), please see the attached waste Manifest for the removed wastes from the site and the Lab Report for (5) endpoint samples collected on April,2021. The analytical results were compared to 6 NYCRR Part 375 Soil Cleanup Objectives for

EAST NY SUMP STATION (Continued) **S127481056**

Industrial Use. All Concentrations were found within the limits except for the following: . Benzo (a) pyrene concentrations of 3,600 uk/kg and 3,700 ug/kg associated with North and South wall Endpoint samples, respectively, were slightly above the Industrial SCO of 1,100 ug/kg (1.1 ppm) LIRR removed all impacted material from the spill location as practicable. Therefore, we will like to request that NYSDEC consider the merit of closing the spoll, so we can backfill the excavation with a clean general fill and ballast. 5/21/21-Zhune-Magdalena Rychtecka sent the following email I wanted to follow up our phone conversation from Wednesday regarding the next steps at ENY Substation (located at 1762 East NY Ave, Brooklyn, NY 11207).Can we backfill the excavation given that the endpoint concentrations were within the SCOs of 6NYCRR OPart 375 for Industrial Use except Benzo (a)pyrene concentrations associated with North and South wall Endpoint Samples. 5/25/21-Zhune-Magdalena Rychtecka sent the following email I compare the endpoint samples to restricted Use (Industrial Use)Soil Clean up Objective in the table 375-6.8(b).It stars at page 6-11 through 6-13 of the 6 NYCRR Part 375. I summarized the analytical results into a table along along with the industrial SCOs for easier comparison. 5/25/21- Zhune sent and email to Magdalena Rychtecka. Additional excavation is required to remove diesel contamination at the east side sample. Also you should take an endpoint sample at the east wall after the excavation. East wall 4/8/21 1,2,4 trimethylbenzene 110,000 1,3,5 trimethylbenzene 28,000 Benzene 490 Ethylbenzene 19,000 Isopropylbenzene 6,300 Naphthalene 13,000 n-butylbenzene 13,000 n-propylbenzene 17.000 0-xylene 32,000 p-&m-xylenes 69,000 p-isopropyltoluene 4,900 sec-buthylbenzene 8,00 toluene 16,000 xylenes 100,000 6/8/21-Zhune - Magdalena Rychtecka sent the following email On May 28, 2021 AB Environmental mobilize to the East NY substation on 5/28/21 to excavate more soil and ballast from the east side of the excavation area, The endpoint sample from the east wall was collected and attached are the lab Results. The analytical result indicate ND VOCs. The fallowing SVOCs are detected above the standards Benzo (a)anthracene 10.000ug/kg, Benzo (a) pyrene 7.000 ug /kg, Benzo (b)fluoranthene, Benzo (g, h,i) Benzo (k)fluoranthene 6.400 ug/kg , Crysene 9600 ug/kg, Dibenzo (a,h)anthracene 1.500 ug/kg, indeno (1,2,3-cd)pyrene 4.300 ug/kg. Spill Closed."

Remarks: "Clean-up pending."

DEC Memo:	"1/6/11-Vought-Primary off hours responder. Vought called FLS (Mohammed Ahmed 212-675-3225) and left message to return call to DEC Vought. As per PBS #2-237973 tank has 5000-gallon #2 fuel oil UST and site is owned by: Our Lady Of Loreto Church 124 Sackman Street Brooklyn, NY 11233 Ph: (718)387-3740 Vought spoke to RSE and spill assigned to DEC Ahmed as secondary off-hours responder. Vought to send out CSL with possible additional requirements upon callback from FLS Ahmed. Vought received callback from and spoke to FLS Ahmed who noted that he was hired by property developer (Reese & Sons) and that the property was to be developed for affordable housing units. They were onsite to remove an abandoned 4,800-gallon fuel oil UST (See PBS #2-237973) and noted contaminated soil around and below the tank. Vought noted that DEC Ahmed was the project manager and that CSL would be drafted by Vought and signed by Ahmed. Vought drafted CSL with one month due date and the following requirements: 1)delineation of soil and groundwater (if applicable) contamination 2)collection of endpoint samples 3)strong recommendation for installation of SSDS and VB 4)Updating PBS Registration 2-237973 to reflect current closed status of UST (as per DEC Falvey this was required, PBS registration also expired as of 7/20/92). 5)cc to FLS Ahmed 6)advisement that site should not be developed until RAP approved by DEC. Vought sent letter with above requirements to address provided by FLS Ahmed: Our Lady of Loreto Catholic Church c/o Progress of Peoples Development Corporation 191 Joralemon Street Brooklyn, NY 11201 Attention: Claire Hilger 11/7/11-Fu-Intern Fu completed summary of reports: SUMMARY UST CLOSURE REPORT & REMEDIAL ACTION PLAN (Fleming Lee Shue)- 08/17/11. On Jan 05 2011, at request of L Riso & Sons, Fleming-Lee Shue performed an UST field investigation in order to remove the tank but end in finding approximately 30 by 30 feet in size and extending approximately 16-37 feet below grade petroleum-impacted area. Then a

OUR LADY OF LORETO CHURCH (Continued) **U000402330**

spill was reported. Between June and July 2011, the UST removal activities was observed, including the removal of the decommissioning material, consisting of cement slurry, and the removal of the tank and associated piping. A 3 section was required to remain in the excavation due to structural and shoring concerns. Excavation and removal of 1249 tons of petroleum-impacted soil (to depth approximately 32ft-bgs) were conducted. On July 8 2011, 8 soil samples were collected per NYSDEC s request. 3 VOCs, Ethylbenzene, Xylene, and Isopropylbenzene, were detected above standard at EP-BE; Ethylbenzene was detected above SCO at EP-BW. One MW will be installed at the site. After installation, the MW will be sampled. If the gw is not found to be contaminated, Closure Report will be submitted; if the gw is contaminated, two additional MWs will be installed downgradient. SUMMARY SPILL CLOSURE REPORT (Tenen Environmental)-Sept 2011. Based on the removal of all structurally-accessible soil, documentation that gw has not been impacted, the incorporation of vapor barrier and SSDS and composite cover system over the area of UST, Tenen requests that this spill be closed. The subsurface investigation dated January 2011 consisted of: 1)Excavation of the soil in the area of the UST, visual and olfactory observations, and PID measurements of organic vapors; and 2) Installation of five (5) soil borings adjacent to the UST and sampling and analysis of soil. The results of the investigation, which are detailed in FLS letter dated January 20, 2011, identify a petroleum-impacted area approximately 30 by 30 feet in size and extending to approximately 16 to 37 feet bgs. Based on the results of the January 2011 subsurface investigation, FLS prepared a January 21, 2011 Remedial Action Work Plan (RAWP). The RAWP described the following remedial actions: installation of sheeting and shoring, excavation of non-impacted soil, tank removal, excavation and disposal of petroleum-impacted soil, post excavation soil sampling, installation of a vapor barrier and SSDS, and preparation of a closure report. June-July 2011 Tank Closure / Interim Remedial Measures On August 17, 2011, FLS submitted an Underground Storage Tank Closure and Remedial Action Report. July-August 2011 Supplemental Remedial Investigation: MW-1, in the center of the excavation was installed on July 29, 2011. The soil boring was advanced using a Sonic drill rig with continuous samples collected starting at a depth of 30 feet bgs and continuing to the groundwater table. 9 samples were collected and analyzed. The analytical results indicate the presence of several petroleum-related VOCs in seven (7) of the nine (9) soil samples collected. All detected VOCs were below the Part 375 Unrestricted Use and Protection of Groundwater SCOs and CP-51 Fuel Oil SCLs except ethylbenzene, isopropylbenzene and xylenes in samples collected from 43-45 and 48-50 feet bgs. The analytical results detected several SVOCs in eight (8) of the nine (9) soil samples collected. SVOCs detected in the soil samples primarily included polycyclic aromatic hydrocarbons (PAHs). All VOCs in MW-1 were detected at concentrations below the Class GA Standards except chloroform, which was detected at 21.9 parts per billion (ppb), above the Class GA Standard of 7 ppb. No SVOCs were detected above the NYSDEC Class GA Standards except phenol. The proposed redevelopment of site includes construction of 4 buildings of 8 dwellings each for a total of 32 dwelling units, designed as the Pacific St Cluster. The area directly above the impacted soil will be redeveloped as a paved parking area. The following potential exposure routes have been indentified: direct contact & inhalation of VOCs from soil and

OUR LADY OF LORETO CHURCH (Continued) **U000402330**

inhalation of VOC from soil vapor. A vapor barrier and SSDS (73 wide *52 deep) will be incorporated into the two buildings closest to the church. The principal components of the SSDS are a layer of gravel beneath the basement slab, a suction pit within the gravel layer, solid-construction piping from the suction pit to an exterior suction fan on the roof and monitoring points through the basement slab. The system has been designed in general accordance with NYSDOH s Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006 (NYSDOH Soil Vapor Guidance), including Section 4.2.2, System-specific recommendations. Several types of composite cover systems will be employed to prevent direct contact with and mitigate inhalation of residual petroleum constituents. "

Remarks: "Contaminated soil found at construction site. Cleanup pending assessment and pre-plan."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

VENTURE METAL PRODUCTS CORP (Continued) **1001405076**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
AIR MINOR
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DER Facility ID:	306251
DEC Memo:	"No CSL was sent to this owner. The consultant has already done most of the work necessary and they said they would send in the results when the end point sample results come back from the lab. 03/06/06 Sharif Rahman- I tried to call Nelson Abramas,(908)947-0274 and left messege to his voice mail to follow up about the status of the vacant lot. 04/06/06 Sharif Rahman- CSL was sent via mail and facsimile to NYC Economic Development Corp. 110 William Street New York, NY 10038 Attn: Kay Zias, Fax:(212)312-3989. 04/25/06 Sharif Rahman- Rec'd tank closure report from Metcalf & Eddy of New York,Inc. One 550 gallon #2 UST was removed from the site. Approx. 12 tons of petroleum contaminated soil was removed from the site.No VOC was detected above TAGM limit in the post excavation end point samples.Minor exceedances of SVOC are similiar to the fill material observed during the Phase II site assesment.NFA required."
Remarks:	"While removing an underground tank found holes in the tank. The contaminated was stock piled and samples have been taken. More clean up will be done depending on the test results. Excavation was lined with plastic then filled in with clean soil."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D008
Waste Description: LEAD

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"During excavation to re-develop the lot, two 550 gallon gasoline ust's were uncovered. DC Env. was retained to remove the tanks. A gas-water mix was pumped from the tanks and soil contamination was encountered. A contaminated soil letter was sent. New Owner Maurice Shami- #212-656-1338 Maurice called and stated that DC spilled the gas while conducting the pump out. Maurice requested and was given the names and numbers of 6 additional consultants upon his request. 11/17/04-Vought-Spoke to Reza Khanbilzardi who is a consultant (Indertech Consultants 914-329-3440) who is requesting DEC requirements. DEC requires: 1)collection of five endpoint soil samples and EPA Methods 8260/8270 2)collection of one groundwater sample 3)locations of fill ports and pump islands 4)copies of soil disposal manifests 5)site plan with sampling locations. 1/12/04 Bill Vardy left message 914-329-3440 requesting 10 day extension to submit report. Rommel 1/26/05-Vought-Spoke to Reza and he is requesting an additional ten days to submit report. Report will be submitted by 2/8/05. 02/08/05 Reza called 914-329-3440. He is the engineer representing the owner. He will overnight the report tomorrow. Rommel 2/11/04-Vought-Received message from Reza on 2/9/05. Vought returned call and he sent report via FedEx to Rommel. Vought told him to call Rommel on 2/14/05. 3/3/05 - Spoke to Reza Khanbilvardi, he is asking a quick review of the closure report. He stated that only minor contamination found with the soil boring and sampling. Need to find the report and get back to him for a determination. - KST 3/8/05 - Owner, Maurice, called and begging to review the closure report. I told him that we have not received the report. He will called his consultant to get a copy and hand deliver it to DEC. - KST

AKA 31-33 MONACO PLACE (Continued) **S106971540**

3/9/05-Vought-Spill transferred from Rommel to Vought as per Tang. Review of Subsurface Investigation Report submitted by InterTech Inc (Reza Khanbilvardi)dated 2/9/05 and received on 3/7/05. Owner of property is Maurice Shami. The site is vacant land... A small excavation (approximate size of 12 ft wide by 16 foot long and 7 ft deep were noticed on the southwest portion of the site. This is the location of the two empty oil tanks which resulted in above spill number to be issued . Five endpoint soil samples were collected on 12/7/05. One groundwater sample was also collected. Since all soil samples taken at the site meets recommended soil cleanup objective criteria and semi-volatile compounds in groundwater are not detected, the elevated volatile amount in groundwater could not have been due to any element on the property. It must be noted that an active commercial gas station is on the other corner of Monaco Place and Atlantic Avenue . Report recommends that we don't believe that any action with respect to soil cleanup is warranted for this site . Site plan shows three proposed two-story buildings onsite. Groundwater at depth of 12' below grade. Groundwater analyticals show 61ppb benzene, 300ppb toluene, 72ppb ethylbenzene, 200ppb xylene and 14ppb MTBE. DEC requires signing of Stipulation Agreement: 1)locations of fill ports and pump islands 2)notification to NYC agencies requesting no development of site 3)determination of groundwater flow direction via installation of three monitoring wells 4)installation of vapor barrier upon development of site 5)installation of passive venting system or performance of soil gas sampling as per NYSDOH guidance upon development of site 6)surrounding area site plan. Vought called Khanbilvardi and left message to return call to DEC. Vought sent Stipulation with above requirements with due date of 4/18/05. 3/10/05-Vought-Received message from Reza. Vought returned call and left message to return call to DEC. 3/14/05-Vought-Meeting at DEC with Reza and Maurice Shami. DEC will give approval to start construction once we receive and approve plan for vapor barrier and three onsite monitoring wells. No passive ventilation system or soil gas sampling will be required due to clean soil endpoints, lack of basement, relatively minor groundwater contamination and 6' depth to groundwater. 3/15/05-Vought-Received call from Maurice Shami (516-482-0276) and copy of bargain and sale deed which referred to previous owner as: Stephen Carter 679 East 98th Street Brooklyn, NY Vought called Shami and left message to return call to DEC. 3/22/05-Vought-Received fax from Inter Tech dated 3/16/05. .... we came to the decision to do the following: 1)the owner of the above referenced property will install a vapor barrier under the footings and basement floor slabs of the proposed construction on the site. This will be done after the excavation and prior to pouring the concrete of the foundation. The owner will install three monitoring wells...to determine groundwater flow direction with respect to the above site . You will provide approval letter to install these wells on the sidewalk . I appreciate your acknowledgement of receiving this letter and also your consent to it and start of the construction at the site so Mr. Shami can proceed with the construction . Vought sent out sidewalk permit letter and called Inter Tech to explain that consent to begin construction will not be given until groundwater results are received and groundwater flow direction is determined. 3/29/05-Vought-Called Maurice Shami for update on site and left message to return call. 3/31/05-Vought-Received call from Reza that wells were scheduled to be installed tomorrow and whether sidewalk permit was needed due to DEC sidewalk permit letter. Vought explained

AKA 31-33 MONACO PLACE (Continued) **S106971540**

that letter was to effectuate the obtaining of a permit and that the permit was still required from DOT. 4/5/05-Vought-Received message from Reza. Vought returned call and left message to return call to DEC. Vought spoke to Reza and he will install wells onsite as opposed to sidewalk so that sidewalk permits are not needed. 5/19/05-Vought-Reviewed Investigation Report (Inter Tech) dated 5/17/05 and received on 5/18/05. Installation of three 4-inch monitoring wells. Contractor who installed wells was American Environmental Assessment Corp. Report recommends ....we do not believe that any action with respect to cleanup is warranted for this site. We therefore, request your approval to start the construction project as the owner is patiently waiting for the last 6 months . Groundwater analyticals show: 13ppb ethylbenzene(MW2), 82ppb MTBE(MW2), 120ppb n-propylbenzene(MW2), 72ppb isopropylbenzene(MW2), 440ppb MTBE(MW3). Source of minor groundwater contamination may be from onsite UST excavation (despite clean endpoints) or from upgradient site(due to minor groundwater contamination in well MW2). DEC sent letter approving construction of residence with installation of vapor barrier as per 3/16/05 letter and requiring as per 3/9/05 STIP cover letter: 1)surrounding area site plan with possible upgradient sources 2)continued quarterly monitoring of groundwater 3)installation of well downgradient from former tankfield and Boring B1 on sidewalk of Atlantic Avenue 4)submission of PBS registration 5)locations of remote fill and dispenser islands. Vought called Maurice and left message. 5/27/05-Vought-Spoke with Maurice and five additional tanks discovered during excavation for building. Maurice is hiring American Environmental to remove the tanks. Maurice will call back with update on tank removal. Maurice returned call and American (631-586-2000 Danny Herzberger) will do tank removal on 6/6/05. 6/1/05-Vought-Received call from Herschberger. Vought returned call and left message to return call. 6/6/05-Vought-Received call from Herschberger(516-852-4713). Vought returned call and tanks registered with PBS. Five endpoint samples will be collected and sampled for 8021 plus MTBE and 8270. Dan will call DEC when excavation is complete so that site visit may be scheduled. Received call from Dan that tanks were removed and impacted soil was found. Vought required excavation of impacted soil and called Maurice to restate requirement. 6/7/05-Vought-Received call from Herschberger. Vought returned call and American will only be removing tanks and underlying pad. A sixth tank was discovered and Maurice's contractor will be removing contaminated soil. American will be collecting endpoint samples. Vought received call from Maurice and returned call and left message to return and stated requirement of disposal manifests. Vought received second message from Maurice and returned call. 6/8/05-Vought-Received third message from Maurice and returned call. Vought spoke to Maurice and stated requirement of disposal manifests and site visit. Maurice will collect two soil samples and submit to laboratory for analyses to see if further excavation is warranted. Vought advised use of field screening device however due to possibility of saving further cost of excavation Maurice decided to collected samples. 6/10/05-Vought-Received call from Maurice. Vought returned call and arranged site visit for Wed 6/15. 6/15/05-Vought-Site visit by Vought with Maurice, Dan Herschberger and Reza. Contaminated soil at former UST location and DEC required 1)additional excavation to groundwater 2)collection of four sidewalls and one bottom groundwater endpoint sample 3)installation of vapor barrier(agreed to by Maurice) 4)well installation downgradient from

AKA 31-33 MONACO PLACE (Continued) **S106971540**

tankfield along Atlantic Ave. Vought also suggested groundwater treatment when excavation was open and boring by Amoco to see if they are contributing source. Vought will send above requirements upon receiving endpoint analyticals. 7/26/05-Vought-Called Maurice for status update of site. No work has been performed as of yet due to unable to find contractor. 7/29/05-Vought-Spoke to Gerard Rutigliano (Rutigliano Environmental 516-314-1553) and he may be performing soil removal and vapor barrier installation. Vought approved installation of a 6.mil vapor barrier under building footprints. Four sidewall endpoint and one bottom groundwater sample will be collected. 8/8/05-Vought-Called El-Shami, Reza and Rutigliano and informed them of new project manager (DEC Zhitomirsky). Vought spoke to Maurice El-Shami and approved that he install vapor barrier provided that he sent letter in writing to DEC. Vought also stated that vapor mitigation system was not necessary as long as excavation was performed to groundwater (12' below grade). 8/8/2005 Zhitomirsky spoke with Maurice Shami and requested submittal of soil disposal manifest, drawings showing where the soil was excavated from, drawings and description of vapor barrier installation. Jeffry Voight informed me that he requested from the site owner a description of the vapor barrier. In this case Vought would not require a vapor mitigation system and allow RP to install the vapor barrier himself. AZ 8/10/2005 I discussed this site with K.Tang. I told him I am requiring environmental report describing soil excavation with pictures, drawings and disposal manifest. Also, RP should include specifications and drawings for vapor barrier. K.Tang concurred and stated that we can issue permission to start construction and install vapor barrier. K.Tang thinks that 6 mil thickness polyethylane sheeting may be not thick enough and RP consultant should suggest another one. I conveyed this information to Morris Yeroshalmi and provided him with K. Tang phone number upon his request. AZ 8/17/2004 KT visited the site on 8/12/2005. He noticed that the excavation could cave in because it is 11 feet deep. He said that there is not much to see in the excavation except gravels and dirt. No petroleum odor, no stained soil. They have put some soil back in the tank pit. He asked a soil sample at the center of the tank pit taken at the water table. He could smell a slight petro odor. Not bad though. Due to safety concern of the side walk on Atlantic Ave side of the excavation collapsing, he told Maurice to go ahead with his construction work and backfill the hole, with the condition that he put down the vapor barrier material (15 mil) below the foundation of the buildings he is putting up. He also told him to compile all the tank removal, soil excavation, wells installation, soil removal activities, soil samples, water samples and the soil disposal manifest in a report for you. He also told him to install 4 wells - 1 on Monaco Pl, 3 on Atlantic Ave. for GW monitor and/or remediation. AZ 11/22/2005 I received an e-mail from K Tang. He asked me to issue a letter to Moris Shami (Mfund Company 516-482-0276). I called him and conveyed that as per K.Tang 4 wells should be installed one on Monaco Place and three on Atlantic Avenue. His address is: 1 Linden Place Suite#302 Great Neck, New York 11021.AZ 11/29/2005 I called Moris and informed him that he should install 3 wells on Atlantic Ave. and one well between his place and BP station. I confirmed this request with K. Tang. I sent him a letter so he can obtain a permission from DOT to install sidewalk wells. AZ 1/18/2006 The owner (Moris) has contacted me. He needed some kind of a letter for the City. I replied that we do not isuue such letters. He is going to

AKA 31-33 MONACO PLACE (Continued) **S106971540**

proceed with the well installation. AZ 4/4/2006 I left a message for owner Moris (516-482-0276). He called me back. Hydro Tech installed wells and is working on the report for DEC. AZ 5-11-2006 Left a message for Rachel Ataman (Hydro Tech Environmental). AZ 5-16-2006 I contacted Sharissa Singh 718-636-0800(Hydro Tech Environmental). She informed me that Rachel Ataman is no longer handles this project. I conveyed to Ms. Singh that the plume should be delineated and once the delineation has been completed a remedial plan should be sumbitted. AZ 5-17-2006 Reviewed the Groundwater Investigation Report prepared by Hydro Tech Environmental Corp., dated April 4, 2006. The report states that VOCs were detected in the groundwater samples obtained from wells MW-1 through MW-4 at concentrations exceeding their respective TOGS standards. The total VOC concentrations at the site range from 1,111 ppb to 523 ppb in downgradient wells. Hydro Tech Environmental recommended groundwater monitoring. After consultation with Koon Tang, I requested delineation of the groundwater plume in the southern area of the site by installing two new wells. If contamination is encountered by these downgradient wells, additional wells should be installed to fully delineate the plume. Once the plume has been delineated, a remedial plan to address the contamination should be submitted to DEC. A letter was sent to the RP and the consultant. AZ 5-25-2006 I reiterated myc comments regarding the submitted report to the owner Maurice Shami over the phone. AZ 10-24-2006 Left a message for the owner Maurice @ 516-482-0276. AZ 10/25/2006 Contacted the owner Maurice @ 516-482-0276. He is hiring an environmental consultant American Environmental Co. He will get back to DEC when the consultants are hired. AZ 11-5-2007 Contacted the owner Maurice @ 516-482-0276 and requested about the site status. He stated that he thinks that no work should be done at this site. He will contact me with more information ASAP. AZ 11-7-2007 Spoke with Maurice Chami (M Fund 45 North Station Plaza Great Neck New York 11021). Mr. Shami is stating that he sold the property but he does not know whom he sold the property to, since the sale was handled by his broker. He will get back to me with this information ASAP. Mr. Shami contacted me later and informed that the buyer is Victor Inwang 31 Monaco Place, Brooklyn, New York 11221. He sold the property in May or June of 2006 (his guess).It is a private dwelling. AZ 11-14-2007 Case Initiation Form was signed by Vadim Brevdo and forwarded to John Urda. AZ 7-29-2008 J. Urda requested that CSL, STIP are send to RP. I sent drafts of CSL, STIP and CAP to John Urda and V. Brevdo for review. They approved the documents. CSL,STIP and CAP were sent to Maurice Chami- M Fund, 45 North Station Plaza, Great Neck, NY 11021 and Victor P. Inwang 1400 Bedford Avenue, Brooklyn, New York 11216. Copies were sent to V.B and John Urda. AZ 8-21-2011 The letter was returned to DEC stating: Return to Sender unclaimed unable to forward AZ 3-17-2011 As per J. Urda request, STIP, CSL and CAP were resent to Victor P. Inwang 1400 Bedford Avenue, Brooklyn, New York 11216 and send to Victor P. Inwang 583 Eastern Parkway, Brooklyn, NY 11216. AZ 4-11-2011 Two letters were returned to DEC stating Return to sender unclaimed unable to forward. I informed J. Urda about the returned letters. AZ"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 10/4/02 TJD Site inspected 10/3. Location is a former gas station now operated as a truck repair garage. Current business on site is A & N Brake and Clutch (owner:Alon Yemini 718-443-2323) which has been operating on site for one month. Several minor petroleum spills were noted both inside and ouside of building, owner immediately dispatched employees to clean up spills on concrete/aphalt using absorbents. Clean-up completed while inpection was conducted. Buried waste oil tank of unknown capacity was identified on site, owner was unable to produce a PBS registation for this tank and was directed to empty tank and obtain registration from DEC. Database search revealed a total of (8) gasoline UST's exist on site an are of unknown status. PBS records (2-600300) indicate registration expired 8/29/96. Last tank tests were performed in 1990

AMERICAN TRUCK REPAIRS (Continued) **U001841386**

on these tanks. Surface spill closed. Out of compliance tanks referred to PBS for follow-up. FAX 443-2422."

Remarks: "OLD GAS STATION - NOW DOING REPAIRS - POSSIBLY DUMPING USED OIL ETC *****NRC # 624474****** CALLER WANTED TO BE ANNOYMOUS NAME-HAYDEE IRIZARRI PHONE 718-9190566"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DER Facility ID:	192989
DEC Memo:	"This spill event is BOTH a spill and a tank test failure. Spill was cleaned. TTF issue remains open 8/5/2009 TTF letter sent to: Ms. Jennifer Woutinen New York City Transit 2 Broadway 27th Flr New York, NY 10004 8/24/09. J.Krimgold interviewed the caller (HAROON ASLAM) form MTA over the phone. He stated that the failure was due to the leak from the fill line, not due to the t/test as originally stated. The fill line is double walled and sloped toward the tank sump, where the product was found. The pipe's secondary containment then was tested and found to be tight. This indicates that there was no release to the environment from this incident. The pipe was tagged (taken out of service). Tank is manifolded with other tanks and has another fill. NFA. JK. "
Remarks:	"CALLER STATES THAT THE TANK (UNK SIZE) FAILED A LEAK TEST, ABOUT 10 GALLONS WAS SPILLED. CALLER DID NOT HAVE THE PBS NUMBER. SPILL WAS CLEANED UP."

DEC Memo:	"02/26/07-Vought-DEC Patel performing site visit due to proximity to spill in field. DEC Ketani called FDNY and left message to return call to DEC. 02/27/06-Hiralkumar Patel. visited site on 02/26/07. met Ferdrnand Torres (917-568-3022), tenant at building. Mr. Torres lives on second floor. as per Mr. Torres, there was no heat yesterday (02/26/07) morning and he compalined to NYC HPD. oil delivered during day. lateron tenant found oil in basement and called FDNY. site has two 275 gal #2 oil ASTs on leg and FDNY found one of these tanks was leaking. they pumped out oil from leaking tank and put in drums and spread absorbent in basement. three 55 gal drums were out of building on sidewalk. second tank is still in use. as per Mr. Torres there is no super in building but Mr. Torres has keys to basement. at time of visit, heavy odors inside basement, free product around tank and odors upstairs also. Mr. Torres's mother and brother living on first floor. suggest Mr. Torres to get these people on second floor as there was no odors. this building ownes by NY City. Mr. Torres gave contact info for person managing property for city. Francis SynMoie 7A Admin. Bld #042 C/O NY Residential Works Inc. 347 Lenox Avenue New York, NY 10027 Ph. (212) 987-8088 Ext. 105 left message for emergency service at NY Residential Works at night. received call from Basil Marshall (646-294-0086). asked him to get cleanup crew to start cleanup for free product and odors in building. he spoke with Anthony Lara (646-772-7180). received call from Anthony. he was ready to send cleanup crew in night but he need approval from city and proposal signed by authorized person, which he hadn't got. tried to contact Mr. Marshall again regarding signing paperwork, but no contact was made. left message for Mr. Marshall. left message for Mr. SynMoie at NY Residential works last night. spoke with Mr. SynMoie this morning. they are still working on getting authorization from city agency for cleanup. asked Mr. SynMoie to start cleanup by end of today. 2/27/07

ON SIDEWALK (Continued) **S108466382**

- Raphael Ketani. I contacted Mr. Francis Synmoie (sin-moy) at NY Residential Works, Inc. (212) 987-8088, ext 101. He said that he is still waiting for authorization to hire a contractor to do the cleanup, but someone already put down absorbent. He said that he contacted Debra Thomas of Unit 7A at HPD (212) 863-7392. He said she has the authority to authorize someone to cleanup the spill. I asked him how the odors are. He said that you notice a moderate odor of oil as you walk into the building, but no one lives on the first floor. I asked him about the odors on the second floor. He said there were none. He said that this building was owned by a private party, but they didn't keep it up. So the city took it over and they will refurbish it. I spoke to Ms. Thomas. She said the City doesn't own the building, but is managing it. I asked her what is happening now. She said that a call was made to the Emergency Repair Unit as there is no money in the budget to pay for the cleanup. She said she is waiting for a call back. I told her that this spill is now at least 24 hours old. She said she knows, but all she can do right now is to call the Emergency Repair people. I told her that certain things will have to be done to cleanup the spill. She asked me to e-mail her what these requirements are. The requirements are: (1) cleanup all of the free oil (2) pickup all of the spent absorbent (3) powerwash the affected areas and the concrete floor (4) take soil samples below the concrete floor and send them to a NYSDOH certified lab for 8260 and 8270 analysis (5) remove all contaminated soil (6) submit manifests for all soil and contaminated material that is removed and the soil analytical results (7) repair the tank system and send copies of the documentation verifying that the repairs were made (8) submit to DEC a short report with pictures (if possible) of the before and after conditions and all documentation Ms. Thomas' e-mail address is thomasd@hpd.nyc.gov 3/12/07 - Raphael Ketani. Spill case #0613303 came in today regarding a new spill at the site. I spoke to Patrick Fahey of Pacific Energy (718) 647-1400 about the spill. He said that it was a loose flare nut that allowed oil to drip onto the floor. About 1 gal. leaked out. The flare nut was tightened, but the earlier large spill hasn't been cleaned up yet. This later spill case was closed. I spoke to Ms. Thomas regarding the old big spill of 2 weeks ago. She said she just got back from vacation and had been told the old spill had been cleaned up. I told her that Pacific Energy had a mechanic on site about 1 hour ago and he said the old spill was not removed. She told me that she will look into the issue and call me back. 3/23/07 - Raphael Ketani. I tried to make a site visit. The front door was locked and there was no one around to let me in. I didn't see or smell any signs of an oil release. 3/27/07 - Raphael Ketani. I made a site visit at 9:45AM today and was shown the basement by a second floor resident of the building who goes by the name of Rio and serves as a helper for Mr. Synmoie. The vapors were light but noticeable in the first floor hallway. The vapor readings were: basement 1334 ppb, first floor 903 ppb, second floor 782 ppb, third floor 751 ppb. Rio explained to me that the tanks are still not sitting solidly on the floor and that there were 2 big spills - both due to the tanks moving and a line below them getting loose. There was a 12 by 6 wet spot below the oil line that connects the two tanks at the bottom. Rio showed me that one spill flowed 30 feet down the basement hallway and into the adjacent room. The floor was in very bad shape and was in pieces, many of which could be moved by hand exposing the soil below. The floor had dark staining all over and so did the floor of the adjacent room. Lastly, Rio showed me the boiler

ON SIDEWALK (Continued) **S108466382**

room. The floor there also had staining. 3/28/07 - Raphael Ketani. I spoke to Mr. Synmoie and told him about the floor, the high vapor readings, the oily wet spot, the oil staining, and the probability that the soil under the basement floor is contaminated. I told him that he has to hire a company to stabilize the tanks, fix the line at the bottom if it is still dripping, do a soil investigation and ventilate the building. He said he will do this. He said there is one tenant on the first floor and she will be moved to the second floor. He said that the building is scheduled for rehabilitation in the very near future. I told him that the soil investigation has to get started as soon as possible. He said he will call Ms. Thomas. I sent Ms. Thomas an e-mail with my notes from 3/27 and 3/28. 3/29/07 - Raphael Ketani. Chacko Thomas (cell (646) 865-4564) [supervisor (718) 857-5444] of NYC HPD called to say that 6 soil samples were taken in the floor of the building after the last oil spill. He said samples were taken in the tank room, the hallway, and the storage rooms. The analytical results should be available soon. He asked what else needed to be done at the site. I told him that the vapors are high so ventilation needs to be provided, the tanks need to be fixed to the floor so they don't move, the line at the bottom of the tanks needs to be fixed so it doesn't drip, and a soil boring needs to be taken in the boiler room floor. Mr. Chafeko said he will have this done. 4/4/07 - Raphael Ketani. Mr. Thomas of NYC HPD sent me a FAX for SVOC analysis for 4 of the 5 samples that were taken in the basement. He said he was expecting the VOC analysis today and will FAX them as soon as he gets them. There were only 2 very low exceedences of the TAGM RSCO limits. I told him these results looked fine. I received a FAX from Mr. Thomas with the VOC analyticals for soil samples 1,2,4,5. The samples were taken on 3/22/07. There were no RSCO exceedences, except 3200 ppb for total xylenes for soil sample #1. This is the tank room sample. Again, soil sample #3 was missing from the results. 4/5/07 - Raphael Ketani. I contacted Mr. Thomas and told him that the results seemed fine, except for total xylene in sample #1. I told him that soil will have to be removed in this area. Afterwards, Mr. Thomas called me up regarding which sample came from what location in the basement. Sample #1 was the tank room. Sample #2 was the storage room next to the tank room. Samples #3 (which he will check on why the results weren't received) to sample #5 were from the hallway. He said that the drip from the pipe at the bottom of the tanks is something new and will be taken care of shortly and that the tank feet were covered in cement to stabilize the tanks. Mr. Thomas said that the stain in the boiler room is only from routine servicing of the boiler. I told him that it seemed like more than routine servicing. He said the service techinician is sloppy and he will talk to him about being careful. However, he said, the building is privately owned and HPD is just overseeing the refurbishing of the building. 4/11/07 - Raphael Ketani. Mr. Thomas FAXed me the analytical results for samples 1,2,4,5. I spoke with him shortly after I received the FAX. He said that the contractor who did the sampling also took samples 3 and 6. However, the contractor threw out these samples as he felt he had enough samples for the site, according to Mr. Thomas. I told Mr. Thomas that either the soil has to be dug out in the tank room or soil treatment needs to be used. He said that he has to make a work order, in either case. I asked him to try and push the process forward. He said he would try. 5/18/07 - Raphael Ketani. Mr. Thomas of HPD (718) 857-5444 sent me a FAX with analytical results for 3 soil samples that were taken in the tank

ON SIDEWALK (Continued) **S108466382**

room after the contaminated soil was removed. All 3 sets of results were non-detect. I called up Mr. Thomas and asked him to send the manifests for the removed soil. He said he will send them. Mr. Thomas added that the 2 tanks have been emptied and will replaced with one tank. So that will take care of the leaking pipe. 7/13/07 - Raphael Ketani. I tried to contact Mr. Thomas regarding the documentation for the cleanup work and the tank replacement work, but could only leave a message. (Mr. Thomas is the person to contact regarding the project, NOT Mr. Synmoie or Ms. Thomas.) 7/16/07 - Raphael Ketani. I spoke to Mr. Thomas and he told me the two tanks were replaced with 2 new 275 gallon tanks. He added that the contaminated soil at boring location #1 was taken away and that I should be receiving the manifest soon. 9/17/07 - Raphael Ketani. I received the Oil Spill Site Assessment Report from Mr. Thomas. The report states that the floors of the basement, the tank room, and the boiler room were power washed and soil samples were taken. The report also states that the leaking tanks were emptied (a waste ticket is included), removed, and replaced with new tanks. On 5/11/07, soil from the tank room was excavated and removed. Based upon the above mentioned Oil Spill Site Assessment Report and the analytical results for the tank room soil that were FAXed on 5/18/07, I am closing the spill case. "

DEC Memo:	"10 days ago line under the oil tank broke. Tank was loose and when the tank is filled, the tank moves. Oil gushed onto the basement floor. FD Haz Mat cleaned the spill. Line broke again. 6 family building - Oil Company on site now - Pacific Energy 718-647-1400 3/12/07 - Raphael Ketani. I spoke to Patrick Fahey, manager at Pacific Energy. He said his mechanic was on site now. He said that a flare nut connecting two pipes came loose a little and dripped oil onto the floor. He said that about 1 gal. dripped out. The flare nut has been tightened and this problem is solved. He said that a big spill happened weeks ago (#0612788)and was caused by a rotten equalizer (pipe connecting the 2 tanks). He said this pipe was repaired back then. Mr. Fahey said that the tanks are full and are holding the oil. As there is an earlier open spill case, I am closing this later case."

DEC Memo:	"12/30/05-Hiralkumar Patel. I spoke with Sherry Bulkley at NYC Transit. According to her, spill happend from fill line of tank. and all the spilled diesel collected in sump. Tank is out of service now and they have pumped diesel from sump. this sump is not connected to any sewer or drain line. I spoke with Mr. Frank Ocello (917-578-8826) at loction, and he told me that sump is on top of tank. they going to test lines for any leak today (12/30/05) noon. I spoke with Mr. Steve Miller, and he will send me a address for further correspondence regarding case after 2nd Jan. 2006 1/5/06-Hiralkumar Patel. I received an address at 1:00PM and have sent a tank test failure letter. 02/02/06-Hiralkumar Patel. Talked with Jaikisan Achaibar (PH: 646-252-5772, FAX: 646-252-5960) at System Safety department, NYC Transit. As per him, there was a line leakage on top of tank, not the tank. they have repaired it. Jai going to send me their internal report in mail today or tomorrow. 02/10/06-Hiralkumar Patel. Received report from Jay Achaibar at NYC Transit. Abstracts of report: - on 12/30/05, during periodic maintenance inspection, approxi. 5 gal fo diesel was found in the fill sump of tank#8. system shut down. - primary line between the fill port and the tank sump was leading at flex connnectors. no leaks found in secondary line at connectors. - spill contained by secondary line and drained to sump, no soil contamination. - 01/25/06, Franklin company replaced flex connector. - primary system, secondary system and sump test were passed. - 5 gal diesel removed by trained NYCT plant and equipment personnel and disposal as non-hazardous industrial waste. we received NYCT spill incident fact sheet, & line testing results. Case Closed based on the report from NYC transit."
Remarks:	"IN SUMP, ARRANGING TO HAVE THE PUMP CLEANED, CLEAN UP IS IN PROGRESS."

DEC Memo:	"6/8/21-Zhune spoke to Daniel Yu from NYC Transit 646-879-6199. Daniel sent the following email Here are the details that I have so far regarding this spill for your assessment. Product was recently found in a sump associated with the fill lines for diesel tanks 7 and 8 at the depot . The tanks were taken out of service and tightness testing was performed yesterday 6/3. Both the primary and secondary lines fill lines failed, after which the incident was called into the DEC spill hotline. The facility has checked the last three months of reconciliation records and have no noted any issues. The people from the facility cleaned the sump. It was a little amount of diesel fuel. 6/9/21-Zhune-Michael Mandac from NYCT sent the following email NYCT was performing sump testing for the diesel USTs at East New York Bus Depot (25 Jamaica Avenue, Brooklyn, NY 11238). Our contractor overseeing the sump test discovered product in the tank sump for tanks 7 and 8. The remote fill line (from the fill port to the tanks) and secondary piping product line (from the tanks to the pump room) both failed the tightness test. Please note that the primary piping (containing the diesel) passed the tightness test. NYCT has locked out the remote fill port for tanks 7 and 8 (please note that the remote fill services both tanks) and locked out dispensing from the tanks 7 and 8. We are reviewing our options to determine if repairs can be made and how long it will take. "
Remarks:	"CLEANUP PENDING."

DEC Memo:	"10/29/09-Vought-Primary off-hours responder. Vought called Nova Consulting (Nick Canonico 516-352-3233) and left message to return call to DEC. As per PBS #2-15884, site has one 1500-gallon diesel UST and site owner info is: Mr. Barry Frankenstein Wartburg Lutheran Home For the Aging 50 Sheffield Avenue Brooklyn, NY 11207 Ph: 718-345-2273 Fax: (718)485-9236 Vought sent TTF with cc to Canonico via email. Spill assigned to DEC Krimgold as site is PBS site. Vought received email reply from Canonico that two tanks failed (one wet and one dry leak). Vought required PBS registration to be updated and that tank with wet leak be emptied immediately to prevent release to soil and or groundwater. Requested confirmation from Canonico that UST will be emptied. 01/15/10. J. Krimgold reviewed the letter report submitted by Pro Test Env. dated Dec. 28, 2009. According to the report the tank failed due to the old abandoned fill line. The line was

DEC Memo:	"02/09/07 - J.Kann - Spill reassigned from S.Kraszewski to J.Kann. 3/10/11: J.Kann - Investigative work plan submitte on 3/3/11. 8/26/14: J.Kann - Reviewed the file. Minimal contamination detected in 1995 ISRP. However, a second spill was called in during tank removal due to contaminated soils being encountered. It is not clear if and where endpoints were collected. Therefore, an investigation is warranted and an approval for the IWP prepared by Grant was emailed to NYCHA today. 12/30/14: J.Kann - part of multi site stip executed on 10/14/14. SIR due 4/14/15. 06/05/2017: J.Kann - Spill reassigned to Andre Obligado. 8/1/2019 - Obligado - I met American Environmental at the Site to observe implementation of the drilling work plan. At the time of my visit, the geoprobe rig had broken down and they had discontinued drilling. Only 1 boring to 30 ft had been advanced prior to break down. They will reschedule the drilling. 9/10/19 - Obligado - I reviewed a Subsurface Investigation Report submitted by American Environemntal. Three wells were installed to between 45 and 50 ft bgs. Groundwater was encountered between 37 and 39 ft bgs. One SVOC compound, Chrysene, was detected above CP51 clean up standards in soil at boring B7 from 25-30 ft with a level of 1.8 ppm, which is above its cp51 standard of 1ppm. No petroleum compounds were detected in groundwater above GWQS. This spill does not appear to be a threat to human health or the environment. This spill is closed."
Remarks:	"CONTRACTOR DOING BORINGS AT LOCATION FOUND CONTAMINATED SOIL."

OCEAN HILL -NYCHA (Continued) **S102149171**

Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 144292
DEC Memo: "01/24/06: This spill transferred from J.Kolleeny to S.Kraszewski. - SK 03/14/06: This spill reassigned to K.Tang. - SK 01/15/08: spill reassigned to J.Kann. Consolidated with closed spill 0302414. J.Kann 4/10/13: J.Kann - IWP approved in an email (edoced). 4/26/13: J.Kann - revised IWP rcvd and edoced. 11/4/13: J.Kann - SAR is past due (due October 2013). stip sent to NYCHA today. Must be returned by December 4, 2013. 12/6/13: J.kann - signed stip rcvd from NYCHA on 12/4 and forwarded to legal for execution on 12/6/13 4/4/14: J.Kann - extention requests made by NYCHA's consultants due to poor weather and a damaged drill rig. Extension was approved on February 12 and then again on March 12. Report was submitted today, the approved extension date. Brief glance at the report shows some VOC and SVOC constituents in groundwater above CP-51 at one location. Closure request was made by NYCHA's consultant. Will need to further review the report before making a determination. 10/21/14: J.Kann - reviewing site. One well has elevated VOCs. Groundwater is at approx. 75 fbgs. Two wells were previously installed on site as part of another investigation. An email was sent to NYCHA on 10/21/14 requesting they try to locate the report related to the previous investigation. 10/30/14: J.Kann - spoke with NYCHA today. They never received information about the investigative work that Gannett Fleming had started at the site. Therefore, no additional info is available. 11/18/14: J.Kann - information from spill 0302414 indicates NYCHA CONTRACTOR GANNETT FLEMING DOING FOLLOW-UP SITE INVESTIGATION SINCE TANK CLOSURE FOUND SVOCs IN SOIL ABOVE TAGM. PUTTING IN WELL, SOIL CONTAMINATION ENCOUNTERED FROM 25 FEET DOWN TO WATER TABLE AT 75 FT., WITH PID=220 PPM AT 50 FT., THEN FIRST SPLIT SPOON BELOW WATER TABLE, PID=230 PPM. SOIL SAMPLES WERE COLLECTED FOR LAB ANALYSIS, AND GROUNDWATER SAMPLE WILL BE TAKEN AFTER WELL IS DEVELOPED. The tank closure report was reviewed (dated February 2000 and prepared by PT&L Contracting). Endpoints were not above CP-51. No VOCs were detected, some PAHs were detected below CP-51. The investigation performed by JCB is also under review. 12/10/14: J.Kann -email sent to Yelena today- I have read the Remedial Investigation Report (RIR) prepared by JC Broderick for the referenced site. Based on the review, the spill has not been closed and the Department has the following comments: -Based on the site file, JCB notified the Department of difficulty encountered during the field investigation, resulting in approved modifications to the original work plan. None of this information is discussed and presented in the RIR. These details must be discussed in the RIR since borings were not advanced to the depths proposed in the original work plan. -The conclusions and recommendations section indicates that JCB suspects the contamination in the on site groundwater monitoring well is from another source, but a potential source is not identified. The Gannett Fleming work plan for the site dated 2003 indicates that based on historic Sanborn Maps a gasoline tank was present on this property until around 1962, or when Ocean Hill Houses were built. Why is the source assumed to be off-site? Please clarify and further discuss this in the RIR. -An additional round of groundwater samples must be collected from the three wells, analyzed for VOCs/SVOCs, summarized and submitted to the Department. Once these comments are addressed, additional investigative work may be necessary at this site. 6/4/15: J.Kann - Additional round of sampling performed at MW-1 and MW-2 in

OCEAN HILL -NYCHA (Continued) **S102149171**

February 2015. Product thickness of .02 ft found in MW-5. Based on new information, an email was sent to NYCHA requesting a fingerprint analysis and installation of two additional wells. 10/14/16: J.kann - Additional investigative work was done including the advancement of 5 more borings. All soil samples collected were below CP-51. Three wells were sampled and MW-5 had minor elevated concentrations. This was the well with a small amount of product previously. The recommendation is to install a sock in MW-6 and sample in 6 months. NYCHA was emailed today indicating that should be done. 06/05/2017: J.Kann - Spill reassigned to Andre Obligado. 1/14/19 - Obligado - I reviewed the 3Q18 monitoring report prepared by H2M. No product was observed in any of the wells since 2015. During the most recent sampling round, data submitted in December 2017, all petroleum VOCs were detected at or below GWQS. H2M recommends spill closure. After review of the report, the DEC concurs that this spill does not appear to be a threat to human health or the environment. This spill is closed based on: 1) 235 tons of contaminated soil removed from the Site during tank closure in 2000. 2) Soil samples collected during well installation were all below CP51 3) No LNAPL present for 3 years 4) No petroleum VOCs above TOGS GWQS. Spill closed. . "

DEC Memo:	"11/29/05: This spill transferred from J.Kolleeny to S.Kraszewski. 9/22/06: Spill transferred from Kraszewski to Kann. 9/21/10: J.Kann - Quarterly Report recieved on 9/1/10. 3/7/11: J.Kann - Qrtly Rpt rcvd 1/6/11 5/10/12: J.Kann - Quarterly Report rcvd 5/9/12. 9/6/12: J.Kann - Quarterly Report recieved on 8/21/12 5/21/13: J.kann - QR rcvd 1/16/13 and edoced. 2/5/15: J.Kann - Site visit made in 2014 to observe pilot study method of gauging 6 oil. The following email was sent to Yelena Tkach of NYCHA today: The Department has reviewed the 2014 3rd and 4th Quarter Status Reports for the referenced site. Based on the review NYCHA should -continue operation of the PRS and VEFR monthly -continue to utilize the pilot study method of gauging the onsite wells monthly. After a year of proper gauging of the 6 oil (in June 2015), the 2nd Quarter 2015 Status Report must include a trend analysis of product in wells, and an evaluation made of the current recovery effort. Please let me know if you have any questions. 06/05/2017: J.Kann - Spill reassigned to Andre Obligado. Obligado - I received the 1Q17 update report. Operation of the PRS is

SETH LOW (Continued) **S101658382**

on-going. The system was offline in March 2017 to repair the oil water separator. According to this report, approximately 447 gallons of oil was recovered during the 1st Quarter 2017. That includes an estimated 46 gallons during VEFR 4 VEFR events. LNAPL was present in multiple wells. Including MW 2 (.25 ft), MW2A (0.08 ft), MW3 (0.25 ft) RW1 (0.08 ft and RW4 (0.08 ft). A film was observed in MW7, RW2, and RW3. The report recommends continued operation of the product recovery system, as well as monthly VEFR events. "

Remarks: "CALLER STATES THAT A MALFUNCTION IN THE TANK PIPING CAUSED AN UNKNOWN AMOUNT SPILL CLEAN UP IS IN THE PROCESS AND TANK WILL BE REPLACED NO CALLBACK NECESSARY"

Town:	New York City
Record Added Date:	06/03/2021
Record Updated Date:	08/10/2021
Update By:	AMSERVIS
Site Description:	"Location: The site is located at 326-350 Rockaway Avenue within an urbanized area of Brooklyn, New York and is identified as Block 3499, Lots 25, 27, 32, 36, 40, 41, 42, 43, and 44 on the Brooklyn Borough Tax Map. The site is located on the city block bound by East New York Avenue to the north, Rockaway Avenue to the east, Pitkin Avenue to the south and Chester Avenue to the west. Site Features: The about 32,826-square-foot (0.75 acre) site is situated in the northern part of the tax block and is occupied by a commercial-use building complex

326-350 ROCKAWAY AVENUE (Continued) **S127990266**

comprised of five interconnected buildings with partial basements (Block 3499, Lots 32, 36, 40 and 41, and p/o Lots 32 and 42), two one-story storage sheds (Block 3499, Lots 25 and 44), a concrete-paved lot used for employee and commercial vehicle parking, and materials storage (Block 3449, Lots 27 and 43, and p/o Lots 32 and 42). According to the United States Geological Survey (USGS) Brooklyn Quadrangle 7.5-minute Series Topographic Map, the site sits at an elevation of about 50 feet above mean sea level (msl). Based upon the United States Geological Survey (USGS) quadrangle maps and information contained in the EDR report, groundwater is presumed to be about 36 to 40 feet below grade surface (bgs) and is expected to flow to the south-southeast towards Jamaica Bay. Current Zoning and Land Use: According to the New York City Planning Commission, the site is within an R6 residential district with a C2-3 commercial overlay. R6 districts are characterized by moderate and higher density residence districts generally found close to central and regional business districts; bulkier buildings and a greater range of building heights characterize these areas. With regard to the commercial overlay, according to the New York City Planning Commission, C1-1 through C1-5 and C2-1 through C2-5 districts are commercial overlays mapped within residence districts. Mapped along streets that serve local retail needs, they are found extensively throughout the city s lower- and medium-density areas and occasionally in higher-density districts . Land use within a half-mile radius is urban and includes residential, commercial, office, industrial and manufacturing, transportation, utility/transportation, public facilities/institutions, open space/outdoor recreation, parking facilities and vacant land. The nearest ecological receptor is Fresh Creek, located about 1.8 miles south-southeast of the site. The site is operated by Electrical Colonial, an electrical products supply and service company, including commercial-use and office space, materials and equipment storage space and employee and commercial vehicle parking. Past Use of the Site: Historical Sanborn Fire Insurance Maps indicate that the site was located in a developed urban area as early as 1897. By 1907, Lots 32, 36, 40, 41 and 42 were developed with one- to three-story residential and commercial buildings. The buildings on the western part of the site were demolished between 1976 and 1984. The buildings on the northeastern part of the site are identified as five interconnected commercial use buildings in 1976 and remain unchanged to present day. Residential and commercial entities were listed in association with the site. Commercial operations included a sign painter supply store (1928), a hat cleaner (1934), an exterminating company (1949), store fixture manufacturing (1950 to 1966), and a lamp manufacturing company (1960 to 1965). Site Geology and Hydrogeology: Based on the findings of the Phase II Environmental Site Investigation (Phase II ESI) completed in January 2020, the site is underlain with historic fill to a depth of about 4.5 feet below cellar grade (about 12.5 feet below ground surface [bgs]), in borings advanced within the building cellar and to about 9 feet bgs in exterior borings. Historic fill is predominantly dark brown to gray, fine-grained sand with varying amounts of silt, gravel, coal, concrete, wood, glass, and brick. The fill layer is underlain by native soil that predominantly consists of brown, fine- to medium-grained sand with varying amounts of silt and fine gravel, which generally extended to the termination depth of each boring. Petroleum-like odors and photoionization detector (PID) readings

326-350 ROCKAWAY AVENUE (Continued) **S127990266**

	above background (maximum 4.8 parts per million [ppm]) were apparent in soil boring SB02 located on the western part of the site from 7 to 8 feet bgs. Visual, olfactory, and instrumental evidence of petroleum impacts were not apparent in the remainder of the borings. Bedrock was not encountered during the January 2020 Phase II ESI. Based on a review of the Bedrock and Engineering Geologic Maps of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey, dated 1994, by Charles A. Baskerville, et al., the site is underlain by the Hartland Formation, which generally consists of white quartz-microline-muscovite granite, gray biotite-muscovite-quartz schist, gray sillimanite-plagioclase-muscovite schist, and greenish-black amphibolite. The depth to bedrock is expected to be greater than 300 feet bgs. Based upon the USGS quadrangle maps and information contained in the EDR report, groundwater is presumed to be about 36 to 40 feet bgs and is expected to flow to the south-southeast towards Jamaica Bay. "

DER Facility ID:	298758
DEC Memo:	"Sangesland spoke to Phil at Tanknology - He said there is a single 40,000 gal #6 oil UST at the site. Tank Test Failure Letter sent to Contact: Adam Nadel (917-559-2703) Nelson Management 249 Hopkinson Ave Brooklyn, NY 11233 Property is being sold and owner wants the issue cleared up quickly if possible. Sangesland suggested that the fastest way to determine if there is a large or small problem at the site was to run a series of GeoProbes around the tank in the courtyard and see if there is any contamination. If there is contamination there could be a major job to clean it up. If there is no contamination then the problem may be solved with fixing/replacing the lines. First TTF letter was returned Second letter sent to new contact: Kevin Raferty Atlantic Plaza Towers 249 Thomas S. Boyland St Brooklyn, NY 11233 10/17/05 - Austin - Spoke with Daniel of Hydrotech (631-462-5866). He indicated that the the Horner test done on this tank was invalid, due to the tank being larger than what such a test can tecnically measure in terms of leaks. He wil send his documentation on this to me, plus the results of geo-probes being placed around the tank in question, to close out this spill event in our records. I faxed him acopy of the spill report. - end 11/28/05 - Austin - Received report from Hydrotech - spill transferred to Piper for review - end 11/28/05- DEC Piper reviewed report. As per analytical results, no elevated levels above Rec'd Soil Cleanup Obj. found at 7 locations 5' from tank. No adverse impact to environment."
Remarks:	"Tank Test Failure on 40,000 gal - #6 oil - UST"

HW Code:	224283
Record Add:	09/06/2018
Record Upd:	03/11/2021
Updated By:	JHOCONNE

Site Description: "Location: The 24,645 square feet (0.566 acre) site is located at 242-288 Livonia Avenue in the Borough of Brooklyn, Kings County, NY in an urban area. Site Features: The Site is occupied by a strip mall with several commercial tenants. The former dry cleaner tenant space is now occupied by a deli. The deli is the westernmost unit. Other tenants on the site include a Chinese take-out restaurant, a pizza restaurant, a check cashing business and a supermarket. The building contains a basement below the units. Current Zoning and Land Use: The site is currently zoned as R-6 and is surrounded by residential and other commercial parcels. The site is bounded on the north by Livonia Avenue, to the east by two high-rise residential buildings, to the south by the rear driveway for the strip mall and a parking lot, and to the west by Rockaway Avenue. Past Use of the Site: A portion of the site was previously occupied by Sep s Cleaners (250 Livonia Avenue) which performed dry cleaning operations and was listed as a Resource Conservation and Recovery Act Small Quantity Generator of spent halogenated wastes. Site Geology and Hydrogeology: The Site-specific vadose zone geology generally consists of brown to dark brown medium-grained sand with occasional silt, minor and sporadic clay, and, in the shallower soil, some fill materials including brick and wood fragments. The Site-specific geology in the saturated zone generally consists of brown medium-grained sand with occasional silt and gravel. The water table is located some 20 feet below grade."

Env Problem: "Nature and Extent of Contamination: Soil Soil samples taken from 16 locations in the alleyway at the rear of the Site revealed elevated concentrations of tetrachloroethylene (PCE) in an area approximately 30 feet long by the width of the alleyway. The highest concentration of PCE was 370 ppm and concentrations ranged from 0.057 ppm to 2.8 ppm at depth (16-20 ft-bgs) and 0.3 to 370 ppm in the shallow sample (0-6 ft-bgs) compared to the Unrestricted Use SCO of 1.3 ppm. In addition, a second smaller hot spot area was delineated directly east of the primary hot spot where the maximum concentration of PCE was 4.2 ppm. The breakdown products of PCE were detected in the soil but not at significant concentrations. One sample was analyzed for SVOCs, PCBs and pesticides, but none were detected above the Unrestricted Use SCOs. Groundwater Geoprobe groundwater samples were obtained from 20 locations. These locations were within the soil hot spot area, and up-, side- and down-gradient of the hot spots. The sampling results were grouped by depth as shallow (20-22 ft-bgs), intermediate (30-32 ft-bgs) and deep (40-42 ft-bgs). The analytical results showed that a

FORMER SEP S CLEANERS (Continued) **S127478102**

	groundwater plume, defined by concentrations of PCE combined with its breakdown products exceeding 100 parts per billion (ppb), emanates from the area of soil contamination mentioned above and advances in the downgradient direction. The highest concentration detected was 39,000 ppb in the shallow groundwater and 2,500 ppb at depth in the same location which corresponds with the area of soil contamination. Soil Vapor PCE and cis-1,2-dichloroethene were detected at up to 140,000 (PCE) and 14,678 g/m3 (DCE) in the sub-slab vapor of the basements in the on-site building. Remediation at the site is ongoing under a Stipulation Agreement (see spill no. 0712821). An air sparging/soil vapor extraction system has been operating on the site since July 2014 and has resulted in improvement to the contaminant concentrations. Site Management will be tracked under this site number."
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Region: 2
Acres: 1.300
HW Code: 224054
Record Add: 03/27/2007
Record Upd: 01/07/2022
Updated By: JEBROWN
Site Description: "Location: The Union Station Holder site is located in an urban area at 2940 Atlantic Avenue in Brooklyn, Kings County. The site is 1.3 acres in size. Site Features: The main site feature is a two-story brick building located in the northeast corner of the site. The rest of the site is covered in asphalt. Current Zoning and Land Use: The site is currently an active Con Edison Service Center, and is zoned for commercial use. The surrounding parcels are currently used for a combination of residential, commercial and manufacturing/industrial. The closest residential area is within 150 feet, due west of the site. Past Use of the Site: The first two gas holders (north and center) were constructed in approximately 1887. The center gas holder was dismantled in 1906, and the north gas holder was dismantled in 1908. The southern holder was constructed in 1908 and operated until approximately 1928, then dismantled around 1950. The site was used as a distribution facility. The Con Edison facility removed two underground storage tanks (USTs) in 1998, and as a result of the impacts found in groundwater and soil, a spill number was assigned (98-06522), and remains open. Site Geology and Hydrogeology: The site is underlain by artificial fill and glacial deposits (outwash sands and gravel). The outwash sand and gravel beneath the site consists of coarse to fine gravel with sand, and ranges from 2 to 250 feet in thickness. The depth to groundwater is approximately 25 to 30 feet below ground surface (bgs), and general flow direction is to the east-southeast."
Env Problem: "Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs) and pesticides. Based upon investigations completed to date, the primary contaminants of concern for the site are VOCs and SVOCs. There have been multiple spills at the site of petroleum products and one spill remains open, associated with the removal of two USTs in 1998. Soil - Total benzene, toluene, ethylbenzene, and xylene (BTEX) ranged from non-detect (ND) to 414 ppm. In addition to BTEX, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and naphthalene were detected at elevated levels, with Total VOC concentrations as high as 2092 ppm. SVOCs, in the form of polycyclic aromatic hydrocarbons (PAHs), were detected from ND to 928 ppm. Groundwater - Total VOC concentrations were found as high as 1879 ppb, mostly downgradient of the holders. Total PAH concentrations ranged from non-detect to 601 ppb. In 2019, several monitoring wells were sampled for PFAS and

K - UNION STATION HOLDER (Continued) **S109580117**

1,4-dioxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 99.5 and 38 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. There were no soil vapor samples collected as part of this investigation. "

Health Problem: "The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review. "

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2022

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

ENV RES DECL: Environmental Restrictive Declarations

The Environmental Restrictive Declarations (ERD) listed were recorded in connection with a zoning action against the noted Tax Blocks and Tax Lots, or portion thereof, and are available in the property records on file at the Office of the City Register for Bronx, Kings, New York and Queens counties or at the Richmond County Clerk's office. They contain environmental requirements with respect to hazardous materials, air quality and/or noise in accordance with Section 11-15 of this Resolution.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Data Release Frequency: Quarterly

Financial Assurance 2: Financial Assurance Information Listing

A listing of financial assurance information for hazardous waste facilities. Financial assurance is intended to ensure that resources are available to pay for the cost of closure, post-closure care, and corrective measures if the owner or operator of a regulated facility is unable or unwilling to pay.

Date of Government Version: 06/11/2020

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

COOLING TOWERS: Registered Cooling Towers

This data includes the location of cooling towers registered with New York State. The data is self-reported by owners/property managers of cooling towers in service in New York State. In August 2015, the New York State Department of Health released emergency regulations requiring the owners of cooling towers to register them with New York State.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.
