1.0 EXECUTIVE SUMMARY

2488 Fulton Owner LLC retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase I Environmental Site Assessment (ESA) for the subject property located at 2488-2514 Fulton Street, Brooklyn, New York. The purpose of the Phase I ESA was to identify and evaluate the presence of Recognized Environmental Conditions (RECs) at the subject property. RECs are the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

The subject property consists of two parcels located at 2488-2514 Fulton Street in Brooklyn, NY. The subject property is located in the borough of Brooklyn and Kings County. The property is identified in the New York City Tax Map as Block 1577, Lots 17 & 26.

The subject property measures approximately 0.52 acres and is improved with multiple trailers (for offices and changing), storage units holding paint and tools, and truck storage. The subject property is currently used as a construction yard with no permanent buildings present. The ground cover appeared to be covered with soil based on the site inspection. Google Street View shows concrete and asphalt-paved conditions as late as 2017; therefore, concrete or asphalt may be present under the current soil cover.

Work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E1527-21 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 Code of Federal Regulations (CFR) Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and PWGC's proposal for services.

PWGC evaluated the findings associated with the subject property and identified four RECs, no HRECs, and no CRECs with respect to the subject property. Conditions determined to be RECs are detailed below:

- The subject property has been used as a construction yard since approximately 2019, which included the storage of soil and stone stockpiles. As the conditions of these stockpiles are not known, stormwater runoff from these stockpiles may have impacted the subsurface through infiltration. Based on this information, the current usage of the site as a construction yard, in conjunction with the past presence of soil and stone stockpiles, represents a REC.
- Ahern Contractors, Inc., the current subject property occupant, utilizes lead-based paint as part of their operations. According to the site contact, lead-based paint is not stored at the subject property, trucks are washed offsite, employees utilize onsite showers located inside the changing trailers as part of decontamination, and the grey water is disposed of offsite. Regardless,

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

inadvertent/minor releases of lead-based paint to the subsurface may have led to more significant subsurface impacts over time. Based on this information, PWGC believes the usage of lead-based paint at the subject property represents a REC.

- The subject property was historically used as a lumber yard from approximately 1932 to 1951. Lumber storage may result in treated wood containing chromated copper arsenate or creosote, which may leach into the subsurface through stormwater runoff. There are no records confirming treated wood storage at the subject property; however, the presence of the lumber yard predates most environmental regulations and documentation related to past releases may not exist. As such, PWGC believes the past usage of the site as a lumber yard represents a REC.
- Based on city directory records, the subject property was historically used for auto wrecking in 1940 and an auto body shop in 1992. Such usages are likely to have used/stored hazardous substances and/or petroleum products. While there are no open spills or violations associated with the subject property, the auto wrecking listing predates most environmental regulations and documentation related to past releases may not exist. As such, PWGC believes the past usage of the subject property for auto wrecking or an auto body shop represents a REC.

Based on the identified RECs, PWGC recommends a supplemental Phase II ESA be performed at the subject property. The Phase II ESA should include:

- Additional soil sampling to more completely characterize subsurface soil and historic fill conditions.

2.0 INTRODUCTION

2.1 Purpose

2488 Fulton Owner LLC (Client) retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase I Environmental Site Assessment (ESA) for the subject property located at 2488-2514 Fulton Street, Brooklyn, New York. The purpose of the Phase I ESA was to identify and evaluate the presence of Recognized Environmental Conditions (RECs) at the subject property. RECs are the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

2.2 Scope of Services

The assessment consisted of a visual inspection of the subject property and surrounding areas, interviews, a review of historical information and aerial photographs, and a review of pertinent local, state, federal and facility records. Environmental Data Resources (EDR) of Shelton, Connecticut provided the following: a database search of environmental compliance records of sites within an ASTM standard radius of the property, a Sanborn fire insurance map search, historical topographic map search, historical aerial photograph search, and a historical telephone directory search.

PWGC reviewed the environmental database report compiled by EDR as a part of the assessment. The purpose of the review was to identify reported listings for the subject property or other properties in the vicinity of the subject property. Databases reviewed included federal and state lists of known or suspected contaminated sites, lists of known handlers or generators of hazardous waste, lists of known waste disposal facilities, and lists of aboveground and underground storage tanks (ASTs and USTs). PWGC's review of the database has been incorporated into this report along with a copy of the EDR report.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E1527-21 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule) and PWGC's proposal for services.

2.3 Definitions

1. RECs are—(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

subject property under conditions that pose a material threat of a future release to the environment.

2. Historic RECs (HREC) are a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.
3. Controlled RECs (CREC) are recognized environmental conditions (RECs) affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).
4. A *de minimus* condition is a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a *de minimis* condition is not a recognized environmental condition nor a controlled recognized environmental condition.
5. Business environmental risk (BER) is a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations.

2.4 Significant Assumptions

PWGC has made the following significant assumptions in the preparation of this report:

1. Groundwater Flow Direction – Based upon regional groundwater elevation maps and local topography, regional groundwater flow direction appears to be toward the southeast.
2. Regulatory Records Information - PWGC assumes that all information provided by EDR regarding the regulatory status of facilities within the ASTM Standard approximate minimum search distance is complete, accurate, and current.
3. Other - PWGC assumes that all information provided through interviews is complete and unbiased.

2.5 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

hydrogeologic standards and practices applicable to this location and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the subject property. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the subject property, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon conditions in existence at subject property at the time of the investigation, and other information obtained and reviewed by PWGC.
4. PWGC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, or regulations or policies of federal, state, or local government agencies. PWGC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document.
5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, subject property location, and project indicated. This report is not a definitive study of contamination at the subject property and should not be interpreted as such.
6. This report is based, in part, on information supplied to PWGC by third-party sources. While efforts have been made to substantiate this third-party information, PWGC cannot attest to the completeness or accuracy of information provided by others.

2.6 Special Terms and Conditions

Authorization to perform this assessment was given by a proposal for services between the Client and PWGC.

2.7 User Reliance

This report was prepared for the exclusive use of the Client. PWGC assumes no liability for use of this report by any person or entity other than those for which it was prepared.

2.8 Data Gaps

Any data gaps identified herein, as defined by ASTM Practice E1527-21 § 3.2.19, are not considered to have significantly affected the ability to identify RECs in connection with the subject property and do not alter the conclusions of this report, unless otherwise noted. Data gaps identified during the preparation of this Phase I ESA include:

- The presence of multiple trailers and storage containers obscured most of the property's perimeter, limiting the ability to inspect ground conditions in these areas.
- Reasonably ascertainable standard sources do not show pre-development conditions at the subject property. The earliest available source (1888 Sanborn Map) shows the subject property developed with residential buildings.
- Gaps of greater than five years (1888 to 1908, 1908 to 1932, 1932 to 1951, 1954 to 1961) were identified in the history of the subject property when reviewing of standard historical sources in ASTM Practice E 1527-21 § 8.3.4.1 through 8.3.4.8 that are reasonably ascertainable and likely to be useful.

Significant data gaps as defined by ASTM E1527-21 § 3.2.78 include data gaps that affect the ability of the environmental professional to identify a REC. No significant data gaps were identified.

2.9 Viability of Phase I ESA

Generally, in accordance with ASTM Practice E1527-21 § 4.6, a Phase I ESA for which the information was collected or updated within one year prior to the date of acquisition or date of the intended transaction may be used provided that the components of the ESA detailed in Table 2-1 were updated within 180 days prior to the date of purchase or date of the intended transaction.

Table 2-1 – Report Viability Dates

Phase I ESA Component	Date Completed
Interviews with Owner, Operators and/or Occupants	3/26/2025
Environmental Lien Search	N/A*
Government Records Review	3/19/2025
Site Reconnaissance	3/26/2025
Declaration of Environmental Professional	6/16/2025

*The environmental lien search is a user requirement. PWGC was not contracted to perform one as part of this Phase I ESA.

BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

3.0 PROPERTY DESCRIPTION AND PHYSICAL SETTING

3.1 Location and Legal Description

The subject property consists of two parcels located at 2488-2514 Fulton Street in Brooklyn, NY. The subject property is located in the borough of Brooklyn and Kings County. The property is identified in the New York City Tax Map as Block 1577, Lots 17 & 26.

A Site Location Map is included as **Figure 1** and a Site Plan is included as **Figure 2**; photos of the subject property are included in **Appendix A**.

3.2 Subject Property Description and Improvements

The subject property measures approximately 0.52 acres and is improved with multiple trailers (for offices and changing), storage units holding paint and tools, and truck storage. The subject property is currently used as a construction yard with no permanent buildings present. The ground cover appeared to be covered with soil based on the site inspection. Google Street View shows concrete and asphalt-paved conditions as late as 2017; therefore, concrete may be present under the current soil cover.

3.2.1 Municipal Services and Utilities

Utility services are provided to the property as follows:

- Heating/Cooling System – The property's trailers are heated and cooled via a diesel-powered generator (Generac Mobile). The generator is fueled by diesel, which is stored in a fuel storage bin containing multiple 5-gallon fuel cans.
- Water Supply – The property has access to a fire hydrant and imports any other water.
- Sanitary System – The property discharges all sanitary waste into on-site container(s) and are privately exported.
- Electric – Electricity is not provided to this site. The diesel-fueled generator supplies the property's trailers with electricity.
- Emergency Electric Power – The subject property is not equipped with an emergency generator, only the aforementioned generator providing electricity and heating/cooling to the onsite trailers.

3.3 Physical Setting

The topography of the subject property and surrounding area was reviewed from the USGS 7.5-minute series topographic map for the Brooklyn, NY quadrangle. The property elevation is approximately 74 feet above the National Geodetic Vertical Datum (NGVD). Regional physiographic conditions are summarized below.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

3.3.1 *Regional Geology / Hydrogeology*

The geologic setting of Long Island is well documented and consists of crystalline bedrock composed of schist and gneiss overlain by layers of unconsolidated deposits. Immediately overlying the bedrock is the Raritan Formation, consisting of the Lloyd sand confined by the Raritan Clay Member. The Lloyd sand is an aquifer and consists of discontinuous layers of gravel, sand, sandy and silty clay, and solid clay. The Raritan Clay is a solid and silty clay with: few lenses of sand and gravel, abundant lignite and pyrite, and gray, red, or white in color.

Above the Raritan Clay lies the Magothy Formation. The Magothy Aquifer consists of layers of fine to coarse sand of moderate to high permeability, with inter-bedded lenses of silt and clay of low permeability resulting in areas of preferential horizontal flow; therefore, this aquifer generally becomes more confined with depth. The Magothy Aquifer is overlain by the Upper Glacial Aquifer. The Upper Glacial Aquifer is the water table aquifer at this location and is comprised of medium to coarse sand and gravel with occasional thin lenses of fine sand and brown clay. This aquifer extends from the land surface to the top of the Magothy Aquifer; therefore, is hydraulically connected to the Magothy Aquifer.

3.3.2 *Local Hydrogeology*

Based upon the subject property elevation and regional groundwater contour maps, the depth to groundwater beneath the subject property is approximately 62 feet below existing grade. Regional groundwater flow is estimated to be toward the southeast direction.

Based upon information contained within the EDR report, there are no public water supply wells within a one-mile radius of the subject property.

3.3.3 *Flood Potential*

PWGC reviewed the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) to determine if the subject property is located within a flood hazard area. Based upon FIRM data, it appears that the subject property is not located within a Special Flood Hazard Area (1%) or a 0.2% Annual Chance Flood Hazard area (FEMA Map Panel ID: 3604970065B).

3.3.4 *Direction and Distance to Nearest Surface Water*

Based on topographic maps, no permanent surface water bodies are located within a one-mile radius of the subject property.

4.0 PROPERTY USAGE

4.1 Current Property Usage

The subject property is currently used as a construction yard with no permanent buildings present.

4.2 Current Usage of Adjoining/Surrounding Properties

A summary of the surrounding properties is as follows:

Table 4-1 – Current Usage of Surrounding Properties

Direction	Adjoining Properties	Surrounding Area
North	Fulton Street. Auto repair shop.	Elevated railroad tracks. East New York Yard (railroad yard)
South	Herkimer Street. NYC Transit Maintenance Authority. Auto dealership.	East New York Ave. Custom iron works, auto repair.
East	Fulton Street, Williams Avenue, Jewel Square.	Commercial businesses (Liquor store, smoke shop).
West	Williams Place. Parking lot for MTA Transit Authority. Elevated railroad tracks.	Medical Center

4.3 Historical Usage of Subject Property and Surrounding Properties

Historical sources researched to determine past usage of the subject property and surrounding properties are as follows:

4.3.1 Sanborn Fire Insurance Maps

EDR was retained to provide historical Sanborn fire insurance maps of the subject and adjacent properties. Historical Sanborn maps for the subject property and surrounding area were reviewed for the years available which include 1887 to 2007. Review of the maps is summarized in Table 4-2. A copy of the historical Sanborn report is included in **Appendix B**.

Table 4-2 – Sanborn Map Summary – Subject Property

Date	Subject Property Usage
1887	Reasonably ascertainable Sanborn maps do not exist.
1888	One 2.5-story dwelling existed on the southwestern portion of the property. A feed and hay storage building and a three-story dwelling are present on the eastern portion, both partially located on the subject property and extending farther to the south.
1908	The hay and feed storage building no longer appears to be present.
1928	Reasonably ascertainable Sanborn maps do not exist.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC

4.3.2 *Historical Topographic Maps*

Historical topographic maps for the subject property and surrounding area were reviewed for the years available which include 1897 to 2019. Review of the maps is summarized in Table 4-3. Copies of historical topographic maps are included as **Appendix C**.

Table 4-4 – Topographic Map Summary – Subject Property

Date	Subject Property Usage
1897-2019	The subject property appears to be located within a developed, urban area; however, the resolution of reasonably ascertainable topographic maps is insufficient to draw conclusions as to the specific usage of the subject property.

Table 4-4 – Topographic Map Summary – Surrounding Area

Date	Adjoining Properties	Surrounding Area
North		
1897-1900	The resolution of reasonably ascertainable topographic maps is insufficient to draw conclusions as to the specific usage of the adjoining property.	The resolution of reasonably ascertainable topographic maps is insufficient to draw conclusions as to the specific usage of the surrounding property.
1947-1956	A railroad appears to be present.	Broadway Junction railroad tracks.
1966-1994	A railroad appears to be present; one small building appears to be present.	Broadway Junction railroad tracks.
2013-2019	The resolution of reasonably ascertainable topographic maps is insufficient to draw conclusions as to the specific usage of the adjoining property.	The resolution of reasonably ascertainable topographic maps is insufficient to draw conclusions as to the specific usage of the surrounding property.
South		
1897-1947	The resolution of reasonably ascertainable topographic maps is insufficient to draw conclusions as to the specific usage of the adjoining property.	The resolution of reasonably ascertainable topographic maps is insufficient to draw conclusions as to the specific usage of the surrounding property.
1956-2019	Herkimer Street has extended to the east to run south of the subject property.	The resolution of reasonably ascertainable topographic maps is insufficient to draw conclusions as to the specific usage of the surrounding property.

1897-1900	A railroad appears to be present.	A railroad appears to be present.
1947-2019	A railroad appears to be present.	Additional railroad tracks are present.

4.3.3 Historical Aerial Photographs

PWGC performed a review of readily available aerial photographs showing the subject property and surrounding area. Photographs were reviewed for the years available which include 1924 to 2019. Review of the photos is summarized in Table 4-4. A copy of the aerial photograph search is included in **Appendix D**.

Table 4-6 – Aerial Photograph Summary – Subject Property

Date	Subject Property Usage
1924-1951	The subject property appears to be developed with multiple buildings; however, the resolution of the reasonably ascertainable aerial photograph is insufficient to draw conclusions as to the specific usage of the subject property.
1954	The subject property appears to be undeveloped
1961-2015	The subject property appears to be used for automobile storage.
2019	A construction yard appears to be present at the subject property. Soil and stone stockpiles appear to be present on the western and northeastern portions of the property.

Date	Adjoining Properties	Surrounding Area
North		
1924	Appears to be developed; potential commercial usage.	A railroad appears to be present.
1951-1954	Four commercial buildings appear to be present	Railroad station, bus terminal.
1961-2019	Three commercial buildings and a parking lot appear to be present.	Railroad station, bus terminal.
South		
1924	Appears to be developed with commercial and residential buildings.	Commercial/residential buildings.
1951-1961	Herkimer Street is present. Commercial buildings appear to be present.	Commercial/residential buildings.
1966-2006	Commercial building appears to have been reconstructed.	Commercial/residential buildings.
2011	Commercial buildings appear to be present.	Commercial/residential buildings. All but one residential building have been demolished.
2015-2019	Commercial buildings appear to be present.	Commercial/residential buildings.
East		
1924	Appears to be developed; commercial/residential usage.	Commercial/residential buildings.
1951-2019	Roadway intersection.	Pedestrian island, commercial buildings.
West		
1924	Railroad tracks appear to be present.	Commercial/residential buildings.
1951-2019	Additional railroad tracks appear to be present.	Parking lot; one large building (commercial/industrial).

4.3.4 City Directory Listings

EDR was retained to provide a directory of historical telephone listings at the subject property and surrounding properties. City directories were reviewed for the years available which include 1928 to 2020. Review of city directories is summarized below. A copy of the city directory report is included as **Appendix E.**

- 2488 to 2514 Fulton Street – even addresses only.

4.3.5 *Subject Property Historical Summary*

Based on review of historical sources, as described in Section 4.3.1 through 4.3.4, the subject property was first developed prior to 1888. The property was used for residential purposes from approximately 1888 to 1932, as a lumber yard from approximately 1932 to 1951, auto wrecking in 1940, an auto body shop in 1992, a parking area from approximately 1951 to 2015, and a construction yard from approximately 2019 to the present day. Historical usage of the subject property indicative of potential RECs include the following:

- lumber yard
- construction yard
- auto wrecking
- auto body shop

4.3.6 *Surrounding Area Historical Summary*

Based on review of historical sources, as described in Section 4.3.1 through 4.3.4, the area surrounding the subject property was first developed prior to 1888. Surrounding property development was primarily residential and commercial until approximately 1932, after which commercial and industrial usage increased to the present-day extent. Historical usage of properties in the surrounding area indicative of potential RECs include the following:

- railroad tracks
- filling station with gasoline tanks present
- auto repair
- steel manufacturing
- lumber yard

5.0 USER PROVIDED INFORMATION

5.1 User Requirements

The user of a Phase I ESA report, in accordance with the USEPA All Appropriate Inquiries (AAI) Rule and ASTM E1527-21 has certain responsibilities which include providing the following information, if available, to PWGC to be included within the Phase I Report. Additionally, PWGC provided the user of the report a User Questionnaire form. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identify if RECs are present at the subject property. A copy of the User Questionnaire and any provided documents are included in **Appendix F**; relevant information has been incorporated into this report.

5.2 Title Records

Title records for the subject property may contain information about past owners and uses of the subject property. The title report may also contain information, such as restrictive declarations which are limitations on site uses based upon know environmental conditions. As of the date of this report, the user has not provided PWGC with a title search or requested that PWGC perform a title search.

5.3 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws. As of the date of this report, the user has not provided PWGC with a lien search or requested that PWGC perform a lien search.

5.4 Specialized Knowledge

The user provided no specialized knowledge about the property to PWGC.

5.5 Commonly Known or Reasonably Ascertainable Information

The user provided no commonly known information about the property to PWGC.

5.6 Valuation Reduction for Environmental Issues

The user provided no information regarding price adjustments to the subject parcels value due to environmental issues.

5.7 Owner, Property Manager, and Occupant Information

The subject property is currently owned by Fulton Junction LLC

The subject property is currently occupied by Ahern Contractors, bridge painters union company.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

5.8 Reason for Performing Phase I ESA

The Phase I ESA was performed to evaluate potential RECs prior to a potential property transaction.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

6.0 RECORDS REVIEW

6.1 Standard Environmental Record Sources

EDR of Shelton, Connecticut was retained to provide a database search of the project area within an ASTM-standard radius of the subject property. A list of the databases searched and the search radius is shown on the summary table below. PWGC reviewed the database output to determine if the property appears on any of the regulatory agency lists. Detailed information concerning each database list is provided in the EDR report (**Appendix G**).

In order to evaluate the potential for a site to have an adverse impact to the subject property, the migration pattern of contaminants in media such as groundwater or soil vapor is considered. Based upon the presumed regional flow towards the southeast, the following is assumed:

- Sites located northwest of the subject property or sites that are neighboring or adjacent to the subject property are considered to have the highest potential to impact the subject property and are referred to as "up gradient."
- Sites located southeast of the subject property, which are not neighboring or adjacent to the subject property are considered to have the least potential to impact the subject property and are referred to as "down gradient."
- All other sites not adjacent to or neighboring the subject property are referred to as "cross gradient" and are considered to have minimal potential to impact the subject property.
- The migration pathway for potential soil vapor impact may not match the migration pattern of potential groundwater impact. As such, sites that are located down or cross gradient of the subject property with respect to groundwater flow may still represent a potential source of vapor encroachment at the subject property. Such sites, if identified are discussed in Section 6.2.

A summary of standard environmental record sources researched is as follows:

6.1.1 Federal Databases

The table below summarizes the Federal databases that were searched.

Table 6-1 - Federal Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Total Nearby Properties Identified	Up Gradient and Adjacent Properties Identified	Down or Cross Gradient Properties Identified
USEPA	National Priority List	NPL	1.0 mile	No	1	1	0
USEPA	National Priority List Deletions	Delisted NPL	0.5 mile	No	0	0	0

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Total Nearby Properties Identified	Up Gradient and Adjacent Properties Identified	Down or Cross Gradient Properties Identified
USEPA	Superfund Enterprise Management System	SEMS	0.5 mile	No	0	0	0
USEPA	Superfund Enterprise Management System Archive	SEMS-ARCHIVE	0.5 mile	No	0	0	0
USEPA	Resource Conservation and Recovery Act Corrective Action Activity	CORRACTS	1.0 mile	No	0	0	0
USEPA	Resource Conservation and Recovery Act Treatment/Storage/ Disposal Facilities	RCRA TSD	0.5 mile	No	0	0	0
USEPA	Resource Conservation and Recovery Act Small/Large Quantity Hazardous Waste Generators	RCRA SQG/LQG/ VSQG/ Non-Gen	Subject Property and Adjoining	No	3	3	N/A
USEPA	Federal Institutional/ Engineering Control Registries	US INST/ENG Controls	Subject Property	No	N/A	N/A	N/A
USEPA	Emergency Response Notification System	ERNS	Subject Property	No	N/A	N/A	N/A

Review of the EDR Radius Map Report indicates that the subject property is not listed in Federal environmental databases searched.

Based on review of environmental database records, as described above, the following sites within the ASTM standard Federal database search radii of the subject property were identified as potential concerns (see section 6.1.5 for further detail on these sites):

- Wolff-Alport Chemical Company - NPL

Remaining sites identified within the ASTM standard Federal database search radii were ruled out as potential concerns due to their distance, direction relative to groundwater flow, and/or closed status.

6.1.2 State and Local Databases

The table below summarizes the State databases that were searched.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

Table 6-2 - New York State and Local Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Total Nearby Properties Identified	Up Gradient and Adjacent Properties Identified	Down or Cross Gradient Properties Identified
NYSDEC	Inactive Hazardous Waste Disposal Sites in New York State	SHWS	1.0 mile	No	2	0	2
NYSDEC	Hazardous Substance Waste Disposal Site Study	HSWDS	0.5 mile	No	0	0	0
NYSDEC	Solid Waste Facility Register	SWF/LF	0.5 mile	No	6	1	5
NYSDEC	Registered Recycling Facilities	SWRCY	0.5 mile	No	1	0	1
NYSDEC	Registered Waste Tire Storage Facilities	SWTIRE	0.5 mile	No	0	0	0
NYSDEC	Petroleum Bulk Storage (PBS)	UST/AST	Subject Property and Adjoining	No	0	0	N/A
NYSDEC	Chemical Bulk Storage (CBS)	CBS AST/UST	Subject Property and Adjoining	No	0	0	N/A
NYSDEC	Major Oil Storage Facilities	MOSF	0.5 mile	No	0	0	0
NYSDEC	Leaking Underground Storage Tank Sites	LTANKS	0.5 mile	No	28	10	18
NYSDEC	New York State Spills	NYSPILLS	0.125 mile	No	34	0	0
NYSDEC	Institutional/ Engineering Control Registries	INST/ENG Controls	Subject Property	No	N/A	N/A	N/A
NYSDEC	Voluntary Cleanup Agreements	VCP	0.5 mile	No	18	2	16
NYSDEC	Brownfield Cleanup Program & Environmental Restoration Program	BCP/ERP	0.5 mile	No	2	0	2
NYSDEC	Dry Cleaner Site	Dry cleaners	0.25 mile	No	0	0	0
NYC	E-Designation	E-DES	Subject Property	No	N/A	N/A	N/A

Review of the EDR Radius Map Report indicates that the subject property is not listed in State environmental databases searched.

Based on review of environmental database records, as described above, due to their distance, direction relative to groundwater flow, and/or closed status, no database records related to surrounding properties within the ASTM standard State database search radii indicative of potential environmental concerns were identified.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

6.1.3 *EDR Databases*

The table below summarizes the EDR databases that were searched.

Table 6-3 - Additional Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Total Nearby Properties Identified	Up Gradient and Adjacent Properties Identified	Down or Cross Gradient Properties Identified
EDR	Manufactured Gas Plants	MGP	1.0 mile	No	2	0	2
EDR	Historical Drycleaners	HDC	0.25 mile	No	0	0	0
EDR	Historical Auto Station	HAS	0.125 mile	No	2	1	1

Review of the EDR Radius Map Report indicates that the subject property is not listed in EDR proprietary environmental databases searched.

Based on review of environmental database records, as described above, the following sites within the EDR proprietary database search radii of the subject property were identified as identified as potential concerns (see section 6.1.5 for further detail on these sites):

- Rusbro Transmission, Inc.

6.1.4 *Orphan Sites*

Orphan sites are properties, that due to an inadequate or incomplete address in government databases or in base map files, are not able to be geographically located (i.e. mapped or geocoded). This can occur for several reasons: no street number or street name in address given, the street address is given only as a P.O. Box, or when inconsistencies exist in the address (street number does not exist in the city / zip code given).

Four orphan sites were identified in the EDR report. PWGC performed a cursory review of the addresses listed. It does not appear that the subject property or neighboring properties are identified in the orphan summary.

6.1.5 *Sites of Potential Concern*

Based on review of environmental database records, as described above, the following sites within ASTM standard search radii were identified as potential environmental concerns related to the subject property:

- Wolff-Alport Chemical Company is listed in the NPL database and is located approximately 0.9 miles upgradient of the subject property at 1125-1139 Irving Avenue. According to USEPA's Database records, the Wolff-Alport Chemical Company imported monazite sand and extracted

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

rare earth metals onsite from the early 1920s until 1954. Monazite contains approximately 6-8% thorium. Until 1947, the Wolff-Alport Chemical Company dumped the thorium waste in the sewer and possibly buried the waste on the property. Investigations confirmed radiological contamination still existed on the property and in/around sewer lines downstream of the former facility. EPA included the adjacent streets, sidewalks, sewers, and commercial and residential properties where radiological contaminants migrated or have the potential to migrate as part of the site, indicating the area of concern related to this site is well outside the subject property boundary. As such, this site does not appear to represent an environmental concern to the subject property.

- Rusbro Transmission, Inc. is listed in the HAS database and is the adjoining property to the north of the subject property. Database records indicate that the site was utilized as an automotive repair shop from 1969 to 1989. This site is not listed on any other database indicative of an existing contamination condition and is located cross gradient of the subject property. As such, this site does not appear to represent an environmental concern to the subject property.

6.2 Vapor Encroachment

PWGC performed a Tier 1 Vapor Encroachment Screening for the subject property in accordance with ASTM E2600-15, Vapor Encroachment Screening on Property Involved in Real Estate Transactions. In accordance with ASTM E2600-15, the default Area of Concern (AOC), adjusted to account for the groundwater flow direction in the vicinity of the subject property, is defined as follows:

Direction Relative to Subject Property	Petroleum Impacted Sites AOC Radius	Contaminants of Concern Impacted Sites AOC Radius
Up Gradient	528 feet	1,760 feet
Cross Gradient	165 feet (LNAPL) 95 feet (dissolved)	365 feet
Down Gradient	100 feet (LNAPL) 30 feet (dissolved)	100 feet

PWGC evaluated sites identified in Federal and State databases (see Section 6.1) located within the adjusted AOC radii for the potential for petroleum impact and or contaminants of concern (such as perc) to be present. The following sites were identified within the adjusted AOC:

- Two HAS sites
- One VCP site
- Six LTANKS sites

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

Each of these sites was evaluated for the potential for a vapor encroachment condition (VEC) to be present. Based on these sites' lack of apparent impact present and/or closed status, PWGC has determined that none are likely to represent a VEC at the subject property.

A copy of the Tier 1 Vapor Encroachment Screening is included as **Appendix H**.

6.3 Additional Environmental Record Sources

6.3.1 Freedom of Information Act Requests

Freedom of Information Act (FOIA) requests were sent to the United States Environmental Protection Agency, Region 2 (USEPA) via USEPA's MyProperty database, the New York State Department of Environmental Conservation, Region 2 (NYSDEC), The New York City Mayor's Office of Environmental Remediation (NYCOER), the New York City Department of Environmental Protection (NYCDEP) and the New York City Fire Department (FDNY). Copies of FOIA requests are included in **Appendix I**.

As of the date of this report, responses to FOIA requests have not been received, except as noted below. As responses were not provided within the allotted due diligence period, the records were deemed not to be "reasonably ascertainable" at this time. Should records become available at a later date, pertinent information will be forwarded as an addendum upon receipt.

6.3.2 Publicly Available Online Information

Information regarding the subject property was collected from several publicly available online sources, including the following:

- Property Shark (www.propertyshark.com, an aggregator of publicly available real estate information).
- NYSDEC DECInfo Locator (https://www.dec.ny.gov/pubs/109457.html)
- NYCDOB Building Information System (https://www1.nyc.gov/site/buildings/index.page)
- Google Street View (https://www.google.com/maps)

Information regarding the subject property available on above listed sources was reviewed to identify pertinent information. No indication of environmental issues was identified.

- NYCDOB Building Information System: A 1954 Certificate of Occupancy identified the subject property as a parking lot and used car sales.
- NYCDOB Building Information System: A complaint was recorded on August 4, 1994, regarding the construction of a single-story building for auto repair purposes.

7.0 SITE RECONNAISSANCE

7.1 Methodology and Limiting Conditions

Danielle Dulligan of PWGC performed site reconnaissance on Wednesday March 26, 2025. Weather conditions during the inspection were cloudy with a temperature of approximately 43-52° Fahrenheit.

The site reconnaissance consisted of an inspection of the interior portions of the property followed by inspection of the exterior portions of the property. A Site Inspection Checklist is included as **Appendix J**. The presence of multiple trailers and storage containers obscured most of the property's perimeter, limiting the ability to inspect ground conditions in these areas.

7.2 Aboveground Storage Tanks (AST)

PWGC identified one 500-gallon AST containing gray water from showers and two 275-gallon ASTs used for collecting dewatered stormwater at the subject property. The ASTs appeared to be in good condition at the time of inspection.

7.3 Underground Storage Tanks (UST)

PWGC did not identify evidence of USTs, such as fill ports or vent lines at the subject property.

7.4 Hazardous and Non-Hazardous Chemical Storage

PWGC observed chemical storage consisting of the following:

- Storage of approximately thirty 5-gallon diesel cans within a chemical storage locker.
- Multiple paint cans (non-lead-based paint) in sealed 2.5-gallon or 5-gallon buckets were observed, located within three storage containers.

No staining or other evidence of spills or improper discharges was observed in the vicinity of chemical storage. Storge containers appeared to be in good condition at the time of inspection.

7.5 Waste Generation, Storage, and Disposal

PWGC observed evidence of waste generation, storage or disposal consisting of the following:

- Two empty 55-gallon drums were observed at the subject property. The use for these drums was not determined at the time of inspection.
- Sanitary waste from portable toilets and office bathrooms and gray water from the onsite showers are transported from the subject property periodically.

7.6 Polychlorinated Biphenyls (PCBs)

PWGC did not identify potentially PCB containing equipment such as electrical transformers or hydraulic lifts at the subject property.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

7.7 Additional Site Conditions

The following is a summary of visual and/or physical observations made by PWGC at the time of site reconnaissance. Photographs of pertinent observations are included in **Appendix A**.

Table 7-1 - Additional Site Conditions

Condition	Identified
Interior drains, trenches or sumps.	Yes[1]
Interior stains or corrosion	No
Unusual odors	No
Interior pools of liquid	No
Stained Soils or Pavement	No
Stressed Vegetation	No
Indications of solid waste disposal	No
Exterior ponds, pits, or lagoons	No
Wastewater discharge/disposal	No
Storm water discharge/disposal	Yes[2]
Oil water separators/clarifiers	No
Septic Systems/Cesspools	No
Wells (Drinking water, monitoring wells, agricultural/ irrigation wells, or process water wells)	No
Petroleum or natural gas pipelines or easements	No
Other	No

1 – At least two floor drains were observed in changing trailers on the eastern portion of the subject property. The drains discharge into a bin and the gray water is disposed of offsite. No chemical storage was observed in the vicinity of the drains; no staining or other evidence of spills or improper discharges was observed in the vicinity of the drains.

2 – Storm water that collects on the subject property is pumped into two 275-gallon ASTs. No determination as to the discharge or disposal of the collected stormwater could be made during site reconnaissance.

7.8 Neighboring Properties

PWGC performed a cursory inspection of the neighboring properties from the subject property and public right of ways. The neighboring properties are used for commercial purposes. Potential environmental concerns observed at neighboring properties included:

- The property located to the north is currently used for auto repair services. Hazardous materials and petroleum products may be stored/utilized at this property.
- The property to the south is used for auto sales/repair. Hazardous materials and petroleum products may be stored/utilized at this property.

8.0 INTERVIEWS

8.1 Current Owner

PWGC emailed a property owner questionnaire to the client, Elizabeth Canela, via email on April 2, 2025, to be forwarded to the current property owner. As of the date of this report, a response from the property owner has not been received

8.2 Occupant

PWGC interviewed Chris of Ahern Contractors Inc., the current occupant. Chris did not have knowledge of environmental issues at the subject property. Information provided by Chris is summarized below and has been incorporated into this report where appropriate.

- The site is a yard for trucks and material storage for their site work.
- Ahern Contractors, Inc. works with lead paint; however, all trucks are washed offsite. Employees utilize the onsite showers located inside the changing trailers and the grey water is disposed of offsite.
- No known USTs are present onsite.
- Water supply for the site is either imported water or accessed via a hydrant along Herkimer Street.
- There are above-ground train tracks adjacent to the site, on the western side of the property. These were originally painted with lead-based paint and were repainted approximately two years ago.

8.3 Previous Environmental Reports

PWGC was provided copies of CBRE Phase I ESA for the subject property. A Phase II ESA was also written by PWGC. Information included in the report is summarized below:

8.3.1 Phase I Environmental Site Assessment Report (September 2018)

CBRE prepared a Phase I ESA in September of 2018. The Phase I ESA did not identify RECs associated with subject property; however, the presence of "fill" material (material with fragments of brick, concrete, cinder, etc) commonly found within the five boroughs of New York City may represent an environmental concern and require special handling and disposal if the site were to be redeveloped.

8.3.2 Phase II Environmental Site Assessment Report (May 2024)

A geophysical survey was conducted and did not identify subsurface anomalies indicative of potential USTs, drywells, or other objects. At the time of the survey, portions of the site were not accessible due to the active usage of the site.

Soil quality across both soil borings exhibited the presence of fill material in the top 15 feet. Six soil samples were collected from four soil borings installed across the site as part of this assessment. Analytical results

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

for each of the four samples did not identify concentrations of Volatile Organic Compounds (VOCs) exceeding Unrestricted Use Soil Cleanup Objectives (UUSCOs). Semivolatile Organic Compounds (SVOCs), namely polyaromatic hydrocarbons (PAHs), were detected at concentrations exceeding Restricted-Residential Use SCOs (RRUSCOs) in SB004 collected from the 0 to 2-foot interval. Lead and mercury were detected at concentrations greater than RRUSCOs in SB003 in the 0 to 2-foot. Additionally, copper, lead, zinc, and mercury were detected at concentrations greater than Unrestricted Use SCOs in SB001, SB002, and SB004 in the 0 to 2-foot interval. VOCs, SVOCs, and metals were not detected at concentrations greater than UUSCOs in the two soil samples collected from the 13 to 15 foot interval. In general, elevated concentrations of SVOCs and metals were identified at locations and depths where the upper layer of fill material was observed.

Two soil vapor samples were collected from the up gradient and down gradient portions of the property. Soil vapor samples were compared to the matrices to provide guidance. There were no concentrations of VOCs detected that would warrant mitigation based on the NYSDOH matrices; however, concentrations of petroleum related compounds, such as the trimethylbenzenes and BTEX (benzene, toluene, ethylbenzene, xylene) and chlorinated VOCs such as tetrachloroethylene and vinyl chloride were detected at lower concentrations.

8.4 Local Government Officials

Freedom of Information Act (FOIA) requests were sent to the United States Environmental Protection Agency, Region 2 (USEPA) via USEPA's MyProperty database, the New York State Department of Environmental Conservation, Region 2 (NYSDEC), The New York City Mayor's Office of Environmental Remediation (NYCOER), the New York City Department of Environmental Protection (NYCDEP) and the New York City Fire Department (FDNY).

Based upon the subject property history, interviews with government officials to obtain additional information are not warranted at this time.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

9.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM 1527-21

9.1 Wetland Delineation

Based on review of the EDR Radius Map Report, which includes State and Federal wetlands, it appears that State and/or Federal wetlands are not present on the subject property.

Based on review of the EDR Radius Map Report, no State or Federal wetlands are located within a one-mile radius of the subject property.

9.2 Radon Risk Evaluation

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate, and pitchblende. The USEPA's "Map of Radon Zones for New York State," September 1993 indicates that Kings County is not a radon risk area. The EDR report provides information from the New York State Department of Health radon survey which indicates that the average result for sites tested in Kings County is 0.750 Pico curies per liter (pCi/L) in the living area, which is less than the USEPA radon action level of 4 pCi/L, and 100% of sites tested in Kings County were less than the action level of 4 pCi/L in the living area.

9.3 Asbestos

The subject property is not currently developed with any permanent structures; no potential asbestos containing material (ACM) was identified.

9.4 Lead-Based Paint (LBP)

The subject property is not currently developed with any permanent structures; no potential lead-based paint was identified.

9.5 Mold

PWGC did not visually observe significant sources of mold at the subject property during site reconnaissance.

9.6 Historic Fill

Given the location of the subject property within the five boroughs of New York City, there is a potential for historic fill material to be present beneath the subject property. Such material, if excavated (for the purpose of constructing a building, installing new footings, and/or utilities), will require special handling and disposal.

9.7 Emerging Contaminants

Emerging contaminants collectively refer to several chemicals/groups of chemicals that represent potential sources of groundwater impact that are becoming increasingly scrutinized and regulated in

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

recent years. Emerging contaminants that are currently a focus of regulatory agencies in New York state are discussed below.

9.7.1 Per- and Poly-Fluoroalkyl Substances

Per- and Polyfluoroalkyl Substances (PFAS) are a group of man-made chemicals that have been in use since the 1940s that are or have been used in products such as chrome plating, electronics manufacturing, fire suppression foams, stain and water repellants, non-stick coatings, paints, and other consumer products. As of February 2023, NYSDEC has established drinking water quality guidance values, and is in the process of establishing soil quality standards for PFAS. In addition, PFAS chemicals perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) have been designated "hazardous substances" as defined by USEPA. As such, the presence or potential presence of such compounds at the site, under conditions defined in Section 2.3, may represent a REC.

Based on review of the database report and site history, PWGC has not identified evidence of current or past chemical usage or storage at the site indicative of a potential source of PFAS impact.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC

BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

10.0 FINDINGS AND OPINIONS

Based upon reconnaissance of the subject and surrounding properties, interviews, and review of historical records and regulatory agency databases, the following potential RECs have been identified:

Onsite

- Subject property usage as a construction yard.
- Subject property lead-based paint usage.
- Historical subject property usage.

Offsite

- Current and/or historical usage of surrounding properties.

Potential RECs identified at the subject property were evaluated to determine whether items initially suspected to be RECs are in fact RECs. Evaluation of potential RECs are as follows:

- The subject property has been used as a construction yard since approximately 2019, which included the storage of soil and stone stockpiles. As the conditions of these stockpiles are not known, stormwater runoff from these stockpiles may have impacted the subsurface through infiltration. Based on this information, the current usage of the site as a construction yard, in conjunction with the past presence of soil and stone stockpiles, represents a REC.
- Ahern Contractors, Inc., the current subject property occupant, utilizes lead-based paint as part of their operations. According to the site contact, lead-based paint is not stored at the subject property, trucks are washed offsite, employees utilize onsite showers located inside the changing trailers as part of decontamination, and the grey water is disposed of offsite. Regardless, inadvertent/minor releases of lead-based paint to the subsurface may have led to more significant subsurface impacts over time. Based on this information, PWGC believes the usage of lead-based paint at the subject property represents a REC.
- The subject property was historically used as a lumber yard from approximately 1932 to 1951. Lumber storage may result in treated wood containing chromated copper arsenate or creosote, which may leach into the subsurface through stormwater runoff. There are no records confirming treated wood storage at the subject property; however, the presence of the lumber yard predates most environmental regulations and documentation related to past releases may not exist. As such, PWGC believes the past usage of the site as a lumber yard represents a REC.
- Based on city directory records, the subject property was historically used for auto wrecking in 1940 and an auto body shop in 1992. Such usages are likely to have used/stored hazardous substances and/or petroleum products. While there are no open spills or violations associated with the subject property, the auto wrecking listing predates most environmental regulations and documentation related to past releases may not exist. As such, PWGC believes the past usage of the subject property for auto wrecking or an auto body shop represents a REC.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

- Multiple surrounding properties were identified as having current and historical industrial uses, including steel manufacturing, a filling station, auto repair, a lumber yard, and railroad. Identified current and historical usages are likely to have used/stored hazardous substances and/or petroleum products. However, based on these sites' lack of identified open spills or other violations, the likelihood of potential releases impacting the subject property appears to be low. Based on this information, the current and historical usage of surrounding properties does not appear to represent a REC.

11.0 CONCLUSIONS AND RECOMMENDATIONS

PWGC has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 for the subject property. There were no exceptions to, or deletions from, this practice except as noted in Section 12.0 of this report. PWGC evaluated the findings associated with the subject property and identified four RECs, no HRECs, and no CRECs with respect to the subject property.

Based on the identified RECs, PWGC recommends a supplemental Phase II ESA be performed at the subject property. The Phase II ESA should include:

- Additional soil sampling to more completely characterize subsurface soil and historic fill conditions.

12.0 DEVIATIONS

This Phase I ESA was conducted in accordance with the scope and limitations of the ASTM Standard E 1527-21 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process) and 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule). Excluding data gaps identified in Section 2.8 and additional services outlined in Section 9.0, there were no deviations or deletions from this practice.

14.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Michael Pecoraro
Project Manager

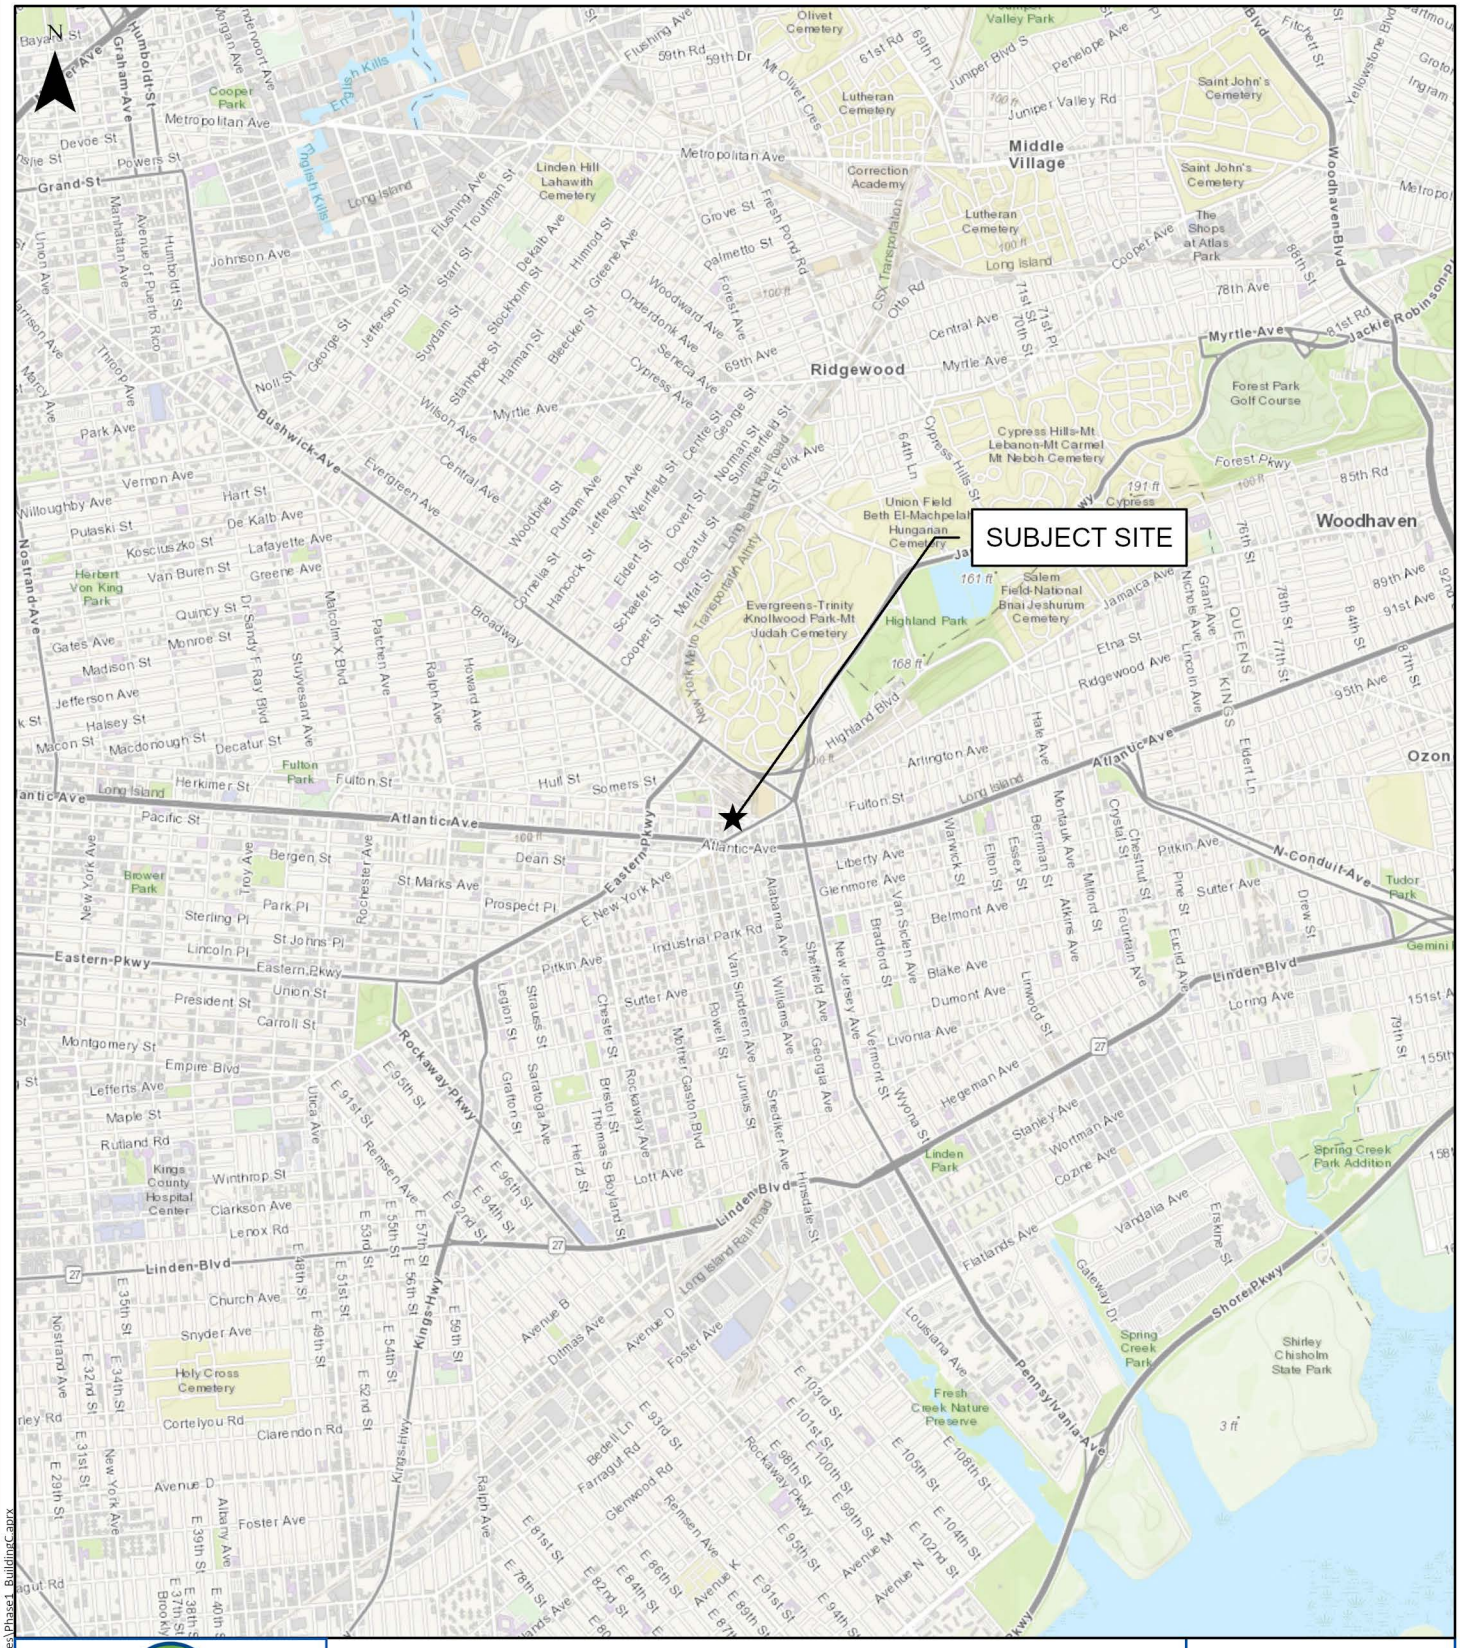

Jennifer Lewis, PG
Vice President

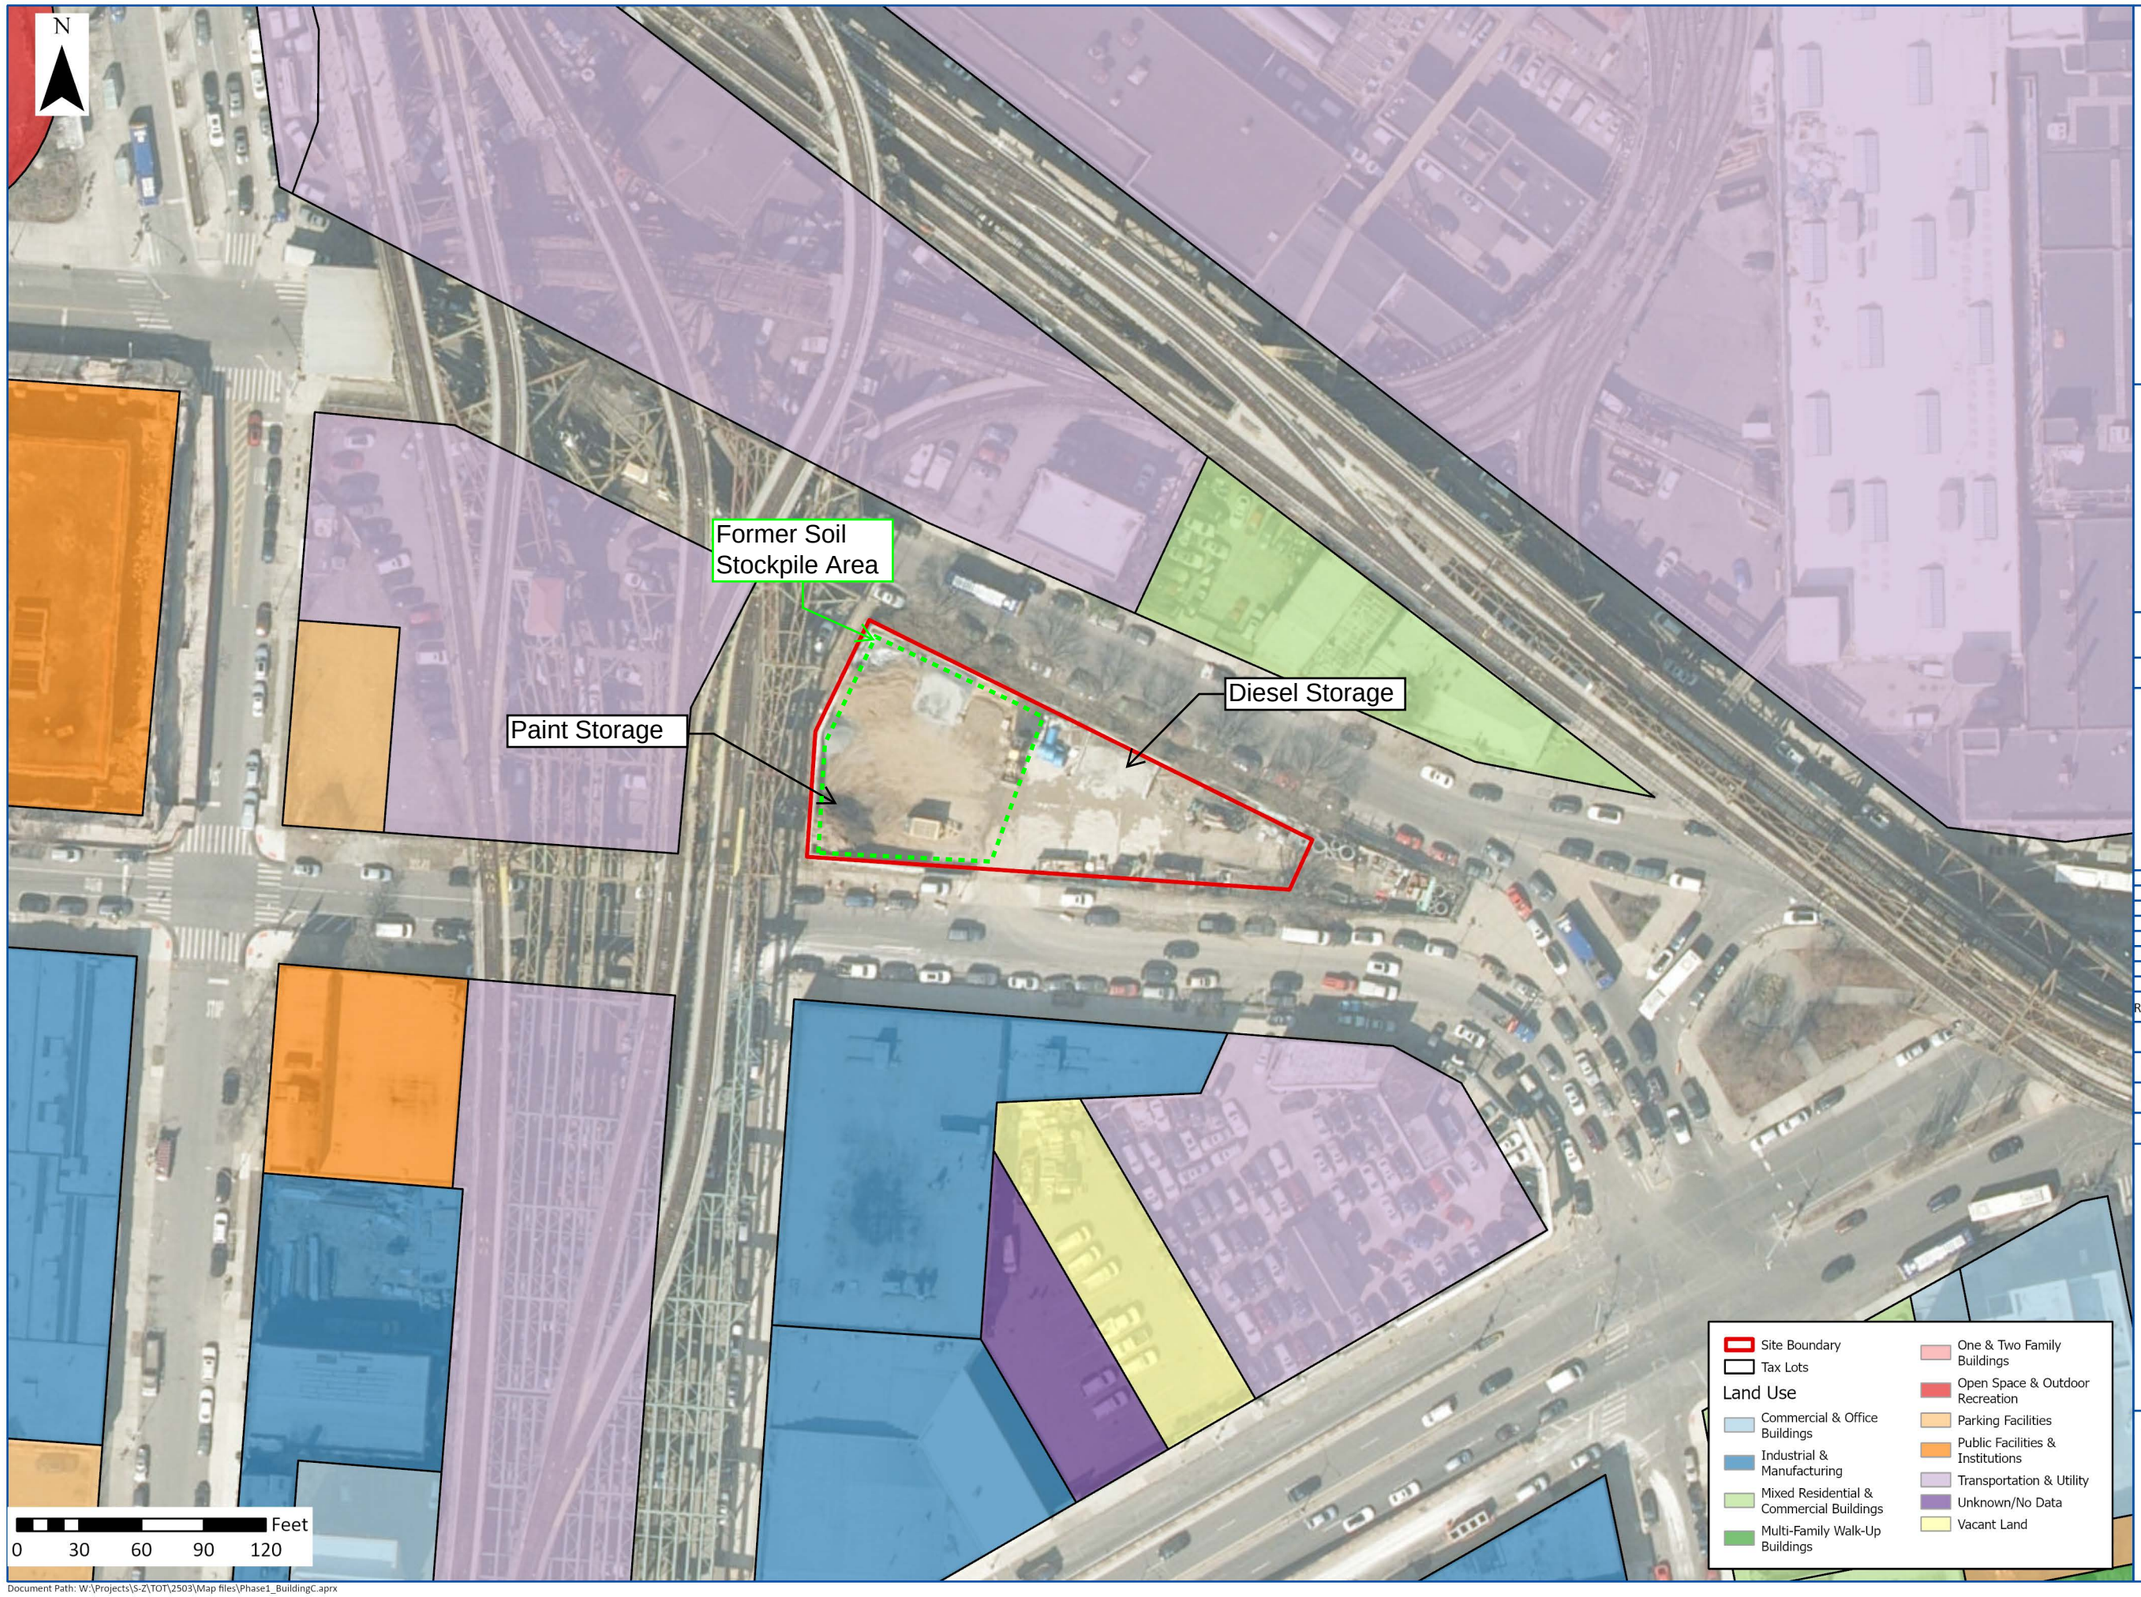

Qualifications of the Environmental Professionals are included in **Appendix K.**

Certified Sanborn® Map Report

03/19/25

Site Name:

Broadway Junction Properties
2488 Fulton Street
Brooklyn, NY 11207
EDR Inquiry # 7931531.12

Client Name:

P.W. Grosser Consulting
630 Johnson Ave
Bohemia, NY 11550
Contact: Michael Pecoraro

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by P.W. Grosser Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn® Library search results
Certification #: EC07-459D-8276

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

P.W. Grosser Consulting (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

630 Johnson Ave
Bohemia, NY 11550
Contact: Michael Pecoraro

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by P.W. Grosser Consulting were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# TOT2503

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 401 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

1.0 INTRODUCTION

Broadway Junction Partners, LLC (Client) retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase II Environmental Site Assessment (ESA) for the property located at 2488-2514 Fulton Street, Brooklyn, New York. The purpose of the Phase II ESA was to obtain sound, scientifically valid data concerning actual property conditions.

Work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1903-19 (Standard Practices for Environmental Site Assessment: Phase II Environmental Site Assessment Process) and in substantial conformance with the New York State Department of Environmental Conservation's (NYSDEC's) Division of Environmental Remediation's (DER's) Technical Guidance for Site Investigation and Remediation, May 2010 (DER-10).

2.0 BACKGROUND

2.1 Site Description and Features

The subject property consists of two parcels located at 2488-2514 Fulton Street in Brooklyn, NY. The subject property is located in the borough of Brooklyn and Kings County. The property is identified in the NYC Tax Map as Block 1577, Lots 17 & 26. The subject property measures approximately 0.52 acres and is improved with a construction yard.

A Site Location Map is included as **Figure 1**. A Site Plan is included as **Figure 2**.

2.2 Physical Setting

The topography of the subject property and surrounding area was reviewed from the USGS 7.5-minute series topographic map for the Brooklyn, NY quadrangle. The property elevation is approximately 73 feet above the National Geodetic Vertical Datum (NGVD).

The geologic setting of Long Island is well documented and consists of crystalline bedrock composed of schist and gneiss overlain by layers of unconsolidated deposits. Immediately overlying the bedrock is the Raritan Formation, consisting of the Lloyd sand confined by the Raritan Clay Member. The Lloyd sand is an aquifer and consists of discontinuous layers of gravel, sand, sandy and silty clay, and solid clay. The Raritan Clay is a solid and silty clay with: few lenses of sand and gravel, abundant lignite and pyrite, and gray, red, or white in color.

Above the Raritan Clay lies the Magothy Formation. The Magothy Aquifer consists of layers of fine to coarse sand of moderate to high permeability, with inter-bedded lenses of silt and clay of low permeability resulting in areas of preferential horizontal flow; therefore, this aquifer generally becomes more confined with depth. The Magothy Aquifer is overlain by the Upper Glacial Aquifer. The Upper Glacial Aquifer is the water table aquifer at this location and is comprised of medium to coarse sand and gravel with occasional thin lenses of fine sand and brown clay. This aquifer extends from the land surface to the top of the Magothy Aquifer; therefore, is hydraulically connected to the Magothy Aquifer.

Based upon the subject property elevation and regional groundwater contour maps, the depth to groundwater beneath the subject property was estimated at 62 feet below existing grade. Regional groundwater flow is estimated to be toward the southeast direction.

2.3 Site History and Land Use

The subject property was first developed prior to 1888, The property was used as a flour, feed, and hay storage building from approximately 1988 until 1932, a lumber yard and residential dwelling from 1932

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

until 1951, a lumber yard from 1951 until 1963, and a parking lot since 1963. The subject property is currently used as a construction yard with no permanent buildings present.

2.4 Adjacent Property Land Use

The area surrounding the subject property was lightly developed by 1888 and more densely developed by 1932. An elevated subway track located near the subject property has been in existence since at least 1897 and the remainder of the area has mostly been used for commercial or industrial uses up until the present day.

2.5 Summary of Previous Assessments

2.5.1 Phase I Environmental Site Assessment Report (September 2018)

CBRE prepared a Phase I ESA in September of 2018. The Phase I ESA did not identify RECs associated with subject property; however, the presence of "fill" material (material with fragments of brick, concrete, cinder, etc) commonly found within the five boroughs of New York City may represent an environmental concern and require special handling and disposal if the site were to be redeveloped.

BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

3.0 INVESTIGATION METHODOLOGY

The Phase II ESA included the following tasks:

- Geophysical survey
- Soil quality evaluation
- Groundwater quality evaluation
- Soil vapor intrusion investigation

3.1 Geophysical Survey

On April 16, 2024, PWGC and Advanced Geological Services (AGS) of Malvern, Pennsylvania mobilized to the subject property to perform a geophysical survey. The purpose of the geophysical survey was to determine the absence/presence of subsurface anomalies at the subject property. Descriptions of the geophysical methods are described below.

A copy of the Geophysical Survey Report, including further detail regarding the methodology and findings, is included in **Appendix A**.

3.1.1 Electromagnetic Survey

AGS utilized a RD400/PDL2 by Radio-Detection, an EM61 electromagnetic (EM) instrument, and a Fisher M Scope TW-6 metal detector. The Radiodetection RD400, EM61 electromagnetic, and Fisher M Scope use the principle of EM induction to measure the variability of electrical conductivity of subsurface materials and the presence of buried metal objects. Significant contrasts in the electrical properties between non-indigenous materials and surrounding soil enable accurate delineation of buried waste materials, fill, and geologic features. The large EM response to metal makes this technique particularly well suited to identifying buried metal objects such as underground storage tanks (USTs), metallic wastes, buried drums, pipelines, reinforced building foundations, and other metal components of buried structures. It is, however, equally sensitive to metal objects on the ground surface.

3.1.2 Ground Penetrating Radar Survey

Following the electromagnetic survey, AGS utilized a GSSI SIR-3000 with a 400 Mhz antenna to further investigate the metallic anomalies. Ground penetrating radar (GPR) uses high frequency pulsed electromagnetic waves to acquire subsurface information. Energy is propagated downward into the ground and is reflected back to the surface from boundaries at which there are electrical property contrasts. Penetration is the greatest in unsaturated sands and fine gravels and dry, well cured concrete. Clayey, highly saline or saturated soils, areas covered by steel reinforced concrete, foundry slag, uncured concrete, or other highly conductive materials significantly reduce depth penetration of the GPR signal. The 400

631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

MHz antenna can achieve depths of penetration up to about 20 feet, but this depth may be greatly reduced due to site-specific conditions as discussed above.

3.2 Soil Quality Evaluation

To characterize soil quality at the subject property, soil borings were installed throughout the site. A total of four soil borings were installed during the Phase II ESA investigation. Soil boring locations are illustrated in **Figure 3**.

3.2.1 Soil Boring Protocol

Lakewood Environmental Services (Lakewood) of Smithtown, New York provided environmental drilling services during the investigation. A Track Mounted Geoprobe 6610 was utilized to install the environmental soil borings. Soils were collected continuously from ground surface down to an approximate depth of 15 feet below the ground surface (bgs).

The soil cores were placed on 10-mil polyethylene sheeting in the order they came out of the ground. The acetate liners were cut open and the soil core was screened for the presence of volatile organic vapors, which are commonly associated with petroleum products and industrial solvents, utilizing a photo-ionization detector (PID). Each soil core was classified by a hydrogeologist using the Unified Soil Classification System (USCS). A soil boring log was developed for each location (**Appendix B**) and includes the characterization and screening data.

3.2.2 Soil Sample Collection Protocol

Soil samples collected for volatile organic analysis were collected directly from the acetate liners utilizing terra-core sampling devices. The remaining sample volumes were transferred to a stainless-steel bowl and homogenized. Once homogenized, samples were transferred to laboratory supplied glassware and packed in a cooler with ice and shipped under proper chain-of-custody procedures to Alpha Analytical Laboratories of Westborough, Massachusetts (Alpha), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certified laboratory, for analysis following NYSDEC Analytical Services Protocol (ASP)-Category A Deliverables.

3.3 Groundwater Quality Evaluation

To characterize groundwater quality at the subject property, a total of two groundwater samples were intended to be collected as part of this Phase II ESA. Lakewood utilized a track mounted Geoprobe® direct-push drill rig to advance a SP-16 sampler in two boreholes and advance the sampler to groundwater. Due to repeated refusals at depths ranging from 30 feet bgs to 40 feet bgs, Lakewood was unable to reach groundwater, and groundwater samples were unable to be collected as part of this Phase II ESA.

3.4 Soil Vapor Intrusion Investigation

To evaluate potential vapor intrusion at the subject property, a soil vapor intrusion investigation was performed. The investigation consisted of the collection of two soil vapor samples.

3.4.1 Soil Vapor Point Installation Protocol

Soil vapor sampling was performed in accordance with the NYSDOH "Guidance for Evaluating Soil Vapor Intrusion in New York State," (NYSDOH Guidance) October 2006 and subsequent addenda.

3.4.1.1 Soil Vapor Sampling

Soil vapor sampling points were installed to a depth of five feet bgs utilizing a Geoprobe® direct-push drill rig. At each location, a six-inch stainless-steel screen was installed at the base of the sampling point with dedicated polyethylene tubing to grade. Coarse sand was placed surrounding the screen and six inches above. The remainder of the soil vapor point annulus was sealed with bentonite grout to the surface.

3.4.1.2 Tracer Gas Testing

Prior to sampling, the integrity of soil vapor sampling point seals was tested using tracer gas analysis. The environment surrounding the seal was enriched with the tracer gas (helium) as readings were collected through the sampling probe with a portable helium detector. Seals were adjusted as needed until acceptable tracer gas readings were collected from each soil vapor probe indicating the seals were intact and the sampling probes were acceptable for sample collection.

After the initial tracer gas test was performed, one to three volumes of the sample tubing was purged prior to collecting samples. Flow rates for both purging and collecting did not exceed 0.2 liters per minute to minimize potential indoor air infiltration during sampling.

3.4.2 Soil Vapor Sample Collection Protocol

Soil vapor samples were collected into 6-liter Summa® vacuum canisters fitted with 2-hour flow controllers. Canisters and flow controllers were batch certified clean by the laboratory. Proper quality assurance/quality control (QA/QC) protocol was followed during the collection of soil gas samples to ensure that cross-contamination in the field did not occur.

4.0 INVESTIGATION FINDINGS

4.1 Geophysical Survey

A geophysical survey was performed as detailed in Section 3.1. Findings of the geophysical survey included the following:

- The maximum depth of GPR penetration at the property was approximately 5 feet bgs.
- No underground storage tanks were identified during the geophysical survey.
- A large area of elevated electromagnetic response was identified in the center of the property. Further investigation using the GPR indicated the area was likely reinforced concrete.
- Eastern and western portions of the property were obstructed by machinery and were not accessible for collection of geophysical data.

4.2 Soil Quality Evaluation

To characterize soil quality, soil borings were installed at the up gradient and down gradient portions of the property and farther inside the property for improved horizontal delineation. A total of four soil borings (SB001-C through SB004-C) were installed during the investigation. Soil boring locations are illustrated in **Figure 3**.

4.2.1 Soil Boring Protocol

Soil borings were installed as detailed in Section 3.2. Soils were collected continuously from ground surface to an approximate depth of 5 feet (shallow borings) or 15 feet (deep borings) bgs. Soils in these areas generally consisted of two distinct layers of fill material. The upper layer contained brick and glass, intermixed with fine to medium grained sand with fines and gravel with slight plasticity, and ranged between surface grade and five to seven feet bgs in the borings. The lower layer contained brick and glass, intermixed with fine to coarse silty sand and gravel with no plasticity, and continued to at least 15 feet bgs where the boring terminated. No visual or olfactory contamination was observed in any of the soil borings. PID readings ranged from 0.0 parts per million (ppm) to 0.1 ppm. Soil boring logs are included in **Appendix B**.

4.2.2 Soil Sample Collection Protocol

Soil samples were collected from each boring from the interval exhibiting the highest visual or olfactory contamination. As each of the four borings did not exhibit visual or olfactory evidence of contamination, but did exhibit evidence of fill material throughout the boring, the following sample depth selection was selected: a shallow sample was collected from a two-foot interval from the top five feet, where contamination is most likely to be present and for deep borings, an additional sample was collected from within the bottom five feet. Soil samples were collected as detailed in Section 3.2, and were analyzed for the following:

- VOCs by USEPA Method 8260
- SVOCs by USEPA Method 8270
- Metals by USEPA Methods 6010/7196/7471/9012

4.2.3 Soil Analytical Results

Soil analytical results were compared to the Soil Cleanup Objectives (SCOs) for Unrestricted, Restricted Residential, and Commercial Use Soil Cleanup Objectives (UUSCOs, RRUSCOs, and CUSCOs, respectively) specified in NYSDEC's Title 6 New York Codes, Rules, and Regulations (NYCRR) Part 375, Environmental Remediation Programs. A total of six soil samples were collected.

Analytical results from each of the soil borings did not yield concentrations of VOCs exceeding UUSCOs.

Chrysene was detected at a concentration exceeding its UUSCO in SB004_0-2'. In addition, SB004_0-2' exceeded RRUSCOs for benzo(a)anthracene at 1.1 mg/kg, benzo(a)pyrene at 1.1 mg/kg, benzo(b)fluoranthene at 1.3 mg/kg, and indeno(1,2,3-cd)pyrene at 0.62 mg/kg.

Metals were detected at concentrations exceeding UUSCOs in SB001_0-2' (copper, lead, and mercury), SB002_0-2' (lead and mercury), SB003_0-2' (copper and zinc), and SB004_0-2' (mercury). In addition, SB003_0-2' exceeded the RRUSCO for lead (400 mg/kg) at 584 mg/kg and mercury (0.81 mg/kg) at 2.47 mg/kg.

Analytical results are detailed in **Tables 1** through **3** and the complete laboratory analytical report is included in **Appendix C**.

4.3 Soil Vapor Intrusion Investigation

To evaluate potential vapor intrusion at the subject property, two soil vapor samples (SV001-C and SV002-C) were collected. Soil vapor samples were collected as described in Section 3.4.

4.3.1 Soil Vapor Analytical Results

The primary method for the evaluation of sub-slab vapor and indoor air data is the use of Soil Vapor / Indoor Air Matrices provided in the NYSDOH Guidance document. The matrices incorporate both sub-slab vapor concentrations and their corresponding indoor air concentrations in a table to formulate an appropriate action for a sampling site. Matrices have been developed for a limited number of chlorinated and petroleum-related VOCs. Although matrices have not yet been developed for other compounds, consideration is given to the comparisons between the sub-slab vapor and indoor air concentrations to determine if vapor intrusion is occurring.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

Indoor air samples were not collected as part of this assessment and, as there was no building present, sub-slab vapor samples could not be collected either; however, the analytical results for the soil vapor samples were utilized in place of the sub-slab vapor samples in comparison to the matrices to provide guidance. The soil vapor samples were compared to the lowest values included on the NYSDOH decision matrices for sub-slab soil vapor which may warrant further action regardless of the results of the indoor air sample.

No VOCs were detected at concentrations exceeding the lowest concentrations specified in the NYSDOH decision matrices. There are detectable concentrations of petroleum related compounds, such as the trimethylbenzenes and BTEX (benzene, ethylbenzene, and toluene) and chlorinated VOCs such as tetrachloroethylene and vinyl chloride. These concentrations are relatively low; however, these samples were not collected immediately beneath a slab or within 2 feet of a known source of contamination.

Analytical results are detailed in **Table 4.** Soil vapor matrices comparisons are detailed in **Table 5**. The complete laboratory analytical report is included in **Appendix C**.

4.4 Site Environmental Evaluation

Soil impact at the property primarily consisted of SVOCs (polyaromatic hydrocarbons [PAHs]) and metals at concentrations exceeding their respective RRUSCOs in the shallow (zero to two feet bgs) soils sampled. Such impact at the levels detected is commonly associated with the presence of fill material. This observation is further supported by the presence of debris (brick/glass) observed in the soil at the property; however, the PAH and metal impact appears to be limited to the upper layer of fill, as the two samples collected from the lower fill layer did not exceed UUSCOs for any parameter.

Additionally, based on the concentration of lead observed in shallow soils, if disturbed or removed from the site for disposal, waste characterization including Toxicity Characteristic Leaching Procedure (TCLP) analysis may result in the soil being deemed hazardous and requiring special handling for disposal.

Petroleum related compounds and chlorinated VOCs were detected in the soil vapor in both soil vapor samples at relatively similar concentrations. As there are no buildings onsite, indoor air and sub-slab soil vapor samples could not be collected. While no concentrations of VOCs were observed that would warrant mitigation based on the NYSDOH matrices, the presence of a building slab could potentially result in higher concentrations of compounds accumulating beneath the slab which may represent a soil vapor intrusion concern. Installation of a vapor barrier or other suitable vapor intrusion mitigation methods may be recommended, if the site were to be developed in the future.

5.0 CONCLUSIONS AND RECOMMENDATIONS

PWGC has performed a Phase II ESA at the subject property in conformance with the scope and limitations of ASTM Practice E1903-19 for the following objectives:

- Geophysical survey to identify potential USTs, utilities, and other subsurface anomalies.
- Installation of four soil borings (SB001-C through SB004-C), and collection of one to two soil samples from each boring.
- Installation of two soil vapor sampling points (SV001-C and SV002-C) and collection of two soil vapor samples.

5.1 Conclusions

Based on the results of the Phase II ESA, PWGC offers the following conclusions:

Subsurface anomalies indicative of potential USTs, drywells, or other objects which would warrant further investigation were not identified during the geophysical survey.

Soil quality across both soil borings exhibited the presence of fill material in the top 15 feet. Six soil samples were collected from four soil borings installed across the site as part of this assessment. Analytical results for each of the four samples did not identify concentrations of VOCs exceeding Unrestricted Use SCOs. SVOCs, namely PAHs, were detected at concentrations exceeding RRUSCOs in SB004 collected from the 0 to 2-foot interval. Lead and mercury were detected at concentrations greater than RRUSCOs in SB003 in the 0 to 2-foot. Additionally, copper, lead, zinc, and mercury were detected at concentrations greater than Unrestricted Use SCOs in SB001, SB002, and SB004 in the 0 to 2-foot interval; however, these concentrations were less than Restricted Residential Use SCOs. VOCs, SVOCs, and metals were not detected at concentrations greater than UUSCOs in the two soil samples collected from the 13 to 15 foot interval. In general, elevated concentrations of SVOCs and metals were identified at locations and depths where the upper layer of fill material was observed.

Two soil vapor samples were collected from the up gradient and down gradient portions of the property. As there was no building present onsite, sub-slab vapor and indoor air samples could not be collected. Soil vapor samples were compared to the matrices to provide guidance. There were no concentrations of VOCs detected that would warrant mitigation based on the NYSDOH matrices; however, concentrations of petroleum related compounds, such as the trimethylbenzenes and BTEX and chlorinated VOCs such as tetrachloroethylene and vinyl chloride were detected at lower concentrations.

5.2 Recommendations

Based on the conclusions detailed above, PWGC offers the following recommendations for the subject property:

- Based on the level of SVOC and metals impact observed in the subsurface, PWGC recommends that these soils be handled in accordance with local, state, and federal regulations and guidance if they are to be disturbed and/or removed from the site for offsite disposal. This should involve appropriate waste characterization sampling to determine if some of the metal impacts are deemed hazardous.
- Installation of a vapor barrier or other appropriate soil vapor mitigation methods if a new building is to be constructed.

6.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Michael Pecoraro

8.0 LIMITATIONS

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections and examination of records prepared by others. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by PWGC.
4. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
5. This report is based, in part, on information supplied to PWGC by third-party sources. While efforts have been made to substantiate this third-party information, PWGC cannot attest to the completeness or accuracy of information provided by others.

(2) NYSDEC 6 NYCRR Environmental Remediation Programs Part 375 Restricted-Residential Use of Soil Cleanup Objective Table 375-6.8b 12/06 and CP-51 Table 1 10/10.

(3) NYSDEC 6 NYCRR Environmental Remediation Programs Part 375 Commercial Use of Soil Cleanup Objective Table 375-6.8b 12/06 and CP-51 Table 1 10/10.

NS - No Standard

U - The analyte was analyzed for, but was not detected above the reported sample quantification limit.

J - The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

Highlighted text denotes concentrations exceeding NYSDEC Unrestricted Use SCO

Highlighted text denotes concentrations exceeding NYSDEC Restricted Residential Use SCO

Highlighted text denotes concentrations exceeding NYSDEC Commercial Use SCO

Subject: Geophysical Investigation Results
Broadway Junction Project
2488-2514 Fulton Street

Dear Ms Jenifer Lewis

Advanced Geological Services (AGS) presents this letter report to PW Grosser Consulting (PWGC) of Bohemia, New York detailing the methods and results of the geophysical investigation conducted at 2488-2514 Fulton Street, Brooklyn, New York. The objective of the geophysical investigation was to locate and identify potential underground storage tanks (USTs) and to "clear" several proposed drilling locations of potential utilities and other drilling obstructions. The field activities for this geophysical investigation were completed by AGS on March 16 2024.

Methods

The ground penetrating radar (GPR), Electromagnetic (EM), radio frequency (RF), and metal detection (MD) methods were utilized for this geophysical investigation. To search for the potential USTs AGS collected EM data in a grid like formation as space permitted to maximize data coverage. Many large obstructions were present at this location that prohibited covering the entire survey area. AGS utilized a GPS instrument to locate each EM data point. The EM data was downloaded and contoured in the field and analyzed for potential USTs. Additional GPR profiles were collected across each area with an elevated EM response.

AGS scanned the each proposed drilling location with the RF instrument looking for potentially active electric lines. Each location was further scanned with the MD instrument to locate potential metallic anomalies that could be associated with utilities or other buried metallic

obstructions. GPR profiles were collected in a grid like pattern centered at the proposed drilling location, looking for potential utilities.

Ground Penetrating Radar (GPR) Method

The ground penetrating radar (GPR) method was used to locate and identify potential utilities and other buried features. The GPR method is based upon the transmission of repetitive, radio frequency electromagnetic (EM) pulses into the subsurface. When the transmitted energy of down going wave contacts an interface of dissimilar electrical character, part of the energy is returned to the surface in the form of a reflected signal. This reflected signal is detected by a receiving transducer and is displayed on the screen of the GPR unit as well as being recorded on the internal hard-drive. The received GPR response remains constant as long as the electrical contrast between media is present and constant. Lateral or vertical changes in the electrical properties of the subsurface result in equivalent changes in the GPR responses. The system records a continuous image of the subsurface by plotting two way travel time of the reflected EM pulse versus distance traveled along the ground surface. Two way travel time values are then converted to depth using known soil velocity functions.

The GPR field procedures involved (1) instrument calibration, (2) test run completion, (3) production profile collection and recording, and (4) data storage for subsequent processing and analysis in the office. Each radar profile was examined for characteristic GPR signatures that may indicate the presence of buried targets. A Geophysical Survey System SIR System 3000 and a 400 megahertz (MHz) antenna were used with a recording window of 60 nanoseconds (ns) to provide the required depth penetration and subsurface detail.

Radio Frequency (RF) Utility Locating Method

A Radiodetection RD400/PDL2 multi-frequency RF utility locating system was used for this project to locate potential electric lines and other surficially identifiable utilities and/or features. This instrument consists of a receiver/tracer and a remote transmitter, which operates at frequencies ranging between 8 kHz and 65 kHz. In addition, the receiver can be used in 60 Hz passive mode to identify active buried electrical lines. This utility tracing instrument provides audible and visual feedback to the operator when a utility that is coupled with the transmitted signal is crossed. The transmitter produces a radio-frequency signal in the

utility to be traced by either induction coupling or direct hook-up. The receiver output provides measured field strength of the received signal and varies an audible pitch depending upon how far the utility is from the receiver. By carefully adjusting the gain of the receiver it is possible to determine the location of the utility and to separate it from adjacent utilities.

Hand Held Metal Detection (MD) Method

The survey area and each proposed drilling location was scanned using a hand held metal detection (MD) instrument. This method uses the principle of electromagnetic induction to detect shallow buried metal objects such as USTs, metal utility conduits, rebar in concrete, manhole covers, and various metallic debris. This is done by carrying a hand-held radio transmitter-receiver unit above the ground and continuously scanning the surface. A primary coil broadcasts a radio signal from a transmitter. This primary radio signal induces secondary electrical currents in metal objects. These secondary currents in turn produce a magnetic field which is detected by the receiver.

The MD instrument used for this investigation was a Fisher TW-6 pipe and cable locater. This instrument is expressly designed to detect metallic pipes, cables, USTs, manhole covers, and other buried metallic objects. The instrument produces an audible response and significant meter deflections when near a metal object. The peak instrument response usually occurs when the unit is directly over the object.

Time Domain EM Metal Detection Method (EM61)

Time domain EM metal detection data were collected using a Geonics EM61 instrument. This instrument generates a pulsed primary EM field into the earth, which induces eddy currents in nearby metallic objects. The eddy current decay produces a secondary magnetic field which is measured by the receiver coil. By taking measurements at a relatively long time after the start of the decay, the current induced in the ground has fully dissipated and only the current in the metal is still producing a secondary field. In scanning mode, the instrument produces an audible response indicating the presence of buried metal beneath the antenna, as well as providing a digital read-out of the response magnitude. The response, which is measured in millivolts (mV), can also be recorded by the integrated data logger. The instrument uses two antenna coils separated by 0.5 meters (1.6 feet) to provide potential depth information, and to both minimize and quantify effects from above ground metallic objects. This instrument is very

sensitive to metal objects, but relatively insensitive to variations in soil conductivity and geologic features. The standard EM61 configuration used during this investigation is capable of detecting metal targets the size of a 55-gallon drum up to depths of 10 feet or more depending upon site conditions.

Results

AGS has included one figure (Figure 1) showing contoured EM results. The aerial photograph was taken in 2022 and was downloaded from https://data.gis.ny.gov/. All locations on Figure 1 are in the New York Long Island NAD83 state plane coordinate system with all units in feet.

No USTs were identified on either the EM or GPR data sets. AGS identified a large area with an elevated EM response. This area was further investigated with the GPR instrument and appears to be reinforced concrete. No USTs were identified on the GPR profiles collected over the reinforced concrete. Furthermore, there were no additional areas with an elevated EM response that was on the contoured EM diagram that are typical of USTs.

Only a portion of the survey area was able to be surveyed with the EM instrument. Numerous obstructions prohibited the collection of geophysical data. AGS cannot make any determination on the presence or absence of USTs in areas that were not accessible to AGS for this investigation.

Furthermore, AGS "cleared" numerous proposed drilling locations. Each “cleared” proposed drilling location exhibited a reflection-free GPR signature and no RF or MD response. The final locations for each proposed drilling location was discussed and reviewed with the onsite representative.

Closing

AGS did not identify any USTs and "cleared" several proposed drilling locations. Upon completion of the geophysical investigation AGS reviewed the results with the onsite PWGC representative.

All geophysical data and field notes collected as a part of this investigation will be stored at the AGS office. The data collection and interpretation methods used in this investigation are consistent with standard practices applied to similar geophysical investigations. The correlation of geophysical responses with probable subsurface features is based on the past results of similar surveys although it is possible that some variation could exist at this site. Due to the nature of geophysical data, no guarantees can be made or implied regarding the presence or absence of additional objects or targets beyond those identified.

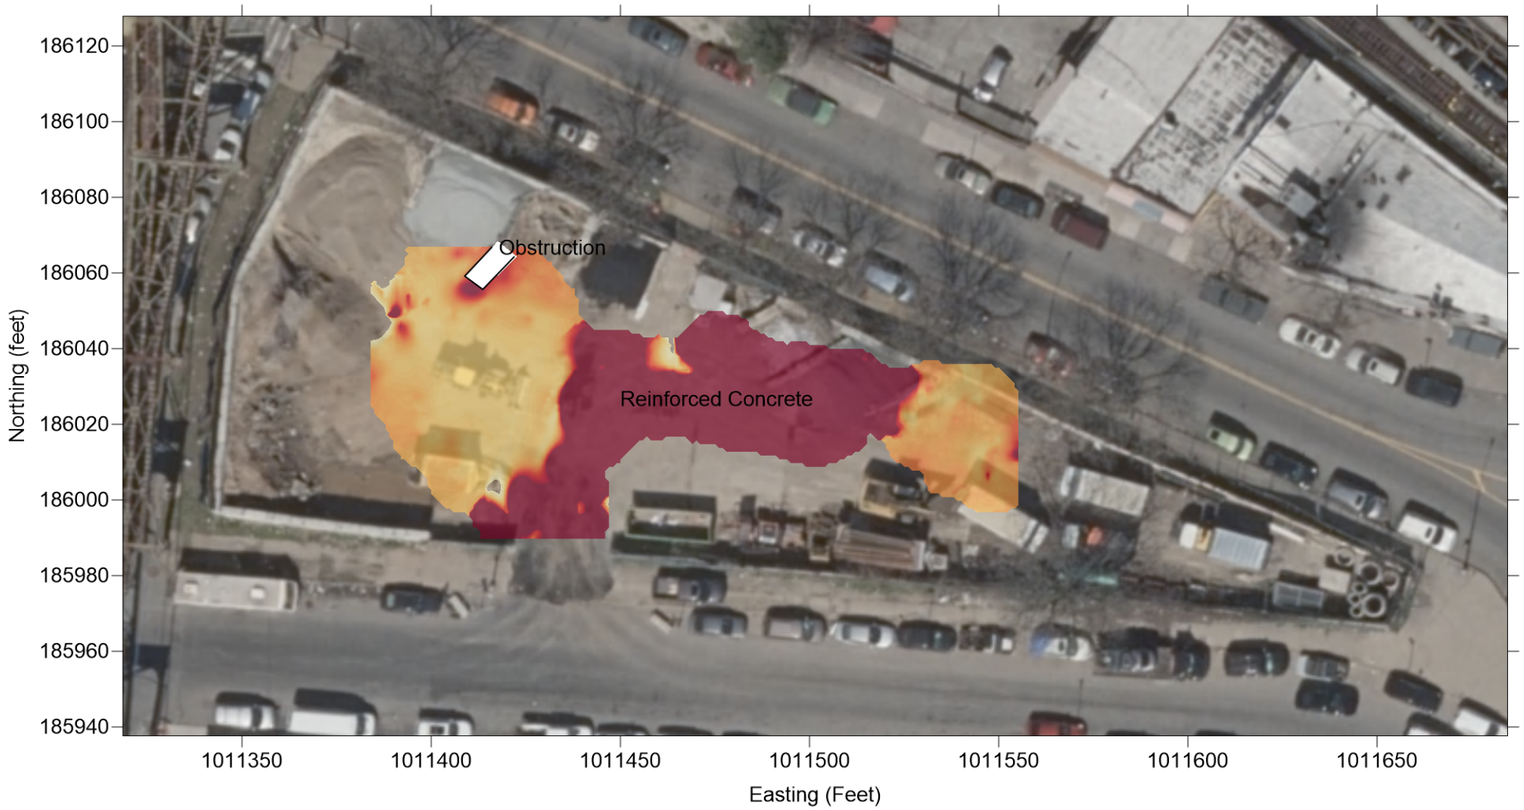

If you have any questions regarding the results of this field investigation, please contact me at 610-722-5500. It was a pleasure working with you on this project and we look forward to being able to provide you with sub-surface imaging services in the future.

Sincerely,
Prepared by

Christopher Call P.G.
Senior Geophysicist

Notes:

(1) AGS used a RF instrument, EM61 and a SIR 3000 GPR instrument with a 400MHz antenna for this investigation.
(2) EM data was collected with a line spacing of approximately 5 feet. The data was contoured and is shown above. AGS identified a large EM anomaly and based on the numerous GPR profiles collected over this feature it appears to be a buried reinforced concrete pad.
(3) AGS did not identify any USTs within the survey area. A large portion of the survey area was covered with obstructions and prohibited the collection of geophysical data across the entire area.
(4) AGS identified several utilities within the survey area. Identified utilities were marked on the ground surface with spray paint.
(5) The aerial photograph was taken in 2022 and was downloaded from https://data.gis.ny.gov/.
(6) The field positions were not surveyed by a licensed surveyor and should be considered approximate.
(7) The items shown on this figure may not be all inclusive. AGS does not warrant the fact that additional buried features might be present at this site.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/19/2024 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/17/2025 has revealed that there are 9 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2025 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 02/17/2025 has revealed that there are 4 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/04/2024 has revealed that there are 2 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 12/11/2024 has revealed that there are 6 NY SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/03/2024 has revealed that there are 28 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 26 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/03/2024 has revealed that there are 34 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/17/2025 has revealed that there are 59 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/30/2024 has revealed that there are 2 PFAS ECHO sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that

there are 9 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 25 UST FINDER sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 02/17/2025 has revealed that there are 40 E MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY E DESIGNATION: Lots designation with an ?E? on the Zoning Maps of the City of New York for potential hazardous material contamination, air and/or noise quality impacts.

A review of the NY E DESIGNATION list, as provided by EDR, and dated 10/07/2024 has revealed that there are 2 NY E DESIGNATION sites within approximately 0.125 miles of the target property.

NY MGP: From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

A review of the NY MGP list, as provided by EDR, and dated 12/02/2024 has revealed that there is 1 NY MGP site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
BELMONT STATION	BELMONT, WILLIAMS, A	SSE 1/2 - 1 (0.545 mi.)	345	1220
UNION STATION (CITIZ	ATLANTIC AVE., ASHFO	E 1/2 - 1 (0.833 mi.)	AZ354	1245

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #145316: 9/30/02 10:00 HRS. S. FULLER #37342 OF EQUIPMENT GROUP REPORTS WHILE PUMPING WATER OUT OF V-2603 AT

VAULT VS2603 (Continued) **S106007972**

09:50 HRS. FOUND AN UNDIAPERABLE SHEEN OF UNKNOWN OIL ON APPROX. 75 GAL WATER. NO OIL WAS PUMPED
OUT OF VAULT. NO SEWER OR WATERWAYS APPEAR TO BE AFFECTED. NO PRIVATE PROPERTY AFFECTED. NO FIRE OR
SMOKE INVOLVED. NO SUMP PUMP AND PIPING FROM OLD PUMP WAS FOUND SEALED. VAULT IS CONNECTED TO
ADJACENT VAULT V-2538 VIA FLOOR DRAIN (SAW WATER GOING DOWN IN V-2538 WHILE PUMPING OUT V-2603).
ENV. STOP TAG #31086 PLACED. TRANSFORMER WILL BE PRESSURE TESTED AND SAMPLE WILL BE TAKEN. CLEANUP
PENDING PCB RESULTS FROM CHEM LAB. PARKING RESTRICTIONS: NO PARKING MID. - 3AM, MON. & THUR.
TRANSFORMER INFO FROM ECC WAREHOUSE -- MANUFACTURER: AC, MFR. DATE 1980, INSTALLED DATE 1988,
HISTORICAL PCB RESULTS FROM 1988 SAMPLE ARE 20 PPM. UPDATE 9/30/02 10:15 HRS. -- S. FULLER REPORTS
PRESSURE TEST OF V-2603 FAILED, BUT ONLY NITROGEN IS LEAKING OUT OF TOP-MOUNTED GROUND SWITCH
HANDLE -- NO OIL LEAK VISIBLE. HE WILL TAKE AN OIL& WATER SAMPLE FROM THE SPILL. UPDATE 9/30/02
10:25 HRS. -- AFTER SPEAKING WITH R. JAMES OF EH&S, I ASKED FULLER TO ALSO TAKE AN OIL SAMPLE FROM
THE TRANSFORMER. FULLER REPORTS BOTH SAMPLES WILL BE DELIVERED TO CHEM LAB VIA COURIER. 9/30/02
10:51 HRS. -- NOTIFIED C. McCARTHY OF C.I.G. 9/30/02=1110hrs UPDATE S.FULLER REPORTS ENVIR
TAG#31086 THAT WAS PLACED FELL INTO STRUCTURE.PLACED NEW TAG 30032, ALSO REPORTS WHEN FEEDER 3B82
IS TAKEN OFF SYSTEM REPAIRS AND PRESSURE TEST WILL BE DONE. UPDATE - 30-SEP-2002 20:00 HRS. DUE TO
PENDING FEEDER OUTAGE : INCIDENT #145316 WILL NOT BE MEETING THE 24 HR. CRITERIA. SPILL WILL BE
RECLASSIFIED AS SPILL DIELECTRIC TRANSFORMER. UPDATE - 30-SEP-2002 20:28 HRS. CIG MR. T.MARCINEK
NOTIFIED OF CHANGE OF STATUES. 1/20/04 Sample results for oil in vault is < 1 ppm PCBs. Transformer
removed and cleanup completed on 7/10/03.

Remarks: ABOVE MATERIAL DISCOVERED AT ABOVE LOCATION IN VAULT. MATERIAL IS ON TOP OF APPROX 75 GALLONS OF WATER. SAMPLE TAKEN AND CLEANUP IS PENDING DE-ENERGIZING OF FEEDER. CON # 145316.

DEC Memo:	12/7/2015: Rashad Duty Desk Called Isabel from NYC Transit, she said vendors truck broke down and about 25 gallons of hydraulic fluid spilled, they initially cleaned about 10 gallons of the spill with sand and other adsorbents. Isabel said the oil did not impact any drains and sewers and they will be cleaning up the rest of the oil shortly. Spill will be closed.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 10/8/2002-VOUGHT-Spill reported soil contamination from one (550-gallon) diesel and one (550-gallon) kerosene tank. Second set of endpoint soil samples show no exceedances above TAGM 4046 Required Soil Cleanup Objectives (analyticals sent to DEC), Soil disposal manifest also sent to DEC. Spill closed by Vought.
Remarks:	site is abandoned warehouse - after tanks were removed test results show contamination

MANHOLE 66367 (Continued) **S104282941**

Contact Name: FRANK MASSERIA
Latitude: 40.6760949
Longitude: -73.9025550
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed E2MIS notes:
while on routine flush assignment found approx 1 gallon of dielectric fluid coming from cable due
to contractor damage boulders, rocks and debris in MH66367, joint regulator in structure, no
outside inpact, cannot see sump in structure due to debris. Not safe at this time to take a sample.
waterbury fitting was leaking at the 3C joint-tightened fitting to stop leak - no D fault exists at
this time. Also verified that there is about 3 cubic ft. of dirt and rocks. Will try to take liquid
sample from joint regulator and call back to advise. Lab sequence# 99-10699 results 10PPM. Oil
clean up completed in mh66367 and e.s.tag#12338 was removed. Incident is closed.
Remarks: THEY HAD A SUB CONTRACTOR DUMP MATERIAL IN THE HOLE AND THE MATERIAL HIT A JOINT REGULATOR CAUSING THE LEAK. SPILL WILL BE CLEANED UP. CON ED 128365

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	01
Tank Id:	228149
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
	J02 - Dispenser - Suction Dispenser
	L00 - Piping Leak Detection - None
	B00 - Tank External Protection - None
	D02 - Pipe Type - Galvanized Steel
	F00 - Pipe External Protection - None
	I05 - Overfill - Vent Whistle
	G03 - Tank Secondary Containment - Vault (w/o access)
	K00 - Spill Prevention - None
	C01 - Pipe Location - Aboveground
	E03 - Piping Secondary Containment - Vault (without Access)
Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel Tank in Concrete
Tank Status:	Tank Converted to Non-Regulated Use
Pipe Model:	Not reported
Install Date:	01/01/1956
Capacity Gallons:	550
Tightness Test Method:	NN

DEC Memo:	contact at Petro is: Sangesland spoke to Mr. Karp. Yesterday during a fuel delivery they noticed oil coming through the wall around the fill line. Probably oil in the soil under the sidewalk cement along the remote fill pipe line. Mr. Karp said that Petro would be repairing the pipe, but Sangesland specifically wanted to know who would do the soil digout/remediation once the sidewalk was opened up and the fill line exposed. Mr. Karp said Petro would come back on Nov 20th to make the repairs. There is a chance that the sidewalk fill line is installed through a coal chute into the basement wall and NOT through soil. When Petro opens up the sidewalk on Nov 20th they will call the DEC to confirm that either No soil was impacted OR there was soil impact and they will hire a company to do the cleanup. 12/19/08 Spoke with Mr. Karp. Mr. Karp told me the spill in the basement was cleaned up with speedy dry.He has no idea about any soil contamination at the site. I told him to find out exactly where was the leak on fill line and if the leaky portion of the line runs underground through the soil.He said he would contact Petro oil to find out the information. Letter was sent to Apex Airtronics Inc 2465 Atlantic Avenue Brooklyn, NY 11207-2305 Attn: Howard Karp (sr) 03/31/09 Performed site visit today. Tank is totally vaulted,i.e can't be seen without taking the top cement off.No PBS registration found though the capacity is above 1,100 gallon. Tightness testing required.As per Mr. Karp, the spill was minor quantity from the fill line in the tank room.Spill was on the concrete floor that was cleaned up by Petro Oil.Fill line has been replaced.No evidence of spill exists in the tank room.I told Mr. Karp to register the tank and have the tightness testing done.(sr) ** Case closed as there is no evidence of oil spill present at the site**S.R.
Remarks:	FILL PIPE IS LEAKING AND SEEPED THROUGH THE WALL; PETRO ON SCENE

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Historic Generators:
Receive Date: 19990708
Handler Name: MTA NYCT - ATLANTIC AVE STATION
Federal Waste Generator Description: Not a generator, verified
State District Owner: Ny
Large Quantity Handler of Universal Waste: No
Recognized Trader Importer: No
Recognized Trader Exporter: No
Spent Lead Acid Battery Importer: No
Spent Lead Acid Battery Exporter: No
Current Record: No
Non Storage Recycler Activity: Not reported

NYCTA - ATLANTIC AVE STATION L LINE (Continued) **1001202984**

Electronic Manifest Broker: Not reported

Receive Date: 20060101
Handler Name: NYCTA-ATLANTIC AVENUE STATION (L LINE)
Federal Waste Generator Description: Very Small Quantity Generator (formerly Conditionally-Exempt Small Quantity Generator
State District Owner: Ny
Large Quantity Handler of Universal Waste: No
Recognized Trader Importer: No
Recognized Trader Exporter: No
Spent Lead Acid Battery Importer: No
Spent Lead Acid Battery Exporter: No
Current Record: No

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE LOT WAS A REPAIR SHOP. ACCORDING TO NYCT, LOT CONTAINED APPROX. 20 DRUMS OF WASTE OIL. NYCT WAS SUPPOSED TO START USING THE LOT TODAY TO STORE BUSES, WHEN THEY NOTICED THAT MOST OF THE DRUMS WERE GONE EXCEPT FOR A FEW CRUSHED ONES. THERE APPEARED TO BE STAINING AROUND THE STORM WATER DRAIN ON THE PROERTY. NYCT (SANJIV'S PAGER # 917-651-4670) OBSERVED SERVERAL INCHES OF WASTE OIL IN THE STORM WATER DRAIN. DEP NOTIFIED. DEP REQUESTED THAT I NOTIFY ENCON POLICE. 9/29/00 SITE VISIT. MET WITH SANJIV KURAY (NYCT), CECIL MORRIS (CARAVAN TRANSPORTATION), ALDO VASAPOLLI (CONTRACTOR), MARK TIBBE (DEC). MR. VASAPOLLI INFORMED TIBBE THAT THERE WERE SEVERAL DRUMS ONSITE THAT HIS COMPANY TOOK DURING THE CLEANING OF THE LOT. MOST OF THEM WERE EMPTY AND WERE TAKEN BACK TO

SPILL NUMBER 0007586 (Continued) **S104790043**

HIS YARD. ONE CONTAINED WATER,
ONE CONTAINED ANTI-FREEZE, ONE CONTAINED WINDSHIELD WASHER FLUID, ONE CONTAINED A LITTLE WASTE OIL
AND TWO CONTAINED WHAT APPEARED TO HYDRALIC OR TRANSMISSION FLUID. NONE OF THE DRUMS WERE FULL.
ACCORDING TO MR. VASAPOLLI, ALL BUT THE HYDRALIC FLUID WERE DUMPED IN THE STORM WATER DRAIN ON THE
PROPERTY. THE HYDRALIC OIL DRUMS WERE PUNCTURED BY THE BACKHOE WHILE IT WAS CLEANING SOME DEBRIS.
THE RESULTING SPILL WAS SWEPT INTO THE SAME DRAIN. TIBBE PLACED A CALL TO IRA TURRET (OWNERS
ATTORNEY) AND INFORMED HIM THE THE SPILL AND THE DRAIN WOULD HAVE TO BE CLEANED. HE INFORMED TIBBE
THAT HE WAS ALREADY WORKING ON GETTING A CONTRACTOR, BUT HE WOULD LIKE A LETTER DIRECTING THEM WHAT
TO DO. THE OWNER OF THE PROPERTY IS LAWRENCE GREEN. As per 10/19/00 letter from Ira Turret, the
spill was cleaned by Dola Construction.

Remarks: PARKING LOT - NYC TRANSIT WAS SUPPOSED TO OCCUPY THIS TODAY, BUT THERE A LOT OF DRUMS ON SITE - SUBJ MAY HAVE DUMPED THE OIL INTO SEWER

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 1K, UST, FULL HAS BEEN EXCAVATED FROM SITE. UST WAS FULL OF OLD FUEL (SPENT), WAS VACATED OUT, CLEANED, CUT, AND WILL BE REMOVED FROM SITED TODAY. CALLER THINKS CONTAMINATED SOILS ARE DUE TO LINE LEAKING DURING PAST YEARS OF DELIVERER. SOILS ARE BEING EXCAVATED, NO GW REACHED AND SOILS TO BE SAMPLED VIA 4046 TAGM. PART OF SAMPLES WILL BE TAKEN AND CLOSURE REPORT TO BE SUBMITTED TO TIPPLE FOR REVIEW. SPILLER HAS BEEN HOOKED UP TO NG FOR SOME YEARS?. RS DEC Received a tank closure report dated Nov. 15, 2001, submitted to PBS and transferred to DEC (Tipple) on Dec. 3, 2001. Referenced report is not in files, called Impact Environmental to try to obtain second copy. 12/06/05. (Eaton, Albany) No additional files available, closed spill based on tank closure information indicated above. DE
Remarks:	contaminated soil from leaking u/g tank. cleanup started.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	W/O-1
Tank Id:	66449
Material Code:	0022
Common Name of Substance:	Waste Oil/Used Oil

Equipment Records:

A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
E00 - Piping Secondary Containment - None
F01 - Pipe External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
J00 - Dispenser - None
G01 - Tank Secondary Containment - Diking (Aboveground)
G12 - Tank Secondary Containment - Double-Walled (AG only)
L00 - Piping Leak Detection - None

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D006
Waste Description:	Cadmium
Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D008
Waste Description:	Lead
Waste Code:	D018

MTA NYCT - EAST NY DEPOT (Continued) **1000136912**

Waste Description: Benzene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U080
Waste Description: Methane, Dichloro- (Or) Methylene Chloride

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
Registry ID: 110009483497

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Equipment Records:

A03 - Tank Internal Protection - Fiberglass Liner (FRP)
H05 - Tank Leak Detection - In-Tank System (ATG)
I04 - Overfill - Product Level Gauge (A/G)
C02 - Pipe Location - Underground/On-ground
F04 - Pipe External Protection - Fiberglass
J02 - Dispenser - Suction Dispenser
B04 - Tank External Protection - Fiberglass
D06 - Pipe Type - Fiberglass Reinforced Plastic (FRP)
E00 - Piping Secondary Containment - None
K01 - Spill Prevention - Catch Basin
L09 - Piping Leak Detection - Exempt Suction Piping
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I02 - Overfill - High Level Alarm
G04 - Tank Secondary Containment - Double-Walled (Underground)

Tank Number:	HTGOIL2
Tank ID:	66443
Tank Status:	Tank Converted to Non-Regulated Use
Material Name:	Tank Converted to Non-Regulated Use
Capacity Gallons:	20000
Install Date:	10/01/1995
Date Tank Closed:	05/18/2022

Longitude:	-73.8991920
DEC Memo:	This spill event is BOTH a spill and a tank test failure. Spill was cleaned. TTF issue remains open 8/5/2009 TTF letter sent to: Ms. Jennifer Woutinen New York City Transit 2 Broadway 27th Flr New York, NY 10004 8/24/09. J.Krimgold interviewed the caller (HAROON ASLAM) form MTA over the phone. He stated that the failure was due to the leak from the fill line, not due to the t/test as originally stated. The fill line is double walled and sloped toward the tank sump, where the product was found. The pipe's secondary containment then was tested and found to be tight. This indicates that there was no release to the environment from this incident. The pipe was tagged (taken out of service). Tank is manifolded with other tanks and has another fill. NFA. JK.
Remarks:	CALLER STATES THAT THE TANK (UNK SIZE) FAILED A LEAK TEST, ABOUT 10 GALLONS WAS SPILLED. CALLER DID NOT HAVE THE PBS NUMBER. SPILL WAS CLEANED UP.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE Testing equipment was discarded in a dumpster and leaked out. Approximately 3 galons leaked into the parking lot with one gallons going into a storm drain. NYCT contained and cleaned all product except what went into the sewer. NYCT attempted to notify DEP but, after being put on hold for several minutes, NYCT discontinued call.
Remarks:	Caller reports someone dumped the oil in their dumpster. It leaked onto pavement and approximately 1 gallon went into the sewer. Cleanup is in progress by NYC transit employees.

DEC Memo:	12/30/05-Hiralkumar Patel. I spoke with Sherry Bulkley at NYC Transit. According to her, spill happend from fill line of tank. and all the spilled diesel collected in sump. Tank is out of service now and they have pumped diesel from sump. this sump is not connected to any sewer or drain line. I spoke with Mr. Frank Ocello (917-578-8826) at loction, and he told me that sump is on top of tank. they going to test lines for any leak today (12/30/05) noon. I spoke with Mr. Steve Miller, and he will send me a address for further correspondence regarding case after 2nd Jan. 2006 1/5/06-Hiralkumar Patel. I received an address at 1:00PM and have sent a tank test failure letter. 02/02/06-Hiralkumar Patel. Talked with Jaikisan Achaibar (PH: 646-252-5772, FAX: 646-252-5960) at System Safety department, NYC Transit. As per him, there was a line leakage on top of tank, not the tank. they have repaired it. Jai going to send me their internal report in mail today or tomorrow. 02/10/06-Hiralkumar Patel. Received report from Jay Achaibar at NYC Transit. Abstracts of report: - on 12/30/05, during periodic maintenance inspection, approxi. 5 gal fo diesel was found in the fill sump of tank#8. system shut down. - primary line between the fill port and the tank sump was leading at flex connnectors. no leaks found in secondary line at connectors. - spill contained by secondary line and drained to sump, no soil contamination. - 01/25/06, Franklin company replaced flex connector. - primary system, secondary system and sump test were passed. - 5 gal diesel removed by trained NYCT plant and equipment personnel and disposal as non-hazardous industrial waste. we received NYCT spill incident fact sheet, & line testing results. Case Closed based on the report from NYC transit.
Remarks:	IN SUMP, ARRANGING TO HAVE THE PUMP CLEANED, CLEAN UP IS IN PROGRESS.

DEC Memo:	2/3/2010 - Sangesland spoke to Jennifer Woutin. Bus was up on the lift over a work pit in the depot. Line on the bus broke and spilled into the pit. Pit is fulled contained (no drains). Jennifer said the pit was pumped out and was being cleaned now. Need to follow up tomorrow. 02/04/10 Performed site visit on 02/03/10 evening.Hydraulic oil spilled from hydraulic lift#10.Spill was contained in the rectangular sump at the base of the lift.Oil was recovered.Minor loose oil in the sump.Each lift has a sump at the base and all sumps are connected through pipe.Facility personnel told me the the sump is made of concrete and there is no leak or holes in the pit.Need confirmatory report from NYCT indicating that the oil has not impacted subsurface.(sr) 2/4/10 - Raphael Ketani. I tried to contact Jennifer Woutin of the NYCTA (646) 252-5768, but could

NYCTA (Continued) **U003080332**

only leave a message. The message stated that the DEC needs a short letter report (possibly
accompanied by pictures and manifests) indicating that the spill has been cleaned up. I stated that
the report must be received. Otherwise, the DEC can't close the spill case. Ms. Woutin called me
back and left a message. She said that the oil was from a broken line on a lift. She said that the
great majority of the oil was recovered. Cleanup is proceeding and the DEC will receive a report
when everything is finished. 2/5/10 - Raphael Ketani. Haroon Aslam of the NYC Transit Authority
sent me an e-mail containing a report regarding the spill incident. The e-mail stated that the
spill was completely cleaned up and that all of the spilled oil was accounted for and recovered.
Based upon Ms. Aslam's e-mail, and Mr. Rahman's site inspection on 2/3/10, and on the fact that the
oil went directly into a secondary containment structure, I have determined that there is no threat
to the public or the environment. Therefore, I am closing the spill case.

Remarks: LINE BROKE DURING REPAIR; CONTAINED TO INTERIOR.CLEAN UP PENDING

Longitude:	Not reported
DEC Memo:	6/8/21-Zhune spoke to Daniel Yu from NYC Transit 646-879-6199. Daniel sent the following email Here are the details that I have so far regarding this spill for your assessment. Product was recently found in a sump associated with the fill lines for diesel tanks 7 and 8 at the depot . The tanks were taken out of service and tightness testing was performed yesterday 6/3. Both the primary and secondary lines fill lines failed, after which the incident was called into the DEC spill hotline. The facility has checked the last three months of reconciliation records and have no noted any issues. The people from the facility cleaned the sump. It was a little amount of diesel fuel. 6/9/21-Zhune-Michael Mandac from NYCT sent the following email NYCT was performing sump testing for the diesel USTs at East New York Bus Depot (25 Jamaica Avenue, Brooklyn, NY 11238). Our contractor overseeing the sump test discovered product in the tank sump for tanks 7 and 8. The remote fill line (from the fill port to the tanks) and secondary piping product line (from the tanks to the pump room) both failed the tightness test. Please note that the primary piping (containing the diesel) passed the tightness test. NYCT has locked out the remote fill port for tanks 7 and 8 (please note that the remote fill services both tanks) and locked out dispensing from the tanks 7 and 8. We are reviewing our options to determine if repairs can be made and how long it will take. 6/2/22 - Kim - Copies of AARCO Environmental Services Corp air tightness test results for tanks 7 and 8 were uploaded to DecDocs. Spill 2102025 reassigned to DEC Brevdo project manager for MTA-NYCT Spill 8807411. June 2, 2022 - Vadim Brevdo - As per discussion and consensus with Eric Kim of Spill

NYCTA (Continued) **U003080332**

Response Section, Spill case 2102025 is reassigned to DER Remediation Section B, Vadim Brevdo to
manage, as Vadim Brevdo has been managing entire MTA-NYCT Order on Consent Portfolio, including
spill 8807411 at the same site - East New York Bus Depot. One DEC project manager for two spill
cases on the same site will make management of the project more effective. VB June 9, 2022 - Vadim
Brevdo MTA-NYCT East New York Depot, 25 Jamaica Ave., Brooklyn (Spill Nos. 8807411 and 2102025)
This site is an active bus depot and maintenance facility located in a commercial area. In 1991,
the diesel and gasoline USTs failed tightness testing. Site investigations identified petroleum
contamination in the diesel dispenser area but not in the gasoline UST area. Remedial activities in
the diesel dispenser area included the recovery of 124 gallons of free-product and in-situ chemical
oxidation. No free product had been detected since October 2016; however, in January 2021, a sheen
was observed in well W-07R. In May 2021, 0.5 foot of product was detected in well W-07R. An
absorbent sock was installed in the well. On June 3, 2021, free product was detected in the sump of
diesel USTs #7 and #8, which was reported to DEC and spill #2102025 was opened. The tanks primary
fill line and secondary suction lines failed tightness tests. However, review of diesel fuel
inventory records showed no issues. During a site visit on June 11, 2021, no measurable product was
detected in well W-07R or in other wells at the depot. It is unclear if the June 3, 2021 tightness
test failure resulted in a release of product into the environment. On October 5, 2021, MTA-NYCT
and AECOM submitted a Post-Remediation Confirmatory Sampling Work Plan. The plan proposed twelve
soil borings. Seven borings would assess the extent of soil and groundwater contamination remaining
at the site and would be advanced to the water table at 62 feet below grade. The other five borings
would be advanced adjacent to USTs #7 and #8 to determine if there was a release of diesel fuel
into the environment associated with the June 3, 2021 discovery of diesel fuel in the UST sump. Due
to difficult drilling conditions at the site, the borings would be advanced using Sonic drilling.
All soil samples would be inspected for evidence of staining and petroleum odors and screened with
a PID, and samples submitted to a laboratory would be analyzed for VOCs and SVOCs. DEC approved the
Post-Remedial Confirmatory Sampling Work Plan on October 12, 2021. NYCT-AECOM commenced the
fieldwork in November 2021 and completed it in January 2022. On June 1, 2022, NYCT-AECOM submitted
Post-Remediation Confirmatory Sampling Report to DEC which included petition for closure of spills
#8807411 and #2102025. A combined post-remedial confirmatory sampling

NYCTA (Continued) **U003080332**

program for spill #8807411
and an investigation for spill #2102025 were implemented in 2021 and 2022 to evaluate current
subsurface contaminant conditions and to determine if the June 2021 tightness testing failure
resulted in a diesel release into the subsurface. The findings of the investigation show that there
is no free phase petroleum product plume beneath the site. Petroleum impacts in soil, where
detected, were at levels just slightly exceeding 6NYCRR Part 375 Unrestricted Use or NYSDEC s CP-51
Soil Cleanup Objectives (SCOs); all detections were below NYCRR Part 375 Commercial Use SCOs. Very
low levels of VOCs and SVOCs in the groundwater indicate that the residual petroleum soil impacts
are not significantly impacting groundwater at the site and/or off-site. Furthermore, groundwater
data confirm that no groundwater impacts are migrating off site. Based on the previous remedial
actions and investigations performed at the site, MTA-NYCT and AECOM concluded that the remaining
low-level impacts do not pose a potential threat to human health or the environment, and petitioned
for closure of two spill cases associated with the site. The site will continue to operate as bus
depot for the foreseeable future. Based on review of the Post-Remedial Confirmatory Sampling
Report, results of previous site investigations and remedial actions performed to date, the DEC
concurred that the closure of spill cases is an appropriate course of action. DEC closed spills
#8807411 and #2102025 on June 9, 2022. VB

Remarks: CLEANUP PENDING.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE 5/12/04 - AUSTIN - TRANSFERRED FROM HALE TO TIBBE - END 10/07/04: As per NYCT's e-mail

PARKING LOT -NYCT (Continued) **S103571449**

dated 10/05/04, 500-600 cubic
yards of petroleum contaminated soil was removed and transported to an asphalt plant but there is
no further information. 07-14-05: The best information that NYCT can ascertain is that this parking
lot was being cleaned up to be surfaced with concrete. Years of cars parking there and dripping
auto fluids cause quite of bit of surface staining. This soil was removed as park of the overall
project and a spill number was needed to ship the material to the asphalt plant. Records do not
indicate any PBS or CBS for this lot.

Remarks: caller stated that site testing on parking lot shows contamination of motor vehicle leaks over a period of time.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT Con Ed e2mis #120812: H. LERNER #33490 F.O.D. REPORTED FINDING 2' GREASE ABOUT 100 GAL. IN TM6983 LOOKS LIKE GREESE WAS DUMPED INTO TRANS.BY RESTERAUNT IN FRONT OF TRANS. CAN SEE STAINS ON GROUND FROM BUILDING TO TRANS.UNABLE TO TELL IF SEWERS ARE AFFECTED DUE TO NO TRANS PRINT IN OFFICE AND GREESE BEING HARD S.ZALLOUGHI WAS NOTIFIED .. A SAMPLE WAS TAKEN AND PUT IN FOR OIL AND GREESE I.D. 4-6 HRS. PRIORITY. INSTALLED E.S.TAG #06960 UNABLE TO REACH N.Y.C. D.E.P NO ONE PICKING UP PHONES. S.ZALLOUGHI CALLED SAYING MR. SHORE EPA WILL NOTIFY D.E.P. LAB RESULT RECEIVED 10/26/98 - 1815. 98-11630. 6 PPM. 10/27/98 Update Environmental Ops: 2200 hrs Bankhead and Vega report that they used Bio 760 and washed vault several times. Utilized under 50 tanker...job incomplete requires alot of further work. Grease imbedded in transformer fins and walls. Source appears to be from Restaurant. 10/28/98 Update Environmental Ops: 1530 hrs Bankhead and Lugo report that they utilized Bio 760 and under 50 tanker to continue cleanup. The grease is very difficult to remove. Suggest the use of a steam cleaner. 10/28/98 Mimnagh reports that a pressure test of the unit was reported good from the Equipment group. 10/29/98 Update Environmental Operations: 2300 hrs Dekanchuk reports crew continued cleanup utilizing Bio 760. Job still incomplete. Env. Ops. will schedule steam cleaner and soda blast equipment. 11/1/98 Update Environmental

SPILL NUMBER 9809322 (Continued) **S104648075**

Operations: 2300 hrs Kavanagh
reports Steam cleaned walls of TM. Very slow process. Equipment
failure prior to finishing walls.
Soaked hole with degreasing agent. Utilized <50 tanker to remove
fluids. 11/2/98: Update
Environmental Operations: 1530 hrs. Continued to clean walls with Bio
715 (sludge removal) and Bio
760. Very little progress. At this time the vault is approimately 50 %
complete. It will be very
hard to do much more with unit in place. 3/4/99 - WILL DISCUSS THE
POSSSIBILITY OF REMOVING
TRANSFORMER WITH EQUIP. GP. SO THAT THIS STRUCTURE CAN BE CLEANED.
3/11/99 - 1000 IMMEDIATE WORK
AREA AND WALLS OF SAME HAVE BEEN CLEANED. SIDES OF TRANSFORMER AND
ADJACENT WALLS HAVE BEEN CLEANED
TO THE BEST OF OUR ABILITY. WHILE UNIT IS IN SERVICE, NO OTHER
CLEANING CAN BE PERFORMED. STAG
REMAINS IN PLACE. 10-23-99 05:30 MR. VEGA REPORTS, ADDED 760 SLICK AND
REWASHED HOLE, CLEANUP
COMPLETED AND TAG 06960 REMOVED.

Remarks: VAULT TM6983. APPEARS TO BE COOKING GREASE, BUT CALLER IS NOT SURE. SAMPLES TAKNE. NO PRINTS AVAILABLE ON VAULT. UNKNOWN IF ANY SEWER CONNECTION OR DRAINS. CLEAN UP PENDING TESTS RESULTS. CON EDISON REFERENCE NUMBER 120812.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	003
Tank Id:	6755
Material Code:	0008
Common Name of Substance:	Diesel

Equipment Records:

	B00 - Tank External Protection - None
	C00 - Pipe Location - No Piping
	D02 - Pipe Type - Galvanized Steel
	F00 - Pipe External Protection - None
	A01 - Tank Internal Protection - Epoxy Liner
	G03 - Tank Secondary Containment - Vault (w/o access)
	H00 - Tank Leak Detection - None
	I00 - Overfill - None
	J02 - Dispenser - Suction Dispenser
Tank Location:	Aboveground in subterranean vault with access for inspections.....
	Tank in subterranean vault but accessible for inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	11/01/1949
Capacity Gallons:	5000
Tightness Test Method:	NN
Date Test:	Not reported

Material Name: diesel

Tank Number: EMGEN-1
Tank Id: 53478
Material Code: 0008
Common Name of Substance: Diesel

Equipment Records:

C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
K00 - Spill Prevention - None
G01 - Tank Secondary Containment - Diking (Aboveground)
J02 - Dispenser - Suction Dispenser
L00 - Piping Leak Detection - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 08/01/2003
Capacity Gallons: 275

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
Registry ID: 110064404121

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	10/29/09-Vought-Primary off-hours responder. Vought called Nova Consulting (Nick Canonico 516-352-3233) and left message to return call to DEC. As per PBS #2-15884, site has one 1500-gallon diesel UST and site owner info is: Mr. Barry Frankenstein Wartburg Lutheran Home For the Aging 50 Sheffield Avenue Brooklyn, NY 11207 Ph: 718-345-2273 Fax: (718)485-9236 Vought sent TTF with cc to Canonico via email. Spill assigned to DEC Krimgold as site is PBS site. Vought received email reply from Canonico that two tanks failed (one wet and one dry leak). Vought required PBS registration to be updated and that tank with wet leak be emptied immediately to prevent release to soil and or groundwater. Requested confirmation from Canonico that UST will be emptied. 01/15/10. J. Krimgold reviewed the letter report submitted by Pro Test Env. dated Dec. 28, 2009. According to the report the tank failed due to the old abandoned fill line. The line was disconnected and tank retested and passed. During line and tank top excavation no contamination was found. Case closed.
Remarks:	underground tank test failure. removal- investigation will be done.

DEC Memo:	5/16/19-Lin-This site along with a few neighboring lots are currently under OER s cleanup program to redevelop the sites. They found a few underground tanks that were previously identified and underground tanks that were not found during the GPR survey. Langan suspect that they will encounter more tanks going forward. 9/10/19-Lin-Received call from langan that they found multiple tank near the site boundary that had soil contamination where the tank

50 PENN LLC (Continued) **S118704070**

were. They made us aware
that they would have trouble obtaining side wall samples due to the shoring put in place. Off site
borings might be require to delineate the contaminated soil. The whole site is going to be
excavated down to 15' and 30 bottoms samples would be taken across the site. 11/5/21-Lin-A total of
sixteen (16) underground storage tanks were removed. Contaminated soil was excavated. Groundwater
was encountered around 50 bgs and the groundwater is inferred to flow to the southeast towards
Jamaica Bay. One groundwater sample was collected and came back clean. Groundwater is not expected
to be impacted at this site. The whole site was excavated to varies depth. A total of 18 endpoint
samples were collected from the base of the remedial excavation. The sample results confirmed that
a Track 4 residential cleanup was achieved. An engineered composite cover system consisting of 46
inch and 40 inch thick structural mat slabs in the partial cellar and in the ground floor garage
was constructed. A 12 inch thick concrete slab above a 20 mil vapor barrier and an active SSDS were
installed. Case closed Stewart from langan 212-479-5461
sknoop@langan.com

Hazardous Waste Summary:

50 PENN LLC (Continued) **1025887674**

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D008
Waste Description: Lead

Waste Code: D018
Waste Description: Benzene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Acres: 0.800
HW Code: C224322
SWIS: 2401
Town: New York City
Record Added Date: 03/17/2021
Record Updated Date: 08/25/2023
Update By: RKCORCOR
Site Description: Location: The 0.8-acre site is located in an urban area of Brooklyn on the northern side of Pacific Street, between Sackman Street to the west and East New York Avenue to the east. The site is comprised of two contiguous tax lots (Lot 46 to the east and Lot 58 to the west). Site Features: The site is primarily grassy land. Gravel and paved surface areas are located along the western and southern property borders, respectively. Chain-link fences and concrete block walls define the property borders. Current Zoning and Land Use: The site is currently vacant and is located in a mixed-use C4-5D/R7D zoning district (a general commercial district with a residential overlay). The adjoining parcels are currently used for a combination of institutional (north), industrial (east), residential (south), and commercial (northeast and west) purposes. Past Uses of the Site: The site was first developed for commercial and manufacturing use sometime between 1908 and 1928. Known commercial uses have included a large automobile garage containing gasoline tanks on Lot 46, subsequently used as a manufacturing facility for elevators, lamps and clothing, and a warehouse on Lot 58 that was occupied by a clothing manufacturer and several retail stores. On-site buildings were demolished by the 1980s (Lot 58) and 2007 (Lot 46). Site Geology and Hydrogeology: Site soils are derived from glacial materials, which overlie deep glacial deposits of sand, gravel and clay, with bedrock located well below the surface, beyond 102 feet below ground surface (bgs). Subsurface soils generally consist of fill (coarse to medium sand, clay, crushed stone, crushed brick and crushed concrete), ranging in depth from three to 15 feet bgs, and underlying native materials were generally comprised of sands with variable size gravel. Geotechnical borings documented deeper native materials comprised of dense sands and gravels. Site elevation is about 68 feet above mean sea level. Depth to groundwater (from well casings) is about 60 feet bgs. Groundwater flow in the vicinity of the property generally follows surficial topography in a southeasterly direction, toward Jamaica Bay (located approximately three miles from the property).
Env Problem: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals,

LOT 46,TAXBLOCK 1437 (Continued) **S118704373**

polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), pesticides, herbicides, and cyanide during the Remedial Investigation. Soil results were compared to restricted residential soil cleanup objectives (RRSCOs) and the restricted residential guidance values for PFAS. Groundwater results were compared to the Ambient Water Quality Standards and Guidance Values (AWQSs and AWQGVs). Soil vapor samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site are lead and polycyclic aromatic hydrocarbons (PAHs), which are a subset of SVOCs. Soil PAHs (e.g., benzo(a)anthracene) and lead were detected above RRSCOs in on-site fill materials. PAHs were detected above RRSCOs in soil in the majority of the soil borings from the surface to as deep as 15 feet below ground surface (bgs). However, the majority of the impacts were in the shallower sample intervals. For PAHs, the maximum values, as compared to the RRSCO include: benzo(a)anthracene at 82 parts per million (ppm); benzo(a)pyrene at 77 ppm; and benzo(b)fluoranthene at 75 ppm (RRSCOs 1 ppm); and benzo(k)fluoranthene at 71 ppm (RRSCO 3.9 ppm). Lead was detected above the RRSCO of 400 ppm at up to 2,620 ppm. Sampling of the deepest soil intervals, which reached clean native materials, generally showed limited contamination. These findings are consistent with general impacts from poor-quality fill, demolition debris, and/or former commercial uses, rather than any localized source areas of soil contamination. Data do not indicate any off-site impacts in soil related to this site. Groundwater Concentrations of some ubiquitous metals (e.g., sodium and manganese) exceed, and some PAH compounds in groundwater slightly exceed, their respective AWQS and are not considered contaminants of concern in groundwater. PFAS were reported in all groundwater samples, including the upgradient wells. Perfluorooctanesulfonic acid (PFOS) was detected up to 57.0 parts per trillion (ppt) (AWQGV 2.7 ppt), and perfluorooctanoic acid PFOA was detected up to 87.2 ppt (AWQGV 6.7 ppt). The results indicate that the site is not a source of PFAS to groundwater. Groundwater contamination may, in part, be related to the presence of poor-quality on-site fill materials. However, groundwater impacts are similar to conditions typically encountered in urban areas and are likely related to local groundwater conditions, rather than a significant onsite source areas. Data do not indicate any off-site impacts in groundwater related to the site. Soil Vapor - Soil vapor samples were analyzed for VOCs. Soil vapor was not found to be impacted by site-related contamination. The highest detections were for acetone up to 945 micrograms per cubic meter (?g/m3), tertiary butyl alcohol up to 355 ?g/m3, chloroform up to 532 ?g/m3, and tetrachloroethene up to 180 ?g/m3. Data do not indicate any off-site impacts in soil vapor related to the site.

Health Problem: People will not come into contact with contaminated soil or groundwater unless they dig below the ground surface. People are not drinking the groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air is not a current concern, however could be a concern for future on-site occupied structures. Environmental sampling indicates soil vapor is not a concern for off-site buildings.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	send TTF letter 01/30/06. Feroze . TTF is sent to: Robert Turrentine Institute For Community Living 40 Rector Street New York, NY 10006. 02/22/06. Feroze, I received a letter from above address that they found a leak at dry portion of the tank. They will repair the tank and test it again. 02/28/06 Feroze. I received a letter from Mr.Robert Turrentine that they will repair or replace the tank and pipe systems. DEC will be informed about their work progress.\\ 03/15/06. Spill is transferred from Feroze to Kumer Patel. 05/17/06-Hiralkumar Patel. Spoke to Jim at Protest. they haven't heard after they submit proposal. Spoke to Pat Valzalerio as Mr. Turrentine is no longer working at management. Pat will call back with more information. 05/18/06-Hiralkumar Patel. Received call from Pat (Ph. 212-385-3030 Ext. 3222, FAX: 212-385-2380). he suggested refurbishing of tank from inside, but landlord is not agree with that. Pat asked to issue a letter requiring such work. Left message for Pat. 05/19/06-Hiralkumar Patel. Received call from Pat. he has an

INSTITUTE FOR COMMUNITY R (Continued) **S101174394**

agreement with landlord which covers repair work. and landlord wants this company to do repair, but Pat thinks that this problem can not be solved by repair work as tank needs either to be replaced or refurbished. he gave me owner's information: Scott Milchman (718) 654-5959 Spoke to Mr. Milchman. he doesn't know anything. sent out TTF letter again at following address to owner. Scott Milchman Eastern Industrial Development Corp. 655 Pelham Parkway North Bronx, NY 10467 Ph. (718) 654-5959 FAX (718) 654-6396 letter faxed to Mr. Milchman and to Pat. 05/24/06-Hiralkumar Patel. REceived message from Scott. left message for Scott. 06/05/06-Hiralkumar Patel. REceived message from Pat. left message for Pat. Received message from Pat. they are planning to remove old tank and to install new tank at same location. left message for Pat. 06/26/06-Hiralkumar Patel. Received call from Mr. Milchman. he has hired Eastmond to remove tank. and after removal Eastmond will take required samples and will send tank closure report. 08/01/06-Hiralkumar Patel. left message for Mr. Milchman. left message for Rene at Eastmond. received call from Mr. Milchman. he asked me to talk to Rene at Eastmond. spoke with Rene. they finished tank removal work last thursday and took endpoint samples. they removed 7-10 yards of contaminated soil. Rene will forward lab results once he gets it. 08/29/06-Hiralkumar Patel. spoke with Isaac at Eastmond. he has everything ready but lab analyticals. once he gets it, he will put together and send final report. 09/25/06-Hiralkumar Patel. spoke with Isaac. he will send final report by end of this week. 10/05/06-Hiralkumar Patel. received closure report from Isaac. they removed tank and removed approx. 10 cubic yard of contaminated soil. excavated area has been backfilled and restored to grade. collected 3 endpoint samples. samples doesn't show any contamination. based on available information, case closed.

Tank Info:

Tank Number:	009
Tank Id:	242082
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

J04 - Dispenser - On Site Heating System (Suction)
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
E00 - Piping Secondary Containment - None
G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
K01 - Spill Prevention - Catch Basin
L09 - Piping Leak Detection - Exempt Suction Piping
F00 - Pipe External Protection - None
C01 - Pipe Location - Aboveground
D03 - Pipe Type - Stainless Steel Alloy
I04 - Overfill - Product Level Gauge (A/G)

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	03/25/2010

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many

SHELL OIL CO (Continued) **1000140688**

types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 10/4/02 TJD Site inspected 10/3. Location is a former gas station now operated as a truck repair garage. Current business on site is A & N Brake and Clutch (owner:Alon Yemini 718-443-2323) which has been operating on site for one month. Several minor petroleum spills were noted both inside and ouside of building, owner immediately dispatched employees to clean up spills on concrete/aphalt using absorbents. Clean-up completed while inpection was conducted. Buried waste oil tank of unknown capacity was identified on site, owner was unable to produce a PBS registation for this tank and was directed to empty tank and obtain registration from DEC. Database search revealed a total of (8) gasoline UST's exist on site an are of unknown status. PBS records (2-600300) indicate registration expired 8/29/96. Last tank tests were performed in 1990 on these tanks. Surface spill closed. Out of compliance tanks referred to PBS for follow-up. FAX 443-2422.
Remarks:	OLD GAS STATION - NOW DOING REPAIRS - POSSIBLY DUMPING USED OIL ETC *****NRC # 624474****** CALLER WANTED TO BE ANNOYMOUS NAME-HAYDEE IRIZARRI PHONE 718-9190566

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	1/6/11-Vought-Primary off hours responder. Vought called FLS (Mohammed Ahmed 212-675-3225) and left message to return call to DEC Vought. As per PBS #2-237973 tank has 5000-gallon #2 fuel oil UST and site is owned by: Our Lady Of Loreto Church 124 Sackman Street Brooklyn, NY 11233 Ph: (718)387-3740 Vought spoke to RSE and spill assigned to DEC Ahmed as secondary off-hours responder. Vought to send out CSL with possible additional requirements upon callback from FLS Ahmed. Vought received callback from and spoke to FLS Ahmed who noted that he was hired by property developer (Reese & Sons) and that the property was to be developed for affordable housing units. They were onsite to remove an abandoned 4,800-gallon fuel oil UST (See PBS #2-237973) and noted contaminated soil around and below the tank. Vought noted that DEC Ahmed was the project manager and that CSL would be drafted by Vought and signed by Ahmed. Vought drafted CSL with one month due date and the following requirements: 1)delineation of soil and groundwater (if applicable) contamination 2)collection of endpoint samples 3)strong recommendation for installation of SSDS and VB 4)Updating PBS Registration 2-237973 to reflect current closed status of UST (as per DEC Falvey this was required, PBS registration also expired as of 7/20/92). 5)cc to FLS Ahmed 6)advisement that site should not be developed until RAP approved by DEC. Vought sent letter with above requirements to address provided by FLS Ahmed: Our Lady of Loreto Catholic Church c/o Progress of Peoples Development Corporation 191 Joralemon Street Brooklyn, NY 11201 Attention: Claire Hilger 11/7/11-Fu-Intern Fu completed summary of reports: SUMMARY UST CLOSURE REPORT & REMEDIAL ACTION PLAN (Fleming Lee Shue)- 08/17/11. On Jan 05 2011, at request of L

OUR LADY OF LORETO CHURCH (Continued) **U000402330**

Riso & Sons, Fleming-Lee Shue
performed an UST field investigation in order to remove the tank but end in finding approximately
30 by 30 feet in size and extending approximately 16-37 feet below grade petroleum-impacted area.
Then a spill was reported. Between June and July 2011, the UST removal activities was observed,
including the removal of the decommissioning material, consisting of cement slurry, and the removal
of the tank and associated piping. A 3 section was required to remain in the excavation due to
structural and shoring concerns. Excavation and removal of 1249 tons of petroleum-impacted soil (to
depth approximately 32ft-bgs) were conducted. On July 8 2011, 8 soil samples were collected per
NYSDEC s request. 3 VOCs, Ethylbenzene, Xylene, and Isopropylbenzene, were detected above standard
at EP-BE; Ethylbenzene was detected above SCO at EP-BW. One MW will be installed at the site. After
installation, the MW will be sampled. If the gw is not found to be contaminated, Closure Report
will be submitted; if the gw is contaminated, two additional MWs will be installed downgradient.
SUMMARY SPILL CLOSURE REPORT (Tenen Environmental)-Sept 2011. Based on the removal of all
structurally-accessible soil, documentation that gw has not been impacted, the incorporation of
vapor barrier and SSDS and composite cover system over the area of UST, Tenen requests that this
spill be closed. The subsurface investigation dated January 2011 consisted of: 1)Excavation of the
soil in the area of the UST, visual and olfactory observations, and PID measurements of organic
vapors; and 2) Installation of five (5) soil borings adjacent to the UST and sampling and analysis
of soil. The results of the investigation, which are detailed in FLS letter dated January 20, 2011,
identify a petroleum-impacted area approximately 30 by 30 feet in size and extending to
approximately 16 to 37 feet bgs. Based on the results of the January 2011 subsurface investigation,
FLS prepared a January 21, 2011 Remedial Action Work Plan (RAWP). The RAWP described the following
remedial actions: installation of sheeting and shoring, excavation of non-impacted soil, tank
removal, excavation and disposal of petroleum-impacted soil, post excavation soil sampling,
installation of a vapor barrier and SSDS, and preparation of a closure report. June-July 2011 Tank
Closure / Interim Remedial Measures On August 17, 2011, FLS submitted an Underground Storage Tank
Closure and Remedial Action Report. July-August 2011 Supplemental Remedial Investigation: MW-1, in
the center of the excavation was installed on July 29, 2011. The soil boring was advanced using a
Sonic drill rig with continuous samples collected starting at a depth of 30 feet bgs and continuing

OUR LADY OF LORETO CHURCH (Continued) **U000402330**

to the groundwater table. 9 samples were collected and analyzed. The analytical results indicate
the presence of several petroleum-related VOCs in seven (7) of the nine (9) soil samples collected.
All detected VOCs were below the Part 375 Unrestricted Use and Protection of Groundwater SCOs and
CP-51 Fuel Oil SCLs except ethylbenzene, isopropylbenzene and xylenes in samples collected from
43-45 and 48-50 feet bgs. The analytical results detected several SVOCs in eight (8) of the nine
(9) soil samples collected. SVOCs detected in the soil samples primarily included polycyclic
aromatic hydrocarbons (PAHs). All VOCs in MW-1 were detected at concentrations below the Class GA
Standards except chloroform, which was detected at 21.9 parts per billion (ppb), above the Class GA
Standard of 7 ppb. No SVOCs were detected above the NYSDEC Class GA Standards except phenol. The
proposed redevelopment of site includes construction of 4 buildings of 8 dwellings each for a total
of 32 dwelling units, designed as the Pacific St Cluster. The area directly above the impacted soil
will be redeveloped as a paved parking area. The following potential exposure routes have been
indentified: direct contact & inhalation of VOCs from soil and inhalation of VOC from soil vapor. A
vapor barrier and SSDS (73 wide *52 deep) will be incorporated into the two buildings closest to
the church. The principal components of the SSDS are a layer of gravel beneath the basement slab, a
suction pit within the gravel layer, solid-construction piping from the suction pit to an exterior
suction fan on the roof and monitoring points through the basement slab. The system has been
designed in general accordance with NYSDOH s Guidance for Evaluating Soil Vapor Intrusion in the
State of New York, October 2006 (NYSDOH Soil Vapor Guidance), including Section 4.2.2,
System-specific recommendations. Several types of composite cover systems will be employed to
prevent direct contact with and mitigate inhalation of residual petroleum constituents.

Remarks: Contaminated soil found at construction site. Cleanup pending assessment and pre-plan.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.

DEC Memo: No CSL was sent to this owner. The consultant has already done most of the work necessary and they said they would send in the results when the end point sample results come back from the lab. 03/06/06 Sharif Rahman- I tried to call Nelson Abramas,(908)947-0274 and left messege to his voice mail to follow up about the status of the vacant lot. 04/06/06 Sharif Rahman- CSL was sent via mail and facsimile to NYC Economic Development Corp. 110 William Street New York, NY 10038 Attn: Kay Zias, Fax:(212)312-3989. 04/25/06 Sharif Rahman- Rec'd tank closure report from Metcalf & Eddy of New York,Inc. One 550 gallon #2 UST was removed from the site. Approx. 12 tons of petroleum contaminated soil was removed from the site.No VOC was detected above TAGM limit in the post excavation end point samples.Minor exceedances of SVOC are similiar to the fill material observed during the Phase II site assesment.NFA required.

Remarks: While removing an underground tank found holes in the tank. The contaminated was stock piled and samples have been taken. More clean up will be done depending on the test results. Excavation was lined with plastic then filled in with clean soil.

SWIS: 2401
Town: New York City
Record Added Date: 01/06/2023
Record Updated Date: 04/17/2024
Update By: CXMAYCOC
Site Description: Location: The site is located within a mixed-use neighborhood on the north side of Glenmore Avenue between Van Sinderen Avenue and Snediker Avenue in the New Lots sub-section of the East New York neighborhood in Brooklyn, NY. The site is abutted to the north by light manufacturing and a multi-family residential building; to the east by Snediker Avenue followed by a five-story office building occupied by the New York City Police Department and an asphalt-paved parking lot followed by commercial, industrial, and residential uses beyond; to the south by Glenmore Avenue followed by mixed-use industrial, residential, and commercial properties; and to the west by Van Sinderen Avenue and an elevated railway for the L-line of the NYC Metropolitan Transit Authority. An adjacent property (Lot 36) divides a portion of this site along Glenmore Avenue forming a U shape and includes a 1-story metal frame garage and driveway. Site Features: The site consists of a single tax parcel (Block 3697, Lot 1) and was previously occupied by three adjoining buildings consisting of a two-story building formerly utilized as storage and workshop spaces, and two single-story former manufacturing buildings. The three former buildings were recently demolished to facilitate the Interim Remedial Measures (IRM). Current Zoning and Land Use: The site is currently zoned as M1-4 (light manufacturing). The surrounding area includes predominately commercial and industrial properties with some residential development. Past Use of the Site: Former uses of the site that may have contributed to site contamination include a lumber yard, manufacture of plumbing supplies, lighting fixture manufacturing, auto repair shop, nail polish bottling, and an auto junkyard from 1983 to 1996. The lighting manufacturer was identified as a Resource Conservation Recovery Act

114 SNEDIKER AVENUE (Continued) **S129982648**

(RCRA) Large Quantity Generator (LQG) in 1982 for the generation of F-coded wastes, which are defined as characteristic hazardous waste and include such chemicals as halogenated solvents (F001: tetrachloroethylene [PCE], trichloroethylene [TCE], etc.) and nonhalogenated solvents (F005: toluene, carbon disulfide, benzene, etc.). Site Geology and Hydrogeology: On-site surface topography is generally flat, with the surrounding area topography sloping gently down to the south-southwest, toward Jamaica Bay. Based on the U.S. Geological Survey (Brooklyn, NY Quadrangle), the Site lies at an elevation of approximately 50 feet above the North American Vertical Datum of 1988 (NAVD 1988), an approximation of mean sea level. The site is underlain by unconsolidated fill comprised of a mixture of sand, gravel, silt, clay, brick, concrete, metal, and plastic to approximately 10.5 feet below ground surface (bgs). The fill is underlain by apparently native dense sand and silt with varying amounts of gravel and cobbles down to the maximum boring terminus of 75 feet bgs. Bedrock was not encountered during the RI; however, a cobble layer was encountered at varying depths throughout the site between approximately 10 and 30 feet bgs and was noted to act as a non-contiguous confining layer. Groundwater is found at a depth of approximately 41 to 43 feet below sidewalk grade and flows south-southeast towards Jamaica Bay, which is located approximately 2.5 miles southeast of the site.

Env Problem:

Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern for the site include VOCs, SVOCs, and metals in soil, VOCs in groundwater, and VOCs in soil vapor. Soil - Soil data were compared to Restricted Residential Use Soil Cleanup Objectives (RRUSCOs) and Protection of Groundwater Soil Cleanup Objectives (PGWSCOs). PCE was found mostly at the northeast end of the property in shallow soil (0 to 4 ft bgs) and in some areas up to 21 ft bgs. VOCs identified include PCE at a maximum concentration of 98 parts per million, or ppm (RRSCO of 19 ppm and PGWSCO of 1.3 ppm). TCE was detected at a maximum concentration of 8 ppm (PGWSCO of 0.47 ppm). SVOCs identified include benzo(a)anthracene at a maximum concentration of 15 ppm (RRSCO is 1 ppm), benzo(a)pyrene at a maximum concentration of 17 ppm (RRSCO is 1 ppm), and benzo(b)fluoranthene at a maximum concentration of 27 ppm (RRSCO is 1 ppm). Metals identified include lead at a maximum concentration of 1,360 ppm (RRSCO of 400 ppm), mercury at a maximum concentration of 3.71 ppm (RRSCO of 0.81 ppm), and barium at a maximum concentration of 814 ppm (RRSCO of 400 ppm). There were no exceedances of RRSCOs or PGWSCOs for PCBs or pesticides in soil samples. 1,4-dioxane was not detected above the reporting limit. Perfluorooctane sulfonic acid (PFOS) was detected at a maximum of 11.4 parts per billion (ppb), which exceeds the Protection of Groundwater Guidance Value (PGGV) of 1.1 ppb but does not exceed the Restricted Residential Use Guidance Value (RRUGV) of 44 ppb. Perfluorooctanoic acid (PFOA) was detected at a maximum of 3.08 ppb which exceeds the Protection of Groundwater Guidance Value (PGGV) of 0.8 ppb but does not exceed RRUGV of 33 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - PCE and its associated degradation products are also found in groundwater across the entire site. For VOCs, PCE, was detected at a maximum concentration of 19,000 ppb exceeding its Ambient Water Quality

114 SNEDIKER AVENUE (Continued) **S129982648**

	Standards and Guidance Values (AWQSGV) of 5 ppb, and TCE was detected at a maximum concentration of 30 ppb (AWQSGV of 5 ppb). The naturally occurring metals iron, manganese, and sodium were detected at concentrations exceeding the AWQSGVs. These metals are not considered to be site-specific contaminants of concern. There were no exceedances of AWQSGVs for SVOCs, PCBs, and pesticides in groundwater samples. For PFAS, PFOA and PFOS were detected at concentrations of up to 105 and 23.8 parts per trillion (ppt), respectively, exceeding the respective AWQSGV of 6.7 ppt and 2.7 ppt respectively. 1,4-dioxane was detected at a maximum concentration of 0.82 ppb, exceeding the AWQSGV of 0.35 ppb. Data indicates there is potential for off-site impacts in groundwater related to this site. Soil Vapor - Elevated concentrations of VOCs were detected in all soil vapor samples collected from 12 soil vapor points, including PCE ranging from 200 micrograms per cubic meter (ug/m3) to 10,000,000 ug/m3, and TCE ranging from 23 ug/m3 to 250,000 ug/m3. Additionally, cis-1,2-dichloroethylene (DCE) was detected in multiple soil vapor samples at concentrations up to 5,800 ug/m3. Data indicates there is potential for off-site impacts in soil vapor related to this site.
Health Problem:	Access to the site is restricted by a fence. However, people who enter the site may come into contact with contaminants in soil by walking on the site, digging, or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into structures and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion (SVI). The site is vacant so inhalation of site contaminants in indoor air on-site via the SVI pathway is not a current concern. However, the potential exists for inhalation of site contaminants due to SVI for any future on-site development. Environmental sampling indicates that SVI related to site-contamination is a potential concern for off-site structures.

DEC Memo:	During excavation to re-develop the lot, two 550 gallon gasoline ust's were uncovered. DC Env. was retained to remove the tanks. A gas-water mix was pumped from the tanks and soil contamination was encountered. A contaminated soil letter was sent. New Owner Maurice Shami- #212-656-1338 Maurice called and stated that DC spilled the gas while conducting the pump out. Maurice requested and was given the names and numbers of 6 additional consultants upon his request. 11/17/04-Vought-Spoke to Reza Khanbilzardi who is a consultant (Indertech Consultants 914-329-3440) who is requesting DEC requirements. DEC requires: 1)collection of five endpoint soil

AKA 31-33 MONACO PLACE (Continued) **S106971540**

samples and EPA Methods 8260/8270 2)collection of one groundwater sample 3)locations of fill ports and pump islands 4)copies of soil disposal manifests 5)site plan with sampling locations. 1/12/04 Bill Vardy left message 914-329-3440 requesting 10 day extension to submit report. Rommel 1/26/05-Vought-Spoke to Reza and he is requesting an additional ten days to submit report. Report will be submitted by 2/8/05. 02/08/05 Reza called 914-329-3440. He is the engineer representing the owner. He will overnight the report tomorrow. Rommel 2/11/04-Vought-Received message from Reza on 2/9/05. Vought returned call and he sent report via FedEx to Rommel. Vought told him to call Rommel on 2/14/05. 3/3/05 - Spoke to Reza Khanbilvardi, he is asking a quick review of the closure report. He stated that only minor contamination found with the soil boring and sampling. Need to find the report and get back to him for a determination. - KST 3/8/05 - Owner, Maurice, called and begging to review the closure report. I told him that we have not received the report. He will called his consultant to get a copy and hand deliver it to DEC. - KST 3/9/05-Vought-Spill transferred from Rommel to Vought as per Tang. Review of Subsurface Investigation Report submitted by InterTech Inc (Reza Khanbilvardi)dated 2/9/05 and received on 3/7/05. Owner of property is Maurice Shami. The site is vacant land... A small excavation (approximate size of 12 ft wide by 16 foot long and 7 ft deep were noticed on the southwest portion of the site. This is the location of the two empty oil tanks which resulted in above spill number to be issued . Five endpoint soil samples were collected on 12/7/05. One groundwater sample was also collected. Since all soil samples taken at the site meets recommended soil cleanup objective criteria and semi-volatile compounds in groundwater are not detected, the elevated volatile amount in groundwater could not have been due to any element on the property. It must be noted that an active commercial gas station is on the other corner of Monaco Place and Atlantic Avenue . Report recommends that we don’t believe that any action with respect to soil cleanup is warranted for this site . Site plan shows three proposed two-story buildings onsite. Groundwater at depth of 12’ below grade. Groundwater analyticals show 61ppb benzene, 300ppb toluene, 72ppb ethylbenzene, 200ppb xylene and 14ppb MTBE. DEC requires signing of Stipulation Agreement: 1)locations of fill ports and pump islands 2)notification to NYC agencies requesting no development of site 3)determination of groundwater flow direction via installation of three monitoring wells 4)installation of vapor barrier upon development of site 5)installation of passive venting system or performance of soil gas sampling as per NYSDOH guidance upon development of site 6)surrounding area site plan. Vought called Khanbilvardi and left message to return call to DEC. Vought sent Stipulation with above requirements with due date of 4/18/05. 3/10/05-Vought-Received message from Reza. Vought returned call and left message to return call to DEC. 3/14/05-Vought-Meeting at DEC with Reza and Maurice Shami. DEC will give approval to start construction once we receive and approve plan for vapor barrier and three onsite monitoring wells. No passive ventilation system or soil gas sampling will be required due to clean soil endpoints, lack of basement, relatively minor groundwater contamination and 6’ depth to groundwater. 3/15/05-Vought-Received call from Maurice Shami (516-482-0276) and copy of bargain and sale deed which referred to previous owner as: Stephen Carter 679 East 98th Street Brooklyn, NY Vought called Shami and left message to return call to DEC. 3/22/05-Vought-Received fax from Inter Tech dated 3/16/05. .... we

AKA 31-33 MONACO PLACE (Continued) **S106971540**

came to the decision to do the following: 1)the owner of the above referenced property will install a vapor barrier under the footings and basement floor slabs of the proposed construction on the site. This will be done after the excavation and prior to pouring the concrete of the foundation. The owner will install three monitoring wells...to determine groundwater flow direction with respect to the above site . You will provide approval letter to install these wells on the sidewalk . I appreciate your acknowledgement of receiving this letter and also your consent to it and start of the construction at the site so Mr. Shami can proceed with the construction . Vought sent out sidewalk permit letter and called Inter Tech to explain that consent to begin construction will not be given until groundwater results are received and groundwater flow direction is determined. 3/29/05-Vought-Called Maurice Shami for update on site and left message to return call. 3/31/05-Vought-Received call from Reza that wells were scheduled to be installed tomorrow and whether sidewalk permit was needed due to DEC sidewalk permit letter. Vought explained that letter was to effectuate the obtaining of a permit and that the permit was still required from DOT. 4/5/05-Vought-Received message from Reza. Vought returned call and left message to return call to DEC. Vought spoke to Reza and he will install wells onsite as opposed to sidewalk so that sidewalk permits are not needed. 5/19/05-Vought-Reviewed Investigation Report (Inter Tech) dated 5/17/05 and received on 5/18/05. Installation of three 4-inch monitoring wells. Contractor who installed wells was American Environmental Assessment Corp. Report recommends ....we do not believe that any action with respect to cleanup is warranted for this site. We therefore, request your approval to start the construction project as the owner is patiently waiting for the last 6 months . Groundwater analyticals show: 13ppb ethylbenzene(MW2), 82ppb MTBE(MW2), 120ppb n-propylbenzene(MW2), 72ppb isopropylbenzene(MW2), 440ppb MTBE(MW3). Source of minor groundwater contamination may be from onsite UST excavation (despite clean endpoints) or from upgradient site(due to minor groundwater contamination in well MW2). DEC sent letter approving construction of residence with installation of vapor barrier as per 3/16/05 letter and requiring as per 3/9/05 STIP cover letter: 1)surrounding area site plan with possible upgradient sources 2)continued quarterly monitoring of groundwater 3)installation of well downgradient from former tankfield and Boring B1 on sidewalk of Atlantic Avenue 4)submission of PBS registration 5)locations of remote fill and dispenser islands. Vought called Maurice and left message. 5/27/05-Vought-Spoke with Maurice and five additional tanks discovered during excavation for building. Maurice is hiring American Environmental to remove the tanks. Maurice will call back with update on tank removal. Maurice returned call and American (631-586-2000 Danny Herzberger) will do tank removal on 6/6/05. 6/1/05-Vought-Received call from Herschberger. Vought returned call and left message to return call. 6/6/05-Vought-Received call from Herschberger(516-852-4713). Vought returned call and tanks registered with PBS. Five endpoint samples will be collected and sampled for 8021 plus MTBE and 8270. Dan will call DEC when excavation is complete so that site visit may be scheduled. Received call from Dan that tanks were removed and impacted soil was found. Vought required excavation of impacted soil and called Maurice to restate requirement. 6/7/05-Vought-Received call from Herschberger. Vought returned call and American will only be removing tanks and underlying pad. A sixth tank was discovered and Maurice's contractor

AKA 31-33 MONACO PLACE (Continued) **S106971540**

will be removing contaminated soil. American will be collecting endpoint samples. Vought received call from Maurice and returned call and left message to return and stated requirement of disposal manifests. Vought received second message from Maurice and returned call. 6/8/05-Vought-Received third message from Maurice and returned call. Vought spoke to Maurice and stated requirement of disposal manifests and site visit. Maurice will collect two soil samples and submit to laboratory for analyses to see if further excavation is warranted. Vought advised use of field screening device however due to possibility of saving further cost of excavation Maurice decided to collected samples. 6/10/05-Vought-Received call from Maurice. Vought returned call and arranged site visit for Wed 6/15. 6/15/05-Vought-Site visit by Vought with Maurice, Dan Herschberger and Reza. Contaminated soil at former UST location and DEC required 1)additional excavation to groundwater 2)collection of four sidewalls and one bottom groundwater endpoint sample 3)installation of vapor barrier(agreed to by Maurice) 4)well installation downgradient from tankfield along Atlantic Ave. Vought also suggested groundwater treatment when excavation was open and boring by Amoco to see if they are contributing source. Vought will send above requirements upon receiving endpoint analyticals. 7/26/05-Vought-Called Maurice for status update of site. No work has been performed as of yet due to unable to find contractor. 7/29/05-Vought-Spoke to Gerard Rutigliano (Rutigliano Environmental 516-314-1553) and he may be performing soil removal and vapor barrier installation. Vought approved installation of a 6.mil vapor barrier under building footprints. Four sidewall endpoint and one bottom groundwater sample will be collected. 8/8/05-Vought-Called El-Shami, Reza and Rutigliano and informed them of new project manager (DEC Zhitomirsky). Vought spoke to Maurice El-Shami and approved that he install vapor barrier provided that he sent letter in writing to DEC. Vought also stated that vapor mitigation system was not necessary as long as excavation was performed to groundwater (12' below grade). 8/8/2005 Zhitomirsky spoke with Maurice Shami and requested submittal of soil disposal manifest, drawings showing where the soil was excavated from, drawings and description of vapor barrier installation. Jeffry Voight informed me that he requested from the site owner a description of the vapor barrier. In this case Vought would not require a vapor mitigation system and allow RP to install the vapor barrier himself. AZ 8/10/2005 I discussed this site with K.Tang. I told him I am requiring environmental report describing soil excavation with pictures, drawings and disposal manifest. Also, RP should include specifications and drawings for vapor barrier. K.Tang concurred and stated that we can issue permission to start construction and install vapor barrier. K.Tang thinks that 6 mil thickness polyethylane sheeting may be not thick enough and RP consultant should suggest another one. I conveyed this information to Morris Yeroshalmi and provided him with K. Tang phone number upon his request. AZ 8/17/2004 KT visited the site on 8/12/2005. He noticed that the excavation could cave in because it is 11 feet deep. He said that there is not much to see in the excavation except gravels and dirt. No petroleum odor, no stained soil. They have put some soil back in the tank pit. He asked a soil sample at the center of the tank pit taken at the water table. He could smell a slight petro odor. Not bad though. Due to safety concern of the side walk on Atlantic Ave side of the excavation collapsing, he told Maurice to go ahead with his construction work and backfill the hole, with the condition that he

AKA 31-33 MONACO PLACE (Continued) **S106971540**

put down the vapor barrier material (15 mil) below the foundation of the buildings he is putting up. He also told him to compile all the tank removal, soil excavation, wells installation, soil removal activities, soil samples, water samples and the soil disposal manifest in a report for you. He also told him to install 4 wells - 1 on Monaco Pl, 3 on Atlantic Ave. for GW monitor and/or remediation. AZ 11/22/2005 I received an e-mail from K Tang. He asked me to issue a letter to Moris Shami (Mfund Company 516-482-0276). I called him and conveyed that as per K.Tang 4 wells should be installed one on Monaco Place and three on Atlantic Avenue. His address is: 1 Linden Place Suite#302 Great Neck, New York 11021.AZ 11/29/2005 I called Moris and informed him that he should install 3 wells on Atlantic Ave. and one well between his place and BP station. I confirmed this request with K. Tang. I sent him a letter so he can obtain a permission from DOT to install sidewalk wells. AZ 1/18/2006 The owner (Moris) has contacted me. He needed some kind of a letter for the City. I replied that we do not isuue such letters. He is going to proceed with the well installation. AZ 4/4/2006 I left a message for owner Moris (516-482-0276). He called me back. Hydro Tech installed wells and is working on the report for DEC. AZ 5-11-2006 Left a message for Rachel Ataman (Hydro Tech Environmental). AZ 5-16-2006 I contacted Sharissa Singh 718-636-0800(Hydro Tech Environmental). She informed me that Rachel Ataman is no longer handles this project. I conveyed to Ms. Singh that the plume should be delineated and once the delineation has been completed a remedial plan should be sumbitted. AZ 5-17-2006 Reviewed the Groundwater Investigation Report prepared by Hydro Tech Environmental Corp., dated April 4, 2006. The report states that VOCs were detected in the groundwater samples obtained from wells MW-1 through MW-4 at concentrations exceeding their respective TOGS standards. The total VOC concentrations at the site range from 1,111 ppb to 523 ppb in downgradient wells. Hydro Tech Environmental recommended groundwater monitoring. After consultation with Koon Tang, I requested delineation of the groundwater plume in the southern area of the site by installing two new wells. If contamination is encountered by these downgradient wells, additional wells should be installed to fully delineate the plume. Once the plume has been delineated, a remedial plan to address the contamination should be submitted to DEC. A letter was sent to the RP and the consultant. AZ 5-25-2006 I reiterated myc comments regarding the submitted report to the owner Maurice Shami over the phone. AZ 10-24-2006 Left a message for the owner Maurice @ 516-482-0276. AZ 10/25/2006 Contacted the owner Maurice @ 516-482-0276. He is hiring an environmental consultant American Environmental Co. He will get back to DEC when the consultants are hired. AZ 11-5-2007 Contacted the owner Maurice @ 516-482-0276 and requested about the site status. He stated that he thinks that no work should be done at this site. He will contact me with more information ASAP. AZ 11-7-2007 Spoke with Maurice Chami (M Fund 45 North Station Plaza Great Neck New York 11021). Mr. Shami is stating that he sold the property but he does not know whom he sold the property to, since the sale was handled by his broker. He will get back to me with this information ASAP. Mr. Shami contacted me later and informed that the buyer is Victor Inwang 31 Monaco Place, Brooklyn, New York 11221. He sold the property in May or June of 2006 (his guess).It is a private dwelling. AZ 11-14-2007 Case Initiation Form was signed by Vadim Brevdo and forwarded to John Urda. AZ 7-29-2008 J. Urda requested that CSL, STIP are send to RP. I sent

AKA 31-33 MONACO PLACE (Continued) **S106971540**

drafts of CSL, STIP and CAP to John Urda and V. Brevdo for review. They approved the documents. CSL,STIP and CAP were sent to Maurice Chami- M Fund, 45 North Station Plaza, Great Neck, NY 11021 and Victor P. Inwang 1400 Bedford Avenue, Brooklyn, New York 11216. Copies were sent to V.B and John Urda. AZ 8-21-2011 The letter was returned to DEC stating: Return to Sender unclaimed unable to forward AZ 3-17-2011 As per J. Urda request, STIP, CSL and CAP were resent to Victor P. Inwang 1400 Bedford Avenue, Brooklyn, New York 11216 and send to Victor P. Inwang 583 Eastern Parkway, Brooklyn, NY 11216. AZ 4-11-2011 Two letters were returned to DEC stating Return to sender unclaimed unable to forward. I informed J. Urda about the returned letters. AZ

DEC Memo:	02/26/07-Vought-DEC Patel performing site visit due to proximity to spill in field. DEC Ketani called FDNY and left message to return call to DEC. 02/27/06-Hiralkumar Patel. visited site on 02/26/07. met Ferdrnand Torres (917-568-3022), tenant at building. Mr. Torres lives on second floor. as per Mr. Torres, there was no heat yesterday (02/26/07) morning and he compalined to NYC HPD. oil delivered during day. lateron tenant found oil in basement and called FDNY. site has two 275 gal #2 oil ASTs on leg and FDNY found one of these tanks was leaking. they pumped out oil from leaking tank and put in drums and spread absorbent in basement. three 55 gal drums were out of building on sidewalk. second tank is still in use. as per Mr. Torres there is no super in building but Mr. Torres has keys to basement. at time of visit, heavy odors inside basement, free product around tank and odors upstairs also. Mr. Torres's mother and brother living on first floor. suggest Mr. Torres to get these people on second floor as there was no odors. this building ownes by NY City. Mr. Torres gave contact info for person managing property for city. Francis SynMoie 7A Admin. Bld #042 C/O NY Residential Works Inc. 347 Lenox Avenue New York, NY 10027 Ph. (212) 987-8088 Ext. 105 left message for emergency service at NY Residential Works at night. received call from Basil Marshall (646-294-0086). asked him to get cleanup crew to start cleanup for free product and odors in building. he spoke with Anthony Lara (646-772-7180). received call from Anthony. he was ready to send cleanup crew in night but he need approval from city and proposal signed by authorized person, which he hadn't got. tried to contact Mr. Marshall again regarding signing paperwork, but no contact was made. left message for Mr. Marshall. left message for Mr. SynMoie at NY Residential works last night. spoke with Mr. SynMoie this morning. they are still working on getting authorization from city agency for cleanup. asked Mr. SynMoie to start cleanup by end of today. 2/27/07 - Raphael Ketani. I contacted Mr. Francis Synmoie (sin-moy) at NY Residential Works, Inc. (212) 987-8088, ext 101. He said that he is still waiting for authorization to hire a contractor to do the cleanup, but someone already put down absorbent. He said that he contacted Debra Thomas of Unit 7A at HPD (212) 863-7392. He said she has the authority to authorize someone to cleanup the spill. I asked him how the odors are. He said that you notice a moderate odor of oil as you walk into the building, but no one lives on the first floor. I asked him about the odors on the second floor. He said there were none. He said that this building was owned by a private party, but they didn't keep it up. So the city took it over and they will refurbish it. I spoke to Ms. Thomas. She said the City doesn't own

APARTMENT BUILDING (Continued) **S108466382**

the building, but is managing it. I asked her what is happening now. She said that a call was made to the Emergency Repair Unit as there is no money in the budget to pay for the cleanup. She said she is waiting for a call back. I told her that this spill is now at least 24 hours old. She said she knows, but all she can do right now is to call the Emergency Repair people. I told her that certain things will have to be done to cleanup the spill. She asked me to e-mail her what these requirements are. The requirements are: (1) cleanup all of the free oil (2) pickup all of the spent absorbent (3) powerwash the affected areas and the concrete floor (4) take soil samples below the concrete floor and send them to a NYSDOH certified lab for 8260 and 8270 analysis (5) remove all contaminated soil (6) submit manifests for all soil and contaminated material that is removed and the soil analytical results (7) repair the tank system and send copies of the documentation verifying that the repairs were made (8) submit to DEC a short report with pictures (if possible) of the before and after conditions and all documentation Ms. Thomas' e-mail address is thomasd@hpd.nyc.gov 3/12/07 - Raphael Ketani. Spill case #0613303 came in today regarding a new spill at the site. I spoke to Patrick Fahey of Pacific Energy (718) 647-1400 about the spill. He said that it was a loose flare nut that allowed oil to drip onto the floor. About 1 gal. leaked out. The flare nut was tightened, but the earlier large spill hasn't been cleaned up yet. This later spill case was closed. I spoke to Ms. Thomas regarding the old big spill of 2 weeks ago. She said she just got back from vacation and had been told the old spill had been cleaned up. I told her that Pacific Energy had a mechanic on site about 1 hour ago and he said the old spill was not removed. She told me that she will look into the issue and call me back. 3/23/07 - Raphael Ketani. I tried to make a site visit. The front door was locked and there was no one around to let me in. I didn't see or smell any signs of an oil release. 3/27/07 - Raphael Ketani. I made a site visit at 9:45AM today and was shown the basement by a second floor resident of the building who goes by the name of Rio and serves as a helper for Mr. Synmoie. The vapors were light but noticeable in the first floor hallway. The vapor readings were: basement 1334 ppb, first floor 903 ppb, second floor 782 ppb, third floor 751 ppb. Rio explained to me that the tanks are still not sitting solidly on the floor and that there were 2 big spills - both due to the tanks moving and a line below them getting loose. There was a 12 by 6 wet spot below the oil line that connects the two tanks at the bottom. Rio showed me that one spill flowed 30 feet down the basement hallway and into the adjacent room. The floor was in very bad shape and was in pieces, many of which could be moved by hand exposing the soil below. The floor had dark staining all over and so did the floor of the adjacent room. Lastly, Rio showed me the boiler room. The floor there also had staining. 3/28/07 - Raphael Ketani. I spoke to Mr. Synmoie and told him about the floor, the high vapor readings, the oily wet spot, the oil staining, and the probability that the soil under the basement floor is contaminated. I told him that he has to hire a company to stabilize the tanks, fix the line at the bottom if it is still dripping, do a soil investigation and ventilate the building. He said he will do this. He said there is one tenant on the first floor and she will be moved to the second floor. He said that the building is scheduled for rehabilitation in the very near future. I told him that the soil investigation has to get started as soon as possible. He said he will call Ms. Thomas. I sent Ms. Thomas an e-mail with my notes from 3/27 and 3/28. 3/29/07 -

APARTMENT BUILDING (Continued) **S108466382**

Raphael Ketani. Chacko Thomas (cell (646) 865-4564) [supervisor (718) 857-5444] of NYC HPD called to say that 6 soil samples were taken in the floor of the building after the last oil spill. He said samples were taken in the tank room, the hallway, and the storage rooms. The analytical results should be available soon. He asked what else needed to be done at the site. I told him that the vapors are high so ventilation needs to be provided, the tanks need to be fixed to the floor so they don't move, the line at the bottom of the tanks needs to be fixed so it doesn't drip, and a soil boring needs to be taken in the boiler room floor. Mr. Chafeko said he will have this done. 4/4/07 - Raphael Ketani. Mr. Thomas of NYC HPD sent me a FAX for SVOC analysis for 4 of the 5 samples that were taken in the basement. He said he was expecting the VOC analysis today and will FAX them as soon as he gets them. There were only 2 very low exceedences of the TAGM RSCO limits. I told him these results looked fine. I received a FAX from Mr. Thomas with the VOC analyticals for soil samples 1,2,4,5. The samples were taken on 3/22/07. There were no RSCO exceedences, except 3200 ppb for total xylenes for soil sample #1. This is the tank room sample. Again, soil sample #3 was missing from the results. 4/5/07 - Raphael Ketani. I contacted Mr. Thomas and told him that the results seemed fine, except for total xylene in sample #1. I told him that soil will have to be removed in this area. Afterwards, Mr. Thomas called me up regarding which sample came from what location in the basement. Sample #1 was the tank room. Sample #2 was the storage room next to the tank room. Samples #3 (which he will check on why the results weren't received) to sample #5 were from the hallway. He said that the drip from the pipe at the bottom of the tanks is something new and will be taken care of shortly and that the tank feet were covered in cement to stabilize the tanks. Mr. Thomas said that the stain in the boiler room is only from routine servicing of the boiler. I told him that it seemed like more than routine servicing. He said the service techinician is sloppy and he will talk to him about being careful. However, he said, the building is privately owned and HPD is just overseeing the refurbishing of the building. 4/11/07 - Raphael Ketani. Mr. Thomas FAXed me the analytical results for samples 1,2,4,5. I spoke with him shortly after I received the FAX. He said that the contractor who did the sampling also took samples 3 and 6. However, the contractor threw out these samples as he felt he had enough samples for the site, according to Mr. Thomas. I told Mr. Thomas that either the soil has to be dug out in the tank room or soil treatment needs to be used. He said that he has to make a work order, in either case. I asked him to try and push the process forward. He said he would try. 5/18/07 - Raphael Ketani. Mr. Thomas of HPD (718) 857-5444 sent me a FAX with analytical results for 3 soil samples that were taken in the tank room after the contaminated soil was removed. All 3 sets of results were non-detect. I called up Mr. Thomas and asked him to send the manifests for the removed soil. He said he will send them. Mr. Thomas added that the 2 tanks have been emptied and will replaced with one tank. So that will take care of the leaking pipe. 7/13/07 - Raphael Ketani. I tried to contact Mr. Thomas regarding the documentation for the cleanup work and the tank replacement work, but could only leave a message. (Mr. Thomas is the person to contact regarding the project, NOT Mr. Synmoie or Ms. Thomas.) 7/16/07 - Raphael Ketani. I spoke to Mr. Thomas and he told me the two tanks were replaced with 2 new 275 gallon tanks. He added that the contaminated soil at boring location #1 was taken away and that I should be receiving the

APARTMENT BUILDING (Continued) **S108466382**

manifest soon. 9/17/07 - Raphael Ketani. I received the Oil Spill Site Assessment Report from Mr. Thomas. The report states that the floors of the basement, the tank room, and the boiler room were power washed and soil samples were taken. The report also states that the leaking tanks were emptied (a waste ticket is included), removed, and replaced with new tanks. On 5/11/07, soil from the tank room was excavated and removed. Based upon the above mentioned Oil Spill Site Assessment Report and the analytical results for the tank room soil that were FAXed on 5/18/07, I am closing the spill case.

DEC Memo: 10 days ago line under the oil tank broke. Tank was loose and when the tank is filled, the tank
moves. Oil gushed onto the basement floor. FD Haz Mat cleaned the spill. Line broke again. 6 family
building - Oil Company on site now - Pacific Energy 718-647-1400
3/12/07 - Raphael Ketani. I spoke
to Patrick Fahey, manager at Pacific Energy. He said his mechanic was on site now. He said that a
flare nut connecting two pipes came loose a little and dripped oil onto the floor. He said that
about 1 gal. dripped out. The flare nut has been tightened and this problem is solved. He said that
a big spill happened weeks ago (#0612788)and was caused by a rotten equalizer (pipe connecting the
2 tanks). He said this pipe was repaired back then. Mr. Fahey said that the tanks are full and are
holding the oil. As there is an earlier open spill case, I am closing this later case.

Longitude:	-73.9087840
DEC Memo:	01/24/06: This spill transferred from J.Kolleeny to S.Kraszewski. - SK 03/14/06: This spill reassigned to K.Tang. - SK 01/15/08: spill reassigned to J.Kann. Consolidated with closed spill 0302414. J.Kann 4/10/13: J.Kann - IWP approved in an email (edoced). 4/26/13: J.Kann - revised IWP rcvd and edoced. 11/4/13: J.Kann - SAR is past due (due October 2013). stip sent to NYCHA today. Must be returned by December 4, 2013. 12/6/13: J.kann - signed stip rcvd from NYCHA on 12/4 and forwarded to legal for execution on 12/6/13 4/4/14: J.Kann - extention requests made by NYCHA's consultants due to poor weather and a damaged drill rig. Extension was approved on February 12 and then again on March 12. Report was submitted today, the approved extension date. Brief glance at the report shows some VOC and SVOC constituents in groundwater above CP-51 at one location. Closure request was made by NYCHA's consultant. Will need to further review the report before making a determination. 10/21/14: J.Kann - reviewing site. One well has elevated VOCs. Groundwater is at approx. 75 fbgs. Two wells were previously installed on site as part of another investigation. An email was sent to NYCHA on 10/21/14 requesting they try to locate the report related to the previous investigation. 10/30/14: J.Kann - spoke with NYCHA today. They never received information about the investigative work that Gannett Fleming had started at the site. Therefore, no additional info is available. 11/18/14: J.Kann - information from spill 0302414 indicates NYCHA CONTRACTOR GANNETT FLEMING DOING FOLLOW-UP SITE INVESTIGATION SINCE TANK CLOSURE FOUND SVOCs IN SOIL ABOVE TAGM. PUTTING IN WELL, SOIL CONTAMINATION ENCOUNTERED FROM 25 FEET DOWN TO WATER TABLE AT 75 FT., WITH PID=220 PPM AT 50 FT., THEN FIRST SPLIT SPOON BELOW WATER TABLE, PID=230 PPM. SOIL SAMPLES WERE COLLECTED FOR LAB ANALYSIS, AND GROUNDWATER SAMPLE WILL BE TAKEN AFTER WELL IS DEVELOPED. The tank closure report was reviewed (dated February 2000 and prepared by PT&L Contracting). Endpoints were not above CP-51. No VOCs were detected, some PAHs were detected below CP-51. The investigation performed by JCB is also under review. 12/10/14: J.Kann -email sent to Yelena today- I have read the Remedial Investigation Report (RIR) prepared by JC Broderick for the referenced site. Based on the review, the spill has not been closed and the Department has the following comments: -Based on the site file, JCB notified the Department of difficulty encountered during the field investigation, resulting in approved modifications to the original work plan. None of this information is discussed and presented in the RIR. These details must be discussed in the RIR since borings were not advanced to the depths proposed in the original work plan. -The conclusions and recommendations section indicates that JCB suspects the contamination in the on site groundwater monitoring well is from another source, but a potential source is not identified. The Gannett Fleming work plan for the site dated 2003 indicates that based on historic Sanborn Maps a gasoline tank was present on this property

OCEAN HILL HOUSES -NYCHA (Continued) **S102149171**

until around 1962, or when Ocean Hill Houses were built. Why is the source assumed to be off-site? Please clarify and further discuss this in the RIR. -An additional round of groundwater samples must be collected from the three wells, analyzed for VOCs/SVOCs, summarized and submitted to the Department. Once these comments are addressed, additional investigative work may be necessary at this site. 6/4/15: J.Kann - Additional round of sampling performed at MW-1 and MW-2 in February 2015. Product thickness of .02 ft found in MW-5. Based on new information, an email was sent to NYCHA requesting a fingerprint analysis and installation of two additional wells. 10/14/16: J.kann - Additional investigative work was done including the advancement of 5 more borings. All soil samples collected were below CP-51. Three wells were sampled and MW-5 had minor elevated concentrations. This was the well with a small amount of product previously. The recommendation is to install a sock in MW-6 and sample in 6 months. NYCHA was emailed today indicating that should be done. 06/05/2017: J.Kann - Spill reassigned to Andre Obligado. 1/14/19 - Obligado - I reviewed the 3Q18 monitoring report prepared by H2M. No product was observed in any of the wells since 2015. During the most recent sampling round, data submitted in December 2017, all petroleum VOCs were detected at or below GWQS. H2M recommends spill closure. After review of the report, the DEC concurs that this spill does not appear to be a threat to human health or the environment. This spill is closed based on: 1) 235 tons of contaminated soil removed from the Site during tank closure in 2000. 2) Soil samples collected during well installation were all below CP51 3) No LNAPL present for 3 years 4) No petroleum VOCs above TOGS GWQS. Spill closed. .

Remarks: 20K TANK SYSTEM FAILED HORNER EZY CHECK WITH A GROSS LEAK, WILL EXCAVATE, ISOLATE & RETEST.

DEC Memo:	10/8/09 - Raphael Ketani (duty desk officer). The spill was discovered on 10/7/09 and called in on 10/8/09. Yesterday, staff from Tanknology (C.J. Schultz (800) 666-1215) discovered an interstitial leak and a ullage leak. In both instances, a vacuum could not be maintained. Mr. Schultz told me that they will come back today and do helium testing to try and pin point the location of the failure. The PBS is #2-217980. The corporate address is: Cumberland Farms, Inc., 100 Crossing Blvd., Framingham, MA, 01702, Attn: Angela Pimental. Cumberland's phone is: (800) 225-9702, ext 4494. A TTF letter was sent to Cumberland. 11/20/09. J.Krimgold reviewed the letter report submitted by ECS and dated 11/17/09. Based on the report subsequent tests were performed on the tank indicating the ullage and interstitial failure. The contents of thank was evacuated and tank is scheduled for in-place closure at the end of November 2009. Gaging of tank pad wells and groundwater monitoring wells throughout the site shows no change in the tank surrounding subsurface. Case closed.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill site has been consolidated under Spill No. 9211872. 6/14/05: This spill case transferred from Rommel to J. Kolleeny. - JK 6/13/06: This spill case transferred from J. Kolleeny to J.A. Maisonave - JAM 6/14/06: Reviewed Semi-annual Groundwater Monitoring Report for July through Dec 2005 submitted by ECS in Feb 2006 for monitoring wells MW-1 through 3. MW-1 and MW-2 show levels of ethylbenzene and xylene above AWQS (highest hit was 147 ppb xylene in MW-1). MW-1 which is located next to the fill ports seems to be on the decline and MW-2 which is down gradient of MW-1 is only slightly elevated. To date MW-3 has shown no contamination. Since the depth to water is in excess of 30 feet the contamination is a low risk. The Semi-annual report for January through June 2006 is expected at the end of July. I will review to see if the downward trend continues. JAM 10/20/06: Reviewed Semi-annual Groundwater Monitoring Report for Jan through June 2006 submitted by ECS dated Sept. 18, 2006 for monitoring wells MW-1 through MW-3. Mw-1 and MW-2 show levels of toluene, ethylbenzene and total zylene above AWQS (highest hit was 192ppb total xylene in MW-1). To date MW-3 has shown no contamination. There was a slight rise in total xylenes in both wells on the March sampling event, which then decreased in the June sampling event. Overall the contaminant concentration is low. The Semi-annual Monitoring Report for July through Dec 2006 is expected in January, 2007. - JAM 9/19/07 Reviewed Semi-annual Groundwater Monitoring Report for Jan-June 2007. Wells MW-1 through MW-03 were sampled and results showed some levels of BTEX that exceeded AWQS. Highest hit was in MW-1 on March 6, 2007 sampling event of total xylene at 303ug/L. I asked Bill Simmons to continue sampling groundwater and analyze for the full TAGM 4046 list of gasoline-related VOCs. - JAM 12/18/07 Reviewed Groundwater Monitoring Report & Closure Request for the period July-Sept 2007. Wells MW-1 through MW-3 were sampled. Results showed total VOCs in MW-1 and MW-2 to be 342ug/L and 176ug/L, respectively. MW-03 was ND. ECS requests closure of the spill. I sent an email today requesting another round of samples be taken and sampled for the full TAGM 4046 list of gasoline related VOCs. A copy of the mail is in the file. - JAM 11/04/08 Reviewed Groundwater

EXXONMOBIL (Continued) **S110045421**

Monitoring Report & Closure Request for period October 2007 through May 2008. ECS collected
groundwater samples from 3 on-site monitoring wells. Results for the latest round collected in May
2008 were 575ug/L Total VOCs in MW-1, 58 ug/L Total VOCs in MW-2 and ND in MW-3. ECS requests spill
closure due to the relatively minor contamination observed. I reviewed a UST closure report
submitted by Unico Environmental, Inc. from 1993. The USTs removed were located on the corner of
Pitkin Ave. and Pennsylvania Ave. This area has not been adequately investgated. Also, groundwater
contamination has not been delineated downgradient of MW-1. I sent a letter today stating, The
NYSDEC cannot approve spill closure at this time. I requested three borings be advanced and soil
and groundwater samples be collected from each boring. A work plan should be submitted for NYSDEC
review and approval. This letter is uploaded to eDocs. - JAM 1/20/09 Reviewed the Groundwater
Monitoring Report & Subsurface Investigation Work Plan for period June 2008 through January 2009
submitted by ECS dated January 15, 2009. ECS collected groundwater samples from three monitoring
wells on-site on Sept 24, 2008 and January 2, 2009. Results from the Sept sampling event showed
total VOC concentrations of ND in MW-3, 210ug/L in MW-2 and 1,718ug/L in MW-1. Results from the Jan
sampling event showed total VOCs of ND in MW-3, 153ug/L in MW-2 and 1,170ug/L in MW-1. ECS proposed
advancing three soil borings (SB-7 through SB-9) and collecting soil and groundwater samples from
each to analyze for the full range of gasoline related VOCs. SB-7 is located at the corner of
Pitken Ave and Pennsylvania Ave, SB-8 is located near MW-2 and SB-9 is located near SB-1,
downgradient from MW-1. I sent an approval letter today requesting that SB-8 be moved further west,
mid-way between MW-2 and proposed soil boring SB-7. Both the report and my approval letter are
uploaded to eDocs. -JAM 11/24/09 Reviewed the On-site Subsurface Investigation Report submitted by
ECS dated August 5, 2009. The report summarizes results of 3 soil borings advanced on site and two
rounds groundwater monitoring results. On March 6 and 27, 2009 three soil borings (GP-7, SB-8 and
MW-4) were advanced and soil and groundwater samples were collected. On March 6, boring GP-7 was
advanced with a geoprobe and soil was continuously screened to 20fbg, at which point very dense
soil was encountered and the sample tubes could not be advanced. The boring was then advanced to
34-36fbg to collect a groundwater grab sample. On March 27, a hollow stem auger was utilized to
advance borings SB-8 and MW-4. Soil at these locations was continuously screened to the water
table. A permanent monitoring well was installed at MW-4. Four soil

EXXONMOBIL (Continued) **S110045421**

samples from borings SB-8 and
MW-4 were analyzed by a lab and results idication no VOCs above TAGM RSCOs. Results from the
groundwater grab samples collected at GP-7 and SB-8 also indicated no VOCs above lab RDLs. On April
2 and June 29, 2009, ECS gauged and sampled four monitoring wells (MW-1 - MW-4. Results from April
ranged from ND in wells MW-3 to 678ug/L total VOCs in MW-1. In June, the results ranged from ND in
well MW-3 and MW-1 to 106ug/L total VOCs. The results from well MW-1 decreased from April to June
where they were ND. Based on the findings of this investigation and from the most recent
groundwater samples collected at the site, ECS requests spill closure. Report uploaded to eDocs.
According to the report, the former UST area on the southwest corner of the site has been
adequately investigated and the soil samples from GP-7 and SB-8 had VOC concentrations below lab
RDLs. The groundwater samples collected during the investigation and during the monitoring events
in April and June 2009, show a general continuing decreasing trend in dissolved phase VOC
concentrations. This site does not pose a threat to human health or the environment. This spill
case was closed and a No Further Action was issued. Letter uploaded to eDocs. - JAM

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: 02/09/07 - J.Kann - Spill reassigned from S.Kraszewski to J.Kann. 3/10/11: J.Kann - Investigative work plan submitte on 3/3/11. 8/26/14: J.Kann - Reviewed the file. Minimal contamination detected in 1995 ISRP. However, a second spill was called in during tank removal due to contaminated soils being encountered. It is not clear if and where endpoints were collected. Therefore, an investigation is warranted and an approval for the IWP prepared by Grant was emailed to NYCHA today. 12/30/14: J.Kann - part of multi site stip executed on 10/14/14. SIR due 4/14/15. 06/05/2017: J.Kann - Spill reassigned to Andre Obligado. 8/1/2019 - Obligado - I met American Environmental at the Site to observe implementation of the drilling work plan. At the time of my visit, the geoprobe rig had broken down and they had discontinued drilling. Only 1 boring to 30 ft had been advanced prior to break down. They will reschedule the drilling. 9/10/19 - Obligado - I reviewed a Subsurface Investigation Report submitted by American Environemntal. Three wells were installed to between 45 and 50 ft bgs. Groundwater was encountered between 37 and 39 ft bgs. One SVOC compound, Chrysene, was detected above CP51 clean up standards in soil at boring B7 from 25-30 ft with a level of 1.8 ppm, which is above its cp51 standard of 1ppm. No petroleum compounds were detected in groundwater above GWQS. This spill does not appear to be a threat to human health or the environment. This spill is closed.
Remarks: CONTRACTOR DOING BORINGS AT LOCATION FOUND CONTAMINATED SOIL.

NYSDEC Spill No.9604417, 6743 Fourth Avenue, Brooklyn; Any information regarding performed repair work, investigation and/or remediation actions related to these open spill cases, should be compiled into summary reports for each case with conclusions and recommendations for further actions and submitted to the Department in a timely manner by December 30, 2015. If there is no information on the performed actions, a suitable investigation work plans should be submitted to DEC for review and approval no later than January 30, 2016. Please feel free to contact me with your questions or comments. Sincerely, Ainura Doronova Response is due December 30, 2015. AD 11/19/2015: Received the following e-mail from B. Simmons; Hi Ainura, The following presents information regarding NYSDEC Spill No.0907625 - 225 Pennsylvania Avenue, Brooklyn: {we believe your address of 189 Pennsylvania is a mistake, as CFI s site was located at 225 Pennsylvania Avenue}. Spill No. 0907625 was assigned on October 7, 2009 for a tank test failure, resulting from an interstitial failure of the inner wall of the double-walled UST identified as T-4. On October 8, 2009, NYSDEC also assigned a 2nd Spill No. 09-07694 to the same tank failure issue - Attached is the NYSDEC letter Dated 10-9-2009 for the 2nd Spill No. 09-07694; Attached is the ECS Letter to NYSDEC dated November 17, 2009 that describes the testing and re-testing and actions to close the tank in place and indicate no release to the environment occurred and only references Spill No. 09-07694. The NYSDEC used this information to CLOSE Spill No. 09-07694 on November 20, 2009. Also attached, is the UST Closure Summary Report & Closure Request of Spill No. 13-00539, dated 6-4-2013 - documenting the removal of the entire UST system the NYSDEC Closed Spill No. 13-00539 on October 16, 2013. Also, several subsurface investigations and groundwater monitoring events were

CFI STATION #70227 (Continued) **S110045410**

performed and reported to the NYSDEC under Spill No. 92-11872 during the period 2002-2009. The NYSDEC closed this Spill No. on November 24, 2009. Based on the fact that the circumstances regarding Spill No. 09-07625 assigned on October 7, 2009, is the 1st Spill No. assigned for the same tank failure issue that was assigned a 2nd Spill No. 09-07694 the very next day, and subsequent information was submitted to the NYSDEC who closed that Spill No. on November 17, 2009, ECS believes that Spill No. 09-07625 should also be closed. Please let me know if you have any additional questions or concerns. Thank you. William Simmons Will review. AD 12/04/2015: Reviewed the submitted documentation. According to ECS, spill No. 0907625 was assigned on October 7, 2009 for a tank test failure, resulting from an interstitial failure of the inner wall of the double-walled UST identified as T-4. On the next day, on October 8, 2009, NYSDEC also assigned a 2nd Spill No. 09-07694 to the same tank failure issue. Based on the fact that the circumstances regarding Spill No. 09-07625 assigned on October 7, 2009, is the 1st Spill No. assigned for the same tank failure issue that was assigned a 2nd Spill No. 09-07694 the very next day, and subsequent information was submitted to the NYSDEC who closed that Spill No. on November 17, 2009, ECS believes that Spill No. 09-07625 should also be closed. Also, ECS submitted USTs closure report which states that all tanks with associated piping were removed off-site in 2013. End-point soil samples were ND for TVOCs. GW depth at the site greater than 30' bgs. No groundwater was encountered during tanks excavation at the final depth at 15' bgs. This report confirms that no release had occurred from the reported tank test failure. Based on the documentation provided, DEC will close this case. AD 12/09/2015: Issued and sent a spill closure letter to Mr. Johnson of CFI. Case closed. AD

DEC Memo:	04/22/20-Hiralkumar Patel. 5:12 PM:- spoke with FDNY. they reported discharge of approx. 70 gal of #2 oil from a tank inside the basement due to an overfill. FDNY provided number for oil company representative. 5:20 PM:- spoke with Patrick (917-560-2394) and left message for oil company. 6:04 PM:- spoke with Vinny at Lefferts Oil. he mentioned that property owner ordered delivery of 600 gal of #2 fuel oil. driver delivered oil around 5 PM and left site. sometime after, property owner called FDNY due to an oil spill noted in basement. the spill occurred from a loose plug on the tank. Vinny mentioned that he has reported spill to NRC (cased # 1275870) and is responding with Miller Env. for cleanup. asked him to send property owner's contact info and site pics. based on available information about spill in building basement, suggested Vinny to place a ventilation fan in basement to prevent any vapor accumulation in the building. Vinny Boves Lefferts Oil Ph. (917) 416-2438 email: vinnyboves@gmail.com 7:59 PM:- spoke with Vinny inquiring update. he is at the site and will call back with property owner's contact details. 8:11 PM:- received call from Vinny and

(Continued) **S102673302**

spoke with Carlos Williams, property owner. Mr. Williams confirmed spill being cleaned up and there
are no petroleum vapors upstairs. Mr. Williams is the only occupant of the building. Carlos
Williams 63 Sunnyside Avenue Brooklyn, NY 11207 Ph. (917) 833-2123
8:26 PM:- received email from
Vinny including some site pics which show tile floor, but does not include any details about tank
location or leak point on the tank. 8:28 PM:- sent email to Vinny and inquired him about type of
floor tiles and pics of tank system from where spill occurred. 8:44 PM:- received email from Vinny
stating that the basement floor tiles are ceramic tiles. he also stated that the tank is
underground located beneath the basement floor. 8:45 PM:- spoke with Vinny and inquired him about
tank location and area from where spill occurred. at this point, Vinny clarified that spill
actually occurred from a vent pipe (not from loose plug as mentioned earlier) which is located
right above a metal hatch for basement access. Vinny stated that spilled material from the vent
line entered the basement through the hatch and had impacted ceramic tile floor. he did not notice
any leak from the tank. Vinny confirmed presence of a tank gauging port on basement floor. asked
Vinny to revisit the site and send pics of vent pipe/basement hatch and basement floor where tank
located to confirm spill cleanup. 8:58 PM:- spoke with Mr. Williams. he gauged the tank and noted
49 inches of oil in the 1,080 gal tank. 10:37 PM:- sent email to Vinny and asked him to revisit the
site and provide pics of vent pipe/basement hatch where spill occurred and basement floor where the
tank is located. also asked him to gauge the tank to measure product in the tank.
04/23/20-Hiralkumar Patel. 9:25 AM:- spoke with Mr. Williams. he regauged the tank and noted same
amount of oil (49 inches). he also confirmed completion of spill cleanup and no petroleum odors in
the house. discussed with DEC Austin. based on review of available information, Austin asked to
assign case to DEC Zhune (off-hour secondary) for a site inspection to confirm cleanup prior to
spill closure. 10:15 AM:- spoke with DEC Zhune and asked her to visit site (as per current
guidelines on COVID-19) to confirm spill cleanup. 10:49 AM:- sent email to DEC Zhune including case
summary and asked her to schedule a site inspection. email copied to Vinny and asked him to send
site pics/tank gauging data to DEC Zhune. case assigned to DEC Zhune.
11:31 AM:- received pics from
Vinny including pics taken during tank gauging. 11:47 AM:- spoke with Vinny. he mentioned that him
and property owner both gauged the tank and noted 49 inches of oil in it. Vinny confirmed that the
tank is full. 1:02 PM:- received email from Vinny including pic of a

(Continued) **S102673302**

vent pipe. email confirms
presence of 49 inches of oil in the tank. 5/12/20-Vinny Boves emailed the report dated 5/7/20. The
letter ststed that on April 22 2020 we received a call from home heating oil to respond to an oil
spill clean up at 63 Sunnyside Avenue. We responded and met either the owner of the property who
took us to the basement. We found approximately less than 2 gqllons of oil on the floor. The tank
cap was loose and oil had come out through the cap. The oil was squeegee back into the tank and the
area was wiped and wipes were put in a 5 gallon container for later pick up by third party. Baking
Soda boxes were left at the side to absorb any lingering odor. The area was clean an no odor could
be detected. Spill Closed

DEC Memo:	01/10/08 - Zielinski Sent a TTF letter to: Property Manager East NY Diagnostic and Treatment Center 2094 Pitkin Avenue Brooklyn, NY 11207 8/15/08 received call from Zack of HRP Associates {ph:(518)899-3011; fax: (518)899-8129} requesting a NFA letter. Spill not closed yet. DEC recveived request for closure letter on possibly August 1, 2008. Letter is stamped that it was received 7/32/08. Letter from HRP is dated 7/30/08. Letter states that fill pipe was excavatyed and replaced. No contamination. Tank was retested and passed. However, pressure calculated is more than pressure applied (2.36 psi calculated and 1.7 psi applied). Called Zack back and told him about this. He will look into it. bf 8/22/08 On 8/21/08, received letter from Jesse Zahn of HRP Associates. Fill pipe was replaced. No indication of petroleum contamination found. Passing tightness test on 7/21/08. NFA. Sent nfa letter to Jesse Zahn. bf

DEC Memo:	12/9/13 The ttt failure report is in e-docs under PBS 2-601503. bf 02/18/2015 - Spill Case Re-assigned to V. Brevdo as per conversation between Brevdo and Piper. VB 10-06-2015 V. Brevdo Had a telephone conversation with Mr. Mark Right of HRP Associates (518)-877-7101 (Ext. 111). Mr. Right advised me that NYC Health and Hospital corporation is abandoning tank in place and will be installing new AST. Mr. Right stated that this TTF failure was a dry leak and no any product has been released into the environment. Mr. Right stated he will be preparing information which should demonstrate that no product has been released and that this spill case can be closed. VB 10-21-2015 V. Brevdo Returned call to Jessie of HRP 718 877 7101 Ext 105. Jessie is preparing documentation on demonstrating that this was dry leak and that no product was released into the environment, as well as information pertinent to the intended closure of the tank. Jessie will be submitting documentation via e-mail to V. Brevdo towards spill case closure and to L. Zieliski towards complying with PBS tank closure regulations. VB 10-26-2015 - V. Brevdo HPR submitted e-mail (to Remediation Section B and PBS Unit) with attachments suggesting a course of action to close tank and spill case. VB 12-03-2015 - V. Brevdo Spill Case Closure Decision Kings County Hospital Center, 2094 Pitkin Avenue, Brooklyn (Spill No. 1306134)

CITY OF NY HEALTH AND HOSP (Continued) **S108983084**

10,000-gallon UST located at the East New York Diagnostic Center failed periodic tightness test above the product line. Kings County Hospital Center (KCHC) and KCHC s environmental engineering consultant, HRP Associates, evaluated several options following the test failure including piping evaluation and cleaning and inspecting the tank to conduct a repair if defect is noticed. Due to the age of the tank, KCHC and HRP elected to close the tank in place, and pursue the installation of a new above ground storage tank (AST). On behalf of KCHC, HRP notified the Department of the intent to close the UST on October 25, 2015. Prior to commencing the onsite field activities, HRP prepared a site specific health and safety plan, and field activities were subsequently performed in accordance with health and safety protocols and applicable federal, state and local regulations. All product, approximately 6,700 gallons, were removed from the tank on October 16, 2015. Sludge and residue were removed from the tank via a vac-truck. The sludge, waste water and personal protective equipment were transported for proper disposal. UST inspection did not reveal corrosion pitting or leaks in the tank shell. No evidence of contamination such as staining or odors were noted in soil samples collected at the site. No elevated PID readings were recorded. VOCs in soil samples were not detected at concentrations exceeding CP-51 cleanup guidance levels. SVOCs were detected in one out of five samples marginally exceeding CP-51 cleanup levels. HRP concluded the following: The UST was emptied and cleaned of all residual product; No visual indications of a release from the tank were observed during the tank inspection; Soil samples collected directly beneath the tank indicated no olfactory or visual evidence or release; All soil samples were screened with PID and no elevated readings were recorded; The SVOCs detected are believed to be from the coal-tar epoxy tank shell coating as these compounds are associated with coal-tar, and no evidence of a release from the tank was identified. HRP intends to backfill the tank with a concrete slurry within 10 days, and is submitting a PBS application to demonstrate the tank closed-in-place. On December 1, 2015, HRP Associates submitted Summary of Pre-Closure Activities Report and requested the Department for a closure of this spill case. The Department concurred that this Tank Test Failure spill case meets closure criteria, and closed spill case on December 4, 2014. VB

DEC Memo:	11/29/05: This spill transferred from J.Kolleeny to S.Kraszewski. 9/22/06: Spill transferred from Kraszewski to Kann. 9/21/10: J.Kann - Quarterly Report recieved on 9/1/10. 3/7/11: J.Kann - Qrtly Rpt rcvd 1/6/11 5/10/12: J.Kann - Quarterly Report rcvd 5/9/12. 9/6/12: J.Kann - Quarterly Report recieved on 8/21/12 5/21/13: J.kann - QR rcvd 1/16/13 and edoced. 2/5/15: J.Kann - Site visit made in 2014 to observe pilot study method of gauging 6 oil. The following email was sent to Yelena Tkach of NYCHA today: The Department has reviewed the 2014 3rd and 4th Quarter Status Reports for the referenced site. Based on the review NYCHA should -continue operation of the PRS and VEFR monthly -continue to utilize the pilot study method of gauging the onsite wells monthly. After a year of proper gauging of the 6 oil (in June 2015), the 2nd Quarter 2015 Status Report must include a trend analysis of product in wells, and an evaluation made of the current recovery effort. Please let me know if you have any questions. 06/05/2017: J.Kann - Spill reassigned to Andre Obligado. Obligado - I received the 1Q17 update report. Operation of the PRS is on-going. The system was offline in March 2017 to repair the oil water separator. According to this report, approximately 447 gallons of oil was recovered during the 1st Quarter 2017. That includes an estimated 46 gallons during VEFR 4 VEFR events. LNAPL was present in multiple wells. Including MW 2 (.25 ft), MW2A (0.08 ft), MW3 (0.25 ft) RW1 (0.08 ft and RW4 (0.08 ft). A film was observed in MW7, RW2, and RW3. The

SETH LOW HOUSES -NYCHA (Continued) **S101658382**

report recommends continued operation of the product recovery system, as well as monthly VEFR events. 11/17/22 - Obligado - I reviewed the Biannual Report - 2022 - System is off-line. All wells were guaged January through June 2022. LNAPL present in MW2, MW2A,MW3, MW7, RW1, RW2, RW3, RW4. Maximum thickness was 1.33 ft in MW5 in January 2022. Monthly VEFRing is on-going. SYSTEM NEEDS REPAIR 12/12/2022-M. Hoque: Due to Andre Obligado's transfer from Spill Response Program to BCP/SSF Section, spill case manager reassigned from Andre Obligado to MD Hoque/ Spill Remediation Section B effective on 12/12/2022. (MDH) 1/30/2022-M. Hoque: Received a semi-annual (January- June) 2022 report and being reviewed. (MDH) 2/16/2023-M. Hoque: DEC reviewed a bi-annual (January-June) 2022 site status update report. Monitoring wells, MW-1, MW-2, MW-2A, MW-3, MW-4, MW-5, MW-6, MW-7, MW-8, MW-9, and recovery wells RW-1, RW-2, RW-3, and RW-4 were gauged during this period. Product thickness was observed ranging from 0.17 foot to 0.59 foot in wells. VEFR events took place on monitoring wells MW-2A, MW-2, MW-3, and MW-7 in January, February, April, May, and June 2022, recovery wells RW-1 in May 2022, RW-2 in February and April 2022, RW-3 in February, April, and May, and RW-4 in February, April, May, and June 2022. The PRS consists of four recovery wells with pneumatic pumps, but it has been offline since February 2019. The PRS need repairs. NYCHA will continue well gauging monthly, with annually reporting to DEC. (MDH)

Remarks: CALLER STATES THAT A MALFUNCTION IN THE TANK PIPING CAUSED AN UNKNOWN AMOUNT SPILL CLEAN UP IS IN THE PROCESS AND TANK WILL BE REPLACED NO CALLBACK NECESSARY

Town:	New York City
Record Added Date:	11/24/2021
Record Updated Date:	12/28/2023
Update By:	MSBABICK
Site Description:	Site Location: The 0.415-acre site is located at 2864 Atlantic Avenue in the East New York neighborhood of Brooklyn, NY, and is designated as Brooklyn Tax Block 3965, Lot 11. The site is bounded to the north by Atlantic Avenue, to the east by Jerome Street, to the south by 2-story residential buildings, and to the west by Barbey Street followed by another BCP site (Site No. C224255). The Long Island Railroad (LIRR) is located approximately 40 feet to the north of the site, beneath Atlantic Avenue. Site Features: Construction for a new mixed-use residential/commercial, mixed-income building with a cellar is currently ongoing. Current Zoning and Land Use: The site is zoned R8-A for residential use and includes a commercial C2-4 overlay. The surrounding properties are currently used for commercial, residential, and warehousing/manufacturing purposes. The nearest residential buildings immediately adjoin the Site to the south. The proposed mixed-use commercial/residential development of this property is consistent with the current zoning. As a result of the CEQR process, Block 3965 Lot 11 was assigned an environmental E-Designation (E-366) - East New York Rezoning Action, for hazardous materials, noise (window wall attenuation & alternative means of ventilation), and air (HVAC fuel limited to natural gas) resulting from a City Environmental Quality Review (CEQR) effective 20 April 2016 (CEQR #15DCP102K). Satisfaction of the E-Designation requirements is subject to review and approval by the New York City Mayor's Office of Environmental Remediation (NYCOER) to obtain a Notice to Proceed (NTP) or a Notice of No Objection (NNO) prior to obtaining building permits. Past Land Use: The site was first developed in the early 1950s with a garage and two gasoline tanks. By 1965, the entire site was occupied by a gas filling station that was developed with an overhead canopy and a one-story office building. The site remained unchanged until 2022 when all on-site fuel tanks were decommissioned and the gas station was demolished as part of the NYSDEC approved Interim Remedial Measures Work Plan (IRMWP). Records for historic bulk petroleum storage (PBS No. 2-297747) list a total of forty-three former underground storage tanks (USTs) for the site. Five additional unregistered USTs were discovered during the 2023 remedial activities and have since been removed. Site Geology and Hydrogeology: As of the 2023 remedial activities, nearly all urban fill has been excavated and removed from the site. The site has been backfilled with approximately 225 tons of 3/4 clean stone from the building foundation sub-base at 13 feet below ground surface

LOT 11,TAXBLOCK 3965 (Continued) **S118704052**

Env Problem:

(ft-bgs)up to 14 ft-bgs. This layer of clean stone is underlain by a native layer consisting of brown to orange-brown coarse to fine sand with varying amounts of silt and gravel and intermittent clay lenses. Bedrock underlying the site is present at depths greater than 100 ft-bgs and is part of the Raritan formation consisting of unconsolidated coastal plain deposits. Groundwater was encountered at approximately 25 to 35 ft-bgs and groundwater flows to the southeast. Remediation at the site is complete. Prior to the 2023 remediation, the primary contaminants of concern for the site were SVOCs and lead in soil, SVOCs and petroleum-related VOCs in groundwater, and petroleum-related VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for Unrestricted Use. Residual contamination remaining in groundwater and soil vapor is being managed under a Site Management Plan. Prior to the 2023 Remediation: Soil One VOC of concern, total xylene, was detected at a maximum concentration of 1.7 parts per million (ppm), exceeding the Unrestricted Use Soil Cleanup Objective (UUSCO) of 0.26 ppm and the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.6 ppm. Several SVOCs were detected at concentrations exceeding the UUSCOs and PGWSCOs, including benzo(a)anthracene (max. 7.1 ppm, UUSCO and PGWSCO is 1 ppm), benzo(b)fluoranthene (max. 8.3 ppm, UUSCO is 1 ppm, PGWSCO is 1.7 ppm), benzo(k)fluoranthene (max. 2.2 ppm, UUSCO is 0.8 ppm, PGWSCO is 1.7 ppm), and chrysene (max. 7.4 ppm, UUSCO and PGWSCO is 1 ppm). For metals in soil, lead was detected at a maximum concentration of 932 ppm (UUSCO is 64 ppm). For PFAS compounds, perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 1.25 parts per billion (ppb), exceeding the guidance value for unrestricted use of 0.88 ppb. Data did not indicate any off-site impacts in soil related to this site. Groundwater Several VOCs were identified in groundwater samples at concentrations above the Ambient Water Quality Standards (AWQSs), including 1,2,4-trimethylbenzene (max. 3,800 ppb, AWQS is 5 ppb), 1,3,5-trimethylbenzene (max. 760 ppb, AWQS is 5 ppb), ethylbenzene (max. 1,500 ppb, AWQS is 5 ppb), o-xylene (max. 1,300 ppb, AWQS is 5 ppb), p/m-xyelene (max. 5,200 ppb, AWQS is 5 ppb), and benzene (max. 22 ppb, AQWS is 1 ppb). Several SVOCs were identified at concentrations exceeding the AWQSs, including benzo(a)anthracene (max. 0.12 ppb, AWQS is 0.002 ppb), benzo(b)fluoranthene (max. 0.18 ppb, AWQS is 0.002 ppb), benzo(k)fluoranthene (max. 0.06 ppb, AWQS is 0.002 ppb), and chrysene (max. 0.13 ppb, AWQS is 0.002 ppb). Several dissolved metals were detected in groundwater, including iron, manganese, and sodium. These are naturally occurring metals and are not considered to be site-related contaminants. PFOS and perfluorooctanoic acid (PFOA) were detected in groundwater at maximum concentrations of 105 parts per trillion (ppt) and 92.1 ppt, respectively. These concentrations exceed the applicable Maximum Contaminant Level (drinking water standard) of 10 ppt each. Data did not indicate any off-site impacts in groundwater-related to this site. Soil Vapor Several petroleum-related VOCs were detected in soil vapor throughout the site, including benzene (max. 69.6 micrograms per cubic meter (ug/m3)), toluene (max. 288 ug/m3), ethylbenzene (max. 34 ug/m3), total xylenes (max. 29.4 ug/m3), 2,2,4-trimethylpentane (max. 27,200 ug/m3), n-hexane (max. 9,060 ug/m3), 2-butanone (max. 2,140 ug/m3), heptane (max. 1,750 ug/m3), 1,2,4-trimethylbenzene (max. 29.6 ug/m3), and 1,3,5-trimethylbenzene (max. 7.18 ug/m3). Data did not indicate any off-site impacts in soil vapor related to this site.

LOT 11,TAXBLOCK 3965 (Continued) **S118704052**

Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination at the site.

Site Description:	Location: The Union Station Holder site is located in an urban area at 2940 Atlantic Avenue in Brooklyn, Kings County. The site is 1.3

K - UNION STATION HOLDER (Continued) **S109580117**

acres in size. Site Features: The main site feature is a two-story brick building located in the northeast corner of the site. The rest of the site is covered in asphalt. Current Zoning and Land Use: The site is currently an active Con Edison Service Center, and is zoned for commercial use. The surrounding parcels are currently used for a combination of residential, commercial and manufacturing/industrial. The closest residential area is within 150 feet, due west of the site. Past Use of the Site: The first two gas holders (north and center) were constructed in approximately 1887. The center gas holder was dismantled in 1906, and the north gas holder was dismantled in 1908. The southern holder was constructed in 1908 and operated until approximately 1928, then dismantled around 1950. The site was used as a distribution facility. The Con Edison facility removed two underground storage tanks (USTs) in 1998, and as a result of the impacts found in groundwater and soil, a spill number was assigned (98-06522), and remains open. Site Geology and Hydrogeology: The site is underlain by artificial fill and glacial deposits (outwash sands and gravel). The outwash sand and gravel beneath the site consists of coarse to fine gravel with sand, and ranges from 2 to 250 feet in thickness. The depth to groundwater is approximately 25 to 30 feet below ground surface (bgs), and general flow direction is to the east-southeast.

Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs) and pesticides. Based upon investigations completed to date, the primary contaminants of concern for the site are VOCs and SVOCs. There have been multiple spills at the site of petroleum products and one spill remains open, associated with the removal of two USTs in 1998. Soil - Total benzene, toluene, ethylbenzene, and xylene (BTEX) ranged from non-detect (ND) to 414 ppm. In addition to BTEX, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and naphthalene were detected at elevated levels, with Total VOC concentrations as high as 2092 ppm. SVOCs, in the form of polycyclic aromatic hydrocarbons (PAHs), were detected from ND to 928 ppm. Groundwater - Total VOC concentrations were found as high as 1879 ppb, mostly downgradient of the holders. Total PAH concentrations ranged from non-detect to 601 ppb. In 2019, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department’s Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 99.5 and 38 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. There were no soil vapor samples collected as part of this investigation.

Health Problem: The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

Updated By:	CXMAYCOC

Site Description: Location: The 0.23-acre site is located at 673 Livonia Avenue in Brooklyn, Kings County, NY in an urban area. Site Features: The site currently consists of a vacant, 8,300 square foot, one-story, slab-on-grade, concrete warehouse building with a concrete driveway to the north. A former UST below the northwest corner of the driveway was closed and removed sometime prior to 1991. Current Zoning and Land Use: The site is currently zoned as R6 (medium-density residence district) with a C2-3 (local retail/service district) overlay and is surrounded by other residential and retail commercial parcels. The site is bound to the north by Dumont Avenue, to the east by Wyona Street, to the south by Livonia Avenue as well as the MTA 2 and 3 aboveground subway lines, and to the west by Vermont Street. Past Use of the Site: The current building was constructed between 1954 1966 and was most recently occupied by Fleetwood Cabinet Co for furniture manufacturing and spray-painting operations from 1985 2017. Historical on-site uses include a knitting mill, textile processing, and dry-cleaning. Site reconnaissance during June 2021 observed a vent pipe reportedly connected to an out-of-service 2,500-gallon #2 fuel oil UST under the northern driveway. An empty 55-gallon drum and two active 250-gallon aboveground storage tanks were observed inside the building as well as evidence of spray-painting on the walls and floor slab in the southeast corner. Site Geology and Hydrogeology: Sub-surface samples collected in June 2021 identified soil consisting of red-brown sand and brown sandy silt. Groundwater was encountered at approximately 22.5 feet below grade and flows at a slight gradient (0.001 ft/ft) to the southeast.

Env Problem: Nature and Extent of Contamination: SOIL No VOCs were detected at concentrations exceeding the applicable protection of groundwater soil cleanup objectives (PGSCO). PCE was detected at a maximum concentration of 0.17 parts per million (ppm) compared to the PGSCO of 1.3 ppm, and TCE at a maximum concentration of 0.11 ppm (PGSCO is 0.47 ppm). One SVOC, benzo(a)pyrene, was identified as exceeding the restricted commercial (RC) SCO of 1 ppm at a maximum of 1.69 ppm. One RCRA metal, barium, was detected at a maximum concentration of 723

673 LIVONIA AVENUE (Continued) **S129982655**

ppm (RCSCO is 400 ppm). GROUNDWATER PCE was detected at concentrations exceeding the applicable Ambient Water Quality Standard (AWQS) of 5 parts per billion (ppb) at a maximum concentration of 8.98 ppb. Chloroform was detected at a maximum of 28 ppb (AWQS is 7 ppb). Detected TCE concentrations did not exceed the AWQS of 5 ppb at a maximum of 0.95 ppb. PFOS was detected at a maximum concertation of 0.0747 ppb (AWQS is 0.01 ppb) and PFOA at a maximum of 0.0635 ppb (AWQS is 0.01 ppb). SOIL VAPOR PCE and TCE were detected at maximum concentrations of 180,000 micrograms per cubic meter (ug/m3) and 52,700 ug/m3, respectively. Additionally, the degradation compounds cis-1,2-dichloroethene and trans-1,2-dicholorethene were detected at maximum concentrations of 16,500 ug/m3 and 1,870 ug/m3. Several petroleum-related VOCs were also detected, including benzene (max. 94 ug/m3), toluene (max. 1,800 ug/m3), ethylbenzene (max. 170 ug/m3), and total xylene (max. 800 ug/m3). --- Significant Threat: No evaluation has been made thus far to determine if the contaminants represent a significant environmental threat.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/19/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/20/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database
EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/04/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248

UTM Y (Meters):	4503297.0
Elevation:	74 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

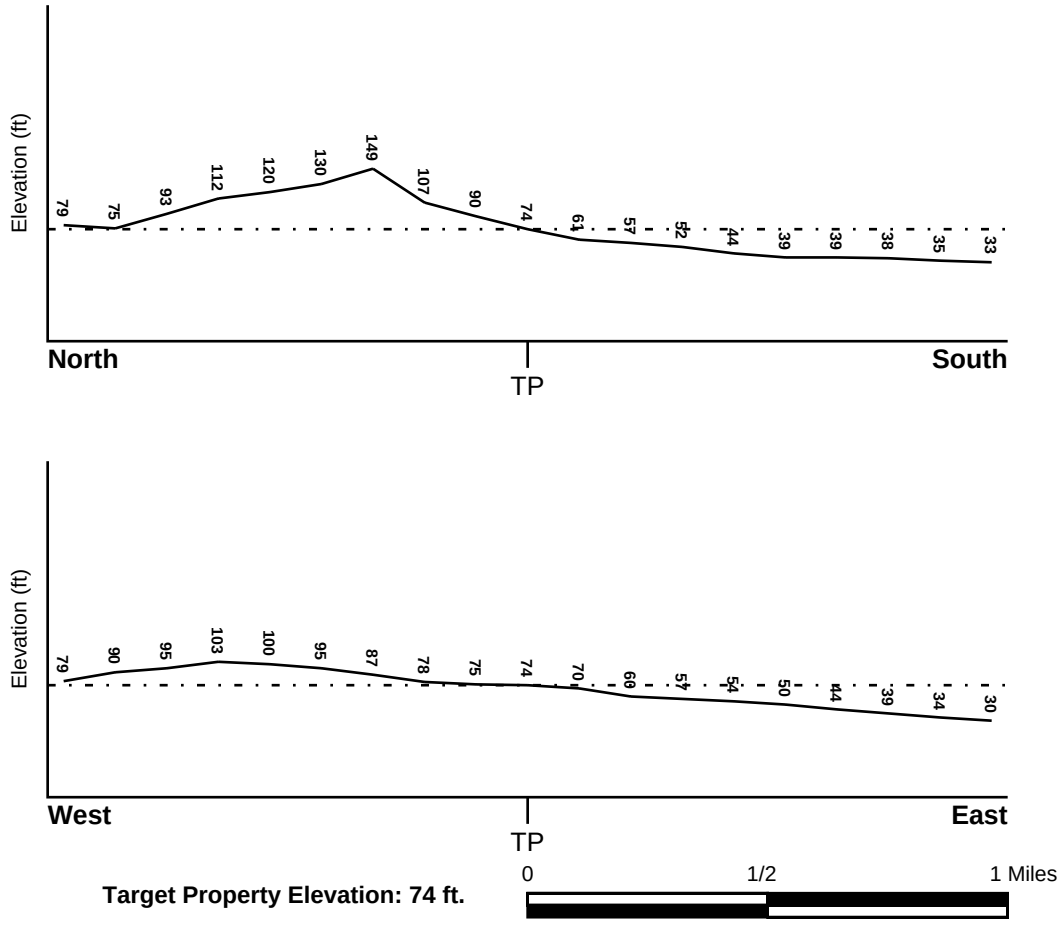

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 74 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970065B	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type

3604970075C	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

Basement	1.370 pCi/L	88%	10%	2%

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

APPENDIX I
PUBLIC RECORDS

2488 Fulton St, Brooklyn, NY 11207

General

1. Overview

Address

Property address	**2488 Fulton St**
Zip code	**11207**
Neighborhood	**Ocean Hill**
Borough	**Brooklyn**
Block & lot	**01577-0017**

Owners

Name	**Fulton Junction LLC**
Address	**377 Pearsall Ave #c Cedarhurst, NY 11516**
Name	**Fulton Junction LLC**
Address	**377 Pearsall Ave #c Cedarhurst, NY 11516**
Real Owners	
Purchase date	**04/26/2017**
Purchase price	**$550,000**
Special factors	**Multiple parcels**
Arm's length	**Yes**

Property Taxes

Tax class	**4**
Property tax	**$15,846**
Property tax tentative	**$16,572**

Lot

Lot sqft	**13,319**
Lot dimensions	**118.92 ft x 112 ft**
Corner lot	**No**

Zoning

Zoning districts	**M1-2**
Zoning map	**17c**
Qualified opportunity zone	**Yes (map)**

Building

Building class	**Licensed Parking Lot (G6)**

Floor Area Ratio (FAR)

Commercial FAR	**2**
Facility FAR	**4.8**
Maximum usable floor area	**26,638**
Unused FAR	**26,638**

Violations

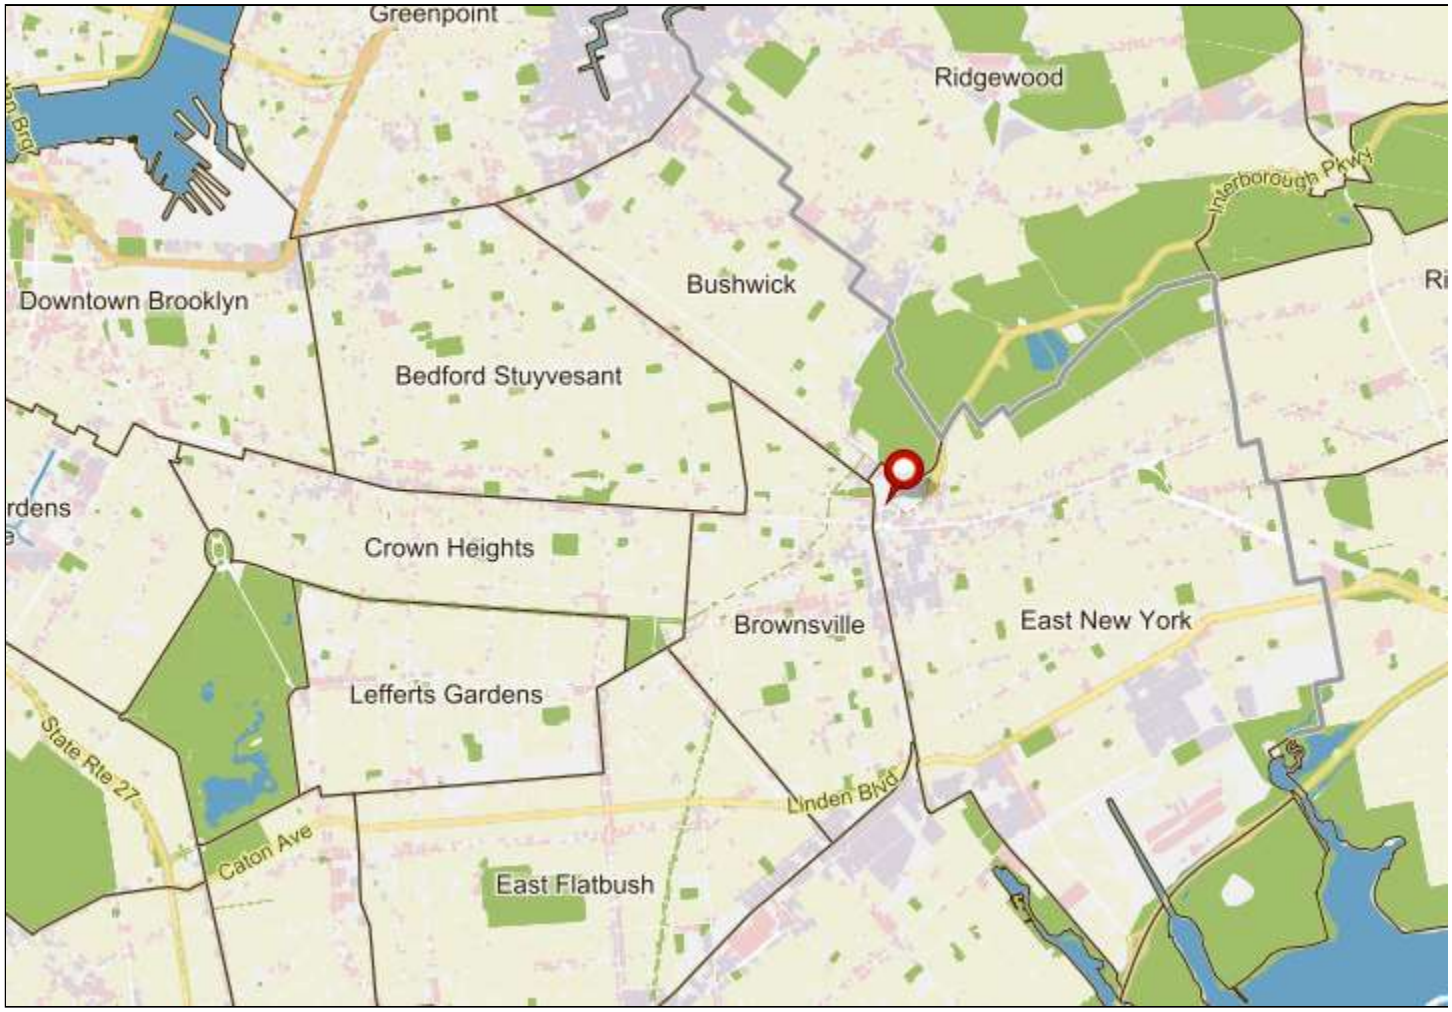

ECB violations	**1**

Occupancy

Taxes

1. Tax Bill

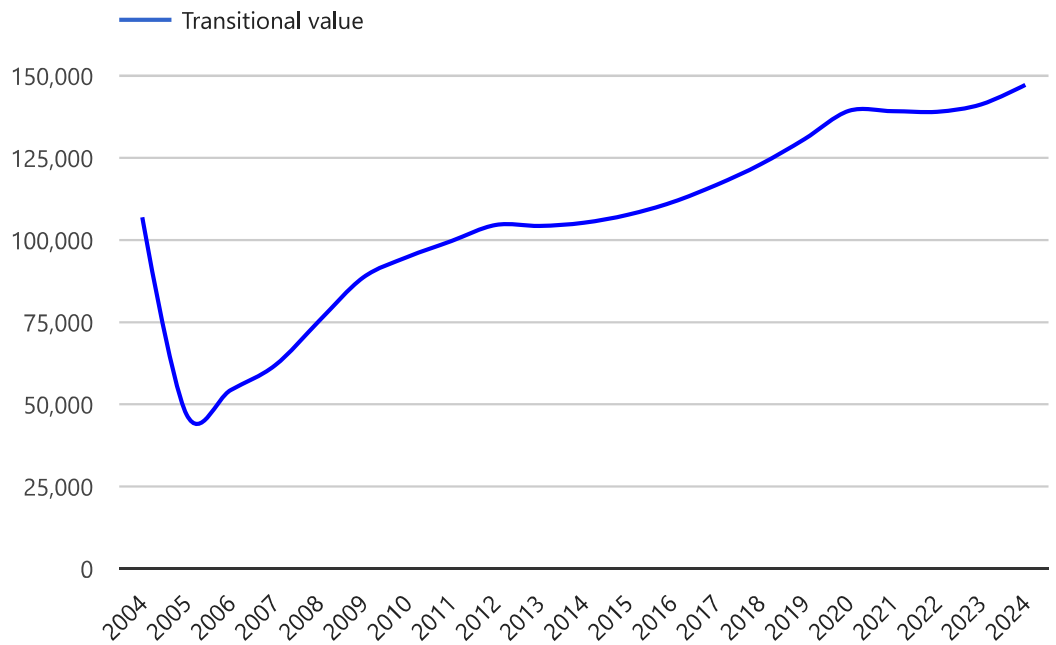

Property tax bill for 7/1/2024 to 6/30/2025	**$15,846**
Estimated property tax bill for 7/1/2025 to 6/30/2026	**$16,572**

2. Key Values in Calculating the Bill

Tax class	**4**
Market value	**$392,000**
Assessed value	**$176,400**
Exemptions granted by city	**$0**
Transitional value	**$147,240**
Transitional exemption value	**$0**
Tax abatements	**$0**

3. Assessed Value Evolution

The state law requires to phase in any changes to the assessed value over a five-year period. In any given year, multiple transitions are being applied to the property, which result in different assessed and transitional values each year. The law requires the use of the lowest value between the two - assessed or transitional - to calculate the property tax bill.Please note that assessment changes due to physical alterations/renovations to the property are not phased in. Additionally, if a tax class change has occurred in the past two years, we are unable to estimate value increases for the next 5 years.

4. Property Tax Calculation

Market Value

The first step is for the City Assessor to determine the *market value* of the property. While the term *market value* would seemingly refer to how much the property would sell for on the open market, in reality the *market value* established by the City Assessor is almost always substantially lower.

		24/25		25/26
Land market value		$392,000		$427,000
Building market value	+	$0	+	$0
Market value	**=**	**$392,000**	**=**	**$427,000**

Assessed Value

Next, the market value is used to compute the assessed value, which is a percentage of the market value. The exact percentage is determined by the tax class of the property. Tax class 1 is assessed at 6% of the market value, and tax classes 2,3 and 4 are assessed at 45%.

		24/25		25/26
Market value		$392,000		$427,000
Assessment ratio	x	45%	x	45%
Maximum assessed value	**=**	**$176,400**	**=**	**$192,150**

Transitional Value

To protect property owners from sudden large increases in property tax, the state limits how quickly the city can increase the assessed value. Typically these limits are applied when the City Assessor makes a big increase to the market value. Without the limits the assessed value would increase by a similar percentage. Instead, the change to the assessed value is phased in over a number of years.

		24/25		25/26
Assessed value		$176,400		$192,150
Exemptions granted by city	-	$0	-	$0
Net assessed value	**=**	**$176,400**	**=**	**$192,150**

The market value of this property was increased in previous years and the assessed value is currently being phased in. Because this property is in **tax class 4**, the assessment cannot be raised more than 8% from the year before or 30% over five years. Assessed value cannot be raised more than 45% from market value.

		24/25		25/26
Transitional value		$147,240		$153,990
Transitional exemption value	-	$0	-	$0
Transitional net value	**=**	**$147,240**	**=**	**$153,990**

Taxable Value

The *taxable value*, for 24/25, is the smaller of the city's net assessed value and the transitional net assessed value.

		24/25		25/26
Taxable value	=	$147,240	=	$153,990

Property Tax

Current tax is calculated by multiplying the taxable value (the assessed value minus any exemptions) by the tax rate. The city also grants some properties incentives called tax abatements, which are subtracted directly from the current tax. This results in the property tax, the amount the current owner pays.

Tax description	Billable value 24/25		Tax rate 24/25		Tax bill 24/25
Current tax	$147,240	x	10.7620%	=	$15,846
Property tax				**=**	**$15,846**

Tax description	Billable value 25/26		Tax rate 24/25		Tax bill 25/26
Current tax estimated	$153,990	x	10.7620%	=	$16,572
Total abatements 24/25 Q3				-	$0
Property tax estimated				**=**	**$16,572**

For more information, you can view this property's assessment, tax bill, and account statements by clicking here and entering the Borough, Block, & Lot.

This map shows property tax in correlation with square footage of the property.

Above $10.00	$4.00 - $5.00
$9.00 - $10.00	$3.00 - $4.00
$8.00 - $9.00	$2.00 - $3.00
$7.00 - $8.00	$1.00 - $2.00
$6.00 - $7.00	Below $1.00
$5.00 - $6.00	No Data

5. Tentative Values

Every year in January, the NYC Department of Finance Commissioner publishes the tentative property assessment roll for the current fiscal year. All properties are valued by law according to their condition on the taxable status date of January 5th. Owners who believe that the Department of Finance has used incorrect information to determine their market value may file forms providing corrections. After Finance verifies the complaints, the agency will make any corrections before the final assessment roll is published on May 25. The final roll will also include changes, based on the decisions made by the New York City Tax Commission, an independent City agency, as well as new information Finance gathers about abatements, exemptions and other adjustments. In June, Finance will use the final roll and new tax rates adopted by the City Council to generate property tax bills for the fiscal year beginning July 1st.

Tentative Transitional Values

Land value	**$153,990**
Total value	**$153,990**
Exemption value	**$0**

Tentative Actual Values

Land value	**$427,000**
Total value	**$427,000**
Exemption value	**$0**

Development

1. Zoning

New York City is divided into three basic *zoning districts:* residential (R), commercial (C) and manufacturing (M). These basic zoning districts are subdivided by the intensity of use. Development is governed by the use, bulk, and parking requirements of the zoning district.

Residence districts
- Low density residence
- Medium and high density residence

Commercial districts
- Neighborhood commercial
- General commercial
- Specialty commercial

Manufacturing districts
- Districts that permit residence
- Districts that do not permit residence

- Parks
- Battery Park

Zoning overlays
- Special purpose
- Limited height d
- Commercial ove

Rezoning
- Rezoning propos
- Rezoning recent

Zoning Designation

Manufacturing **M1-2**

Rezoning Projects

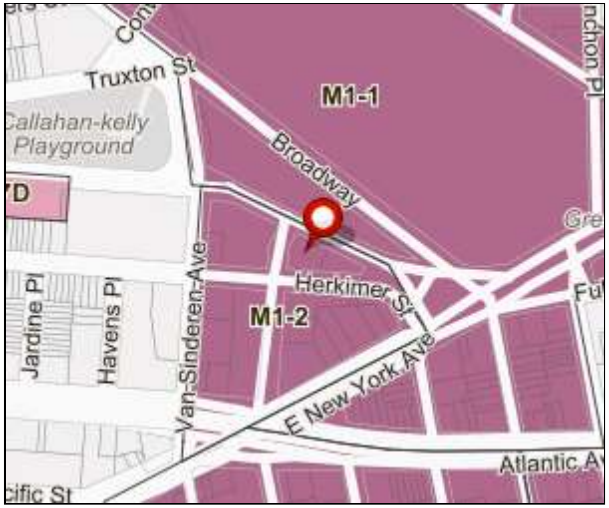

We have no information to indicate that there is a rezoning planned.

For more information about zoning district regulations, click here.

Parcel Vicinity

Frontage(s) **Williams Place(narrow)**
Fulton Street(wide)
Herkimer Street(narrow)
14 Street/Canarsie Line(narrow)

Manufacturing M1-2

M1 districts range from the Garment District in Manhattan and Port Morris in the Bronx with multistory lofts, to parts of Red Hook or College Point with one- or two-story warehouses characterized by loading bays. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. M1-1, M1-2 and M1-3 districts are subject to parking requirements based on the type of use and size of an establishment. More info

Map Disclaimer: Our maps are not official zoning maps. The print version of the NYC Zoning Resolution, which includes the zoning maps, together with any amendments adopted by the City Council subsequent to the most recent update to the print version, remains the official version of the Zoning Resolution. All zoning descriptions have been taken from the NYC Planning official source.

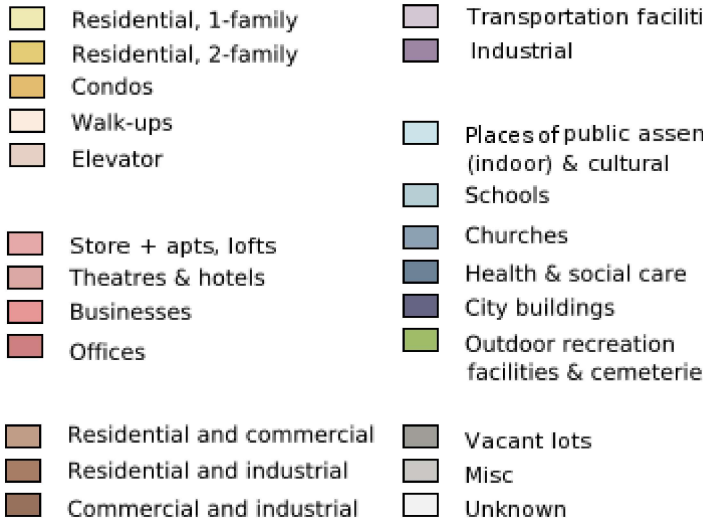

2. Building Class

The *building class* specifies how a property is used or what type of building is present on that property. Building classes range from A to Z (excluding X). There are at most 10 different sub-classes within each building class (ranging from 0 to 10). These building classes cover all property uses from residential and commercial to government buildings and parks.

The full list of building classes can be found here.

Building class: **Licensed Parking Lot (G6)**

3. Floor Area Ratio & Air Rights

There are many rules that limit what you can build on a lot and how large it can be. But the most important is the Floor Area Ratio, or FAR. The FAR is expressed as a ratio of the size of the building in square feet to the size of the lot in square feet. For example, if a lot is 2,000 square feet and has an allowable FAR of 4.0, then you cannot build a building larger than 8,000 square feet. Max FAR depends on several factors including zoning, location and use.

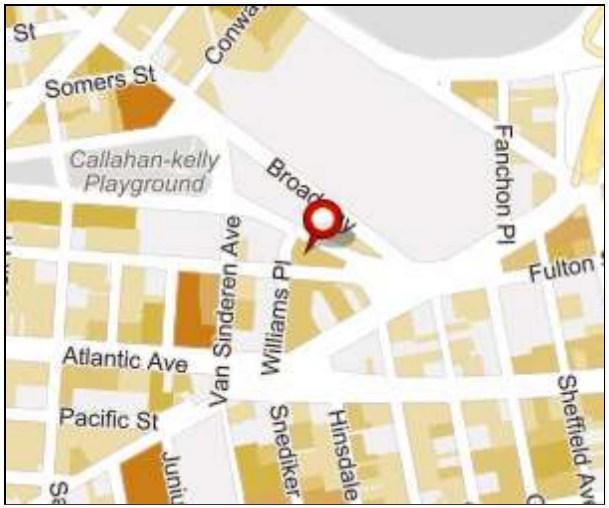

The maximum usable floor area is calculated by multiplying the size of the lot by the larger of the residential or commercial FAR.

Lot sqft		**13,319**
FAR	x	**2**
Maximum usable floor area	=	**26,638**

Available Air Rights by Parcel

The building on this lot is smaller than the maximum set by the FAR. Thus it may be possible to add to the building (either more floors or an extension) or it may be possible to sell the "air rights" to a developer who owns a nearby lot. (Note: other factors may limit what you can do.)

Maximum usable floor area		**26,638**
Usable floor area as built	-	**0**
Unused FAR ("air rights")	=	**26,638**

Opportunity by parcel

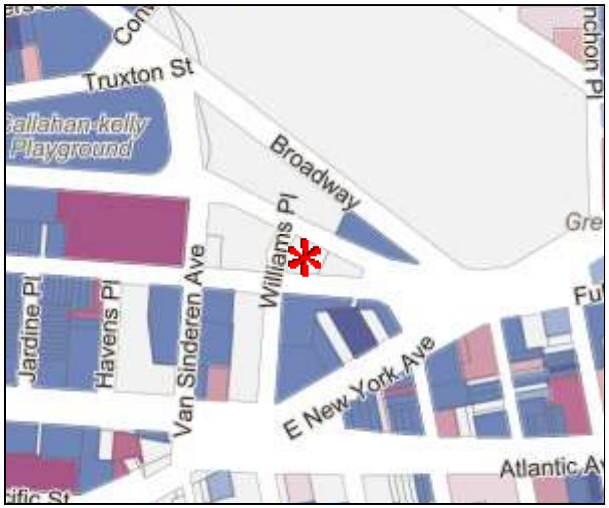

- Above 250.000 sq. ft.
- 100.000 - 250.000 sq. ft.
- 60.000 - 100.000 sq. ft.

Very little opportunity

- 30.000 - 60.000 sq. ft.
- 10.000 - 30.000 sq. ft.
- Below 10.000 sq. ft.

Commercial FAR	**2**
Facility FAR	**4.8**

5. HPD Alternative Enforcement Program

The HPD Alternative Enforcement Program map is based on the current month's HPD violations in a building divided by the number of units in the building. It takes in consideration the open hazardous and immediately hazardous violations (I/B/C class) in the last 5 years.

Properties over the HPD-AEP threshold

- More than 600% over
- 300% to 600% over
- Up to 300% over

Properties below the HPD-AEP threshold

- 80% to 99%
- 60% to 80%
- 50% to 60%

HPD-AEP threshold for buildings having:

3 to 14 units = 5 violations/unit

15 units or more = 3 violations/unit

For more information, visit the HPD website.

Neighborhood

1. Area Overview

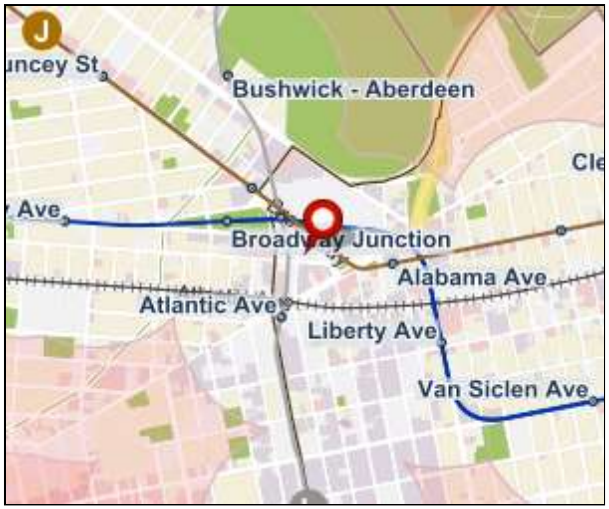

Walk Score
87 /100. Very Walkable

Transit Score
100 /100. Rider's Paradise

Bike Score
59 /100. Bikeable

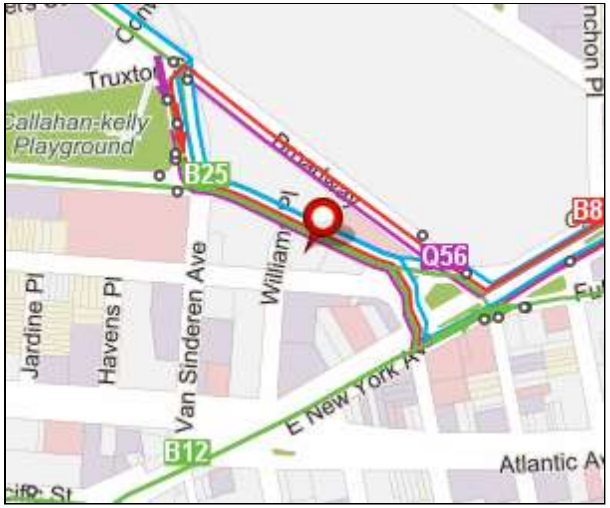

2. Transportation

On this color-coded map, view the nearest subway station for each building.

Houses with mortgages	**66.8%**

Wealth

Median value for units with a mortgage	**$673,300**
Median value for units without a mortgage	**$629,700**
Median gross rent	**$1,443**
Median mobile home values	**$0**
Median housing costs per month	**$1,549**
Population in poverty	**27.3%**

Violations

1. HPD Violations

When excessive violations are present, this can adversely affect the support given by The NYC Department of Housing Preservation and Development (HPD). These violations can result in building-wide inspections, fees, and the requirement of extensive repair work to correct underlying conditions. In some cases, outstanding violations may result in a lien being placed on the property. It is also substantially more difficult to mortgage a building with extensive violations.

We do not have any record of violations in our database. Status can be verified here.

2. 311 Complaints

Created	Agency	Type	Descriptor	Disposition	Closed
07/05/2022	NYPD	Encampment		The Police Department visited the location and no Encampment was found.	07/05/2022
05/16/2022	NYPD	Encampment		The Police Department visited the location and no Encampment was found.	05/16/2022
05/06/2022	NYPD	Encampment		The Police Department visited the location and no Encampment was found.	05/06/2022
04/07/2022	NYPD	Encampment		The Police Department visited the location and has referred the complaint to the Department of Homeless Services (DHS) for further action. DHS will inspect the condition and update your Service Request with more information.	04/07/2022
04/07/2022	DHS	Encampment		The Department of Homeless Services (DHS) visited the location and is coordinating with their agency partners to address the condition. No further information will be available with 311.	04/07/2022
04/01/2022	NYPD	Encampment		The Police Department visited the location and no Encampment was found.	04/01/2022

Complaint status can be verified here.

3. ECB Violations

There are eleven city agencies that administer the City's quality-of-life laws and issue Notices of Violation (NOVs) for alleged violations. The ECB is a separate and independent agency that hears challenges to those NOVs. The agencies that issue the most violations for real estate are:

- Department of Buildings (DOB)
- Department of Environmental Protection (DEP)
- Fire Department (FDNY)
- Landmarks Preservation Commission (LPC)
- Department of Sanitation (DSNY)

Violation ID	Issue date	Type	Severity	Status	Link to violation
34055227Y	03/19/1991	Construction	Non-hazardous	Resolve	
Work without a permit. Construction of an 8 foot by 10 foot stucco covered concrete block building in the southwest corner of the lot without a permit.					
34050623N	02/14/1991	Construction	Non-hazardous	Active	
Work without a permit-one story masonary structure approx 25'x60' has been constructed without first obtaining a permit from this dept remedy-file required plan and application and obtain a permit or remove ill					

Please note: the NYC Department of Buildings is the only authoritative source for information on ECB violations. Verify the status of the violation on DOB website.

Records are obtained from ECB and updated weekly.

4. Neighborhood Complaints

Created	Agency	Type	Descriptor	Disposition	Closed
07/15/2020	DOHMH	Rodent	Rat sighting		
06/02/2020	DOT	Street sign - missing	St name - attached to pole		
06/02/2020	DOT	Sidewalk condition	Broken sidewalk		
07/20/2017	NYPD	Illegal parking	Blocked hydrant	The Police Department responded and upon arrival those responsible for the condition were gone.	07/20/2017
07/20/2017	NYPD	Illegal parking	Parking permit improper use	The Police Department reviewed your complaint and provided additional information below.	07/20/2017
07/31/2014	NYPD	Blocked driveway	No access	The Police Department responded and upon arrival those responsible for the condition were gone.	07/31/2014
08/13/2010	NYPD	Blocked driveway	Partial access		08/13/2010

Risk

1. FEMA Flood Zones

Use this map to determine if the property is in a flood zone.

Occupancy

Taxes

1. Tax Bill

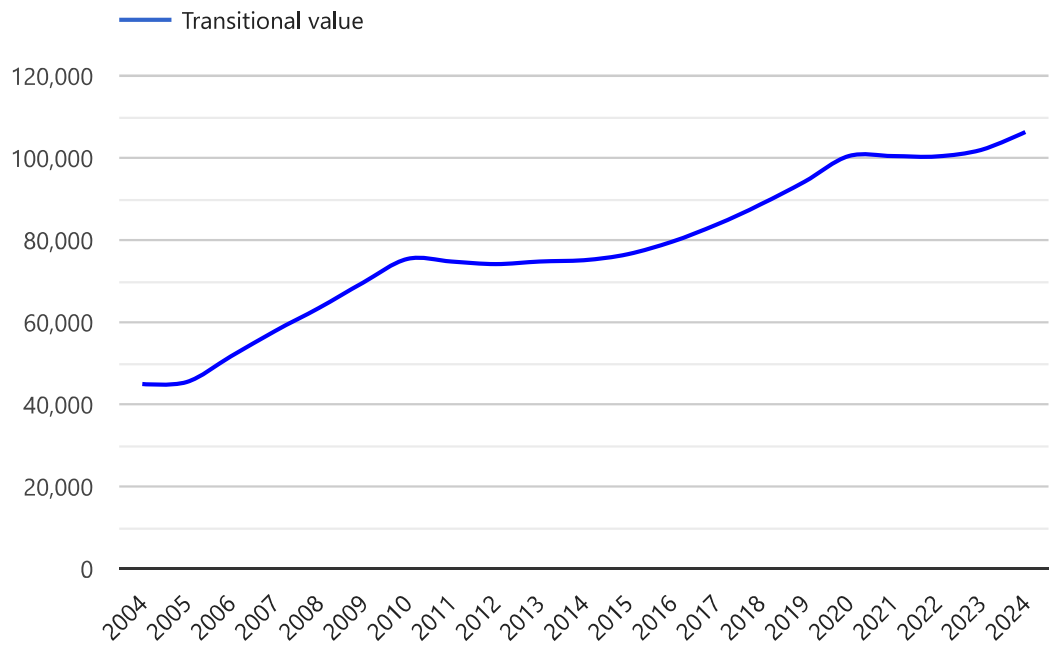

Property tax bill for 7/1/2024 to 6/30/2025	**$11,439**
Estimated property tax bill for 7/1/2025 to 6/30/2026	**$11,962**

2. Key Values in Calculating the Bill

Tax class	**4**
Market value	**$283,000**
Assessed value	**$127,350**
Exemptions granted by city	**$0**
Transitional value	**$106,290**
Transitional exemption value	**$0**
Tax abatements	**$0**

3. Assessed Value Evolution

The state law requires to phase in any changes to the assessed value over a five-year period. In any given year, multiple transitions are being applied to the property, which result in different assessed and transitional values each year. The law requires the use of the lowest value between the two - assessed or transitional - to calculate the property tax bill.Please note that assessment changes due to physical alterations/renovations to the property are not phased in. Additionally, if a tax class change has occurred in the past two years, we are unable to estimate value increases for the next 5 years.

4. Property Tax Calculation

Market Value

The first step is for the City Assessor to determine the *market value* of the property. While the term *market value* would seemingly refer to how much the property would sell for on the open market, in reality the *market value* established by the City Assessor is almost always substantially lower.

		24/25		25/26
Land market value		$127,000		$127,000
Building market value	+	$156,000	+	$181,000
Market value	**=**	**$283,000**	**=**	**$308,000**

Assessed Value

Next, the market value is used to compute the assessed value, which is a percentage of the market value. The exact percentage is determined by the tax class of the property. Tax class 1 is assessed at 6% of the market value, and tax classes 2,3 and 4 are assessed at 45%.

		24/25		25/26
Market value		$283,000		$308,000
Assessment ratio	x	45%	x	45%
Maximum assessed value	**=**	**$127,350**	**=**	**$138,600**

Transitional Value

To protect property owners from sudden large increases in property tax, the state limits how quickly the city can increase the assessed value. Typically these limits are applied when the City Assessor makes a big increase to the market value. Without the limits the assessed value would increase by a similar percentage. Instead, the change to the assessed value is phased in over a number of years.

		24/25		25/26
Assessed value		$127,350		$138,600
Exemptions granted by city	-	$0	-	$0
Net assessed value	**=**	**$127,350**	**=**	**$138,600**

The market value of this property was increased in previous years and the assessed value is currently being phased in. Because this property is in **tax class 4**, the assessment cannot be raised more than 8% from the year before or 30% over five years. Assessed value cannot be raised more than 45% from market value.

		24/25		25/26
Transitional value		$106,290		$111,150
Transitional exemption value	-	$0	-	$0
Transitional net value	**=**	**$106,290**	**=**	**$111,150**

Taxable Value

The *taxable value*, for 24/25, is the smaller of the city's net assessed value and the transitional net assessed value.

		24/25		25/26
Taxable value	=	$106,290	=	$111,150

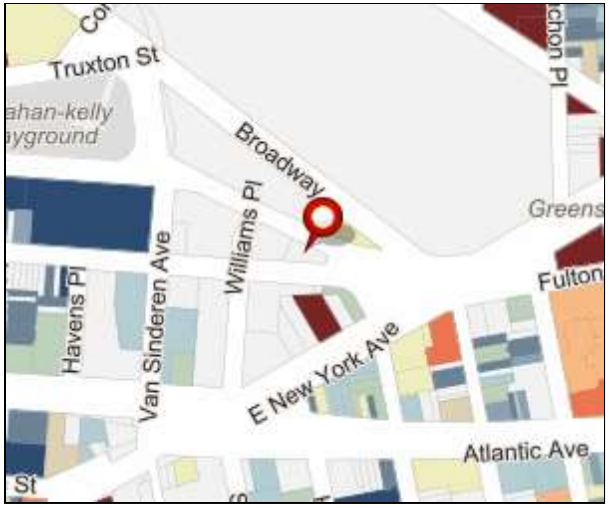

Property Tax

Current tax is calculated by multiplying the taxable value (the assessed value minus any exemptions) by the tax rate. The city also grants some properties incentives called tax abatements, which are subtracted directly from the current tax. This results in the property tax, the amount the current owner pays.

Tax description	Billable value 24/25		Tax rate 24/25		Tax bill 24/25
Current tax	$106,290	x	10.7620%	=	$11,439
Property tax				**=**	**$11,439**

Tax description	Billable value 25/26		Tax rate 24/25		Tax bill 25/26
Current tax estimated	$111,150	x	10.7620%	=	$11,962
Total abatements 24/25 Q3				-	$0
Property tax estimated				**=**	**$11,962**

For more information, you can view this property's assessment, tax bill, and account statements by clicking here and entering the Borough, Block, & Lot.

This map shows property tax in correlation with square footage of the property.

Above $10.00	$4.00 - $5.00
$9.00 - $10.00	$3.00 - $4.00
$8.00 - $9.00	$2.00 - $3.00
$7.00 - $8.00	$1.00 - $2.00
$6.00 - $7.00	Below $1.00
$5.00 - $6.00	No Data

5. Tentative Values

Every year in January, the NYC Department of Finance Commissioner publishes the tentative property assessment roll for the current fiscal year. All properties are valued by law according to their condition on the taxable status date of January 5th. Owners who believe that the Department of Finance has used incorrect information to determine their market value may file forms providing corrections. After Finance verifies the complaints, the agency will make any corrections before the final assessment roll is published on May 25. The final roll will also include changes, based on the decisions made by the New York City Tax Commission, an independent City agency, as well as new information Finance gathers about abatements, exemptions and other adjustments. In June, Finance will use the final roll and new tax rates adopted by the City Council to generate property tax bills for the fiscal year beginning July 1st.

Tentative Transitional Values

Land value	**$57,150**
Total value	**$111,150**
Exemption value	**$0**

Tentative Actual Values

Land value	**$127,000**
Total value	**$308,000**
Exemption value	**$0**

Development

1. Zoning

New York City is divided into three basic *zoning districts:* residential (R), commercial (C) and manufacturing (M). These basic zoning districts are subdivided by the intensity of use. Development is governed by the use, bulk, and parking requirements of the zoning district.

Zoning Designation

Manufacturing **M1-2**

Rezoning Projects

We have no information to indicate that there is a rezoning planned.

For more information about zoning district regulations, click here.

Parcel Vicinity

Frontage(s) **Fulton Street(wide)**
Herkimer Street(narrow)
Williams Avenue(narrow)

Manufacturing M1-2

M1 districts range from the Garment District in Manhattan and Port Morris in the Bronx with multistory lofts, to parts of Red Hook or College Point with one- or two-story warehouses characterized by loading bays. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. M1-1, M1-2 and M1-3 districts are subject to parking requirements based on the type of use and size of an establishment. More info

Map Disclaimer: Our maps are not official zoning maps. The print version of the NYC Zoning Resolution, which includes the zoning maps, together with any amendments adopted by the City Council subsequent to the most recent update to the print version, remains the official version of the Zoning Resolution. All zoning descriptions have been taken from the NYC Planning official source.

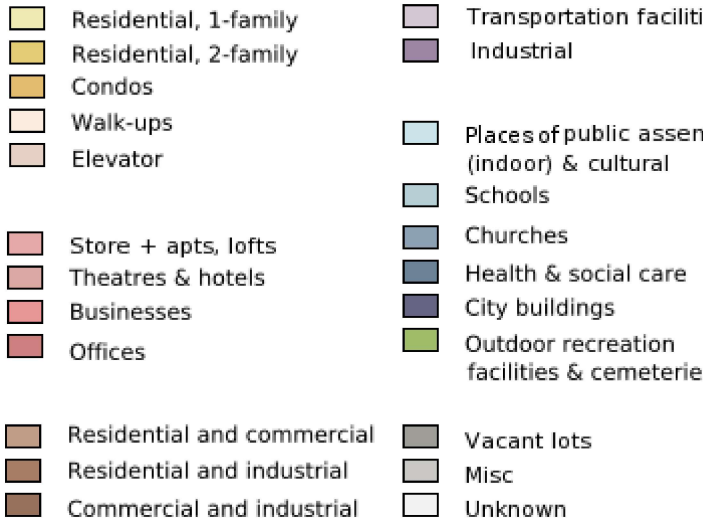

2. Building Class

The *building class* specifies how a property is used or what type of building is present on that property. Building classes range from A to Z (excluding X). There are at most 10 different sub-classes within each building class (ranging from 0 to 10). These building classes cover all property uses from residential and commercial to government buildings and parks.

The full list of building classes can be found here.

Building class: **Licensed Parking Lot (G6)**

3. Floor Area Ratio & Air Rights

There are many rules that limit what you can build on a lot and how large it can be. But the most important is the Floor Area Ratio, or FAR. The FAR is expressed as a ratio of the size of the building in square feet to the size of the lot in square feet. For example, if a lot is 2,000 square feet and has an allowable FAR of 4.0, then you cannot build a building larger than 8,000 square feet. Max FAR depends on several factors including zoning, location and use.

The maximum usable floor area is calculated by multiplying the size of the lot by the larger of the residential or commercial FAR.

Lot sqft		**9,375**
FAR	x	**2**
Maximum usable floor area	=	**18,750**

Available Air Rights by Parcel

The building on this lot is smaller than the maximum set by the FAR. Thus it may be possible to add to the building (either more floors or an extension) or it may be possible to sell the "air rights" to a developer who owns a nearby lot. (Note: other factors may limit what you can do.)

Maximum usable floor area		**18,750**
Usable floor area as built	-	**0**
Unused FAR ("air rights")	=	**18,750**

Opportunity by parcel

- Above 250.000 sq. ft.
- 100.000 - 250.000 sq. ft.
- 60.000 - 100.000 sq. ft.

Very little opportunity

- 30.000 - 60.000 sq. ft.
- 10.000 - 30.000 sq. ft.
- Below 10.000 sq. ft.

Commercial FAR	**2**
Facility FAR	**4.8**

- 5 to 6 Stories
- 4 Stories
- 3 Stories
- 2 Stories
- 1 Story
- No data

5. HPD Alternative Enforcement Program

The HPD Alternative Enforcement Program map is based on the current month's HPD violations in a building divided by the number of units in the building. It takes in consideration the open hazardous and immediately hazardous violations (I/B/C class) in the last 5 years.

Properties over the HPD-AEP threshold

- More than 600% over
- 300% to 600% over
- Up to 300% over

Properties below the HPD-AEP threshold

- 80% to 99%
- 60% to 80%
- 50% to 60%

HPD-AEP threshold for buildings having:

3 to 14 units = 5 violations/unit

15 units or more = 3 violations/unit

For more information, visit the HPD website.

Wealth

Median value for units with a mortgage	**$673,300**
Median value for units without a mortgage	**$629,700**
Median gross rent	**$1,443**
Median mobile home values	**$0**
Median housing costs per month	**$1,549**
Population in poverty	**27.3%**

Violations

1. HPD Violations

When excessive violations are present, this can adversely affect the support given by The NYC Department of Housing Preservation and Development (HPD). These violations can result in building-wide inspections, fees, and the requirement of extensive repair work to correct underlying conditions. In some cases, outstanding violations may result in a lien being placed on the property. It is also substantially more difficult to mortgage a building with extensive violations.

We do not have any record of violations in our database. Status can be verified here.

2. 311 Complaints

Created	Agency	Type	Descriptor	Disposition	Closed
07/29/2024	DEP	Water system	Hydrant running (WC3)		
05/19/2023	DEP	Water system	Hydrant leaking (WC1)	The Department of Environmental Protection investigated this complaint and shut the running hydrant.	05/21/2023
04/29/2021	NYPD	Encampment		The Police Department visited the location and no Encampment was found.	04/29/2021
10/13/2020	NYPD	Homeless street condition		This complaint does not fall under the Police Department's jurisdiction.	10/13/2020

Complaint status can be verified here.

3. Neighborhood Complaints

Created	Agency	Type	Descriptor	Disposition	Closed

Form 54-80M-1026084(51) 114

DEPARTMENT OF HOUSING AND BUILDINGS

gmb BOROUGH OF BROOKLYN , CITY OF NEW YORK

No. 138741

Date MAR 25 1954

CERTIFICATE OF OCCUPANCY

(Standard form adopted by the Board of Standards and Appeals and issued pursuant to Section 646 of the New York Charter, and Sections C26-181.0 to C26-187.0 inclusive Administrative Code 2.1.3.1. to 2.1.3.7. Building Code.)

This certificate supersedes C. O. No.

To the owner or owners of the building or premises:

THIS CERTIFIES that the ~~new~~ altered ~~existing~~ building premises located at 2488 to 2514 Fulton Street; S/E cor. of Williams Place(1/15) N/E corner of Herkimer Street 1543/1569 and Williams Place Block 1577 Lot 17 & 26

, conforms substantially to the approved plans and specifications, and to the requirements of the building code and all other laws and ordinances, and of the rules and regulations of the Board of Standards and Appeals, applicable to a building of its class and kind at the time the permit was issued; and

CERTIFIES FURTHER that, any provisions of Section 646F of the New York Charter have been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent.

~~New Building No.~~ Alt. 5453/53 Construction classification—Frame (shed) Vacant land

Occupancy classification—See below Height - stories, - feet.

Date of completion—Const. 3-15-54 Plumb. None Located in Unrestricted Use District.

C Area . Height Zone at time of issuance of permit

This certificate is issued subject to the limitations hereinafter specified and to the following resolutions of the Board of Standards and Appeals: (Calendar numbers to be inserted here)

PERMISSIBLE USE AND OCCUPANCY

STORY	LIVE LOADS Lbs. per Sq. Ft.	PERSONS ACCOMMODATED MALE	FEMALE	TOTAL	USE
On Ground		-	-	-	Parking lot for more than five (5) cars and sale of new and used cars and 8'0" x 6'0" Attendant's frame shed.

TOTAL - AS STATED ABOVE.

NOTE: Frame shed is temporary structure revocable at option of Superintendent.

Borough Superintendent.

CERTIFICATE WILL BE NULL AND VOID IF ALTERED IN ANY MANNER OR ADDITIONS ARE MADE THERETO.

(Page 1)

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division, unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises, upon payment of a fee of fifty cents per copy.

APPENDIX J
SITE INSPECTION CHECKLIST

PHASE I ESA SITE INSPECTION CHECKLIST

Site Address:
2488-2514 Fulton Street, Brooklyn, NY 11207

Inspector:	Date:
Danielle Dulligan	03/26/2025

Site Contact (include phone #):
Chris, Ahern Contractors (tenant of property)

Weather Conditions:
43-52 Degrees F, Cloudy; Wind 2-12mph NNW

Limiting Conditions:
Large trailers around perimeter of property, could not see full ground space.

Property Description – Include # of buildings, floors, basements, occupied vs. unoccupied, etc. Also try to identify potential former use based on visual evidence or discussions with site contact.
Large open parking lot w/ temporary office trailers; Storage trailers- paint and tools; Changing trailers. Three paint storage, Seven changing trailers. All of property occupied by Ahern Contractors Inc., union bridgepainters company.

Adjoining Property Description – General site use, evidence of tanks, monitoring wells, etc.

North:
Fulton street; Auto repair, mixed-use (commercial/residential buildings)

South:
Herkimer Street; NYC Transit Maintenance Facility; Brooklyn Auto Mall- used car sales

East:
Atlantic Avenue

West:
Williams Place; Parking Lot for MTA Transit Authority; Overhead trains (subway)

General Topographic Site Condition and Other Site Notes
Site is one entire block.

Utilities – Visual Inspection and Discussion with Site Contact

Heating & Cooling System:
HVAC for two main office trailers.

Water Supply:
Fire hydrant; Bring water onsite

Sanitary System(s):
Have waste water pumped out. Grey water from showers is collected as is waste from bathrooms.

Electric:
Inside office trailers.

Emergency Generator? Yes / No (If Yes, location, size, type, description, fuel)
Yes, diesel, 35K.

Site Features – Visual Inspection and Discussion with Site Contact (If yes for any describe in detail)

Aboveground Storage Tanks (ASTs):
None observed.

Underground Storage Tanks (USTs):
None observed.

Hazardous and Non-Haz Chemical Storage:
Paint and diesel storage (~30 cans); 2 black 55-gal drums observed west side of site, was told they were empty. All lead paint from outside of site work disposed of offsite (as is truck wash)

Waste Generation, Storage and Disposal:
Grey water disposed of through facility and exported offsite.

PCB Containing Equipment (transformers or hydraulic lifts present?):
None observed. Gas operated forklift.

Interior Drains, Trenches or Sumps:
None observed.

Interior Stains or Corrosion:
None observed

Unusual Odors:
None observed

Interior Pools of Liquid:
None observed.

Stained Soils, Pavement or Stressed Vegetation:
Outside yard had stains on floor, beneath diesel garbage trucks.

Drums:
Two 55-gal drums, was told they were empty.

Indications of Solid Waste Disposal:
None observed.

Exterior Ponds, Pits or Lagoons:
None observed.

Wastewater or Storm Water Discharge / Disposal:
None observed.

Oil/Water Separators:
None observed.

Septic Systems / Cesspools:

None observed.

Wells:

None observed.

Petroleum or Natural Gas Pipelines or Easements:

None observed

Other General Observations:

Interview Information

Contact Name:	Chris
Relationship to Site:	Yard foreman for Ahern Contractors, tenant of property.
Years Associated with Site:	Approximately 1.5 years

Topics Discussed:

• The site is a yard for trucks and material storage for their site work.
• Ahern Contractors, Inc. does work with lead paint, but all trucks are washed offsite. All employees was in the on-site changing trailers and the grey water is disposed of offsite.
• No USTs are used or are known on site.
• Water supply for the site is either imported water or accessed via a hydrant along Herkimer Street.
• There are above-ground train tracks adjacent to the site, on the western side of the property. These were originally painted with lead-based paint and were repainted approximately two years ago.

Other Observations

Asbestos Containing Material (List Major Potential ACM Identified):

None observed.

Lead Based Paint (If Built Before 1975, identify chipping paint):

None observed- contractor work involves lead paint. Trucks are cleaned offsite. Employees shower onsite and greywater is exported offsite.

Mold (note any evidence and location):

None observed.

General Notes or Additional Information

Two water tanks observed, one west atop storage trailer and one east atop changing trailer. Was told they collected rainwater. Did not observe close up.

Large ditches at entrance of site, Ahern Contractors filled in with stone.

Ahern Contractors repainted the overhead train lines adjacent to the site. They were originally painted with lead-based paint, and redone about two years ago.

APPENDIX K
QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL

Michael Pecoraro .

PROJECT MANAGER

PROFESSIONAL EXPERIENCE
PWGC: 8 years

AREAS OF EXPERTISE
Environmental Due Diligence
Preparation of Investigative and Remedial Plans and Reports
Water, Soil, Air Sampling
Field Work (Protocol, Oversight, Documentation)
Site Investigation/Analysis
PFAS & Other Emerging Contaminants
Health & Safety Protocols
Air Monitoring Protocols
Public Well Installation & Development
Geotechnical Investigation
Electronic Data Deliverable Processing

EDUCATION & TRAINING/CERTIFICATION
MA, Geological and Environmental Sciences, CUNY Queens College
BA, Earth Science/Education, University of Delaware
AS, Liberal Sciences, Nassau Community College
40 Hour HAZWOPER Certification
30 Hour Construction Certification
10 Hour Construction Certification
NYC Site Safety Training Certification
NYSDEC Erosion and Sediment Control Training 4 Hour
Transportation Worker Identification Credential (TWIC)

PROFILE

Mr. Pecoraro is a member of PWGC's Environmental Team where he applies his skills as a Project Manager. His project experience is focused on projects that include groundwater remediation, soil sampling, air quality sampling, Phase I/II environmental site assessments, water supply well installation, and permitting for dredging projects. He has an excellent record in timely completion and maintenance of project coordination, monitoring, and document preparation, while successfully maintaining communication between clients, government regulatory agencies, and other interested parties.

NOTABLE PROJECTS

Glen Isle Waterfront Redevelopment, Glen Cove, NY

Mr. Pecoraro performed air monitoring during intrusive earth work to assure air quality was in accordance with the Community Air Monitoring Program approved by the NYSDEC and USEPA. He prepared Remedial Action Completion Reports and EDD data submittals to the NYSDEC. He conducted soil sampling in accordance with NYSDEC TOGS at Garvies Point. He was responsible for overseeing the on-site contracts perform drilling, impacted soil excavations, hazardous and non-hazardous soil trucking and the importation of acceptable materials to the site. Mr. Pecoraro collected confirmation endpoint samples within remedial excavations and prevented on-site contaminants from migrating off-site. Mr. Pecoraro was responsible for keeping a detailed field log and coordinating daily work on-site with the numerous contractors.

NYCOER E-Designation/VCP Sites

Mr. Pecoraro has provided management services for sites which are included in the NYCOER E-Designation Program. The services included on-site services performed in accordance with the NYCOER approved Remedial Action Work Plan (RAWP) and Health & Safety Plan (HASP), reporting to the NYCOER, coordinating field efforts, and coordinating with contractors and disposal facilities for the removal of impacted soils to obtain site specific cleanup objectives.

NYSDEC Brownfield Cleanup Program Services

Mr. Pecoraro has performed investigations and remediations for sites under the NYSDEC Brownfield Cleanup Program. He has performed Remedial Investigations that included soil, groundwater, and soil vapor sampling, geophysical surveys, and based on those findings assisted in developing an appropriate Remedial Action Plan for the site.

Phase I/II Environmental Site Assessments
Mr. Pecoraro has performed various aspects of Phase I/II ESA scopes of work for commercial and industrial properties, including: historical research; FOIL requests, EDR records, initial site inspections; field work; sampling of soil, groundwater and air; subcontractor oversight, coordinating with assigned laboratories, and general project coordination and management.

Residential/ Commercial Fuel Oil Spills Oversight and Reporting
Mr. Pecoraro has overseen fieldwork for projects such as petroleum spill remediation. He completes spill reports, and coordinates with contractors and the NYSDEC to ensure that the project stays on schedule, is compliant with regulatory guidelines, and meets the client's goals.

UIC Remediation Oversight
Mr. Pecoraro has overseen remediation activities of dry wells (Class V wells) at multiple sites for various clients throughout Suffolk County. He ensures proper soil and sediment removal during VacTruck operations, performs endpoint sampling of storm drains and sanitary systems, coordinates and performs sampling in conjunction with the SCDHS, and prepares reports documenting the remediation and endpoint sampling so a No Further Action letter can be obtained.

Drilling Oversight
Mr. Pecoraro has performed various aspects of the installation of monitoring and injection wells, including: completion of boring logs; USCS soil classification, soil screening, processing logs using Strater; soil and groundwater sampling, health and safety monitoring, conduction of NYSDEC static, pumping, and recovery tests using data loggers, subcontractor oversight, coordinating with assigned laboratories, and general project coordination and management.

Dredged Materials Management Implementation
Mr. Pecoraro has implemented Sediment Sampling and Analysis Plans (SSAPs) for proposed dredge sites to determine the appropriate dredge protocols and materials management. He oversees soil borings collected by the assigned subcontractors, completes boring logs with proper USCS soil classification, processes logs on Strater, and coordinates with the assigned analytical laboratories. He assists in the preparation of dredging permits from multiple regulatory agencies and maintains frequent communication to ensure they are processed in a timely manner.

Public Supply Well Installation – Ocean Beach, Sands Point, Franklinville
Mr. Pecoraro has overseen the installation of public supply wells, including test borings, well installation, well development, and water sampling for multiple supply wells across New York State. He has assisted with the selection of screen intervals using USCS soil classification, collection of groundwater parameters (pH, turbidity, depth to water) during development, and coordination and collection of groundwater samples for drinking water standards.

PFAS Remediation Sites – Suffolk County
Mr. Pecoraro has implemented Site Characterization and Soil Delineation Investigations for sites impacted with per-and poly-fluoroalkyl substances (PFAS) at properties in Suffolk County. Activities included collection of soil and groundwater samples, generation of contour maps to trace the sources of PFAS impact, coordination with NYSDEC and SCDHS, preparation of remedial costs to cure and feasibility studies, and preparation of investigation reports.

Jennifer Lewis, PG .

VICE PRESIDENT

PROFESSIONAL EXPERIENCE
PWGC: 17 years

AREAS OF EXPERTISE
NYSDEC Brownfield Cleanup Program Management
NYCOER Brownfield and "E" Designation Management
Work Plan/Report Preparation
Phase I & II Environmental Site Assessments
Underground Injection Structure Remediation
Underground Storage Tank Remediation
Water, Soil, Air Sampling
Data Management & Interpretation
Groundwater Remediation via Chemical Injection

EDUCATION & TRAINING/CERTIFICATION
MBA, CUNY Baruch, New York, NY
BS, Geology, SUNY Stony Brook, NY
AA, Liberal Arts, Suffolk County Community College, Selden, NY
Licensed Professional Geologist - NYS
OSHA Health & Safety 8-hr Supervisor, 40-hr HazWoper
Construction Management Certification
ASTM Training on Phase I and Phase II Environmental Site Assessments for Commercial Real Estate

PROFILE

As a Vice President, Ms. Lewis has assisted property buyers, sellers, and developers navigate potential environmental concerns, petroleum spills, the New York State (NYS) Brownfield Cleanup Program, the New York City (NYC) E-Designation Program/Voluntary Cleanup Program requirements during property transactions and site development. Ms. Lewis's roles on these projects has included planning, conducting, and reporting soil/groundwater investigations, air quality studies, and instituting remedial measures. Her clients, ranging from developers to attorneys to municipal agencies, benefit from her expertise in overseeing Phase I and II Environmental Site Assessments (ESAs), Remedial Investigations, cost to cure estimates for financial institutions, and Brownfields projects. Ms. Lewis coordinates with clients and attorneys to prepare plans for approval by federal, state, and local agencies (e.g., Remedial Action Plans, Health and Safety Plans, Investigation Work Plans, Interim Remedial Measures) and monitors each project's day-to-day progress to meet the client's objectives and regulatory requirements.

NOTABLE PROJECTS

Phase I & II Environmental Site Assessment

Ms. Lewis manages Phase I & II ESA preparation, implementation, and completion. For each project, she provides a customized scope of work and relevant documentation to provide clients with pertinent information. She performs Phase I & Phase II ESAs for private clients, environmental attorneys, municipalities, and lending institutions for use in property transactions according to ASTM Standards.

Brownfield Redevelopment

AvalonBay Communities, Inc. – Former Darby Drug Facility, Rockville Centre, NY – NYSDEC Brownfield Cleanup Program Implementation During Development

The Former Darby Drugs Distribution Center was a commercial warehouse formerly occupied by a textile company which was a source of PCE contamination to soil and groundwater beneath the site. The site was enrolled in the NYSDEC Brownfield Cleanup Program (BCP). Ms. Lewis implemented an Interim Remedial Measure which included a sophisticated soil excavation and dewatering program within a warehouse, chemical injections into the groundwater, and UIC remediation. Ms. Lewis then documented the Interim Remedial Measure effort and prepared an Alternatives Analysis and a Remedial Action Work Plan to provide a scope for additional remediation and a Final Engineering Report and a Site Management Plan to document the results of the remedial action and protective steps to follow for the future use of the site.

Brownfield Redevelopment

Coney Island Realty - NYSDEC BCP Site

During the Interim Remedial Measure Phase, Ms. Lewis coordinated the soil excavation, community air monitoring, and sampling activities. Ms. Lewis also prepared reports detailing the Supplemental Remedial Investigation and Interim Remedial Measure, as

well as the Remedial Action Work Plan to provide a scope for additional remediation and a Final Engineering Report and a Site Management Plan to document the results of the remedial action and protective steps to follow for the future use of the site. Ms. Lewis has continued overseeing the routine operation and maintenance of a soil vapor extraction system operating at the site.

Suffolk County Department of Public Works (SCDPW) - Suffolk County, NY
UIC Remediation
Ms. Lewis was responsible for maintaining a UIC structure database for SCDPW and conducting UIC investigations and remediations as part of the planned upgrade of SCDPW site sanitary upgrades. Ms. Lewis coordinated closely with SCPWS, SCDHS, and contractors to conduct this work efficiently and within budget.

Brookhaven National Laboratory - Upton, NY
OUIII Western South Boundary/OUI South Boundary Vertical Profiles and Monitoring Well Installation
Ms. Lewis provided sampling services and hydrogeologic oversight for multiple vertical profiles, as part of the on-site OUIII plume evaluation. Her responsibilities included the collection of groundwater samples during sampling. She was responsible for construction observation and documentation for 3 monitoring well installations. After installation, wells were developed by pumping and surging. Ms. Lewis documented field activities and verified the work that was performed in accordance with BNL's Standard Operating Procedures and Project Work Plans. She conducted daily tailgate safety meetings, completed BNL's daily field reports and reported to BNL's Project Manager at the completion of each day.

Pratt Institute – Brooklyn, NY
Well Installation
Ms. Lewis provided over-site for the installation of a geothermal test well. She generated boring logs, documented soil characteristics, and classified in accordance with USGS' Monthly/Quarterly Groundwater/Air Sampling.
Well Monitoring
Ms. Lewis performs routine monitoring and sampling of air and groundwater, and product removal if necessary, at various sites. In addition to the fieldwork at these sites, Ms. Lewis analyzes the data and prepares a site plan and a quarterly report detailing the results and future recommendations.

Brookhaven National Laboratory - Upton, NY
Environmental Protection Division: Groundwater Protection and Remediation
Ms. Lewis supervised the installation of multiple vertical profiles via geoprobe to monitor strontium-90, tritium, and volatile organic compound (VOC) plumes on site. Her responsibilities included the collection of groundwater samples during sampling. Ms. Lewis documented field activities and verified the work that was performed in accordance with BNL's Standard Operating Procedures and Project Work Plans. She conducted daily tailgate safety meetings, completed BNL's daily field reports and reported to BNL's Project Manager at the completion of each day.

Newark-Liberty International Airport
The Automotive Fueling Station at Newark-Liberty Airport is the site of a UST failure regulated by the NJDEP Site Remediation Program. Ms. Lewis performs routine groundwater monitoring and sampling as well as supplemental remedial activities at the site. Ms. Lewis is also responsible for coordinating field activities with regulators and assisting with preparation of periodic Status Reports. Field work and reporting is completed in accordance with NJDEP Technical Requirements for Site Investigation 7.26E.

New York City Housing Authority - New York City, NY
Sub-Surface Investigations
Ms. Lewis performs environmental assessments associated with site specific NYSDEC spill files in order to delineate petroleum and tetrachloroethene impacts. Specifically, collection of soil, groundwater, and sub-surface air samples, oversight of monitoring well installations, preparation and submittal of site assessment reports, and coordination with NYCHA staff and regulatory agencies.

NYCDEP/NYCOER "E" Designation Sites - New York City, NY
RAP & HASP enforcement, air monitoring for particulates and VOCs
Ms. Lewis's services focus on coordinating remedial investigations, preparation of Remedial Investigation Reports, preparing a Remedial Action Scope of Work that considers the contaminants identified at the site as well as the intended use and building design, coordinating the remediation, and documenting the results of the remediation. Ms. Lewis, with the assistance of the architect and mechanical engineer of record, has also prepared Remedial Action Work Plans and Installation Reports for Air and Noise "E"s.

Former Penetrex Remedial Investigation
Ms. Lewis oversaw a chemical injection at a former dry cleaning facility utilizing a Geoprobe® that drilled down to 50 feet below grade and pulled the rods up during the injection.

USEPA Superfund Site
Treatment System O&M
Ms. Lewis provided assistance with the remediation efforts of the down-gradient pond system and oversight of the down-gradient recovery well installation for the USEPA Superfund remediation project. Additional duties included sampling backfill material brought on-site and overseeing the backfilling and compaction of excavations. Allstate Insurance Company – NY Wide Residential/Commercial Fuel Oil Spills Oversight & Reporting - Ms. Lewis oversees fieldwork for projects such as petroleum spill remediation. She completes spill reports, and coordinates with contractors and the NYSDEC to ensure that the project stays on schedule, is compliant with regulatory guidelines, and meets the client's goals.

UIC Control Programs - Suffolk and Nassau Counties, NY
Remediation Oversight
Ms. Lewis has been overseeing the remediation activities of dry wells (Class V wells) at multiple sites for various clients throughout Suffolk and Nassau Counties. She performs endpoint sampling of storm drains and sanitary systems, coordinates and performs sampling in conjunction with the SCDHS and NCDH, and ensures proper soil and sediment removal during VacTruck operations.

Rechler Equity Partners - Melville, NY
250 Miller Place, Hicksville, NY
The subject site, a large commercial property and formerly used by a circuit board manufacturer and trucking company, had a history of chemical uses (i.e. chlorinated solvents, diesel fuel, and gasoline). To determine if subsurface soils had been impacted, PWGC conducted a Phase II investigation for a potential buyer. Ms. Lewis was present during the Phase II and oversaw the project's subsurface investigation-phase. She directed the Geoprobe® operator, and participated in the preparation of the Phase II investigation report. In addition, Ms. Lewis observed the follow-up investigation and remediation performed by the current property owner's consultant.

Franklin Hospital - Valley Stream, NY
Water Sampling
Ms. Lewis collected water samples from the dialysis treatment suite and from a sink in order to determine the source of a bacterial contamination.
