ACRONYMS

Acronym	Definition
AOC	Area of Concern
AST	Aboveground Storage Tank
ASTM	American Society for Testing and Materials
AWQS	Ambient Water Quality Standards
BCP	Brownfield Cleanup Program
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes
COC	Contaminant of Concern
COPC	Contaminants of Potential Concern
CVOCs	Chlorinated Volatile Organic Compounds
DER	Department of Environmental Remediation
EDR	Environmental Data Resources
ELAP	Environmental Laboratory Approval Program
ESA	Environmental Site Assessment
FOIA	Freedom of Information Act
GIS	Geographic Information System
GPR	Ground Penetrating Radar
LPM	Liters per minute
LTANKS	Leaking Tanks
MCL	Maximum Contaminant Level
MDL	Method Detection Limit
mg/kg	Milligrams per kilogram
mg/L	Milligrams per liter
mg/m^3	Milligrams per cubic meter
µg/kg	Micrograms per kilogram
µg/L	Micrograms per liter
$µg/m^3$	Micrograms per cubic meter
msl	Mean sea level
NFA	No Further Action
NYC	New York City
NYS	New York State
NYSDEC	New York State Department of Environmental Conservation
NYSDOH	New York State Department of Health
NYSDOL	New York State Department of Labor
OSHA	Occupational Safety and Health Administration
PAHs	Polycyclic Aromatic Hydrocarbons
PCBs	Polychlorinated Biphenyls
PCE	Tetrachloroethylene
PGM	Portable Gas Monitor
PID	Photoionization detector
PM	Particulate Matter
ppb	Parts per billion
ppm	Parts per million

Acronym	Definition
PVC	Polyvinyl chloride
QA/QC	Quality Assurance/Quality Control
RCRA	Resource Conservation and Recovery Act
RfC	Reference Concentration
RL	Reporting Limit
RSL	Regional Screening Level
SCDHS	Suffolk County Department of Health Services
SCO	Soil Cleanup Objective
SDS	Safety Data Sheets
SMP	Site Management Plan

UST	Underground Storage Tank
VC	Vinyl Chloride
VOCs	Volatile Organic Compounds

PWGC
ENVIRONMENTAL ENGINEERING & CONSULTING

CERTIFICATION

I, Jennifer Lewis, PG, certify that I am currently a Qualified Environmental Professional (QEP) as defined in 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 and that this Remedial Investigation Work Plan (RIWP) was prepared in accordance with applicable statutes and regulations and in substantial conformance with the New York State Department of Environmental Conservation's (NYSDEC's) Division of Environmental Remediation's (DER's) Technical Guidance for Site Investigation and Remediation (DER-10).

I certify that the information and statements in this certification are true. I understand that a false statement made herein is punishable as Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law.

Signature — Date: 1/15/26

It is a violation of Article 145 of New York State Education Law for any person to alter this document in any way without the express written verification of adoption by any New York State licensed engineer in accordance with Section 7209(2), Article 145, New York State Education Law.

1.0 INTRODUCTION

P.W. Grosser Consulting Engineer & Hydrogeologist, D.P.C. (PWGC) has prepared the following Remedial Investigation Work Plan (RIWP) to outline procedures and a scope of work intended to delineate impacted areas of concern at the property identified as 45 Van Sinderen Avenue, Brooklyn, New York (the Site). The proposed Remedial Investigation (RI) is intended to obtain additional subsurface quality data, delineate areas of concern within the Site boundary, and evaluate whether offsite adjacent properties may be impacted.

1.1 Site Description

The Site consists of one parcel located at 45 Van Sinderen Avenue in Brooklyn, New York. The Site is located in the borough of Brooklyn in Kings County and is identified on the NYC Tax Map as Block 1576, Lot 1.

A Site Location Map is included as **Figure 1**. A Site Plan is included as **Figure 2**.

1.2 Site History

Historical usage of the Site includes the following:

- The Site was first developed prior to 1888. The Site was used for coal/lime storage for a lumber yard from approximately 1888 to 1908, gold foil manufacturing from approximately 1932 to 1934, Terminix Insulation in 1940, instrument testing from approximately 1951 to 2007, and as a distribution warehouse and art studio (present day). Historical usage of the Site indicative of recognized environmental conditions (RECs) includes usage as coal and lime storage and gold foil manufacturing.

1.3 Previous Environmental Reports

The Site's environmental history, summarized below, is based upon the following reports that have been prepared for the Site:

- Phase I Environmental Site Assessment (ESA) – CBRE, Inc. prepared September 2018
- Phase II ESA – PWGC prepared May 2024
- Phase I ESA – PWGC prepared June 2025
- Supplemental Phase II ESA – PWGC prepared September 2025

Reports supplied to PWGC and PWGC ESA Reports that are detailed below can be found in **Appendix A**.

1.3.1 Phase I Environmental Site Assessment (September 2018)

CBRE, Inc. prepared a Phase I ESA in September of 2018 for 45 Van Sinderen Avenue. The Phase I ESA did not identify RECs associated with Site; however, the presence of "fill" material (material with fragments of brick, concrete, cinder, etc) commonly found within the five boroughs of New York City was noted to represent an environmental concern and require special handling and disposal if the Site were to be redeveloped.

1.3.2 Phase II Environmental Site Assessment (May 2024)

PWGC performed a Phase II ESA between April 15 and April 16, 2024 for 45 Van Sinderen Avenue (Site) and 2465 Atlantic Avenue (adjoining southern property). The Phase II ESA results for 45 Van Sinderen Avenue are summarized below and includes results from soil borings SB001-B and SB004-B.

A geophysical survey was conducted. Subsurface anomalies indicative of potential USTs, drywells, or other objects which would warrant further investigation were not identified.

Soil quality across the soil borings exhibited the presence of fill material in the top 15 feet. Three soil samples were collected from two soil borings installed across the Site as part of this assessment. Analytical results for each of the three samples did not identify concentrations of Volatile Organic Compounds (VOCs) greater than Unrestricted Use Soil Cleanup Objectives (UUSCOs) with the exception of tetrachloroethene (PCE) at a concentration of 2.3 mg/kg and trichloroethylene (TCE) at a concentration of 1.1 mg/kg in SB001 at 0 to 2 feet. Both concentrations are slightly greater than their respective UUSCOs, but less than their Restricted Residential Use Soil Cleanup Objectives (RRUSCOs). Semi-volatile organic compounds (SVOCs), namely polyaromatic hydrocarbons (PAHs), were detected in SB004 from the 0 to 2-foot interval at concentrations greater than RRUSCOs. Exceedances of metals in SB001 at 0 to 2 feet below the basement included copper exceeding Commercial Use Soil Cleanup Objectives (CUSCOs) and lead, zinc, and mercury exceeding UUSCOs. Exceedances in SB004 in the 0 to 2 foot interval included chromium and zinc exceeding UUSCOs, copper exceeding its CUSCO, and lead and mercury exceeding RRUSCOs. In the SB004 sample collected 13 to 15 feet below the sidewalk level, manganese exceeded its UUSCO. In general, elevated concentrations of SVOCs and metals were identified at locations and depths where the upper layer of fill material was observed, with manganese the only analyte detected greater than UUSCOs in the lower fill layer. Elevated concentrations of VOCs were identified only in samples collected from beneath the building slab and may be associated with the presence of soil vapors.

One soil vapor sample was collected in the northern yard. Soil vapor samples were compared to the NYS Department of Health (NYSDOH) matrices in its Soil Vapor Guidance document (Oct 2006; as amended) to provide guidance. There were no VOC concentrations detected in the soil vapor sample that would warrant mitigation based on NYSDOH matrices; however, concentrations of petroleum related compounds, such as the trimethylbenzenes and BTEX (benzene, toluene, ethylbenzene, xylene) and chlorinated VOCs such as tetrachloroethylene were detected.

The data and spider diagram for this Phase II has been updated to reflect the recent update to NYSDEC Part 375.

1.3.3 Phase I Environmental Site Assessment Report (June 2025)

PWGC prepared a Phase I ESA in June of 2025. The Phase I ESA identified the following RECs associated with Site.

- REC 1 – Historical usage for coal and lime storage.
- REC 2 – Historical usage for gold foil manufacturing

Based on the findings of the Phase I ESA, PWGC recommended that a Supplemental Phase II ESA be performed at the Site consisting of additional soil sampling to more completely characterize subsurface soil and historic fill conditions.

1.3.4 Supplemental Phase II Environmental Site Assessment Report (September 2025)

PWGC prepared a Supplemental Phase II ESA on July 28, 2025 for 45 Van Sinderen Avenue. The Supplemental Phase II ESA included a soil quality evaluation and soil vapor investigation

Six soil samples were collected across two soil borings. Soil quality across the soil borings exhibited the presence of fill material to the deepest interval investigated at 15 feet below grade. One VOC, acetone, was detected at a concentration greater than its UUSCO; however, acetone is a typical laboratory contaminant. SVOCs, namely PAH compounds, were detected at concentrations exceeding UUSCOs and/or RRUSCOs in each of the two 0 to 2 feet soil samples collected from the ground level. These borings were also sampled at 6 to 8 feet which did not contain SVOC exceedances of UUSCOs. RRUSCO exceedances included benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene. Metals were detected in four of the six soil samples at concentrations exceeding UUSCOs. Lead (max 529 mg/kg) was detected in one of those samples at concentrations exceeding RRSCOs and mercury (max 0.317 mg/kg)

was detected in two of the samples at concentrations exceeding RRSCOs. UUSCO exceedances also included total chromium, copper, and zinc.

One sub-slab soil vapor sample was collected beneath the basement of the on-site building, which was previously used for industrial purposes (gold foil manufacturing and coal/lime storage). The sub-slab soil vapor sample contained elevated concentrations of PCE (748 µg/m^3) and TCE (290 µg/m^3); the TCE concentration was at a value that would warrant mitigation based on NYSDOH matrices.

Based on the findings of the Supplemental Phase II ESA, PWGC recommended that soils impacted with VOCs, SVOCs, and metals be handled in accordance with local, state, and federal regulations and guidance pursuant to the New York State Brownfield Cleanup Program if they are to be disturbed and/or removed from the Site for offsite disposal. This should involve appropriate waste characterization sampling to determine if some of the metal impacts (particularly lead) are deemed hazardous. In addition, soil vapor intrusion mitigation is recommended in the basement of 45 Van Sinderen Avenue, including the installation of a sub-slab depressurization system, a vapor barrier, and/or other appropriate soil vapor mitigation methods.

The data and spider diagram for this Phase II has been updated to reflect the recent update to NYSDEC Part 375.

1.4 Current Site Use

The Site is improved with a two-story warehouse and loft building, built in 1921, covering approximately 40% of the lot on the south, with an attached storage yard to the north. The building has a partial cellar covering approximately half the building area on the west, featuring stone rubble walls with a superstructure of wood frame and masonry construction. The Site is currently used as a distribution warehouse and an art studio.

1.5 Surrounding Land Use

The Site is located in an urban, mixed use (commercial/industrial) area in Brooklyn, New York. The Site is bounded by a church to the north, railroad tracks to the east, a sign shop and inn to the south, and Van Sinderen Avenue and garage space to the west. The surrounding land use is shown on **Figure 3**.

1.6 Site Geology

The Site is approximately 70 feet above mean sea level. The stratigraphy of the Site, from the surface down, consists primarily of historical urban fill from grade ranging down to at least 15 feet below grade. Groundwater is estimated to be approximately 59 feet below grade and regional groundwater flow is anticipated to flow towards the southeast according to the United States Geological Survey (USGS) 2013 Groundwater Conditions on Long Island map. Bedrock was not encountered. There are no public water supply wells within one mile of the Site. Based on topographic maps, no permanent surface water bodies are located within a one-mile radius of the Site.

2.0 STANDARDS, CRITERIA, AND GUIDANCE

Based on previous investigations at the Site, the primary contaminants of potential concern (COPC) to be encountered at the Site are chlorinated VOCs, SVOCs (namely PAHs), and metals.

Soil sample results will be compared to the applicable regulations in 6 NYCRR § 375-6.8(a-b), which provide SCOs for Unrestricted Use and Restricted Residential Use. In addition, soil samples are also evaluated against the NYSDEC April 2023 Guidelines for Sampling and Analysis of PFAS Under NYSDEC's Part 375 Remedial Programs.

Groundwater sample results will be compared to the NYSDEC Class GA AWQS or GVs as specified in the Technical Operation and Guidance Series (TOGS 1.1.1) Ambient Water Quality Standards and Guidance Values. In addition, groundwater samples are also evaluated against the NYSDEC April 2023 Guidelines for Sampling and Analysis of PFAS Under NYSDEC's Part 375 Remedial Programs.

Soil vapor results will be evaluated in comparison to the NYSDOH Soil Vapor guidance matrices to determine the type and concentration of analytes present.

3.0 SCOPE OF WORK

The purpose of this RI is to delineate the areal and vertical extent of contaminants in all media at or emanating from the Site, determine the surface and subsurface characteristics of the Site, identify the sources of contamination, the migration pathways, and actual or potential receptors of contaminants, and collect and evaluate data to assess impacts to public health and the environment, including fish and wildlife resource impacts.

3.1 Sampling Methodologies

3.1.1 Soil Sampling Methodology

To characterize soil quality, twelve soil borings will be installed throughout the Site. Boring locations will be focused in areas of potential concern as shown on **Figure 4**. A direct-push drill rig (Geoprobe® 7822DT or equivalent) will be utilized to install the soil borings.

Soils will be collected continuously from ground surface to the terminus of the boring, estimated to be approximately 15 feet below grade. The acetate liners will be cut open and the soil core will be screened for the presence of volatile organic vapors utilizing a PID. Each soil core will be classified by a hydrogeologist using the Unified Soil Classification System (USCS) and soil boring logs developed for each location.

Four samples will be collected from each boring, placed directly into laboratory supplied bottleware, and placed on ice in a cooler for transport to a New York State Department of Health (NYSDOH) Environmental Laboratory Accredited Program (ELAP) certified laboratory. Each sample will be analyzed for the following analytes:

- TCL VOCs by USEPA Method 8260, collected with terracore devices or equivalent
- TCL SVOCs by USEPA Method 8270
- TAL Metals by USEPA Method 6010/7471

The shallower two intervals in each boring will be analyzed for the following additional analytes:

- TCL Pesticides/PCBs by USEPA Method 8081/8082
- Trivalent & Hexavalent Chromium by USEPA Method 7196
- Total Cyanide by USEPA Method 9012
- PFAS by USEPA Method 1633 (NYSDEC list of 40 compounds)
- 1,4-Dioxane by USEPA Method 8270-SIM

The PFAS and 1,4-Dioxane sampling will be conducted in accordance with Guidelines for Sampling and Analysis of PFAS under NYSDEC's Part 375 Remedial Programs (April 2023) as included in **Appendix B**.

Sample locations, depths, rationales, and analyses are detailed in the below table. It is assumed that sidewalk grade elevation is approximately 70 feet across the Site.

Proposed Location	Proposed Depths	Estimated Elevations	Analyses
SB007	1 to 3 feet	69 to 67 feet	Full Part 375 Suite
	5 to 7 feet	65 to 63 feet	Full Part 375 Suite
	9 to 11 feet	61 to 59 feet	VOCs, SVOCs, Metals only
	13 to 15 feet	57 to 55 feet	VOCs, SVOCs, Metals only
SB008	1 to 3 feet	69 to 67 feet	Full Part 375 Suite
	5 to 7 feet	65 to 63 feet	Full Part 375 Suite
	9 to 11 feet	61 to 59 feet	VOCs, SVOCs, Metals only
	13 to 15 feet	57 to 55 feet	VOCs, SVOCs, Metals only
SB009	1 to 3 feet	69 to 67 feet	Full Part 375 Suite
	5 to 7 feet	65 to 63 feet	Full Part 375 Suite
	9 to 11 feet	61 to 59 feet	VOCs, SVOCs, Metals only
	13 to 15 feet	57 to 55 feet	VOCs, SVOCs, Metals only
SB010	1 to 3 feet	69 to 67 feet	Full Part 375 Suite
	5 to 7 feet	65 to 63 feet	Full Part 375 Suite
	9 to 11 feet	61 to 59 feet	VOCs, SVOCs, Metals only
	13 to 15 feet	57 to 55 feet	VOCs, SVOCs, Metals only
SB011	1 to 3 feet	69 to 67 feet	Full Part 375 Suite
	5 to 7 feet	65 to 63 feet	Full Part 375 Suite
	9 to 11 feet	61 to 59 feet	VOCs, SVOCs, Metals only
	13 to 15 feet	57 to 55 feet	VOCs, SVOCs, Metals only
SB012	1 to 3 feet	69 to 67 feet	Full Part 375 Suite
	5 to 7 feet	65 to 63 feet	Full Part 375 Suite
	9 to 11 feet	61 to 59 feet	VOCs, SVOCs, Metals only
	13 to 15 feet	57 to 55 feet	VOCs, SVOCs, Metals only
SB013	1 to 3 feet	69 to 67 feet	Full Part 375 Suite
	5 to 7 feet	65 to 63 feet	Full Part 375 Suite
	9 to 11 feet	61 to 59 feet	VOCs, SVOCs, Metals only
	13 to 15 feet	57 to 55 feet	VOCs, SVOCs, Metals only
SB014	1 to 3 feet	69 to 67 feet	Full Part 375 Suite
	5 to 7 feet	65 to 63 feet	Full Part 375 Suite
	9 to 11 feet	61 to 59 feet	VOCs, SVOCs, Metals only
	13 to 15 feet	57 to 55 feet	VOCs, SVOCs, Metals only
SB015	1 to 3 feet	69 to 67 feet	Full Part 375 Suite
	5 to 7 feet	65 to 63 feet	Full Part 375 Suite
	9 to 11 feet	61 to 59 feet	VOCs, SVOCs, Metals only
	13 to 15 feet	57 to 55 feet	VOCs, SVOCs, Metals only
SB016	1 to 3 feet*	59 to 57 feet	Full Part 375 Suite
	5 to 7 feet	55 to 53 feet	Full Part 375 Suite

Proposed Location	Proposed Depths	Estimated Elevations	Analyses
SB017	1 to 3 feet*	59 to 57 feet	Full Part 375 Suite
	5 to 7 feet	55 to 53 feet	Full Part 375 Suite
SB018	1 to 3 feet	69 to 67 feet	Full Part 375 Suite
	5 to 7 feet	65 to 63 feet	Full Part 375 Suite
	9 to 11 feet	61 to 59 feet	VOCs, SVOCs, Metals only
	13 to 15 feet	57 to 55 feet	VOCs, SVOCs, Metals only

**Feet below cellar slab. Depth interval below grade is 11 to 13 feet and 15 to 17 feet.*

If evidence of contamination is observed at other intervals than those prescribed above, additional samples may be collected to characterize the quality of the soil.

Quality Assurance / Quality Control (QA/QC) sampling will be conducted as discussed in Section 4.0.

3.1.2 Groundwater Sampling Methodology

To characterize groundwater quality, three of the proposed soil borings will be converted into groundwater monitoring wells as shown on **Figure 5**. Based upon the limited height within the building, the anticipated geology beneath the Site likely contains boulders, and the deep depth to groundwater, it is assumed that the feasibility of installing wells within the building is low.

Groundwater monitoring wells will be constructed of two-inch diameter, schedule 40 polyvinyl chloride (PVC) casing and pre-pack screen with 0.010-inch slot. The groundwater monitoring wells will be constructed with a minimum 10-foot screen section and riser to grade unless precluded by hydrogeologic conditions. The screen will be set with a minimum of seven (7) feet into and three (3) feet above the water table at the time of installation. The well annulus will be filled with #2 morie sand (or equivalent), to two feet above the well screen followed by a two-foot bentonite seal. Above the bentonite layer, the annulus around the well will be filled with a cement/bentonite grout, #2 morie sand, or non-impacted drill cuttings. A concrete surface pad (approximately 2 feet by 2 feet by 6-inch) will be installed. The groundwater monitoring wells will be finished with flush mount curb boxes. Groundwater monitoring well construction logs will be prepared for each groundwater monitoring well installed during this RI.

Following installation, the new groundwater monitoring wells will be developed by over-pumping to restore the hydraulic properties of the aquifer. Groundwater monitoring well development will continue until the turbidity of the groundwater is less than or equal to 50 Nephelometric Turbidity Units (NTUs) or when pH, temperature, and conductivity measurements stabilize. Stabilization is considered achieved when three consecutive readings of these field parameters are within five percent of each other over a period of 15 minutes. Groundwater monitoring well development water will be containerized for offsite disposal. Groundwater monitoring wells will be surveyed relative to an arbitrary onsite datum.

Groundwater samples will be collected one week after development and in compliance with the USEPA Low Stress (Low Flow) Purging and Sampling Procedure for The Collection of Groundwater Samples From Monitoring Wells (September 2017). A copy of the procedure is included as **Appendix B**.

Groundwater samples will be placed directly into laboratory supplied bottleware and placed on ice in a cooler for transport to a NYSDOH ELAP certified laboratory. Samples will be analyzed for each of the following analytes listed in the below table:

- TCL VOCs by USEPA Method 8260
- TCL SVOCs by USEPA Method 8270
- TAL Metals by USEPA Method 6010/7471 (total and dissolved)
- TCL Pesticides/PCBs by USEPA Method 8081/8082
- PFAS by USEPA Method 1633 (NYSDEC list of 40 compounds)
- 1,4-Dioxane by USEPA Method 8270-SIM

Groundwater samples for emerging contaminant evaluation will be collected in accordance with Guidelines for Sampling and Analysis of PFAS under NYSDEC's Part 375 Remedial Programs (April 2023).

Sample locations, depths, and rationales are detailed in the below table. It is assumed that sidewalk grade elevation is approximately 70 feet across the Site.

Proposed Location	Proposed Bottom Depth	Estimated Bottom Elevation	Parent Soil Boring
MW001	66 feet	4 feet	SB002
MW002	66 feet	4 feet	SB007
MW003	66 feet	4 feet	SB009

Quality Assurance / Quality Control (QA/QC) sampling will be conducted as detailed in Section 4.0.

3.1.3 Soil Vapor Sampling Methodology

To further evaluate potential soil vapor intrusion for the proposed redevelopment of the Site, six soil vapor sampling points will be installed as shown on **Figure 6**.

Soil vapor sampling point installation and sample collection will be performed in accordance with the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006; as amended).

Sampling points will be installed using a Geoprobe® direct-push drill rig or manually driven rods to a depth comparable to the depth of the future development's foundation footings (approximately 15 feet bgs) or beneath the concrete slab of the existing building. Sampling points will be constructed of a dedicated stainless-steel screen fitted with inert tubing (e.g. polyethylene or Teflon®) to grade. Porous, inert backfill material (e.g., glass beads, washed #1 crushed stone, etc.) will be added to create a sampling zone 1 to 2 feet in length for soil vapor samples. The sampling point will be sealed above the sampling zone with bentonite slurry for a minimum distance of 3 feet to prevent outdoor air infiltration and the remainder of the borehole will be backfilled with clean material. For sub-slab soil vapor samples, the sampling interval will be 1 to 2 inches below the slab.

As part of the vapor intrusion evaluation, a tracer gas will be used in accordance with NYSDOH protocols to serve as a QA/QC device to verify the integrity of the soil vapor probe seal. Helium will be used as the tracer gas and a box will serve to keep it in contact with the probe during testing. A portable monitoring device will be used to analyze a sample of soil vapor for the tracer prior to sampling. If the tracer sample results show a significant presence of the tracer (greater than 10% of the air), the probe seals will be adjusted to prevent infiltration.

Prior to sampling approximately two to three probe volumes will be purged at a flow rate less than 0.2 liters per minute. Soil vapor samples will then be collected using 6-liter SUMMA® canisters. The laboratory will provide batch certified-clean canisters with an initial vacuum of approximately 26 inches of mercury (in. of Hg) for sample collection and flow regulators pre-set to provide uniform sample collection over an approximate 8-hour sampling period. Sample collection will be ceased (i.e., the valve on the canister closed) when 8 hours has passed or approximately 2 in. of Hg vacuum remains in the canister (whichever occurs quicker), leaving a vacuum in the canister as a means for the laboratory to verify the canister did not leak while in transit. Soil vapor samples shall be analyzed for VOCs by USEPA Method TO-15. Indoor and outdoor ambient air samples are not anticipated to be collected as part of this RI.

Sample locations, depths, and rationales are detailed in the below table.

Proposed Location	Surface Elevation	Proposed Depth(s)	Estimated Elevations	Rationale
SS001	60 feet (cellar)	0 to 2 inches	60 feet	Sub-slab soil vapor sample
SS002	70 feet	0 to 2 inches	70 feet	Sub-slab soil vapor sample

Proposed Location	Surface Elevation	Proposed Depth(s)	Estimated Elevations	Rationale
SV001	70 feet	15 feet	55 feet	Future development's footings
SV002	70 feet	15 feet	55 feet	Future development's footings
SV003	70 feet	15 feet	55 feet	Future development's footings
SV004	70 feet	15 feet	55 feet	Future development's footings

3.2 Onsite and Offsite Qualitative Human Health Exposure Evaluation

A Qualitative Human Health Exposure Assessment will be completed for the Site, characterizing the exposure setting, identifying exposure pathways, and evaluating contaminant fate and transport. The Qualitative Human Health Exposure Assessment will follow DER-10, appendix 3B and Section 3.3(c)4.

4.0 QUALITY ASSURANCE PROJECT PLAN

PWGC has prepared a Quality Assurance Project Plan (QAPP) in accordance with DER-10, Section 2.4. The QAPP presents the objectives, functional activities, methods, and QA/QC requirements associated with sample collection and laboratory analysis for characterization activities. Specifically, this QAPP addresses the following:

- Project Scope and Goals
- Organization and Responsibilities of Project Personnel
- Project Objectives, including Quality Assurance Objectives for Data
- Overview of Field Sampling Program and Procedures
- Sample Packaging and Shipping
- Sample Documentation
- Sample Analytical Program
- Quality Assurance/Quality Control Procedures

A copy of the QAPP is included as **Appendix E.**

5.0 HEALTH AND SAFETY PLAN

PWGC has developed a Health and Safety Plan (HASP) to be followed during the implementation of the Remedial Investigation. The HASP has been developed in accordance with DER-10, Section 1.9. Activities performed under the HASP will comply with applicable parts of OSHA Regulations, primarily 29 CFR Parts 1910 and 1926. A copy of the HASP is included as **Appendix F**.

Subcontractors will have the option of adopting this HASP or developing their own site-specific HASP. If a subcontractor prepares their own HASP, it must meet the minimum requirements of this HASP and must be made available to PWGC and the NYSDEC prior to implementation of the RI.

5.1 Community Air Monitoring Plan

In addition to the HASP, a Community Air Monitoring Plan (CAMP) has been developed. The purpose of the CAMP is to address community health and safety to ensure that the public living and working near the Site, as well as employees or visitors to any facility located on the Site, are protected from exposure to Site contaminants during intrusive activities. This CAMP has been developed in accordance with DER-10, Section 1.9 and Appendix 1A. A copy of the CAMP is included as **Appendix G**.

6.0 PROJECT SCHEDULE

The preliminary schedule for the major project milestones is presented in **Table 1**. Field work is anticipated to be begin 30 days following approval of this RIWP by NYSDEC. A draft RI Report should be submitted to the NYSDEC 45 days following receipt of analytical results.

7.0 REPORTING

The RI Report (RIR) will incorporate the methods and findings of the investigation activities performed as outlined in this work plan. The report will identify specific contamination concentrations throughout each media (e.g. soil, groundwater, etc.), delineate the extent of contamination in soil and groundwater, evaluate potential exposure pathways, and provide conclusions and recommendations for additional investigation and/or remedial action. Electronic copies of the Investigation Report will be submitted to the NYSDEC along with hard copies, if requested. Analytical results of the investigation will be submitted in the electronic data delivery (EDD) format through the Department's environmental information management system (EIMS).

1.0 INTRODUCTION

Broadway Junction Partners, LLC (Client) retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase II Environmental Site Assessment (ESA) for the properties located at 45 Van Sinderen Avenue and 2465 Atlantic Avenue, Brooklyn, New York. The purpose of the Phase II ESA was to further evaluate recognized environmental conditions (RECs) identified in September 2018 Phase I ESAs prepared by CBRE, Inc. and to obtain sound, scientifically valid data concerning actual property conditions.

Work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1903-19 (Standard Practices for Environmental Site Assessment: Phase II Environmental Site Assessment Process) and in substantial conformance with the New York State Department of Environmental Conservation's (NYSDEC's) Division of Environmental Remediation's (DER's) Technical Guidance for Site Investigation and Remediation, May 2010 (DER-10).

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC

2.0 BACKGROUND

2.1 Site Description and Features

The subject property consists of two parcels located at 45 Van Sinderen Avenue and 2465 Atlantic Avenue in Brooklyn, NY. The subject property is located in the borough of Brooklyn and Kings County. The property is identified in the NYC Tax Map as Block 1576, Lots 1 and 34. The subject property measures approximately 0.36 acres and is improved with:

- 45 Van Sinderen Ave: The property is improved with an approximately 103-year-old (built in 1921), two-story warehouse and loft building covering approximately 40% of the lot on the south, with an attached storage yard to the north. The building has a partial cellar covering approximately half the building area on the west, featuring stone rubble walls with a superstructure of wood frame and masonry construction.
- 2465 Atlantic Avenue: The property is improved with an approximately 116-year-old (built circa 1908) three-story vacant loft building covering the entirety of the lot. The building has a full cellar featuring stone rubble walls with a superstructure of wood frame and masonry construction.

A Site Location Map is included in **Figure 1**. A Site Plan is included as **Figure 2**.

2.2 Physical Setting

The topography of the subject property and surrounding area was reviewed from the USGS 7.5-minute series topographic map for the Brooklyn, NY quadrangle. The property elevation is approximately 70 feet above the National Geodetic Vertical Datum (NGVD).

The geologic setting of Long Island is well documented and consists of crystalline bedrock composed of schist and gneiss overlain by layers of unconsolidated deposits. Immediately overlying the bedrock is the Raritan Formation, consisting of the Lloyd sand confined by the Raritan Clay Member. The Lloyd sand is an aquifer and consists of discontinuous layers of gravel, sand, sandy and silty clay, and solid clay. The Raritan Clay is a solid and silty clay with: few lenses of sand and gravel, abundant lignite and pyrite, and gray, red, or white in color.

Above the Raritan Clay lies the Magothy Formation. The Magothy Aquifer consists of layers of fine to coarse sand of moderate to high permeability, with inter-bedded lenses of silt and clay of low permeability resulting in areas of preferential horizontal flow; therefore, this aquifer generally becomes more confined with depth. The Magothy Aquifer is overlain by the Upper Glacial Aquifer. The Upper Glacial Aquifer is the water table aquifer at this location and is comprised of medium to coarse sand and gravel with occasional thin lenses of fine sand and brown clay. This aquifer extends from the land surface to the top of the Magothy Aquifer; therefore, is hydraulically connected to the Magothy Aquifer.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

Based upon the subject property elevation and regional groundwater contour maps, the depth to groundwater beneath the subject property was estimated at 59 feet below existing grade. Regional groundwater flow is estimated to be toward the southeast direction.

2.3 Site History and Land Use

45 Van Sinderen Avenue: Prior to the construction of the existing improvements, the subject property was improved with small buildings used for coal and wood storage associated with the Thatford and Ackerman Coal and Lumber Yard since at least 1888 and was likely vacant land prior to that. The current subject building was constructed in 1920 and was used as a rolled gold manufacturing facility in 1932 and an instrument testing company from 1951 until the early 2000's. The property is currently used as a furniture warehouse.

2465 Atlantic Avenue: Prior to the construction of the existing improvements, the subject property was developed with a two-story commercial building used as part of the Thatford & Ackerman Coal and Lumber Yard since at least 1888. Prior to that, the Subject was vacant land. The current building was constructed circa 1908 and was used as a hotel, an electrical supply company, a clothing manufacturer, a lamp manufacturer and a radio and telecom manufacturer throughout the years since its construction. The property is currently used as a sign designer and manufacturer.

2.4 Adjacent Property Land Use

The area surrounding the subject property was lightly developed by 1888 and more densely developed by 1932. An elevated subway track located near the subject property has been in existence since at least 1897 and the remainder of the area has mostly been used for commercial or industrial uses up until the present day.

2.5 Summary of Previous Assessments

2.5.1 Phase I Environmental Site Assessment Report (September 2018) - 2465 Atlantic Avenue

CBRE, Inc. prepared a Phase I ESA in September of 2018 for 2465 Atlantic Avenue. The Phase I ESA identified the following RECs associated with subject property:

- REC 1 – The property was formerly occupied by APEX Airtronics, Inc. (a radio and telecom equipment manufacturer) from 1948-2014. The subject property was listed as a Resource Conservation and Recovery Act (RCRA) Non-Generator as of 2007, but in 1999 was formerly a Small Quantity Generator of hazardous waste. In 1980, the subject property was a Large Quantity Generator in 1980 for production of spent non-halogenated solvents. Given that much of the

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

operations at the property occurred during a period with little to no environmental regulations, the historical industrial usage was considered a REC.

- BER – The subject property installed a 550-gallon No. 2 fuel oil AST in 1956. The tank was converted to non-regulated use and appeared to be in good condition. The tank is encased in concrete and is considered to be an underground storage tank by the NYSDEC. This was not considered a REC, but was considered a BER.

2.5.2 Phase I Environmental Site Assessment Report (September 2018) – 45 Van Sinderen Avenue

CBRE, Inc. prepared a Phase I ESA in September of 2018 for 45 Van Sinderen Avenue. The Phase I ESA did not identify RECs associated with subject property.

2.5.3 Phase II Environmental Site Assessment Report (November 2018) – 2465 Atlantic Avenue

Castleton Environmental prepared a Phase II ESA in November of 2018. The Phase II ESA documented the findings of the Subsurface Investigation performed at the subject property. The Phase II ESA is summarized below.

On November 7, 2018, two sub-slab vapor samples (SSV01 and SSV02), two indoor air samples (IAQ01 and IAQ02), and one outdoor ambient air sample (OAQ01) were collected and analyzed for the presence of VOCs by York Analytical Laboratories using 6-liter SUMMA canisters fitted with two-hour regulators. Each sub slab location was screened with a photoionization detector for the presence of VOCs before sampling. The photoionization detector detected readings of 1.4 and 2.7 parts per million.

Multiple chlorinated VOCs, including carbon tetrachloride, cis-1,2-dichloroethylene, (DCE), trichloroethylene (TCE), methylene chloride, and tetrachloroethylene (PCE) were detected. PCE was detected at concentrations in SSV02 and IAQ02 that would warrant mitigation based on NYSDOH decision matrices and was also detected in OAQ01. All remaining analytes were reported as non-detect.

Based on the findings of the Phase II ESA, Castleton Environmental recommended the sealing of seams, piping penetrations, and floor/wall joints to prevent vapors from entering the building from beneath the slab. Castleton Environmental did not recommend further sampling that would disturb the concrete floor.

BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

3.0 INVESTIGATION METHODOLOGY

The Phase II ESA included the following tasks:

- Geophysical survey
- Soil quality evaluation
- Groundwater quality evaluation
- Soil vapor intrusion investigation

3.1 Geophysical Survey

On April 15 and April 16, 2024, PWGC and Advanced Geological Services (AGS) of Malvern, Pennsylvania mobilized to the subject property to perform a geophysical survey. The purpose of the geophysical survey was to determine the absence/presence of subsurface anomalies at the subject property. Descriptions of the geophysical methods are described below.

A copy of the Geophysical Survey Report, including further detail regarding the methodology and findings, is included in **Appendix A**.

3.1.1 Electromagnetic Survey

AGS utilized a RD400 by Radio-Detection, an EM61 electromagnetic (EM) instrument, and a Fisher M Scope TW-6 metal detector. The Radiodetection RD400, EM61 electromagnetic, and Fisher M Scope use the principle of EM induction to measure the variability of electrical conductivity of subsurface materials and the presence of buried metal objects. Significant contrasts in the electrical properties between non-indigenous materials and surrounding soil enable accurate delineation of buried waste materials, fill, and geologic features. The large EM response to metal makes this technique particularly well suited to identifying buried metal objects such as underground storage tanks (USTs), metallic wastes, buried drums, pipelines, reinforced building foundations, and other metal components of buried structures. It is, however, equally sensitive to metal objects on the ground surface.

3.1.2 Ground Penetrating Radar Survey

Following the electromagnetic survey, AGS utilized a GSSI SIR-3000 with a 400 Mhz antenna to further investigate the metallic anomalies. Ground penetrating radar (GPR) uses high frequency pulsed electromagnetic waves to acquire subsurface information. Energy is propagated downward into the ground and is reflected back to the surface from boundaries at which there are electrical property contrasts. Penetration is the greatest in unsaturated sands and fine gravels and dry, well cured concrete. Clayey, highly saline or saturated soils, areas covered by steel reinforced concrete, foundry slag, uncured concrete, or other highly conductive materials significantly reduce depth penetration of the GPR signal. The 400

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

MHz antenna can achieve depths of penetration up to about 20 feet, but this depth may be greatly reduced due to site-specific conditions as discussed above.

3.2 Soil Quality Evaluation

To characterize soil quality at the subject property, soil borings were installed throughout the site. A total of four soil borings were installed during the Phase II ESA investigation. Soil boring locations are illustrated in **Figure 3**.

3.2.1 Soil Boring Protocol

Lakewood Environmental Services Corp. (Lakewood) of Smithtown, New York provided environmental drilling services during the investigation. A Track Mounted Geoprobe 6610 was utilized to install the environmental soil borings. Soils were collected continuously from ground surface down to an approximate depth of 15 feet below the ground surface (bgs). For two soil borings installed in the buildings' basements, a hammer drill was utilized to break through the concrete slab and a hand auger was utilized to collect soils up to a depth of two feet bgs.

The soil cores and hand augured soils were placed on 10-mil polyethylene sheeting in the order they came out of the ground. The acetate liners were cut open and the soil core was screened for the presence of volatile organic vapors, which are commonly associated with petroleum products and industrial solvents, utilizing a photo-ionization detector (PID). Each soil core was classified by a hydrogeologist using the Unified Soil Classification System (USCS). A soil boring log was developed for each location (**Appendix B**) and includes the characterization and screening data.

3.2.2 Soil Sample Collection Protocol

Soil samples collected for volatile organic analysis were collected directly from the acetate liners utilizing terra-core sampling devices. The remaining sample volumes were transferred to a stainless-steel bowl and homogenized. Once homogenized, samples were transferred to laboratory supplied glassware and packed in a cooler with ice and shipped under proper chain-of-custody procedures to Alpha Analytical Laboratories of Westborough, Massachusetts (Alpha), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certified laboratory, for analysis following NYSDEC Analytical Services Protocol (ASP)-Category A Deliverables.

3.3 Groundwater Quality Evaluation

To characterize groundwater quality at the subject property, a total of two groundwater samples were intended to be collected as part of this Phase II ESA. Lakewood utilized a track mounted Geoprobe® direct-push drill rig to advance a SP-16 sampler in two boreholes and advance the sampler to groundwater. Due

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

to repeated refusals at depths ranging from 30 feet bgs to 40 feet bgs, Lakewood was unable to reach groundwater; therefore, groundwater samples were unable to be collected as part of this Phase II ESA.

3.4 Soil Vapor Intrusion Investigation

To evaluate potential vapor intrusion at the subject property, a soil vapor intrusion investigation was performed. The investigation consisted of the collection of one soil vapor sample and one sub-slab soil vapor sample.

3.4.1 Soil Vapor Point Installation Protocol

Soil vapor and sub-slab soil vapor sampling was performed in accordance with the NYSDOH "Guidance for Evaluating Soil Vapor Intrusion in New York State," (NYSDOH Guidance) October 2006 and subsequent addenda.

3.4.1.1 Sub-Slab Soil Vapor Sampling

The sub-slab soil vapor sampling points was installed using a hammer drill to approximately two inches beneath the floor slab in accordance with procedures specified in the NYSDOH Guidance. Sampling points were constructed of dedicated polyethylene tubing backfilled with coarse sand and sealed at the surface with hydrated bentonite.

3.4.1.2 Soil Vapor Sampling

The soil vapor sampling point was installed to a depth of five feet bgs utilizing a Geoprobe® direct-push drill rig. A six-inch stainless-steel screen was installed at the base of the sampling point with dedicated polyethylene tubing to grade. Coarse sand was placed surrounding the screen and six inches above. The remainder of the soil vapor point annulus was sealed with bentonite grout to the surface.

3.4.1.3 Tracer Gas Testing

Prior to sampling, the integrity of soil vapor and sub-slab soil vapor sampling point seals was tested using tracer gas analysis. The environment surrounding the seal was enriched with the tracer gas (helium) as readings were collected through the sampling probe with a portable helium detector. Seals were adjusted as needed until acceptable tracer gas readings were collected from each soil vapor probe indicating the seals were intact and the sampling probes were acceptable for sample collection.

After the initial tracer gas test was performed, one to three volumes of the sample tubing was purged prior to collecting samples. Flow rates for both purging and collecting did not exceed 0.2 liters per minute to minimize potential indoor air infiltration during sampling.

3.4.2 *Soil Vapor and Air Sample Collection Protocol*

Soil vapor and sub-slab soil vapor samples were collected into 6-liter Summa® vacuum canisters fitted with 2-hour flow controllers. Canisters and flow controllers were batch certified clean by the laboratory. Proper quality assurance/quality control (QA/QC) protocol was followed during the collection of soil gas samples to ensure that cross-contamination in the field did not occur.

4.0 INVESTIGATION FINDINGS

4.1 Geophysical Survey

A geophysical survey was performed as detailed in Section 3.1. Findings of the geophysical survey included the following:

- The maximum depth of GPR penetration at the property was approximately 5 feet bgs.
- No underground storage tanks were identified during the geophysical survey.
- Areas of elevated electromagnetic response appear to be due to the presence of smaller scrap metal.
- The northern and eastern portions of the property exterior were obstructed by vehicles and equipment storage and were not accessible for collection of geophysical data.

4.2 Soil Quality Evaluation

To characterize soil quality, soil borings were installed within the basements of 2465 Atlantic Avenue and 45 Van Sinderen Avenue, within the northern exterior yard, and in the alley between the two buildings. A total of four soil borings (SB001-B through SB004-B) were installed during the investigation. Soil boring locations are illustrated in **Figure 3**.

4.2.1 Soil Boring Protocol

Soil borings were installed as detailed in Section 3.2. Soils were collected continuously to the final depth of each boring. Borings inside the cellar (SB001-B and SB002-B) were installed to a depth of 2 feet below the slab (approximately 12 feet below ground surface). Borings outside of the building (SB003-B and SB004-B) were installed to a depth of 15 feet below ground surface. Soils in these areas generally consisted of two distinct layers of fill material. The upper layer contained brick and glass, intermixed with fine to medium grained sand with fines and gravel with slight plasticity, and ranged between surface grade and two to six feet bgs in the borings. The lower layer contained brick and glass, intermixed with fine to coarse silty sand and gravel with no plasticity, and continued to at least 15 feet bgs where the boring terminated. No visual or olfactory contamination was observed in any of the soil borings. PID readings ranged from 0.0 parts per million (ppm) to 1.3 ppm. Soil boring logs are included in **Appendix B**.

4.2.2 Soil Sample Collection Protocol

Two soil samples were collected from the buildings' basements using a hand auger from the 0 to 2 feet interval directly beneath the concrete slab. Two soil samples were collected from each of the two borings advanced using the Geoprobe, from the intervals exhibiting the highest visual or olfactory contamination. As these two borings did not exhibit visual or olfactory evidence of contamination, but did exhibit evidence of fill material throughout the boring, samples were collected from the 0 to 2 feet bgs and 13 to 15 feet bgs intervals. Soil samples were collected as detailed in Section 3.2, and were analyzed for the following:

- VOCs by USEPA Method 8260

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

- SVOCs by USEPA Method 8270
- Metals by USEPA Methods 6010/7196/7471/9012

4.2.2.1 Soil Analytical Results

Soil analytical results were compared to the Soil Cleanup Objectives (SCOs) for Unrestricted, Restricted Residential, and Commercial Use Soil Cleanup Objectives (UUSCOs, RRUSCOs, and CUSCOs, respectively) as specified in NYSDEC's Title 6 New York Codes, Rules, and Regulations (NYCRR) Part 375, Environmental Remediation Programs. A total of six samples were collected.

Analytical results from each of the soil borings did not yield concentrations of VOCs exceeding UUSCOs except for Trichloroethylene (TCE) in SB001-B_0-2' and cis-1,2-dichloroethylene (DCE) and tetrachloroethylene (PCE) in SB002-B_0-2'.

SVOCs were detected at concentrations exceeding UUSCOs in two samples, SB002-B_0-2' (benzo(k)fluoranthene) and SB004-B_0-2' (chrysene). SB002-B_0-2' exceeded RRUSCOs for chrysene and indeno(1,2,3-cd)pyrene, and SB004-B_0-2' exceeded RRUSCOs for benzo(a)anthracene, benzo(b)fluoranthene, and indeno(1,2,3-cd)pyrene. In addition, SB002-B_0-2' exceeded CUSCOs for benzo(a)anthracene (7.0 mg/kg), benzo(a)pyrene (8.5 mg/kg), benzo(b)fluoranthene (9.8 mg/kg), and dibenzo(a,h)anthracene (1.5 mg/kg), and SB004-B_0-2' exceeded CUSCOs for benzo(a)pyrene (1.4 mg/kg).

Metals were detected at concentrations exceeding UUSCOs in SB001-B_0-2' (lead, mercury, and zinc), SB002-B_0-2' (lead, mercury, and zinc), SB003-B_0-2' (copper, and zinc), SB004_0-2' (zinc and mercury), and SB004-B_13-15' (manganese). SB003-B_0-2' exceeded RRUSCOs for mercury and lead and SB004-B_0-2' exceeded RRUSCOs for lead. In addition, SB001-B_0-2' and SB004-B_0-2' exceeded the CUSCO for copper (270 mg/kg) at 311 mg/kg and 414 mg/kg, respectively) and SB003-B_0-2' exceeded the CUSCO for arsenic (16 mg/kg) at 25.8 mg/kg.

Analytical results are detailed in **Tables 1** through **3** and the complete laboratory analytical report is included in **Appendix C**.

4.2.3 Soil Vapor Intrusion Investigation

To evaluate potential vapor intrusion at the subject property, one sub-slab soil vapor (SS001-B) sample and one soil vapor (SV001-B) sample were collected. Soil vapor and air samples were collected as described in Section 3.3.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC

BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

4.2.3.1 Soil Vapor Analytical Results

The primary method for the evaluation of sub-slab vapor and indoor air data is the use of Soil Vapor / Indoor Air Matrices provided in the NYSDOH Guidance document. The matrices incorporate both sub-slab vapor concentrations and their corresponding indoor air concentrations in a table to formulate an appropriate action for a sampling site. Matrices have been developed for a limited number of chlorinated and petroleum-related VOCs. Although matrices have not yet been developed for other compounds, consideration is given to the comparisons between the sub-slab vapor and indoor air concentrations to determine if vapor intrusion is occurring.

Indoor air samples were not collected as part of this assessment. As there was no building present in the northern yard, a sub-slab vapor sample could not be collected at the up gradient end of the property; however, the analytical results for the soil vapor sample was utilized in place of a sub-slab vapor sample in comparison to the matrices to provide guidance. The analytical results for the sub-slab soil vapor and soil vapor samples were compared to the lowest values included on the NYSDOH decision matrices for sub-slab soil vapor which may warrant further action.

Analytical results for sub-sab soil vapor in SS001-B exceeded the lowest concentrations specified in the NYSDOH decision matrices for PCE (100 µg/m^3) at 1,440 100 µg/m^3, TCE (6 µg/m^3) at 111 µg/m^3, and DCE (6 µg/m^3) at 61.9 µg/m^3. Furthermore, these concentrations exceed the decision matrices that would warrant mitigation regardless of the concentration of the corresponding indoor air sample (1,000 µg/m^3 for PCE, 60 µg/m^3 for TCE and DCE).

No VOCs were detected at concentrations exceeding the lowest concentrations specified in the NYSDOH decision matrices in SV001-B. There are detectable concentrations of petroleum related compounds, such as the trimethylbenzenes and BTEX (benzene, ethylbenzene, and toluene) and chlorinated VOCs such as tetrachloroethylene. These concentrations are relatively low; however, these samples were not collected immediately beneath a slab or within 2 feet of a known source of contamination.

Analytical results are detailed in **Table 4**. The complete laboratory analytical report is included in **Appendix C**.

4.3 Site Environmental Evaluation

Soil impact at the property primarily consisted of chlorinated VOCs exceeding UUSCOs and SVOCs (polyaromatic hydrocarbons [PAHs]) and metals at concentrations exceeding their respective CUSCOs in the shallow (zero to two feet bgs) soils sampled. SVOC and metal impact at the levels detected is commonly associated with the presence of fill material. This observation is further supported by the presence of debris

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

(brick/glass) observed in the soil at the property; however, the PAH and metal impact appears to largely be limited to the upper layer of fill, as manganese was the only analyte to exceed UUSCOs in the lower fill layer. Based on the concentration of lead observed in shallow soils, if disturbed or removed from the site for disposal, waste characterization including Toxicity Characteristic Leaching Procedure (TCLP) analysis may result in the soil being deemed hazardous and requiring special handling for disposal.

The concentrations of chlorinated VOCs exceeding UUSCOs were limited to the two samples collected from beneath the building slabs and may be associated with the presence of these compounds in sub-slab soil vapor.

Chlorinated VOCs were detected in the sub-slab soil vapor sample at concentrations that warrant mitigation, regardless of their respective concentrations in the indoor air. A more comprehensive soil vapor intrusion investigation and installation of a soil vapor mitigation system may be recommended.

Petroleum related compounds and chlorinated VOCs were also detected in the soil vapor sample. While no concentrations of VOCs were observed that would warrant mitigation based on the NYSDOH matrices, the presence of a building slab in this area, if a new building were to be constructed, could potentially result in higher concentrations of compounds accumulating beneath the slab which may represent a soil vapor intrusion concern, similar to what was observed in the sub-slab vapor sample. Installation of a vapor barrier or other suitable vapor intrusion mitigation methods may be recommended here, too, if this portion of the site were to be developed in the future.

5.0 CONCLUSIONS AND RECOMMENDATIONS

PWGC has performed a Phase II ESA at the subject property in conformance with the scope and limitations of ASTM Practice E1903-19 for the following objectives:

- Geophysical survey to identify potential USTs, utilities, and other subsurface anomalies.
- Installation of four soil borings (SB001 through SB004), and collection of one to two soil samples from each boring.
- Installation of one soil vapor sampling point (SV001) and one sub-slab soil vapor sampling point (SS001) and collection of two soil vapor samples.

5.1 Conclusions

Based on the results of the Phase II ESA, PWGC offers the following conclusions:

Subsurface anomalies indicative of potential USTs, drywells, or other objects which would warrant further investigation were not identified during the geophysical survey.

Soil quality across the soil borings exhibited the presence of fill material in the top 15 feet. Six soil samples were collected from four soil borings installed across the site as part of this assessment. Analytical results for each of the four samples did not identify concentrations of VOCs greater than Unrestricted Use SCOs with the exception of PCE, TCE, and DCE in SB002 from the 0 to 2-foot interval, collected from the basement of 2465 Atlantic Avenue. SVOCs, namely PAH compounds, were detected in SB002 and SB003 from the 0 to 2-foot interval at concentrations greater than CUSCOs. Metals including arsenic and copper were detected at concentrations greater than CUSCOs in SB001, SB003, and SB004 in the 0 to 2-foot interval, lead, mercury, and zinc exceeded UUSCOs in SB002 in the 0 to 2-foot interval, and manganese exceeded UUSCOs in SB004 in the 13 to 15-foot interval. VOCs, SVOCs, and metals were not detected at concentrations greater than UUSCOs in the two soil samples collected from the deeper interval. In general, elevated concentrations of SVOCs and metals were identified at locations and depths where the upper layer of fill material was observed, with manganese being the only analyte detected greater than UUSCOs in the lower fill layer. Elevated concentrations of VOCs were identified only in samples collected from beneath the building slab and may be associated with the presence of soil vapors.

One soil vapor sample was collected from the up gradient portion of the property in the northern yard, and one sub-slab soil vapor sample was collected from the down gradient portion of the property in the basement of 2465 Atlantic Ave, which was previously used for industrial purposes (radio and telecom manufacturing). There were no VOC concentrations detected in the up gradient soil vapor sample that would warrant mitigation based on NYSDOH matrices; however, concentrations of petroleum related compounds, such as the trimethylbenzenes and BTEX and chlorinated VOCs such as tetrachloroethylene

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

and vinyl chloride were detected at lower concentrations. The sub-slab soil vapor sample contained concentrations of PCE, TCE, and DCE that would warrant mitigation regardless of a corresponding indoor air sample. Based on the results of the sub-slab soil vapor sample and the soil samples collected in the basements of 2465 Atlantic Avenue and 45 Van Sinderen Avenue, there appears to be a soil vapor intrusion concern within this portion of the property.

5.2 Recommendations

Based on the conclusions detailed above, PWGC offers the following recommendations for the subject property:

- Based on the concentrations of SVOC and metals impact observed in the subsurface, PWGC recommends that these soils be handled in accordance with local, state, and federal regulations and guidance if they are to be disturbed and/or removed from the site for offsite disposal. This should involve appropriate waste characterization sampling to determine if some of the metal impacts (particularly lead) are deemed hazardous.
- Soil vapor intrusion mitigation is recommended in the basements of 2465 Atlantic Avenue and 45 Van Sinderen Avenue. Additional delineation of sub-slab vapor concentrations is recommended to more finely focus this mitigation area. Once this area has been better defined, a pilot study is recommended to determine the radius of influence for SSDS pits, and the SSDS system should then be designed and installed.
- Installation of a vapor barrier or other appropriate soil vapor mitigation methods if a new building is to be constructed.

8.0 LIMITATIONS

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections and examination of records prepared by others. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by PWGC.
4. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
5. This report is based, in part, on information supplied to PWGC by third-party sources. While efforts have been made to substantiate this third-party information, PWGC cannot attest to the completeness or accuracy of information provided by others.

Toluene	17.6
Trichloroethene	111

Client Sample ID:	SV001-B
Sample Type:	Soil Vapor
Sample Depth:	5'
Laboratory ID:	L2420834-02
Sampling Date:	4/16/2024
Volatile Organic Compounds by USEPA Method TO-15 in µg/m³	
1,2,4-Trimethylbenzene	18.8
1,3,5-Trimethylbenzene	5.16
1,3-Butadiene	10.6
2-Butanone	75.8
2-Hexanone	19.8
4-Ethyltoluene	2.25
4-Methyl-2-pentanone	4.63
Acetone	649
Benzene	2.92
Carbon disulfide	5.33
Chloromethane	2.87
Cyclohexane	20.3
Dichlorodifluoromethane	2.26
Ethanol	36.7
Ethylbenzene	4.52
Heptane	38.8
Isopropanol	3.47
Naphthalene	1.52
n-Hexane	50.8
o-Xylene	11.6
p/m-Xylene	18.9
Tertiary butyl Alcohol	13.6
Tetrachloroethene	23.1
Tetrahydrofuran	55.7
Toluene	18.2

Site Boundary
Tax Lots
Soil Vapor Sample
Sub-slab Soil Vapor Sample

Notes:
Only analytes with detectable concentrations are displayed.

(3) NYSDEC 6 NYCRR Environmental Remediation Programs Part 375 Commercial Use of Soil Cleanup Objective Table 375-6.8b 12/06 and CP-51 Table 1 10/10.
NS - No Standard
U - The analyte was analyzed for, but was not detected above the reported sample quantification limit.
J - The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
Highlighted text denotes concentrations exceeding NYSDEC Unrestricted Use SCO
Highlighted text denotes concentrations exceeding NYSDEC Restricted Residential Use SCO
Highlighted text denotes concentrations exceeding NYSDEC Commercial Use SCO

Subject: Geophysical Investigation Results
Broadway Junction Project
2465 Atlantic Ave & 45 Van Sinderen Ave

Dear Ms Jenifer Lewis

Advanced Geological Services (AGS) presents this letter report to PW Grosser Consulting (PWGC) of Bohemia, New York detailing the methods and results of the geophysical investigation conducted at 2465 Atlantic Ave & 45 Van Sinderen Ave, Brooklyn, New York. The objective of the geophysical investigation was to locate and identify potential underground storage tanks (USTs) and to "clear" several proposed drilling locations of potential utilities and other drilling obstructions. The field activities for this geophysical investigation were completed by AGS on March 15 2024.

Methods

The ground penetrating radar (GPR), Electromagnetic (EM), radio frequency (RF), and metal detection (MD) methods were utilized for this geophysical investigation. To search for the potential USTs AGS collected EM data in a grid like formation as space permitted to maximize data coverage. Many large obstructions were present at this location which prohibited covering the entire survey area. AGS utilized a GPS instrument to locate each EM data point. The EM data was downloaded and contoured in the field and analyzed for potential USTs. Additional GPR profiles were collected across each area with an elevated EM response.

AGS was unable to enter more than 4 feet into the alleyway between the two buildings due to the presence of debris and obstructions. Due to the debris and obstructions no geophysical data was collated further into the alleyway.

AGS scanned the each proposed drilling location with the RF instrument looking for potentially active electric lines. Each location was further scanned with the MD instrument to locate potential metallic anomalies that could be associated with utilities or other buried metallic obstructions. GPR profiles were collected in a grid like pattern centered at the proposed drilling location, looking for potential utilities.

Ground Penetrating Radar (GPR) Method

The ground penetrating radar (GPR) method was used to locate and identify potential utilities and other buried features. The GPR method is based upon the transmission of repetitive, radio frequency electromagnetic (EM) pulses into the subsurface. When the transmitted energy of down going wave contacts an interface of dissimilar electrical character, part of the energy is returned to the surface in the form of a reflected signal. This reflected signal is detected by a receiving transducer and is displayed on the screen of the GPR unit as well as being recorded on the internal hard-drive. The received GPR response remains constant as long as the electrical contrast between media is present and constant. Lateral or vertical changes in the electrical properties of the subsurface result in equivalent changes in the GPR responses. The system records a continuous image of the subsurface by plotting two way travel time of the reflected EM pulse versus distance traveled along the ground surface. Two way travel time values are then converted to depth using known soil velocity functions.

The GPR field procedures involved (1) instrument calibration, (2) test run completion, (3) production profile collection and recording, and (4) data storage for subsequent processing and analysis in the office. Each radar profile was examined for characteristic GPR signatures that may indicate the presence of buried targets. A Geophysical Survey System SIR System 3000 and a 400 megahertz (MHz) antenna were used with a recording window of 60 nanoseconds (ns) to provide the required depth penetration and subsurface detail.

Radio Frequency (RF) Utility Locating Method

A Radiodetection RD400/PDL2 multi-frequency RF utility locating system was used for this project to locate potential electric lines and other surficially identifiable utilities and/or features. This instrument consists of a receiver/tracer and a remote transmitter, which

operates at frequencies ranging between 8 kHz and 65 kHz. In addition, the receiver can be used in 60 Hz passive mode to identify active buried electrical lines. This utility tracing instrument provides audible and visual feedback to the operator when a utility that is coupled with the transmitted signal is crossed. The transmitter produces a radio-frequency signal in the utility to be traced by either induction coupling or direct hook-up. The receiver output provides measured field strength of the received signal and varies an audible pitch depending upon how far the utility is from the receiver. By carefully adjusting the gain of the receiver it is possible to determine the location of the utility and to separate it from adjacent utilities.

Hand Held Metal Detection (MD) Method

The survey area and each proposed drilling location was scanned using a hand held metal detection (MD) instrument. This method uses the principle of electromagnetic induction to detect shallow buried metal objects such as USTs, metal utility conduits, rebar in concrete, manhole covers, and various metallic debris. This is done by carrying a hand-held radio transmitter-receiver unit above the ground and continuously scanning the surface. A primary coil broadcasts a radio signal from a transmitter. This primary radio signal induces secondary electrical currents in metal objects. These secondary currents in turn produce a magnetic field which is detected by the receiver.

The MD instrument used for this investigation was a Fisher TW-6 pipe and cable locater. This instrument is expressly designed to detect metallic pipes, cables, USTs, manhole covers, and other buried metallic objects. The instrument produces an audible response and significant meter deflections when near a metal object. The peak instrument response usually occurs when the unit is directly over the object.

Time Domain EM Metal Detection Method (EM61)

Time domain EM metal detection data were collected using a Geonics EM61 instrument. This instrument generates a pulsed primary EM field into the earth, which induces eddy currents in nearby metallic objects. The eddy current decay produces a secondary magnetic field which is measured by the receiver coil. By taking measurements at a relatively long time after the start of the decay, the current induced in the ground has fully dissipated and only the current in the metal is still producing a secondary field. In scanning mode, the instrument produces an audible response indicating the presence of buried metal beneath the antenna, as well as providing a

digital read-out of the response magnitude. The response, which is measured in millivolts (mV), can also be recorded by the integrated data logger. The instrument uses two antenna coils separated by 0.5 meters (1.6 feet) to provide potential depth information, and to both minimize and quantify effects from above ground metallic objects. This instrument is very sensitive to metal objects, but relatively insensitive to variations in soil conductivity and geologic features. The standard EM61 configuration used during this investigation is capable of detecting metal targets the size of a 55-gallon drum up to depths of 10 feet or more depending upon site conditions.

Results

AGS has included one figure (Figure 1) showing contoured EM results. The aerial photograph was taken in 2022 and was downloaded from https://data.gis.ny.gov/. All locations on Figure 1 are in the New York Long Island NAD83 state plane coordinate system with all units in feet.

No USTs were identified on either the EM or GPR data sets. AGS identified several small areas with elevated EM response. AGS collected GPR profiles across each identified EM anomaly. The small areas with elevated EM response appeared to be small buried metallic debris that did not have the size or shape typical of an UST. Furthermore, there were no additional areas with an elevated EM response that was on the contoured EM diagram that are typical of USTs.

Only a portion of the survey area was able to be surveyed with the EM instrument. Numerous obstructions prohibited the collection of geophysical data. AGS cannot make any determination on the presence or absence of USTs in areas that were not accessible to AGS for this investigation.

Furthermore, AGS "cleared" numerous proposed drilling locations. Each “cleared” proposed drilling location exhibited a reflection-free GPR signature and no RF or MD response. The final locations for each proposed drilling location was discussed and reviewed with the onsite representative.

Closing

AGS did not identify any USTs and "cleared" several proposed drilling locations. Upon completion of the geophysical investigation AGS reviewed the results with the onsite PWGC representative.

All geophysical data and field notes collected as a part of this investigation will be stored at the AGS office. The data collection and interpretation methods used in this investigation are consistent with standard practices applied to similar geophysical investigations. The correlation of geophysical responses with probable subsurface features is based on the past results of similar surveys although it is possible that some variation could exist at this site. Due to the nature of geophysical data, no guarantees can be made or implied regarding the presence or absence of additional objects or targets beyond those identified.

If you have any questions regarding the results of this field investigation, please contact me at 610-722-5500. It was a pleasure working with you on this project and we look forward to being able to provide you with sub-surface imaging services in the future.

Sincerely,
Prepared by

Christopher Call P.G.
Senior Geophysicist

(mV)

Notes:

(1) AGS used a RF instrument, EM61 and a SIR 3000 GPR instrument with a 400MHz antenna for this investigation.
(2) EM data was collected with a line spacing of approximately 5 feet. The data was contoured and is shown above. AGS identified several locations with elevated EM responses, however upon further investigation with the GPR instrument these anomalies appear to be caused by small metallic objects. .
(3) AGS did not identify any USTs within the survey area. A large portion of the junkyard area was covered with obstructions and prohibited the collection of geophysical data across the entire area. Furthermore the entire alley way was full of obstructions that prohibited the use of the EM61 and GPR instruments.
(4) AGS identified several utilities within the survey area. Identified utilities were marked on the ground surface with spray paint.
(5) The aerial photograph was taken in 2022 and was downloaded from https://data.gis.ny.gov/.
(6) The field positions were not surveyed by a licensed surveyor and should be considered approximate.
(7) The items shown on this figure may not be all inclusive. AGS does not warrant the fact that additional buried features might be present at this site.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name:	TOT2401	**Lab Number:**	L2420537
Project Number:	TOT2401	**Report Date:**	04/22/24

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2420537-01: The sample was analyzed as a High Level Methanol based upon screen results. The sample was then analyzed as a Low Level in order to achieve lower reporting limits. The results of both analyses are reported. Differences were noted between the results of the analyses which have been attributed to vial discrepancies.

Semivolatile Organics

The WG1909584-2 LCS recovery, associated with L2420537-01 and -02, is below the acceptance criteria for benzoic acid (8%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

Total Metals

L2420537-01 and -02: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	TOT2401	**Lab Number:**	L2420537
Project Number:	TOT2401	**Report Date:**	04/22/24

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	TOT2401	**Lab Number:**	L2420537
Project Number:	TOT2401	**Report Date:**	04/22/24

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol, Azobenzene; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2420803-03: The internal standard (IS) response(s) for chlorobenzene-d5 (42%), and 1,4-dichlorobenzene-d4 (21%) and the surrogate recovery for 1,2-dichloroethane-d4 (136%) were outside the acceptance criteria; however, re-analysis achieved the following results: 1,4-dichlorobenzene-d4 (41%). The results of both analyses are reported. A high-level analysis was performed and those results are also reported.
L2420803-03R: The sample was received in the appropriate containers (vials) for the Volatile Organics by EPA Method 5035/8260 analysis; however, the results could not be reported. With the client's authorization, a sample aliquot was taken from an unpreserved container (inappropriate plastic) and preserved appropriately.

Semivolatile Organics

The WG1909995-2 LCS recovery, associated with L2420803-01 through -04, is below the acceptance criteria for benzoic acid (7%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

Total Metals

L2420803-01 through -04: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	TOT2401	**Lab Number:**	L2420803
Project Number:	TOT2401	**Report Date:**	04/23/24

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	TOT2401	**Lab Number:**	L2420803
Project Number:	TOT2401	**Report Date:**	04/23/24

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol, Azobenzene; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Nonpotable Water: EPA RSK-175 Dissolved Gases
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 524.2: THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on April 4, 2024. The canister certification data is provided as an addendum.

L2420834-01D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

The WG1913951-3 LCS recovery for vinyl bromide (142%), associated with L2420834-02, is above the upper 130% acceptance limit. All samples associated with this LCS do not have reportable amounts of this analyte.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J. Anderson

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name:	TOT2401	**Lab Number:**	L2420834
Project Number:	Not Specified	**Report Date:**	04/30/24

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

Report Format: Data Usability Report

Project Name:	TOT2401	**Lab Number:**	L2420834
Project Number:	Not Specified	**Report Date:**	04/30/24

Data Qualifiers

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: Data Usability Report

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol, Azobenzene; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Nonpotable Water: EPA RSK-175 Dissolved Gases
Biological Tissue Matrix: EPA 3050B

1.0 EXECUTIVE SUMMARY

Broadway Junction Partners, LLC (Client) retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase I Environmental Site Assessment (ESA) for the subject property located at 45 Van Sinderen Avenue, Brooklyn, New York. The purpose of the Phase I ESA was to identify and evaluate the presence of Recognized Environmental Conditions (RECs) at the subject property. RECs are the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

The subject property consists of one parcel located at 45 Van Sinderen Avenue in Brooklyn, New York. The subject property is located in the borough of Brooklyn in Kings County. The property is identified in the NYC Tax Map as Block 1576, Lot 1.

The subject property measures approximately 0.3 acres and is improved with an approximately 103-year-old (built in 1921) two-story warehouse and loft building covering approximately 40% of the lot on the south, with an attached storage yard to the north. The building has a partial cellar covering approximately half the building area on the west, featuring stone rubble walls with a superstructure of wood frame and masonry construction.

The subject property is currently used as the following:

- Garbage truck storage, north yard tenant.
- Great Goods Co, Inc., Amazon product distributor, tenant of first floor.
- Rented artist studio space, tenant of second floor of building on site.

Work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E1527-21 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 Code of Federal Regulations (CFR) Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and PWGC's proposal for services.

PWGC evaluated the findings associated with the subject property and identified three RECs, no HRECs, and no CRECs with respect to the subject property. Conditions determined to be RECs are detailed below:

- The subject property was historically used for coal and lime storage as part of a lumber yard from approximately 1888 to 1908. Lumber storage may result in treated wood containing chromated copper arsenate or creosote, which may leach into the subsurface through stormwater runoff. Coal

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

and lime storage similarly may result in subsurface impact through infiltration. There are no records confirming treated wood storage at the subject property; however, the presence of the lumber yard predates most environmental regulations and documentation related to past releases may not exist. As such, PWGC believes the past usage of the site as a lumber yard represents a REC.

- The subject property was historically used for gold foil manufacturing from approximately 1920 to 1934. Such usages are likely to have used/stored hazardous substances, such as sodium cyanide, and/or petroleum products. While there are no open spills or violations associated with the subject property, the gold foil manufacturing listing predates most environmental regulations and documentation related to past releases may not exist. As such, PWGC believes the past usage of the subject property for gold foil manufacturing represents a REC.
- Dark-stained soil/pavement was observed in the northern yard. The property is a storage yard for diesel-powered garbage trucks. The yard is poorly maintained with miscellaneous trash/junk stored across the property. The potential exists for the material causing the staining to the yard to impact the subsurface. As such, PWGC believes the presence of dark staining in the northern yard represents a REC.

Based on the identified RECs, PWGC recommends a supplemental Phase II ESA be performed at the subject property. The Phase II ESA should include:

- Additional soil sampling to more completely characterize subsurface soil and historic fill conditions.
    - Based on the potential PFAS impact from the garbage truck fire, and potential cyanide impact from the gold foil manufacturing usage, PWGC recommends including PFAS and cyanide in the soil sampling analyses.

Although not a part of the ASTM E1527-21 scope, the following additional concerns associated with the subject property must be considered:

- Based on inspection of the subject property, it is possible that ACM and/or lead-based paint are present within the structure. PWGC recommends that, prior to demolition or renovation of the building, a detailed asbestos and/or lead based paint survey should be performed by a qualified asbestos/lead inspector in accordance with applicable federal, state, and local regulations prior to renovation or demolition of the building; please note that the asbestos/lead inspection performed as part of this Phase I ESA does not meet those criteria.

2.0 INTRODUCTION

2.1 Purpose

Broadway Junction Partners, LLC (Client) retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase I Environmental Site Assessment (ESA) for the subject property located at 45 Van Sinderen Avenue, Brooklyn, New York. The purpose of the Phase I ESA was to identify and evaluate the presence of Recognized Environmental Conditions (RECs) at the subject property. RECs are the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

2.2 Scope of Services

The assessment consisted of a visual inspection of the subject property and surrounding areas, interviews, a review of historical information and aerial photographs, and a review of pertinent local, state, federal and facility records. Environmental Data Resources (EDR) of Shelton, Connecticut provided the following: a database search of environmental compliance records of sites within an ASTM standard radius of the property, a Sanborn fire insurance map search, historical topographic map search, historical aerial photograph search, and a historical telephone directory search.

PWGC reviewed the environmental database report compiled by EDR as a part of the assessment. The purpose of the review was to identify reported listings for the subject property or other properties in the vicinity of the subject property. Databases reviewed included federal and state lists of known or suspected contaminated sites, lists of known handlers or generators of hazardous waste, lists of known waste disposal facilities, and lists of aboveground and underground storage tanks (ASTs and USTs). PWGC's review of the database has been incorporated into this report along with a copy of the EDR report.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E1527-21 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule) and PWGC's proposal for services.

2.3 Definitions

1. RECs are—(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

subject property under conditions that pose a material threat of a future release to the environment.

2. Historic RECs (HREC) are a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.
3. Controlled RECs (CREC) are recognized environmental conditions (RECs) affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).
4. A *de minimus* condition is a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a *de minimis* condition is not a recognized environmental condition nor a controlled recognized environmental condition.
5. Business environmental risk (BER) is a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations.

2.4 Significant Assumptions

PWGC has made the following significant assumptions in the preparation of this report:

1. Groundwater Flow Direction – Based upon regional groundwater elevation maps and local topography, regional groundwater flow direction appears to be toward the southeast.
2. Regulatory Records Information - PWGC assumes that all information provided by EDR regarding the regulatory status of facilities within the ASTM Standard approximate minimum search distance is complete, accurate, and current.
3. Other - PWGC assumes that all information provided through interviews is complete and unbiased.

2.5 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

hydrogeologic standards and practices applicable to this location and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the subject property. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the subject property, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon conditions in existence at subject property at the time of the investigation, and other information obtained and reviewed by PWGC.
4. PWGC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, or regulations or policies of federal, state, or local government agencies. PWGC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document.
5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, subject property location, and project indicated. This report is not a definitive study of contamination at the subject property and should not be interpreted as such.
6. This report is based, in part, on information supplied to PWGC by third-party sources. While efforts have been made to substantiate this third-party information, PWGC cannot attest to the completeness or accuracy of information provided by others.

2.6 Special Terms and Conditions

Authorization to perform this assessment was given by a proposal for services between the Client and PWGC.

2.7 User Reliance

This report was prepared for the exclusive use of the Client. PWGC assumes no liability for use of this report by any person or entity other than those for which it was prepared.

2.8 Data Gaps

Any data gaps identified herein, as defined by ASTM Practice E1527-21 § 3.2.19, are not considered to have significantly affected the ability to identify RECs in connection with the subject property and do not alter the conclusions of this report, unless otherwise noted. Data gaps identified during the preparation of this Phase I ESA include:

- Portions of the second floor were locked and inaccessible during site reconnaissance.
- The presence of multiple garbage trucks in the northern, open portion of the subject property obscured a significant portion of the yard, limiting the ability to inspect ground conditions.
- Reasonably ascertainable standard sources do not show pre-development conditions at the subject property. The earliest available source (1888 Sanborn Map) shows the subject property developed with residential buildings.
- Gaps of greater than five years (1888 to 1908, 1908 to 1924, 1984 to 1994, 1994 to 2006) was identified in the history of the subject property when reviewing of standard historical sources in ASTM Practice E 1527-21 § 8.3.4.1 through 8.3.4.8 that are reasonably ascertainable and likely to be useful.

Significant data gaps as defined by ASTM E1527-21 § 3.2.78 include data gaps that affect the ability of the environmental professional to identify a REC. No significant data gaps were identified.

2.9 Viability of Phase I ESA

Generally, in accordance with ASTM Practice E1527-21 § 4.6, a Phase I ESA for which the information was collected or updated within one year prior to the date of acquisition or date of the intended transaction may be used provided that the components of the ESA detailed in Table 2-1 were updated within 180 days prior to the date of purchase or date of the intended transaction.

Table 2-1 – Report Viability Dates

Phase I ESA Component	Date Completed
Interviews with Owner, Operators and/or Occupants	3/26/2025
Environmental Lien Search	N/A*
Government Records Review	3/19/2025
Site Reconnaissance	3/26/2025 & 4/8/2025
Declaration of Environmental Professional	4/14/2025

*The environmental lien search is a user requirement. PWGC was not contracted to perform one as part of this Phase I ESA.

3.0 PROPERTY DESCRIPTION AND PHYSICAL SETTING

3.1 Location and Legal Description

The subject property consists of one parcel located at 45 Van Sinderen Avenue in Brooklyn, New York. The subject property is located in the borough of Brooklyn in Kings County. The property is identified in the NYC Tax Map as Block 1576, Lot 1.

A Site Location Map is included as **Figure 1** and a Site Plan is included as **Figure 2**; photos of the subject property are included in **Appendix A**.

3.2 Subject Property Description and Improvements

The subject property measures approximately 0.3 acres and is improved with an approximately 103-year-old (built in 1921) two-story warehouse and loft building covering approximately 40% of the lot on the south, with an attached storage yard to the north. The building has a partial cellar covering approximately half the building area on the west, featuring stone rubble walls with a superstructure of wood frame and masonry construction.

3.2.1 Municipal Services and Utilities

Utility services are provided to the property as follows:

- Heating/Cooling System – The building on the property is heated via a natural gas boiler heating system with natural gas supplied by National Grid and cooled via window-mounted air conditioning units.
- Water Supply – The property is connected to a municipal water supply system provided by the New York City Department of Environmental Protection (NYCDEP).
- Sanitary System – The property is connected to the New York City municipal sewer system.
- Electric – Electricity is provided to the property by Consolidated Edison.

3.3 Physical Setting

The topography of the subject property and surrounding area was reviewed from the USGS 7.5-minute series topographic map for the Brooklyn, New York quadrangle. The property elevation is approximately 70 feet above the National Geodetic Vertical Datum (NGVD). Regional physiographic conditions are summarized below.

3.3.1 Regional Geology / Hydrogeology

The geologic setting of Long Island is well documented and consists of crystalline bedrock composed of schist and gneiss overlain by layers of unconsolidated deposits. Immediately overlying the bedrock is the Raritan Formation, consisting of the Lloyd sand confined by the Raritan Clay Member. The Lloyd sand is

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

an aquifer and consists of discontinuous layers of gravel, sand, sandy and silty clay, and solid clay. The Raritan Clay is a solid and silty clay with: few lenses of sand and gravel, abundant lignite and pyrite, and gray, red, or white in color.

Above the Raritan Clay lies the Magothy Formation. The Magothy Aquifer consists of layers of fine to coarse sand of moderate to high permeability, with inter-bedded lenses of silt and clay of low permeability resulting in areas of preferential horizontal flow; therefore, this aquifer generally becomes more confined with depth. The Magothy Aquifer is overlain by the Upper Glacial Aquifer. The Upper Glacial Aquifer is the water table aquifer at this location and is comprised of medium to coarse sand and gravel with occasional thin lenses of fine sand and brown clay. This aquifer extends from the land surface to the top of the Magothy Aquifer; therefore, is hydraulically connected to the Magothy Aquifer.

3.3.2 Local Hydrogeology

Based upon the subject property elevation and regional groundwater contour maps, the depth to groundwater beneath the subject property is approximately 59 feet below existing grade. Regional groundwater flow is estimated to be toward the southeast direction.

Based upon information contained within the EDR report, there are no public water supply wells within a one-mile radius of the subject property.

3.3.3 Flood Potential

PWGC reviewed the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) to determine if the subject property is located within a flood hazard area. Based upon FIRM data, it appears that the subject property is/is not located within a Special Flood Hazard Area (1%) or a 0.2% Annual Chance Flood Hazard area (FEMA Map Panel ID: 3604970065B).

3.3.4 Direction and Distance to Nearest Surface Water

Based on topographic maps, no permanent surface water bodies are located within a one-mile radius of the subject property.

4.0 PROPERTY USAGE

4.1 Current Property Usage

The subject property is currently used as the following:

- Garbage truck storage, north yard tenant.
- Great Goods Co, Inc., Amazon product distributor, tenant of first floor.
- Rented artist studio space, tenant of second floor of building on site.

4.2 Current Usage of Adjoining/Surrounding Properties

A summary of the surrounding properties is as follows:

Table 4-1 – Current Usage of Surrounding Properties

Direction	Adjoining Properties	Surrounding Area
North	Church inside a 2-story building.	Railroad lines and transportation property.
South	'Noble Signs' sign shop; East New York Inn.	Long Island Railroad line and station.
East	Parking lot beneath subway/railroad lines.	Railroad lines; NYC Transit Maintenance Facility.
West	Van Sinderen Avenue; Garage space.	Light industrial property and residential.

4.3 Historical Usage of Subject Property and Surrounding Properties

Historical sources researched to determine past usage of the subject property and surrounding properties are as follows:

4.3.1 Sanborn Fire Insurance Maps

EDR was retained to provide historical Sanborn fire insurance maps of the subject and adjacent properties. Historical Sanborn maps for the subject property and surrounding area were reviewed for the years available which include 1887 to 2007. Review of the maps is summarized in Table 4-2. A copy of the historical Sanborn report is included in **Appendix B**.

Table 4-2 – Sanborn Map Summary – Subject Property

Date	Subject Property Usage
1887	Reasonably ascertainable Sanborn maps do not exist.
1888	The northern portion of the property appears to be undeveloped. The southern portion appears to be used for lime and coal storage with a shed in the southwest corner of the property. The storage buildings are part of the Thatford and Ackerman Coal and Lumber Yard. A rail spur appears to service the property.

4.3.2 *Historical Topographic Maps*

Historical topographic maps for the subject property and surrounding area were reviewed for the years available which include 1897 to 2019. Review of the maps is summarized in Table 4-3. Copies of historical topographic maps are included as **Appendix C**.

Table 4-4 – Topographic Map Summary – Subject Property

Date	Subject Property Usage
1897-2019	The subject property appears to be located within a developed, urban area; however, the resolution of reasonably ascertainable topographic maps is insufficient to draw conclusions as to the specific usage of the subject property.

Table 4-4 – Topographic Map Summary – Surrounding Area

Date	Adjoining Properties	Surrounding Area
North		
1897-1900	A railroad appears to be present.	A railroad appears to be present.
1947-1994	A railroad appears to be present.	Broadway Junction railroad tracks.
2013-2019	A railroad appears to be present.	A railroad appears to be present.
South		
1897-1900	A railroad appears to be present.	A railroad appears to be present.
1947-1994	Additional railroad tracks running east-west appear to be present.	A railroad and a railroad station appear to be present.
2013-2019	A railroad appears to be present.	A railroad appears to be present.
East		
1897-1947	A railroad appears to be present.	A railroad appears to be present.
1956-1994	Additional railroad tracks appear to be present.	A railroad appears to be present.
2013-2019	A railroad appears to be present.	A railroad appears to be present.
West		
1897-1900	The resolution of reasonably ascertainable topographic maps is insufficient to draw conclusions as to the specific usage of the adjoining property.	The resolution of reasonably ascertainable topographic maps is insufficient to draw conclusions as to the specific usage of the surrounding property.

4.3.3 Historical Aerial Photographs

PWGC performed a review of readily available aerial photographs showing the subject property and surrounding area. Photographs were reviewed for the years available which include 1924 to 2019. Review of the photos is summarized in Table 4-4. A copy of the aerial photograph search is included in **Appendix D**.

Table 4-6 – Aerial Photograph Summary – Subject Property

Date	Subject Property Usage
1924-1961	The northern portion of the subject property appears to be undeveloped. The southern portion of the property appears to be developed with one small building (shed) and one larger building (with six skylights).
1966-1976	The resolution of reasonably ascertainable aerial photographs maps is insufficient to draw conclusions as to the specific usage of the subject property.
1980-1984	The larger building appears to have been renovated (the skylights no longer appear to be present). This appears to be the currently existing building.
1994	The shed no longer appears to be present.
2006-2015	The undeveloped northern portion of the property appears to be overgrown with vegetation.
2019	The undeveloped northern portion of the property no longer appears to be overgrown; vehicles appear to be staged in this area. This appears consistent with currently existing conditions at the subject property.

Table 4-7 – Aerial Photograph Summary – Surrounding Area

Date	Adjoining Properties	Surrounding Area
North		
1924	Appears to be undeveloped.	One building is present. Overhead train tracks.
1951-1976	Four buildings appear to be present.	One large building and a parking lot are present. Overhead train tracks.
1980-2019	Two buildings appear to be present (three of the previous buildings were replaced by one larger building).	One large building and a parking lot are present. Overhead train tracks.

4.3.5 Subject Property Historical Summary

Based on review of historical sources, as described in Section 4.3.1 through 4.3.4, the subject property was first developed prior to 1888. The property was used for coal/lime storage for a lumber yard from approximately 1888 to 1908, Gold foil manufacturing from approximately 1932 to 1934, Terminix Insulation in 1940, instrument testing from approximately 1951 to 2007, and as a distribution warehouse and art studio (present day)

- industrial usage
- lumber yard

4.3.6 Surrounding Area Historical Summary

Based on review of historical sources, as described in Section 4.3.1 through 4.3.4, the area surrounding the subject property was first developed prior to 1888. Surrounding property development was a mix of residential, commercial, and industrial uses until approximately 1965, after which residential use decreased, and commercial/industrial usage increased to the present-day extent. Historical usage of properties in the surrounding area indicative of potential RECs include the following:

- lumber yard
- railroad
- steel manufacturing
- auto sales and services
- knitting mill

5.0 USER PROVIDED INFORMATION

5.1 User Requirements

The user of a Phase I ESA report, in accordance with the USEPA All Appropriate Inquiries (AAI) Rule and ASTM E1527-21 has certain responsibilities which include providing the following information, if available, to PWGC to be included within the Phase I Report. Additionally, PWGC provided the user of the report a User Questionnaire form. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identify if RECs are present at the subject property. A copy of the User Questionnaire and any provided documents are included in **Appendix F**; relevant information has been incorporated into this report.

5.2 Title Records

Title records for the subject property may contain information about past owners and uses of the subject property. The title report may also contain information, such as restrictive declarations which are limitations on site uses based upon know environmental conditions. As of the date of this report, the user has not provided PWGC with a title search or requested that PWGC perform a title search.

5.3 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws. As of the date of this report, the user has not provided PWGC with a lien search or requested that PWGC perform a lien search.

5.4 Specialized Knowledge

The user provided no specialized knowledge about the property to PWGC.

5.5 Commonly Known or Reasonably Ascertainable Information

The user provided no commonly known information about the property to PWGC.

5.6 Valuation Reduction for Environmental Issues

The user provided no information regarding price adjustments to the subject parcels value due to environmental issues.

5.7 Owner, Property Manager, and Occupant Information

The subject property is currently owned by 2465 Atlantic LLC.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

The subject property is currently occupied by the following:

- Great Goods, Co., 1st floor warehouse
- Artist Studios, 2nd floor
- Garbage truck storage, north yard.

5.8 Reason for Performing Phase I ESA

The Phase I ESA was performed to evaluate potential RECs prior to a potential property transaction.

6.0 RECORDS REVIEW

6.1 Standard Environmental Record Sources

EDR of Shelton, Connecticut was retained to provide a database search of the project area within an ASTM-standard radius of the subject property. A list of the databases searched and the search radius is shown on the summary table below. PWGC reviewed the database output to determine if the property appears on any of the regulatory agency lists. Detailed information concerning each database list is provided in the EDR report (**Appendix G**).

In order to evaluate the potential for a site to have an adverse impact to the subject property, the migration pattern of contaminants in media such as groundwater or soil vapor is considered. Based upon the presumed regional flow towards the southeast, the following is assumed:

- Sites located northwest of the subject property or sites that are neighboring or adjacent to the subject property are considered to have the highest potential to impact the subject property and are referred to as "up gradient."
- Sites located southeast of the subject property, which are not neighboring or adjacent to the subject property are considered to have the least potential to impact the subject property and are referred to as "down gradient."
- All other sites not adjacent to or neighboring the subject property are referred to as "cross gradient" and are considered to have minimal potential to impact the subject property.
- The migration pathway for potential soil vapor impact may not match the migration pattern of potential groundwater impact. As such, sites that are located down or cross gradient of the subject property with respect to groundwater flow may still represent a potential source of vapor encroachment at the subject property. Such sites, if identified are discussed in Section 6.2.

A summary of standard environmental record sources researched is as follows:

6.1.1 Federal Databases

The table below summarizes the Federal databases that were searched.

Table 6-1 - Federal Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Total Nearby Properties Identified	Up Gradient and Adjacent Properties Identified	Down or Cross Gradient Properties Identified
USEPA	National Priority List	NPL	1.0 mile	No	1	1	0
USEPA	National Priority List Deletions	Delisted NPL	0.5 mile	No	0	0	0

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

USEPA	Emergency Response Notification System	ERNS	Subject Property	No	N/A	N/A	N/A

Review of the EDR Radius Map Report indicates that the subject property is not listed in Federal environmental databases searched.

Based on review of environmental database records, as described above, the following sites within the ASTM standard Federal database search radii of the subject property were identified as potential concerns (see section 6.1.5 for further detail on these sites):

- Wolff-Alport Chemical Company - NPL

Remaining sites identified within the ASTM standard Federal database search radii were ruled out as potential concerns due to their distance, direction relative to groundwater flow, and/or closed status.

6.1.2 State and Local Databases

The table below summarizes the State databases that were searched.

Table 6-2 - New York State and Local Databases Searched

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC

Review of the EDR Radius Map Report indicates that the subject property is not listed in State environmental databases searched (see section 6.1.5 for further detail).

Based on review of environmental database records, as described above, due to their distance, direction relative to groundwater flow, and/or closed status, no database records related to surrounding properties within the ASTM standard State database search radii indicative of potential environmental concerns were identified.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

6.1.3 *EDR Databases*

The table below summarizes the EDR databases that were searched.

Table 6-3 - Additional Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Total Nearby Properties Identified	Up Gradient and Adjacent Properties Identified	Down or Cross Gradient Properties Identified
EDR	Manufactured Gas Plants	MGP	1.0 mile	No	2	0	2
EDR	Historical Drycleaners	HDC	0.25 mile	No	0	0	0
EDR	Historical Auto Station	HAS	0.125 mile	No	2	0	2

Review of the EDR Radius Map Report indicates that the subject property is not listed in EDR proprietary environmental databases searched.

Based on review of environmental database records, as described above, due to their distance, direction relative to groundwater flow, and/or closed status, no database records related to surrounding properties within the EDR proprietary database search radii indicative of potential environmental concerns were identified.

6.1.4 *Orphan Sites*

Orphan sites are properties, that due to an inadequate or incomplete address in government databases or in base map files, are not able to be geographically located (i.e. mapped or geocoded). This can occur for several reasons: no street number or street name in address given, the street address is given only as a P.O. Box, or when inconsistencies exist in the address (street number does not exist in the city / zip code given).

Four orphan sites were identified in the EDR report. PWGC performed a cursory review of the addresses listed. It does not appear that the subject property or neighboring properties are identified in the orphan summary.

6.1.5 *Sites of Potential Concern*

Based on review of environmental database records, as described above, the following sites within ASTM standard search radii were identified as potential environmental concerns related to the subject property:

- Wolff-Alport Chemical Company is listed in the NPL database and is located approximately 0.9 miles upgradient of the subject property at 1125-1139 Irving Avenue. According to USEPA's Database records, the Wolff-Alport Chemical Company imported monazite sand and extracted

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

rare earth metals onsite from the early 1920s until 1954. Monazite contains approximately 6-8% thorium. Until 1947, the Wolff-Alport Chemical Company dumped the thorium waste in the sewer and possibly buried the waste on the property. Investigations confirmed radiological contamination still existed on the property and in/around sewer lines downstream of the former facility. EPA included the adjacent streets, sidewalks, sewers, and commercial and residential properties where radiological contaminants migrated or have the potential to migrate as part of the site, indicating the area of concern related to this site is well outside the subject property boundary. As such, this site does not appear to represent an environmental concern to the subject property.

6.2 Vapor Encroachment

PWGC performed a Tier 1 Vapor Encroachment Screening for the subject property in accordance with ASTM E2600-15, Vapor Encroachment Screening on Property Involved in Real Estate Transactions. In accordance with ASTM E2600-15, the default Area of Concern (AOC), adjusted to account for the groundwater flow direction in the vicinity of the subject property, is defined as follows:

Direction Relative to Subject Property	Petroleum Impacted Sites AOC Radius	Contaminants of Concern Impacted Sites AOC Radius
Up Gradient	528 feet	1,760 feet
Cross Gradient	165 feet (LNAPL) 95 feet (dissolved)	365 feet
Down Gradient	100 feet (LNAPL) 30 feet (dissolved)	100 feet

PWGC evaluated sites identified in Federal and State databases (see Section 6.1) located within the adjusted AOC radii for the potential for petroleum impact and or contaminants of concern (such as perc) to be present. The following sites were identified within the adjusted AOC:

- Four LTANKS sites
- One VCP site

Each of these sites was evaluated for the potential for a vapor encroachment condition (VEC) to be present. Based on these sites' lack of apparent impact present and/or closed status, PWGC has determined that none are likely to represent a VEC at the subject property.

A copy of the Tier 1 Vapor Encroachment Screening is included as **Appendix H**.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC

6.3 Additional Environmental Record Sources

6.3.1 Freedom of Information Act Requests

Freedom of Information Act (FOIA) requests were sent to the United States Environmental Protection Agency, Region 2 (USEPA) via USEPA's MyProperty database, the New York State Department of Environmental Conservation, Region 2 (NYSDEC), The New York City Mayor's Office of Environmental Remediation (NYCOER), the New York City Department of Environmental Protection (NYCDEP) and the New York City Fire Department (FDNY). Copies of FOIA requests are included in **Appendix I**.

As of the date of this report, responses to FOIA requests have not been received, except as noted below. As responses were not provided within the allotted due diligence period, the records were deemed not to be "reasonably ascertainable" at this time. Should records become available at a later date, pertinent information will be forwarded as an addendum upon receipt.

6.3.2 Publicly Available Online Information

Information regarding the subject property was collected from several publicly available online sources, including the following:

- Property Shark (www.propertyshark.com, an aggregator of publicly available real estate information).
- NYSDEC DECInfo Locator (https://www.dec.ny.gov/pubs/109457.html)
- NYCDOB Building Information System (https://www1.nyc.gov/site/buildings/index.page)

Information regarding the subject property available on above listed sources was reviewed to identify pertinent information. No indication of environmental issues was identified.

- NYCDOB Building Information System: A 1920 Certificate of Occupancy identified the subject property as a gold leaf factory.
- NYCDOB Building Information System: Oil burner applications were filed in 1942 and 1943.

Copies of publicly available information are included in **Appendix I**.

7.0 SITE RECONNAISSANCE

7.1 Methodology and Limiting Conditions

Ms. Danielle Dulligan of PWGC performed site reconnaissance on Wednesday, March 26, 2025. Weather conditions during the inspection were cloudy with a temperature of approximately 43-52° Fahrenheit. PWGC returned to the subject property on April 8, 2025, to access the property basement that was inaccessible during the initial inspection.

The site reconnaissance consisted of an inspection of the interior portions of the existing building, followed by inspection of the exterior portions of the property. A Site Inspection Checklist is included as **Appendix J**. The presence of multiple garbage trucks in the northern, open portion of the subject property obscured a significant portion of the yard, limiting the ability to inspect ground conditions. Additionally, the second floor of the building (rented artist space) contained several locked areas that were inaccessible during site reconnaissance.

7.2 Aboveground Storage Tanks (AST)

PWGC did not identify ASTs at the subject property.

7.3 Underground Storage Tanks (UST)

PWGC did not identify evidence of USTs, such as fill ports or vent lines at the subject property.

7.4 Hazardous and Non-Hazardous Chemical Storage

PWGC observed chemical storage consisting of the following:

- Paint and lacquer were observed, stored in their retail containers, within the second-floor art studio. No staining was observed in the vicinity of the chemical storage, and containers appeared to be in good condition at the time of inspection.
- A five-gallon bucket of lubricant was observed laying on its side in the northern yard. Multiple dark stains were observed across the yard.

7.5 Waste Generation, Storage, and Disposal

PWGC did not identify evidence of waste generation, storage or disposal at the subject property.

7.6 Polychlorinated Biphenyls (PCBs)

PWGC did not identify potentially PCB containing equipment such as electrical transformers or hydraulic lifts at the subject property.

7.7 Additional Site Conditions

The following is a summary of visual and/or physical observations made by PWGC at the time of site reconnaissance. Photographs of pertinent observations are included in **Appendix A**.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

Table 7-1 - Additional Site Conditions

Condition	Identified
Interior drains, trenches or sumps.	No
Interior stains or corrosion	No
Unusual odors	No
Interior pools of liquid	No
Stained Soils or Pavement	Yes[1]
Stressed Vegetation	No
Indications of solid waste disposal	No
Exterior ponds, pits, or lagoons	No
Wastewater discharge/disposal	No
Storm water discharge/disposal	No
Oil water separators/clarifiers	No
Septic Systems/Cesspools	No
Wells (Drinking water, monitoring wells, agricultural/ irrigation wells, or process water wells)	No
Petroleum or natural gas pipelines or easements	No
Other	No

1 – Dark-stained pavement was observed in the northern yard. The property is a storage yard for diesel-powered garbage trucks. The yard is poorly maintained with miscellaneous trash/junk stored across the property.

7.8 Neighboring Properties

PWGC performed a cursory inspection of the neighboring properties from the subject property and public right of ways. The neighboring properties are used for commercial purposes. Potential environmental concerns were not observed at neighboring properties.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

8.0 INTERVIEWS

8.1 Current Owner

PWGC emailed a property owner questionnaire to the client, Elizabeth Canela, via email on April 2, 2025, to be forwarded to the current property owner. As of the date of this report, a response from the property owner has not been received.

8.2 Occupant

PWGC interviewed Stephen of Great Goods, Co., an employee of the current first floor occupant. Stephen did have knowledge of environmental issues at the subject property. Information provided by Stephen is summarized below and has been incorporated into this report where appropriate.

- One of the garbage trucks in the northern yard caught fire. The fire department was called and the fire was extinguished. It was unclear if water or foam were utilized to extinguish the fire.

8.3 Previous Environmental Reports

PWGC was provided copies of a Phase I Environmental Site Assessment Report by CBRE, Inc. from September 2018 for the subject property. PWGC prepared a Phase II ESA in May 2024 for the subject property and the adjoining southern property located at 2465 Atlantic Avenue. Information included in the reports is summarized below.

8.3.1 Phase I Environmental Site Assessment Report (September 2018)

CBRE, Inc. prepared a Phase I ESA in September of 2018 for 45 Van Sinderen Avenue. The Phase I ESA did not identify RECs associated with subject property; however, the presence of "fill" material (material with fragments of brick, concrete, cinder, etc) commonly found within the five boroughs of New York City may represent an environmental concern and require special handling and disposal if the site were to be redeveloped.

8.3.2 Phase II Environmental Site Assessment Report (May 2024)

PWGC prepared a Phase II ESA in May of 2024 for 45 Van Sinderen Avenue (subject property) and 2465 Atlantic Avenue (adjoining southern property). The Phase II ESA documented the findings of the Subsurface Investigation performed at the subject property. The Phase II ESA results for 45 Van Sinderen Avenue is summarized below.

Subsurface anomalies indicative of potential USTs, drywells, or other objects which would warrant further investigation were not identified during the geophysical survey.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

Soil quality across the soil borings exhibited the presence of fill material in the top 15 feet. Three soil samples were collected from two soil borings installed across the site as part of this assessment. Analytical results for each of the three samples did not identify concentrations of Volatile Organic Compounds (VOCs) greater than Unrestricted Use Soil Cleanup Objectives (UUSCOs) with the exception of trichloroethylene (TCE) in SB001. Semivolatile Organic Compounds (SVOCs), namely polyaromatic hydrocarbons (PAHs), were detected in SB004 from the 0 to 2-foot interval at concentrations greater than Commercial Use SCOs (CUSCOs). Metals including arsenic and copper were detected at concentrations greater than CUSCOs in SB001 and SB004 in the 0 to 2-foot interval, and manganese exceeded UUSCOs in SB004 in the 13 to 15-foot interval. In general, elevated concentrations of SVOCs and metals were identified at locations and depths where the upper layer of fill material was observed, with manganese being the only analyte detected greater than UUSCOs in the lower fill layer. Elevated concentrations of VOCs were identified only in samples collected from beneath the building slab and may be associated with the presence of soil vapors.

One soil vapor sample was collected from the up gradient portion of the property in the northern yard. There were no VOC concentrations detected in the up gradient soil vapor sample that would warrant mitigation based on NYSDOH matrices; however, concentrations of petroleum related compounds, such as the trimethylbenzenes and BTEX (benzene, toluene, ethylbenzene, xylene) and chlorinated VOCs such as tetrachloroethylene were detected at lower concentrations.

8.4 Local Government Officials

Freedom of Information Act (FOIA) requests were sent to the United States Environmental Protection Agency, Region 2 (USEPA) via USEPA's MyProperty database, the New York State Department of Environmental Conservation, Region 2 (NYSDEC), The New York City Mayor's Office of Environmental Remediation (NYCOER), the New York City Department of Environmental Protection (NYCDEP) and the New York City Fire Department (FDNY).

Based upon the subject property history, interviews with government officials to obtain additional information are not warranted at this time.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

9.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM 1527-21

9.1 Wetland Delineation

Based on review of the EDR Radius Map Report, which includes State and Federal wetlands, it appears that State and/or Federal wetlands are not present on the subject property.

Based on review of the EDR Radius Map Report, no State or Federal wetlands are located within a one-mile radius of the subject property.

9.2 Radon Risk Evaluation

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate, and pitchblende. The USEPA's "Map of Radon Zones for New York State," September 1993 indicates that Kings County is not a radon risk area. The EDR report provides information from the New York State Department of Health radon survey which indicates that the average result for sites tested in Kings County is 0.750 Pico curies per liter (pCi/L) in the living area, which is less than the USEPA radon action level of 4 pCi/L, and 100% of sites tested in Kings County were less than the action level of 4 pCi/L in the living area.

9.3 Asbestos

PWGC performed a cursory visual inspection of the building during site reconnaissance for potential asbestos containing material (ACM) and did not identify obvious potential ACM. However, regardless of the age of the building, ACM may be present in building products such as drywall, acoustic ceiling tiles, plaster, joint compound, roofing materials, waterproofing material, caulk, grout, flooring, mastics, thermal systems, and pipe wrap. A detailed asbestos survey should be performed by a qualified asbestos inspector in accordance with applicable federal, state, and local regulations prior to renovation or demolition of the building(s); please note that the asbestos inspection performed as part of this Phase I ESA does not meet those criteria.

9.4 Lead-Based Paint (LBP)

PWGC did not identify evidence of potential lead-based paint at the subject property. Based on the apparent age of the building, it is possible that lead based paint is present.

9.5 Mold

PWGC did not visually observe significant sources of mold at the subject property during site reconnaissance.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

9.6 Historic Fill

Given the location of the subject property within the five boroughs of New York City, there is a potential for historic fill material to be present beneath the subject property. Such material, if excavated (for the purpose of constructing a building, installing new footings, and/or utilities), will require special handling and disposal.

9.7 Emerging Contaminants

Emerging contaminants collectively refer to several chemicals/groups of chemicals that represent potential sources of groundwater impact that are becoming increasingly scrutinized and regulated in recent years. Emerging contaminants that are currently a focus of regulatory agencies in New York state are discussed below.

9.7.1 Per- and Poly-Fluoroalkyl Substances

Per- and Polyfluoroalkyl Substances (PFAS) are a group of man-made chemicals that have been in use since the 1940s that are or have been used in products such as chrome plating, electronics manufacturing, fire suppression foams, stain and water repellants, non-stick coatings, paints, and other consumer products. As of February 2023, NYSDEC has established drinking water quality guidance values, and is in the process of establishing soil quality standards for PFAS. In addition, PFAS chemicals perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) have been designated "hazardous substances" as defined by USEPA. As such, the presence or potential presence of such compounds at the site, under conditions defined in Section 2.3, may represent a REC.

Based on review of the database report and site history, PWGC has not identified evidence of current or past chemical usage or storage at the site indicative of a potential source of PFAS impact; however, the fire that occurred on the garbage truck in the northern yard was addressed by the fire department. Aqueous firefighting foam (AFFF) contains PFAS and may have been utilized to extinguish the fire. PWGC prepared a FOIL request to FDNY to confirm whether AFFF was utilized. As of the date of this report, a response has not been received.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO • SYRACUSE • SHELTON, CT

10.0 FINDINGS AND OPINIONS

Based upon reconnaissance of the subject and surrounding properties, interviews, and review of historical records and regulatory agency databases, the following potential RECs have been identified:

Onsite

- Current and historical site usage.
- Dark staining observed in northern yard.

Offsite

- Current/historical usage of surrounding properties.

Potential RECs identified at the subject property were evaluated to determine whether items initially suspected to be RECs are in fact RECs. Evaluation of potential RECs are as follows:

- The subject property was historically used for coal and lime storage as part of a lumber yard from approximately 1888 to 1908. Lumber storage may result in treated wood containing chromated copper arsenate or creosote, which may leach into the subsurface through stormwater runoff. Coal and lime storage similarly may result in subsurface impact through infiltration. There are no records confirming treated wood storage at the subject property; however, the presence of the lumber yard predates most environmental regulations and documentation related to past releases may not exist. As such, PWGC believes the past usage of the site as a lumber yard represents a REC.
- The subject property was historically used for gold foil manufacturing from approximately 1920 to 1934. Such usages are likely to have used/stored hazardous substances, such as sodium cyanide, and/or petroleum products. While there are no open spills or violations associated with the subject property, the gold foil manufacturing listing predates most environmental regulations and documentation related to past releases may not exist. As such, PWGC believes the past usage of the subject property for gold foil manufacturing represents a REC.
- Dark-stained soil/pavement was observed in the northern yard. The property is a storage yard for diesel-powered garbage trucks. The yard is poorly maintained with miscellaneous trash/junk stored across the property. The potential exists for the material causing the staining to the yard to impact the subsurface. As such, PWGC believes the presence of dark staining in the northern yard represents a REC.
- Multiple surrounding properties were identified as having current and historical industrial uses, including steel manufacturing, auto sales and repair, a lumber yard, a knitting mill, and railroad. Identified current and historical usages are likely to have used/stored hazardous substances and/or petroleum products. However, based on these sites' lack of identified open spills or other violations, the likelihood of potential releases impacting the subject property appears to be low. Based on this information, the current and historical usage of surrounding properties does not appear to represent a REC.

11.0 CONCLUSIONS AND RECOMMENDATIONS

PWGC has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 for the subject property. There were no exceptions to, or deletions from, this practice except as noted in Section 12.0 of this report. PWGC evaluated the findings associated with the subject property and identified three RECs, no HRECs, and no CRECs with respect to the subject property.

Based on the identified RECs, PWGC recommends a supplemental Phase II ESA be performed at the subject property. The Phase II ESA should include:

- Additional soil sampling to more completely characterize subsurface soil and historic fill conditions.
    - Based on the potential PFAS impact from the garbage truck fire, and potential cyanide impact from the gold foil manufacturing usage, PWGC recommends including PFAS and cyanide in the soil sampling analyses.

Although not a part of the ASTM E1527-21 scope, the following additional concerns associated with the subject property must be considered:

- Based on inspection of the subject property, it is possible that ACM and/or lead-based paint are present within the structure. PWGC recommends that, prior to demolition or renovation of the building, a detailed asbestos and/or lead based paint survey should be performed by a qualified asbestos/lead inspector in accordance with applicable federal, state, and local regulations prior to renovation or demolition of the building; please note that the asbestos/lead inspection performed as part of this Phase I ESA does not meet those criteria.

12.0 DEVIATIONS

This Phase I ESA was conducted in accordance with the scope and limitations of the ASTM Standard E 1527-21 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process) and 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule). Excluding data gaps identified in Section 2.8 and additional services outlined in Section 9.0, there were no deviations or deletions from this practice.

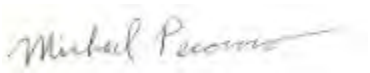
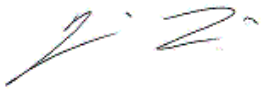
14.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.



Michael Pecoraro
Project Manager



Jennifer Lewis, PG
Vice President

Qualifications of the Environmental Professionals are included in **Appendix K.**

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by P.W. Grosser Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Site Name:

Broadway Junction Properties
45 Van Sinderen Avenue
Brooklyn, NY 11207
EDR Inquiry # 7931531.4

Client Name:

P.W. Grosser Consulting
630 Johnson Ave
Bohemia, NY 11550
Contact: Michael Pecoraro

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by P.W. Grosser Consulting were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# TOT2503
Project: TOT2503

Coordinates:

Latitude:	40.676539 40° 40' 36" North
Longitude:	-73.903116 -73° 54' 11" West

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 401 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

APPENDIX F
SITE QUESTIONNAIRE
AND RELEVANT DOCUMENTS

SUBJECT PROPERTY OCCUPANT QUESTIONNAIRE

P.W. Grosser Consulting Inc. (PWGC) has been contracted to perform a Phase I Environmental Site Assessment (ESA) of the property listed below. The Phase I ESA will include site observations, interviews, and review of available documentation. To ensure the success of the assessment, and in accordance with ASTM Standard E1527-21 we are required to ask the following questions of subject property occupants. If you could please complete this questionnaire and return it via email within one business day of receipt it will allow us to complete the Phase I ESA in a timely and efficient manner.

Date Completed:	Wednesday 03/26/25
Subject Property Address:	45 Van Sinderen Avenue, Brooklyn, NY
Name:	Stephen, employee of Great Goods
Company:	Great Goods, 1st Floor Tenant
Length of association with property:	At least 3 years
Phone Number:	
Email Address:	

Directions: Please read and answer all questions very carefully, to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response. Supplemental details necessary to explain any yes or unknown responses should be provided in the "Comments" column. Note: U/NR indicates "Unknown" or "No Response," and "N/A" indicates not applicable. If "Comment" box proves too small to fit your comment, please use the "additional information" section at the end of this form.

	Question	Yes	No	U/NR	Comment
1	Is the subject property currently, or to the best of your knowledge in the past, used for an industrial use?		√		
2	Are any adjoining properties currently, or to the best of your knowledge in the past, used for an industrial use?			√	
3	Is the property currently, or to the best of your knowledge in the past, used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junk yard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?			√	
4	Is any adjoining property currently, or to the best of your knowledge in the past, used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junk yard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?			√	
5	Are there currently or to the best of your knowledge in the past, any automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers greater than five gallons in the aggregate, stored on or used at the subject property?		√

	Question	Yes	No	U/NR	Comment
6	Are there currently or to the best of your knowledge in the past, any industrial drums (typically 55 gallon) or sacks of chemicals located on the property?		√		
7	Is there currently or to the best of your knowledge in the past, any groundwater monitoring wells or other groundwater wells (e.g., potable drinking water wells) located on the property?		√		
8	Has fill dirt been brought onto the property which originated from a contaminated site or unknown origin?		√		
9	Are there currently or to the best of your knowledge in the past, any pits, ponds or lagoons located on the property in connection with waste treatment or waste disposal?			√	
10	Is there currently, or to the best of your knowledge in the past, any stained soil on the property?		√		
11	Are there currently or to the best of your knowledge in the past, any registered or unregistered storage tanks (above or underground) located on the property?			√	
12	Are there currently or to the best of your knowledge in the past, any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?			√	
13	Are there currently, or to the best of your knowledge in the past, any onsite sanitary systems, cesspools, storm drains, floor drains, drywells or other leaching pools located on the property.			√	
14	Does the property discharge wastewater on or adjacent to the property, other than storm water, or into a sanitary system?		√		
15	Are there currently or to the best of your knowledge in the past, any flooring, drains, or walls located at the property that are stained by substances other than water or are emitting foul odors?		√		
16	If the property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system, or has the well been designated as contaminated by any government environmental/health agency?			√	
17	Have you been informed of the current or past existence of hazardous substances or petroleum products with respect to the property or any facility located on the property?			√	
18	Have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the property?			√	
19	Is there a transformer, capacitor or any hydraulic equipment for which there are any records indicating the presence of PCBs?		√

	Question	Yes	No	U/NR	Comment
33	Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?			√	
34	Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?			√	
35	Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases?			√	
36	Based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of releases at the subject property			√	
37	Have there been any environmental site assessments of the property that indicated the presence of hazardous substances or petroleum products on, or contamination of, the property or recommended further assessment of the property?			√	
38	Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?			√	
39	Are you aware of any fires at the subject property that required the municipal fire department to respond?	√			Fire in north yard, garbage truck about two years ago

In addition, are you aware of any of the following documents, and if so, please forward copies of the document(s) to P.W. Grosser Consulting at 630 Johnson Ave, Ste 7, Bohemia, NY 11716-2618 (along with a copy of this form):

- Environmental site assessment reports (e.g., Phase I or II ESAs, tank testing results, radon, lead paint, or asbestos testing, etc.).
- Environmental compliance audit reports; risk assessments; and recorded Activity and Use Limitations (AULs).
- Environmental permits (e.g., solid waste disposal, hazardous waste disposal, wastewater, NPDES, etc.).
- Registrations for underground storage tanks (USTs) and aboveground storage tanks (ASTs).
- Registrations for underground injection systems Material safety data sheets.
- Community right to know plan.
- Safety plans; preparedness and prevention plans; spill prevention, countermeasure/control plans, etc.
- Reports regarding hydrogeological or geotechnical conditions on the property and surrounding area.
- Notices/correspondence from any agency relating to past or current violations of environmental laws, or liens encumbering the property.
- Hazardous waste generator notices or report.

SUBJECT PROPERTY OCCUPANT QUESTIONNAIRE

P.W. Grosser Consulting Inc. (PWGC) has been contracted to perform a Phase I Environmental Site Assessment (ESA) of the property listed below. The Phase I ESA will include site observations, interviews, and review of available documentation. To ensure the success of the assessment, and in accordance with ASTM Standard E1527-21 we are required to ask the following questions of subject property occupants. If you could please complete this questionnaire and return it via email within one business day of receipt it will allow us to complete the Phase I ESA in a timely and efficient manner.

Date Completed:	Wednesday 03/26/25
Subject Property Address:	45 Van Sinderen Avenue, Brooklyn, NY
Name:	Tom
Company:	2nd Floor Tenant; Rented studio spaces
Length of association with property:	At least 5 years; Lease holder 2 years
Phone Number:	
Email Address:	

Directions: Please read and answer all questions very carefully, to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response. Supplemental details necessary to explain any yes or unknown responses should be provided in the "Comments" column. Note: U/NR indicates "Unknown" or "No Response," and "N/A" indicates not applicable. If "Comment" box proves too small to fit your comment, please use the "additional information" section at the end of this form.

	Question	Yes	No	U/NR	Comment
1	Is the subject property currently, or to the best of your knowledge in the past, used for an industrial use?		✓		
2	Are any adjoining properties currently, or to the best of your knowledge in the past, used for an industrial use?			✓	
3	Is the property currently, or to the best of your knowledge in the past, used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junk yard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?		✓		
4	Is any adjoining property currently, or to the best of your knowledge in the past, used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junk yard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?			✓	
5	Are there currently or to the best of your knowledge in the past, any automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers greater than five gallons in the aggregate, stored on or used at the subject property?		✓

	Question	Yes	No	U/NR	Comment
6	Are there currently or to the best of your knowledge in the past, any industrial drums (typically 55 gallon) or sacks of chemicals located on the property?		✓		Paint gallons on site (2nd floor, non lead)
7	Is there currently or to the best of your knowledge in the past, any groundwater monitoring wells or other groundwater wells (e.g., potable drinking water wells) located on the property?		✓		
8	Has fill dirt been brought onto the property which originated from a contaminated site or unknown origin?		✓		
9	Are there currently or to the best of your knowledge in the past, any pits, ponds or lagoons located on the property in connection with waste treatment or waste disposal?			✓	
10	Is there currently, or to the best of your knowledge in the past, any stained soil on the property?		✓		
11	Are there currently or to the best of your knowledge in the past, any registered or unregistered storage tanks (above or underground) located on the property?			✓	
12	Are there currently or to the best of your knowledge in the past, any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?			✓	
13	Are there currently, or to the best of your knowledge in the past, any onsite sanitary systems, cesspools, storm drains, floor drains, drywells or other leaching pools located on the property.			✓	
14	Does the property discharge wastewater on or adjacent to the property, other than storm water, or into a sanitary system?		✓		
15	Are there currently or to the best of your knowledge in the past, any flooring, drains, or walls located at the property that are stained by substances other than water or are emitting foul odors?		✓		
16	If the property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system, or has the well been designated as contaminated by any government environmental/health agency?			✓	Public water system
17	Have you been informed of the current or past existence of hazardous substances or petroleum products with respect to the property or any facility located on the property?			✓	
18	Have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the property?			✓	
19	Is there a transformer, capacitor or any hydraulic equipment for which there are any records indicating the presence of PCBs?		✓

	Question	Yes	No	U/NR	Comment
20	Are there currently, or to the best of your knowledge in the past, any identified asbestos containing materials (ACM), in any application, on the property, ACM testing conducted on the property, or an ACM Operations and Maintenance (O&M) program in place at the property?			✓	
21	Are there currently, or to the best of your knowledge in the past, any identified lead-based paint (LBP), in any application, on the property, LBP testing conducted on the property, or an LBP O&M program in place at the property?			✓	Chipped paint on stairway walls
22	Are there any other O&M programs in place that we should be made aware of?			✓	
23	Has potable water at the property ever been tested for lead?		✓		
24	Has radon testing ever been conducted at the property?		✓		
25	Has there ever been any Indoor Air Quality (IAQ) or mold testing conducted in the building(s)?		✓		
26	Is there now, or to the best of your knowledge in the past, evidence of mold or mildew present at the building(s)?		✓		
27	Is there now, or to the best of your knowledge in the past, water damage in the building(s), whether from flooding, plumbing, roof leaks, or other sources? If so, when?		✓		Stained wall in hallway
28	Is the property or any portion of the property located or involved in any environmentally sensitive areas (e.g., wetlands, coastal barrier resource areas, coastal barrier improvement act areas, flood plains, endangered species, etc.)?		✓		
29	Are you aware of any environmental liens filed or recorded against the subject property under federal, tribal, state, or local law?			✓	
30	Are you aware of land title records (or judicial records where appropriate) that identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded against the subject property under federal, tribal, state or local law?			✓	
31	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?			✓	
32	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?		✓		

	Question	Yes	No	U/NR	Comment
33	Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?			✓	
34	Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?			✓	
35	Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases?			✓	
36	Based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of releases at the subject property			✓	
37	Have there been any environmental site assessments of the property that indicated the presence of hazardous substances or petroleum products on, or contamination of, the property or recommended further assessment of the property?			✓	
38	Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?			✓	
39	Are you aware of any fires at the subject property that required the municipal fire department to respond?		✓		

In addition, are you aware of any of the following documents, and if so, please forward copies of the document(s) to P.W. Grosser Consulting at 630 Johnson Ave, Ste 7, Bohemia, NY 11716-2618 (along with a copy of this form):

- Environmental site assessment reports (e.g., Phase I or II ESAs, tank testing results, radon, lead paint, or asbestos testing, etc.).
- Environmental compliance audit reports; risk assessments; and recorded Activity and Use Limitations (AULs).
- Environmental permits (e.g., solid waste disposal, hazardous waste disposal, wastewater, NPDES, etc.).
- Registrations for underground storage tanks (USTs) and aboveground storage tanks (ASTs).
- Registrations for underground injection systems Material safety data sheets.
- Community right to know plan.
- Safety plans; preparedness and prevention plans; spill prevention, countermeasure/control plans, etc.
- Reports regarding hydrogeological or geotechnical conditions on the property and surrounding area.
- Notices/correspondence from any agency relating to past or current violations of environmental laws, or liens encumbering the property.
- Hazardous waste generator notices or report.

Tom, lease holder of second floor. Has held the lease for about two years, was a renter of the same space starting five years ago. Space has two bathrooms, no floor drains. Tenant said he did not dump anything other than grey water down the drains, but unsure of what his renters do. Paint was observed in the bathroom sink. Spaces are rented to mostly painters and some textile artists.

Re: Phase I Environmental Site Assessment
45 Van Sinderen Avenue
Brooklyn, New York 11207
CBRE Project No.: PC80947573-102

Dear Ms. Sirota:

CBRE, Inc., a Delaware corporation ("CBRE") is pleased to submit this copy of our Phase I Environmental Site Assessment on the above-referenced property. The report was prepared solely for the use of Metropolitan Commercial Bank and any party specifically referenced in Section 2.1. No other party shall use or rely on this report or the findings herein, without the prior written consent of CBRE.

I declare that, to the best of my professional knowledge and belief, I meet the definition of *environmental professional* as defined in § 312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the *subject property*. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Please contact the undersigned at (703) 225-8563 or by email at jeremiah.okrasinski@cbre.com should you have any questions.

Sincerely,

CBRE, Inc. – ASSESSMENT AND CONSULTING SERVICES

Alex Singh

1.0 EXECUTIVE SUMMARY

This report documents CBRE's findings from our Phase I Environmental Site Assessment on the property located at 45 Van Sinderen Avenue, Brooklyn, New York (the "Subject"). The property, which is situated in an urban area characterized by light industrial and residential development, consists of a 0.30-acre parcel improved with a 97-year-old (built in 1921), two-story warehouse and loft building that is currently used as a warehouse for furniture storage on the first floor and artist studios on the second floor. The Subject also includes an attached yard that is used for truck storage for an ironworks company.

Prior to the construction of the existing improvements, the Subject property was improved with small buildings used for coal and wood storage associated with the Thatford and Ackerman Coal and Lumber Yard since at least 1888 and was likely vacant land prior to that. The current Subject building was constructed in 1921 and was used as a rolled gold manufacturing facility in 1932 and an instrument testing company from 1951 until the early 2000s.

The purpose of this Phase I Environmental Site Assessment was to assess existing site conditions and render an opinion as to the identified or potential presence of recognized environmental conditions in connection with the property within the scope and limitations of ASTM International's Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-13 and the limitations identified herein. Exceptions to or deletions from the scope of work are described in Section 2.0.

Findings, Opinions and Conclusions

The term Recognized Environmental Conditions (RECs) is defined by ASTM Standard E 1527-13 as "...the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Subject.

A Controlled Recognized Environmental Condition *(CREC)* as defined by ASTM Standard E 1527-13 refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. CBRE did not identify CRECs in connection with the Subject.

An historical recognized environmental condition (HREC) refers to an environmental condition which would have been considered a REC in the past, but which is no longer considered a REC based on subsequent assessment and/or remediation of any contaminants to below the most restrictive (generally residential) cleanup target concentrations or regulatory closure with no formal or implied restricted uses. CBRE did not identify HRECs in connection with the Subject.

No significant data gaps were identified that would affect the ability of the environmental professional to identify RECs at the Subject.

The ASTM Standard was designed solely to meet the requirements of the USEPA's All Appropriate Inquiries (AAI) to permit the potential purchaser to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability, but recognizes that a User may choose to evaluate other business environmental risks (BERs). The investigation has revealed no BERs associated with the standard ASTM scope considerations.

At the request of Client, CBRE conducted a preliminary evaluation for asbestos-containing material (ACM), radon, lead-based paint (LBP), drinking water quality, mold and wetlands which are ASTM Non-Scope Considerations. This investigation has revealed no business environmental risks relating to these ASTM Non-Scope Considerations in connection with the Subject except for the following:

- Based on the age of the site improvements, the potential use of ACMs exists. No friable suspect ACM was identified in readily accessible areas. However, the non-friable resilient floor finish assemblies, plasters, built-up roofing system, caulking, and mastics may contain asbestos. Note, additional suspect ACMs may exist in inaccessible locations such as behind walls, above ceilings, and beneath visible flooring. Since these non-friable materials are in good condition and the potential for fiber release is low, no further action is recommended at this time, other than maintaining the materials in good condition under an Asbestos Operations and Maintenance (O&M) Program. However, in the event that building maintenance, renovation, or demolition activities require the removal or disturbance of the suspect ACM, CBRE recommends that they be characterized for asbestos by a material specific reliable method for detecting asbestos. All activities involving ACM should be conducted in accordance with governmental regulations.

- Since the Subject was constructed prior to the Consumer Product Safety Commission's 1978 ban on the sale of LBP to consumers and the use of LBP in residences, there is a potential that LBP may have been applied at the Subject. Testing would be required in order to determine whether LBP exists. Painted

surfaces observed were in good condition with no excessive peeling or flaking. No further action is recommended at this time. However, all activities involving LBP should be conducted in accordance with HUD guidelines, the USEPA's Lead-Based Paint Renovation, Repair and Painting Program Rule as well as the OSHA Lead in Construction (CFR Part 1926.62) and EPA Renovate Right regulations and RCRA guidelines.

2.1 General

CBRE was retained by Metropolitan Commercial Bank ("Client" or "User") to prepare a Phase I Environmental Site Assessment, in conformance with ASTM International's Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-13 on the Subject in accordance with our Agreement dated September 5, 2018.

2.2 Purpose and Scope

2.2.1 Purpose

The purpose of this report is to identify Recognized Environmental Conditions in connection with the property, using the methodology recommended by ASTM International in order for a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser defenses to CERCLA liability and/or to help understand potential environmental conditions that could materially impact the operation of the business associated with the Subject. Specifically, this methodology is referred to as *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* Designation: E 1527-13.

The term Recognized Environmental Conditions (RECs) is defined by ASTM Standard E 1527-13 as "...the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."

The term Controlled Recognized Environmental Condition *(CREC)* as defined by ASTM Standard E 1527-13 refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

The term Historical Recognized Environmental Condition *(HREC)* as defined by ASTM Standard E 1527-13 refers to a past release of any hazardous substances or petroleum products that has occurred in

connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

The term business environmental risk (BER) as defined by ASTM Standard E 1527-13 refers to a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated per the ASTM standard.

2.2.2 Scope

In general, the scope of this assessment consisted of reviewing readily available information and environmental data relating to the property; interviewing readily available persons knowledgeable about the site; reviewing readily available maps, aerial photographs and records maintained by federal, state, and local regulatory agencies; and conducting a site visit.

Of importance, the client is advised that federal, state, and local laws may impose environmental assessment obligations beyond the scope of this practice. Client is also notified that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the Subject that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

The specific scope of this assignment included the following:

2.2.2.1 Performing a site reconnaissance to characterize on-site conditions and assess the site's location with respect to surrounding property uses and natural surface features. In addition, CBRE conducted a reconnaissance of the surrounding roads and readily accessible adjacent properties to identify obvious potential environmental conditions on neighboring properties. Photographs taken as part of the site reconnaissance are provided in Appendix A.

The site visit was conducted on September 13, 2018, by Alex Singh representing CBRE. The site was represented by Mr.

Moshe Simpson, the property owner. It was overcast and the temperature was approximately 85° F at the time of our site survey. CBRE conducted the site reconnaissance in a systematic manner focusing initially on the exterior, which was surveyed in a grid pattern. CBRE also surveyed a representative sampling of the interior spaces in a systematic manner.

2.2.2.2 Interviewing persons familiar with the property to obtain information on present and previous on-site activities potentially resulting in the environmental degradation of the site or adjoining properties. A Pre-Survey Questionnaire to be filled out and returned to CBRE by someone knowledgeable about the site was provided to the Site Contact. A blank copy of the Pre-Survey Questionnaire is provided in Appendix B.

The following table presents a summary of the individuals contacted or to whom requests for documentation were made as part of this assessment:

Name	Affiliation	Telephone No.
Building Information System (BIS)	New York City Department of Buildings	(212) 312-8062
Ms. Brenda Farrow	New York City Department of Environmental Protection	(718) 595-3448
Mr. Fawzy Abelsadek	New York State Department of Environmental Conservation	(718) 482-4949
Ms. Rena Bryant	New York City Health Department	(212) 788-5013
Moshe Simpson	Property Owner	(718) 938-7810

2.2.2.3 If provided, reviewing of information such as previously prepared appraisals, building plans and specifications, and environmental reports.

2.2.2.4 Reviewing readily available historical documents, such as topographic maps, aerial photographs, city directories, Sanborn Fire Insurance Maps and atlases, to identify previous activities on and in the vicinity of the Subject. Copies of these documents are included in the Appendices.

2.2.2.5 Reviewing readily available environmental databases maintained by federal, state, and local agencies within the approximate minimum search distances as described within the Regulatory Review Section 6.0 of this report. A copy of the Computerized Environmental Report can be referenced in Appendix D.

2.2.2.6 Conducting a "Tier I" (non-intrusive) Vapor Encroachment Screening (VES) on the Subject in accordance with the methodology set forth in ASTM E 2600-15 "*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*". During the VES, the Area of Concern (AOC) was minimized using the methodology taught in the ASTM Screening for Vapor Encroachment onto Property Involved in Real Estate Transactions Training Course.

2.2.2.7 Conducting a visual survey of readily accessible common areas to identify the presence of the most obvious and common types of suspect asbestos containing materials (ACM). The basis for "suspect" determination is taken from the materials listed in Appendix G of the United States Environmental Protection Agency (USEPA) publication Managing Asbestos in Place (also known as the Green Book). All building materials listed within Appendix G of the Green Book are considered to be suspect ACMs at the Subject. This screening is not intended to be used for demolition, abatement, renovation, or repair work.

THIS LIMITED SURVEY IS NOT TO BE CONSTRUED AS A COMPREHENSIVE ASBESTOS SURVEY, WHICH OFTEN ENTAILS DESTRUCTIVE TESTING OR THE SURVEY OF AREAS BEHIND WALLS, ABOVE CEILINGS, IN TENANT SPACES AND IN OTHER TYPICALLY INACCESSIBLE AREAS. MOREOVER, CBRE DOES NOT WARRANT THAT ALL ACMs AT THE SUBJECT HAVE BEEN IDENTIFIED.

2.2.2.8 Reviewing published radon occurrence maps to determine whether the site is located in an area with a propensity for elevated radon concentrations.

2.2.2.9 An analysis of mold and/or mold issues was beyond the scope of this report.

2.2.2.10 Assessing the age of the Subject to determine whether it is predisposed to contain lead-based paint. During our walkthrough survey, CBRE noted the condition of the paint observed. Note, a compliance audit for lead paint was not conducted. NOTWITHSTANDING, THIS SCAN FOR LEAD-BASED PAINT SHOULD NOT BE CONSTRUED AS AN IN-DEPTH LEAD-BASED PAINT SURVEY.

2.2.2.11 Testing, if any, was designed solely to meet the requirements of the client's scope of work, not to meet any local, State or Federal regulations and shall not be utilized as such.

2.3 Data Gaps

According to § 3.2.21 of ASTM Standard E 1527-13, a data gap is a lack of or inability to obtain information required by the ASTM Standard despite good faith efforts to gather same. Data gaps may result from incompleteness in any of the activities required by the ASTM Standard. The following data gaps occurred in connection with this report:

Data Gap	Explanation	Significance of Gap
Site History	History not conducted back to a time when the site was undeveloped land (See § 5)	Low - not likely to alter Report's conclusions due to CBRE's search of standard historical sources of information such historic topographic maps, city directory abstracts, Sanborn Fire Insurance Maps and interviews with knowledgeable individuals who were familiar with the property.
Site History	Site history not conducted in 5-year intervals (See § 5)	Low - not likely to alter Report's conclusions due to CBRE's search of standard historical sources of information.
Former Owner or Operator Interview	Unable to interview former site owner or operator due to inability to locate	Low - not likely to alter Report's conclusions
Governmental Records	FOIAs not returned (See § 8.6)	Unknown - However, if receipt of FOIAs alters the Report's conclusion, the client will be notified

Salient Assignment Information	
Project No.:	PC80947573-102
Project Name:	45 Van Sinderen Avenue
Street Address:	45 Van Sinderen Avenue
City, State and Zip:	Brooklyn, New York 11207
Primary Use:	Warehouse and Artist Studos
Year Built and Age of Improvements:	1921; 97 Years-Old
Site Area:	0.30 Acres
Building Size:	8,000 SFG
Number of Buildings:	One

4.1 Property Location

The Subject is located at 45 Van Sinderen Avenue in the Borough of Brooklyn Kings County, New York City, New York and is identified on local tax maps as Block 1576, Lot 1. More specifically, the Subject is located on the east side of Van Sinderen Avenue midway between Herkimer Street and Atlantic Avenue. Please refer to the Site Plan and maps provided within Appendix C.

4.2 Surrounding Land Use

The Subject is located in an urban setting characterized by light industrial and residential development. The following is a tabulation of surrounding property usage:

Direction	Adjacent Properties	Surrounding Properties
North	Along Van Sinderen Avenue is the Calvary Baptist Church (1520-1530 Herkimer Street and 25-35 Van Sinderen Avenue).	Parking and transportation/railroad properties farther north.
South	Along Atlantic Avenue is a commercial loft building (2465 Atlantic Avenue/65 Van Sinderen Avenue) and a hotel (2467-2473 Atlantic Avenue).	Long Island Railroad tracks and station farther south.
East	Along Williams Place is a New York City Transit consisting of parking and a raised railroad track system (24-64 Williams Place).	Light industrial development farther east.
West	Across Van Sinderen Avenue are two light industrial buildings (38-56 Van Sinderen Avenue) (26-36 Van Sinderen Avenue/1508-1518 Herkimer Street).	Light industrial and residential development farther west.

4.3 Physical Site Setting

4.3.1 Size and Shape of Parcel

The parcel is rectangular in shape and 0.30-acres in size.

4.3.2 Topography

The Subject is essentially level and at the same approximate topographic gradient as the surrounding properties. The topography of the area is best described as flat. According to the United States Geological Survey (USGS) *Brooklyn, N.Y.* 7.5 Minute Series topographic map, the Subject's topographic elevation is approximately 70' above mean sea level (msl).

4.3.3 Surface Waters and Wetlands

Surface Waters

There are no surface water bodies or streams on or adjacent to the Subject. The closest open surface water to the Subject is the Pond at Highland Park, which is located approximately 0.75 mile to the northeast.

Wetlands

CBRE reviewed a wetlands map of the Subject area prepared using the US Department of the Interior, Fish and Wildlife Service's Internet Wetland Interactive Mapper. The source material used to produce the National Wetlands Inventory digital data for these maps was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Based on this review, CBRE did not identify any federally regulated wetlands on the Subject. Additionally, CBRE did not observe vegetation characteristic of wetlands on-site.

4.3.4 Soils, Geology and Groundwater

Soils

The soils at the Subject are classified as Urban Land. Urban Land complex are those soils in which the soil's original structure and content have been so altered by human activities it has lost its original characteristics and is thus unidentifiable.

Geology

According to a report titled "Potentiometric Surface of the Water Table, Magothy and Lloyd Aquifer on Long Island, New York in 1984, Water

Resources Investigation Report 86--4189 and published by USGS in 1987, the subsurface geology in the vicinity of the Subject consists of the Upper Glacial Deposits, Gardiners Clay, Jameco Gravel, the Raritan formation, and bedrock.

The unconsolidated Upper Glacial layer, deposited during the Pleistocene, extends to a depth of 175' below grade surface (bgs) and consists of glacial outwash deposits composed of sands and gravel. The permeability of this unit is moderate to high.

The Upper Glacial deposits are underlain by Gardiners Clay consisting of clay, silt, and a few layers of sand. Also deposited during Pleistocene, the Gardiners Clay extends to a depth of 200' below sea level (bsl). The permeability of this unit is very low, so it constitutes a confining unit for the underlying aquifer.

The Gardiners Clay is underlain by the Jameco Gravel unit consisting primarily of sand and gravel with a few layers of clay and silt. This unit extends to a depth of 250' bsl and is moderately to highly permeable.

The Jameco Gravel is underlain by the Raritan formation consisting of the Raritan Confining Unit and the Lloyd Sand Member, deposited during the Cretaceous Period. The Raritan Confining Unit extends to a depth of 300' bsl and is composed of clay (solid and silty), with a few lenses and layers of sand, lignite, and pyrite. The permeability of this unit is very poor. The Lloyd Sand Member extends to a depth of 400' bsl and is composed of sand and gravel within a clayey matrix. The permeability of this layer is poor to moderate.

Underlying the Raritan formation is bedrock. Paleozoic and Precambrian in age, the bedrock consists of metamorphic and metaigneous rocks (muscovite and biotic schist, gneiss and metagranites). The bedrock is poorly permeable to virtually impregnable, and constitutes the lower boundary of groundwater reservoir.

Groundwater

Under natural, undisturbed conditions, shallow groundwater flow generally follows the topography of the land surface and on this basis, the topography suggests that groundwater flow across the Subject is in a southerly to southeasterly direction. However, localized conditions

can alter flow direction and thus the presumed flow may not coincide with the actual in the Subject area.

4.4 Site Improvements

4.4.1 Utilities

The Subject is served with the following utilities:

Water:	New York City Department of Environmental Protection (NYCDEP)
Sanitary Sewer:	NYCDEP
Storm Sewer:	NYCDEP
Electric:	Consolidated Edison (Con Ed)
Natural Gas:	National Grid

Potable water is provided to the Subject via underground tunnels and pipes by the City of New York, which derives it from surface reservoirs in the Croton, Catskill, and Delaware watersheds.

Stormwater runoff collected by roof drains is discharged into the municipal stormwater management system.

4.4.2 Building Description

The Subject is improved with an approximately 97-year-old (built in 1921), two-story warehouse and loft building with an attached storage yard. The building has a cellar featuring stone rubble walls with a superstructure of wood frame and masonry construction. Exterior walls feature brick siding. The flat roof is covered with a smooth-surface built-up roofing system.

Interior finishes include floor coverings of carpet, resilient floor finishes, and bare concrete; walls of concrete block and ceilings typically consist of an open system that exposes the underside of the roof and glued-on ceiling tile.

Heating is provided by a gas-fired boiler. The Subject is without a central air conditioning system. The Subject is not provided with vertical transportation systems.

4.5 Current Property Use

The Subject is developed with a warehouse and loft building with an attached storage yard that is currently occupied by a furniture warehouse on the first floor, artist studios on the second floor and truck storage for an ironworks company in the attached yard. Based on the operations currently conducted at the Subject, significant quantities of hazardous waste are not generated. The current on-site activities are not suspected to have degraded the environmental quality of the Subject site.

4.6 Environmental Permits

Based on our research, no environmental permits such as wastewater discharge, National Pollutant Discharge Elimination System (NPDES), air emissions, or petroleum bulk storage (PBS) tank registrations are required at the Subject.

4.7 Plans and Specifications

Neither building drawings nor specifications were provided for our review.

5.1 Historical Summary

Prior to the construction of the existing improvements, the Subject property was improved with small buildings used for coal and wood storage associated with the Thatford and Ackerman Coal and Lumber Yard since at least 1888 and was likely vacant land prior to that. The current Subject building was constructed in 1920 and was used as a rolled gold manufacturing facility in 1932 and an instrument testing company from 1951 until the early 2000's.

5.2 Topographic Maps

CBRE reviewed historic USGS *Brooklyn, N.Y.* 7.5 Minute Series topographic maps of the Subject area provided by EDR dated 2013. The topographic map only depicts contours, roadways, waterbodies, and the locations of schools. Individual structures are not depicted.

5.3 Historical Maps

Sanborn Fire Insurance Maps (Sanborn Maps)

CBRE had a search conducted for Sanborn Maps, which reference the Subject. The findings of this review are summarized below:

Year	Subject Property	Adjacent and Surrounding Properties
1887	The Subject is either vacant land or not depicted on the Sanborn Map.	Adjacent and surrounding properties are either vacant land or not depicted on the Sanborn Map. The Long Island Railroad is located farther to the south.
1888	The Subject is improved with small storage buildings as part of the Thatford and Ackerman Coal and Lumber Yard with a rail line.	Adjacent properties to the north, south and east are improved with small buildings associated with the Thatford and Ackerman Coal and Lumber Yard. The west adjacent properties across Van Sinderen Avenue are improved with stores and vacant lots.
1908 1928	The Subject appears similar to the previous Sanborn Map reviewed.	The south adjacent properties are labeled as stores and offices and the east adjacent properties are improved with stables. The remainder of the surrounding area appears similar to the previous Sanborn Map reviewed.

Year	Subject Property	Adjacent and Surrounding Properties
1932 1950	The Subject is improved with the current two-story building as well as a small storage shed and is labeled as Rolled Gold Manufacturing.	The north adjacent property appears to be vacant land. The east adjacent property is labeled as an iron works for tracks. There is an auto repair facility with a gas tank father to the northwest. The remainder of the surrounding area appears similar to the previous Sanborn Map reviewed.
1951	The Subject appears similar to the previous Sanborn Map reviewed and is labeled as an instrument testing facility.	The north adjacent property is improved with a label weaving facility. The south adjacent properties are labeled as a manufacturer, stores and a machine shop. There is a parking lot to the adjacent west. The remainder of the surrounding area appears similar to the previous Sanborn Map reviewed.
1963 1965 1966 1977	The Subject appears similar to the previous Sanborn Map reviewed.	The aforementioned parking lot to the adjacent west has been redeveloped into a warehouse building and is labeled as a steel cabinet manufacturer. The aforementioned auto repair facility to the northwest is labeled as a manufacturing building with no gas tanks displayed. The remainder of the surrounding area appears similar to the previous Sanborn Map reviewed.
1978-1981	The Subject appears similar to the previous Sanborn Map reviewed.	The north adjacent property is labeled as a temple/church building. One of the south adjacent properties has been razed and the remaining south adjacent properties are labeled as a loft, a commercial building and a dwelling. An additional commercial building has been developed to the adjacent west. The remainder of the surrounding area appears similar to the previous Sanborn Map reviewed.
1982 1983 1986	The Subject appears similar to the previous Sanborn Map reviewed.	The east adjacent building has been razed and the property contains overhead railroad tracks. The remainder of the surrounding area appears similar to the previous Sanborn Map reviewed.

Year	Subject Property	Adjacent and Surrounding Properties
1987-1989 1991-1996 2001-2006	The Subject appears similar to the previous Sanborn Map reviewed.	Aside from the aforementioned loft building, the adjacent south buildings have been razed. The remainder of the surrounding area appears similar to the previous Sanborn Map reviewed.
2007	The Subject appears similar to the previous Sanborn Map reviewed.	A commercial building has been developed to the adjacent south.

Several adjacent and surrounding properties were identified on regulatory databases and are discussed further in Section 6.0 below. The former auto repair facility to the northwest is not listed on any database of concern.

5.4 Aerial Photographs

Aerial photographs frequently provide visual documentation of site conditions at the time of the photographs. Activities such as dumping or industrial use of a site can often be discerned through the examination of aerial photographs. Inasmuch as the Subject has been sufficiently covered by other standard historic information sources, aerial photographs were not consulted as part of this assessment.

5.5 Chain-of-Ownership

A copy of the Subject's Chain-of-Title has not been provided to CBRE for review.

5.6 Previous Reports

Although requested, no previously prepared environmental reports such as Phase I or II Environmental Site Assessments, lead-based paint surveys, lead-in-water surveys, asbestos surveys or geotechnical reports were provided for our review.

5.7 City Directories

CBRE commissioned EDR to obtain a historical City Directory Abstract for the Subject, which provide tenant listings by address for every year covered by the directory service. EDR's City Directory Abstract included a directory review for the following years: 1928, 1934, 1940, 1945, 1949, 1960, 1965, 1970,

1973, 1976, 1980, 1985, 1992, 1997, 2000, 2005, 2010, and 2014. This review yielded the following information:

Subject Property: The Subject is listed as Schumacher Bros Rolled Gold Leaf company in 1934, Terminex Insulation Co. Inc. in 1940 and Amthor Testing Instrument Co. from 1960 to 1973. These listings are not suspected of having a negative environmental impact on the Subject.

Surrounding Properties: Adjacent and surrounding properties were identified as light industrial and manufacturing listings such as electronics, cabinets, lamps and metal supply companies. Based on hydrogeologic positions, distances, and regulatory statuses of these sites, these listings are not suspected of having a negative environmental impact on the Subject.

5.8 Interviews

According to Moshe Simpson, the Property Owner, who has been involved with the property for the past eight months, the Subject was used as a warehouse and was then vacant for nearly 20 years prior to the current use as a furniture warehouse and artist studio. According to Mr. Simpson, the attached yard is used for truck storage for an ironworks company.

5.9 Municipal Records

Tax Assessor Records

According to the tax assessor records reviewed, the Subject building was constructed in 1920 on a 0.30-acre lot and is identified on New York City tax maps as Block 1576, Lot 1.

Building Department Records

CBRE reviewed building permits and records for the Subject at the New York City Department of Building (NYCDOB), Building Information System (BIS) database. The following relevant permits were reviewed:

Permit Number	Date	Purpose of Permit
NB 1473-021320	1920	Permit to construct a new building
FO 2378-110543	1943	Fuel oil burner application

Permit Number	Date	Purpose of Permit
FO 1353-45-080662	1962	Fuel oil burner application

According to the Building Department records reviewed, the Subject was constructed after 1920. In addition, the Subject may have utilized fuel oil in at least 1943 and 1962. The Subject is not listed as a registered Petroleum Bulk Storage (PBS) tank site with the NYSDEC, nor is it listed on any database indicative of an existing or former contamination condition. Furthermore, CBRE did not observe any evidence of former or current fuel oil tank on site. As such, any possible former fuel oil usage at the Subject is not of environmental concern.

5.10 Internet Search

CBRE conducted a cursory internet search for the Subject's name and address using the Google search engine on September 18, 2018. No environmentally related information was identified on the first page of the Google search results.

A copy of regulatory database information contained within a Computerized Environmental Report (CER) appears in Appendix D. The CER is a listing of sites identified on select federal and state standard source environmental databases within the approximate minimum search distance specified by ASTM Standard Practice for Environmental Site Assessments E 1527-13. CBRE reviewed each environmental database to determine if certain sites identified in the CER are suspected to represent a material negative environmental impact to the Subject. The following table lists the number of sites by regulatory database within the prescribed minimum search distance appearing in the CER.

Databases Reviewed	Approximate Minimum Search Distance (AMSD)	Number of Sites Within AMSD
Federal National Priorities List (NPL) Site List	One-Mile	0
Federal Delisted NPL Site List	One-Half Mile	0
Superfund Enterprise Management System (SEMS) (Formerly known as Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS))	One-Half Mile	0
SEMS-ARCHIVE (Formerly known as Federal CERCLIS No Further Remedial Action Planned (NFRAP) Sites)	One-Half Mile	1
Federal Resource Conservation and Recovery Information System (RCRIS) Treatment, Storage, and Disposal (TSD) List	One-Half Mile	0
Federal RCRIS Generators List	On-Site and Adjoining Properties	2
Federal Corrective Action Tracking System (CORRACTS)	One-Mile	0
Federal Emergency Response Notification System (ERNS) List	On-Site	0
Federal Institutional/Engineering Control Registries	On-Site	0
New York and Tribal Lists of NPL Equivalent Hazardous Waste Sites Identified for Investigation and/or Remediation	One-Mile	1
New York and Tribal Lists of CERCLIS Equivalent Hazardous Waste Sites Identified for Investigation and/or Remediation	One-Half Mile	0
New York and Tribal Landfills or Solid Waste Facilities List	One-Half Mile	6
New York and Tribal Petroleum Bulk Storage Tank List	On-Site and Adjoining Properties	1

Databases Reviewed	Approximate Minimum Search Distance (AMSD)	Number of Sites Within AMSD
New York and Tribal Leaking UST/Spill List	One-Half Mile	41
New York and Tribal Institutional/Engineering Control Registries	On-Site	0
New York and Tribal Voluntary Cleanup Sites	One-Half Mile	2
New York and Tribal Brownfields Sites	One-Half Mile	0

The CER identified three "Orphan Sites". "Orphan Sites" are those sites that could not be mapped or "geocoded" due to inadequate address information. Please refer to the CER for a list of these "Orphan Sites". CBRE attempted to locate these sites via a review of street maps, vehicular reconnaissance and/or interviews with people familiar with the area. "Orphan Sites" that were identified in this manner were analyzed in their respective regulatory database below.

A description of the databases reviewed by CBRE and an analysis of sites identified within the prescribed search area are presented below.

6.1 Federal Databases

NPL

The NPL database is a listing of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA or "Superfund"). A site must be on the NPL to receive money from the Trust Fund for Remedial Action.

Analysis/Comment: The CER did not identify NPL sites within the AMSD.

Delisted NPL Site List

The EPA may delete a final NPL site if it determines that no further response is required to protect human health or the environment, under Section 300.425(e) of the National Contingency Plan (55 FR 8845, March 8, 1990). Sites that have been deleted from the NPL remain eligible for further Superfund-financed remedial action in the unlikely event that conditions in the future warrant such action. Partial deletions can also be conducted at NPL sites.

Analysis/Comment: The CER did not identify Delisted NPL sites within the AMSD.

SEMS

SEMS is the USEPA's system for tracking hazardous waste sites, potential hazardous-waste sites and remedial activities performed in support of the Superfund Program. The system was formerly known as CERCLIS. A site's presence on SEMS does not imply a level of federal activity or progress at a site, nor does it indicate that hazardous conditions necessarily exist at the location. Within one year of being entered into SEMS, the USEPA performs a preliminary assessment of a site. Based upon the results of the preliminary assessment, the USEPA may conduct additional investigation, which could lead to a site being listed on the NPL.

Analysis/Comment: The CER did not identify SEMS sites within the AMSD.

SEMS-ARCHIVE

SEMS-ARCHIVE tracks sites that have no further interest under the Superfund Program. The list was formerly known as CERCLIS-NFRAP. Archived status sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to warrant Federal Superfund Action or NPL consideration.

Analysis/Comment: The CER identified the following SEMS-ARCHIVE site within the AMSD:

Property Name/ Address	Distance(Mile)	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
Bklyn Union Gas/Belmont Works Belmont Ave & Alabama Ave	0.49	South Southeast	Downgradient	NFRAP

The above tabulated site has been granted a No Further Remedial Action Planned (NFRAP) status by the USEPA. NFRAP sites may be sites where, following an initial investigation, no contamination was found, or the contamination was either abated or the contamination was not significant enough to warrant Federal Superfund Action or NPL consideration.

Furthermore, this site is located a sufficient distance from the Subject so as not to be reasonably suspect of having impacted same. In addition, this site is located hydrogeologically downgradient from the Subject and groundwater flow across this site is suspected to be away from the Subject. As such, CBRE does not suspect this site of having had a significant negative environmental impact on the Subject.

RCRIS TSD

The RCRIS TSD contains information pertaining to those facilities that treat, store, or dispose of hazardous waste. While these facilities represent some form of hazardous waste activity, they are most significant if determined to be out of compliance or to have violations.

Analysis/Comment: The CER did not identify RCRIS TSD facilities within the AMSD.

RCRIS Generators

CBRE reviewed the list of sites, which have filed notification with the USEPA in accordance with RCRA requirements. These sites include generators of hazardous waste regulated under RCRA. Under RCRA, hazardous waste generators are classified by the quantity of hazardous waste generated in a calendar month into the following categories: Large Quantity Generator (LQG), greater than 1,000 kilograms (kg); Small Quantity Generator (SQG), 100 to 1,000 kg; and Conditionally-Exempt Small Quantity Generator (CESQG), less than 100 kg. RCRA Generators, while they represent some form of hazardous waste activity, are most significant if they are determined to have Class I Violations or to be non-compliant.

Analysis/Comment: The CER identified the following RCRA Generators located within the AMSD:

Property Name/ Address	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
Con Edison Manhole: 5027 2473 Atlantic Ave	South Southeast	Downgradient	RCRA Non-Generator Compliant/No Violations

The above tabulated site is listed as a RCRA Non-Generator under EPA ID NYP004456299 for a typical Con Edison manhole with no reported violations. Con Edison manholes and service boxes are typically located in vaults within

the streets and sidewalks adjacent to the properties for which they are listed and any releases would most likely be contained within these vaults. In addition, this site is not listed on any database indicative of an existing contamination condition. Furthermore, this site is located at a crossgradient to downgradient position in relation to the Subject. Given the above information, CBRE does not suspect this listing of having had a negative environmental impact on the Subject.

Property Name/ Address	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
APEX Airtronics Inc 2465-69 Atlantic Ave	South Southwest	Crossgradient	RCRA Non-Generator Compliant/No Violations

The above tabulated site is listed as a RCRA Non-Generator under EPA ID NYD001284439 as of 2007 and was historically a SQG in 1999 and a LQG in 1980 for the production of spent non-halogenated solvents. This site was formerly a manufacturer of radio and telecom equipment. This site is located at a crossgradient hydrogeologic position in relation to the Subject and undocumented impacts to groundwater originating at this facility are not anticipated to have encroached upon the Subject.

Corrective Action Tracking System (CORRACTS)

CORRACTS is a list of facilities that are found to have had hazardous waste releases and require RCRA corrective action activity, which can range from site investigations to remediation.

Analysis/Comment: The CER did not identify CORRACTS sites within the AMSD.

ERNS

The ERNS is a database of notifications of oil discharges and hazardous substance releases made to the Federal government. These notifications are used by "On-Scene Coordinators" to determine an emergency response and release prevention. When a call is made to the National Response Center or one of the 10 USEPA Regions, a report is created containing all of the release information that the caller provided. This report is transferred to an appropriate agency to evaluate the need for a response and the records are electronically transferred to the ERNS database. As such, if a reported release of oil or a hazardous substance is deemed to require a response, it should also

be listed in the appropriate federal or state environmental database such as CERCLIS, state equivalent CERCLIS, or state leaking underground storage tank or spills lists.

Analysis/Comment: The CER did not identify the Subject on the ERNS database.

Federal Institutional Control/Engineering Control Registries

The Federal registries contain listings of those sites which have either engineering and/or institutional controls in place. Engineering controls include various physical control devices such as fences, caps, building slabs, paved areas, liners and treatment methods to eliminate pathways for regulated substances to enter the environment or affect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions (Activity and Use Limitations) are generally required as part of institutional controls.

Analysis/Comment: The CER did not identify the Subject on the Federal Institutional or Engineering Control registries.

6.2 New York State Department of Environmental Conservation (NYSDEC) and Tribal Databases

Registry of Inactive Hazardous Waste Disposal Sites (IHWDS) and Tribal NPL Equivalent State Hazardous Waste Sites (SHWS)

The IHWDS and Tribal NPL Equivalent SHWS list is an inventory of toxic sites listed by New York and/or Tribal Environmental and Health Authorities. These sites are either under remediation, or are currently under evaluation for further action, if necessary.

Analysis/Comment: The CER identified the following IHWDS and/or Tribal NPL Equivalent Hazardous Waste sites within the AMSD:

Property Name/ Address	Distance (Mile)	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
K – Union Station Holder	0.91	East	Crossgradient	SHWS

Property Name/ Address	Distance (Mile)	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
Atlantic Ave, Ashford St, Liberty Ave				

The above tabulated site is located a sufficient distance from the Subject so as not to be reasonably suspect of having impacted same. In addition, this site is located hydrogeologically crossgradient from the Subject and groundwater flow across this site is suspected to be away from the Subject. As such, CBRE does not suspect this site of having had a significant negative environmental impact on the Subject.

Vapor Intrusion Legacy Site List

"Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, the NYSDEC is currently re-evaluating pre-2003 remedial decisions on IHWDS where chlorinated hydrocarbons were released to determine the possibility of vapor intrusion at the sites. The Vapor Intrusion Legacy Site List is a database of these sites.

Analysis/Comment: The CER did not identify Vapor Intrusion Legacy sites within a mile of the Subject.

New York and Tribal CERCLIS Equivalent Hazardous Waste Sites

The State HWS is an inventory of dumps, landfills, and other toxic sites listed by Environmental and Health Authorities. The Tribal NPL Equivalent HWS list is an inventory of toxic sites listed by Tribal Environmental and Health Authorities. These sites are either under remediation, or are currently under evaluation for further action, if necessary.

Analysis/Comment: The CER did not identify New York and/or Tribal CERCLIS Equivalent Hazardous Waste sites within the AMSD.

New York and/or Tribal Solid Waste Facilities (SWF) List

The SWF list is an inventory of landfills, incinerators, transfer stations, and other sites that manage solid wastes.

Analysis/Comment: The CER identified six SWF sites the AMSD. All but one of sites are located a sufficient distance from the Subject so as not to be reasonably suspect of having impacted same. In addition, these sites are located hydrogeologically crossgradient/downgradient from the Subject and groundwater flow across these sites is not suspected to be in the direction of the Subject. As such, CBRE does not suspect these sites of having had a significant negative environmental impact on the Subject. The adjacent SWF site is discussed below:

Property Name/ Address	Distance (Mile)	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
Aries Autoworld LTD 2471 Atlantic Avenue	0.02	South Southeast	Crossgradient to Downgradient	Inactive

The above tabulated site is listed as a former vehicle dismantling facility. This site is located topographically crossgradient to downgradient from the Subject and groundwater across this site is inferred to flow to the southeast, which is away from the Subject. In addition, this site has reportedly been closed in accordance with governmental regulations and has been granted an inactive status. Furthermore, this site is not listed on any database indicative of a release or existing contamination condition. As such, it is unlikely that this solid waste facility has had a significant negative environmental impact upon the Subject.

Petroleum Bulk Storage (PBS) Tanks List and/or Tribal Registered Storage Tanks (RST) Facility List

The PBS Tank list is an inventory of registered liquid bulk storage tanks maintained either by the county or the NYSDEC. Inclusion of a site on the PBS Tank list does not necessarily constitute environmental contamination, but instead merely indicates the presence of registered bulk storage tanks.

Analysis/Comment: The CER identified the following PBS Tank site within the AMSD:

Property Name/ Address	Distance	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
Apex Airtronics Inc. 2465 Atlantic Avenue	Adjacent	South Southeast	Crossgradient to Downgradient	Unregulated/ Closed

The above tabulated site is listed in the NY AST database under PBS No. 2-611061 for the presence of a 550-gallon No. 2 fuel oil AST that was reportedly installed in 1956 and has been converted to non-regulated use. This site is also listed in the NY Spills database and is discussed further in the Spills Section below.

New York Leaking Underground Storage Tanks (LUST) and Spill Lists

The LUST list is an inventory of spills and leaks, both active and inactive reported to regulatory authorities. They include stationary and non-stationary source spills reported to state and federal agencies, including remediated and contaminated leaking UST sites. The Spills list is a compilation of data collected on spills and reported to the NYSDEC pursuant to either Article 12 of the Navigation Law, or 6 NYCRR Section 595.2.

Analysis/Comment: The CER identified 41 LUST/Spill/LTANKS listings within the prescribed search radius. All of these listings have been i) granted a "Case Closed" status by the NYSDEC (this classification is granted to those sites that have been remediated to the satisfaction of the NYSDEC and are not suspected to pose a significant threat to human health or the environment), ii) are located at crossgradient or downgradient hydrogeologic directions with anticipated groundwater flow away from the Subject; iii) are *de minimis* in nature; and/or iv) located over one-eighth mile away from the Subject, and based on the general non-sensitivity of the urban setting of the Subject, are not considered to represent a significant environmental concern. As such, CBRE does not suspect that these sites have had a significant negative environmental impact upon the Subject. Any adjacent spill listings are discussed below:

Property Name/ Address	Distance (Mile)	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
Factory 2465 Atlantic Avenue	Adjacent	South Southeast	Crossgradient to Downgradient	Closed 4/6/2009

The above tabulated site is listed in the NY Spills database under Spill No. 0708834 for an incident that occurred on November 13, 2007 when during a

fuel delivery, oil was observed coming through the wall around the fill line. Approximately one-gallon of No. 2 fuel oil was reported to have been released. The spill was contained and cleaned up and the fill line was exposed and repaired. No evidence of contamination was found in the soils. The NYSDEC granted this incident a case closed status on April 6, 2009. Given the de minimis nature and closed status of this incident as well as the crossgradient to downgradient hydrogeologic position of this site in relation to the Subject, CBRE does not suspect this incident of having had a negative environmental impact on the Subject.

Property Name/ Address	Distance (Mile)	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
Spill No. 0206144 38 Van Sinderen Ave	Adjacent	West Northwest	Upgradient	Closed 10/8/2002

The above tabulated site is listed in the NY LTANKS database under Spill No. 0206144 for an incident that occurred on September 13, 2002 when soil contamination was discovered after the removal of a 550-gallon diesel fuel oil UST and one 550-gallon kerosene UST. The contaminated soils were removed and soil disposal manifests were documented. Endpoint sampling did not identify contamination above TAGM 4060 Required Soil Cleanup Objectives. The NYSDEC granted this incident a case closed status on October 8, 2002. Given the closed status of this incident, CBRE does not suspect this incident of having had a negative environmental impact on the Subject.

New York and Tribal Institutional Control/Engineering Control Registries

According to the NYSDEC website, Institutional Controls shall mean any non-physical means of enforcing a restriction on the use of real property that limits human or environmental exposure, restricts the use of groundwater, provides notice to potential owners, operators, or members of the public, or prevents actions that would interfere with the effectiveness of a remedial program or with the effectiveness and/or integrity of operation, maintenance, or monitoring activities at or pertaining to a brownfield site.

Engineering Control shall mean any physical barrier or method employed to actively or passively contain, stabilize, or monitor hazardous waste or petroleum, restrict the movement of hazardous waste or petroleum to ensure the long-term effectiveness of a remedial program, or eliminate potential exposure pathways to hazardous waste or petroleum. Engineering controls include, but are not limited to, pavement, caps, covers, subsurface barriers, vapor barriers, slurry walls, building ventilation systems, fences, access

controls, provision of alternative water supplies via connection to an existing public water supply, adding treatment technologies to such water supplies, and installing filtration devices on private water supplies.

- If an IC/EC is used as a component of a site cleanup plan, the Remedial Work Plan must include: a complete description of the IC/ECs and the mechanisms that will be used to implement, maintain, monitor, and enforce such restrictions and controls, both by the applicant and by any state and local government, and an evaluation of the reliability, viability, and costs of the long-term implementation, maintenance, monitoring, and enforcement of any IC/EC.
- Financial assurance for the long-term maintenance, monitoring, and enforcement of IC/ECs may be required.
- Any EC must be used in conjunction with an IC.
- The final remediation report must include a certification that any IC/ECs are included in an environmental easement that has been duly recorded.
- An annual certification that the IC/ECs are in place and protective of public health and the environment must be submitted to the NYSDEC.
- The NYSDEC must create, update, and maintain a data base available to the public of sites using IC/ECs.
- Any proposal for a change in site use must include an evaluation of the impacts of the change on the viability, reliability, and effectiveness of any IC/ECs.

Analysis/Comment: The CER did not identify the Subject on the New York and Tribal Institutional or Engineering Control registries.

New York and Tribal Voluntary Cleanup Program Sites

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. New York's Voluntary Cleanup Program is a cooperative approach among the NYSDEC, lenders, developers and prospective purchasers to investigate and/or remediate contaminated sites. Under the VCP, a volunteer performs remedial activities pursuant to one or more NYSDEC approved work plans. The volunteer agrees to remediate the site to a level which is protective of public health and the environment for the present or intended use of the property. Investigation and remediation is carried out under the oversight of the NYSDEC and the New York State Department of Health (DOH) and the volunteer pays the State's oversight costs. When the volunteer completes work, a release from liability from the NYSDEC is provided with standard reservations. Once the required remedial actions

have been completed, the NYSDEC issues a letter declaring that it agrees that the volunteer has met their obligations and that, barring an event triggering a reopener, the Department does not contemplate further action will need to be taken at the site. Non-PRP volunteers also receive a release that covers natural resource damages. All of the volunteer's successors and assigns (except the site's PRPs) benefit from the release given to the volunteer. The NYSDEC's release binds only itself, and does not bind private parties harmed, does not bind the State's Attorney General, the State's Comptroller, and does not bind the USEPA.

The Release is subject to the following reservations for further investigation or remediation the NYSDEC deems necessary due to:

- Off-site migration of contamination causing significant impacts if the Volunteer is a PRP;
- Environmental conditions or information related to the Site that were unknown when the Release was issued and that indicate that site conditions under the Contemplated Use are not sufficiently protective of human health and the environment;
- Failure to comply with the VCA (e.g., not completing OM&M, not paying State costs, not maintaining use restrictions, etc.);
- Fraud committed by the Volunteer in entering into or implementing the VCA;
- A release, discharge or threat thereof after the effective date of the VCA; or
- A change of use where the new use requires a lower level of residual contamination.

Analysis/Comment: The CER identified the following VCP site within the AMSD.

Property Name/ Address	Distance (Mile)	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
91 Junius Street	0.25	South	Crossgradient	Active
201-205 Mother Gaston Boulevard/2396 Dean Street	0.29	West Southwest	Crossgradient	Active

The above tabulated sites are located a sufficient distance from the Subject so as not to be reasonably suspect of having impacted same. In addition, these sites are located hydrogeologically crossgradient from the Subject and groundwater flow across these sites is not suspected to be in the direction of

the Subject. As such, CBRE does not suspect these sites of having had a significant negative environmental impact on the Subject.

New York and Tribal Brownfield Sites

According to the NYSDEC website, brownfields are abandoned, idled, or under-used properties where expansion or redevelopment is complicated by real or perceived environmental contamination. They typically are former industrial or commercial properties where operations may have resulted in environmental contamination. Brownfields often pose not only environmental, but legal and financial burdens on communities. The impediments to contaminated site redevelopment in New York are complex. The existing liability scheme may hold all owners of contaminated property liable for cleanup costs, regardless of when or how the property was acquired. The potential cost of cleanup, which may not be known for certain at the time of purchase, is also a deterrent to parties wishing to build, relocate, or expand businesses. Lenders have been reluctant to extend credit for the purchase and cleanup of contaminated sites, fearing future liability issues.

A Brownfield Cleanup Agreement (BCA) is required for all parties who wish to participate in the Brownfield Cleanup Program. By executing a BCA, an Applicant makes a commitment to undertake certain remedial activities under the NYSDEC's oversight.

Analysis/Comment: The CER did not identify Brownfield sites within a one-half mile radius of the Subject.

New York City Building Information System

The City Environmental Quality Review (CEQR) designation "E" on New York City Zoning Maps indicates that environmental requirements pertaining to potential hazardous material contamination or noise or air quality impacts have been established on one or more tax lots. These "E" designations function as indicators of the environmental review that must be conducted when the lots are developed in accordance with the regulations of the rezoned district.

New York City Zoning Resolution § 11-15 provides that the New York City Department of Buildings (NYCDOB) may not issue a building permit for work on a tax lot labeled with an "E" due to potential hazardous material contamination, if the building permit would allow: (1) a development; (2) an enlargement, extension or change of use involving a residential or community

facility use; or (3) an enlargement that disturbs the soil. The NYCDOB identifies haz-mat "E" lots on its Building Information System ("BIS").

An "E" designation for potential hazardous material contamination may be satisfied and removed from a zoning map following receipt of a report from the NYC Office of Environmental Remediation (OER) stating that the environmental requirements for the lot have been met. These requirements may include subsurface investigations and/or remediation of contamination to the satisfaction of the OER.

Analysis/Comments: Based on our review of the NYCDOB BIS and New York City Zoning Maps, an "E" designation has not been declared on the Subject.

6.3 EDR Proprietary Databases

EDR Manufactured Gas Plants

This database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to the 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of wastes. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Analysis/Comment: The CER did not identify the Subject or any adjacent properties on the manufactured gas plant database.

EDR Historic Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

Analysis/Comment: The CER did not identify the Subject or any adjacent properties on the historical auto stations database.

EDR Historic Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

Analysis/Comment: The CER did not identify the Subject or any adjacent properties on the historical cleaners database.

7.1 Chemical Storage and Usage

With the exception of chemicals customarily used for routine building maintenance and cleaning, CBRE did not observe any hazardous chemicals stored on-site. For the most part, the maintenance chemicals are stored in the maintenance closet and cellar. Of note, floor drains were not observed in the vicinity of the chemical storage areas. In addition, housekeeping was generally considered satisfactory. The chemicals, which are stored in their original containers, do not appear to represent an impact to the environmental quality of the Subject provided that they are used as intended, properly handled, and the regulations pertaining to their usage are followed.

7.2 Bulk Storage Tanks

Underground Storage Tanks (USTs)

No active USTs were identified on the Subject property and no common indicators of USTs such as vent pipes, fill ports, manways, pavement cuts, fuel gauges or dispensers were observed. In addition, the Subject was not identified on the New York list of registered UST facilities. No underground storage tanks were reportedly removed, closed-in-place or abandoned at the Subject and no common indicators of closed tanks were observed.

Aboveground Storage Tanks (ASTs)

No ASTs were observed and CBRE did not identify any equipment, which should require such tanks. Moreover, visual indicators of former site ASTs, such as tank cradles, secondary containment structures, tank pedestals, etc., were not observed. In addition, according to the site contact, there are no ASTs on-site.

7.3 Site Waste and Wastewater

Solid Waste

Non-hazardous solid waste is disposed of in dumpsters and is removed from the Subject on a regular basis by the municipality. Potential sources of contamination, such as waste oil or automobile batteries, were not observed in the vicinity of the dumpsters.

Sanitary Sewage

Sanitary sewage disposal is provided by the NYCDEP. CBRE did not observe any sources of wastewater or liquid discharge into the sewer other than sanitary sewage.

Hazardous Waste

No hazardous waste was observed or reported to be generated on the Subject. Furthermore, CBRE's review of the USEPA's database of sites regulated under RCRA did not identify the Subject as a generator of hazardous waste.

7.4 Stained Soil, Stained Pavement, or Stressed Vegetation

There was no evidence of significant soil staining, stained pavement, or stressed vegetation observed on-site.

7.5 Liquid Discharges

No visible evidence of liquid discharges, suspected to represent an environmental concern were observed during our survey.

7.6 Pools of Liquid

CBRE did not observe significant standing surface water or pools containing liquids likely to be hazardous substances or petroleum products.

7.7 Pits, Ponds, or Lagoons

No pits, ponds or lagoons suspected of containing hazardous substances or petroleum products were identified on-site.

7.8 Wells

CBRE did not identify on-site dry wells, irrigation wells, injection wells, observation wells, monitoring wells, potable water wells, recovery wells or abandoned wells.

7.9 On-Site Fill

Based on our observations, other than typical engineered fill used in foundation construction, it does not appear that a significant amount of fill has been imported onto the Subject.

7.10 Drums and Containers for Storing Waste

With the exception of non-hazardous solid waste containers, CBRE did not identify containers suspected of storing waste. With respect to the non-hazardous solid waste containers, no significant environmental concerns were noted.

7.11 Floor Drains and Sumps

CBRE did not identify any floor drains or sumps that were stained, emitting foul odors, connected to an on-site sewage disposal system or located adjacent to chemical storage areas.

7.12 Odors

CBRE did not identify strong, pungent, or noxious odors suspected to represent an environmental concern.

7.13 Air Emissions

CBRE did not identify processes or equipment that emit noticeable vapors or fumes.

7.14 Polychlorinated Biphenyls (PCBs)

Transformers

No primary power electrical transformers were identified on-site.

Hydraulic Lifts

No hydraulic lifts were observed on-site.

Elevators

No hydraulic elevators were observed on-site.

Compactors and Bailers

No hydraulic compactors or bailers were observed on-site.

7.15 Asbestos-Containing Material (ACM)

Based on the age of the site improvements, the potential use of ACMs exists. No friable suspect ACM was identified in readily accessible areas. However, the non-friable resilient floor finish assemblies, plasters, built-up roofing system, caulking, and mastics may contain asbestos. Note, additional suspect ACMs may exist in inaccessible locations such as behind walls, above ceilings, and beneath visible flooring. These non-friable materials are in good condition and the potential for fiber release is low.

7.16 Lead-in-Drinking Water

Based on our conversations with utility personnel, the water at the Subject is not expected to contain elevated levels of lead.

7.17 Radon

Based on statistical information maintained within the New York State Department of Health (NYS DOH)'s Short Term Basement Radon Measurements by Town, dated January 2017, radon concentrations in Kings County average 1.94 picocuries per liter (pCi/L), which is below the 4.0 pCi/L action level established by the USEPA and places the Subject in an EPA radon Zone 3. Based solely on this data, it is unlikely that radon represents an environmental concern to the Subject.

7.18 Lead-Based Paint (LBP)

Since the Subject was constructed prior to the Consumer Product Safety Commission's 1978 ban on the sale of LBP to consumers and the use of LBP in residences, there is a potential that LBP may have been applied at the Subject. Testing would be required in order to determine whether LBP exists. Painted surfaces observed were in good condition with no excessive peeling or flaking.

8.1 Questionnaires

CBRE sent a Pre-Survey Questionnaire and an AAI User Questionnaire to the site contact and the User, respectively. The purpose of these questionnaires was to disclose any previous or existing hazardous waste or toxic material conditions, which may not have been apparent at the time of our site reconnaissance and to satisfy the User interview all appropriate inquiry requirements.

The completed AAI questionnaire is attached hereto as Appendix B. However, the site contact has not returned a completed Pre-Survey Questionnaire.

8.2 User

8.2.1 Title Records

A copy of the Subject's Chain-of-Title has not been provided to CBRE for review.

8.2.2 Environmental Clean Up Liens and Activity and Use Limitations (AULs)

The User had no knowledge of any environmental liens against the Subject that have been filed or recorded under federal, tribal, state or local law. Moreover, the User was not aware of any AULs, such as engineering controls, land use restrictions, or institutional controls that are in-place at the Subject or have been filed or recorded under federal, tribal, state or local law.

8.2.3 Specialized Knowledge

The User had no specialized knowledge of recognized or potential recognized environmental conditions in connection with the Subject.

8.2.4 Relationship of Purchase Price to Fair Market Value Due to Contamination in Connection with the Subject

The User has indicated they are unaware of any environmental conditions in connection with the Subject that have resulted in the diminution of its purchase price in relation to its Fair Market Value.

8.2.5 Common Knowledge or Reasonably Ascertainable Information

The User had no common knowledge of recognized or potential recognized environmental conditions in connection with the Subject.

8.2.6 Purpose for Conducting the Phase I Environmental Site Assessment

The purpose of conducting this Phase I Environmental Site Assessment was for underwriting purposes.

8.2.7 Proceedings Involving the Property

The User had no knowledge of pending, threatened, or past litigation, administrative proceedings, or notices from governmental agencies regarding violations of environmental laws regarding hazardous substances or petroleum products.

8.3 Key Site Manager

8.3.1 Historic Site Use

According to Moshe Simpson, the Property Owner, who has been involved with the property for the past eight months, the Subject was used as a warehouse and was then vacant for nearly 20 years prior to the current use as a furniture warehouse and artist studio. According to Mr. Simpson, the attached yard is used for truck storage for an ironworks company.

8.3.2 Proceedings Involving the Property

Mr. Simpson had no knowledge of pending, threatened, or past litigation, administrative proceedings, or notices from governmental agencies regarding violations of environmental laws regarding hazardous substances or petroleum products involving the Subject.

8.4 Occupants

Subject occupants were not available for interviews.

8.5 Past Owners

CBRE was unable to locate the Subject's former owner.

8.6 Local Regulatory Agency Interviews and/or File Reviews

Tax Assessor Records

According to the tax assessor records reviewed, the Subject building was constructed in 1920 on a 0.30-acre lot and is identified on New York City tax maps as Block 1576, Lot 1.

Building Department Records

CBRE reviewed building permits and records for the Subject at the New York City Department of Building (NYCDOB), Building Information System (BIS) database. The following relevant permits were reviewed:

Permit Number	Date	Purpose of Permit
NB 1473-021320	1920	Permit to construct a new building
FO 2378-110543	1943	Fuel oil burner application
FO 1353-45-080662	1962	Fuel oil burner application

According to the Building Department records reviewed, the Subject was constructed after 1920. In addition, the Subject may have utilized fuel oil in at least 1943 and 1962. The Subject is not listed as a registered Petroleum Bulk Storage (PBS) tank site with the NYSDEC, nor is it listed on any database indicative of an existing or former contamination condition. Furthermore, CBRE did not observe any evidence of former or current fuel oil tank on site. As such, any possible former fuel oil usage at the Subject is not of environmental concern.

Health Department

CBRE has sent a request to the New York City Health Department for environmental information pertaining to the Subject property. As of this writing,

the Health Department has not responded to our request. Should receipt of a response from the Health Department change the conclusions of this report, the Client will be notified in writing by CBRE.

New York State Department of Environmental Conservation (NYSDEC)

CBRE has sent a request to the New York State Department of Environmental Conservation (NYSDEC) for environmental information pertaining to the Subject property. As of this writing, the NYSDEC has not responded to our request. Should receipt of a response from the NYSDEC change the conclusions of this report, the Client will be notified in writing by CBRE.

New York City Department of Environmental Protection (NYCDEP)

CBRE has sent a request to the New York City Department of Environmental Protection (NYCDEP) for environmental information pertaining to the Subject property. As of this writing, the NYCDEP has not responded to our request. Should receipt of a response from the NYCDEP change the conclusions of this report, the Client will be notified in writing by CBRE.

Fire Department

CBRE did not send a request to the Fire Department of the City of New York (FDNY) as based on our experience with this agency, the information is not reasonably ascertainable, as the response time exceeds 20 calendar days and typically extends 4-6 weeks from acknowledgement of receipt of the request. However, potential tank information was requested from additional regulatory authorities (NYSDEC) under a separate FOIA and were viewed on-line via the NYSDEC database website as well as the NYC Office of Environmental Remediation (OER) Searchable Property Environmental E-Database (SPEED). Additionally, CBRE reviewed historical Sanborn maps for evidence of petroleum or chemical storage tanks on-site.

CBRE conducted a "Tier I" (non-intrusive) Vapor Encroachment Screening (VES) on the Subject in accordance with the methodology set forth in ASTM E 2600-15 "*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*". During the VES, the Area of Concern (AOC) was minimized using the methodology taught in the ASTM Screening for Vapor Encroachment onto Property Involved in Real Estate Transactions Training Course. The purpose of the Tier I VES is to conduct an initial screen to identify, to the extent feasible, the potential for a vapor encroachment condition (VEC) in connection with the Subject with respect to chemicals of concern that may migrate as vapors into the vadose zone of the Subject as a result of contaminated soil and/or groundwater on or near the Subject.

This VES utilized readily available data sources previously discussed in this Phase I ESA to include the type of soils, geology and groundwater characteristics of the Subject area (refer to Section 4.3) as well as known or potentially contaminated sites as identified on Federal, State, tribal and local databases. CBRE also utilized previously discussed standard historical sources of information to identify potential historical sources of contamination on the Subject and surrounding properties which may be indicative of a VEC. This data collection and analysis was coupled with our site reconnaissance of the Subject and surrounding properties. Based upon the results of our data collection, reconnaissance and analysis, a summary of our Tier I VES findings is presented in the table below:

Potential for Vapor Encroachment to Impact the Subject	
Area of Concern	Conclusion
Subject Operations or Existing Conditions	None identified (Refer to Sections 4.0 Site Description and 7.0 Site Reconnaissance)
Historical Uses of the Subject Property	None identified (Refer to Section 5.0 Historical Use)
Adjoining Property Operations or Existing Conditions	None identified (Refer to Section 4.2 Surrounding Land Use)
Historical Uses of Adjoining Properties or Nearby Properties	None identified (Refer to Section 5.0 Historical Use)
Regulatory Review of sites identified on Federal, State, tribal and Local Environmental Databases which were located in Approximate Minimum Search Distance (AMSD)	Several Identified (Detailed within Section 6.0 Regulatory Review), but none of concern.

Several impacted properties were identified in CBRE's regulatory database review. However, based upon hydrogeology, groundwater flow direction and the furthest known extents of the contamination, none of these properties are suspected of having petroleum or chemical contaminant plumes that would be identified as a VEC and as such, a VEC from these properties can be ruled out.

CBRE has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-13 of the property at 45 Van Sinderen Avenue, New York, New York. Any exceptions to, or deletions from, the standard practice are described within Section 2.0 of this report.

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Subject.

CBRE did not identify CRECs in connection with the Subject.

CBRE did not identify HRECs in connection with the Subject.

No significant data gaps were identified that would affect the ability of the environmental professional to identify RECs at the Subject.

The investigation has revealed no BERs associated with the standard ASTM scope considerations.

This investigation has revealed no business environmental risks relating to these ASTM Non-Scope Considerations in connection with the Subject except for the following:

- Based on the age of the site improvements, the potential use of ACMs exists. No friable suspect ACM was identified in readily accessible areas. However, the non-friable resilient floor finish assemblies, plasters, built-up roofing system, caulking, and mastics may contain asbestos. Note, additional suspect ACMs may exist in inaccessible locations such as behind walls, above ceilings, and beneath visible flooring. Since these non-friable materials are in good condition and the potential for fiber release is low, no further action is recommended at this time, other than maintaining the materials in good condition under an Asbestos Operations and Maintenance (O&M) Program. However, in the event that building maintenance, renovation, or demolition activities require the removal or disturbance of the suspect ACM, CBRE recommends that they be characterized for asbestos by a material specific reliable method for detecting asbestos. All activities involving ACM should be conducted in accordance with governmental regulations.

- Since the Subject was constructed prior to the Consumer Product Safety Commission's 1978 ban on the sale of LBP to consumers and the use of LBP in residences, there is a potential that LBP may have been applied at the Subject. Testing would be required in order to determine whether LBP exists. Painted surfaces observed were in good condition with no excessive peeling or flaking. No further action is recommended at this time. However, all activities involving LBP

should be conducted in accordance with HUD guidelines, the USEPA's Lead-Based Paint Renovation, Repair and Painting Program Rule as well as the OSHA Lead in Construction (CFR Part 1926.62) and EPA Renovate Right regulations and RCRA guidelines.

11.1 This report has been prepared in compliance with the ASTM standard entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" E1527-13.

11.2 The observations described in this report were made under the conditions stated herein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services within the constraints imposed by the client. The work described in this report was carried out in accordance with the Terms and Conditions of the contract.

11.3 In preparing this report, CBRE has relied on certain information provided by federal, state, and local officials and other parties referenced therein, and on information contained in the files of governmental agencies, that were readily available to CBRE at the time of this assessment. Although there may have been some degree of overlap in the information provided by these various sources, CBRE did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this site assessment. Observations were made of the site and of the structures on the site as indicated in this report. Where access to portions of the site or to structures on the site was unavailable or limited, CBRE renders no opinion as to the presence of direct or indirect evidence relating to petroleum substances, hazardous substances, or both, in that portion of the site and structure. In addition, CBRE renders no opinion as to the presence of indirect evidence relating to hazardous material or oil, where direct observation of the ground surface, interior walls, floors, ceiling or a structure is obstructed by objects or materials, including snow, covering on or over these surfaces.

11.4 As part of this assessment, CBRE submitted requests for information via the Freedom of Information Act (FOIA) to various governmental agencies. As of the preparation of this report these requests may not have been fulfilled. The conclusions of this report are subject to change upon receipt of a response from these FOIA requests.

11.5 CBRE does not represent that the site referred to herein contains no petroleum or hazardous or toxic substances or other conditions beyond those observed by CBRE during the site walkthrough.

11.6 CBRE has produced this document under an agreement between CBRE and Metropolitan Commercial Bank. All terms and conditions of that agreement are included within this document by reference. Any reliance upon this document, or upon CBRE's performance of services in preparing this document, is conditioned upon the relying party's acceptance and acknowledgement of the limitations, qualifications, terms, conditions and indemnities set forth in that agreement, and property ownership/management disclosure limitations, if any. It is not to be relied upon by any party other than Metropolitan Commercial Bank nor used for any purpose other than that specifically stated in our Agreement or within this Report's Introduction section without CBRE's advance and express written consent. The Phase I report is only valid if completed within 180 days of an acquisition or the transaction necessitating the report.

11.7 TIME LIMITATION TO ENACT CLAIM AGAINST CBRE If in the opinion of the client, or any third party claiming reliance on CBRE's report or services, that CBRE was negligent or in breach of contract, such aforementioned parties shall have two years from the date of CBRE's site visit to make a claim.

11.8 Unless specifically identified within Section 2, Chinese drywall, indoor air quality and any other non-ASTM scope issues as identified in ASTM E1527-13, Section 13.1.5, are excluded from the scope of this assessment.

1.0 INTRODUCTION

Broadway Junction Partners, LLC (Client) retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase II Environmental Site Assessment (ESA) for the properties located at 45 Van Sinderen Avenue and 2465 Atlantic Avenue, Brooklyn, New York. The purpose of the Phase II ESA was to further evaluate recognized environmental conditions (RECs) identified in September 2018 Phase I ESAs prepared by CBRE, Inc. and to obtain sound, scientifically valid data concerning actual property conditions.

Work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1903-19 (Standard Practices for Environmental Site Assessment: Phase II Environmental Site Assessment Process) and in substantial conformance with the New York State Department of Environmental Conservation's (NYSDEC's) Division of Environmental Remediation's (DER's) Technical Guidance for Site Investigation and Remediation, May 2010 (DER-10).

2.0 BACKGROUND

2.1 Site Description and Features

The subject property consists of two parcels located at 45 Van Sinderen Avenue and 2465 Atlantic Avenue in Brooklyn, NY. The subject property is located in the borough of Brooklyn and Kings County. The property is identified in the NYC Tax Map as Block 1576, Lots 1 and 34. The subject property measures approximately 0.36 acres and is improved with:

- 45 Van Sinderen Ave: The property is improved with an approximately 103-year-old (built in 1921), two-story warehouse and loft building covering approximately 40% of the lot on the south, with an attached storage yard to the north. The building has a partial cellar covering approximately half the building area on the west, featuring stone rubble walls with a superstructure of wood frame and masonry construction.
- 2465 Atlantic Avenue: The property is improved with an approximately 116-year-old (built circa 1908) three-story vacant loft building covering the entirety of the lot. The building has a full cellar featuring stone rubble walls with a superstructure of wood frame and masonry construction.

A Site Location Map is included in **Figure 1**. A Site Plan is included as **Figure 2**.

2.2 Physical Setting

The topography of the subject property and surrounding area was reviewed from the USGS 7.5-minute series topographic map for the Brooklyn, NY quadrangle. The property elevation is approximately 70 feet above the National Geodetic Vertical Datum (NGVD).

The geologic setting of Long Island is well documented and consists of crystalline bedrock composed of schist and gneiss overlain by layers of unconsolidated deposits. Immediately overlying the bedrock is the Raritan Formation, consisting of the Lloyd sand confined by the Raritan Clay Member. The Lloyd sand is an aquifer and consists of discontinuous layers of gravel, sand, sandy and silty clay, and solid clay. The Raritan Clay is a solid and silty clay with: few lenses of sand and gravel, abundant lignite and pyrite, and gray, red, or white in color.

Above the Raritan Clay lies the Magothy Formation. The Magothy Aquifer consists of layers of fine to coarse sand of moderate to high permeability, with inter-bedded lenses of silt and clay of low permeability resulting in areas of preferential horizontal flow; therefore, this aquifer generally becomes more confined with depth. The Magothy Aquifer is overlain by the Upper Glacial Aquifer. The Upper Glacial Aquifer is the water table aquifer at this location and is comprised of medium to coarse sand and gravel with occasional thin lenses of fine sand and brown clay. This aquifer extends from the land surface to the top of the Magothy Aquifer; therefore, is hydraulically connected to the Magothy Aquifer.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

Based upon the subject property elevation and regional groundwater contour maps, the depth to groundwater beneath the subject property was estimated at 59 feet below existing grade. Regional groundwater flow is estimated to be toward the southeast direction.

2.3 Site History and Land Use

45 Van Sinderen Avenue: Prior to the construction of the existing improvements, the subject property was improved with small buildings used for coal and wood storage associated with the Thatford and Ackerman Coal and Lumber Yard since at least 1888 and was likely vacant land prior to that. The current subject building was constructed in 1920 and was used as a rolled gold manufacturing facility in 1932 and an instrument testing company from 1951 until the early 2000's. The property is currently used as a furniture warehouse.

2465 Atlantic Avenue: Prior to the construction of the existing improvements, the subject property was developed with a two-story commercial building used as part of the Thatford & Ackerman Coal and Lumber Yard since at least 1888. Prior to that, the Subject was vacant land. The current building was constructed circa 1908 and was used as a hotel, an electrical supply company, a clothing manufacturer, a lamp manufacturer and a radio and telecom manufacturer throughout the years since its construction. The property is currently used as a sign designer and manufacturer.

2.4 Adjacent Property Land Use

The area surrounding the subject property was lightly developed by 1888 and more densely developed by 1932. An elevated subway track located near the subject property has been in existence since at least 1897 and the remainder of the area has mostly been used for commercial or industrial uses up until the present day.

2.5 Summary of Previous Assessments

2.5.1 Phase I Environmental Site Assessment Report (September 2018) - 2465 Atlantic Avenue

CBRE, Inc. prepared a Phase I ESA in September of 2018 for 2465 Atlantic Avenue. The Phase I ESA identified the following RECs associated with subject property:

- REC 1 – The property was formerly occupied by APEX Airtronics, Inc. (a radio and telecom equipment manufacturer) from 1948-2014. The subject property was listed as a Resource Conservation and Recovery Act (RCRA) Non-Generator as of 2007, but in 1999 was formerly a Small Quantity Generator of hazardous waste. In 1980, the subject property was a Large Quantity Generator in 1980 for production of spent non-halogenated solvents. Given that much of the

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

operations at the property occurred during a period with little to no environmental regulations, the historical industrial usage was considered a REC.

- BER – The subject property installed a 550-gallon No. 2 fuel oil AST in 1956. The tank was converted to non-regulated use and appeared to be in good condition. The tank is encased in concrete and is considered to be an underground storage tank by the NYSDEC. This was not considered a REC, but was considered a BER.

2.5.2 Phase I Environmental Site Assessment Report (September 2018) – 45 Van Sinderen Avenue

CBRE, Inc. prepared a Phase I ESA in September of 2018 for 45 Van Sinderen Avenue. The Phase I ESA did not identify RECs associated with subject property.

2.5.3 Phase II Environmental Site Assessment Report (November 2018) – 2465 Atlantic Avenue

Castleton Environmental prepared a Phase II ESA in November of 2018. The Phase II ESA documented the findings of the Subsurface Investigation performed at the subject property. The Phase II ESA is summarized below.

On November 7, 2018, two sub-slab vapor samples (SSV01 and SSV02), two indoor air samples (IAQ01 and IAQ02), and one outdoor ambient air sample (OAQ01) were collected and analyzed for the presence of VOCs by York Analytical Laboratories using 6-liter SUMMA canisters fitted with two-hour regulators. Each sub slab location was screened with a photoionization detector for the presence of VOCs before sampling. The photoionization detector detected readings of 1.4 and 2.7 parts per million.

Multiple chlorinated VOCs, including carbon tetrachloride, cis-1,2-dichloroethylene, (DCE), trichloroethylene (TCE), methylene chloride, and tetrachloroethylene (PCE) were detected. PCE was detected at concentrations in SSV02 and IAQ02 that would warrant mitigation based on NYSDOH decision matrices and was also detected in OAQ01. All remaining analytes were reported as non-detect.

Based on the findings of the Phase II ESA, Castleton Environmental recommended the sealing of seams, piping penetrations, and floor/wall joints to prevent vapors from entering the building from beneath the slab. Castleton Environmental did not recommend further sampling that would disturb the concrete floor.

BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

3.0 INVESTIGATION METHODOLOGY

The Phase II ESA included the following tasks:

- Geophysical survey
- Soil quality evaluation
- Groundwater quality evaluation
- Soil vapor intrusion investigation

3.1 Geophysical Survey

On April 15 and April 16, 2024, PWGC and Advanced Geological Services (AGS) of Malvern, Pennsylvania mobilized to the subject property to perform a geophysical survey. The purpose of the geophysical survey was to determine the absence/presence of subsurface anomalies at the subject property. Descriptions of the geophysical methods are described below.

A copy of the Geophysical Survey Report, including further detail regarding the methodology and findings, is included in **Appendix A**.

3.1.1 Electromagnetic Survey

AGS utilized a RD400 by Radio-Detection, an EM61 electromagnetic (EM) instrument, and a Fisher M Scope TW-6 metal detector. The Radiodetection RD400, EM61 electromagnetic, and Fisher M Scope use the principle of EM induction to measure the variability of electrical conductivity of subsurface materials and the presence of buried metal objects. Significant contrasts in the electrical properties between non-indigenous materials and surrounding soil enable accurate delineation of buried waste materials, fill, and geologic features. The large EM response to metal makes this technique particularly well suited to identifying buried metal objects such as underground storage tanks (USTs), metallic wastes, buried drums, pipelines, reinforced building foundations, and other metal components of buried structures. It is, however, equally sensitive to metal objects on the ground surface.

3.1.2 Ground Penetrating Radar Survey

Following the electromagnetic survey, AGS utilized a GSSI SIR-3000 with a 400 Mhz antenna to further investigate the metallic anomalies. Ground penetrating radar (GPR) uses high frequency pulsed electromagnetic waves to acquire subsurface information. Energy is propagated downward into the ground and is reflected back to the surface from boundaries at which there are electrical property contrasts. Penetration is the greatest in unsaturated sands and fine gravels and dry, well cured concrete. Clayey, highly saline or saturated soils, areas covered by steel reinforced concrete, foundry slag, uncured concrete, or other highly conductive materials significantly reduce depth penetration of the GPR signal. The 400

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

MHz antenna can achieve depths of penetration up to about 20 feet, but this depth may be greatly reduced due to site-specific conditions as discussed above.

3.2 Soil Quality Evaluation

To characterize soil quality at the subject property, soil borings were installed throughout the site. A total of four soil borings were installed during the Phase II ESA investigation. Soil boring locations are illustrated in **Figure 3**.

3.2.1 Soil Boring Protocol

Lakewood Environmental Services Corp. (Lakewood) of Smithtown, New York provided environmental drilling services during the investigation. A Track Mounted Geoprobe 6610 was utilized to install the environmental soil borings. Soils were collected continuously from ground surface down to an approximate depth of 15 feet below the ground surface (bgs). For two soil borings installed in the buildings' basements, a hammer drill was utilized to break through the concrete slab and a hand auger was utilized to collect soils up to a depth of two feet bgs.

The soil cores and hand augured soils were placed on 10-mil polyethylene sheeting in the order they came out of the ground. The acetate liners were cut open and the soil core was screened for the presence of volatile organic vapors, which are commonly associated with petroleum products and industrial solvents, utilizing a photo-ionization detector (PID). Each soil core was classified by a hydrogeologist using the Unified Soil Classification System (USCS). A soil boring log was developed for each location (**Appendix B**) and includes the characterization and screening data.

3.2.2 Soil Sample Collection Protocol

Soil samples collected for volatile organic analysis were collected directly from the acetate liners utilizing terra-core sampling devices. The remaining sample volumes were transferred to a stainless-steel bowl and homogenized. Once homogenized, samples were transferred to laboratory supplied glassware and packed in a cooler with ice and shipped under proper chain-of-custody procedures to Alpha Analytical Laboratories of Westborough, Massachusetts (Alpha), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certified laboratory, for analysis following NYSDEC Analytical Services Protocol (ASP)-Category A Deliverables.

3.3 Groundwater Quality Evaluation

To characterize groundwater quality at the subject property, a total of two groundwater samples were intended to be collected as part of this Phase II ESA. Lakewood utilized a track mounted Geoprobe® direct-push drill rig to advance a SP-16 sampler in two boreholes and advance the sampler to groundwater. Due

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

to repeated refusals at depths ranging from 30 feet bgs to 40 feet bgs, Lakewood was unable to reach groundwater; therefore, groundwater samples were unable to be collected as part of this Phase II ESA.

3.4 Soil Vapor Intrusion Investigation

To evaluate potential vapor intrusion at the subject property, a soil vapor intrusion investigation was performed. The investigation consisted of the collection of one soil vapor sample and one sub-slab soil vapor sample.

3.4.1 Soil Vapor Point Installation Protocol

Soil vapor and sub-slab soil vapor sampling was performed in accordance with the NYSDOH "Guidance for Evaluating Soil Vapor Intrusion in New York State," (NYSDOH Guidance) October 2006 and subsequent addenda.

3.4.1.1 Sub-Slab Soil Vapor Sampling

The sub-slab soil vapor sampling points was installed using a hammer drill to approximately two inches beneath the floor slab in accordance with procedures specified in the NYSDOH Guidance. Sampling points were constructed of dedicated polyethylene tubing backfilled with coarse sand and sealed at the surface with hydrated bentonite.

3.4.1.2 Soil Vapor Sampling

The soil vapor sampling point was installed to a depth of five feet bgs utilizing a Geoprobe® direct-push drill rig. A six-inch stainless-steel screen was installed at the base of the sampling point with dedicated polyethylene tubing to grade. Coarse sand was placed surrounding the screen and six inches above. The remainder of the soil vapor point annulus was sealed with bentonite grout to the surface.

3.4.1.3 Tracer Gas Testing

Prior to sampling, the integrity of soil vapor and sub-slab soil vapor sampling point seals was tested using tracer gas analysis. The environment surrounding the seal was enriched with the tracer gas (helium) as readings were collected through the sampling probe with a portable helium detector. Seals were adjusted as needed until acceptable tracer gas readings were collected from each soil vapor probe indicating the seals were intact and the sampling probes were acceptable for sample collection.

After the initial tracer gas test was performed, one to three volumes of the sample tubing was purged prior to collecting samples. Flow rates for both purging and collecting did not exceed 0.2 liters per minute to minimize potential indoor air infiltration during sampling.

631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

3.4.2 *Soil Vapor and Air Sample Collection Protocol*

Soil vapor and sub-slab soil vapor samples were collected into 6-liter Summa® vacuum canisters fitted with 2-hour flow controllers. Canisters and flow controllers were batch certified clean by the laboratory. Proper quality assurance/quality control (QA/QC) protocol was followed during the collection of soil gas samples to ensure that cross-contamination in the field did not occur.

4.0 INVESTIGATION FINDINGS

4.1 Geophysical Survey

A geophysical survey was performed as detailed in Section 3.1. Findings of the geophysical survey included the following:

- The maximum depth of GPR penetration at the property was approximately 5 feet bgs.
- No underground storage tanks were identified during the geophysical survey.
- Areas of elevated electromagnetic response appear to be due to the presence of smaller scrap metal.
- The northern and eastern portions of the property exterior were obstructed by vehicles and equipment storage and were not accessible for collection of geophysical data.

4.2 Soil Quality Evaluation

To characterize soil quality, soil borings were installed within the basements of 2465 Atlantic Avenue and 45 Van Sinderen Avenue, within the northern exterior yard, and in the alley between the two buildings. A total of four soil borings (SB001-B through SB004-B) were installed during the investigation. Soil boring locations are illustrated in **Figure 3**.

4.2.1 Soil Boring Protocol

Soil borings were installed as detailed in Section 3.2. Soils were collected continuously to the final depth of each boring. Borings inside the cellar (SB001-B and SB002-B) were installed to a depth of 2 feet below the slab (approximately 12 feet below ground surface). Borings outside of the building (SB003-B and SB004-B) were installed to a depth of 15 feet below ground surface. Soils in these areas generally consisted of two distinct layers of fill material. The upper layer contained brick and glass, intermixed with fine to medium grained sand with fines and gravel with slight plasticity, and ranged between surface grade and two to six feet bgs in the borings. The lower layer contained brick and glass, intermixed with fine to coarse silty sand and gravel with no plasticity, and continued to at least 15 feet bgs where the boring terminated. No visual or olfactory contamination was observed in any of the soil borings. PID readings ranged from 0.0 parts per million (ppm) to 1.3 ppm. Soil boring logs are included in **Appendix B**.

4.2.2 Soil Sample Collection Protocol

Two soil samples were collected from the buildings' basements using a hand auger from the 0 to 2 feet interval directly beneath the concrete slab. Two soil samples were collected from each of the two borings advanced using the Geoprobe, from the intervals exhibiting the highest visual or olfactory contamination. As these two borings did not exhibit visual or olfactory evidence of contamination, but did exhibit evidence of fill material throughout the boring, samples were collected from the 0 to 2 feet bgs and 13 to 15 feet bgs intervals. Soil samples were collected as detailed in Section 3.2, and were analyzed for the following:

- VOCs by USEPA Method 8260

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

- SVOCs by USEPA Method 8270
- Metals by USEPA Methods 6010/7196/7471/9012

4.2.2.1 Soil Analytical Results

Soil analytical results were compared to the Soil Cleanup Objectives (SCOs) for Unrestricted, Restricted Residential, and Commercial Use Soil Cleanup Objectives (UUSCOs, RRUSCOs, and CUSCOs, respectively) as specified in NYSDEC's Title 6 New York Codes, Rules, and Regulations (NYCRR) Part 375, Environmental Remediation Programs. A total of six samples were collected.

Analytical results from each of the soil borings did not yield concentrations of VOCs exceeding UUSCOs except for Trichloroethylene (TCE) in SB001-B_0-2' and cis-1,2-dichloroethylene (DCE) and tetrachloroethylene (PCE) in SB002-B_0-2'.

SVOCs were detected at concentrations exceeding UUSCOs in two samples, SB002-B_0-2' (benzo(k)fluoranthene) and SB004-B_0-2' (chrysene). SB002-B_0-2' exceeded RRUSCOs for chrysene and indeno(1,2,3-cd)pyrene, and SB004-B_0-2' exceeded RRUSCOs for benzo(a)anthracene, benzo(b)fluoranthene, and indeno(1,2,3-cd)pyrene. In addition, SB002-B_0-2' exceeded CUSCOs for benzo(a)anthracene (7.0 mg/kg), benzo(a)pyrene (8.5 mg/kg), benzo(b)fluoranthene (9.8 mg/kg), and dibenzo(a,h)anthracene (1.5 mg/kg), and SB004-B_0-2' exceeded CUSCOs for benzo(a)pyrene (1.4 mg/kg).

Metals were detected at concentrations exceeding UUSCOs in SB001-B_0-2' (lead, mercury, and zinc), SB002-B_0-2' (lead, mercury, and zinc), SB003-B_0-2' (copper, and zinc), SB004_0-2' (zinc and mercury), and SB004-B_13-15' (manganese). SB003-B_0-2' exceeded RRUSCOs for mercury and lead and SB004-B_0-2' exceeded RRUSCOs for lead. In addition, SB001-B_0-2' and SB004-B_0-2' exceeded the CUSCO for copper (270 mg/kg) at 311 mg/kg and 414 mg/kg, respectively) and SB003-B_0-2' exceeded the CUSCO for arsenic (16 mg/kg) at 25.8 mg/kg.

Analytical results are detailed in **Tables 1** through **3** and the complete laboratory analytical report is included in **Appendix C**.

4.2.3 Soil Vapor Intrusion Investigation

To evaluate potential vapor intrusion at the subject property, one sub-slab soil vapor (SS001-B) sample and one soil vapor (SV001-B) sample were collected. Soil vapor and air samples were collected as described in Section 3.3.

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

4.2.3.1 Soil Vapor Analytical Results

The primary method for the evaluation of sub-slab vapor and indoor air data is the use of Soil Vapor / Indoor Air Matrices provided in the NYSDOH Guidance document. The matrices incorporate both sub-slab vapor concentrations and their corresponding indoor air concentrations in a table to formulate an appropriate action for a sampling site. Matrices have been developed for a limited number of chlorinated and petroleum-related VOCs. Although matrices have not yet been developed for other compounds, consideration is given to the comparisons between the sub-slab vapor and indoor air concentrations to determine if vapor intrusion is occurring.

Indoor air samples were not collected as part of this assessment. As there was no building present in the northern yard, a sub-slab vapor sample could not be collected at the up gradient end of the property; however, the analytical results for the soil vapor sample was utilized in place of a sub-slab vapor sample in comparison to the matrices to provide guidance. The analytical results for the sub-slab soil vapor and soil vapor samples were compared to the lowest values included on the NYSDOH decision matrices for sub-slab soil vapor which may warrant further action.

Analytical results for sub-sab soil vapor in SS001-B exceeded the lowest concentrations specified in the NYSDOH decision matrices for PCE (100 µg/m^3) at 1,440 100 µg/m^3, TCE (6 µg/m^3) at 111 µg/m^3, and DCE (6 µg/m^3) at 61.9 µg/m^3. Furthermore, these concentrations exceed the decision matrices that would warrant mitigation regardless of the concentration of the corresponding indoor air sample (1,000 µg/m^3 for PCE, 60 µg/m^3 for TCE and DCE).

No VOCs were detected at concentrations exceeding the lowest concentrations specified in the NYSDOH decision matrices in SV001-B. There are detectable concentrations of petroleum related compounds, such as the trimethylbenzenes and BTEX (benzene, ethylbenzene, and toluene) and chlorinated VOCs such as tetrachloroethylene. These concentrations are relatively low; however, these samples were not collected immediately beneath a slab or within 2 feet of a known source of contamination.

Analytical results are detailed in **Table 4**. The complete laboratory analytical report is included in **Appendix C**.

4.3 Site Environmental Evaluation

Soil impact at the property primarily consisted of chlorinated VOCs exceeding UUSCOs and SVOCs (polyaromatic hydrocarbons [PAHs]) and metals at concentrations exceeding their respective CUSCOs in the shallow (zero to two feet bgs) soils sampled. SVOC and metal impact at the levels detected is commonly associated with the presence of fill material. This observation is further supported by the presence of debris

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

(brick/glass) observed in the soil at the property; however, the PAH and metal impact appears to largely be limited to the upper layer of fill, as manganese was the only analyte to exceed UUSCOs in the lower fill layer. Based on the concentration of lead observed in shallow soils, if disturbed or removed from the site for disposal, waste characterization including Toxicity Characteristic Leaching Procedure (TCLP) analysis may result in the soil being deemed hazardous and requiring special handling for disposal.

The concentrations of chlorinated VOCs exceeding UUSCOs were limited to the two samples collected from beneath the building slabs and may be associated with the presence of these compounds in sub-slab soil vapor.

Chlorinated VOCs were detected in the sub-slab soil vapor sample at concentrations that warrant mitigation, regardless of their respective concentrations in the indoor air. A more comprehensive soil vapor intrusion investigation and installation of a soil vapor mitigation system may be recommended.

Petroleum related compounds and chlorinated VOCs were also detected in the soil vapor sample. While no concentrations of VOCs were observed that would warrant mitigation based on the NYSDOH matrices, the presence of a building slab in this area, if a new building were to be constructed, could potentially result in higher concentrations of compounds accumulating beneath the slab which may represent a soil vapor intrusion concern, similar to what was observed in the sub-slab vapor sample. Installation of a vapor barrier or other suitable vapor intrusion mitigation methods may be recommended here, too, if this portion of the site were to be developed in the future.

5.0 CONCLUSIONS AND RECOMMENDATIONS

PWGC has performed a Phase II ESA at the subject property in conformance with the scope and limitations of ASTM Practice E1903-19 for the following objectives:

- Geophysical survey to identify potential USTs, utilities, and other subsurface anomalies.
- Installation of four soil borings (SB001 through SB004), and collection of one to two soil samples from each boring.
- Installation of one soil vapor sampling point (SV001) and one sub-slab soil vapor sampling point (SS001) and collection of two soil vapor samples.

5.1 Conclusions

Based on the results of the Phase II ESA, PWGC offers the following conclusions:

Subsurface anomalies indicative of potential USTs, drywells, or other objects which would warrant further investigation were not identified during the geophysical survey.

Soil quality across the soil borings exhibited the presence of fill material in the top 15 feet. Six soil samples were collected from four soil borings installed across the site as part of this assessment. Analytical results for each of the four samples did not identify concentrations of VOCs greater than Unrestricted Use SCOs with the exception of PCE, TCE, and DCE in SB002 from the 0 to 2-foot interval, collected from the basement of 2465 Atlantic Avenue. SVOCs, namely PAH compounds, were detected in SB002 and SB003 from the 0 to 2-foot interval at concentrations greater than CUSCOs. Metals including arsenic and copper were detected at concentrations greater than CUSCOs in SB001, SB003, and SB004 in the 0 to 2-foot interval, lead, mercury, and zinc exceeded UUSCOs in SB002 in the 0 to 2-foot interval, and manganese exceeded UUSCOs in SB004 in the 13 to 15-foot interval. VOCs, SVOCs, and metals were not detected at concentrations greater than UUSCOs in the two soil samples collected from the deeper interval. In general, elevated concentrations of SVOCs and metals were identified at locations and depths where the upper layer of fill material was observed, with manganese being the only analyte detected greater than UUSCOs in the lower fill layer. Elevated concentrations of VOCs were identified only in samples collected from beneath the building slab and may be associated with the presence of soil vapors.

One soil vapor sample was collected from the up gradient portion of the property in the northern yard, and one sub-slab soil vapor sample was collected from the down gradient portion of the property in the basement of 2465 Atlantic Ave, which was previously used for industrial purposes (radio and telecom manufacturing). There were no VOC concentrations detected in the up gradient soil vapor sample that would warrant mitigation based on NYSDOH matrices; however, concentrations of petroleum related compounds, such as the trimethylbenzenes and BTEX and chlorinated VOCs such as tetrachloroethylene

P.W. GROSSER CONSULTING, INC • P.W. GROSSER CONSULTING ENGINEER & HYDROGEOLOGIST, PC
631.589.6353 • WWW.PWGROSSER.COM • PWGC.INFO@PWGROSSER.COM
BOHEMIA • MANHATTAN • SARATOGA SPRINGS • MONTICELLO, NY • SYRACUSE • SHELTON, CT

and vinyl chloride were detected at lower concentrations. The sub-slab soil vapor sample contained concentrations of PCE, TCE, and DCE that would warrant mitigation regardless of a corresponding indoor air sample. Based on the results of the sub-slab soil vapor sample and the soil samples collected in the basements of 2465 Atlantic Avenue and 45 Van Sinderen Avenue, there appears to be a soil vapor intrusion concern within this portion of the property.

5.2 Recommendations

Based on the conclusions detailed above, PWGC offers the following recommendations for the subject property:

- Based on the concentrations of SVOC and metals impact observed in the subsurface, PWGC recommends that these soils be handled in accordance with local, state, and federal regulations and guidance if they are to be disturbed and/or removed from the site for offsite disposal. This should involve appropriate waste characterization sampling to determine if some of the metal impacts (particularly lead) are deemed hazardous.
- Soil vapor intrusion mitigation is recommended in the basements of 2465 Atlantic Avenue and 45 Van Sinderen Avenue. Additional delineation of sub-slab vapor concentrations is recommended to more finely focus this mitigation area. Once this area has been better defined, a pilot study is recommended to determine the radius of influence for SSDS pits, and the SSDS system should then be designed and installed.
- Installation of a vapor barrier or other appropriate soil vapor mitigation methods if a new building is to be constructed.

8.0 LIMITATIONS

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections and examination of records prepared by others. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by PWGC.
4. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
5. This report is based, in part, on information supplied to PWGC by third-party sources. While efforts have been made to substantiate this third-party information, PWGC cannot attest to the completeness or accuracy of information provided by others.

Sample Elevation:	0-2'	13-15'	
Laboratory ID:	L2420803-03	L2420803-04	
Sampling Date:	4/16/2024	4/16/2024	
Semi-Volatile Organic Compounds by USEPA method 8270 in mg/kg			
Benzo(a)anthracene	1.6	0.020	U
Benzo(a)pyrene	1.4	0.043	U
Benzo(b)fluoranthene	1.9	0.030	U
Chrysene	1.6	0.018	U
Indeno(1,2,3-cd)pyrene	0.95	0.025	U
Total Metals by USEPA Method 6010 in mg/kg			
Copper	414	29.2	
Lead	828	6.68	J
Manganese	197	1,670	
Zinc	371	43.4	
Total Mercury by USEPA Method 7471 in mg/kg			
Mercury	0.389	0.0440	U

Client Sample ID:	SB001-B
Sample Elevation:	0-2'
Laboratory ID:	L2420537-01
Sampling Date:	4/15/2024
Volatile Organic Compounds by USEPA method 8260 in mg/kg	
Trichloroethene	1.1
Total Metals by USEPA Method 6010 in mg/kg	
Copper	311
Lead	65.7
Zinc	218
Total Mercury by USEPA Method 7471 in mg/kg	
Mercury	0.193

Client Sample ID:	SB002-B
Sample Elevation:	0-2'
Laboratory ID:	L2420537-02
Sampling Date:	4/15/2024
Volatile Organic Compounds by USEPA method 8260 in mg/kg	
cis-1,2-Dichloroethene	0.37
Tetrachloroethene	13
Semi-Volatile Organic Compounds by USEPA method 8270 in mg/kg	
Benzo(a)anthracene	7.0
Benzo(a)pyrene	8.5
Benzo(b)fluoranthene	9.8
Benzo(k)fluoranthene	2.0
Chrysene	7.0
Dibenzo(a,h)anthracene	1.5
Indeno(1,2,3-cd)pyrene	3.8
Total Metals by USEPA Method 6010 in mg/kg	
Lead	207
Zinc	130
Total Mercury by USEPA Method 7471 in mg/kg	
Mercury	0.373

Client Sample ID:	SB003-B		
Sample Elevation:	0-2'	12-14'	
Laboratory ID:	L2420803-01	L2420803-02	
Sampling Date:	4/16/2024	4/16/2024	
Total Metals by USEPA Method 6010 in mg/kg			
Arsenic	25.8	5.02	
Copper	56.6	25.3	
Lead	598	5.64	J
Zinc	144	29.4	
Total Mercury by USEPA Method 7471 in mg/kg			
Mercury	1.13	0.0420	U

Notes:

U - The analyte was analyzed for, but was not detected above the reported sample quantification limit.

J - The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

Highlighted text denotes concentrations exceeding NYSDEC Unrestricted Use SCO

Highlighted text denotes concentrations exceeding NYSDEC Restricted Residential Use SCO

Highlighted text denotes concentrations exceeding NYSDEC Commercial Use SCO

(2) NYSDEC 6 NYCRR Environmental Remediation Programs Part 375 Restricted-Residential Use of Soil Cleanup Objective Table 375-6.8b 12/06 and CP-51 Table 1 10/10.
(3) NYSDEC 6 NYCRR Environmental Remediation Programs Part 375 Commercial Use of Soil Cleanup Objective Table 375-6.8b 12/06 and CP-51 Table 1 10/10.
NS - No Standard
U - The analyte was analyzed for, but was not detected above the reported sample quantification limit.
J - The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
Highlighted text denotes concentrations exceeding NYSDEC Unrestricted Use SCO
Highlighted text denotes concentrations exceeding NYSDEC Restricted Residential Use SCO
Highlighted text denotes concentrations exceeding NYSDEC Commercial Use SCO

Subject: Geophysical Investigation Results
Broadway Junction Project
2465 Atlantic Ave & 45 Van Sinderen Ave

Dear Ms Jenifer Lewis

Advanced Geological Services (AGS) presents this letter report to PW Grosser Consulting (PWGC) of Bohemia, New York detailing the methods and results of the geophysical investigation conducted at 2465 Atlantic Ave & 45 Van Sinderen Ave, Brooklyn, New York. The objective of the geophysical investigation was to locate and identify potential underground storage tanks (USTs) and to "clear" several proposed drilling locations of potential utilities and other drilling obstructions. The field activities for this geophysical investigation were completed by AGS on March 15 2024.

Methods

The ground penetrating radar (GPR), Electromagnetic (EM), radio frequency (RF), and metal detection (MD) methods were utilized for this geophysical investigation. To search for the potential USTs AGS collected EM data in a grid like formation as space permitted to maximize data coverage. Many large obstructions were present at this location which prohibited covering the entire survey area. AGS utilized a GPS instrument to locate each EM data point. The EM data was downloaded and contoured in the field and analyzed for potential USTs. Additional GPR profiles were collected across each area with an elevated EM response.

AGS was unable to enter more than 4 feet into the alleyway between the two buildings due to the presence of debris and obstructions. Due to the debris and obstructions no geophysical data was collated further into the alleyway.

AGS scanned the each proposed drilling location with the RF instrument looking for potentially active electric lines. Each location was further scanned with the MD instrument to locate potential metallic anomalies that could be associated with utilities or other buried metallic obstructions. GPR profiles were collected in a grid like pattern centered at the proposed drilling location, looking for potential utilities.

Ground Penetrating Radar (GPR) Method

The ground penetrating radar (GPR) method was used to locate and identify potential utilities and other buried features. The GPR method is based upon the transmission of repetitive, radio frequency electromagnetic (EM) pulses into the subsurface. When the transmitted energy of down going wave contacts an interface of dissimilar electrical character, part of the energy is returned to the surface in the form of a reflected signal. This reflected signal is detected by a receiving transducer and is displayed on the screen of the GPR unit as well as being recorded on the internal hard-drive. The received GPR response remains constant as long as the electrical contrast between media is present and constant. Lateral or vertical changes in the electrical properties of the subsurface result in equivalent changes in the GPR responses. The system records a continuous image of the subsurface by plotting two way travel time of the reflected EM pulse versus distance traveled along the ground surface. Two way travel time values are then converted to depth using known soil velocity functions.

The GPR field procedures involved (1) instrument calibration, (2) test run completion, (3) production profile collection and recording, and (4) data storage for subsequent processing and analysis in the office. Each radar profile was examined for characteristic GPR signatures that may indicate the presence of buried targets. A Geophysical Survey System SIR System 3000 and a 400 megahertz (MHz) antenna were used with a recording window of 60 nanoseconds (ns) to provide the required depth penetration and subsurface detail.

Radio Frequency (RF) Utility Locating Method

A Radiodetection RD400/PDL2 multi-frequency RF utility locating system was used for this project to locate potential electric lines and other surficially identifiable utilities and/or features. This instrument consists of a receiver/tracer and a remote transmitter, which

operates at frequencies ranging between 8 kHz and 65 kHz. In addition, the receiver can be used in 60 Hz passive mode to identify active buried electrical lines. This utility tracing instrument provides audible and visual feedback to the operator when a utility that is coupled with the transmitted signal is crossed. The transmitter produces a radio-frequency signal in the utility to be traced by either induction coupling or direct hook-up. The receiver output provides measured field strength of the received signal and varies an audible pitch depending upon how far the utility is from the receiver. By carefully adjusting the gain of the receiver it is possible to determine the location of the utility and to separate it from adjacent utilities.

Hand Held Metal Detection (MD) Method

The survey area and each proposed drilling location was scanned using a hand held metal detection (MD) instrument. This method uses the principle of electromagnetic induction to detect shallow buried metal objects such as USTs, metal utility conduits, rebar in concrete, manhole covers, and various metallic debris. This is done by carrying a hand-held radio transmitter-receiver unit above the ground and continuously scanning the surface. A primary coil broadcasts a radio signal from a transmitter. This primary radio signal induces secondary electrical currents in metal objects. These secondary currents in turn produce a magnetic field which is detected by the receiver.

The MD instrument used for this investigation was a Fisher TW-6 pipe and cable locater. This instrument is expressly designed to detect metallic pipes, cables, USTs, manhole covers, and other buried metallic objects. The instrument produces an audible response and significant meter deflections when near a metal object. The peak instrument response usually occurs when the unit is directly over the object.

Time Domain EM Metal Detection Method (EM61)

Time domain EM metal detection data were collected using a Geonics EM61 instrument. This instrument generates a pulsed primary EM field into the earth, which induces eddy currents in nearby metallic objects. The eddy current decay produces a secondary magnetic field which is measured by the receiver coil. By taking measurements at a relatively long time after the start of the decay, the current induced in the ground has fully dissipated and only the current in the metal is still producing a secondary field. In scanning mode, the instrument produces an audible response indicating the presence of buried metal beneath the antenna, as well as providing a

digital read-out of the response magnitude. The response, which is measured in millivolts (mV), can also be recorded by the integrated data logger. The instrument uses two antenna coils separated by 0.5 meters (1.6 feet) to provide potential depth information, and to both minimize and quantify effects from above ground metallic objects. This instrument is very sensitive to metal objects, but relatively insensitive to variations in soil conductivity and geologic features. The standard EM61 configuration used during this investigation is capable of detecting metal targets the size of a 55-gallon drum up to depths of 10 feet or more depending upon site conditions.

Results

AGS has included one figure (Figure 1) showing contoured EM results. The aerial photograph was taken in 2022 and was downloaded from https://data.gis.ny.gov/. All locations on Figure 1 are in the New York Long Island NAD83 state plane coordinate system with all units in feet.

No USTs were identified on either the EM or GPR data sets. AGS identified several small areas with elevated EM response. AGS collected GPR profiles across each identified EM anomaly. The small areas with elevated EM response appeared to be small buried metallic debris that did not have the size or shape typical of an UST. Furthermore, there were no additional areas with an elevated EM response that was on the contoured EM diagram that are typical of USTs.

Only a portion of the survey area was able to be surveyed with the EM instrument. Numerous obstructions prohibited the collection of geophysical data. AGS cannot make any determination on the presence or absence of USTs in areas that were not accessible to AGS for this investigation.

Furthermore, AGS "cleared" numerous proposed drilling locations. Each “cleared” proposed drilling location exhibited a reflection-free GPR signature and no RF or MD response. The final locations for each proposed drilling location was discussed and reviewed with the onsite representative.

Closing

AGS did not identify any USTs and "cleared" several proposed drilling locations. Upon completion of the geophysical investigation AGS reviewed the results with the onsite PWGC representative.

All geophysical data and field notes collected as a part of this investigation will be stored at the AGS office. The data collection and interpretation methods used in this investigation are consistent with standard practices applied to similar geophysical investigations. The correlation of geophysical responses with probable subsurface features is based on the past results of similar surveys although it is possible that some variation could exist at this site. Due to the nature of geophysical data, no guarantees can be made or implied regarding the presence or absence of additional objects or targets beyond those identified.

If you have any questions regarding the results of this field investigation, please contact me at 610-722-5500. It was a pleasure working with you on this project and we look forward to being able to provide you with sub-surface imaging services in the future.

Sincerely,
Prepared by

Christopher Call P.G.
Senior Geophysicist

Notes:

(1) AGS used a RF instrument, EM61 and a SIR 3000 GPR instrument with a 400MHz antenna for this investigation.
(2) EM data was collected with a line spacing of approximately 5 feet. The data was contoured and is shown above. AGS identified several locations with elevated EM responses, however upon further investigation with the GPR instrument these anomalies appear to be caused by small metallic objects. .
(3) AGS did not identify any USTs within the survey area. A large portion of the junkyard area was covered with obstructions and prohibited the collection of geophysical data across the entire area. Furthermore the entire alley way was full of obstructions that prohibited the use of the EM61 and GPR instruments.
(4) AGS identified several utilities within the survey area. Identified utilities were marked on the ground surface with spray paint.
(5) The aerial photograph was taken in 2022 and was downloaded from https://data.gis.ny.gov/.
(6) The field positions were not surveyed by a licensed surveyor and should be considered approximate.
(7) The items shown on this figure may not be all inclusive. AGS does not warrant the fact that additional buried features might be present at this site.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/19/2024 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/19/2024 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/17/2025 has revealed that there are 9 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2025 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/04/2024 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 12/11/2024 has revealed that there are 6 NY SWF/LF sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/03/2024 has revealed that there are 23 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 20 NY UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/17/2025 has revealed that there are 52 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/30/2024 has revealed that there are 2 PFAS ECHO sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 9 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are

EXECUTIVE SUMMARY

18 UST FINDER sites within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 02/17/2025 has revealed that there are 40 E MANIFEST sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MGP: From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

A review of the NY MGP list, as provided by EDR, and dated 12/02/2024 has revealed that there is 1 NY MGP site within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
BELMONT STATION	BELMONT, WILLIAMS, A	SSE 1/2 - 1 (0.523 mi.)	303	1092
UNION STATION (CITIZ	ATLANTIC AVE., ASHFO	E 1/2 - 1 (0.912 mi.)	AT319	1128

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Tank Info:

Tank Number:	01
Tank Id:	228149
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
J02 - Dispenser - Suction Dispenser
L00 - Piping Leak Detection - None
B00 - Tank External Protection - None
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
I05 - Overfill - Vent Whistle
G03 - Tank Secondary Containment - Vault (w/o access)
K00 - Spill Prevention - None
C01 - Pipe Location - Aboveground
E03 - Piping Secondary Containment - Vault (without Access)

Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel Tank in Concrete
Tank Status:	Tank Converted to Non-Regulated Use
Pipe Model:	Not reported
Install Date:	01/01/1956
Capacity Gallons:	550
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	MJGRIFFI
Last Modified:	05/09/2022
Material Name:	#2 fuel oil (on-site consumption)

DEC Memo:	contact at Petro is: Sangesland spoke to Mr. Karp. Yesterday during a fuel delivery they noticed oil coming through the wall around the fill line. Probably oil in the soil under the sidewalk cement along the remote fill pipe line. Mr. Karp said that Petro would be repairing the pipe, but Sangesland specifically wanted to know who would do the soil digout/remediation once the sidewalk was opened up and the fill line exposed. Mr. Karp said Petro would come back on Nov 20th to make the repairs. There is a chance that the sidewalk fill line is installed through a coal chute into the basement wall and NOT through soil. When Petro opens up the sidewalk on Nov 20th they will call the DEC to confirm that either No soil was impacted OR there was soil impact and they will hire a company to do the cleanup. 12/19/08 Spoke with Mr. Karp. Mr. Karp told me the spill in the basement was cleaned up with speedy dry.He has no idea about any soil contamination at the site. I told him to find out exactly where was the leak on fill line and if the leaky portion of the line runs underground through the soil.He said he would contact Petro oil to find out the information. Letter was sent to Apex Airtronics Inc 2465 Atlantic Avenue Brooklyn, NY 11207-2305 Attn: Howard Karp (sr) 03/31/09 Performed site visit today. Tank is totally vaulted,i.e can't be seen without taking the top cement off.No PBS registration found though the capacity is above

FACTORY (Continued) **S108956688**

1,100 gallon. Tightness testing required.As per Mr. Karp, the spill was minor quantity from the fill line in the tank room.Spill was on the concrete floor that was cleaned up by Petro Oil.Fill line has been replaced.No evidence of spill exists in the tank room.I told Mr. Karp to register the tank and have the tightness testing done.(sr) ** Case closed as there is no evidence of oil spill present at the site**S.R.

Remarks: FILL PIPE IS LEAKING AND SEEPED THROUGH THE WALL; PETRO ON SCENE

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed E2MIS notes: while on routine flush assignment found approx 1 gallon of dielectric fluid coming from cable due to contractor damage boulders, rocks and debris in MH66367, joint regulator in structure, no outside inpact, cannot see sump in structure due to debris. Not safe at this time to take a sample. waterbury fitting was leaking at the 3C joint-tightened fitting to stop leak - no D fault exists at this time. Also verified that there is about 3 cubic ft. of dirt and rocks. Will try to take liquid sample from joint regulator and call back to advise. Lab sequence# 99-10699 results 10PPM. Oil clean up completed in mh66367 and e.s.tag#12338 was removed. Incident is closed.
Remarks:	THEY HAD A SUB CONTRACTOR DUMP MATERIAL IN THE HOLE AND THE MATERIAL HIT A JOINT REGULATOR CAUSING THE LEAK. SPILL WILL BE CLEANED UP. CON ED 128365

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE LOT WAS A REPAIR SHOP. ACCORDING TO NYCT, LOT CONTAINED APPROX. 20 DRUMS OF WASTE OIL. NYCT WAS SUPPOSED TO START USING THE LOT TODAY TO STORE BUSES, WHEN THEY NOTICED THAT MOST OF THE DRUMS WERE GONE EXCEPT FOR A FEW CRUSHED ONES. THERE APPEARED TO BE STAINING AROUND THE STORM WATER DRAIN ON THE PROERTY. NYCT

SPILL NUMBER 0007586 (Continued) **S104790043**

(SANJIV'S PAGER # 917-651-4670) OBSERVED SERVERAL INCHES OF WASTE OIL IN THE STORM WATER DRAIN. DEP
NOTIFIED. DEP REQUESTED THAT I NOTIFY ENCON POLICE. 9/29/00 SITE VISIT. MET WITH SANJIV KURAY
(NYCT), CECIL MORRIS (CARAVAN TRANSPORTATION), ALDO VASAPOLLI (CONTRACTOR), MARK TIBBE (DEC). MR.
VASAPOLLI INFORMED TIBBE THAT THERE WERE SEVERAL DRUMS ONSITE THAT HIS COMPANY TOOK DURING THE
CLEANING OF THE LOT. MOST OF THEM WERE EMPTY AND WERE TAKEN BACK TO HIS YARD. ONE CONTAINED WATER,
ONE CONTAINED ANTI-FREEZE, ONE CONTAINED WINDSHIELD WASHER FLUID, ONE CONTAINED A LITTLE WASTE OIL
AND TWO CONTAINED WHAT APPEARED TO HYDRALIC OR TRANSMISSION FLUID. NONE OF THE DRUMS WERE FULL.
ACCORDING TO MR. VASAPOLLI, ALL BUT THE HYDRALIC FLUID WERE DUMPED IN THE STORM WATER DRAIN ON THE
PROPERTY. THE HYDRALIC OIL DRUMS WERE PUNCTURED BY THE BACKHOE WHILE IT WAS CLEANING SOME DEBRIS.
THE RESULTING SPILL WAS SWEPT INTO THE SAME DRAIN. TIBBE PLACED A CALL TO IRA TURRET (OWNERS
ATTORNEY) AND INFORMED HIM THE THE SPILL AND THE DRAIN WOULD HAVE TO BE CLEANED. HE INFORMED TIBBE
THAT HE WAS ALREADY WORKING ON GETTING A CONTRACTOR, BUT HE WOULD LIKE A LETTER DIRECTING THEM WHAT
TO DO. THE OWNER OF THE PROPERTY IS LAWRENCE GREEN. As per 10/19/00 letter from Ira Turret, the
spill was cleaned by Dola Construction.

Remarks: PARKING LOT - NYC TRANSIT WAS SUPPOSED TO OCCUPY THIS TODAY, BUT THERE A LOT OF DRUMS ON SITE - SUBJ MAY HAVE DUMPED THE OIL INTO SEWER

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	4/7/21 - Obligado - 1244pm - I called LI Railroad and left a message to call back the NYDEC. About 100 gallons of diesel spilled leaked on the gravel. Emergency spill contractor is mobilizing. It is an ongoing spill that is being contained with buckets and spill pads. They are trying to get a vactor truck to mobilize. The spill is from an emergency generator with a 275 gallon tank. The spill is in substation. Spill assigned to Veronica Zhune for response. Entrance to the Site is on Van Sinderen Ave. Contact is Magdalen (347) 804-3069. 4/8/21-Zhune-Magdalena Rychtecka sent the following email. Summary of the event on 4/7/21 . On 4/7/21 @ noon: LIRR Substation Department personnel notified LIRR Corporate Safety Department- Environmental Planning and Compliance (LIRR CSD-EPC) of a diesel spill in the East NY Substation that was found during a monthly inspection. The 275-gallon diesel tank connected to an emergency generator was found on its side-dripping diesel through a vent pipe. We are assuming approximately 100 gallons of diesel spill into soil and ballast under the tank. . Initial Spill Response on 4/7/2021: . Long Island personal placed oil absorption pads underneath the dripping vent to minimize the spill to the gravel and soil under the tank . LIRR CSD-EPC: . Called NYSDEC hotline to report the spill & obtained Spill # 2100177 . Coordinated with LIRR Sub station personnel regarding the access, utilities to assess the limiting conditions for emergency response contractor (AB Environmental, referred herein as AB) . Requested AB's spill response team to mobilize to the site. . Mobilize to the site to oversee the spill response activities. . Spill response activities performed by AB Environmental: . AB removed approximately 137 gallons of diesel from the tank utilizing pump truck . AB disconnected the tank from the emergency generator, drained all the associated piping and filter, and placed the empty tank in a secure position. . AB removed 3.8 CY of soil and ballast impacted by the diesel utilizing vactor truck . AB collected (5) endpoint soil samples to be analyzed for contaminants listed in NYSDEC CP-51 table 3 Soil Cleanup levels for Fuel Oil Contaminated Soil. 5/18/21-Zhune-Magdalena

EAST NY SUMP STATION (Continued) **S127481056**

Rychtecka sent the following email. To follow up the East NY Substation Spill Response (summarized in the attached email from April 8, 2021 -including photo documentation), please see the attached waste Manifest for the removed wastes from the site and the Lab Report for (5) endpoint samples collected on April,2021. The analytical results were compared to 6 NYCRR Part 375 Soil Cleanup Objectives for Industrial Use. All Concentrations were found within the limits except for the following: . Benzo (a) pyrene concentrations of 3,600 uk/kg and 3,700 ug/kg associated with North and South wall Endpoint samples, respectively, were slightly above the Industrial SCO of 1,100 ug/kg (1.1 ppm) LIRR removed all impacted material from the spill location as practicable. Therefore, we will like to request that NYSDEC consider the merit of closing the spoll, so we can backfill the excavation with a clean general fill and ballast. 5/21/21-Zhune-Magdalena Rychtecka sent the following email I wanted to follow up our phone conversation from Wednesday regarding the next steps at ENY Substation (located at 1762 East NY Ave, Brooklyn, NY 11207).Can we backfill the excavation given that the endpoint concentrations were within the SCOs of 6NYCRR OPart 375 for Industrial Use except Benzo (a)pyrene concentrations associated with North and South wall Endpoint Samples. 5/25/21-Zhune-Magdalena Rychtecka sent the following email I compare the endpoint samples to restricted Use (Industrial Use)Soil Clean up Objective in the table 375-6.8(b).It stars at page 6-11 through 6-13 of the 6 NYCRR Part 375. I summarized the analytical results into a table along along with the industrial SCOs for easier comparison. 5/25/21- Zhune sent and email to Magdalena Rychtecka. Additional excavation is required to remove diesel contamination at the east side sample. Also you should take an endpoint sample at the east wall after the excavation. East wall 4/8/21 1,2,4 trimethylbenzene 110,000 1,3,5 trimethylbenzene 28,000 Benzene 490 Ethylbenzene 19,000 Isopropylbenzene 6,300 Naphthalene 13,000 n-butylbenzene 13,000 n-propylbenzene 17.000 0-xylene 32,000 p-&m-xylenes 69,000 p-isopropyltoluene 4,900 sec-buthylbenzene 8,00 toluene 16,000 xylenes 100,000 6/8/21-Zhune - Magdalena Rychtecka sent the following email On May 28, 2021 AB Environmental mobilize to the East NY substation on 5/28/21 to excavate more soil and ballast from the east side of the excavation area, The endpoint sample from the east wall was collected and attached are the lab Results. The analytical result indicate ND VOCs. The fallowing SVOCs are detected above the standards Benzo (a)anthracene 10.000ug/kg, Benzo (a) pyrene 7.000 ug /kg, Benzo (b)fluoranthene, Benzo (g, h,i) Benzo (k)fluoranthene 6.400 ug/kg ,

EAST NY SUMP STATION (Continued) **S127481056**

Crysene 9600 ug/kg, Dibenzo
(a,h)anthracene 1.500 ug/kg, indeno (1,2,3-cd)pyrene 4.300 ug/kg.
Spill Closed.

Remarks: Clean-up pending.

Environmental Interest/Information System:

The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	ATF-1
Tank Id:	66445
Material Code:	9999
Common Name of Substance:	Other

Equipment Records:

	I04 - Overfill - Product Level Gauge (A/G)
	C01 - Pipe Location - Aboveground
	J02 - Dispenser - Suction Dispenser
	L00 - Piping Leak Detection - None
	G12 - Tank Secondary Containment - Double-Walled (AG only)
	I02 - Overfill - High Level Alarm
	K01 - Spill Prevention - Catch Basin
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	E00 - Piping Secondary Containment - None
	F01 - Pipe External Protection - Painted/Asphalt Coating
	H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
	A00 - Tank Internal Protection - None
	B01 - Tank External Protection - Painted/Asphalt Coating
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	03/01/1999
Capacity Gallons:	1000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

HW Code:	C224322
SWIS:	2401
Town:	New York City
Record Added Date:	03/17/2021
Record Updated Date:	08/25/2023
Update By:	RKCORCOR
Site Description:	Location: The 0.8-acre site is located in an urban area of Brooklyn on the northern side of Pacific Street, between Sackman Street to the west and East New York Avenue to the east. The site is comprised of two contiguous tax lots (Lot 46 to the east and Lot 58 to the west). Site Features: The site is primarily grassy land. Gravel and paved surface areas are located along the western and southern property borders, respectively. Chain-link fences and concrete block walls define the property borders. Current Zoning and Land Use: The site is currently vacant and is located in a mixed-use C4-5D/R7D zoning district (a general commercial district with a residential overlay). The adjoining parcels are currently used for a combination of institutional (north), industrial (east), residential (south), and commercial (northeast and west) purposes. Past Uses of the Site: The site was first developed for commercial and manufacturing use sometime between 1908 and 1928. Known commercial uses have included a large automobile garage containing gasoline tanks on Lot 46, subsequently used as a manufacturing facility for elevators, lamps

LOT 46,TAXBLOCK 1437 (Continued) **S118704373**

and clothing, and a warehouse on Lot 58 that was occupied by a clothing manufacturer and several retail stores. On-site buildings were demolished by the 1980s (Lot 58) and 2007 (Lot 46). Site Geology and Hydrogeology: Site soils are derived from glacial materials, which overlie deep glacial deposits of sand, gravel and clay, with bedrock located well below the surface, beyond 102 feet below ground surface (bgs). Subsurface soils generally consist of fill (coarse to medium sand, clay, crushed stone, crushed brick and crushed concrete), ranging in depth from three to 15 feet bgs, and underlying native materials were generally comprised of sands with variable size gravel. Geotechnical borings documented deeper native materials comprised of dense sands and gravels. Site elevation is about 68 feet above mean sea level. Depth to groundwater (from well casings) is about 60 feet bgs. Groundwater flow in the vicinity of the property generally follows surficial topography in a southeasterly direction, toward Jamaica Bay (located approximately three miles from the property).

Env Problem:

Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), pesticides, herbicides, and cyanide during the Remedial Investigation. Soil results were compared to restricted residential soil cleanup objectives (RRSCOs) and the restricted residential guidance values for PFAS. Groundwater results were compared to the Ambient Water Quality Standards and Guidance Values (AWQSs and AWQGVs). Soil vapor samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site are lead and polycyclic aromatic hydrocarbons (PAHs), which are a subset of SVOCs. Soil PAHs (e.g., benzo(a)anthracene) and lead were detected above RRSCOs in on-site fill materials. PAHs were detected above RRSCOs in soil in the majority of the soil borings from the surface to as deep as 15 feet below ground surface (bgs). However, the majority of the impacts were in the shallower sample intervals. For PAHs, the maximum values, as compared to the RRSCO include: benzo(a)anthracene at 82 parts per million (ppm); benzo(a)pyrene at 77 ppm; and benzo(b)fluoranthene at 75 ppm (RRSCOs 1 ppm); and benzo(k)fluoranthene at 71 ppm (RRSCO 3.9 ppm). Lead was detected above the RRSCO of 400 ppm at up to 2,620 ppm. Sampling of the deepest soil intervals, which reached clean native materials, generally showed limited contamination. These findings are consistent with general impacts from poor-quality fill, demolition debris, and/or former commercial uses, rather than any localized source areas of soil contamination. Data do not indicate any off-site impacts in soil related to this site. Groundwater Concentrations of some ubiquitous metals (e.g., sodium and manganese) exceed, and some PAH compounds in groundwater slightly exceed, their respective AWQS and are not considered contaminants of concern in groundwater. PFAS were reported in all groundwater samples, including the upgradient wells. Perfluorooctanesulfonic acid (PFOS) was detected up to 57.0 parts per trillion (ppt) (AWQGV 2.7 ppt), and perfluorooctanoic acid PFOA was detected up to 87.2 ppt (AWQGV 6.7 ppt). The results indicate that the site is not a source of PFAS to groundwater. Groundwater contamination may, in part, be related to the presence of poor-quality on-site fill materials. However, groundwater impacts are similar to conditions typically encountered in urban areas and are likely related to local groundwater conditions, rather than a significant onsite source areas. Data do not indicate any off-site

LOT 46,TAXBLOCK 1437 (Continued) **S118704373**

	impacts in groundwater related to the site. Soil Vapor - Soil vapor samples were analyzed for VOCs. Soil vapor was not found to be impacted by site-related contamination. The highest detections were for acetone up to 945 micrograms per cubic meter (?g/m3), tertiary butyl alcohol up to 355 ?g/m3, chloroform up to 532 ?g/m3, and tetrachloroethene up to 180 ?g/m3. Data do not indicate any off-site impacts in soil vapor related to the site.
Health Problem:	People will not come into contact with contaminated soil or groundwater unless they dig below the ground surface. People are not drinking the groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air is not a current concern, however could be a concern for future on-site occupied structures. Environmental sampling indicates soil vapor is not a concern for off-site buildings.

FOLEY Con Ed e2mis #145316:
9/30/02 10:00 HRS. S. FULLER #37342 OF EQUIPMENT GROUP REPORTS WHILE PUMPING WATER OUT OF V-2603 AT
09:50 HRS. FOUND AN UNDIAPERABLE SHEEN OF UNKNOWN OIL ON APPROX. 75 GAL WATER. NO OIL WAS PUMPED
OUT OF VAULT. NO SEWER OR WATERWAYS APPEAR TO BE AFFECTED. NO PRIVATE PROPERTY AFFECTED. NO FIRE OR
SMOKE INVOLVED. NO SUMP PUMP AND PIPING FROM OLD PUMP WAS FOUND SEALED. VAULT IS CONNECTED TO
ADJACENT VAULT V-2538 VIA FLOOR DRAIN (SAW WATER GOING DOWN IN V-2538 WHILE PUMPING OUT V-2603).
ENV. STOP TAG #31086 PLACED. TRANSFORMER WILL BE PRESSURE TESTED AND SAMPLE WILL BE TAKEN. CLEANUP
PENDING PCB RESULTS FROM CHEM LAB. PARKING RESTRICTIONS: NO PARKING MID. - 3AM, MON. & THUR.
TRANSFORMER INFO FROM ECC WAREHOUSE -- MANUFACTURER: AC, MFR. DATE 1980, INSTALLED DATE 1988,
HISTORICAL PCB RESULTS FROM 1988 SAMPLE ARE 20 PPM. UPDATE 9/30/02 10:15 HRS. -- S. FULLER REPORTS
PRESSURE TEST OF V-2603 FAILED, BUT ONLY NITROGEN IS LEAKING OUT OF TOP-MOUNTED GROUND SWITCH
HANDLE -- NO OIL LEAK VISIBLE. HE WILL TAKE AN OIL& WATER SAMPLE FROM THE SPILL. UPDATE 9/30/02
10:25 HRS. -- AFTER SPEAKING WITH R. JAMES OF EH&S, I ASKED FULLER TO ALSO TAKE AN OIL SAMPLE FROM
THE TRANSFORMER. FULLER REPORTS BOTH SAMPLES WILL BE DELIVERED TO CHEM LAB VIA COURIER. 9/30/02
10:51 HRS. -- NOTIFIED C. McCARTHY OF C.I.G. 9/30/02=1110hrs UPDATE S.FULLER REPORTS ENVIR
TAG#31086 THAT WAS PLACED FELL INTO STRUCTURE.PLACED NEW TAG 30032, ALSO REPORTS WHEN FEEDER 3B82
IS TAKEN OFF SYSTEM REPAIRS AND PRESSURE TEST WILL BE DONE. UPDATE - 30-SEP-2002 20:00 HRS. DUE TO
PENDING FEEDER OUTAGE : INCIDENT #145316 WILL NOT BE MEETING THE 24 HR. CRITERIA. SPILL WILL BE
RECLASSIFIED AS SPILL DIELECTRIC TRANSFORMER. UPDATE - 30-SEP-2002 20:28 HRS. CIG MR. T.MARCINEK
NOTIFIED OF CHANGE OF STATUES. 1/20/04 Sample results for oil in vault is < 1 ppm PCBs. Transformer
removed and cleanup completed on 7/10/03.
Remarks: ABOVE MATERIAL DISCOVERED AT ABOVE LOCATION IN VAULT. MATERIAL IS ON TOP OF APPROX 75 GALLONS OF WATER. SAMPLE TAKEN AND CLEANUP IS PENDING DE-ENERGIZING OF FEEDER. CON # 145316.

DEC Memo:	send TTF letter 01/30/06. Feroze . TTF is sent to: Robert Turrentine Institute For Community Living 40 Rector Street New York, NY 10006. 02/22/06. Feroze, I received a letter from above address that they found a leak at dry portion of the tank. They will repair the tank and test it again. 02/28/06 Feroze. I received a letter from Mr.Robert Turrentine that they will repair or replace the tank and pipe systems. DEC will be informed about their work progress.\\ 03/15/06. Spill is transferred from Feroze to Kumer Patel. 05/17/06-Hiralkumar Patel. Spoke to Jim at Protest. they haven't

INSTITUTE FOR COMMUNITY R (Continued) **S101174394**

heard after they submit proposal. Spoke to Pat Valzalerio as Mr. Turrentine is no longer working at management. Pat will call back with more information. 05/18/06-Hiralkumar Patel. Received call from Pat (Ph. 212-385-3030 Ext. 3222, FAX: 212-385-2380). he suggested refurbishing of tank from inside, but landlord is not agree with that. Pat asked to issue a letter requiring such work. Left message for Pat. 05/19/06-Hiralkumar Patel. Received call from Pat. he has an agreement with landlord which covers repair work. and landlord wants this company to do repair, but Pat thinks that this problem can not be solved by repair work as tank needs either to be replaced or refurbished. he gave me owner's information: Scott Milchman (718) 654-5959 Spoke to Mr. Milchman. he doesn't know anything. sent out TTF letter again at following address to owner. Scott Milchman Eastern Industrial Development Corp. 655 Pelham Parkway North Bronx, NY 10467 Ph. (718) 654-5959 FAX (718) 654-6396 letter faxed to Mr. Milchman and to Pat. 05/24/06-Hiralkumar Patel. REceived message from Scott. left message for Scott. 06/05/06-Hiralkumar Patel. REceived message from Pat. left message for Pat. Received message from Pat. they are planning to remove old tank and to install new tank at same location. left message for Pat. 06/26/06-Hiralkumar Patel. Received call from Mr. Milchman. he has hired Eastmond to remove tank. and after removal Eastmond will take required samples and will send tank closure report. 08/01/06-Hiralkumar Patel. left message for Mr. Milchman. left message for Rene at Eastmond. received call from Mr. Milchman. he asked me to talk to Rene at Eastmond. spoke with Rene. they finished tank removal work last thursday and took endpoint samples. they removed 7-10 yards of contaminated soil. Rene will forward lab results once he gets it. 08/29/06-Hiralkumar Patel. spoke with Isaac at Eastmond. he has everything ready but lab analyticals. once he gets it, he will put together and send final report. 09/25/06-Hiralkumar Patel. spoke with Isaac. he will send final report by end of this week. 10/05/06-Hiralkumar Patel. received closure report from Isaac. they removed tank and removed approx. 10 cubic yard of contaminated soil. excavated area has been backfilled and restored to grade. collected 3 endpoint samples. samples doesn't show any contamination. based on available information, case closed.

DEC Memo:	1/6/11-Vought-Primary off hours responder. Vought called FLS (Mohammed Ahmed 212-675-3225) and left message to return call to DEC Vought. As per PBS #2-237973 tank has 5000-gallon #2 fuel oil UST and site is owned by: Our Lady Of Loreto Church 124 Sackman Street Brooklyn, NY 11233 Ph: (718)387-3740 Vought spoke to RSE and spill assigned to DEC Ahmed as secondary off-hours responder. Vought to send out CSL with possible additional requirements upon callback from FLS Ahmed. Vought received callback from and spoke to FLS Ahmed who noted that he was hired by property developer (Reese & Sons) and that the property was to be developed for affordable housing units. They were onsite to remove an abandoned 4,800-gallon fuel oil UST (See PBS #2-237973) and noted contaminated soil

OUR LADY OF LORETO CHURCH (Continued) **U000402330**

around and below the tank. Vought noted that DEC Ahmed was the project manager and that CSL would
be drafted by Vought and signed by Ahmed. Vought drafted CSL with one month due date and the
following requirements: 1)delineation of soil and groundwater (if applicable) contamination
2)collection of endpoint samples 3)strong recommendation for installation of SSDS and VB 4)Updating
PBS Registration 2-237973 to reflect current closed status of UST (as per DEC Falvey this was
required, PBS registration also expired as of 7/20/92). 5)cc to FLS Ahmed 6)advisement that site
should not be developed until RAP approved by DEC. Vought sent letter with above requirements to
address provided by FLS Ahmed: Our Lady of Loreto Catholic Church c/o Progress of Peoples
Development Corporation 191 Joralemon Street Brooklyn, NY 11201
Attention: Claire Hilger
11/7/11-Fu-Intern Fu completed summary of reports: SUMMARY UST CLOSURE REPORT & REMEDIAL ACTION
PLAN (Fleming Lee Shue)- 08/17/11. On Jan 05 2011, at request of L Riso & Sons, Fleming-Lee Shue
performed an UST field investigation in order to remove the tank but end in finding approximately
30 by 30 feet in size and extending approximately 16-37 feet below grade petroleum-impacted area.
Then a spill was reported. Between June and July 2011, the UST removal activities was observed,
including the removal of the decommissioning material, consisting of cement slurry, and the removal
of the tank and associated piping. A 3 section was required to remain in the excavation due to
structural and shoring concerns. Excavation and removal of 1249 tons of petroleum-impacted soil (to
depth approximately 32ft-bgs) were conducted. On July 8 2011, 8 soil samples were collected per
NYSDEC s request. 3 VOCs, Ethylbenzene, Xylene, and Isopropylbenzene, were detected above standard
at EP-BE; Ethylbenzene was detected above SCO at EP-BW. One MW will be installed at the site. After
installation, the MW will be sampled. If the gw is not found to be contaminated, Closure Report
will be submitted; if the gw is contaminated, two additional MWs will be installed downgradient.
SUMMARY SPILL CLOSURE REPORT (Tenen Environmental)-Sept 2011. Based on the removal of all
structurally-accessible soil, documentation that gw has not been impacted, the incorporation of
vapor barrier and SSDS and composite cover system over the area of UST, Tenen requests that this
spill be closed. The subsurface investigation dated January 2011 consisted of: 1)Excavation of the
soil in the area of the UST, visual and olfactory observations, and PID measurements of organic
vapors; and 2) Installation of five (5) soil borings adjacent to the UST and sampling and analysis
of soil. The results of the investigation, which are detailed in FLS

OUR LADY OF LORETO CHURCH (Continued) **U000402330**

letter dated January 20, 2011,
identify a petroleum-impacted area approximately 30 by 30 feet in size and extending to
approximately 16 to 37 feet bgs. Based on the results of the January 2011 subsurface investigation,
FLS prepared a January 21, 2011 Remedial Action Work Plan (RAWP). The RAWP described the following
remedial actions: installation of sheeting and shoring, excavation of non-impacted soil, tank
removal, excavation and disposal of petroleum-impacted soil, post excavation soil sampling,
installation of a vapor barrier and SSDS, and preparation of a closure report. June-July 2011 Tank
Closure / Interim Remedial Measures On August 17, 2011, FLS submitted an Underground Storage Tank
Closure and Remedial Action Report. July-August 2011 Supplemental Remedial Investigation: MW-1, in
the center of the excavation was installed on July 29, 2011. The soil boring was advanced using a
Sonic drill rig with continuous samples collected starting at a depth of 30 feet bgs and continuing
to the groundwater table. 9 samples were collected and analyzed. The analytical results indicate
the presence of several petroleum-related VOCs in seven (7) of the nine (9) soil samples collected.
All detected VOCs were below the Part 375 Unrestricted Use and Protection of Groundwater SCOs and
CP-51 Fuel Oil SCLs except ethylbenzene, isopropylbenzene and xylenes in samples collected from
43-45 and 48-50 feet bgs. The analytical results detected several SVOCs in eight (8) of the nine
(9) soil samples collected. SVOCs detected in the soil samples primarily included polycyclic
aromatic hydrocarbons (PAHs). All VOCs in MW-1 were detected at concentrations below the Class GA
Standards except chloroform, which was detected at 21.9 parts per billion (ppb), above the Class GA
Standard of 7 ppb. No SVOCs were detected above the NYSDEC Class GA Standards except phenol. The
proposed redevelopment of site includes construction of 4 buildings of 8 dwellings each for a total
of 32 dwelling units, designed as the Pacific St Cluster. The area directly above the impacted soil
will be redeveloped as a paved parking area. The following potential exposure routes have been
indentified: direct contact & inhalation of VOCs from soil and inhalation of VOC from soil vapor. A
vapor barrier and SSDS (73 wide *52 deep) will be incorporated into the two buildings closest to
the church. The principal components of the SSDS are a layer of gravel beneath the basement slab, a
suction pit within the gravel layer, solid-construction piping from the suction pit to an exterior
suction fan on the roof and monitoring points through the basement slab. The system has been
designed in general accordance with NYSDOH s Guidance for Evaluating Soil Vapor Intrusion in the

OUR LADY OF LORETO CHURCH (Continued) **U000402330**

State of New York, October 2006 (NYSDOH Soil Vapor Guidance), including Section 4.2.2,
System-specific recommendations. Several types of composite cover systems will be employed to
prevent direct contact with and mitigate inhalation of residual petroleum constituents.

Remarks: Contaminated soil found at construction site. Cleanup pending assessment and pre-plan.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE Testing equipment was discarded in a dumpster and leaked out. Approximately 3 galons leaked into the parking lot with one gallons going into a storm drain. NYCT contained and cleaned all product except what went into the

NYCTA (Continued) **U003080332**

sewer. NYCT attempted to notify DEP but, after being put on hold for several minutes, NYCT
discontinued call.

Remarks: Caller reports someone dumped the oil in their dumpster. It leaked onto pavement and approximately 1 gallon went into the sewer. Cleanup is in progress by NYC transit employees.

DEC Memo: 12/30/05-Hiralkumar Patel. I spoke with Sherry Bulkley at NYC Transit. According to her, spill happend from fill line of tank. and all the spilled diesel collected in sump. Tank is out of service now and they have pumped diesel from sump. this sump is not connected to any sewer or drain line. I spoke with Mr. Frank Ocello (917-578-8826) at loction, and he told me that sump is on top of tank. they going to test lines for any leak today (12/30/05) noon. I spoke with Mr. Steve Miller, and he will send me a address for further correspondence regarding case after 2nd Jan. 2006
1/5/06-Hiralkumar Patel. I received an address at 1:00PM and have sent a tank test failure letter.
02/02/06-Hiralkumar Patel. Talked with Jaikisan Achaibar (PH: 646-252-5772, FAX: 646-252-5960) at System Safety department, NYC Transit. As per him, there was a line leakage on top of tank, not the tank. they have repaired it. Jai going to send me their internal report in mail today or tomorrow.
02/10/06-Hiralkumar Patel. Received report from Jay Achaibar at NYC Transit. Abstracts of report: - on 12/30/05, during periodic maintenance inspection, approxi. 5 gal fo diesel was found in the fill sump of tank#8. system shut down. - primary line between the fill port and the tank sump was leading at flex connnectors. no leaks found in secondary line at connectors. - spill contained by secondary line and drained to sump, no soil contamination. - 01/25/06, Franklin company replaced flex connector. - primary system, secondary system and sump test were passed. - 5 gal diesel removed by trained NYCT plant and equipment personnel and disposal as non-hazardous industrial waste. we received NYCT spill incident fact sheet, & line testing results. Case Closed based on the report from NYC transit.

Remarks: IN SUMP, ARRANGING TO HAVE THE PUMP CLEANED, CLEAN UP IS IN PROGRESS.

DEC Memo:	2/3/2010 - Sangesland spoke to Jennifer Woutin. Bus was up on the lift over a work pit in the depot. Line on the bus broke and spilled into the pit. Pit is fulled contained (no drains). Jennifer said the pit was pumped out and was being cleaned now. Need to follow up tomorrow. 02/04/10 Performed site visit on 02/03/10 evening.Hydraulic oil spilled from hydraulic lift#10.Spill was contained in the rectangular sump at the base of the lift.Oil was recovered.Minor loose oil in the sump.Each lift has a sump at the base and all sumps are connected through pipe.Facility personnel told me the the sump is made of concrete and there is no leak or holes in the pit.Need confirmatory report from NYCT indicating that the oil has not impacted subsurface.(sr) 2/4/10 - Raphael Ketani. I tried to contact Jennifer Woutin of the NYCTA (646) 252-5768, but could only leave a message. The message stated that the DEC needs a short letter report (possibly accompanied by pictures and manifests) indicating that the spill has been cleaned up. I stated that the report must be received. Otherwise, the DEC can’t close the spill case. Ms. Woutin called me back and left a message. She said that the oil was from a broken line on a lift. She said that the great majority of the oil was recovered. Cleanup is proceeding and the DEC will receive a report when everything is finished. 2/5/10 - Raphael Ketani. Haroon Aslam of

NYCTA (Continued) **U003080332**

	the NYC Transit Authority sent me an e-mail containing a report regarding the spill incident. The e-mail stated that the spill was completely cleaned up and that all of the spilled oil was accounted for and recovered. Based upon Ms. Aslam's e-mail, and Mr. Rahman's site inspection on 2/3/10, and on the fact that the oil went directly into a secondary containment structure, I have determined that there is no threat to the public or the environment. Therefore, I am closing the spill case.
Remarks:	LINE BROKE DURING REPAIR; CONTAINED TO INTERIOR.CLEAN UP PENDING

DEC Memo:	09/11/12-Hiralkumar Patel. 2:50 PM:- spoke with Rochelle. she mentioned that due to flooding in depot, oily water came to sump. she doesn't know where the oil came from. she asked to contact Josephine Brown at the depot. 2:52 PM:- left message for Ms. Brown. Josephine Brown NYC Transit Ph. (718) 566-3415 (O) (646) 879-8573 (C) 4:26 PM:- received message from Ms. Brown. 09/12/12-Hiralkumar Patel. 11:30 AM:- spoke with Ms. Brown. she mentioned that they have a waste oil UST under the depot floor. over the weekend, due to heavy rain, depot was flooded. during inspection, Ms. Brown found mostly water, with some minor oil, in sump right above the waste oil tank. oil on water could be the residual oil from sump. oily water was contained in the sump and was clened up immediately. no oil found on depot floor. case closed.
Remarks:	into sump, repair and c/u pending

Longitude:	Not reported
DEC Memo:	6/8/21-Zhune spoke to Daniel Yu from NYC Transit 646-879-6199. Daniel sent the following email Here are the details that I have so far regarding this spill for your assessment. Product was recently found in a sump associated with the fill lines for diesel tanks 7 and 8 at the depot . The tanks were taken out of service and tightness testing was performed yesterday 6/3. Both the primary and secondary lines fill lines failed, after which the incident was called into the DEC spill hotline. The facility has checked the last three months of reconciliation records and have no noted any issues. The people from the facility cleaned the sump. It was a little amount of diesel fuel. 6/9/21-Zhune-Michael Mandac from NYCT sent the following email NYCT was performing sump testing for the diesel USTs at East New York Bus Depot (25 Jamaica Avenue, Brooklyn, NY 11238). Our contractor overseeing the sump test discovered product in the tank sump for tanks 7 and 8. The remote fill line (from the fill port to the tanks) and secondary piping product line (from the tanks to the pump room) both failed the tightness test. Please note that the primary piping (containing the diesel) passed the tightness test. NYCT has locked out the remote fill port for tanks 7 and 8 (please note that the remote fill services both tanks) and locked out dispensing from the tanks 7 and 8. We are reviewing our options to determine if repairs can be made and how long it will take. 6/2/22 - Kim - Copies of AARCO Environmental Services Corp air tightness test results for tanks 7 and 8 were uploaded to DecDocs. Spill 2102025 reassigned to DEC Brevdo project manager for MTA-NYCT Spill 8807411. June 2, 2022 - Vadim Brevdo - As per discussion and consensus with Eric Kim of Spill Response Section, Spill case 2102025 is reassigned to DER Remediation Section B, Vadim Brevdo to manage, as Vadim Brevdo has been managing entire MTA-NYCT Order on Consent Portfolio, including spill 8807411 at the same site - East New York Bus Depot. One DEC project manager for two spill cases on the same site will make management of the project more effective. VB June 9, 2022 - Vadim Brevdo MTA-NYCT East New York Depot, 25 Jamaica Ave., Brooklyn (Spill Nos. 8807411 and 2102025) This site is an active bus depot and maintenance facility located in a

NYCTA (Continued) **U003080332**

commercial area. In 1991,
the diesel and gasoline USTs failed tightness testing. Site investigations identified petroleum
contamination in the diesel dispenser area but not in the gasoline UST area. Remedial activities in
the diesel dispenser area included the recovery of 124 gallons of free-product and in-situ chemical
oxidation. No free product had been detected since October 2016; however, in January 2021, a sheen
was observed in well W-07R. In May 2021, 0.5 foot of product was detected in well W-07R. An
absorbent sock was installed in the well. On June 3, 2021, free product was detected in the sump of
diesel USTs #7 and #8, which was reported to DEC and spill #2102025 was opened. The tanks primary
fill line and secondary suction lines failed tightness tests. However, review of diesel fuel
inventory records showed no issues. During a site visit on June 11, 2021, no measurable product was
detected in well W-07R or in other wells at the depot. It is unclear if the June 3, 2021 tightness
test failure resulted in a release of product into the environment. On October 5, 2021, MTA-NYCT
and AECOM submitted a Post-Remediation Confirmatory Sampling Work Plan. The plan proposed twelve
soil borings. Seven borings would assess the extent of soil and groundwater contamination remaining
at the site and would be advanced to the water table at 62 feet below grade. The other five borings
would be advanced adjacent to USTs #7 and #8 to determine if there was a release of diesel fuel
into the environment associated with the June 3, 2021 discovery of diesel fuel in the UST sump. Due
to difficult drilling conditions at the site, the borings would be advanced using Sonic drilling.
All soil samples would be inspected for evidence of staining and petroleum odors and screened with
a PID, and samples submitted to a laboratory would be analyzed for VOCs and SVOCs. DEC approved the
Post-Remedial Confirmatory Sampling Work Plan on October 12, 2021. NYCT-AECOM commenced the
fieldwork in November 2021 and completed it in January 2022. On June 1, 2022, NYCT-AECOM submitted
Post-Remediation Confirmatory Sampling Report to DEC which included petition for closure of spills
#8807411 and #2102025. A combined post-remedial confirmatory sampling program for spill #8807411
and an investigation for spill #2102025 were implemented in 2021 and 2022 to evaluate current
subsurface contaminant conditions and to determine if the June 2021 tightness testing failure
resulted in a diesel release into the subsurface. The findings of the investigation show that there
is no free phase petroleum product plume beneath the site. Petroleum impacts in soil, where
detected, were at levels just slightly exceeding 6NYCRR Part 375 Unrestricted Use or NYSDEC s CP-51

NYCTA (Continued) **U003080332**

Soil Cleanup Objectives (SCOs); all detections were below NYCRR Part 375 Commercial Use SCOs. Very low levels of VOCs and SVOCs in the groundwater indicate that the residual petroleum soil impacts are not significantly impacting groundwater at the site and/or off-site. Furthermore, groundwater data confirm that no groundwater impacts are migrating off site. Based on the previous remedial actions and investigations performed at the site, MTA-NYCT and AECOM concluded that the remaining low-level impacts do not pose a potential threat to human health or the environment, and petitioned for closure of two spill cases associated with the site. The site will continue to operate as bus depot for the foreseeable future. Based on review of the Post-Remedial Confirmatory Sampling Report, results of previous site investigations and remedial actions performed to date, the DEC concurred that the closure of spill cases is an appropriate course of action. DEC closed spills #8807411 and #2102025 on June 9, 2022. VB

Remarks: CLEANUP PENDING.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002

MTA NYCT - EAST NY DEPOT (Continued) **1000136912**

Waste Description: Corrosive Waste

Waste Code: D006
Waste Description: Cadmium

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D018
Waste Description: Benzene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U080
Waste Description: Methane, Dichloro- (Or) Methylene Chloride

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
Registry ID: 110009483497

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System

MTA NYCT - EAST NY DEPOT (Continued) **1000136912**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D008
Waste Description:	Lead
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents

NYCT-40 CONWAY ST (Continued) **1001119495**

Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Longitude:	-73.8991920
DEC Memo:	This spill event is BOTH a spill and a tank test failure. Spill was cleaned. TTF issue remains open 8/5/2009 TTF letter sent to: Ms. Jennifer Woutinen New York City Transit 2 Broadway 27th Flr New York, NY 10004 8/24/09. J.Krimgold interviewed the caller (HAROON ASLAM) form MTA over the phone. He stated that the failure was due to the leak from the fill line, not due to the t/test as originally stated. The fill line is double walled and sloped toward the tank sump, where the product was found. The pipe's secondary containment then was tested and found to be tight. This indicates that there was no release to the environment from this incident. The pipe was tagged (taken out of service). Tank is manifolded with other tanks and has another fill. NFA. JK.
Remarks:	CALLER STATES THAT THE TANK (UNK SIZE) FAILED A LEAK TEST, ABOUT 10 GALLONS WAS SPILLED. CALLER DID NOT HAVE THE PBS NUMBER. SPILL WAS CLEANED UP.
