LIST OF ACRONYMS

Acronym	Definition
AOC	Area of Concern
CAMP	Community Air Monitoring Plan
COC	Contaminant of Concern
CPP	Citizen Participation Plan
CSM	Conceptual Site Model
DER-10	New York State Department of Environmental Conservation Technical Guide 10
FID	Flame Ionization Detector
GPS	Global Positioning System
HASP	Health and Safety Plan
HAZWOPER	Hazardous Waste Operations and Emergency Response
IRM	Interim Remedial Measure
NAPL	Non-aqueous Phase Liquid
NYC VCP	New York City Voluntary Cleanup Program
NYC DOHMH	New York City Department of Health and Mental Hygiene
NYC OER	New York City Office of Environmental Remediation
NYS DOH ELAP	New York State Department of Health Environmental Laboratory Accreditation Program
OSHA	Occupational Safety and Health Administration
PID	Photoionization Detector
QEP	Qualified Environmental Professional
RI	Remedial Investigation
RIR	Remedial Investigation Report
SCO	Soil Cleanup Objective
SPEED	Searchable Property Environmental Electronic Database

CERTIFICATION

I, Cheryl Benmergui, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 60 Throop Avenue, (NYC OER Project Numbers: 22TMP1095K, 22EHAN258K). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Cheryl Benmergui	March 21, 2022	
Qualified Environmental Professional	Date	Signature

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 60 Throop Avenue in the Broadway Triangle section in Brooklyn, New York and is identified as Block 2250 and Lot 129 on the New York City Tax Map. The Site is 3,750-square feet and is bounded by Throop Avenue to the north, a religious community center to the south and east, and a 6-story residential building to the west. Currently, the Site is vacant and used for storage of various construction equipment.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of 6-story residential building with a cellar, and a total of 10 dwelling units. The new building will be approximately 73 feet and 10 inches in height (73'-10"), feature storage and parking for 6 vehicles at the cellar level and consist of a rear yard approximately 30 feet in length. The cellar will also consist of a water and sprinkler service room and an electric room. Floors 1 through 5 will contain dwelling units, while the 6th floor will contain two recreational areas and a boiler/hot water heater (HWH) room. The proposed excavation for development purposes is approximately 5.5 feet below the base plane, and 10 feet below the base plane for the elevator pit. As part of development, the referenced lot is not expected to be sub-divided or merged. The water table is expected at approximately 9 feet below grade surface (bgs). Excavation is not anticipated to extend into the water table.

The site is approximately 13 feet above mean sea level and is generally flat.

Summary of Past Uses of Site and Areas of Concern

As per the historical sources reviewed, the Subject Site consisted of a 2-story residential building in 1887 which was razed by 1977 when it became vacant and has remained vacant to date. No other former uses were identified.

Recognized environmental conditions (RECs) and areas of concern (AOCs) in association with the Site were identified in the Phase I ESA. Below is a summary of identified RECs and AOCs:

1. REC: CITGO, a gasoline service station located at 594 Broadway approximately 250 feet up-gradient from the subject site, is listed in the NY Spills database (Spill No. 9507227) for a spill that was reported on August 8, 1995. Report states "soil was contaminated in remote fills and poor housekeeping around waste oil resulted in fill slowly bubbling, divorced fill lines and further contamination." The spill case is still open to date. Based on this information, petroleum-related contamination may be present in the subsurface soil, groundwater, and soil vapor due to said release of contaminants by CITGO which can potentially impact the Subject site.

2. AOC: 295-297 Wallabout Street, located approximately 273 feet Southwest and down-gradient of the Subject site, is listed in the Brownfields database. EDR report states the site was developed with a three-story dwelling/auto repair from at least the late 1880s through the 1940s. By the late 1940s, the dwellings were demolished and a building encompassing the site and adjoining lots was constructed. The on-site building was used for a variety of manufacturing operations: woodworking in the 1960s, woodworking and plastic products manufacturing between the 1970s and 2007, and steel work in the 1980s and 1990s. By 2012, the manufacturing building was demolished, and the site remained a vacant, undeveloped lot. EDR report also states persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Volatile organic compounds in soil vapor (air spaces within soil) may move into buildings and affect indoor air quality. There is no on-site building, but the potential exists for inhalation of site contaminants via the soil vapor intrusion pathway for any future on-site development, as well as for offsite buildings.

3. AOC: Per the NYCOER and City Environmental Quality Review (CEQR) E-Designation site list, on December 22, 2009, the subject site (Block 2250, Lot 129) was assigned the following E-Designation (E-238) as part of the Broadway Triangle Rezoning (CEQR 09HPD019K):

    - Hazardous Materials* Phase I and Phase II Testing Protocol
    - Air Quality - Natural Gas Heat & Hot Water

- Exhaust stack location limitations

Window Wall Attenuation & Alternate Ventilation

Summary of the Work Performed under the Remedial Investigation

Rock Enviro performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed four (4) soil borings across the entire project Site, and collected nine (9) soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed three (3) groundwater monitoring wells throughout the Site to establish groundwater flow and collected four (4) groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed four (4) soil vapor probes around Site perimeter and collected four (4) samples for chemical analysis

Summary of Environmental Findings

1. Elevation of the property is approximately 13 feet above mean sea level (amsl) with a base plane elevation ranging approximately from 11.12' to 11.51' referring to the North American Vertical Datum of 1988 (NAVD88).
2. Depth to groundwater ranges from 8.55 to 9.1 feet at the Site (corresponding elevation of 2.57' to 2.41' NAVD88).
3. Groundwater flow is generally from Northeast to Southwest beneath the Site.
4. Depth to bedrock is unknown. According to the geotechnical report, two borings were drilled down to 100' and recovered samples did not indicate any bedrock.
5. The stratigraphy of the site, from the surface down, consists of 4 feet of historic fill underlain by 3.5 feet of medium to fine dense silty sand underlain by medium stiff clay.
6. Soil/fill samples collected during the RI were compared to the NYSDEC Part 375.6-8(a) Unrestricted Use (Track 1) Soil Cleanup Objectives (UUSCOs), Residential and Restricted Residential Use (Track 2) (RSCOs & RRSCOs). Data for **B3 5.5-7.5'** was also

analyzed for NYSDEC Part 375 Remedial Soil Guidance PFAS Unrestricted (PFAS UUSCOs), Residential (PFAS RSCOs), Restricted Residential (PFAS RRSCOs) – October 2020. Data tables for soil chemical analysis are included in Table 2 and below is a summary of findings:

- *VOCs*

  Methylene chloride was detected above UUSCO in surface sample B4 (0-2') at 0.073 mg/kg.

- *SVOCs*

  No SVOCs were detected above the RSCOs, RRSCOs, or UUSCOs.

- *Target Analyte Metals*

  Barium (max. concentration 761 mg/Kg) and mercury (max. concentration 2.62 mg/Kg) were detected above RSCOs, RRSCOs, UUSCOs in the surface and subsurface samples. Lead (max. concentration 178 mg/Kg), nickel (max. concentration 42.6 mg/Kg), and zinc (max. concentration 286 mg/Kg) were detected above UUSCOs in the surface and subsurface samples. Highest concentrations of metals were detected in one surface sample (0-2') at location B2.

- *Pesticides and PCBs*

  4,4'-DDD (max. concentration 0.0304 mg/Kg), 4,4'-DDE (max. concentration 0.0526 mg/Kg), 4,4'-DDT (max. concentration 0.224 mg/Kg) and dieldrin (max. concentration 0.0376 mg/Kg) were detected above UUSCOs in the surface and subsurface samples. Highest concentrations of pesticides were detected in one surface sample (0-2') at location B4. No PCBs were detected above the RSCOs, RRSCOs, or UUSCOs.

- *PFAS NYSDEC Target List*

  Perfluoro-n-butanoic acid (PFBA) (max. concentration 0.559 ug/Kg) and perfluorooctanesulfonic acid (PFOS) (max. concentration 0.316 ug/Kg) were detected in the subsurface sample (5.5-7.5') at location B3.

7. Groundwater samples collected during the RI were compared to the NYSDEC TOGS Standards and Guidance Values - GA groundwater standards and NYDEC Part 375

PFAS Remedial Program Water October 2020, respectively. Data tables for ground water chemical analysis are included in Table 3 and below is a summary of findings:

- *VOCs*

  Benzene (max. concentration 4 ug/L), cis-1,2-Dichloroethylene (max. concentration 16 ug/L), and Trichloroethylene (TCE) (max. concentration 31 ug/L) were detected above NYSDEC TOGS.

- *SVOCs*

  No SVOCs were detected above NYSDEC TOGS.

- *Target Analyte Metals*

  Dissolved parameters manganese (max. concentration 895 ug/L) and sodium (dissolved) (max. concentration 64,200 ug/L) were detected above NYSDEC TOGS.

- *Pesticides and PCBs*

  No Pesticides or PCBs were detected above NYSDEC TOGS.

- *PFAS*

  Perfluorooctanesulfonic acid (PFOS) (max. concentration 46.3 ng/L) and perfluorooctanoic acid (PFOA) (max. concentration 57.1 ng/L) were detected above NYDEC Part 375 PFAS regulations.

8. Soil vapor samples collected during the RI were compared to New York State Department of Health (NYSDOH) Final Guidance on Soil Vapor Intrusion (May 2017) Matrix A, B, and C guidance values. Based on the VOC concentrations detected and the NYSDOH decision matrices, the concentrations for the following compounds did not exceed the guidance value for no further action and monitoring/mitigation is not required.

   - 1,1-dichloroethylene, 1,1,1-trichloroethane, cis-1,2-dichloroethene, methylene chloride, and vinyl chloride were undetected in all soil vapor samples collected onsite.

   - Carbon tetrachloride (max. concentration 0.35 ug/m^3) and TCE (max. concentration 2.92 ug/m^3) were detected in one or more soil vapor samples. Based

on these results, no further action is recommended as per NYSDOH decision matrix A.

- Tetrachloroethylene (PCE) (max. concentration 4.85 ug/m^3) was detected in one or more soil vapor samples. Based these results, no further action is recommended as per NYSDOH decision matrix B.

- Total concentrations of BTEX ranged from 827 ug/m^3 to 1,639 ug/m^3.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

58-60 Throop LLC has enrolled in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.086-acre site located at 60 Throop Avenue in the Broadway Triangle section of Brooklyn, New York. Residential use is proposed for the property. The RI work was performed between March 3, 2022 and March 11, 2022. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 60 Throop Avenue in the Broadway Triangle section in Brooklyn, New York and is identified as Block 2250 and Lot 129 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 3,750-square feet and is bounded by Throop Avenue to the north, a religious community center to the south and east, and a 6-story residential building to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is vacant and used for storage of various construction equipment.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of 6-story residential building with a cellar, and a total of 10 dwelling units. The new building will be approximately 73 feet and 10 inches in height (73'-10"), feature storage and parking for 6 vehicles at the cellar level and consist of a rear yard approximately 30 feet in length. The cellar will also consist of a water and sprinkler service room and an electric room. Floors 1 through 5 will contain dwelling units, while the 6th floor will contain two recreational areas and a boiler/hot water heater (HWH) room. The proposed excavation for development purposes is approximately 5.5 feet below the base plane, and 10 feet below the base plane for the elevator pit. As part of development, the referenced lot is not expected to be sub-divided or merged. The water table is expected at approximately 9 feet below grade surface (bgs). Excavation is not anticipated to extend into the water table. Layout of the proposed site development is presented in Figure 3.

The site is approximately 13 feet amsl and is generally flat.

1.3 Description of Surrounding Property

Properties surrounding the subject site include the following: adjacent to the Subject site to the Southeast is a 1-story religious community center; adjacent to the Subject site to the Northwest is a 6-story residential building; across the Subject site on Throop Avenue to the North/Northeast is a 10-story residential building complex; across the Subject site on Throop Avenue to the East is a 4-story residential building complex; adjacent to the rear of the Subject site to the South/Southwest is a 5-story residential building. One public school, Eugenio Maria De Hostos School is approximately 215 feet West of the Site. No other hospitals, daycare facilities, or other schools are located within the 500-foot radius of the Site. Figure 4 shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

As per the historical sources reviewed, the Subject Site consisted of a 2-story residential building in 1887 which was razed by 1977 when it became vacant and has remained vacant to date. No other former uses were identified.

2.2 Previous Investigations

The following environmental investigation has been completed at the Site:

1. Phase I Environmental Site Assessment (ESA), completed by Rock Enviro, dated February 2, 2022, which included a site reconnaissance at the Subject Property, review of environmental database searches and former environmental data, and information gathered from state and municipal offices and officials.

Rock Enviro is not aware of any previous investigations completed at the Site.

2.3 Site Inspection

Rock Enviro conducted a site investigation on March 3 and March 11, 2022. Rock Enviro visually inspected accessible areas of the Site where possible. The site consists of a vacant rectangular-shaped lot that seemingly was used for storage of various construction supplies and contains, three trees with small piles of brick, stone, and other various debris scattered throughout the site. Field investigation activities were performed to the extent possible around obstructions, such as overhead clearance when such obstructions could not be removed or negotiated in a safe manner.

2.4 Areas of Concern

Recognized environmental conditions (RECs) and areas of concern (AOCs) in association with the site were identified in the Phase I ESA. Below is a summary of identified RECs and AOCs:

1. REC: CITGO, a gasoline service station located at 594 Broadway approximately 250 feet up-gradient from the subject site, is listed in the NY Spills database (Spill No. 9507227) for a spill that was reported on August 8, 1995. Report states “soil was contaminated in remote fills and poor housekeeping around waste oil resulted in fill slowly bubbling,

divorced fill lines and further contamination." The spill case is still open to date. Based on this information, petroleum-related contamination may be present in the subsurface soil, groundwater, and soil vapor due to said release of contaminants by CITGO which can potentially impact the Subject site.

2. AOC: 295-297 Wallabout Street, located approximately 273 feet Southwest and down-gradient of the Subject site, is listed in the Brownfields database. EDR report states the site was developed with a three-story dwelling/auto repair from at least the late 1880s through the 1940s. By the late 1940s, the dwellings were demolished and a building encompassing the site and adjoining lots was constructed. The on-site building was used for a variety of manufacturing operations: woodworking in the 1960s, woodworking and plastic products manufacturing between the 1970s and 2007, and steel work in the 1980s and 1990s. By 2012, the manufacturing building was demolished, and the site remained a vacant, undeveloped lot. EDR report also states persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Volatile organic compounds in soil vapor (air spaces within soil) may move into buildings and affect indoor air quality. There is no on-site building, but the potential exists for inhalation of site contaminants via the soil vapor intrusion pathway for any future on-site development, as well as for offsite buildings.

3. AOC: Per the NYCOER and City Environmental Quality Review (CEQR) E-Designation site list, on December 22, 2009, the subject site (Block 2250, Lot 129) was assigned the following E-Designation (E-238) as part of the Broadway Triangle Rezoning (CEQR 09HPD019K):

    - Hazardous Materials* Phase I and Phase II Testing Protocol
    - Air Quality - Natural Gas Heat & Hot Water
    - Exhaust stack location limitations
    - Window Wall Attenuation & Alternate Ventilation

The requirements under the E-Designation program are satisfaction of the requirements for Hazardous Materials and Air Quality with the NYCOER. However, the subject site is not listed in the EDR E-Designation database for Hazardous Material and Air Quality assigned to the subject site. This listing does not necessarily indicate an environmental concern.

Phase I Report is presented in Appendix A.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Cheryl Benmergui.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements. Additionally, a Health and Safety Plan (HASP) was developed for the Site and is provided in Appendix B. The HASP was provided to OER and submitted with the RIWP prior to the commencement of remedial investigation activities.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations. All investigation derived waste was disposed of, by Coastal Environmental Solutions, within the generated boreholes to within 24 inches of the surface and capped with asphalt or bentonite.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

Rock Enviro performed the following scope of work:

5. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
6. Installed four (4) soil borings across the entire project Site, and collected nine (9) soil samples for chemical analysis from the soil borings to evaluate soil quality;
7. Installed three (3) groundwater monitoring wells throughout the Site to establish groundwater flow and collected four (4) groundwater samples for chemical analysis to evaluate groundwater quality;
8. Installed four (4) soil vapor probes around Site perimeter and collected four (4) samples for chemical analysis.

4.1 Geophysical Investigation

Coastal Environmental Solutions was retained by Rock Enviro to perform a geophysical survey including ground penetrating radar. The geophysical survey was performed on March 3, 2022, under Rock Enviro's supervision. Coastal utilized a ImpulseRadar PinPointR UWB Ground Penetrating Radar (GPR) unit with a dual band 400/800 MHz HS antenna mounted to a stroller frame, a Vivax-Metrotech vLoc3-Pro Receiver/Transmitter, and a TW-6 Pipe and Cable Locator to conduct the investigation.

A geophysical investigation was performed across the site in order to locate and mark detectable underground utilities and other underground anomalies in close proximity to client proposed soil boring locations. Active and passive detection methods were utilized with the VLoc3-Pro receiver/transmitter. Coastal direct connected to all accessible and traceable pipes, conduits, valve covers, and any other surface feature throughout the site. A passive scan was performed throughout the site to detect any potential underground utilities that could not be located with active scan.

The TW-6 was utilized to sweep accessible areas in 3-to-5-foot spacings for readings that may represent a buried metallic anomaly. Upon detection of a reading, the approximate size and shape of the anomalous area was marked on the surface to be investigated further with GPR.

GPR was utilized to further characterize the approximate dimensions, depth, and shape of the anomalies located with the TW-6. The remainder of the areas were scanned with GPR in 3-to-5-foot spacing to locate any anomalous features not previously detected such as non-conductive piping and former excavations.

Coastal ultimately identified no evidence of existing or former utilities or anomalies indicative of tanks or associated piping on the property. The complete results and report of the geophysical investigation are included in Appendix C.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

A total of four (4) soil borings, designated as B1 through B4, were installed throughout the Site on March 3, 2022. Borings were advanced using a Geoprobe® 6610 direct push drill rig equipped with a two-inch diameter macro-core soil sampling unit with dedicated acetate liner sleeve. Soil samples were collected continuously to final termination depth. Soil samples were observed for staining, soil characteristics, and screened for the presence of total organic vapors with a calibrated photoionization detector (PID) equipped with a 10.6 eV lamp. A description of the soils retained in each macro-core was logged using the Unified Soil Classification System. No visual or olfactory evidence of contamination including odor or elevated PID readings were observed at each boring location. Soil samples were collected from each boring at the 0-2 foot interval (surface sample) and 5.5-7.5 foot interval (subsurface sample), excluding B2, in which the subsurface sample was collected at the 10-12 foot interval.

Boring logs are attached in Appendix D. A map showing the location of soil borings and temporary wells is shown in Figure 5.

Groundwater Monitoring Well Construction

Temporary groundwater monitoring well points, designated as TW1 through TW3 were installed within three of the four soil borings. Temporary groundwater monitoring well points were installed using standard direct push technology by first advancing a Geoprobe to the intended depth and constructed with one-inch inside diameter (ID) slotted polyvinyl chloride (PVC) screen and solid riser.

Well points were constructed with 5 ft of 0.010-inch slotted screen to span the water table, 10 ft of riser to grade, and completed with a bottom point to minimize silt inundation.

Temporary wells TW1 through TW3 were installed to 15. TW1 was installed at boring location B1, TW2 was installed at boring location B2, TW3 was installed at boring location B4.

Prior to sampling, each well was purged via a peristaltic pump using a dedicated polyethylene tubing. Approximately three well volumes were purged or until the purge water ran clear. Temporary well locations are shown in Figure 5.

Survey

Locations of soil borings and temporary well points were measured in the field with a measuring wheel from two site reference points such as the property boundary or site features. Field measurements were plotted on the provided Site Sampling Plan.

Water Level Measurement

Groundwater levels were confirmed with an interface probe upon installation of temporary groundwater monitoring well points. Water level data is included in Table 1.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

A total of nine (9) soil samples, including a duplicate sample, were collected for chemical analysis during this RI. The samples were collected from acetate sleeves and transferred to appropriate pre-cleaned, laboratory supplied bottles, stored in a chilled cooler (4°C), and submitted for analysis. The soil samples were submitted under proper chain of custody records to York Analytical Laboratories, Inc. (York) (NYS License No. 10854 and 12058), a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program

(ELAP) State-certified laboratory for analysis. All soil samples were analyzed for the presence of volatile organic compounds (VOCs) by EPA Method 8260, semi volatile organic compounds (SVOCs) by EPA Method 8270, pesticides by EPA Method 8081, polychlorinated biphenyls (PCBs) by EPA Method 8082, and target analyte list (TAL) metals. One soil sample was also analyzed for PFAS (per- and polyfluoroalkyl substances) (NYSDEC Analyte List) by LC-MS/MS via EPA 537.1 and 1,4-dioxane via EPA Method 8270 SIM. One duplicate sample was collected from the 5.5-7.5-foot interval of soil boring B4 for quality assurance and quality control (QA/QC) purposes.

Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Table 2. Figure 5 shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

Groundwater Sampling

Four (4) groundwater samples, including a duplicate sample, were collected for chemical analysis during this RI. Groundwater samples were collected for monitoring wells TW1 through TW3, utilizing a peristaltic pump and dedicated polyethylene tubing. Low-flow techniques were utilized to collect the samples. Groundwater samples were placed into laboratory-supplied glassware, immediately stored in an ice-filled cooler, and delivered under proper chain of custody records to York Analytical Laboratories, Inc. Groundwater samples were analyzed for VOCs, SVOCs, pesticides, PCBs, dissolved and total TAL metals, PFAS and 1,4-dioxane. One (1) duplicate sample was collected from TW1, and one trip blank sample was collected for QA/QC purposes.

Groundwater sample collection data is reported in Table 3. Sampling logs with information on purging and sampling of groundwater monitor wells is included in Appendix E. Figure 5 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

Four (4) soil vapor probes, designated as SV1 through SV4, were installed using standard direct push technology by first advancing a Geoprobe to the intended depth, and constructed with ¼ inch ID polyethylene tubing, which extended approximately 2 ft above surface grade. Clean silica sand was placed around the tubing, and the concrete surface was plugged with a bentonite

slurry to prevent cross communication with the atmosphere. Soil vapor probes were installed to 6 ft bgs.

Four (4) soil vapor probes were installed and four (4) soil vapor samples were collected for chemical analysis during this RI. The soil vapor samples were submitted under proper chain of custody records to Phoenix Analytical Laboratories, Inc. (NYS License No. 11301), a (NYSDOH) (ELAP) certified laboratory for analysis. Soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 4. Soil vapor sampling logs are included in Appendix F. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006.*

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Cheryl Benmergui
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI are NYS ELAP certified and were York Analytical Laboratories, Inc and Phoenix Environmental Laboratories, Inc.
Chemical Analytical Methods	Soil analytical methods: • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); • PFAS (NYSDEC Analyte List) by LC-MS/MS via EPA 537.1

	• 1,4-dioxane via EPA Method 8270 SIM Groundwater analytical methods: • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); • PFAS (NYSDEC Analyte List) by LC-MS/MS via EPA 537.1 • 1,4-dioxane via EPA Method 8270 SIM Soil vapor analytical methods: • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 2-4, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix G.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

Soil, to a maximum depth of 4 ft bgs, consisted primarily of historic fill. Historic fill was mostly comprised of a mix of concrete, asphalt, and brick fragments with medium to coarse silty sand mixed in. The native material underlying the historic fill to a depth of 7 ft bgs, consisted generally of medium to fine dense silty sand underlain by medium stiff clay.

Hydrogeology

A table of water level data for all monitor wells is included in Table 1. Groundwater was encountered at varying depths from 8.55 ft to 9.1 ft bgs, with an average depth of 8.87 ft bgs. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in Figure 6. Groundwater flow is from the Northeast to Southwest.

5.2 Soil Chemistry

Data collected during this RI was compared to the NYSDEC Part 375.6-8(a) Unrestricted Use (Track 1) Soil Cleanup Objectives (UUSCOs), Residential and Restricted Residential Use (Track 2) (RSCOs & RRSCOs). Data for **B3 5.5-7.5'** was also analyzed for NYSDEC Part 375 Remedial Soil Guidance PFAS Unrestricted (PFAS UUSCOs), Residential (PFAS RSCOs), Restricted Residential (PFAS RRSCOs) – October 2020. Data tables for soil chemical analysis are included in Table 2 and below is a summary of findings:

VOCs

Methylene chloride was detected above UUSCO in B4 (0-2') at 0.073 mg/kg. No other VOCs were detected above the RSCOs, RRSCOs, or UUSCOs.

SVOCs

No SVOCs were detected above the RSCOs, RRSCOs, or UUSCOs.

Target Analyte Metals

Barium, lead, nickel, zinc, and mercury all reported exceedances. In **B2 0-2'** barium was detected at 761 mg/Kg and mercury at 0.849 mg/Kg which exceeded RSCOs, RRSCOs, and UUSCOs. Lead was detected at 178 mg/Kg and zinc at 286 mg/Kg which exceeded UUSCOs. In **B2 10-12'** nickel was detected at 42.6 mg/Kg, and in **B3 5.5-7.5'** lead was detected at 132 mg/Kg and mercury at 0.218 mg/Kg which all exceeded UUSCOs. Mercury was detected at

0.471 mg/Kg in **B4 0-2'** which exceeded UUSCOs and 2.62 mg/Kg in **B4 5.5-7.5'** which exceeded RSCOs, RRSCOs, and UUSCOs.

Pesticides and PCBs

4,4'-DDD, 4,4'-DDE, 4,4'-DDT, and dieldrin all reported exceedances above UUSCOs. 4,4'-DDD was detected at 0.00404 mg/Kg in **B1 0-2'**, 0.00624 mg/Kg in **B3 5.5-7.5'**, and at 0.0304 in **B4 0-2'** respectively. 4,4'-DDE was detected at 0.0147 mg/Kg in **B1 0-2'**, 0.0123 mg/Kg in **B2 0-2'**, and at 0.0526 mg/Kg **in B4 0-2'** respectively. 4,4'-DDT was detected at 0.0147 mg/Kg in **B1 0-2'**, 0.0241 mg/Kg in **B2 0-2'**, 0.0197 mg/Kg in **B3 5.5-7.5'**, and at 0.224 mg/Kg in **B4 0-2'** respectively. Dieldrin was detected at 0.0376 mg/Kg in **B4 0-2'**. No PCBs were detected above the RSCOs, RRSCOs, or UUSCOs.

PFAS NYSDEC Target List

Perfluoro-n-butanoic acid (PFBA) was detected at 0.559 ug/Kg, and perfluorooctanesulfonic acid (PFOS) was detected at 0.316 ug/Kg respectively. No other PFAS compounds were detected in soil.

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 2. Figure 7 shows the location and posts the values for soil/fill that exceed the NYSDEC Part 375.6-8(a) Unrestricted Use (Track 1) and Residential and Restricted Residential (Track 2) Soil Cleanup Objectives.

5.3 Groundwater Chemistry

Groundwater samples collected during this RI were compared to the NYSDEC TOGS Standards and Guidance Values - GA groundwater standards and NYDEC Part 375 PFAS Remedial Program Water October 2020, respectively. Data tables for ground water chemical analysis are included in Table 3 and below is a summary of findings:

VOCs

Benzene, cis-1,2-Dichloroethylene, and Trichloroethylene (TCE) all reported exceedances above NYSDEC TOGS. In **TW1**, benzene was detected at 3.5 ug/L. In the **Duplicate**, benzene was detected at 4 ug/L. In **TW2**, cis-1,2-Dichloroethylene was detected at 16 ug/L and TCE was detected at 30 ug/L. In **TW3**, TCE was detected at 31 ug/L.

SVOCs

No SVOCs were detected above NYSDEC TOGS.

Target Analyte Metals

Manganese, sodium, and selenium all reported exceedances above NYSDEC TOGS. In **TW1**, manganese was detected at 991 ug/L, sodium at 56,200 ug/L, manganese (dissolved) at 895 ug/L, sodium (dissolved) at 64,200 ug/L, and selenium at 10.3 ug/L. In the **Duplicate**, manganese was detected at 879 ug/L, sodium at 56,400 ug/L, manganese (dissolved) at 841 ug/L, and sodium (dissolved) at 57,700 ug/L. In **TW2**, manganese was detected at 421 ug/L, sodium at 45,000 ug/L, manganese (dissolved) at 406 ug/L, sodium (dissolved) at 50,200 ug/L, and selenium at 11.5 ug/L. In **TW3**, manganese was detected at 414 ug/L, sodium at 34,000 ug/L, manganese (dissolved) at 363 ug/L, and sodium (dissolved) at 35,500 ug/L.

Pesticides and PCBs

No Pesticides or PCBs were detected above NYSDEC TOGS.

PFAS

Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) reported exceedances above NYDEC Part 375 PFAS regulations. In **TW1**, PFOS was detected at 26.8 ng/L and PFOA at 27.7 ng/L. In **TW2**, PFOS was detected at 31 ng/L and PFOA at 36.8 ng/L. In **TW3**, PFOS was detected at 46.3 ng/L and PFOA at 57.1 ng/L.

The source of the cis-1,2-Dichloroethylene and trichloroethylene detections could potentially have come from the adjacent property on 62 Throop Avenue, which was an auto repair shop from 1950 to 1965 based on the Sanborn maps.

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Table 3. Exceedance of applicable groundwater standards are shown.

Figure 8 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

5.4 Soil Vapor Chemistry

Soil vapor analytical results collected during this RI were compared to New York State Department of Health (NYSDOH) Final Guidance on Soil Vapor Intrusion (May 2017) Matrix A, B, and C guidance values. Based on the VOC concentrations detected and the NYSDOH decision matrices, the concentrations for the following compounds did not exceed the guidance value for no further action and monitoring/mitigation is not required.

- 1,1-dichloroethylene, 1,1,1-trichloroethane, cis-1,2-dichloroethene, methylene chloride, and vinyl chloride were undetected in all soil vapor samples collected onsite.

- Carbon tetrachloride was detected in **SV2** at 0.35 ug/m^3, **SV3** at 0.35 ug/m^3, and **SV4** at 0.23 ug/m^3. TCE was detected in **SV2** at 0.37 ug/m^3, **SV3** at 2.92 ug/m^3, and **SV4** at 0.25 ug/m^3. Based on these results, no further action is recommended as per NYSDOH decision matrix A.

- Tetrachloroethylene (PCE) was detected in **SV1** at 4.85 ug/m^3, **SV2** at 1.07 ug/m^3, **SV3** at 1.44 ug/m^3, and **SV4** at 3.51 ug/m^3. Based on these results, no further action is recommended as per NYSDOH decision matrix B.

- Total concentrations of benzene, toluene, ethyl benzene, and xylenes (BTEX) are 1,639 ug/m^3 for **SV1**, 1,495 ug/m^3 for **SV2**, 827 ug/m^3 for **SV3**, and 1,226 ug/m^3 for **SV4**.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 4.

Figure 9 shows the location and posts the values for soil vapor samples with detected concentrations.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

NOTES:
Any Regulatory Exceedences are color coded by Regulation
Unrestricted in Yellow

Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are color coded by Regulation
Unrestricted in Yellow

Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are color coded by Regulation
Unrestricted in Yellow

Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are color coded by Regulation
Unrestricted in Yellow

Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are color coded by Regulation

Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

Attention: Israel Lefkowitz

Subject: Phase I Environmental Site Assessment
60 Throop Avenue
Brooklyn, New York

Dear Mr. Lefkowitz:

In accordance with your authorization, Rock Enviro has completed a Phase I Environmental Site Assessment (ESA) of the property located at 60 Throop Avenue in Brooklyn, New York (herein referred to as the "subject site"). This Phase I ESA was conducted in conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process as referenced in 40 Code of Federal Regulations (CFR) Part 312 (the All Appropriate Inquiries [AAI] Rule).

The objective of a Phase I ESA is to assess whether known and suspect recognized environmental conditions (REC), historical RECs (HREC), or controlled RECs (CREC) are associated with the subject site, as defined in the ASTM E 1527-13 Standard. The Phase I ESA uncovered one REC.

Thank you for the opportunity to provide these services. Please do not hesitate to contact us if you have any questions.

Sincerely,
Rock Enviro

Senior Environmental Scientist

Director of Environmental Assessment

Director of Environmental Assessment
Rock Enviro

Executive Summary

Rock Enviro has performed a Phase I Environmental Site Assessment (ESA) of the property located at 60 Throop Avenue in Brooklyn, New York (herein referred to as the "subject site"). The scope of work is described in Section 1.2 of this report. This Phase I ESA was performed for 58-60 Throop LLC and in conformance with the scope and limitations of the ASTM E 1527-13 Standard and All Appropriate Inquiries (AAI) Rule.

SUBJECT SITE DESCRIPTION

The subject site is 3,750 square feet (SF) in size and is identified as Block 2250 Lot 129, on the New York City Tax Map. The subject site consists of a singular vacant rectangular-shaped lot.

The subject site is located in a residential R7A zoning area with a C2-4 commercial overlay in the Bedford section of the Borough of Brooklyn and was assigned an E-238 for Hazardous Materials, Air Quality, and Noise Attenuation, as part of the Broadway Triangle Rezoning (CEQR 09HPD019K). The requirements under the E-Designation program are satisfaction of the requirements for Hazardous Materials, Air Quality, and Noise with the New York City Office of Environmental Remediation (NYCOER).

OBJECTIVE

The objective of a Phase I ESA is to assess whether recognized environmental conditions (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the subject site. Conclusions derived are intended to help the user evaluate the business environmental risk associated with the subject site. Rock Enviro's opinion regarding the potential impact of a REC on the subject site is based on the scope of work, the information obtained during the course of the assessment, the conditions prevailing at the time the assessment was performed, the applicable regulatory requirements in effect at the time the assessment was performed, and Rock Enviro's experience evaluating similar sites.

RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a REC in part as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

The following REC listed below was identified in connection with the subject site.

<u>REC #1: Potential Subsurface Impacts Associated with Petroleum Release into Environment</u>

CITGO, a gasoline service station located at 594 Broadway approximately 250 feet up-gradient from the subject site, is listed in the NY Spills database (Spill No. 9507227) for a spill that was reported on August 8, 1995. Report states "soil was contaminated in remote fills and poor housekeeping around waste oil resulted in fill slowly bubbling, divorced fill lines and further contamination." The spill case is still open to date. Based on this information, petroleum-related contamination may be present in the subsurface soil, groundwater, and soil vapor due to said release of contaminants by CITGO which can potentially impact the Subject site.

CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a CREC as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

CRECs were not identified in connection with the subject site.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines an HREC as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

HRECs were not identified in connection with the subject site.

OTHER FINDINGS

The ASTM E 1527-13 Standard does not define the term "other finding," however, Rock Enviro utilizes the category to indicate conditions of potential risk that are not clearly defined in the ASTM Standard such as areas of concerns. While not considered RECs, Rock Enviro identified the following other findings:

1. 295-297 Wallabout Street, located approximately 273 feet Southwest and down-gradient of the Subject site, is listed in the Brownfields database. EDR report states the site was developed with a three-story dwelling/auto repair from at least the late 1880s through the 1940s. By the late 1940s, the dwellings were demolished and a building encompassing the site and adjoining lots was constructed. The on-site building was used for a variety of manufacturing operations: woodworking in the 1960s, woodworking and plastic products manufacturing between the 1970s and 2007, and steel work in the 1980s and 1990s. By 2012, the manufacturing building was demolished, and the site remained a vacant, undeveloped lot. EDR report also states persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Volatile organic compounds in soil vapor (air spaces within soil) may move into buildings and affect indoor air quality. There is no on-site building, but the potential exists for inhalation of site contaminants via the soil vapor intrusion pathway for any future on-site development, as well as for offsite buildings.

2. Per the NYCOER and City Environmental Quality Review (CEQR) E-Designation site list, on December 22, 2009, the subject site (Block 2250, Lot 129) was assigned the following E-Designation (E-238) as part of the Broadway Triangle Rezoning (CEQR 09HPD019K):

    - Hazardous Materials* Phase I and Phase II Testing Protocol
    - Air Quality - Natural Gas Heat & Hot Water
    - Exhaust stack location limitations

- Window Wall Attenuation & Alternate Ventilation

The requirements under the E-Designation program are satisfaction of the requirements for Hazardous Materials and Air Quality with the NYCOER. However, the subject site is not listed in the EDR E-Designation database for Hazardous Material and Air Quality assigned to the subject site. This listing does not necessarily indicate an environmental concern.

SUMMARY AND RECOMMENDATIONS

One REC was identified during this Phase I ESA.

To address this REC listed above, Rock Enviro recommends the performance of a Phase II Environmental Site Investigation (ESI) consisting of the collection and analysis of soil, groundwater, and soil vapor samples to determine whether the identified REC has affected the suitability of the subject site for future use and redevelopment.

The remainder of this report contains additional information regarding the Phase I ESA, the resulting findings summarized above, and limitations affecting this report.

1. Introduction

This report presents the findings of a Phase I Environmental Site Assessment (ESA) conducted at the property located at 60 Throop Avenue in Brooklyn, New York (herein referred to as the "Subject site"). The subject site is comprised of one vacant property located on a rectangular-shaped parcel totaling 3,750 square feet (SF). The Subject site is identified by the New York City (NYC) Department of Finance as Block 2250 and Lot 129, with the following address: 60 Throop Avenue Brooklyn, NY. The Subject site is presented in Figure 1.

1.1 OBJECTIVE

The objective of this assessment was to evaluate past and existing environmental conditions at the subject site, including the storage, release, or disposal of hazardous substances on the site, and to identify any potential areas of environmental concern or recognized environmental conditions (RECs), historical RECs (HRECs), and controlled RECs (CRECs), that are associated with the subject site. Evaluation of site history, interviews, existing observable conditions, current site use, and current and former uses of adjoining properties as well as potential releases at surrounding properties, that could affect the site's environmental integrity, were conducted as part of this assessment. This Phase I ESA was performed in general conformance with the ASTM International Practice E1527-13. Conclusions presented in this Phase I ESA are intended to help the user evaluate the business environmental risk associated with the subject site.

RECs are defined in the ASTM E 1527-13 Standard as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment."

1.2 SCOPE OF SERVICES

This Phase I ESA was performed in accordance with the scope and limitations of the ASTM E 1527-13 Standard and All Appropriate Inquiries (AAI) Rule. The scope of this assessment consisted of: reviewing readily available information and environmental database information relating to the property; interviewing readily available persons knowledgeable about the site; review of records maintained by federal, state, and local regulatory agencies; reviewing readily available maps, aerial photographs and historical information pertaining to the site and surrounding properties; conducting a site visit to visually observe site conditions and conditions of abutting property use; review of previous reports (if identified and provided); and provide recommendations for further study and conclusions regarding the potential presence and impact of identified REC's.

1.3 NON-SCOPE CONSIDERATIONS

The following limitations that are considered as non-scope items outside of the ASTM Phase I ESA practice and were not included as part of this assessment: asbestos-containing materials, biological agents, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources,

industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, and mold.

A limited assessment of the presence of polychlorinated biphenyls (PCBs) was included as part of this assessment. The presence of PCBs is limited to electrical or hydraulic equipment known or likely to contain PCBs and were visually observed or identified to the extent possible. The assessment of PCBs did not include identification of building materials manufactured or installed prior to 1979 that may contain PCBs.

1.4 LIMITATIONS AND DEVIATIONS

Rock Enviro did not make additions to or deviate from the ASTM E 1527-13 Standard to complete this Phase I.

1.5 USER RESPONSIBILITIES

The completion of this Phase I ESA is only one component of the process required to satisfy the AAI Rule. In addition, the user must adhere to a set of user responsibilities as defined by the ASTM E 1527-13 Standard and the AAI Rule. User responsibilities are discussed in section 6.6 of this report. A user seeking protection from Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability as an innocent landowner, bona fide prospective purchaser, or contiguous property owner must complete all components of the AAI process in addition to meeting ongoing obligations. AAI components, CERCLA liability relief, and ongoing obligations are discussed in the AAI Rule and in Appendix XI of the ASTM E 1527-13 Standard.

This study is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with the subject site, within reasonable limits of time and cost. It is assumed that the user has provided Rock Enviro with any specialized knowledge or experience that is material to recognized environmental conditions in connection with the property.

2. Site Description

The following sections discusses the subject site location and description, and current uses of the site and adjacent properties. Refer to Figure 2 for a site plan showing relevant site features and adjacent properties.

2.1 SITE OWNERSHIP, LOCATION, AND VICINITY DESCRIPTION

The following properties included as the subject site are described as follows:

Site Description		
Property Address		**60 Throop Avenue**
Owner		Israel Lefkowitz
Occupant		Vacant
Current Site Use		Vacant Lot
Lot Area (SF)		3,750
Building Square Footage (SF)		N/A
USGS 7.5 Minute Topographic Map		Brooklyn
Site County		Kings County
Zoning		R7A: Residential with a C2-4 commercial overlay
Utilities	Water	City of New York
	Sewerage	New York Department of Environmental Protection
	Electricity	Consolidated Edison
	Gas/Oil/LPG:	N/A
Heating/Cooling System		N/A

The property is located in an urban setting characterized by residential housing.

Site Vicinity Description		
General Area Description:		**Mixed-use residential, commercial, industrial manufacturing**
Adjoining Property Description	Northwest:	Residential 6 story property – 54 Throop Avenue
	Northeast:	Residential 10-story properties – 41 & 37 Throop Avenue along with a residential 4-story properties on the East – 45 & 47 Throop Avenue
	Southeast:	1-story religious community center – 62 Throop Avenue
	Southwest:	Residential 5-story property – 311 Wallabout Street

2.2 PHYSICAL SETTING

Subsurface explorations and/or hydrogeologic investigations were not performed for this Phase I ESA. Subject site geology and hydrology were evaluated on the basis of readily available public information or references, and/or based upon Rock Enviro's experience and understanding of subsurface conditions in the vicinity of the subject site. It is unknown to what extent localized variations in groundwater depth and flow occur on the subject site.

Physical Setting		**Source**
Topography Summary	The subject area is generally flat	1,3
Site Elevation	Approximately 13 feet above mean sea level	1,2
Overburden Soils	Soil is described as Urban Land, which refers to soils that have been altered by human activities, thus making them unidentifiable. Typically, these soils have been mixed with other materials, such as brick and concrete (urban fill), and characteristics can only be determined by the on-site investigation.	2
Bedrock Formation	Bedrock underlying the subject site is part of the Raritan Formation, which consists of Cretaceous aged coastal plains deposits.	2,5
Depth to Bedrock	Greater than 100 feet below ground surface (ft bgs)	2,5
Depth to Groundwater	Approximately ranges from 7-9 ft	4,5
Surface Water Flow Direction	Surface water appears to flow towards the south-southwest based on observed surface topography	1,3
Regional Groundwater Flow Direction	Regional groundwater flow appears to flow to the south-southwest based on the proximity to Upper Bay	2
Nearest Surface Water Body	Newtown Creek is located approximately 5,086 ft Northeast of the subject site	1,2

3. Previous Reports

Previous environmental report for the subject site were not provided as part of this assessment. Rock Enviro is unaware if previous reports were prepared for the subject site.

4. Site History

Historical use information of the subject site and adjoining properties is based on a review of:

- Sanborn Fire Insurance Maps dated 1887, 1904, 1918, 1935, 1947, 1950, 1965, 1977, 1979, 1980, 1981, 1982, 1984, 1986, 1987, 1989, 1991, 1992, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006, and 2007
- Aerial Photographs dated 1924, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1991, 1994, 2006, 2009, 2013, and 2017
- Topographic Maps dated 1897, 1898, 1900, 1947, 1956, 1967, 1979, 1995, 2013, 2016, and 2019
- City Directories dated 1928, 1934, 1940, 1945, 1949, 1960, 1965, 1970, 1973, 1976, 1980, 1985, 1992, 1994, 1997, 1999, 2000, 2004, 2005, 2009, 2014, 2017
- Municipal records

Unless otherwise noted below, per the ASTM standard, sources were reviewed dating back to 1940 or first developed use, whichever is earlier, and at 5-year intervals if the use of the property has changed within the time period. Copies of the historical data is provided in Appendix B.

The tables below provide a detailed summary of pertinent information from the historical sources reviewed:

Sanborn Fire Insurance Maps

Year	Subject Site	Adjacent and Surrounding Properties
1887	The Subject lot appears as a 2-story residential property with a single hydrant.	2- and 3-story residential properties surround the Subject Site with a store front property towards the Northeast.
1904	No significant changes	No significant changes
1918	Sanborn map is unclear but additions to the Subject site have been made.	No significant changes however one of the Northern properties across the street from the subject site is depicted as a school.
1935	No significant changes	No significant changes however, a storage facility is now depicted instead of the school depicted in the 1918 Sanborn Map the school.
1947	No significant changes	Adjacent property to the Southeast is vacant.
1950	No significant changes	Adjacent property to the Southeast is improved with a 1-story auto repair shop. Vacant property to the Northwest under construction.
1965	No significant changes	Northern storage facility no longer depicted and Northeastern property is now vacant.
1977-1979	Previous structures have been razed and the Subject lot is a vacant rectangular-shaped parcel.	Adjacent property on Southeast is now a 1-story manufacturing structure and adjacent property on Northwest is vacant.
1980-1981	No significant changes	No significant changes

Year	Subject Site	Adjacent and Surrounding Properties
1982	No significant changes	No significant changes however Southeastern property adjacent to the 1-story manufacturing structure is now vacant
1984-1992	No significant changes	No significant changes
1993	No significant changes	Northwestern property adjacent to 58 Throop Ave under construction
1995-2007	No significant changes	No significant changes

Aerial Photographs

Year	Subject Site	Adjacent and Surrounding Properties
1924	Aerial photograph depicts a residential structure on the Subject lot	The adjacent properties appear developed with residential structures surrounding the Subject site.
1951-1954	No significant changes	No significant changes
1961	No significant changes	No significant changes
1966	No significant changes	Northwestern lot appears to be partially vacant and undergoing construction.
1974-1976	Aerial photograph of subject site appears to be unclear but possibly shows subject site to be vacant.	Northwestern lot improved with residential and commercial structures. Lot adjacent to Subject site on the Northwest appears vacant.
1980	Subject site appears as a vacant rectangular-shaped parcel	Property directly across subject site towards the Northeast appears vacant.
1984	No significant changes	No significant changes.
1991	Aerial photograph appears unclear but does not show any significant changes	Aerial photograph appears unclear but does not show any significant changes
1994	No significant changes	Property adjacent to Subject site on the Northwest appears to be improved with residential structure.
2006	No significant changes	Property directly across subject site towards the Northeast improved with residential structure.
2009-2017	No significant changes	No significant changes

Topographic Maps

Year	Subject Site	Adjacent and Surrounding Properties
1897-1900	The subject site is undeveloped.	The surrounding properties appear undeveloped.
1947	The subject site is shaded indicating the lots are developed.	Surrounding properties are also developed.
1956-2019	Subject site is located in a color-shaded area, indicating the subject site is within	The adjacent properties are developed.

Year	Subject Site	Adjacent and Surrounding Properties
	a densely populated areas where individual structures are not delineated.	

City Directories

Year	Subject Site Uses
1965	Private Residence
1960	Private Residence
1949	Private Residence
1934	Private Residence
1928	Private Residence

A review of City Directories of the surrounding properties listed a number of residential properties with a few commercial and industrial properties as well. A copy of the City Directory is provided in Appendix B.

5. Environmental Records Review

5.1 ENVIRONMENTAL DATABASE RECORDS SEARCH

Rock Enviro conducted a review of the regulatory status of the subject site and surrounding properties within the ASTM-specified approximate minimum search distance as it pertains to regulated activities involving the use of hazardous chemicals; the generation of hazardous waste; the treatment, storage, or disposal of hazardous waste; or the release of regulated substances. Rock Enviro utilized Environmental Data Resources (EDR) to conduct the appropriate searches of federal and state sites identified within the ASTM-specified search radius.

The following table summarizes the databases reviewed and identified properties listed within the ASTM-specified search distance.

The complete environmental database report is provided in Appendix C. Pertinent information obtained from the database is summarized in Section 5.3 below.

Database Searched	Approximate Minimum Search Distance	Subject Site Listed?	Number of Sites within Search Distance[1]
1. Federal NPL Sites	1 mile	No	0
2. Federal Delisted NPL Sites	0.5 mile	No	0
3. Federal CERCLIS[2] Sites	0.5 mile	No	0
4. Federal CERCLIS-NFRAP[2] Sites	0.5 mile	No	1
5. Federal ERNS	Site only	No	N/A
6. Federal RCRA non-CORRACTS TSD Facilities	0.5 mile	No	0
7. Federal RCRA CORRACTS TSD Facilities	1 mile	No	0
8. Federal RCRA Generators	Site & Adjoining	No	31
9. Federal Institutional/Engineering Controls	Site Only	No	N/A
10. State/Tribal Equivalent NPL Sites	1 mile	No	0
11. State/Tribal Equivalent CERCLIS[2] Sites	0.5 mile	No	0
12. State/Tribal Landfills and Solid Waste Disposal Sites	0.5 mile	No	1
13. State/Tribal Leaking Storage Tanks	0.5 mile	No	51
14. State/Tribal Registered Storage Tanks	Site & Adjoining	No	28
15. State/Tribal Institutional/Engineering Controls	Site Only	No	N/A
16.State/Tribal Voluntary Cleanup Sites	0.5 mile	No	38
17.State/Tribal Brownfield Sites	0.5 mile	No	13
18. Orphan Site List[3]	Site & Adjoining	No	0

Notes:

1. *Some sites may be included on multiple databases.*
2. *The US EPA retired the CERCLIS database in October 2013. In January 2016, the Superfund Enterprise Management System (SEMS), which replaces the CERCLIS database, became active. The CERCLIS database records search included as part of this assessment includes currently ascertainable data from the SEMS and SEMS-Archive databases as reported through the database vendor.*

3. *Rock Enviro also searched the Orphan Site List provided in the database report for the subject site and sites adjoining the subject site. Orphan sites are those that, due to incorrect or incomplete addresses, could not be mapped.*

5.2 ADDITIONAL ENVIRONMENTAL RECORDS OR FILE REVIEW

To supplement the environmental record search, a Freedom of Information Act (FOIA) requests for information associated with the subject site and surround properties were submitted to the following state and local government agencies, including applicable online database searches. Obtained documents available in time for inclusion in this report were reviewed and discussed in Section 5.3 below.

Agency	Request Sent or Files Searched		Files Exist and Available for Review	Files Reviewed
	Subject Site	Adjoining Properties		
New York State Department of Environmental Conservation[2]	Yes	No	N/A	N/A
New York State Department of Finance City Registry[3]	Yes	No	Yes	Yes
New York City Department of Buildings[4]	Yes	No	No	N/A
New York City Department of Health[5,1]	Yes	No	N/A	N/A
Fire Department of New York[6,1]	Yes	No	N/A	N/A
New York State Department of Environmental Protection[7,1]	Yes	No	N/A	N/A

Notes:

1. To date, no responses have been received from the Freedom of Information Act (FOIA) requests noted above. Based on the information obtained through interviews with key site personnel and review of other records, it does not appear that responses to the FOIA requests should affect Rock Enviro's conclusions regarding RECs on the site. However, when a response is received, it will be forwarded to the client and, if it affects Rock Enviro's conclusions regarding the site, the client will be informed.
2. The New York State Department of Environmental Conservation (NYSDEC) maintains information regarding spills, petroleum bulk storage (PBS), including underground storage tanks (UST) and above ground storage tanks (AST), and investigation/remediations overseen by New York State regulatory programs. No records were found.
3. The New York City Department of Finance City Register maintains information regarding property transactions, including deeds, lease, and mortgage documents. Records were reviewed in the online database.
4. The New York City Department of Buildings (NYCDOB) maintains information regarding violations, complaints, certificates of occupancy, elevator records, asbestos assessments, and permits. Records were reviewed in the online database, which included three Certificates of Occupancy for the subject site.
5. The New York City Health Department maintains information regarding environmental concerns for public health. A response has not yet been received by the NYCDOH.
6. The Fire Department of New York maintains information regarding underground storage tanks (USTs) and emergencies/fire episodes. A response has not yet been received by the FDNY.
7. The New York City Department of Environmental Protection maintains information regarding wastewater discharge and boilers. A response has not yet been received by the NYCDEP.

5.3 DETAILED DESCRIPTION OF RELEVANT INFORMATION

5.3.1 Subject Site

As per the information obtained from the New York City Office of Environmental Remediation (NYCOER) and City Environmental Quality Review (CEQR) E-Designation site list, December 22, 2009, the subject site (Block 2250, Lot 129) was assigned the following E-Designation (E-238) as part of the Broadway Triangle Rezoning (CEQR 09HPD019K) for Hazardous Materials* Phase I and Phase II Testing Protocol, Air Quality - Natural Gas Heat & Hot Water, and exhaust stack location limitations, and Noise requirements related to Window Wall Attenuation & Alternate Ventilation. The requirements under the E-Designation program are satisfaction of the requirements for Hazardous Materials, Air Quality, and Noise with the NYCOER. This listing does not necessarily indicate an environmental concern.

The subject site was not identified in any other databases searched by EDR.

5.3.2 Nearby Sites

Several nearby sites were listed in the database report within the applicable search radii or identified in regulatory records reviews. Due to their location with respect to the subject site (on the opposite side of a hydrogeologic barrier, distance from the site, location of the site relative to inferred groundwater flow, or their status (closed out release, etc.), several of the sites are not likely to adversely affect the subject site and are not discussed herein. Only those sites adjacent to the subject site and sites with a potential to have impacted the subject site are discussed below. The complete database report and relevant records review information are included in Appendix C.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
Susion Develpors LLC/A G Ignition 594 Broadway	UST, EDR Hist Auto	This property, located up gradient, is identified in the EDR database as a UST database for Susion Developers LLC for a 550-gallon gasoline tank that was reportedly removed and closed. No closing date listed. The property, under the same address, is identified in the EDR database as a Historic Auto, but for a different site name, A G Ignition. The site was listed as a Gasoline Service Station from 1986-1994, a General Automotive Repair Shop from 1995-2002, and back to a Gasoline Service Station from 2002-2005.	No violations or environmental concerns have been reported for this site; therefore, this site does not have the potential to adversely impact the subject site and/or represent a REC.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
307 Wallabout Street	AST, E-Designation	This property, located down-gradient from the subject site, is listed in EDR database report as an AST database for 307 Wallabout Street for a 2500-gallon gasoline tank containing #2 fuel oil (on-site consumption) installed on May 1, 1961. Site Status reports it is closed but a close date is not listed. The property was also identified in the EDR database report as an E-Designation site (E-238) by the NYCOER New York City Office of Environmental Remediation for Air Quality, Exhaust stack location limitations, and Hazardous Materials as part of the Broadway Triangle Rezoning (CEQR 09HPD019K) effective December 22, 2009. The requirements under the E-Designation program are satisfaction of the requirements for Hazardous Materials with the NYCOER.	The requirements under the E-Designation program are satisfaction of the requirements for Air Quality, Exhaust stack location limitations, and Hazardous Materials with the NYCOER and no violations or environmental concerns have been reported for this site; therefore, this site does not have the potential to adversely impact the subject site and/or represent a REC.
Lotus Cleaners 80 Manhattan Ave	NY Dry Cleaners	This property, located up-gradient from the Subject site, is listed in the NY Dry Cleaners database (facility 2-6104-01050), the Manifest database (EPA ID: NYD987029188) for halogenated solvent waste in 2018, and the RCRA database as a conditionally exempt small quantity generator for hazardous waste for spent halogenated solvents.	No violations or environmental concerns have been reported for this site; therefore, this site does not have the potential to adversely impact the subject site and/or represent a REC.
G F C Corp – 582 Broadway/Lindsay Park Dry Cleaners – 584 Broadway	EDR Hist Cleaner	These properties, located up-gradient from the subject site, are listed in the EDR Historic Dry Cleaners database. G F C Corp (Dry cleaning plants, except rugs)	No violations or environmental concerns have been reported for this site;

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
		from 1977-1979 and Lindsay Park Dry Cleaners (Dry cleaning plants, except rugs) in 2000.	therefore, this site does not have the potential to adversely impact the subject site and/or represent a REC.
Throop Buildings 72 Throop Avenue	RCRA, NY Manifest	This property, located cross-gradient from the subject site, is listed in the RCRA and Manifest database (EPA ID: NYR000197897) as a large quantity generator for hazardous waste (lead).	No violations or environmental concerns have been reported for this site; therefore, this site does not have the potential to adversely impact the subject site and/or represent a REC.

5.4 VAPOR MIGRATION

The ASTM 1527-13 standard states that "for the purposes of this practice, “migrate” and “migration” refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." Thus, this section specifies whether or not a risk of vapor migration to the subject site is perceived.

To assess a vapor migration risk, we conducted a detailed review and analysis of the site-specific environmental database report and/or other reasonably ascertainable records to assess whether:

1. Off-site properties have documented chlorinated volatile organic compound (VOC) contamination located within 100 feet of the subject site, or
2. Off-site properties have documented volatile petroleum hydrocarbon contamination within 30 feet of the subject site.

Based on records reviewed, there were no potential sources for vapor migration identified during review and analysis of the site-specific environmental database report.

6. Site Reconnaissance and Key Personnel Interview(s)

A site visit to observe the subject site conditions of Lot 129 was conducted by Jason Gellati of Rock Enviro on February 2, 2022. Access to Lot 129 of the subject site was provided by Israel Lefkowitz, owner of 60 Throop Avenue.

Rock Enviro personnel observed the Subject site which is a vacant lot, including the property boundaries, and observed adjoining property conditions from the Subject site boundaries and/or public thoroughfares. Snow from recent storm activity covered the majority of the sight and obstructed surface observation in a large portion of the area. No other weather-related conditions that would limit the ability to observe the subject site or adjoining properties occurred during the site visit.

Per the ASTM Standard, past owners, operators, and occupants of the subject site who are likely to have material information regarding the potential for contamination at the subject site shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources.

The findings of the site visit are discussed below. Site photographs are included in Appendix D.

ASTM E 1527-13 Standard Section 10.8 requires that, prior to the site visit, the current subject site owner or key site manager and User, if different from the current owner or key site manager, be asked if there are any helpful documents that can be made available for review. Documents were not provided.

6.1 CURRENT USE OF THE PROPERTY

The Subject site is currently vacant.

6.2 GENERAL DESCRIPTION OF STRUCTURES

The Subject site (Lot 129) is a rectangular-shaped vacant lot, with various construction supplies onsite. Three non-operational HVAC units, five fire extinguishers, five 5-gallon containers with unknown contents, a job box with construction documents, and miscellaneous construction supplies were observed onsite during inspection. No fill ports or vent pipes indicative of underground storage tanks, or monitoring wells were observed.

6.3 USE, STORAGE, AND DISPOSAL OF PETROLEUM PRODUCTS AND HAZARDOUS MATERIALS

The use, storage and/or disposal of petroleum products or hazardous materials were not observed during this site visit.

MISCELLANEOUS HAZARDOUS MATERIALS

Five 5-gallon containers with unknown contents were observed onsite during inspection.

6.4 OTHER SUBJECT SITE OBSERVATIONS

The table below summarizes items that were observed and/or reported at the subject site during the site visit other than those items related to use, storage, and disposal of petroleum or hazardous materials (described in Section 6.3 above). If items were observed or reported, they are further described either in the table or below.

Description	Observed or Reported at Time of Site Visit	Observations/Comments
Potable Water Supply	N/A	
Nearest Drinking Water Source	No	
Sewage Disposal System	N/A	
Septic System	No	
Unidentified Storage Containers	Yes	Five 5-gallon
Wastewater Discharge	No	
Stormwater Discharge	No	
Odors	No	
PCBs Associated with Electrical or Hydraulic Equipment	N/A	
Elevators (Traction or Hydraulic)	N/A	
Vehicle Maintenance Lifts	N/A	
Emergency Generators	N/A	
Sprinkler System Pumps	N/A	
Heating System	N/A	
Cooling System	N/A	
Stains or Corrosion on Floors, Walls, or Ceilings	N/A	
Floor Drains	N/A	
Sumps	N/A	
Catch Basins	No	
Pits, Ponds, Lagoons, and Pools of Liquid	No	
Stained Soil or Pavement	No	
Stressed Vegetation	No	
Solid Waste and Evidence of Waste Filling	No	
Dry Wells	No	
Monitoring Wells	No	
Water Supply Wells	No	
Irrigation Wells	No	
Injection Wells	N/A	
Abandoned Wells	No	

Notes:

N/A items are those that were not observed or reported and/or not anticipated to be present given the nature of the site (e.g., building features not present on an undeveloped property).

6.5 ADJOINING PROPERTY OBSERVATIONS

Properties surrounding the subject site include the following: adjacent to the Subject site to the Southeast is a 1-story religious community center; adjacent to the Subject site on the Northwest is a 6-story residential building; across the Subject site on Throop Avenue to the North/Northeast is a 10-story residential building complex; across the Subject site on Throop Avenue to the East is a 4-story residential building complex; adjacent to the rear of the Subject site on the South/Southwest is a 5-story residential building.

6.6 USER RESPONSIBILITIES

The AAI Rule requires that the User of the report consider the following:

- Whether the User has specialized knowledge about previous ownership or uses of the subject site that may be material to identifying REC's;
- Whether the User has determined that the subject site's Title contains environmental liens or other information related to the environmental condition of the property, including engineering and institutional controls and Activity and Use Limitations (AULs), as defined by ASTM;
- Whether the User is aware of commonly known or reasonably ascertainable information about the subject site, including whether the presence of contamination is likely on the subject site and to what degree it can be detected; and,
- Whether the User has prior knowledge that the price of the subject site has been reduced for environmentally-related reasons.

While such information is not required to be provided by the environmental professional(s), the information can assist the environmental professional in identifying recognized environmental conditions. The "All Appropriate Inquiries" Final Rule (40 CFR Part 312) requires that these tasks be performed by or on behalf of a party seeking to qualify for an LLP to CERCLA liability.

Rock Enviro requested but was not provided with a completed User Questionnaire. The absence of this information is not considered significant in respect to the conclusions derived.

7. Findings and Opinions

7.1 DATA GAPS

The ability to identify and evaluate RECs at the subject site is conditioned upon data gaps identified as part of this Phase I ESA.

Rock Enviro did not identify data gaps in association with this Phase I ESA. Based upon historical data collected from other sources, potential data gaps are not expected to adversely impact the results of this assessment. Thus, it is Rock Enviro's opinion that sufficient information was obtained to identify subject site conditions indicative of releases or threatened releases of hazardous substances and petroleum hydrocarbons. Rock Enviro's opinion is limited by the conditions prevailing at the time the assessment is performed and the applicable regulatory requirements in effect.

7.2 RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines an REC in part as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

Rock Enviro's opinion regarding the potential impact of a REC on the subject site is based on the scope of work, the information obtained during the course of this assessment, the conditions prevailing at the time the assessment was performed, the applicable regulatory requirements in effect at the time the assessment was performed, Rock Enviro's experience evaluating similar sites, and Rock Enviro's understanding of the client's intended use for the subject site.

The following REC listed below was identified in connection with the subject site.

<u>REC #1: Potential Subsurface Impacts Associated with Petroleum Release into Environment</u>

CITGO, a gasoline service station located at 594 Broadway approximately 250 feet up-gradient from the subject site, is listed in the NY Spills database (Spill No. 9507227) for a spill that was reported on August 8, 1995. Report states "soil was contaminated in remote fills and poor housekeeping around waste oil resulted in fill slowly bubbling, divorced fill lines and further contamination." The spill case is still open to date. Based on this information, petroleum-related contamination may be present in the subsurface soil, groundwater, and soil vapor due to said release of contaminants by CITGO which can potentially impact the Subject site.

7.3 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a CREC as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

CRECs were not identified in connection with the subject site.

7.4 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines an HREC as an environmental condition "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

HRECs were not identified in connection with the subject site.

7.5 OTHER FINDINGS

The ASTM E 1527-13 Standard does not define the term "other finding," however, Rock Enviro utilizes the category to indicate conditions of potential risk that are not clearly defined in the ASTM Standard. While not considered RECs, Rock Enviro identified the following other findings:

3. 295-297 Wallabout Street, located approximately 273 feet Southwest and down-gradient of the Subject site, is listed in the Brownfields database. EDR report states the site was developed with a three-story dwelling/auto repair from at least the late 1880s through the 1940s. By the late 1940s, the dwellings were demolished and a building encompassing the site and adjoining lots was constructed. The on-site building was used for a variety of manufacturing operations: woodworking in the 1960s, woodworking and plastic products manufacturing between the 1970s and 2007, and steel work in the 1980s and 1990s. By 2012, the manufacturing building was demolished, and the site remained a vacant, undeveloped lot. EDR report also states persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Volatile organic compounds in soil vapor (air spaces within soil) may move into buildings and affect indoor air quality. There is no on-site building, but the potential exists for inhalation of site contaminants via the soil vapor intrusion pathway for any future on-site development, as well as for offsite buildings.

4. Per the NYCOER and City Environmental Quality Review (CEQR) E-Designation site list, on December 22, 2009, the subject site (Block 2250, Lot 129) was assigned the following E-Designation (E-238) as part of the Broadway Triangle Rezoning (CEQR 09HPD019K):

    - Hazardous Materials* Phase I and Phase II Testing Protocol
    - Air Quality - Natural Gas Heat & Hot Water
    - Exhaust stack location limitations
    - Window Wall Attenuation & Alternate Ventilation

The requirements under the E-Designation program are satisfaction of the requirements for Hazardous Materials and Air Quality with the NYCOER. However, the subject site is not listed in the EDR E-Designation database for Hazardous Material and Air Quality assigned to the subject site. This listing does not necessarily indicate an environmental concern.

7.6 DE MINIMIS CONDITIONS

The ASTM E 1527-13 Standard defines de minimis conditions as those conditions which "do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." The ASTM E 1527-13 Standard notes that "conditions determined to be de minimis are not recognized environmental conditions."

De minimis conditions were not identified in connection with the subject site.

8. Conclusions

Rock Enviro performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of the ASTM Practice E 1527 for the properties located 60 Throop Avenue Brooklyn, New York. Any exceptions to or deletions from, this practice are described in Section 1.4 of this report.

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the property except for the following:

- REC #1: Potential Subsurface Impacts Associated with Petroleum Release into the Environment

To further address the REC listed above, Rock Enviro recommends the performance of a Phase II Environmental Site Investigation (ESI) consisting of and the collection and analysis of soil, groundwater, and soil vapor samples to determine whether the identified REC has affected the suitability of the subject site for future use and redevelopment.

9. Environmental Professional Certification

The undersigned declare the following:

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312 and

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Jason Gellati
Senior Environmental Scientist

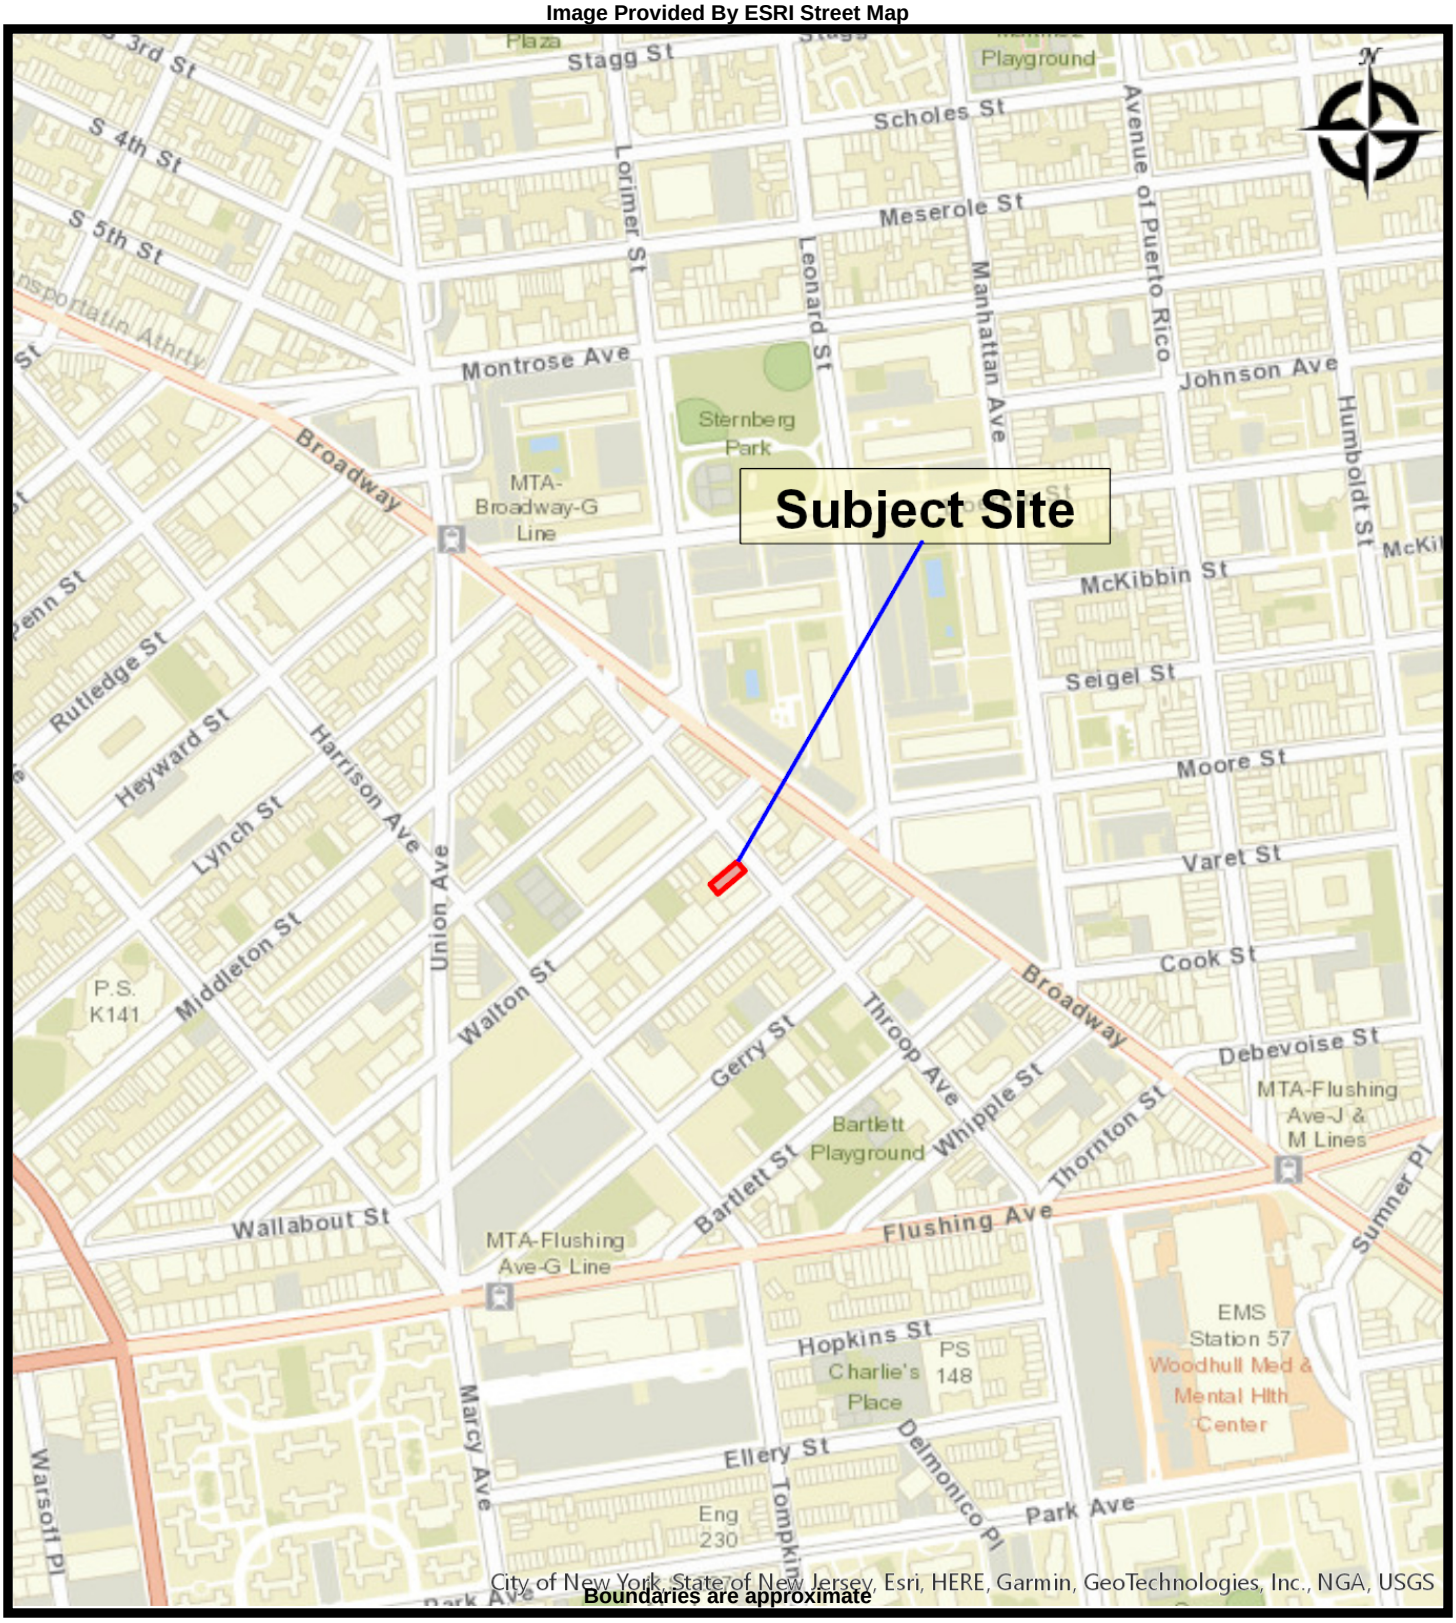
Cheryl Benmergui
Director of Environmental Assessment

10. Credentials

This Phase I report was prepared by Jason Gellati, under the direct supervision of Cheryl Benmergui, who served as the Environmental Professional for this project. Qualification information for the project personnel is provided below.

Cheryl Benmergui is the Director of Environmental Assessment at Rock Enviro with strong environmental background and fifteen years of experience in soil, and groundwater, and soil vapor investigation with a focus on remedial investigations.

Jason Gellati is a Senior Environmental Scientist at Rock Enviro with more than six years of experience conducting environmental investigations and construction oversight, to identify and determine the extent of soil contamination and hazardous materials.



11. References

The following references were utilized and reviewed as part of this assessment:

1. Sanborn Fire Insurance Maps dated 1887, 1904, 1918, 1935, 1947, 1950, 1965, 1977, 1979, 1980, 1981, 1982, 1984, 1986, 1987, 1989, 1991, 1992, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006, and 2007

Appendix A

Limitations

APPENDIX A

Limitations

Environmental site assessment ("ESA") reports prepared by Rock Enviro are for the sole and exclusive use of its Client. Rock Enviro represents that the ESA was prepared in accordance with the ASTM International Standard E1527-13 entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" ("ASTM E 1527 13"). The findings, opinions, conclusions, and information contained in the ASTM E 1527-13 ESA are limited to, and solely based upon, information reasonably ascertainable by Rock Enviro at the time the ASTM E 1527-13 ESA was completed.

All users of this ASTM E 1527-13 ESA are bound to the terms and conditions and limitations contained in the accompanying Proposal, Terms & Conditions, and Limitations for this ASTM E 1527 13 ESA. The findings, opinions, conclusions, and information contained in this report are based solely on the Scope of Services provided pursuant to the Proposal and its attachments and the information reasonably ascertainable by Rock Enviro at the time the ASTM E 1527-13 ESA was completed. Rock Enviro has not performed any additional observations, investigations, studies, or other testing not specified in the Scope of Services. Rock Enviro shall not be liable for the existence of any condition the discovery of which would have required the performance of services not authorized under the Scope of Services.

This ASTM E 1527-13 ESA is prepared for the exclusive use of Rock Enviro's client in connection with the subject property for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject property. There are no intended beneficiaries other than Rock Enviro's client. Rock Enviro shall owe no duty whatsoever to any other person or entity by issuing the ASTM E 1527-13 ESA. Use of this ASTM E 1527-13 ESA by any person or entity, including by Rock Enviro's client, for a purpose other than for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject property is expressly prohibited unless such person or entity obtains written authorization from Rock Enviro indicating that the ASTM E 1527-13 ESA is adequate for such other use. Use of this ASTM E 1527-13 ESA by any person or entity for such other purpose without written authorization by Rock Enviro shall be at such person's or entity's sole risk and shall be without legal exposure or liability to Rock Enviro.

Rock Enviro may authorize third-party reliance on the ASTM E 1527-13 ESA by providing reliance letters to third party(ies) provided that the third party(ies) agree: (1) to use the ASTM E 1527-13 ESA only for the purpose of assessing the potential or existing environmental contamination liabilities associated with real property; (2) to be bound by the terms and conditions and limitations contained in the ASTM E 1527-13 ESA and the Proposal and its attachments, Terms & Conditions, and Limitations; (3) to accept the form and substance of Rock Enviro's reliance letter; and (4) to deliver to Rock Enviro a signed copy of a reliance letter by an authorized representative of the relying party, within thirty (30) days after said reliance letter is provided to the relying party, signifying the relying party's acceptance of the aforementioned conditions. Upon Rock Enviro's receipt of the signed reliance letter by the relying party(ies), the relying party(ies) will be authorized to rely on Rock Enviro's ASTM E 1527-13 ESA for the limited purpose of identifying potential or existing environmental contamination liabilities associated with the subject property. The relying party(ies) agrees to bind each of its respective successors and assigns to the aforementioned terms and conditions.

This ASTM E 1527-13 ESA reflects site conditions observed and described by records available to Rock Enviro as of the date of ASTM E 1527-13 ESA preparation. The passage of time may result in significant changes in site conditions, technology, or economic conditions, which could alter the findings and/or recommendations of the ASTM E 1527-13 ESA. Accordingly, Rock Enviro's client and any other party to whom the ASTM E 1527-13 ESA is provided recognize and agree that Rock Enviro shall bear no liability for deviations from observed conditions or available records after the time of ASTM E 1527-13 ESA preparation. Rock Enviro makes no express or implied representation that the information contained in the ASTM E 1527-13 ESA has continued viability after 180 days of the ASTM E 1527-13 ESA's completion date, and any use or reliance on the ASTM E 1527-13 ESA after 180 days of the ASTM E 1527-13 ESA's completion date by Rock Enviro's client or any other authorized person or entity will be at that party's sole risk and without liability to Rock Enviro.

Notwithstanding anything contained herein, Rock Enviro shall not be liable for any claim or damage arising from environmental contamination liabilities that occurred on the subject property after the effective date of the ASTM E 1527-13 ESA. Likewise, Rock Enviro shall not be liable for any existing or future property owner's failure to satisfy any continuing obligation for CERCLA liability protection or under the Federal Environmental Protection Agency's All Appropriate Inquiries rule.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Rock Enviro were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Limited Permission To Make Copies

Rock Enviro (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Rock Enviro were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

TOLDOS YEHUDAH LLC EPA ID:: NYD000824334	***8 WALWORTH ST***	***SW 1/2 - 1 (0.510 mi.)***	***CA439***	***1328***

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are

EXECUTIVE SUMMARY

24 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 4 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state

funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 01/06/2022 has revealed that there are 9 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/09/2021 has revealed that there are

EXECUTIVE SUMMARY

28 NY LTANKS sites within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, has revealed that there are 2 NY RES DECL sites within approximately 0.125 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 08/09/2021 has revealed that there are 23 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 82 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

BORDEN CHEMICAL	56 NOSTRAND AVE.	SW 1/4 - 1/2 (0.467 mi.)	433	1279

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2019 has revealed that there are 113 NY MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 5 EDR MGP sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SKILLMAN STATION	SKILLMAN ST. FLUSHIN	WSW 1/2 - 1 (0.628 mi.)	CB442	1369
NASSAU GAS	SKILLMAN AVE	SW 1/2 - 1 (0.655 mi.)	444	1374

SCHOLES ST. STATION	SCHOLES ST 7 BOGART	ENE 1/2 - 1 (0.809 mi.)	448	1383
KEAP ST. STATION	KEAP ST. WYTHE AVE.	W 1/2 - 1 (0.817 mi.)	449	1383

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
A G IGNITION	594 BROADWAY	N 0 - 1/8 (0.047 mi.)	E41	97

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

VARTEX INSTRUMENT CORP (Continued) **1004761306**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"-Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 12/29/2003 Reassigned from Rommel to Sun. 11/03/05-File Update by Sun: A stipulation Agreement was mailed to Susion Developers LLC on 11/03/05 and required to be signed and returned by 11/25/05. (Sun) 11/18/05-File Update by Sun: Final New Order of Consent was sent to Howard D. Stave, Esq. (Attorney for Northland) on 11/15/05. (Sun) 02/21/06-File Update by Sun: On 02/10/06, Sun received Phase I and II Environmental Investigation Report fro the Responsible Party, Leo Lefkowitz (718-218-7880). Review of the above reports is in progress. (Sun) 06/15/06-Sun: Phase II investigation report showed two soil samples were taken on South Cellar 2' below follor level and one soil sample was taken on North Cellar 2' below Floor Level. Additional investigation is required. (Sun) 10/19/06-The Legal Department received a fax copy (pdf version) of signed Stipulation Agreement from Responsible Party, Sosoin Developers LLC. The Department requires an original of signed Stipulation to be executed by DEC Regional Director. (Sun) 11/13/06-Sun called John Urda, DEC's Assistant Regional Attorney about the execution of Stipulation Agreement. He said that he still has not received the original of

CITGO/ 594 BROADWAY (Continued) **S102672996**

signed stips by RP. He will call RP's Lawyer, David Yudelson. (Sun) 11/29/06: The Stipulation Agreement was signed by RP on 10/30/06 and executed by DEC on 11/29/06. 03/12/07: A copy of executed stipulation agreement was mailed to Sosoin Development, LLC and also sent to David Yudelson of Sive, Paget & Riesel, P.C. (Sun) 03/12/07: Sun received from David Yudelson the Investigation Work Plan on 03/12/07. (Sun) 05/11/07: Sun approves the Site Investigation Work Plan with some conditions. The Site Investigation Summary Report is due 08/13/07. (Sun) 07/08/08-Sun: Sun sent thr following email to David Yudelson, Dear Mr. Yudelson: On May 11, 2007, the Department approved a Site Investigation Work Plan submitted by P.W. Grosser Consulting, dated February 8, 2007 for the above referenced site. The Department requires that a Final Investigation Report be submitted by August 13, 2007. As of today, the Department has not received the subject report. Therefore, you will be given two weeks to submit, via email or mail, a copy of the Final Investigation Report . A Final Investigation Report must be received by July 22 2008 or the case will be referred to the Department's Legal Affairs office for initial enforcement proceedings. (Sun) 7/8/08-Sun: Sun received the following email from David Yudelson, Joe - thank you for the email. I have not been in contact with the former client for many months. I will reach out to them and find out what the story is. I will report back. Dave. (Sun) 7/15/08-Sun: Sun sent the following email to David Yudelson, Hi David, Thanks for your response. Can you tell me the phone No and email address of your former client, Sosoin Developers, LLC and its owner, Mr. Leo Lefkowitz. My certified mail to him was twice returned as undeliverable. I need to speak to him. He has signed the Stipulation Agreement. Your information is very important to DEC to complete the cleanup of this site by Mr. Lefkowitz. Your response is urgently requested. (sun)

---------- 7/24/08: Reassigned from Joe sun to Chanda. 5/27/09 This spill case transferred from K. Chanda to J.A. Maisonave. - JAM 12/14/11: This spill case transferred from J. Maisonave to J. Kolleeny. - JK"

Remarks: "SOIL CONTAMINATED IN REMOTE FILLS. POOR HOUSEKEEPING AROUND WASTE OIL FILL SLOWLY BUBBLING. DIVORCED FILL LINES."

SWIS:	2401
Town:	New York City
Record Added Date:	11/13/2020
Record Updated Date:	02/10/2021
Update By:	HMDUDEK
Site Description:	"The area of concern subject to this work is considered off-site from BCP site C224299 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224299 for further information regarding the status of the site in the Brownfield Cleanup program Location This site is the off-site component to the 295-297 Wallabout Street in the Williamsburg section of Brooklyn, NY. The BCP site occupies Tax Block 2250 Lot 45. Site Features The off-site area consists of a combination of residential and industrial buildings immediately adjacent to the north and east of 297 Wallabout Street. The BCP site at 297 is a vacant lot. Current Zoning and Land Use The off-site area consists of residential and industrial (warehouses). The BCP site at 297 Wallabout is zoned R7A for medium density residential use. The surrounding properties are residential and commercial. Past Use of the Site The BCP site C224299 was developed with a three-story dwelling/auto repair from at least the late 1880s through the 1940s. By the late 1940s the dwellings were demolished and a building encompassing the site and adjoining lots was constructed. The on-site building was used for a variety of manufacturing operations: woodworking in the 1960s, woodworking and plastic products manufacturing between the 1970s and 2007, and steel work in the 1980s and 1990s. By 2012, the manufacturing building was demolished, and the site remained a vacant, undeveloped lot. Site

297 WALLABOUT STREET - OFF-SITE (Continued) **S127478123**

Env Problem:

Geology and Hydrogeology The BCP site's stratigraphy, starting at grade, consists of a maximum of one foot of urban fill underlain by 4-6 feet of brown, medium to fine sand with trace silt. Underlying the sand layer is a 3- to 5-foot layer of firm light brown to tan silty clay. Beneath the clay layer, is a layer of brown, medium sand, which extends at least 12 feet below grade. Groundwater occurs approximately 8 to 8.5 feet below grade and flows to the northeast. " "This site represents an off-site project to investigate the area surrounding BCP Site C224299A, 297 Wallabout Street. The environmental assessment below is for C224299. Off-site investigation including groundwater sampling, soil vapor sampling, and soil vapor intrusion investigation is planned Nature and Extent of Contamination Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include trichloroethene (TCE), tetrachloroethene (PCE), cis-1,2-dichloroethene (cis-1,2-DCE), vinyl chloride, PAHs and lead. Soil Soil data were compared to Restricted Residential Soil Cleanup Objectives (RRSCOs), Unrestricted Use Soil Cleanup Objectives (UUSCOs), and Protection of Groundwater Soil Cleanup Objectives (PGWSCO). The contaminants of concern in soil are chlorinated VOCs (CVOCs), PAHs, and metals. The highest levels of CVOCs were found in the north central section of the site between 8-10 feet below ground surface (bgs). PCE was detected at 20 parts per million (ppm), compared to the RRSCO of 19 ppm and the protection of groundwater (PGWSCO) of 1.3 ppm. TCE was detected at 150 ppm, compared to the RRSCO of 21 ppm and the PGWSCO of 0.47 ppm . Elevated PAHs were detected on-site in both shallow samples and samples taken between 8-10 feet bgs. Metals were found throughout the site in the top two feet of soil. Lead was detection ranged from 120-796 ppm; the RRSCO is 400 ppm. Soil was tested for PFOA/PFOS and 1,4-Dioxane; these compounds were not detected above the laboratory reporting limits. Data does not indicate any off-site impacts in soil related to this site. Groundwater Groundwater contamination includes CVOCs and SVOCs above the NYS DEC TOGS Ambient Water Quality Standards (NY-AWQS). The highest levels of CVOCs were detected in the north central section of the site at the same sampling location as the highest soil levels for CVOCs, where PCE was detected at 150 parts per billion (ppb); TCE was detected at 3,300 ppb; cis-1,2-DCE was detected at 390 ppb; and vinyl chloride was detected at 6.7 ppb. SVOCs, including PAHs, were found throughout the site. PFOA was detected in the northeast corner, the eastern side, and southeast corner of the site at 13.6 parts per trillion (ppt), 14.9 ppt, and 15.9 ppt, respectively. PFOS was detected in the southeast of the site at 20.4 ppt. PFAS is not a contaminant of concern at this site. The remaining PFOA/PFOS and 1,4-Dioxane samples were below the maximum contaminant levels (MCL). Data indicates the potential for off-site impacts to groundwater related to this site. Soil Vapor CVOCs were detected in soil vapor throughout the site. PCE was detected at 620 micrograms per cubic meter (g/m3). TCE detections ranged from 54.8-74,000 g/m3. The maximum PCE and TCE detections were in the north central section of the site and collocated with the maximum values for CVOCs in soil and groundwater. Cis-1,2-DCE detections ranged from 8.8-15.4 g/m3. Data indicates the potential for off-site impacts to soil vapor related to this site. Additional sampling is needed to determine whether actions

297 WALLABOUT STREET - OFF-SITE (Continued) **S127478123**

	are needed to address soil vapor intrusion of-site."

BROWNFIELDS:

Name:	297 WALLABOUT STREET
Address:	295-297 WALLABOUT STREET
City,State,Zip:	BROOKLYN, NY 11206
Program:	BCP
Site Code:	595787
Acres:	0.150
HW Code:	C224299
SWIS:	2401
Town:	New York City
Record Added Date:	10/30/2019
Record Updated Date:	03/16/2021
Update By:	MKMEDWID
Site Description:	"Location The site is a 0.15-acre lot located at 295-297 Wallabout Street in the Williamsburg section of Brooklyn, NY. The site occupies Tax Block 2250 Lot 45. The site is located between Throop Avenue and Harrison Avenue on the north side of Wallabout Street. Site Features The site is an unpaved, vacant lot. Current Zoning and Land Use The site is zoned R7A for medium density residential use. The surrounding

297 WALLABOUT STREET (Continued) **S125896291**

properties are residential and commercial. The site is bounded to the south and west by warehouses, to the north by an apartment building, and to the east by Wallabout Street followed by residential buildings. Past Use of the Site The site was developed with a three-story dwelling/auto repair from at least the late 1880s through the 1940s. By the late 1940s the dwellings were demolished and a building encompassing the site and adjoining lots was constructed. The on-site building was used for a variety of manufacturing operations: woodworking in the 1960s, woodworking and plastic products manufacturing between the 1970s and 2007, and steel work in the 1980s and 1990s. By 2012, the manufacturing building was demolished, and the site remained a vacant, undeveloped lot. Site Geology and Hydrogeology The site stratigraphy, starting at grade, consists of a maximum of one foot of urban fill underlain by 4-6 feet of brown, medium to fine sand with trace silt. Underlying the sand layer is a 3- to 5-foot layer of firm light brown to tan silty clay. Beneath the clay layer, is a layer of brown, medium sand, which extends at least 12 feet below grade. Groundwater occurs approximately 8 to 8.5 feet below grade and flows to the northeast."

Env Problem:

"Nature and Extent of Contamination Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include trichloroethene (TCE), tetrachloroethene (PCE), cis-1,2-dichloroethene (cis-1,2-DCE), vinyl chloride, PAHs and lead. Soil Soil data were compared to Restricted Residential Soil Cleanup Objectives (RRSCOs), Unrestricted Use Soil Cleanup Objectives (UUSCOs), and Protection of Groundwater Soil Cleanup Objectives (PGWSCO). The contaminants of concern in soil are chlorinated VOCs (CVOCs), PAHs, and metals. The highest levels of CVOCs were found in the north central section of the site between 8-10 feet below ground surface (bgs). PCE was detected at 20 parts per million (ppm), compared to the RRSCO of 19 ppm and the protection of groundwater (PGWSCO) of 1.3 ppm. TCE was detected at 150 ppm, compared to the RRSCO of 21 ppm and the PGWSCO of 0.47 ppm . Elevated PAHs were detected on-site in both shallow samples and samples taken between 8-10 feet bgs. Metals were found throughout the site in the top two feet of soil. Lead was detection ranged from 120-796 ppm; the RRSCO is 400 ppm. Soil was tested for PFOA/PFOS and 1,4-Dioxane; these compounds were not detected above the laboratory reporting limits. Data does not indicate any off-site impacts in soil related to this site. Groundwater Groundwater contamination includes CVOCs and SVOCs above the NYS DEC TOGS Ambient Water Quality Standards (NY-AWQS). The highest levels of CVOCs were detected in the north central section of the site at the same sampling location as the highest soil levels for CVOCs, where PCE was detected at 150 parts per billion (ppb); TCE was detected at 3,300 ppb; cis-1,2-DCE was detected at 390 ppb; and vinyl chloride was detected at 6.7 ppb. SVOCs, including PAHs, were found throughout the site. PFOA was detected in the northeast corner, the eastern side, and southeast corner of the site at 13.6 parts per trillion (ppt), 14.9 ppt, and 15.9 ppt, respectively. PFOS was detected in the southeast of the site at 20.4 ppt. PFAS is not a contaminant of concern at this site. The remaining PFOA/PFOS and 1,4-Dioxane samples were below the maximum contaminant levels (MCL). Data indicates the potential for off-site impacts to groundwater related to this site. Soil Vapor

297 WALLABOUT STREET (Continued) **S125896291**

	CVOCs were detected in soil vapor throughout the site. PCE was detected at 620 micrograms per cubic meter (g/m3). TCE detections ranged from 54.8-74,000 g/m3. The maximum PCE and TCE detections were in the north central section of the site and collocated with the maximum values for CVOCs in soil and groundwater. Cis-1,2-DCE detections ranged from 8.8-15.4 g/m3. Data indicates the potential for off-site impacts to soil vapor related to this site."
Health Problem:	"Persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within soil) may move into buildings and affect indoor air quality. The process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Currently, there is no on-site building. However, the potential exists for the inhalation of site contaminants via the soil vapor intrusion pathway for any future on-site development, as well as for offsite buildings."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SOSA DIAGNOSTIC REPAIR INC. (Continued) **A100304674**

Tank Info:

Tank Number:	001
Tank Id:	216665
Material Code:	0022
Common Name of Substance:	Waste Oil/Used Oil

Equipment Records:

I01 - Overfill - Float Vent Valve
B01 - Tank External Protection - Painted/Asphalt Coating
J01 - Dispenser - Pressurized Dispenser
F00 - Pipe External Protection - None
C00 - Pipe Location - No Piping
G00 - Tank Secondary Containment - None
K01 - Spill Prevention - Catch Basin
E00 - Piping Secondary Containment - None
A01 - Tank Internal Protection - Epoxy Liner
L00 - Piping Leak Detection - None
D00 - Pipe Type - No Piping
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1975
Capacity Gallons:	275
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

DEC Memo:	"02/12/13-Hiralkumar Patel. 1:17 PM:- spoke with Kevin. he mentioned that the subject site is e designated and they are working with NYC OER for remediation. during previous investigations, they collected groundwater samples from three on-site wells and found chlorinated solvents. they prepared RAP and got approved by OER. recently, during excavation, they found 1,000 gal UST. today, they found another 550 gal tank. currently, the excavation is about 7 ft bg. its 50 ft by 100 ft site and it will be developed as 4 story condo with celler with new foundation at 8 ft bg. Kevin mentioned that groundwater was found around 8.5 ft bg during previous investigations. passive SSDS and vapor barrier designs have been approved by NYC OER. Hannah Moore NYC OER Ph. (212) 442-6372 78-80 Throop LLC. **property owner** c/o Rabsky Group 505 Flushing Ave, # 1D Brooklyn, NY 11205 Attn.: Ph. (718) 237-2261 alternate address: none no PBS or other spills found. as per ACRIS record, 78-80 Throop LLC. owns properties 78 Throop Ave and 80 Throop Ave and as per NYC DOB record, both properties are being developed. also, as per NYC DOB record, site 78 Throop Ave has little e designation for hazmat/noise/air. ---------- 1:51 PM:- left message at Rabsky Group. 02/15/13-Hiralkumar Patel. 9:33 AM:-

UNDERGROUND (Continued) **S112809841**

received email from Kevin including Remedial Investigation Report. report forwarded to DEC Sharif for review. after discussing with DEC Sharif, case assigned to him. 01/15/14-Hiralkumar Patel. DEC Nick Lombardo came to discuss PBS application form he received for registation of a 100 gal tank. informed him that contractor found one 1,000 gal and one 550 gal tank at the site. he will talk to contractor to discuss this. case reassigned to DEC Patel. 10:24 AM:- spoke with Kevin. inquired him about remediation work. he mentioned that three lots (78/80/82 Throop Ave) being redeveloped with three separate buildings. all three lots were excavated to about 8-9 ft bg, little into groundwater, for entire footprint. EBC collected endpoint samples. foundation for all three buidings have been poured. asked Kevin to submit report for review. 11:07 AM:- received email from Kevin including report. he mentioned that some soil and liquid manifests are missing which will be submitted soon, once available. reviewed available documents. 1) Remedial Investigation Report dated Oct. 2012: - site located at 78-80 Throop Ave; block 2266; lots # 32 and 33 - proposed future use of the site will consist of two identical 4-story apartment buildings - both buildings will have a full cellar beneath the footprint of each building - concrete slab of the cellar will be approx. 6 ft 4 inches below sidewalk level - excavation for each new building and rear cellar-level court yard will likely extend to a depth of approx. 8 ft bg - prior to 1887, the property was developed with a bakery, livery and wagon house. the operation was closed by 1904. sometime between 1904 and 1905 the site was redeveloped with a 5-story mixed use commerical/residential building. the first floor was divided into two commercial spaces and the upper floors were residential. the 5-story mixed use building remained until the entire lot was demolished in 1980. the site has remained undeveloped since, but the land was used for lumber storage until 2003. since 2003, the site has remained vacant - elevation of the property is approx. 14 ft - depth to bedrock is greater than 100 ft - installed four (4) borings (SB-1 through SB-4) to a depth of 10 ft bg - subsurface soil at the site consisted of historic fill, which was primarily comprised of brick, concrete, wood and other debris in a borwn silty-sand mix - layer of historic fill extended to a depth of 7 ft bg - native soil consisting of a brown sand is present below the historic fill layer - no PID readings were obtained from any of the soil borings with the exception of slightly elevated readings noted for soil recovered from approx. 8 to 10 ft bg from SB1 (50 ppm) and SB3 (100 ppm) - soil at 8-10 ft bg exhibited a petroleum odor, and was stained slightly grey - collected two soil samples from each boring: one from 0-2 ft bg and another from 8-10 ft bg - collected one duplicate soil sample from boring SB-4 from 0-2 ft bg - found some VOC contamination in deeper soil from 8-10 ft bg - found some SVOC contamination in shallow soil from 0-2 ft bg - installed three (3) 1-inch diameter temporary monitoring wells (in borings SB-1, SB-2 and SB-3) - wells were installed to a depth of 15 ft bg, with 10 ft of screen - collected 3 groundwater samples and 1 duplicate groundwater sample - no free product was observed within the three monitoring wells - depth to groundwater is approx. 10 ft bg ---------- - groundwater flow direction based on prior investigations performed on adjacent properties is from south to north ---------- - three groundwater samples and one duplicate groundwater sample (from boring SB-1) were collected for analysis - found only chlorinated compounds in groundwater samples - installed three (3) soil vapor probes (VP-1 through VP-3) to a depth of 6 ft bg

UNDERGROUND (Continued) **S112809841**

and collected 3 samples - found petroleum and chlorinated compounds in soil-vapor samples 2) Remedial Action Work Plan dated Oct. 2012: - excavation of soil/fill to a depth of approx. 8 ft bg for development purposes and excavation of the area with VOC contamination to an anticipated depth of approx. 10 ft bg - collection and analysis of endpoint samples - installation of vapor barrier below the concrete slab and behind the foundation walls of the two proposed buildings - installation and operation of a passive SSDS below the vapor barrier 3) tank removal report dated 09/17/13: - two (2) 1,000 gal USTs removed: one from near the front of 80 Throop Ave (lot 33) and another from near the front of 82 Throop Ave (lot 34) - both lots were excavated to a depth of approx. 7 ft bg (depth of groundwater table) for redevelopment purposes, but additional excavation was performed below the groundwater interface to remove 2 ft smear zone of petroleum impacted soil from across teh front of 60 ft of site - pool of water accumulated within the excavation - total of approx. 784 gal of groundwater and a thin film of oil that accumulated on the groundwater surface was removed - endpoint samples were collected from entire site - no contamination noted in endpoint samples based on available information, case closed. ** e designation**"

Remarks: "found while removal of tank - clean up pending"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE assigned to C. Whitfield in backlog initiative; no file received from region. Original 3/28/01 site info indicates caller was a contractor asked for quote for soil cleanup as part of construction project. The caller was not selected for the work due to price. A search of spills database by location did not reveal any other spill report, however, Property Shark indicated the location is also known as 331 - 341 Wallabout Street. On May 1, 2001 Wallabout Development, LLC was registered with NYSDOS. This location is now occupied by a 7 story 101' X 72' condo built in 2001 owned by Wallabout Development. Next step is to pursue new owner for documentation of soil removal or close administratively. 10/2/09 - Austin - Spill transferred from Albany staff to Ketani, for further investigation - end 10/27/09 - Raphael Ketani. The spill was discovered or took place on 3/28/01. It consisted of a call from someone at a construction company to PTC, an oil spill cleanup contractor. PTC called in the spill, but the nature of the spill was not known. The spill site address is 613 Broadway. However, the previous DEC case manager thought that the site was the location of a condo building that was under construction. This location is 614 Broadway and is listed in Property Shark as the same block and lot as 331-341 Wallabout Street. The block and lot is listed in Property Shark as 2251 and 7501, but ACRIS lists the block as 1003. On top of this, Property Shark doesn't list the address 613. The closest one is 607 and this belongs to the Lindsay Park Houses. So it is not clear whether the condo building is the correct spill location. If 614 Broadway is the correct address, then the condominium building is the correct site. The construction company was Wallabout Development, LLC, 341 Wallabout Street, Ste 1A, Brooklyn, 11206. The general builder was Wallabout Development, Inc., 1454 42 Street, Brooklyn, 11219. Mr. Slavik (917) 364-5803 was the last contact at Wallabout. The site is near the intersection of Manhattan Avenue and Broadway. There is no PBS registration, nor a case file, nor any E-docs. I will make a site visit. 12/7/09 - Raphael Ketani. I made an unannounced site visit. The building is of relatively new construction. It is a brick apartment building and sits at the corner of Wallabout Street and Broadway. A side entrance had the address 610 Broadway. A doctor's office is at 341 Wallabout Street. I could not locate the other alternate address, 331 Wallabout

APARTMENT BUILDING (Continued) **S104951601**

Street. I did not see a management company address or name plate in the lobby for the building. There were no oil odors. I rechecked the block and lot information with the address of 331 to 341 Wallabout Street. ACRIS indicated that the block and lot were 2251 and 1003. The owner appears to be Broadway Wallabout Realty, LLC, 341 Wallabout Street, apt 1A, Brklyn, 11206. 12/8/09 - Raphael Ketani. I contacted Mr. Slavik, the last known party who was involved in the building construction. He told me to contact K I Construction (718) 387-0400. I contacted K I Construction and spoke to one of the owners, Aron Kapelyus. He said that the building was built 6 years ago. However, before this, it was a vacant lot for 15 years. Mr. Kapelyus said that the lot was dug out in order to construct the foundation. I asked him whether the basement is one level or two levels. He said that it was just one level and that the digging went down 6 feet. I asked him where the oil contaminated soil was sent to. He said that there was no oil contaminated soil. I asked him whether he can send me copies of the soil disposal manifests. He said that he has none. I asked him whether he can send me a copy of the construction plan for the foundation. He said that he will e-mail it to me. He passed my call to Carol, his secretary, and she took down my e-mail information. 12/14/09 - Raphael Ketani. I never received the plans for the foundation, nor the excavation for the foundation. As the contaminated soil was most likely removed as part of the soil excavation to at least 6 feet below grade, as there were no oil odors in the lobby, nor visible impacts from any contaminated soil, as there is no further information regarding the spill, and as there doesn't appear to be any threat to human safety, or the environment, I am closing the spill case."

Remarks: "CALLER WAS CONTACTED TO GIVE A PRICE ON A CLENA UP JOB AT THE ABOVE LOCATION SITE IS UNDER CONSTRUCTION AFTER CALLER GAVE HIS PRICE THEY TOLD HIM IT WAS TOO MUCH HE IS REPORTING SPILL TO COVER HIMSELF UNK WHEN SPILL OCCURED OR IF IT MAY HAVE ALREADY BEEN REPORTED"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Name:	FORMER JUST4WHEELS SITE 2
Address:	93 GERRY STREET
City,State,Zip:	BROOKLYN, NY 11206
Program:	BCP
Site Code:	618464
Acres:	0.057
HW Code:	C224326
SWIS:	2401
Town:	New York City
Record Added Date:	04/26/2021
Record Updated Date:	06/15/2021
Update By:	GWBURKE
Site Description:	"Site Location: The Former Just4Wheels Site 2 is 2,500 square feet (0.057 acres) in size. The site is located in an urban area of the Broadway Triangle neighborhood of Brooklyn on the north side of Gerry Street between Throop Avenue and Harrison Avenue and approximately 1.1 miles east of the Wallabout Channel. The site s address is 93 Gerry Street and occupy the Block 2266 Lot 39. Site Features: The site is currently a rectangular shaped undeveloped lot with a temporary trailer located in the rear portion of lot 41, approximately 44x10 ft in size. There are no permanent structures on the subject site. Current Zoning and Land Use: The site is currently undeveloped land that is zoned for residential use. The surrounding properties are currently used for commercial, residential, and warehousing/manufacturing purposes. The nearest residential building is immediately adjoining to the northwest of the site. Past Use of the Site: The site was developed with two dwellings in the late 1800s. By the early 1900s, the dwelling along Gerry Street was converted to a store. The site was operated by a deck manufacturer and laboratory in the 1930s. In the late 1940s a laundry facility began operations on the neighboring parcel to the west. The site became vacant in the mid-1960s. By the mid-2000s the site began to be used for parking and remains a parking lot today occupied by Just 4 Wheels. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists primarily of urban fill extending to approximately 5 to 7 ft bgs underlain by a layer of tan to light brown fine sand with varying amounts of silt and clay extending to approximately 10 ft bgs. This layer is underlain by orange brown to brown poorly graded sand to 15 ft bgs. Groundwater was encountered at approximately 9 ft bgs and groundwater flow is to the north-northwest. "
Env Problem:	"Nature and Extent of Contamination: Based on the findings of the February 2021 investigation the primary contaminants of concern for the Site are semi-volatile organic compounds (polyaromatic hydrocarbons) and metals in soil and groundwater. Very low level of chlorinated volatile organic compounds in soil vapor. Soil: No VOCs detected in any soil samples. Several SVOCs, specifically polyaromatic hydrocarbons (PAHs), were identified in shallow soil samples (0-2) exceeding both UUSCOs and RRSCOs. SVOCs including benzo(a)anthracene (maximum 2.0 ppm), benzo(a)pyrene (3.2 ppm) and benzo(b)fluoranthene (4.0 ppm) were identified above RRSCOs of 1 ppm. Indeno(1,2,3-cd)pyrene (maximum 2.2 ppm, RRSCO 0.5 ppm). Additionally

FORMER JUST4WHEELS SITE 2 (Continued) **S110242402**

	dibenzo(a,h)anthracene (0.48 ppm, RRSCO 0.33 ppm) was detected in one boring above RRSCOs. Benzo(k)fluoranthene (1.3 ppm) was detected above UUSCOs (0.8 ppm) in B-4 (0-2) and chrysene (maximum 2.2 ppm) was detected above UUSCOs(1 ppm) in borings B-1 (0-2) and B-4 (0-2). Metals lead (1,170 ppm), mercury (3.82 ppm) and copper (332 ppm) were found at concentrations exceeding RRSCOs in multiple shallow soil Groundwater: Only two groundwater samples were analyzed. Two VOCs, vinyl chloride (3.4 ppb) and cis-1,2-dichloroethene (360 ppb) were detected above the AWQS in one temporary well. Soil Vapor: No VOCs were detected above guidance values. However, several VOCs were detected at concentrations exceeding the method detection limit including vinyl chloride (0.846 ?g/m3) and cis-1,2-dichloroethene (3.77 ?g/m3) in SV-2. Additionally, tetrachloroethene (maximum 2.19 ?g/m3) was detected in both soil vapor samples above method detection limits. "
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

BROWNFIELDS:

Name:	FORMER JUST4WHEELS SITE
Address:	89-91 GERRY STREET
City,State,Zip:	BROOKLYN, NY 11206
Program:	BCP
Site Code:	616660
Acres:	0.110
HW Code:	C224321
SWIS:	2401
Town:	New York City
Record Added Date:	02/26/2021
Record Updated Date:	04/22/2021
Update By:	JCGRATHW
Site Description:	"Site Location The Former Just4Wheels Site is 5,000 square feet (0.11 acres) in size. The Site is located in an urban area of the Broadway Triangle neighborhood of Brooklyn on the north side of Gerry Street between Throop Avenue and Harrison Avenue and approximately 1.1 miles east of the Wallabout Channel. The Site s address is 89-91 Gerry Street and occupy the Block 2266 Lots 40, and 41. Site Features: The site is currently a rectangular?shaped undeveloped lot with a temporary trailer located in the rear portion of lot 41, approximately 44x10 ft in size. There are no permanent structures on the subject site. Current Zoning and Land Use: The Site is currently undeveloped land that is zoned for residential use. The surrounding properties are currently used for commercial, residential, and warehousing/manufacturing purposes. The nearest residential building is immediately adjoining to the northwest of the Site. Past Use of the Site: From the late 1880s through the early 1900s the site was developed with multiple dwellings. By the early 1900s, several of the dwellings were demolished and were replaced with a store, stable, and carriage house. The 89 Gerry Street parcel began operating as a laundry facility in the mid?1930s and operations expanded to 91 Gerry Street in the late?1940s. Both laundry facilities continued operations until the late?1970s when all buildings were razed, and the site became vacant. By the mid?2000s the site began to be used for parking and remains a parking lot today occupied by Just 4 Wheels Car, Truck, and Van Rental. Site Geology and Hydrogeology The stratigraphy of the Site, from the surface down, consists of 5?8 feet of urban fill material comprised of fine to medium brown sand with silt, with pieces of brick, concrete, and glass. Urban fill material is underlain by native fine?grained clays ranging in color from light brown to black to depths of 10?12 ft bgs. This layer is underlain by medium to coarse grained brown to light brown sand to 15 ft bgs. Depth to groundwater ranges from approximately 8?10 feet below ground surface (ft bgs) with groundwater flow to the north?northwest "
Env Problem:	"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor was analyzed for VOCs only. Based on investigations conducted to date, the primary contaminants of concern for the Site are chlorinated volatile organic compounds, semi?volatile organic compounds (polyaromatic hydrocarbons), and metals. Soil: Seven polyaromatic hydrocarbons (PAHs), including

FORMER JUST4WHEELS SITE (Continued) **S127478141**

benzo(a)anthracene (maximum 17 parts per million(ppm)), benzo(a)pyrene (maximum 16 ppm), benzo(b)fluoranthene (maximum ppm), benzo(k)fluoranthene (maximum 7.2 ppm), chrysene (maximum 16 ppm), dibenzo(a,h)anthrancene (maximum 2.5 ppm), and indeno(1,2,3?cd)pyrene (maximum 9.5 ppm) were detected above the NYSDEC 6NYCRR Part 375 RRSCOs in borings B?1 (3?5). B?4 (1?3), and B?5 (0?2). Mercury was detected above the RRSCOs in all shallow soil samples and above RRSCOs in B-4 (1-3) at 1.44 ppm and in B-5 (0-2) at 5.56 ppm. Groundwater: Several PAHs such as benzo(a)anthracene (maximum 0.07 parts per billion (ppb)), benzo(b)pyrene (maximum 0.06 ppb), benzo(k)fluoranthene (maximum 0.06 ppb), benzo(k)fluoranthene (maximum 0.05 ppb), chrysene (maximum 0.07 ppb) and indeno(1,2,3-cd)pyrene (maximum 0.05 ppb) were detected above the Ambient Water Quality Standards (AWQS). Manganese (320.2 ppb) was also detected above the AWQS in one sample. VOC, cis-1,2-dichloroethene (maximum 260 ppb) detected in two groundwater samples whereas Vinyl chloride (29 ppb) was detected above the AWQS in groundwater sample. Soil Vapor: Vinyl chloride (455 ?g/m3), cis-1,2-dichloroethene (658 microgram per meter cube (?g/m3)), and trichloroethene (118 ?g/m3) were detected above the New York State Department of Health (NYSDOH) Final Guidance on Soil Vapor Intrusion, May 2017, Matrix A, B, and C guidance values in SV-1. Multiple other VOCs were detected in both soil vapor samples, but did not exceed guidance values, including tetrachloroethene (maximum 17 ?g/m3) carbon disulfide (maximum 87.2 ?g/m3), trans-1,2-dichloroethene (maximum 14.3 ?g/m3), 2,2,4-trimethylpentane (maximum 13.4 ?g/m3), toluene (maximum 47.5 ?g/m3), ethylbenzene (maximum 15.7 ?g/m3), and o-Xylene (maximum 17.7 ?g/m3). Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	IGNITABLE WASTE

NYC DEPT OF EDUCATION - PS 318K (Continued) **1000552941**

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: P028
Waste Description: BENZENE, (CHLOROMETHYL)- (OR) BENZYL CHLORIDE

Waste Code: P030
Waste Description: CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED

Waste Code: P092
Waste Description: MERCURY, (ACETATO-O)PHENYL- (OR) PHENYLMERCURY ACETATE

Waste Code: P098
Waste Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Waste Code: P106
Waste Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Waste Code: U032
Waste Description: CALCIUM CHROMATE (OR) CHROMIC ACID H2CRO4, CALCIUM SALT

NYC DEPT OF EDUCATION - PS 318K (Continued) **1000552941**

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Sangesland called Earth Tech Environmental back to ask about this spill Contact said a 20 gal drum of unknown oil was found on the property during soil borings (part of a phase 2 on the site). Sangesland informed Earth Tech that the property owner was responsible for removing the drum from the site, NOT the DEC. Sangesland told Earth Tech to remove the drum, over excavate any contmainated soil, take 1 end point sample, forward a report to DEC with writeup, test results and waste manifest. 04/13/06- Case was transferred from Jake Krimgold to Koon Tang. 08/27/2009 - Copy of Phase 2 report was submitted by Earth Tech. In 2005, during excavation of Test Pit #29 on the site, a drum was discovered at approx 7 ft depth. Drum contained unknown black oil which was leaking. Spill was called in to DEC. Visually contaminated soils were excavated from a depth of 10 ft below grade (approx 35 tons) of soil was removed. Soil sample #TP29-10 was tested and came back No VOCs, or SVOCs therefore no additional excavation work was necessary at this site."
Remarks:	"1-25 GALLON DRUM IN A TEST PIT: DEC CALL TO SEE IF IT CAN BE PICKED UP:"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

VENT PIPE (Continued) **S111456487**

Contact Name: CALLER
DEC Memo: "11/22/11 Driver could not hear whistle, approx 5 to 10 gallons out of vent to soil. One drum full of pcs was collected. Homeowner not happy, wants more removed along with his well sampled. Steve Kalka has been hired to take water sample and access soil...mm See edocs for email response of 2/6/12. DT 7/9/13- Site meeting. Tom Chi, Steve Kalka, Deborah Thompson, Mike Taylor, and Energi Insurance on site. Discussed spill cleanup history and noted spill area. Area of initial cleanup/soil removal was limited to area under deck only; no cleanup performed outside of under deck area adjacent to tank. Recent test pit was done just downgradient of cleanup area towards pool that demonstrated impact. Shallow exposed bedrock is visible. Mr. Taylor explained that spill occurred due to plastic cap in a bung opening on top of a/g 550 tank instead of a metal cap. Tank was overfilled causing oil to come out of plastic cap on bung opening. Inspected whole house treatment system. Only one carbon tank followed by sediment filter and a UV light. Required that system be upgraded to be in compliance with DOH specs. Site potable well is reported to be some 400 feet deep and is some 40 feet from spill location. Required that well be checked for presence of free phase product. Discussed additional work requirements to delineate impacts and remediate. DT Consulting to submit work plan to Ins. Co. and then to DEC for subsurface investigation. DT 8/21/13- DT Consulting reports that subsurface investigation was performed and report to be sent to DEC in next 7-10 days. DT Subsurface Inv. conducted; no significant soil or gw impacts found. POET to remain in place and monitored quarterly. 6/9/14- Received 4 quarterly POET system sample results. Raw water has been non-detect. No Further Remeidal Action necessary at this time. DT"
Remarks: "No Whisle Clean up done"

BROWNFIELDS:

Name:	"SITE B" PFIZER
Address:	59-71 GERRY STREET AND 73-87 GERRY STREET
City,State,Zip:	BROOKLYN, NY 11206
Program:	BCP
Site Code:	333571
Acres:	0.800
HW Code:	C224101
SWIS:	2401
Town:	New York City
Record Added Date:	11/10/2004
Record Updated Date:	02/15/2007
Update By:	KXCarpen
Site Description:	"Site B is located in the eastern portion of the Pfizer facility and is bordered on the north by a poultry market and vacant land, a three-story apartment building, and an auto body garage and yard; on the south by Gerry St.; on the east by a portion of the auto body garage and yard, and a storage lot; and on the west by Harrison Ave.. Building demolishing in 1996 has left a reinforced concrete slab across half of the eastern portion of site B. The western portion of site B is covered with gravel and is being used as a parking lot. The site is being investigated and remediated under VP Agreement ? see site no. V00350. "
Env Problem:	"Based upon preliminary investigations, Pfizer completed on-site and off-site delineation of petroleum related impacts in the fill material and conducted an Interim Remedial Measure (IRM) in December 2002. IRM included removal the removal of 4,735 tons of petroleum related impacted soils and more than 18,000 gallons of groundwater (including perched groundwater). In addition, nine UST?s and other subsurface structures were removed and properly disposed off-Site. Investigations indicate a plume of groundwater contamination that extends north to the property border. Soil gas investigation is on-going."

Date Rec Updated:	09/01/2020
Updated By:	MXYAU
Site Description:	"Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177

PFIZER SITES B AND D (Continued) **S106906497**

Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest. "

PFIZER SITES B AND D (Continued) **S106906497**

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium

PFIZER SITES B AND D (Continued) **S106906497**

as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department s VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination

Site Description:	"Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177 Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development

PFIZER SITES B AND D (Continued) **S106906497**

schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (

PFIZER SITES B AND D (Continued) **S106906497**

g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department s VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the

PFIZER SITES B AND D (Continued) **S106906497**

	northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Name:	PFIZER SITES B AND D
Address:	59-71 GERRY ST. AND 73-87 GERRY ST.
City,State,Zip:	BROOKLYN, NY 11206
Site Code:	58206
HW Code:	V00350
Control Code:	12
Control Type:	ENG
Date Record Added:	07/09/2018
Date Rec Updated:	09/01/2020
Updated By:	JJTEETER
Site Description:	"Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177 Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2

PFIZER SITES B AND D (Continued) **S106906497**

(59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm,

PFIZER SITES B AND D (Continued) **S106906497**

compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the

PFIZER SITES B AND D (Continued) **S106906497**

Department s VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment. "

Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Description:	"Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177

PFIZER SITES B AND D (Continued) **S106906497**

Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest. "

PFIZER SITES B AND D (Continued) **S106906497**

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium

PFIZER SITES B AND D (Continued) **S106906497**

as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department s VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination

Site Description: "Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177 Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater

PFIZER SITES B AND D (Continued) **S106906497**

(including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated

PFIZER SITES B AND D (Continued) **S106906497**

VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department s VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating

PFIZER SITES B AND D (Continued) **S106906497**

petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 58206
Site Description: "Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177 Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and

PFIZER SITES B AND D (Continued) **S106906497**

Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the

PFIZER SITES B AND D (Continued) **S106906497**

eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature

PFIZER SITES B AND D (Continued) **S106906497**

and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department s VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Dt rec updated: 09/01/2020
Updated By: MXYAU
Site Code: 58206
Site Description: "Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177 Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10

PFIZER SITES B AND D (Continued) **S106906497**

feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related

PFIZER SITES B AND D (Continued) **S106906497**

to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department s VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower

PFIZER SITES B AND D (Continued) **S106906497**

	concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

VCP:
Name: PFIZER SITES B AND D
Address: 59-71 GERRY ST. AND 73-87 GERRY ST.
City,State,Zip: BROOKLYN, NY 11206
Program Type: VCP
Site Code: 58206
HW Code: V00350
Site Class: C
SWIS: 2401
Region: 2
Town: New York City
Acres: 1.470
Date Record Added: 11/30/2000
Date Record Updated: 09/26/2018
Updated By: JHOCONNE
Site Description: "Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177 Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was

PFIZER SITES B AND D (Continued) **S106906497**

formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present

PFIZER SITES B AND D (Continued) **S106906497**

in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department s VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and

PFIZER SITES B AND D (Continued) **S106906497**

dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"6/5/20-Lin- The consultant will be submitting RIR to OER. This site comprise of 10 lots and is a E designation site and will enroll in NYCOER's BCP program. Spill was called in due to PID reading 89.4 with petroleum odor. Well in the vincity of elevated PID reading had petroleum odor and exceedances in SVOC but no exceedances in VOC. Soil boring results came back with no exceedances of the unrestricted standards. This is a former manufacturing site. GPR did not detect any anomalies. The site will be excavated down to 11' bgs as part of the development. Consultant will send RIR to DEC project manager. "
Remarks:	"soil samples positive and ground water affected clean up pending"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:

Name:	100 UNION AVENUE REDEVELOPMENT SITE
Address:	100 UNION AVENUE
City,State,Zip:	BROOKLYN, NY 11206
Program:	BCP
Site Code:	569083
Acres:	0.240
HW Code:	C224274
SWIS:	2401
Town:	New York City
Record Added Date:	04/17/2018
Record Updated Date:	11/02/2021
Update By:	JHOCONNE
Site Description:	"Location: The site is located in an urban area at 100 Union Avenue, Brooklyn, NY and is identified on the tax map as block 2242, lot 3. The site is bounded by Middleton Street to the north, a small parking area (Lot 2) and multi-story residential building (Lot 1) to the

100 UNION AVENUE REDEVELOPMENT SITE (Continued) **S117676130**

south/southeast, Union Avenue to the west, and a New York City Transit (NYCT) substation (Lot 57) and multi-story residential buildings (Lots 15 and 7502) to the east. Site Features: The site is 10,566 square feet (0.24 acres) in area and is currently vacant. Surface cover is mostly concrete with patches of vegetation throughout the site. The site is surrounded by a plywood fence along the two bounding streets. Current Zoning and Land Use: The site is zoned R6A (residential district) with C2-4 commercial overlay and is currently vacant. Past Use of the Site: The site was historically occupied by a church and residential dwellings prior to 1887 through 1935. The site then became vacant through 1950. A 1-story building located in the northern portion of the site was used for auto sales between 1965 through 2014 and the southern portion was used as a junk yard from 1992 through 2014. Site Geology and Hydrology: The site is generally level and is at an elevation of approximately 16 feet above sea level. The topographic gradient of the site and the surrounding area gradually slopes west northwest towards the East River. During the remedial investigation, fill composed of brown medium sand, some medium gravel and cinders were identified throughout the Site between 0 to 8 ft below ground surface (bgs). Gray silty sand was also identified throughout the Site between 8 and 15 ft bgs. A layer of localized peat was identified in the northeastern area of the Site at depths of 8 to 9.5 ft bgs. A confining clay layer was observed at the Site between 9 and 15 ft bgs. Bedrock was not encountered. Groundwater was found to flow in a south/southeast direction. Groundwater was encountered between approximately 6.76 and 8.49 ft bgs. "

Env Problem: "Based on a Phase II and RIR conducted at the Site, the primary contaminants of concern are chlorinated solvents, specifically tetrachloroethylene (PCE) and trichloroethene (TCE). Soil: Ten soil borings done below the concrete cover indicated only one detection of a VOC (acetone, a common lab artifact) at a concentration in exceedances of its unrestricted use soil cleanup objective (UUSCO). SVOCs were detected at concentrations above UUSCOs and/or restricted residential SCOs (RRSCOs) in soil samples across the site with benzo(a)anthracene at 7.47 parts per million (ppm) compared to the RRSCO of 1 ppm being the highest. SVOCs did not exceed SCOs in soil samples collected below 2 feet below grade. One pesticide, cis-chlordane, exceeded its UUSCO of 0.094 ppm with a concentration of 0.127 ppm. Metals including arsenic, barium, copper, lead, mercury and zinc were detected at concentrations above UUSCOs but below RRSCOs across the site in surface and sub-surface samples. Groundwater: PCE exceeded the applicable Ambient Water Quality Standards (AWQS) in two out of nine samples with concentrations ranging from 14 to 19 parts per billion (ppb). Methylene chloride was the only other VOC with an exceedances. SVOCs exceeded AWQS in four samples. Metal exceedances included iron, lead, manganese, selenium and sodium. PFAS components exceeded the guidance values in five of the nine groundwater samples. Soil Vapor: TCE and PCE were detected at elevated concentrations across the northern portion of the Site where groundwater exceedances were also identified. Concentrations ranged from 1.34 to 61.3 micrograms per cubic meter (ug/m3) and 37 to 1450 ug/m3, respectively. "

Health Problem: "The site is completely fenced or boarded which restricts public access. Persons who enter the site can contact contaminants in the soil by walking through or digging below surface soil or otherwise disturbing soil beneath the concrete cover. Contaminated groundwater

100 UNION AVENUE REDEVELOPMENT SITE (Continued) **S117676130**

at the site is not used for drinking or other purposes, since the site is served by a public water supply that obtains its water from a source not affected by site contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion is not a current concern on-site because the site is vacant; however, the potential exists for inhalation exposure from soil vapor intrusion in any future on-site building construction and occupancy. Soil vapor intrusion is potential exposure concern for site-related contaminants off-site."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND Sangesland gave written notice directly to Mr. Alaliewie (owner of site) to do the following work within 30 days of 7/28/99: 1)Surface removal down to pavement or top 2 feet of soil in contaminated work area. (owner says site is paved under gravel) 2)A subsurface investigation via geoprobes of the yard area 3)Installation of asphalt or other solid surface in work area 4)Prepare a report outlining proposed method of site remediation. A

HYDRO TECH (Continued) **S104193417**

list of contractors was provided to the owner. It was explained to him that he can hire one of these, or someone of his own choice. 9/26/2000 Mr. Jules Kimel (718-996-3260) called requesting closure of this spill number because he wants to sell the lot to build an Edwards supermarket/mall. Mr. Kimel said he was the owner along with Mr. Cici and that Mr. Sam Alaliewie was just a tenent on the site. Mr. Kimel was told that a site investigation & cleanup would be required before the spill number would be closed out. Jules Kimel 27 85 West 5th St #7A Brooklyn 11224 Frank Cici 69-26 53rd Rd maspeth 11378 9/26/2000 Mr. Sammy Alaliewie called back to say the site was cleaned last year and NYC did 8 soil borings when they were planning on buying the site to build housing. Sangesland told Sammy to track down a copy of the environmental report related to the 8 soil borings and submit it to the DEC. If the report shows the subsurface is clean then the DEC will consider closing the site out. 9/28/2000 Real Estate Broker - John Fischer 718-677-5700 was told of the situation and what needs to be done. 4/3/2006 Sangesland sent a Notice of Violation letter to: Willboro Properties Ltd. c/o Klein & Solomon, 275 Madison Ave - 11th Flr, NYC 10016 Letter gives a June 15,2006 deadline to provide DEC with results of soil boring work on the site to prove the site has been cleaned up adequately. 4/6/2006 Sangesland received a voice message from someone named Mr. Schwimer at 718-522-5512. He did not identify how he was related to the site nor did he say what he was lookin for. Sangesland returned the call and left a voice message at a machine which once again did NOT identify who they were. 4/13/2006 Sangesland called Mr. John Fischer (Real Estate Broker) he said that he was NOT involved in the final transaction. He knows nothing about the current owners or what they may or may not have done on the site. 4/25/2006 Dave Glass (212-221-8303) has been hired by the property owner to remediate the site. 6/21/2006 Sangesland received a Proposed Work Plan prepared by David Glass at TRC environmental (212-221-7822). The report was inadequate to what was requested in the April 3, 2006 letter. When Sangesland asked Mr. Glass if he was the legal representitive of the owner for this site, Mr. Glass specifically said he was NOT. When Sangesland asked for the name and contact information for the owner of the property, Mr. Glass said that he did not know . 6/22/2006 Sangesland spoke with Mr. Ed Klein at Klein & Solomon (law firm listed on NYC Tax records as legal address for Willboro Properties LLC). Mr. Klein said he heard of Willboro Properties, but didn't know the details. He said he would look into it and get back to the DEC with the proper contacts for the property owner. 6/22/2006 Mr. Glass from TRC called Sangesland again asking why DEC needed to know who the property owner was. Sangesland said that the DEC can/will only deal with the property owner or his designated representitive . Sangesland stated that the report submitted by Mr. Glass was inadequate and that the DEC would like to prepare a Stipulation Agreement to be reviewed and signed by the property owner. This agreement will lay out the specific work required along with establishing a schedule for when the work will be done. Mr. Glass stated that the owners do not want to be identified, they do not want a stipulation agreement and they do not want a schedule of when the work must be done on the site. 7/11/2006 Sangesland and John Urda (DEC Legal Dept) spoke with Mr. Solomon at Klein & Solomon again asking for property owner name/contacts. Mr. Solomon said he would look into it . 7/12/2006 Mr. Solomon called Sangesland to say that his firm no longer represents the owner and he has no additional

HYDRO TECH (Continued) **S104193417**

information on the property. Sangesland responded that the April 3, 2006 letter to Klein & Solomon apparently made it through to the owner. So obviously someone at their law firm knows how to get in touch with the owner. 7/13/2006 Sangesland submitted a Case Initiation Form to John Urda (DEC Legal) for this site. DEC spills would like to find the name/contact of the property owner and to get them to sign a Stipulation Agreement or an Order on Consent. 3/20/2007 Soil and groundwater sampling work was done in Dec 2006 by Hydrotech Environmental Corp. (631-462-5866). The initial report was found to have some problems with the well depth and screening of the wells, so another round of samples were requested. This second round of groundwater samples were taken on Feb 12, 2007. The results show a problem with high levels of cis-1,2-Dichloroethene = 2,060 ug/L in the area of MW-1 in the North edge of the property associated with the former tank farm of the former gas station. This compound is normally associated with a breakdown of PERC which is normally associated with dry cleaners or sometimes used as a parts washer in automotive service stations. Sangesland reviewed the report (see e-docs) and sent the following response via e-mail to Mr. Saha at Hydrotech Environmental:
****

****** e-mail to Mr. Saha dated 3/20/07: Yash Saha, The NYSDEC has reviewed your Technical Submital dated March 7, 2007 for the subject site, and we have the following questions/requirements for the site. The primary area of concern is around MW-1. 1) Please provide a detailed scaled layout of this portion of the property, showing the locations of the: a) Former tank field (current drawings show this location different from the old Sanborn maps, where are the site photos taken during excavation?) b) remote fill pipes c) pump islands d) location of MW-1 in relation to the old station structures. 2) A hit of cis-1,2-Dichloroethene = 2,060 ug/L will need to be further delineated and remediated in some fashion. Where is the source? (is it from offsite from the East side of Harrison Ave?, from the prior gas station on this corner?) This material is normally believed to be a breakdown of PERC from either a dry cleaner or a parts washer from a service station. If it was from the former gas station, is there a former drywell hot spot on the property that was used as a drain? How long ago was the station closed? Where is the groundwater flow moving the contamination? What are the receptors? If Hydrotech will be arguing that there is no offsite impact, then a groundwater sample from offsite will be required (DEC may request to be present for this sample) 3) There is a serious concern that there are high levels of VOC's in the groundwater at a depth of 6 ft below grade in an area where a new building is being built. The DEC will need information on the type of building going up on the site (residential or industrial). Also, will the building have a basement? In addition, depending upon the degree of remediation involved, some form of mechanical barrier will probably need to be installed under the slab floor of the new building to prevent vapor intrusion into the new structure. 4) Has this building site been processed through the NYC E-designation program? If so, what is the case number? If not, then the site is assumed to be remaining as industrial in nature? Please get back to me with answers to these questions. Thank you, Steven Sangesland Environmental Engineer 1 NYSDEC - Spills Remediation Group
****

********** 12/26/07-Hiralkumar Patel. received call from Ms. Saha (718-636-0800). she wants meeting with DEC project manager. 12/4/2008

HYDRO TECH (Continued) **S104193417**

- Sangesland received a quarterly sampling status report for a single MW on the south corner of the site (corner Walton & Union St). These samples from June & Oct 2008 appear clean or minor. 1/14/2009 - Sangesland spoke to Yasha at HydroTech Environmental. Requested copy of building drawings (HydroTech says building is now complete) showing a vapor barrier under the basement slab. Also copies of all environmental reports from the last few years and a meeting here at DEC to review site status. 5/6/2010 - Sangesland spoke again with Yasha at HydroTech. She submitted a Vapor Barrier System Design Specification for a building THAT HAS NOT YET BEEN BUILT????? Sangesland told her that the spill case will be closed out after Sangesland visits the site and actually sees the vapor barrier installed in the foundation. Only comment on the HydroTech report (Feb 26, 2010) is to change from 30 mil barrier to 40 mil barrier. Notification was sent to HydroTech. 5/24/2011 - Sangesland sent a letter to the owner stating that no additional water samples will be needed from MW#1. Also, once the 40Mil vapor barrier has been laid down, the NYSDEC will close out the spill case. 7/5/2011 - Sangesland received a copy of a Vapor Barrier Specification/Drawings (signed by a PE) and dated June 3, 2011 (see eDocs). The document is acceptible to NYSDEC. Sangesland requested to witness the barrier installation and Field Testing/Vacuum Test as per the specification (Section 1.13.C.1.a) After the installation is complete and a PE has signed off that the installation was completed as per the specification , then the spill cases will be closed out. 8/21/2013 - Sangesland still has NOT received the vapor barrier installation is complete statement from a PE. as per 7/5/2011 request above. In addition on 8/2/2013 sangesland sent the following e-mail requesting a summary of all work done on the site INCLUDING the Perc TCE issues:
********** To: Ezgi Karayel Ezgi, Back in March 2007 I responded to a Feb 2007 submittal from Hydrotech with a specific question. Please take a look at that request and incorporate an answer into your summary report: From March 2007 e-mail to Yash: 2) A hit of cis-1,2-Dichloroethene = 2,060 ug/L will need to be further delineated and remediated in some fashion. Where is the source? (is it from offsite from the East side of Harrison Ave?, from the prior gas station on this corner?) This material is normally believed to be a breakdown of PERC from either a dry cleaner or a parts washer from a service station. If it was from the former gas station, is there a former drywell hot spot on the property that was used as a drain? (Steve believes this is true) How long ago was the station closed? Where is the groundwater flow moving the contamination? What are the receptors? If Hydrotech will be arguing that there is no offsite impact, then a groundwater sample from offsite will be required (DEC may request to be present for this sample) Please update your report and resubmit. Thanks, Steve Sangesland
****
11/5/2013 - as per J. Vought, spill is assigned to J. Feng. 2/14/2014 - email case review comments to HydroTech. Spill closure is denied. More information and clarification are required. 3/30/2016 Feng This spill is transferred from J. Feng to V. Brevdo as per J. Vought. 2/2/18 - Spill transferred to Central Office spills. 02/04/19 - Spill closed not meeting standards. Central office staff made a site visit on 03/01/18 and discovered the parcel has been developed with a new building. The building has been outfitted with a vapor barrier (per NYC building code) and an SSDS to address any residual CIS 1,2 DCE

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

KNIGHTS COLLISION EXPERTS INC (Continued) **1000235004**

corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U031
Waste Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U080
Waste Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U112
Waste Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Waste Code: U115
Waste Description: ETHYLENE OXIDE (I,T) (OR) OXIRANE (I,T)

Waste Code: U122
Waste Description: FORMALDEHYDE

Waste Code: U134
Waste Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U188
Waste Description: PHENOL

PFIZER INC (Continued) **1000443177**

Waste Code: U219
Waste Description: THIOUREA

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U226
Waste Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

City,State,Zip:	BROOKLYN, NY 11206
Program:	BCP
Site Code:	579698
Acres:	2.550
HW Code:	C224288
SWIS:	2401
Town:	New York City
Record Added Date:	11/20/2018
Record Updated Date:	11/02/2021
Update By:	JHOCONNE
Site Description:	"Location The site is located at 334 Wallabout Street in the Brooklyn Triangle section of Brooklyn, NY. The site is comprised of four tax parcels totaling approximately 110,040 square feet (2.55 acres). The irregular shaped site occupies a full block with approximately 485 feet of frontage along Wallabout Street, 200 feet of frontage on Harrison Avenue, 225 feet of frontage on Union Avenue and 600 feet of frontage on Gerry Street. Site Features The site is currently vacant, paved, and surrounding by an 8-foot high chain-link fence with one gate on Wallabout Street. The surrounding area comprises residential and commercial uses, including two schools in the immediate vicinity. Current Zoning and Land Use The western portion of the site is zoned R8A, the central portion is zoned R7D, and the eastern portion is zoned R7A (all residential use). The site is currently used for the storage of scaffolding and related construction equipment. Surrounding land use includes residential apartment buildings to the west, former Pfizer Site A (BCP site no. C224284) to the north, commercial warehouses, residential buildings and a private school (Bais Ruchel High School) to the east; and a charter school (Beginning with Children) to the south. The closest school (Bais Ruchel High School) is located 60 feet to the east. The charter school is located 70 feet to the south and PS 318 is located 375 feet to the north. Past Use of the Site The historic use of the site includes residential homes, the Pfizer chemical works and varnish manufacturing in 1887-1918, a lumber yard and the Pfizer chemical works in 1935. By 1947 the Pfizer chemical works occupied the entire property and continued to do so through 1995 when the buildings were demolished. Site Geology and Hydrogeology Subsurface soils at the site consist of historic fill materials to a depth of approximately 4 to 9 feet below ground surface (bgs) followed by a native silt and clay layer. The elevation of the site is approximately 18 feet above mean sea level. The area topography is generally flat with little relief and no significant elevation changes. Bedrock was not encountered during previous site investigations. Groundwater is present at depths of approximately 8 to13 feet bgs under perched water table conditions. Groundwater flow is generally west to southwest. The site is not located within a designated flood zone area. Groundwater in this area of Brooklyn is not used as a source of potable water. "
Env Problem:	"Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals,

LOT 14,TAXBLOCK 2265 (Continued) **S121343849**

polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern for this site include VOCs, SVOCs, and metals in soil and in groundwater. Soil - VOCs exceeding protection of groundwater soil cleanup objectives (PGWSCOs), including chlorobenzene at 3.20 parts per million (ppm) (PGWSCO is 1.1 ppm) and sec-butylbenzene at 16 ppm (PGWSCO is 11 ppm), were detected selected locations. SVOCs exceeding restricted residential soil cleanup objectives (RRSCOs) were detected in soil throughout the site including benzo(a)anthracene at 61.6 ppm compared to RRSCO of 1 ppm, benzo(a)pyrene at 57.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 45.7 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 44.9 ppm (RRSCO is 3.9 ppm), chrysene at 54.4 ppm (RRSCO is 3.9 ppm), dibenzo(a,h)anthracene at 9.54 ppm (RRSCO is 0.33 ppm), fluoranthene at 113 ppm (RRSCO is 100 ppm), and indeno(1,2,3-cd)pyrene at 31.3 ppm (RRSCO is 0.5 ppm). Several metals were detected at concentrations exceeding the RRSCOs, including arsenic at 39.90 ppm (RRSCO is 16 ppm), barium at 825 ppm (RRSCO is 400 ppm), cadmium at 4.48 ppm (RRSCO is 4.3 ppm), copper at 3,990 ppm (RRSCO is 270 ppm), lead at 5,290 ppm RRSCO is 400 ppm), and mercury at 290 ppm (RRSCO is 0.81 ppm). Perfluorooctanesulfonic acid (PFOS) was measured in soil at concentrations ranging from 0.42 parts per billion (ppb) to 0.95 ppb, exceeding the guidance value for unrestricted use of 0.88 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - VOCs were detected in groundwater at concentrations exceeding the ambient water quality standards (AWQS), including benzene at a maximum concentration of 11.6 ppb compared to the AWQS of 1 ppb, chlorobenzene at 1,750 ppb (AWQS of 5 ppb), isopropylbenzene at 67.8 ppb (AWQS of 5 ppb), naphthalene at 56.3ppb (AWQS of 10 ppb), n-butylbenzene at 7.2 ppb (AWQS of 5 ppb), and n-propylbenzene at 66 ppb (AWQS of 5 ppb). SVOCs were detected at concentrations exceeding the AWQS including benzo(a)anthracene at a maximum concentration of 0.070 ppb, benzo(b)fluoranthene at 0.050 ppb, benzo(k)fluoranthene at 0.060 ppb, and chrysene at 0.130 ppb compared to their respective AWQS of 0.002 ppb. Dissolved metals were detected at concentrations exceeding the AWQS, including chromium at 1,030 ppb (AWQS of 50 ppb), nickel at 109 ppb (AWQS of 100 ppb), antimony at 9.60 ppb (AWQS of 3 ppb), arsenic at 129 ppb (AWQS of 25 ppb), and mercury at 1.20 ppb (AWQS of 0.7 ppb). PFOS and PFOA were detected above the maximum contaminant level (MCL) of 10 parts per trillion (ppt) with PFOS at a maximum concentration of 185 ppt and PFOA at 79.8 ppt. Data does not indicate any off-site impacts in groundwater related to this site.
Soil Vapor - Petroleum and chlorinated VOCs were detected in soil vapor samples. The maximum concentration of petroleum VOCs included toluene at 2,100 ug/m3. The maximum concentration of chlorinated VOCs included tetrachloroethene at 97 ug/m3, and trichloroethene at 65 ug/m3. Data does indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "The site is completely fenced, which restricts access, and covered by pavement; therefore direct contact with contaminants in the soil is unlikely. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas

LOT 14,TAXBLOCK 2265 (Continued) **S121343849**

from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern, however, the potential exists for indoor air impacts from site contaminants in any future on-site buildings. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:

Name:	BROADWAY TRIANGLE SITE A
Address:	663-667 FLUSHING AVENUE AND 29-31 BARTLETT STREET
City,State,Zip:	BROOKLYN, NY 11206
Program:	BCP
Site Code:	623113
Acres:	0.330
HW Code:	C224333
SWIS:	2401
Town:	New York City
Record Added Date:	08/06/2021
Record Updated Date:	11/02/2021
Update By:	JHOCONNE
Site Description:	"Location: The site is located at 29-31 Bartlett Street and 663-667 Flushing Avenue, Brooklyn, NY encompassing Kings County Tax Map Block 2272, Lots 49, 51, 52, 53, and 108 (Site A1) and Block 2269, Lot 52 (Site A2). Site A1 is bounded to the north by an automotive repair facility, to the south by Flushing Avenue and Whipple Street, and to the east and west by multi-family residential buildings. Site A2 is bounded to the north and west by a construction site, to the south by Bartlett Street, and to the east by a commercial office building. Site Features: The site is 0.33 acres and is currently comprised of vacant, overgrown land with several patches of exposed concrete, likely from former on-Site structures. The site is fully enclosed by chain-link fencing with locked gates. Current Zoning and Land Use: The current property zoning is R7A for residential use with a C2-4 commercial overlay. The area surrounding the site is an urban area comprised primarily of commercial and multi-family residential properties and vacant land. Site A1 is adjoined by the following: a residential construction site and an automotive repair facility to the north, and multi-family residential buildings to the south (across Flushing Avenue and Whipple Street), east, and west. Site A2 is adjoined by the following: an active construction site (former automotive repair facility) and a multi-family residential building to the south (across Bartlett Street); an office building to the east; and an active construction site (anticipated mixed commercial and residential use) to the north and west. Past Use of the Site: Based on a review of Historic Sanborn fire insurance maps, aerial photographs, city directories, and New York City Assessor s and Building Department records, the following site history was established. Site A1 was developed as early as 1887 with residential and commercial structures. Former on-site commercial uses included retail stores, a bakery, carpenter s shop, and a junk shop. The former buildings on Site A1 were demolished by 1980 and the site has remained vacant since that time. Site A2 is likely to have been in use for residential and commercial purposes since at least 1887. Former on-site uses included single and multi-family residences, a fur dresser, and several retail stores. The former buildings on Site A2 were demolished sometime after 2006 and the site has remained vacant since that time. No other significant on-Site commercial uses were noted. All six site lots are currently owned by New York City (NYC) Housing Preservation and Development (HPD). Site Geology & Hydrogeology: Based on the June 2020 Remedial Investigation,

BROADWAY TRIANGLE SITE A (Continued) **S127990274**

	subsurface materials generally contain fill materials (unsorted sand, gravel, and debris [e.g., brick, concrete, stone, and glass]) to depths ranging from 4 feet to 8 ft bls at site A1; fill materials overly native orange-brown medium to coarse sands with brown or black clay lenses. At site A2 subsurface material generally contains fill materials (unsorted sand, gravel, and debris) to depths of 7 to 8 ft bls; fill materials overly native brown medium to coarse gravelly sands interbedded with gray-green clayey silt. Depth to bedrock is unknown. No bedrock was encountered to a maximum depth of 20 ft bls during the RI. Groundwater flow direction is likely influenced by subsurface utilities, lithology, and other subsurface features. Groundwater, when encountered, was generally between approximately 8 and 10 ft bls at site A1; the assumed groundwater flow direction is from northwest to southeast. Groundwater, when encountered, was generally between 7 and 8 ft bls at site A2; the assumed groundwater flow direction is from west to east. "
Env Problem:	"Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Control Code:	15
Control Type:	ENG
Date Record Added:	08/25/2021
Date Rec Updated:	12/29/2021
Updated By:	GWBURKE
Site Description:	"Location: The site is located in the Broadway Triangle section of Brooklyn and is comprised of four tax parcels totaling 71,305 square feet (1.63 acres). The irregular shaped site occupies a full block bounded by Wallabout Street, Harrison Avenue, Union Avenue and Walton Street. Site Features: The site is currently undergoing redevelopment into a residential apartment building. Current Zoning and Land Use: The western portion of the site is zoned R8A while the central portion is zoned R7D and the eastern portion is zoned R7A. Each of these zoning designations allow for residential uses. Surrounding land use includes residential apartment buildings to the west, residential apartment buildings and a public school (IS 318) to the north, commercial warehouses, residential buildings and a private school to the east and the Former Pfizer Site C BCP site (site no. C224288) and a charter school to the south. Past Use of the Site: From 1887 through 1918, the site was comprised of mixed commercial and residential properties, including a synagogue, a church, a Mission, laundry, tailor shops and bakeries. A portion of the storage yard of an iron works factory that was replaced by a bottling facility by 1904 was also present at the southwestern-most corner of the site. By 1947, an adhesive manufacturing facility operated in the south-central region of the site at 255/257 Wallabout Street (later Pfizer Building 47), and a lumber yard was present at the west end of the site. A taxi garage located at 249 through 253 Wallabout Street (later Pfizer Building 52) maintained two gasoline underground storage tanks (USTs) and a five-story residential building with

FORMER PFIZER SITE A (Continued) **S123159099**

delivery services at ground level, located at 58/60 Walton Street, was serviced by a 2,000-gallon fuel oil tank installed in the sidewalk. Pfizer started using the western region of the site circa 1954 for employee parking and warehousing purposes. The residential buildings along Harrison Avenue were demolished between 1959 and 1961 and replaced by more parking space for Pfizer employees. A small sheet metal workshop was also present at 262 Wallabout Street, close to the southeast corner of the site. By 1977, the majority of the eastern region of the site had been redeveloped into a parking lot and Pfizer used most of the site for parking and warehousing purposes. The small sheet metal workshop was demolished by 1986 and, between 1991 and 1992, the entire block had been razed and has remained vacant to date. Site Geography and Geology: Subsurface soils consist of historic fill materials to a depth of approximately 7 to 10 feet below the surface, followed by silty-clay and fine sand. According to the USGS topographic map for the area (Central Park Quadrangle), the elevation of the property is approximately 16 feet above mean sea level. The area topography is generally flat with little relief and no significant elevation changes. Groundwater occurs beneath the site at a depth of approximately 6-10 feet below grade under perched water table conditions. Based on previous studies performed at the site, groundwater flow is generally to the east. The site is not located within a designated flood zone area. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and lead in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil is being managed under a Site Management Plan. Prior to Remediation Soil and groundwater were analyzed for emerging contaminants (ECs), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern include lead and SVOCs. Soil SVOCS and metals exceeding Unrestricted Use Soil Cleanup Objectives (UUSCOs) were detected in soils throughout the site. SVOCs and metals were found to exceed UUSCOs down to 8 feet below ground surface (ft bgs). A total of 5 locations where levels of lead exceeded the hazardous waste threshold were identified across the site. For SVOCs, the maximum concentration of benzo(a)anthracene was 32 parts per million (ppm) as compared to the UUSCO of 1 ppm, benzo(a)pyrene was 25 ppm (UUSCO is 1 ppm), benzo(b)fluoranthene was 23 ppm (UUSCO is 1 ppm), chrysene was 30 ppm (UUSCO is 1 ppm), and indeno(1,2,3-cd)pyrene of 13 ppm (UUSCO is 0.5 ppm). For metals, the maximum concentration of lead was 4,310 ppm (UUSCO is 63 ppm), mercury was 15.7 ppm (UUSCO is 0.18 ppm), arsenic was 81.1 ppm (UUSCO is 13 ppm), and barium was 5,910 ppm (UUSCO is 350 ppm). Only two VOCs (acetone and methyl ethyl ketone) were detected at concentrations slightly exceeding the UUSCOs; however, these are common lab artifacts and are not considered to be site-specific contaminants of concern. Several pesticides were detected at concentrations nominally exceeding their respective UUSCOs, including 4,4-DDD at 0.035 ppm (UUSCO is 0.0033 ppm) and 4,4-DDE at 0.080 ppm (UUSCO is 0.0033 ppm). For PCBs, the maximum concentration of PCB-1260 was 0.18 ppm (UUSCO is 0.1 ppm). Emerging contaminants (ECs) were also detected in soil samples collected from the shallow intervals down to 17 ft bgs. For example, the maximum concentrations of perfluorooctanoic acid (PFOA) and perfluorooctane

FORMER PFIZER SITE A (Continued) **S123159099**

sulfonic acid (PFOS) were 378 parts per trillion (ppt) and 2,490 ppt, respectively. Data does not indicate any off-site impacts in soil related to this site. Groundwater Concentrations of naturally occurring metals were detected in groundwater at concentrations exceeding the ambient water quality standards (AWQS). The maximum concentration of iron was 871 parts per billion (ppb) (AWQS is 300 ppb), manganese was 43,900 ppb (AWQS is 300 ppb), and sodium was 193,000 ppb (AWQS is 20,000 ppb). ECs were also detected in groundwater samples. The maximum concentrations of PFOA and PFOS are 204 parts per trillion (ppt) and 154 ppt, respectively. No VOCs, PCBs or pesticides were detected at concentrations exceeding the applicable AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor Trichloroethene (TCE) was detected in soil vapor at concentrations up to 50.5 micrograms per cubic meter. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Site Code: 576972
Site Description: "Location: The site is located in the Broadway Triangle section of Brooklyn and is comprised of four tax parcels totaling 71,305 square feet (1.63 acres). The irregular shaped site occupies a full block bounded by Wallabout Street, Harrison Avenue, Union Avenue and Walton Street. Site Features: The site is currently undergoing redevelopment into a residential apartment building. Current Zoning and Land Use: The western portion of the site is zoned R8A while the central portion is zoned R7D and the eastern portion is zoned R7A. Each of these zoning designations allow for residential uses. Surrounding land use includes residential apartment buildings to the west, residential apartment buildings and a public school (IS 318) to the north, commercial warehouses, residential buildings and a private school to the east and the Former Pfizer Site C BCP site (site no. C224288) and a charter school to the south. Past Use of the Site: From 1887 through 1918, the site was comprised of mixed commercial and residential properties, including a synagogue, a church, a Mission, laundry, tailor shops and bakeries. A portion of the storage yard of an iron works factory that was replaced by a bottling facility by 1904 was also present at the southwestern-most corner of the site. By 1947, an adhesive manufacturing facility operated in the south-central region of the site at 255/257 Wallabout Street (later Pfizer Building 47), and a lumber yard was present at the west end of the site. A taxi garage located at 249 through 253 Wallabout Street (later Pfizer Building 52) maintained two gasoline underground storage tanks (USTs) and a five-story residential building with delivery services at ground level, located at 58/60 Walton Street, was serviced by a 2,000-gallon fuel oil tank installed in the sidewalk. Pfizer started using the western region of the site circa 1954 for employee parking and warehousing purposes. The residential buildings along Harrison Avenue were demolished between 1959 and 1961 and replaced by more parking space for Pfizer employees. A small sheet metal workshop was also present at 262 Wallabout Street, close to the southeast corner of the site. By 1977, the majority of the eastern region of the site had been redeveloped into a parking lot and Pfizer used most of the site for parking and warehousing

FORMER PFIZER SITE A (Continued) **S123159099**

purposes. The small sheet metal workshop was demolished by 1986 and, between 1991 and 1992, the entire block had been razed and has remained vacant to date. Site Geography and Geology: Subsurface soils consist of historic fill materials to a depth of approximately 7 to 10 feet below the surface, followed by silty-clay and fine sand. According to the USGS topographic map for the area (Central Park Quadrangle), the elevation of the property is approximately 16 feet above mean sea level. The area topography is generally flat with little relief and no significant elevation changes. Groundwater occurs beneath the site at a depth of approximately 6-10 feet below grade under perched water table conditions. Based on previous studies performed at the site, groundwater flow is generally to the east. The site is not located within a designated flood zone area. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and lead in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil is being managed under a Site Management Plan. Prior to Remediation Soil and groundwater were analyzed for emerging contaminants (ECs), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern include lead and SVOCs. Soil SVOCS and metals exceeding Unrestricted Use Soil Cleanup Objectives (UUSCOs) were detected in soils throughout the site. SVOCs and metals were found to exceed UUSCOs down to 8 feet below ground surface (ft bgs). A total of 5 locations where levels of lead exceeded the hazardous waste threshold were identified across the site. For SVOCs, the maximum concentration of benzo(a)anthracene was 32 parts per million (ppm) as compared to the UUSCO of 1 ppm, benzo(a)pyrene was 25 ppm (UUSCO is 1 ppm), benzo(b)fluoranthene was 23 ppm (UUSCO is 1 ppm), chrysene was 30 ppm (UUSCO is 1 ppm), and indeno(1,2,3-cd)pyrene of 13 ppm (UUSCO is 0.5 ppm). For metals, the maximum concentration of lead was 4,310 ppm (UUSCO is 63 ppm), mercury was 15.7 ppm (UUSCO is 0.18 ppm), arsenic was 81.1 ppm (UUSCO is 13 ppm), and barium was 5,910 ppm (UUSCO is 350 ppm). Only two VOCs (acetone and methyl ethyl ketone) were detected at concentrations slightly exceeding the UUSCOs; however, these are common lab artifacts and are not considered to be site-specific contaminants of concern. Several pesticides were detected at concentrations nominally exceeding their respective UUSCOs, including 4,4-DDD at 0.035 ppm (UUSCO is 0.0033 ppm) and 4,4-DDE at 0.080 ppm (UUSCO is 0.0033 ppm). For PCBs, the maximum concentration of PCB-1260 was 0.18 ppm (UUSCO is 0.1 ppm). Emerging contaminants (ECs) were also detected in soil samples collected from the shallow intervals down to 17 ft bgs. For example, the maximum concentrations of perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS) were 378 parts per trillion (ppt) and 2,490 ppt, respectively. Data does not indicate any off-site impacts in soil related to this site. Groundwater Concentrations of naturally occurring metals were detected in groundwater at concentrations exceeding the ambient water quality standards (AWQS). The maximum concentration of iron was 871 parts per billion (ppb) (AWQS is 300 ppb), manganese was 43,900 ppb (AWQS is 300 ppb), and sodium was 193,000 ppb (AWQS is 20,000 ppb). ECs were also detected in groundwater samples. The maximum concentrations of PFOA and PFOS are 204 parts per trillion (ppt) and 154 ppt, respectively. No VOCs, PCBs

FORMER PFIZER SITE A (Continued) **S123159099**

or pesticides were detected at concentrations exceeding the applicable AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor Trichloroethene (TCE) was detected in soil vapor at concentrations up to 50.5 micrograms per cubic meter. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Site Code: 576972
Site Description: "Location: The site is located in the Broadway Triangle section of Brooklyn and is comprised of four tax parcels totaling 71,305 square feet (1.63 acres). The irregular shaped site occupies a full block bounded by Wallabout Street, Harrison Avenue, Union Avenue and Walton Street. Site Features: The site is currently undergoing redevelopment into a residential apartment building. Current Zoning and Land Use: The western portion of the site is zoned R8A while the central portion is zoned R7D and the eastern portion is zoned R7A. Each of these zoning designations allow for residential uses. Surrounding land use includes residential apartment buildings to the west, residential apartment buildings and a public school (IS 318) to the

FORMER PFIZER SITE A (Continued) **S123159099**

north, commercial warehouses, residential buildings and a private school to the east and the Former Pfizer Site C BCP site (site no. C224288) and a charter school to the south. Past Use of the Site: From 1887 through 1918, the site was comprised of mixed commercial and residential properties, including a synagogue, a church, a Mission, laundry, tailor shops and bakeries. A portion of the storage yard of an iron works factory that was replaced by a bottling facility by 1904 was also present at the southwestern-most corner of the site. By 1947, an adhesive manufacturing facility operated in the south-central region of the site at 255/257 Wallabout Street (later Pfizer Building 47), and a lumber yard was present at the west end of the site. A taxi garage located at 249 through 253 Wallabout Street (later Pfizer Building 52) maintained two gasoline underground storage tanks (USTs) and a five-story residential building with delivery services at ground level, located at 58/60 Walton Street, was serviced by a 2,000-gallon fuel oil tank installed in the sidewalk. Pfizer started using the western region of the site circa 1954 for employee parking and warehousing purposes. The residential buildings along Harrison Avenue were demolished between 1959 and 1961 and replaced by more parking space for Pfizer employees. A small sheet metal workshop was also present at 262 Wallabout Street, close to the southeast corner of the site. By 1977, the majority of the eastern region of the site had been redeveloped into a parking lot and Pfizer used most of the site for parking and warehousing purposes. The small sheet metal workshop was demolished by 1986 and, between 1991 and 1992, the entire block had been razed and has remained vacant to date. Site Geography and Geology: Subsurface soils consist of historic fill materials to a depth of approximately 7 to 10 feet below the surface, followed by silty-clay and fine sand. According to the USGS topographic map for the area (Central Park Quadrangle), the elevation of the property is approximately 16 feet above mean sea level. The area topography is generally flat with little relief and no significant elevation changes. Groundwater occurs beneath the site at a depth of approximately 6-10 feet below grade under perched water table conditions. Based on previous studies performed at the site, groundwater flow is generally to the east. The site is not located within a designated flood zone area. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and lead in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil is being managed under a Site Management Plan. Prior to Remediation Soil and groundwater were analyzed for emerging contaminants (ECs), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern include lead and SVOCs. Soil SVOCS and metals exceeding Unrestricted Use Soil Cleanup Objectives (UUSCOs) were detected in soils throughout the site. SVOCs and metals were found to exceed UUSCOs down to 8 feet below ground surface (ft bgs). A total of 5 locations where levels of lead exceeded the hazardous waste threshold were identified across the site. For SVOCs, the maximum concentration of benzo(a)anthracene was 32 parts per million (ppm) as compared to the UUSCO of 1 ppm, benzo(a)pyrene was 25 ppm (UUSCO is 1 ppm), benzo(b)fluoranthene was 23 ppm (UUSCO is 1 ppm), chrysene was 30 ppm (UUSCO is 1 ppm), and indeno(1,2,3-cd)pyrene of 13 ppm (UUSCO is 0.5

FORMER PFIZER SITE A (Continued) **S123159099**

ppm). For metals, the maximum concentration of lead was 4,310 ppm (UUSCO is 63 ppm), mercury was 15.7 ppm (UUSCO is 0.18 ppm), arsenic was 81.1 ppm (UUSCO is 13 ppm), and barium was 5,910 ppm (UUSCO is 350 ppm). Only two VOCs (acetone and methyl ethyl ketone) were detected at concentrations slightly exceeding the UUSCOs; however, these are common lab artifacts and are not considered to be site-specific contaminants of concern. Several pesticides were detected at concentrations nominally exceeding their respective UUSCOs, including 4,4-DDD at 0.035 ppm (UUSCO is 0.0033 ppm) and 4,4-DDE at 0.080 ppm (UUSCO is 0.0033 ppm). For PCBs, the maximum concentration of PCB-1260 was 0.18 ppm (UUSCO is 0.1 ppm). Emerging contaminants (ECs) were also detected in soil samples collected from the shallow intervals down to 17 ft bgs. For example, the maximum concentrations of perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS) were 378 parts per trillion (ppt) and 2,490 ppt, respectively. Data does not indicate any off-site impacts in soil related to this site. Groundwater Concentrations of naturally occurring metals were detected in groundwater at concentrations exceeding the ambient water quality standards (AWQS). The maximum concentration of iron was 871 parts per billion (ppb) (AWQS is 300 ppb), manganese was 43,900 ppb (AWQS is 300 ppb), and sodium was 193,000 ppb (AWQS is 20,000 ppb). ECs were also detected in groundwater samples. The maximum concentrations of PFOA and PFOS are 204 parts per trillion (ppt) and 154 ppt, respectively. No VOCs, PCBs or pesticides were detected at concentrations exceeding the applicable AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor Trichloroethene (TCE) was detected in soil vapor at concentrations up to 50.5 micrograms per cubic meter. Data does not indicate any off-site impacts in soil vapor related to this site. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and lead in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil is being managed under a Site Management Plan. Prior to Remediation Soil and groundwater were analyzed for emerging contaminants (ECs), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern include lead and SVOCs. Soil SVOCS and metals exceeding Unrestricted Use Soil Cleanup Objectives (UUSCOs) were detected in soils throughout the site. SVOCs and metals were found to exceed UUSCOs down to 8 feet below ground surface (ft bgs). A total of 5 locations where levels of lead exceeded the hazardous waste threshold were identified across the site. For SVOCs, the maximum concentration of benzo(a)anthracene was 32 parts per million (ppm) as compared to the UUSCO of 1 ppm, benzo(a)pyrene was 25 ppm (UUSCO is 1 ppm), benzo(b)fluoranthene was 23 ppm (UUSCO is 1 ppm), chrysene was 30 ppm (UUSCO is 1 ppm), and indeno(1,2,3-cd)pyrene of 13 ppm (UUSCO is 0.5 ppm). For metals, the maximum concentration of lead was 4,310 ppm (UUSCO is 63 ppm), mercury was 15.7 ppm (UUSCO is 0.18 ppm), arsenic was 81.1 ppm (UUSCO is 13 ppm), and barium was 5,910 ppm (UUSCO is 350 ppm). Only two VOCs (acetone and methyl ethyl ketone) were detected at concentrations slightly exceeding the UUSCOs; however, these are common lab artifacts and are not considered to be site-specific contaminants of concern. Several pesticides were detected at concentrations nominally exceeding their respective UUSCOs, including 4,4-DDD at 0.035 ppm (UUSCO is 0.0033 ppm) and 4,4-DDE at 0.080 ppm (UUSCO is 0.0033 ppm). For PCBs, the maximum concentration of PCB-1260 was 0.18 ppm (UUSCO is 0.1 ppm). Emerging contaminants (ECs) were also detected in soil samples collected from the shallow intervals down to 17 ft bgs. For example, the maximum concentrations of perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS) were 378 parts per trillion (ppt) and 2,490 ppt, respectively. Data does not indicate any off-site impacts in soil related to this site. Groundwater Concentrations of naturally occurring metals were detected in groundwater at concentrations exceeding the ambient water quality standards (AWQS). The maximum concentration of iron was 871 parts per billion (ppb) (AWQS is 300 ppb), manganese was 43,900 ppb (AWQS is 300 ppb), and sodium was 193,000 ppb (AWQS is 20,000 ppb). ECs were also detected in

FORMER PFIZER SITE A (Continued) **S123159099**

groundwater samples. The maximum concentrations of PFOA and PFOS are 204 parts per trillion (ppt) and 154 ppt, respectively. No VOCs, PCBs or pesticides were detected at concentrations exceeding the applicable AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor Trichloroethene (TCE) was detected in soil vapor at concentrations up to 50.5 micrograms per cubic meter. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

FORMER PFIZER SITE A (Continued) **S123159099**

BROWNFIELDS:

Name:	FORMER PFIZER SITE A
Address:	243-271 WALLABOUT STREET
City,State,Zip:	BROOKLYN, NY 11206
Program:	BCP
Site Code:	576972
Acres:	1.640
HW Code:	C224284
SWIS:	2401
Town:	New York City
Record Added Date:	09/10/2018
Record Updated Date:	12/29/2021
Update By:	GWBURKE
Site Description:	"Location: The site is located in the Broadway Triangle section of Brooklyn and is comprised of four tax parcels totaling 71,305 square feet (1.63 acres). The irregular shaped site occupies a full block bounded by Wallabout Street, Harrison Avenue, Union Avenue and Walton Street. Site Features: The site is currently undergoing redevelopment into a residential apartment building. Current Zoning and Land Use: The western portion of the site is zoned R8A while the central portion is zoned R7D and the eastern portion is zoned R7A. Each of these zoning designations allow for residential uses. Surrounding land use includes residential apartment buildings to the west, residential apartment buildings and a public school (IS 318) to the north, commercial warehouses, residential buildings and a private school to the east and the Former Pfizer Site C BCP site (site no. C224288) and a charter school to the south. Past Use of the Site: From 1887 through 1918, the site was comprised of mixed commercial and residential properties, including a synagogue, a church, a Mission, laundry, tailor shops and bakeries. A portion of the storage yard of an iron works factory that was replaced by a bottling facility by 1904 was also present at the southwestern-most corner of the site. By 1947, an adhesive manufacturing facility operated in the south-central region of the site at 255/257 Wallabout Street (later Pfizer Building 47), and a lumber yard was present at the west end of the site. A taxi garage located at 249 through 253 Wallabout Street (later Pfizer Building 52) maintained two gasoline underground storage tanks (USTs) and a five-story residential building with delivery services at ground level, located at 58/60 Walton Street, was serviced by a 2,000-gallon fuel oil tank installed in the sidewalk. Pfizer started using the western region of the site circa 1954 for employee parking and warehousing purposes. The residential buildings along Harrison Avenue were demolished between 1959 and 1961 and replaced by more parking space for Pfizer employees. A small sheet metal workshop was also present at 262 Wallabout Street, close to the southeast corner of the site. By 1977, the majority of the eastern region of the site had been redeveloped into a parking lot and Pfizer used most of the site for parking and warehousing purposes. The small sheet metal workshop was demolished by 1986 and, between 1991 and 1992, the entire block had been razed and has remained vacant to date. Site Geography and Geology: Subsurface soils consist of historic fill materials to a depth of approximately 7 to 10 feet below the surface, followed by silty-clay and fine sand. According to the USGS topographic map for the area (Central Park Quadrangle), the elevation of the property is approximately 16 feet above mean sea level. The area topography is generally flat with little relief and no significant elevation changes. Groundwater

FORMER PFIZER SITE A (Continued) **S123159099**

occurs beneath the site at a depth of approximately 6-10 feet below grade under perched water table conditions. Based on previous studies performed at the site, groundwater flow is generally to the east. The site is not located within a designated flood zone area. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and lead in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil is being managed under a Site Management Plan. Prior to Remediation Soil and groundwater were analyzed for emerging contaminants (ECs), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern include lead and SVOCs. Soil SVOCS and metals exceeding Unrestricted Use Soil Cleanup Objectives (UUSCOs) were detected in soils throughout the site. SVOCs and metals were found to exceed UUSCOs down to 8 feet below ground surface (ft bgs). A total of 5 locations where levels of lead exceeded the hazardous waste threshold were identified across the site. For SVOCs, the maximum concentration of benzo(a)anthracene was 32 parts per million (ppm) as compared to the UUSCO of 1 ppm, benzo(a)pyrene was 25 ppm (UUSCO is 1 ppm), benzo(b)fluoranthene was 23 ppm (UUSCO is 1 ppm), chrysene was 30 ppm (UUSCO is 1 ppm), and indeno(1,2,3-cd)pyrene of 13 ppm (UUSCO is 0.5 ppm). For metals, the maximum concentration of lead was 4,310 ppm (UUSCO is 63 ppm), mercury was 15.7 ppm (UUSCO is 0.18 ppm), arsenic was 81.1 ppm (UUSCO is 13 ppm), and barium was 5,910 ppm (UUSCO is 350 ppm). Only two VOCs (acetone and methyl ethyl ketone) were detected at concentrations slightly exceeding the UUSCOs; however, these are common lab artifacts and are not considered to be site-specific contaminants of concern. Several pesticides were detected at concentrations nominally exceeding their respective UUSCOs, including 4,4-DDD at 0.035 ppm (UUSCO is 0.0033 ppm) and 4,4-DDE at 0.080 ppm (UUSCO is 0.0033 ppm). For PCBs, the maximum concentration of PCB-1260 was 0.18 ppm (UUSCO is 0.1 ppm). Emerging contaminants (ECs) were also detected in soil samples collected from the shallow intervals down to 17 ft bgs. For example, the maximum concentrations of perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS) were 378 parts per trillion (ppt) and 2,490 ppt, respectively. Data does not indicate any off-site impacts in soil related to this site. Groundwater Concentrations of naturally occurring metals were detected in groundwater at concentrations exceeding the ambient water quality standards (AWQS). The maximum concentration of iron was 871 parts per billion (ppb) (AWQS is 300 ppb), manganese was 43,900 ppb (AWQS is 300 ppb), and sodium was 193,000 ppb (AWQS is 20,000 ppb). ECs were also detected in groundwater samples. The maximum concentrations of PFOA and PFOS are 204 parts per trillion (ppt) and 154 ppt, respectively. No VOCs, PCBs or pesticides were detected at concentrations exceeding the applicable AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor Trichloroethene (TCE) was detected in soil vapor at concentrations up to 50.5 micrograms per cubic meter. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 12/1/05 - Obligado - Review Baseline Assessment Report, submitted by Delta, 10/4/02. location had 2 4000 gallon gasoline and 1 4000 gallon Deisel UST, an dformarly 9 550 gallon USTS removed in 1990. A total of 9 boring locations and 16 soil samples collected. During UST installation, excavation base sample collected shows 6190 ppb MTBE. Sensitive Receptors reported are 3 story residence with basement downgradient and across the street. Sensitive Receptors reported are 3 story residence with basement downgradient and across the street 80 ft to west. Closest Public School (PS 122) is 660 ft west of the subject site. East River 5500 ft west and English Kills 5500 ft east. USGS observation well 2600 ft southwest. Ground water located at 9 ft bgs. soil underlain by coarse silty clay with lenses of silty sand. Ground water flow to southwest. Soil Analytical Results: SB1(5-9') : 632 ppb benzene, 5230 ppb toluene, 30,400 ppb xylenes; SB6(9-9.5) : 410 ppb benzene, 2250 ppb toluene, 15800 ppb xylenes; SB7(8-9.5) : 74.4 ppb benzene, 4240 ppb xylenes; SB9 (7-8') : 176 ppb benzene, 3310 ppb toluene, 17100 ppb xylenes, 380 ppb MTBE; SB9 (18-20) : 1010 ppb MTBE. SS1 Base - 6190 ppb MTBE. Ground Water Analytical results: SB6 : 294 ppb benzene, 92.4 ppb tolune, 5240 ppb MTBE; SB7 : 18.3 ppb benzene, 48.7 toluene, 74.5 ethlybenzene, 447 ppb xylenes SB8 : 198 ppb MTBE SB9 : 5560 ppb benzene, 2280 ppb toluene, 3190 ethylbenzene, 11200 xylenes, 6500 ppb MTBE Subsurface Investigation Workplan, submitted by AGS. 933 tons of petroleum

BP SERVICE STATION #48360 (Continued) **U001833054**

impacted soil transported off site by BP. Site is currently an operating BP station. 2 Gw samples collected from Tank Mat Wells show 7.4 ppb benzene and 140 ppb MTBE at MW-North and 1.4 ppb benzene and 45 ppb MTBE at WM-South. Proposes the installation of 3 wells along the western site boundary. 12/7/05 - Obligado - Meeting with Gaseteria and ASR. Well install scheduled for Dec. 05. 12/19/05 - Obligado - Voice mail from Steve Muller on 12/15. Says drilling has been rescheduled for either 12/21 or 12/22/05. 1/5/05 - Obligado - Spoke with Steve MUller, 4 wells installed at the site, 1 additional existing well was found. All 5 wells were sampled. 3/8/06 - Obligado - Review Investigation Summary Report, submitted by ASR, dated February 28, 2006. 4 wells installed, 1 well preexisting. GW between 6 and 8.5 ft bgs. Soil samples collected from a 12 inch interval at the ground water intersect. No mention of PID readings or split spoon sampling. Ground water samples collected 1 week later. Notable Soil Results in ppb: MW-5 - 12800 ppb xylenes MW-3 - 9200 ppb MTBE Notable GW Results in ppb: MW-1 - 3000 benzene, 920 ethylbenzene, 4610 xylenes, 1200 MTBE, 12780 total VOCs MW-2 - 250 benzene, 290 toluene, 3200 MTBE MW-4 - 180 benzene, 1500 MTBE MW-5 - 120 MTBE Recomends: Further investigation is necessary, survey to determine flow direction, further delineation of plume required. 4/27/06 - Obligado - Sent letter requiring submission of workplan by 5/20/06 5/16/06 - Obligado - delivery confirmation on 5/1/06. 6/9/06 - Obligado - Sent email to S. Muller requiring immediate submission of workplan. 7/19/06 - Obligado - Meeting with ASR, Gaseteria, and DEC. According to ASR, additional delineation is not possible due to subway. Will submit a RAP. 9/12/06 - Obligado - On 9/7/06, I emailed Gaseteria a Multi Site Stipulation Agreement including this site. Sent via mail on 9/12/06. Due date for RAP according to Corrective Action Schedule is 9/15/06. 11/1/06 - Obligado - RAP received. 12/19/06 - Obligado - Reviewed RAP. Disapprove of RAP. Only 2 application points proposed. Required at least 2 more additional points to cover treatment area. Also required more detailed OM&M plan. Sent RAP Addendum required email to Steve Muller. New due date for RAP Addendum is January 29, 2007. 2/1/07 - Obligado - Received RAP Addendum. Proposed 4 application wells. Detailed pre and post injection monitoring parameters. Quarterly sampling for VOCs and Heterotrophic Plate Count. Treatment volume is 15000 ft3. Anticipate 12-16 months to remediate the site using this method. Sent email RAP approval. Due date for BioRem application is May 13, 2007. 4/25/07 - Obligado - Spoke with Steve Muller. He has procured a drilling contractor to install Biorem Injection points. 5/13/08 - Obligado - Review 1Q08 Update Quarterly Report - Bioremediation began on May 2, 2007. 4 bioapplication wells were installed. Biorem is injected monthly. BTEX ND in MW1, MW2, MW3, MW4. BTEX in MW5 is 4023, ND MTBE. LNAPL not detected. 6/24/08 - Obligado - Review 2Q08 update report. BTEX ND in MW2, MW3, and MW4 but 5635 ug/L in MW5. Heterotrophic Plate Count is 44,000 in MW5 compound to 1500 in June of 2007. Proposes continued monthly applications of bio-solution and concentrating application adjacent to MW5. Proposes continued monitoring. 8/20/08 - Obligado - Meeting with Gasteria, ASR, DEC. They will investigate the depath to subway next time on=site to determine if it is a barrier to flow. 3 more months of injections, then evaluate effectiveness. Soil manifests from excavation activites by BP/Delta. 12/9/08 - Obligado - Review 3Q08 quartelry report. MW5 had 6000 BTEX. No subway depth investigation. last injection will be December. 5/11/09 - Obligado - Review Investigation Work Plan - proposes installation of 2 wells

BP SERVICE STATION #48360 (Continued) **U001833054**

off-site and submission of a report within 60 days. Approved Work Plan. Report due 7/11/09. 1/15/10 - Obligado - I reviewed the RIR report. On-site, max BTEX was 693 in MW5 all other wells at or close to ND. This data was from April 2009. I emailed Steve Muller to inquire if there were more up dated analytical results from the 4th quarter. He forwarded me the 4th quarter results, BTEX in MW5 increased to 3200 ug/L. There were some SVOC impacts in the new. The two downgradient wells were ND for VOCs. I sent a letter to Gaseteria requiring additional investigation on-site to investigate continued gw contamination at MW5. Soil borings and wells are required in closer proximity to the USTs. Sent a letter requiring an investigation workplan within 45 days. 5/13/10 - Obligado - I reviewed an investigation work plan for the 3 additional borings/wells as required. 3 wells are proposed around the tank field to determine if there is a continuing source to the ground water contamination at MW5. A report will be submitted in 90 days. I sent approval for the report. 2/8/11 - Obligado - I reviewed the 4Q10 report. BTEX was detected up to 4500 ug/L in newly installed well MW8. 2/10/11 - Obligado - I emailed a letter to Gaseteria approving the Investigation report and requiring a RAP within 90 days. 2/16/11 - Obligado - GAseteria meeting with DEC. RAP due by the end of May 2011. 10/6/11 - Obligado - GAseteria submits RAP for MNA. 10/3/13 - Obligado - 2nd Quarter 2013 report. After decreasing concentrations for several quarters in MW5, recent monitoring shows upd to 0.15 ft of free product in MW8. As per 9/26/13 meeting, Gaseteria will place product socks in wells. BTEX up to 2,930 ug/L in MW8. 11/6/14 - Obligado - Notes from meeting with Gaseteria, JCB, Reliant. At the request of the DEC, VEFR has been performed at the site twice monthly thorugh June 2014, and is now on a monthly schedule. Product last recorded on 11/13 in MW8. Highest recorded dissolved is 5,500 ppb in MW9. VEFR events have been suspended and gaseteria will continue monitoring groundwater. 10/22/15 - obligado - Gaseteria, JCB, Reliant and DEC met to discuss the Gaseteria portfolio. Notes from the meeting agenda provided by JCB - VVEFR events had been suspended as product had not been detected in MW8 since 12/14. The highest total dissolved BTEX is 3,870 ug/L in MW9. Overall, dissolved concentrations show a downward trend. DEC Obligado stressed that the DEC was still concerned about potential impact to the G Line subway system immediately adjacent to the site. We discussed potential remedial options, such as use of a mobile MPE system that Gaseteria was considering purchasing. I indidcated that based on the geology of the site, which the clayey soils in the impacted area along Union ave, and the relatively small size of the site and the small area of impact, mobile targeted MPE events may be an effective strategy, and that if they purchase the system, the DEC would likely be approved the use on this site. After the meeting, DEC spill hotline received a spill report from NYCT transit, spill no 1507634, reporting that maintenance crews cleaning the vent shaft immediately adjacent to the site had reported the presence of oil seeping through the vent structure concrete wall and in to the vent. The spill was reported by NYCT McDermot 212 712 4120, who spoke with Rashad Omar the duty desk officer. After discussion with Demeo, the spill has been assigned to me as well, as the case manager for the Gaseteria gas station site, and the NYCT Subway Spill Manager. I spoke to McDermot and he said that his workers noticed a smell of petroleum and saw a small amout of oil seeping through the wall of the structure. Absorbents had been applied. I scheduled a site inspection for the following morning. I

BP SERVICE STATION #48360 (Continued) **U001833054**

called Francine Maibauer regarding the incident. NYCT System Safety also reported a duplicate spill number 1507641, which I subsequently closed. She will have Daniel Yu attend the meeting the following day. I told her there is an open 3rd party spill for 152 Union, which is likely the source of the seepage. 12-18-18 - Obligado - I received the 3rd Quarter 2018 report. The report documents the most recent sampling performed on 8/24/18, and contains historical BTEX and groundwater monitoring data going back to 2005. During the most recent event, depth to groundwater ranges from 4.26 ft to 8.07 ft below surface. Ground water flows to the southwest. The maximum BTEX concentration was found in MW9, with total BTEX of 436 ppb. MW8 had 418 ppb BTEX. These are the only 2 wells which have exceedences and both MW8 and MW9 were located in close proximity to the Gasoline UST field. MW1, MW10, MW2, MW3, MW4, MW5, ASR6, and ASR7 were all below TOGS groundwater standards. The report recommends spill closure due to decreasing groundwater trends. After review of the report, the Department approves the request for spill closure based on the following: 1) The plume is contained onsite and is localized to a hotspot around the tank field 2) Concentration trends are decreasing in MW5, MW8, and MW9. MW5 has decreased from a high of 9,040 ppb BTEX in 2006 to 1.6 ppb in 2018. MW8 has decreased from 4,601 ppb BTEX in MW8 to 418 ppb in 2018. MW9 decreased from 5610 ppb BTEX in 2011 to 436 ppb BTEX in 2018. Additionally, the area extent of the plume is shrinking and is now limited to the vicinity of the tank field. 3) There is no significant off-site plume migration. Only low levels of dissolved VOCs were observed in off-site downgradient wells. 4) There has been no further intrusion of petroleum sheen into the MTA vent since the report in 2015. 5) The spill is attenuating naturally. 6) This spill no longer appears to be a threat to human health or the environment. "

Remarks: "Contaminated soil and groundwater found. Data reported to DEC by Delta despite knowledge by Gaseteria since 8/5/2002."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.
