Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 1/2/2004 Reassigned from Rommel to Sun. (Also refer to Spill # 93-03325 for this site) 07/08/04 This spill is closed. To be investigated and remediated under Spill #93-03325. 01/12/06-The spill is reopened since this spill was caused by gasoline, while Spill #93-03325 was caused by #6 fuel oil. 1/12/2006 - Feng - Called Pfizer Inc and spoke with Manuel Lopez (718-780-0947). He remembers that they have been sent the some report to DEC. He would contact his engineer and find the information DEC need and get back to DEC. (RJF) 1/12/2006 - Feng - Faxed the two spill report to Samantha Plourde (718-780-8380) and request to send 1) tank closure report, 2) any other site investigation/site assessment, to DEC. (RJF) 1/27/2006 - Feng - Reviewed the Tank Closure Report of 12/10/1999, sent on 1/20/2006 by Pfizer. These 6 USTs were discovered during pre-construction activities in the northwestern corner. The site was a former Texaco gasoline station some time in the 1940's. 6 USTs in the northwestern corner of the site were confirmed by the insurance maps. Pfizer registered and removed the USTs performed from 5/17/1999 to 9/30/1999. 6 soil boringw were done prior the removal activities. Analyticals show SB-6 (10'-12' bg) with high contamination, 840 ppb Toluene, 10,000 ppb Ethylbenzene, 51,800 ppb Xylene, 20,000 ppb 1,3,5-Trimethylbenzene, and 40,000 ppb 1,2,4-Trimethylbenzene. To further delineate the SB-6, SB-6A to SB-6E (12'-14')were drilled and sampled, lab result indicated low VOCs. And removed all the soil above the clay layer (12' bg plus 0.5'-1.0' of the clay). The tankks found no carcks or holes. After tank removal, precipitation occurred for several days and the rain water run into the excavation, water removed and tested, found 6,047 ppb BTEX. All the piping associated with the USTs were removed. Soil removal extented to where the pre-USt removal soil samples contained concentration of VOCs below DEC STARS. Total of 286.18 tons of soil were removed. The report attached with lab analyticals sheet for soil sample, but not indiated the location of sample taken and not mentioned in the narrative text. Backfilled with clean sand and permanent asphalt pavement was placed on top. Requested spill closure. (RJF) 1/27/2006 - Feng - Send letter to Pfizer request of 1) groundwater sample in the vicinity of the former SB-6 boring location, 2) clarification of the soil sample

FORMER PFIZER PROPERTY (Continued) **U003074670**

presented in the lab report attached in App C. Result due 4/3/2006. Faxed to Scott Glash (Roux). (RJF) 02/09/06: This spill transferred from R.Feng to S.Kraszewski. 03/06/06: Recieved letter from Pfizer, dated March 2, 2006. Pfizer is requesting that the Department suspend the April 3rd deadline for the subsurface investigation. Pfizer believes that the Department is not familiar with all documentaiton related to this spill. Pfizer will collect and review all historic documentation and correspondence related to the closure and removal of the gasoline USTs. This information will be submitted to the DEC by March 15, 2006. Pfizer believes that based on the contents of this letter that an additional investigation will not be necessary. - SK 03/24/06: Received detailed summary of closure activities from Pfizer. Currently under review. - SK 03/27/06: Reviewed all documents for the UST closure. This additional information was sent in response to the DEC's request for a complete subsurface delineation both on-site and off-site. Pfizer believes that with the information supplied in this closure summary that there is no need for further investigation and NFA should be issued. Pfizer has also included documentation and explanations in response to R.Feng's letter issued January 2006 and previous DEc requests: No post-exc samples taken: Pfizer contests that retrieving samples would cause stockpiling of contaminated soil and leave the excavation open, which is a hazard. Instead, they conducted soil borings to eliminate the hazards associated with an open excavation. Furthermore, Pfizer feels that the soil borings properly delineated the horizontal extent of the contamination since they were conducted until no VOCs were detected by PID. Rainwater from the excavation was sampled and found to contain high levels of BTEX: It was a waste characterization sample, a composite from several sources. Pfizer states this water sample was mixture of rainwater from the USTs, the excavation and waste water used to clean each UST. A soil samples with highly elevated VOC concentrations was detected but it was not mentioned in the report summary nor is it given a location on the site plan: This sample was alos a composite sample, collected from each UST. Sand material was discovered within the USTs and this sample was used to characterize the tank solids for proper disposal. It did not come from the excavation. R.Feng requests GW samples: Pfizer attached results from two GW samples taken from the former tank area in June 2004. The samples were takenf rom 8 to 10 fbg using low-flow purging techniques. Actetone was detected in both samples, a common laboratory contaminant. Naphthalene and Xylenes were detcted but below GW standards. Boring logs, PID logs, information of perched GW and explanations of work methods are also included in response to a February 2000 letter from DEC to provide information for these shortcomings in the UST closure report from 1999. - SK 03/27/03: Called Manuel Lopez to ask about the report. He said it would be best to contact Omar at Roux & Associates. I called and left Omar (631-232-2600) a voicemail to call me back. - SK 03/28/06: Rob Kovacs for Roux and Associates called in place of Omar. I asked Rob about the clay layer and he said based on historic production wells used by Pfizer and Roux & Associates' experience with the surrounding area they have mapped out the extent of the clay layer. Rob is emailing me a map with the known extent of the clay layer. - SK 03/31/06: Received PDF of the geologic cross section for that area and an overhead map. After careful consultation and consideration with supervisor J.Kolleeny, we feel that based on all of the available information at hand, this spill poses no threat to GW, the

VCP:

Name:	PFIZER INC. (CITRIC BLOCK)
Address:	630 FLUSHING AVE.
City,State,Zip:	BROOKLYN, NY
Program Type:	VCP
Site Code:	56802
HW Code:	V00067
Site Class:	C
SWIS:	2401
Region:	2
Town:	New York City
Acres:	1.750
Date Record Added:	11/30/2000
Date Record Updated:	03/23/2007
Updated By:	dcwalsh
Site Description:	"The Citric Block Site is located in the Williamsburg section of Brooklyn, New York. Gerry Street, Harrison Avenue, and Union Avenue border the Citric Block Site to the north, east, and west, respectively, while Flushing Avenue border the Citric Block Site to the south . The Citric Block Site is situated within a high-density, mixed urban residential commercial industrial zone, approximately one mile east-southeast of the East River. Pfizer decommissioned the Citric Block Site for future redevelopment and/or beneficial use. As part of the decommissioning process, all Citric Block Site buildings were demolished, with demolition activities being completed in August 1995. Presently, the reinforced-concrete slab foundation is the only aboveground remnant of the former buildings. The concrete slab is continuous throughout most of the Citric Block Site, and varies in thickness between approximately O.5 and 1.5 feet. The remaining portion of the Citric Block Site is covered with asphalt pavement approximately two inches thick with a four-inch aggregate subgrade. The entire Citric Block Site is surrounded by a 10-ft high chain-link fence, and is under continuous security surveillance. The Citric Block Site was developed for chemical manufacturing between 1854 and 1888 and it operated continuously until 1985, and was demolished in 1995. Redevelopment is likely to include paved areas for outdoor activities in the center of the Citric Block Site and a small park in the western portion. The remainder of the Citric Block Site would be Capped by either the existing concrete slab or by new pavement. The cap will prevent any direct exposure of future users of the property with fill material. Institutional controls involving Deed restrictions have been implemented. The property can be used for industrial/ commercial usage. Site Management Plan requires proper management of all future subgrade construction activities and proper notification to the Department."
Env Problem:	"The site has been cleaned up. Post remedial groundwater monitoring was satisfactory."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 4/2/2001 Sangesland and NYCDEP Wai Man Wan made a site visit to the Pfizer facility to look for a reported Acetone leak. After initial inspection, DEC - ECO Shawn Dussault arrived to make a similar inspection of the roof top equipment. According to Pfizer Engineer Mr. Daniel Shiel the following is a description of the process and then the system problem: Process: Acetone is used in the process of coating pills. After the material leaves the pills bath area, the vapor acetone is collected and piped to a chiller/condensor on the plant roof. This Edwards Unit chiller/condensor has 3 stages which drops the vapor temperature in 3 steps to 85'F below zero. At that point the acetone is in liquid form and is recovered via pipe and collected. This material is then tanked and removed from the site. (Pfizer states that a company purchases this recondensed acetone from them). Problem: Somewhere in the second stage of this unit is a leak. The Pfizer representitive stated that there is probably a crack in the line someplace, but the exact location has not been found. Pfizer states that they first became aware of the problem in early March 2001 and took the system out of service for approx. 10 days to perform routine maintenance to the unit and to try to find the problem. The specific problem was not found and not fixed. The equipment was put back into operation. At the site visit, it was clear that acetone was leaking to the atmosphere. Pfizer says that they have done a mass balance which shows that they are still retreaving approx. 91% of the total process acetone, above their legal limit (limit is someplace in the low 80's %). Pfizer also had LEL meters on the equipment to show that they have remained below approx 50% of the LEL explosive limits. However, there is no alarm on this meter. The meter is read several times per day by plant personnel. Pfizer rep also said the units are actually 2 separate parallel process lines running at the same time. He believes that the

FORMER PFIZER PROPERTY (Continued) **U003074670**

leak is only in one side of the system. The system can operate with only one side of the process system in operation, only at a lower volume and therefore a lower pill production rate. In order to repair the system, the unit would need to be lifted off the roof of the building, lowered to the street level, opened and re-welded. Pfizer said they had an equipment rep on site later today to quote them on the cost and time needed to build a replacement unit. ECO Dussault issued 2 tickets. 6NYCRR Part 595.3.a.2.ii and .iii with a May 17, 2001 court appearance date. Since this is a release to the atmosphere it may include the NYSDEC Air Unit. Since it is a material AFTER production (of the pills) it may be considered by NYSDEC RCRA Dept. 4/3/2001 Officer Dussault spoke with Dan Shiel (Pfizer) later on the afternoon of 4/2. Mr. Shiel said that Pfizer met with the manufacturer of the Edwards unit and he said it would take about 6 to 8 weeks to build and install a new unit. Until that time, Mr. Shiel said they may try to find a way to run just the first and third stage of the system and bypass the second unit. This will still allow some condensation of the process acetone and may allow the production line to operate (perhaps at a reduced rate) "

Remarks: "caller states that the compnay has had a leak since june on the roof of the building from the edwards unit. the do not want to fix this due to the down time and the cost. dennis pappas engineer of charge"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 7/6/04 - AUSTIN - TRANSFERRED FROM GARDINEER TO SUN - RELATED TO SPILL #990181 - END 07/08/04-Sun- Also refer to Spill # 99-01811 for the same site. 02/09/06: This spill transferred from R.Feng to S.Kraszewski. 03/06/06: Recieved letter from Pfizer, dated March 2, 2006. The letter states that the Department's verbal request for documentation of UST closure from 1993 is unnecessary since significant remedial work has taken place to address this spill since 1993 and also an NFA letter has been issued. The NFA supposedly declares that the VCA (Voluntary Cleanup Agreement) performed by Pfizer has been completed. SK spoke with Manuel Lopez, Director of Environmental Health and Safety for Pfizer. I requested a copy of the NFA letter be faxed for confirmation. - SK 03/07/06: Reviewed NFA letter faxed by Pfizer. Will discuss with J.Kolleeny and K.Tang. - SK 04/05/06: Apparently, when this site became involved with the Voluntary Clean-Up Agreement (VCP) the spill number should have been closed. This spill closed out. - SK "

Contact Name:	RUSSEL DOWNEY
DEC Memo:	"02/02/11- Zhune spoke to Russel Downey 908-413-0811. Site is a Pfizer Factory. Property is going to be sold. During investigation found groundwater contamination. Requested report. Mr. Russel will send the report. 04/04/12-Roux Associates sent the Petroleum Investigation Report dated June 24, 2011. Property solution performed Phase I and Pase II subsurface invetigation activities at site E and F on behalf of Acumen Capital Partner, LLC (Acumen)(buyer). PhaseII.- Included the completion of 24 soil borings, with the collection of 24 soil borings samples and 7 groundwater samples were collected from temporary well. Of the 24 borings completed 12 were located on Site E and 12 were located on Site F. Four (4) of the seven groundwater samples were collected on Site E, and the remaining three collected on Site F. Only The propety solution's borings designated SB-19,SB-20/GW-20, SB-21, SB-22/GW-22, SB-23, SB-24 and SB-25 were completed within the former Main Plant near the former Fitness Center. The analytical results inidcated that soil and groundwater collected from boring SB-22/GW-22 (located within the Former Fitness Center) contained elevated concentrations of VOCs. The soil samples collected from the four (4) borings located near SB-22 as well as borings located at the west end of the former Main Plant (SB-19 and SB-20) did not have any exceedances. The groundwater sample collected from boring SB-20/GW-20) at 15 to 16 ft bls. detected VOCs below the applicable limit. In response to the identification of groundwater impacts in phase II beneath the Main Plant, Roux Associates on behalf of Pfizer conducted focused investigation activities in April, May and June 2011. The focused investigation included the installation of four(4) deep wells BMW-10, BMW-11, BMW-12, BMW-13 and a total of three (3) soil borings TPNE, TPSE, TPSW. Groundwater samples were collected from wells BMW-10 trough BMW-13 and soil borings TPNE, TPSE, TPSW. The analytical results indicated the following VOCs (BTEX, 1,3,5 trimethybenzene, Isopropylbenzene, naphthalene, n-propylbenzene, and p-isopropyltoluene) were detected above the

FORMER PFIZER PROPERTY (Continued) **U003074670**

acceptable limits in the groundwater sample collected from BMW-11. LNAPL was found in well BMW-11 at a thickness of 2.76 feet. A sample of LNAPL was collected for gas chromatography product characterization analysis. The LNAPL was identified as leaded gasoline. The groundwater sample collected from boring TPNE indicated the following VOCS(BTEX, 1,3,5 trimethybenzene,Isopropylbenzene, MTBE, naphthalene and n-propylbenzene) detected above the acceptable limits. BP evaluated Groundwater flow directions in shallow perched water. BP reported groundwater flow to be in the northeast direction at the BP service station. Pfizer's assessment evaluated Groundwater flow directions in deep water. Pfizer reported that Groundwater flow in the deep zone was to the southwest. 04/11/12- Roux Associated Inc. sent the Supplemental Petroleum Investigation Report dated July 22,2011 05/07/12-This spill has been transferred to Hassan Hussein of the Hazardous Material Unit. 1/24/2013 - Raphael Ketani. The spill case for this Commercial Property at 630 Flushing Avenue, Brooklyn, 11206 was transferred to me. The spill was called in on 2/1/11 due to the discovery of oil contaminated soil samples. The block and lot are 1720 and 1. The deed date is 2/11/11. The property was sold by Pfizer, Inc., 235 East 42nd Street, NY, 10017 to Acumen Capital Partners (ACP) BK I, LLC, 37-18 Northern Blvd., Ste. 300, LIC, 11101. PBS is #2-017329. There were 31 tanks. Twenty five (25) were closed, 1 was converted to non-regulatory use and 5 are active. The tank sizes ranged from 62 gals. to 30,000 gal. The products contained were #6 oil, #2 oil, diesel, gasoline and other. Presently, there are 6 active tanks. They range in size from 62 gals. to 20,000 gals. The two 20,000 gal. tanks contain #6 oil and others (300 gal., 275 gal. and 62 gal.) contain diesel fuel. A 275 gal. tank contains #2 heating oil is also active. 3/18/13 - Raphael Ketani. Matthew (Mat) Carroll, P.E., of Tenen Environmental, LLC (646) 606-2332, ext 103 [121 West 27th Street, Suite 1004, New York, NY 10001, mcarroll@tenen-env.com] called today regarding the site. He is the new consultant for ACP. I tried to contact him, but could only leave a message. Mr. Carroll called me back. He said that Pfizer is still involved in the remediation of the property, even though ACP bought the site. They are the responsible party. Mr. Carroll will send me the two ROUX reports for my review. However, Pfizer is contending that there is a gas station upgradient which is the source of the contamination. Mr. Carroll sent me the following contact information: Please address all correspondence related for Spill #1011062 to: Robert Kovacs, Sr. Environmental Scientist Roux Associates, Inc. 209 Shafter Street Islandia, New York 11749 rkovacs@rouxinc.com Please also cc Pfizer, the site owner and myself. Office addresses and email addresses are as follows: Matthew R. Basso, MS, CHMM Manager, ERT Pfizer 100 Route 206N (M/S 414) Peapack, NJ 07977 Matt.Basso@pfizer.com Jeffrey Rosenblum ACP BK 1 LLC The Standard Motor Products Building 37-18 Northern Boulevard, Suite 300 Long Island City, NY 11101 jrosenblum@acumenny.com 3/28/13 - Raphael Ketani. I reviewed the 6/24/11 Petroleum Investigation Report which was produced by Roux Associates, Inc. for Pfizer. Groundwater impacts were found under the main plant on the north side where the former Fitness Center used to be. Roux did investigations during April, May and June of 2011. Borings and wells were installed. The data indicates that the source is the BP Service Station (formerly AMOCO; active spill #0104597) to the north at 655 Flushing Avenue. The BP investigation was limited to the shallow soil and groundwater above the silty clay (which averages 10 feet bgs). Pfizer investigated the groundwater in the deeper zone.

FORMER PFIZER PROPERTY (Continued) **U003074670**

Roux states in the report that their evidence for BP being the source is the following: 1) BP is 70 feet away from the main building (site E) and has a long history of impacts to the the soil and the groundwater 2) petroleum contamination was found beneath the Pfizer main plant as part of utility work which took place by the utility company (they don't state who this is, but it was probably Con Ed) - the utility company filed reports regarding the contamination 3) the deeper groundwater zone is hydraulically downgradient from BP 4) almost 3 feet of NAPL was found on the south side of Flushing Avenue and the fingerprint of the oil indicated that it was leaded gasoline 5) Roux identified extremely elevated VOC concentrations in the deeper groundwater zone - there were 38,700 ppb of total BTEX in the groundwater 8 feet south of BP in the deeper zone 6) Pfizer had 2 small USTs under the north part of the main buildng (former Fitness Center) - the soil results did not indicate any impacts from the USTs - the USTs were in 12 inches of concrete in an intact vault and were decommissioned in 1988 7) information from Pfizer and BP for routine groundwater sampling provides data from the south side of Flushing Avenue supporting that the Pfizr USTs did not leak 8) MTBE is present in the deeper groundwater samples from the Pfizer site, but the timing does not support that the impacts are related to the Pfizer operations - Pfizer decommissioned the USTs in 1988 before the widespread use of MTBE in 1992 - MTBE bearing gasoline was stored at BP for years and BP had many releases of gas - in 2001 there was a gasoline release with MTBE where the MTBE concentrations were up to 385,000 ppb in the groundwater The main plant consists of buildings 55, 16, 16A, warehouse A and warehouse AA. The majority of the main plant (site E) is buildings 16 and 16A - 8 story buildings.
Operations at the plant ceased during November 2008. On 2/11/11, the ownership changed to Acumen Capital Partners (ACP) BK I LLC. Site F is the parking lot to the south. Property Solutions performed the Phase II during October 2010 and January 2011 for sites E and F. They did 24 borings. Seven (7) gorundwater samples were taken from temporary wells. Twelve (12) borings were performed at site E and 12 borings were performed at site F. Four (4) groundwater samples were taken at site E and 3 groundwater samples were taken at site F. A small portion of the sampling was done near the former Fitness Center in warehouse A and pertains to this investigation. The borings and wells were SB-19, SB-20/GW20, SB-21, SB-22/GW-22, SB-23 to SB-25. Groundwater from G-22 was taken on 1/6/11 and had elevated VOCs of gasoline. The sample was collected at 16.5 to 20 feet bgs, below the perched water table at 10 feet bgs. Anthropogenic fill is present from 5 to 12 feet bgs. Silty clay is present throughout the area and is 15 feet thick. The Upper Glacial Aquifer underlies the silty clay at 20 to 30 feet bgs. Thin perched lenses of groundwater are present throughout the area. A perched water table is present at 5 to 8 feet below the site. The perched water table follows the surficial topography of the clay. The clay is 6 feet below the southwest part of the BP site and 11 feet below the northeast part of the site. The BP wells are in the perched horizon. BP reported that the groundwater flowed to the northeast. Permanent wells BMW-10 to BMW-13 indicate that the deeper groundwater flows to the southwest. The deeper groundwater is likely affected by pumping by NYCT for its subway tunnels. Their pumping wells are to the west of the main building. The pumping also likely affects the vertical gradient. Gauging took place at BMW-10 to BMW-13 on May 3 to June 8 during 2011. LNAPL was found to be 2.76 feet thick at BMW-11 on 6/8/11. Property Solutions

FORMER PFIZER PROPERTY (Continued) **U003074670**

did borings SB-19 to SB-25 near the Fitness Center. Only SB-22 at 7.5 to 8 feet bgs had soil VOCs that were above the unrestricted CP-51 standards. There were 5 VOCs above the standards. Naphthalene at 16,000 ppb, n-butylbenzene at 14,000 ppb, n-propylbenzene at 7000 ppb, ethylbenzene at 2300 ppb. The soil samples from the rest of the borings had results that were below the unrestricted standards. On 1/26/11, Property Solutions collected groundwater samples from GW-20 and GW-22. Low levels of BTEX were detected at 15 to 16 feet bgs. The sample from GW-22 beneath the Fitness Center had many VOC hits that were above the unrestricted standards. Permanent well BMW-11 had many VOC hits that were above the unrestrictted standards. From 6/6/11 to 6/8/11, Roux took groundwater samples from 3 borings. All had samples with exceedences. Groundwater samples from boring TPNE (in the sidewalk at the south edge of the BP station) were taken at 13 to 15 feet bgs, 15 to 17 feet bgs, and at 17 to 19 feet bgs. There were many VOC exceedences amongst the samples. The highest BTEX result was from the sample from 13 to 15 feet bgs. The groundwater samples that were taken at 15 to 17 feet bgs and at 17 to 19 feet bgs from boring TPSW directly downgradient (southwest) of the station had low VOC hits. I finished my reivew of the 6/24/11 Petroleum Investigation Report. I looked at Plate 1 - Generalized Hydrogeological Cross Section - of the report. All of the wells - temporary and permanent - were partially screened at the top in the silty clay. This is not proper practice. There is no explanation in the report why this was done. Any groundwater samples that would be taken from these wells would entrain some of the clay sediment due to disturbance of the clay as a result of the collection process. So, the geochemistry of the groundwater is not representative of just the Upper Glacial Aquifer. Analytes which had adhered to the clay flakes were incoporated in each groundwater sample. Additionally, water samples which are taken from soil borings typically do not have as high concentrations of analytes as would samples from permanent wells. Also, from the boring logs in the report, it is not entirely clear that the perched aquifer and the glacial aquifer are truely separated at a distance. If the NYCT is pumping groundwater, then their actions could cause some groundwater to seep down from above. _____ Comments by Ketani: ---------- The soil results from SB-22 for the sample from 7.5 to 8 feet bgs in the former diesel and gasoline USTs area(the former Fitness Center) had naphthalene and n-butylbenzene hits above 10,000 ppb. The ethylbenzene hit was 2,300 ppb and the n-propylbenzene hit was 7,000 ppb. Though the soil results for the samples from SB-21 and SB-23 to SB-25 which surround SB-22 did not have exceedences or were non-detect. The groundwater results from temporary well GW-22 in the former diesel and gasoline USTs area had high VOC exceedences in the sample from 16.5 to 20 feet bgs. However, the groundwater results from temporary well TPSW about 65 feet to the east and permanent well BMW-10 about 35 feet to the east have a small number of very low hits and no exceedences. These soil and groundwater results suggest that one of the UST systems probably leaked. More borings and permanent wells need to be installed in this area. Additionally, the BP Service Station that is referred to in the report has an active spill number, #0104597. According to a report in the e-docs, groundwater flow in the perched water table is due northeast, away from the Pfizer site. Also, MTBE was introduced to gasoline nationally during 1979. So, it is not impossible that there used to be MTBE bearing gasoline in the gas UST below the former fitness center location before the tank was

FORMER PFIZER PROPERTY (Continued) **U003074670**

removed during 1988. 3/29/13 - Raphael Ketani. Next, I reviewed the Roux Supplement to Petroleum Investigation Report dated 7/22/11. Of significance was that staff from Roux stated in this Supplement report that the former DEC case manager should obtain all of the UST and piping information for the BP Service Station from the respective DEC file. They also stated that the Phase I and the Phase II were not done for Pfizer. So, Pfizer can't vouch for the reliability of the reports. Also, they stated, Acumen Captial Partners may consider the reports to be confidential and may not feel comfortable releasing them to the DEC. However, Roux did provide some information regarding the USTs under the Pfizer site and neighboring facilities in this Supplement report. The staff from Roux stated that tank closure reports weren't required to be submitted when the tanks were decommissioned during 1988. They state that soil samples were collected from TPNE, TPSW, TPSE, BMW-10 to BMW-13, but the samples were not submitted to the laboratory for analysis. The information contained in the report consisted of documents related to the UST decommissioning which took place throughout the site and Sanborn maps. The 550 gal. diesel UST (#211) and the 550 gal. gasoline UST (#212) under the Fitness Center were pressure tested during 1984 and held the pressure (9/27/84 and 10/24/84 Tone Gasoline Tank and Pump Inc. letters). In a 12/28/88 tank decommissioning letter, it is stated that tanks #211 and #212 in the former Wha garage were cut up from 12/13/88 to 12/16/88. In the process of cutting them up, it was noticed that the gasoline UST had leaked into the vault. The gasoline was collected and the vault was ventilated in order to remove the vapors. It was noticed that the floor of the vault was pitted due to leaked gasoline. However, it was reported in the letter that the tank removal crew did not notice signs of chipping of the floor or any loose concrete. _____ Comments by Ketani: ---------- From the information in the 7/22/11 report, it is apparent that there was at least a gasoline spill. How the gasoline UST could have passed its integrity test in 1984 and be found to have leaked anyway is not clear. There are no details regarding how the testing was performed. So the test may not have been valid compared to later integrity testing methods. Additionally, the pitted floor suggests that the leaking had been going on for some time. Also, there still is no information regarding the locations of the associated piping for the USTs and the locations of the pump islands. Clearly, more investigation needs to be done. A draft letter was submitted to Hassan Hussein, EE III and head of Unit C, requesting that a work plan be submitted for conducting an investigation around and under the vault, next to any remaining piping and in the vicinity of the pump islands. Soil and groundwater sampling was requested. The letter was approved by Mr. Hussein and was sent out. A due date of April 30 was set for submission of the work plan. 4/15/13 - Raphael Ketani. Mr. Kovacs (631) 232-2600 tried to call me today regarding the March 29, 2013 letter and left a voice message. I tried to contact him, but could only leave a voice message. 4/16/13 - Raphael Ketani. Mr. Kovacs and I discussed the site and the soil and groundwater results for SB-22 and GW-22, respectively. I pointed out that the soil contamination results from the surrounding borings at the same level did not have exceedences. Also, the groundwater results for GW-22 were higher than a sidegradient well that was sampled at the same depth. I added that there was a letter in the Roux 7/22/11 report which stated that a gasoline leak had been discovered. Mr. Kovacs argued that all of the contamination was from

FORMER PFIZER PROPERTY (Continued) **U003074670**

the BP site across the street. I reiterated that the soil and groundwater results and the letter suggested a local source of contamination. I asked him for soil and groundwater contamination delineation. Mr. Kovacs stated that the tank vault was in the former loading dock area, which had been filled in with 4 feet of concrete. However, they had cored thick concrete before. So they could do borings in this area. Mr. Kovacs added that Pfizer was not objecting to doing more investigative work in this area, but that they wanted to make sure everyone was on the same page and that the DEC was considering the groundwater flow from the northeast from the BP site. I repeated my previous statement that the DEC had determined that there is a local source of contamination under the former Pfizer site and that delineation is being required. Mr. Kovacs stated that he will talk to the people at Pfizer. With that, the conversation ended. 4/17/13 - Raphael Ketani. Mr. Kovacs sent me an e-mail requesting an extension of the deadline for submitting the work plan. He asked for a deadline of June 3, 2013. I granted his request. 6/4/13 - Raphael Ketani. I reviewed the Work Plan for Additional Petroleum Investigation Activities dated 5/29/13 and submitted by Roux Associates on behalf of Pfizer, Inc. The work plan contained the same information and arguments as I had read in the previous 6/24/11 Petroleum Investigation Report and the Supplement to Petroleum Investigation Report dated 7/22/11. Roux Associates added that the timing of the use of the gasoline and diesel USTs below the former fitness center and the soil data generated by Property Solutions does not support that the impacts associated with spill #1011062 are related to the Pfizer operations. Pfizer removed the USTs in 1988 before the widespread us of high concentrations of MTBE beginning in 1992. There was no MTBE in the soil samples below the Pfizer site where the USTs used to be. High concentrations of MTBE were found in the groundwater beneath the former fitness center. Property Solutions collected 7 soil samples from 5 borings in the vicinity of the USTs and found only slight soil contamination in one sample. In the work plan, Roux proposes conducting three tasks. Task 1 would be to do one round of groundwater gauging and sampling at wells BMW-10 to 13. Roux would request that the DEC gain access for them to the wells on the BP site. They will have the samples tested only via method 8260. Task 2 would involve submitting a report of their findings. Roux will make recommendations for either additional investigations, or to close the spill case, or to link the spill case to the BP site. Task 3 involved having a meeting with the DEC to discuss their findings and additional data. I drafted a response letter for the review of Mr. Hussein. In the letter, I explained that the information and statements that were in the 5/29/13 work plan were the same as were included in the 6/24/11 Petroleum Investigation Report and the Supplement to Petroleum Investigation Report dated 7/22/11. So, the Department was again requesting that a soil and groundwater investigation take place as previously requested in our 3/29/13 letter. I added that we will send a letter to Acumen requesting their cooperation for allowing the wells to be installed. However, it would be up to Pfizer to obtain permission from BP for gaining access to their wells. I set a deadline of 7/12/13 for submission of a new work plan. 6/5/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 6/6/13 - Raphael Ketani. In response to the 6/5/13 letter, Matthew Basso of Pfizer called me. He tried to explain to me that Pfizer wasn't responsible for the contamination under the vault. He used the same information as had been presented in the 6/24/11

FORMER PFIZER PROPERTY (Continued) **U003074670**

report and the 7/22/11 report. I explained to him that his discussion wasn't going to change the Department's request for a soil and groundwater investigation. I added the lower groundwater hits of the deep well to the northeast, the finding of free product in the vault, the discovery of soil contamination in the unsaturated zone below the vault and the presence of high contamination in the groundwater just under the vault. Mr. Basso explained that he had witnessed the consultants for the BP station across the street doing remedial work. He said that they were injecting treatment solutions. Mr. Basso added that the gas station has lost a lot of product and it is going under the former Pfizer site. I told Mr. Basso that the Department was aware of the problems at the BP station and that they were being addressed. I did admit to him that some of the contamination may be going under part of the former Pfizer site, but that the contamination in the former vault area was a different matter that was solely the responsibility of Pfizer. Mr. Basso stated that the groundwater was flowing from the BP site to the former Pfizer building. I told him that this was not true for the perched water table. He also stated that he didn't believe the new owners of the property, Acumen, would allow Pfizer to drill through the floor of the former fitness center. I told him that I will write a letter requesting Acumen's cooperation regarding the investigation. At the end of the conversation, Mr. Basso requested a meeting with the DEC. I told him to talk to everyone at his end and get them to agree on a date for next week. He said that he will do this. Later, Mr. Kovacs (631) 232-2600 sent me an e-mail stating that Pfizer, Acumen and Roux would be able to meet with staff from the DEC on monday, June 10th, at 2:00PM. I confirmed that this was an acceptable meeting time. A draft letter was submitted to Mr. Hussein which requested the cooperation of Acumen in allowing Roux Associates to conduct an investigation in the vicinity of the vault. Mr. Hussein approved the letter and it was sent out. 6/10/13 - Raphael Ketani. The meeting took place as scheduled. In attendance were Matthew Basso from Pfizer, Robert Kovacs and Charlie McGuckin from Roux Associates, and Hassan Hussein and myself. The former Pfizer site and the BP gas station to the north were discussed. Mr. Kovacs and Mr. McGuckin presented the same information as I had read from previous reports. They showed one new map which showed that, at one time, the Wallabout Creek had flowed near the vicinity of the former vault and in adjacent areas. So the area contained stream sediments. Mr. Kovacs and Mr. McGuckin stated that the gas contamination in the former vault area was from the BP site due to deep groundwater flow towards the southwest in the regional aquifer. They commented that the NYCT was pumping from a well to the southwest for the G train line. So, this well had moved groundwater flow to the southwest. I stated that groundwater flow was to the northeast in the perched water table and to the southwest in the regional aquifer. I stated that the gas contamination in the vicinity of the vault was from a former gas UST that had been observed to have leaked. I also stated that there was gas contamination in the shallow unsaturated soil in the vicinity of the vault. So the contamination in the immediate vicinity had come from the UST, not the BP site. They countered that the gasoline below the vault contained MTBE and this chemical was not in the Pfizer gas UST when it was removed in 1988. They also stated that the groundwater analytes had the signature of BP gas. I told the Roux consultants that the wells were never screened properly. Some were screened in the clay. So it is not clear what the true groundwater

FORMER PFIZER PROPERTY (Continued) **U003074670**

chemical makeup is. I requested a work plan for conducting 4 soil borings around the former vault location, installing a properly screened well in the shallow zone and another in the deeper regional aquifer, and to take a Shelby tube sample and do permeability testing for the confining layer between the two bodies of groundwater. Mr. McGuckin objected to the request for more investigating. He said that Pfizer had done enough to determine subsurface conditions and that there was no point in doing more work. He again stated that all of the contamination was due to the spilling at the BP station. He added that there was a well 75 feet to the east of the Pfizer vault with 3 feet of product in it. Mr. Basso stated that this gasoline could be fingerprinted to prove that it belonged to BP. I added that more soil and groundwater data must be obtained in order to determine the subsurface conditions and in order to determine where the contamination had originated from. Otherwise, BP will not accept responsibility with so little information. Mr. Basso said that he will approach his management with the DEC demand and our argument why more work needed to be done. Following this meeting, Mr. Hussein and I had a meeting with June Feng, the DEC project manager for the BP station at 655 Flushing Avenue, Brooklyn (spill case #0104597). Specifically, we asked her whether the BP investigation had done off site delineation of the spill and whether there presently were leaking USTs and product on the groundwater. Ms. Feng said that, presently, there were no leaking USTs and no product on the groundwater. She said that wells were only installed on the BP property. I told her about the 3 feet of product that had been found in the Roux Associates well BMW-11, which was about 100 feet east of the vault in question and downgradient from the BP station (as regards the deeper aquifer flow). Ms. Feng asked whether the gasoline had ever been fingerprinted. I told her No. She said that she could not understand how gasoline could make its way down from the perched water table to the regional aquifer. I told her I was not sure either how this had happened, but the Roux Associates consultants were stating that this happened. She then asked whether the gasoline could have followed a utility conduit. I told her that this was possible, but I wasn't sure it would stay in the aquifer as gasoline floats on water. Ms. Feng and I thought about how the gasoline could have ended up below a perched water table, but we did not find an answer. 6/11/13 - Raphael Ketani. Ms. Feng sent me a c-c for an e-mail she had sent to Nicholas Onufrak of BP. She warned him that Pfizer and their consultants were telling the DEC that the gasoline contamination was from the 655 Flushing Avenue site. Later, Mr. Onufrak responded back that he had received the e-mail. 6/12/13 - Raphael Ketani. Mr. Basso sent me an e-mail in which he stated that Pfizer was working on a work plan and intended to submit it by July 12, 2013. 7/22/13 - Raphael Ketani. I reviewed the 7/18/13 Workplan for Additional Focused Subsurface Investigation. The work plan was written in response to the DEC 3/29/13 letter in which additional investigative work was requested around the vault. ROUX also made the same arguments that the source of the contamination under the former Pfizer plant is from the BP service station across the street. They also recapped the results of the previous investigations from 2011. They state that NAPL was found on 6/8/11 at BMW-11 and was identified as leaded gasoline. Also, they state in the report that, given the geologic and hydrogeologic conditions in the subsurface and the presence of NAPL in the deep groundwater zone downgradient of the BP station and the presence of MTBE in the groundwater, it is strongly

FORMER PFIZER PROPERTY (Continued) **U003074670**

suggested that the impacts at SB-22/GW-22 are not the result of former Pfizer operations, but the result of the long history of releases from the BP station. ROUX will do a focused field investigation involving a Phase I and, if necessary, a Phase II. After the work is done, a summary report will be prepared and a meeting with DEC staff will be requested to discuss the results and determine what should happen next. The Phase II will be performed only if contaminated soil is found below the former UST locations. Five shallow soil borings will be performed around the vault and dispenser area to the top of the silty clay. Soil and groundwater samples will be analyzed via methods 8260 and 8270. The perched water table samples will be collected from 3 temporary wells. Only temporary wells can be installed due to the height restrictions inside of the Fitness Center (it will only accomodate small equipment). Undisturbed soil samples will be collected from the silty clay and the sandy layer below it for permeability testing. If there are no discernable soil impacts in the shallow soil, then they will bore down below the silty clay layer and sample the soil just above the deep groundwater. The existing deep wells BMW-10 to BMW-13 will be gauged and sampled. If the Phase II is necessary, then two additional wells will be installed at two more locations within the Fitness Center footprint and the groundwater will be sampled beneath the silty clay. The Phase II would also involve the collection of additional perched water samples. I looked at the proposed soil boring and well locations depicted in Figure 7 of the report. The locations seemed reasonable. I drafted a letter for the review of Mr. Hussein in which I stated that the Department had approved the 7/18/13 work plan. 7/24/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out today. 10/15/13 - Raphael Ketani. As there has been no word regarding activity at the site, I sent an e-mail to the three individuals involved in the spill case from Pfizer and Roux (Mr. Basso at (908) 901-7096/bassom@pfizer.com; Mr. Kovacs at (631) 232-2600/rkovacs@rouxinc.com; Mr. McGuckin at (631) 232-2600/cmcguckin@rouxinc.com). The e-mail mentioned that the 7/18/13 work plan had been approved and reports were due to the Department on September 19 (phase I) and on October 8 (phase II). I requested updated information regarding the investigation around the vault. In response to my e-mail, Mr. Basso sent me the message: The Pfizer /Roux project team met today to review the Phase I /Phase II data, that includes comprehensive soil sampling data, perched groundwater zone data, deep groundwater gauge data as obtained as part of the approved Workplan. Today we also reviewed schedule, where Pfizer had earmarked a touchbase meeting for its internal team in early October, and wrap-up to document the Phase I/Phase II results and conclusions this week. My apologize for this delay, and we met today in order to prepare an update for NYSDEC on this project. Please note: we had significant technical difficulty to get the smallest made geoprobe rig into the interior study location of the Acumen Capital Partners building to successfully achieve the intrusive sampling, and needed to arrange for the right equipment, which slowed our progress. I will ask that Roux Associates follow-up on my e-mail to better communicate the schedule for submitting to DEC the WorkPlan Report. Via this email I am keeping the site owner (Acumen) informed of our progress. Best regards, Matt Basso, MS, CHMM Later, Mr. Kovacs sent me an e-mail stating that the Phase I was completed, but with great difficulty. They had to find a drilling machine that was small enough to fit into the health club and they

FORMER PFIZER PROPERTY (Continued) **U003074670**

had to hire a specialized drilling company to drill through 7 feet of concrete. However, they did the soil borings, took soil and perched groundwater samples and gauged the deep groundwater wells. They hope to get permission from BP to gauge their on site wells, also. The report will be submitted on November 15, 2013. 11/20/13 - Raphael Ketani. I reviewed the ROUX Associates Additional Focused Subsurface Investigation report dated 11/13/13. During 9/9/13 and 9/10/13, ROUX Associates drilled 5 soil borings - RSB-1 to RSB-5. RSB-1 was adjacent to the location of SB-22/GW-22 and RSB-5 was very close by. The other borings were installed radially around the former UST locations (1 550 gal. diesel UST-west and 1 550 gal. gas UST-east) and the former dispenser location. According to the report, the UST had been removed during 1988 and the vault was filled with concrete. (It should be noted that the introduction of MTBE in gasoline took place nationally in the U.S. during 1979 and was banned by New York State beginning on January 1, 2004.) Before the borings took place, the 7 feet of concrete was cored on 8/26/13 and 8/27/13. The bottom 6 inches of concrete at RSB-1 was collected for permeability testing. The soil was bored just into the confining silt and clay layer. The boring terminated at the groundwater at 16 to 19 feet below grade. The soil and groundwater samples were tested via methods 8260 and 8270. Two (2) soil cores were collected for permeability testing and grain size analysis from boring RSB-4A (1 foot from RSB-4). The collection device was pushed using the Geoprobe hammer. One sample consisted of shallow fill at 2 to 4 feet bgs and the other sample consisted of silt and clay at 8 to 10 feet bgs. The 2 to 4 foot sample from RSB-4A was 71.5% sand and 28.1% fines (due to the high sand content, the permeability test couldn't be performed). The 8 to 10 foot sample was 47.5% sand and 52.2% silt and clay. This sample tested at a permeability of 2.7 x 10-4 cm/sec. However, there were microfractures in the sample. The true permeability was estimated as probably being 10-5 cm/sec. Based on previous soil investigations at the Citric Block near the former Main Building, on the north side of Flushing Avenue, Shelby Tube samples had been collected by ROUX at 8 feet bgs during 1996. These soil samples had permeabilities of 2.87 x 10-7 to 1.8 x 10-6 cm/sec. Though, as regards the permeability of the concrete core, it had not been tested at the time of the writing of this report. This data will be submitted later. The soil sample that had been collected years ago from SB-22 at a depth of 7.5' to 8' had 5 VOC hits from 1900 ppb to 16,000 ppb, but no MTBE. RSB-1 (to the east and next to SB-22) = 7' sample 15 VOC hits from 100 ppb to 1200 ppb with 390 ppb MTBE; 11' sample almost entirely non-detect with 2300 ppb MTBE; 13' sample almost entirely non-detect with 3700 ppb MTBE RSB-2 (next to former east side of gas UST) = almost entirely non-detect RSB-3 (downgradient of the USTs) = 9' sample with 13 VOC hits from 3000 ppb to 62,000 ppb but no MTBE; 14' sample almost entirely non-detect RSB-4 (far west of SB-22) = 6.5' sample 11 VOC hits from 57 ppb to 8200 ppb but no MTBE; 8' sample 13 VOC hits from 89 ppb to 8500 ppb but no MTBE RSB-5 (very near and to the northwest of SB-22) = 7' and 9.5' samples almost entirely non-detect Except for 24,000 ppb of naphthalene in the 8.5' to 10.5' sample from RSB-3, there were no SVOC hits for any of the RSB samples. Groundwater was found at 0.5' to 2.5' below the former location of the USTs (perched groundwater) and at 10' to 13.5' below the former USTs location (deep groundwater). Deep wells BMW-10 to BMW-13 were gauged on 9/10/13. However, BP would not let ROUX have access to their wells on the gas station property. Attempts were made to collect groundwater from the

FORMER PFIZER PROPERTY (Continued) **U003074670**

perched water table at RSB-1, RSB-2 and RSB-4. ROUX was successful in collecting perched groundwater only from RSB-2. GW-22 (screened deep 16'-22') = 13 VOCs from 5.9 ppb to 3900 ppb, 10 VOCs 100 ppb or above, 3 VOCs 1000 ppb or above, 3900 ppb MTBE BMW-11 (deep water) = 6.83' product on 9/10/13, other series wells without product; 9 VOCs with 6 hits from 240 ppb to 6100 ppb, no MTBE BMW-12 and BMW-13 almost entirely non-detect (deep) TPNE highest VOC concentrations in this series in 2011 with 7 VOC hits to 17,600 ppb and MTBE 200 ppb TPSE at all levels (13'-15', 15'-17', 17'-19') had the same VOC hits at about the same concentrations, except the sample from the 13'-15' interval had generally slightly higher concentrations TPSW was almost entirely non-detect RSB-2 (perched at 7'-9') had 6 VOC hits from 16 ppb to 120 ppb, but no MTBE SVOCs were almost entirely non-detect for RSB-2, except for 54 ppb of naphthalene As part of my review, I reviewed reports for the BP site (spill #0104597). I looked at the groundwater flow maps and analytical results in the 3rd Quarter 2004 Quarterly Monitoring Report dated 7/25/05 and the groundwater flow map in the 2nd Quarter 2013 Quarterly Monitoring Report dated 6/28/13. I determined that groundwater flow in the perched horizon is to the northeast while groundwater flow in the regional aquifer is to the southwest. 11/25/13 - Raphael Ketani. I sent a quick e-mail to Mr. Kovacs requesting that Pfizer and ROUX immediately begin product recovery events in order to contain any plumes emanating from BMW-11. 11/26/13 - Raphael Ketani. I drafted a review letter for editing by Mr. Hussein. I stated in the letter that the Department had approved the report. However, the data in the report and the case file indicated that additional work needed to take place. I determined that groundwater was flowing from upgradient to under the former Pfizer site through the deep groundwater horizon. However, there was evidence of contamination from onsite, also. The Department was requiring delineation of the soil contamination downgradient from the former vault and downgradient from BMW-11. Pfizer was also asked to immediately begin product collection at BMW-11 and to submit monthly gauging and product collection reports. A deadline of January 10, 2013 was set for the submission of a delineation work plan. Mr. Hussein approved the letter. 11/27/13 - Raphael Ketani. The AFSI report review letter was sent to Mr. Basso at (908) 901-7096/bassom@pfizer.com, Mr. Kovacs at (631) 232-2600/rkovacs@rouxinc.com and Mr. Rosenblum. After having sent the letter, I met with June Feng, the case manager of the BP Station site to the north. I explained that the data indicated that the source of the product at BMW-11 was the BP site. I showed her some pages from various reports describing the subsurface conditions below the Pfizer site and ROUX Associates' findings. I asked her to contact Nicholas Onufrak, the BP representative, regarding this matter and to try and have BP take over the product collection at BMW-11. 12/2/13 - Raphael Ketani. I met with Jeff Vought, Ms. Feng's supervisor, regarding the former Pfizer site and the BP site. I explained the data and showed him the Additional Focused Subsurface Investigation report (AFSI). I also explained that the perched groundwater was flowing northeast, away from the former Pfizer site, while the deeper groundwater was flowing toward the site. He noted what I had told him, but wasn't convinced that the source of the contamination under the Pfizer site was from the BP station. At the end of the day, Mr. Kovacs sent a response e-mail regarding the DEC 11/27/13 AFSI review and response letter. In short, Mr. Kovacs wrote that the responsibility for the contamination lied with the BP station and that Pfizer was not going

FORMER PFIZER PROPERTY (Continued) **U003074670**

to do further delineation nor collect the 7 feet of product from BMW-11 which was next to the school. He wrote that I should contact BP and have them do the VEFRing. 12/3/13 - Raphael Ketani. In response to Mr. Kovacs 12/2/13 e-mail, I sent him a response e-mail (with C-Cs to Mr. Basso, Mr. Rosenblum and Mr. Hussein) stating that Pfizer and ROUX had to evacuate BMW-11 immediately as this well had 7 feet of gasoline and it was right next to the school indicated in Figure 2 of the AFSI. ROUX's claim that the gasoline had originated from the BP station hadn't been proven and the product was under the former Pfizer site. So it was Pfizer's responsibility. I added that if Pfizer and ROUX fail to send me an e-mail by December 6 (friday) stating that VEFRing is taking place, then the DEC will open up a PIN case, have its contractor do the work and continue to VEFR the well as required by DEC. I also wrote that our contractor will do the delineation work, bill the DEC, and the DEC will pass the costs along to the Attorney General who will sue Pfizer. A series of response e-mails followed from Mr. Basso. In summation, he said that Pfizer staff were in consultation regarding the presence of gasoline in BMW-11. It was also explained that the building next to BMW-11 was not a school. I asked Mr. Basso to get someone into the building to do indoor air surveying for vapors with a PID meter. Later, I sent Mr. Basso an e-mail stating that I wanted to make a site visit tomorrow to see for myself what the conditions are who is using the former Pfizer building. Mr. Basso agreed to the site visit. 12/4/13 - Raphael Ketani. A site meeting and inspection took place at 2:00PM as planned. In attendance were Mr. Kovacs (631) 232-2600, Mr. Basso (908) 901-7096, Mr. Rosenblum, Mr. Hussein and myself. At the beginning of the lobby entrance, I saw a wall on the left side with many placards indicating the various businesses that were using the former Pfizer main building. Most of the business appeared to be food processing and management companies (i.e. ice cream manufacturing, manufacturing of meals for homebound people, etc.). However, Mr. Rosenblum pointed out that there were some high tech business and his office. He also stated that the businesses were on the upper floors and that the first floor, where we were, was vacant. Next, we went to the former fitness center. Throughout the first floor, I sensed various odors, but all were light and none were noxious. There was one odor from food cooking. The PID meter did not detect any vapors anywhere at the first floor. Mr. Kovacs had the same brand and model of PID meter and his didn't detect any vapors, either. We went to the former fitness center. I continued to take pictures. There were no PID detections. Mr. Kovacs and Mr. Basso explained to everyone that the vault was below the floor and how the soil boring operation went. We saw many places where a piece of floor tile had been removed in order to do a boring and we saw the filled boring holes. Mr. Kovacs showed me where SB-22 had been and where RSB-3 was. He explained that the floor was only 1 or 2 feet thick at the location of RSB-3. Whereas, they had to go through 7 feet of concrete at the location of SB-22. Next, we walked to the first floor level of warehouse A (the eastern part of the main building). Mr. Basso showed us where BMW-11 was. We could also see the BP station across the street. Mr. Hussein, Mr. Basso, Mr. Kovacs and myself discussed the product in BMW-11 and that the data in the ROUX reports showed deep groundwater flow from the BP station and to the Pfizer site. Mr. Basso and Mr. Kovacs stated that there had been many spills at the BP station over the course of many decades. The problem of how the gasoline could get from the perched aquifer to the deeper aquifer was discussed. Mr.

FORMER PFIZER PROPERTY (Continued) **U003074670**

Hussein mentioned that there were only wells in the perched horizon at BP. Mr. Kovacs mentioned that BP had installed a lot of tanks and that they had stacked the tanks on top of each other. He stated that he thought BP had stacked the tanks so deep that they penetrated through the confining silty clay layer. Mr. Hussein agreed that the data seemed to suggest the contamination was from the BP station. He stated that delineating the contamination could be done in two ways. First, BP could be asked to do the work. If they were to refuse, then the State would have its own contractor do the work and install deep wells at the BP station in order to determine the deep groundwater flow direction. Mr. Basso stated Pfizer was deferring to BP to do the delneation work. He added that if BP were to do the delineation and groundwater monitoring, then he would gladly give them access to the Pfizer wells. Mr. Hussein asked Mr. Basso for an Executive Summary describing the current environmental conditions and the information that Pfizer and ROUX have found so far. We left this part of the building and entered the middle (building 16) warehouse area. Again, no vapors were detected. There was nothing much to see here. So, we went down to the partial basement. Once inside the partial basement, there was a moderate odor of #2 oil. My meter registered about 1.7 ppm of total VOC vapors. Mr. Kovacs' meter detected the same concentration of vapors. A man was in the basement and he told us that he had just finished cleaning a machine (he didn't say what type of machine it was). I asked him whether any oil had been spilled. He said very little oil had been released. However, he mentioned that he had used a spray cleaner to remove the oil from the surfaces of the machine. We went further into the basement. It was well lit, 78 degrees Fahrenheit and the floor was clean. There was no active ventilation taking place, even though there was a means for the indoor air to be circulated and removed. So the oil vapors were everywhere. Mr. Kovacs stated that we were standing 10 feet below grade. So, we were below the water table, but the walls were dry. Mr. Kovacs pointed out the sump and the sump pumps. The pumps weren't running. I put the nose of the PID meter into a hole through the steel plate covering the sump, but the vapors that were being detected seemed to remain the same. The vapors were actually higher about a few feet above the steel plate. There was nothing else to see. So we left the basesment and exited onto Flushing Avenue. I took some pictures outside and the meeting ended. 12/5/13 - Raphael Ketani. Jeff Vought, a supervisor in the Spills Unit, was told about the Pfizer site visit and my findings. I had previously talked to him about the data for this site. He contacted Randall Austin, the Regional Spills Engineer, and they contacted Nicholas Onufrak, Project Manager, at the Atlantic Richfield Company (the owners of the BP station). Mr. Onufrak agreed to send a vacuum truck over to suck out the well during the morning of 12/6/13. He also agreed to do at least one more vacuum event. Mr. Onufrak will look at the data for the Pfizer site and decide whether BP is responsible for the gasoline. Mr. Onufrak's contact information is: Atlantic Richfield Company, 1 West Pennsylvania Avenue, Ste. 440, Towson, MD, 21204. Later, Mr. Basso sent me the Executive Summary. I reviewed the document. The majority of the content consisted of Mr. Basso writing that BP was the source of the contamination below the former Pfizer site. He did state that there were soil impacts below the former fitness center. However, he claimed that they were minor and that the results should be compared to the Commercial Soil Standards. At the end of the document, Mr. Basso requested closure of the spill case.

FORMER PFIZER PROPERTY (Continued) **U003074670**

12/6/13 - Raphael Ketani. Mr. Onufrak sent staff at the DEC Spills Unit and myself an e-mail today. He wrote that the evacuation of the well took place. One gallon of NAPL was recovered. A sample was collected for forensic analysis. The vac truck operator collected 637 gals. of total liquids. There was no measureable NAPL in the truck. June Feng, the project manager for the BP spill case, will be contacted by BP. 12/18/13 - Raphael Ketani. I e-mailed Mr. Kovacs regarding BMW-11. I stated that BP had evacuated only 1 gallon of product, but ROUX had measured 7 feet of product in the well several months ago. Mr. Kovacs responded that the well is two inches in diameter and that Antea Group, BP's consultant, had also measured 7 feet of product when they gauged the well before evacuating it on December 6, 2013. 1/14/14 - Raphael Ketani. A planned followup site visit took place in the partial basement of the main former Pfizer building. In attendance were Mr. Rosenbloom and Gavin Cato of ROUX. I walked around the basement with my PID meter. The basement air was at 76 degrees Fahrenheit. There were no oil odors. I put the nose of the meter above my head, at the sump and at the opening to several floor drains. The PID meter didn't detect any volatile chemicals. After this, I left the site. Later, I met with Mr. Hussein to discuss my site visit, the soil and groundwater analytical results and the other data regarding the site. Based upon our discussion and the information regarding the case, Mr. Hussein approved the closure of the spill case. Based upon the information in the spill case, I have determined that there is no threat to the public or the environment from the residual contamination below the site. Therefore, I am closing the spill case effective 1/14/14. As the building is currently being used for commercial purposes and will be used in this fashion for the foreseeable future, I am making this closure in consideration of a comparison of the soil data to the New York State commercial standards. 1/16/14 - Raphael Ketani. A spill closure letter was sent to Mr. Basso. In the letter, I wrote that the Department was requesting that Pfizer leave their wells open so that British Petroleum can use them for groundwater gauging, sampling and product recovery as part of their investigation and remedial efforts."

Contact Name:	FIREFIGHTER KOTLARCHYK
DEC Memo:	"3/5/2021 - Feng - Desk Duty in office. Spoke to Firefighter Kotlarchyk. A delivery truck hit the safety barrels and ripped the fuel tank of the truck. About 25 gallons of diesel leaked out to the ground of the private parking lot. The remaining oil was offloaded from the tank into drums. Nobody hurts. The spill is contained to the pavement, and no soil/sewer impacted. HATMAT 1 cleaned up the spill. The absorbents/speediDry has been swept up and drummed. The spill cleanup is completed. The drums of the waste and remaining oil will be left on scene for the truck company to pick up and disposed off. Left a message to the truck company. Left the Spill Info number 718-482-4651. Firefighter Kotlarchyk 347-539-0559 Elite Gendin Discount Trucking 2630 Ocean Ave Brooklyn, NY 917-723-4190 3/9/21 - Kim - I called Elite Gendin to follow up on the drums of waste left on scene from the spill. I asked if the drums were removed by the trucking company and Elite Gendin asked if I wanted the drums back. Based on our conversation, the trucking company did remove the drums. - Spill closed - end"
Remarks:	"loss to pavement only, c/u in progress"

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR SYNTHETIC MINOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Updated By:	dcwalsh
Site Description:	"The "Organics/Suciac Block" site is located in the central portion of the Pfizer Inc. facility in the Williamsburg section of Brooklyn, NY. Gerry Street, Harrison Avenue, Union Avenue and Wallabout Street border this block. The site was first developed for chemical manufacturing between 1854-1888. Operations continued there until 1989 and all buildings were demolished by March of 1995. The Organic/Suciac block is situated within a high-density, mixed urban/commercial/ industrial zone. Pfizer decommissioned the Organic/Suciac block with the intent to utilize it for future redevelopment and/or beneficial use. As part of the decommissioning process, all buildings were demolished. The present concrete slab is continuous throughout the Block and varies in thickness from 0.5 and 1.5 feet. In 1997, waste from the site was excavated and disposed off site, which included 18.12 tons of mercury and lead hazardous soils. Also, a total of 1,930 tons of benzene hazardous soils were excavated and disposed off-site. In 1999/2000, the excavated soil (approximately 420.3 tons) was classified as a petroleum contaminated non-hazardous material, and was transported off-site and disposed. Institutional Controls: On June 22, 2001, Pfizer presented the deed restrictions for recording in the Kings County Registrar s Office. These restrictions state that unless additional response actions are performed at the Site to allow its use for residential purposes, the

PFIZER (ORGANICS/SUCIAC BLOCK) (Continued) **S104323903**

	Site shall be prohibited from being used for purposes other that industrial, commercial and/or recreational purposes without the expressed written permission from the Department. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Contact Name:	CHRIS STEIN
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY Initial site investigation soil data found soil contamination, however, additional soil sampling by URS failed to duplicate those results and only contaminant in groundwater was MTBE, which seemed likely to be coming from upgradient 90th Precinct. In March 2005, J. Kolleeny approved NFA for the soil at site (and monitoring of groundwater combined with 90th Pct. monitoring), but cautioned that if there were indications that on-site soil contamination was impacting groundwater, additional investigation and/or remediation could be required. In November 2004 URS Groundwater Monitoring report for 90th Precinct and Engine Co. 216, MTBE levels in Eng. Co. 216 wells seem persistent and possibly unrelated to 90th Precinct plume. JK spoke with Jane Staten of URS and agreed that if next round of GW sampling still showed high MTBE levels, situation at Eng. Co. 216 would be re-evaluated. Spill transferred from Kolleeny to A. Zhitomirsky on 4/4/05. - JK 8-14-2006 Reviewed monitoring report by Roux dated July 28, 2005 for March through June 2006.MW-3 - 150 PPB mtbe in groundwater.Recommendations: maintainn DPE and Oxygen delivery remediation systems shut down; continue gw monitoring, discontinue SVOCs analyses, evaluate alternative technologies. AZ 04-5-2007 Reviewed Monitoring Reports submitted in November 2006 for July through September 2006 and on March 23, 2007, for October through December 2006. Residual MTBE contamination was detected in four wells with concentrations up to 60

ENGINE CO. 216/LADD. CO. 108 NYFD -DDC (Continued) **S104073416**

ppb(July 2006). Benzine and naphthalene were encountered in one well. DPE was inactive. ORC injections and ORC socks were discontinued. In October 2006 sampling event MTBE ranged from 16 ppb to 136 ppb. Some increase of MTBE concentrations was observed. ORC socks will be installed in MW 216-MW-01, 216-MW-03 and MW-09. Recommended maintaining shutdown status of DPE system, reducing monitoring and reporting to semi-annual. These recommendations were approved. An e-mail was sent to Brian Morrissey (ROUX). AZ 10-22-2007 Reviewed Monitoring Reports submitted in August 2007 for January through June 2007. Residual MTBE contamination was detected in five wells wells with concentrations up to 85 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. Roux recommended continuing semi-annual groundwater monitoring program. AZ 7-2-2008 Reviewed Monitoring Reports submitted in April 2008 for July through December 2008. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux recommended continuing semi-annual groundwater monitoring program. AZ 2-13-2009 Reviewed Monitoring Reports submitted in October 2009 for January through September 2008. Residual MTBE contamination was detected in four wells of the six wells with concentrations up to 66 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux will conduct a site wide groundwater sampling round in preparation for NFA. AZ 11-6-09 An e-mail was sent to Brian Morrisey/Fatemeh Ashkan/ V. Brevdo: I have reviewed a semi-annual report for the above site dated May 22, 2009 add covering the period of June 2008 through March 2009. Roux proposed conducting soil sampling and analyses in areas of residual groundwater contamination (i.e.e 216-MW-02 and MW-08) in order to determine current status of soil impacts. Also, you proposed considering enhanced bioremediation for this site. These proposals are approved and should the work plan should be included in the next monitoring report. AZ 4-25-2011 Reviewed LiRo status report. This spill is associated with four closed in place 550 gallon gasoline USTs. Two soil borings will be installed near these USTs. AZ 11-28-2011 A report dated 9-8-2011 stated that drilling for the borings approved by DEC was scheduled for August 2011. AZ 6-12-2012 Reviewed a status report dated 3-29-2012. ORC socks were placed in contaminated wells. AZ 4-12-2012 Reviewed a status report dated 8-31-2012. Semi-annual sampling is being performed at 12 wells. Downgradient well MW-2 exhibited continued rise in contaminant levels. Left a message for S. Frank. He called back and we discussed the site. He will into it. Maybe LiRo will install a well downgradient of 216-MW-2 AZ 9-3-2013 Reviewed s pill closure report for this spill. This spill is associated with the four closed in-place 550-gallon gasoline USTs located on the Engine Company 216 property. No remediation of soils required based on recent (May 2012) and hsitorical soil analytical data. ORC slurry application was performed in March 2004. Stable dissolved phase groundwater plume with TVOC concentrations less than 100 ppb was recorded uring last two sampling events. The subway and tunnel prevent offsite migration. AZ 9-4-2013 The following e-mail sent to S. Frank/V. Brevdo/F. Ashkan: Dear Steve, I have reviewed Request for Spill Closure dated May 23, 2013. This spill is associated with the four closed in-place 550-gallon gasoline USTs located on the Engine Company 216 property. No remediation of soils required based on recent (May 2012) and historical soil analytical data. ORC slurry application was performed

ENGINE CO. 216/LADD. CO. 108 NYFD -DDC (Continued) **S104073416**

in March 2004. Stable dissolved phase groundwater plume with Total Volatile Organic Contaminant concentrations less than 100 ppb was recorded during last two sampling events. The subway and tunnel prevent offsite migration. URS requested that DEC close spill number 9807905. Based on the documentation provided to date, the New York State Department of Environmental Conservation (the Department) has closed the spill case number 9807905. All wells associated with this project should be closed according to the Department's Groundwater Monitoring Well Decommissioning Procedures. All wells should gaged for the presence of free product before closure. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates the corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts must be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely.
Sincerely, Alex Zhitomirsky"

DEC Memo:	"7/26/2005 Sangesland spoke to Christopher DeCarlo (cell #201-694-4943) with Flemming Lee Shue Environmental Consulting. Approx. 20 years ago this site was a gasoline station. There is no DEC - PBS or Spill history for the site. Chris DeCarlo works for the new owner of a property which is now under construction. Apparently the former owner dug out the tanks and left a pit. Now that the new owner has started construction, approx 8 ft below the bottom of the pit they found floating gasoline product. They are in the process of removing product and contaminated soil. Since the consultant knew the DEC proceedure and had already started, no contaminated soil letter was sent. 7/26/2005 Sangesland - a second Spill Report came in on this site (#0505029). A vapor complaint from a neighbor with the smell of gasoline (95 degree temp today). Sangesland left a voice mail with Chris DeCarlo at Flemming Shue asking him to confirm that the stock piled material is covered and as much Vapor Abatement as possible has been done. 9/19/05-Reassigned to A. Obligado. (Sun) 9/19/05- Obligado- Reviewed fax from Christopher De Carlo of Fleming Lee Shue consultants dated 9/8/05 requesting case manager be assigned

UNKNOWN RESIDENCE (Continued) **S106970053**

to site. Called De Carlo to give him contact info. DeCarlo stated that they completed excavation of soil and taken clean soil endpoint samples. GW sample from bottom of excavation is 18 ppm MTBE and 3.9 ppm benzene. Asks if they can request closure of spill number. Tell him the NYSDEC needs to see the UST closure report before a judgement can be made. DeCarlo says report is in progress and NYSDEC should receive it shortly. 9/19/05 - Obligado - Follow up phone converstation with De Carlo. Ask him to send DEC foundation and vapor barrier details. Inquire about site status - site construction on hold pending permit for excavation. Ask him not to begin construction until the department reviews designs and UST excavation results. 10/28/05 - Obligado - Received phone call from De Carlo, says he had sent DEC Remedial Action Report and was waiting for DEC response. Told him that haven't seen report yet, and to email pdf of report. 10/31/05 - Obligado - review Remedial Action Report. 5 gasoline USTs removed previously, no records of soil disposal or analyticals. Upon beginning of FLShue's involvement of the site, the USTs had already been removed and an excavation 3 to 4 ft deep was on site. Continued excavation to 9-10 ft bgs. Excavated laterally until no contaminated soil encountered. 354 tons of soil removed from site. Soil results show no VOC exceedences in endpoint samples, only PAH exceedences in one soil sample, SB-2. Ground water sample collected from bottom of excavation show 3.9 ppb benzene and 18 ppb MTBE. Building construction will include 20 mL high polypropylene vapor barrier. Request NFA based on low concentrations and vapor barrier. Call Chris and leave message. Sent email approving building construction. Need to discuss closure. 11/3/05 - Obligado - Call Chris De Carlo (212) 675-3225, left message "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY The spill is referred to spill # 8809462. The site is currently under remediation by LiRo Engineers. - II (03/02/05). 4/28/05- Reviewed the monthly monitoring report-Jan/05. A multi-phase extraction system is in place and is performing well. Both vapor and water effluent are under compliance. A trace (.01 ft)of free product persists at one well only as revealed from monthly monitoring data. Quarterly groundwater sampling results show persistently decreasing trend and are close to under compliance. Soil sampling is done semiannually. Routine site monitoring to continue. 3 monthly electronic files have been installed in the eDoc Folder.- II 6/6/05- Reviewed Feb/05 & Mar/05 monthly monitoring reports. The MPE system monitoring data shows that it is working effectively. Neither of the scheduled Quarterly GW sampling nor Semi-annual soil sampling were done during the monitoring period as they were not due in this period. All monitoring wells have become free from Free Product. Routine monitoring to continue as scheduled.- II 7/22/05- Reviewed the Monthly Monitoring Report prepared by LiRo Engineers dated May 27, 2005. The report presents MPE system performance monitoring data for the month of April, 2004. The system monitoring data indicate that vacuum measurements were not taken at two monitoring wells and six (50%) extraction wells. This lack of readings prevents DEC from properly evaluating the system s effectiveness. Sent the above comment to DDC and LiRo via email. Installed the monthly monitoring reports for Feb., Mar. & Apr./05 in the eDoc Folder. - II 8/23/05- Reviewed the May/05 monitoring report. The report presents MPE system operating data and GW sampling results for the month of May/05. Apprx. 0.3 lbs VOC was collected and the MPE system is functioning effectively.Monthly GW sampling could not be done on wells EW-6 & MW-8 due to deposits lining the inside of the drop tube and well EW-1 & MW-13 for being under water. Over all, the GW contamination has reduced substantially and four of the wells sampled in May/05 still exceed NYSDEC quality criteria for one or more compounds. Routine monitoring will cintinue.- II. 9/19/05- Reviewed the June & July/05 monthly monitoring reports. MPE system is operating effectively. Approx. 2.8 lb VOC was collected during July month which is very high compared to the June month. LiRo did not explain the reason.

BROOKLYN NORTH 03/03A DOS -DDC (Continued) **S104621574**

Quarterly GW sampling was not due during the monitoring period. Routine system monitoring will continue. - II. 10/25/05- Reviewed the August/05 monitoring report. The MPE system collected about 0.5 lb VOC during the month and the last month's spike (2.8 lb) is said to be an anomally. Overall GW contamination at most wells has been significantly reduced. Low level Product has appeared in two wells and they have been sampled for fingerprint analysis. Of the four wells sampled, two wells were non-detect for STARS list compounds. Other two wells showed a very slight increase in TVOC contamination. However, routine monitoring will continue.- II 11/18/05- Reviewed the Sept. & Oct/05 monthly monitoring reports. Product appearance in wells LW-1 & MW-1 have been found to be mineral spirit and hydraulic oil respectively by fingerprint analysis. In Sept. & Oct/05 the MPE system collected 4.2 lbs and 2.4 lbs of VOCs respectively. LiRo states this increase in influent VOC levels during the period due to system cleaning and drop tube adjustments which the contractor Franklin conducted during this period. GW sampling was not due during this two months of monitoring period. LiRo recommends to continue operation of the MPE system with improved induced vacuum. LiRo also recommends installation of passive skimmers in two wells having product. LiRo's recommendation for passive skimmers installation and plan for next round of annual soil sampling four borings) are approved with an additional boring to be located in the vicinity of GPR-13. Filed the monthly reports in the eDoc folder.- II 01/31/06: This spill transferred from Imdad to Q.Abidi. Reviewed November/05 monthly monitoring report. Quarterly groundwater sampling was not performed during this monitoring period. On Dec.6, 2005 Liro pumped out wells LW-1 and MW-1 with a vacuum truck, removing 1,412 gallons of contaminated fluids, of which an estimated 14 gallons was free product. Liro recommends to continue the system operation. No response letter necessary.- QA 02/07/06: Reviewed December/05 Monthly monitoring report. Quarterly groundwater sampling was not performed during the monitoring period. LiRo recommends that the vacuum truck should return to the site to treat wells LW-1 and MW-1. Site is being transferred to Greyhawk. Data show decrease in induced vacuum levels, possibly indicating a line blockage.Liro suggest New CM should evaluate the site and determine whether system should be cleaned, or shut down and only use a vacuum truck on LW-1 and MW-1. Filed the monthly report in the eDoc folder.- QA 08/18/06: Transferred to S.Kraszewski. According to URS Bi-monthly update report Rouc performed GW sampling and gauging on April 5, 2006. VOCs detected range from 6 ppb to 532 ppb. SVOCs were below detection. Monthly gauging on May 5, 2006 revealed 0.22 ft of product in LW-02 and 0.01 ft in LW-01. On June 15, 2006 no free product in LW-02 and 0.01 ft of product in LW-01. An absorbent sock was placed in LW-01. - SK 08/31/06: Reviewed Quarterly O&M and MOnitoring Report for April-June 2006 submitted on July 7, 2006 by Greyhawk/Roux. On April 5, 2006 Roux gauged and monitoring wells EW-1, EW-4, EW-6, EW-9, LW-1 and LW-2. Gauging occured on May 5 and June 15 as well. GW flow direct was determined to be southernly. No free product in April, but 0.01 ft for LW-1 and 0.22 ft for LW-2 in May. In June, LW-1 had 0.01 ft. All six MWs revealed VOCs ranging from 6 ppb to 532 ppb with several TAGM exceedances. No SVOCs detected in GW. Greyhawk plans on contiuing quarterly GW sampling but recommends reducing the gauging and free product removal frequency from monthly to quarterly visits. Low PID readings for influent and effluent air. However, influent air TVOCs reveal 3250 ug/m^3 in April and 877 ug/m^3 in June. Since the

BROOKLYN NORTH 03/03A DOS -DDC (Continued) **S104621574**

system is still effectively removing volatiles Greyhawk recommends contiued operation and maintenance of the MPE system. They will attempt to increase the vacuum in EW-3 and EW-12. SK called Andris Ledins at Greyhawk (718-943-1100.) Left a message to call back. - SK 10/27/06 Spill case transferred from S. Kraszewski to J. Maisonave. - JAM 5/31/07 Reviewed Quarterly Monitoring Report for July through September 2006 submitted by Roux and dated Nov. 10, 2006. Free phase product was detected in wells LW-02 (0.01 foot) and product sheen detected in EW-06 on July 20, 2006. During the previous quarterly monitoring period (April through June 2006), free product was detected in well LW-01 (0.01 ft) and LW-02 (0.22 ft). Groundwater samples were collected from wells on the quarterly schedule (more wells are sampled on an annual schedule at this site) and the highest level of TVOCs was 693ug/L in LW-01. The MPE system continues to run however restricted vacuum readings have been observed in multiple monitoring wells and ventilation wells. 6/11/07 Reviewed Quarterly Monitoring Report for October Through December 2006 submitted by Roux and dated March 15, 2007. Free-phase product was detected in wells LW-02 (0.10 ft) and EW-06/MW-08 (0.15 ft) and product sheen was observed in LW-01 during the October gauging event. Wells EW-06/MW-08 was not gauges in December because of a DOS truck was obstructing and LW-01 and LW-02 had petroleum absorbent socks which were removed. Groundwater samples were collected from wells on the quarterly schedule and the highest level of TVOCs was 261ug/L in LW-01. The MPE system has had an uptime of approximately 80 percent during this monitoring period. However, the system has been hampered by the decreased inlet header vacuum, which resulted in the system s inability to extract groundwater and expose the smear zone. Attached in the appendices were an Enhanced Bioremediation Work Plan and Additional Site Investigation Work Plan. The Enhanced Bioremediation Work Plan proposed injecting a bacteria/enzyme mixture at wells LW-01, LW-02 and MW-16. These wells would be monitored to evaluate the effectiveness of the injection. I requested that EW-07/MW-09 be included in the monitoring program and approved the work plan. The Additional Site Investigation Work Plan proposed the advancement of seven soil borings in locations as shown in Figure 8. I requested that the new borings be advanced as close as possible to the original soil samples collected at the beginning of the site investigation and approved the work plan. Additional recommendations to the O&M Procedures are as follows: 1) Convert MPE system to SVE system 2) Reduce frequency of the quarterly groundwater monitoring program to semi-annual 3) Reduce frequency of gauging from monthly to quarterly 4) Remove SVOCs from the groundwater sampling program 5) Remove wells EW-05, MW-12 and MW-15 from the groundwater sampling program. Recommendations 1, 3, 4, and 5 were approved. Since a new remedy is being implemented at the site groundwater monitoring should continue on a quarterly basis for several more round. The reduction of monitoring frequency from quarterly semi-annual will be reevaluated at a later date. A letter was sent today with these approvals and can be found in edocs. - JAM 3/3/08 Reviewed Quarterly O&M and Monitoring Report for period January through June 2007 submitted by Roux and dated September 18, 2007. MPE system operated at the site and as currently configured the MPE system is not operating efficiently to remediate residual soil and groundwater. Groundwater samples were collected from select wells in January and April 2007 for VOCs and SVOCs. No SVOCs were detected in any wells and TVOCs were observed ranging from ND to 84ug/L. Roux states the MPE system has effectively

BROOKLYN NORTH 03/03A DOS -DDC (Continued) **S104621574**

reduced levels of free product and residual soil and groundwater contamination. During the next monitoring event Roux will conduct quarterly monitoring, implement the approved bioremediation WP and convert the MPE system to an SVE system. - JAM 6/10/08 Spoke to Brian Morrissey at Roux. He said the DOS is terminating their lease and moving from the site. They will maintain liability for the spill. Several tanks on the site will be closed. The In-situ Bioremediation work plan should be implimented soon. The MPE system will also be converted to an SVE system. I have received emails from Envirotrac notifying the DEC that the MPE system has been shut down due to a faulty solenoid valve. The valve will be replaced and the extimated down time is 1 week. - JAM 6/23/08 Spill number 0001698 was closed and consolidated with this spill number. Hoist oil was observed in several wells which has been evacuated or removed by petroleum absorbent sock. I added Hoist Oil to the material list on this spill case. I called Brian Morrissey and let him know that spill number 0001698 was closed and consolidated with this spill. - JAM 7/28/08 Reviewed Quarterly Monitoring Report for period July 2007 through May 2008 submitted by Roux and dated June 24, 2008. The MPE system operated at the site with an uptime of 81 percent. As configured the MPE system is not operating effectively and needs optimization. Free product was detected in 4 of the on-site monitoring wells with a max thickness of 0.38feet in well EW-09/MW-03. Product identified as hydraulic oil or heavy lubricating oil. VOCs were detected in several wells with the max detection during the reporting period of 512ug/L in LW-01 in July 2007. Roux advanced six soil borings as per the approved work plan to a depth ranging between 24 to 31 feet. VOCs were detected in 4 of the six borings with a max of 249400ppb in RXSB-02 from interval 19-21fbs. Roux recommends the following: 1. Continue quarterly groundwater monitoring program. 2. Continue using petroleum absorbent socks in wells LW-01 and LW-02. 3. Conduct a soil investigation (as proposed in Appendix E) near the three UST areas in the south-southwester part of the site. 4. Optimize the MPE system performance. I sent an email today approving these recommendations. A work plan should be submitted in a separate letter for approval that describes the optimization of the current MPE system in more detail. The letter should include a process and instrumentation diagram and a site diagram showing the additional extraction points. The report and email are uploaded to eDocs. - JAM 9/12/08 Received an email from Tom Hug at Envirotrac. The MPE system was shut down because the discharge line has become clogged and the system is shutting down on a high water alarm. As soon as the blockage is cleared the system will be restarted. Estimated downtime is 1 week. - JAM 5/12/10 Received an email from Stephen Frank at LiRo and Fatemah Ashkan at the NYCDDC. LiRo proposed a conceptual remedy, which includes excavation and removal of USTs on-site as well as injecting chemical oxidants to treat smear zone and groundwater contamination. I sent a reply email stating that, The proposed approach is acceptable; however, a remedial action work plan (RAWP) must be submitted to the DEC for approval. The RAWP should include a detailed description of the proposed excavation/tank removal work with figures showing the proposed excavation limits and an end-point soil sampling plan. The RAWP should also include a chemical oxidant injection plan with a detailed description of the chemical oxidant to be used, how the chemical oxidant will be applied and a monitoring plan to evaluate the effectiveness of the remedy. I also notified them that the EPA Underground Injection Control Program needs to be notified and an

BROOKLYN NORTH 03/03A DOS -DDC (Continued) **S104621574**

application must be submitted to perform the chemical oxidant injections. - JAM 6/25/10 Reviewed the Proposed Site Pre-Design Investigation Work Plan for the above referenced site submitted by LiRo Engineers, Inc. (LiRo) dated June 16, 2010. The work plan was prepared for the tanks located on the adjacent property at 314 Rutledge Street and proposes advancing nine soil borings and installing two groundwater monitoring wells. The purpose is to locate the three previously abandoned tanks and delineate soil and groundwater contamination, and to determine the limits of the planned soil excavation and design a chemical oxidation injection program, which constitute the remedial strategy approved by the NYSDEC via email on May 12, 2010. The work plan is uploaded to eDocs. I issued a letter today approving this work plan. A summary report including appropriate diagrams, soil boring logs, well construction logs, and tables summarizing soil and groundwater analytical data should be submitted to the NYSDEC for review. A detailed remedial action plan based on the findings of this investigation should also be included for review and approval. Letter uploaded to eDocs. - JAM 11-10-2010 The spill was transferred from J. Maisonave to Alex Zhitomirsky, as per V. Brevdo/J. Kolleeny. AZ 2-14-2011 Reviewed revised additional soil and geophysical investigation summary report and remedial action work plan dated 10/13/2010 and received from J. Kolleeny on Dec. 20, 2010. The plan proposed an in-situ chemical oxidation system to treat smear zone and phreatic zone at 314 Rutledge St. Also, the plan proposed excavation of the remaining USTs and excavation of the remaining residual soil contamination and injections of a metal solution, hydrogen peroxide, and a biological treatment at 306 Rutledge Street. An e-e-mail was sent to S. Frank, V.Brevdo and F. Ashkan: I have reviewed a Revised Soil and Geophysical Summary Report and Remedial Action Work Plan dated October 13, 2010. The Work Plan is approved. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. AZ 8-18-2011 The following e-mail was received from S. Frank (LiRo) on 8/18/2011: At the Quarterly meeting we discussed Brooklyn 3/3A. As you know, NYCDOS moved out of the leased site several years ago. There is currently litigation over rent payments and site impacts that have been ongoing between the property owners and NYC. To complicate matters, the former DOS site includes two separate properties (306 Rutledge and 314 Rutledge) that are owned by two different parties. Both parties are separately in litigation with the City. The City is committed to remediating both properties, but in the past, all site contamination was being addressed under a common spill number associated with fuel oil releases on the 306 Rutledge property. We have acquired Sanborn Fire Insurance maps that show that the 314 site had historically been used for dry cleaning and the historical mapping shows solvent tanks in the portion of the site where the contamination was identified as mineral spirits (see attached Sanborn Map). A mineral spirits derivative was historically used for dry cleaning. The City has inquired if it would be possible to open a separate spill number for the mineral spirits release at the 314 Rutledge Street property. At the meeting, Vadim indicated that NYSDEC would review the site information and advise DDC with regard to opening a new spill for mineral spirits at 314 Rutledge Street. I was wondering if you have had an opportunity to discuss this issue with him. AZ 8/22/2011 The following e-mail was sent by S. Frank (LiRo) to Vadim Brevdo and AZ on 8/22/2011: Dear Mr. Brevdo, I am writing to follow-up on our quarterly meeting conversation regarding the former use of 314

BROOKLYN NORTH 03/03A DOS -DDC (Continued) **S104621574**

Rutledge Street for Dry Cleaning and the identification of a mineral spirits release. Mr. Alex Zhitomirsky called me to inquire weather chlorinated dry cleaning hydrocarbon compounds (i.e., tetrachloroethene and/or its breakdown products) were present. LiRo tested for full Target Compound List (TCL) volatile organic compounds during our February 2011 groundwater sampling of wells in the area of concern (314 Rutledge and 306 Rutledge at the common wall with 314 Rutledge) and the results are summarized in the attached table. Based on the February 2011 sampling, there is no evidence that chlorinated compounds are present in groundwater and all samples showed a chemical identification of mineral spirits. Thank you for your attention to this matter and do not hesitate to contact me if your office needs additional information. AZ 10/26/2011 An e-mail with the information regarding the Owner of 314 Rutledge, LLC. Contact info: c/o Abraham Glanzer, 718 855-9100. Mailing address: Edith Kahan and/or Abraham Glanzer, 170 Hewes St, Brooklyn, NY 11211. AZ 10/31/2011 Discussed this site w/V. Brevdo. Contacted S. Frank of LiRo and requested a technical memo which will summarize all information related to a mineral spirits spill. 12-13-2011 Received an email from S. Frank: Dear Alex, I wanted to update you on the status of remedial work at Brooklyn 3/3A. We are installing injection wells for the ISCO work at both properties (314 Rutledge and 306 Rutledge) as well as removing tanks that were formerly closed in place in the building interior at 306 Rutledge. In conjunction with the tank removal work, we are over-excavating contaminated soil to the extent possible. We are hoping to finish the well installation and tank removal work this week. We expect the ISCO injection work will begin within a couple of weeks after the well installations are completed. AZ 2-13-2012 Reviewed and discussed with V. Brevdo a report by LiRo Former DSNY Brooklyn 03/3a Garage Request for spill number for mineral spirits released at 314 Rutledge. The report states that contamination at 314 Rutledge is a different spill and plume from 306 Rutledge. A spill at 306 Rutledge is allegedly caused by mineral spirits. According to the report, this site was a dry cleaning operation between 1947 and 1965. The Sanborn maps indicate the presence of solvent tanks located along eastern wall of 314 Rutledge which is adjacent to the 306 Rutledge Street property. Petroleum based mineral spirits (Stoddard solvent was historically used in dry cleaning operations. Soil and groundwater investigation completed by EBC (contractor working for 314 Rutledge owner) at 314 Rutledge in 2008 indicated petroleum related VOC in soil and groundwater. EBC recommended the DEC Hotline be notified, however, it was not done. Free phase product fingerprint analysis for the sample from MW-18 (located at 314 Rutledge) identified the product as mineral spirits. Routine groundwater sampling completed in February 2011 from 314 Rutledge wells MW-17 and MW-18 indicated petroleum identification as mineral spirits. DSNY records indicate that petroleum fuel storage and fueling operations were never conducted by DSNY at the 314 Rutledge parcel. However, PBS records indicate that there are three 1,500 gal tanks closed and registered by DSNY in 2000. Product stored indicated as gasoline. This discrepancy must be resolved. S. Frank indicated that these tanks were filled with concrete and will be excavated by LiRo. I requested to attempt fingerprinting any remaining product or sludge in the tanks in question. Also, the tanks design should be described. The Sanitation is leasing this site from 1993. LiRo should submit tank inspection results. LiRo should submit any information supporting statement that

BROOKLYN NORTH 03/03A DOS -DDC (Continued) **S104621574**

DSNY did not use 314 Rutledge for fueling or storage. LiRo should include fingerprint analysis of the alleged mineral spirits. The site was discussed with J. Urda. It was decided that V. Brevdo will contact A. Samani and request a conference call with a City lawyer AZ 10-3-2012 LiRo issued a report in August 2011, stating that Empire Environmental conducted the tank removal and remedial soil excavation work at 306 Rutledge from December 2011 to January 2012. The report was uploaded to e-docs. AZ 10-4-2012 According to LiRo's report dated January 8, 2012, tanks 009, 010 and 011 are 1,500-gallon gasoline USTs which were closed in place at 314 Rutledge in 2000. These tanks were registered as gasoline tqanks. However, according to DSNY records, petroleum fuel was not stored and petroleum fuel operations were not conducted at the 314 Rutledge parcel. The results of geophysical investigation did not indicate the presence of USTs beneath the site. In October 2010, free phase product was observed in 314 Rutledge St. well MW-18. Fingerprint analysis identified the product as mineral spirits. Soil and groundwater contamination are present at 314 Rutledge. However, in the report dated August 8, 2012, LiRo stated that they located and removed previously closed in place mineral spirits tanks at 314 Rutledge Street parcel. A report for the 314 Rutledge Street tank removal will be submitted to DEC under separate cover. Discussed the site with V. Brevdo. AZ 1-2-2013 Reviewed LiRo's report dated August 8, 2012. According to the report, Spill#9200212 was opened in in 1992 due to the release of gasoline and hoist oil in the southern portion of the 306 Rutledge parcel of the site. Underground storage tanks (USTs) and aboveground storage tanks (ASTs) used by DSNY for storing gasoline and hoist oil include three 550-gallon USTs (Tanks 012, 013, and 0140, one hoist oil UST and one hoist oil AST). Multi-phase extraction system was made operational in 2002 and shut down in 2008 because of operational issues. The proposed remedial plan included soil/UST excavation to address spill#92002112 in the 306 Rutledge portion of the site. In addition, the plan proposed chemical oxidation to treat mineral spirits contamination supposedly coming from the historic dry cleaning operation at 314 Rutledge. 1-11-2013 A CSL was sent to C/O GLanzer 170 Hewes Street, Brooklyn, NY 11211. Copies were sent to J. Urda/V. Brevdo. AZ 12-5-2013 Reviewed a semi-annual monitoring report through March 2013. According to the report, mineral spirit related impacts from the 314 Rutledge St. parcel, are present in in wells near the common wall with 314 Rutledge and two wells located along Rutledge St. These include wells LW-01, MW-16, IP-22, IP-23, IP-29, MW-22 and MW-23. Total VOC concentrations above the standards ranged from 42 ppb to 3,870 ppb. Contamination fingerprint identification completed previously at IP-22 and MW-22 identified mineral spirits. Residual motor fuel impacts, mainly Benzene and MTBE are present at 306 Rutledge wells, RXMW-01, MW-03/EW-09, MW-01 and RXMW-07, located along Heyward Street. Total VOC concentrations above the standards ranged from 7 ppb to 150 ppb. A trace level (less than 0.03') of residual oil has been detected intermittently at wells RXMW-01 and MW-03/EW-09 located along Heyward Street. The oil was historically identified as a mixture of lube oil and kerosene. AZ 09-16-2014 Reviewed a semi-annual monitoring report for the period of April 2013 through October 2013, dated January 16, 2014. In October 2013 free-phase product was observed in wells EW-09/MW-03, RXMW-01 and MW-22. No groundwater samples were collected from the Site's interior wells since LiRo was unable to gain access from the current site owner to the interior of the 306 Rutledge Street parcel.Residual

BROOKLYN NORTH 03/03A DOS -DDC (Continued) **S104621574**

motor fuel VOC (MTBE) impacts are present in 306 Rutledge street parcel. Residual motor fuel, VOC (MTBE) impacts are present in 306 Rutledge street parcel well RXMW-07, located along Howard Street(29 ppb). Free phase product was noted in wells EW-09/MW-2 and RXMW-01 along Howard Street. Petroleum absorbent socks were placed in wells RW-09/MW-03, RXMW-01 and MW-22 during the October 2013 sampling event. All three wells were gauged again in November 2013 and December 2013 and attempted to collects product samples for TPH petroleum identification. The only well exhibiting free phase product was MW-22. A TPH sample was collected and identified as mineral spirits. AZ 1-22-2015 Reviewed a semi-annual monitoring report for the period of November 2013 through May 2014, dated June 30, 2014. Free phase product was measured in wells FW-09/MW-03, RXMW-01, MW-01 and MW-22 (exteroir 314 Rutledge parcel well) in April 2014, and petroleum absorbent socks were re-installed. TPH samples were collected from EW-09/MW-03, RXMW-09, RXMW-01 and MW-01. The product was generally identified as #2 fuel oil/motor oil mixture or motor oil. The product in MW-01 could not be identified due to low volume of product. On May 13, 2014, LiRO completed EFR on Heyward Street wells (RXMW-01, MW-01, EW-09/MW-03. during the EFR event the only well with measurable free-phase product was RXMW-01. AZ 7-31-2015 Reviewed semi-annual monitoring report for the period of June 2014 to December 2014 and dated 1/29/2015. Free phase product identified as mineral spirits was measured in well MW-22(314 Rutledge Street parcel well).The product thickness ranged from 0.43' to 0.89' thick. Free phase product was measured in well RXMW-01 on Aug. 20, 2014 at 0.13' thick. LiRo performed EFR on September 3, 2014. Absorbent socks were changed on a regular basis during this monitoring period. During the August 2014 gauging event, LiRo noticed that wells RXMW-01 and MW-22 had been tempered with. The petroleum absorbent socks in both wells had been raised and were no longer situated at the groundwater table. LiRo returned to the Site on September 4, 2014 and installed locked j-plugs in the exterior wells. The wells were also tagged. AZ 12-1-2015 Reviewed semi-annual monitoring report for the period of January 2015 to June 2015 and dated 9/01/2015. Free phase product identified as mineral spirits was measured in January 2015 and June 2015. The product was measured in wells MW-16, MW-22, IP-18 and IP-22 during the January 2015 sampling and in wells MW-22, IP-22 and RXMW-01 during the June 2015 sampling. Product thickness ranged from 0.03' to 1.42'. Free -phase product was consistently measured in well MW-22(314 Rutledge Street parcel well). Interior well LW-01 was discovered as being damaged in January 2015. LiRo will utilize nearby well IP-18 as a substitute for sampling and gauging. I left a message for S. Frank requesting continuation of semi-annual monitoring of groundwater monitoring wells at 306 Rutledge Street parcel. AZ 12-15-2015 Reviewed additional groundwater data submitted by LiRo on 12/15. Discussed the site with S. Frank It was decided that LiRo will fingerprint free product from IP-18 and reinstall three monitoring wells MW-2, MW-10 and MW-12 located on Heyward street and near RXMW-01 that contains free product (motor oil). AZ 12-22-2015 On December 22, 2015, a meeting was held among the Department (K. Mintzer, V. Brevdo, Alex Zhitomirsky), owners of the 306 Rutledge Street site and their environmental consultant (Mohamed Ahmed, Tenen Env.) and legal counsel. The current status of the spill cases on both 306 and 314 Rutledge Street properties, path forward towards spill case closure and potential site development were discussed during the meeting. The DER has completed preparation of the case

BROOKLYN NORTH 03/03A DOS -DDC (Continued) **S104621574**

referral form to OGC to enforce cleanup of the 314 Rutledge Street parcel and is preparing Stipulation Agreement and Corrective Action Plan for the owners of the 314 Rutledge Street parcel. AZ 12-23-2016 Reviewed a semi-annual monitoring report dated April 14, 2016. On 12/21/2015 Sheen was encountered at monitoring well RXMW-01. The free-phase product in this well is motor fuel. Petroleum absorbent socks have been used to remove low levels of product. Wells associate with 306 Rutledge Street (spill#9200212) reported low levels total dissolved VOCs: less than 130 ppb. AZ 10-26-2017 Reviewed a semi-annual monitoring report dated April 4, 2017. Measurable FREE-PHASE product was encountered at monitoring well RXMW-01 and MW-01. EFR was performed on two wells on November 2016. Petroleum absorbent socks have been used to remove low levels of product. Wells associated with 306 Rutledge Street (spill#9200212) reported low levels total dissolved VOCs: less than 95 ppb. Only four out of 15 wells of the interior at 306 Rutledge were accessible. AZ 2-22-2018 Reviewed a semi-annual monitoring report dated August 25, 2017. During this monitoring period measurable free-phase product was reported twice in well MW-01 (0.24'and 0.19') EFR was performed on April 10, 2017. Petroleum absorbent socks were changed. Historically, free phase product has been measured in 306 Rutledge Street parcel interior well IP-22, however, the well was covered with debris during this monitoring period. AZ 9-18-2018 Reviewed a semi-annual monitoring report dated March 1, 2018. During this monitoring period free-phase product was not measured in any Heyward Street wells (September and October 2017). However, petroleum absorbent socks were maintained in these wells. LiRo was unable to gain access to the interior wells of 306 Rutledge, therefore, there is no groundwater data for these wells. Numerous interior wells were covered with debris, garbage, storage pallets, etc., and could not be gauged. Well IP-22, which historically contained mineral spirits free-phase product, was covered with debris and could not be gauged. Mineral spirits contamination migrated onto 306 Rutledge Street interior wells in the northeast corner along the common wall with 314 Rutledge Street. AZ 9-27-2018 On September 27, 2018, DEC met with 306 Rutledge representatives. Regional Attorney Patrick Foster (DEC), Vadim Brevdo (DEC), Chris Gorman and Michael Bogin (the owner's counsel), and Mohamed Ahmed (the owner s consultant, Tenen Environmental) were present. The status of the site was discussed. DEC expressed concerns regarding access for the City s consultant, LiRo, to the interior of the site. Mr. Gorman 516-328-2300)promised to assist with this issue; his contact information will be provided to LiRo. The off-site mineral spirits contamination from 314 Rutledge into 306 Rutledge was discussed. The 306 Rutledge owners requested that the 314 Rutledge owners expedite the cleanup of the mineral spirits spill. DEC agreed to contact the 314 Rutledge owners to request that they expedite the cleanup. Mr. Bogin stated that if the City is willing to excavate the remaining petroleum contamination at 306 Rutledge, the 306 Rutledge owners will demolish the existing on-site structures. This proposal will be discussed with the DDC consultant LiRo. AZ 1-29-2019 On January 29, 2019, a meeting was held between the representatives of 306 Rutledge Street property owners, NYCDDC, NYC Law Department, DSNY and NYSDEC (represented by Alex Z, Vadim B. and Regional Attorney) to discuss further course of action for the project. During this meeting 306 Rutledge Street site owner s counsel reiterated their readiness to demolish the building on the property to expedite remediation if the City commits to excavation of the contaminated area to complete

BROOKLYN NORTH 03/03A DOS -DDC (Continued) **S104621574**

remediation. City Law Department expressed concern about the cost of remedial excavation as opposed to product recovery via absorbent socks. The Department stated that it s priority is to have the remedial work completed and spill closed. The NYC Law Department stated that they will hold additional internal discussions on whether City can commit to remedial excavation and get back to 306 Rutledge Street property owner and the Department. 5-29-2019 Reviewed a semi-annual monitoring report dated October 27, 2018. During this monitoring period free-phase product was not measured in any Heyward Street wells (associated with 306 Rutledge Street). However, petroleum absorbent socks were maintained in these wells. A sheen was noticed in RXMW-01 following purging. Petroleum absorbent socks were replaced in wells RXMW-01 and MW-01 on March 1, 2018. Free-phase product was measured in well MW-22 associated with 314 Rutledge Street during this monitoring period. Access to 314 Rutledge wasn't provided during March 2018 sampling event. However, the owner did provide access during the October 2018 sampling event. AZ 12-2-2019 Reviewed a semi-annual monitoring report dated April 4, 2019. During this monitoring period the current 306 Rutledge Street owner granted LiRo access to the interior wells (306 Rutledge). Free-phase product was measured on 10/3/2018. IP -22 had 2.35' of product and well IP-29 had 0.13' of product. Product was measured in 314 Rutledge Street exterior well MW-22(associated with 306 Rutledge Street) on November 12, 2018 (0.06'). Since this product is not related to the Site's petroleum spill, NYCDDC no longer maintains absorbent sock in this well. In RXMW-01, associated with petroleum spill, product was measured at 0.06' on 10/03/2018, and a petroleum absorbent sock was maintained in the well until January 2019. The petroleum absorbent sock was removed on January 25, 2019, to determine if measurable free-phase product would return to the well. AZ '""

Remarks: "U.G. TANK INSIDE BLDG, NOT USED FOR 10 YEARS. EXCAV. FOR NEW FLOOR, DISCOVERED CONTAMINATED SOIL. SHOULD BE CHECKED ASAP, PLAN TO POUR NEW FLOOR SOON."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 4/12/04-Vought-Spill transferred from Mulqueen to Vought as per Rommel. 3/24/06 Diaz - Next steps required - review file, track down contacts. Spill transferred back to Region 2 3/10/08 - Austin - Spill assigned to Ahmed for followup - end 10/27/11 - Austin - Transferring this case from Ahmed to Ketani - end 9/23/13 - Raphael Ketani. I spoke to Heidi Unwin (518) 786-4347, Environmental Specialist II, Environmental Compliance Branch regarding the spill. She said that she had been looking through some old records and discovered that the spill had not been closed out. I told her that the DEC had only two letters stating that the investigation and remediation was going to take place. Ms. Unwin stated that she will send the DEC copies of all of the remediation, sampling and disposal information that she has on file. 10/8/13 - Raphael Ketani. Ms. Unwin sent 4 documents regarding the tank removal and soil excavation. These documents were: the Solution Mechanical Corp. 7/11/96 pre-excavation soil endpoint analytical report; the Solution Mechanical Corp. 7/18/96 post-excavation soil endpoint analytical report; the Solution Mechanical Corp. 7/26/96 tank removal and remediation report; and the NYS Division of Military and Naval Affairs 10/2/13 Spill Closure Letter. The pre-excavation soil endpoint samples were analyzed for VOCs and SVOCs. Samples were taken from all four sidewalls and two samples from the bottom. The results were either non-detect or well below the CP-51 unrestricted standards. The post-excavation soil endpoint samples were analyzed for VOCs and SVOCs. Samples were taken from all four sidewalls and two samples from the bottom. Samples were also taken from the soil

UNITED STATES ARMORY (Continued) **S103569544**

stockpile and around the stockpile. The results were almost entirely non-detect for the endpoints and non-detect to well below standards for the soil stockpile samples. The tank removal and remediation report had a map showing where the tanks and the pump islands had been. Both 2,000 gal. USTs had contained gasoline, even though one was labeled as containing diesel. The cause of the spill was the sweating of product from the joints of the fill pipes and the suction lines. The excavation of the soil had started on 6/24/96. The contaminated soil was shipped to a landfill in Albany, NY. Tanks were cleaned and shipped to a scrap metal facility. Manifests were included for the soil and the tanks. The Spill Closure Letter stated that about 63.4 tons of soil had been excavated. 10/10/13 - Raphael Ketani. The spill case was presented to Hassan Hussein, supervisor Unit C, Region 2, Remediation for closure. Mr. Hussein accepted the closure of the spill case. Based upon the information in the case record, the site has been successfully remediated and there are no threats to the public of the environment. Therefore, I am closing the spill case effective today."

Remarks: "upon digging out tanks it was discovered that soil was contaminated from gasoline and possibly diesel fuel-area has been cleaned up"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY URS investigated site, operated dual-phase extraction system to address free product, soil and groundwater contamination. System operation was terminated in 2002 due to diminishing results. To address remaining groundwater contamination they applied ORC. Groundwater monitoring still ongoing. - JK 4/4/05 Spill transferred from Kolleeny to A. Zhitomirsky on 4/4/05. - JK 10/31/2005 Reviewed report dated September 2005. MTBE is at 230 ppb. AZ 8-14-2006 Reviewed monitoring report by Roux dated July 28, 2005 for March through June 2006.MW-3 - 150 PPB mtbe in groundwater.Recommendations: maintainn DPE and Oxygen delivery remediation systems shut down; continue gw monitoring, discontinue SVOCs analyses, evaluate alternative technologies. AZ 04-5-2007 Reviewed Monitoring Reports submitted in November 2006 for July through September 2006 and on March 23, 2007, for October through December 2006. Residual MTBE contamination was detected in four wells with concentrations up to 60 ppb(July 2006). Benzine and naphthalene were encountered in one well. DPE was inactive. ORC injections and ORC socks were discontinued. In October 2006 sampling event MTBE ranged from 16 ppb to 136 ppb. Some increase of MTBE concentrations was observed. ORC socks will be installed in MW 216-MW-01, 216-MW-03 and MW-09. Recommended maintaining shutdown status of DPE system, reducing monitoring and reporting to semi-annual. These recommendations were approved. An e-mail was sent to Brian Morrissey (ROUX): I have reviewed Monitoring Report for October- December 2006 dated March 15, 2007. The report recommended reducing monitoring and reporting frequency to semi-annual. ORC socks should be placed in wells where VOC concentrations exceed NYSDEC Guidance Values. AZ 10-22-2007 Reviewed Monitoring Reports submitted in August 2007 for January through June 2007. Residual MTBE contamination was detected in five wells wells with concentrations up to 85 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. Roux recommended continuing semi-annual groundwater monitoring program. AZ 7-2-2008 Reviewed Monitoring Reports submitted in April 2008 for July through December 2008. Residual MTBE contamination was detected in four wells of the six wells with concentrations up to 56 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. MTBE is the only VOC detected at a concentration greater than its NYSDEC

90 PRECINCT NYPD -DDC (Continued) **S102238705**

AWQSGV in multiple wells. Roux recommended continuing semi-annual groundwater monitoring program. AZ 2-13-2009 Reviewed Monitoring Reports submitted in October 2009 for January through September 2008. Residual MTBE contamination was detected in four wells of the six wells with concentrations up to 66 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux will conduct a site wide groundwater sampling round in preparation for NFA. AZ 11-6-09 An e-mail was sent to Brian Morrisey/Fatemeh Ashkan/ V. Brevdo: I have reviewed a semi-annual report for the above site dated May 22, 2009 add covering the period of June 2008 through March 2009. Roux proposed conducting soil sampling and analyses in areas of residual groundwater contamination (i.e.e 216-MW-02 and MW-08) in order to determine current status of soil impacts. Also, you proposed considering enhanced bioremediation for this site. These proposals are approved and should the work plan should be included in the next monitoring report. AZ 3-29-2011 Reviewed 4,000 gal gasoline tank closure report.3 bottom samples were collected at depth 13 to 16 bgs. Sidewalls samples could not be collected due to the steel sheeting that was previously installed during the original tank installation. Groundwater sample was collected from approximately 13 ft bgs. No visual evidence of contamination was detected. PID readings 0.6 - 2.1 ppm. The tank was in good condition. 456.4 tons of soil was transported for offsite disposal. No VOCs or SVOCs were detected in the soil samples. Groundwater sample contained VOCs detected above NYSDEC TOGs total VOCS 438 ppb. AZ 4-27-2011 An e-mail was sent to LiRo/DDC/V. Brevdo: I have reviewed the Site Turnover Status Report and Semi-Annual Monitoring Report dated January 24, 2011. I concur with the LiRo's recommendations to install two wells near a former 4,000 gal gasoline UST. Since the groundwater contamination was discovered when this UST was removed, two additional wells are required near this tank (a total of four wells). Well MW-01 could be removed from the monitoring schedule, as per LiRo's recommendation. Additional soil borings are approved. There is a number of USTs, including gasoline tanks, closed in place at this site. I recommend that these tanks be removed, if feasible. AZ 11-27-2011 Reviewed report dated Aug. 29, 2011. The report stated that the latest groundwater results show VOCs were detected above AWQSGVs in four wells. LiRo will ORC socks and continue semi-annual monitoring. AZ 6-11-2012 Additional soil borings SB-01 through SB-04 will be installed. New monitoring wells LMW-01 through LMW-04 will installed in the second quarter of 2012. AZ 4-15-2013 ORC socks are installed in MW-02 and MW-08. AZ 9-24-2013 The following e-mail was sent to S. Frank/V. Brevdo/F. Ashkan: Dear Steve, I have reviewed Request for Spill Closure dated May 23, 2013. This spill is associated with the four closed in-place USTs located on the 90th Precinct property. No remediation of soils required based on recent (May 2012) and historical soil analytical data. ORC slurry application was performed in March 2004. Stable dissolved phase groundwater plume with Total Volatile Organic Contaminant concentrations less than 100 ppb was recorded during last two sampling events. The subway and tunnel prevent offsite migration. LiRo requested that DEC close spill number 9512590. Based on the documentation provided to date, the New York State Department of Environmental Conservation (the Department) has closed the spill case number 9512590. All wells associated with this project should be closed according to the Department's Groundwater Monitoring Well

90 PRECINCT NYPD -DDC (Continued) **S102238705**

Decommissioning Procedures. All wells should gaged for the presence of free product before closure. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts must be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alex Zhitomirsky"

Update By:	GWBURKE
Site Description:	"Location: The site is located at 159 Boerum Street in Brooklyn, NY and is identified as Block 3071, Lot 40 on the Kings County Tax Map. The site is located on the city block bound by Johnson Avenue to the north, Humboldt Street to the east, Boerum Street to the south, and Graham Avenue to the west. Site Features: The site is approximately 11,180-square-foot (0.25 acres) and is situated on the south-central part of the tax block. The site is occupied by an open-air asphalt parking lot surrounded by landscaped areas to the north and south. There are no buildings on the site. The site grade slopes from north to south, toward Boerum Street. The topography of the region is characterized by small peaks and valleys, which causes varying changes in the direction and degree of slopes in localized areas. The surrounding area slopes downward gradually to the south-southeast. Current Zoning and Land Use: The site is zoned R6 (residential). The surrounding properties are zoned R6 with C1/C2 (commercial) overlays along major thoroughfares. Land use within a half-mile radius includes residential, commercial, industrial, open space and

159 BOERUM STREET (Continued) **S123658106**

institutional developments. The nearest ecological receptor is the English Kills (tributary to Newtown Creek), located about 0.64 miles northeast of the site. Past Use of the Site: A review of available Sanborn Fire Insurance Maps, historic aerial photographs, and City Directory records indicate the site was developed as early as 1887 with four multi-story buildings used as stores (labeled as tailor shop, synagogue, candy packaging, and warehouse), parking, and residential dwellings until about 1965. The previous mixed commercial/residential buildings were demolished around 1974, and the site was used as an open-air parking lot as early as 1981. Test pits excavated on-site revealed buried solid waste, including glass, organic fibers, fabric, plastic, automobile tires, coal, ceramics, metal, brick and concrete as deep as 7.5 feet bgs, suggesting that undocumented dumping occurred at some point after the buildings were demolished in 1974. Site Geology and Hydrogeology: Based on findings from the Remedial Investigation, the asphalt parking lot and vegetated areas are underlain by a fill layer extending from surface grade to depths approximately 5 to 14 feet bgs. The historic fill predominantly consists of a brown, fine to medium sand and gravel matrix. The historic fill material was heterogeneous and contained various amounts of glass, organic fibers, wood, coal, ash, slag, metal, brick and concrete. The historic fill material is underlain by a native tan to brown, fine- to coarse-grained sand with trace silt and fine gravel observed at approximately 5 feet to at least 25 feet bgs. Bedrock was not encountered during the remedial investigation. Groundwater was encountered at depths ranging from 21 to 23.29 feet bgs. Based on measured groundwater elevations, site groundwater flows towards the northwest."

Env Problem:

"Nature and Extent of Contamination: A site wide investigation was conducted to delineate contamination in soil, groundwater and soil vapor. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compound (SVOCs), metals, polychlorinated biphenyls (PCBs),pesticides, the emerging contaminants per-and polyfluoroalkyl substances(PFAS),and 1,4 dioxane. Soil vapor was analyzed for VOCs. According to the most recent analytical results, the primary contaminants of concern at the site are metals, VOCs and SVOCs. Results are summarized below: Soil: Based on investigations conducted to date, the primary contaminants of concern detected in soil at the site include VOCs, SVOCs and metals. One VOC, naphthalene, was detected in sub-surface soil (2 to 4 feet below grade) at a concentration exceeding its Unrestricted Use Soil Cleanup Objective (UUSCO), of 3,400 parts per million (ppm) compared to its UUSCO of 12 ppm. Several SVOCs detected in the subsurface exceeded their respective UUSCOs benzo(a)anthracene up to 230 ppm (UUSCO is 1 ppm), benzo(a)pyrene up to 210 ppm (UUSCO is 1 ppm), benzo(b)fluoranthene up to 270 ppm (UUSCO is 1 ppm), chrysene up to 210 ppm (UUSCO is 1 ppm), indeno(1,2,3-c,d)pyrene up to 110 ppm (UUSCO is 0.5 ppm), dibenz[a,h]anthracene up to 29 ppm (UUSCO is 0.33 ppm), benzo(k)fluoranthene up to 80 ppm (UUSCO is 0.8 ppm), fluoranthene up to 530 ppm (UUSCO is 100 ppm). Several metals exceeded their respective UUSCOs, including barium up to 990 ppm (UUSCO is 350 ppm), cadmium up to 5.98 ppm (UUSCO is 2.5 ppm), mercury up to 1.47 ppm (UUSCO is 0.18 ppm), lead up to 2,680 ppm (UUSCO is 63 ppm). During an additional subsurface investigation, lead was detected at a concentration above the hazardous waste regulatory threshold in three soil borings, with a maximum Toxicity Characteristic Leaching Procedure (TCLP) concentration of 11.6 ppm

159 BOERUM STREET (Continued) **S123658106**

(Regulatory level for lead is 5 ppm), at depth of 2-3 feet bgs. Based on the sampling results, there is no indication that these contaminants have migrated off-site. Groundwater: Barium was identified in on-site groundwater at a maximum concentration of 3,143 parts per billion (ppb), compared to the NYSDEC Groundwater Quality Standard (GQS) of 1,000 ppb, and chromium was found up to 317 ppb (GQS is 50 ppb). Several SVOCs were detected, including benzo(a)anthracene up to 0.07 ppb (GQS of 0.002 ppb), benzo(b)fluoranthene up to 0.07 ppb (compared to GQS of 0.002 ppb), chrysene up to 0.05 ppb (compared GQS of 0.002 ppb), and indeno(1,2,3-c,d)pyrene up to 0.12 ppb (compared to GQS of 0.002 ppb). Pesticides including dieldrin up to 0.006 ppb (GQS is 0.004 ppb). Based on the sampling results, there is no indication that these contaminants have migrated off-site. Soil Vapor : Total VOCs in soil vapor samples collected near the site perimeter areas ranged from 346 micrograms per cubic meter (?g/m) to 2,015 ?g/m . Primarily acetone, methyl ethyl ketone (2-butanone), 2-hexanone, chloroform are driving the elevated total VOCs concentration. Tetrachloroethene (PCE) concentrations detected in soil vapor ranged from about 1.48 ?g/m3 to 5.81 ?g/m3. PCE s daughter products, trichloroethene, cis-1,2-dichloroethene and vinyl chloride, were not detected in soil vapor samples. Benzene, toluene, ethylbenzene, and xylenes (BTEX) were detected at total concentrations ranging from about 17.71 ?g/m3 to 42.5 ?g/m3. Based on the soil vapor sampling results, soil vapor intrusion does not appear to be a concern for off-site buildings."

Health Problem:	"People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by site-related contamination. People who enter the site may come into contact with soil and groundwater contamination if they dig below the ground surface. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Environmental data collected from the site indicates that soil vapor intrusion is not a concern for off-site structures."

Site Description: "Location: The Site is located at 152 Graham Avenue in the Borough of Brooklyn, Kings County, NY. The site is located in the East Williamsburg section of Brooklyn, New York. The property is bordered by Graham Avenue on the west, by a three-story mixed commercial/residential building to the north, by a four-story mixed commercial/residential building and a three-story mixed commercial/residential building to the south, and by a four-story residential building to the east. The three-story building located to the southeast of the site also has a dry cleaner on the first floor. Site Features: The 2,500 square foot (0.057 acre) site parcel is occupied by a three-story building built in 1920. The site parcel also contains an open yard area behind (east of) the structure. The first floor is occupied by a dry cleaner and the upper two floors are occupied by residential apartments. Current Zoning and Land Use: The current site use is a dry cleaner (Top Hat Cleaners) on the first floor with residential apartments on the second and third floors. Past Use of the Site: According to the historical records, a dry cleaner has occupied the 152 Graham Ave location since approximately 1960. A Phase I study at the adjacent property (154 Graham Avenue) identified current and prior occupants of the ground floor retail space (pastry shop, shoe retailer and moving company, among others) which were not likely to be a source for chlorinated VOC impacts beneath the site. The report identifies the dry cleaner at 152 Graham Avenue (Top Hat Cleaners) as the most likely source of the contaminants identified in soil vapor. Site Geology and Hydrogeology: The site elevation is approximately 27 feet above mean sea level. Soil lithology consists of two main types of soils. The first soil type was fill material that consisted of fine to medium sand to silt with fine to coarse gravel and traces of brick and other miscellaneous debris. The second type was natural material composed of fine to coarse sand to silt with fine to coarse gravel and little clay. Groundwater was encountered between 17.5 feet and 22.5 feet below ground surface. Groundwater flow was determined to be in the north to northwest direction. Site is transferred and being remediated under BCP Site No. C224208."
Env Problem: "Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs). Based upon investigations conducted to date, the primary contaminant of concern is tetrachloroethene (PCE). Soil - Sampling of soil beneath and behind the site structure was limited due to inability to access the area with a drill rig. Sample results from other media indicate that a source area of higher contaminant concentrations may be present beneath the site structure. Two detections of PCE were observed in soil borings advanced during the Site Characterization. PCE was

TOP HAT CLEANERS (Continued) **1004758111**

detected at MW-02 (0.0036 ppm 17 19) and MW-04 (0.0017 ppm 5 6). Both detections are below the NYCRR Part 375 Soil Clean-up Objective of 1.3 ppm for PCE meeting both Unrestricted Use and Protection of Groundwater objectives. Groundwater - PCE was found in groundwater at two of the three boring locations advanced into the water table. Concentrations in contravention of the Class GA Groundwater standard of five (5) ppb were observed at 56 ppb and 10 ppb. Each of these exceedances were located in the public sidewalk immediately off the site parcel. Soil Vapor & Indoor Air A Vapor Intrusion Investigation was performed at the adjacent building to the north (154 Graham Avenue) as part of a real estate transaction. As part of that investigation two sub-slab vapor samples, one basement indoor air sample, and one ambient air sample were collected. At sub-slab location SG2, 43,399 ug/m3 of PCE was detected in soil vapor. (Note that the concentration reported is from a sample that was diluted 600 times. The concentration of PCE in the undiluted sample was 10,171 ug/m3, which exceeded the calibration range of the equipment.) Trichloroethylene (TCE) was detected at 1074 ug/m3 in the diluted sample and at 1504 ug/m3 in the undiluted sub-slab vapor sample. Cis-1,2-dichlorothylene (cis-1,2-DCE) was detected at 2180 ug/m3 in the diluted sample and at 1110 ug/m3 in the undiluted sub-slab vapor sample. Indoor air sampling results identified 44.1 ug/m3 of PCE and 0.43 ug/m3 of TCE in the basement air sample. See site no. C224208 for additional updates."

Health Problem: "People may contact contaminated soil or groundwater if they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion on-site. Additional investigation of the potential for soil vapor intrusion to occur off-site is needed."

Update By:	JHOCONNE
Site Description:	"Location The Site is identified as 152 Graham Avenue, Brooklyn, NY 11206. This Site is located on the east side of Graham Avenue between Montrose Avenue to the north and Johnson Avenue to the south in the Borough of Brooklyn, New York. This property Site is bordered by a 3-story mixed residential and commercial building to the north, Graham Avenue to the west, a 4-story mixed residential and commercial building to the south, and a 4-story residential building to the east. Site Features The Site is 2,500 square feet in area and currently consists of a 3-story mixed residential and commercial building witl1 a partial basement and a rear yard. The building is constructed of concrete, brick, and mortar, and occupies the majority of the footprint of the lot. Current Zoning and Land Use The Site is currently zoned as R6 but is categorized in the S2 building class according to the NYC Department of Finance, which allows mixed-use as a residential building with one attached store or office. Past Use of the Site According to the Sanborn maps, the Site was historically occupied by an unidentified store and 3-story story dwelling between 1887 and 1950, although the existing building was constructed in 1920. The Site has been utilized as a dry-cleaning facility, identified as Top Hat Cleaners, since circa 1960. Site Geology and Hydrology The Site is generally level and is at an elevation of

TOP HAT CLEANERS (Continued) **S106435385**

approximately 27 feet above sea level. The geology of Kings County consists of unconsolidated glacial deposits. The groundwater beneatl1 tl1e Site was encountered at depths ranging between 17.5 feet and 22.5 feet below ground surface, and groundwater flow was determined to be in the north to northwest direction. "

Env Problem: "Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, poly-chlorinated biphenyls (PCBs), and metals. Soil vapor was analyzed for VOCs. Soil: Elevated levels of chlorinated-related VOCs were detected with the highest concentrations near the basement of the site. The highest level VOC concentration, tetrachloroethene (PCE), was detected at 440 parts per million (ppm) compared to the Restricted-Residential Soil Cleanup Objective (RRSCO) value of 19 ppm and Protection of Groundwater Soil Cleanup Objection (PGSCO) of 2 ppm at depths of 2 to 12 feet below grade. Groundwater: Chlorinated related VOCs were detected in all monitoring wells. The highest VOC concentration was tetrachloroethene (PCE) with a maximum concentration of 29,000 ug/l compared to the Ambient Water Quality Standards (AWQS) of 5 ug/l. Trichloroethene (TCE) was detected at a max concentration of 200 ug/l compared with AWQS of 5 ug/l, cis-1,2-dicholorthene (max. 1,400 ug/l) compared with AWQS of 5 ug/l, and vinyl chloride (max. 25 ug/l) compared with AWQS of 2 ug/l. Soil Vapor: Chlorinated VOCs (CVOCs) were reported in soil vapor and sub-slab soil vapor samples. Tetrachloroethene (PCE) was detected with a maximum value of 929,000 ug/m3, cis-1,2-dicholorthene with a maximum value of 2,070 ug/m3, and trichloroethene (TCE) with a maximum value of 1,240 ug/m3. PCE and TCE was detected indoor air samples at maximum concentration of 396 ug/m3 and 6.87 ug/m3, respectively. PCE was detected in an outdoor air sample at a concentration of 10.5 ug/m3. Elevated levels of petroleum related volatile organic compounds were found in soil vapor and sub-slab soil vapor, including benzene at 96.4 micrograms per cubic meter (ug/m3), ethylbenzene at 103 ug/m3, and hexane at 191 ug/m3. The analytical results exceedance for chlorinate solvents (PCE and TCE) by the NYSDOH 2006Guidance for Evaluating Soil Vapor Intrusion recommends mitigation actions. Elevated concentrations were found at the property boundaries, indicating a possibility for off-site migration of site-related soil vapor. "

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

SLATTERY J B & BROS INC (Continued) **1000421759**

corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"01/30/06: This spill transferred from J.Kolleeny to S.Kraszewski. This site was previously served by two 23K USTs installed in 1960. They were replaced by two 20K USTs in 2004. They all stored #2 fuel oil. A Phase II report performed in 1993 reveals oil-stained soil in the vacinity of the USTs, the leaks origin is suspected to be the fuel lines since oil seepage has been seen coming through the boiler room wall. Two MWs were installed but neither found any free product or a sheen. Test results show no PAHs, AHs or TPH. However, some GW contamination might exist between the tanks and the boiler room wall, were the leak is most likely to be. Report suggests quarterly monitoring and one additional MW. Monitoring and bailing records on file indicate no free product in any of the MWs. No GW samples taken from any of the wells prior to the Phase II. Seems that only the soil has been impacted and isn't migrating into the GW. - SK 03/22/06: This spill transferred to K.Tang - SK 11/19/07: This spill remains open, but consolidated with 0402157. J.Kann 5/20/09: J.Kann - Investigation work plan received. 5/1/12: J.Kann - work plan approved in an email dated 9/21/09. SIR rcvd 4/2012. Report reviewed. Some product appears to be seeping into the basement based on a photo in the report. Information on the tank closure was requested from NYCHA and submitted on 4/26/2012. SIR includes closure request. File under review. 1/4/12: J.Kann - Work Plan approved in an email dated 9/21/2009. GPR work is scheduled to start on 1/5/12. 4/12/12: J.Kann - SIR received in March 27, 2012 5/1/12: J.Kann - reviewed SIR, additional information regarding tank closure requested from NYCHA in an email. Info submitted by NYCHA to DEC on 4/26/12 and is under review. 5/9/12: J.kann - Tank closure report from 2004 received on 4/26/12 shows no VOCs detected in endpoints and minor PAHs in one location of endpoints. In 2004, the excavation was performed to 18 feet (groundwater varies from 8-12 ft bgs on site). The site Investigation Summary report dated March 2012 (installation of 5 borings and 2 new wells, and sampling of an existing well) shows no groundwater impacts and soils below CP-51 with the exception of minor exceedences of PAHs at 10-12 feet in one location. A photo in the report shows some oil seepage in the basement at a depth of approx. 12 ft bgs. A site visit was made on May 3. Staining on the boiler room wall with weathered No. 6 oil was observed at a depth 12-14 feet

BUSHWICK HOUSES -NYCHA (Continued) **S102143036**

bgs. Given the number 6 oil tanks were removed in 2004, together with contaminated soils; and the 2012 investigation shows no contamination in borings and wells, it is likely a layer of saturated soils remain immediately adjacent to the foundation wall (the tank excavation required shoring which was place approx. 2-3 feet from the foundation wall (based on site photos and a drawing in the tank closure report. The site was discussed at the May 7 closure meeting. Closure was rejected because of the seepage/staining. An email will be sent to NYCHA indicating this. 5/10/12: J.Kann - email sent to NYCHA and edoced. 5/29/12: J.kann - rcvd a response from NYCHA. 6/13/12: J.kann - sent a response back to NYCHA. The oil seepage issue remains and NYCHA must determine whether there is a feasible way to address it. 8/30/12: J.Kann - received a revised ISR on August 21 and edoced it. 5/30/13: J.Kann - NYCHA sealed the seepage area in the basement and provided a photo. Spoke with Jeff Vought and he confirmed that the spill should be closed and that the revised spill closure letter should be sent. 6/26/13: J.Kann - Spill closure letter sent."

Remarks: "DISCOVERED OIL COMING THROUGH BASEMENT WALL."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 11/02/05: This spill transferred from J.Kolleeny to S.Kraszewski 01/13/06: Recieved NYCHA spill report. Gordon Environmental was on site during excavation to perform the site assessment, which is available according to the report. No documentation of investigation report on file. Need to contact NYCHA for the site assessment. - SK 07/07/06: The site summary provided by NYCHA states that a site assessment is available, but doesn't describe what kind of assessment or the date. Recommends that the Department review it. - SK 02/06/07 - J.Kann - site reassigned from S. Kraszewski to J.Kann. 11/19/07: J.Kann - This spill closed and consolidated with 8908280. "
Remarks:	"FOUND SOME CONTAMINATED SOIL WHILE REMOVING TANK: SOIL IS BEING REMOVED BY GORDON ENVIORMENTAL AND WILL BE TESTED AND STOCKPILED ON PLASTIC. "

DEC Memo:	"08/25/06 - Zielinski The drawing has been received and photos indicating filling lines and vent lines. They run in the basement above a concrete floor. Thew case is closed. 8/17/06 - Zielinski

MOST HOLY TRINITY RESIDENCE (Continued) **U001839612**

Steven Tsevdos called and said that they have only two 257-gallon tanks on the site. The drawing depicting the location of the closed tank and pipe lines would be sent to DEC. 8/17/06 - Zielinski Received soil samples' analyses taken 3 feet below tha tank bottom--no indication of soil contamination (eDOCs). Jim Donelan of Protest faxed a tank test report-- it had been a dry leak. Left a message for Steven Tsevdos, Caring Communities manager, asking for a layout of the failed tank and a number of tanks in service since the subject tank had been closed, and no records of registered tanks at the site. 7/17/06 - Zielinski Sent a letter requesting that within three weeks of receipt of this letter, Caring Communities would submit a report, required by the department's letter of September 24, 2003. This letter provides that the Caring Communities must submit soil sample analyses, an explanation of tank failure, and remowe contaminated soil. 7/13/06 - Zielinski Took photos of at the site. No indication of soil boring. Talked to Mr. Perez- superintendent. Left a note to Mr. Alonso requesting soil sampling results. 7/6/06 - Zielinski Spoke with Gustavo Alonso, the manager of Caring Communites. Asked him to sent all documents related to the spill. That same day, he faxed a DEC letter of 09/24/03 requesting a report and an affidavit; a proposal of work to be done, submitted by Petroleum Tank Cleaners, dated 11/21/03; an affidavit from Mercury Tank & Pump Inc., dated 4/9/04. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHAO 9/24/03 DDO Sawyer sent tank test failure letter to: Juan Perez 157 Graham Ave. Brooklyn, NY 11206 10/3/05: CBN Called Juan Perez and was told that the spill has been taken care of. Requested documentation/report for spill closure. Manager will get back to DEC on that."

WILLIAMSBURG HOUSES -NYCHA (Continued) **S102672842**

Plan dated Jan. 13, 2004. Jon sent approval for Site Investigation Work Plan on Feb. 4 2005 to NYCHA. I spoke with Joel, he never recieved approval letter possibly because Steve Saccacio from NYCHA transferred from his position around the time Jon submitted his approval. I spoke with Ralph Trocchio at NYCHA, he said he would look into it. - SK This spill transferred from J.Kolleeny to S.Kraszewski. 11/22/05: Message from Joel Rogers, says he still hasn't recieved approval for work plan. Faxed him copy of approval. - SK 02/06/07 - J.Kann - site reassigned from S. Kraszewski to J.Kann. 11/18/14: J.Kann - Reviewed original tank closure report prepared by UTB. SVOC and VOC constituents in the endpoints samples are all below CP-51 Fuel Oil Guidance. NFA. NYCHA will be informed of spill closure. "

They will repair and retest and send documentation. 3/27/13 AFrischeisen intern TTF letter sent. 5-6-14 Dupigny - Notes from Sangesland what repair work was done to the tank/ Lines? No work was done will Demo the building 10/30/14-Vought-Received call from Chris Lickman (Ph:718-797-9555) who left Vought numerous messages regarding the above spill. Vought left message for Lickman with Demeo's phone number and email address. 1/20/15 TJD File review. 8K concrete wrapped AST failed tightness test. Tester (ATS) determined the cause of the failure was the fill pipe - failure point was interior (tank room) where the pipe penetrated the concrete wrap. Tank was entirely above ground with no petroleum discharge noted during inspection by tester and author of Phase 2 report (PW Grosser). Tank has subsequently been removed and structure was converted to natural gas heat. Based upon the documentation received there was no petroleum discharge from reported

FORMER CASCADE LAUNDRY (Continued) **S118628301**

Site Description: "Site Location: The site is located in an urban area at 553 Marcy Avenue in Brooklyn, Kings County. It is identified on New York City tax maps as Block 1747, Lot 1. The site is bordered by Stockton Street on the north, Marcy Avenue on the west and Myrtle Avenue on the south. Site Features: The site is approximately 2.1 acres in size. Currently a new building covering the majority of the site is under construction. The site previously included several attached industrial buildings which were demolished for redevelopment in 2015 and 2016. The remainder of the site was paved parking. Current Zoning and Land Use: Part of the site is zoned as residential with commercial retail businesses on the ground floor (R7D residential with a C2-4 commercial overlay), while the remainder of the site has residential zoning (R6A). The site is currently vacant and the on-site buildings have been demolished. The surrounding area includes multi-family residential buildings, schools, churches and retail stores. The site is located in a Type A en-zone. Past Use of the Site: Commercial and residential development at the site began prior to 1887. Cascade Laundry, a commercial laundry, began operating on part of the site prior to 1918 and expanded onto the other parts of the site over the succeeding decades before closing in 2010. Other past uses of the site include various retail stores, an oil paint factory, a carpet cleaning facility, a bakery, an upholstery factory, a furniture manufacturer, and a chemical factory. At some point in their history, Cascade Laundry used tetrachloroethene (PCE) in their operations, as evidenced by PCE-contaminated soil. Petroleum contamination was also detected in the on-site soil, likely from leaking underground storage tanks. The top 4-8 feet of soil beneath the site is historic fill, which contains semi-volatile organic compounds (SVOCs), metals and pesticides. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of about 4 to 8 feet below grade. Silty sand and gravel is present immediately below this layer. The elevation of the property is about 30 feet above mean sea level and the land within the immediate area slopes gradually from southeast to northwest. Groundwater at the site is present at a depth of about 25 feet below grade. The groundwater flow direction is northwest. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Based on investigations conducted to date, the primary contaminants of concern for the site include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Review of on-site data indicates that the on-site contamination does not impact off-site properties or receptors. Soils - Soil contamination was addressed in the Remedial Action by dewatering, excavation and chemical oxidation. Post remediation, remaining soils to a depth of 15 ft. bgs meet UUSCOs for all parameters due to the depth of excavation across the site. All remaining soils at depth meet UUSCOs for all COCs, except for a single detection of Chrysene at 30 ft. bgs beneath Lot 2. Soils pre remediation - The VOCs in the soil included petroleum compounds and chlorinated solvents. During the Remedial Investigation, petroleum compounds exceeding unrestricted use soil cleanup objectives include 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, xylene, methylene chloride and naphthalene. For example, 1,2,4-trimethylbenzene, was detected at 38 parts-per-million (ppm), exceeding the unrestricted use soil cleanup objective of 3.6 ppm. Tetrachloroethene (PCE), a chlorinated solvent, was found in the soil at 48 ppm, exceeding the unrestricted use soil cleanup objective of

FORMER CASCADE LAUNDRY (Continued) **S118628301**

1.3 ppm. SVOCs, metals and pesticides were detected in the subsurface soils. Nearly all of these contaminants were detected near the surface in the historic fill layer, and likely arrived at the site with the deposition of the historic fill material. However, chrysene, an SVOC, was detected beneath the historic fill at 3.1 ppm, exceeding the unrestricted soil cleanup objective of 1 ppm. Lead was detected in the soil at a maximum level of 3,770 ppm, which may classify the soil as hazardous waste. Groundwater - Post Remediation, groundwater beneath the site meets or will meet SCGs for all site-sourced contaminants. The petroleum compounds still being detected in groundwater approximate the ambient water quality standards. As of January 2020, however, on site groundwater sampling shows up to 80 ug/l of PCE in groundwater. Pre Remediation groundwater - The VOCs in the groundwater also consist of petroleum compounds and chlorinated solvents. A viscous petroleum product -- likely fuel oil -- was found in one monitoring well, indicated a layer of free petroleum product floating on the groundwater. PCE was detected in several wells at levels exceeding its New York State groundwater standard; however, the highest PCE concentrations were detected upgradient of any known on-site source area and at the upgradient edge of the site. Several pesticides were detected at concentrations above groundwater standards. Soil Vapor and Sub-Slab Vapor - Post remediation sub-slab samples taken in newly constructed on-site buildings detected PCE at a concentrations as high as 441 micrograms per cubic meter. Pre Remediation Soil Vapor and Sub-Slab Vapor - Several VOCs, including PCE, were detected in soil vapor and sub-slab vapor samples collected on-site, most of which were not detected in the soil and groundwater. However, PCE was detected in the on-site soil and groundwater. PCE and TCE were detected in sub-slab and soil vapor samples at maximum concentrations of 453 micrograms per cubic meter and 25.8 micrograms per cubic meter, respectively. One soil vapor sample had detections of benzene, toluene, ethylbenzene and xylene (BTEX) totaling 1,466 micrograms per cubic meter. "

Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site."

The site is currently vacant and the on-site buildings have been demolished. The surrounding area includes multi-family residential buildings, schools, churches and retail stores. The site is located in a Type A en-zone. Past Use of the Site: Commercial and residential development at the site began prior to 1887. Cascade Laundry, a commercial laundry, began operating on part of the site prior to 1918 and expanded onto the other parts of the site over the succeeding decades before closing in 2010. Other past uses of the site include various retail stores, an oil paint factory, a carpet cleaning facility, a bakery, an upholstery factory, a furniture manufacturer, and a chemical factory. At some point in their history, Cascade Laundry used tetrachloroethene (PCE) in their operations, as evidenced by PCE-contaminated soil. Petroleum contamination was also detected in the on-site soil, likely from leaking underground storage tanks. The top 4-8 feet of soil beneath the site is historic fill, which contains semi-volatile organic compounds (SVOCs), metals and pesticides. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of about 4 to 8 feet below grade. Silty sand and gravel is present immediately below this layer. The elevation of the property is about 30 feet above mean sea level and the land within the immediate area slopes gradually from southeast to northwest. Groundwater at the site is present at a depth of about 25 feet below grade. The groundwater flow direction is northwest. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Based on investigations conducted to date, the primary contaminants of concern for the site include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Review of on-site data indicates that the on-site contamination does not impact off-site properties or receptors. Soils - Soil contamination was addressed in the Remedial Action by dewatering, excavation and chemical oxidation. Post remediation, remaining soils to a depth of 15 ft. bgs meet UUSCOs for all parameters due to the depth of excavation across the site. All remaining soils at depth meet UUSCOs for all COCs, except for a single detection of Chrysene at 30 ft. bgs beneath Lot 2. Soils pre remediation - The VOCs in the soil included petroleum compounds and chlorinated solvents. During the Remedial Investigation, petroleum compounds exceeding unrestricted use soil cleanup objectives include 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, xylene, methylene chloride and naphthalene. For example, 1,2,4-trimethylbenzene, was detected at 38 parts-per-million (ppm), exceeding the unrestricted use soil cleanup objective of 3.6 ppm. Tetrachloroethene (PCE), a chlorinated solvent, was found in the soil at 48 ppm, exceeding the unrestricted use soil cleanup objective of

FORMER CASCADE LAUNDRY (Continued) **S118628301**

1.3 ppm. SVOCs, metals and pesticides were detected in the subsurface soils. Nearly all of these contaminants were detected near the surface in the historic fill layer, and likely arrived at the site with the deposition of the historic fill material. However, chrysene, an SVOC, was detected beneath the historic fill at 3.1 ppm, exceeding the unrestricted soil cleanup objective of 1 ppm. Lead was detected in the soil at a maximum level of 3,770 ppm, which may classify the soil as hazardous waste. Groundwater - Post Remediation, groundwater beneath the site meets or will meet SCGs for all site-sourced contaminants. The petroleum compounds still being detected in groundwater approximate the ambient water quality standards. As of January 2020, however, on site groundwater sampling shows up to 80 ug/l of PCE in groundwater. Pre Remediation groundwater - The VOCs in the groundwater also consist of petroleum compounds and chlorinated solvents. A viscous petroleum product -- likely fuel oil -- was found in one monitoring well, indicated a layer of free petroleum product floating on the groundwater. PCE was detected in several wells at levels exceeding its New York State groundwater standard; however, the highest PCE concentrations were detected upgradient of any known on-site source area and at the upgradient edge of the site. Several pesticides were detected at concentrations above groundwater standards. Soil Vapor and Sub-Slab Vapor - Post remediation sub-slab samples taken in newly constructed on-site buildings detected PCE at a concentrations as high as 441 micrograms per cubic meter. Pre Remediation Soil Vapor and Sub-Slab Vapor - Several VOCs, including PCE, were detected in soil vapor and sub-slab vapor samples collected on-site, most of which were not detected in the soil and groundwater. However, PCE was detected in the on-site soil and groundwater. PCE and TCE were detected in sub-slab and soil vapor samples at maximum concentrations of 453 micrograms per cubic meter and 25.8 micrograms per cubic meter, respectively. One soil vapor sample had detections of benzene, toluene, ethylbenzene and xylene (BTEX) totaling 1,466 micrograms per cubic meter. "

Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site."

Site Code: 495614
Site Description: "Site Location: The site is located in an urban area at 553 Marcy Avenue in Brooklyn, Kings County. It is identified on New York City tax maps as Block 1747, Lot 1. The site is bordered by Stockton Street on the north, Marcy Avenue on the west and Myrtle Avenue on the south. Site Features: The site is approximately 2.1 acres in size. Currently a new building covering the majority of the site is under construction. The site previously included several attached industrial buildings which were demolished for redevelopment in 2015 and 2016. The remainder of the site was paved parking. Current Zoning and Land Use: Part of the site is zoned as residential with commercial retail businesses on the ground floor (R7D residential with a C2-4 commercial overlay), while the remainder of the site has residential zoning (R6A). The site is currently vacant and the on-site buildings have been demolished. The surrounding area includes multi-family residential buildings, schools, churches and retail stores. The site is located in a Type A en-zone. Past Use of the Site: Commercial and residential development at the site began prior to 1887. Cascade Laundry, a commercial laundry, began operating on part of the site prior to 1918 and expanded onto the other parts of the site over the succeeding decades before closing in 2010. Other past uses of the site include various retail stores, an oil paint factory, a carpet cleaning facility, a bakery, an upholstery factory, a furniture manufacturer, and a chemical factory. At some point in their history, Cascade Laundry used tetrachloroethene (PCE) in their operations, as evidenced by PCE-contaminated soil. Site Code: 495614
Site Description: "Site Location: The site is located in an urban area at 553 Marcy Avenue in Brooklyn, Kings County. It is identified on New York City tax maps as Block 1747, Lot 1. The site is bordered by Stockton Street on the north, Marcy Avenue on the west and Myrtle Avenue on the south. Site Features: The site is approximately 2.1 acres in size. Currently a new building covering the majority of the site is under construction. The site previously included several attached industrial buildings which were demolished for redevelopment in 2015 and 2016. The remainder of the site was paved parking. Current Zoning and Land Use: Part of the site is zoned as residential with commercial retail businesses on the ground floor (R7D residential with a C2-4 commercial overlay), while the remainder of the site has residential zoning (R6A). The site is currently vacant and the on-site buildings have been demolished. The surrounding area includes multi-family residential buildings, schools, churches and retail stores. The site is located in a Type A en-zone. Past Use of the Site: Commercial and residential development at the site began prior to 1887. Cascade Laundry, a commercial laundry, began operating on part of the site prior to 1918 and expanded onto the other parts of the site over the succeeding decades before closing in 2010. Other past uses of the site include various retail stores, an oil paint factory, a carpet cleaning facility, a bakery, an upholstery factory, a furniture manufacturer, and a chemical factory. At some point in their history, Cascade Laundry used tetrachloroethene (PCE) in their operations, as evidenced by PCE-contaminated soil. Petroleum contamination was also detected in the on-site soil, likely from leaking underground storage tanks. The top 4-8 feet of soil beneath the site is historic fill, which contains semi-volatile organic compounds (SVOCs), metals and pesticides. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of about 4 to 8 feet below grade. Silty sand and gravel is present immediately below this layer. The elevation of the property is about 30 feet above mean sea level and the land within the immediate area slopes gradually from southeast to northwest. Groundwater at the site is present at a depth of about 25 feet below grade. The groundwater flow direction is northwest. "
Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Based on investigations conducted to date, the primary contaminants of concern for the site include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Review of on-site data indicates that the on-site contamination does not impact off-site properties or receptors. Soils - Soil contamination was addressed in the Remedial Action by dewatering, excavation and chemical oxidation. Post remediation, remaining soils to a depth of 15 ft. bgs meet UUSCOs for all parameters due to the depth of excavation across the site. All remaining soils at depth meet UUSCOs for all COCs, except for a single detection of Chrysene at 30 ft. bgs beneath Lot 2. Soils pre remediation - The VOCs in the soil included petroleum compounds and chlorinated solvents. During the Remedial Investigation, petroleum compounds exceeding

FORMER CASCADE LAUNDRY (Continued) **S118628301**

unrestricted use soil cleanup objectives include 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, xylene, methylene chloride and naphthalene. For example, 1,2,4-trimethylbenzene, was detected at 38 parts-per-million (ppm), exceeding the unrestricted use soil cleanup objective of 3.6 ppm. Tetrachloroethene (PCE), a chlorinated solvent, was found in the soil at 48 ppm, exceeding the unrestricted use soil cleanup objective of 1.3 ppm. SVOCs, metals and pesticides were detected in the subsurface soils. Nearly all of these contaminants were detected near the surface in the historic fill layer, and likely arrived at the site with the deposition of the historic fill material. However, chrysene, an SVOC, was detected beneath the historic fill at 3.1 ppm, exceeding the unrestricted soil cleanup objective of 1 ppm. Lead was detected in the soil at a maximum level of 3,770 ppm, which may classify the soil as hazardous waste. Groundwater - Post Remediation, groundwater beneath the site meets or will meet SCGs for all site-sourced contaminants. The petroleum compounds still being detected in groundwater approximate the ambient water quality standards. As of January 2020, however, on site groundwater sampling shows up to 80 ug/l of PCE in groundwater. Pre Remediation groundwater - The VOCs in the groundwater also consist of petroleum compounds and chlorinated solvents. A viscous petroleum product -- likely fuel oil -- was found in one monitoring well, indicated a layer of free petroleum product floating on the groundwater. PCE was detected in several wells at levels exceeding its New York State groundwater standard; however, the highest PCE concentrations were detected upgradient of any known on-site source area and at the upgradient edge of the site. Several pesticides were detected at concentrations above groundwater standards. Soil Vapor and Sub-Slab Vapor - Post remediation sub-slab samples taken in newly constructed on-site buildings detected PCE at a concentrations as high as 441 micrograms per cubic meter. Pre Remediation Soil Vapor and Sub-Slab Vapor - Several VOCs, including PCE, were detected in soil vapor and sub-slab vapor samples collected on-site, most of which were not detected in the soil and groundwater. However, PCE was detected in the on-site soil and groundwater. PCE and TCE were detected in sub-slab and soil vapor samples at maximum concentrations of 453 micrograms per cubic meter and 25.8 micrograms per cubic meter, respectively. One soil vapor sample had detections of benzene, toluene, ethylbenzene and xylene (BTEX) totaling 1,466 micrograms per cubic meter. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site."

Site Code: 495614
Site Description: "Site Location: The site is located in an urban area at 553 Marcy Avenue in Brooklyn, Kings County. It is identified on New York City tax maps as Block 1747, Lot 1. The site is bordered by Stockton Street on the north, Marcy Avenue on the west and Myrtle Avenue on the south. Site Features: The site is approximately 2.1 acres in size. Currently a new building covering the majority of the site is under construction. The site previously included several attached industrial buildings which were demolished for redevelopment in 2015 and 2016. The remainder of the site was paved parking. Current Zoning and Land Use: Part of the site is zoned as residential with commercial retail businesses on the ground floor (R7D residential with a C2-4 commercial overlay), while the remainder of the site has residential zoning (R6A). The site is currently vacant and the on-site buildings have been demolished. The surrounding area includes multi-family residential buildings, schools, churches and retail stores. The site is located in a Type A en-zone. Past Use of the Site: Commercial and residential development at the site began prior to 1887. Cascade Laundry, a commercial laundry, began operating on part of the site prior to 1918 and expanded onto the other parts of the site over the succeeding decades before closing in 2010. Other past uses of the site include various retail stores, an oil paint factory, a carpet cleaning facility, a bakery, an upholstery factory, a furniture manufacturer, and a chemical factory. At some point in their history, Cascade Laundry used tetrachloroethene (PCE) in their operations, as evidenced by PCE-contaminated soil. Petroleum contamination was also detected in the on-site soil, likely from leaking underground storage tanks. The top 4-8 feet of soil beneath the site is historic fill, which contains semi-volatile organic compounds (SVOCs), metals and pesticides. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of about 4 to 8 feet below grade. Silty sand and gravel is present immediately below this layer. The elevation of the property is about 30 feet above mean sea level and the land within the immediate area slopes gradually from southeast to northwest. Groundwater at the site is present at a depth of about 25 feet below grade. The groundwater flow direction is northwest. "
Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Based on investigations conducted to date, the primary contaminants of concern for the site include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Review of on-site data indicates that the on-site contamination does not impact off-site properties or receptors. Soils - Soil contamination was addressed in the Remedial Action by dewatering, excavation and chemical oxidation. Post remediation, remaining soils to a depth of 15 ft. bgs meet UUSCOs for all parameters due to the

FORMER CASCADE LAUNDRY (Continued) **S118628301**

depth of excavation across the site. All remaining soils at depth meet UUSCOs for all COCs, except for a single detection of Chrysene at 30 ft. bgs beneath Lot 2. Soils pre remediation - The VOCs in the soil included petroleum compounds and chlorinated solvents. During the Remedial Investigation, petroleum compounds exceeding unrestricted use soil cleanup objectives include 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, xylene, methylene chloride and naphthalene. For example, 1,2,4-trimethylbenzene, was detected at 38 parts-per-million (ppm), exceeding the unrestricted use soil cleanup objective of 3.6 ppm. Tetrachloroethene (PCE), a chlorinated solvent, was found in the soil at 48 ppm, exceeding the unrestricted use soil cleanup objective of 1.3 ppm. SVOCs, metals and pesticides were detected in the subsurface soils. Nearly all of these contaminants were detected near the surface in the historic fill layer, and likely arrived at the site with the deposition of the historic fill material. However, chrysene, an SVOC, was detected beneath the historic fill at 3.1 ppm, exceeding the unrestricted soil cleanup objective of 1 ppm. Lead was detected in the soil at a maximum level of 3,770 ppm, which may classify the soil as hazardous waste. Groundwater - Post Remediation, groundwater beneath the site meets or will meet SCGs for all site-sourced contaminants. The petroleum compounds still being detected in groundwater approximate the ambient water quality standards. As of January 2020, however, on site groundwater sampling shows up to 80 ug/l of PCE in groundwater. Pre Remediation groundwater - The VOCs in the groundwater also consist of petroleum compounds and chlorinated solvents. A viscous petroleum product -- likely fuel oil -- was found in one monitoring well, indicated a layer of free petroleum product floating on the groundwater. PCE was detected in several wells at levels exceeding its New York State groundwater standard; however, the highest PCE concentrations were detected upgradient of any known on-site source area and at the upgradient edge of the site. Several pesticides were detected at concentrations above groundwater standards. Soil Vapor and Sub-Slab Vapor - Post remediation sub-slab samples taken in newly constructed on-site buildings detected PCE at a concentrations as high as 441 micrograms per cubic meter. Pre Remediation Soil Vapor and Sub-Slab Vapor - Several VOCs, including PCE, were detected in soil vapor and sub-slab vapor samples collected on-site, most of which were not detected in the soil and groundwater. However, PCE was detected in the on-site soil and groundwater. PCE and TCE were detected in sub-slab and soil vapor samples at maximum concentrations of 453 micrograms per cubic meter and 25.8 micrograms per cubic meter, respectively. One soil vapor sample had detections of benzene, toluene, ethylbenzene and xylene (BTEX) totaling 1,466 micrograms per cubic meter. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site."

Update By:	HMDUDEK
Site Description:	"Location The site (a.k.a. Former Techtronics B, Site No. 224259). is in the Bedford Stuyvesant section of Brooklyn in the City of New York and is comprised of a single tax parcel totaling 4,450 square feet (0.102 acre). The site is rectangular in shape with 50 feet of frontage on Flushing Avenue and 89.25 feet of frontage on Walworth Street. The north side of the property is bordered by Flushing Avenue, and the east side is bordered by Walworth Street. The west and south property lines are bordered by two NYSBCP sites; the 11 Spencer site to the west and the 8 Walworth site to the south. Site Features The site is currently vacant with no structures and is not being used. An 8-foot-high construction fence borders the property on the north and west sites to prevent unauthorized access. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent

480 FLUSHING (Continued) **S121933852**

residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. M2 districts buffer light industrial zones (M1) and zones which are occupied by heavy industrial use (M3) (i.e. power plants, solid waste transfer facilities and recycling plants). Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. Certain community facilities, such as hospitals, are allowed in M1 districts only by special permit, but houses of worship are allowed as-of-right. The site is currently vacant with no structures present and is not being used. Surrounding land use includes commercial and mixed-use (retail / residential) properties along the north side of Flushing Avenue, commercial / office use to the west, commercial (warehouses) properties to the south and to the east. The area surrounding the property is highly urbanized and predominantly consists of older industrial / commercial buildings with mixed use (retail / residential) buildings along main corridors such as Bedford Avenue, Flushing Avenue and Park Avenue. There are ten schools located within 1,200 feet of the site including Bnei Shimon Yisroel of Sopron approximately 150 feet to the east. There were no nursing homes or hospitals identified within 1,000 feet of the site. Past Use of the Site The environmental history of the subject property was previously investigated through the review of Federal and State Environmental databases, Environmental Sanborn Fire Insurance maps, NYC Department of Building records and the NYC Department of Finance databases. According to the review of these sources the property was developed sometime prior to 1887 with two 2-story residences in the southern portion of the Lot with the northern portion vacant. A 1-story building was constructed on the northern portion which is shown as broom manufacturers supply till 1950. Based on sources provided, a 1 story building was constructed in 1965 and identified as paint mixing . The northern building is shown as storage or warehouse. Both buildings remain unchanged till 2016 when the north building was demolished. The south building was demolished in 2018. The property was known to be most recently used by an auto repair shop and a fish market. A site characterization of the site was completed under the project name Former Techtronics B (Site No. 224259). After the site characterization the site entered the brownfield program as 480 Flushing. Site Geology and Hydrogeology Subsurface soils at the site consist of historic fill materials to a depth of approximately 1 foot below grade followed by native silty-sand and clay. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 16 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. Groundwater was reported to be present under semi-confined conditions at approximately 12-14 ft below grade. Based upon the site characterization, groundwater flow was reported to be northwest. Neighboring sites indicate a east by north east groundwater flow. The site is not located within a designated flood zone area."

Env Problem:

"Nature and Extent of Contamination: Surface Soil: A Site Characterization was performed in 2017 under an Order from the NYS Department of Environmental Conservation. A set of two (2) surface soil samples were collected from four (4) locations across the site. The samples were collected from 0-2 inches bgs and 2-12 inches bgs. Tetrachloroethene (PCE) was detected at a maximum concentration of 16

480 FLUSHING (Continued) **S121933852**

parts per million (ppm). This concentration exceeds both the Unrestricted Use soil cleanup objective (UUSCO) of 1.3 ppm and the Protection of Groundwater SCO (PoGWSCO) (1.3 ppm). Subsurface Soil: During the 2017 Site Characterization, eight (8) soil borings were installed across the site. Samples were collected and analyzed at areas of observable impact and at the groundwater interface. PCE was detected at a maximum concentration 99 parts per million (ppm)(UUSCO: 1.3 ppm and PoGWSCO: 1.3 ppm). The following VOCs and Semi-Volatile Organic compounds were also detected in subsurface soils: Benzo(a)anthracene (260 ppm max, standard 1 UUSCO), Benzo(a)pyrene (230 ppm, standard 1 UUSCO), Benzo(b)fluoranthene (280 ppm, standard 1 UUSCO), Benzo(k)Fluoranthene (100 ppm, standard 0.8 UUSCO), Phenanthrene (800 ppm, standard 1 UUSCO), Dibenzo(a,h)anthracene (37 ppm, standard 0.33 UUSCO), Indo(1,2,3-cd)pyrene (140 ppm, standard 0.5 UUSCO). Brick and coal fragments were observed in shallow soil at some of the soil borings collected, suggesting the presence of urban fill. Groundwater: As part of the Site Characterization three (3) monitoring wells were installed and sampled. PCE was detected at a maximum concentration of 2,400 parts per billion (ppb), (standard 5 ppb), TCE was detected at a maximum concentration of 350 ppb (5 ppb standard), and 1,2-dichlorethene was detected at a maximum concentration of 340 ppb (5 ppb standard). Soil Vapor: The site is currently undeveloped. Three soil vapor samples were collected on-site with elevated concentrations of chlorinated VOCs. Max concentrations of PCE are 40.6 micrograms per cubic meter (ug/m3), TCE 1470 ug/m3 and vinyl chloride 7.77 ug/m3. "

Health Problem: "Access is restricted by a fence. People may contact contaminants in soil by walking on the site, digging, or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant and redevelopment is planned. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future on-site buildings. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in off-site structures."

Site Description:	"This site is being managed under BCP site C224239. "
Env Problem:	"Nature and Extent of Contamination: The chlorinated solvent compounds tetracholoethylene (PCE) and its breakdown products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE), as well as other volatile organic compounds (VOCs) were detected in soil and groundwater samples during investigation in December 2007. Soil Chlorinated solvents were detected in one soil sample collected from above the water table at concentrations exceeding unrestricted use soil cleanup objectives: PCE (4.3 parts per million, or ppm) and TCE (0.87 ppm). Groundwater Chlorinated solvents were detected in all four groundwater samples collected at the site: PCE ranges from 17 to 30,845 parts per billion, or ppb; TCE ranges from 31 to 48,675 ppb; and cis-1,2-DCE ranges from 7 to 164,000 ppb. Non-chlorinated VOCs were detected in one groundwater sample (MW-2): toluene (75,488 ppb), ethylbenzene (4,393 ppb) and xylene (17,405 ppb). Significant Threat: A significant threat determination will be made following completion

Site Description: "Location The Site (a.k.a. Former Techtronics Ecological Site, P Site No. 224239) is located in the Bedford Stuyvesant section of Kings County and is comprised of a single tax parcel totaling 3,910 square feet (0.089 acres). The Site is located in the City of New York and Borough of Brooklyn. The Site is rectangular shaped with 78 feet of frontage along Walworth Street. The north, south and west sides of the property are bordered by warehouses and commercial / industrial buildings. Site Features The Site is improved with a 3,910 sf, 1-story masonry building constructed in 1982 (estimate). The building is divided into two sections each with its own access to the outside; the north section which was recently used as warehouse space and the south section which was used by an orthodox congregation for a prayer room. Current Zoning and Land Use Compliance with Current Zoning The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. Certain community facilities, such as hospitals, are allowed in M1 districts only by special permit, but houses of worship are allowed as-of-right. The proposed project, which includes an office building, is compatible with the surrounding land use and will be in compliance with the current zoning. Compliance with Land Use Plans On May 9, 2001, the City Council approved the Flushing - Bedford rezoning action (CEQR No. 00DCP015K) covering 15 blocks in the Flushing Avenue and Bedford Avenue area of Community Districts 1 and 3 in the Bedford Stuyvesant neighborhood of Brooklyn. According to the Notice of Completion of The Final Environmental Impact Statement issued on March 16, 2001 by the NYC Planning Commission: The Flushing Bedford area, although zoned for manufacturing uses, contains a mix of residential uses, vacant land, open uses, auto-related uses, and commercial and industrial buildings. The rezoning area has experienced a significant decline in industrial activity over the last four decades resulting in an increase in auto related uses, junk yards and vacant land.

TOLDOS YEHUDAH LLC (Continued) **1000244308**

Study findings indicate that over the last two decades, there has been a substantial growth in the residential population in the surrounding areas, resulting in a housing shortfall and increasing demand for new dwelling 'units. Since the mid 1980's there has been a marked increase in residential development, especially in the area north of Flushing Avenue. Although the existing manufacturing zoning does not permit as-of-right residential development, in recent years there has been new residential development in the area north of Flushing Avenue pursuant to zoning variances granted by the Board of Standards, and Appeals (BSA). In 1996 and 1998, two rezoning applications were approved changing the designation of a three block area immediately north of the rezoning area from manufacturing to residential. The presence of vacant and underutilized land, coupled with the increasing demand for housing in the adjacent communities, presents an opportunity for new residential development in this part of Brooklyn. The objectives of the rezoning were to: -provide opportunities for new residential development on vacant and under-utilized parcels; -bring existing non-conforming residential uses into conformance, and would allow for their enlargement; -allow for the continued presence and expansion of commercial and manufacturing uses; -permit the introduction of new commercial and manufacturing uses; and, -allow the residential re-use of underutilized and vacant land. In general, the action would provide the land use controls necessary for appropriate residentialdevelopment and the continued presence of viable manufacturing uses. The proposed project will be in full compliance with the current land use plans as identified in the Flushing Bedford Rezoning Action (CEQR No. 00DCP015K) adopted by the City on May 9, 2001. Past Use of the Site The historic use of the Site includes a storefront building, garage and residence from sometime prior to 1887 to sometime before to sometime before 1965 when a two-story residence remained on the south side of the Site and a single-story warehouse used for chemical drum storage was present on the north side of the Site. By 1977, the two-story residence was no longer present and the singlestory chemical drum storage warehouse remained on the north side of the Site. By 1982 the Site was redeveloped with a single-story paint mixing warehouse. The Site and adjacent properties have remained generally unchanged through the current day. This site was originally a P site (Former Techtronics Ecological Site, Site No. 224239). The site then entered the BCP program to complete the investigation and remedy. Site Geography and Geology The geologic setting of Long Island is well documented and consists of crystalline bedrock overlain by layers of unconsolidated deposits. According to geologic maps of the area created by the United States Geologic Survey (USGS), the bedrock in this area of Brooklyn is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and / or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Subsurface soils at the Site consist of historic fill materials to a depth of approximately 4 to 6 feet below grade. Silty sand and gravel is present immediately below this layer. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 20 feet above mean sea level. The topography within the immediate area slopes

TOLDOS YEHUDAH LLC (Continued) **1000244308**

gradually from south to north. No portion of the Site is located within a designated flood zone area. The nearest moderate risk flood zone is located 800 feet to the northwest and the nearest high risk flood zone is located 950 feet to the northwest. "

Env Problem: "Nature and Extent of Contamination: The chlorinated solvent compounds tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE), as well as other volatile organic compounds (VOCs) were detected in soil, groundwater, and soil vapor samples during the remedial investigation in 2018/19. Soil samples collected on site also contained elevated concentrations of Metals, Semi-Volatile Organic Compounds (SVOCs), and PCBs. Soil During the remedial investigation, eight (8) soil borings were collected throughout the site. Chlorinated Volatile Organic Compounds (CVOCs) were detected above Protection of Groundwater Soil Cleanup Objectives in all soil borings. Maximum PCE concentration of 3,200,000 ug/kg was found at SB-1708 (7-9 bgs). Maximum TCE concentration of 200,000 ug/kg was found at SB-1708 (7-9 bgs). Groundwater During the remedial investigation, five (5) monitoring wells were installed. CVOCs were detected in all five groundwater samples collected at the site: PCE ranges from 7,800 to 20,000 parts per billion, or ppb; TCE ranges from 1,800 to 11,000 ppb; and cis-1,2-DCE ranges from 270 to 11,000 ppb. The NYSDEC s list of 21 PFAS compounds was also analyzed as part of the remedial investigation. Combined PFOA PFOS concentrations ranged from 50 parts per trillion (ppt) in MW-1701 to 928 ppt in MW 1705. Soil Vapor As part of the remedial investigation, six (6) soil vapor samples were collected throughout the site. CVOCs were detected in all on-site samples. PCE ranged from 705 ug/m3 in SS-5 to 590,000 ug/m3 in SS-1. TCE concentrations ranged from 106 ug/m3 in SS-5 to 488,000 ug/m3 in SS-1. All sub-slab vapor samples also contained BTEX compounds. Significant Threat: A significant threat determination will be made following completion of a site characterization. "

Health Problem: "People may contact contaminated soils or groundwater if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and this site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant and redevelopment is planned. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future onsite buildings. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in offsite structures."

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

TOLDOS YEHUDAH LLC (Continued) **1000244308**

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Site Description:	"This site was terminated. Plume track down 224251 identified 735 Bedford Avenue/12 Spencer Street at the source of CVOC contamination. The plume trackdown project was originally called the Spencer Street Groundwater plume trackdown. The name was changed to 735 Bedford Avenue in 2018. The plume trackdown project was generated based on information collected on the public sidewalk of Spencer Street between Flushing Avenue and Park Avenue. The project area is located on the western extent of Long Island, in the New York City Borough of Brooklyn, in the northern section of the Bedford/Stuyvesant

12 SPENCER STREET (Continued) **S123159094**

neighborhood. The area of investigation includes Spencer Street and Bedford Avenue, south of Flushing Avenue. The surrounding area is predominantly industrial/commercial with mixed commercial and residential properties. The area of investigation is approximately 1.3 miles east southeast of the East River. Location The Site is located in the Bedford Stuyvesant section of Kings County. The Site is located in the City of New York and Borough of Brooklyn. The Site is rectangular shaped spanning between Bedford Avenue and Spencer Street with 25 feet of frontage along both Bedford Avenue and Spencer Street. The north and south sides of the property are bordered by residential buildings. The west side is bordered by the Bedford Avenue and the east side by Spencer Street. Site Features The Site is improved with a multi-story commercial building with one half accessible by Bedford Avenue and the other half accessible on Spencer Street. There is currently a cellar level below the 735 Bedford Avenue portion of the site. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. The current use of the building as office space is in compliance with the zoning. Surrounding land use includes multi-family residential properties to the north, commercial / retail / office use to the west, residential and commercial (warehouses) to the south and commercial (warehouses) to the east. The area surrounding the property is highly urbanized and predominantly consists of older industrial / commercial buildings with mixed use (retail / residential) buildings along main corridors such as Bedford Avenue Flushing Avenue and Park Avenue. There are ten schools located within 1,200 feet of the Site including Bnei Shimon Yisroel of Sopron approximately 450 feet to the east. There were no nursing homes or hospitals identified within 1,000 feet of the Site. Past Use of the Site The environmental history of the subject property was previously investigated through the review of Federal and State Environmental databases, Environmental Sanborn Fire Insurance maps, NYC Department of Building records and the NYC Department of Finance databases. According to the review of these sources the Site has been developed since at least 1887 with a residential home through at least 1904. In 1918 the property is shown to be redeveloped with a 1story building identified as a carriage and auto repair shop. The present 3-story building is shown by 1935. The use from 1935 to 1965 is shown as storage. From 1977 to 1989 the building is labeled with an M which refers in general to manufacturing. From 1991 to 1996 the use is not specified. The Requestor purchased the property in March 2015. The investigation of this brownfield site is the result of the 735 Bedford Ave. (Site #224251) (aka Spencer Street Groundwater Plume) groundwater plume trackdown. Site Geography and Geology Subsurface soils at the Site consist of historic fill materials to a depth of approximately 1 to 5 feet below grade followed by native silty-sand and clay. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 20 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. Groundwater occurs beneath the Site at a depth of approximately 15 feet below grade under water table conditions. Based

12 SPENCER STREET (Continued) **S123159094**

on groundwater flow maps on properties in the vicinity, groundwater flow is generally east. However, the groundwater flow direction was determined from groundwater elevation measurements taken on the Site show the flow direction to be from the south east to the northwest in the eastern half of the Site. The Site is not located within a designated flood zone area. "

Env Problem: "Background: 224281 was identified as a potential source for contamination outlined in a plume track down identified as Spencer Street GW (Site 224251). As part of an off-site investigation performed upgradient to BCP site C224204 (11 Spencer) groundwater samples were collected showing high concentrations of chlorinated volatile organic compounds (CVOCs). Tetrachloroethene (PCE) was detected at 120,000 parts per billion or ppb (compared to a groundwater standard of 5 ppb), trichloroethene was detected at 38,000 ppb (compared to a groundwater standard of 5 ppb) and 1,1,1-trichloroethane was detected at 86,000 ppb (compared to a groundwater standard of 5 ppb). These elevated values located as part of an up-gradient plume led to the creation of P-Site Spencer Street GW. In the summer of 2017 Environmental Assessment Remediation (EAR) on behalf of the Department performed the plume track down. Four (4) monitoring wells (MW-1 to MW-4) were installed to delineate the plume. Concentrations of PCE ranged from 150,000 ppb in MW-3 to 0.33 ppb in MW-1 (compared to a groundwater standard of 5 ppb). Along with the groundwater analysis, five (5) soil samples were collected from four locations (MW-1 through MW-4) at the water table interface and/or the depth interval exhibiting indication of impact. PCE in soil samples ranged from 4,200,000 ppb in MW-3 to 0.7 ppb in MW-4 (compared to commercial soil cleanup objective (CSCO) of 150,000 ppb). C224282: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), some metals, and polychlorinated biphenyls (PCBs) as part of a limited subsurface investigation performed by Environmental Business Consultants (EBC) on behalf of the property owner. Sub slab soil Vapor samples were collected and analyzed for VOCs. Based upon the limited investigation conducted to date, the primary contaminants of concern are tetrachloroethene (PCE), trichloroethene (TCE), and 1,2-dichlorethene (1,2-DCE). Soil Based on the investigations completed to date, chlorinated VOCs are detectable in soil. Maximum concentration of PCE in soils collected on site are 4.2 ppm (unrestricted use soil cleanup objective (UUSCO) is 1.3 ppm). Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, and Dibenzo(a,h)anthracene were detected above CSCO objectives throughout the site. Groundwater PCE [maximum concentration 45,000 parts per billion (ppb), standard 5 ppb], TCE (9,100 ppb max, 5 ppb standard), 1,2-dichlorethene (4,200 ppb max, 5 ppb standard), and well as 1,1,1-TCA, 1,1-DCA, and 1,1-DCE were detected above the NYSDEC GA Groundwater Quality Standards. Sub-slab soil vapor and indoor air CVOCs were detected in the sub slab vapor and indoor air samples. Further evaluation of the results is required to determine if monitoring or mitigation is necessary on-site. "

Health Problem: "People are not expected to come into contact with contaminated soil or groundwater because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality.

12 SPENCER STREET (Continued) **S123159094**

This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The on site commercial building is occupied and actions are recommended to address potential exposures associated with soil vapor intrusion. Additional investigation is needed to determine whether additional actions may be needed to address the potential for exposure associated with soil vapor intrusion off-site."

The Requestor purchased the property in March 2015. The investigation of this brownfield site is the result of the 735 Bedford Ave. (Site #224251) (aka Spencer Street Groundwater Plume) groundwater plume trackdown. Site Geography and Geology Subsurface soils at the Site consist of historic fill materials to a depth of approximately 1 to 5 feet below grade followed by native silty-sand and clay. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 20 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. Groundwater occurs beneath the Site at a depth of approximately 15 feet below grade under water table conditions. Based on groundwater flow maps on properties in the vicinity, groundwater flow is generally east. However, the groundwater flow direction was determined from groundwater elevation measurements taken on the Site show the flow direction to be from the south east to the northwest in the eastern half of the Site. The Site is not located within a designated flood zone area. "

Env Problem: "Background: BCP site C224281 was identified as a potential source for contamination outlined in a plume track down identified as

12 SPENCER STREET (Continued) **S123159094**

Spencer Street GW (Site 224251). As part of an off-site investigation performed upgradient to BCP site C224204 (11 Spencer) groundwater samples were collected showing high concentrations of chlorinated volatile organic compounds (CVOCs). Tetrachloroethene (PCE) was detected at 120,000 parts per billion or ppb (compared to a groundwater standard of 5 ppb), trichloroethene was detected at 38,000 ppb (compared to a groundwater standard of 5 ppb) and 1,1,1-trichloroethane was detected at 86,000 ppb (compared to a groundwater standard of 5 ppb). These elevated values located as part of an up-gradient plume led to the creation of P-Site Spencer Street GW. In the summer of 2017 Environmental Assessment Remediation (EAR) on behalf of the Department performed the plume track down. Four (4) monitoring wells (MW-1 to MW-4) were installed to delineate the plume. Concentrations of PCE ranged from 150,000 ppb in MW-3 to 0.33 ppb in MW-1 (compared to a groundwater standard of 5 ppb). Along with the groundwater analysis, five (5) soil samples were collected from four locations (MW-1 through MW-4) at the water table interface and/or the depth interval exhibiting indication of impact. PCE in soil samples ranged from 4,200,000 ppb in MW-3 to 0.7 ppb in MW-4 (compared to commercial soil cleanup objective (CSCO) of 150,000 ppb). C224282: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), some metals, and polychlorinated biphenyls (PCBs) as part of a limited subsurface investigation performed by Environmental Business Consultants (EBC) on behalf of the property owner. Sub slab soil Vapor samples were collected and analyzed for VOCs. Based upon the limited investigation conducted to date, the primary contaminants of concern are tetrachloroethene (PCE), trichloroethene (TCE), and 1,2-dichlorethene (1,2-DCE). Soil Based on the investigations completed to date, chlorinated VOCs are detectable in soil. Maximum concentration of PCE in soils collected on site are 4.2 ppm (unrestricted use soil cleanup objective (UUSCO) is 1.3 ppm). Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, and Dibenzo(a,h)anthracene were detected above CSCO objectives throughout the site. Groundwater PCE [maximum concentration 45,000 parts per billion (ppb), standard 5 ppb], TCE (9,100 ppb max, 5 ppb standard), 1,2-dichlorethene (4,200 ppb max, 5 ppb standard), and well as 1,1,1-TCA, 1,1-DCA, and 1,1-DCE were detected above the NYSDEC GA Groundwater Quality Standards. Sub-slab soil vapor and indoor air CVOCs were detected in the sub slab vapor and indoor air samples. Further evaluation of the results is required to determine if monitoring or mitigation is necessary on-site. "

Health Problem: "People are not expected to come into contact with contaminated soil or groundwater because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The on-site commercial building is occupied and additional investigation is needed to determine whether actions may be needed to address the potential for exposure associated both on and off-site."

Site Description: "Location: The Skillman Street Holder Station is located in an urban area, at 7 Skillman Street, Brooklyn, NY. Site Features: The 7 Skillman Street parcel is completely covered by a two-story building. This building is used as a banquet/catering hall. Current Zoning/Use: The property is currently in active use as a banquet hall, and is zoned for mixed use, which includes residential, commercial, and light industrial uses. The surrounding parcels are currently used for a combination of commercial and residential purposes. The nearest residential building is approximately 150 feet to the southwest. Past Use of the Site: Two manufactured gas storage holders were constructed at the site between 1887 and 1904. These holders were operated solely as gas distribution holders, and no gas production facilities were present. At some point prior to 1935, gas storage operations ceased and the holders were demolished. The site remained under the ownership of the Brooklyn Union Gas Company until sometime prior to 1947. Upon being sold the property was used for automobile parking and storage. By 1950, the site was used as an automobile repair facility which remained until at least 1993. In 2003, the existing building was developed into a catering hall, which is presently in operation. Site Geology and Hydrogeology: The site is underlain by fill material, alluvial sands, glacial outwash and bedrock at depth. Groundwater is typically found at approximately 7 to 16 feet below ground surface (bgs), and flows generally to the west-northwest. "
Env Problem: "Based upon investigations conducted to date, the primary contaminants of concern are the volatile organic compounds (VOCs) benzene, toluene, ethylbenzene and xylene (together known as BTEX), and styrene; polycyclic aromatic hydrocarbons (PAHs); and metals. Soil- The subsurface soil exceedances for on-site VOCs (BTEX) were slightly above unrestricted soil cleanup objectives (USCOs), though no samples exceed the restricted residential SCOs. However sampling of soil beneath the site was limited due to the inability to access much of the property with a drill rig, and a source area of higher contaminant concentrations may be present beneath the buildings. Adjacent to the site, in a sample collected beneath Skillman Street at a depth of approximately 27 feet where evidence of coal tar was observed, the concentration of toluene was 160 ppm, ethylbenzene was 220 ppm, and xylenes were 840 ppm in subsurface soil. Styrene was also detected at this location at a concentration of 400 ppm. There were no detections of chlorinated solvents or total cyanide in soil

K - SKILLMAN ST. STATION (Continued) **S109321184**

above unrestricted SCOs either on or off-site. The PAH exceedances above unrestricted SCOs consisted of benzo(b)fluoranthene, benz(a)anthracene, benzo(a)pyrene, chrysene, indeno(1,2,3-cd)pyrene, and naphthalene. Adjacent to the site the concentration of naphthalene was 1000 ppm (at 27 feet below ground surface). The only inorganics to exceed unrestricted SCOs were lead and mercury, although neither exceeded the restricted residential SCOs in soil. Groundwater - Samples collected from monitoring wells located both on-site (temporary sampling points) and off-site exceeded groundwater quality standards (GWQS) for benzene, toluene, ethylbenzene, xylenes (BTEX) compounds, naphthalene, chlorinated VOCs, cyanide, and metals. On-site, benzene ranged from 13 to 5,600 ppb (GWQS of 1 ppb), toluene at 20,000 ppb (GWQS of 5 ppb), ethylbenzene at 12,000 ppb (GWQS of 5 ppb), xylenes at 9,400 ppb (GWQS of 5 ppb), isopropyl benzene at 420 ppb (GWQS of 5 ppb), styrene at 82 ppb (GWQS of 5 ppb), cis-1,2-dichloroethene at 9.2 ppb (GWQS of 5 ppb), naphthalene at 5,600 ppb (GWQS of 10 ppb), total cyanide at 240 ppb (GWQS of 200 ppb), chromium at 380 ppb (GWQS of 50 ppb), and lead at 280 ppb (GWQS of 25 ppb). Elevated BTEX and napthalene also indicate the possible presence of MGP-related contaminants in the subsurface beneath the building. Off-site, detections of benzene range from 100 ppb to 410 ppb; toluene from 79 ppb to 1,100 ppb; ethylbenzene from 32 ppb to 930 ppb; xylenes from 100 ppb to 3,900 ppb; tetrachloroethene (PCE) from 5.6 to 9,400 ppb; trichloroethene (TCE) from 140 to 1,900 ppb; vinyl chloride from 200 to 380 ppb; cis-1,2-dichloroethene from 600 ppb to 8,000 ppb; isopropyl benzene from 64 ppb to 420 ppb; styrene from 82 ppb to 1,800 ppb; and naphthalene from 62 ppb to 5,600 ppb. There were also eight inorganic compounds that exceeded the groundwater standards in both on-site and off-site wells. These compounds were copper, iron, magnesium, manganese, nickel, selenium, sodium, and thallium, all of which are not associated with the former MGP operations. Soil Vapor - Soil vapor samples collected from the site contained elevated levels of both MGP-related and non-MGP-related compounds. The MGP-related detections included benzene at 35 ug/m3; toluene at 96 ug/m3; ethylbenzene at 12 ug/m3; xylenes at 40 ug/m3; 1,2,4-trimethylbenzene at 12 ug/m3; and nonane at 8.4 ug/m3. The non-MGP constituents included PCE at 12,000 ug/m3, TCE at 1,200 ug/m3, and cis-1,2-dichloroethene at 1,500 ug/m3. Indoor Air - The contaminants present in soil vapor at elevated levels were detected at much lower concentrations in indoor air. The highest concentration of the BTEX compounds was toluene at 6.3 ug/m3. PCE was detected at a concentration of 0.66 ug/m3; TCE at 0.21 ug/m3; and ethanol at 450 ug/m3. The ethanol concentrations in indoor air were approximately an order of magnitude larger than the soil vapor concentrations, indicating the source to be within the building. No indoor air guidance values were exceeded for any compound. The owners of the affected property have been notified where mitigation or monitoring of impacts to indoor air is required. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department’s Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfanoic acid (PFOS) were reported at concentrations of up to 180 and 45 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. Individual PFAS exceeding the 100 ppt screening level included perfluorohexanoic acid (PFHxA) at a concentration of 208 ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations of up to 817 ppt, which is above the 500 ppt screening

K - SKILLMAN ST. STATION (Continued) **S109321184**

	level for total PFAS in groundwater. An Interim Site Management Plan (ISMP) is in place that governs soil disturbance and the required groundwater monitoring. "
Health Problem:	"Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move in to the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Mitigation has been recommended to address the potential for people to inhale contaminants in indoor air of the onsite building due to soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion is a concern for off-site buildings which are occupied. "

Site Description: "Location: The subject site consists of 7 separate tax lots (block 3046, lots 22, 24, 26, 27, 47, 48 and 49) and is an irregularly shaped parcel. The following addresses are associated with the Site: 254-258 and 262-264 Scholes Street, and 249-257 Meserole Street. The Site fronts the south side of Scholes Street, extending south to Meserole Street, between Bushwick Avenue and Waterbury Street. The total Site area is approximately 27,500 square feet (0.63 acres). The site is currently used for vehicle maintenance for an armored car service. Site Features: The Site lots are currently occupied with warehouse-style buildings and a surface parking area. The site is surrounded by commercial properties to the south and east, Scholes Street to the north and a playground to the west. Current Zoning and Land Use: The site is zoned M1-1 (light manufacturing/industrial) and is located in an industrial business zone. Past Use of the Site: Historically, the site used for auto repair, machine repair, machine shops, printing, unspecified manufacturing and textile/knitting mill. Site Geology and Hydrogeology: The site is underlain by fill and sands extending to the groundwater interface. Fill layer ranges from 2 to 30 ft thick and consists of brown to red silty sand with concrete, brick and glass fragments. The sand is fine with few cobbles at shallower depths. Groundwater was measured below 32 ft depth."

Env Problem: "Nature and Extent of Contamination: A limited subsurface investigation performed in early 2019 consisted of collection of soil, groundwater and soil vapor samples. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and PBCs. Soil No VOCs, SVOCs, metals, pesticides or PCBs were detected at concentrations exceeding the unrestricted use soil cleanup objectives. Groundwater VOCs were detected in groundwater at concentrations exceeding the applicable ambient water quality standards (AWQS), including: trichloroethene (TCE) at 16 parts per billion (ppb) compared to the AWQS of 5 ppb; cis-1,2-dichloroethene (DCE) at 220 ppb (AWQS is 5 ppb); vinyl chloride at 150 ppb (AWQS is 5 ppb); 1,2-dichlorobenzene at 410 ppb (AWQS is 3 ppb); and 1,4-dichlorobenzene at 160 ppb (AWQS is 3 ppb). Sub-slab soil vapor VOCs were detected at elevated concentrations including: tetrachloroethene (PCE) at 104 micrograms per cubic meter (ug/m3); TCE at 83 ug/m3; and chloroform at 33 ug/m3. "

Site Description:	"Site being handled under BCP - C224036 Location: The Former Jayer Plating site is located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the property is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the Site was used as an orphanage. In 1948, the site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills. "
Env Problem:	"This site is now in the BCP as 2 Ingraham Street site (C224036). Project was reclassed to N. "

warehouse. The property is bordered by Ingraham Street to the north, by Marrisson Place to the south, by Bogart Street to the west and by Morgan Avenue to the east. The current use of the site is commercial. Before 1998, the building was used for cloth manufacturing and one of its section was used as a plating factory (Former Jayer Plating Co.). In spring 1998, the warehouse was vacant. The neighbourhood was mixed industrial, residential, and commercial. In the western section of the warehouse, where the plating factory has operated a deep corroded dry drain was noticed. In this area the concrete floor was also broken and corroded, perhaps due to waste bath residues of the metal plating processes on the floor. The VCP investigation was not compleated and the Volunteer Cleanup Agreement negotiations have been closed . See project C224036 "

Site Description: "This project (2 Ingraham Street Off-Site, C224036A) was created to investigate for potential off-site impacts from the 2 Ingraham Street BCP Site (C224036). Location: This site is the off-site component to the 2 Ingraham Street Site located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The BCP site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The BCP site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the BCP site is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the BCP site was used as an orphanage. In 1948, the BCP site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the BCP site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The BCP site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills. "
Env Problem: "This Site represents an off-site project to investigate the area surrounding BCP Site C224036, 2 Ingraham Street. The environmental assessment below is for C224036. Off-site investigation including groundwater sampling, soil vapor sampling, and soil vapor intrusion investigation is planned. Nature and Extent of Contamination: The primary contaminants of concern off-site include metals, and volatile organic compounds (VOCs). Previous environmental investigation in the area revealed concentrations of metals and VOCs exceeding Standards, Criteria, and Guidance values in the soil and/or groundwater. Based upon investigations to date, shallow soils (up to 5 feet below ground surface) are contaminated with metals. Data results from soils sampling reported metals (lead, mercury and nickel). Maximum detections vs. applicable unrestricted use or protection of groundwater cleanup objectives are as follows: lead at 106 parts per million (ppm) vs. 63 ppm, mercury at 18.2 ppm vs. 0.73 ppm, and nickel at 433 ppm vs. 130 ppm. Groundwater sampling indicates metals and VOCs contamination above Class GA groundwater standards. Some metals were found in relative low levels in groundwater and are likely related to the presence of historic fill. Maximum groundwater detections vs. standards are as follows: tetrachloroethene at 17 parts per billion (ppb) vs. 5 ppb, trichloroethene at 140 ppb vs. 5 ppb, chromium at 10,800 ppb vs. 50 ppb, and nickel at 8,690 ppb vs.

Site Description:	"Location: The 2 Ingraham Street site is located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the property is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the Site was used as an orphanage. In 1948, the site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills. "
Env Problem:	"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. The primary contaminants of concern at the site include metals, SVOCs, and VOCs. Environmental investigation in the area revealed concentrations of metals, SVOCs, and VOCs exceeding Standards, Criteria, and Guidance values (SCGs) in the soil and/or groundwater. Soil: Based upon investigations to date, sub-surface soils are contaminated with metals, SVOCS, and VOCs. Results from soils sampling reported metals (chromium, lead, mercury, and nickel), SVOCs (polyaromatic hydrocarbons or PAHs), and VOCs(tetrachloroethene or PCE). The PAHs contamination in soils is likely related to the presence of historic fill. Maximum detections vs. applicable unrestricted use or protection of groundwater soil cleanup objectives (UUSCO/PGWSCO) are as follows: chromium at 8,400 ppm vs. 19 ppm, lead at 607 ppm vs. 63 ppm, mercury at 1,790 ppm vs. 0.73 ppm, nickel at 3,720 ppm vs. 130 ppm, several PAHs including benzo(a)pyrene at 16

FORMER JAYER PLATING (Continued) **S110487597**

ppm vs. 1 ppm, and PCE at 1.9 ppm vs. 0.47 ppm. Mercury and nickel (up to 18.2 ppm, and 433 ppm, respectively) were detected off-site at soil boring SSB7N. Lead (up to 106 ppm) was detected off-site at soil boring SB8. Groundwater: Groundwater sampling indicates metals and VOCs contamination above Class GA groundwater standards. Some metals were found in relative low levels in groundwater and are likely related to the presence of historic fill. Maximum groundwater detections vs. standards are as follows: chromium at 110,000 parts per billion (ppb) vs. 50 ppb, lead at 461 ppb vs. 25 ppb, and nickel at 90,900 ppb vs. 100 ppb. PCE (up to 17 ppb) and mercury (up to 3.3 ppb) were detected in off-site downgradient groundwater at MW-7. Chromium, lead, and nickel (up to 10,800 ppb, 802 ppb, and 8,690 ppb, respectively) were detected off-site in down-gradient groundwater at MW-8. Trichloroethene up to 140 ppb was detected off-site in groundwater at MW-6. Soil Vapor: Elevated levels of VOCs were detected in sub-slab soil vapor. The maximum concentrations of PCE and 1,1,1-Trichloroethane in sub-slab soil vapor were detected in the northwestern/northeastern portion of the site at the respective concentrations of 827 micrograms per cubic meter (ug/m3) and 1,220 ug/m3. In addition, soil vapor intrusion (SVI) levels for methylene chloride (e.g., 42 ug/m3 [below the slab] and 20.5 ug/m3 [indoor air]) require additional assessment, investigation or mitigation in accordance with NYSDOH SVI matrices. Therefore, additional sampling is needed to determine whether actions are needed to address soil vapor intrusion on- and off-site. Significant Threat: Recent public events held at the site and past unapproved activities are likely to increase the risk of direct contact with the contamination visually observed on the surface of the slab and/or slab areas with broken concrete in which the upper soils likely contain hazardous waste levels of contamination. Contravention of SCOs for metals pose a significant threat to human health due to accessibility. Also, metals contamination in soil at the source area exceeds respective industrial and/or protection of groundwater SCOs. This has resulted in contamination of shallow groundwater at levels several orders of magnitude above standards, creating a significant threat to the environment."

Health Problem: "Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. People may come into contact with contaminants in soils if they dig below the surface or contact exposed soil. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in the event the site is re-occupied and for any future buildings developed on the site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site. "

Site Description:	"Location: The site is located in the Williamsburg section of Brooklyn. The site is bounded by Havemeyer Street to the northwest, North 6th Street to the southwest, Macri Triangle park to the southeast, and North 8th Street to the northeast. Site Features: The site is completely covered with buildings in the northwest section; and covered with asphalt, concrete, and open park space in the southeast section. The site is bisected by an elevated portion of I-278 (the Brooklyn-Queens Expressway (BQE)) adjacent to the park. Current Zoning and Land Use(s): The site is zoned for residential, manufacturing, and commercial uses. The residential area is in the northwest section of the site. The manufacturing building along Meeker Avenue is unoccupied. Past Use of the Site: According to Sanborn maps, the former Ansbacher Color and Dye Factory (Ansbacher) occupied multiple buildings along North 6th Street, North 7th Street, and Metropolitan Avenue from ~1887 to ~1945. The assumed use of the facility was to manufacture paints and/or pigments for commercial and industrial use. In the early 1950's, the buildings in the southeastern section of the site were torn down to make room for the construction of the BQE. It is believed that during this construction, waste material and debris from the former Ansbacher plant may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation (NYSDOT) in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed by the New York State Department of Environmental Conservation (NYSDEC) during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. In 2015, the NYSDEC initiated an investigation on the perimeter of the site to identify the origin of chlorinated solvents found in groundwater beneath the sidewalk as part of routine sampling. Site Geology and

BQE/ANSBACHER COLOR & DYE FACTORY (Continued) **S106780917**

Hydrogeology: The site is underlain by fine to medium sands; with limited quantities of coarse sand, gravel, and silt throughout the site at varying intervals. Groundwater is approximately 9.5 - 12.5' below grade. Flow direction in shallow groundwater is toward the west-southwest, while deeper groundwater appears to flow towards the east. (This may be due to the presence of the L train subway tunnel underneath North 7th Street.)"

Env Problem: "Nature and Extent of Contamination: - Soil Sampling was completed in multiple stages from 1988 to 1999. The primary contaminants of concern in soil at this site are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 7,500 ppm, well above the cleanup objective for commercial use (16 ppm). This soil failed for EP Toxicity (48 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Lead has been found at concentrations up to 10,600 ppm, well above the cleanup objective for commercial use (1,000 ppm). This soil failed for EP Toxicity (20.3 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Mercury was also found at concentrations up to 294 ppm, well above the cleanup objective for commercial use (2.8 ppm). These concentrations were all found in the vicinity of the Arsenate Of Lead building in the southeast area of the site, which is now located in the footprint of the BQE. - Groundwater Sampling has been completed in multiple stages from 1988 to 2015. The primary contaminants of concern in groundwater are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 15,500 ppb, well above the Class GA standard of 25 ppb. Lead has been found at concentrations up to 431 ppb, above the Class GA standard of 25 ppb. Mercury has been found at concentrations up to 75 ppb, well above the Class GA standard of 0.7 ppb. These concentrations were all found in the vicinity of the Arsenate Of Lead building in the southeast area of the site, which is now located in the footprint of the BQE. In 2015, groundwater in the northwest portion of the site was also found to contain tetrachloroethene (PCE) up to 1,900 ppb, trichloroethene (TCE) up to 120 ppb, and cis-1,2-dichloroethene (DCE) up to 320 ppb. PCE, TCE, and DCE all have a Class GA standard of 5 ppb. Significant Threat: The site does not constitute a significant threat to human health or the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory."

Health Problem: "Residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt, thereby preventing direct contact. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Groundwater in the area is not used, since public water is available. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

PFAS: PFAS Contamination Site Location Listing

DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Exclusive Recovered Govt. Archives

RGA HWS: Recovered Government Archive State Hazardous Waste Facilities List

The EDR Recovered Government Archive State Hazardous Waste database provides a list of SHWS incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

Date of Government Version: N/A
Date Data Arrived at EDR: 07/01/2013
Date Made Active in Reports: 12/30/2013
Number of Days to Update: 182

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/23/2021
Date Data Arrived at EDR: 08/10/2021
Date Made Active in Reports: 11/08/2021
Number of Days to Update: 90

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Longitude (West):	73.947375 - 73ˆ 56’ 50.55’’
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	588926.8
UTM Y (Meters):	4506105.0
Elevation:	13 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

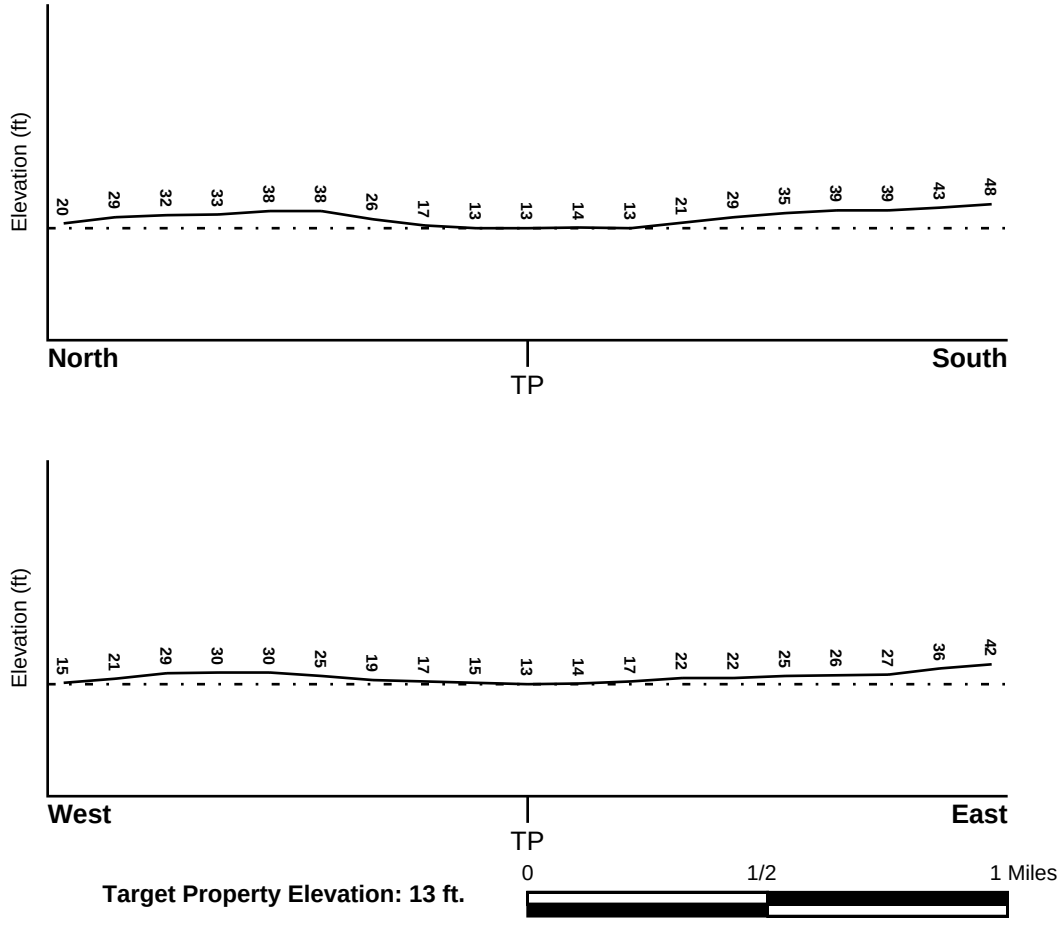
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 13 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970204F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970208F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles WSW
Site Name:	Naval Station Ny
Site EPA ID Number:	NY5170022250
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	14 feet in a well located 1 mile southeast of the site.
Hydraulic Connection:	Information is not available about the hydraulic connection between the surficial aquifer (upper glacial till) and underlying aquifer(s). Bedrock is present at an estimated depth of 100 feet.
Sole Source Aquifer:	A sole source aquifer is persent at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

Higher | **FED USGS** | **USGS40000829065**

Organization ID:	USGS-NY	Organization Name:	USGS New York Water Science Center
Monitor Location:	K 65. 1	Type:	Well
Description:	Not Reported	HUC:	02030201
Drainage Area:	Not Reported	Drainage Area Units:	Not Reported
Contrib Drainage Area:	Not Reported	Contrib Drainage Area Unts:	Not Reported
Aquifer:	Northern Atlantic Coastal Plain aquifer system		
Formation Type:	Glacial Aquifer, Upper	Aquifer Type:	Not Reported
Construction Date:	Not Reported	Well Depth:	59
Well Depth Units:	ft	Well Hole Depth:	Not Reported

Well Hole Depth Units: Not Reported

Ground water levels,Number of Measurements:	468	Level reading date:	1968-11-06
Feet below surface:	Not Reported	Feet to sea level:	0.65
Note:	Not Reported

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

NOTE: Where no dimensions for zoning district boundaries appear on the zoning maps, such dimensions are determined in Article VII, Chapter 6 (Location of District Boundaries) of the Zoning Resolution.

ZONING MAP

THE NEW YORK CITY PLANNING COMMISSION

Major Zoning Classifications:

The number(s) and/or letter(s) that follows an R, C or M District designation indicates use, bulk and other controls as described in the text of the Zoning Resolution.

R – RESIDENTIAL DISTRICT

C – COMMERCIAL DISTRICT

M – MANUFACTURING DISTRICT

SPECIAL PURPOSE DISTRICT
The letter(s) within the shaded area designates the special purpose district as described in the text of the Zoning Resolution.

AREA(S) REZONED

Effective Date(s) of Rezoning:

*11-23-2021 C 210480 ZMK
11-23-2021 C 200314 ZMK

Special Requirements:

For a list of lots subject to CEQR environmental requirements, see APPENDIX C.

For a list of lots subject to "D" restrictive declarations, see APPENDIX D.

For Inclusionary Housing designated areas and Mandatory Inclusionary Housing areas on this map, see APPENDIX F.

ZONING MAP **13b**

NOTE: Zoning information as shown on this map is subject to change. For the most up-to-date zoning information for this map, visit the Zoning section of the Department of City Planning website: **www.nyc.gov/planning** or contact the Zoning Information Desk at (212) 720-3291.

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations (BFEs) shown on this map apply only landward of 0.0' National Geodetic Vertical Datum of 1929 (NGVD 29). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations tables in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations tables should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was New York State Plane FIPSZONE 3104. The **horizontal datum** was NAD 83, GRS80 spheroid. Differences in datum, spheroid, projection or State Plane zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the National Geodetic Vertical Datum of 1929. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3182
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713-3242**, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was provided in digital format by the Department of Information Technology and Telecommunication, City of New York. This information was derived from digital orthophotos produced at a scale of 1:1,200 with 2-foot pixel resolution from photography dated 2004.

Based on updated topographic information, this map reflects more detailed and up-to-date **stream channel configurations and floodplain delineations** than those shown on the previous FIRM for this jurisdiction. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map. Also, the road to floodplain relationships for unrevised streams may differ from what is shown on previous maps.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map showing the layout of map panels for this jurisdiction.

Contact the **FEMA Map Service Center** at 1-800-358-9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its website at http://msc.fema.gov.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov.

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A	No Base Flood Elevations determined.
ZONE AE	Base Flood Elevations determined.
ZONE AH	Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
ZONE AO	Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE AR	Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
ZONE A99	Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
ZONE V	Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
ZONE VE	Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X	Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X	Areas determined to be outside the 0.2% annual chance floodplain.
ZONE D	Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

	1% annual chance floodplain boundary
	0.2% annual chance floodplain boundary
	Floodway boundary
	Zone D boundary
	CBRS and OPA boundary
	Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.
513	Base Flood Elevation line and value; elevation in feet*
(EL 987)	Base Flood Elevation value where uniform within zone; elevation in feet*

* Referenced to the National Geodetic Vertical Datum of 1929

A — A	Cross section line
23 — 23	Transect line
87°07'45", 32°22'30"	Geographic coordinates referenced to the North American Datum of 1983 (NAD 83), Western Hemisphere
2 76 000 N	1000-meter Universal Transverse Mercator grid values, zone 18
600000 FT	5000-foot grid ticks: New York State Plane coordinate system, Long Island zone (FIPSZONE 3104), Lambert Conformal Conic projection
DX5510 ×	Bench mark (see explanation in Notes to Users section of this FIRM panel)
●M1.5	River Mile

1. General Site Information

Site Information	
Address	60 Throop Avenue
Block	2250
Lot(s)	129
Lot Area (SF)	3,750
Property Description	Vacant rectangular-shaped lot
Current Uses	Storage of some construction supplies
Historic Uses	Consisted of residential use until it became vacant according to the Sanborn maps.

1.1 Site Description and Project Background

The subject site is 3,750 square feet (SF) in size and is identified as Block 2250 Lot 129, on the New York City Tax Map. The subject site consists of a singular vacant rectangular-shaped lot. The general vicinity of the surrounding area comprises of residential development. A Site Location Map is provided as Figure 1.

The project is within a New York City Office of Environmental Remediation (OER) E-Designation area and has been assigned E-Designation E-238 as part of the Broadway Triangle Rezoning. The development project consists of a new 6-story residential building containing a total of 10 dwelling units.

The HASP has been prepared prior to the start of any soil disturbance or construction activities. The HASP has been generated in support of the planned Phase II Environmental Site Investigation (Remedial Investigation) at the Site to address identified areas of environmental concern at the Site. Proper implementation of the HASP will minimize contaminant exposure pathways (e.g., dermal contact, ingestion, and inhalation) for future occupants of the dwellings at the Site and the construction workers. All sampling and investigation activities will be performed in accordance with the NYSDEC Draft DER-10: Technical Guidance for Site Investigation and Remediation (December, 2002), the Spill Technology and Remediation Series (STARS #1): Petroleum-Contaminated Soil Guidance Policy (August, 1992), Sampling, Analysis, and Assessment of Per-and Polyfluoroalkyl substances (October, 2020), and the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006).

1.2 Project Tasks

The following sampling and investigation activities will be performed to obtain information regarding the following concerns at the Site:

- Soil sampling and laboratory analysis
- Groundwater sampling and laboratory analysis
- Soil vapor sampling and laboratory analysis

See the Site plan in Figure 2 for work locations.

1.2.1 Soil Investigation

A total of four (4) soil borings will be advanced at the Site. Soil borings will be advanced up to a maximum depth of 7 feet (ft) below ground surface (bgs) in the proposed excavation area for the site. Two (2) soil samples per soil boring, and one duplicate soil sample for quality assurance and quality control (QA/QC) purposes, will be collected. A total of nineteen (9) soil samples will be collected and analyzed for the parameters described in the OER-approved Phase II Work Plan.

Recovered soils will be assessed for lithology and field-screened with a photo-ionization detector (PID). All field work will be recorded in a field log. A Geoprobe® direct-push rig (or equivalent) outfitted with a macro-core sampler and dedicated acetate liners will be used and if necessary, more advanced drilling technology will be used to complete the site investigation.

1.2.2 Groundwater Investigation

Three (3) temporary groundwater monitoring wells will be installed within three of the soil borings noted above, or as described in the OER-approved Phase II Work Plan. Review of the October 2018 geotechnical investigation indicated that groundwater is expected to be encountered at approximately 10 ft bgs. Designated borings will be advanced further to reach the groundwater table if necessary. One (1) groundwater sample will be collected from each temporary well, and one duplicate groundwater sample will be collected for QA/QC purposes. A total of four (4) groundwater samples will be collected and analyzed for the parameters described in the OER-approved Phase II Work Plan.

The groundwater wells will be gauged with a water level meter to record a depth to groundwater reading (1/100 foot), and if necessary, an interface meter to determine the thickness of LNAPL (Light Non-Aqueous Phase Liquid).

1.2.3 Soil Vapor Investigation

Four (4) soil vapor implants will be installed at the Site. Soil vapor implants will be set at a maximum depth of six (6) feet below ground surface in the proposed excavated areas. A Geoprobe® direct push drilling machine will be used to install the vapor implants. A helium leak test will be utilized to ensure that each soil vapor point has a proper seal prior to sample collections as part of the QA/QC procedure. A total of four (4) soil vapor samples will be collected using 6-Liter SUMMA canisters equipped with 2-hour regulators. The soil vapor samples will be analyzed for the parameters described in the OER-approved Phase II Work Plan.

1.3 Personnel

The following is a list of the names and job functions of key site safety personnel assigned to this project:

Project Name	60 Throop Ave	Site Address	60 Throop Ave. Brooklyn, NY	Project No.	221004.03
Site Activities Start Date	3/3/2022*	Site Activities End Date	3/3/2022*		
Client/Site Contact Organization		Phone Number			
Rock Enviro Project Manager (PM)	Cheryl Benmergui	Office Phone Number	(718) 858-6655	Cell Phone Number	(805) 452-8128
Rock Enviro Site Safety Officer (SSO)	Jason Gellati	Office Phone Number	(718) 858-6655	Cell Phone Number	(917)572-1279
Rock Enviro Alternate SSO	Cheryl Benmergui*	Office Phone Number	(718) 858-6655	Cell Phone Number	(805) 452-8128
Subcontractor: Organization	Coastal Environmental Solutions*	Phone Number	(631) 256-6974	Alternate Phone Number	

**Tentatively assigned for submittal purposes. Designation will be revised upon final selection and prior to commencement of work.*

1.3.1 Roles and Responsibilities

The following provides project roles and responsibilities of key site safety personnel assigned to this project:

Project Manager (PM)

The Project Manager (PM) is responsible for ensuring that the requirements of this HASP are implemented at that project location. Some of the PM´s specific responsibilities include:

- Assuring that all personnel to whom this HASP applies have received a copy of this HASP;
- Providing the project team with updated information regarding environmental conditions at the site and the scope of site work;
- Providing adequate authority and resources to the on-site SSO to allow for the successful implementation of all necessary safety procedures;
- Supporting the decisions made by the SSO;
- Maintaining regular communication with the SSO and the project team;
- Coordinating the activities of all subcontractors and ensuring awareness of the pertinent health and safety requirements for this project;
- Providing project scheduling and planning activities; and
- Providing guidance to field personnel in the development of appropriate Job Safety Analysis (JSA) relative to the site conditions and hazard assessment.

Site Safety Officer (SSO)

The Site Safety Officer (SSO) is responsible for field implementation of this HASP and enforcement of safety rules and regulations. SSO functions may include some or all:

- Act as the liaison for health and safety issues with client, staff, subcontractors, and agencies.
- Verify that utility clearance has been performed by subcontractors.
- Oversee day-to-day implementation of the HASP by personnel on site.
- Interact with subcontractor project personnel on health and safety matters.
- Verify use of required PPE as outlined in the safety plan.
- Inspect and maintain Rock Enviro's safety equipment, including calibration of air monitoring instrumentation used by Rock Enviro.
- Perform changes to HASP and document as needed and notify appropriate persons of changes.
- Investigate and report on-site accidents and incidents involving Rock Enviro and its subcontractors.
- Verify that site personnel are familiar with site safety requirements (e.g., the hospital route and emergency contact numbers).
- Report accidents, injuries, and near misses to the PM as needed.

The SSO will conduct initial site safety orientations with site personnel (including subcontractors) and conduct toolbox and safety meetings thereafter with employees and subcontractors at regular intervals. The SSO will track the attendance of site personnel at safety orientations, toolbox talks, and safety meetings.

Alternate Site Safety Officer (ASSO) and Field Personnel

The Alternate Site Safety Officer (SSO) will be responsible for coverage of responsibilities delegated to the SSO if the SSO is unavailable or under means that prevent the SSO to perform specified duties. The ASSO will be assigned prior to site activities and may be assigned to other field personnel. The ASSO will also be authorized to administer the HASP.

Field personnel are responsible for following the health and safety procedures specified in this HASP and for performing their work in a safe and responsible manner. Some of the specific responsibilities of the field personnel are as follows:

- Reading the HASP in its entirety prior to the start of on-site work;
- Attending the pre-entry briefing prior to beginning on-site work;
- Bringing forth any questions or concerns regarding the content of the HASP to the PM or the SSO prior to the start of work;
- Stopping work when tasks or activities can be performed safely;
- Reporting all accidents, injuries and illnesses, regardless of their severity, to the SSO;
- Complying with the requirements of this safety plan and the requests of the SSO; and
- Reviewing the established JSAs for the site-specific hazards on a daily basis and prior to each shift change, if applicable.

Subcontractors

Each contractor/subcontractor will provide a qualified representative who will act as their Site Safety Manager (Sub-SSM). This person will be responsible for the planning, coordination, and safe execution of subcontractor tasks, including preparation of job hazard analyses (JHA), performing daily safety planning, and coordinating directly with the SSO for other site safety activities. This person will play a lead role in safety planning for Subcontractor tasks, and in ensuring that all their employees and lower tier subcontractors are in adherence with applicable local, state, and/or federal regulations, and/or industry and project specific safety standards or best management practices.

General contractors/subcontractors are responsible for preparing a site-specific HASP and/or other task specific safety documents (e.g., JHAs), which are, at a minimum, in compliance with local, state, and/or federal other regulations, and/or industry and project specific safety standards or best management practices. The contractor's/subcontractor's safety documentation will be at least as stringent as the health and safety requirements of this HASP.

Safety requirements include, but are not limited to: legal requirements, contractual obligations and industry best practices. Contractors/subcontractors will identify a site safety representative during times when contractor/subcontractor personnel are on the Site. All contractor/subcontractor personnel will undergo a field safety orientation conducted by the SSO and/or PM prior to commencing site work activities. All contractors/subcontractors will participate in site safety meetings and their personnel will be subject to training and monitoring requirements identified in this HASP. If the contractors/subcontractors means and methods deviate from the scope of work described in Section 1 of this HASP, the alternate means and methods must be submitted, reviewed, and approved by the SSO and/or PM prior to the commencement of the work task. Once approved by the SSO and/or PM, the alternate means and methods submittal will be attached to this HASP as an Addendum.

Visitors

Authorized visitors (e.g., Client Representatives, Regulators, management staff, etc.) requiring entry to any work location on the site will be briefed by the Site Supervisor on the hazards present at that location. Visitors will be escorted at all times at the work location and will be responsible for compliance with their employer´s health and safety policies. In addition, this safety plan specifies the minimum acceptable qualifications, training and personal protective equipment which are required for entry to any controlled work area; visitors must comply with these requirements at all times. Unauthorized visitors, and visitors not meeting the specified qualifications, will not be permitted within established controlled work areas.

2. Site Hazards

The following tables identifies potential hazards that may exist or be encountered during site activities:

Safety Hazards					
X	Slip/Trips/Falls (hoses and tools on the ground, uneven terrain, etc.)	X	Wet or Slippery Surfaces	X	Surface Debris (broken glass, sharp objects, etc.)
	Unstable structures	X	Ground disturbance/ Excavations	X	Heavy Equipment
X	Excessive Noise	X	Above or underground utilities	X	Reduced lighting/visibility
	Confined Spaces (Confined Space Entry Program Required if applicable)	X	Weather conditions (extreme heat/cold, storms, etc)	X	Generated, Infections, or Hazardous wastes
	Biological hazards (poison ivy, insects, rodents, etc)		Other:		Other:

2.1 Hazard Conditions and Controls

The following controls have been defined for the safety hazards identified in the table above:

Slips, Trips, and Falls	
Hazard Information	**Hazard Controls**
Slip and trip injuries are the most frequent injuries to workers. Statistics show that most falls happen on the same level resulting from slips and trips. Both slips and trips result from some a kind of unintended or unexpected change in the contact between the feet and the ground or walking surface. This shows that good housekeeping, quality of walking surfaces (flooring), awareness of surroundings, selection of proper footwear, and appropriate pace of walking are critical for preventing fall accidents. Site workers will be walking on a variety of irregular surfaces, that may affect their balance. Extra care must be taken to walk cautiously near rivers because the bottom of the riverbed maybe slick and may not be visible. Rocks, gradient changes, sandy bottoms, and debris may be present but not observable.	Take your time and pay attention to where you are going. Adjust your stride to a pace that is suitable for the walking surface and the tasks you are doing Check the work area to identify hazards - beware of trip hazards such as wet floors, slippery floors, and uneven surfaces or terrain. Establish and utilize a pathway free of slip and trip hazards. Choose a safer walking route. Carry loads you can see over. Keep work areas clean and free of clutter. Communicate hazards to on-site personnel – remove hazards as appropriate.

Slippery Surfaces	
Hazard Information	**Hazard Controls**
Both slips and trips result from some a kind of unintended or unexpected change in the contact between the feet and the ground or walking surface. This shows that good housekeeping, quality of walking surfaces (flooring), selection of proper footwear, and appropriate pace of walking are critical for preventing fall accidents. Slips happen where there is too little friction or traction between the footwear and the walking surface. Common causes of slips are: • wet or oily surfaces • occasional spills • weather hazards • loose, unanchored rugs or mats • flooring or other walking surfaces that do not have same degree of traction in all areas Weather-related slips and falls become a serious hazard as winter conditions often make for wet or icy surfaces outdoors. Even wet leaves or mud can create treacherous walking conditions. Spills and leaks inside can also lead to slips and falls.	Evaluate the work area to identify any conditions that may pose a slip hazard. Address any spills, drips or leaks immediately. Mark areas where slippery conditions exist. Select proper footwear or enhance traction with additional PPE. Where conditions are uncertain or environmental conditions result in slippery surfaces walk slowly, take small steps, and slide feet on wet or slippery surfaces.

Ground Disturbance/Excavations	
Hazard Information	**Hazard Controls**
Ground disturbance is defined as any activity disturbing the ground. Ground disturbance activities include, but are not limited to, excavating, trenching, drilling (either mechanically or by hand), digging, plowing, grading, tunneling, and pounding posts or stakes. Because of the potential hazards associated with striking an underground utility or structure, the operating procedure for underground utility clearance shall be followed prior to performing any ground disturbance activities.	Prior to performing ground disturbance activities, the following requirements should be applied: Confirm all approvals and agreements (as applicable) either verbal or written have been obtained. Request for line location has been registered with the applicable One-Call or Dial Before You Dig organization, when applicable • Whenever possible, ground disturbance areas should be adequately marked or staked prior to the utility locators site visit. Notification to underground facility operator/owner(s) that may not be associated

Ground Disturbance/Excavations	
Hazard Information	**Hazard Controls**
	with any known public notification systems such as the One-Call Program regarding the intent to cause ground disturbance within the search zone. Notifications to landowners and/or tenant, where deemed reasonable and practicable. Proximity and Common Right of Way Agreements shall be checked, if the line locator information is inconclusive.

Heavy Equipment	
Hazard Information	**Hazard Controls**
Staff members must be careful and alert when working around heavy equipment since equipment failure or breakage and limited visibility can lead to accidents and worker injury. Heavy equipment such as cranes, drills, haul trucks, or other can fail during operation increasing the likelihood of worker injury. Equipment of this nature should be visually inspected and checked for proper working order prior to the commencement of field work. Those that operate heavy equipment must meet all of the requirements to operate heavy equipment. Staff members that supervise projects or are associated with such high-risk projects that involve digging or drilling should use due diligence when working with a construction firm.	Only approach equipment once you have confirmed contact with the operator (e.g., the operator places the bucket on the ground). Always maintain visual contact with operators and keep out of the strike zone whenever possible. Always be alert to the position of the equipment around you. Always approach heavy equipment with an awareness of the swing radius and traffic routes of each piece of equipment and never go beneath a hoisted load. Avoid fumes created by heavy equipment exhaust. Understand the site traffic pattern and position yourself accordingly.

Noise	
Hazard Information	**Hazard Controls**
Working around heavy equipment (drill rigs, excavators, etc.) often creates excessive noise. The effects of noise can include physical damage to the ear, pain, and temporary and/or permanent hearing loss. Workers can also be startled, annoyed, or distracted by noise during critical activities. Noise monitoring data that indicates that work locations within 25 feet of operating heavy equipment (e.g., drill rigs, earth working	Personnel are required to use hearing protection (earplugs or earmuffs) within 25 feet of any operating piece of heavy equipment. Limit the amount of time spent at a noise source. Move to a quiet area to gain relief from hazardous noise sources.

<table>

Identifying a no-drill or dig zone</td></tr>
</table>

Utilities	
Overhead Utilities	
Hazard Information	**Hazard Controls**
	Hand dig or use vacuum excavation in the proposed ground disturbance locations if insufficient data is unavailable to accurately determine the location of the utility lines.

Heat Conditions	
Hazard Information	**Hazard Controls**
Acute excessive exposure to solar radiation may cause painful sunburn, and chronic exposure may contribute to eye damage and skin cancer. The average peak intensity of solar ultraviolet (UV) radiation is at midday. Most of the total daily UV received is between 10 AM and 2 PM. UV radiation can reflect off of water, concrete, light colored surfaces, and snow. Cloud cover can reduce UV levels, but overexposure may still occur. Use the shadow test to determine sun strength: If your shadow is shorter than you are, the sun´s rays are at their peak, and it is important to protect yourself.	Wear light-colored, closely woven clothing, which covers as much of the body as practicable. Use sunscreens with broad spectrum protection (against both UVA and UVB rays) and sun protection factor (SPF) values of 30 or higher. Ideally, about 1 ounce of sunscreen (about a shot glass or palmful) should be used to cover the arms, legs, neck, and face of the average adult. Sunscreen needs to be reapplied at least every 2 hours to maintain protection. Hats should be worn and should be wide brimmed, protecting as much of the face, ears, and neck as possible. Hats should also provide ventilation around the head. Sunscreen should be applied to areas around the head not protected by the hat (ears, lips, neck, etc.). Wear sunglasses while working outdoors. Sunglasses should allow no more than 5% of UVA and UVB penetration and should also meet the ANSI Z87.1 standard for safety glasses. Use natural or artificial shade, where possible.
Heat-related illness is a serious hazard especially when physically active. We rely on our bodies' ability to get rid of excess heat (heat dissipation). When it does not happen quickly enough, our body temperature continues to rise and someone working in these excessively hot conditions may experience symptoms that include thirst, irritability, a rash, cramping, heat exhaustion, or heat stroke. Heat stroke is the most severe heat-related illness. Workers suffering from heat stroke	There are different levels of protection to prevent heat-related illnesses. Workers who have not spent time recently in warm or hot environments and/or being physically active will need time to build tolerance to the heat. During their first few days in warm or hot environments, employers should encourage workers to: • Consume adequate fluids • Work shorter shifts

Heat Conditions	
Hazard Information	**Hazard Controls**
experience mental dysfunction such as unconsciousness, confusion, disorientation, or slurred speech. Anyone suffering from a heat stroke should be cooled immediately and EMS must be called. These heat-related illnesses are a combination of various factors including: • Physical activity • Air temperature • Humidity • Sunlight • Heat sources (ovens/heat absorbing roofs/ road surfaces) • Air movement • Clothing that hampers heat dissipation (PPE) • Personal risk factors (pre-existing health conditions/lifestyle) Management should commit to considering all factors that contribute to body temperature increase when determining if a heat hazard is present in a workplace.	• Take frequent breaks • Quickly identify symptoms of heat-related illness Engineering controls such as air conditioning, with cooled air, and increased air flow, leading to increased evaporative cooling, can make the workplace safer. OSHA encourages water, rest, and shade as prevention as well as treatment for heat-related illness.

Cold Conditions	
Hazard Information	**Hazard Controls**
Cold stress may occur at any time work is being performed during low ambient temperatures and high velocity winds. Because cold stress is common and potentially serious illnesses are associated with outdoor work during cold seasons, regular monitoring and other preventative measures are vital. Examples of Cold Stress Conditions are: **Frostbite:** Localized injury resulting from cold is included in the generic term "frostbite. There are several degrees of damage. ***Symptoms:*** Frost nip or incident frostbite; sudden blanching or whitening of the skin. • Superficial frostbite: Skin has a waxy or white appearance and is firm to the touch, but tissue beneath is resilient.	Recognize the environmental and workplace conditions that may be dangerous. • When the temperature is below 41° F, workers should be aware that cold stress is a potential hazard. Learn signs of cold-induced illnesses and injuries and how to help affected staff members. • Observe fellow staff members for signs of cold stress and administer first aid, where necessary. Staff members should maintain a clothing level that keeps them warm but dry (not sweating). • Staff should wear thermal clothing including gloves and footwear and beneath chemical resistant clothing, when appropriate.

Cold Conditions	
Hazard Information	**Hazard Controls**

• Deep frostbite: Tissues are cold, pale, and solid; extremely serious injury.
 	
Treatment:
• Bring the victim indoors and heat the areas quickly in water between 102° and 105° F.
  ○ Never place frostbitten tissue in hot water as the area will have a reduced heat awareness and such treatment could result in burns.
• Give the victim a warm drink (not coffee, tea, or alcohol).
  ○ The victim should not smoke or do anything that will inhibit blood circulation.
• Keep the frozen parts in warm water or covered with warm clothes for 30 minutes even though the tissue will be very painful as it thaws.
  ○ Elevate the injured area and protect it from injury.
  ○ Do not allow blisters to be broken. Use sterile, soft, dry material to cover the injured areas.
• Keep victim warm and get medical care immediately following first aid treatment.
• After thawing, the victim should try to move the injured areas slightly, but no more than can be done without assistance.
 	
Do NOT:
• Rub the frostbitten area(s)
• Use ice, snow, gasoline, or anything cold on frostbite
• Use heat lamps or hot water bottles to rewarm the frostbitten area
• Place the frostbitten area near a hot stove
 	
Hypothermia: Significant loss of body heat that is also a potential hazard during cold weather operations. Hypothermia is characterized as "moderate" or "severe".
	• Workers should have a spare set of clothing in case work clothes are not warm enough or become wet.
	• If a worker begins to sweat, he/she should remove a layer.
	• If clothing becomes wet and temperatures are below 36° F, clothing must be immediately replaced with dry clothing.
	
	A warm area for rest breaks should be designated.
	• In cold temperatures, rotate shifts of workers with potential cold stress exposure or take periodic breaks to allow recovery from cold stress.
	• Do not go into the field alone when cold stress could occur.
	
	Avoid fatigue or exhaustion because energy is needed to keep muscles warm.
	
	Workers should drink warm liquids (non-alcoholic, non-caffeinated) periodically throughout their shifts to prevent dehydrated.

Cold Conditions	
Hazard Information	**Hazard Controls**
Symptoms: • Early hypothermia - Chills, pale skin, cold skin, muscle rigidity, depressed heart rate, and disorientation • Moderate hypothermia - Any combination of severe shivering, abnormal behavior, slowing of movements, stumbling, weakness, repeated falling, inability to walk, collapse, stupor, or unconsciousness • Severe hypothermia - Extreme skin coldness, loss of consciousness, faint pulse, and shallow, infrequent or apparently absent respiration Death is the ultimate result of untreated hypothermia. The onset of severe shivering signals danger to personnel; exposure to cold shall be immediately terminated for any severely shivering worker. ***Treatment:*** Staff members should seek emergency medical treatment in the event of hypothermia. The following actions can be taken prior to obtaining medical treatment: Gently place patients in an environment most favorable to reducing further heat loss from evaporation, radiation, conduction, or convection. Remove wet clothing and replace it with dry blankets or sleeping bags. Initiate active external rewarming with heat packs (e.g., hot water bottles, chemical packs, etc.) placed in the areas of the armpits, groin, and abdomen. Be aware of the risk of causing body surface burns from excessive active external rewarming. In dire circumstances, rescuers may provide skin-to-skin contact with patients when heat packs are unavailable and such therapy would not delay evacuation.	

Generated Waste	
Hazard Information	**Hazard Controls**
Excess sample solids, decontamination materials, rags, brushes, poly sheeting, etc. that are determined to be free of contamination through field or laboratory screening can usually be disposed into client-approved, on-site trash receptacles. Uncontaminated wash water may be discarded onto the ground surface away from surface water bodies in areas where infiltration can occur. Contaminated materials must be segregated into liquids or solids and drummed separately for off-site disposal.	All wastes generated shall be containerized in an appropriate container (i.e. open or closed top 55-gallon drum, roll-off container, poly tote, cardboard box, etc.) as directed by the PM. Prior to putting waste containers into service, the containers should be inspected for damages or defects. Waste containers should be appropriately labeled indicating the contents, date the container was filled, owner of the material (including address) and any unique identification number, if necessary. Upon completion of filling the waste container, the container should be inspected for leaks and an appropriate seal.

Biological Hazards	
Hazard Information	**Hazard Controls**
Biological hazards are defined as infectious agents or hazardous biological materials that exert harmful effects on workers' health, either directly thorough infection or indirectly through damage to the working environment, and it can also include medical waste or samples of a microorganism, virus, or toxin from a biological source. Two of the most common and easily identifiable biohazards are blood and bodily fluids, including saliva, mucous, urine, and feces. These are risks in every work environment where people are located. Other common biohazards include airborne pathogens (such as the common cold), wastewater, and sewage. Common biological hazards derived from the environment include mold and fungi, harmful plants, stinging insects, and animal and bird droppings. Workers who are in close proximity to animals must be wary of the additional risks that these work activities carry. Rabies, leptospirosis, and other animal-borne diseases may be transferred to humans who come into contact with infected animals or animal waste.	Engineering controls should be the first line of defense for protecting workers against biological hazards. Engineering controls work to reduce the risk of exposure through physical means. While appropriate controls will vary depending on the specific hazards present in the workplace, the following are examples of effective options: • Containment laboratories • Microbiological safety cabinets • Proper ventilation • Proper storage, transport, and disposal of biologically hazardous materials Administrative controls are the second line of defense. One of the key methods of control in this category is safe operating procedures. Employers must detail procedures and processes that should be followed to protect workers from biological hazard risks, including things such as when and where it is necessary for workers to wear gloves. Examples of other effective ways to use administrative controls to manage biological hazards include:

Biological Hazards	
Hazard Information	**Hazard Controls**
	• Comprehensive employee education and training • Adequate supervision • Monitoring exposure and immunizations • Sick leave policies (to discourage sick employees from coming to work) • Clear emergency procedures Personal protective equipment (PPE) is the last line of defense against hazards, though it plays a critical role. Examples of PPE to guard against biological hazards in the workplace include: • Laboratory coats • Non-permeable gloves • Eye protection • Masks or respiratory protection

Other Considerations	
Unstable Structures	
Hazard Information	**Hazard Controls**
Some properties may be vacant/worn down or going through some sort of demolition process which can also bring about various hazardous conditions. The hazards unique to these conditions include the following: • Changes from the structure's design introduced during construction • Approved or unapproved modifications that altered the original design • Materials hidden within structural members, such as lead, asbestos, silica, and other chemicals or heavy metals requiring special material handling • Unknown strengths or weaknesses of construction materials, such as post-tensioned concrete • Hazards created by the demolition methods used such as exposure to excessive dust	When preparing to work in these conditions, careful assessment and planning of whatever work being done to eliminate hazards where possible is crucial for safety. This can include: • Structural surveys to assess the strength and stability of the structure and adjacent structures; propping and supporting may be necessary to prevent collapse • Assessing the strength and stability of floors to ensure that plant, machinery, and debris put on those floors do not exceed their tolerance • Disconnection of services (gas, electricity, water) • Removal and disposal of any hazardous materials, such as asbestos • Damping down with water spray to reduce dust creation

Other Considerations	
Line of Fire	
Hazard Information	**Hazard Controls**
Line of fire refers to the path an object will travel. Examples of line of fire typically observed on project sites include lifting/hoisting, lines under tension, objects that can fall or roll, pressurized objects, springs or stored energy, work overhead, and vehicles and heavy equipment.	The following precautions should be observed for work overhead: • Never walk under a suspended load. • Communicate to other workers when entering a lifting/hoisting zone, even if for a short period. • Balance the load prior to lifting. • Rigging equipment shall never be loaded in excess of its maximum safe loading limit. • Establish a drop zone, an area below any work being performed aloft. Drop zone size depends on work scope and potential for falling tools and equipment. Keep the drop zone clear of people. • If work at the structure base is unavoidable, inform the worker above. Make sure work stops and they secure tools and equipment prior to performing the work below. • Materials should never be dropped from height. Use tool bags and hand lines when providing tools and equipment to the employee aloft The following precautions should be observed for tension and pressure: • Be aware and stay clear of tensioned lines such as cable, chain and rope. • Use only correct gripping devices. Select proper equipment based on size and load limit. • Be cautious of torque stresses that drilling equipment and truck augers can generate. Equipment can rotate unexpectedly long after applied torque force has been stopped. • Springs come in a variety of shapes and sizes and can release tremendous energy if compression as tension is suddenly released. • Ensure tanks are stored upright and are in good condition, and be aware of potential failures or pressurized lines and fittings

Other Considerations	
Line of Fire	
Hazard Information	**Hazard Controls**
	• Items under tension and pressure can release tremendous energy if it is suddenly released. The following precautions should be observed for objects that can fall or roll: • Not all objects may be overhead; be especially mindful of top-heavy items and items being transported by forklift or flatbed. • Secure objects that can roll such as tools, cylinders and pipes. • Stay well clear of soil cuttings, soil stockpiles generated during drilling operations and excavations, be aware that chunks of dirt, rocks, and debris can fall or roll. • Establish a drop zone that is free of any tools and/or debris. The following precautions should be observed for working in proximity to vehicles and heavy equipment: • Use parking brakes and wheel chocks for any vehicle or equipment parked on an incline. • When working near moving, heavy equipment such as line trucks and cranes, remain in operator's full view. Obtain operator's attention prior to approaching equipment. • Vacate the back of the bucket truck when the boom is being moved or cradled. Get the operator's attention if you must get into the back of the truck so he or she can stop boom movement. Take precautions for all pedestrian and vehicle traffic when positioning vehicles and equipment at a job site.

Other Considerations	
Site Operations and Congestions	
Hazard Information	**Hazard Controls**
There are potential activities which could bring about an undesired event or set of circumstances, e.g., safety, environment, damage to assets, schedule, commercial, financial, etc. The performance of two or more operations concurrently can occur on an actively operating site or in areas of congestion. It is important that operations and activities are identified at an early stage before operations commence to understand issues such as schedule clashes, physical clashes, maintenance activities, failure impacts, interferences between vessels, contracts and third part interfaces and environmental impacts.	Coordinate project with site activities. Identify and understand the hazards associated with the host/client's activities. Integrate site emergency response protocols where appropriate and communicate to all project staff. Integrate site communication protocols and communicate to all project staff.

3. Site Operations

Tasks to be performed as described in Section 1:

Task 1 – Soil, Groundwater, and Soil Vapor Sampling

Drilling, such as associated with installation of soil borings, temporary wells, and soil vapor probes, is conducted for a range of services. Familiarity with basic drilling safety is an essential component of all drilling projects. Potential hazards related to drilling operations include, but are not limited to, encountering underground or overhead utilities, traffic and heavy equipment, hoisting heavy tools, steel impacts, open rotation entanglement, and the planned or unexpected encountering of toxic or hazardous substances. While staff members do not operate drilling equipment, they may work in close proximity to operating drilling equipment and may be exposed to many of the same hazards as the subcontractor. It is imperative that staff are aware of emergency stops and establish communication protocols with the drillers prior to the start of work. Potential Safety Hazards include:

- Overhead and underground utilities;
- Ground disturbance;
- Heavy equipment;
- Noise;
- Line of fire; and
- Generated waste.

4. Personal Protection

Level of Protection (LOP) to be employed for each site task.

TASK	LOP	LOP UPGRADE
Drilling	D	C
Sampling	D	C
Surveying	D	C

Level D - Personal Protective Equipment (PPE) includes:

- Steel toe/steel shank safety shoes
- Hard Hat
- Nitrile Gloves
- Safety Vest
- Hearing Protection
- Long pants and sleeved shirt
- Rubber over boots or disposable boot covers (Modified Level D *)
- Polyethylene coated Tyvek coveralls (Modified Level D *)
- Nitrile Outer gloves (Modified Level D *)
- Face Shield (Modified Level D *)

Level C - PPE includes the following in addition to Level D PPE:

- Rubber overboots or disposable boot covers
- Full-face respirator with GMCH cartridges
- Polyethylene coated Tyvek coveralls
- Nitrile outer gloves

Level B*: -PPE includes the following in addition to Level C PPE:

Level B upgrade not planned for this site; if conditions exist that warrant this level of PPE, then work will be terminated until appropriate further actions to remediate conditions are determined.

- Pressure-demand SCBA
- Saranex (or equal) coveralls

Other safety equipment:

- Tick spray
- Cooler(s)
- Sunscreen
- Safety Cones
- Gatorade and cups (hot work only)

5. Decontamination

All personnel and portable equipment used on site shall be thoroughly decontaminated before leaving the site.

5.1 Decontamination of Personnel

Non-disposable clothing such as boots, goggles and hard hats shall be washed, as appropriate, using a Liqui-Nox and water solution and scrub brushes.

Decontamination Procedure:

1. Wash and rinse boots and gloves in a Liqui-Nox and water solution
2. Rinse again paying special attention to the soles of the boots
3. Remove tapes
4. Remove boots
5. Remove outer gloves
6. Remove coveralls
7. Remove outer surgical gloves (if present)
8. Remove respirator
9. Remove inner surgical gloves
10. Wash hands, arms, and face

5.2 Decontamination of Equipment and Instruments

Small Equipment and Instruments:

All reusable equipment shall be scrubbed with Liqui-Nox and water prior to removal from the site. If this method is not sufficient to decontaminate, steam cleaning will used, if applicable. When feasible, electronic instruments should be wrapped in plastic for protection to avoid washing instruments with water. Remember to allow intake ports, vents, etc. of the instruments for proper operation of the instrument.

Heavy Equipment:

Heavy equipment should be decontaminated prior to leaving the site. This should include manual removal of gross contamination with shovels or other tools. A steam cleaning station will be set up for decontamination of heavy equipment at the site or an area designated by the Field Operations Manager if necessary. Because decontamination at the steam cleaning station poses the possibility of a splash, the task should be performed using modified Level D personal protective equipment. Face shields are recommended during steam-cleaning operations if conducted.

5.3 Disposal of Contaminated Material

It is anticipated that during the course of the site investigation, a limited quantity of investigative derived waste (IDW) may be generated, including PPE. Based on the types of sampling to be performed under this sampling plan, the quantity of waste material is not expected to be substantial and is expected to include PPE, drill cuttings, purge water from well development and sampling, and spent decontamination solutions. All PPE and disposable equipment will be removed from the site at the conclusion of the investigations. All IDW will be field screened with a photoionization detector (PID) for VOCs and be disposed appropriately either on-site or containerized for characterization and subsequent off-site disposal, if deemed necessary. Containerization of drill cuttings will be provided contingent on field screening observations.

5.4 Decontamination Equipment and Supplies

- Wash tubs/buckets
- Water sprayers
- Scrub brushes
- Liqui-Nox
- Deionized water
- Plastic garbage bags
- Disposable wipes
- Poly sheeting
- 55-gallon drums (if needed)

6. Emergency Response

6.1 Communication

Team members will always work in groups of two or more while on site. Visual contact distance among team members must be maintained at all times. Hand signals will be used on-site to ensure safety during high noise instances. Should an emergency occur, other team members will be alerted via hand signals, air horns, whistles or other devices.

CONTINUOUS HORN/WHISTLE BLAST: is the emergency signal to indicate the onset of an emergency requiring that personnel vacate the Exclusion Zone immediately and meet at the designated area discussed in Section 6.2 below.

6.2 Evacuation

In the event of an emergency, such as fire, explosion, toxic gas release etc, personnel will leave the site and congregate at the corner of **Throop Avenue and Walton Street**.

6.3 Personnel Injury or Exposure

In the event of an injury within the Exclusion Zone, all equipment within the zone, if not needed for response to the emergency, will be shut down. On-site personnel trained in First Aid and CPR will initiate first response treatment of the injured person(s). An eyewash station and water sprayer shall be available in the CRZ or support zone. All other personnel will assemble at the decontamination line. The SSO and the Field Operations Manager will evaluate the nature and extent of the injury. The victim will be decontaminated to the extent possible before moving to the Support Zone. If necessary, emergency personnel will be contacted for medical aid and emergency transportation to **Woodhull Medical Center** (see Figure 3: Route to Hospital Map). No persons will re-enter the Exclusion Zone until the cause of the injury or symptoms have been determined.

First aid for Personnel exposure:

- Skin contact: Flush with water
- Inhalation: Move person to fresh air, provide respiration and transport **Woodhull Medical Center** if signs of injury or exposure persist.
- Ingestion: Decon and transport to the **Woodhull Medical Center**.

6.4 Emergency Decon Procedures

If decon can be performed without aggravating injuries or delaying life-saving treatment, protective clothing will be washed, and rinsed or cut off from the injured personnel. If decon cannot be done, for instance due to signs of acute exposure being exhibited, the victim will be wrapped in blankets, plastic or rubber to reduce contamination of other on-site personnel and rescue workers and transported to

Woodhull Medical Center. Emergency and off-site medical personnel will be alerted to the risk of potential exposure to contamination while handling the injured worker.

6.5 Emergency Information

If a field employee becomes injured or ill while on the job, transport to the **Woodhull Medical Center.** Also, contact management. State that the injury or illness is an "on the job injury".

Department	Phone Number
Emergency Service:	911
Ambulance	911
Emergency Room **(Woodhull Medical Center)**	(718) 963-8000
Police	911
Fire Department	911
NYSDEC Hotline	(800)-457-7362
NYCDEP Hotline	311
Poison Control Center	(800) 962-1253
Office of Site Safety and Health	(609) 984-9779
USEPA Emergency Response	(800) 424-8802

6.6 General Emergency Procedures

In the event of an emergency, the following initial procedures shall be implemented to ensure that the appropriate parties are notified, and the scene of the emergency is secured:

1) Notify the appropriate local authorities (Police, Fire, Ambulance, etc.)
2) Notify the appropriate officials (Case Manager, HazMat Team, etc.)
3) Cordon off the emergency scene to the extent possible using caution tape, cones, drums, etc. Personnel will also prevent pedestrians from entering the emergency scene until local authorities arrive on-site.

6.7 Update of Emergency Response Plan

The Emergency Response Plan shall be periodically reviewed and amended as necessary to keep it current with new or changing site conditions or information. Additionally, if an emergency occurs on-site, the incident will be reviewed to determine if the response measures employed were effective and make modifications, as necessary.

Route to the Hospital:

Figure 3 is a map indicating the fastest route from the Site to the **Woodhull Medical Center**.

7. General Requirements

7.1 Training

Personnel engaging in exclusion zone activities must have completed a minimum of 40 hours of environmental safety and health training with a current 8-hour annual refresher. On-site managers and supervisors directly responsible for, or who supervise, personnel engaging in field activities shall have completed additional training in the supervision of those activities. A site safety meeting shall be conducted prior to the start of on-site activities, and before each day's work, if necessary. Those not having completed the 40-hour training requirement are not to enter the exclusion zone.

7.2 Medical Surveillance

All personnel who are potentially exposed to hazardous substances must be enrolled in the medical surveillance program (MSP) and must have had an up-to-date physical. Those not enrolled in the MSP are not to enter the exclusion zone.

7.3 General Safety Rules

The following is a list of general safety rules in effect at the site.

a. There will be no eating, drinking, or smoking in the exclusion or contamination reduction zone.
b. All personnel must pass through the contamination reduction zone to enter or exit the exclusion zone.
c. At a minimum, an emergency deluge shower/spray is to be located on the clean side of the contamination reduction area (for Level C and above).
d. All personnel shall wash hands, arms, and face before eating, smoking, or drinking and at the end of the workday.
e. All supplied breathing air shall be certified as grade D or better.
f. Where practical and necessary, all tools/equipment will be sparking proof, explosion resistant, and/or bonded and grounded.
g. Fire extinguishers will be on-site for use on equipment or small fires only.
h. An adequate supply of cool drinking water (at least 1 gallon per person) with an ample supply of disposable cups shall be present during each day of site operations and be readily available to site personnel.

7.4 Other Safety Precautions and Hazardous Operations

Utility Clearance

All utilities will be cleared prior to subsurface exploration. All drilling rigs and backhoe arms will stay a minimum of 10 feet away from overhead power lines.

Confined Space Operations

No confined space operations are anticipated for the tasks covered under this remedial investigation.

Site Security

All personnel shall be briefed (at safety meeting and site visit) prior to entering and working at the Site; all work areas and limited entry areas will be barricaded and marked at their perimeter and entry points during active field work. A Site map indicating all planned work areas is presented as Figure 2 in this report and will be made available to all site personnel.

Hot Work

Permit-required hot work is not anticipated for this project. However, if such work becomes necessary, the on-site Safety Officer will issue hot work permits.

Health and Safety during COVID-19

REDUCING VIRAL EXPOSURE DURING FIELD WORK
Prior to beginning work, all personnel shall perform a self-assessment. They will consider whether or not they are experiencing any of the following symptoms:

- A fever of 100.3 of or higher
- Difficulty breathing or shortness of breath
- Dry (non-productive) cough
- Loss of smell and/or taste
- Other Flu-like Symptoms

If personnel are experiencing any of these symptoms, do not report to work. Immediately contact your supervisor and inform them of your condition. Each personnel shall sign and date a log sheet confirming they are free of symptoms and are following health and safety requirements.

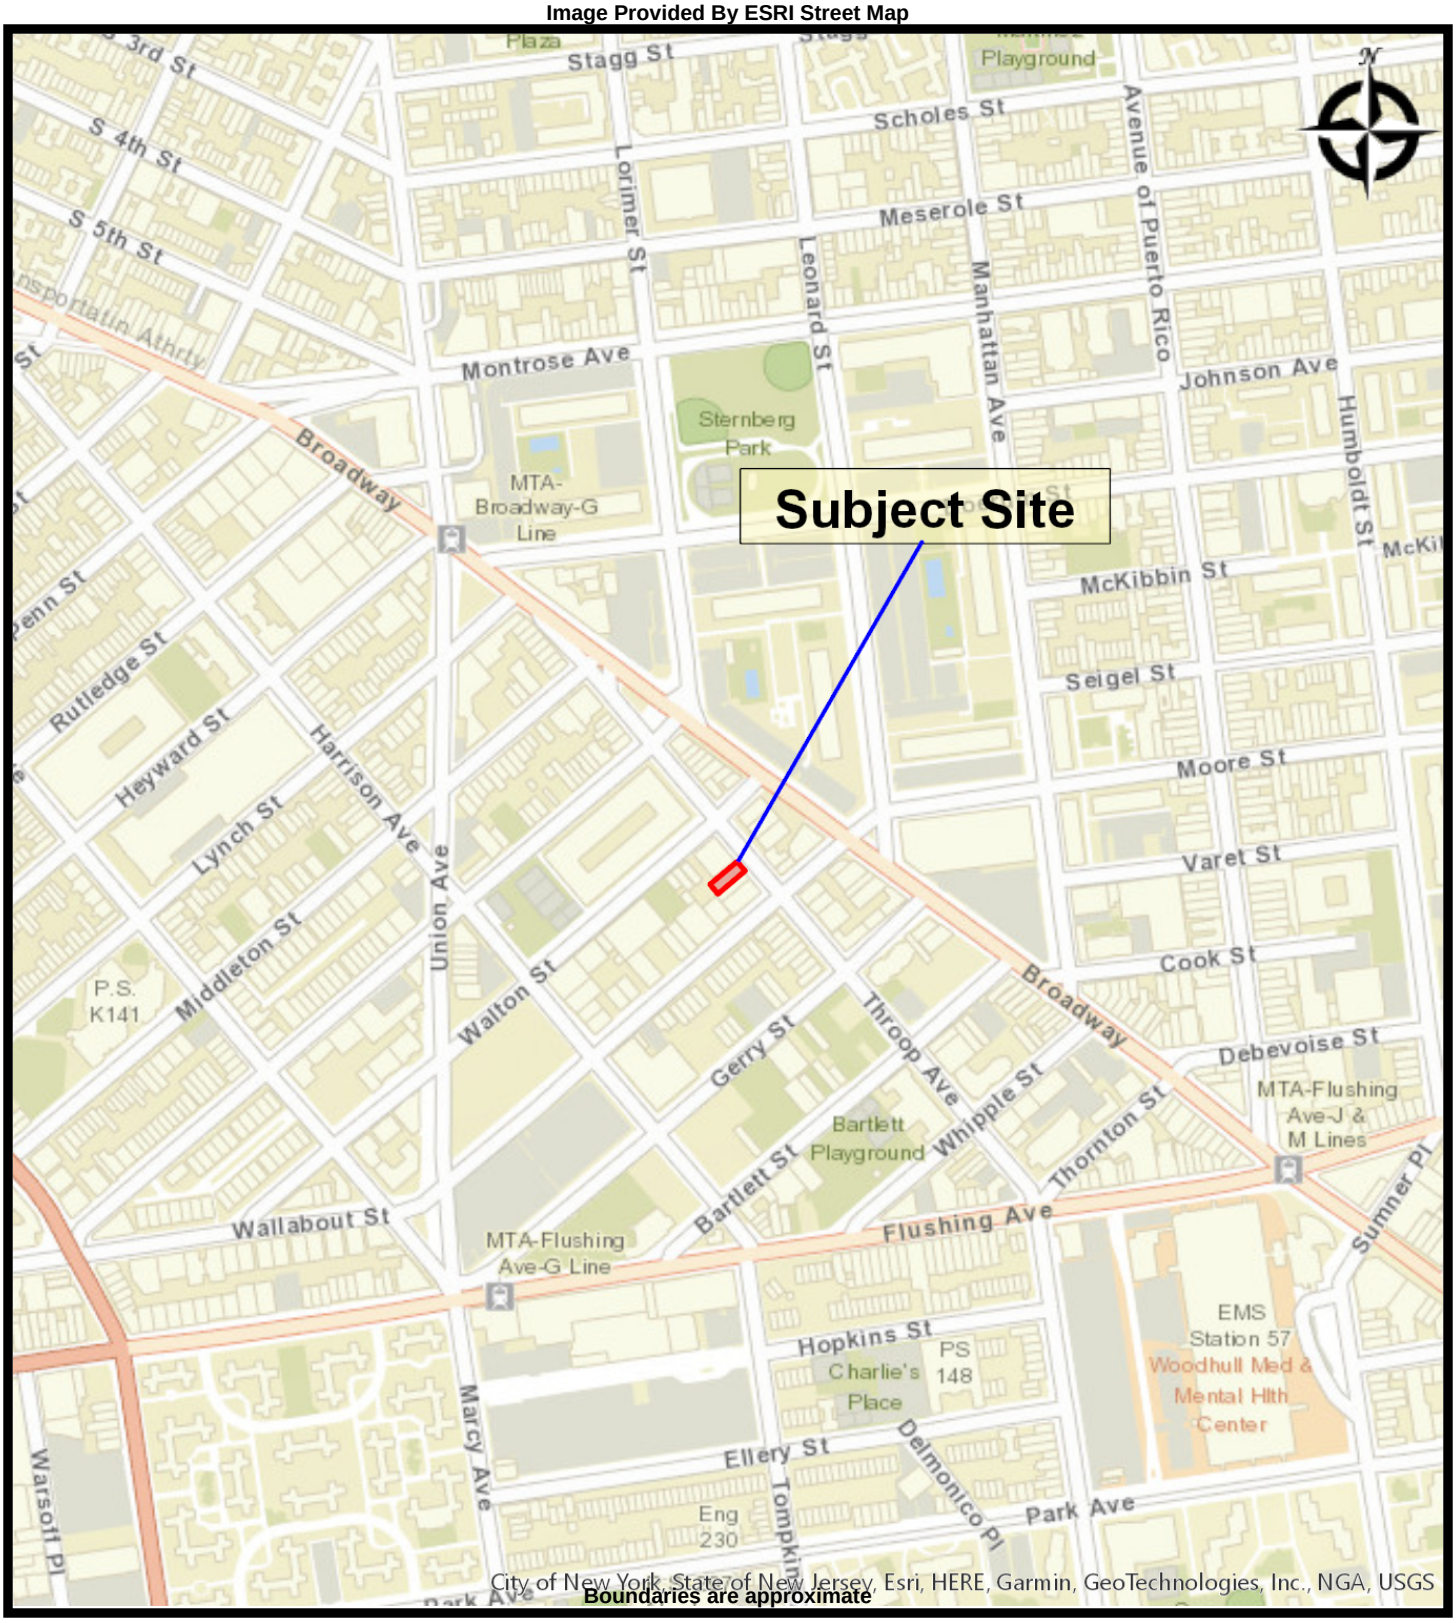
When traveling to or from a worksite, personnel shall wear face covering. They shall avoid touching surfaces and their face.

The following guidelines are based on the latest COVID-19 guidance from the CDC, OSHA, and other publications. Permit holders are responsible for enforcing physical distancing and safety measures on their job sites.

<u>ENSURE PHYSICAL DISTANCING ON-SITE</u>

a. Workers should maintain six feet from each other whenever possible. Provide tools to help them mark out physical distancing spacing when performing job tasks. Require that workers maintain six feet when waiting to enter turnstiles, hoists/elevators, stairs, and other shared spaces.

b. Prevent workers from congregating during pre-shift meetings, toolbox talks and other similar gatherings.
c. Stagger schedules for job functions that put workers close together. For example, workers that perform job functions that are in close proximity can work different shifts or days, or they can have different work start times and end times, including breakfasts and lunch breaks. It is up to permit holders to limit, to the greatest degree possible, all operations where proper physical distancing cannot be followed. Examples where this may be an issue could include material delivery, pouring concrete, and the installation of sheet rock or curtain walls. To carry out these complex operations and maintain physical distancing, there are a variety of strategies you can employ, including:
d. Replace a worker with mechanical means for operations that require multiple workers.
e. Erect temporary barriers for additional protective measures such as: sheet rock, plastic sheeting, plexiglass, etc.



OPERATIONS AND PHYSICAL DISTANCING - SUGGESTED SAFETY MEASURES

In addition to the above safety precautions, there are a variety of other strategies permit holders should employ to maintain physical distancing to keep your workers, and the public, safe. These include:

a. Take Temperatures: Use a no contact thermometer to take workers' temperatures before letting them on the jobsite.
b. Hand Washing: Require that all workers wash their hands thoroughly before and after an operation. Add hand washing and hand sanitizing stations throughout your worksite.
c. PPE: All workers are required to wear appropriate personal protective equipment (PPE). If a mask is not part of routine PPE used for a specific task, workers should use a face covering – any well-secured paper or cloth (like a bandana or scarf) that covers one's nose and mouth – if they cannot maintain at least 6 feet of distance between themselves and others.
d. Temporary Barriers: Erect temporary barriers to keep workers separate during the workday.
e. Only Use Your Items: Strongly discourage workers from using other workers' phones, desks, offices, work tools and equipment.
f. Disinfect: Regularly clean and disinfect shared tools and equipment.
g. Send Sick Workers Home: If anyone is symptomatic send them home and do not let them on the site.
h. Effective Quarantine: Workers must stay home if sick. They should not return to work until all the following are true:
i. It has been at least seven days since your symptoms started.
    a. ii. You never had fever, or you have not had a fever for the prior three days without the use of fever-reducing drugs such as Tylenol or ibuprofen.
    b. iii. Your overall illness has improved.
j. Shut It Down: Close the site if physical distancing cannot be maintained.

1.0 INTRODUCTION

On March 3, 2022, Coastal Environmental Solutions, Inc (Coastal) personnel performed a limited geophysical investigation at 60 Throop Ave, Brooklyn, NY. The area of interest included the entirety of the site behind the gate. Surface conditions consisted of soil.

2.0 SCOPE OF WORK

1. Locate and mark detectable underground utilities and other underground anomalies in close proximity to client proposed soil boring locations.

3.0 EQUIPMENT

ImpulseRadar PinPointR Ultra-Wide Band (UWB) Penetrating Radar System
Ground Penetrating RADAR (GPR) is a non-destructive geophysical method that produces a continuous cross-sectional profile of subsurface features in real time. GPR operates by transmitting both high and low frequency electromagnetic wave pulses down into the ground through a transmitter in the antenna. The transmitted electromagnetic waves reflect off materials with contrasting dielectric properties from surrounding medium such as underground storage tanks, utilities, distinct contacts between different earth materials, and other various subsurface objects. The antenna receiver collects the reflected electromagnetic waves which are then interpreted by the operator.

The ImpulseRadar PinPointR UWB GPR utilizes a dual band 400/800 MHz HS antenna mounted to a stroller frame which rolls over the surface. The total depth of penetration achieved with the antenna can be up to 10 feet but widely varies based on site-specific subsurface conditions. Conductive materials in the soil attenuate the GPR signal causing a decrease in effective depth of penetration and clarity.

Vivax-Metrotech vLoc3-Pro Receiver/Transmitter
The vLoc3-Pro Receiver is a hand-operated antenna capable of detecting electromagnetic (EM) fields emitted from a source. The EM antenna can detect pipes and cables in the ground at depths of up to 20 feet using active or passive tracing techniques. Passive tracing is the act of locating an underground utility through the detection of electrical or radio signals travelling along conductive utilities. Active tracing is used in conjunction with the Transmitter that is directly connected to the target utility or to a conductive rodder within a non-conductive line. A signal is sent through the utility at a specific frequency that can be detected by the Receiver. The detectability of a target utility depends on many factors including access to the target utility, grounding, depth of utility, conductivity, and other site-specific factors.

TW-6 Pipe and Cable Locator
The TW-6 Pipe and Cable locator is a handheld magnetometer which utilizes a transmitter-receiver pair attached to opposite ends of a handle and carried approximately 1-2ft from the surface. The magnetometer induces an electromagnetic (EM) field into the ground that is generated by the transmitter. Once the induced EM field passes through a buried metallic object, it generates a secondary EM field which is detected by the receiver, generating an audible tone. Based on the

calibration of the magnetometer, the audible tone reflects the strongest response as the highest pitched sound, trailing off on all sides of the peak. This piece of technology can be used to detect subsurface features such as metallic USTs, large diameter conductive pipes, and buried manholes, especially in areas in which traditional GPR methods cannot be utilized, such as overgrown or uneven surfaces.

4.0 METHODOLOGY

1. A subsurface investigation was performed in close proximity to the client proposed soil boring locations. Active and passive detection methods were utilized with the VLoc3-Pro receiver/transmitter. Coastal personnel direct connected to all accessible and traceable pipes, conduits, valve covers, and any other surface feature throughout the site. A passive scan was performed throughout the site to detect any potential underground utilities that could not be located with active scan.
2. The TW-6 was utilized to sweep accessible areas around the suspected UST location in 3-to-5-foot spacings for readings that may represent a buried metallic anomaly. Upon detection of a reading, the approximate size and shape of the anomalous area was marked on the surface to be investigated further with GPR.
3. GPR was utilized to further characterize the approximate dimensions, depth, and shape of the anomalies located with the TW-6. The remainder of the areas around the suspected UST location was scanned with GPR in 3-to-5-foot spacing to locate any anomalous features not previously detected such as non-conductive piping and former excavations.
4. All findings were marked on the surface utilizing the American Public Works Association (APWA) recommended color code, seen below:

WHITE	Proposed Excavation
PINK	Temporary Survey Markings (Approximate UST Locations, Soil Boring Locations)
RED	Electric Power Lines, Cables, Conduit and Lighting Cables
YELLOW	Gas, Oil, Steam, Petroleum or Gaseous Materials
ORANGE	Communication, Alarm or Signal Lines, Cables or Conduit
BLUE	Water (Domestic and Fire Lines)
PURPLE	Irrigation (Not commonly used)
GREEN	Sewers and Drain Lines

5.0 SUMMARY OF FINDINGS

Utility Locate

Coastal personnel conducted a utility locate on all accessible areas within the area of concern. The following utilities were identified:

Coastal identified no evidence of existing or former utilities on the property.

Limitations

The effective depth of GPR penetration was limited to 3 feet. The limiting factor was due to soil conductivity attenuating the GPR signal. The GPR and TW-6 was unable to be utilized within close proximity to parked vehicles and exterior walls. GPR was unable to be used in areas of heavy debris piled up.

Disclaimer

The subsurface investigation was performed by Coastal after considering the limits of the scope of work and the time constraint for the investigation. The investigation that is described in this report was undertaken in accordance with current accepted standards and practices of the geophysical survey industry. The results and interpretations that are presented are based on professional judgment and are as accurate as can reasonably be achieved. However, no geophysical equipment can accurately depict all subsurface features due to the geology and environmental conditions of the subsurface. Any intrusive work in proximity to identified anomalies should be carefully considered and cross-referenced with all available site-specific documentation. Coastal is not liable for the use, interpretation, or application of the data and information in this report.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on March 04, 2022 and listed below. The project was identified as your project: **60 Throop Ave**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 22C0330

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By:  **Date:** 03/14/2022

Sample and Data Qualifiers Relating to This Work Order

S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
S-08	The recovery of this surrogate was outside of QC limits.
QR-03	The RPD value for the sample duplicate or MS/MSD was outside of QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery and/or RPD values.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
QC-LCS	LCS/LCS Dup recovery was above laboratory control limits. Sample does not contain any target compounds; therefore sample results are acceptable.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
M-BLK	The target analyte was detected above the RL in the batch method blank. All samples showed >10x the concentration in the blank for this analyte. Data are reported.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis

Low Bias — Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.
