in wells near closed USTs: MW-03 had 9,398 ug/L total VOCs (up from 8,709 ug/L in Jan. 2012); MW-09 had 5,038 ug/L tVOCs (down from 7,078 ug/L in Jan. 2012); and MW-10 had 3,127 ug/L tVOCs (up from 801 ug/L in Jan. 2012). LiRo concludes DPE system is operating effectively. They will continue to do quarterly GW gauging & sampling, maintain DPE system ops and monitoring, and submit quarterly rpts. - J. Kolleeny 06/10/13: Reviewed Qtrly Mon and Syst Performance Rpt for June 2012 to Feb. 2013 by LiRo, dated 5/6/13 (in eDocs). Rpt states that NYCDDC & NYCDEP have notified LiRo of site building reconstruction program scheduled for 2014, during which on-site DPE system will temporarily be shut down and place in secure storage. DPE system operated ~99% of this rpting period. Vapor & GW discharges were in compliance with limits. No measurable free product was detected in any wells during this period. GW sampling in June & Sept. 2012 and Jan. 2013 showed well MW-03 had 12,710 ug/L total VOCs in June 2012 (up from 9,398 ug/L in April 2012), increased to 14,790 ug/L tVOCs in Sept. 2012, and decreased to 7,815 ug/L tVOCs in Jan. 2013; MW-09 had 8,978 ug/L tVOCs in June 2012 (up from 5,038 ug/L in April 2012), decreased to 8,644 ug/L tVOCs in Sept. 2012, and decreased to 5,092 ug/L tVOCs in Jan. 2013; MW-10 had 3,159 ug/L tVOCs in June 2012 (up from 3,127 ug/L in April 2012), decreased to 2,581 ug/L tVOCs in Sept. 2012, and decreased to 130 ug/L tVOCs in Jan. 2013. LiRo concludes DPE system is operating effectively. They will continue quarterly GW gauging & sampling, DPE system O&M, submission of quarterly rpts, and will continue to gauge and sample accessible wells during upcoming building reconstruction and temporary DPE system shutdown scheduled for 2014. - J. Kolleeny 10/07/13: Reviewed Quarterly Mon and Syst Performance Rpt for March to May 2013 by LiRo, dated 8/12/13 (in eDocs). On-site DPE system was operation for ~72% of reporting period. System's vapor discharge was in compliance with air discharge std. No free product was detected in any wells during this period. Rpt states that due to NYCDDC budgetary constraints, no GW samples were collected during this monitoring period. I sent email to Steve Frank of LiRo, cc to Fatemeh Ashkan of DDC: Steve, I'm reviewing quarterly mon rpt for March to May 2013 for this site, dated 8/12/13. Rpt states (on page 10): Due to NYCDDC budgetary constraints, no GW samples were collected during this monitoring period. Was I notified about this? I don't seem to have any recollection of GW sampling having been suspended at any of my sites due to budget problems. This site has an active remedial system and several wells with relatively high levels of contam (in Jan. 2013, well MW-03 had 7,815 ug/L total VOCs and well MW-09 had 5,092 ug/L tVOCs). Continuing with regularly scheduled quarterly GW sampling at this site seems to me like a fairly high priority. Has funding for sampling at this site been restored? Has GW been sampled since January 2013? Please let me know status of this site, and please let me know when situations like this arise. Received email reply from Steve Frank: John, Our analytical services subcontract is now funded and Kent Ave Site was sampled in August. Results are attached [in eDocs as brief]. I apologize for not sending notification. There may be other sites of yours that we missed a sample event at. I will send you a list if there are others. If there are any future issues that will result in interruption of monitoring, we will send notification. Aug. 2013 GW data show well MW-03 had 10,487 ug/L total VOCs (up from 7,815 ug/L in Jan. 2013), well MW-09 had 6,525 ug/L tVOCs (up from 5,092 ug/L in Jan. 2013). I asked Steve Frank why well MW-10 was not sampled in Aug. 2013, he said because it

NYCDEP (Continued) **S103272814**

went dry during purging and did not recharge. - J. Kolleeny 02/26/14: Reviewed Quarterly Mon Rpt & System Performance Rpt for June to August 2013 by LiRo, dated 11/19/13 (in DecDocs). Rpt states that on-site DPE system only operated 6 days out of mon period; system has leak in oil/water separator and was shut down on 6/7/13. Rpt presents results of well gauging in July & Aug. 2013 and GW sampling in Aug. 2013. No free product was detected during this mon period. GW sampling showed MW-03 (worst well) had 10,487 ug/L total VOCs (up from 7,815 ug/L in Jan. 2013), MW-08 had 83 ug/L tVOCs (down from 124 ug/L in Jan. 2013), MW-09 had 6,525 ug/L tVOCs (up from 5,092 ug/L in Jan. 2013), and MW-13 had 436 ug/L tVOCs (down from 556 ug/L in Jan. 2013). Rpt concludes that tVOC concentrations remain high in area of MW-03 and MW-09, but overall, dissolved-phase plume remained stable; absence of measurable free product suggests DPE system has been effective in removing product, and system has prevented off-site migration of dissolved plume. Rpt states that following actions will be conducted as part of routine monitoring program: Continue quarterly well gauging & sampling; prepare DPE system for temporary shutdown & storage pending site Bldg reconstruction; continue to prepare/submit quarterly mon rpts; continue to gauge & sample accessible mon wells during upcoming site Bldg reconstruction and temporary DPE system shutdown scheduled for 2014. Rpt has no proposals requiring DEC response. - J. Kolleeny 05/05/14: Reviewed Quarterly Mon Rpt & System Performance Rpt for Sept. to Nov. 2013 by LiRo, dated 1/8/14 (in DecDocs). Rpt states that for Sept.-Nov. 2013 mon period, no system O&M data were collected due to system being shut down for duration of quarter, and well gauging & GW sampling were conducted on Dec. 4th & 5th due to scheduling issues. Dec. 2013 GW elevation data indicate GW flow is still towards center of site, preventing off-site migration of contam plume. Dec. 2013 GW sampling results show well MW-03 had 8,997 ug/L total VOCs (down from 10,487 ug/L in Aug. 2013), well MW-08 was inaccessible and not sampled, well MW-09 had 4,950 ug/L tVOCs (down from 6,525 ug/L in Aug. 2013), well MW-10 had 4,576 ug/L tVOCs (up from 130 ug/L in Jan. 2013, not sampled in Aug. 2013), and well MW-13 had 583 ug/L tVOCs (up from 436 ug/L in Aug. 2013). Rpt states that LiRo will continue to gauge & sample accessible site wells during upcoming bldg construction and anticipated DPE system shutdown scheduled for 2014; replace DPE system's oil/water separator and operate system until shutdown is required for pending bldg construction; and prepare/submit quarterly mon rpts. - J. Kolleeny 08/08/14: Reviewed Quarterly Monitoring Rpt & System Performance Rpt for Dec. 2013 to Feb. 2014 by LiRo, dated 4/8/14 (in DecDocs). Rpt states that on-site DPE system was operational for 72 of 90 days during rpt period; oil-water separator was replaced on 12/5/13, allowing re-start of system on 12/18/13. PID screening and lab sampling/analysis of vapor effluent showed system air discharge in compliance with State stds. A GW effluent sample collected in Jan. 2014 was in compliance with NYCDEP discharge criteria. Avg system flow rate was 0.55 gpm, and total GW discharge for rpt period was 58,270 gals. Well gauging showed no free product in any wells during this rpt period. GW sampling in Feb. 2014 showed well MW-03 had 6,533 ug/L total VOCs (down from 8,997 ug/L in Dec. 2013), well MW-09 had 5,101 ug/L tVOCs (up from 4,950 ug/L in Dec. 2013), well MW-10 had 3,561 ug/L tVOCs (down from 4,576 ug/L in Dec. 2013), and well MW-13 had 978 ug/L tVOCs (up from 583 ug/L in Dec. 2013). LiRo will continue to gauge & sample accessible site mon wells during upcoming site bldg reconstruction (scheduled for 2014),

NYCDEP (Continued) **S103272814**

operate DPE system until temporary shutdown is required for upcoming bldg reconstruction, & prepare/submit quarterly mon rpts. - J. Kolleeny 11/10/14: Reviewed Quarterly Mon & System Performance Rpt for March-May 2014 by LiRo, dated 8/6/14 (in DecDocs). Rpt states that on-site DPE system was operational 92 out of 92 days during rpt period (100% of time). PID screening and lab analysis of vapor effluent showed system air discharge in compliance with State stds. Avg system flow rate was 0.65 gpm, total GW discharge during rpt period was 86,276 gals. GW sampling in April 2014 showed well MW-03 had 10,190 ug/L total VOCs (up from 6,533 ug/L in Feb. 2014), well MW-09 had 5,047 ug/L tVOCs (had 5,101 ug/L in Feb. 2014), well MW-10 had 2,942 ug/L tVOCs (down from 3,561 ug/L in Feb. 2014). LiRo will continue to gauge & sample accessible site mon wells during upcoming site bldg reconstruction (scheduled for 2014), operate DPE system until temporary shutdown is required for upcoming bldg reconstruction, and prepare/submit quarterly mon rpts. - J. Kolleeny 01/22/15: Reviewed Quarterly Mon & System Performance Rpt for June-Aug. 2014 by LiRo, dated 10/24/14 (in DecDocs). Rpt states that on-site DPE system was operational 86 out of 92 days (92.5%). PID screening and lab analysis of vapor effluent showed system air discharge was in compliance with State stds during rpt period. Avg system flow rate was 0.61 gpm, total GW discharge during rpt period was 75,705 gals. GW sampling in July 2014 showed well MW-03 had 10,274 ug/L total VOCs (up from 10,190 ug/L in April 2014), well MW-09 had 6,437 ug/L tVOCs (up from 5,047 ug/L in April 2014), well MW-10 had 6,063 ug/L tVOCs (up from 2,942 ug/L in April 2014). LiRo concludes that overall, GW data indicate dissolved-phase contaminant plume is similar to previous monitoring periods with no signficant changes in plume configuration. LiRo will continue to gauge & sample accessible site monitoring wells during upcoming site bldg reconstruction (scheduled for 2014), operate DPE system until temporary shutdown is required for upcoming bldg reconstruction, and prepare/submit quarterly mon rpts. - J. Kolleeny 03/16/15: Reviewed Quarterly Monitoring & System Performance Rpt for Sept.-Nov. 2014 by LiRo, dated 2/3/15 (in DecDocs). Rpt states that on-site DPE system was operation 86 of 91 days (94.5%); on 11/14/14, system was shut down, dismantled and placed in storage for duration of site reconstruction program. PID screening & lab analysis of vapor effluent showed system air discharge was in compliance with State stds during rpt period. Avg system GW recovery flow rate was 0.61 gpm, total GW discharge during rpt period was 75,705 gals [? data not updated from previous quarterly rpt? Sent email inquiry to Steve Frank of LiRo]. GW sampling in Oct. 2014 showed well MW-03 had 9,919 ug/L total VOCs (down from 10,274 ug/L in July 2014), well MW-09 had 7,117 ug/L tVOCs (up from 6,437 ug/L in July 2014), well MW-10 had 5,863 ug/L tVOCs (down from 6,063 ug/L in July 2014). LiRo will continue to gauge & sample accessible mon wells during upcoming site reconstruction (scheduled for 2015) and prepare & submit quarterly mon rpts. I sent email to Steve Frank of LiRo: Steve, I have a question about LiRo s Qtrly Mon Rpt & System Performance Rpt for Sept.-Nov. 2014 for this site. On Page 7, rpt states that system was operational for 86 out of 91 calendar days in this rpting period. However, on Page 8 text states For rpting period (92 days), average system flow rate& was 0.61 gpm and, Total net system GW effluent discharge for rpting period was 75,705 gals. These flow rate & discharge numbers are identical to numbers in previous qtrly rpt (June-Aug. 2014), and since text here gives rpting period as 92 days

NYCDEP (Continued) **S103272814**

(rather than 91, as stated on previous page), I m wondering if flow rate & discharge data presented here are holdovers from previous qtrly rpt, and were inadvertently not updated for this rpt? Please let me know if this is true, and if so, please provide correct system flow rate in gpm and GW effluent discharge in gals, if those data are available. - J. Kolleeny 03/17/15: Received email reply from Steve Frank of Liro: Jon, Your guess was correct. We will send you a new pdf of rpt with corrected flow rate/discharge numbers. - J. Kolleeny 03/24/15: Received email from Steve Frank of LiRo with revised Quarterly Monitoring & System Performance Rpt for Sept.-Nov. 2014, uploaded to DecDocs. - J. Kolleeny 07/23/15: Reviewed Quarterly Monitoring & System Performance Rpt for Dec. 2014 to Feb. 2015 by LiRo, dated 5/14/15 (in DecDocs). Rpt notes that on-site DPE system was shut down and put into storage on 11/20/14, in preparation for site construction work. In addition, due to interruption of DDC funding, no GW sampling was performed this quarter. Therefore, site activities during this quarter were limited to gauging of all accessible wells, which was performed in Jan. and Feb. 2015. No LNAPL was observed in any wells. GW contour maps based on gauging measurements show GW flowing radially inward toward center of site, altho this pattern appears to be less pronounced in Feb. 2015 map. Rpt states that quarterly GW sampling at site resumed on 4/13/15 (results will be in next quarterly rpt). - J. Kolleeny 10/30/15: Reviewed Quarterly Monitoring & System Performance Rpt for March to May 2015 by LiRo, dated 8/26/15 (in DecDocs). Rpt notes that on-site DPE system was shut down and put into storage in Nov. 2014 in preparation for site construction work. GW sampling was performed in April 2015; results show well MW-03 had 11,071 ug/L total VOCs (up from 9,919 ug/L in Oct. 2014), well MW-08 had 161 ug/L tVOCs (up from 70 ug/L in Oct. 2014), well MW-09 had 3,839 ug/L tVOCs (down from 7,117 ug/L in Oct. 2014), well MW-10 had 1,717 ug/L tVOCs (down from 5,863 ug/L in Oct. 2014), well MW-13 had 323 ug/L tVOCs (down from 421 ug/L in Oct. 2014), and well DPE-13 had 109 ug/L tVOCs (up from 28 ug/L in Oct. 2014). Other wells had minimal VOCs or were ND, or were not sampled. Rpt states that generally reduced VOC concentrations in site perimeter wells and absence of free product indicate that DPE system was effective and functioned as designed by removing free product and preventing off-site migration of dissolved-phase GW plume. Rpt states that LiRo will continue quarterly well gauging and sampling to extent feasible during building reconstruction, will initiate monthly EFR events at accessible wells to remove contaminated GW during site reconstruction, and will continue to prepare/submit quarterly monitoring rpts. - J. Kolleeny 03/23/16: Reviewed Quarterly Monitoring & System Performance Rpt for June to Aug. 2015 by LiRo, dated 12/18/15 (in DecDocs). Rpt notes that on-site DPE system was shut down & put into storage in Nov. 2014 in preparation for site construction work. GW sampling was performed in June 2015; results show well MW-03 had 12,133 ug/L total VOCs (up from 11,071 ug/L in April 2015), well MW-08 had 137 ug/L tVOCs (down from 161 ug/L in April 2015), well MW-09 had 5,144 ug/L tVOCs (up from 3,839 ug/L in April 2015), well MW-10 had 4,283 ug/L tVOCs (up from 1,717 ug/L in April 2015), well MW-13 had 227 ug/L tVOCs (down from 323 ug/L in April 2015), well DPE-13 had 101 ug/L tVOCs (down from 109 ug/L in April 2015. Other wells had minimal VOCs or were ND, or were not sampled. No LNAPL was observed in any wells during rpt period. Rpt states that tVOCs in several wells remain high, but overall

NYCDEP (Continued) **S103272814**

dissolved-phase plume is similar to previous monitoring periods. On 8/26/15, LiRo initiated EFR on six wells (MW-03, MW-09, MW-10, MW-13, DPE-01 & DPE-13) as an IRM; ~235 gals total fluids were recovered. Rpt states that LiRo will continue to gauge & sample accessible wells on a quarterly basis, will continue to do monthly EFR events as an IRM, and will continue to prepare/submit quarterly rpts. - J. Kolleeny 06/10/16: Reviewed Quarterly Monitoring & System Performance Rpt for Sept. to Nov. 2015 by LiRo, dated 3/24/16 (in DecDocs). Rpt notes that on-site DPE system was shut down & put into storage in Nov. 2014 in preparation for site construction work; states that when construction activities are complete LiRo will evaluate remedial requirements and determine if DPE system should be re-commissioned and reactivated. EFR events were performed on 5 wells (MW-03, MW-09, MW-13, DPE-01, DPE-13) in Sept. 2015, removing ~35-40 gals from each well, then on same 5 wells in Oct. 2015, removing ~53-54 gals from each well, then from first 3 of those wells in Nov. 2015 (DPE wells were blocked), removing from 50 to 65 gals from wells. GW sampling in Sept/Oct 2015 showed well MW-03 had 12,255 ug/L (up from 12,133 ug/L in June 2015), well MW-08 had 187 ug/L tVOCs (up from 137 ug/L in June 2015), well MW-10 had 6,149 ug/L tVOCs (up from 4,283 ug/L in June 2015), well DP-12 had 282 ug/L tVOCs (had 4 ug/L when last sampled in Oct. 2014), well DP-13 had 42 ug/L tVOCs (down from 101 ug/L in June 2015). Well MW-09, which had 5,144 ug/L tVOCs in June 2015, was not sampled and no explanation is provided in text or tables. Rpt notes that a number of wells saw increases in VOCs this quarter, but states that overall, there was no significant change in plume configuration. LiRo will continue to gauge & sample accessible wells on a quarterly basis, will continue to do monthly EFR events as an IRM, and will continue to prepare/submit quarterly rpts. I contacted Steve Frank of LiRo regarding well MW-09 not being sampled this quarter; he responded that MW-09 was inaccessible at time of sampling due to parked vehicle over well, which was noted in well purge logs but not in text or well gauging data table. - J. Kolleeny 07/08/16: Reviewed Quarterly Monitoring & System Performance Rpt for Dec. 2015 to Feb. 2016 by LiRo dated 4/29/16 (in DecDocs). Rpt notes that on-site DPE remedial system is shut down while site building undergoes renovations, but that monthly EFR on impacted, accessible wells continues to be performed as an interim measure to address GW contam. In this quarter, EFR events were performed in Jan. & Feb. of 2016, removing ~267 gals total fluids, bringing total since IRM began to 1,133 gals total fluids removed. GW sampling in Jan. 2016 showed well MW-03 had 15,871 ug/L total VOCs (up from 12,255 ug/L in Sept. 2015), well MW-09 had 6,138 ug/L tVOCs (up from 5,144 ug/L when last sampled in June 2015), well MW-13 had 217 ug/L tVOCs (up from 42 ug/L in Sept. 2015); other wells sampled were either ND or had very low tVOCs. Wells MW-08 & MW-10 were not sampled; well purge logs indicate they were blocked by construction equipment. LiRo concludes that high tVOC levels remain in vicinity of MW-03, MW-09 & MW-10, but that plume is similar to previous monitoring periods. LiRo will continue to gauge & sample accessible wells on a quarterly basis, perform monthly EFR at select wells to remove contaminated GW as an IRM, & prepare/submit quarterly monitoring rpts. - J. Kolleeny 09/09/16: Reviewed Quarterly Monitoring & System Performance Rpt for March-May 2016, dated 7/20/16 (in DecDocs). Rpt notes that while DPE system is shut down for site bldg renovations, monthly EFR continues to be performed on accessible wells with high levels of dissolved VOCs (MW-03, MW-09, MW-13, DPE-01, DPE-13) as an IRM. In this quarter, EFR

NYCDEP (Continued) **S103272814**

events were performed in March, April & May 2016, removing total of ~321 gals total fluids, bringing total since IRM began to 1,454 gals total fluids removed. No LNAPL was detected during rpt period. For April 2016 GW sampling event, only two wells were accessible for sampling: LMW-01 and MW-19, both of which were ND for VOCs. LiRo will continue to gauge & sample accessible wells quarterly, do monthly EFR at impacted wells as an IRM, & submit qtrly mon rpts. I sent email to Steve Frank of LiRo: Steve, I reviewed LiRo s Qtrly Mon & System Performance Rpt for March-May 2016 for Kent Ave Shop, and I see that only 2 monitoring wells were accessible for GW sampling on 4/11/16 neither of which is among highly contaminated wells at site. Yet EFR summary table indicates EFR events were performed on all of those wells in April and on most of those wells in May 2016, so they must have been accessible at those times. Why weren t critical wells (MW-03, MW-09, MW-13, DPE-01, DPE-13) sampled when they were accessible on EFR visit dates? Please let me know. - J. Kolleeny 09/12/16: Received email reply from Steve Frank of LiRo: Jon, Thanks for your note and I understand your concern. Construction conditions are in a constant state of flux at Kent Shop. We tried to sample wells on April 11 and found them blocked. We returned next week and found wells still blocked and unfortunately, we moved on from trying to sample those wells in April. Different LiRo crews & equipment are required to complete sampling vs EFR & there is a subcontractor involved & work scheduled at other sites. We always go out in advance of attempting EFR & we did that on April 26th. Wells were accessible & we completed EFR on 27th. Going forward, I think we can coordinate our sampling & EFR events more closely when we scout for EFR & see wells are accessible, we will scramble a sampling crew to try & hit site to sample within a day or two. Just to give you an idea of what we are up against, I attached photos of conditions inside. June 2016 photo is from area of MW-03, 09 & 13& Stuff (not technical term) is piled up there because it was in way somewhere else. It could sit there for 2 days or 2 months we have no say in that. In ramp removed photo ramp got torn out, so until that gets rebuilt we cannot get personnel in there at all. We are not currently able to complete EFR or sampling but we continue to scout site monthly. Next time we see well access, we will get a sampling crew there ASAP. I sent email reply: Steve, Thanks for explanation & photos I can better see what you re up against. It occurs to me that there could be a quarterly period during which your staff will be unable to either sample/gauge wells or perform EFR on wells at this site. In that case, perhaps it makes sense to reduce reporting frequency from quarterly to semi-annual, at least for duration of site renovations? If/when remedial system is re-started, LiRo could resume submission of quarterly rpts. I m not sure whether or not to also suggest a reduction of GW sampling frequency, and of course I d prefer to see EFR events continue monthly as approved IRM while DPE system is off, assuming wells are accessible. Please let me know what you think. - J. Kolleeny 09/15/16: Received email reply from Steve Frank of LiRo: Jon, I think switch to semi-annual reporting until system is back on-line is a fine idea. We will continue to visit site and try for monthly EFR (as construction conditions permit) and I think it would be best to stick with quarterly GW sampling. I fear that if we dial back to semi-annual sampling and catch a period with no well access we could end up with no data. I sent email reply: Steve, Sounds good, so I will consider reporting schedule for this site to be changed to semi-annual for duration of building reconstruction project, while

NYCDEP (Continued) **S103272814**

EFR and GW sampling schedules will remain same, at monthly & quarterly, resp. (with understanding that there may be months/quarters in which EFR/GW sampling of certain wells is not possible to do access constraints). - J. Kolleeny 03/31/17: Reviewed Semi-Annual Monitoring & System Performance Rpt for June to Nov. 2016, by LiRo, dated 1/30/17 (in DecDocs). On-site DPE system was shut down in Nov. 2014 for building renovations. Monthly EFR was performed in June & July 2016 as required IRM during system down time, removing ~205 gals of total fluids (volume of total fluids removed since start of IRM is ~1,659 gals). LiRo made site visits in Sept. & Oct. 2016 to attempt EFR & GW sampling, but was unable to do either due to construction activities. Based on discussions with site personnel, EFR in basement will not be possible until after Spring 2017. However, in early Nov. 2016 LiRo was able to collect GW samples from 10 out of 16 wells in monitoring program. No free product was detected in wells. Sampling results showed well MW-3 had 11,191 ug/L total VOCs (down from 15,871 ug/L in Jan. 2016), well MW-10 had 957 ug/L tVOCs (down from 6,149 ug/L in Sept. 2015, well MW-13 had 5 ug/L tVOCs (down from 217 ug/L in Jan. 2016), well DPE-13 had 201 ug/L tVOCs (up from 42 ug/L in Sept. 2015); well MW-9 (historically high impacts) could not be sampled. LiRo will continue to do quarterly well gauging & GW sampling, & monthly EFR events as an IRM on accessible wells as permitted by site conditions, & will continue to submit semi-annual mon rpts. - JK 11/27/17: Reviewed Semi-Annual Monitoring Rpt for Dec. 2016 to May 2017 by LiRo, dated 8/31/17 (in DecDocs). On-site DPE system remains shut down for bldg renovations. Rpt states LiRo conducted gauging of accessible site wells & sampling of 12 wells in Feb. 2017 (5 wells couldn't be sampled due to access blocked by construction), and gauging of accessible wells & sampling of 13 wells in May 2017 (4 wells couldn't be sampled due to access blocked by construction). In March 2017, LiRo resumed EFR events, regaining access to basement wells after reconstruction of access ramp & basement floor was completed. EFR was performed on 5 wells in March, April & May 2017, recovering ~268 gals of total fluids, bringing total recovered since EFR began to ~1,725 gals total fluids. No measurable LNAPL was detected in this rpt period. GW sampling showed well MW-03 had 16,775 ug/L total VOCs in Feb. 2017 (up from 11,191 ug/L in Nov. 2016) and had 10,806 ug/L tVOCs in May 2017; well MW-09 had 4,801 ug/L tVOCs in Feb. 2017 (not accessible in Nov. 2016; had 6,138 ug/L tVOCs in Jan. 2016) and had 3,708 ug/L tVOCs in May 2017; well MW-10 was not accessible in Feb. 2017 (had 957 ug/L tVOCs in Nov. 2016) and had 1,698 ug/L tVOCs in May 2017; well MW-13 was not sampled in Feb. 2017 (had 5 ug/L tVOCs in Nov. 2016) and had 117 ug/L tVOCs in May 2017; well DPE-12 had 78 ug/L tVOCs in Feb. 2017 (down from 282 ug/L when last sampled in Sept. 2015) and had 59 ug/L tVOCs in May 2017; well DPE-13 had 171 ug/L tVOCs in Feb. 2017 (down from 201 ug/L in Nov. 2016) and had 120 ug/L tVOCs in May 2017. LiRo will continue quarterly gauging/sampling of accessible site wells to extent feasible during bldg reconstruction activities, continue monthly EFR at accessible wells as an IRM during reconstruction, & will prepare/submit semi-annual monitoring rpts. - J. Kolleeny 07/19/18: Reviewed Semi-Annual GW Monitoring Rpt (June 2017 to Jan. 2018) by LiRo dated 5/16/18 (in DecDocs). GW sampling in Oct. 2017 & Jan. 2018 showed (main wells of concern) MW-03 had 8,271 ug/L total VOCs in Oct. 2017 (down from 11,850 ug/L in Aug. 2017) and had 8,921 ug/L tVOCs in Jan. 2017; well MW-09 had 2,858 ug/L tVOCs in Oct. 2017 (down from 3,708 ug/L in Aug. 2017) and had 1,541 ug/L tVOCs in Jan.

NYCDEP (Continued) **S103272814**

2017; well MW-10 had 1,905 ug/L tVOCs in Oct. 2017 (up from 1,068 ug/L in Aug. 2017) and had 939 ug/L tVOCs in Jan. 2018; well MW-13 had 305 ug/L tVOCs in Oct. 2017 (up from 11 ug/L in Aug. 2017) and had 154 ug/L tVOCs in Jan. 2018; well DPE-13 had 167 ug/L tVOCs in Oct. 2017 (same as in Aug. 2017) and had 119 ug/L tVOCs in Jan. 2018. EFR was performed monthly during rpt period, recovering ~982 gals total fluids (bringing total fluids recovered since start of IRM to ~2,707 gals). In Dec. 2017, LiRo drilled 16 soil borings to obtain current soil data for evaluation of remedial alternatives to inactive on-site DPE system; 47 soil samples were collected and results ranged from ND in 25 samples to 173,410 ug/kg total VOCs. Based on Dec. 2017 soil data, areas of residual vadose zone soil impacts are located in SW & E portions of site. Rpt states that data shows a general overall decrease in total mass of VOCs in soil. Rpt includes an evaluation of remedial alternatives including MNA with EFR, GWET, S-ISCO, and In-Situ Biorem (IB) with MNA. Rpt concludes best alternative for site would be IB, which would involve application of bacteria & nutrients into existing site wells by gravity feed, possibly supplemented with oxygen. Rpt states that quarterly well gauging & GW sampling and monthly EFR will continue, pending DEC approval of proposed changes. Proposals requiring DEC approval are: discontinue and decommission DPE system, discontinue monthly EFR, reduce well gauging & GW sampling to semi-annual and analyze GW samples only for VOCs, prepare & submit an IB design/treatment study work plan to evaluate this technology as remedial approach for site. - J. Kolleeny 07/19/18 (cont.): I sent email to Steve Frank of LiRo: Steve, I m reviewing Semi-Annual Mon Rpt for this site dated 5/16/18. Rpt recommends reducing GW sampling frequency from quarterly to semi-annual, and includes latest GW data from a Jan. 2018 sampling event. Since site is currently on quarterly schedule, I was wondering if you have any addt'l GW data, perhaps from April or May 2018?I always like to see latest available GW data when reviewing remedial proposals. Also, since LiRo is recommending a new remedial approach (In-Situ Bioremediation, or IB), are you sure you want to reduce GW sampling frequency? Won t that delay your ability to evaluate effectiveness of new approach? Finally, I see IB proposal recommends injection of bacteria & nutrients into existing wells. Since those wells are screened to straddle water table, with screens presumably extending only a few ft above water table, how would injections into those wells address residual vadose zone soil impacts at site? Please feel free to call to discuss. - J. Kolleeny 07/27/18: Received email from Steve Frank of LiRo with answers to my 7/19/18 email: JK - Rpt recommends reducing GW sampling frequency from quarterly to semi-annual, and includes latest GW data from Jan. 2018 sampling event. Since it s currently on quarterly schedule, do you have any addt'l GW data for April or May 2018? SF - We have quarterly data from April & June. Latest GW data is attached. [In Decdocs.] JK - Seeing as LiRo is recommending a new remedial approach (In-Situ Bioremediation, or IB), wouldn't reducing GW sampling frequency delay ability to evaluate effectiveness of new approach? SF - Proposed reduction is for long-term routine sampling. We will develop an IB design/study work plan that will specify more frequent monitoring of wells in treatment area to evaluate effectiveness. JK - IB proposal recommends injection of bacteria & nutrients into existing wells, screened to straddle water table, with screens extending only a few feet above GW; how would injections into those wells address residual vadose zone soil impacts at site? SF - Water table is extremely

NYCDEP (Continued) **S103272814**

shallow in treatment area and most soil contamination is in capillary fringe or below water table. IB design/treatment study proposed in our rpt will include an evaluation of potential effectiveness in capillary fringe. Reviewed addt'l GW data; well MW-3 had 11,742 ug/L total VOCs in April and had 8,199 ug/L tVOCs in June; well MW-9 had 2,059 ug/L tVOCs in April and 1,122 ug/L in June; well MW-10 had 1,257 ug/L tVOCs in April and 2,373 ug/L in June; other wells had low to moderate VOC levels. I sent letter (in DecDocs) approving proposals in LiRo's SAMR for June 2017 to Jan. 2018, to Jerry Aliberti of DDC, cc's to Marco Chen of DDC, Steve Frank & Martha DeLozier of LiRo. - J. Kolleeny 02/07/19: Reviewed Semi-Annual Monitoring Rpt for Monitoring Period (February to July 2018) by LiRo dated 12/11/18 (in DecDocs). Rpt presents results of GW sampling in April & June 2018; these are same data sent in July 2018 and reviewed in above 7/27/18 entry. Rpt notes that on 7/27/18 DEC approved LiRo's proposals to cease operating & decommission on-site DPE system, discontinue EFR as an IRM, and reduce well gauging & GW sampling frequency from quarterly to semi-annual, and that DEC requested preparation/submittal of an in-situ bioremediation work plan. Rpt states that LiRo will continue to gauge & sample accessible site wells on semi-annual basis, prepare/submit semi-annual rpts, and will prepare/submit in-situ bio-rem work plan in Jan. 2019 monitoring rpt. - JK 04/04/19: Reviewed Semi-Annual Monitoring Rpt for Monitoring Period (Aug. 2018 to Jan. 2019) by LiRo dated 2/28/19 (in DecDocs). One monitoring event was conducted during rpt period, in Oct. 2018. Well gauging showed no LNAPL in any site well. GW sampling showed well MW-03 had 6,327 ug/L total VOCs (down from 8,199 ug/L in June 2018), well MW-09 had 176 ug/L tVOCs (down from 1,122 ug/L in June 2018), well MW-10 had 3,811 ug/L tVOCs (up from 2,373 ug/L in June 2018), well MW-13 had 174 ug/L tVOCs (up from 78 ug/L in June 2018), well DPE-13 had 102 ug/L tVOCs (up from 63 ug/L in June 2018); other wells sampled were either ND or had very low to moderately low (below 100 ug/) levels of tVOCs. Worst GW impacts remain in SW area of site. Rpt notes that contaminant plume appears to be confined to site. LiRo will continue to gauge & sample accessible site wells and submit monitoring rpts on semi-annual basis; they will also prepare a preliminary design for a bioremediation system and draft a Remedial Action Work Plan. - J. Kolleeny 09/30/19: Received email from Steve Frank of LiRo: Hi Jon, I wanted to give you a heads-up on our findings at Kent Ave shop. Some product appeared in LMW-01 back in April & unfortunately (and I am sorry for this) no one immediately recognized this as an unusual condition. However, given that LMW-01 is an up-gradient well which has historically not shown contamination, I believe it is unusual. We tested product for fingerprint and it came back as mineral spirits (confirmed with a second ID sample). We started EFR on well and as of this morning, thickness was 0.13 ft. There is no record of mineral spirits storage at site and considering well location it is possible that there is an off-site source. We ordered Sanborn maps and an EDR database rpt (I attached a Sanborn map) and records indicate that there was a fairly large dry-cleaning plant (with 6 solvent tanks called out) from 1940s thru 90s or maybe a little later even. From our mineral spirits findings at Brooklyn 3/3A, we learned that a type of mineral spirit (Stoddard Solvent) was an early dry-cleaning chemical. Former dry-cleaning building (380 Flushing Ave) appears to have been demolished (probably in 2018) and property has an E-designation. I could not find addt'l info on property in City s OER database. I was

NYCDEP (Continued) **S103272814**

thinking that we could continue to do EFR for a couple of months and if product goes away, pursue source no further. If product persists, I think we would need to put in some addt'l up-gradient wells along Kent Ave to further evaluate source. Let us know what you think of my suggestions or if there are any other things you would like us to do. I sent email reply: Steve, Thanks for bringing this to my attention. I would suggest continuing to do EFR to see if product disappears in a month or two. I believe that property at 380 Flushing Ave which formerly was a dry cleaning plant is now a BCP site; I will follow up on that to try to find out if they have detected any mineral spirits in wells and/or if they have knowledge of mineral spirits or Stoddard Solvent having been stored at that site. I ll also find out what sort of remediation they have done or will be doing, and if they have done any off-site investigation. Thanks again for heads-up on this, and please let me know how it goes with EFR efforts to eliminate product. I checked Remediation database, found that former dry cleaning plant at 380 Flushing Ave is a BCP project, no. C224264, off-site investigation under no. C22426A, being managed by Wendy Zheng of R2 Remediation Section A. According to notes in database, GW flow at site is to E (away from Kent Ave Shop), and main impacts at site are from fuel oil. - J. Kolleeny 11/26/19: Discussed this site with LiRo at 11/21/19 DDC Consent Order semiannual status meeting, told them Wendy Zheng said main site contaminant is fuel oil, and off-site investigation will only be done to N and E, based on GW flow. Steve Frank and Martha DeLozier of LiRo stated that Stoddard Solvent contamination in soil resembles fuel oil. They also stated that EFR events have greatly reduced product in impacted well, they will evaluate product rebound. On 11/26/19, Martha DeLozier sent follow-up email: Jon, As discussed in our meeting last Thursday, attached is an excerpt from document titled Toxicological Profile for Stoddard Solvent, US Dept. of Health & Human Services, Agency for Toxic Substances and Disease Registry, dated June 1995. Excerpt discusses chemical and physical info for Stoddard solvent which is similar in chemical composition to white spirits / mineral spirits. Also attached is soil data from solvent tank (mineral spirit) excavation work related to DSNY-Former Brooklyn North 3 site (314 Rutledge St parcel). As you can see from results, 1,2,4-Trimethylbenzene was detected at highest percentage concentration levels. - JK 01/17/20: Reviewed Semi-Annual GW Monitoring Rpt for Monitoring Period (Feb. to July 2019) by LiRo dated 12/4/19 (in DecDocs). Well gauging on April 8-9, 2019 showed well LMW-01 had 0.22 ft of LNAPL, later identified as mineral spirits (i.e., Stoddard Solvent) (see above entries for 9/30/19 & 11/26/19); well gauging on 6/25/19 again showed 0.21 ft of LNAPL in well LMW-01. GW sampling in April 2019 showed well MW-03 had 11,066 ug/L total VOCs (up from 6,327 ug/L in Oct. 2018), well MW-09 had 2,002 ug/L tVOCs (up from 176 ug/L in Oct. 2018), well MW-10 had 1,089 ug/L tVOCs (down from 3,811 ug/L in Oct. 2018), well MW-13 had 113 ug/L tVOCs (down from 174 ug/L in Oct. 2018); other wells sampled had very low to ND levels of VOCs. Rpt states that on 9/30/19, LiRo informed DEC of presence of mineral spirits in well LMW-01 and of LiRo's intent to perform EFR on this well for two months to evaluate any increases/decreases in mineral spirit thickness. Rpt notes that well LMW-01 is located up-gradient of former on-site UST system, that this well never had mineral spirits before, and there is no record of mineral spirits being used or stored at site. Rpt also states that with measurement of LNAPL ID'ed as mineral spirits in LMW-01 in April and verified in June 2019, LiRo conducted EFR on 9/19/19 and 9/30/19;

NYCDEP (Continued) **S103272814**

after two EFR events product thickness was reduced to 0.13 ft. Based on this reduction, EFR was discontinued. Rpt states that LiRo will continue semiannual gauging & sampling of accessible site wells and will perform EFR as required by SMP, and for next monitoring period will gauge wells monthly to evaluate presence of LNAPL. Rpt also includes a RAWP proposing Biological Augmentation, which I will review separately. - JK 01/22/20: Reviewed RAWP included as attachment in LiRo's Semi-Annual GW Mon Rpt for Feb. to July 2019 (in DecDocs). RAWP proposes biological augmentation to address residual petroleum impacts at site. RAWP states there is an area of residual soil contam in a smear zone at water table, and this contam soil is acting as an ongoing source of GW contamination. To address soil contam, LiRo will implement a GW recirculation, mixing and oxygenation system. Proposed system will utilize conduits and extraction wells from former on-site DPE system. Two extraction wells (DPE-11 & DPE-13) located up-gradient of presumed contam soil mass will remove GW, which will be pumped to a treatment system where nutrients & oxygen will be added, with volume of additives and mixing rates controlled by Biological Oxygen Supply System (BOSS). Treated/amended water will then be gravity fed to 3 re-circulation wells (DPE-06, DPE-12 & DPE-17) located down-gradient of contam soil. Bio-augmentation program will extend over 12 months, with quarterly sampling of GW for bio parameters, semi-annual sampling of GW for petroleum contaminants (as per current monitoring schedule), and confirmation soil sampling after 9 months to evaluate progress of soil remediation. Operation and performance monitoring of bio-augmentation system will be summarized in usual semi-annual rpts, and results of bio-augmentation program will be summarized in a single rpt in first semi-annual monitoring rpt after receipt of confirmation soil sampling data. RAWP states that LiRo will not implement bio-augmentation program until there are no more measurable product (mineral spirits) in any site well. In quarter following no observation of product at site, after bid document prep and USEPA notification, program will be initiated. I sent letter (in DecDocs) approving RAWP to Jerry Aliberti of NYCDDC, cc's to Ricardo Walton of DDC; Steve Frank, Martha DeLozier & John Proios of LiRo, but suggesting that bio-program be implemented when there is no more product in wells located within proposed bio treatment area. - J. Kolleeny 06/04/20: Reviewed Semi-Annual Monitoring Rpt for Aug. 2019 to Jan. 2020 by LiRo, dated 4/23/20. Rpt notes that on 9/30/19, LiRo notified DEC of the presence of product ID'ed as mineral spirits in well LMW-01 and of LiRo's intent to do EFR on that well for 2 months to evaluate changes in product thickness. LiRo gauged site wells multiple times in Sept., Oct., Nov. & Dec. 2019 and Jan. 2020; product was identified intermittently in wells LMW-01, DPE-08, MW-06, MW-03 and DPE-03, and product thicknesses detected during this period ranged from 2.01 ft (LMW-01) to 0.01 (several wells). LiRo performed EFR on well LMW-01 on Sept. 19 & 30, 2019 and on wells LMW-01 and DPE-08 on Jan. 17 & 31, 2020. A total of 151.21 gals of fluids were removed from these wells during rpt period. LiRo installed an absorbent sock in LMW-01 on 10/10/19 and in MW-06 and DPE-08 on 11/21/19. A product sample from DPE-08 taken on 11/8/19 was ID'ed as possibly mineral spirits or weathered gasoline. Rpt notes that on 1/22/20, DEC approved LiRo's RAWP for biological augmentation (included in previous semiannual rpt), with caveat that RAWP will not be implemented until no free product is observed within treatment area. Site-wide GW sampling performed in Nov. 2019 showed well MW-03

NYCDEP (Continued) **S103272814**

had 7,412 ug/L total VOCs (down from 11,066 ug/L in April 2019), well MW-08 had 148 ug/L tVOCs (not sampled in April 2019, had 525 ug/L tVOCs in Aug. 2017), well MW-09 had 968 ug/L tVOCs (down from 2,002 ug/L in April 2019), well MW-10 had 797 ug/L tVOCs (down from 1,089 ug/L in April 2019), well MW-13 had 169 ug/L tVOCs (up from 113 ug/L in April 2019), well DPE-08 had 525 ug/L tVOCs (not analyzed in April 2019; had 153 ug/L tVOCs in June 2018), well LMW-01 had 391 ug/L tVOCs (not sampled in April 2019 due to free product; had 9 ug/L tVOCs in Oct. 2018), well DPE-13 had 110 ug/L tVOCs (up from 43 ug/L in April 2019). Rpt states that LiRo will continue semi-annual GW sampling, perform EFR as required by SMP, perform monthly gauging of accessible wells for next monitoring period to evaluate presence and migration of product, and will implement approved biological augmentation RAWP when there is no more product observed within treatment area. - J. Kolleeny 12/28/20: Reviewed Semi-Annual Monitoring Rpt for Feb. to July 2020 by LiRo, dated 11/13/20. During rpt period, LiRo completed semiannual GW sampling on 4/6/20 and 6/24-25/20; time gap was due to DEP restricting access to site interior due to COVID-19; LiRo collected free product and product/water mix samples from LMW-01 & DPE-14 on 7/30/20 and submitted for lab analysis of target VOCs; LiRo performed 11 addt'l well gauging events for product, installed & maintained absorbent socks in wells MW-06 & DPE-8, and conducted 4 rounds of EFR (twice in Feb., once in March and once in July 2020). Product thickness ranged up to 0.52 ft (in DPE-08). A total of 36 gals of product were recovered from LMW-01, MW-09, DPE-08 & DPE-14 by EFR this period, bringing cumulative total recovered to 187.71 gals since 4/8/19. Rpt states that EFR seems to have short-term effect in reducing product thicknesses, but long-term effectiveness will require further monitoring. Rpt states that LiRo will not implement approved biological augmentation program until no more free product is observed within treatment area. June 2020 well gauging data appear to show GW flow to ENE across site, instead of usual inward radial flow toward site center. GW sample results show well LMW-01 had 85 ug/L total VOCs (down from 391 ug/L in Nov. 2019), well MW-03 had 7,582 ug/L tVOCs (up from 7,412 ug/L in Nov. 2019), well MW-08 had 1,451 ug/L tVOCs (up from 148 ug/L in Nov. 2019), well MW-09 had 890 ug/L tVOCs (down from 968 ug/L in Nov. 2019), well MW-10 had 161 ug/L tVOCs (down from 797 ug/L in Nov. 2019), well DPE-08 was not sampled due to LNAPL (had 525 ug/L tVOCs in Nov. 2019), well DPE-13 had 13 ug/L tVOCs (down from 110 ug/L in Nov. 2019), well DPE-14 had 3,958 ug/L tVOCs (no earlier sampling data available). Other wells sampled were ND or had very low tVOCs. Rpt notes that GW contam plume has expanded beyond bldg footprint to include well LMW-01 and for 1st time includes on-site well DPE-14; this differs from historical data showing no off-site migration, and LiRo states this trend will require further monitoring. LiRo will continue monthly gauging of select wells for LNAPL and EFR as required by SMP, and semiannual gauging and sampling of all accessible site wells. LiRo will implement approved biological augmentation program when no LNAPL is observed in treatment area and funding constraints are removed. - J. Kolleeny 07/01/21: Reviewed Semi-Annual Monitoring Rpt for Aug. 2020 to Jan. 2021 by LiRo Engineers dated 6/3/21. During rpt period, LiRo performed semiannual GW sampling in Oct./Nov. 2020; 8 free product well gauging events; maintained absorbent socks in wells MW-06 and DPE-08; and conducted three EFR/product removal events (due to budget constraints, product recovery was performed by vac truck or

NYCDEP (Continued) **S103272814**

peristaltic pump). Rpt states that distribution of free product (ID'ed as mineral spirits) decreased this period to only 3 wells: LMW-01, DPE-08 and DPE-14. Product thickness ranged from 0.01 ft in DPE-14 to 0.52 ft in LMW-01. A total of 69 gals of product were recovered by EFR during rpt period, bringing total recovered from April 2019 to Jan. 2021 to 256.21 gals. Rpt states that DEC is currently evaluating potential of BCP Site C222464A (former NY Cleaning & Dyeing) as possible source of mineral spirits. GW elevation data indicate flow to E/SE. GW sampling showed well LMW-01 had 103 ug/L total VOCs (up from 85 ug/L in April 2020), well MW-03 had 3,214 ug/L tVOCs (down from 7,582 ug/L in June 2020), well MW-08 had 301 ug/L tVOCs (down from 1,451 ug/L in June 2020), well MW-09 had 578 ug/L tVOCs (down from 890 ug/L in June 2020), well MW-10 had 2 ug/L tVOCs (down from 161 ug/L in June 2020), well MW-13 had 25 ug/L tVOCs (down from 82 ug/L in June 2020), well DPE-14 had 186 ug/L tVOCs (down from 3,958 ug/L in June 2020); all other wells sampled were either ND or had very low levels of VOCs similar to previous sampling round. Rpt states that LiRo will continue monthly well gauging for free product, perform EFR as required by SMP, continue semi-annual GW sampling and rpt submission; LiRo will also implement biological augmentation program as per approved RAWP, once free product has been eliminated from proposed treatment area and NYCDDC funding constraints have been removed. - J. Kolleeny 10/28/21: Reviewed Semi-Annual Monitoring Rpt for Feb. to July 2021 by LiRo Engineers dated 10/7/21. During rpt period, LiRo performed semiannual well gauging & GW sampling on 2/16-18/21; performed 9 addt'l free product well gauging events; maintained petroleum-absorbent socks in MW-06 and DPE-08; and conducted four EFR/product removal events (using combo of vac truck, peristaltic pump and/or hand bailer, due to budget constraints). During this rpt period, measurable product was detected in 4 wells: LMW-01, MW-09, DPE-08 and DPE-14. Product thickness ranged from 0.01 ft (DPE-08) to 0.41 ft (LMW-01). About 64 gals of GW w/product were recovered this rpt period; cumulative total of 320 gals of GW/product have been recovered since 9/19/19. Absorbent socks were replace 6 times in well DPE-08 and twice in well MW-06. Rpt notes that product at site has been ID'ed as mineral spirits, and states that DEC is currently evaluating possibility that up-gradient BCP site no. C22464A (former NY Cleaning & Dyeing) may be source of product. GW sampling showed well MW-03 had 6,640 ug/L total VOCs (up from 3,214 ug/L in Oct. 2020), well MW-08 had 410 ug/L tVOCs (up from 301 ug/L in Oct. 2020), well MW-09 had 686 ug/L tVOCs (up from 578 ug/L in Oct. 2020), well MW-10 had 3 ug/L tVOCs (up from 2 ug/L in Oct. 2020), well MW-13 had 145 ug/L tVOCs (up from 25 ug/L in Oct. 2020), well DPE-08 had 55 ug/L tVOCs (not sampled last two events; had 525 ug/L when last sampled in Nov. 2019), well DPE-13 had 49 ug/L tVOCs (was ND in Oct. 2020), well DPE-14 had 251 (up from 186 ug/L in Nov. 2020); other wells sampled were either ND or had only trace levels (less than 1 ug/L) of VOCs. Rpt states that LiRo will continue monthly well gauging for product, perform EFR as required by SMP, continue semiannual GW sampling and rpt submission, and will implement biological augmentation program as per approved RAWP once product has been eliminated from proposed treatment area & DDC funding constraints have been removed. - JK"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:

Name:	FORMER NY CLEANING AND DYEING SITE - OFF-SITE
Address:	376-378 FLUSHING AVENUE
City,State,Zip:	BROOKLYN, NY 11205
Program:	BCP
Site Code:	568007
Acres:	Not reported
HW Code:	C224264A
SWIS:	2401
Town:	New York City
Record Added Date:	03/16/2018
Record Updated Date:	06/07/2021
Update By:	JHOCONNE
Site Description:	"The area of concern subject to this work is considered off-site from BCP site No. C224264 Former NY Cleaning and Dyeing and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224264 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The Site includes properties around the BCP Site (C224264) located at 376-378 Flushing Avenue. This Site is an off-site project associated with the on-site BCP project as well as Spill No. 1609531. Site Features: The Site does not have definite boundaries since it is an off-site project associated with an on-site BCP project. Potentially impacted areas from the BCP Site Former NY Cleaning and Dyeing include the residential apartment building to the west and the three story commercial building to the east. The off-site areas are not necessarily limited to these areas. Current Zoning and Land Use: The Site is currently zoned M1-2 for manufacturing. The potentially impacted areas from the Former NY Cleaning and Dyeing Site (BCP: C224264) include a residential apartment building to the west and a three story commercial building to the east. Potential for further migration include downgradient impacts from the on-site BCP Site. Past Use of the Site: The Site has not yet been identified for its past historic use. The property potentially impacting the Site but not limited to, The Former NY Cleaning and Dyeing BCP site was historically used for several manufacturing and commercial processes including auto repair shops, storage facilities, and sheet metal works that occupied the BCP site from 1928-1940s. By the 1940s, a commercial dry cleaning plant (NY Cleaning and Dyeing) occupied Lot 48; vehicle storage and NY Cleaners-Uniform Rental services occupied Lot 40 of the site until the late 1980s. Currently, the site is occupied by a door and molding warehouse and a catering hall. Site Geology and Hydrology: Based on the information collected during the investigation of C224264, the soil beneath the site includes silt, sand non-native fill with brick, concrete, coal and other rubble associated with historic fill approximately 5 feet below grade. A native sand and clay layer is present below the historic fill to depths of approximately 12 feet below grade. The evaluation of the surrounding area is approximately 16 feet above the National Geodetic Vertical Datum (NGVD). The areas topography gradually slopes to the west. The depth to groundwater beneath the Site is approximately 9 to

DRAFT

FORMER NY CLEANING AND DYEING SITE - OFF-SITE (Continued) **S126369652**

	13 feet below grade. Local groundwater flow is to the east. The nearest surface water body is Wallabout Channel, which is approximately 0.5 miles northwest. "
Env Problem:	"During the on-site Remedial Investigation for site C224264, soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the results of the RI, the primary contaminants of concern for on-site include vinyl chloride, trichloroethene (TCE) and tetrachloroethene (PCE). Contamination can likely be attributed to activities associated with the historic use of the site for manufacturing activities. Further investigation is needed to fully delineate the extent of off-site contamination. "
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

BROWNFIELDS:

Name:	FORMER NY CLEANING AND DYEING SITE
Address:	376-378 FLUSHING AVENUE
City,State,Zip:	BROOKLYN, NY 11205
Program:	BCP
Site Code:	555285
Acres:	0.882
HW Code:	C224264
SWIS:	2401
Town:	New York City
Record Added Date:	07/25/2017
Record Updated Date:	12/30/2020
Update By:	AMSERVIS
Site Description:	"Location: The Former NY Cleaning and Dyeing Site is located in an urban area located in the Bedford Stuyvesant section of Brooklyn (Kings County), New York. The site is comprised of two tax parcels (Block 1884, Lots 40 and 48) totaling 0.8822 acres. The site fronts on Flushing Avenue to the north, Franklin Avenue to the east, and Little Nassau Street to the south. Site Features: The site is being redeveloped into a mixed commercial-residential building. Previously, Lot 40 was a one-story commercial building approximately 13,250 sqft in size, occupied by a door and molding company. Lot 48 was a three 2-story commercial buildings occupied by a catering hall, a warehouse for the door and molding company on Lot 40, and office space. According to the NYC Department of Buildings, the current buildings were constructed in 1924 (Lot 48) and 1966 (Lot 40). Current Zoning and Land Use: The site is currently zoned R7A for residential use, with a C2-4 overlay which allows for commercial use. The area immediately surrounding site consists of a three-story commercial building to the southeast and a residential apartment building to the west. Past Use of the Site: The buildings present on the site are in use as a wood door and molding manufacturer and warehouse (Lot 40, p/o Lot 48) and a catering hall (p/o Lot 48). Lot 40 appears to have been redeveloped by 1928 with the existing one-story building identified as Priemo Garage. By 1945 the building was used by Metropolitan Distributers for the storage of ice cream and delivery trucks. From 1928 to 1934, 380 Flushing Avenue (Lot 48) was used as an auto body fabricator while two 1-story buildings, identified as an auto body repair and a paper company, were located in the western portion of the Lot. A sheet metal works was identified on a portion of Lot 48 from 1928-1940. By 1940, a commercial dry cleaning plant (NY Cleaners and Dyeing) occupied all of Lot 48. Based on the 1966 Certificate of occupancy, describing Lot 40 as being used for commercial vehicle storage and trucking terminal, the lack of city directory listings for this lot between 1949 and 1992 and the history of common ownership with Lot 48 by Uniform Rentals Inc., it is probable that both lots were part of the NY Cleaners-Uniform Rental operation with lot 40 being used to store and service the company's vehicle fleet from 1949 through 1986-1987. Although not reflected in the Sanborn Maps, the City Directory listings identify 376 Flushing Ave. (lot 40) as Alexander Supply (door and molding warehouse) in 1997 and 378 Flushing Ave (portion of lot 48) as Exclusive millwork in 1992. Exclusive Door and molding currently occupies both 376 and

DRAFT

FORMER NY CLEANING AND DYEING SITE (Continued) **S122449226**

	378 Flushing Avenue. Therefore, the laundry operations and fleet maintenance garage vacated prior to these dates, most likely in 1986-1987 when Uniform Rentals sold the lots. Site Geology and Hydrology: The elevation of the site is approximately 16 feet above the National Geodetic Vertical Datum (NGVD). The area topography gradually slopes to the west. The depth to groundwater beneath the Site, as determined from field measurements, is approximately 9 to 13 feet below grade. Local groundwater flow is to the east. The nearest surface water body is Wallabout Channel, which is located approximately 0.5 miles from the site. "
Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soil and groundwater consist of petroleum related VOCs. Low levels of chlorinated solvents were found in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Short-term groundwater monitoring is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with any residual contamination."

DEC Memo:	"12/14/05: This spill transferred from J.Kolleeny to S.Kraszewski. 03/23/06: This spill transferred to K.Tang - SK 12/10/07: J.Kann - spill reassigned to J.Kann. Spill consolidated with 9601867 (closed) 10/14/10: J.Kann - Investigative Work Plan received on 10/5/10. 05/29/12: J.Kann - priority P0 assigned to site 8/5/14: J.Kann - RAR received on 8/4/14 and under review. 8/7/14: J.Kann - reviewed the site file. In 1992 7 soil borings were advanced and one monitoring well installed. No free product encountered. Some stained soils

DRAFT

INDEPENDENCE TOWERS (Continued) **S104073512**

observed. The tank was subsequently removed and replaced in 1999. The 2014 RAR was also reviewed. 6 borings were advanced and 1 monitoring wells installed. Many difficulties with advancing borings was encountered in the field. Groundwater is at at depth of approximately 45 feet bgs. Two of the deep borings could not advance beyond 35 feet so groundwater was not encountered. Screening did not reveal elevated PID readings, and no visual impacts were observed (see photos in report). Laboratory analysis was ND for groundwater. Soil analysis revealed one location with minor SVOC exceedences. Based on historic data and recent data as well as the tank replacement activities performed, the spill has been closed. NFA"

Remarks: "TANK #1"

Site Description: "Location: The Skillman Street Holder Station is located in an urban area, at 7 Skillman Street, Brooklyn, NY. Site Features: The 7 Skillman Street parcel is completely covered by a two-story building. This building is used as a banquet/catering hall. Current Zoning/Use: The property is currently in active use as a banquet hall, and is zoned for mixed use, which includes residential, commercial, and light industrial uses. The surrounding parcels are currently used for a combination of commercial and residential purposes. The nearest residential building is approximately 150 feet to the southwest. Past Use of the Site: Two manufactured gas storage holders were constructed at the site between 1887 and 1904. These holders were operated solely as gas distribution holders, and no gas production facilities were present. At some point prior to 1935, gas storage operations ceased and the holders were demolished. The site remained under the ownership of the Brooklyn Union Gas Company until sometime prior to 1947. Upon being sold the property was used for automobile parking and storage. By 1950, the site was used as an automobile repair facility which remained until at least 1993. In 2003, the

DRAFT

K - SKILLMAN ST. STATION (Continued) **S109321184**

existing building was developed into a catering hall, which is presently in operation. Site Geology and Hydrogeology: The site is underlain by fill material, alluvial sands, glacial outwash and bedrock at depth. Groundwater is typically found at approximately 7 to 16 feet below ground surface (bgs), and flows generally to the west-northwest. "

Env Problem: "Based upon investigations conducted to date, the primary contaminants of concern are the volatile organic compounds (VOCs) benzene, toluene, ethylbenzene and xylene (together known as BTEX), and styrene; polycyclic aromatic hydrocarbons (PAHs); and metals. Soil- The subsurface soil exceedances for on-site VOCs (BTEX) were slightly above unrestricted soil cleanup objectives (USCOs), though no samples exceed the restricted residential SCOs. However sampling of soil beneath the site was limited due to the inability to access much of the property with a drill rig, and a source area of higher contaminant concentrations may be present beneath the buildings. Adjacent to the site, in a sample collected beneath Skillman Street at a depth of approximately 27 feet where evidence of coal tar was observed, the concentration of toluene was 160 ppm, ethylbenzene was 220 ppm, and xylenes were 840 ppm in subsurface soil. Styrene was also detected at this location at a concentration of 400 ppm. There were no detections of chlorinated solvents or total cyanide in soil above unrestricted SCOs either on or off-site. The PAH exceedances above unrestricted SCOs consisted of benzo(b)fluoranthene, benz(a)anthracene, benzo(a)pyrene, chrysene, indeno(1,2,3-cd)pyrene, and naphthalene. Adjacent to the site the concentration of naphthalene was 1000 ppm (at 27 feet below ground surface). The only inorganics to exceed unrestricted SCOs were lead and mercury, although neither exceeded the restricted residential SCOs in soil. Groundwater - Samples collected from monitoring wells located both on-site (temporary sampling points) and off-site exceeded groundwater quality standards (GWQS) for benzene, toluene, ethylbenzene, xylenes (BTEX) compounds, naphthalene, chlorinated VOCs, cyanide, and metals. On-site, benzene ranged from 13 to 5,600 ppb (GWQS of 1 ppb), toluene at 20,000 ppb (GWQS of 5 ppb), ethylbenzene at 12,000 ppb (GWQS of 5 ppb), xylenes at 9,400 ppb (GWQS of 5 ppb), isopropyl benzene at 420 ppb (GWQS of 5 ppb), styrene at 82 ppb (GWQS of 5 ppb), cis-1,2-dichloroethene at 9.2 ppb (GWQS of 5 ppb), naphthalene at 5,600 ppb (GWQS of 10 ppb), total cyanide at 240 ppb (GWQS of 200 ppb), chromium at 380 ppb (GWQS of 50 ppb), and lead at 280 ppb (GWQS of 25 ppb). Elevated BTEX and napthalene also indicate the possible presence of MGP-related contaminants in the subsurface beneath the building. Off-site, detections of benzene range from 100 ppb to 410 ppb; toluene from 79 ppb to 1,100 ppb; ethylbenzene from 32 ppb to 930 ppb; xylenes from 100 ppb to 3,900 ppb; tetrachloroethene (PCE) from 5.6 to 9,400 ppb; trichloroethene (TCE) from 140 to 1,900 ppb; vinyl chloride from 200 to 380 ppb; cis-1,2-dichloroethene from 600 ppb to 8,000 ppb; isopropyl benzene from 64 ppb to 420 ppb; styrene from 82 ppb to 1,800 ppb; and naphthalene from 62 ppb to 5,600 ppb. There were also eight inorganic compounds that exceeded the groundwater standards in both on-site and off-site wells. These compounds were copper, iron, magnesium, manganese, nickel, selenium, sodium, and thallium, all of which are not associated with the former MGP operations. Soil Vapor - Soil vapor samples collected from the site contained elevated levels of both MGP-related and non-MGP-related compounds. The MGP-related detections included benzene at 35 ug/m3; toluene at 96 ug/m3; ethylbenzene at 12 ug/m3;

K - SKILLMAN ST. STATION (Continued) **S109321184**

xylenes at 40 ug/m3; 1,2,4-trimethylbenzene at 12 ug/m3; and nonane at 8.4 ug/m3. The non-MGP constituents included PCE at 12,000 ug/m3, TCE at 1,200 ug/m3, and cis-1,2-dichloroethene at 1,500 ug/m3. Indoor Air - The contaminants present in soil vapor at elevated levels were detected at much lower concentrations in indoor air. The highest concentration of the BTEX compounds was toluene at 6.3 ug/m3. PCE was detected at a concentration of 0.66 ug/m3; TCE at 0.21 ug/m3; and ethanol at 450 ug/m3. The ethanol concentrations in indoor air were approximately an order of magnitude larger than the soil vapor concentrations, indicating the source to be within the building. No indoor air guidance values were exceeded for any compound. The owners of the affected property have been notified where mitigation or monitoring of impacts to indoor air is required. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfanoic acid (PFOS) were reported at concentrations of up to 180 and 45 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. Individual PFAS exceeding the 100 ppt screening level included perfluorohexanoic acid (PFHxA) at a concentration of 208 ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations of up to 817 ppt, which is above the 500 ppt screening level for total PFAS in groundwater. An Interim Site Management Plan (ISMP) is in place that governs soil disturbance and the required groundwater monitoring. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move in to the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Mitigation has been recommended to address the potential for people to inhale contaminants in indoor air of the onsite building due to soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion is a concern for off-site buildings which are occupied. "

DRAFT

744 BEDFORD AVENUE (Continued) **S116712571**

Update By:	DJEVANS
Site Description:	"Location: The site is located in the Bedford-Stuyvesant section of Brooklyn. The site is generally rectangular in shape with 193 feet of frontage along Bedford Avenue. The site is comprised of a single tax parcel (Block 1886, Lot 44). The site is approximately 0.46 acres in size. Site Features: Now that contamination has been removed, construction of a 7-story mixed-use commercial-residential building, which will cover the entire site, is underway. Current Zoning and Land Use: The current use of the site is vacant, zoned mixed commercial (M1-2 / R6A zoning) use. Past Use of the Site: According to Sanborn maps the southern portion of the site was occupied by a carriage repository in 1904 while the northern portion was occupied by single family homes. By 1918 the southern portion became occupied by a 50-car garage with underground gasoline tanks. By 1947 auto sales and service was added to the front portion of the garage. In 1950 the rear portion of the site remained residential. Sometime between 1965 and 1977 the homes on the northern portion were removed and replaced with a 1-story building identified as used auto sales. The use of the site remained as auto sales and auto repair through 1993 when the buildings were shown as vacant. The gas tanks remained on all the maps from 1918 through 1996. Site Geology and Hydrogeology: The elevation of the site ranges from 19 to 21 feet above the National Geodetic Vertical Datum (NGVD). The area topography gradually slopes to the north. Soil at the site is described as historic fill materials to a depth ranging from 4 to 6 feet below the surface followed by native silty-sand and gravel. The depth to groundwater beneath the Site is approximately 12 feet below grade and flows to the southwest toward dewatering wells at a subway station. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related VOCs, including ethylbenzene, n-propylbenzene, xylene, and 1,3,5-Trimethylbenzene (1,3,5-TMB) which exceeded the unrestricted use soil cleanup objectives (UUSCOs). Metals (copper, lead, mercury, and zinc) were also detected in the soil exceeding UUSCOs. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Low level VOCs found in soil vapor were addressed by the extensive site excavation (source removal) and following a soil vapor intrusion evaluation, no further actions were necessary to address exposures related to soil vapor intrusion."
Health Problem:	"Remedial actions are complete and have eliminated the potential for contact with site-related contaminants."

DEC Memo:	"6/7/2018 - Feng - Duty Desk. Spoke to Peter Mirabile of Millennium Tank Services. He went through old files and came across this one. There are (2) 20,000-gallon USTs tested on 1/12/2018. 1 passed and 1 failed with suspected the vent line . Not know if the owner reported that, but he was notified. No notes indicates of any actual spill. He gave the contact information of the property manager. Peter Mirabile Millennium Tank Services 718-685-2545 Spoke with Robert. The tank tester did not notify them right away. He did get a call a week ago. The building is running on gas 95% of the time. But in winter, when the temperature below 15 degree, they had to use the oil. They have two 20,000-gallon tanks. The tanks are no in use at this time. They had last delivery in Jan or Feb 2018. According to the National Grid rule, they have to maintain the oil to a certain level. There is oil inside, but not in full. Staff advised him that do the tight test again, find the problem if it fails, repair, and then retest. Robert Property Manager 917-299-6195 Robert1210_2000@yahoo.com 8/10/2018 - Feng - Reviewed the Spill Closure Report, dated 8/9/2018, by CC Controlled Combustion Co., Inc. The report states that the investigation showed that the manhole cover on the tank was leaking. The manhole covers, gaskets, and bolts on both tanks were replaced. Both tanks were retested on 6/21/2018 and passed the retest. Requests spill closure. No actual spill. Repair has been made to the tanks and the tanks passed the retest. Spill is closed. "
Remarks:	"tank failure, possibly vent line failure."

PROPERTY

VACANT BUILDING (Continued) **S104279121**

Patel. received report from James. abstract: - report prepared on Oct. 18, 2000 - Accutech removed one 12,000 gal #2 UST and one hydraulic lift and abandoned one 12,000 #2 oil UST - western UST (UST #1) was located immediately adjacent to the footings of a loading dock existing on the adjacent property - was determined that the removal of UST #1 would seriously undermine the footings of loading dock, so UST #1 was abandoned-in-place with cement slurry - eastern UST (UST #2) was removed - stained soil was observed around the fill pipes of both USTs and on the bottom of the UST's excavation - groundwater was not encountered in the bottom of the UST's common excavation at approx. 16 ft bg - 8 inch thick concrete anchor slab, on which the USTs were installed, was found on the bottom of the UST's excavation - sandy clay found from 2 ft to 10 ft and silty clay was found from 10 ft to 16 ft depth - tops of the UST's were located approx. 3.5 ft bg - no holes were found in UST #2 - stained soil was removed from the northern, eastern and southern sidewalls and the bottom of the excavation - excavated was extended vertically to approx. 16 ft bg in the eastern portion of the excavation, between the edge of the anchor slab and the buildng foundations - UST #1 was inspected in place. no holes were observed on the exposed top and eastern side of UST #1 - hydraulic lift, located immeidately adjaced to the eastern sidewall of the UST's excavation, was corroded and stained soil was observed on top, around and beneath the hydraulic lift - total of 113.47 tons of contamianted soil was removed - collected a total of 14 post-excavation soil samples from sidewalls and bottom of the UST's and hydraulic lift's common excavation - samples were analyzed via TCLP methods - found SVOC contamination in all samples and VOC contamination in one sample P-1, bottom sample under hydraulic lift discussed with DEC Krimgold. as excavation done below tank bottom and no groundwater was encoutnered, after reviewing analytical data, Krimgold asked to close the case. case closed."

Remarks: "THEY HAVEN'T GOT WATER SAMPLES YET JUST SOIL SAMPLES - CONTAMINATED SOIL PROBABLY DUE TO TANK FAILURE - UNK TYPE FUEL OIL - SENT OUT PROPSALS FOR CLEAN UP & EXCAVATION"

BROWNFIELDS:

Name:	FORMER EAST COAST INDUSTRIAL UNIFORM
Address:	35, 43 AND 49 SKILLMAN STREET
City,State,Zip:	BROOKLYN, NY 11205
Program:	BCP
Site Code:	458025
Acres:	0.570
HW Code:	C224156
SWIS:	2401
Town:	New York City
Record Added Date:	11/16/2011
Record Updated Date:	05/29/2021
Update By:	JHOCONNE
Site Description:	"Location: The Former East Coast Industrial Uniform Site is located in the City of New York, Borough of Brooklyn (Kings County) at 35, 43 and 49 (formerly 39) Skillman Street. It is currently identified as Section 7, Block 1886, Lots 10, 11 and 12 on the NYC tax map. Site Features: The site was vacant and was formerly developed with three attached buildings and a parking area. The site is now occupied by three new 6-story residential apartment buildings. Each building consists of 16 apartments with a mix of 3, 4 and 5 bedroom units to better serve the needs of the community. Each building features a full basement level with utility rooms, residential living space, and 8-9 parking spaces and outdoor recreation areas on the roof. Current Zoning/Uses: The site has historically been zoned for light industrial/commercial applications. In 2001, the area was rezoned as a Special Mixed Use district (MX4) which added an R-6A residential zoning to the area. The surrounding land use includes 3 new multi-family residential buildings to the east, four new multi-family residential buildings and a vacant commercial building to the west, older multi-family walk up style buildings to the south and a community/office building to the north. Past Use of the Site: The Site was developed prior to 1887 with a Brooklyn Union Gas Gasometer (gas holder) in the northern third of the property and multiple residential homes and stores on the southern portion. The holder was operated solely as a gas distribution holder; no gas production facilities were present. By 1935, the holder was removed and the northern section was vacant until approximately 1941 when it was a parking lot and then a furniture/framing company. From 1974 to 2008, East Coast Industrial Uniform, an industrial dry-cleaning operation, was operating on the site. There are several concrete lined trenches cut through the southeast end of the building which were likely used to contain wash water from numerous washing machines prior to discharge through the small aboveground oil water separator located in the southeast corner and finally to public sewer. An abandoned-in-place underground storage tank is located near the roll-up gate entrance to the building. The underground storage tank (UST)is believed to be the 3,000-gallon No. 2 fuel oil tank identified on the NYSDEC PBS database. The UST was subsequently

DRAFT

FORMER EAST COAST INDUSTRIAL UNIFORM (Continued) **S116041497**

	removed as part of the IRM. Site Geology and Hydrogeology: Subsurface soils at the Site consist of brown sand with some gravel to approximately 15 feet below grade. Native fine brown sand with a trace amount of silt is present immediately below this layer. The water table is approximately 20 feet below grade and groundwater flows generally to the west-northwest. "
Env Problem:	"Nature and Extent of Contamination Prior to Remediation: Based on the results of the Remedial Investigation, known contaminants including volatile organic compounds (VOCs) consisting primarily of petroleum compounds and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals are presented in the subsurface. These contaminants are impacting soil, groundwater and soil vapor. Groundwater - Petroleum VOCs and chlorinated VOCs were reported in groundwater above TOGS standards. For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 290 ppb (standard is 5 ppb). Tetrachloroethene (PCE) was detected at a maximum concentration of 540 ppb (standard is 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 53 ppb (standard is 5 ppb). Soil - Petroleum VOCs were detected in soil above their corresponding NYSDEC Part 375.6 unrestricted soil cleanup objectives (UUSCOs). For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 16 ppm (UUSCO is 3.6 ppm). Naphthalene was detected at a maximum concentration of 18 ppm (UUSCO is 12 ppm). Soil Vapor Elevated concentrations of several chlorinated VOCs were detected on the site. For example, PCE was detected at a maximum concentration of 3,510 ug/m3 and TCE was detected at 687 ug/m3. Significant Threat: NYSDEC and NYSDOH determined that this site does not pose a significant threat to human health or the environment. Post Remediation: Remediation at the site has been completed. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

DEC Memo:	"09/23/2011-Zhune spoke to Kevin Brusse from Environmental Business Consultant 631-504-6000 He said. They are doing Phase II for potential purchaser. They found one UST not properly abandoned. Yesterday they did boribgs arround the tank and found soil contaminated. They went 20' down and found a gray sheen in the groundwater interface. They collected soil and groundwater samples. 05/14/12-Zhune called to Kevin Brusse. He said the site has been accepted into the Brownfield program. He also said Mandy Yau is the project manager for this site. 05/14/12- Zhune spoke to Jane O'Connell she request to assign this spill to Mandy Yau. "
Remarks:	"Caller advised during inspection of property found a leaking fuel tank unknown amount of oil spilled into soil. Clean up is pending."

Updated By: HMDUDEK
Site Description: "This site was terminated. Plume track down 224251 identified 735 Bedford Avenue/12 Spencer Street at the source of CVOC contamination. The plume trackdown project was originally called the Spencer Street Groundwater plume trackdown. The name was changed to 735 Bedford Avenue in 2018. The plume trackdown project was generated based on information collected on the public sidewalk of Spencer Street between Flushing Avenue and Park Avenue. The project area is located on the western extent of Long Island, in the New York City Borough of Brooklyn, in the northern section of the Bedford/Stuyvesant neighborhood. The area of investigation includes Spencer Street and Bedford Avenue, south of Flushing Avenue. The surrounding area is predominantly industrial/commercial with mixed commercial and residential properties. The area of investigation is approximately 1.3 miles east southeast of the East River. Location The Site is located in the Bedford Stuyvesant section of Kings County. The Site is located in the City of New York and Borough of Brooklyn. The Site is rectangular shaped spanning between Bedford Avenue and Spencer Street with 25 feet of frontage along both Bedford Avenue and Spencer Street. The north and south sides of the property are bordered by residential buildings. The west side is bordered by the Bedford Avenue and the east side by Spencer Street. Site Features The Site is improved with a multi-story commercial building with one half accessible by Bedford Avenue and the other half accessible on Spencer Street. There is currently a cellar level below the 735 Bedford Avenue portion of the site. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. The current use of the building as office space is in compliance with the zoning. Surrounding land use includes multi-family residential properties to the north, commercial / retail / office use to the west, residential and commercial (warehouses) to the south and commercial (warehouses) to the east. The area surrounding the property is highly urbanized and predominantly consists of older industrial / commercial buildings with mixed use (retail / residential) buildings along main corridors such as Bedford Avenue Flushing Avenue and Park Avenue. There are ten

12 SPENCER STREET (Continued) **S123159094**

schools located within 1,200 feet of the Site including Bnei Shimon Yisroel of Sopron approximately 450 feet to the east. There were no nursing homes or hospitals identified within 1,000 feet of the Site. Past Use of the Site The environmental history of the subject property was previously investigated through the review of Federal and State Environmental databases, Environmental Sanborn Fire Insurance maps, NYC Department of Building records and the NYC Department of Finance databases. According to the review of these sources the Site has been developed since at least 1887 with a residential home through at least 1904. In 1918 the property is shown to be redeveloped with a 1story building identified as a carriage and auto repair shop. The present 3-story building is shown by 1935. The use from 1935 to 1965 is shown as storage. From 1977 to 1989 the building is labeled with an M which refers in general to manufacturing. From 1991 to 1996 the use is not specified. The Requestor purchased the property in March 2015. The investigation of this brownfield site is the result of the 735 Bedford Ave. (Site #224251) (aka Spencer Street Groundwater Plume) groundwater plume trackdown. Site Geography and Geology Subsurface soils at the Site consist of historic fill materials to a depth of approximately 1 to 5 feet below grade followed by native silty-sand and clay. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 20 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. Groundwater occurs beneath the Site at a depth of approximately 15 feet below grade under water table conditions. Based on groundwater flow maps on properties in the vicinity, groundwater flow is generally east. However, the groundwater flow direction was determined from groundwater elevation measurements taken on the Site show the flow direction to be from the south east to the northwest in the eastern half of the Site. The Site is not located within a designated flood zone area. "

Env Problem: "Background: 224281 was identified as a potential source for contamination outlined in a plume track down identified as Spencer Street GW (Site 224251). As part of an off-site investigation performed upgradient to BCP site C224204 (11 Spencer) groundwater samples were collected showing high concentrations of chlorinated volatile organic compounds (CVOCs). Tetrachloroethene (PCE) was detected at 120,000 parts per billion or ppb (compared to a groundwater standard of 5 ppb), trichloroethene was detected at 38,000 ppb (compared to a groundwater standard of 5 ppb) and 1,1,1-trichloroethane was detected at 86,000 ppb (compared to a groundwater standard of 5 ppb). These elevated values located as part of an up-gradient plume led to the creation of P-Site Spencer Street GW. In the summer of 2017 Environmental Assessment Remediation (EAR) on behalf of the Department performed the plume track down. Four (4) monitoring wells (MW-1 to MW-4) were installed to delineate the plume. Concentrations of PCE ranged from 150,000 ppb in MW-3 to 0.33 ppb in MW-1 (compared to a groundwater standard of 5 ppb). Along with the groundwater analysis, five (5) soil samples were collected from four locations (MW-1 through MW-4) at the water table interface and/or the depth interval exhibiting indication of impact. PCE in soil samples ranged from 4,200,000 ppb in MW-3 to 0.7 ppb in MW-4 (compared to commercial soil cleanup objective (CSCO) of 150,000 ppb). C224282: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), some metals, and polychlorinated biphenyls (PCBs) as part of a

DRAFT

12 SPENCER STREET (Continued) **S123159094**

limited subsurface investigation performed by Environmental Business Consultants (EBC) on behalf of the property owner. Sub slab soil Vapor samples were collected and analyzed for VOCs. Based upon the limited investigation conducted to date, the primary contaminants of concern are tetrachloroethene (PCE), trichloroethene (TCE), and 1,2-dichlorethene (1,2-DCE). Soil Based on the investigations completed to date, chlorinated VOCs are detectable in soil. Maximum concentration of PCE in soils collected on site are 4.2 ppm (unrestricted use soil cleanup objective (UUSCO) is 1.3 ppm). Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, and Dibenzo(a,h)anthracene were detected above CSCO objectives throughout the site. Groundwater PCE [maximum concentration 45,000 parts per billion (ppb), standard 5 ppb], TCE (9,100 ppb max, 5 ppb standard), 1,2-dichlorethene (4,200 ppb max, 5 ppb standard), and well as 1,1,1-TCA, 1,1-DCA, and 1,1-DCE were detected above the NYSDEC GA Groundwater Quality Standards. Sub-slab soil vapor and indoor air CVOCs were detected in the sub slab vapor and indoor air samples. Further evaluation of the results is required to determine if monitoring or mitigation is necessary on-site. "

Health Problem: "People are not expected to come into contact with contaminated soil or groundwater because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The on site commercial building is occupied and actions are recommended to address potential exposures associated with soil vapor intrusion. Additional investigation is needed to determine whether additional actions may be needed to address the potential for exposure associated with soil vapor intrusion off-site."

BROWNFIELDS:
Name: 12 SPENCER STREET
Address: 12 SPENCER STREET
City,State,Zip: BROOKLYN, NY 11205
Program: BCP
Site Code: 576204
Acres: 0.057
HW Code: C224282
SWIS: 2401
Town: New York City
Record Added Date: 08/20/2018
Record Updated Date: 07/03/2019
Update By: SXDEWES
Site Description: "Location The Site is located in the Bedford Stuyvesant section of Kings County and is comprised of the eastern half of a single tax parcel totaling 2,500 square feet (0.057 acres). The Site is located in the City of New York and Borough of Brooklyn. The Site is rectangular shaped with 25 feet of frontage along Spencer Street. The north and south sides of the property are bordered by residential buildings. The west side is bordered by the Bedford half of the property which is being renovated for a commercial tenant. Properties on the east side of Spencer Street are all in commercial / warehouse use. Site Features The Site is improved with the eastern half of a 3-story masonry building constructed in 1931 (estimate). The 2nd and 3rd floor of the building is used as office space by the Requestor. The first floor is being outfitted for a commercial tenant. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. The current use of the building as office space is in compliance with the zoning. Surrounding land use includes multi-family residential properties to the north, commercial / retail / office use to the west, residential and commercial (warehouses) to the south and commercial (warehouses) to the east. The area surrounding the property is highly urbanized and predominantly consists of older industrial / commercial buildings with mixed use (retail / residential) buildings along main corridors such as Bedford Avenue Flushing Avenue and Park Avenue. There are ten schools located within 1,200 feet of the Site including Bnei Shimon Yisroel of Sopron approximately 450 feet to the east. There were no nursing homes or hospitals identified within 1,000 feet of the Site. Past Use of the Site The environmental history of the subject property was previously investigated through the review of Federal and State Environmental databases, Environmental Sanborn Fire Insurance maps, NYC Department of Building records and the NYC Department of Finance databases.

DRAFT

12 SPENCER STREET (Continued) **S123159094**

According to the review of these sources the Site has been developed since at least 1887 with a residential home through at least 1904. In 1918 the property is shown to be redeveloped with a 1story building identified as a carriage and auto repair shop. The present 3-story building is shown by 1935. The use from 1935 to 1965 is shown as storage. From 1977 to 1989 the building is labeled with an M which refers in general to manufacturing. From 1991 to 1996 the use is not specified. The Requestor purchased the property in March 2015. The investigation of this brownfield site is the result of the 735 Bedford Ave. (Site #224251) (aka Spencer Street Groundwater Plume) groundwater plume trackdown. Site Geography and Geology Subsurface soils at the Site consist of historic fill materials to a depth of approximately 1 to 5 feet below grade followed by native silty-sand and clay. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 20 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. Groundwater occurs beneath the Site at a depth of approximately 15 feet below grade under water table conditions. Based on groundwater flow maps on properties in the vicinity, groundwater flow is generally east. However, the groundwater flow direction was determined from groundwater elevation measurements taken on the Site show the flow direction to be from the south east to the northwest in the eastern half of the Site. The Site is not located within a designated flood zone area. "

Env Problem:

"Background: BCP site C224281 was identified as a potential source for contamination outlined in a plume track down identified as Spencer Street GW (Site 224251). As part of an off-site investigation performed upgradient to BCP site C224204 (11 Spencer) groundwater samples were collected showing high concentrations of chlorinated volatile organic compounds (CVOCs). Tetrachloroethene (PCE) was detected at 120,000 parts per billion or ppb (compared to a groundwater standard of 5 ppb), trichloroethene was detected at 38,000 ppb (compared to a groundwater standard of 5 ppb) and 1,1,1-trichloroethane was detected at 86,000 ppb (compared to a groundwater standard of 5 ppb). These elevated values located as part of an up-gradient plume led to the creation of P-Site Spencer Street GW. In the summer of 2017 Environmental Assessment Remediation (EAR) on behalf of the Department performed the plume track down. Four (4) monitoring wells (MW-1 to MW-4) were installed to delineate the plume. Concentrations of PCE ranged from 150,000 ppb in MW-3 to 0.33 ppb in MW-1 (compared to a groundwater standard of 5 ppb). Along with the groundwater analysis, five (5) soil samples were collected from four locations (MW-1 through MW-4) at the water table interface and/or the depth interval exhibiting indication of impact. PCE in soil samples ranged from 4,200,000 ppb in MW-3 to 0.7 ppb in MW-4 (compared to commercial soil cleanup objective (CSCO) of 150,000 ppb). C224282: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), some metals, and polychlorinated biphenyls (PCBs) as part of a limited subsurface investigation performed by Environmental Business Consultants (EBC) on behalf of the property owner. Sub slab soil Vapor samples were collected and analyzed for VOCs. Based upon the limited investigation conducted to date, the primary contaminants of concern are tetrachloroethene (PCE), trichloroethene (TCE), and 1,2-dichlorethene (1,2-DCE). Soil Based on the investigations completed to date, chlorinated VOCs are detectable in soil. Maximum concentration of PCE in soils collected on site are 4.2 ppm

DRAFT

12 SPENCER STREET (Continued) **S123159094**

(unrestricted use soil cleanup objective (UUSCO) is 1.3 ppm). Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, and Dibenzo(a,h)anthracene were detected above CSCO objectives throughout the site. Groundwater PCE [maximum concentration 45,000 parts per billion (ppb), standard 5 ppb], TCE (9,100 ppb max, 5 ppb standard), 1,2-dichlorethene (4,200 ppb max, 5 ppb standard), and well as 1,1,1-TCA, 1,1-DCA, and 1,1-DCE were detected above the NYSDEC GA Groundwater Quality Standards. Sub-slab soil vapor and indoor air CVOCs were detected in the sub slab vapor and indoor air samples. Further evaluation of the results is required to determine if monitoring or mitigation is necessary on-site. "

Health Problem: "People are not expected to come into contact with contaminated soil or groundwater because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The on-site commercial building is occupied and additional investigation is needed to determine whether actions may be needed to address the potential for exposure associated both on and off-site."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 5/15/03 - ROSSAN, DDO - Tank test failure letter prepared and sent to: Mr Ricky Brons Kent Village Housing Inc. 60 Division Avenue Brooklyn, NY 11211 4/23/2004 Sangesland saw that the PBS records show that tank #1 passed it's TT in May 2003 and Tank #2 failed in May 2003 and retested and passed in June 2003. Letter sent to owner requesting info on passing tank #2, so DEC can close out the case. 6/7/2004 Sangesland received a package of info from Kent Village Housing Inc. Robert Kotara (718-387-8213). Package has a summary of the work done along with copies of the various tank testing. It says the failure was in the fill line of tank #2 approx 2 feet from the fill cup - corroded threading . DEC contacted PTC to ask about the repair of this location. Ray at PTC says this work was done by someone else. PTC was called back to retest the system after the fill line pipe had been repaired. Sangesland spoke with Robert Kotara (Director of Physical Operations at Kent Village) He said the fill line was replaced/ repaired by the building super. He says there was NO CONTAMINATION SEEN IN THE SOIL AROUND THIS LOCATION. A written statement saying this was faxed to the DEC today. Spill Closed"

KENT AVENUE STATION SITE (Continued) **S102663001**

HW Code: 224137
Record Add: 11/17/2009
Record Upd: 10/01/2020
Updated By: DJEATON
Site Description: "The Kent Avenue Generating Station Site is located in Brooklyn, NY. It is along the waterfront (Wallabout Channel, trib to East River) on the west side of Kent Avenue, south of the intersection with Division Avenue. The site is the location of the former Kent Avenue Generating Station, which has since been demolished. Excepting activities related to building demolition and property rehabilitation, with respect to current use the site is considered inactive. The uses of the surrounding parcels are varied: across Kent Avenue is a NYC Park (Roberto Clemente Ballfield); immediately to the south is the Brooklyn Navy Yard 13 Acre Parcel Site (NYSDEC Site No. 224019A); immediately to the north across Division Avenue are commercial uses; properties to the northeast and to the southeast appear to have residential uses. Prior uses that appear to have led to site contamination include discharges during the period of operation of the power plant and on-site re-use of prior demolished structures as fill material. A number of environmental investigations of the property have occurred including a Phase II (2000) and other investigations focused on particular issues or areas of the site from 2006 to present. Reclassified to N. See V00732 - Kent Avenue Station Site. Work to be done under VCA Amendment."
Env Problem: "This site has been successfully remediated. The information on the remedy is included under site V00732. The following description was true during the early stages of work at this site. The primary contaminants of concern at the site known at the time include PCBs, asbestos, various metals, petroleum constituents and PAHs. Investigations indicate SCG exceedances of PCB and petroeum compounds in sediments/ sludge contained in a large concrete structure (known as the ash pit); asbestos, metals and PAHs in subsurface soils/fill; and an area of groundwater petroleum contamination in the southwest corner of the property. The significance of the contamination needs to be determined."

Updated By:	DJEATON
Site Description:	"Location: The site is located in a mixed-use area along the Brooklyn waterfront. It is bounded by Kent Avenue to the east, Wallabout Channel to the west, Division Avenue to the north, and the Brooklyn Navy Yard to the south. Site Features: The site has been sold to a developer but is still currently vacant and open. In the subsurface, a large concrete-lined pit is present in the northwest corner of the site and along the edge of the Wallabout Channel. A large concrete slab which is part of a former power plant foundation occupies the center of the site. The slab has been covered with clean fill. Current zoning/use. The site is zoned for industrial use but is currently vacant. It is surrounded by commercial buildings and multiple occupancy residences. Past Use of the Site: The site was previously an electrical generating station and substation from 1906 until the late 1990s. The site was razed from 2007 to 2009. The main sources of contamination were the concrete-lined ash pit storage area and by-products of the electrical generating process which are scattered across the site. Site Geology and Hydrogeology: The site is underlain by a 5 to 10 foot layer of fill material. Under the fill are intermingled layers of silt and sand down to roughly 100 feet below grade. Beneath the silt and sand is a clay confining unit. The water table lies roughly 8 feet below the ground surface. Based on the site s proximity to the Wallabout channel, groundwater levels are probably tidally influenced. The far western edge of the site is built out on piles over the bank of the Wallabout Channel. "
Env Problem:	"Active Remediation at the site is complete. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) in soil, volatile organic compounds (VOCs) in groundwater and polychlorinated biphenyls (PCBs) in the ash pit sediments. "

DRAFT

KENT AVENUE STATION SITE (Continued) **S102663001**

Health Problem:	"The site is completely fenced, which restricts public access. Persons who dig below the ground surface may come into contact with contaminants in the subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy."

KENT AVENUE STATION SITE (Continued) **S102663001**

DEC Memo: "12/14/06: spoke with David Rubin, Con Ed Remediation project manager. Apparently the site is undergoing second Phase II for property transfer. Con Ed also plans on demolishing the former gen station building. They expect a summary report of investigation with recommendations for remediation from consultant during 1Q07. I told Dave to make sure DEC receives a copy, since we have a number of outstanding spills related to the site. (JHO) 3/14/08: NYSDEC received Ash Pit Remedial Investigation (RI) summary report dated March 3, 2008 from Con Ed. See eDocs for details. (MA, 4/04/08) 4/3/08: Spoke with Con Ed Remediation project manager, David Rubin regarding suitable time-frame for submission of feasibility study work plan (FSWP) and RAWP related to Ash Pit site. The Department has approved 90 days period as requested by Con Ed for submission of FSWP and RAWP. 4/14/08: NYSDEC sent comments letter to Con Ed in response to Ash Pit Remedial Investigation Summary Report dated March 3, 2008. Comments letter is in eDocs. (MA). 4/17/08: NYSDEC is in receipt of response letter from ConEd. The letter requests for modification of time-frame requested in comments letter of April 4, 2008 for submission of RAWP and Feasibility Study report. See eDocs for details. (MA) 4/18/08: NYSDEC sent approval letter to ConEd, the letter modified submission of FS and RAWP schedule. Document in eDocs. (MA) 11/25/09. This site was transfered to Hazardous Waste Program and should be tracked under HW224137. Spill case closed. JK. 5/23/13 - note that the prior comment needs clarification; the investigation finding that was reported to the Department via this spill is being addressed through the Voluntary Cleanup Program (VCP) as site V00732. The prior comment also notes that the spill case was closed, but it was not. It is closed today as an administrative closure as referred to V00732. Refer to VCP site V00732 for further information. (JOC)"

Program:	BCP
Site Code:	503018
Acres:	0.431
HW Code:	C224204
SWIS:	2401
Town:	New York City
Record Added Date:	12/17/2014
Record Updated Date:	08/24/2021
Update By:	HMDUDEK
Site Description:	"Location The Site is located in the Bedford Stuyvesant section of Kings County and is comprised of three tax parcels identified as Block 1716, Lots 20, 21 and 24 on the New York City Tax Map. The combined lots total 18,774 square feet (0.43 acres). The Site has 167.25 ft of street frontage on Spencer Street and 75 feet of street frontage on Flushing Avenue. The area surrounding the Site includes commercial to the south and west, mixed-use (1st floor retail) properties to the east, residential properties to the northwest, and commercial / industrial properties to the north. Site Features The Site is currently vacant with no structures present and is not being used. An 8-foot high construction fence borders the property on the north and west sites to prevent unauthorized access. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. Certain community facilities, such as hospitals, are allowed in M1 districts only by special permit, but houses of worship are allowed as-of-right. Surrounding land use ncludes commercial to the south and west, mixed-use (1st floor retail) properties to the east, residential properties to the northwest, and commercial / industrial properties to the north. The area surrounding the property is highly urbanized and predominantly consists of older industrial/ commercial buildings with mixed use (retail / residential) buildings along main corridors such as Bedford Avenue, Flushing Avenue and Park Avenue. There are eight schools located within 1,200 feet of the Site including Bnei Shimon Yisroel of Sopron approximately 200 feet to the east (see Figure 5). There were no nursing homes or hospitals identified within 1,000 feet of the Site. Past Use of the Site Lot 21 was originally developed prior to 1887 with a 2-story residential home along Spencer Street and a stone yard which fronted on Flushing Avenue. The most recent building was constructed in 1935 and was used as a garage. By 1947, the main portion of the building was used as a sheet metal works with the Spencer Street portion used as a private garage. By 1950 the private garage became part of the sheet metal works and was used for painting and spraying and making wire and wire products. The building remained in this use through at least the

Draft

11 SPENCER STREET (Continued) **S117362879**

1990's. Lot 20 was originally a storefront but has been a vacant lot used for parking since 1935. Lot 24 was used as a lumber shed in 1918, then as a tire shop from 1935 to 1950, storage from 1965 to 1996. The current owner purchased the property in March 2015. The buildings on lot 21 and 20 were demolished in 2018?. Site Geology and Hydrogeology Subsurface soils at the site include a silty non-native fill with ash and other rubble which varies in depth from 1 to 5 feet. A fine silt, and in some locations clay, is present beneath the fill at a depth of approximately 3 to 5 feet. Crushed rock and course sand grading to fine sand and silt is present below the fill and silt and extends to the water table (10 to 15 feet bgs). This is followed by a medium to coarse sand to a depth of 20 feet with cobbles and coarse sand observed in the vicinity of the source area from 20 to 50 feet below grade. The groundwater flow direction as determined from on-site groundwater elevation measurements is north and east. A site location map is attached as Figure 1. "

Env Problem:

"Nature and Extent of Contamination : Soil: A Focused Subsurface Site Investigation was conducted in July 2014 and a Supplemental Focused Subsurface Investigation was conducted in September 2014. The primary contaminant of concern in soil is PCE. PCE was detected at all 46 reported on-site soil sampling locations, at a maximum of 32 parts per million (ppm) in one of the soil samples collected from a boring that was installed near the concrete degreasing pit within the building. This concentration exceeds both the Unrestricted Use soil cleanup objective (UUSCO) of 1.3 ppm and the Protection of Groundwater SCO (1.3 ppm). No petroleum-related volatile organic compounds (VOCs) were detected in soil at concentrations exceeding the UUSCOs. Additional soil samples were collected in 2015, 2016 and 2017. During that investigation, the highest concentration of PCE was detected in MWC2 (2/22/17) at 900 ppm at 11/12 feet below grade surface . Contaminants of concern have also been detected in off-site soil samples collected to the north and west of the BCP site. Adjacent BCP sites abut the Site to the east. Additional delineation of off-site impacted will be required as part of the RAWP. Groundwater: Multiple investigations were performed on-site from 2014 to 2019. Groundwater samples have been collected from nineteen monitoring wells. Several compounds were detected well above standards in groundwater during the Focused Subsurface Site Investigation. PCE was detected at a maximum of 47,000 parts per billion (ppb) (standard of 5 ppm), TCE at a maximum of 250 ppb (standard of 5 ppm), DCE at a maximum of 260 ppb (standard of 5 ppm), and 1,1,1-TCA at a maximum of 3,100 ppb (standard of 5 ppm). During a supplemental investigation, toluene was detected at a maximum of 66,000 ppb (standard of 5 ppm). Supplemental groundwater samples were collected in 2017. CVOCs were the primary contaminants of concern. PCE was detected at a maximum concentration of 120,000 ppb (standard of 5 ppm), TCE at a maximum concentration of 38,000 ppb (standard of 5 ppm), DCE at a maximum concentration of 4,200 ppb (standard of 5 ppm), and 1,1,1-TCA at a maximum concentration of 86,000 ppb (standard of 5 ppm). Contaminants of concern have also been detected in off-site groundwater samples collected to the north and west of the BCP site. Adjacent BCP sites abut the Site to the east. Additional delineation of off-site impacted will be required as part of the RAWP. Soil Vapor and Indoor Air: Sub-slab vapors containing PCE and TCE have been found beneath the building slab at levels as high as 1.6 million micrograms per meter cubed (ug/m3) and 82,000 ug/m3, respectively. These same compounds have been detected

DRAFT

11 SPENCER STREET (Continued) **S117362879**

within the indoor air in the building on Lot 21 (prior to demolition), with PCE observed as high as 80 ug/m3 and TCE observed as high as 30.8 ug/m3. These concentrations represent a concern for soil vapor intrusion with respect to any on-site buildings that will be built and nearby offsite buildings. Neighboring lots were analyzed for soil vapor intrusion as part of the remedial investigations. Lot 26 had maximum sub-slab concentrations of PCE and TCE a5.47 ug/m3 and 3,000 ug/m3 respectively. Indoor air concentrations of PCE and TCE within Lot 26 resulted maximum concentrations of 14.4 ug/m3 and 0.84 ug/m3 respectively. "

Health Problem: "Access is restricted by a fence. People may contact contaminants in soil by walking on the site, digging, or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant and redevelopment is planned. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future on-site buildings. Action is recommended to address potential exposures at an adjacent building. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in other off-site structures."

11 SPENCER STREET (Continued) **S117362879**

(516) 326-6767 Fax (866) 344-7288 email: brooksea@optonline.net 3:30 PM:- sent email to Mr. Brooks with copy of email previously sent to Mr. Mandell. asked Mr. Brooks to submit copy of available environmental investigation reports for review. 09/25/14-Hiralkumar Patel. 7:04 AM:- received email from Frank including draft copy of Focused Subsurface Site Investigation report and Supplemental Focused Subsurface Site Investigation report. Frank mentioned that these reports were made for Merritt Environmental, who subcontracted them. abstract of focused subsurface site investigation report: - site consists multiple lots on two block: 1. Block# 1716 / Lot# 24 (and 25, as per tax lot) (1-9 Spencer St, 466-468 Flushing Ave) - approx. 2,500 sq. ft. vacant located at the southeast corner of the intersection between Flushing Ave and Spencer St 2. Block# 1716 / Lot# 20 (15 Spencer St) and 21 (11 Spencer St, 476-478 Flushing Ave) - one large 20,000 sq. ft. vacant one-story former manufacturing building with no basement used in large part for sheet metal manufacturing ---------- 3. Block# 1716 / Lot# 15 (25 Spencer St) and 16 (23 Spencer St, 28-32 Walworth St) - one approx. 4,000 sq. ft. single-story manufacturing/warehouse building that is currently contains a seafood distributor 4. Block# 1716 / Lot# 14 (27 Spencer St) - approx. 7,000 sq. ft exterior stockyard used by the seafood distributor 5. Block# 1715 / Lot# 29 (12 Spencer St, 735 Bedford Ave) - vacant three-story commercial building with a full basement - site elevation is estimated at roughly 20 ft above mean sea level - Phase I conducted by Merritt Engineering - Phase I indicated historical underground benzene storage tank, evidence of a former aboveground storage tank containing TCE and at least two historical gasoline USTs at 476 Flushing Ave (former sheet metal manufacturing facility) ---------- - GPR survey found one subsurface anomaly resembling a UST at the Flushing Ave side of the former sheet metal manufacturing building, and possible UST fill pipe in vacant lot (lot #: 24/25) - one 07/21/14, total of 16 borings (B1 through B16) were installed on lots associated with this project - borings B15 and B16 were installe in the basement of building at 12 Spencer St (lot #: 29), to a maximum depth of 3 ft below basement floor where refusal encountered - during field activities, it was observed that all equipment and other items associated with former operations within the sheet metal manufacturing building had been removed - a large concrete-lined pit is located within this building and its former use was unknown. however, a former employee of the manufacturing operations said that the pit was a former dipping tank for cleaning metal with solvents - former worker also recalled possible dumping of water solvent at the southeast corner of the open stockyard at south end of the site ---------- - groundwater was encountered at approx. 13 ft bg - a distinct solvent odor was detected in soil and groundwater samples collected from boring B10, which was located nearest to the concrete pit in the sheet manufacturing building - due to field evidence of possible contamination, two soil samples were collected from boring B10 - groundwater samples were collected from borings B1, B6, B7, B8, B9, B10 and B14 - found chlorinated solvent contamination in soil and groundwater samples soil analyticals: ----------B10 9-10 ft PCE----------32,000 groundwater analyticals: ----------B1GW-----B6GW-----B7GW-----B8GW-----B9GW-------B10GW-----B14GW

480 FLUSHING (Continued) **S121933852**

Address:	480 FLUSHING AVENUE
City,State,Zip:	BROOKLYN, NY 11205
Program:	BCP
Site Code:	578363
Acres:	0.102
HW Code:	C224259
SWIS:	2401
Town:	New York City
Record Added Date:	10/16/2018
Record Updated Date:	09/15/2021
Update By:	HMDUDEK
Site Description:	"Location The site (a.k.a. Former Techtronics B, Site No. 224259). is in the Bedford Stuyvesant section of Brooklyn in the City of New York and is comprised of a single tax parcel totaling 4,450 square feet (0.102 acre). The site is rectangular in shape with 50 feet of frontage on Flushing Avenue and 89.25 feet of frontage on Walworth Street. The north side of the property is bordered by Flushing Avenue, and the east side is bordered by Walworth Street. The west and south property lines are bordered by two NYSBCP sites; the 11 Spencer site to the west and the 8 Walworth site to the south. Site Features The site is currently vacant with no structures and is not being used. An 8-foot-high construction fence borders the property on the north and west sites to prevent unauthorized access. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. M2 districts buffer light industrial zones (M1) and zones which are occupied by heavy industrial use (M3) (i.e. power plants, solid waste transfer facilities and recycling plants). Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. Certain community facilities, such as hospitals, are allowed in M1 districts only by special permit, but houses of worship are allowed as-of-right. The site is currently vacant with no structures present and is not being used. Surrounding land use includes commercial and mixed-use (retail / residential) properties along the north side of Flushing Avenue, commercial / office use to the west, commercial (warehouses) properties to the south and to the east. The area surrounding the property is highly urbanized and predominantly consists of older industrial / commercial buildings with mixed use (retail / residential) buildings along main corridors such as Bedford Avenue, Flushing Avenue and Park Avenue. There are ten schools located within 1,200 feet of the site including Bnei Shimon Yisroel of Sopron approximately 150 feet to the east. There were no nursing homes or hospitals identified within 1,000 feet of the site. Past Use of the Site The environmental history of the subject property was previously investigated through the review of Federal and State Environmental databases, Environmental Sanborn Fire Insurance maps, NYC Department of Building records and the NYC Department of Finance databases. According to the review of these sources the property was developed sometime prior to 1887 with two 2-story residences in the southern portion of the Lot with the northern portion vacant. A 1-story building was constructed on the northern portion which is shown as broom manufacturers supply till 1950. Based on sources provided, a 1 story building was constructed in 1965 and identified

Draft

480 FLUSHING (Continued) **S121933852**

as paint mixing . The northern building is shown as storage or warehouse. Both buildings remain unchanged till 2016 when the north building was demolished. The south building was demolished in 2018. The property was known to be most recently used by an auto repair shop and a fish market. A site characterization of the site was completed under the project name Former Techtronics B (Site No. 224259). After the site characterization the site entered the brownfield program as 480 Flushing. Site Geology and Hydrogeology Subsurface soils at the site consist of historic fill materials to a depth of approximately 1 foot below grade followed by native silty-sand and clay. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 16 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. Groundwater was reported to be present under semi-confined conditions at approximately 12-14 ft below grade. Based upon the site characterization, groundwater flow was reported to be northwest. Neighboring sites indicate a east by north east groundwater flow. The site is not located within a designated flood zone area."

Env Problem: "Nature and Extent of Contamination: Surface Soil: A Site Characterization was performed in 2017 under an Order from the NYS Department of Environmental Conservation. A set of two (2) surface soil samples were collected from four (4) locations across the site. The samples were collected from 0-2 inches bgs and 2-12 inches bgs. Tetrachloroethene (PCE) was detected at a maximum concentration of 16 parts per million (ppm). This concentration exceeds both the Unrestricted Use soil cleanup objective (UUSCO) of 1.3 ppm and the Protection of Groundwater SCO (PoGWSCO) (1.3 ppm). Subsurface Soil: During the 2017 Site Characterization, eight (8) soil borings were installed across the site. Samples were collected and analyzed at areas of observable impact and at the groundwater interface. PCE was detected at a maximum concentration 99 parts per million (ppm)(UUSCO: 1.3 ppm and PoGWSCO: 1.3 ppm). The following VOCs and Semi-Volatile Organic compounds were also detected in subsurface soils: Benzo(a)anthracene (260 ppm max, standard 1 UUSCO), Benzo(a)pyrene (230 ppm, standard 1 UUSCO), Benzo(b)fluoranthene (280 ppm, standard 1 UUSCO), Benzo(k)Fluoranthene (100 ppm, standard 0.8 UUSCO), Phenanthrene (800 ppm, standard 1 UUSCO), Dibenzo(a,h)anthracene (37 ppm, standard 0.33 UUSCO), Indo(1,2,3-cd)pyrene (140 ppm, standard 0.5 UUSCO). Brick and coal fragments were observed in shallow soil at some of the soil borings collected, suggesting the presence of urban fill. Groundwater: As part of the Site Characterization three (3) monitoring wells were installed and sampled. PCE was detected at a maximum concentration of 2,400 parts per billion (ppb), (standard 5 ppb), TCE was detected at a maximum concentration of 350 ppb (5 ppb standard), and 1,2-dichlorethene was detected at a maximum concentration of 340 ppb (5 ppb standard). Soil Vapor: The site is currently undeveloped. Three soil vapor samples were collected on-site with elevated concentrations of chlorinated VOCs. Max concentrations of PCE are 40.6 micrograms per cubic meter (ug/m3), TCE 1470 ug/m3 and vinyl chloride 7.77 ug/m3. "

Health Problem: "Access is restricted by a fence. People may contact contaminants in soil by walking on the site, digging, or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into

DRAFT

480 FLUSHING (Continued) **S121933852**

overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant and redevelopment is planned. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future on-site buildings. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in off-site structures."

Updated By: SMQUANDT
Site Description: "Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin)on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded

DRAFT

BROOKLYN NAVY YARD 13 ACRE PARCEL (Continued) **S105586296**

	from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychloriinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds and PCBs in the soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site."

Site Code: 57818
Site Description: "Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin)on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychloriinated biphenyls (PCB)

DRAFT

BROOKLYN NAVY YARD 13 ACRE PARCEL (Continued) **S105586296**

contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds and PCBs in the soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site."

Site Code: 57818
Site Description: "Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin)on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychloriinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds and PCBs in the soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan."
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site."

Site Description: "Location The Site (a.k.a. Former Techtronics Ecological Site, P Site No. 224239) is located in the Bedford Stuyvesant section of Kings County and is comprised of a single tax parcel totaling 3,910 square feet (0.089 acres). The Site is located in the City of New York and Borough of Brooklyn. The Site is rectangular shaped with 78 feet of frontage along Walworth Street. The north, south and west sides of the property are bordered by warehouses and commercial / industrial buildings. Site Features The Site is improved with a 3,910 sf, 1-story masonry building constructed in 1982 (estimate). The building is divided into two sections each with its own access to the outside; the north section which was recently used as warehouse space and the south section which was used by an orthodox congregation for a prayer room. Current Zoning and Land Use Compliance with Current Zoning The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. Certain community facilities, such as hospitals, are allowed in M1 districts only by special permit, but houses of worship are allowed as-of-right. The proposed project, which includes an office building, is compatible with the surrounding land use and will be in compliance with the current zoning. Compliance with Land Use Plans On May 9, 2001, the City Council approved the Flushing - Bedford rezoning action (CEQR No. 00DCP015K) covering 15 blocks in the Flushing Avenue and Bedford Avenue area of Community Districts 1 and 3 in the Bedford Stuyvesant

DRAFT

TOLDOS YEHUDAH LLC (Continued) **1000244308**

neighborhood of Brooklyn. According to the Notice of Completion of The Final Environmental Impact Statement issued on March 16, 2001 by the NYC Planning Commission: The Flushing Bedford area, although zoned for manufacturing uses, contains a mix of residential uses, vacant land, open uses, auto-related uses, and commercial and industrial buildings. The rezoning area has experienced a significant decline in industrial activity over the last four decades resulting in an increase in auto related uses, junk yards and vacant land. Study findings indicate that over the last two decades, there has been a substantial growth in the residential population in the surrounding areas, resulting in a housing shortfall and increasing demand for new dwelling 'units. Since the mid 1980's there has been a marked increase in residential development, especially in the area north of Flushing Avenue. Although the existing manufacturing zoning does not permit as-of-right residential development, in recent years there has been new residential development in the area north of Flushing Avenue pursuant to zoning variances granted by the Board of Standards, and Appeals (BSA). In 1996 and 1998, two rezoning applications were approved changing the designation of a three block area immediately north of the rezoning area from manufacturing to residential. The presence of vacant and underutilized land, coupled with the increasing demand for housing in the adjacent communities, presents an opportunity for new residential development in this part of Brooklyn. The objectives of the rezoning were to: -provide opportunities for new residential development on vacant and under-utilized parcels; -bring existing non-conforming residential uses into conformance, and would allow for their enlargement; -allow for the continued presence and expansion of commercial and manufacturing uses; -permit the introduction of new commercial and manufacturing uses; and, -allow the residential re-use of underutilized and vacant land. In general, the action would provide the land use controls necessary for appropriate residentialdevelopment and the continued presence of viable manufacturing uses. The proposed project will be in full compliance with the current land use plans as identified in the Flushing Bedford Rezoning Action (CEQR No. 00DCP015K) adopted by the City on May 9, 2001. Past Use of the Site The historic use of the Site includes a storefront building, garage and residence from sometime prior to 1887 to sometime before to sometime before 1965 when a two-story residence remained on the south side of the Site and a single-story warehouse used for chemical drum storage was present on the north side of the Site. By 1977, the two-story residence was no longer present and the singlestory chemical drum storage warehouse remained on the north side of the Site. By 1982 the Site was redeveloped with a single-story paint mixing warehouse. The Site and adjacent properties have remained generally unchanged through the current day. This site was originally a P site (Former Techtronics Ecological Site, Site No. 224239). The site then entered the BCP program to complete the investigation and remedy. Site Geography and Geology The geologic setting of Long Island is well documented and consists of crystalline bedrock overlain by layers of unconsolidated deposits. According to geologic maps of the area created by the United States Geologic Survey (USGS), the bedrock in this area of Brooklyn is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of

Preview

TOLDOS YEHUDAH LLC (Continued) **1000244308**

dredge spoils, rubble and / or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Subsurface soils at the Site consist of historic fill materials to a depth of approximately 4 to 6 feet below grade. Silty sand and gravel is present immediately below this layer. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 20 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. No portion of the Site is located within a designated flood zone area. The nearest moderate risk flood zone is located 800 feet to the northwest and the nearest high risk flood zone is located 950 feet to the northwest. "

Env Problem: "Nature and Extent of Contamination: The chlorinated solvent compounds tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE), as well as other volatile organic compounds (VOCs) were detected in soil, groundwater, and soil vapor samples during the remedial investigation in 2018/19. Soil samples collected on site also contained elevated concentrations of Metals, Semi-Volatile Organic Compounds (SVOCs), and PCBs. Soil During the remedial investigation, eight (8) soil borings were collected throughout the site. Chlorinated Volatile Organic Compounds (CVOCs) were detected above Protection of Groundwater Soil Cleanup Objectives in all soil borings. Maximum PCE concentration of 3,200,000 ug/kg was found at SB-1708 (7-9 bgs). Maximum TCE concentration of 200,000 ug/kg was found at SB-1708 (7-9 bgs). Groundwater During the remedial investigation, five (5) monitoring wells were installed. CVOCs were detected in all five groundwater samples collected at the site: PCE ranges from 7,800 to 20,000 parts per billion, or ppb; TCE ranges from 1,800 to 11,000 ppb; and cis-1,2-DCE ranges from 270 to 11,000 ppb. The NYSDEC s list of 21 PFAS compounds was also analyzed as part of the remedial investigation. Combined PFOA PFOS concentrations ranged from 50 parts per trillion (ppt) in MW-1701 to 928 ppt in MW 1705. Soil Vapor As part of the remedial investigation, six (6) soil vapor samples were collected throughout the site. CVOCs were detected in all on-site samples. PCE ranged from 705 ug/m3 in SS-5 to 590,000 ug/m3 in SS-1. TCE concentrations ranged from 106 ug/m3 in SS-5 to 488,000 ug/m3 in SS-1. All sub-slab vapor samples also contained BTEX compounds. Significant Threat: A significant threat determination will be made following completion of a site characterization. "

Health Problem: "People may contact contaminated soils or groundwater if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and this site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant and redevelopment is planned. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future onsite buildings. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in offsite structures."

TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Site Description:	"This site is being managed under BCP site C224239. "
Env Problem:	"Nature and Extent of Contamination: The chlorinated solvent compounds tetracholoethylene (PCE) and its breakdown products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE), as well as other volatile organic compounds (VOCs) were detected in soil and groundwater samples during investigation in December 2007. Soil Chlorinated solvents were detected in one soil sample collected from above the water table at concentrations exceeding unrestricted use soil cleanup objectives: PCE (4.3 parts per million, or ppm) and TCE

DRAFT

FORMER TECHTRONICS ECOLOGICAL CORP. (Continued) **S120706231**

(0.87 ppm). Groundwater Chlorinated solvents were detected in all four groundwater samples collected at the site: PCE ranges from 17 to 30,845 parts per billion, or ppb; TCE ranges from 31 to 48,675 ppb; and cis-1,2-DCE ranges from 7 to 164,000 ppb. Non-chlorinated VOCs were detected in one groundwater sample (MW-2): toluene (75,488 ppb), ethylbenzene (4,393 ppb) and xylene (17,405 ppb). Significant Threat: A significant threat determination will be made following completion of a site characterization."

Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

DER Facility ID:	314980
DEC Memo:	"06/01/06-Vought-Daytime duty desk officer. Spill assigned to DEC Piper (daytime runner). Vought called and spoke to Danny Singh (fax 718-857-2100) and as per Singh owner is: Myer Stern 545 Broadway Suite 1C Brooklyn, NY 11206 Cell 718-599-5569 Fax 718-599-5632 Contaminated soil found on top of 8000-gallon #4 fuel oil UST which was removed. Contamination found at 6' below grade. Soil being stockpiled on plastic sheeting. Site will be overexcavated and samples sent for disposal analysis. Groundwater very deep at site. Site will be developed as six family residential site and is E designated. This site is lot 3 and lot 1 is E designated and NYCDEP requests lot 3 to be part of E designation review. NYCDEP contact is Tyrell Estesen (718-595-4473 fax 718-595-4479). Previous Phase II investigation performed. Spill number on Lot #1 is 0601468. DEC requires STIPULATION AGREEMENT due to development issues of site: 1)endpoint samples 2)vapor barrier and possible sub-slab depressurization system 3)delineation 3)submission of PBS registration. Vought called Myer Stern and left message to return to DEC Piper. STIPULATION sent with above requirements with cc to DEP and Singh. 6/2/06- DEC Piper sent STIP. 6/15/06- DEC Piper left message for ted at Don Carlo Env. requesting callback. 8/21/06- DEC Piper received signed STIP agreement, w/ Myer Stern. 9/26/06- DEC Piper responded to site. Don Carlo and owner on site to witness excavation of contaminated soils. Soil was stockpiled. 5 Endpoints colled and waiting for 14-48 hr turnaround to determine if additional excavation is neeeded. 10/27/06- DEC Piper reviewed closure request. As per report and analytical, this spill is closed.See e-docs if warranted."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 4/12/04-Vought-Spill transferred from Mulqueen to Vought as per Rommel. 3/24/06 Diaz - Next steps required - review file, track down contacts. Spill transferred back to Region 2 3/10/08 - Austin - Spill assigned to Ahmed for followup - end 10/27/11 - Austin - Transferring this case from Ahmed to Ketani - end 9/23/13 - Raphael Ketani. I spoke to Heidi Unwin (518) 786-4347, Environmental Specialist II, Environmental Compliance Branch regarding the spill. She said that she had been looking through some old records and discovered that the spill had not been closed out. I told her that the DEC had only two letters stating that the investigation and remediation was going to take place. Ms. Unwin stated that she will send the DEC copies of all of the remediation, sampling and disposal information that she has on file. 10/8/13 - Raphael Ketani. Ms. Unwin sent 4 documents regarding the tank removal and soil excavation. These documents were: the Solution Mechanical Corp. 7/11/96 pre-excavation soil endpoint analytical report; the Solution Mechanical Corp. 7/18/96 post-excavation soil endpoint analytical report; the Solution Mechanical Corp. 7/26/96 tank removal and remediation report; and the NYS Division of Military and Naval Affairs 10/2/13 Spill Closure Letter. The pre-excavation soil endpoint samples were analyzed for VOCs and SVOCs. Samples were taken from all four sidewalls and two samples from the bottom. The results were either non-detect or well below the CP-51 unrestricted standards. The post-excavation soil endpoint samples were analyzed for VOCs and SVOCs. Samples were taken from all four sidewalls and two samples from the bottom. Samples were also taken from the soil stockpile and around the stockpile. The results were almost entirely non-detect for the endpoints and non-detect to well below standards for the soil stockpile samples. The tank removal and remediation report had a map showing where the tanks and the pump islands had been. Both 2,000 gal. USTs had contained gasoline, even though one was labeled as containing diesel. The cause of the spill was the sweating of product from the joints of the fill pipes and the suction lines. The excavation of the soil had started on 6/24/96. The contaminated soil was shipped to a landfill in Albany, NY. Tanks were cleaned and shipped to a scrap metal facility. Manifests were included for the soil and the tanks. The Spill Closure Letter stated that about 63.4 tons of soil had been excavated. 10/10/13 - Raphael Ketani. The spill case was presented to Hassan Hussein, supervisor Unit C, Region 2, Remediation for closure. Mr. Hussein accepted the closure of the spill case. Based upon the information in the case

UNITED STATES ARMORY (Continued) **S103569544**

record, the site has been successfully remediated and there are no threats to the public of the environment. Therefore, I am closing the spill case effective today."

Remarks: "upon digging out tanks it was discovered that soil was contaminated from gasoline and possibly diesel fuel-area has been cleaned up"

City,State,Zip:	BROOKLYN, NY 11205
Program:	BCP
Site Code:	487038
Acres:	0.191
HW Code:	C224183
SWIS:	2401
Town:	New York City
Record Added Date:	09/19/2013
Record Updated Date:	12/10/2015
Update By:	RECURLEY
Site Description:	"Location: The 85 Skillman Street site (Site) is located in the Bedford-Stuyvesant section of Brooklyn. The site is bounded by commercial/residential properties and Park Avenue to the north, residential properties, a fire station and Bedford Avenue to the east, commercial, vacant property and Myrtle Avenue to the south and Skillman Street to the west. Site Features: The site is identified as 85 Skillman Street, Section 3, Block 1900, Lot 16 on the NYC tax map. Lot 16 encompasses approximately 0.19 acres of property and includes former lots 14, 15, 16 and 17, that were consolidated into one through a lot merger. The site was formerly vacant property covered with crushed stone and gravel and used as a parking lot. Current Zoning and Land Use: The site is zoned M1-2/R6A in a mixed use zoning district. This mixed use district permits a mixture of residential and non-residential (commercial, community, light manufacturing) uses in the same building. After remediation, the site has been developed for restricted residential use as a multi-story apartment building with a basement. Past Use of the site: All of the lots which now make

DRAFT

85 SKILLMAN STREET - FORMER JUNK YARD (Continued) **S113916513**

up the site parcel were developed as residential properties at one time. Former lot 17 on the north side was redeveloped for industrial use as a sheet metal facility for a short period around 1950, an auto repair facility and then as a junk storage or storage facility. The structure on this lot was demolished around 1978, however the lot continued to be used as a small junkyard up until recently. The residence on former lot 16 was demolished around 1965. Residential structures on former lots 14 and 15 were demolished around 1981. Since the demolitions, former lots 14, 15 and 16 have been used for parking. Site Geology and Hydrogeology: The topography of the site and the surrounding area slopes gently to the northwest towards the New York Shipyard and the East River. The ground level elevation on the property is approximately 33 feet above mean sea level. The site is underlain by a layer of historic fill that is approximately 2 to 7 feet thick starting just below the ground surface. The historic fill generally consists of silty-sand, brick, wood, concrete and other debris. The native soils below the historic fill consist of brown silty-sand. The approximate depth to groundwater is 31 feet below ground surface (bgs) in the area. Regional groundwater contour maps indicated that the groundwater flow should be to the northwest towards the East River. However, contrary to this, monitoring well water level measurements appear to indicate that the site area flow is in a southeasterly direction. Additional research indicates that groundwater flow, particularly on the eastern half of the site, may be influenced by the MTA's six subway dewatering wells located in the Nostrand and Marcy Avenue area 1,600 feet to the east of the site."

Env Problem:

"Remediation at the site is complete. Prior to remediation, the primary contaminants were PCBs in soil, as well as lead and polycyclic aromatic hydrocarbons in soil. Minimal amounts PCBs were also detected in groundwater. Remedial actions have been achieved unrestricted soil cleanup objectives, PCBs are no longer present in groundwater and no environmental easement or site management plan are necessary. The text below remains for information. Nature and Extent of Contamination: Soil - A total of 17 soil samples were initially collected at the site. Twelve of these samples were collected from six borings at two different depth intervals (0 to 2 and 6 to 8 feet) in each boring. Two soil samples were collected at the groundwater interface in two of the borings. Additionally three shallow hand-augured soil samples were collected at a suspected hotspot area in the NE corner of the site. At the request of the USEPA, eight additional soils samples (B7 to B14) were collected from 0 to 2 feet below grade to further delineate the horizontal extent of soil with PCB concentrations greater than 50 ppb. The shallow soils on northern lot 17 and on the western half of lot 16 were impacted by polychlorinated biphenyls (PCBs). PCB (Aroclor 1254) were found in the range of 0.51 to 150 parts per million (ppm) in the 0 to 2 foot depth interval. The shallow soils throughout the site have also been impacted by metals and polycyclic aromatic hydrocarbons (PAHs). Lead was found in the range of 450 to 5,300 ppm and individual PAHs from non-detectable to 18 ppm. No volatile organic compounds (VOCs) were encountered during the RI Except at one location where metals and PAHs were found in fill materials, there was no contamination, including PCBs found above unrestricted use SCOs in the deeper (6 to 8 foot) native soils. The RI report cited the presence of subsurface electrical equipment located in the northeast corner of the property as the possible source of the PCB contamination. The metals and PAH contamination found throughout the site, appears to be indicative of

DRAFT

85 SKILLMAN STREET - FORMER JUNK YARD (Continued) **S113916513**

typical historic fill in NYC. Remediation consisted of excavation and disposal of contaminated soil, followed by confirmation sampling. Initially, areas of soil containing PCBs above 40 ppm (PCB Hot Spot) and PCBs between 1 ppm and 40 ppm (PCB Cold Spot) were divided into grids and sampled individually to ensure PCB removal. Upon completion of PCB soil removal, and after removal of the remaining historic fill and clean soil necessary for building construction, nine endpoint samples were taken. These indicated that no exceedances of unrestricted soil cleanup objectives for PCBs, metals, VOCs, SVOCS or pesticides remain at the site. Groundwater - PCE and TCE were initially found in groundwater at two monitoring well locations on the eastern side of the property. Both compounds were above the groundwater standards of 5.0 ppb for each and were believed to originate from an off-site source. The maximum PCE concentration was 26 ppb and the maximum TCE concentration was 38 ppb. Filtered samples of groundwater exceeded SCGs for sodium and manganese as well as for iron, which are commonly found in shallow groundwater in this region and are not considered site specific contaminants of concern. PCBs were also found in groundwater in three of the monitoring wells. Concentrations ranged from 1.5 to 2.3 ppb. Based on the fact that PCBs were not detected in the deeper soils, the depth to groundwater and the installation of the wells in contaminated boreholes, the RI report attributed the PCBs in groundwater to cross-contamination during monitoring well construction. All four wells were removed during construction. After remediation, four groundwater wells were re-installed at the site. The groundwater was sampled twice and did not contain PCBs. Although the PCE and TCE were attributed to an off-site source, groundwater was also sampled for VOCs. While the PCE in the first well was 26 ppb, the TCE decreased by 60 percent to a final concentration of 12 ppb. In the second well, the groundwater concentrations of both PCE and TCE decreased by over 90 percent (to 1.9 and 1.3 ppb respectively). Soil Vapor - During the remedial investigation, soil vapor on the property was found to contain low levels of several volatile organic compounds. The PCE concentrations found in soil vapor were less than 1.0 micrograms per cubic meter and TCE was not detected in the soil vapor. No remedial measures were necessary to address soil vapor onsite. "

Health Problem:	"Remedial actions completed at the site have eliminated all potential exposures to site-related contamination."

Tank Info:

Tank Number:	001
Tank Id:	33438
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

C01 - Pipe Location - Aboveground
L09 - Piping Leak Detection - Exempt Suction Piping
E00 - Piping Secondary Containment - None
G03 - Tank Secondary Containment - Vault (w/o access)
J02 - Dispenser - Suction Dispenser
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
F00 - Pipe External Protection - None
H04 - Tank Leak Detection - Groundwater Well
I05 - Overfill - Vent Whistle

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	5000

Site Description: "Location: The site is known as the Former Domsey Fiber Corp. Site, and was comprised of a single tax parcel identified as Block 2135, Lot 1. It has since been subdivided into lots 1-9 with the construction of the initial redevelopment which consists of eight buildings in the northern section (lots 2-9). The site was previously occupied by Domsey Fiber Corp., is located in the Williamsburg section of Brooklyn (Kings County) and is currently comprised of two sections, north and south, which are divided by a public road, South 10th Street,totaling 111,465 square feet (2.56 acres). The site has 237 feet of frontage on South 11th Street, 490 feet on Wythe Avenue, and 498 feet on Kent Avenue. The north sector designated A totals 60,448.96 sf (1.38 acres) and is bounded by S. 9th Street to the north, Wythe Avenue to the east, Kent Avenue to the west and a planned road, identified as S. 10th Street, to the south. The south sector designated "B" totals 51,015.63 sf (1.17 acres) and is bounded by a planned road, S. 10th Street, to the north, Wythe

Avenue to the east, Kent Avenue to the west and S. 11th Street to the south. Site Features: The subject site was prevoiusly developed with three buildings which were demolished prior to remediation. As the initial part of the redevelopment, eight seven-story buildings for residential occupancy have been constructed in the north section of the site. Similar redevelopment is planned for the southern section. Properties located north and northwest of the subject property have recently been developed as residential and mixed residential/commercial properties. Properties to the east and west along Wythe Avenue and Kent Avenue are mixed with commercial and residential properties. Properties to the south consist of older commercial/industrial buildings. Current Zoning: In 2002 the subject Site and two additional parcels were rezoned from M3-1 heavy industrial to R7A Residential as part of the Domsey Rezoning Conditional Negative Declaration (CEQR No. 00DCP008K). Historic Uses: The subject site was utilized primarily for a variety of commercial and industrial uses from the late 1800s to the 1940s. Former on-site commercial/industrial operations included the following; machine shops, a pump works, leather goods manufacturing, pen manufacturing, coffin manufacturing, confectioners, paint and varnish manufacturing companies, a gas appliance manufacturing company, truck and auto repair shops, laboratories, and construction companies. All of the buildings within the footprint were demolished sometime before 1959 (except the two-story and four-story buildings mentioned in the Site Features section, above)and then redeveloped with the warehouse building that currently occupies the site for use by the F and M Schaefer Brewing Co. for warehousing and shipping of beer. The last tenant was Domsey International Trading Co. (used clothing factory), which was reported to have moved in sometime between 1975 and 1986 and left by 2002. Site Geology and Hydrogeology: Subsurface soils at the Site consisted of a silty, non-native fill with bricks, wood and other rubble which ranges in thickness from 2 feet in the eastern part to 12 feet in the western section of the building. Most of this fill was excavated and removed as part of the remedial action. Native fine brown silty-sand is present immediately below the fill material to a depth of approximately 14 feet below grade. The fine silty-sand layer is underlain by a fine to coarse sand and gravel layer to the water table approximately 22 feet below grade. The elevation of the property is approximately 16-25 feet above the National Geodetic Vertical Datum (NGVD). The topography in the immediate area of the property generally slopes downward from east to the west. The depth to groundwater beneath the site is approximately 17 to 23 feet below grade within the native silty-sand. Groundwater flow is generally from the northeast to the southwest with some mounding exhibited in the northwest portion of the Site. The nearest body of water to the subject site is Wallabout Channel (a portion of the East River) located approximately 400 feet to the west. "

Env Problem: "Nature and Extent of Contamination: Prior to remediation: Soil - Soil and groundwater at the site were impacted by a release(s) of petroleum, PCE and possibly TCE particularly in the northwest corner of the Site. These contaminants were found to be limited to the top 13 to 15 feet of soil within an approximate radius of 35 feet. The release scenario is unknown but likely caused by a spill from waste fuel stored in a drum or above ground tank. Waste PCE was likely discharged to the same container resulting in PCE contaminated waste oil being spilled. The released fluid was of insufficient quantity to migrate through the 20 foot soil column to the water table,

FORMER DOMSEY FIBER CORP SITE (Continued) **U003074765**

terminating at a depth of 13 to 15 feet below ground surface. Groundwater - Groundwater in the location mentioned above also exhibited high SVOC concentrations. This would indicate that this area is not the source of site wide CVOC contamination in groundwater; this was further evaluated as stated in the Elements of the Proposed Remedy section, below. The wide distribution of CVOCs in groundwater may be a function of the limited slope in the water table. Based on the groundwater flow direction and distribution of CVOCs across the Site, a low level CVOC plume appears to be migrating onto the Site from the northeast (upgradient) direction. The results of the subsequent off-site groundwater sampling confirmed that the aforementioned contaminant plume is from an upgradient source. Soil Vapor - CVOCs are present in soil vapor at elevated concentrations in many areas of the Site. CVOCs are either off-gassing from impacted groundwater and soil on-site or are migrating onto the Site from off-site sources. The highest concentration of PCE and TCE in soil vapor occurred in locations along the western and eastern property line in the southern section of the Site. However, this does not correspond with the highest concentrations of these contaminants in groundwater or soil which were encountered in the northeast and northwest corner of the Site respectively. In general, CVOC concentrations in soil vapor were higher in perimeter locations than those within the footprint of the former building. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs, CVOCs and metals such as chromium in soil. Remedial action has successfully achieved soil cleanup objectives for a contingent Track 1 cleanup to not include unrestricted use. On-site soil vapor contamination will be mitigated by the sub-slab depressurization system (SSDS), and this is being managed under a Site Management Plan. Based on the results of supplemental soil vapor intrusion testing at the site, the Remedial Engineer (P.E.) certified in the report that the site remains protective of human health and the environment without reliance on the SSDS. The NYSDOH then reviewed and concurred with the request to terminate the SSDS operation. A letter was then issued by NYSDEC in July 2019 approving termination of the SSDS. Pursuant to 6 NYCRR Part375-3.8(e)(1)(iv)(a) the remedial program has now achieved a Track1 unrestricted use cleanup as the SSDS is no longer required as an engineering control after 5 years of mitigation."

Health Problem:	"Remedial actions are complete and have eliminated the potential for contact with site-related contaminants."

However, this does not correspond with the highest concentrations of these contaminants in groundwater or soil which were encountered in the northeast and northwest corner of the Site respectively. In general, CVOC concentrations in soil vapor were higher in perimeter locations than those within the footprint of the former building. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs, CVOCs and metals such as chromium in soil. Remedial action has successfully achieved soil cleanup objectives for a contingent Track 1 cleanup to not include unrestricted use. On-site soil vapor contamination will be mitigated by the sub-slab depressurization system (SSDS), and this is being managed under a Site Management Plan. Based on the results of supplemental soil vapor intrusion testing at the site, the Remedial Engineer (P.E.) certified in the report that the site remains protective of human health and the environment without reliance on the SSDS. The NYSDOH then reviewed and concurred with the request to terminate the SSDS operation. A letter was then issued by NYSDEC in July 2019 approving termination of the SSDS. Pursuant to 6 NYCRR Part375-3.8(e)(1)(iv)(a) the remedial program has now achieved a Track1 unrestricted use cleanup as the SSDS is no longer required as an engineering control after 5 years of mitigation."

Health Problem: "Remedial actions are complete and have eliminated the potential for contact with site-related contaminants."

Site Description: "Location: The site is known as the Former Domsey Fiber Corp. Site, and was comprised of a single tax parcel identified as Block 2135, Lot 1. It has since been subdivided into lots 1-9 with the construction of the initial redevelopment which consists of eight buildings in the northern section (lots 2-9). The site was previously occupied by Domsey Fiber Corp., is located in the Williamsburg section of Brooklyn (Kings County) and is currently comprised of two sections, north and south, which are divided by a public road, South 10th Street,totaling 111,465 square feet (2.56 acres). The site has 237 feet of frontage on South 11th Street, 490 feet on Wythe Avenue, and 498 feet on Kent Avenue. The north sector designated A totals 60,448.96 sf (1.38 acres) and is bounded by S. 9th Street to the north, Wythe Avenue to the east, Kent Avenue to the west and a planned road, identified as S. 10th Street, to the south. The south sector designated "B" totals 51,015.63 sf (1.17 acres) and is bounded by a planned road, S. 10th Street, to the north, Wythe Avenue to the east, Kent Avenue to the west and S. 11th Street to the

DRAFT

FORMER DOMSEY FIBER CORP SITE (Continued) **U003074765**

south. Site Features: The subject site was prevoiusly developed with three buildings which were demolished prior to remediation. As the initial part of the redevelopment, eight seven-story buildings for residential occupancy have been constructed in the north section of the site. Similar redevelopment is planned for the southern section. Properties located north and northwest of the subject property have recently been developed as residential and mixed residential/commercial properties. Properties to the east and west along Wythe Avenue and Kent Avenue are mixed with commercial and residential properties. Properties to the south consist of older commercial/industrial buildings. Current Zoning: In 2002 the subject Site and two additional parcels were rezoned from M3-1 heavy industrial to R7A Residential as part of the Domsey Rezoning Conditional Negative Declaration (CEQR No. 00DCP008K). Historic Uses: The subject site was utilized primarily for a variety of commercial and industrial uses from the late 1800s to the 1940s. Former on-site commercial/industrial operations included the following; machine shops, a pump works, leather goods manufacturing, pen manufacturing, coffin manufacturing, confectioners, paint and varnish manufacturing companies, a gas appliance manufacturing company, truck and auto repair shops, laboratories, and construction companies. All of the buildings within the footprint were demolished sometime before 1959 (except the two-story and four-story buildings mentioned in the Site Features section, above)and then redeveloped with the warehouse building that currently occupies the site for use by the F and M Schaefer Brewing Co. for warehousing and shipping of beer. The last tenant was Domsey International Trading Co. (used clothing factory), which was reported to have moved in sometime between 1975 and 1986 and left by 2002. Site Geology and Hydrogeology: Subsurface soils at the Site consisted of a silty, non-native fill with bricks, wood and other rubble which ranges in thickness from 2 feet in the eastern part to 12 feet in the western section of the building. Most of this fill was excavated and removed as part of the remedial action. Native fine brown silty-sand is present immediately below the fill material to a depth of approximately 14 feet below grade. The fine silty-sand layer is underlain by a fine to coarse sand and gravel layer to the water table approximately 22 feet below grade. The elevation of the property is approximately 16-25 feet above the National Geodetic Vertical Datum (NGVD). The topography in the immediate area of the property generally slopes downward from east to the west. The depth to groundwater beneath the site is approximately 17 to 23 feet below grade within the native silty-sand. Groundwater flow is generally from the northeast to the southwest with some mounding exhibited in the northwest portion of the Site. The nearest body of water to the subject site is Wallabout Channel (a portion of the East River) located approximately 400 feet to the west. "

Env Problem: "Nature and Extent of Contamination: Prior to remediation: Soil - Soil and groundwater at the site were impacted by a release(s) of petroleum, PCE and possibly TCE particularly in the northwest corner of the Site. These contaminants were found to be limited to the top 13 to 15 feet of soil within an approximate radius of 35 feet. The release scenario is unknown but likely caused by a spill from waste fuel stored in a drum or above ground tank. Waste PCE was likely discharged to the same container resulting in PCE contaminated waste oil being spilled. The released fluid was of insufficient quantity to migrate through the 20 foot soil column to the water table, terminating at a depth of 13 to 15 feet below ground surface.

FORMER DOMSEY FIBER CORP SITE (Continued) **U003074765**

Groundwater - Groundwater in the location mentioned above also exhibited high SVOC concentrations. This would indicate that this area is not the source of site wide CVOC contamination in groundwater; this was further evaluated as stated in the Elements of the Proposed Remedy section, below. The wide distribution of CVOCs in groundwater may be a function of the limited slope in the water table. Based on the groundwater flow direction and distribution of CVOCs across the Site, a low level CVOC plume appears to be migrating onto the Site from the northeast (upgradient) direction. The results of the subsequent off-site groundwater sampling confirmed that the aforementioned contaminant plume is from an upgradient source. Soil Vapor - CVOCs are present in soil vapor at elevated concentrations in many areas of the Site. CVOCs are either off-gassing from impacted groundwater and soil on-site or are migrating onto the Site from off-site sources. The highest concentration of PCE and TCE in soil vapor occurred in locations along the western and eastern property line in the southern section of the Site. However, this does not correspond with the highest concentrations of these contaminants in groundwater or soil which were encountered in the northeast and northwest corner of the Site respectively. In general, CVOC concentrations in soil vapor were higher in perimeter locations than those within the footprint of the former building. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs, CVOCs and metals such as chromium in soil. Remedial action has successfully achieved soil cleanup objectives for a contingent Track 1 cleanup to not include unrestricted use. On-site soil vapor contamination will be mitigated by the sub-slab depressurization system (SSDS), and this is being managed under a Site Management Plan. Based on the results of supplemental soil vapor intrusion testing at the site, the Remedial Engineer (P.E.) certified in the report that the site remains protective of human health and the environment without reliance on the SSDS. The NYSDOH then reviewed and concurred with the request to terminate the SSDS operation. A letter was then issued by NYSDEC in July 2019 approving termination of the SSDS. Pursuant to 6 NYCRR Part375-3.8(e)(1)(iv)(a) the remedial program has now achieved a Track1 unrestricted use cleanup as the SSDS is no longer required as an engineering control after 5 years of mitigation."

initial part of the redevelopment, eight seven-story buildings for residential occupancy have been constructed in the north section of the site. Similar redevelopment is planned for the southern section. Properties located north and northwest of the subject property have recently been developed as residential and mixed residential/commercial properties. Properties to the east and west along Wythe Avenue and Kent Avenue are mixed with commercial and residential properties. Properties to the south consist of older commercial/industrial buildings. Current Zoning: In 2002 the subject Site and two additional parcels were rezoned from M3-1 heavy industrial to R7A Residential as part of the Domsey Rezoning Conditional Negative Declaration (CEQR No. 00DCP008K). Historic Uses: The subject site was utilized primarily for a variety of commercial and industrial uses from the late 1800s to the 1940s. Former on-site commercial/industrial operations included the following; machine shops, a pump works, leather goods manufacturing, pen manufacturing, coffin manufacturing, confectioners, paint and varnish manufacturing companies, a gas appliance manufacturing company, truck and auto repair shops, laboratories, and construction companies. All of the buildings within the footprint were demolished sometime before 1959 (except the two-story and four-story buildings mentioned in the Site Features section, above)and then redeveloped with the warehouse building that currently occupies the site for use by the F and M Schaefer Brewing Co. for warehousing and shipping of beer. The last tenant was Domsey International Trading Co. (used clothing factory), which was reported to have moved in sometime between 1975 and 1986 and left by 2002. Site Geology and Hydrogeology: Subsurface soils at the Site consisted of a silty, non-native fill with bricks, wood and other rubble which ranges in thickness from 2 feet in the eastern part to 12 feet in the western section of the building. Most of this fill was excavated and removed as part of the remedial action. Native fine brown silty-sand is present immediately below the fill material to a depth of approximately 14 feet below grade. The fine silty-sand layer is underlain by a fine to coarse sand and gravel layer to the water table approximately 22 feet below grade. The elevation of the property is approximately 16-25 feet above the National Geodetic Vertical Datum (NGVD). The topography in the immediate area of the property generally slopes downward from east to the west. The depth to groundwater beneath the site is approximately 17 to 23 feet below grade within the native silty-sand. Groundwater flow is generally from the northeast to the southwest with some mounding exhibited in the northwest portion of the Site. The nearest body of water to the subject site is Wallabout Channel (a portion of the East River) located approximately 400 feet to the west. "

Env Problem: "Nature and Extent of Contamination: Prior to remediation: Soil - Soil and groundwater at the site were impacted by a release(s) of petroleum, PCE and possibly TCE particularly in the northwest corner of the Site. These contaminants were found to be limited to the top 13 to 15 feet of soil within an approximate radius of 35 feet. The release scenario is unknown but likely caused by a spill from waste fuel stored in a drum or above ground tank. Waste PCE was likely discharged to the same container resulting in PCE contaminated waste oil being spilled. The released fluid was of insufficient quantity to migrate through the 20 foot soil column to the water table, terminating at a depth of 13 to 15 feet below ground surface. Groundwater - Groundwater in the location mentioned above also exhibited high SVOC concentrations. This would indicate that this

FORMER DOMSEY FIBER CORP SITE (Continued) **U003074765**

area is not the source of site wide CVOC contamination in groundwater; this was further evaluated as stated in the Elements of the Proposed Remedy section, below. The wide distribution of CVOCs in groundwater may be a function of the limited slope in the water table. Based on the groundwater flow direction and distribution of CVOCs across the Site, a low level CVOC plume appears to be migrating onto the Site from the northeast (upgradient) direction. The results of the subsequent off-site groundwater sampling confirmed that the aforementioned contaminant plume is from an upgradient source. Soil Vapor - CVOCs are present in soil vapor at elevated concentrations in many areas of the Site. CVOCs are either off-gassing from impacted groundwater and soil on-site or are migrating onto the Site from off-site sources. The highest concentration of PCE and TCE in soil vapor occurred in locations along the western and eastern property line in the southern section of the Site. However, this does not correspond with the highest concentrations of these contaminants in groundwater or soil which were encountered in the northeast and northwest corner of the Site respectively. In general, CVOC concentrations in soil vapor were higher in perimeter locations than those within the footprint of the former building. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs, CVOCs and metals such as chromium in soil. Remedial action has successfully achieved soil cleanup objectives for a contingent Track 1 cleanup to not include unrestricted use. On-site soil vapor contamination will be mitigated by the sub-slab depressurization system (SSDS), and this is being managed under a Site Management Plan. Based on the results of supplemental soil vapor intrusion testing at the site, the Remedial Engineer (P.E.) certified in the report that the site remains protective of human health and the environment without reliance on the SSDS. The NYSDOH then reviewed and concurred with the request to terminate the SSDS operation. A letter was then issued by NYSDEC in July 2019 approving termination of the SSDS. Pursuant to 6 NYCRR Part375-3.8(e)(1)(iv)(a) the remedial program has now achieved a Track1 unrestricted use cleanup as the SSDS is no longer required as an engineering control after 5 years of mitigation."

Health Problem: "Remedial actions are complete and have eliminated the potential for contact with site-related contaminants."

Updated By: SNBOLLER
Site Code: 462026
Site Description: "Location: The site is known as the Former Domsey Fiber Corp. Site, and was comprised of a single tax parcel identified as Block 2135, Lot 1. It has since been subdivided into lots 1-9 with the construction of the initial redevelopment which consists of eight buildings in the northern section (lots 2-9). The site was previously occupied by Domsey Fiber Corp., is located in the Williamsburg section of Brooklyn (Kings County) and is currently comprised of two sections, north and south, which are divided by a public road, South 10th Street,totaling 111,465 square feet (2.56 acres). The site has 237 feet of frontage on South 11th Street, 490 feet on Wythe Avenue, and 498 feet on Kent Avenue. The north sector designated A totals 60,448.96 sf (1.38 acres) and is bounded by S. 9th Street to the north, Wythe Avenue to the east, Kent Avenue to the west and a planned road, identified as S. 10th Street, to the south. The south sector designated "B" totals 51,015.63 sf (1.17 acres) and is bounded by a planned road, S. 10th Street, to the north, Wythe Avenue to the east, Kent Avenue to the west and S. 11th Street to the south. Site Features: The subject site was prevoiusly developed with three buildings which were demolished prior to remediation. As the initial part of the redevelopment, eight seven-story buildings for residential occupancy have been constructed in the north section of the site. Similar redevelopment is planned for the southern section.

DRAFT

FORMER DOMSEY FIBER CORP SITE (Continued) **U003074765**

Properties located north and northwest of the subject property have recently been developed as residential and mixed residential/commercial properties. Properties to the east and west along Wythe Avenue and Kent Avenue are mixed with commercial and residential properties. Properties to the south consist of older commercial/industrial buildings. Current Zoning: In 2002 the subject Site and two additional parcels were rezoned from M3-1 heavy industrial to R7A Residential as part of the Domsey Rezoning Conditional Negative Declaration (CEQR No. 00DCP008K). Historic Uses: The subject site was utilized primarily for a variety of commercial and industrial uses from the late 1800s to the 1940s. Former on-site commercial/industrial operations included the following; machine shops, a pump works, leather goods manufacturing, pen manufacturing, coffin manufacturing, confectioners, paint and varnish manufacturing companies, a gas appliance manufacturing company, truck and auto repair shops, laboratories, and construction companies. All of the buildings within the footprint were demolished sometime before 1959 (except the two-story and four-story buildings mentioned in the Site Features section, above)and then redeveloped with the warehouse building that currently occupies the site for use by the F and M Schaefer Brewing Co. for warehousing and shipping of beer. The last tenant was Domsey International Trading Co. (used clothing factory), which was reported to have moved in sometime between 1975 and 1986 and left by 2002. Site Geology and Hydrogeology: Subsurface soils at the Site consisted of a silty, non-native fill with bricks, wood and other rubble which ranges in thickness from 2 feet in the eastern part to 12 feet in the western section of the building. Most of this fill was excavated and removed as part of the remedial action. Native fine brown silty-sand is present immediately below the fill material to a depth of approximately 14 feet below grade. The fine silty-sand layer is underlain by a fine to coarse sand and gravel layer to the water table approximately 22 feet below grade. The elevation of the property is approximately 16-25 feet above the National Geodetic Vertical Datum (NGVD). The topography in the immediate area of the property generally slopes downward from east to the west. The depth to groundwater beneath the site is approximately 17 to 23 feet below grade within the native silty-sand. Groundwater flow is generally from the northeast to the southwest with some mounding exhibited in the northwest portion of the Site. The nearest body of water to the subject site is Wallabout Channel (a portion of the East River) located approximately 400 feet to the west. "

Env Problem: "Nature and Extent of Contamination: Prior to remediation: Soil - Soil and groundwater at the site were impacted by a release(s) of petroleum, PCE and possibly TCE particularly in the northwest corner of the Site. These contaminants were found to be limited to the top 13 to 15 feet of soil within an approximate radius of 35 feet. The release scenario is unknown but likely caused by a spill from waste fuel stored in a drum or above ground tank. Waste PCE was likely discharged to the same container resulting in PCE contaminated waste oil being spilled. The released fluid was of insufficient quantity to migrate through the 20 foot soil column to the water table, terminating at a depth of 13 to 15 feet below ground surface. Groundwater - Groundwater in the location mentioned above also exhibited high SVOC concentrations. This would indicate that this area is not the source of site wide CVOC contamination in groundwater; this was further evaluated as stated in the Elements of the Proposed Remedy section, below. The wide distribution of CVOCs in

FORMER DOMSEY FIBER CORP SITE (Continued) **U003074765**

groundwater may be a function of the limited slope in the water table. Based on the groundwater flow direction and distribution of CVOCs across the Site, a low level CVOC plume appears to be migrating onto the Site from the northeast (upgradient) direction. The results of the subsequent off-site groundwater sampling confirmed that the aforementioned contaminant plume is from an upgradient source. Soil Vapor - CVOCs are present in soil vapor at elevated concentrations in many areas of the Site. CVOCs are either off-gassing from impacted groundwater and soil on-site or are migrating onto the Site from off-site sources. The highest concentration of PCE and TCE in soil vapor occurred in locations along the western and eastern property line in the southern section of the Site. However, this does not correspond with the highest concentrations of these contaminants in groundwater or soil which were encountered in the northeast and northwest corner of the Site respectively. In general, CVOC concentrations in soil vapor were higher in perimeter locations than those within the footprint of the former building. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs, CVOCs and metals such as chromium in soil. Remedial action has successfully achieved soil cleanup objectives for a contingent Track 1 cleanup to not include unrestricted use. On-site soil vapor contamination will be mitigated by the sub-slab depressurization system (SSDS), and this is being managed under a Site Management Plan. Based on the results of supplemental soil vapor intrusion testing at the site, the Remedial Engineer (P.E.) certified in the report that the site remains protective of human health and the environment without reliance on the SSDS. The NYSDOH then reviewed and concurred with the request to terminate the SSDS operation. A letter was then issued by NYSDEC in July 2019 approving termination of the SSDS. Pursuant to 6 NYCRR Part375-3.8(e)(1)(iv)(a) the remedial program has now achieved a Track1 unrestricted use cleanup as the SSDS is no longer required as an engineering control after 5 years of mitigation."

Health Problem:	"Remedial actions are complete and have eliminated the potential for contact with site-related contaminants."

FORMER DOMSEY FIBER CORP SITE (Continued) **U003074765**

Builders 144 spencer St, Brooklyn Sangesland spoke to Kevin Brussee at Environmental Business Consultants. He said the site is a former industrial site (between oil terminals). Site is now rezoned for residential towers. Soil borings done as part of the redevelopment Phase 2 discovered VOC, SVOC, PCE & TCE contamination. Developer has already given a presentaion and prepared a plan for the City office of OER. Since the city OER can not deal with PCE & TCE, the developer may apply to the NYSDEC Brownfield program. This is NOT a short term cleanup case. 2/24/2012 Kevin Brussee at EBC said he's working with Shaminder (Former DEC now City OER) at 212-442-3007. Shaminder said he already sent the technical report outlining the contamination to Paul John (Copy has now been forwarded to Ryan Piper). After this report is reviewed and confirmed that it is NOT a short term cleanup, Randy Austin said it can be forwarded on to Remediation for action. 5/25/16- DEC Piper- Site is in NYSDEC BCP- This spill closed and referred to C224158"

He mentioned that it is a construction site and poor house keeping resulting in a motor oil spill in the area. DEC Mahat is responding to the site for further investigation. 8/22/14: Mahat Site Visit: DEC Mahat partnered with DEP Keith Williams to investigate further on the site. The contruction site is a Bwown Filed site and it is Managed by DEC Bouler. The site does not have any petroelem spill. However, the site appear to have some DEP waste water violations. A Tickert was issued to the managment company for improper use of the catch basin. Furthermore, a ticket was issued by a ECO for deleberate discharge of the water from the building to the coned vault. The case is disussed with Brown Field Manager and no further investigation is required by the Spill program. Hence, the spill will be closed in the database. **** Spill Close **** "
Remarks:	"mechanical discharge, purposeful and unknown oil or quantity; cleanup not pending at this time, spilled on grass/soil"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Property History:	As per Declaration of Taking dated 29 January 1941, the Department of the Navy obtained 2.638 acres fee. On 15 April 1975, the Department of the Navy conveyed 2.638 acres fee to GSA. As per quitclaim deed dated 4 June 1979, GSA conveyed 0.294 acre fee to the Department of Health and Hospitals Corporation (HHC) of the City of New York. Said deed did not contain any recapture or restoration clauses but did contain a restrictive clause (to be used public health purposes for a period of thirty years -from the date of conveyance). As per quitclaim deed dated 22 February 1985, GSA conveyed 2.344 acres fee to the City of New York. Said deed did not contain any recapture, restoration or restrictive clauses. On 8 September 1986, the 0.294 acre fee reverted back to GSA because of a breach of contract by HHC. GSA is still the owner of record of the 0.2 94 acre fee.

Description:	The Navy Barracks are located in the County of Kings, Borough of Brooklyn, City of New York, State of New York. The site is bounded on

DRAFT

NAVY BARRACKS BKLYN (Continued) **1024899202**

the North by Flushing Avenue, on the South by Park Avenue, on the East by Vanderbilt Avenue and on the West by Clermont Avenue. The site was improved by a six story concrete building utilized as a military prison and three story brick building used as barrack and for administrative purposes. The NYC Department of Corrections is used as the Brooklyn Correctional Facility. The former military prison building and associated utilities are beneficially used by the present owner the New York City Department of Corrections. The former Navy barrack and administrative building is abandoned and owned by GSA. There are number of underground storage tanks, which were never used by the present owner.

History: As per Declaration of Taking dated 29 January 1941, the Department of the Navy obtained 2.638 acres fee. On 15 April 1975, the Department of the Navy conveyed 2.638 acres fee to GSA. As per quitclaim deed dated 4 June 1979, GSA conveyed 0.294 acre fee to the Department of Health and Hospitals Corporation (HHC) of the City of New York. Said deed did not contain any recapture or restoration clauses but did contain a restrictive clause (to be used public health purposes for a period of thirty years -from the date of conveyance). As per quitclaim deed dated 22 February 1985, GSA conveyed 2.344 acres fee to the City of New York. Said deed did not contain any recapture, restoration or restrictive clauses. On 8 September 1986, the 0.294 acre fee reverted back to GSA because of a breach of contract by HHC. GSA is still the owner of record of the 0.2 94 acre fee.

DER Facility ID:	124588
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 9/24/03 There was a Ferric Chloride spill called in to the DEC Hotline by DEP James Daley at 8:37 AM on September 24,2003. Reportedly, the spill was caused by a tank failure. DEC Spill responder Michelle Tipple and Joseph Kudirka from the Water unit responded to this spill. Upon investigation, an 8000 gallon tank of Ferric Chloride had an internal failure and released some of it's contents to a secondary containment tank, this secondary tank released some of the Ferric Chloride into the containment area surrounding the secondary tank. The containment area surrounding the secondary tank had been modified with the installation of a wooden structure secured with steel bolts around the top of the containment. When the chemical hit the bolts they were dissolved, allowing a small amount,10-15 gal of Ferric Chloride beyond the containment areas. Soda Ash was applied to the Ferric Chloride as required by DEP protocol. Mats were placed on the drain inlets in the vicinity to reduce the possibility of the chemical reaching the water. Eagle Brook Pump and repair were in route to remove all product from the tanks and containment area, assess and repair the system. DEP Plant Superintendent Joseph Massaro will keep DEC updated. 9/25/03 Tipple followed up with James Daly- DEP safety. Eagle Brook worked until 4:30 this AM removing product and thoroughly cleaning the tanks and impacted area, all product removed from the site was carried by the eagle brook company's properly tagged tank trucks. Upon inspection of the cleaned system it was determined that the discharge line on the bottom of the tank was compromised causing the release. The system repairs are scheduled to begin later today. "
Remarks:	"ruptured tank caused materal to leak - attm to stop leak now - haz mat enroute - 10 to 15 gal on the ground -- over 1000 gal in the tank -- potential for a large spill"

DEC Memo:	"03/09/17-Hrialkumar Patel. 2:24 PM:- spoke with Shila (716-204-8054) at Core Env. Ron was not in office. Shila mentioned that DEC Jonathan Greco was copied on email correspondence on this matter. 2:34 PM:- left message for DEC Greco. reviewed remediation database and found open case #: 224018. 3:09 PM:- received call from DEC Greco and asked to transfer case to his name as he is handling a VCP case (# 224018) at the site. case assigned to DEC Greco. 3/30/18 - Spill has reportedly been addressed, however, no documentation has been submitted as yet. Greco to check with Langan for current status. 4/27/18 - Spill closure request and documentation was received from Langan Environmental (the Developer's Environmental Consultant)via Core Environmental (BNY's Environmental Consultant). The report documents the limited nature of the spill, as well as the adequacy of Langan's response. The spill was excavated, and end points were sampled and only low PPM levels of SVOC were detected. DEC PM J. Greco closed the spill based upon the report received. (Greco, 4/27/18)"

DEC Memo:	"11/22/2019 - Obligado - Desk Duty - Spill assigned to Charlie Post in Central Office as per Randall Austin. 11/22/2019 - C. Post - the Brooklyn Navy Yard was a VCP site that is currently under site management. C. Post is the project PM and the Department had approved the cover system breach and was aware of the dewatering. Groundwater removed from the excavation was containerized in a frac tank. A contractor accidentally allowed some water (approximately 3,000 gallons) to siphon back into the excavation. Laboratory analytical results indicated low-level concentrations of VOCs, SVOC and metals. No PCBs were detected. The spill was administratively closed 11/22/2019."
Remarks:	"Under site management plan under DEC Charlie Post in Central. Water contained into frac tank that was re-introduced back into the ground."

Updated By: JHOCONNE
Site Description: "Location: The 0.49 acre site is located at 98, 100, and 104 South 4th Street in the Borough of Brooklyn, Kings County, NY in an urban area. It was previously known as 98-116 South 4th Street. Site Features: The site consists of three buildings: 98-102 (now 98), 104-114 (now 100) and 116 (now 104) South 4th Street. Occupying almost the entirety of the site is a multi-story structure made up of a 7 story structure in the center (100 South 4th St.) flanked by two smaller 1 story structures. Two of the buildings were constructed in 1910 and the third was constructed in 1950. All three buildings were renovated in the early 2000s. The 7 story structure is a residential building with approximately 74 units. Current Zoning and Land Use: The site is currently zoned as M1-2/R6 and is surrounded by residential, commercial and industrial uses. It is identified as a single tax lot, Block 2443, Lot 13 and is a rectangular shaped parcel along the southern side of South 4th St., between Berry St. and Bedford Ave. Past Use of the Site: The site previously had a variety of manufacturing uses, including an adhesives factory (98 S. 4th St, formerly 98-102 S 4th St), an electroplating operation, a laboratory (100 S. 4th St, formerly 104-114 S 4th St), and a dye factory (116 S 4th St). Carmin Industries was identified as a Large Quantity Generator of hazardous wastes, including undefined hazardous wastes, ignitable hazardous wastes, corrosive hazardous wastes, reactive hazardous wastes, chromium, lead and cyanides. Site Geology and Hydrogeology: Soil borings conducted in 1996 identified fill materials to a depth of approximately 7 feet below grade from the first floor of 98 S. 4th St and to a depth of approximately 6 feet below the basement floor of 100 S. 4th St. Beneath the surface fill layer is sand and silt to a depth of at least 17 feet below grade. Groundwater is present at a depth of approximately 15-17 feet below grade."
Env Problem: "Nature and Extent of Contamination: A subsurface investigation was performed in 1997 in support of an application to participate in the Voluntary Cleanup Program (see site no. V00094). Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and polychlorinated biphenyls (PCBs). Groundwater

DRAFT

FORMER EL PUENTE (Continued) **S121933853**

samples were analyzed for VOCs only. Soil A total of nine soil borings were advanced throughout buildings 2 and 3 (access to building 1 was precluded by structural deficiencies). Samples were collected from nine soil borings. Various VOCs were detected at concentrations exceeding the unrestricted use soil cleanup objectives (SCOs), including: tetrachloroethylene (PCE) at a maximum concentration of 5.5 parts per million (ppm); trichloroethene (TCE) at 3.7 ppm; and toluene at 1.4 ppm. SVOCs were also detected above the unrestricted use SCOs including: fluoranthene at a maximum concentration of 14 ppm; phenanthrene at 19 ppm; and pyrene at 19 ppm. The majority of the contaminants appear to be found beneath building 3 (the western one-story building). Groundwater Groundwater samples were collected from 3 locations on-site. PCE was detected at a maximum concentration of 86 parts per billion (ppb), TCE at 100 ppb, and toluene at 28 ppb. In addition, groundwater samples collected from a property immediately adjacent to the south of the site (BCP site no. C224233) identified PCE at a maximum concentration of 71.4 ppb and TCE at 27.2 ppb. Soil Vapor No soil vapor samples were collected. Groundwater samples collected from a property immediately adjacent to the south of the site (BCP site no. C224233) identified PCE at a maximum concentration of 2870 micrograms per cubic meter (ug/m3) and TCE at 3510 ug/m3. Further delineation of the soil vapor was performed at 2 residential buildings located to the west of the Site on Berry Street identified the need for mitigation. See also site no. C224260."

Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D002
Waste Description:	CORROSIVE WASTE
Waste Code:	D003
Waste Description:	REACTIVE WASTE
Waste Code:	D004
Waste Description:	ARSENIC
Waste Code:	D009
Waste Description:	MERCURY
Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

DRAFT

PFIZER INC (Continued) **1000443177**

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U031
Waste Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U080
Waste Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U112
Waste Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Waste Code: U115
Waste Description: ETHYLENE OXIDE (I,T) (OR) OXIRANE (I,T)

Waste Code: U122
Waste Description: FORMALDEHYDE

Waste Code: U134
Waste Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U188
Waste Description: PHENOL

Waste Code: U219
Waste Description: THIOUREA

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U226
Waste Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: D042
Waste Description: 2,4,6-TRICHLOROPHENOL

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE

DRAFT

RADIAC RESEARCH CORP (Continued) **1000245435**

SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: F008
Waste Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F009
Waste Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F010
Waste Description: QUENCHING BATH RESIDUES FROM OIL BATHS FROM METAL HEAT TREATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F011
Waste Description: SPENT CYANIDE SOLUTIONS FROM SLAT BATH POT CLEANING FROM METAL HEAT TREATING OPERATIONS.

Waste Code: F012
Waste Description: QUENCHING WASTEWATER TREATMENT SLUDGES FROM METAL HEAT TREATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F019
Waste Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Waste Code: P001
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Site Description:	"Location: The Brooklyn Gas Light Works Manufactured Gas Plant (MGP) is located at 1 Hudson Avenue in Brooklyn, New York in Kings County. Site Features: An active generating station (Hudson Ave.), owned by Consolidated Edison, currently operates at the site. The site is covered by buildings, some asphalt parking areas and walkways. Current Zoning and Land Use: The site is currently an active generating station and is zoned for light manufacturing and commercial uses. The nearest residential area is 0.3 miles to the south. Past Use of the Site: The MGP plant operated from 1849 until approximately 1900. The property was sold to Brooklyn Edison Company between 1922 and 1928. The MGP buildings and associated above-ground structures were subsequently removed and the generating station was built. Consolidated Edison purchased the property and generating station in approximately 1950. Site Geology and Hydrogeology: The general geology in the area is artificial fill and alluvial deposits ranging between 15-20 feet thick. The next layer consists of glacial deposits (clay, sand, gravel and boulders); then a layer of Gardiner's Clay; coarse sand and gravel; a clay and silty clay layer; a sand layer interbedded with gravel clay and silt; and finally a bedrock consisting of gneiss, schist and pegmatite. Overall groundwater ranges between 5 and 22 feet below ground surface (bgs), and generally flows to the north towards the East River. The site groundwater is tidally influenced. "
Env Problem:	"Environmental conditions at the site will be determined during the Site Characterization."
Health Problem:	"The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review. "

Site Description: "Location: The 2825 square foot site is located at 134 Metropolitan Avenue in the Borough of Brooklyn, Kings County, NY in an urban area. The site is bounded by Metropolitan Avenue to the north, a movie theater to the east, North 1st Street to the south, and a commercial/residential building to the west. Site Features: The Site is approximately 2,825 square-feet and is currently occupied by a two-story commercial building with partial basement (30% of site) and a partial sub-basement. Current Zoning and Land Use: The site is currently zoned as M1-2 (manufacturing) with an R6A (residential) overlay. The on-site building was most recently occupied by a bar/nightclub which closed in 2016. Past Use of the Site: Historic uses at the Site include wire works (prior to 1887), a machine shop (1887-1905), and manufacturing (1951). The current owner plans to add 3 additional floors on the building for residential use. Site Geology and Hydrogeology: No soil or groundwater samples have been collected to date. "

Env Problem: "Nature and Extent of Contamination: This site was referred to the Department from the NYC Office of Environmental Remediation (OER). A soil vapor intrusion investigation was undertaken on the site under the direction of OER as a result of an environmental e -designation on the site. Soil No soil samples have been collected to date. Groundwater No groundwater samples have been collected to date. Soil Vapor The chlorinated solvents tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE) and 1,2-dichloroethene (DCE) have been detected at maximum concentrations of 223,000 micrograms per cubic meter, or ug/m3 (PCE), 203 ug/m3 (TCE) and 114 ug/m3 (DCE). "

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Acres: 0.600
HW Code: 224016
Record Add: 11/18/1999
Record Upd: 05/29/2021
Updated By: JHOCONNE
Site Description: "Location: The site is located in the Williamsburg section of Brooklyn. The site is bounded by Havemeyer Street to the northwest, North 6th Street to the southwest, Macri Triangle park to the southeast, and North 8th Street to the northeast. Site Features: The site is completely covered with buildings in the northwest section; and covered with asphalt, concrete, and open park space in the southeast section. The site is bisected by an elevated portion of I-278 (the Brooklyn-Queens Expressway (BQE)) adjacent to the park. Current Zoning and Land Use(s): The site is zoned for residential, manufacturing, and commercial uses. The residential area is in the northwest section of the site. The manufacturing building along Meeker Avenue is unoccupied. Past Use of the Site: According to Sanborn maps, the former Ansbacher Color and Dye Factory (Ansbacher) occupied multiple buildings along North 6th Street, North 7th Street, and Metropolitan Avenue from ~1887 to ~1945. The assumed use of the facility was to manufacture paints and/or pigments for commercial and industrial use. In the early 1950's, the buildings in the southeastern section of the site were torn down to make room for the construction of the BQE. It is believed that during this construction, waste material and debris from the former Ansbacher plant may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation (NYSDOT) in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed by the New York State Department of Environmental Conservation (NYSDEC) during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. In 2015, the NYSDEC initiated an investigation on the perimeter of the site to identify the origin of chlorinated solvents found in groundwater beneath the sidewalk as part of routine sampling. Site Geology and

DRAFT

BQE/ANSBACHER COLOR & DYE FACTORY (Continued) **S106780917**

Hydrogeology: The site is underlain by fine to medium sands; with limited quantities of coarse sand, gravel, and silt throughout the site at varying intervals. Groundwater is approximately 9.5 - 12.5' below grade. Flow direction in shallow groundwater is toward the west-southwest, while deeper groundwater appears to flow towards the east. (This may be due to the presence of the L train subway tunnel underneath North 7th Street.)"

Env Problem: "Nature and Extent of Contamination: - Soil Sampling was completed in multiple stages from 1988 to 1999. The primary contaminants of concern in soil at this site are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 7,500 ppm, well above the cleanup objective for commercial use (16 ppm). This soil failed for EP Toxicity (48 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Lead has been found at concentrations up to 10,600 ppm, well above the cleanup objective for commercial use (1,000 ppm). This soil failed for EP Toxicity (20.3 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Mercury was also found at concentrations up to 294 ppm, well above the cleanup objective for commercial use (2.8 ppm). These concentrations were all found in the vicinity of the Arsenate Of Lead building in the southeast area of the site, which is now located in the footprint of the BQE. - Groundwater Sampling has been completed in multiple stages from 1988 to 2015. The primary contaminants of concern in groundwater are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 15,500 ppb, well above the Class GA standard of 25 ppb. Lead has been found at concentrations up to 431 ppb, above the Class GA standard of 25 ppb. Mercury has been found at concentrations up to 75 ppb, well above the Class GA standard of 0.7 ppb. These concentrations were all found in the vicinity of the Arsenate Of Lead building in the southeast area of the site, which is now located in the footprint of the BQE. In 2015, groundwater in the northwest portion of the site was also found to contain tetrachloroethene (PCE) up to 1,900 ppb, trichloroethene (TCE) up to 120 ppb, and cis-1,2-dichloroethene (DCE) up to 320 ppb. PCE, TCE, and DCE all have a Class GA standard of 5 ppb. Significant Threat: The site does not constitute a significant threat to human health or the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory."

Health Problem: "Residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt, thereby preventing direct contact. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Groundwater in the area is not used, since public water is available. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/20/2021

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

DRAFT

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

DRAFT

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

DRAFT

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

NAP INDUSTRIES
667 KENT AVENUE & 46 KEAP STREET
BROOKLYN, NY 11249

TARGET PROPERTY COORDINATES

Latitude (North):	40.701613 - 40ˆ 42’ 5.81’’
Longitude (West):	73.963161 - 73ˆ 57’ 47.38’’
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	587594.9
UTM Y (Meters):	4505939.5
Elevation:	14 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

DRAFT

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

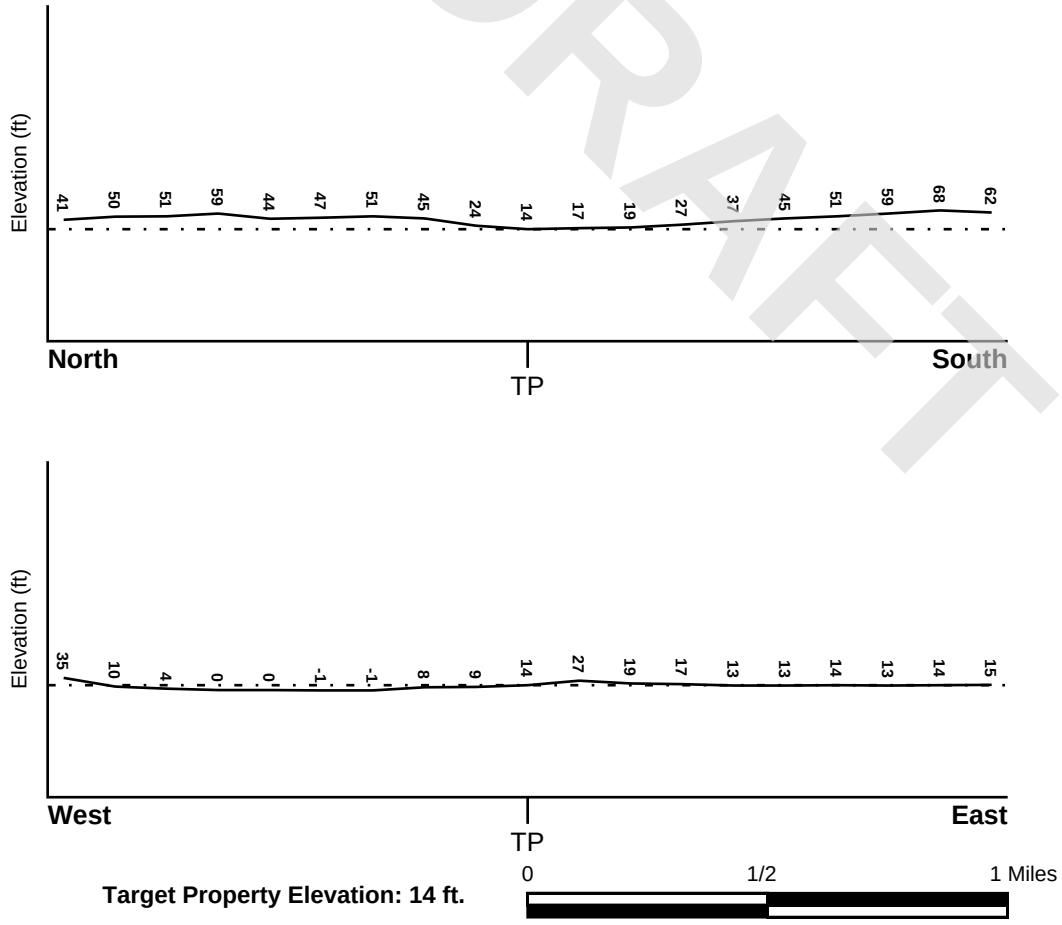
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

DRAFT

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 14 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970204F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970203F	FEMA FIRM Flood data
3604970063B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile SW
Site Name:	Naval Station Ny
Site EPA ID Number:	NY5170022250
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	14 feet in a well located 1 mile southeast of the site.
Hydraulic Connection:	Information is not available about the hydraulic connection between the surficial aquifer (upper glacial till) and underlying aquifer(s). Bedrock is present at an estimated depth of 100 feet.
Sole Source Aquifer:	A sole source aquifer is persent at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

DRAFT

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

DRAFT

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

DRAFT

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

New York City Fire Department Fuel Tank Special Report

The New York City Fire Department issues New York City Fire Code Fuel Tank Inspection Reports and issues violations for bulk fuel storage tanks within New York City. The FDNY does not maintain copies of Fuel Tank Inspection Report records for bulk fuel storage tanks located outside of New York City.

Where do I obtain a copy of my FDNY Fuel Tank Special Report?

- You can perform an on-line search for a summons, see a copy of the summons, find your NYC Office of Administrative Trials and Hearings (OATH) Environmental Control Board (ECB) hearing date, hearing results, and make payments. You can search for this information by name, address or the summons number. You can search for this information by name, address or the summons number by going to the Summons Finder.
- You may obtain copies from the FDNY Public Records Unit through the following methods,
    - In Person
    - By Mail
    - Online

If you are picking your Report up in person or want to request the records by mail, please either visit or mail requests to:

FDNY Public Records Unit
9 MetroTech Center- First Floor
Brooklyn, N.Y. 11201
Use the FLATBUSH AVENUE ENTRANCE
Hours of Operation: Monday - Friday 9:00am to 4:00pm (except Holidays)
(718) 999-1998 or 1999

Who is eligible to obtain a copy of a FDNY Fuel Tank Special Report?

- Anyone may obtain a copy of a FDNY Fuel Tank Special Report.

What is the fee for a copy of an FDNY Fuel Special Tank Report?

- The fee is $10.00 per Report.
- Payments for Mail or Online requests may be made by check or money order payable to the New York City Fire Department - **Do not send cash**.
    - *NOTE: Payments submitted from foreign countries must be made by a check drawn on a United States bank or by international money order.*

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Re: Site Characterization Oversight
46 Keap Street
Brooklyn, New York
Langan Project No.: 170084302

DRAFT

Dear Mr. Freund:

We are pleased to present our site characterization oversight summary for 46 Keap St property. Our findings and conclusion are based on soil and groundwater samples collected during the ARCADIS BBL's (ARCADIS) July 2009 preliminary environmental investigation at the above-referenced site. In addition, our findings are compared to the results of the ARCADIS Soil and Groundwater Sampling Interim Data Results Letter, dated 13 October 2009 (Attachment A). Both data, Langan and Arcadis, are presented herein.

Project Background

The 46 Keap Street property (Site) is located in Brooklyn, NY in the middle of the city block bordered by Keap Street on the northwest, Wythe Avenue on the northeast, Hooper Street on the southeast, and Kent Avenue on the southwest. The Site currently consists of a single story warehouse building housing a light manufacturing operation. A site location map is attached as Figure 1.

The Site was once the location of a Brooklyn Union Gas Company manufactured gas holder distribution station known as the Keap Street Station. The Site is under an Administrative Order on Consent (AOC) with the New York State Department of Environmental Conservation (NYSDEC). The AOC requires National Grid, the legacy owner of the Keap Street gas holder station to conduct a characterization of the onsite soil and groundwater relative to the former gasification system.

Preliminary Environmental Investigation

ARCADIS, on behalf of National Grid, conducted the preliminary environmental investigation at the Site between the 2nd and 23rd of July 2009. ARCADIS's soil investigation consisted of drilling of three interior (SB-5 through SB-7) and four sidewalk borings (MW-1 through MW-4).

The groundwater investigation included installing a temporary well within one of the completed interior borings (SB-6) and four permanent wells within the completed exterior borings. The approximate locations of the borings and wells are shown in the attached Figure 2 – Boring Location Plan.

ARCADIS's subcontractor, Boart Longyear, installed the borings to 45 feet (ft) below ground surface (bgs) using a Boart Longyear 100C sonic rig. The interior borings were installed on the 2nd and 3rd July 2009 and the exterior borings were installed on the 6th and 7th July 2009. ARCADIS field personnel screened the soil samples with a photo-ionization detector (PID) for the presence of total organic vapors and collected select soil samples for laboratory analysis. After the completion of the borings, ARCADIS installed a temporary well within interior boring SB-6, collected a groundwater sample, and immediately removed the well. This interior temporary well was not included in the ARCADIS Work Plan, dated October 2007 (revised January 2008) that was approved by the NYSDEC but was added in response to Nap Industries representative's request in the Spring of 2009. The collection of this groundwater sample was included in the field work by ARCADIS to provide information on the groundwater directly beneath the building. This would allow for comparison to the results from the exterior wells to allow for a more comprehensive overview of the subsurface conditions relative to the gas holder station. ARCADIS collected the groundwater samples from the four exterior monitoring wells on 23 July 2009 for laboratory analysis. ARCADIS submitted all of their samples to the laboratory TestAmerica of New Jersey.

Langan's Observations and Findings

Langan was on site part-time during ARCADIS's preliminary environmental investigation to provide independent observations of the ARCADIS's field work procedures, to conduct independent soil and groundwater characterization, and to collect select soil and groundwater samples for laboratory analysis.

Observations of ARCADIS Field Work Procedures

Langan was present on-site to observe the installation of interior boring SB-5 (the first boring of the investigation) and exterior wells MW-4 and MW-2. The sonic rig drilling procedure that was used during this investigation was to advance the three-inch diameter macro-core sampler ten ft into the subsurface and then to immediately advance the casing to the same depth as the macro-core sampler. Langan field personnel noted that the soil samples collected utilizing this method were heated in the drilling process to a point that the soil was hot to the touch and visibly steaming once exposed to the air. Langan discussed with the on-site ARCADIS project manager that the heating of the soil could drive off any VOCs present before collection for laboratory analysis. Mr. Arco agreed to modify the drilling technique for the remaining borings to advance the casing with surface supplied water injected between the macro-core and

DRAFT

casing; this technique would assist in reducing the overall soil sample temperature. In addition, Langan informed ARCADIS that the PID that they were using, a RAE system MiniRAE 2000, was adversely affected by the high humidity content of the recovered soil samples. The Langan field person also noted that the selected approach to drilling significantly disturbs the deposition of the soil, precluding the accurate identification of soil stratification indications.

Langan was present on-site to observe the collection of groundwater samples from the interior temporary monitoring well installed in SB-6 and the exterior permanent monitoring wells MW-2 and MW-3. ARCADIS collected the SB-6 groundwater samples with a bailer without prior purging of the temporary well. The resulting groundwater samples from this temporary well were visibly high in silt and sand content. ARCADIS purged exterior wells MW-2 and MW-3 with a Grundfos impellor pump and recorded water quality parameters until the parameters were stable. During the groundwater sample collection in MW-2, the relatively high silt content "locked" the pump twice, which resulted in groundwater collected for semi-volatile and cyanide analysis having greater silt content than the groundwater collected for the volatile analysis. Sampling logs for the groundwater samples collected from MW-2 and MW-3 are included in Attachment B – Groundwater Sample Field Information Forms.

Analytical Results

Langan Soil Results

Langan created boring logs of SB-5, MW-2 and MW-4 based on field observations. Langan used ARCADIS notes from the top five ft to complete the boring logs as these strata were previously excavated as part of the utility clearance excavation. In these three borings, native material (i.e. not fill material) was encountered immediately below the floor and sidewalk slabs. This material consisted of silty sand that transitioned to well-graded sand as the depth increased. There were no indications of historical fill, free product, staining, or odors. The highest PID screening value was 1.4 parts per million (ppm), which was found directly below the floor slab in SB-5. Langan boring logs of SB-5, MW-2 and MW-4 are included in the Attachment C – Boring Logs.

Langan field personnel arrived after boring SB-6 was completed. This was due to the fact that the commencement of drilling activities occurred earlier than previously scheduled. Based on the recovered soil samples, Langan noted that historical fill comprised of brick and sand appeared to extend to 15 ft bgs and that black stained silty sand with odor was found between 15 and 20 ft bgs. PID screening in this boring did not indicate the presence of VOCs. Transcribed boring logs from ARCADIS are included in Attachment D.

Langan collected representative soil samples from 20 to 25 ft bgs in boring SB-5 (sample SB5-20-25), 15 to 20 ft bgs in boring SB-6 (sample SB6-15-20) and 26 to 27 ft bgs in MW-2 (MW 2-SB-26-27). Langan's soil and groundwater samples were placed in laboratory-supplied containers, stored in ice-chilled coolers, and shipped under chain-of-custody protocol to

Spectrum Analytical Laboratory in Agawam, Massachusetts. Spectrum is certified by the New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP). The samples were analyzed for the following parameters: volatile organic compounds (VOCs) by United States Environmental Protection Agency (EPA) Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, and cyanide by EPA Method 9012A.

The VOC and SVOC results were compared to the NYSDEC Technical and Administrative Guidance Memorandum (TAGM) Recommended Soil Cleanup Levels (RSCOs). The cyanide results were compared to the NYSDEC Part 375-6.8(a) Unrestricted Use Soil Cleanup Objective (SCO) for that compound.

The results for sample SB5-20-25 indicate non-detect for VOCs, SVOCs, and cyanide. The results for sample SB6-15-20 indicate detections of benzene, naphthalene and cyanide; however, these concentrations are below applicable NYSDEC TAGM standards. The results for MW-2-SB-26-27 indicate total SVOCs of 19,808 parts per billion (ppb) and non-detect for VOCs and cyanide. The soil analytical results are shown in attached Table 1- Summary of Detected VOCs, SVOCs, and Cyanides in Soil Samples. The laboratory reports are included in Appendix E – Laboratory Reports.

DRAFT

ARCADIS Soil Results

The soil sample results from the ARCADIS field investigation indicate similar analytical results to Langan's soil samples. It should be noted that these were not split soil samples but were collected from the same lithology as the ARCADIS soil samples. Therefore, since they are not split samples, there may be slight differences between analytical data sets. The soil sample results for SB-5 (20-25 fbg) indicate non-detect for VOCs, SVOCs and cyanide, agreeing with Langan's soil sample results. ARCADIS also analyzed for metals, which were non-detect.

The soil sample collected by ARCADIS from SB-6 (15-20 fbg) indicates non-detect for VOCs, SVOCs, metals and cyanide. Langan's results indicate the presence of the VOCs benzene, naphthalene and cyanide.

Limited concentrations of SVOCs, inorganic compounds and/or cyanide were detected in all the soil samples collected from SB-5, SB-6 and SB-7. No VOCs were detected above regulatory limits in these soil samples. These concentrations are typical of fill material and not MGP impacts, which would have reported concentrations significantly greater than presently indicated. A review of the ARCADIS soil boring logs indicate that no odor or staining was noted in the borings and PID readings were zero. The analytical results are presented in their letter report (Attachment A). The sampling interval in MW-2 was 4.5 to 5 fbg and 5 to 10 fbg. Results indicated non-detect for VOCs, SVOCs, cyanide with limited metals impacts in the deeper sample (mercury). Langan's sampling interval for MW-2 was 26 to 27 fbg.

Langan Groundwater Results

Langan collected duplicate groundwater samples from the interior temporary well installed in SB-6 (sample SB6-070309) and exterior monitoring wells MW-2 (MW2-090723) and MW-3 (MW3-090723) after ARCADIS collected their groundwater samples. These groundwater samples were placed in a cooler with ice and submitted to the laboratory for analysis. Since temporary well SB-6 was not purged, the sample for cyanide was filter by the laboratory prior to analysis. The laboratory results were compared to the NYSDEC Technical & Operational Guidance (TOGS) Series 1.1.1 Ambient Water Quality (AWQ) Standards.

The groundwater sample collected from the temporary monitoring well installed in SB-6 was found to have TOGS VOC exceedances for benzene and ethanol and a SVOC exceedance for Bis(2-ethylhexyl)phthalate. The groundwater results for MW-2 and MW-3 indicate the presence of methyl tert-butyl ether (MTBE) with concentrations of 33.5 micrograms per liter (µg/l)

The groundwater analytical results are shown in the attached Table 2 – Summary of Detected VOC, SVOC and Cyanides in Groundwater Samples.

ARCADIS Groundwater Results

The groundwater results indicate trace concentrations of SVOCs, mainly poly-aromatic hydrocarbons (PAHs) in select groundwater samples with elevated concentrations elevated concentrations of metals in the grab groundwater sample from SB-6. The elevated metal concentrations in SB-6 are most likely attributed to the turbidity of the sample. ARCADIS samples were not tested for MTBE. SB-6 also reportedly contained VOCs (benzene) and SVOCs (bis(2 ethylhexyl) phthalate). The results from MW-2 indicate non-detect for VOCs, SVOCs and cyanide and limited metals (iron and manganese). Similar results are indicated for MW-3 except for trace concentrations of SVOCs. Again, MTBE was not analyzed for in these samples. The results agree with Langan's results except for the presence of MTBE (Langan).

CONCLUSIONS

The results of the soil samples collected from the interior soil borings indicate limited impacts to the soil at the discrete sampling depths of 20 to 25 ft bgs (SB-5) and 15 to 20 ft bgs (SB-6). However, the soil boring logs from these two soil borings did not indicate impacted zones in the soil column. This was further confirmed by these soil sample results. The soil sample collected from exterior boring MW-2 (26 to 27 ft bgs) did indicate the presence of SVOCs (Langan); however, the concentration is significantly below the applicable standard. Based on these limited results, the subsurface soil does not appear to be impacted with either historical MGP use or current use of the Site.

DRAFT

The groundwater results from the interior temporary well (SB-6) had benzene and toluene (Langan) detections above the applicable standards. The results from two of the four exterior wells that Langan sampled, MW-2 (up-gradient) and MW-3 (down-gradient), indicated MTBE concentrations above the applicable standard. The presence of the benzene and toluene (SB-6 temporary well) in the groundwater beneath the Site and MTBE (Langan) in the exterior groundwater beneath the adjacent sidewalks could indicate nearby off-site petroleum/gasoline spills. This conclusion is further supported by the lack of these parameters in the limited on-site soil samples we collected.

These conclusions are based on both Langan and ARCADIS soil and groundwater analytical results which are similar in most reports for this investigation. As noted earlier, split soil samples were not collected which may account for the variation in Langan's and ARCADIS's analytical results. The presence of MTBE in the off-site wells and not on-site may be due to multiple off-site spills that are affected by groundwater flow gradients. Because of the limited focus of the site investigation on the former gas holder location, conclusions regarding overall on-site impacts cannot be presented at this time.

Please contact me at (212) 479 5441 if you have any questions.

nationalgrid

October 13, 2009

Mr. Jacques Freund
Vice President
NAP Industries, Inc.
667 Kent Avenue
Brooklyn, NY 11211

Re: Soil and Groundwater Sampling Interim Data Results
Former Keap Street Holder Station Site
46 Keap Street, Brooklyn, New York

Dear Mr. Freund:

This letter has been prepared to provide you with analytical results of soil and groundwater samples collected on and near 46 Keap Street, Brooklyn, NY. The data were collected in July 2009 as part of a Site Characterization (SC) that National Grid is completing under a New York State Department of Conservation (NYSDEC)/New York State Department of Health (NYSDOH)-approved work plan dated January 2008. As you are aware, an Administrative Order on Consent (the Order) between National Grid and the New York State Department of Environmental Conservation (NYSDEC) requires National Grid to conduct the SC because a remote gas holder, used to store manufactured gas, was located on the property at 46 Keap Street.

Summary of Sampling Activities

The NYSDEC-approved scope of work consisted of:

- drilling three soil borings (SB-5, SB-6, and SB-7) at 46 Keap Street;
- installing four monitoring wells (MW-1 through MW-4) in the sidewalks near 46 Keap Street;

- based on discussions with your consultant, Langan Engineering & Environmental Services, and concurrence of the NYSDEC, collecting one "grab" groundwater sample for laboratory testing from the boring (SB-6) located within the footprint of the former gas holder; and

- collecting groundwater samples from each monitoring well for laboratory testing (total of four groundwater samples and one duplicate sample).

As discussed in our March 12, 2009 letter to you, soil borings were drilled using roto-sonic drilling techniques. Soil borings were drilled to approximately 43 or 45 feet below grade, depending on location. Each monitoring well was installed using schedule 40 PVC and 15-feet long, 0.02-inch slotted well screens. Screens for monitoring wells MW-1 through MW-3 were installed approximately 10 to 25 feet below grade and the screen for monitoring well MW-4 was installed from approximately 20 to 35 feet below grade. The locations of the borings and wells are shown on the attached figure. Soil boring and monitoring well logs are provided in Attachment 1.

Collected samples were analyzed as follows:

- All samples were analyzed for volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260B

- All samples were analyzed for semi-volatile organic compounds (SVOCs) by USEPA Method 8270C

- All samples were analyzed for Priority Pollutant List (PPL) Metals by USEPA Method 6000/7000

- Groundwater samples were analyzed for total cyanide by USEPA Method 9012

DRAFT

Samples were analyzed by TestAmerica Laboratories of Shelton, Connecticut, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program- (ELAP-) certified laboratory. Table 1 provides a comparison of validated soil sample results to the NYSDEC Part 375 Restricted Use Commercial and Restricted Use Residential Soil Cleanup Objectives (SCOs). Table 2 provides a comparison of the validated groundwater sample results to NYSDEC TOGS 1.1.1 Class GA Ambient Water Quality Standards and Guidance Values (Class GA Standards and Guidance Values). A summary of the results is provided below.

General Observations

- Soil beneath the building generally consists of up to approximately 25 feet (at SB-7) of fill underlain by fine to coarse sand.
- The water table was encountered at approximately 12 to 13 feet below grade.
- Black staining and an odor were observed in SB-6 at depths between 15 and 20 feet below grade. Otherwise, no visual impacts were observed in soil samples retrieved at other boring and wells locations.
- Headspace screening measurements (using a photo-ionization detector [PID]) of continuously collected soil samples were all non-detect for borings beneath the building and 1 part per million (ppm) or less for well borings drilled in the sidewalks.

Soil Analytical Results

A summary of the soil analytical results is provided below. Please refer to Table 1 for the detailed results in comparison to applicable SCOs.

DRAFT

- Only two samples (SB-6 [4-5'] and SB-7 [3-4']) contained polycyclic aromatic hydrocarbon (PAHs) at concentrations slightly above both SCOs. While associated with MGPs, PAHs are formed during the incomplete burning of fossil fuel, garbage, or any organic matter; consequently PAHs are ubiquitous, especially in urban environments.

- Two samples (SB-5 [1-2'] and SB-6 [4-5']) contained inorganic compounds (barium or lead) at concentrations above the SCOs. Both samples were collected from the fill material.

- Trace levels of free cyanide were detected in three soil samples (SB-5 [1-2'], SB-6 [15-20'], and SB-7 [3-4']) at concentrations well below both SCOs for this compound.

Groundwater Analytical Results

A summary of the groundwater analytical results is provided below. Please refer to Table 2 for the detailed results in comparison to Class GA Standards and/or Guidance Values.

- Trace levels of VOCs were detected in the grab sample collected from SB-6 at approximately 16 feet below grade. The concentration of benzene exceeded its Class GA Standard of 1 parts per billion (ppb). Benzene is a MGP-related constituent, but is also present in numerous petroleum products. VOCs were not detected in any groundwater samples collected from monitoring wells.

- Trace concentrations of SVOCs were detected in each groundwater sample. The sample from MW-3 contained concentrations of six SVOCs (all PAHs) above Class GA Standards/Guidance Values and the grab sample from SB-6(16') contained one compound (bis[2-ethylhexl]phthalate) slightly above its Class GA Standard. Bis(2-ethylhexl)phthalate is a plasticizer ubiquitous in the environment and is not a known MGP-related constituent. Groundwater from MW-1, MW-2, and MW-4 did not contain concentrations of SVOCs above Class GA Standards or Guidance Values.

- Numerous metals were detected in the sample from SB-6 at levels above Class GA Standards or Guidance Values. This is not surprising given the turbid nature of the grab sample.

DRAFT

Groundwater samples from each monitoring well contained concentrations of iron and manganese above the Class GA Standard for each compound. Iron and manganese are naturally occurring metals that are often observed at elevated levels, particularly in areas where abundant fill is present. Iron and manganese are not typically considered a constituent of concern at MGP sites.

- Total cyanide was detected in groundwater from SB-6 below its Class GA Standard. Total cyanide was not detected in groundwater sampled from the monitoring wells.

Closing

Concentrations of some VOCs, SVOCs, and metals were detected in soil and/or groundwater samples collected during the SC. However, the levels appear to be low and only a few compounds were detected slightly above applicable NYSDEC criteria. The concentrations of metals detected in the samples are likely the result of the presence of fill beneath the building. Although some of the metals concentrations in the groundwater grab sample appear elevated, the levels are attributed to the turbidity of the sample. While these results have not yet been presented to the NYSDEC, it does not appear the former holder has had significant adverse affects on the soil and groundwater beneath and around your building. We expect that a draft Site Characterization Report will be submitted to the NYSDEC in the coming weeks.

National Grid appreciates your cooperation throughout the duration of the SC work. Please do not hesitate to contact myself or Mr. Roger Cawley if you have any questions.

Sincerely,

Donald Campbell
Project Manager

Notes/Remarks

Pump seized up twice during sample collection, once after the collection of the VOCs bootles and once after the collection of the CN bottle.

Approximately 20 gallons of additional purge water was pumped out after the VOC sample was collected.

This well has a significant quantity of silt entrained in the groundwater.

Authorized by:

Hanibal C. Tayeh, Ph.D.
President/Laboratory Director

Technical Reviewer's Initial:

Spectrum Analytical holds certification in the State of New York for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of New York does not offer certification for all analytes.
Please note that this report contains 44 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supercedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report is available upon request. This report may not be reproduced, except in full, without written approval from Spectrum Analytical, Inc.

Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Spectrum is currently accredited for the specific method or analyte indicated. Please refer to our "Quality" web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (NY-11840, FL-E87936 and NJ-MA012).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

DRAFT

CASE NARRATIVE:

The sample temperature upon receipt by Spectrum Analytical courier was recorded as 2.3 degrees Celsius. The condition of these samples was further noted as received on ice. The samples were transported on ice to the laboratory facility and the temperature was recorded at 2.0 degrees Celsius upon receipt at the laboratory. Please refer to the Chain of Custody for details specific to sample receipt times.

An infrared thermometer with a tolerance of +/- 2.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group.

See below for any non-conformances and issues relating to quality control samples and/or sample analysis/matrix.

EPA 335.4

Laboratory Control Samples:

9070474-BS2

The spike recovery for this QC sample is outside the established control limits. The sample results for the QC batch were accepted based on LCS/LCSD or SRM recoveries within the control limits.

Cyanide (total)

SW846 8260B

Blanks:

9070450-BLK1

Analyte quantified by quadratic equation type calibration.

Vinyl chloride

DRAFT

SW846 8260B

Laboratory Control Samples:

9070435-BS1

Analyte out of acceptance range in QC spike but no reportable concentration present in sample.

Ethyl tert-butyl ether
Tert-amyl methyl ether

9070435-BSD1

Analyte out of acceptance range in QC spike but no reportable concentration present in sample.

Ethyl tert-butyl ether
Tert-amyl methyl ether

9070450-BS1

Analyte quantified by quadratic equation type calibration.

Vinyl chloride

9070450-BSD1

Analyte quantified by quadratic equation type calibration.

Vinyl chloride

9070545-BS1

Analyte out of acceptance range in QC spike but no reportable concentration present in sample.

Ethyl tert-butyl ether

The spike recovery for this QC sample is outside the established control limits. The sample results for the QC batch were accepted based on LCS/LCSD or SRM recoveries within the control limits.

Tert-amyl methyl ether

9070545-BSD1

Analyte out of acceptance range in QC spike but no reportable concentration present in sample.

Ethyl tert-butyl ether

The spike recovery for this QC sample is outside the established control limits. The sample results for the QC batch were accepted based on LCS/LCSD or SRM recoveries within the control limits.

1,1,2-Trichlorotrifluoroethane (Freon 113)

DRAFT

Notes and Definitions

CAL1	Analyte quantified by quadratic equation type calibration.
CAL2	Analyte percent drift/percent difference is greater than 30%, data is accepted due to all CCC analytes passing within the 20% Drift/Difference criteria
E	The concentration indicated for this analyte is an estimated value. This value is considered an estimate (CLP E-flag).
J	Detected above the Method Detection Limit but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
QC2	Analyte out of acceptance range in QC spike but no reportable concentration present in sample.
QM9	The spike recovery for this QC sample is outside the established control limits. The sample results for the QC batch were accepted based on LCS/LCSD or SRM recoveries within the control limits.
U	Analyte included in the analysis, but not detected
BDL	Below Detection Limit - Analyte NOT DETECTED at or above the minimum detection limit
BRL	Below Reporting Limit - Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

A plus sign (+) in the Method Reference column indicates the method is not accredited by NELAC.

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

National Grid – Keap Street

Data Usability Summary Report

BROOKLYN, NEW YORK

Volatile, Semivolatile, Metals and Miscellaneous Analyses

SDG# 220-9535

Analyses Performed By:
TestAmerica Laboratories
Shelton, Connecticut

Report: # 10701
Review Level: Tier III
Project: B0012552.0000.00002

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) #220-9535 for samples collected in association with the National Grid Keap Street site. The review was conducted as a Tier III evaluation and included review of data package completeness. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis				
					VOC	SVOC	PEST PCB	MET	MISC
SB-5 (1-2)	220-9535-1	Soil	7/2/2009		X	X		X	X
SB-6 (15-20)	220-9535-10	Soil	7/3/2009		X	X		X	X
SB-6 W	220-9535-11	GW	7/3/2009		X	X		X	X
MW-4 (4-5)	220-9535-12	Soil	7/3/2009		X	X		X	X
SB/MW-2 (4.5-5)	220-9535-13	Soil	7/6/2009		X	X		X	X
TB-1	220-9535-14	Water	7/3/2009		X	X		X	X
SB-6 (4-5)	220-9535-3	Soil	7/2/2009		X	X		X	X
SB-5 (20-25)	220-9535-4	Soil	7/2/2009		X	X		X	X
SB-7 (3-4)	220-9535-5	Soil	7/2/2009		X	X		X	X
SB-7 (15-20)	220-9535-7	Soil	7/2/2009		X	X		X	X
DUP-1	220-9535-8	Soil	7/2/2009	SB-5 (1-2)	X	X		X	X
MW-3 (4-5)	220-9535-9	Soil	7/3/2009		X	X		X	X

Note:

1. Miscellaneous parameters include cyanide and free cyanide.

QA - Quality Assurance

DRAFT

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) SW-846 Method 8260, 8270, 8081 and 8082 as referenced in NYSDEC-ASP. Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999 and USEPA Region 2 Validation SOPs.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.

  UB Compound considered non-detect at the listed value due to associated blank contamination.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is

DRAFT

that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DRAFT

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8260	Water	14 days from collection to analysis	Cooled @ 4 °C; preserved to a pH of less than 2 s.u.
	Soil	14 days from collection to analysis	Cooled @ 4 °C.

s.u. Standard units

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B) of data. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Sample Locations	Analytes	Sample Result	Qualification
SB-6 (15-20) SB-5 (20-25) SB/MW-2 (4.5-5)	Methylene chloride	Detected sample results <RL and <BAL	"UB" at the PQL
SB-5 (1-2) SB-6 (4-5) SB-7 (3-4) SB-7 (15-20) DUP-1 MW-3 (4-5) MW-4 (4-5)	Methylene chloride	Detected sample results <RL and <BAL	"UB" at the PQL
	Acetone		

RL Reporting limit

DRAFT

3. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

4. Calibration

Satisfactory instrument calibration is established to insure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

4.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (15%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits, with the exception of the compounds presented in the following table.

Sample Locations	Initial/Continuing	Compound	Criteria
SB-6 W TB-1	ICV %RSD	Acetone	19.2%
		Methylene chloride	42.8%
SB-5 (1-2) SB-6 (15-20) MW-4 (4-5) SB/MW-2 (4.5-5) SB-6 (4-5) SB-5 (20-25) SB-7 (3-4) SB-7 (15-20) DUP-1 MW-3 (4-5)	ICV %RSD	Chloroethane	33.6%
SB-6 W TB-1	CCV %D	Bromomethane	21.2%
		Carbon disulfide	20.8%
SB-5 (1-2) MW-4 (4-5) SB/MW-2 (4.5-5) SB-6 (4-5)	CCV %D	Chloroethane	26.9%

DRAFT

Sample Locations	Initial/Continuing	Compound	Criteria
SB-5 (20-25) SB-7 (3-4) SB-7 (15-20) DUP-1 MW-3 (4-5)			
SB-6 (15-20)	CCV %D	Chloromethane	22.5%
		Chloroethane	33.8%
		Methylene chloride	24.5%
		2-Hexanone	23.3%

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

Initial/Continuing	Criteria	Sample Result	Qualification
Initial and Continuing Calibration	RRF <0.05	Non-detect	R
		Detect	J
	RRF <0.01[1]	Non-detect	R
		Detect	J
	RRF >0.05 or RRF >0.01[1]	Non-detect	No Action
		Detect	
Initial Calibration	%RSD > 15% or a correlation coefficient <0.99	Non-detect	UJ
		Detect	J
Continuing Calibration	%D >20% (increase in sensitivity)	Non-detect	No Action
		Detect	J
	%D >20% (decrease in sensitivity)	Non-detect	UJ
		Detect	J

[1] RRF of 0.01 only applies to compounds which are typically poor responding compounds (i.e., ketones, 1,4-dioxane, etc.)

DRAFT

5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

All surrogate recoveries were within control limits.

6. Internal Standard Performance

Internal standard performance criteria insure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

7. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

A MS/MSD analysis was not performed on a sample location within this SDG.

8. Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

Sample locations associated with LCS analysis exhibiting recoveries outside of the control limits presented in the following table.

Sample Locations	Compound	LCS Recovery
SB-6 W TB-1	1,1-Dichloroethene	> UL
	Trichloroethene	> UL
	Trans-1,2-Dichloroethen	> UL
SB-5 (1-2) SB-6 (4-5) SB-5 (20-25) SB-7 (3-4) SB-7 (15-20) DUP-1 MW-3 (4-5) MW-4 (4-5) SB/MW-2 (4.5-5)	Acetone	> UL
SB-6 (15-20)	Acetone	> UL
	Bromomethane	> UL
	Methylene chloride	> UL

The criteria used to evaluate the LCS/LCSD recoveries are presented in the following table. In the case of an LCS/LCSD deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action

DRAFT

Control Limit	Sample Result	Qualification
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J

Note: Sample results were not qualified as rejected (R) due to the deviations listed above.

9. Field Duplicate Analysis

Field duplicate analysis is used to assess the precision and accuracy of the field sampling procedures and analytical method. A control limit of 100% for soil matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for soil matrices.

Results for duplicate samples are summarized in the following table.

Sample ID/Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
SB-5 (1-2)/ DUP-1	All compounds	ND	ND	AC

AC Acceptable
ND Not detected

The calculated RPDs between the parent sample and field duplicate were acceptable.

10. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

All identified compounds met the specified criteria.

11. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

SEMI-VOLATILE VOLATILE ORGANIC COMPOUND (SVOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8270	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cooled @ 4 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cooled @ 4 °C

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore detected sample results were not associated with blank contamination.

3. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

4. Calibration

Satisfactory instrument calibration is established to insure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

4.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

DRAFT

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (15%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits, with the exception of the compounds presented in the following table.

Sample Locations	Initial/Continuing	Compound	Criteria
SB-6 W	CCV %D	Bis (2-chloroethyl) ether	21.8%
		2,2'-Oxybis (1-chloropropane)	23.0%
		N-nitroso-di-n-propylamine	21.5%
		Butyl benzyl phthallate	23.7%
		Bis (2-ethylhexyl) phthallate	27.2%

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

Initial/Continuing	Criteria	Sample Result	Qualification
Initial and Continuing Calibration	RRF <0.05	Non-detect	R
		Detect	J
	RRF <0.01[1]	Non-detect	R
		Detect	J
	RRF >0.05 or RRF >0.01[1]	Non-detect	No Action
		Detect	
Initial Calibration	%RSD > 15% or a correlation coefficient <0.99	Non-detect	UJ
		Detect	J
Continuing Calibration	%D >20% (increase in sensitivity)	Non-detect	No Action
		Detect	J
	%D >20% (decrease in sensitivity)	Non-detect	UJ
		Detect	J

[1] RRF of 0.01 only applies to compounds which are typically poor responding compounds (i.e., ketones, 1,4-dioxane, etc.)

5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

DRAFT

Sample locations associated with surrogates exhibiting recoveries outside of the control limits presented in the following table.

Sample Locations	Surrogate	Recovery
SB-6 W	Phenol-d5	AC
	2-Fluorophenol	AC
	2,4,6-Tribromophenol	AC
	Nitrobenzene-d5	AC
	2-Fluorobiphenyl	<LL but > 10%
	Terphenyl-d14	AC

AC Acceptable

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the sample results associated with the deviant fraction are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> upper control limit (UL)	Non-detect	No Action
	Detect	J
< lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J

DRAFT

6. Internal Standard Performance

Internal standard performance criteria insure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the SVOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

7. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

A MS/MSD analysis was not performed on a sample location within this SDG.

8. Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the LCS analysis exhibited recoveries within the control limits.

9. Field Duplicate Analysis

Field duplicate analysis is used to assess the precision and accuracy of the field sampling procedures and analytical method. A control limit of 100% for soil matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for soil matrices.

Results for duplicate samples are summarized in the following table.

Sample ID/Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
SB-5 (1-2)/ DUP-1	2-Methylnaphthalene	16 J	9.9 J	AC
	Acenaphthylene	22 J	21 J	AC
	Anthracene	31 J	32 J	AC
	Benzo[a]anthracene	100 J	110 J	AC
	Benzo[a]pyrene	150 J	130 J	AC
	Benzo[b]fluoranthene	130 J	120 J	AC
	Benzo[g,h,i]perylene	110 J	110 J	AC
	Benzo[k]fluoranthene	47 J	44 J	AC
	Bis(2-ethylhexyl) phthalate	320	490	AC
	Butyl benzyl phthalate	310 U	180 J	AC
	Chrysene	110 J	110 J	AC
	Fluoranthene	160 J	180 J	AC
	Indeno[1,2,3-cd]pyrene	120 J	97 J	AC
	Naphthalene	20 J	310 U	AC
	Phenanthrene	120 J	120 J	AC
	Pyrene	160 J	180 J	AC

AC Acceptable

The calculated difference between the parent sample and field duplicate were acceptable.

DRAFT

10. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

Sample results associated with compound that exhibited a concentration greater than the linear range of the instrument calibration are summarized in the following table.

Sample ID	Compound	Original Analysis	Diluted Analysis	Reported Analysis
SD-6 (4-5)	Phenanthrene	8600 E	9400 D	9400 D
	Fluoranthene	7200 E	7800 D	7800 D
	Pyrene	6200 E	6900 D	6900 D
SB-7 (3-4)	Phenanthrene	14000 E	20000 D	20000 D
	Fluoranthene	16000 E	24000 D	24000 D
	Pyrene	13000 E	19000 D	19000 D
	Benzo(a)anthracene	9000 E	9400 D	9400 D
	Chrysene	8900 E	9200 D	9200 D
	Benzo(b)fluoranthene	9900 E	9200 D	9200 D
	Benzo(a)pyrene	10000 E	9800 D	9800 D
	Indeno(1,2,3-cd)pyrene	6600 E	6700 D	6700 D
	Benzo(g,h,i)perylene	5600 E	6000 D	6000 D

Note: In the instance where both the original analysis and the diluted analysis sample results exhibited a concentration greater than and/or less than the calibration linear range of the instrument; the sample result exhibiting the greatest concentration will be reported as the final result.

Sample results associated with compounds exhibiting concentrations greater than the linear range are qualified as documented in the table below when reported as the final reported sample result.

Reported Sample Results	Qualification
Diluted sample result within calibration range	D
Diluted sample result less than the calibration range	DJ
Diluted sample result greater than the calibration range	EDJ
Original sample result greater than the calibration range	EJ

11. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DRAFT

INORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) SW-846 Methods 6020, 7471 and 9012. Data were reviewed in accordance with USEPA National Functional Guidelines of July 2002 and USEPA Region 2 Validation SOPs.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and that it was already subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with the USEPA National Functional Guidelines:

- Concentration (C) Qualifiers

    U The analyte was analyzed for but not detected. The associated value is the analyte instrument detection limit.

    B The reported value was obtained from a reading less than the contract-required detection limit (CRDL), but greater than or equal to the instrument detection limit (IDL).

- Quantitation (Q) Qualifiers

    E The reported value is estimated due to the presence of interference.

    N Spiked sample recovery is not within control limits.

    * Duplicate analysis is not within control limits.

- Validation Qualifiers

    J The analyte was positively identified; however, the associated numerical value is an estimated concentration only.

    UJ The analyte was not detected above the reported sample detection limit. However, the reported limit is approximate and may or may not represent the actual limit of detection.

    UB Analyte considered non-detect at the listed value due to associated blank contamination.

    R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DRAFT

METALS ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 6020	Water	180 days from collection to analysis	Cooled @ 4 °C; preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cooled @ 4 °C.
SW-846 7470	Water	28 days from collection to analysis	Cooled @ 4 °C; preserved to a pH of less than 2.
SW-846 7471	Soil	28 days from collection to analysis	Cooled @ 4 °C.

All samples were analyzed within the specified holding times.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Analytes were detected in the associated QA blanks; however, the associated sample results were greater than the BAL and/or were non-detect. No qualification of the sample results was required.

3. Calibration

Satisfactory instrument calibration is established to provide that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument's continuing performance is satisfactory.

3.1 Initial Calibration and Continuing Calibration

The correct number and type of standards were analyzed. The correlation coefficient of the initial calibration was greater than 0.995 for all non-ICP analytes and all initial calibration verification standard recoveries were within control limits.

All continuing calibration verification standard recoveries were within the control limit.

DRAFT

3.2 CRDL Check Standard

The CRDL check standard serves to verify the linearity of calibration of the analysis at the CRDL. The CRDL standard is not required for the analysis of aluminum (Al), barium (Ba), calcium (Ca), iron (Fe), magnesium (Mg), sodium (Na), and potassium (K). The criteria used to evaluate the CRDL standard analysis are presented below in the CRDL standards evaluation table.

All analytes associated with CRDL standard recoveries were within control limits with the exception of the analytes presented in the following table.

Sample Locations	Analytes	CRDL Recovery
All soil samples in this SDG	Manganese	58%

The criteria applied to evaluate the CRDL Standard criteria are presented below. In the case of a calibration deviation, the sample results are qualified.

CRDL Standard Recovery Criteria			
Analytes	**Control Limit**	**Sample Result**	**Qualification**
All analytes, with the exception of Al, Ba, Ca, Fe, Mg, Na, and K	CRDL %R <50% (<30% for Sb, Pb, Tl)	Sample results ≥ MDL but <2x CRDL	R
		Non-detect sample results	R
		Detected sample results ≥ 2x CRDL	J
	CRDL %R 50-69% (30-49% for Sb, Pb, Tl)	Sample results ≥ MDL but <2x CRDL	J
		Non-detect sample results	UJ
		Detected sample results ≥ 2x CRDL	No Action
	%R >130% but <180% (>150% but <200% for Sb, Pb, Tl)	Sample results ≥ MDL but <2x CRDL	J
		Non-detect sample results	No Action
		Detected sample results ≥ 2x CRDL	No Action
	CRI %R >180% (>200% for Sb, Pb, Tl)	Sample results ≥ MDL	R

3.3 ICP Interference Control Sample (ICS)

The ICS verifies the laboratories interelement and background correction factors.

All ICS exhibited recoveries within the control limits.

4. Matrix Spike/Matrix Spike Duplicate (MS/MSD)/Laboratory Duplicate Analysis

MS/MSD and laboratory duplicate data are used to assess the precision and accuracy of the analytical

DRAFT

method.

4.1 MS/MSD Analysis

All metal analytes must exhibit a percent recovery within the established acceptance limits of 75% to 125%. The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the analyte's concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater. In instance where this is true, the data will not be qualified even if the percent recovery does not meet the control limits and the laboratory qualifier "N" will be removed.

A MS/MSD analysis was not performed on a sample location within this SDG.

4.2 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the CRDL. A control limit of 20% for water matrices and 35% for soil matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the CRDL, a control limit of one times the CRDL is applied for water matrices and two times the CRDL for soil matrices.

A laboratory duplicate analysis was not performed on a sample location within this SDG.

5. Field Duplicate Analysis

Field duplicate analysis is used to assess the precision and accuracy of the field sampling procedures and analytical method. A control limit of 100% for soil matrices and 50% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for soil matrices and two times the RL for water matrices.

Results for duplicate samples are summarized in the following table.

Sample ID/Duplicate ID	Analyte	Sample Result	Duplicate Result	RPD
SB-5 (1-2)/ DUP-1	Aluminum	12500	12000	4.0 %
	Arsenic	3.4	5	38.0 %
	Barium	204	567	94.1 %
	Beryllium	0.57	0.55	AC
	Cadmium	0.1 J	0.13 J	AC
	Calcium	2250	3250	36.3 %
	Chromium	17.3	17.3	0 %
	Cobalt	7.3	7.1	2.7 %
	Copper	94.3	190	67.3 %
	Iron	18700	18200	2.7 %
	Lead	695	887	24.2 %
	Magnesium	2990	2920	2.3 %
	Manganese	383	289	27.9 %
	Nickel	14.5	16.5	12.9 %
	Potassium	964	996	3.2 %
	Selenium	1.9	1.8	5.4 %

DRAFT

Sample ID/Duplicate ID	Analyte	Sample Result	Duplicate Result	RPD
	Silver	0.19 J	0.39 J	AC
	Sodium	135	152	11.8 %
	Vanadium	23.6	22.5	4.7 %
	Zinc	61.8	90	37.1 %

AC = Acceptable

The calculated RPDs between the parent sample and field duplicate were acceptable.

6. Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The analytes associated with the LCS analysis must exhibit a percent recovery between the control limits of 80% and 120%.

All LCS recoveries were within control limits, with the exception of the analytes associated with sample locations, as presented in the following table.

Sample Location	Analytes	LCS Recovery
All soil samples in this SDG	Antimony	121%

The criteria used to evaluate LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified.

Control limit	Sample Result	Qualification
LCS (water) percent recovery 50% to 79%	Non-detect	UJ
	Detect	J
LCS (water) percent recovery <50%	Non-detect	R
	Detect	J
LCS (water) percent recovery >120%	Non-detect	No Action
	Detect	J
LCS (soil) percent recovery < lower limit	Non-detect	J
	Detect	J
LCS (soil) percent recovery > upper limit	Non-detect	No Action
	Detect	J

7. Serial Dilution

The serial dilution analysis is used to assess if a significant physical or chemical interference exists due to sample matrix. Analytes exhibiting concentrations greater than 50 times the MDL in the undiluted sample are evaluated to determine if matrix interference exists. These analytes are required to have less than a 10% difference (%D) between sample results from the undiluted (parent) sample and results associated with the same sample analyzed with a five-fold dilution.

A serial dilution analysis was not performed on a sample location within this SDG.

DRAFT

8. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DRAFT

GENERAL CHEMISTRY ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
Cyanide by SW-846 9012 and Free cyanide by ASTM D4282.2	Water	14 days from collection to analysis	Cooled @ 4 °C; preserved to a pH of greater than 12.
	Soil		Cooled @ 4 °C.

All samples were analyzed within the specified holding times.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Analytes were not detected above the MDL in the associated blanks; therefore detected sample results were not associated with blank contamination.

3. Calibration

Satisfactory instrument calibration is established to insure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

The correct number and type of standards were analyzed. The correlation coefficient of the initial calibration was greater than 0.995 and all initial calibration verification standard recoveries were within control limits.

All calibration standard recoveries were within the control limit.

4. Matrix Spike(MS)/Laboratory Duplicate Analysis

MS/ and laboratory duplicate data are used to assess the precision and accuracy of the analytical method.

4.1 MS Analysis

All metal analytes must exhibit a percent recovery within the established acceptance limits of 75% to 125%. The MS recovery control limits do not apply for MS performed on sample locations where the analyte's concentration detected in the parent sample exceeds the MS concentration by a factor of four or greater. In instance where this is true, the data will not be qualified even if the percent recovery does not meet the control limits and the laboratory qualifier "N" will be removed.

DRAFT

The MS analysis performed on sample location SB-6 W exhibited recoveries within the control limits.

4.2 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the CRDL. A control limit of 20% for water matrices and 35% for soil matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the CRDL, a control limit of one times the CRDL is applied for water matrices and two times the CRDL for soil matrices.

A laboratory duplicate was not performed on a sample location within this SDG.

5. Field Duplicate Analysis

Field duplicate analysis is used to assess the precision and accuracy of the field sampling procedures and analytical method. A control limit of 100% for soil matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for soil matrices.

Results for duplicate samples are summarized in the following table.

Sample ID/Duplicate ID	Analyte	Sample Result	Duplicate Result	RPD
SB-5 (1-2)/ DUP-1	Free Cynanide	230 U	45.7 J	AC

The calculated RPDs between the parent sample and field duplicate were acceptable.

6. Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The analytes associated with the LCS analysis must exhibit a percent recovery between the control limits of 80% and 120%.

The LCS analysis exhibited recoveries within the control limits.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.
