| DEC Memo: | 8/17/2011 Sangesland spoke to Chris at ABC Tank. 5,000 gal UST that has not been used for 8+ years. Owner wants to abandon it. Failed a tank test causing this spill report to be filed (TTF). Sangesland told ABC to take a soil sample through the bottom of the tank and send in closure report. Tank will be abandoned in place per PBS requirements. 9/13/2011 Sangesland reviewed a tank closure report which analyzed 5 soil samples taken under/adjacent to the existing buried tank. (Report is attached in eDocs). 4 of the soil samples were well below CP51 Recommended Soil Cleanup Objectives. 1 sample had some minor SVOC exceedances in the Benzos but the case is OK to close out. |

| DEC Memo: | T/C : DEC Mahat contacted Mr. Kanaparthi inquiring more about the remediation of the site. An email address was provided in oder to receive a progress report on the case. DEC IS WAITING ON A REPORT. 10/22/14: Mahat DEC Mahat received an email from the Mr. Kanaparthi explaining the current status of the case, Email goes like this : Per you request, please see the following status for spill# 1407344 at Public School 3K At the direction of the New York City School Construction Authority, our consultant Divirka and Bartilucci Consulting Engineers (D&B) performed a soil sampling program on October 13, 2014 at P.S. 3 located at 50 Jefferson Avenue, Brooklyn, New York. This work was conducted to support the closure of two underground storage tanks as part of a proposed heating plant upgrade at Public School 3K. Soil samples collected from borings around the perimeter of the tanks indicated visual and PID impacts at the elevation of the tank invert (approximately 18-23 feet bgs). Analytical results from the soil sampling program are pending from the laboratory. Following receipt of the analytical data a report will be prepared describing the nature and extent of the contamination and will provide recommendations for closure. The report will be submitted to NYSDEC. Concurrently, NYCSCA will be proceeding with the preparation of a bid package to include plans and specifications for the proper closure of these tanks and closeout of the spill. It has been reported that these tanks have not been used in approximately 30 years. Also, during the site inspection by D&B, the tanks were observed to be filled with sand. Therefore, it is unlikely that this is an on-going release. Please feel free to contact me if you have any questions Thank you Steve Goldberg NYCSCA IEH Division 718-752-5022 DEC is waiting for laboratory analysis and a complete report. 12/17/14: Mahat A complete report has been submitted to the Department for a review. It has been uploaded on D2 for a reference. Collected end point samples are below CP 51 guidance standard. The potential source has been reomoved from the site. Futher excavation and remedial activities are not practical due to structural limits. Based on the report, any further investigation is not warrented by the Department. Hence, the spill case will be closed on the DEC |

| DEC Memo: | 8/1/95 Northland Marketing Corp. (Joseph Macchia) submitted corrective action plan. 8/7/95 Macchia informed DEC that borings were performed and to contact Walter Berninger at (516) 588-2251. Walter received info for Fenley & Nichol borings. Will mail 4 boring logs and associated lab analysis. No map indicating locations. Investigation most probably performed in conjuction with tank test failure and in vicinity of tanks & piping. 8/11/95 Received boring logs from F&N 1/2/89 completed due to TTF. 8/15/95 J. Rommel and K. O'Dowd conducted PBS inspection. Unregistered tanks in leased portion of property (minimum 3). Product in stick manhole for Regular U/L. Apparent antifreeze and transmission fluid surface spills. Apparent recurring spill by diesel pump island. 6 vent lines and 4 tanks. Concrete in very poor condition-increased possibility for surface spills to leach into subsurface. Could not ID location of F&N 12/89 borings. Leasing portion of property since 8/7/95. 8/21/95 DEC approved CAP. CAP to be implemented within 10 days of receipt. An |

investigation plan will be submitted within 15 days. 9/29/95 DEC sent Northland comments on Investigation Plan. 12/4/95 As per W. Berninger. BEI on site today with air rotary rig. Down 35' and did not encounter GW. Maybe caused by hot air injected (maybe within water table but can't tell). Rethinking approach. 12/6/95 Down hole hammer got stuck, formation caved in. Propose to case top 20' and drill deeper. Air rotary to break rubble and then switch to hollow-stem auger(small diameter). 1/30/96 S. Muller, BEI, called to report 2 wells were installed last week. DTW 68'bgs. Boring near Atlantic clean. He determined that groundwater flow direction probably NNW. He wants to gain access into fenced area. 2 more wells are planned for installation. 1/31/96 On site during installation. 4/15/96 MW-1 Pet. Odor 70', 5.5ppm HNU soil, 3392ppb gw MW-2 Clean, 1.8ppm HNU soil, 1134ppb gw MW-3 27.4ppm HNU soil, 25,436ppb gw BEI recommends additional MWs to define plume and confirm its origin. As per C. Nalbone, flying Citgo flag. Singh (Citygas) operating/testing. Spill 9614595 reported 3/13/97 for product in wells and odor complaints. J. Rommel/K. O'Dowd Notes: 3/20/97 Spoke to Manager of Wendy's, Rommel Smith. Vapor problem during deliveries, especially in women's bathroom. Floor drain in office did not show readings with Crocon. Environmental reports MW-3 and MW-4 observed with 0.13' and 0.74' LNAPL respectively. An automated free product recovery system being considered. 8/19/99 Impact reports a new Mobil station being constructed and all USTs and system components removed. 10/22/99 UST Closure Report submitted (Impact, 10/20/99). 21 USTs removed. 3 X 4000gal gasoline tanks removed from the north area(concrete encased). 9 X 750gal tanks were removed from the south area(concrete encased). 2 X 3000gal, 1 X 1000gal gas USTs in south area were observed to be abandoned and filled with concrete. 5 X 100gal empty tanks removed from the south area. 1 X 1000gal fuel oil tank removed from area 3. Endpoint samples show VOC/SVOC concentrations above soil cleanup guidance in all three excavations. Removed 3200 tons of contaminated soil. All wells destroyed and replaced. Report recommends remediation. Quarterly monitoring reports received 7/24/01, 12/5/01, 8/27/02, 1/15/04 prepared by Impact. 6/13/01, 7/18/01 EFR events for MW-3, MW-4, MW-5. 30gal LNAPL was recovered during each event. The recovery system is a compact skimming system used in conjuction with the SVES. Wells were on monthly product recovery schedule. The remediation system that was installed on the property consists of two soil vapor extraction well clusters(SVE-1/MW-5, SVE-2/MW-3), one monitoring well (MW-4) and two blowers. Screens of SVE wells are set at different levels through vadose and saturated zones. The SVES is manifolded to operate each well cluster independent of the other. (Startup date unknown). 3/10/04 Received 1Q04 monitoring report. MW-3, MW-4 and MW-5 are hottest. MW-6, across Bedford Ave is the edge of the plume. Upgradient wells Mw-1 and MW-2 are clean. May need to install well downgradient/north of MW-4 but appears plume migration is minimal. GW direction varies. Monthly monitoring for LNAPL. SVE effluent is below benzene emission limit(250cfm, 20' stack). 6/18/04 Received 2Q2004 monitoring report. BTEX ranged from ND(MW-1, MW-2, MW-6) to 22526ppb(MW-4). MTBE ranged from ND(MW-1, MW-2, MW6) to 95ppb(MW-5). 6/21/04 Received addendum to approved RAP. Three air sparge wells will be installed to approx 78'bgs, with 2' of screen, connected to 1 pipe. A 3HP compressor is expected to provide approx 8-10CFM at 10psi to each sparge well. Air sparge pilot testing will be conducted to verify pressure, flow and equipment size assumptions. The existing SVE system consists of two SVE well clusters, one well MW-4 that is connected to the SVE system and two blower units. Each blower is capable of inducing airflow of 125cfm at approx 60 of water for a total flow of 250cfm. Startup testing will be done upon completion of upgrade activities. SVES & Sparge vacuums, pressures and radii of influence will be measured to ensure vapor capture and sparge system efficacy. Following startup, the system will be monitored weekly for one month to assure proper system operation. 6/30/04 Meeting with Spartan Petroleum and Impact Environmental. Previously an Exxon. Impact plans on system modification. Asked them to confirm the well screen was above the water table and water is where it was last year. Proposing to sparge. March 2003 was the last time free product was detected. Dissolved now. 200tons of contaminated soil was removed. 9/15/04 Received 3Q2004 monitoring report. BTEX ranged from ND(MW-1,2,6) to 8180ppb(MW-4). MTBE ranged from ND(MW-1,2,6) to 644ppb(MW-4). 2/8/05 Received 4Q04 monitoring report. BTEX ranged from ND(MW-1,2) to 7527ppb(MW-4). Results of 5/27/11 GW sampling event show MW-8 had 6,444 ug/L total VOCs (up from ND in Feb. 2011). Kolleeny 02/24/12: Reviewed 3rd Quarter 2011 mon rpt by Impact Envt'l (in eDocs), dated 12/30/11. GW samples collected on 9/12/11 showed low to moderate levels of dissolved-phase contam in wells MW-4 & MW-6; however, MW-5 and MW-8 were dry and could not be sampled. Rpt says PID screening of AS/SVE system vapor discharge shows discharge in compliance with benzene limit. - JK 03/09/12: I closed spill case 0912321 for waste oil UST at this site. Sent spill closure letter via email to Mr. Harvinder Singh of Bolla EM Realty LLC, stating: Dear Mr. Singh: Please see attached spill closure letter regarding spill case 0912321. A hard copy of this letter will not be forwarded. As noted in letter, spill no. 8808500, for gasoline-related contamination at site, remains open. All monitoring, vapor extraction and air sparging wells at site should remain open for ongoing monitoring and remediation of contamination related to that spill. Feel free to contact me if you have any questions. - J. manager for Impact? After sending email, received phone call from Michael Bluight of Impact, who said he is now PM and that they are finishing up monitoring rpts for 4th qtr 2011 and all 4 qtrs of 2012, with sampling of wells installed by Impact and also wells installed by Kleinfelder. He sent follow-up email: Jon, I will be taking over as project manager for this site. I am currently finalizing QMR rpts for Site. Said final rpts will include sampling results from: 4th qtr 2011 (sampled 12/13/11) 1st qtr 2012 (sampled 2/14/12) 2nd qtr 2012 (sampled 6/27/12) 3rd qtr 2012 (sampled 10/5/12) 4th qtr 2012 (sampled 12/28/12) As per our conversation, GW samples were collected during 2nd, 3rd and 4th quarters of 2012, from wells in current monitoring network, and from on-site monitoring wells installed by Kleinfelder East, Inc. during its 2010 Phase II Envt'l Site Assessment work. An annual GW monitoring rpt for 2012, consolidating data obtained from all four quarters in 2012, can be constructed and submitted to NYSDEC in lieu of four separate rpts, if preferred. Please call me if you have any questions and/or concerns. On 2/13/13, I sent email reply: Michael, Thanks for your response, it was nice speaking with you yesterday. Please send a separate rpt for 4th Quarter of 2011, but I like your suggestion of sending one annual rpt for 2012 consolidating data for four quarters of 2012. However, let's return to quarterly monitoring rpts for 2013. Most importantly, rpt for 2012 should include evaluation of remedial progress and recommendations for further actions to move this spill case toward closure. - J. Kolleeny 03/27/13: On 3/25/13, received Quarterly Monitoring Rpt for 4th Quarter 2011 and GW Mon Rpt - 2012 Annual Rpt by Impact Envt'l, both dated 3/21/13 (both in eDocs). On 3/27/13, received email from Michael Bluight of Impact: Jon, we are having a few problems with our UPS overnight service as of late just wanted to make sure you received hard copy (with electronic copy on CD) of rpts for this site? 1st quarter [2013] GW monitoring / sampling event is scheduled to be performed within next 5 to 7 business days. I sent email reply if rpt(s) include any recommendations that require DEC response. Michael sent reply: For Atlantic Avenue, we will still continue monitoring and operating remedial system as before. Only revision was incorporation of certain monitoring wells installed by Kleinfelder during a phase II investigation a few years back and deletion of existing wells in profile, located on western side of Site. Majority of detections in GW samples and identified location of dissolved phase in GW, is located on eastern side of Site. I listed our proposed revised monitoring network in conclusions section of 2012 annual rpt. Please call me if you have any questions and or concerns with rpt information and thank again for your assistance. - JK 04/03/13: Received email from Michael Bluight of Impact Envt'l: Jon, just a follow-up for 1143 Atlantic Avenue, Brooklyn, NY. We were planning to conduct next quarterly sampling round tomorrow at site. As per your below correspondence, we recommended revising GW monitoring network to consist of wells: MW-1, MW-4, MW-5, MW-8, MW-E, MW-G and MW-H. We will gauge ALL site wells (helps tighten up GW contour map). Is this recommended revision OK?Thanks as always for your assistance with this project and please call me if you have any questions and/or concerns. I sent email reply: Michael, I've quickly looked over 4th quarter 2011 monitoring rpt and 2012 annual monitoring rpt for this site, and wells you've listed are approved for sampling, but in addition to those wells, I'd like you to also include well MW-6. Well MW-6 helps provide off-site delineation, and had 196 ug/L total BTEX when last sampled in December 2012. Not a

very high result, but evidence of an off-site impact that should continue to be monitored. I also want to reserve right to request that other wells be added back into monitoring program, if there are reasons to do so. Please let me know if you have any questions or comments. - J. Kolleeny 04/03/13: Completed review of QMR for 4th Quarter 2011 by Impact Envt'l, dated 3/21/13 (in eDocs). Rpt states that SVE/AS system is operating, recovering hydrocarbons, and that PID screening of vapor effluent indicates benzene is in compliance with discharge limit. GW sampling in Dec. 2011 shows significant impact in well MW-3, with 2,677 ug/L total BTEX (was reportedly ND for BTEX when sampled in May and Sept. 2011, but had 2,940 ug/L tBTEX in Sept. 2009); off-site well MW-6 had 123 ug/L tBTEX (down from 415 ug/L in Sept. 2011). Several important wells were not sampled, e.g., MW-5 and MW-8, nor were any of wells installed by Kleinfelder as part of Phase II Assmt sampled. Rpt states that Impact will attempt to recondition wells MW-5 and MW-8 so they can be sampled in future monitoring events. - JK 04/04/13: Reviewed GW Mon Rpt 2012 Annual Rpt by Impact Envt'l, dated 3/21/13 (in eDocs). Rpt presents data for all four quarters of 2012. On-site AS/SVE system operated throughout period; PID screening indicates effluent was in compliance with benzene discharge limit. GW samples were collected from usual wells in Feb. 2012, and from most of those wells plus wells installed by Kleinfelder in June, October and December 2012. Overall, data show significant GW impacts in wells MW-3, which had 2,730 ug/L total BTEX in Feb. 2012, up from 2,677 ug/L in Dec. 2011 (not sampled in 2nd, 3rd & 4th quarters of 2012); well MW-G, which had 920 ug/L tBTEX in June 2012, 1,190 ug/L in Oct. 2012 and 3,100 ug/L in Dec. 2012 (had 4,794 ug/L tBTEX when sampled in June 2010); and well MW-H, which had 6,050 ug/L tBTEX in June 2012, 3,110 ug/L in Oct. 2012 and 910 ug/L in Dec. 2012. Off-site well MW-6 had 196 ug/L tBTEX in Dec. 2012. Wells MW-5 and MW-8 were not sampled during 2012. Rpt proposes revised well network for quarterly monitoring, comprising wells MW-1, MW-4, MW-5, MW-8, MW-E, MW-G and MW-H (Impact will attempt to recondition wells MW-5 and MW-8 for sampling). As noted above, I sent email on 4/3/13 approving these wells for sampling but adding well MW-6 to monitor off-site impacts and stating that DEC reserves right to add back other wells as needed. Operation and monitoring of SVE/AS system and quarterly GW monitoring will continue, with 1st quarter 2013 GW sampling event expected to occur in late March 2013. - J. Kolleeny 03/18/14: Reviewed 2013 Semi-Annual GW Monitoring Rpt dated 11/20/13, by Impact Envt'l, received by email from Julianna de la Fuente of Impact on 12/2/13 (in eDocs). Results of GW sampling in April & June 2013 (i.e., 1st & 2nd quarters 2013) showed well MW-4 had 171 ug/L total BTEX in April 2013 (up from 1 ug/L in Dec. 2012), and had 20 ug/L tBTEX in June 2013; well MW-6 had 546 ug/L tBTEX in April 2013 (up from 196 ug/L in Dec. 2013) and 475 ug/L tBTEX in June 2013; well MW-G had 2,190 ug/L tBTEX in April 2013 (down from 3,100 ug/L in Dec. 2012) and 560 ug/L tBTEX in June 2013; well MW-H had 1,799 ug/L tBTEX in April 2013 (up from 910 ug/L in Dec. 2013) and 2,840 ug/L in June 2013. Well MW-3 has been damaged and could not be accessed for sampling in April/June 2013, but well MW-H is very close by; wells MW-5 and MW-8 were dry and could not be sampled in April/June 2013. Based on data, Impacts recommends continuing with quarterly GW monitoring/sampling from agreed-upon well network. - J. Kolleeny 08/15/14: Reviewed Semi-Annual GW Mon Rpt for 3rd & 4th Quarters 2013 by Impact Envt'l, dated 4/11/14 (in DecDocs). Results of GW sampling in Sept. & Dec. 2013 showed only significant GW

impacts in well MW-G, which had 1,499 ug/L total BTEX in Sept. 2013 (up from 560 ug/L in June 2013) and increased to 1,910 ug/L tBTEX in Dec. 2013; and well MW-H, which had 2,594 ug/L tBTEX in Sept. 2013 (down from 2,840 ug/L in June 2013), and decreased to 761 ug/L tBTEX in Dec. 2013. Wells MW-5 and MW-9 were dry and could not be sampled. I sent email to Juliana de la Fuente of Impact, cc to Kevin Keaka of Impact, asking if Impact ever tried to recondition wells MW-5 & MW-8 as stated in an earlier rpt, noting that it's important to sample these wells, which have had high VOC levels in past, and that if wells cannot be reconditioned, they may have to be reinstalled to greater depth to hit GW. I also asked that GW data tables in future rpts include line for total VOCs in addition to total BTEX. - J. Kolleeny 01/22/15: Received phone call from Kevin Kleaka of Impact Envt'l, asking if he could meet with me on 1/28/15 to discuss improvements in GW quality and possibility of shutting down SVE system at site. I agreed to meet on 1/28/15; Kevin sent site map and GW data table with recent sampling data. I asked if he had any SVE system vapor recovery data, he sent table with data from PID screening of system's vapor recovery. Site plan and data tables in DecDocs as brief. - J. Kolleeny 01/28/15: Met with Kevin Kleaka of Impact Envt'l to discuss site. GW data for 4 quarters of 2014 show all wells being sampled below 1,000 ug/L total BTEX, except for well MW-H which had 1,386 ug/L tBTEX on 9/16/14 (but decreased to 798 ug/L tBTEX in Dec. 2014). These wells also show fairly consistent decreasing trends over time. However, well well MW-5 had 1,093 ug/L tBTEX when last sampled in Sept. 2009 and well MW-8 had 3,427 ug/L tBTEX when last sampled in May 2011, but sampling of these wells was discontinued because they have gone dry. According to Kevin, depth to water at site is ~80 ft. PID screening of SVE system vapor recovery shows mainly low PID readings for past several yrs, with temporary increases in first half of 2014 - went from 3 ppm in Dec. 2013 to 127 ppm in Jan. 2014, 21.5 ppm in Feb. 2014, 59.6 ppm in March 2014, 25.8 ppm in May 2014, 16.0 ppm in June 2014, then settled back to single digitsin July 2014 and was only 0.5 ppm in Dec. 2014. Based on decreasing GW contam levels & trends and low hydrocarbon vapor recovery of system, Impact is proposing shutting down system and considering site for spill closure. I asked that system be pulsed, that a vapor influent sample be collected for lab analysis, and that another round of GW sampling of selected wells be performed to confirm levels and trends, and that if data support closure in their view, they include risk assessment/sensitive receptor evaluation for residual impacts in report requesting closure. They agreed to these requests. Afterward, Kevin sent follow-up email to summarize discussion at meeting: Jonathan - Thank you again for meeting with me today regarding this site. As discussed, below is a brief summary of tasks we agreed to complete for 1st quarter [2015] pursuant toward closure of spill. 1. A system influent sample will be collected and analyzed for VOCs by TO-14 during next site visit. 2. Remedial system will be pulsed during first quarter. Pulsing will include effluent readings with a PID for possible rebound . 3. Next quarterly GW sampling event for 1st Qtr (likely in March) will only include wells MW-H, MW-4, MW-E and MW-G. DTW readings will be recorded from all on-site wells during above GW sampling event for purpose of providing current GW flow direction. If system shutdown/pulsing doesn t show any significant recovery of residual contamination and next GW sampling data is consistent with and/or lower than existing data set, we will be requesting closure of spill inclusive of a risk

assessment. Thank you, please advise if you have any comments based on above points. I wrote back: Kevin, It was nice meeting with you today. My only comment on your summary of today s discussion is that I was thinking that system influent sample for TO-14 analysis should be taken when pulsing system, i.e., after system has been down for a while and then re-started, which would presumably be maximum hydrocarbon recovery one is likely to see from system at this point. If you think this doesn t make sense, please let me know. Another option (though more expensive) would be to collect a vapor sample for lab analysis during next site visit, as you ve stated below, and then collect one more TO-14 sample after pulsing system off and back on (as I suggested above), which would allow a direct comparison of pre-pulsing and post-pulsing hydrocarbon recovery. Kevin replied: Thanks Jonathan - We will collect an influent sample both before system is shut down for pulsing and at end of 1st qtr (likely when we collect GW samples) after a few cycles of pulsing. I agree this will be useful for comparison purposes. - JK 10/20/15: Reviewed Closure Request Rpt by Impact Envt'l dated 9/21/15 (in DecDocs). Rpt summarizes past investigative and remedial actions at site, presents recent & historical GW sample data and system operational data, plus includes risk assessment/sensitive receptor survey in support of spill closure request. Rpt states that total of 21 USTs were removed from site in 1999, and ~3,200 tons of petroleum-impacted soil were excavated and removed. An SVE system was installed in 2000; VEFR events were performed on several wells in 2001-2002, recovering ~325 gals of LNAPL; no LNAPL has been observed in site wells since 2003. In 2004, system was upgraded to include air sparging. As requested by DEC, remedial system was pulsed by alternately being shut down & restarted in Feb. and March 2015; vapor influent samples collected before shutdown and after re-start showed no significant increase in hydrocarbon recovery (in fact, neither sample had significant VOCs), suggesting system has reached limit of effectiveness. GW data for March and June 2015 showed well MW-4 had 23 ug/L total VOCs in March 2015 (down from 909 ug/L in Dec. 2014; had 11 ug/L tVOCs in Sept. 2014) and had 56 ug/L tVOCs in June 2015; well MW-E had 782 ug/L tVOCs in March 2015 (up from 69 ug/L in Dec. 2014) and had 225 ug/L tVOCs in June 2015; well MW-G had 709 ug/L tVOCs in March 2015 (down from 1,552 ug/L in Dec. 2014) and had 1,627 ug/L tVOCs in June 2015; well MW-H had 3,940 ug/L tVOCs in March 2014 (up from 1,065 ug/L in Dec. 2014) and had 1,713 ug/L tVOCs in June 2015. Well MW-3 was found to be damaged and was replaced by well MW-H; wells MW-5 and MW-8 have been dry since 2013, and other wells were dropped from monitoring program due to low or ND levels of VOCs. Impact Envt'l concludes that altho VOC levels remain somewhat elevated in wells MW-G and MW-h, both wells show decreasing trends over time. Depth to water at site is more than 60 ft, and GW flow, altho it has varied over time, has been to N or NW since 2013 and wells down-gradient from MW-G and MW-H show impacts in those wells are limited in extent and not migrating. Rpt states that site is likely to remain a gas station. Receptor analysis concludes that altho some residual soil & GW impacts remain at site, considering that bulk of contaminated soil was excavated, AS/SVE system operated on-site for years and had virtually no hydrocarbon recovery towards end of operation, and depth to GW is more than 60 ft, residual impacts are not likely to pose a threat to public health or environment. Based on remedial actions performed and data presented, I closed spill case and sent closure letter (in DecDocs) by email to Mr. Hank Alpert of Spartan Petroleum, Inc.

| DEC Memo: | Sangesland spoke to Kleinfelder about this spill. They will contact Veeder Root and get back to the DEC with the results. 9/30/2008 Sangesland reviewed a report from Kleinfelder dated June 9, 2008. Apparently there were 2 bolts missing from the spill bucket encasement which prevented the line tightness test from happening. Once these bolts were replaced, the system passed. Based on this information and a telephone conversation with rep from Kleinfelder, this case is closed out. See attached report in eDocs to review repairs made to the spill bucket encasement at the site. |

Spill assigned to DEC Rahman as site is part of ExxonMobil portfolio review and possible closure or transfer to Albany if necessary. 09/14/10-Farrell-CD File review requested by S. Rahman. Spill closure request for Spill #09-12321 & 09-12250 by (Kleinfelder East, Inc.-Joel Adrian/Alex Wirth-(845)-567-6530) July 8, 2010 SAR prepared by (Kleinfelder East, Inc.-Lisa Messinger/Laurie Smith-(631)-218-0612) May 25, 2010 for ExxonMobil Environmental Services Company, Fairfax, VA. Location of interest: ExxonMobil Station No.12141 (17-TJ8) 1143 Atlantic Avenue Brooklyn, NY KEI (listed above) evaluated recognized environmental conditions (REC) conducted in 12/08 by KEI. Active retail petroleum fuel station with convenience store. A grassy area, a car wash driveway, & further a church (north), Bedford Avenue followed by Quizit Motor Sports, Inc. and an inactive gas station (Gaseteria) (east), Atlantic Avenue and a US Army Armory beyond (south), & a car wash (west). groundwater found at depths of 11.67-67.92 bgs, north and east flow determined. Two tank field
observation wells are monitoring points, located at the corners of the tank field. KEI (above)
reported ten (10) Federal water-supply wells within 1 mile of the property, one (1) private
non-potable well within 300 ft of the property, & one (1) private water well within 1000 ft of the
property. REC s include 2 current 12,000-gal gasoline USTs with piping and dispensing units, one
(1) current 8,000-gal diesel UST, ten (10) current dry wells utilized for surface storm water
drainage, a historical record of gasoline sales and automobile service since the 1930s, and
potential impact from several surrounding off-site properties. The property has been indicated to
have had 21 USTs removed from site in 1999. Seven (7) previous spill cases have been noted:
#8808500 assigned to CITGO/Spartan Petroleum (Follow-up indication of contaminated soil and
groundwater from determined air pressure test fail on 4,000 gal UST in 1989. This case remains open
and active.). Case #8903335, #9614595, #0111876, #0507954, and #0800461 have all been closed (no
description listed), #0513211 (discharge of 20 gal of gasoline from motor vehicle striking MPD)
opened 2/16/06 closed 3/20/06, & the Spill numbers listed above are open currently due to elevated
PID measurements & discovery of a UST in the northeastern portion of the property (included water
and several inches of petroleum; also sampled 3/20/10). ERI began Phase II ESA on 1/13/10 with
site-wide GPR survey. Five of twelve (5) soil borings were advanced, (5) monitoring wells were
installed, and (1) combined soil boring/monitoring well was established beginning on 2/15/10.

The two (2) tank field observation wells & one monitoring well (TF1, TF2, & MW-2) were gauged on
4/8/2010 as well. They were all dry with no presence of LPH.

(1,740ppm) Reviewer Recommendations: 1) Further remediation is need at
the four locations directly
above due to the PID readings and their downgradient position 2) The
abandoned UST will have to be
purged and removed to confirm that it isn t a source of the
contamination at the surrounding
borings/wells. If a different process is warranted at this time, then
that procedure should be
undertaken 3) Surrounding groundwater flow needs to be determined to
indicate if off-site sources
are contributing environmental factors 10/26/2010: Site transferred
from Region 2 to Central Office
(Remedial Bureau B, Section C) for management. 11/9/2010: Based on
document review and
conversations with Region 2 personnel familiar with the case (Kolleeny
and Maisonave), the
abandoned UST noted under this spill is related to an earlier spill
number (88-08500, assigned to
CITGO/Spartan Petroleum). This historic spill is currently being
addressed under a STIP, and is
being managed in Region 2. Therefore, it is recommended that this
spill be transferred back to
Region 2 for management. (Harrington) 08/17/11: This spill case
transferred from J. Maisonave to J.
Kolleeny. I was contacted by Jessica Kruczek of ARCADIS regarding
plans to close this UST (which is
suspected to have been a waste oil or heating oil UST based on small
size). She forwarded an email
she had sent to Joseph Maisonave of DEC (currently on extended leave):
Mr. Maisonave, After
identifying locations of utilities at site in advance of UST removal,
we are requesting to abandon
UST in place rather than remove it. Please see attached Figures (2 &
3) [in eDocs as drawing] for
locations of utilities relative to UST location (marked as abandoned;
we were already preparing for
rpt). Please note that there is an unidentified utility within 1 ft of
tank, an active water line
and AS/SVE components within 2.75 ft, and active sewer and gas lines
less than 9 ft from UST. In
addition, there is a retaining wall within 3 ft. This makes for a very
difficult and potentially
dangerous removal. Please advise. After getting Joe M’s auto reply,
Jessica contacted me, stating

**CITGO STATION (Continued)** **S102560459**

that, altho they wanted to remove UST, due to proximity of tank to utilities, components of AS/SVE system, and retaining wall, they prefer to close UST in place. I said that's ok, but they should advance 3 or 4 borings as close as possible to tank, down to 15 ft or so, to collect soil samples and evaluate any possible release from tank. I mentioned that site is being remediated under sp8808500, consultant Impact Envt'l, and Jessica said she would contact Impact and coordinate closure activities with them. She will send email confirming closure sampling plan and schedule. - J. Kolleeny 10/17/11: Sent email to Jessica Kruczek of ARCADIS requesting site update. She called back and said UST was abandoned in place during Sept. 2011, two closure borings were drilled, but in trying to drill 3rd boring, they hit an unmarked gas line and stopped. She said results of soil samples from two borings showed only traces of one VOC (toluene) and several PAHs. They will forward rpt with request for spill closure in several weeks. - J. Kolleeny 10/25/11: On 10/24/11, received UST Abandonment Rpt by ARCADIS (in eDocs). Will review. - JK 12/23/11: Completed review of 10/24/11 UST Abandonment Rpt by ARCADIS. Rpt summarizes UST abandonment activities in Sept. 2011. Top of former waste oil tank was exposed; tank contained mixture of product/water (suggesting tank was tight). Tank was vacuumed out, cut open and cleaned. Three borings were attempted, but only two were successfully advanced to target depth (3rd boring hit an unmarked gas line). Soil data showed no significant soil contam. No boring logs included in rpt; I contacted Jessica Kruczik of ARCADIS and requested boring logs. - J. Kolleeny 01/05/12: Received soil boring logs from ARCADIS via email from Jessica Kruczik on 12/29/11 (in eDocs). Logs show two borings extended to 15 ft bgs, no PID readings detected. - JK 03/09/12: In February 2012, I contacted Hal Benjamin and Kevin Klaeka of Impact Envt'l, they are addressing spill no. 8808500 at this site, using AS/SVE to remediate gasoline-related soil and GW contam. I told them I intended to close this spill; Kevin brought to my attention a Kleinfelder Phase II rpt done for site (in eDocs for closed spill no. 0912250). That rpt shows wells not shown in Impacts monitoring rpts; one such well, MW-G, has significant GW contam and is located not far from closed-in-place waste oil UST. I contacted Jessical Kruczik of ARCADIS to discuss whether contam in this well could be related to waste oil UST. She noted that tank had been tight, with no sign of pipes going in/out that could have leaked, and that GW data show high levels of gasoline-related compounds, unlikely to have been generated by release from a waste oil UST. In any case, she noted that Impact is contracted to

**CITGO STATION (Continued)** **S102560459**

perform remediation of site,
ARCADIS was only responsible for tank closure and soil delineation.
Based on available data, I
agree that waste oil UST is not likely source of GW contam at site.
Closed spill and issued closure
letter (in eDocs) to RP, Harvinder Singh of Bolla EM Realty LLC, cc's to Paul Pingile of Bolla,
Jessica Kruczik of ARCADIS. - JK

SB-C/MW-E at 68-69 bgs
(1,740ppm) Reviewer Recommendations: 1) Further remediation is need at
the four locations directly
above due to the PID readings and their downgradient position 2) The
abandoned UST will have to be
purged and removed to confirm that it isn t a source of the
contamination at the surrounding
borings/wells. If a different process is warranted at this time, then
that procedure should be
undertaken 3) Surrounding groundwater flow needs to be determined to
indicate if off-site sources
are contributing environmental factors 10/26/2010: Site transferred
from Region 2 to Central Office
(Remedial Bureau B, Section C) for management. 11/9/2010: Based on
document review and
conversations with Region 2 personnel familiar with the case (Kolleeny
and Maisonave), the
contamination noted under this spill is consistent with an earlier
spill number (88-08500, assigned
to CITGO/Spartan Petroleum). This historic spill is currently being
addressed under a STIP, and is
being managed in Region 2. Therefore, no further work will be
conducted under this spill number.

Environmental Interest/Information System:
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

He said on July 24, 2000 they tested two tanks at the hospital one 2000-gallons and one 3000-gallons both failed the test. the 3000-gallons failed the test with a gross dry leak and the 2000-gallons show no indication. He said we were hired for another company ( Coastal Combustion) 516-352-5156. PBS # 2-347647 9/14/15-Donna Vieni from ABC Tank sent the following email On August 11, 2000 ABC Tank disconnected the union on the manhole cover and installed gasket, nuts & bolts on (1) 2000 gallon fuel storage tank,. As per the above notes the 3000-gallon failed the test with a gross dry leak due to the manhole which was repair. If no further documentation or orvet evidence exits regarding the TTF being bonafide indication of a petroleum release to administratively close the spill. Spill Close.

| DEC Memo: | DEC Piper contacted resident at 2am 12/9/06- Resident was just getting to sleep after petro was there. Piper followed up at 7 am. Oil was outside and some was inside. Petro placed speedy dry down and gave owner name of three contractors. Piper responded due to lack of info. Piper arrived on site and oil was present outside. Owner had left??? No answer. Piper was able to contact Petro through 1800 oil heat. As per rep., a delivery was made on Friday though was stopped due to a broken fill line. Piper asked to speak with manager Pauola Kuzack. Piper explained that spill occured during a delivery and was not cleaned up properly. Petro had left a mess and did not clean. Piper asked if this was normal practice. PAuola said no and would have someone clean up spill, and make repairs thereafter. Piper contacted owner via cell who was at appointment? and stated Petro will clean spill and owner required to pay for repairs. Piper to follow up on Monday. 12/11/06- DEC Piper phoned Petro. As per Joe at Petro, spill was not cleaned by Petro since they did not make a delivery. SJ Fuel made a delivery next door that Friday and may have delivered to wrong address. Piper contacted SJ Fuel and stated that I can do a fingerprint analysis on the two tanks and it would be a lot easier for everyone if SJ cleaned the small surface spill. Piper was in neigborhood that afternoon and surfacespill was already cleaned by owner. Owner still has to make repairs to vent. and notified Petro. This case is closed. |
| Remarks: | Caller reports unk oil company overfilled the tank. Spill was in the basement of the residence. Caller was given 3 cleanup company names. |

conducted. DEC Piper recieved
letter report. Spill has been partially cleaned. A cracked filter on
the temp burner located in a
trailer was the cause. It spilled to the trailer and dripped onto
pavers. Three was also an
uncovered 5 gal pail of oil next to tank that was displaced by
rainwater. Speedy dry was placed
down and picked up. 5/17/10= DEC Piper spoke with DREW PArdus.
Additional work has been comleted
though soil samples were never taken. Drew will schedule sampling and
notify me. 3/10/11- DECPiper
received closure request. Soil samples revealed VOC's below tagm and
SVOCs slightly above. The SVOC
were consistent troughout and believe to be derived from urban fill.
Based on work to date, this
spill is closed. see edocs if warranted.

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 12/12/2003 Lisa from Tristate Envir. (914-592-3385) called to say her crew was on their way to the site. 12/15/2003 Lisa said her crew did a cleanup both outside and inside the basement. Basement floor was cement. Some personal property was impacted. She will check with her crew for more details and get back to the DEC. 12/19/2003 Sangesland spoke again with Lisa at Tristate. The borings taken near the tank were a little high. Tristate will do more work next week and will get back to the DEC. 2/5/2004 Lisa from Tristate called from the site. They're digging out the basement today and will probably get endpoint samples by the end of the day. The homeowner had issues |

Sangesland said the DEC would work with Tristate to turn around the sample results and approve a closure ASAP. 3/5/2004 Sangesland called Lisa for a status update. Tristate still needs to get into basement to finish digout. Scheduling is a problem with the homeowner.
Sangesland tried to call homeowner- no answer, no message machine

Site Description: Site Location: The 0.177-acre site is located at 517-523 Nostrand Avenue, in the Bedford-Stuyvesant section of Brooklyn. The site occupies Tax Block 1867 Lots 15, 16, 17, and 18. The site is bounded to the north by Herkimer Street followed by commercial and residential buildings; to the east by a residential building; to the south by a mixed-use residential and commercial building; and to the west by Nostrand Avenue followed by mixed-use buildings and commercial buildings. Site Features: The site is a vacant, vegetated lot. Current Zoning and Land Use: The site is currently zoned C4-5D and vacant. The proposed development will consist of a seven-story

**517-523 NOSTRAND AVENUE (Continued)** **S129982658**

residential building. Past Use of the Site: By the late 1880s, there were residential and commercial sites fronting Nostrand Avenue. Commercial buildings were fronting Herkimer Avenue by the early 1930s. Historical records indicate that a dry cleaner was among the commercial uses. The buildings along both streets were demolished by the early 1990s and the site has been vacant since demolition. Site Geology and Hydrogeology: The site is underlain with historic fill up to 15 feet below ground surface (bgs). Fill material is underlain by glacial till consisting of brown, fine to coarse-grained sand, pebbles, cobbles, and rock fragments. Bedrock was not encountered during site investigation. Groundwater occurs approximately 50 feet bgs and flows to the southwest.

Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), pesticides and 1,4-Dioxane. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include SVOCs, pesticides, PCBs, and metals in soil; VOCs, SVOCs, and PFAS in groundwater; and petroleum-related VOCs and chlorinated VOCs in soil vapor. Soil: Soil data were compared to Restricted Residential Soil Cleanup Objectives (RRSCOs), Unrestricted Use Soil Cleanup Objectives (UUSCOs), and Protection of Groundwater Soil Cleanup Objectives (PGSCO). The contaminants of concern in soil are PCBs, SVOCs, and metals. Total PCBs were detected at a maximum of 71 parts per million (ppm) above the RRSCO of 1 ppm. PAHs were detected throughout the site. The PAHs detected include benzo(a)anthracene detected at a maximum of 29 ppm above the RRSCO of 1 ppm; benzo(a)pyrene at a maximum of 22 ppm above the RRSCO of 1 ppm; benzo(b)fluoranthene at a maximum of 21 ppm above the RRSCO of 1 ppm; chrysene at a maximum of 29 ppm above the RRSCO of 3.9 ppm; and indeno(1,2,3-cd)pyrene was detected at a maximum of 16 ppm above the RRSCO of 0.5 ppm. Barium was detected at a maximum of 1,170 ppm above the RRSCO of 400 ppm; cadmium was detected at a maximum of 11.7 ppm above the RRSCO of 4.3 ppm; lead was detected at a maximum of 2,650 ppm above the RRSCO of 400 ppm; and mercury was detected at a maximum of 3.84 ppm above the RRSCO of 0.81 ppm. 1,4-dioxane was not detected above the reporting limit. No PFAS compounds were detected above guidance values. PFOA, PFOS, and 1,4-dioxane are not considered contaminants of concern at this site. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Groundwater data was compared to the NYS DEC TOGS Ambient Water Quality Standards (NY-AWQS). Chloroform was detected at 18 parts per billion (ppb) which is above the NY-AWQS of 7 ppb. PAHS were detected throughout the site and include benzo(a)anthracene detected at a maximum of 0.07 ppb above the NY-AWQS of 0.002 ppb; benzo(a)pyrene at a maximum of 0.02 ppb above the NY-AWQS of not detectable; benzo(b)fluoranthene at a maximum of 0.04 ppb above the NY-AWQS of 0.002 ppb; and chrysene at a maximum of 0.07 ppb above the NY-AWQS of 0.002 ppb. 1,4-dioxane was detected at a maximum of 61 parts per trillion (ppt) above the EPA Cancer Reference Concentration of 35 ppt. Perfluorooctanoic Acid (PFOA) was detected between 53.8-132 ppt; the maximum contaminant limit, or MCL (drinking water standard) of PFOA is of 10 ppt. Perfluorooctanesulfonic Acid (PFOS) was detected between 14.5-41 ppt above guidance value of 10 ppt; the maximum contaminant limit, or MCL (drinking water standard) of PFOS is of 10 ppt. Data does not indicate potential for off-site impacts to groundwater related to

**517-523 NOSTRAND AVENUE (Continued)** **S129982658**

| | |
|---|---|
| | this site. Soil Vapor/Indoor Air: PCE was detected throughout the site ranging from 1.36-13.6 micrograms per cubic meter g/m3. TCE was detected between 1.51-12.9 g/m3. Cis-1,2-DCE was detected between 0.793-15.5 g/m3. Vinyl chloride was detected at 0.511-1.69 g/m3. 1,1,1-Trichloroethane was detected between 1.09-1.22 g/m3. Petroleum-related compounds, namely benzene, toluene, ethylbenzene, and xylenes, were detected between 7.28-16.56 g/m3. |
| Health Problem: | As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns. |

| DEC Memo: | Sangesland spoke with Clarinda at Milro. As of 4:10PM The vac truck is on it's way already, the spill guys are loading up now 11/3/05-Vought-Recieved case from DEC Sangesland. Insurance coverage covers house only and not soil contamination remaining in drywell in basement. As per Milro approximately 3'x3' area of oil impacted soil. Neighbors property also affected through foundation. Vought called and spoke with Gadi Weinreich (646-642-6044) and two tanks were onsite (275-gallon manifolded tanks). One tank was leaking and was emptied by Milro. Site visit scheduled by Vought for 11/5 to inspect drywell and neighbors property. Vought called Milro and tanks were cleaned out by Milro. Floor was cleaned with speedy dry. In 653 Saint Marks (Mr. Bernard Jones) floor was pressure washed, contaminated debris was removed. Received call from David Oloke that he will be performing site visit tomorrow to inspect site. Vought faxed him copy of spill report. 11/7/05-Vought-Site visit by Vought on 11/5/05 due to unavailability of owner during week. Onsite were two 275-gallon manifolded USTs in brand new condition. As per owner of property (Gadi), the former 275-gallon #2 fuel oil UST was leaking from the bottom and he placed to service calls to Petrol to have tank repaired. No spill out of vent or fill was visible. As per Gadi, Petro performed site visit in response to his calls on 7/13/05 due to fuel odors. On 10/7/05, a delivery was performed by Petro and during the delivery the tank failed causing the contents of to fall onto the basement floor. Basement floor is mostly concrete however some of the spill ran into the boiler room and into an approximate 2'x3' soil patch. Gadi contacted Travelers insurance who is filing a case against Petro. Contact info for Travelers is George Coch (631-577-7293 Claim #LOA7455). No odors present in living quarters of 651 and 653 St. Marks Avenue. A site visit was performed in 653 St. Marks Avenue (owner: Bernard Jones 347-643-3951) and no odors were present. Mortar in schist block walls however smelled of petroleum upon very close inpspection and Mr. Jones indicated that puddles of oil were on floor at his time of spill (oil had saturated walls between two residences). 653 St. Marks Avenue is on natural gas heating. Vought sent soil contamination letter to Weinreich requiring: 1)excavation of soil from pit and collection of endpoint samples 2)sealing of basement floors and walls of both residences |

**WEINREICH RESIDENCE (Continued)** **S107416915**

3)possible soil boring under 653 St Marks Place to investigate possibility of contamination under foundation. Vought called Coch (Travelers) and left message to return call. 11/14/05-Vought-DEC Sangesland received call from Milro regarding site. Vought returned call and insurance is not paying bills. Vought faxed copy of 11/7/05 letter to Basso. 11/18/05-Vought-Called George Coch and left message to return call. Vought recevied call from Gadi on 11/17/05 regarding status of spill. Vought called Gadi (212-840-6977) and left message to return call. Vought received message from Gadi and returned call. Vought spoke to Gadi and informed him of message left with Coch and advised him to call Travelers for update. Gadi provided number of Judy Helm (Travelers 800-624-6007x4736). Vought called Helm and left message to return call. Vought received message from Judy and returned call. Vought received third message from Judy and returned call and left message to return call. Vought received call and spoke to Judy. Letter sent to Petro by Travelers stating that Petro was responsible. Liability claim being handled by Andrew Follo (Claim# LOA7698 877-828-4110x48653) who is also reviewing claim by Milro. Vought called Follo and left message to return call. Vought spoke to Follo who is only handling third party claim. Letter sent to Petro to pay for bill by Milro. Possible third party coverage of soil under 651 due to third party impact. DEC will ask for two soil borings on adjacent property. Follo will return call to DEC. Vought called Gadi and delivery was 150-gallons and tank was filled (275-gallons). Approximately 175 gallons was lost. 11/22/05-Vought-Spoke to Gadi and Milro contacted Wienreich and insurance company did not pay Milro. Vought advised that Gadi contact insurance company with respect to suit against Petro and possible coverage under third party claim. 11/29/05-Vought-Spoke with Gadi and his insurance company approved work at both 651 and 653 St. Marks Place. Insurance company will be hiring a contractor to perform work. 1/3/06-Vought-Received call and spoke to Gadi and contractor will be starting work tomorrow to inspect 651 St. Marks and take pictures/samples. 1/23/06-Vought-Received call from Gadi that soil borings are scheduled to be performed by insurancce company on 1/19/06. 1/25/06-Vought-Received call from and spoke to Gadi. Gadi spoke to Travelers and as per Gadi, sample analyticals will be returned in one to two weeks. 2/27/06-Vought-Received call and spoke to Gadi and borings were performed and samples were collected by Liberty Mutual. 3/9/06-Vought-Reviewed AST Spill Investigation Report dated 2/10/06 and received on 3/2/06 from Madison Environmental and Tank Services (Joe Tomasulo 914-276-8690). Four soil borings performed. Soil borings performed to a maximum depth of 3.7 feet below grade. Soil analyticals show: 12000ppb xylene(GB2 2'bg), 7400ppb xylene(GB3 2'bg). Madison proposes minor hand excavation of soil be completed in the vicinity of GB-2 and GB-3 and the basement be treated with a bioremediation application. . Also reviewed AST Spill Investigation report dated 2/23/06 and received on 2/27/06. Vought sent letter approving of report recommendations with requirements: 1)collection of soil endpoint samples. Vought called Tomasulo and left message of approval and cc'd above letter. 3/23/06-Vought-Received call from Gadi and letter was sent to Travelers by Weinreich. As per Weinreich, Milro will be doing work. 03/28/06-Vought-Received call and spoke to Follo and DEC requires excavation as opposed to more borings. 05/10/06-Vought-Received call and spoke to Gadi and excavation has not started yet and Gadi expecting to receieve call today with start date by Milro. Gadi had received proposal from contractor and

proposal was agreed to by Follo. 05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 6/22/06 - Raphael Ketani. I spoke to Mr. Gadi Weinrich (212) 840-6977. He said that the insurance company and MILRO had been going back and forth on the prices for the digging. However, they came to an agreement and MILRO is supposed to start digging next week. 7/20/06 - Raphael Ketani. Mr. Weinrich [(212) 840-6977/(212) 840-6500] left a message that Madison Environmental (914) 276-8690 finished the digging of the contaminated soil and took soil samples. He said that Joey of Madison will contact me soon. 7/21/06 - Raphael Ketani. Mr. Weinrich said that Madison dug and sampled 2 weeks ago. They will send the results and report. 7/27/06 - Raphael Ketani. Mr. Weinrich called to ask whether Madison had sent the spill closure report to me. I told him I hadn't received anything yet and to call Madison to get them to send it to me very soon. Joe of Madison Environmental (914) 276-8690 called to say that the closure report is being mailed out today, but it is addressed to Jeff Vought. He said to keep an eye out for it. 8/3/06 - Raphael Ketani. I received the spill cleanup report dated 7/24/06 from HyrdoEnvironmental Solutions. I am reviewing the report. 8/7/06 - Raphael Ketani. I reviewed the 7/24/06 cleanup report and there were no exceedences of TAGM 4046 standards for any of the soil samples from the site. In fact, the results were very low (i.e. in the hundreds of ppb at most). 8/8/06 - Raphael Ketani. I reviewed the entire case file for the site. Based upon the analytical results in the 7/24/06 cleanup report, the pictures in the report showing that the bottom of the wall was sealed to prevent any future oil spills from traveling to 653 St. Marks Avenue, the cleaning of the neighbor's floor on 11/3, and the inspection by the former case manager, Jeff Vought, on 11/7 whereby it was seen that the oil at 653 St. Marks Avenue was cleaned up and there were no odors, I am closing the spill case.

Remarks: MILLRO IS ON THE WAY FOR CLEAN UP.LOCATED ON THE BASEMENT FLOOR

| DEC Memo: | 10/29/13- Zhune spoke to Christopher Steel 718-624-4842. He said they put a new boiler. They coverted to gas/oil. The tank failed the test with a dry leak. They will perform isolation test. Last test was in 2008. As per Christopher there is no oil spill. 01/03/14- Mark From Petroleum Tank Cleaner emailed the tank test results dated 12/26/13. As per Mark the tank was not conected to the boiler and that was the only reason that it failed. Apparently they were going to interruptible service and someone disconnected the line from the boiler and allowed to fail. Those lines were reconnected. it has been restested and it passed the test. As per Mark there is no contamination. The Test result in eDos. Based on the information from Petroleum Tank Cleaner the spill is closed. |

| DEC Memo: | Sangesland spoke to Tom Butler with Vijax Fuel. He said a delivery was made this morning. At lunch time the owner's granddaughter came home from work and smelled oil. NYC Fire Dept arrived, contained the spill and laid speedie dry. The granddaughter then went back to her job. Vijax will send someone to the house today at 4PM when she comes home to inspect and clean the basment area. Unknown how much spilled, unknown what impact was made to the basement area. (could be a minor spill all cleaned up, or it could need remediation) Sangesland spoke to Miss Foster granddaughter of owner. She said the spill was rather small and only on the cement floor of the basement. Vijax was in the process of cleaning it up as of 4:30 PM on10/27. Probably OK to close out if we don't hear back from Ms Foster in the next couple of days. 11/8/05 - Raphael Ketani. I called up Vijax and spoke to Thomas Butler. He said that everything is cleaned up and working well in the home. He said Mr. Farrow is happy with the cleanup and how things are working now. So I am closing the case. |

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 04/12/04 TRANSFERRED FROM ODOWD TO ROMMEL March 22, 2006, Jones, no recent work done on this site. Contacts provided in spill report unsuccessful. March 29, 2006, next step, establish contact with current site occupant. 5/22/2006 - Mike Scibel - Current Occupant is McDonalds, property shark reveals owner as an Mmb Associates, reverse phone directory has no listing for address given by property shark. Currently can not contact owner. From file DEC requested 3MW's, soil delineation and documentaion in 2000. Need to find if those tests were performed. Needs additional work. 2/23/10 - Austin - Reassigned to Ketani to followup and bring spill to closure - end 3/3/10 - Raphael Ketani. I restarted the management of the spill case. The spill was called in on 3/19/1998 due to the discovery of contaminated soil while removing gasoline tanks from this former gas station. The caller was Marc Godick of Lexicon Environmental Associates (516) 488-8742. Twelve 550 gal. gas tanks were removed. They appeared to be in good condition. The source of the gas was believed to be the pump island. Initially, 200 cubic yards of contaminated soil were removed by Lexicon. The site is at the intersection of Atlantic and Vanderbilt avenues (northern edge of Prospect Heights). From Property Shark, the block and lot are 1122 and 0001. The prime address is 547 Vanderbilt Avenue. The alternates are 850-852 Atlantic Avenue, 855-857 Pacific Street (the lot extends to the south side of the block). A DOB picture shows a TEXACO gas station. A 2006 picture shows a McDonalds with a paved area in front. ACRIS lists the ownership as follows: Janet H. Brooks sold the property to M&B Associates c/o Crosstown Management on 10/27/99 (she was a 1/4 owner |

**CON EDISON (Continued)** **S103571868**

of the property - M&B owned
the other 3/4); in 2/2/2000 M&B assigned a lease to the McDonald's Corp; in 1/29/04 Musto of M&B
sold the property to MMB Associates, LLC, 320 Heather Lane, Hewlett Harbor, NY, 11557 (MMB consists
of the three people who always owned the property). An attempt was made to locate a PBS record for
the site using all of the known addresses. However, nothing could be found. As the tanks were never
registered, this is a violation of 6 NYCRR Part 612 and Part 613. The situation was referred to
Leszek Zielinski, EE I of the PBS Unit, for action. The E-docs
contains only one document file.
This file contains the 6/2/98 Underground Storage Tank Closure Report, and the 8/21/98 Subsurface
Investigation Report. The 6/2/98 Underground Storage Tank Closure Report was written by Lexicon
Environmental Assessment for Yellowstone Industries (which has since gone out of business). The
USTs were removed, but the piping was left in place. 200 to 300 cu. yds. of contaminated soil were
removed. The tanks were in good condition with no holes. The excavation went down to 10' to 12',
and to within 10' of the sidewalk. Groundwater was not encountered. End point samples ranged in
total VOC concentration from 7 ppb to 1,149,000 ppb (bottom of pit). Four of the eight samples were
above TAGM limits. No wells were installed. The end points were taken at 11.5' below grade. Samples
3 to 5 and 8 were below TAGM. Samples 1 and 2 had high VOCs above TAGM. Sample 6 had high VOC hits
with 480,000 ppb total xylenes. Sample 7 had high VOC hits with 524,000 ppb total xylenes. The
8/12/98 Subsurface Investigation Report was written by Lexicon. The site elevation was indicated as
70' to 75' above sea level. (From the USGS maps, groundwater is at about 15' above sea level.)
Borings were drilled to 53' below grade. From 0' to 15' was natural fill. From 15' to 53' was
cobbles and boulders with thin layers of natural fill. Nine (9) borings were performed in the
vicinity of the former UST locations from 6/22-30/98. SB-3 at 12.5' to 13' was 42,946 total VOCs.
SB-4 at 8.5' to 9' was 7,698,160 total VOCs. SB-4 at 12.5' to 13' was much lower, but above TAGM.
SB-5 and SB-7 to SB-9 were drilled to 53' and there were no VOC concentrations above the DEC
Alternative Guidance Value standards. SB-6 at 11.5' to 12' was drilled, according to the drawings,
at the location of SS-7 of the UST Closure Report, but the results were non-detect for the soil
sample. It is not known how the SS-7 sample with total VOCs of over one million parts per billion
could have dropped to non-detect during a time interval of several months. The locations of the two
borings must have been far enough removed from each other to be in separate geochemical regimes.

**CON EDISON (Continued)** **S103571868**

There are no other spill cases associated with this site. 3/4/10 - Raphael Ketani. I reviewed the 5/19/99 Site Remediation Report that was produced by HydroScience, Inc. From the analytical results and figures contained in the report, it appears that all of the contamination that was above the TAGM RSCO limits was removed, except for the West Wall-3 location and the Southwest Bottom location. There were only 2 and 3 analytes, respectively, that had exceeded the TAGM limits at these locations. Given that 11 years have passed since the samples were taken, it is believed that natural attenuation and evaporation of the volatile components have reduced the concentrations further. The sampling at depth below 15' also showed that the contaminant concentrations were very far below the TAGM limits and would not have been a threat to the groundwater, which was about 60 feet below the site. Given the data in the HydroScience Site Remediation Report, I have determined that the residual contamination at the site is not a threat to the public or the environment.
Therefore, I am closing the spill case. 6/24/10 - Raphael Ketani.
Anthony Musto (718) 937-8100 called today. He said that he had been talking to Leszek Zielinski, acting head of the PBS Unit.
Mr. Zielinski had referred him to me. He said that he had never known he was supposed to register the tanks that had been pulled. He said that he thought the contractor was going to do this 11 years ago. I told Mr. Musto that the contractors don't always do the PBS registrations unless they are asked to. He asked who he is supposed to talk to regarding registering the tanks. I told him that Mr. Zielinski is in charge of the PBS Unit here in Region 2. Mr. Musto said that he was given the telephone number of the PBS Bureau in Albany and that he saw the name John Urda on a piece of correspondence. I told him to talk to both parties in order to resolve the matter. He asked how much the registration will cost. I told him that it is relatively inexpensive, when compared to any fines or penalties. I added that since Mr. Urda is involved there may be fines and penalties as there are outstanding violations because the tanks were never registered. Mr. Musto said that he will talk to Albany PBS and Mr. Urda.

Remarks: UPON EXCAVATION OF 12 (550) GAL TANKS SOIL CONTAMINATION WAS DISCOVERED. 200 CUBIC YARDS OF IMPACTED SOIL WAS REMOVED AND POST EXCAVATION SAMPLING COMPLETED AND AWAITING DATA.

Active SS with 4X4K. 8/12/93 Baltec performed soil gas survey which revealed presence of high conc of VOCs in the shallow soil along the north property line and lesser conc east of the pump islands and north of the USTs. 4/26/95 4 SB drilled and 3 MWs installed. DTW 23.5-25'bgs. SB-1 has high soil contamination from 5-25'bgs. MW-2 & 3 has soil contamination from 5-30'bgs. Existing soil contamination from 5-30'bgs in 4 borings. B-4 has high soil contamination at 23' and hit refusal. 6/95 Benzene levels: 802ppb(MW-1), 5090ppb(MW-2), 356ppb(MW-3). 9/95 Benzene levels: 0.05' LPH(MW-1), 5000ppb(MW-2), 2300ppb(MW-3). 11/6-11/15/96 Baltec drilled 5 more SBs and 5 MWs. MW-6 has very high soil cont. from 30-45'bgs. MW-7 had minor soil cont, with refusal at 4-5' in 2 attempts. One hit something metal that appeared to be hollow when poked with pry bar. Since this boring is located in the vicinity of the former USTs, this maybe a former UST left in place. MW-7 had PID hits above 20' and below 45'bgs. MW-8 had high PID hits from 20-40'bgs. 12/95 MW-2 & MW-8 had greater than 2' LPH. MW-1 was dry. 1/96 MW-2 had 0.32-0.47' LPH, MW-3 had 0.29-2.47' LPH, MW-8 had 0.38-3.97' LPH. 4/96-7/96 MW-2 had 0.3-3' LPH, MW-3 had 1.01-2.77' LPH, MW-8 had 3-6.1' LPH. 7/10/96 Meeting-Amoco will do a GPR survey to look for old tanks, test existing USTs, install overfill protection, do weekly EFR for 90 days and then make proposal for remediation. Will drill MW downgradient at corner of Bedford and St. Johns Pl. Delineate LPH plume and remediate. Will abandon MW-1 if consistently dry or redrill it(if not screened in proper interval). 7/96-9/96 EFR performed at the site six times during this quarter. Six times on MW-8 and five on MW-2. EFR was very effective here. 10/96 MW-3 had 0.56', MW-8 had 1.63' LPH. 12/96 MW-3 had 2.47', MW-8 had 2.9'. 3/97 MW-3 had 0.49-1.23', MW-8 had 0.18-0.95' LPH. The system was removed during raze and rebuild activities. We installed two SVE wells, which,
depending on the perched water table, could be used as dual-phase extraction wells. We are
currently monitoring trends, including product thickness as it relates to ground water elevation in
MW-18, following the excavation of almost 8,000 tons of contaminated soil from the site. We just
collected our third quarter data. The ground water elevation has been decreasing across the site,
which is counterintuitive based on the rains we have, but could confirm our belief that the perched
water originates from the adjacent car wash and therefore is not regulated by ground water
recharge. Once trends are assessed (preferably 4 quarters of data), we will be conducting an LNAPL
baildown test in MW-18 and conducting feasibility testing to address the residual impacts. 11/5/04
Issued sidewalk access letter for the installation of 1) two monitoring wells in north sidewalk of
Lincoln Place east of Bedford Avenue, 2) one monitoring well in the north sidewalk of Lincoln Place
west of Bedford Avenue, 3) one monitoring well in the south sidewalk of Lincoln Place east of
Bedford Avenue and 4) one monitoring well on the west sidewalk of Bedford Avenue south of Lincoln
Place. 4/13/05 Spoke to K. Kleaka, Impact Env. He represents the owner, Wiczyk Family LLC. Impact
conducted their own investigation and found contamination and old tanks on the southern portion of
the property and near car wash. Impact will send in report. Delta needs to modify the RAP to
include these other source areas. 4/25/05 Received subsurface investigation report from Impact.
Property was recently redevloped with a lubrication facility, three 10000gal gasoline USTs and pump
dispensers between 1/03-9/03. Four 4000gal gas USTs, piping and pump dispensers were removed by
Delta. In addition, one 550gal gas UST was discovered during excavation and was removed. DTW
16.55-35.66'bgs. Suspect perched water. 4.0' LNAPL detected in MW-18.

BTEX concetrations ranged
from 2051ppb to 119750ppb; and MTBE from ND to 220ppb. Possibly an old tank on the southwest corner
of property. High soil contamination detected at 16-18' in SP-2 and 21-23' in SP-3, adjacent to
anomaly detected. 5/24/05 Email to B. Fisher, Delta, requiring a revised RAP be submitted by
8/31/05 to address all contaminated media including newly identified contamination on southern
portion of property. Recommended they investigate abandoned tanks along southern portion of
property and subsequent closure. Will need to delineate contamination found in area of MW-18.

(3.95ft), SVE1(0.03ft) and SVE2(0.15ft). Groundwater encountered due to a perched water table
resulting from an uprgradient car wash. Max BTEX: 104,270ppb (MW10), max MTBE 1,340ppb (MW17).
Fluctuating concentrations in many wells. 12/2/05 Received Feasibility Pilot Test and Analysis
Report for SVE. An SVE system was previously operating at this site prior to raze and rebuild.
Delta to develop a RAP. 1/18/06 Received letter report from Delta stating they uncovered the
abandoned tank that Impact had found in 4/05. The tank appeared to be properly abandoned with sand
and no further work is recommended. Impact's investigation indicates contaminated soil in the area
of the tank. Upon discussion with K. Kleaka, Impact, he indicated that it is in the sales agreement
that BP is responsible for existing environmental conditions. He will discuss with his client and
his client's attorney to determine liability. 3/3/06 4Q05 report received. Seven of thirteen MWs
sampled on 11/2/05. DTW 18.20-37.15'bgs. 1.62' LNAPL in MW-18 and 0.03' in SVE-2. BTEX ranged from
2ppb(MW-20) to 95600ppb(SVE-1). MTBE from ND(MW-11, 20) to 27200ppb(SVE-1). 3/16/06 Met with BP and

Work Plan for Porposed Soil Boring Locations, dated 7/24/2009, by Delta. Delta propose 6 soil
borings around MW-18, MW-10, MW-11 and SVE-2 in the east part of the site. comments to ARCADIS. 1)
more soil borings around MW-19, MW-21 and MW-16; 2) drill down further where the water is now and
to completely delineate soil vertically; 3) check screen interval and total depth of wells for the
dry wells. Revised work plan by 5/2010. (RJF) 5/20/2010 - email from Ray Wagner (ARCADIS). Six more
borings seems like a lot to me to delineate at this site. That would double the scope of work and I
don't feel we need 12 borings to complete this assessment. If this is required then I would request
re-assessing the work scope using a different method (i.e. MIP) instead of the work scope (borings)
as proposed by Delta. 5/26/2010 - reply to Ray Wagner. The main reason I asked for these additional
soil borings is because the site is dry, and we still need to delineate the extent of soil and
groundwater contamination. If you feel the 12 soil borings is over-scoped and would like to
re-assessing the work scope using a different method, it is fine with us. Please revise the work
plan and send it to me by June or July. Just make sure to include the confirmatory sampling, like
the other site that use MIP/FFD, from some representative soil borings. We may discuss it more
detail tomorrow. 7/22/2010 - 1Q2010, 6/4/2010, by ARCADIS. 4 wells with water. Gauged 3/12/2010.

9/7/10, I sent email to Ray
Wagner and Andrew Korik of ARCADIS, cc to Jon Armstrong of BP: I've looked over 2nd Quarter 2010
Monitoring Rpt for this site, and also reviewing June Feng's file. I understand that in July 2010,
June approved work plan for soil investigation using MIP/CPT technology, involving 12 on- and
off-site borings. Has tinvestigation already been performed? I'm curious why no off-site borings
were proposed on south side of Bedford Ave., across from on-site well MW-18? I believe that area
should be investigated in order to more completely delineate soil and GW contamination. If soil
investigation has not yet been performed, can you advance a boring there when you do mobilize to
site? If contamination is encountered, a well should also be installed there. On 9/8/10, Ray sent
reply: We have initiated MIP work per approved work plan. Initially 6 locations were planned along
Bedford Ave. at station. June requested that we add addt'l locations near existing wells MW-16,
MW-19 & MW-21, which we have done. This is historically direction of GW flow (north northwest). We
have encountered some difficult drilling conditions (cobbles, bricks, concrete fill, etc.) and have
run into scheduling constraints with driller. We are hoping to complete this work by 9/15 and if
time and site conditions permit we will try to compete additional boring you are requesting. Please
confirm that this location is south of MW-18 (near car wash) or west of MW-18 (across Bedford
Ave.). Site figure north is toward Lincoln Place. If we are not able to complete this location
during this mobilization we could add this to future work to replace monitoring wells that are
currently dry at select locations to supplement well network. I sent reply: You're right, my
mistake - I didn't notice that north arrow was pointing to left. Location I am requesting would be
to west of MW-18, across Bedford Avenue. If a boring/well can be installed there during this work,
that would be great; if not, it could be done as part of future well replacement work, as you
suggested. - J. Kolleeny 04/08/11: Reviewed 3rd & 4th Quarter 2010 GW monitoring rpts by ARCADIS,
dated 12/15/10 and 12/21/10, resp. (in eDocs). Rpts present GW data for Sept. and Dec. 2010 and
monthly well gauging data; GW results show significant impacts remain in several wells, but
virtually no measurable product was detected (except 0.01 ft in well SVE-2 in Nov. 2010). 3rd Qtr
rpt recommends continuing quarterly GW sampling, and reducing vac truck events on wells MW-18 and
SVE-2 from monthly to quarterly. Also, reviewed Subsurface Hydrocarbon Assessment Rpt by ARCADIS
dated 3/4/11 (in eDocs). Rpt presents results of soil investig at site involving membrane interface

probe equipped with cone penetrometer test probe. Based on resulting data, which show areas of
significant soil contam, ARCADIS recommends addt'l soil sampling on western portion of site to
delineate impacts; performance of vertical aquifer profile sampling at select locations to better
define site lithology, identify water-bearing units, confirm depth of water table, and characterize
vertical distribution of soil and GW impacts both on- and off-site; and based on results of aquifer
profile sampling, install'n of up to 3 new on-site mon wells and an addt'l off-site well. I sent
letter (in eDocs) to Jon Armstrong of BP, cc to Gene Choquette of ARCADIS, stating: DEC responds as
follows: Based on data presented in this rpt and in recent quarterly GW mon rpts, it is clear that
none of existing on- or off-site mon wells penetrate regional aquifer. Site is located at an
elevation of 150 ft above sea level, on top of Harbor Hill Terminal Moraine, yet wells at site
terminate at depths of about 35-45 ft below grade. It is evident that these wells are screened
within zones of perched GW; true regional water table in this area is most likely located at depth
greater than 100 ft below grade. DEC requires that potential petroleum impacts to regional aquifer
be investigated. A work plan for install'n of deep monitoring wells to investigate regional aquifer
should be prepared and submitted; work plan should include actions recommended by ARCADIS. Based on
results of these addt'l investigative actions, a remedial plan to address on- and off-site
petroleum impacts should be prepared and submitted.Please submit requested investig work plan by no

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 12/9/03 TJD Transferred Demeo >>> Rommel. June, 2005: Spill transferred to Greco as part of Spill Closure Initiative. The facility contact, Mr. Daniel Greenberg, was called on 6/16/05. Mr. Greenberg claims that all remedial work is complete and that the DEC was involved in the project. Unfortunately, the project file contains only the Spill Report and the second tank test report (i.e., the one that Mr. Greenberg claims was done following tank repair and soils remediation). Mr. Greenberg is attempting to find the engineer's report on the remediation. 06/20/05 JDG July 14: Pro Test (the firm that did the tank testing)contacted me on 7/13/05 and explained that Mr. Greenberg had confused this site with another site he had been involved in (i.e., 9903240, located at a different Sea Crest Linen site at 46 Crown St.). The 46 Crown St. site did require remediation and was ultimately closed by the DEC. Pro Test went on to say that the 931 Carroll St. site had two tanks that failed tightness testing, however, they were determined to not have leaked (i.e., it was a vent line breach, only). This was determined during an excavation and tank upgrade performed following the first tightness failure. The tanks have been upgraded and have passed tightness testing. Sice there was no reported release to the environment and the tanks now have been upgraded and pass testing, the spill was closed. JDG 7/14/05 |
| Remarks: | both tanks failed test - no product spilage |

| DEC Memo: | 7/8/19 - Sekhon Historic impacts confirmed in lab results for E - designated site. Case transferred to DEC Rick Lin for follow up. 12/29/22-Lin-A leaking UST was discovered leaking into a test pit toward the south of the site. Excavation in the leaking UST area will be over excavated to 9' bgs to 18'bgs. SB-7 hotspot will be excavated to 9'bgs to 10'bgs. 12/29/22-Lin-Additional USTs were found. A total of five (5) USTs were found on site. NYCOER site address is 54 Crown St, Brooklyn. 8/3/23-Lin-The contractor excavated the hotspot area where two (2) 550 gallon gasoline USTs were found to the south of the site including the UST that leaked. All USTs were removed from the site. The site was excavated down to 18' bsl and the hotspot was excavated down to 22' bsl. Endpoint samples were collected according to RAWP approved by OER. The bottom sample taken from the base of the hotspot excavation came back with only exceedance of total xylene (100mg/kg) over the residential restricted SCOs. Further excavation of the hotspot is not feasible as it will likely result in undermining the foundation elements that are already in place. A high air flow below ground parking garage will be installed. Vapor barrier and composite slab have been installed over the spill area. Case closed. | DEC Memo: | 3/31/2014 - Feng - Called EBC and spoke to Kevin (631-504-6000, kbrussee@ebcincny.com). It is an empty lot and they are doing excavation for development. They came across (2) 550-gallon gasoline USTs. The USTs were abandoned with water but some residual oil is on top of the water. They tried to lift one and broke the UST and the water spilled out. They have tank remover ABC to come to remove the tanks and have them to excavate the impacted soil. The excavation is at 2 feet at this time for this area, which aimed for future parking lot and was not planned for much excavation. But at this time, they plan to excavate as much as possible to remove the impacted soil and will collect endpoint samples. The other portion of the site have been excavated and no impacts have been encountered. This is also a NYCOER project. The owner is Cecily Norton 435-757-6268. 4/21/16- DEC Piper received and reviewed closure report. Based on work t o date no further action is granted. This spill is closed. See Dec Docs for report if warranted. Closed. |

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

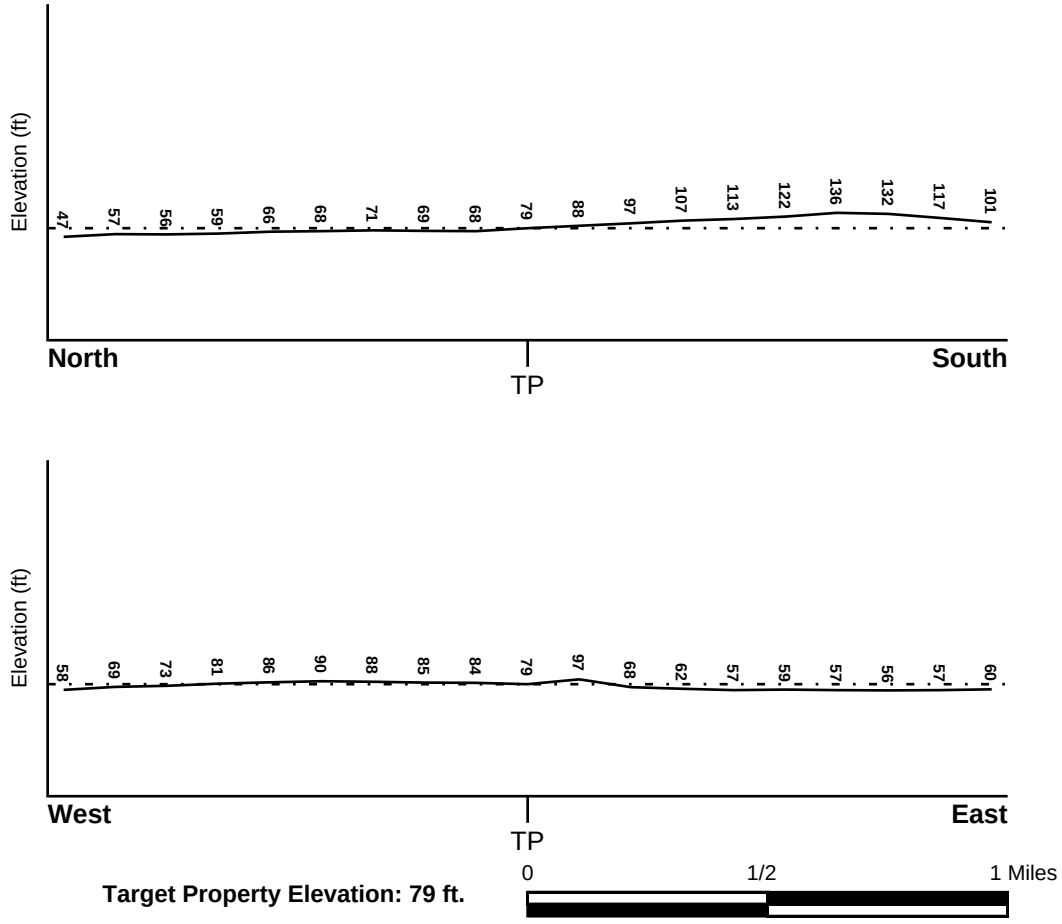
**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General NNE

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

**DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

**LOCAL / REGIONAL WATER AGENCY RECORDS**

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

## HYDROGEOLOGIC INFORMATION

AQUIFLOW$^{R}$ Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Kings County, New York
Survey Area Data: Version 15, Aug 29, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 1, 2023—Sep 1, 2023

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.
