Hazardous Waste Summary:
Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D003
Waste Description: Reactive Waste

Waste Code: D007
Waste Description: Chromium

Waste Code: D009
Waste Description: Mercury

Waste Code: D010
Waste Description: Selenium

Waste Code: D011
Waste Description: Silver

Waste Code: D024
Waste Description: M-Cresol

Waste Code: P001
Waste Description: 2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

Waste Code: P042
Waste Description: 1,2-Benzenediol, 4-[1-Hydroxy-2-(Methylamino)Ethyl]-, (R)- (Or) Epinephrine

Waste Code: P075
Waste Description: Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts

Waste Code: P081
Waste Description: 1,2,3-Propanetriol, Trinitrate (R) (Or) Nitroglycerine (R)

Waste Code: P188
Waste Description: Benzoic Acid, 2-Hydroxy-, Compd. With (3as-Cis)-1,2,3,3a,8,8a-Hexahydro-1,3a,8-Trimethylpyrrolo[2,3-B]Indol-5-Yl Methylcarbamate Ester (1:1) (Or) Physostigmine Salicylate

CVS (Continued) **1014958051**

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U034
Waste Description: Acetaldehyde, Trichloro- (Or) Chloral

Waste Code: U129
Waste Description: Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane

Waste Code: U165
Waste Description: Naphthalene

Waste Code: U188
Waste Description: Phenol

Waste Code: U205
Waste Description: Selenium Sulfide (Or) Selenium Sulfide Ses2 (R,T)

BROWNFIELDS:

Name:	149 KENT AVENUE
Address:	149 KENT AVENUE
City,State,Zip:	BROOKLYN, NY 11211
Program:	BCP
Site Code:	463657
Acres:	0.920
HW Code:	C224159
SWIS:	2401
Town:	New York City
Record Added Date:	05/01/2012
Record Updated Date:	08/01/2022
Update By:	JHOCONNE
Site Description:	Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.
Env Problem:	Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Hazardous Waste Summary:
Waste Code: D008
Waste Description: Lead

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U210
Waste Description: Ethene, Tetrachloro- (Or) Tetrachloroethylene

Date Record Added:	10/03/2013
Date Rec Updated:	03/31/2023
Updated By:	WYZHENG
Site Description:	Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from

CON ED (Continued) **S117742197**

	the subject site.
Env Problem:	Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Site Description: Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from

CON ED (Continued) **S117742197**

	the subject site.
Env Problem:	Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from

CON ED (Continued) **S117742197**

	the subject site.
Env Problem:	Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Site Code: 463657
Site Description: Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed

CON ED (Continued) **S117742197**

by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem: Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage

CON ED (Continued) **S117742197**

until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem: Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

DER Facility ID:	29992
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO TTF letter sent to Mr. Wersocki at 187 Bedford Ave Bklyn 11211 12/3/05: CBN Called Alex Wersocki (718) 963-2659 and left a message for hm to call me back, but haven't heard from him yet. 12/1/08 bf: Sent ttf old spill letter to: Alexander Wersocki 187 Bedford Avenue Brooklyn, NY 11211 10/14/14-Hiralkumar Patel. reviewed available information for DEC DeMeo. alternate address: none no other spills found. PBS #: 2-608263. as per PBS record, the site has one 2,000 gal #2 oil UST, in-service, installed in Jun. 1983. as per documents available on PBS database, the tank system was found tight during test on 11/26/2008 and 01/31/2014. Alexander Wersocki **property owner** 187 Bedford Avenue Brooklyn, NY 11211 PH. (718) 963-2659 (646) 287-6165 email: dg.nycbdrs@gmail.com 2/12/15 TJD Spill reassigned from DeMeo to Patel 03/24/15-Hiralkumar Patel. 10:35 AM:- went to site for inspection, but no one was available to provide access to the basement. found a color coded fill port and vent pipe by the building wall, at the southeast corner of the building (adjacent to building 189 Bedford Ave). 10:43 AM:- spoke with Mr. Wersocki. he mentioned that he doesn't remember the actual cause of test failure in 2003, but the tank system was tested tight after 2003. he confirmed no spill inside building. 10:47 AM:- spoke with Richard (917-647-6475), who maintains the boiler system at the site. he confirmed that the site has an underground tank which was found tight during recent testing. he also confirmed no signs of oil spill within building. in accordance with R2 TTF closure protocol, this spill is being closed due to no indication of a current release, no information indicating that there may have been a historical release, no information that this tank test failure will be an issue in the future and the tank system was found tight during subsequent testing.

Update By:	BXANDERS
Site Description:	BCP Denial Letter signed by DER Div Director on 2/19/14. Site Location: The proposed 94 N. 13th Street BCP site is located in the Williamsburg section of Brooklyn, Kings County. The site is made up of two tax parcels and is bordered by Wythe Avenue, N. 12th Street, and N. 13th Street. Site Features: The site is developed with two-one story commercial/industrial buildings which were built in the 1960's and are occupied. There is a small parking area and buildings cover most of the site area, which is approximately 1.147 acres in size. Current Zoning and Land Use: The site is zoned M1-2 which includes light industrial uses and is currently used by a manufacturer of clear plastic bags, and a manufacturer of wooden pallets. Past Uses of the Site: Previous uses were manufacturing and include the storage of manufactured gas and also as a plating facility. Site Geology and Hydrogeology: The geologic setting of Long Island is well documented and consists of crystalline bedrock overlain by layers of unconsolidated deposits. The bedrock in this area is igneous intrusive classified as the ravenwood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisteing of dredge spoils, rubble and/or other materials have historically been used to raise and improve the drainage of low lying areas. Subsurface soils consist of a mixture of a silty non-native fill, to a depth of approximately 12 feet below grade followed by sand and gravel. The elevation of the site is 15 feet above National Geodetic Vertical Datum (NGVD) and the area topography gradually slopes to the northwest. Groundwater is present at a depth of approximately 7 feet below the surface and is expected to flow north.
Env Problem:	Nature of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include benzene, toluene, ethylbenzene and xylene (BTEX), napthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene; various SVOCs (PAHs), including benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene; and several metals (lead, mercury, barium, nickel, zinc and copper). Soil- Subsurface soil contains maximum concentrations of BTEX (944 ppm), napthalene (280 ppm), total PAHs (218 ppm), lead (920 ppm), mercury (18 ppm). The metals concentrations were 920 ppm for lead, 18 ppm for mercury, 160 ppm for copper, 52 ppm for nickel, 2,300 ppm for zinc, and 2,400 ppm for barium. Groundwater- On-site groundwater contained low levels of PAHs, with a maximum concentration of total PAHs of 7 ug/L. Lead was detected at a maximum concentration of 254 ug/L. Off-site groundwater contained BTEX concentrations as high as 6,480 ug/L, 1,600 ug/L of napthalene, total PAHs of 1,670 ug/L, 600 ug/L of 1,2,4-trimethylbenzene,and 160 ug/L of 1,3,5-trimethylbenzene.

DEC Memo:	06/27/14-Hiralkumar Patel. alternate addresses: 94-102 North 13th Street, 45-59 Wythe Ave, 103-109 North 12th Street 3:51 PM:- DEC Vought sent copy of email he received from DEC Rivera. DEC Rivera received inquiry from Lisa Bloodgood. Ms. Bloodgood visited site on 06/26/14 and noted awful odors at the site. 4:30 PM:- visited site. noted very strong odors in and around the subject site. at the time of inspection, site construction activities were not happening, but a groundwater treatment system was running. site soil has been disturbed and some areas have been excavated to groundwater

94 N. 13TH STREET (Continued) **S116041508**

which is about 10-15 ft bg. met with Terrance, person who is monitoring groundwater treatment system. he mentioned that system will operate 24/7. noted white smoke from pump on the treatment system. spoke with Raphael Rivera (973-417-4467), person who has rented the treatment system. he mentioned that the system uses biodegradable oil and smoke from the system is not hazardous. spoke with Mordy Steinfeld (on-site) and Charles Sosik (over the phone). they are working to get contractor to resolve odor issue. also spoke with John Brooks (over the phone), attorney representing the site owner/developer. he will discuss with National Grid. Mordy Steinfeld **site developer** Level Hotel Ph. (718) 599-1145 (o) (432) 363-5377 (c) Email: mordy@levelhotel.com John Brook **attorney for site owner/developer** PH. (516) 455-0215 received call from Mr. Brook. he mentioned that developer's crew will cover site excavation area with tarp to control any odors from open excavation. while waiting for response from property owner/developer's crew, met with Mr. Morang from GEI, around 7 PM. at this time, the site was locked and no access provided to GEI. GEI represents National Grid. Mr. Morang mentioned that GEI has four air monitoring stations within the property, along the perimeter. he noted that there were no PID readings during work hours today. but after site work was completed, the groundwater treatment system was turned on. he also mentioned that the treatment system was installed recently. Mr. Morang suspects odors due to improper installation of the treatment system, but it can not be confirmed as no site access available. alongwith Mr. Morang, we checked air quality near corner of Wythe Ave and N 13th Street (where the treatment system is located) and found PID readings around 0.4 ppm. at this time, air quality was improved, but there were still some pockets of strong odors. Mr. Morang mentioned that from next week, GEI will use foam to abate any odors from the site. Russell Morang GEI Consultants, Inc. Ph. (860) 368-5416 (O) (860) 608-1438 (C) Email: rmorang@geiconsultants.com Donald Campbell National Grid Ph. (718) 963-5453 (O) (347) 452-5983 (C) 06/30/14-Hiralkumar Patel. 9:40 AM:- visited site. noted tarp in deeper excavation areas where groundwater was visible during earlier site visit. also noted a tarp on the entire frac tank. some odors noted near the intersection of Wythe Ave and N 13th St. DEC Scott Deyette (BCP # C224186) is managing this former MGP site. after discussing with DEC Austin, case closed. refer to BCP # C224186. 07/01/14-Hiralkumar Patel. 2:37 PM:- spoke with DEC Scott. informed him that as per Mr. Morang, GEI was planning to use foam to abate odors. Scott has discussed with involved parties and mentioned

94 N. 13TH STREET (Continued) **S116041508**

that GEI is there only for air
monitoring and property owner is responsible to address any
environmental issues. Scott asked to
provide his cell phone number (518-461-3721) to whoever has any
inquiry about remediation.

Remarks: Lisa Bloodgood went to site on 06/26/14 and noted odors at the site.

Site Description: Location: The Williamsburg Works Manufactured Gas Plant (MGP) site is located in a commercial/industrial area in the Williamsburg section of Brooklyn, New York. The site is approximately six acres in size and is composed of four parcels of land located on the east bank of the East River between North 11th and North 12th Streets on the west and east sides of Kent Avenue. Site features: Site features include a vacant asphalt paved lot and the foundation slab for the recently demolished document storage warehouse on the west side of Kent Avenue and a two -story commercial building on the east side of Kent Avenue. Current zoning and land use: The land uses in the area surrounding the MGP site are currently a mix of industrial, commercial, residential, and parkland uses. The privately-owned document storage warehouse was in active use until it was destroyed in a fire on January 31, 2015 and subsequently demolished. The former building's slab remains and is surrounded by a lockable chain link fence. The vacant lot at 50 Kent Ave. is owned by the NYC Department of Parks and Recreation and used as an outdoor music venue, flea market and skate park and surrounded by a chain link fence. The two-story

K - WILLIAMSBURG WORKS (Continued) **S109209078**

commercial building on the east side of Kent Avenue is privately owned and in active use. The nearest residential properties are located to the east and south approximately 1 block from the site. Past use of the site: A manufactured gas plant operated on the site from circa 1850 until approximately 1930. Following the decommissioning of the MGP, the lot was occupied by a NYC Department of Sanitation Garage that was demolished around 2000. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till, and lenticular clay more than 100 feet in thickness. The groundwater table is approximately 5 feet below ground surface. Groundwater flows to the west, toward the East River.

Env Problem:	The Remedial Investigation of the site has not been fully completed, since large portions of the site are occupied by buildings. However, the work that has been completed has identified significant coal tar contamination in the subsurface. Soils beneath the vacant lot at 50 Kent Avenue are heavily impacted. Design work is currently under way for an excavation IRM on this parcel during the 2015 field season, and tar collection wells have been completed around the perimeter of this property. Tar removal from these wells is taking place on a continuing basis. Tar contamination has moved off site to the north but does not appear to have reached the shoreline in that area. A large portion of the former plant footprint lies beneath the former document storage warehouse. Test borings around the perimeter of this building confirm the presence of MGP tars in the area, and off site migration of this tar has taken place, leading to contamination of sediments beneath adjacent areas of the East River.
Health Problem:	The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	001
Tank Id:	278511

Equipment Records:

H05 - Tank Leak Detection - In-Tank System (ATG)
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
E12 - Piping Secondary Containment - Double-Walled (AG only)
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
G02 - Tank Secondary Containment - Vault (w/access)
C01 - Pipe Location - Aboveground
J07 - Dispenser - Loading Rack/Transfer Pump
B09 - Tank External Protection - Urethane

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported

Control Type: INST
Dt record added: 11/29/2017
Dt rec updated: 08/01/2023
Updated By: BWDEMO
Site Code: 503484
Site Description: Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site is bounded by Wythe Avenue to the east, N 13th Street to the north, Kent Avenue to the west, and N 12th Street to the south. Site Features: The site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts include light industrial uses although offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned major oil storage facility (MOSF); however, both of these sites are slated for redevelopment as parks. Past Use(s) of the Site: Beginning in roughly 1867, the site was part of a large, multi-block petroleum refinery known as the Pratt works. Sanborn fire insurance maps dated 1887 and 1916 show numerous storage tanks related to the Pratt Works, and to paint manufacturing facilities. Subsequent land uses include manufacturing, lumber storage, and a scrap metal yard. Most recently, the property was used for storage and maintenance of heavy construction equipment. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in association with underground storage tank (UST) removals. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: Regional maps show bedrock as an igneous intrusive known as the Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River.
Env Problem: Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Both the VOCs and SVOCs appear to be derived from former petroleum tank locations. Soil Vapor: TCE (ND-16.2 ug/m3) PCE (ND-245 ug/m3) and TCA (ND-284 ug/m3) were detected in soil vapor samples collected from the site. These COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 503484
Site Description: Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site is bounded by Wythe Avenue to the east, N 13th Street to the north, Kent Avenue to the west, and N 12th Street to the south. Site Features: The site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts include light industrial uses although offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned major oil storage facility (MOSF); however, both of these sites are slated for redevelopment as parks. Past Use(s) of the Site: Beginning in roughly 1867, the site was part of a large, multi-block petroleum refinery known as the Pratt works. Sanborn fire insurance maps dated 1887 and 1916 show numerous storage tanks related to the Pratt Works, and to paint manufacturing facilities. Subsequent land uses include manufacturing, lumber storage, and a scrap metal yard. Most recently, the property was used for storage and maintenance of heavy

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

construction equipment. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in association with underground storage tank (UST) removals. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: Regional maps show bedrock as an igneous intrusive known as the Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River.

Env Problem: Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Both the VOCs and SVOCs appear to be derived from former petroleum tank locations. Soil Vapor: TCE (ND-16.2 ug/m3) PCE (ND-245 ug/m3) and TCA (ND-284 ug/m3) were detected in soil vapor samples collected from the site. These COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Site is being excavated under an E designation with the city because of lead contamination. One of the dump trucks hit a pylon and ruptured a diesel saddle tank. Area was soil, but was contained as best they could. ABC Pumped out the puddles & scraped up the contaminated soils. The area is being excavated and end point samples will be taken. Kevin Brussee will forward a spill closure report to DEC within the next couple of weeks. 05/21/14-Hiralkumar Patel. found report dated 05/06/10. as per the report, about 100 gal diesel spilled into construction site due to puncture in saddle tank on dump truck. contaminated soil was removed and endpoint samples were collected. no contmaination found in endpoint samples. based on available information, case closed administratively.
Remarks:	A dump truck drove over a obstacle puncturing its fuel tank spilling its fuel onto the soil. A vac truck is enroute, and soil will be removed at a later date.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Spiller Address:	105 NORTH 13TH STREET
Spiller Company:	999
Contact Name:	KEVIN
DEC Memo:	9/24/15: Mahat DEC Mahat contacted Kevin from EBC inquiring about the spill and its nature. He mentioned that they found some old contaminated soil during the excavation. Phase II is under the progress. Kevin will provide the a narrative email and Phase II report shortly. DEC is waiting for a report. 8/26/16: Mahat e/c: DEC Mahat sent an email to Kevin asking for any update or report on the spill case. On 8/26/16, DEC Mahat received an email informing that site is a DEC BCP site. Email : Site is a NYSDEC BCP Project Former F&S Central Manufacturing Corp Site. C224230 PM is Scott Deyette. Entire Site is being excavated to 15 ft below grade for new building. Endpoint samples already indicate a Track 1 was achieved. Final Engineering Report will be submitted to DEC in 2017. DEC Mahat will partner with DEC BCP PM to discuss the future of the spill case. 8/31/16: Mahat The spill case is closed as the site is acutely under remediation under NYSDEC BCP program. BCP Application number has bee crossed referenced. No further action is required by the DEC spill Units.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Name:	FORMER F&S CENTRAL MANUFACTURING CORP. SITE
Address:	103 NORTH 13TH STREET
City,State,Zip:	BROOKLYN, NY 11249
Program:	BCP
Site Code:	517727
Acres:	0.279
HW Code:	C224230
SWIS:	2401
Town:	New York City
Record Added Date:	12/07/2015
Record Updated Date:	01/02/2018
Update By:	BXANDERS
Site Description:	Location: The Former F&S Central Manufacturing site is located at 103 North 13th Street, identified as Block 2279, Lot 34 in the Greenpoint section of Brooklyn. Site Features: The site is comprised of a single tax parcel totaling 12,500 square feet (0.29 acres), and is currently vacant. The exterior walls and concrete slab of a former one-story manufacturing building remain, with the slab approximately 3 feet above sidewalk grade. Current Zoning and Land Use: The site is zoned as a M1-2 district which allows both commercial and light industrial use. The surrounding parcels are used for a combination of commercial and light industrial. Prior to acceptance into the BCP, the site was used for commercial warehouse space. The nearest residential area is approximately 1000 feet to the south. Past Use of the Site: The site was undeveloped prior to 1905. From 1916 to 1930, the site was developed with three small one-story sheds/storage rooms and a portion of a single-story commercial building. The former one-story warehouse/manufacturing building was constructed in 1930. The building was used as an iron pipe warehouse (1940s 1950s), a paper storage warehouse (1960s), metal pipe hanger manufacturing facility (1970s), contractor s storage facility (1990s) and a food storage warehouse (2000s). Site Geography and Hydrogeology: Bedrock in this area of Brooklyn is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth as great as 13 feet below the existing building slab (10 feet below sidewalk grade), followed by a native grey (wet) sandy silt. Bedrock was not encountered at the site. The elevation of the site is approximately 14 feet above mean sea level and gradually slopes to the northwest. The depth to groundwater beneath the site is approximately 7 feet below sidewalk grade. The groundwater flows to the north-northwest.
Env Problem:	Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzene, ethylbenzene, total xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benz(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, chromium, lead, arsenic and mercury

FORMER F&S CENTRAL MANUFACTURING CORP. SITE (Continued) **S118372394**

in soil; and 1,1,1-trichloroethane and trichloroethene (TCE) in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and PCB/pesticides. Based upon investigations conducted to date, the primary contaminants of concern include benzene, ethylbenzene, total xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benz(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, chromium, lead, arsenic and mercury in soil; and 1,1,1-trichloroethane and trichloroethene (TCE) in soil vapor. Soil - The VOCs found in subsurface soils were predominantly in the shallower soils (0-5 feet bgs). Concentrations were found as high as 0.2 ppm for benzene; 7.1 ppm for ethylbenzene, and 31 ppm for total xylene. Both 1,2,4-trimethylbenzene (24 ppm) and 1,3,5-trimethylbenzene (23 ppm) were found in deeper soils at 7 to 11 feet bgs. Offsite investigations were not conducted as the adjacent properties are fully built out with existing structures. The SVOCs were found in the shallower soils. These were found as high as 2.4 ppm for benz(a)anthracene; benzo(a)pyrene (1.7 ppm); benzo(k)fluoranthene (1.5 ppm); and chrysene (3.8 ppm). The exception to this was in the southwest corner of the site, where the same SVOC constituents were found at concentrations approximately 12 to 15 times higher at 12 to 16 feet bgs. The metal constituents were also found mostly in the shallower soils. Chromium was found as high as 381 ppm; lead at 37,500 ppm; barium at 6,840 ppm; and mercury at 11.4 ppm. Hazardous levels of lead (as high as 14.9 mg/L TCLP) were found between 4 and 13 feet bgs in the western half of the site. All soil borings were drilled to 20 feet bgs, and there were no detections of any contaminant below 13 feet bgs. Bedrock was not encountered during the investigation. Groundwater - Both lead and chromium were found to slightly exceed groundwater standards on-site, as well as naturally occurring metals including, sodium, manganese and iron. There were no VOC or SVOC constituents detected in groundwater. Soil Vapor - Soil vapor was sampled at depths ranging from 5 to 6 feet below ground surface (bgs) and low levels of petroleum-related VOCs were noted. Also, TCE and 1,1,1-trichloroethane were detected as high as 173 micrograms per cubic meter (ug/m3) and 2,090 ug/m3 respectively, and are attributed to a suspected off-site source.

Health Problem:	Remedial actions are complete and have eliminated the potential for contact with site-related contaminants.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:
Name: FORMER DUTCH MASTERS PAINT AND VARNISH CO.
Address: 29-41 WYTHE AVENUE AND 180 N. 14TH STREET
City,State,Zip: BROOKLYN, NY 11249
Program: BCP
Site Code: 551700
Acres: 0.650
HW Code: C224262
SWIS: 2401
Town: New York City
Record Added Date: 06/14/2017
Record Updated Date: 02/05/2024
Update By: AAOBLIGA
Site Description: Location: The site is comprised of two parcels designated as block 2279, lots 1 and 9, totaling 0.65 acres, and is located at 29-41 Wythe Avenue and 180 North 14th Street in the Williamsburg neighborhood of Brooklyn, NY. Site Features: Lot 1 was improved with a 1-2 story industrial building constructed circa 1925. Lot 9 was improved with a 1-story industrial building constructed circa 1950. Both buildings were recently demolished. Current Zoning and Land Use: The site is currently zoned M1-1 (manufacturing). M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. The site is currently vacant, with concrete covering the entire site. The land use in the immediate vicinity of the site includes an industrial manufacturing building and new development project to the west, a new hotel and retail shops to the south, new construction, a high school and an existing office building to the east, and an industrial/manufacturing property to the north. Past Use of the Site: A portion of Lot 1 was occupied by a varnish factory beginning sometime prior to 1887. The varnish works expanded to cover the entirety of Lot 1 by 1942. Records show that, by 1951, this lot was occupied by the Dutch Masters Paint and Varnish

FORMER DUTCH MASTERS PAINT AND VARNISH CO. (Continued) **S121493079**

company until 2007. This lot was also used as a manufacturer of typewriter ribbon, a clothing warehouse, a motorcycle repair shop and art studio. A portion of Lot 9 was used as a foundry for the manufacture of window weights from 1902 through 1916. By 1942, the property was used as a bed spring manufacturer. Dutch Masters Paint and Varnish took a mortgage on this lot in 1969. Later, the property was used as a warehouse for typewriter ribbons and a clothing warehouse. In 2009, it was rented out as music studios. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of approximately 8 to 10 feet below the surface, followed by native silty-sand and clay layers. The elevation of the property is approximately 12-13 feet above mean sea level. The area topography gradually slopes to the north toward the East River. Groundwater is 7.5-11.8 feet below grade under water table conditions and flows to the north east toward the East River. The entire site is located within a designated moderate risk flood zone area with a portion of Lot 1 in a high-risk flood area.

Env Problem:

Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides, and emerging contaminants (per and polyfluorinated alkyl substances, or PFAS, and 1,4-dioxane) in groundwater. Soil vapor samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include trichloroethene (TCE), and petroleum related SVOCs. Soil - TCE was found in shallow soil across the site. The maximum concentration of trichloroethene was 3.1 parts per million (ppm), which exceeds the applicable protection of groundwater soil cleanup objective (0.47 ppm). Historic fill material has been identified across the site to depths of 15-17 feet. Analysis of the material showed benzo(a)anthracene at 32 ppm, benzo(a)pyrene at 31 ppm, benzo(b)fluoranthene at 24 ppm, chrysene at 51 ppm compared the unrestricted SCO of 1 ppm, and indeno(1,2,3-CD)pyrene at 18 ppm compared to the unrestricted SCO of 0.5 ppm. Data does not indicate any off-site impacts in soil related to this site. Groundwater - TCE was also found in groundwater at the site at a maximum concentration of 8.7 parts per billion (ppb), which slightly exceeds the groundwater standard of 5 ppb. Petroleum related SVOCs were detected across both lots on the site, including benzo(a)anthracene at 66 ppb, benzo(a)pyrene at 61 ppb, benzo(b)fluoranthene at 31 ppb, chrysene at 58 ppb, and indeno(1,2,3-CD)pyrene at 26 ppb, all above the standard of 0.002 ppb. Several metals were detected above standards, including iron, magnesium, manganese and sodium in the majority of samples. These exceedances are not considered contaminants of concern and are likely naturally occurring. Emerging contaminants (i.e., PFAS) were detected at maximum combined concentration of 134.37 parts per trillion. There were no PCBs, pesticides detections above standards. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - Petroleum related VOCs were detected at low levels in soil vapor samples across the site. TCE was detected in soil vapor at concentrations ranging from 0.24 micrograms per cubic meter (ug/m3) to 320 ug/m3. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem:

Access to the site is restricted, which prohibits public access. Persons who enter the site could contact contaminated soil or groundwater by disturbing the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and

FORMER DUTCH MASTERS PAINT AND VARNISH CO. (Continued) **S121493079**

	the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are currently no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern. However, the potential exits for the inhalation of site contaminants for any future onsite development and occupancy. Environmental sampling indicates that soil vapor intrusion is not a concern for offsite buildings.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

BROWNFIELDS:

Name:	FORMER STERLING TRANSFORMER CORP. - OFF-SITE
Address:	510 DRIGGS AVENUE
City,State,Zip:	BROOKLYN, NY 11211
Program:	BCP
Site Code:	533273
Acres:	Not reported
HW Code:	C224203A
SWIS:	2401
Town:	New York City
Record Added Date:	10/05/2016
Record Updated Date:	08/09/2019
Update By:	RKCORCOR
Site Description:	The area of concern subject to this work is considered off-site from BCP site C224203 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224203 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The site is located in the Williamsburg section of the borough of Brooklyn, NY. Driggs Avenue bounds the property to the southeast, N 8th Street bounds the property to the southwest, and N 9th Street bounds the property to the north. The site is bound to the west by various mixed-use residential buildings. Site Features: The site consists of multiple tax lots including a paved parking lot and mixed-use residential buildings. Current Zoning and Land Use: The site is currently zoned commercial/industrial/high density residential and general residence (M1-2/R6A and R6B). Allowable uses include light manufacturing,

FORMER STERLING TRANSFORMER CORP. - OFF-SITE (Continued) **S128906195**

	warehouses, wholesalers, and multi-story residential buildings. Past Use of Site: Based on a map dated 1855, the property is believed to have been occupied by a manufactured gas plant (MGP). The MGP was demolished by 1887. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by food warehouse around 1991. Both buildings were demolished in 2006 and replaced with the existing parking lot. Geology and Hydrogeology: Soil at the site is described as historic fill materials to a depth of about 15 feet below the surface followed by native brown fine sand with silt and some clay. Groundwater is present at about 12 feet below ground surface, and flows to the northeast.
Env Problem:	Nature and Extent of Contamination: Based upon the remedial investigation at the BCP site #C224203, the primary contaminants of concern are expected to be naphthalene, vinyl chloride, and cis-1,2-dichloroethene which were found in the BCP site soil, groundwater, and soil vapor. The BCP site soils also contained some semi-volatile organic compounds (SVOCs), such as benzo(a)pyrene, benzo(a) anthracene and benzo(b)fluoranthene, chrysene, dibenz[a,h]anthracene. The off-site investigation has not begun, therefore this section will be updated to reflect the investigation results as data become available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Record Added Date:	12/03/2014
Record Updated Date:	12/31/2021
Update By:	RKCORCOR
Site Description:	Location: The site is located in the Williamsburg section of the borough of Brooklyn, NY. The site has approximately 175 feet of frontage along Driggs Avenue and 100 feet of frontage along North 8th Street. Site Features: The site prior to remediation was occupied by a parking lot and an attendant booth. After remediation, the site has been redeveloped with an eight to eleven story building the footprint of which occupies the entire site. Current Zoning and Land Use: The property is currently a vacant parking lot. The site is zoned commercial/industrial/high density residential (M1 2/R6A and R6B). Allowable uses include light manufacturing, warehouses, wholesalers, and multi story residential buildings. Past use of the Site: Based on a map dated 1855, the property is believed to have been occupied by a manufactured gas plant (MGP). The MGP was demolished by 1887. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by a food warehouse circa 1991. Both buildings were demolished in 2006 and replaced with a parking lot parking lot. Geology and Hydrogeology: Soil at the site is described as historic fill materials to a depth of about 15 feet below the surface followed by native brown fine sand with silt and some clay. Groundwater is present at about 12 feet below ground surface, and flows to the northeast.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soils were petroleum VOCs, Chlorinated VOCs (CVOCs) and naphthalene. Non-aqueous phase liquids (NAPL) were present at the site. On site groundwater was contaminated with SVOCs and CVOCs.Pure solvent was detected in groundwater in the southern portion of the site. CVOCs including vinyl chloride were detected in soil vapor at the site. Remedial actions (excavation and disposal of contaminated soil) have successfully achieved soil cleanup objectives for Unrestricted Residential Use.
Health Problem:	Remedial actions are complete and no exposures are expected to residual contamination as the site has been remediated to unrestricted use.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Sangesland spoke to Hardik Parekh at EEA Inc. He said the site is a vacant lot CSL sent to owner: Joe Matarese, 484 Union Ave, Brooklyn, NY 11211 EEA forwarded to DEC a copy of the Phase 2 report (see E-Docs) Case reassigned from Sangesland to Ahmed 10/27/11 - Austin - Spill Transferred from Ahmed to Rahman - end 07/16/13- Closure report in edocs.Summary from closure report: No VOCs were detected in the soil or ground water.A vapor barrier 20 mil HDPE was installed below the slab of the cellar and behind all foundation walls. A total of approx. 4764.38 tons of non hazardous soil

JORAL CARTING INC. (Continued) **S109205024**

was transported to the Clean Earth of NJ.In accordance with the RAP, EBC collected endpoint soil
samples from across the Site from the final excavation needed for the new building's basement.
Endpoint soil samples were collected at the approximate rate of one endpoint sample per 900 ft2 of
excavation base as excavation within each section was completed. As shown in Figure 6, the Site was
divided into five zones with the acronyms A, B, C, D, and E. From each of the five zones, EBC
collected five endpoint samples. The samples were labeled A1, A2, A3, A4, A5, etc. The endpoint
samples collected from Zones A, B and C were analyzed for SVOCs (8270) and metals, and the endpoint
samples collected from Zones D and E were analyzed for VOCs, SVOCs,pesticides/PCBs, and metals. A
copy of each of the laboratory reports for the endpoint soil samples is attached in Appendix E and
the results are summarized in Table 1 - Volatile Organic Compounds,Table 2 - Semi-Volatile
Compounds, Table 3 - Pesticides/PCBs, and Table 4 - Metals. No SVOCs were detected within any of
the 25 endpoint samples at a concentration above NYSDEC Part 375.6 Unrestricted Use Soil Cleanup
Objectives (SCOs). No metals were detected above Unrestricted Use SCOs within 22 of the 25 endpoint
samples. Two of the endpoint samples in Zone B contained chromium at a concentration slightly above
Unrestricted Use SCOs, but well below Restricted Residential SCOs. Zinc was detected slightly above
Unrestricted Use SCOs within one soil sample collected from Zone A. Soil disturbance and intrusive
activities were completed in accordance with the procedures outlined in the site specific CHASP and
RAP approved by the NYCDEP in June 2008. No surface soils and/or fill were utilized for backfilling
or grading purposes. NFA required.(sr)

DEC Memo:	TTF sent to property manager: Mr. Martin Gurshon 233 Broadway - Suite 2704 New York, NY 10279 11/20/09. J.Krimgold reviewed the letter report submitted by Pro Test Enviro and dated 10/30/09. According to the letter the tank system failed the test due to a leak in the supply and/or return lines. The damaged portions of these line were replaced and the tank system retested and passed. During excavation of piping contaminated soil was encountered. This soil was excavated, drummed and properly disposed of. End point samples show no contaminant above TAGM limits. Case closed.
Remarks:	1518 The caller advised dispatch the tank has failed their test and requested to obtain a spill number. No water ways have been affected. This was just a tank test failure. The owner will be incharge of the fixing of the system. At this time chemicals have spilled. 4000 gallon underground tank.

Record Add:	11/10/2023
Record Upd:	02/02/2024
Updated By:	WBBENNET
Site Description:	Location: The Pratt Refinery site is located in a commercial/industrial area in the Williamsburg section of Brooklyn. The site comprises a single real estate parcel, Block 2277 Lot 1, at 26 N 12th St. It is approximately 7.3-acres in size and is located between Kent Avenue and the East River and between N 12th St. and Bushwick Inlet. Site Features: The site formerly included above ground petroleum bulk storage tanks, a 3-story office building, a one-story cinder block garage, a fuel dispenser island, and a large asphalt paved area. All above ground structures, buildings and storage tanks, were dismantled and removed during the summer of 2019. Current Zoning and Land Use: Currently the site is vacant and covered by concrete slabs and asphalt. The Block and Lot are zoned commercial and future use is anticipated as parkland. The land use in the surrounding area is currently a mix of industrial, commercial, residential, and parkland use. The nearest residential property is located approximately 2 blocks to the south. Past Use of the Site: A

FORMER BAYSIDE FUEL OIL DEPOT CORPORATION - N 12TH ST (Continued) **S117564948**

petroleum refinery operated on the site from circa 1870 into the early 1900s. Subsequently, the property was utilized as a major petroleum bulk storage facility until the early 2000s. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till and lenticular clay more than 100 feet in thickness. The fluvial marsh silty clay to clay is encountered from approximately 5 to 25 feet below ground surface across the site. The groundwater table is approximately 6 feet below ground surface. Groundwater flows to the north northwest, toward Bushwick Inlet and the East River.

Env Problem:	Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, and the emerging contaminants per and polyfluorinated substances (PFAS) and 1,4 dioxane. Based on investigations conducted, the primary contaminants of concern include VOCs and SVOCs, and metals in soil and groundwater. Both Light Non-Aqueous Phase Liquid (LNAPL) and Dense Non-Aqueous Phase Liquid (DNAPL) were encountered in soil borings below the water table and in groundwater wells.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: Location: The Williamsburg-Pratt Refinery site is located in a commercial/industrial area in the Williamsburg section of Brooklyn. The site comprises a single real estate parcel, Block 2277 Lot 1, at 26 N 12th St. It is approximately 7 acres in size and is located between Kent Ave. and the East River and between N 12th St. and Bushwick Inlet. Site Features: The site formerly included above ground petroleum bulk storage tanks, a 3 story office building, a one story cinder block garage, a fuel dispenser island, and a large asphalt paved area. All above ground structures, buildings and storage tanks, were dismantled and removed during the summer of 2019. Current Zoning and Land Use: Currently the site is vacant covered by concrete slabs and asphalt. The Block and Lot are zoned commercial and future use is anticipated as parkland. The land use in the surrounding area is currently a mix of industrial, commercial, residential, and parkland use. The nearest residential property is located approximately 2 blocks to the south. Past Use of the Site: A petroleum refinery operated on the site from circa 1870 into the early 1900s. Subsequently, the property was utilized as a major petroleum bulk storage facility until the early 2000s. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till and lenticular clay more than 100 feet in thickness. The fluvial marsh silty clay to clay is encountered from approximately 5 to 25 feet below ground surface across the site. The groundwater table is approximately 6 feet below ground surface. Groundwater flows to the north northwest, toward Bushwick Inlet and the East River.
Env Problem: Soil sediment and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, and the emerging contaminants per and polyfluorinated substances (PFAS) and 1,4 dioxane. Based on investigations conducted, the primary contaminants of concern include VOCs and SVOCs, and total metals in soil and groundwater. PFAS was found in groundwater samples. Nature and Extent Soil: Sampling results indicated that VOCs, SVOCs, pesticides, PCBs, metals and mercury were detected above the applicable restricted residential use soil cleanup objectives (RRSCOs) or protection of groundwater soi cleanup objectives (PGWSCOs) in soil samples. VOCs: Petroleum VOCs consisting of benzene, toluene, ethylbenzene, total xylenes (collectively BTEX), isopropylbenzene, n propylbenzene, 1, 3, 5 trimethylbenzene, 1, 2, 4

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

trimethylbenzene, sec butylbenzene, 4 isopropyltoluene, and naphthalene were detected in many samples site wide. The soil boring logs indicate that the petroleum contamination extends from the surface to a depth of approximately 30 ft below ground surface (bgs). Petroleum VOC detections and concentrations increased with depth, a majority of them occurring in the area of the former bulk storage tanks. The highest number of samples containing petroleum VOCs occurred at the water table interface. The highest concentrations occurred at or below the water table (1 to 6 feet bgs) to approximately 25 30 ft below grade. Some samples containing BTEX were found at greater depths, which were associated with coal tar, as noted below. 1,2,4 Trimethylbenzene, naphthalene and BTEX (benzene, toluene, ethylbenzene and xylenes) were found most often and had the highest concentrations exceeding RRSCOs and PGWSOCs. 1,2,4 Trimethylbenzene concentrations ranged from 4.4 to 790 parts per million (ppm), exceeding the PGWSCO of 3.6 ppm. Naphthalene concentrations ranged from 17 to 2,500 ppm, exceeding the PGWSCO of 12 ppm. Benzene concentrations ranged from 0.7 to 19 ppm, exceeding the PGWSCO of 0.7 ppm; toluene concentrations ranged from 0.88 to 59 ppm, exceeding the PGWSCO of 0.7 ppm; ethylbenzene concentrations ranged from 1 to 120 ppm, exceeding the PGWSCO of 1 ppm; total xylenes concentrations ranged from 0.28 to 460 ppm, exceeding the PGWSCO of 0.26 ppm. The petroleum contamination is more prevalent along the southern boundary along 12th Street and around the former bulk storage tanks. This suggests that the site has been impacted by the former petroleum storage and fueling operations. SVOCs: SVOCs, primarily polycyclic aromatic hydrocarbons (PAHs), were detected in a majority of the soil borings site wide, primarily within the shallow soil samples associated with the historic fill (5 to 10 ft below grade), although some occurred at greater depths and were associated with coal tar. PAHs, specifically benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3 c,d)pyrene, accounted for the highest percentage of SVOC samples exceeding RRSCOs or PGWSCOs, as applicable. Concentrations of benzo(a)anthracene (1.1 ppm to 230 ppm) and benzo(a)pyrene (1.1 to 76 ppm) found on site significantly exceed their RRSCO of 1 ppm. Concentrations of benzo(b)fluoranthene (1.1 ppm to 75 ppm) and chrysene (1.1 to 160 ppm) found on site exceed their RRSCO of 3.9 ppm. Concentrations of dibenz(a,h)anthracene (0.36 ppm to 11 ppm) found on site exceed the RRSCO of 0.33 ppm. Concentrations of indeno(1,2,3 c,d)pyrene (0.53 ppm to 34 ppm) found on site exceed the RRSCO of 0.5 ppm. The highest SVOC sample concentrations were phenanthrene, fluorene, fluoranthene, and naphthalene and found within the historic fill. Concentrations of phenanthrene (120 to 3,600 ppm), fluorene (120 to 1,500 ppm), naphthalene (200 to 2,500 ppm) and fluoranthene (160 to 1,600 ppm) found on site significantly exceed their RRSCO of 100 ppm. Coal Tar: The PAH and VOC (BTEX, noted above) analytical results indicate that coal tar was encountered in two borings from 20 to 50 feet, bgs. Coal tar was also identified in the field based upon photoionization detector(PID) readings, olfactory observations, and visual identification. The location of these borings is generally in the southeast and central portion of the site. Metals: Metals consisting of arsenic, barium, cadmium, total chromium, iron, cobalt, copper, lead, mercury, nickel, selenium and zinc were detected above RRSCOs. Metals exceeding the RRSCOs are found primarily within the shallow soils (5 to 10 feet, bgs) site wide within the historic fill. Arsenic, lead, and mercury accounted

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

for the highest percentage of metal exceedances of RRSCOs. Concentrations of arsenic (16.3 to 1,110 ppm) found on the site exceed the RRSCO of 16 ppm. Concentrations of lead (448 to 12,100 ppm) found onsite exceed the RRSCO of 400 ppm. Concentrations of mercury (0.856 to 8.43 ppm) found onsite exceed the RRSCO of 0.81 ppm. While many of the metal values were within the range of their typical background concentrations for urban fill, some were well above these values are likely attributable to the petroleum and coal tar releases previously identified. PCBs and Pesticides: PCBs were detected at 8.9 ppm in one shallow soil boring exceeding the RRSCO of 1 ppm. Pesticides were detected in samples, although no pesticides were detected above RRSCOs. Site-related VOC, SVOC, pesticides and metals were found in Bushwick Inlet and/or East River sediments adjacent to the site. Coal tar DNAPL was observed in one sample in the East River. Petroleum LNAPL, sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick Inlet. This suggests that site contamination has likely migrated off-site into the Bushwick Inlet. Groundwater: Sampling results indicated that VOCs, SVOCs, and metals were detected above the 6NYCRR Part 703 Ambient Water Quality Standards and Guidance Values (AWQSGVs) in groundwater. VOCs: VOCs, including 1,2,4 trimethylbenzene, 1, 3, 5 trimethylbenzene, benzene, chlorobenzene, isopropylbenzene, naphthalene, n propylbenzene, sec butylbenzene, MTBE, and total xylenes were detected at concentrations exceeding AWQSGVs The following VOCs were the highest: naphthalene at 2,100 part per billion (ppb) which exceeds the AWQSGV of 10 ppb; benzene at 160 ppb which exceeds the AWQSGV of 1 ppb; 1,2,4 trimethylbenzene at 260 which exceeds the AWQSGV of 5 ppb; total xylenes at 1,140 ppb which exceeds the AWQSGV of 5 ppb. SVOCs: SVOCs, including acenaphthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3 c,d)pyrene, and phenol were detected at concentrations exceeding NYSDEC AWQSGVs. The following are the maximum concentrations of SVOC found on site in groundwater: acenaphthene at 52 ppb, which exceeds the AWQSGV of 20 ppb; benzo(a)pyrene at 4 ppb, which exceeds the AWQSGV (non detect); benzo(b)fluoranthene at 3 ppb, benzo(k)fluoranthene at 2 ppb, chrysene at 5 ppb and indeno(1,2,3 c,d)pyrene at 2 ppb, which exceed their AWQSGV of 0.002 ppb; and phenol at 2 ppb which exceeds the AWQSGV of 1 ppb. 1,4-Dioxane was not detected above the laboratory reporting limit in any groundwater sample. The elevated concentration of VOCs is likely a reflection of the petroleum contamination as most exceedances occurred in the former petroleum storage and fueling operations. The SVOC contamination is in part the result of the historic fill as most exceedances occurred in the western half of the site. SVOC contamination was also found in borings with observed coal tar in the southeast area of the site along 12th street, suggesting some SVOC groundwater contamination could be attributed to the MGP. Metals: The metals arsenic, barium, beryllium, cadmium, chromium, copper, iron, magnesium, lead, manganese, and sodium were detected at concentrations exceeding AWQSGVs in unfiltered samples. Filtered samples show only iron, magnesium, and sodium exceeding AWQSGVs, which is likely from compounds associated with the East River, which have a hydrogeological connection to groundwater at the Site. The source of the other metals in the unfiltered samples is likely due to the presence of suspended sediments in the sample. PCBs and Pesticides: PCBs and pesticides were not detected above the

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

laboratory reporting limit in any groundwater sample. PFAS Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 160 parts per trillion (ppt) and 17 ppt, respectively, exceeding the Maximum Contaminant Level (MCL, drinking water standard) of 10 ppt in groundwater. The maximum concentration of total PFAS in one sample was 706 ppt. The source of these compounds is thought to be from the on site fire suppression system as the compounds were found in samples taken in the immediate vicinity of the foam house. Non Aqueous Phase Liquid-NAPL NAPL was found in both soil and groundwater samples sitewide. Both LNAPL and DNAPL were found in soil borings below the water table and in groundwater wells. Most groundwater observations were non measurable sheens or blebs. However, some had measurable LNAPL,up to 1.5 feet thick. Sediment: Site-related VOC, SVOC, and metals were found in Bushwick Inlet and/or East River sediments adjacent to the site. Coal tar and petroleum was observed in one sample in the East River. Petroleum sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick Inlet. contamination has migrated off-site. The VOC most often detected in samples and with the highest concentrations was 1,2,4-Trimethylbenzene, concentrations of which ranged from 0.1 to 10 ppm. The SVOC most often detected in samples and with the highest concentrations was Naphthalene, concentrations of which ranged from 3 to 48 ppm. The source of these VOC and SVOC compounds are associated with the site. Unfiltered metals samples show compounds associated with the East River. The source of the other metals in the unfiltered samples is likely due to the presence of suspended sediments in the sample. Sediment gathered show observed coal tar and petroleum contamination in the East River and Bushwick Inlet sediment. Coal tar DNAPL was observed in one sample in the East River adjacent to the site. Petroleum LNAPL, sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick inlet. Based on sediment data below and the tidal influence, contaminated groundwater and LNAPL/DNAPL appear to have migrated off-site into the adjacent waterway.

Health Problem: The site is completely fenced, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Sampling indicates soil vapor intrusion is a potential concern for off-site buildings, however this may be attributable to contamination from an off-site source.

DEC Memo:	12/30/14-Vought-This spill reassigned from DEC Zhune to Vought as Vought also working on spill 1216805 with NYCOER Chawla and Moore which is two lots away and upgradient from this site. See that spill also for further information. Vought copied following notes from Spill 1216805: 12/19/14-Vought-Sent reply to OER Moore with cc to OER Chawla that Hannah, According to the reports for 1216805 and the block/lot maps the most contaminated groundwater flows from 223 North 8th towards 207 North 8th. I would call in a spill for the following reasons: -Down-gradient VOC concentrations are ten times higher at 207 North 8th suggesting an on-site source.-Prior site use of 207 North 8th as a private garage suggesting petroleum use and possible storage. -Groundwater concentrations at 207 North 8th will require at least quarterly monitoring via installation of sidewalk wells (if the site is to be developed) to ensure a decreasing

207 NORTH 8TH STREET (Continued) **S117394139**

VOC trend attributable to attenuation. -PCE in soil vapor may require DOH review and possible SSDS (unless this site has been reviewed with Jane O or Bob C during OER/DEC routine meetings). As I manage the almost adjacent site, it would make most sense for me to manage 207 North 8th as well. As such I would much appreciate if the spill caller to the hotline was to mention my name be placed in DEC Remarks. Hope this helps and feel free to forward this email onto the developer/responsible parties. Submission of a Remedial Action Report (RAR) that describes the remedial activities, certifies that the remedial requirements have been achieved, defines the Site boundaries, lists any changes from this RAWP, and describes all ECs and ICs to be implemented at the Site. 12/29/14-Vought-Sent email to OER Moore as to if spill at 207 North 8th was called into Spills Hotline. OER Moore replied that she would return call to Vought to discuss. Vought had teleconference with OER Chawla, Moore and Wong and they noted that 207 would be excavated to below groundwater and Vought noted DEC would require collection of groundwater sample from excavation during development of that site under separate spill number. OER Moore will have spill called in to hotline and note Vought as PM so that Vought could manage both spill sites due to proxmity. Construction and maintenance of an engineered composite cover consisting of a 4 inch thick concrete slab across the southern 70 feet of the Site and a 4 inch thick concrete patio across the northern 30 feet of the Site to prevent human exposure to residual soil/fill remaining under the Site. The entire Site will be capped, there will be no exposed soils, vegetation, or landscaping; 12/30/14-Vought-Sent email to OER Moore with cc to Chawla and Morris that Hannah, The Spill is indeed assigned to me and I look forward to the collection of the groundwater sample post excavation and dewatering. I would much appreciate if you could forward me any pertinent reports NYCOER received so I can review them as well as complete our files. I would also appreciate if you could forward or send the owner/developer contact information (I will hold off on contacting them as you are facilitating our requirements for the collection of samples). Please note as well that after further thought we should also collect soil sidewall endpoint samples (if possible) to ensure complete site characterization as well as to ensure no vapor intrusion from possibly contaminated soil sidewalls. If needed I can formalize this in a letter to the developer. Thanks as always, -Jeff 8/19/16-Vought-Sent letter to OER Moore with cc to OER Chawla that Hannah, We just received a FOIL request for the above site and I see there are no

207 NORTH 8TH STREET (Continued) **S117394139**

updates since my last notes of 12/30/14 where I noted that Sent email to OER Moore with cc to Chawla and Morris that Hannah, The Spill is indeed assigned to me and I look forward to the collection of the groundwater sample post excavation and dewatering. I would much appreciate if you could forward me any pertinent reports NYCOER received so I can review them as well as complete our files. I would also appreciate if you could forward or send the owner/developer contact information (I will hold off on contacting them as you are facilitating our requirements for the collection of samples). Please note as well that after further thought we should also collect soil sidewall endpoint samples (if possible) to ensure complete site characterization as well as to ensure no vapor intrusion from possibly contaminated soil sidewalls. If needed I can formalize this in a letter to the developer. Thanks as always, -Jeff And my requirements at that time were DEC Requires: 1)Submission of a RAP including collection of bottom groundwater sample and soil sidewalls (if possible) as development of site includes excavation to groundwater as per NYCOER 12/29/14. 2)Submission of reports submitted to NYCOER as per email dated 12/29. 3)Vapor or moisture mitigation into new development. 4)cc to OER Chawla/Moore/Morris and PW Grosser. I have attached the spill notes for your reference as well and would much appreciate any updates you have or resending those updates if already sent. Thanks. OER Moore replied Hi Jeff we re looking into it and will get back to you. Thanks. 8/19/16-Vought-Received email reply from OER Chawla with cc to OER Moore/Glass that Since the spill was called in during investigations back in 2014, development project has been stalled and no work is ongoing. See email from consultant below. Kate Glass is managing this site for us. RIR and RAWP were finalized in 2014. Kate will be voiding their NTP. Give me call if you need any additional info. In below email string was email from PW Grosser Almskog to OER Glass dated 2/17/16 that Katherine, I look forward to working with you on this and other OER projects in the future. The project redevelopment has been on hold for the past few years and no development or excavation activities have taken place since the remedial investigation and the Remedial Action Plan were submitted to OER. The property owner is evaluating proposed development design plans and is hoping to start construction activities in 2017 at this site. Once the redevelopment plans are finalized, I will be in contact with you to determine if a revised RAWP or addendum is needed based upon modifications. Please let me know if you have any additional questions. Thanks 8/22/16-Vought-Reviewed Remedial Investigation

207 NORTH 8TH STREET (Continued) **S117394139**

Report (PW Grosser Jennifer Lewis)
dated May 2014. Vought added report to D2. Report prepared for: North Eight NY, LLC 900 Grant
Avenue Brooklyn, NY 11211 Remedial Investigation Report (PW Grosser)-May 2014: The development
project consists of a new six story residential building with a cellar. The lot size of the
property is 25 feet by 100 feet and the first through six floors of the building will occupy the
south 25 feet by approximately 55 feet. The first floor will be underlain by the cellar which will
extend an additional approximate 15 feet north into an open air areaway and sump pump room. The
remaining 30 feet north of the cellar will remain near sidewalk grade and will exist as a concrete
paved courtyard. The cellar level will consist of utility rooms, a laundry room, a boiler room, the
areaway, and an accessory room to a first floor dwelling unit. The site will be excavated to a
maximum depth of approximately 15 feet below sidewalk level for the installation of the elevator
pit and step footings. Site E designated with NYCOER. Former oil tank on site as per NYCDOB permit
in 1992. Scope of work included five soil borings with collection of eleven soil samples,
installation of three monitoring wells and five soil vapor probes with three samples collected for
analysis. Water in monitoring wells is 7-11'bg but may be perched. Groundwater flow to the
northwest and soils are 3-10'of historic fill underlain by sandy clay. Generally, the soil beneath
the site consists of approximately 3 feet of historic fill material overlaying a layer of brown to
black sandy clay that extended to a minimum depth of 30 feet. Anomaly noted during GPR survey in
rear portion of property. Soil analyses showed up to 460ppb xylene(SB-2 20-23'bg). Groundwater
analyses showed up to 1.2ppb benzene(MW1), 31ppb ethylbenzene(MW1), 11ppb xylene(MW2), and 250ppb
naphthalene(MW2). Soil vapor analyses show up to: 15ug/m3 PCE(SV002), 19.8ug/m3 benzene(SV001),
144ug/m toluene(SV001), 31.4ug/m3 ethylbenzene(SV001), 113ug/m3 xylene(SV001). PWGC recommends that
a Remedial Action Work Plan be prepared and submitted to address the proper handling of on-Site
soils and groundwater and the installation of appropriate engineering controls based upon the
development plans and the quality of the soil to remain in place following development. In appendix
was Phase I from PW Grosser noting performance of GPR survey with detection of anomaly in rear of
property. Remedial Action Work Plan Stipulation List (PW Grosser)-10/3/14. Vought added RAWP and
Stipulation List to D2. P.W. Grosser Consulting (the consultant) hereby submits a Remedial Action
Work Plan (RAWP) Stipulation List for the 207 North 8th Street (the Site) to the New York City

207 NORTH 8TH STREET (Continued) **S117394139**

Office of Environmental Remediation (OER) on behalf of North Eight NY, LLC. This letter serves as an addendum to the RAWP to stipulate additional content, requirements, and procedures that will be followed during the Site remediation. The contents of this list are added to the RAWP and will supersede the content in the RAWP where there is a conflict in purpose or intent. The Site will be excavated to a maximum depth of approximately 15 feet below sidewalk level for the installation of the elevator pit and step footings beneath the cellar for an approximate 850 cubic yards of off-site soil removal. Groundwater is estimated at approximately 7 to 11 feet below grade and excavation for the cellar will require excavation into the groundwater. RAWP includes CAMP, establishment of restricted residential SCOs. The rear yard area (northern 30 feet of the Site) will be excavated approximately 0.5 feet below sidewalk grade for the installation of the concrete patio. Approximately, 1,000 tons of soil will be excavated and removed from this Site. Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs. Installation of a vapor barrier system beneath the building slab and outside foundation sidewalls below grade. The vapor barrier will consist of a combination of Grace Construction Products Preprufe 300R for horizontal applications and Preprufe 160R for vertical applications. Both vapor barriers are constructed of a high density polyethylene film; Preprufe 300R is 46 mils thick and Preprufe 160R is 32 mils thick. A letter from the manufacturer stating the compatibility of the vapor barrier with observed on-Site contaminants and manufacturer s cut sheets for the vapor barrier are included in Appendix B. A RAR will be submitted to OER following implementation of the remedial action defined in this RAWP. The RAR will document that the remedial work required under this RAWP has been completed and has been performed in compliance with this plan. 8/22/16-Vought-Sent letter approving of RIR and RAWP and Stipulation list pending inclusion of quarterly groundwater sampling, use of Unsrestricted SCOs, and collection of bottom groundwater endpoint sample. Letter added to D2 and sent to North Eighth with cc to OER Chawla and Moore with email that Kris, Please see the Department s attached review letter of the RIR and RAWP and Stipulation list for the above referenced site. An original of the letter is in the mail to North Eighth LLC. Please provide an update on the status of the site. Thanks 9/6/16-Vought-Received hardcopy of DEC requirement letter returned to DEC from US postal service and envelope noted insufficient address and unable to forward . No resending of letter

207 NORTH 8TH STREET (Continued) **S117394139**

via US mail as Vought in active
correspondence with consultant. DEC Requires: 1)Confirmation of RP's mailing address as last DEC
letter returned as undeliverable . 1)Update on development plans for site as per the RAWP and RIR
2)Continuation of quarterly sampling of groundwater. 3)Use of Unrestricted SCO's as per CP-51
versus NYCOER using Restricted SCOs 4)Collection of groundwater sample from excavation to examine
for possible attenuation after source removal 5)cc to OER Chawla/Moore/Morris and PW Grosser (Kris
Almskog) as site E designated 12/19/2017 - Austin - Project transferred from Vought to Lakhani -
end 08/08/18 - Lakhani OER Shaminder informed that the new project manager for the site is Alysha
Alfieri. No work has occurred on the site. The site has been simply fenced in. 08/05/19 - Lakhani -
Spill being transferred to Lin. 4/22/2020-Lin-Reviewed August 2018 groundwater results. No
exceedances for VOC in groundwater samples. Groundwater contamination attenuated since samples were
last taken in 2014. 11/8/21-Lin-Recieved groundwater sample results. There are three groundwater
monitoring wells on site. The most recent groundwater sample results (one round of sampling in 2018
and two rounds of sampling in 2021) came back without exceedances of NYSDEC Ambient water quality
standards for VOC. Case closed.

Remarks: historical spill requesting Jeff out of long island be assigned to this spill

Contact Name:	KIM SOMERS
DEC Memo:	7/28/2015 - Feng - Duty Desk. Talked to Kim Somers of EBC (631-504-6000). The site is being developed under the OER BCP program. OER has approved the RAWP already. They have installed borings/wells and found soil and groundwater contamination. Soil consist of historical fill and 1,000 ppb benzene, 1,600 ppb toluene at 1-2 feet. Groundwater was found to have 420 ug/L MTBE and SVOCs. DTW is at 5-7 feet. They probably start the excavation in 1

GROUNDWATER (Continued) **S118141503**

month pending the Notice to
Proceed letter from OER and the DOB's permit. The investigation was done in 2/2015 and EBC reported
it to OER and reported to DEC now. The RAWP calls for excavation of 10 feet in the north portion, 3
feet in the south portion and no excavation in the 25 feet of midsection. The RAWP calls for vapor
barrier also. They are building a 4-story mixed use building which expand the existing building.
Partial cellar to 10 feet for the 25 feet of the new building.

Environmental Business Consultants Ph. (631) 504-6000 Fax (631) 924-2870 email:
ksomers@ebcincny.com 07/29/15-Hiralkumar Patel. received reports from Kim. abstract of Phase I: -
according to the sanborn maps, the site appears to have been originally developed sometime between
1887 and 1905 with two, one-story structures identified as sheds with an office, and an attached
two-story structure in the southern rear portion of the lot - site appears to have been redeveloped
in 1970 with the currently existing, one-story industrial warehouse building - the building is
slab-on-grade - site was identified as a private garage (1951, 1965), an auto repair use (1978) and
a warehouse (2007) - no ASTs or evidence of USTs were observed - site was assigned an E-designation
hazmat ---------- abstract of RIR: - proposed future use of the site will consist of the
redevelopment of the existing structure in two, 4-story mixed use (commercial and residential)
buildings with a mezzanine level and partial cellars - the cellar level will require excavation to
a depth of approx. 11 ft bg across the first 36 ft of the site from N 10th St - the first floor
sunken level in the rear 50 ft portion of the building will require excavation of at least 3 ft bg
- elevation of the site is approx. 14 ft - water table is present at a depth of approx. 7 ft bg -
installed nine borings (SB1 through SB4 on 07/19/14 and SB5 through SB9 on 02/11/15) - borings SB1
through SB4 were installed to a depth of 16 ft bg; borings SB5 through SB7 were installed to a
depth of 15 ft bg; boring SB8 was installed to a depth of 7 ft bg and boring SB9 was installed to a
depth of 10 ft bg - borings installed in Feb. 2015 were at or in close proximity to previous
borings installed in Jul. 2014 (SB5 near SB4, SB6 near SB3, SB8 near SB2, SB9 near SB1) -

GROUNDWATER (Continued) **S118141503**

stratigraphy of the site consists of 3 to 5 ft of historic fill, underlain by native brown sand - no PID readings above background concentrations were detected (but as per borings logs, PID values and odors were detected in borings SB5 and SB7) - total of fourteen (14) soil samples were collected for VOC and SVOC analyses: one from borings SB1 through SB4 (shallow soil samples from SB1 through SB4 were not analyzed for VOC/SVOC) and two from borings SB5 through SB9 - three (3) temporary 1-inch diameter groundwater monitoring wells (MW1 through MW3) were installed to a depth of 15 ft bg; with 20 ft screen at MW2 and 10 ft screen at MW1 and MW3, set to intersect the water table - free product was noted in GW2 (or MW-2??) during the Feb. 2015 sampling. the thickness of the product layer was not measured - well GW2 installed in boring B7 where contamination noted in shallow soil ------- - installed four soil gas implants to a depth of approx. 5 to 6 ft bg and collected four soil vapor samples - found some VOC contamination in soil samples, with maximum at 0-2 ft in boring SB7 but no contamination noted on deeper soil sample (at 11-13 ft bg) in SB7. the deeper soil sample was collected from below the water table and free phase product noted in well GW2 which was installed at/near SB7 ---------- - found SVOC contamination in almost all soil samples, mostly in shallow soil samples - free phase product noted in well GW2 --------- - some VOCs detected in soil vapor samples (maximum: 47.9 ug/m3 in SG-3) soil analyticals:

----------B1----------B2----------B7 13-14 ft 8-10 ft 0-2 ft
Benzene----------340*----------1,000
Toluene----------1,600
Xylene----------540---------940--------1,640
MTBE----------680*--------570*

* - higher reporting limit the submitted RIR has following information incorrect, confusing or missing: - as per table 1, monitoring wells were installed to a depth of 15 feet below grade; but as per text on page #8, wells were installed with 20 feet of screen at MW2 - as per text on page iii, groundwater flow is west-northwest; but as per figure 9, groundwater flows to the east - as per text on page 8, no PID readings above background concentrations were detected; but as per borings logs, PID values and odors were detected in borings SB5 and SB7 - report missing detailed boring logs for soil borings SB1 through SB4 and well installation logs - as per table 6, 420 ppb of MTBE was detected in groundwater sample from well MW2 during sampling in July 2014; but as per the lab report, MTBE was non-detect abstract of RAWP: - will remove any USTs encountered during excavation - will collect and analyze endpoint samples - dewatering

GROUNDWATER (Continued) **S118141503**

will occur - will install
waterproofing/vapor barrier system below the concrete slab of the building as well as behind
foundation walls 08/04/15-Hiralkumar Patel. 11:07 AM:- spoke with Kim. informed her about
missing/confusing/incorrect information in the remedial investigation report. asked her to submit a
revised report. also asked her about status of monitoring wells. informed her that the department
requires re-gauging of existing wells to confirm depth of groundwater and product thickness. 11:11
AM:- spoke with Mr. Finnican. he leased this property. inquired him about reason for not reporting
spill in July 2014 when contamination was detected first time. he mentioned that EBC was handling
this case from beginning and NYC OER was aware of the findings. asked him to provide contact
information for property owners. Thomas Finnican **leasee** 202 North 10th LLC. 144 North 7th
Street, Suite # 408 Brooklyn, NY 11249 Ph. (646) 688-5144 email: tfinnican@patoma.com 11:33 AM:-
sent email to Kim and Mr. Finnican. asked Kim to submit revised remedial investigation report
including correct/missing information and results of re-gauging of existing wells to confirm depth
of groundwater and product thickness. asked Mr. Finnican to submit contact information for property
owners. email copied to OER Chawla and Charles Sosik. 11:48 AM:- sent email to Kim and Mr. Finnican
and asked them to submit signed copy of RAWP. email copied to OER Chawla and Charles.
08/06/15-Hiralkumar Patel. 8:57 AM:- sent email to OER Chawla requesting call back to discuss spill
notification issue. 08/07/15-Hiralkumar Patel. received message from Hanna Moore (at 5:36 PM on
08/06/15) from OER. she mentioned that OER was informed about contamination at the site in Mar.
2015 and since then they have asked property owner/operator to report spill. 08/19/15-Hiralkumar
Patel. 9:05 AM:- sent email to Kim and Mr. Finnican. asked Kim to submit revised report and signed
copy of RAWP along with results of re-gauging of existing monitoring wells. asked Mr. Finnican to
submit property owners' contact information. email copied to OER Chawla and Charles.
09/16/15-Hiralkumar Patel. 10:49 AM:- spoke with Kim and inquired her about revised RAR and signed
RAWP. she mentioned that she has sent link to those documents on 08/28/15, but I have not received
it. asked her to resend it. also asked her about product thickness in impacted the well. during
regauging, they found 0.03 ft of product. Kim mentioned that they have received Notice to Proceed
from NYC OER. 10:56 AM:- spoke with Mr. Finnican and asked him to provide property owner's contact
info. 10:56 AM:- received email from Kim including copy of OER's Notice to Proceed letter. searched

GROUNDWATER (Continued) **S118141503**

online and found number for property owner. 11:14 AM:- spoke with Ms. Dorto (516-887-1006) and
informed her about open spill case at the site. she mentioned that the site has been leased out and
she asked to contact leasee. 11:24 AM:- received email from Kim including GW elevation table and
map. as per the map, groundwater flows to the north and well MW2 is the downgradient well. there is
typo in GW elevation table. as per depth to water and depth to product data, 7.85 ft of product
noted in well MW-2. 11:32 AM:- spoke with Kim and informed her about typo in elevation table. she
will submit revised one. also asked her to submit RIR and RAWP via mail. 11:51 AM:- received email
from Mr. Finnican including Mr. Dorto's phone number. Shirley Dorto / Joseph A. Dorto **property
owners** 39 Linden Street Malverne, NY 11565 Ph. (516) 887-1006 (516) 643-0133 received revised RIR
and signed copy of RAWP. 12:11 PM:- received email from Kim including revised GW elevation table
and map. after using correct information from field notes, groundwater flow found towards the
northeast. 11/20/15-Hiralkumar Patel. 11:02 AM:- spoke with Kim inquiring updates. she was out of
office and will call back next week after reviewing file.
12/08/15-Hiralkumar Patel. 1:49 PM:- sent
email to OER Hannah inquiring update. email copied to OER Shaminder.
12/10/15-Hiralkumar Patel.
2:53 PM:- spoke with Kim. she mentioned that the developer has received notice to proceed from NYC
OER, but project has not started yet. 2:56 PM:- tried Mr. Finnican's phone number multiple times,
but no response. 2:58 PM:- spoke with OER Hanna. she has not heard from property developer yet. she
checked NYC DOB record and noted that the developer has not received required DOB permit yet.
03/31/16-Hiralkumar Patel. 8:58 AM:- spoke with Kim and inquired her about current status. she
mentioned that site redevelopment is on hold. asked her to re-gauge existing wells.
04/01/16-Hiralkumar Patel. 2:54 PM:- received email from Kim. she mentioned that they are going to
the site next week to re-gauge the monitoring well. she inquired if product sample needs to be
collected for fingerprint analysis, if found in monitoring well. 3:42 PM:- sent email to Kim and
asked her to collect product sample for fingerprint analysis, if found. 04/26/16-Hiralkumar Patel.
9:21 AM:- received report from EBC. abstract: - three monitoring wells (MW-1 through MW-3) were
gauged on 04/04/16 - found approx. 1-inch product in well MW-2 - depth to groundwater ranges in
depth from 5.85 to 7.94 ft bg - depth to groundwater in MW-2 could not be determined due to
thickness of product present - product sample from MW-2 was collected for fingerprint anslysis -
lab findings for the petroleum ID on the oil sample from MW-2 was

GROUNDWATER (Continued) **S118141503**

inconclusive, with majority of
mass listed as unidentified . the chromatogram in general, however was noted to resemble that of
motor oil ---------- 12:05 PM:- spoke with OER Hannah inquiring about current status of project in
OER file. she will talk to project manager (Horace Zhang) and will call back. 04/28/16-Hiralkumar
Patel. 9:31 AM:- spoke with Kim. inquired her about current status of the site. she mentioned that
the developer is revising redevelopment plans due to revised floodplain maps. 12:58 PM:- spoke with
Mr. Finnican. he mentioned that they have not received required permit from NYCDOB yet. due to
revised floodplain maps, now they will not create a cellar and on-site building will not be
demolished. a new footings will be installed to extend existing one-story building into four-story
building. as redevelopment plan changed and there will be no basement, need a revised RAWP. 2:38
PM:- sent letter to Mr./Ms. Dorto and Mr. Finnican requiring implementation of interim remedial
measures (weekly well gauging/product removal) and determination of site-specific groundwater flow
direction (via installation of additional well). also asked them to collect endpoint samples, if
soil excavation occurs. asked them to submit report, including plans for remediation of all
contaminated media and vapor mitigation details, by the end of 07/01/16. letter emailed to Mr.
Finnican, OER Shaminder and Kim. 05/26/16-Hiralkumar Patel. received email from OER Horace Zhang
(at 5:21 PM on 05/25/16) including summary of meeting between OER, property owner and property
owner’s consultant. he mentioned that additional investigation scheduled for Friday 5/27 to -
install 1 additional groundwater well (MW4) to determine flow direction - convert MW2 to a 2 inch
well for increased product recovery - collect soil samples to delineate the extent of contamination
in 10 increments outward from MW2 he mentioned that because the development plans don t require
site-wide excavation, owner is also exploring the possibility of conducting test pits to delineate
the contamination/ potentially identify source.
construction/remediation is expected to begin in 2
to 3 months. the partial cellar is being eliminated to comply with DOB flood zone requirements. new
plans with finalized excavation depths will be submitted when the foundation design is completed.
11:40 AM:- received email from Kim. she mentioned that the following steps will be implemented at
the site to address the free-phase petroleum identified in monitoring well MW2: 1) installation of
a permanent groundwater monitoring well in the vicinity of MW2 2) replacement of existing
monitoring well MW2 with a 2-inch diameter well to improve product recovery efforts 3) gauging all

GROUNDWATER (Continued) **S118141503**

monitoring wells on-site and implementing product recovery of any free-phase product present 4) installation of test borings around MW2 at 10ft intervals to delineate the extent of the contamination. soils from each test boring will be screened with a PID and inspected for physical evidence of petroleum contamination. test borings will extend from the location of MW2 in 10-ft intervals until field conditions/PID readings do not indicate evidence of petroleum contamination 5) soil samples will be collected from the driest deepest depth of the test borings where visible contamination is not present to confirm the horizontal extent of the petroleum-impacted soils. 6) soils from the well installations will be screened continuously with a PID. soils samples from the deepest driest interval and the interval with the highest PID reading will be retained for laboratory analysis of VOCs and SVOCs (CP-51) Kim mentioned that the above work is scheduled to commence at the site tomorrow, Friday 5/27. well gauging and product recovery efforts will continue on a weekly basis. documentation of the weekly gauging/product removal will be submitted to NYSDEC and OER for review. Kim submitted a site map with proposed well and test pit locations.
05/27/16-Hiralkumar Patel. 12:30 PM:- visited site and met Tom from EBC. he drilled couple of borings, including proposed well MW4, around existing well MW2. well MW4 is installed west of well MW2, where some oil staining noted. Trans Boro Fuel Oil is located to the west of the subject site.
Trans Boro Fuel Oil 481 Driggs Ave (alternate address: 198-200 N 10th St) Brooklyn, NY PH. (718) 389-1466 no PBS or spill record found for 481 Driggs Ave.
06/02/16-Hiralkumar Patel. received email from Kim (at 10:04 AM on 06/01/16) including summary of observations during well/borings installation on 05/27/16. stained soils/odors were detected in four test borings west of MW2 at approximately 8-10 ft bg and extending to the western site boundary. PID readings were highest in the boring where MW4 was installed, approximately 10 ft west of MW2, 40 ppm at 8-10 ft bg. borings installed 10 ft north and south of MW2 contained minor staining at the 8-10 ft interval and PID readings were low (0.0-1.8 ppm). test boring to the east of MW2 did not have any visual or olfactory evidence of petroleum-impacted soils and PID readings at the 8-10 ft interval were 0.0 ppm. total of 12 soil samples were retained for laboratory analysis of VOC and SVOCs. the four monitoring wells at the site were gauged and sampled on May 31, 2016. a less than 1 layer of thick free-phase petroleum product was detected in MW2 and MW4. four groundwater samples were retained for laboratory analysis of VOC and SVOCs. groundwater flow direction

GROUNDWATER (Continued) **S118141503**

was reassessed and appears to
flow towards the northeast. 9:44 AM:- spoke with a person (who did not provide his name) at Trans
Boro Fuel. he mentioned that they only park fuel oil truck at the site and don't have any storage
tanks or repair shop at 481 Driggs Ave. 06/10/16-Hiralkumar Patel. 8:53 AM:- received email from
Kim including results of weekly product removal conducted on 05/27/16 and 06/08/16. 0.03 ft of
product found in well MW2 on 05/27/16. on 06/08/16, depth of product in MW2 could not be determined
because the probe was coated with product. total of 24 oz of product/water mix was removed from MW2
on 06/08/16. 06/17/16-Hiralkumar Patel. 1:24 PM:- received email from Kim including results of
weekly well gauging conducted on 06/16/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. depth of
product in MW2 could not be determined because the probe was coated with product. total of 28 oz of
product/water mix was removed from MW-2. 06/28/16-Hiralkumar Patel. received email from Kim (at
4:32 PM on 06/27/16) including results of weekly well gauging conducted on 06/23/16. wells MW-1,
MW-2, MW-3 and MW-4 were gauged. depth of product in MW2 could not be determined because the probe
was coated with product. total of 1/2 gal of product/water mix was removed from MW-2. faint reading
indicating product noted in well MW-4. 06/30/16-Hiralkumar Patel. 8:12 AM:- received email from Kim
including sampling report for delineation work conducted on 05/27/16. abstract: - installed total
of eight soil borings (SBD1 through SBD8) within the vicinity of MW2 to horizontally delineate
extent of petroleum-impacted soils - soil borings were installed to a depth of 10 ft bg - visually
contaminated soil (grey/black stained) and PID readings were identified in three soil borings
(SBD4, SBD6 and SBD7), all of which are located west of MW2 ---------- - as per site map, boring
SBD2 was installed to replace well MW2 - total of 12 soil samples were collected for analysis: two
each from SBD1, SBD3, SBD4, SBD6 and SBD7; and one each from SBD5 and SBD8 - installed a new 2-inch
well MW4 west of existing well MW2 - existing 1-inch well MW2 was replaced with a 2-inch well -
wells were installed with 10 ft of screen - depth to groundwater is approx. 7 ft bg - direction of
groundwater flow appears to flow towards the east/northeast ---------- - four groundwater samples
were collected - free-phase product is present in wells MW2 and MW4 - petroleum-impacted soils
appear to be concentrated in the area of MW2, extending west towards the property line at the 6-10
ft bg interval - found sandy silt with clay with ash in soil borings - less than 10 ppm recorded on
PID in soil borings, excepts SBD4 (40 ppm at 8 ft bg) and SBD7 (29.6 ppm at 8 ft bg) - no

GROUNDWATER (Continued) **S118141503**

contamination noted in groundwater samples - found VOC contamination in deeper soil samples from SBD1, SBD4, SBD6 and SBD7 - highest contamination noted in boring SBD6 which is along the western boundary of the site soil analyticals:

recommendations from contractor: - continuation of product removal effort on a weekly basis until site redevelopment begins - excavation to a depth of groundwater in the area of MW2 and MW4, without compromising integrity of existing structure or the adjacent structure, during site excavation activities for the proposed new building footings - collection and analysis of endpoint samples the report does not include any details about vapor mitigation efforts. 07/01/16-Hiralkumar Patel. 1:33 PM:- received email from Kim including results of weekly well gauging conducted on 06/30/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. no solid tone was detected for either well, indicating no product. but when the probe was removed, there was trace amount of product on probe for both MW-2 and MW-4. 07/05/16-Hiralkumar Patel. reviewed weekly well gauging data and soil/gw delineation results. based on well gauging reports, groundwater found at around 8 ft bg in well MW-1; and between 5 and 6 ft bg in wells MW-2, MW-3 and MW-4. based on these, heaviest soil contamination noted in soil boring SBD6 was noted below water table and no contamination noted in groundwater sample from well MW-4, which is less than 10 ft away from borings SBD6. 10:42 AM:- sent email to Kim and asked her to submit a revised RAWP as redevelopment plan has changed. email copied to Mr. Finnican. 10:45 AM:- received email from Kim. she mentioned that RAWP will be revised once the finalized plans are received from the developer. 07/11/16-Hiralkumar Patel. received email from Kim (at 1:53 PM on 07/08/16) including results of weekly well gauging conducted on 07/07/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. no solid tone was detected for either well, indicating no product. but when the probe was removed, there was trace amount of product on probe for MW-2. MW-4 had no trace product. 07/18/16-Hiralkumar Patel. 9:53 AM:- received email from Kim including results of weekly well gauging conducted on 07/13/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. no solid tone

GROUNDWATER (Continued) **S118141503**

was detected for either well,
indicating no product. but when the probe was removed, there was trace amount of product on probe
for MW-2. MW-4 had no trace product. 07/22/16-Hiralkumar Patel. 9:18 AM:- received email from Kim
including results of weekly well gauging conducted on 07/21/16. wells MW-1, MW-2, MW-3 and MW-4
were gauged. no solid tone was detected for either well, indicating no product. but when the probe
was removed, there was trace amount of product on probe for MW-2. MW-4 had no trace product.
08/05/16-Hiralkumar Patel. received email from Thomas Gallo (at 4:15 PM on 08/04/16) from EBC
including results of weekly well gauging conducted on 08/03/16. wells MW-1, MW-2, MW-3 and MW-4
were gauged. thick product encountered in MW-2. product coated interface meter probe preventing
depth to water reading in MW-2. trace product noted in MW-4. 08/31/16-Hiralkumar Patel. received
email from Thomas Gallo (at 8:12 PM on 08/14/16) including results of weekly well gauging conducted
on 08/11/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product encountered below
groundwater interface and in bottom 3 ft (12-15 ft bg) in MW-2. trace product noted in MW-4.
received email from Thomas Gallo (at 8:06 PM on 08/21/16) from EBC including results of weekly well
gauging conducted on 08/19/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product
encountered in MW-2. trace product noted in MW-4. 09/01/16-Hiralkumar Patel. 9:31 AM:- received
email from EBC including results of weekly well gauging conducted on 08/26/16. wells MW-1, MW-2,
MW-3 and MW-4 were gauged. thick product encountered in MW-2. trace product noted in MW-4.
09/12/16-Hiralkumar Patel. received email from EBC (at 8:52 PM on 09/11/16) including results of
weekly well gauging conducted on 09/02/16 and 09/09/16. wells MW-1, MW-2, MW-3 and MW-4 were
gauged. thick product coated probe at MW-2 and trace product noted in MW-4 during both events.
09/23/16-Hiralkumar Patel. received email from EBC (at 5:40 PM on 09/22/16) including results of
weekly well gauging conducted on 09/15/16 and 09/22/16. wells MW-1, MW-2, MW-3 and MW-4 were
gauged. thick product coated probe at MW-2 and some light staining on tubing from well MW-4 during
both monitoring events. 10/13/16-Hiralkumar Patel. received email from EBC (at 7:09 PM on 10/12/16)
including results of weekly well gauging conducted on 09/29/16. 0.03 ft of product noted in MW-2
and some light staining on tubing from well MW-4. 11/01/16-Hiralkumar Patel. received email from
EBC (at 1:36 PM on 10/31/16) including results of weekly well gauging conducted on 10/12/16. 0.05
ft of product noted in MW-2 and some yellow staining on tubing from well MW-4. 11:45 AM:- received

GROUNDWATER (Continued) **S118141503**

email from Kim including results of weekly well gauging conducted on 10/28/16. thick product coated
probe at MW-2 and some yellow staining on tubing from well MW-4. 11/16/16-Hiralkumar Patel. 8:34
AM:- received email from Kim including results of weekly well gauging conducted on 11/04/16 and
11/11/16. thick product coated probe at MW-2 and some yellow staining on tubing from well MW-4
during both monitoring events. 11/23/16-Hiralkumar Patel. 11:08 AM:- received email from Kim
including results of weekly well gauging conducted on 11/22/16. no product was detected with
interface probe in MW-2, but mostly yellow oil mix in purged groundwater and thick product coated
outside of tubing. no product in purged groundwater from MW-4, but some yellow staining on tubing.
12/05/16-Hiralkumar Patel. 12:30 PM:- received email from Kim including results of weekly well
gauging conducted on 12/02/16. no product was detected with interface probe in MW-2, but mostly
yellow oil mix in purged groundwater and thick product coated outside of tubing. no product in
purged groundwater from MW-4, but some yellow staining on tubing. 12/13/16-Hiralkumar Patel. 2:44
PM:- received email from Kim including results of weekly well gauging conducted on 12/09/16. no
product was detected with interface probe in MW-2, but thick product coated bottom and sides of
tubing. no product in purged groundwater from MW-4, but some thick product at the tip of tubing.
12/27/16-Hiralkumar Patel. 9:33 AM:- received email from Kim including results of weekly well
gauging conducted on 12/16/16. light film of product on interface probe in well MW-2. product seen
on bailer at 4 ft below groundwater interface in MW-2. MW-4 had no product in purged groundwater,
but some yellow staining on bailer and tubing. 01/10/17-Hiralkumar Patel. 10:44 AM:- received email
from Kim including results of weekly well gauging conducted on 01/09/17. 0.02 ft of product was
detected in MW-2 including thick film of product coated on interface probe. also thick product
lined inside and outside of tubing during purging of well. MW-4 had small amount of staining on
bottom, inside tubing from purging. 02/01/17-Hiralkumar Patel. 2:34 PM:- received email from Kim
including results of weekly well gauging conducted on 01/18/17 and 01/26/17. during both events, no
product detected with interface meter, but small particles of product in purged groundwater from
MW-2. also thick product lined inside and outside of tubing during purging of well MW-2. MW-4 had
small amount of staining on bottom, inside tubing during purging. 02/14/17-Hiralkumar Patel. 9:23
AM:- received email from Kim including results of weekly well gauging conducted on 02/02/17. small
amount of product in purged groundwater from wells MW-2 and MW-4.

GROUNDWATER (Continued) **S118141503**

02/27/17-Hiralkumar Patel. 9:03
AM:- received email from Kim including results of weekly well gauging conducted on 02/17/17 and
02/24/17. 0.01 ft of product noted in well MW-2 during both gauging events. no product found in
MW-4. 03/21/17-Hiralkumar Patel. 9:51 AM:- received email from Kim including results of weekly well
gauging conducted on 03/03/17 and 03/16/17. 0.01 ft of product noted in well MW-2 during both
gauging events. no product found in MW-4. 04/25/17-Hiralkumar Patel. received email from Kim
including results of weekly well gauging conducted on 03/23/17, 03/30/17, 04/06/17 and 04/20/17.
during all four gauging events, trace amount of product noted around casing in well MW-2. based on
gauging results, Kim proposes to install a filter sock in the well to reduce the frequency of
product removal. 05/04/17-Hiralkumar Patel. 2:31 PM:- spoke with Kim. informed her that based on
review of available information, the Department agrees with proposal of installation of filter sock
in affected well MW-2, but recommends sock in well MW-4 also as had product in past. Kim agrees
with it and proposes to monitor wells twice a month at beginning and modify frequency based on
monitoring results. asked Kim to send email including proposed well monitoring frequency. also
asked her to submit revised RAWP as site development plans have changed. 05/10/17-Hiralkumar Patel.
3:51 PM:- received email from Kim. she mentioned that based on the recent inspections at the site,
the majority of free-phase petroleum product has been removed via weekly purging efforts. remnants
of free-phase product are visible on product removal tubing over the last four rounds of removal,
which appears to be only from product coating on the PVC piping. Kim proposed installation of an
absorbent sock for monitoring wells MW2 and MW4 where free-phase product has previously been
detected. the socks at each well will be inspected on a bi-monthly basis. during each inspection, a
groundwater interface probe will be used to identify the presence of any free-phase product within
each of the wells. any free-phase product will subsequently be pumped out and drummed on-site. Kim
mentioned that there is no proposed cellar in the revised redevelopment plans; therefore, she will
be submitting a revised Remedial Action Workplan shortly. 3:58 PM:- received email from Kim
including link to revised redevelopment plans. 05/11/17-Hiralkumar Patel. 8:39 AM:- received email
from Kim including results of weekly well gauging conducted on 05/05/17. found 0.02 ft of product
in well MW2. Kim mentioned about report dated 04/27/17, but email included report for 03/16/17.
05/19/17-Hiralkumar Patel. 2:10 PM:- sent email to Kim and asked her to submit missing well

GROUNDWATER (Continued) **S118141503**

monitoring report for 04/27/17. 05/22/17-Hiralkumar Patel. 7:57 AM:- received email from Kim
including well gauging report for 04/27/17. found 0.01 ft of product in well MW2. 1:36 PM:- left
message for Kim. informed her that based on all available information, the Department agrees with
proposal to place absorbent socks in wells MW2 and MW4 and monitor those on bi-monthly basis.
inquired her about revised remedial action work plan.
06/14/17-Hiralkumar Patel. 9:41 AM:- received
email from Kim including well gauging report for 06/07/17. found 0.02 ft of product in well MW2.
absorbent socks were installed in wells MW2 and MW4.
07/11/17-Hiralkumar Patel. received email from
Kim (at 4:31 PM on 07/10/17) including link to revised redevelopment plans (previously submitted).
received email from Kim (at 4:37 PM on 07/10/17) including copy of a revised stipulation list (OER
document). summary: - revised stipulation list serves as an addendum to the RAWP - proposed
building will no longer feature a cellar level - excavation will be limited to approx. 3 ft bg
across the site for structural footings/pile caps, and to a 5 ft for an elevator pit - first floor
will feature a residential lobby and a retail/commercial unit - the mezzanine level above the first
floor will feature a mechanical room, retail space and an outdoor retail terrace - second through
fourth floors will features residential units - delineation and remediation of two hotspots: 1)
mercury hotspot at sample B6, and 2) SVOC hotspot at sample B8 - a composite cover (comprised of
concrete foundation/slabs) will be placed over the entire footprint of the site - collection and
analysis of four (4) end-point samples from the bottom of the excavation to evaluate the
performance of the remedy with respect to attainment of Track 4 SCOs - a 20-mil waterproofing
membrane/vapor barrier will be installed beneath the structure’s slab and along foundation
sidewalls the revised stipulation list (addendum to RAWP) does not include any discussion about
remediation of petroleum contaminated materials noted in area around wells MW2 and MW4. 12:18 PM:-
spoke with OER Shaminder and OER Horace and discussed submitted revised stipulation list. informed
Shaminder that the department requires remediation of petroleum contaminated materials noted in
area around MW2/MW4, collection of endpoint samples after remediation in area around MW2/MW4 and
installation of SSDS (if required by NYSDOH) based on known petroleum impact beneath the site.
12:31 PM:- sent email to OER Shaminder and OER Horace including above discussion. asked them to
provide a revised RAWP including the missing info. 07/13/17-Hiralkumar Patel. received email from
OER Shaminder (at 12:28 PM on 07/12/17) including updated briefing. he

GROUNDWATER (Continued) **S118141503**

has asked EBC to prepare a
new RAWP including DEC requirements listed in email dated 07/11/17.
email was copied to DOH Nathan
inquiring about SSDS requirement. 3:38 PM:- received email from DOH
Nathan. he mentioned that SSDS
is not needed based on the fact that the structure will be slab on
grade, proposed excavation of
hot spots, minimal detects in GW and soil vapor results.
08/04/17-Hiralkumar Patel. 11:09 AM:-
received email from OER Shaminder including revised draft RAWP. plan
proposes excavation for
development to 3 feet across entire site; three hotspots removal for
mercury, SVOCs and petroleum
soil; collection/analysis of endpoint samples; and installation of
vapor barrier and an active
SSDS. 09/20/17-Hiralkumar Patel. 9:58 AM:- sent email to OER Shaminder
and informed him that no
comments from DEC. asked him to submit final copy of RAWP and work
schedule. email copied to OER
Horace. 09/28/17-Hiralkumar Patel. 10:36 AM:- received email from Kim.
she mentioned that
developers will be commencing excavation in near future, but they are
concerned about structural
integrity of existing foundation wall (which will remain as part of
redevelopment) during
excavation of petroleum impacted soils. Kim proposed to either
excavate soil in slope (which will
leave contamination in area of SBD6 in-place) or dug near the
foundation wall to a depth of
groundwater and immediately backfill the excavation. Kim inquired
about any further remediation
needed if excavation extends to the groundwater and chemical oxidant
applied in excavation prior to
backfilling. 12:48 PM:- spoke with Kim and recommended her to excavate
to water table near the
foundation, only if it is safe (or using shoring). informed her that
remediation of any remaining
soil contamination beneath the water table may not be needed based on
available soil and
groundwater data. Kim will discuss excavation options with site
developer. 11/01/17-Hiralkumar
Patel. 1:07 PM:- received email from Kim including soil sample results
summary table. she mentioned
that the area of petroleum soil was excavated last week. soil endpoint
samples were collected from
the base of the excavation (10.5ft) and sidewalls. the excavation was
extended to the north by 2-3
ft where initial endpoint samples failed to meet soil cleanup
objectives. soil endpoint samples
from the western sidewall and bottom sample also failed to meet soil
cleanup objectives; these
locations could not be excavated further without compromising the
structural integrity of the
adjacent foundation wall. the final depth of the excavation was
completed to 10.5 ft. no staining
was apparent on soils from the 10 ft below grade interval. prior to
backfilling, a chemical oxidant

GROUNDWATER (Continued) **S118141503**

was applied to the base of the excavation. report will be submitted soon. as per sample result summary table, endpoint sample from north sidewall showed presence of contamination which was removed via further excavation. some contamination noted in endpoint sample from west sidewall (3,390 ppb total BTEX) and bottom (305 ppb total BTEX). 11/30/17-Hiralkumar Patel. 12:33 PM:- Kim sent spill closure report via DEC's file transfer service. 12/06/17-Hiralkumar Patel. after reviewing all available information (product removal from impacted wells, removal of contaminated soil, results of endpoint samples, proposed installation of vapor barrier and an active SSDS), no further investigation/remediation is required in area around well MW2 where petroleum impact was noted. spill case can be closed upon receipt of confirmation for installation of proposed vapor barrier and SSDS, unless contamination noted in other areas during site's redevelopment. 10:07 AM:- left message for Kim. 10:17 AM:- sent email to Kim. informed her that no further investigation/remediation is required in the area around well MW2 where petroleum impact was noted. also informed her that the subject spill case can be closed upon receipt of confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact noted in other areas during site s redevelopment. asked her to provide estimated schedule for installation of vapor barrier/SSDS. email copied to Mr. Finnican, OER Shaminder and DOH Nathan. 10:30 AM:- received email from Kim stating that Patrick Recio will be managing this project. Patrick Recio EBC Ph. (631) 504-6000 email: precio@ebcincny.com 08/09/18-Hiralkumar Patel. 10:59 AM:- sent email to Patrick inquiring project update. email copied to Mr. Finnican, OER Shaminder and OER Samantha. 12:04 PM:- received email from Patrick. he mentioned that there has not been much activity at the site since December of 2017. there was minimal excavation of the elevator pits towards the front of the site that were lined with Graceprufe 300R waterproofing/vapor barrier and inspected by EBC. a few trucks of soil were removed from the site since beginning of 2018 and that material had no evidence of petroleum contamination. the SSDS and the vapor barrier have not yet been installed. 07/16/20-Hiralkumar Patel. 11:31 AM:- sent email to Patrick inquiring updates. email copied to OER Shaminder, OER Samantha, Kim and Mr. Finnican. 11:48 AM:- received email from Charlie Sosik from EBC stating that Robert Bennett is currently managing project at EBC. 07/21/20-Hiralkumar Patel. 9:51 AM:- sent email to Robert inquiring updates. email copied to Charlie, OER Shaminder and OER Samantha. Robert Bennett EBC Ph. (631) 504-6000 Ext. 116 email:

GROUNDWATER (Continued) **S118141503**

rmbennett@ebcincny.com
07/22/20-Hiralkumar Patel. 9:07 AM:- received email from OER Shaminder. he mentioned that
remediation at the site started in October 2017 and development work was completed by January 2020.
OER recently (July 10th) reviewed final report and sent back comments. OER will send revised report
once available. 02/25/21-Hiralkumar Patel. 2:08 PM:- sent email to Robert and asked him to submit
report. email copied to OER Shaminder and Charlie. 2:21 PM:- received email from OER Shaminder
stating that they have provided comments on revised RAR last month and waiting on final report
soon. 04/14/21-Hiralkumar Patel. received email from OER Shaminder (at 3:52 PM on 04/13/21)
including link to remedial action report and requesting spill closure.
he mentioned that following
activities occurred at the site: - performed Waste Characterization on July 17, 2017 - following
excavations were performed: excavation to 3 ft bg across the site. the elevator pit was excavated
to a final depth of 5 ft. in addition, a 6 ft by 6ft area around EP 1 (mercury hotspot) was
excavated an additional 6 inches and a 6 ft by 6 ft area around EP2 (SVOC hotspot) was excavated an
additional foot. - free product removal: from May 27 2016, to June 7, 2017, monitoring wells MW2
and MW4 were gauged weekly and any free-phase product present in the monitoring wells was removed
by bailer and containerized in a 55-gallon drum. absorbent socks were installed in both monitoring
wells on June 7, 2017, and weekly product removal efforts were decreased to bi-monthly until Site
excavation commenced - petroleum impacted soil removal: on October 23, 2017, the area delineated as
the petroleum hotspot was excavated using a track-mounted excavator to the fullest extent possible.
a 3 ft setback from the western foundation wall was required in order not to compromise the
integrity of the adjacent foundation wall. the final excavation area was approximately 22 ft by 22
ft. petroleum impacted soil was excavated to approximately 4 to 10.5 ft below grade. no odors or
staining were observed at the 8-10 ft below grade interval. EBC collected four sidewall endpoint
soil samples (Hot Spot S, Hot Spot W, Hot Spot E, Hot Spot N) and a bottom endpoint soil sample
(Hot Spot Bottom) from the petroleum hotspot excavation. to address the residual VOCs detected in
the endpoint soil samples, a powdered chemical oxidant was applied directly to the residual soil
and raked in with the excavator before backfilling - collected and analyzed seventeen (17) endpoint
samples from bottom of excavations and from hotspot areas to determine the performance of the
remedy with respect to attainment of Track 4 Site-Specific SCOs - track 4 remedy was achieved -

GROUNDWATER (Continued) **S118141503**

Composite cover - Vapor barrier; and - site management plan as per the report, a 20-mil thick vapor
barrier was installed beneath the building/elevator pits. the report also states that on
05/16/2019, OER determined that an active SSDS was no longer required at the site.
---------- 04/19/21-Hiralkumar Patel. 5:04 PM:- sent email to OER Shaminder and asked him
to call back to discuss reason for not installing SSDS. email copied to OER Samantha.
04/23/21-Hiralkumar Patel. 12:38 PM:- received email from OER Shaminder. he mentioned that OER
reevaluated soil and soil vapor contamination and agreed with development team that implemented
remedy (only vapor barrier and no SSDS) is protective of environment and public health. he also
stated that the development team will obtain one round of indoor and outdoor air samples prior to
spill closure. OER plans to issue Notice of Satisfaction this week for building occupancy and
Notice of Completion will be issued after spill is closed.
04/30/21-Hiralkumar Patel. as per the
RAR, remedial actions begun on 10/13/2017 and was completed on 01/06/2020. all endpoint samples
were collected in Oct. 2017 and those results were previously submitted in spill closure report
dated Nov. 2017. based on those samples results, the property owner/consultant were informed via
email on 12/06/2017 that no further investigation/remediation is required in the area around well
MW2 where petroleum impact was noted, and the subject spill case can be closed upon receipt of
confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact
noted in other areas during site s redevelopment . OER reevaluated sample results and agreed not to
install a SSDS. a vapor barrier has been installed beneath the building. 10:25 AM:- sent email to
OER Shaminder. informed him that the submitted Remedial Action Report dated March 2021 includes
result of endpoint samples collected in/around Oct. 2017 and these sample results were already
submitted in the Spill Closure Report dated Nov. 2017. based on these sample results and other
information available at that time, an email was sent to Kim at EBC (copied to NYSDOH, NYCOER and
property owner) on 12/06/2017 stating Based on review of all available information, the Department
does not require further investigation/remediation in the area around well MW2 where petroleum
impact was noted. Please note that the subject spill case can be closed upon receipt of
confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact
noted in other areas during site s redevelopment. informed OER Shaminder that as NYCOER determined
no need for SSDS and a vapor barrier has been installed beneath the

GROUNDWATER (Continued) **S118141503**

building, the Department will
wait for results of indoor/outdoor air sampling during the next
heating season prior to considering
spill closure. asked him to provide air sampling schedule, once
available. email copied to OER
Samantha and Kevin (EBC). 12:37 PM:- received copy of Notice of
Satisfaction from NYC OER.
08/04/21-Hiralkumar Patel. 9:05 AM:- received email from OER Shaminder
including an indoor air
sampling report. summary: - one indoor air (IA1) and one outdoor air
(OA1) were collected - sample
IA1 was collected in the breathing zone at a height of 3-4 ft above
the floor, from the rear of the
commercial space of the 202 N 10th St building - petroleum VOCs (max.
41.7 ug/m3 of Xylene) and PCE
(1.25 ug/m3) were noted in indoor air sample; similar compounds were
also noted in outdoor air
sample 08/05/21-Hiralkumar Patel. 1:36 PM:- forwarded indoor air
sampling report to DOH Nathan for
review. 08/06/21-Hiralkumar Patel. 10:28 AM:- received email from DOH
Nathan stating that based on
remediation conducted at the site and the low levels of VOCs detected
in indoor air, he does not
believe additional sampling will be necessary; however, should odors
appear at a later date or
during the heating season, additional sampling may be warranted.
08/12/21-Hiralkumar Patel. case
closed based on review of all available information. 12:14 PM:- sent
email to OER Shaminder and
informed him about spill closure. email copied to OER Samantha.

Remarks: Phase 2 revealed contaminated groundwater and soil. Clean up is pending OER approval.

Program:	BCP
Site Code:	515605
Acres:	0.413
HW Code:	C224229
SWIS:	2401
Town:	New York City
Record Added Date:	11/02/2015
Record Updated Date:	10/21/2022
Update By:	JBSWARTO
Site Description:	Location: The site is located in an urban area in the Williamsburg section of Brooklyn (Kings County) on the northeast corner of North 10th Street and Roebling Street. Site Features: The site was formerly developed with two single-story industrial buildings and two smaller

215 NORTH 10TH STREET (Continued) **S121933762**

one-story structures, which are surrounded by parking areas. The buildings were demolished in May 2018. No water bodies are present on site. A mixed-use commercial and residential building is currently under construction on the site. Current Zoning and Land Use: The site is a parcel currently undergoing redevelopment within a special mixed use zoning district (M1-2/R6A), which is characterized by light industrial use (woodworking shops, repair shops, storage facilities) and allows for mixed-use residential buildings. The surrounding parcels are currently used for a combination of residential, commercial, transportation, and open park space. Past Use of the Site: A review of Sanborn Fire Insurance maps show that the site was used for manufacturing and industrial operations that include a dry color and paint storage facility, a varnish research works, and a chemical warehouse. The 1942 Sanborn map also identified one benzene and two gasoline underground storage tanks (USTs). Prior uses of the site that appear to have led to contamination are the varnish research works and USTs, both of which are associated with the use of chlorinated solvents that have potential for release to the environment. Site Geology and Hydrogeology: Site elevation ranges from about 9 to 13 feet above sea level and gradually slopes downward to the east. The subsurface stratigraphy consists of historic fill to about 4 feet below grade surface (bgs), underlain by brown sand, red clay, brown clay, black gravel, and black/brown silt. Predominant geological surface features were not reported and bedrock was not encountered during the 2015 investigation. Depth to groundwater ranges from about 6 to 7 feet bgs and appears to flow towards the west. The site is located within a Zone AE designated flood zone, which is identified as a high risk flood area.

Env Problem:

Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs, trichloroethene, and its breakdown products, zinc, nickel, arsenic, mercury, and lead in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for residential use to 15 feet below ground surface. Residual contamination in the soil and groundwater is being managed under an local groundwater controls. Prior to Completion of Remediation: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals during the Remedial Investigation. Polychlorinated biphenyls (PCBs) and pesticides were also analyzed for during the preliminary investigation and were not found to exceed standards. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include trichloroethene (TCE) and its breakdown products, cis-1,2-dichloroethene (DCE) and vinyl chloride, lead, mercury, arsenic, and SVOCs (e.g. benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene). Soil-Metals, such as lead, mercury, and arsenic, were found across the Site in shallow and deep soils. Concentrations of arsenic found on Site (maximum of 95.4 parts per million [ppm]) significantly exceeded the soil cleanup objective (SCO) for unrestricted use (UUSCO) and restricted residential use soil cleanup objective (RRUSCO) (13 and 16 ppm respectively). Lead found on-site (maximum concentration of 5,630 ppm) exceeded the UUSCO and RRUSCO (63 and 400 ppm). Concentrations of mercury found on-site (maximum of 160 ppm) significantly exceeded the UUSCO and RRUSCO (0.18 and 0.81 ppm respectively). SVOCs (mostly polycyclic aromatic hydrocarbons (PAHs) were noted mainly in shallow soils throughout the site, and one deep soil location on the northern

215 NORTH 10TH STREET (Continued) **S121933762**

portion of the site. Concentrations of SVOCs, such as benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene had maximum concentrations ranging from of 5.1 ppm to 6.5 ppm which exceeded the UUSCO and RRUSCO (all contaminants are 1 ppm for both the UUSCO and RRUSCO). TCE was noted on the northern portion of the Site in shallow soils with a maximum concentration of 30 ppm which exceeds the 0.47 ppm UUSCO and the 21 ppm RRUSCO. Vinyl chloride was noted in shallow soils with a concentration of 1.6 ppm; which exceeds the 0.02ppm UUSCO and the 0.9 ppm RRUSCOs. Other volatile organic compounds noted that exceeded the UUSCO include 1,2,4-trimethylbenzene, methyl ethyl ketone, cis-1,2-dichlorothene (DCE), naphthalene, and tetrachloroethene. Groundwater - TCE (maximum concentration of 21 parts per billion [ppb]) and its associated degradation products (DCE at 40 ppb) are found in the groundwater on the central and southern portion of the site, exceeding the groundwater standard of 5 ppb. It is suspected that these contaminants may migrate off-site. Dense Non-Aqueous Phase Liquid (DNAPL) was noted in a central monitoring well (MW-3) during the preliminary investigation, but was not seen during the Remedial Investigation. SVOCs, such as benzo(a)anthracene (maximum of 0.45 ppb), chrysene (maximum of 0.48 ppb), and benzo(b)fluoranthene(maximum of 0.6 ppb), were noted to be greatest at the eastern (most downgradient) monitoring well (exceeding the standard of 0.002 ppb for all named contaminants), and potentially are migrating off-site. Contaminants in this class exceeded the groundwater standards in all wells. Metals, such as lead, mercury, and arsenic, were found across the Site in groundwater. Concentrations of total and dissolved arsenic were found to exceed (maximum of 120.6 ppb) the groundwater standard (25 ppb) in MW4. Concentrations of total lead (maximum of 359 ppb) were found to exceed the groundwater standard (25 ppb) in 16MW2 and 16MW3. Concentrations of total mercury were found to exceed (maximum of 20.05 ppb) the groundwater standard (0.7 ppb) in 16MW2. Additional metals found to exceed the groundwater standard were total and dissolved nickel and zinc. Soil Vapor - TCE was detected at significantly elevated concentrations, up to 243,000 micrograms per cubic meter (ug/m3). PCE was detected at significantly elevated concentrations up to 7,730 ug/m3. Carbon tetrachloride was noted at a maximum concentration of 6,350 ug/m3 and 1,1,1-trichloroethane was noted with a maximum concentration of 6,000 ug/m3. Soil vapor samples were collected at 6 feet below sidewalk grade. Additional soil vapor and soil vapor intrusion sampling is being conducted to determine whether actions are needed off-site to address exposures associated with soil vapor intrusion.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with contamination remaining at the site. Investigation and remediation of offsite contamination will be conducted under a separate program.

Site Description:	The following Site Description is for the associated BCP on-site: Location: The site is located in an urban area in the Williamsburg section of Brooklyn (Kings County) on the northeast corner of North 10th Street and Roebling Street. Site Features: The site was formerly

Actual:
14 ft.

215 NORTH 10TH STREET - OFF-SITE (Continued) **S123661448**

developed with two single-story industrial buildings and two smaller one-story structures, which are surrounded by parking areas. The buildings were demolished in May 2018. No water bodies are present on site. A mixed-use commercial and residential building was constructed on the site. Current Zoning and Land Use: The on-site is a parcel that was redeveloped within a special mixed use zoning district (M1-2/R6A), which is characterized by light industrial use (woodworking shops, repair shops, storage facilities) and allows for mixed-use residential buildings. The current on-site land use is a mixed-use commercial and residential building. The surrounding parcels are currently used for a combination of residential, commercial, transportation, and open park space. Past Use of the Site: A review of Sanborn Fire Insurance maps shows that the site was used for manufacturing and industrial operations that include a dry color and paint storage facility, a varnish research works, and a chemical warehouse. The 1942 Sanborn map also identified one benzene and two gasoline underground storage tanks (USTs). Prior uses of the site that appear to have led to contamination are the varnish research works and USTs, both of which are associated with the use of chlorinated solvents that have potential for release to the environment. Site Geology and Hydrogeology: Site elevation ranges from about 9 to 13 feet above sea level and gradually slopes downward to the east. The subsurface stratigraphy consists of historic fill to about 4 feet below grade surface (bgs), underlain by brown sand, red clay, brown clay, black gravel, and black/brown silt. Predominant geological surface features were not reported and bedrock was not encountered during the 2015 investigation. Depth to groundwater ranges from about 6 to 7 feet bgs and appears to flow towards the west. The site is located within a Zone AE designated flood zone, which is identified as a high risk flood area.

Env Problem:
Prior to completion of remediation: Soil contamination was not identified in off-site area. Groundwater was analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, Pesticides, and PFAS during the Site Characterization. Indoor air was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include PFOA, benzene, and methylene chloride. Groundwater Benzene and PFOA were found in the off-site area moderately exceeding their respective standards in groundwater (1 ppb and 10 ppt). The greater concentrations were seen in wells downgradient of the on-site and in the deeper monitoring wells (15-20 ft bgs). Indoor Air TCE, carbon tetrachloride, and methylene chloride were detected at elevated concentrations in indoor air. TCE was detected at elevated concentrations up to 2.7 ug/m3. Carbon tetrachloride was noted at a maximum concentration of 0.58 ug/m3 and methylene chloride was noted with a maximum concentration of 90 ug/m3. Post-Remediation: Remediation at the on-site is complete to Track 2 standards and received a COC in 2020. It did not require a site management plan. People are not exposed to the contaminated groundwater because the area is served by a unimpacted public water supply. Mitigation was completed at the off-site area to control soil vapor intrusion.

Health Problem:
Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air

215 NORTH 10TH STREET - OFF-SITE (Continued) **S123661448**

quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion.

DEC Memo:	2/27/2019 - Feng - Duty Desk. Spoke to DEP Okoli who found the spill while responding to a sewage complaint. He stated that it is a construction site and they are doing excavation now. There is heavy equipment which broke down and spilled oil on the soil. He could not quantify how big the spill is. He could not provide photo picture nor the contact information of any personnel at the site. NYCDEP Okoli 347-672-6059 Searched the database and found Spill 15-05078 and Superfund 224229. Talked to Jane O'Connell and she said the only active one is C224229 for this address. She had unsuccessful attempts to call Albany. She recommended to email Melissa Sweet and copied Eric Obrecht and John Swartwout. email to Melissa Sweet Hi Melissa, We received the above referenced spill reported this morning. I spoke to DEP Okoli who found the spill while responding to a sewage complaint. He stated that it is a construction site and they are doing excavation now. There is heavy equipment which broke down and spilled oil on the soil. He could not quantify how big the spill is. He could not provide photo picture nor the contact information of any personnel at the site. I searched the database and found Spill 15-05078 and Superfund 224229. I talked to Jane and she said the only active one is C224229 for this address. So I am asking if you can call the consultant PM to see what happened and if anything done to address the spill. If you need Region 2 staff to inspect the site, let us know. 2/27/19-Lin-Responded to site regarding report of an oil spill from DEP. Spoke to the site representative and was informed that someone tipped over a bucket of hydraulic oil (less than 5 gallons) last week. They did not notice the spill right away due to a snow event last week. They put down some speedy dry on the location of the spill. There was no petroleum odor when I was on-site. Case closed.

Updated By: JHOCONNE
Site Description: Location: The site is located at 215 North 10th Street in the Borough of Brooklyn, NY. The site is bordered on the south by North 10th Street with residential buildings on the opposite side of the street, to the west by a parking garage, to the north by a six story residential building, and to the east by Roebling Street with residential buildings on the opposite side of the street Site Features: The Site currently developed with one-story industrial building, two smaller one-story structures and parking areas. The Site is currently partially occupied by a motorcycle sales and service company and a marble importer/manufacturer. Current Zoning and Land Use: The site is currently zoned M1-2 (light manufacturing) with an R6A (residential) overlay. The site has a New York City e designation for hazardous materials as a result of recent rezoning from the previous MX8 zoning (heavy industrial use). Past Use of the Site: The Site appears to have been developed sometime prior to 1887 and has been occupied by various industrial uses including a dry color and paint storage, a varnish research works (which utilized two benzene tanks and a gasoline tank) and a chemical warehouse. The site is listed as an inactive facility in the Chemical Bulk Storage database as site no. 2-000052 for storage of muriatic acid, ammonium hydroxide and nitric acid. Site Geology and Hydrogeology: NYSDEC has not received any reports including these details.
Env Problem: SEE SITE NO C224229 FOR FUTURE UPDATES Nature and Extent of Contamination: Based on preliminary sampling, contaminants of concern include volatile organic compounds (VOCs) in soil, groundwater and soil vapor. Samples were analyzed for VOCs, semi-volatile organic compounds (SVOCs), metals, PCBs and pesticides. Soil A total of eleven (11) soil borings were installed and from which twenty-five (25) soil samples were collected for analysis. Petroleum and chlorinated solvent-related VOCs were identified in soil samples. Benzene was found at a maximum concentration of 5.7 parts per million (ppm), ethylbenzene at a maximum concentration of 10 ppm, 1,3,5-trimethylbenzene at a maximum concentration of 35 ppm, tetrachloroethylene (PCE) at a maximum concentration of 9.4 ppm, trichloroethylene (TCE) at a maximum concentration of 220 ppm, cis-1,2-dichloroethylene (cis-1,2-DCE) at a maximum concentration of 36 ppm, vinyl chloride (VC) at a maximum concentration of 0.46 ppm and naphthalene at a maximum concentration of 100 ppm. Groundwater As per the site map, total of four (4) monitoring wells were installed and sampled. Due to insufficient sample volume, only 3 of the wells

215 NORTH 10TH STREET (Continued) **S121933833**

were analyzed for VOCs (the likely downgradient well was not analyzed for VOCs). TCE was detected at a maximum concentration of 170 parts per billion (ppb), cis-1,2-DCE at a maximum concentration of 16 ppb, VC at a maximum concentration of 15 ppb and naphthalene at a maximum concentration of 31 ppb. Soil Vapor A total of six (6) soil-vapor probes were installed, including one location beneath the occupied on-site building. Petroleum and chlorinated solvent contamination noted in soil-vapor samples including PCE at a maximum concentration of 7730 micrograms per cubic meter (ug/m3), TCE at a maximum concentration of 243,000 ug/m3, cis-1,2-DCE at a maximum concentration of 11,000 ug/m3 and VC at a maximum concentration of 1650 ug/m3. Significant Threat: Determination of significant threat will be made following completion of the Site Characterization.

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	Ignitable Waste

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D008
Waste Description: Lead

Waste Code: D018
Waste Description: Benzene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U228
Waste Description: Ethene, Trichloro- (Or) Trichloroethylene

DEC Region:	2
DER Facility ID:	272130
DEC Memo:	Tipple was at the site at 6:40 AM and discovered the spill. Detailed work outline was discussed with Bayside and Classic Fuel to clean up both the yard area and the street. 08/10/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called Pat at (718)372-9800 and talked to Ms. Dana regarding status of the spill. She said that when Mr. Pat will come she will find about it and she will convey my message to Pat. Mr. Pat will call me back. -QA 09/22/06: On September 21, received a closing confirmation letter from Mr. Albert Cirino (Model Petroleum Transportation INC.). According to Mr.Cirino the spill was on concrete. No water and no land were contaminted by the spill. the spill is cleaned. Also talk to Bayside Terminal manager Mr. Sergio, He said they clean their yard. Also talk to Mr. John (718)388-1515 he said yard is asphaltand asphalt is sealed, it is not open dirt. John spoke on phone that they picked up each & every pocket of the product. so according to letter of Albert Cirino and Conversation with John and Terminal Manager Sergio DEC Staff closed the spill. -QA

Contact Name:	SCOTT VITELLO
DEC Memo:	4/29/24 - JHO Spill reopened and NFA rescission letter sent to Chevron. Spill reassigned to Richard Mustico. Cross reference site number 224402. 07/02/08 - LZ ARCADIS submitted a report dated June 26, 2008, documenting wells' decommissioning. 01/23/08 - LZ As advised by the Regional Spill Engineer, the spill case is closed and the presence of MGP contamination at the site referred to Gardiner Cross, Central Office, Remedial Bureau C, for further investigation. An NFA letter was sent out (eDocs). 11/23/07 - Zielinski ARCADIS BBL submitted a report, dated November 13, 2007, containing groundwater analytical results of sampling conducted on October 17, 2007. A sheen was detected in MW-18(an off-site well). Benzene was detected above groundwater standards limit (0.7 ppb) in twelve wells. The highest concentration was noticed in MW-14R (390 ppb), MW-11(180 ppb), B-2(110 ppb), MW-15(34 ppb), MW-19(35 ppb). Toluene was detected above

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

the limit (5 ppb) in
MW-11(17 ppb), MW-14R (21 ppb), B-1(16 ppb), and B-2(11 ppb). Ethylbenzene was detected above the
limit (5 ppb) in the following wells: MW-9(5.7 ppb), MW-11(9.2 ppb), MW-14R (35 ppb), MW-19(29
ppb), B-1(13 ppb), and B-2(12 ppb). Total xylenes were detected above the limit (5 ppb) in MW-9(20
ppb), MW-11(6.4 ppb), MW-14R (130 ppb), MW-15(8.4 ppb), B-1(46 ppb), and B-2(100 ppb). MTBE was
detected above the limit (10 ppb) at MW-5 (11 ppb), MW-6(48 ppb), MW-12(79 ppb), and MW-14R (21
ppb). Acenaphthene, naphthalene, benzo(a)anthracene, benzo(b)fluoranthene, and benzo(k)fluoranthene
were detected above groundwater limits at MW-19(an off-site well). Acenaphthene was detected in
MW-9 (20 ppb). 09/19/07 - Zielinski A letter requesting a one round groundwater sampling for the
presence of SOVs, SVOCs, and MTBE was sent to ARCADIS BBL. 09/06/07 -Zielinski Historical
information on spill # 9804544, 1 North 12th Street, Brooklyn, NY August 28, 1997: well gauging,
conducted for Star Enterprise, reveals 0.81 feet of free product in MW-10. October 30, 1997: in its
letter to NYSDEC, Star Enterprise declares that it will retain responsibility for cleanup of
hydrocarbons existing at the facility, prior to the sale of the facility, and will prepare a site
investigation and remediation plan. November 1, 1997: Bayside Fuel Oil Depot Corp. purchases Texaco
NY Terminal. November 1997: the removal of USTs at the site. January 16, 1998: sampling by Handex
reveals the presence of free product in MW-10 (0.16 feet), and contamination in MW- 6 MTBE (6,370
ppb) and naphthalene (21 ppb). May 1998: the Technical Analyses and Proposed Remedial Actions for
Texaco Facility No. 58079, Brooklyn, NY, is prepared for Star Enterprise by Environmental Systems
and Technologies, Inc. Findings: unsaturated zone thickness ranges from 2 to 12 feet; groundwater
flows north-northeast toward the East River and the Bushwick Inlet; MW-10 (1.17 feet of LPH); MW-7
(0.04 feet of LPH); MW-6 MTBE (13,000 ppb), benzene (494 ppb); soil contamination below NYSDEC
guidance values. Conclusions: the primary focus of remediation should be on removal of LPH and
installation of additional wells at vicinity of MW-10. July 10, 1998: Star Enterprise notifies
about a spill of an unknown cause, dated February 23, 1996; the spill receives No. 9804544. July
27, 1998: a Stipulation Agreement (SA), signed by Region 2 Regional Spill Engineer, provides that
Texaco Refining and Marketing, Inc., is responsible for cleanup of the spill. The cover letter,
however, indicates Star Enterprise as the respondent of the SA. The SA requires Texaco Refining and
Marketing, Inc. submit a corrective action plan and quarterly progress reports. October 1998: an

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

Investigation Report, prepared by Handex for Star Enterprise, shows results of sampling conducted on July 29, 1998; soil contamination was found near MW-13 (BTEX 754,700 ppb), no MTBE detected, TPH-DRO (Total Petroleum Hydrocarbons-Diesel Range) (2,800 ppm), THP-GRO (9,800 ppm); near MW-14 (BTEX 343,900 ppb), no MTBE, detected TPH-DRO (5,560 ppm), TPH-GRO (18,400 ppm). Groundwater contamination: MW- 10 (0.58 feet of LPH); MW-13 (0.09 feet of LPH); MW-6 BTEX (3,410 ppb). Depth to water: MW-11 (1.94 feet below grade); EPA-3 (7.51 feet below grade). November 1998: Handex prepares a report of behalf of Texaco Refining and Marketing, Inc., which reveals free product at MW-10 (0.40 feet) on September 22, 1008; and at MW-13 (0.67 feet) on September 28, 1998. The results of soil sampling; MTBE not detected, BTEX detected only near MW-16 (1.7 ppb). January 19, 1999: since the results of investigation by Handex, submitted on November 4, 1998, indicate free product in the velocity of MW-10 and dissolved phased petroleum in the vicinity of MW-16, NYSDEC requests that Star Enterprise submit a proposed CAP in accordance with the SA. April 5, 1999: on behalf of Motiva Enterprise, LLC, Handex submits a remediation plan for the former Star Enterprises facility. The plan includes the use of enhanced fluid recovery (EFR) system, soil-vapor extraction, and removal of free product from MW-6, MW-10, and MW-13. The EFR events will be conducted once a month for six consecutive months. Groundwater samples will be collected twice a year from all wells where free product is not present. November 24, 1999: Handex is submitting, on behalf of Motiva Enterprise, a site status report. Groundwater sampling was conducted in May 1999 and EFR events conducted in May and June 1999. The EFR program was terminated because of the presence of LPH in MW-14 and MW-16. February 17, 2000: NYSDEC, reviewing the November 4, 1999, report determines that the CAP was not successful in the remediation at the site, as required by the SA. NYSDEC states that Motiva Enterprise has failed to submit a proposed plan to complete the cleanup. NYSDEC requests that Motiva Enterprise submit a progress report. July 27, 2000: on behalf of Motiva Enterprise, LLC, Handex submits a quarterly progress report which asserts that additional monitoring proposed in the investigation plan were not installed because of the presence of the underground utilities. Soil contamination shows exceedances of SVOCs near MW-17, MW-18, and MW-19 and the presence of free product in MW-10, MW-13, MW-14, and MW-16. August 20, 2001: a letter from Scolaro, Shulman, Cohen, P.C., reveals that NYSDEC agreed to the discontinuance of enhanced fluid recovery in June of 1999 after LPH appeared in MW-14 and MW-16. The letter informs that on

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

April 22, 1999, NYSDEC approved the CAP submitted on July 16, 1998. December 17, 2001: Handex, on behalf of Motiva Enterprise, submits a semiannual monitoring report that reveals the presence of LPH in MW-6, 7, 10, 13, 14, 15, 18, and 19 (from traces to 0.60 feet-MW-10). Groundwater contamination was detected in MW-13 BTEX (7,706 ppb); B-2 MTBE (1,280 ppb). April 1, 2002: Anthony Sigona of NYSDEC in his memo informs that the current owner of the site (Bayside Fuel Oil Depot) has not been directly involved in the cleanup; the cleanup continues under direction of Equiva Services, LLC, which acquired Texaco Refining & Marketing; LPH have dropped to levels no greater that 0.1 feet; dissolved BTEX and MTBE are present. May 30, 2002: TransGas Energy applies for a Voluntary Cleanup Program assistance. The cover letter says that the site is adjacent to a former coal gasification or manufactured gas plant located on the south side of North 12th Street. August 20, 2002: Blasland, Bouck & Lee, Inc., (BBL) on behalf of Chevron Environmental Management Company (CEMC) submits results of June 25, 2002, groundwater sampling; LPH was observed in MW-7, 10, 15, and 16 with the highest number of 0.13 feet at MW-16. Detected groundwater contamination; MW-13 xylenes 93,040 ppb), benzene (2,120 ppb). August 22, 2002: a letter from Joseph Lentol, Assemblyman, Kings Country District, asserts that Texaco merged with Motiva (most likely between July 1998 and August 2002); the DEC files do not reveal Motiva as the company responsible for the cleanup. September 25, 2002: Anthony Sigona of NYSDEC in his letter to Chevron Product Company indicates that since Chevron has merged with Texaco Refining & Marketing, Inc., NYSDEC will determine whether Chevron is authorized to implement the remediation project on behalf of Texaco. If so, Chevron is required--under the CA--submit a feasibility study and estimated cleanup schedule for approval. November 25, 2002: Blasland, Bouck & Lee, Inc., (BBL) on behalf of Chevron Environmental Management Company (CEMC) submits a corrective action plan. The plan evaluates remediation options: natural attenuation, soil vapor extraction or bioventing (installation of wells to pump air out or into the soil), and excavation and a number of remediation methods for excavated soil (disposal and treatment at an asphalt plant, thin spreading, on-site or off-site thermal desorption, bioremediation/biopile remediation, and disposal in a landfill). BBL proposes the excavation (area 25'x50' extending about 2' into the water table, next to MW-10, 13, 14, and 16) and off-site disposal as the remediation method. December 27, 2002: NYSDEC approves a BBL corrective action plan of November 25, 2002, and its implementation schedule.

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

January 8, 2003: a letter from Chevron Product Company informs that Chevron /Texaco Corporation
assumes environmental responsibilities associated with Texaco Refining and Marketing, Inc., as a
result of the merger on October 9, 2001. Attached to it a certificate reveals that Chevron Corp.
has changed the name to ChevronTexaco Corporation. March 5, 2003: Randall Austin in his e-mail
informs that during excavation of an UST discovered recently at the site--strong odors were
generated and entered an adjacent property, occupied by City Storage. As a result, 3 people were
sick and 25 people were evacuated. The contractor covered the excavated area with plastic sheeting
and overfilled it with clean sand. March 10, 2003: NYSDEC sends a letter to Chevron Products Co.
requesting that because of excessive vapors present on March 5, the CAP must be modified and
submitted for DEC approval. The modification must address containment of vapors from contaminated
soil. March 11, 2003: Blasland, Bouck & Lee, Inc. (BBL), on behalf of Chevron Environmental
Management Company submits November 2002 groundwater sampling and bimonthly gauging results. LPH
were detected in MW-10 (0.02 feet); MW-16 (0.12 feet). Benzene was detected at B-1 (120 ppb); B-2
(45.3 ppb); MW-6 (72.4 ppb); MW-11 (70,6 ppb); MW-13 (1,800ppb); MW-14 (155 ppb). Toluene was
discovered in B-1 (18.7 ppb); MW-13 (597 ppb). Ethylbenzene, total xylene, and MTBE were detected
in B-1, MW-6, and MW-13. March 14, 2003: Windels, Marx, Lane & Mitterdorf, LLP, representing
TransGas Energy Systems (TGES), LLC, sends to City Storage/ Citi Postal a Notice of Intent to Sue
as a result of TGES s position that the Bayside property was polluted by significant amounts of
waste from a former Manufactured Gas Plant (MGP)-a parcel that City Storage occupies. March 2003: a
drafted and undated letter by DEC Deputy Commissioner James Ferreira to Windels Marx, Lane &
Mitterdorf, LLP, responds to their March 14, 2003, letter. Ferreira states that TransGas Energy
Systems entered into a voluntary cleanup agreement with DEC to investigate and remediate the
Bayside property. The property is also on DEC s Addendum to Hazardous Substance Waste Disposal Site
Study of December 1998, and is listed as B.U.G./Williamsburg Works site, presently owned by
Keyspan. In response to a Notice of Intent to Sue, Ferreira addresses also alleged contamination of
the Bayside property from MGP property, located on two parcels between North 11th and 12th Streets,
and subsequent discharge into the Bushwick Inlet. He writes that the CWA allows for the initiation
of citizen suits only for point-source discharges to the surface waters. Year 2003: a draft of an
Order on Consent, R2-20030401-90(CO), indicates that Chevron Product

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

Company, was the Respondent of
this proposed CO. There is no proof that this order has been executed:
a signed CO exists neither
in the Regional Enforcement Coordination database nor in the DER s
files. April 1, 2003: in its
letter to NYSDEC, Chevron Environmental Management Company (CEMS)
summarizes results of a meeting
between these entities: NYSDEC will prepare a drafted consent order;
April 7 is a deadline of a
revised CAP, which include a method of sampling C&D debris stockpiled
at the site; BBL will submit
review comments on a report prepared for TransGas Energy Systems to
Shaminder Chawla of NYSDEC.
April 2, 2003: on behalf of CEMS, BBL submits a revised corrective
action plan. The plan provides
that C&D debris will be disposed after analytical results are
available; the UST will be left in
place and abandoned. The excavation area will be capped and covered
with clean fill. Odors will be
monitored by a PID meter in accordance with a Community Air Monitoring
Plan. A summary report will
be prepared. April 3, 2003: BBL reviews a TRC Environmental
Corporation s (TRC) Phase II Baseline
Environmental Assessment Report for the Bayside Fuel Oil site (former
Chevron facility). BBL agrees
to TRC s conclusions that a significant amount of coal tar and
petroleum contamination migrated on
the Bayside Property and impacted soil and groundwater. The depth of
contaminated soil is limited
to 13 feet or less. Shallow petroleum contamination is commingled with
MGP contamination from the
Williamsburg Works site. Deeper soil and groundwater are almost
exclusively affected by MGP
contamination. April 4, 2003: Anthony Sigona comments on the revised
CAP and the Community Air
Monitoring Plan (CAMP), prepared by BBL, dated April 2, 2003. Sigona
writes that the CAMP must
address vapor and dust suppression techniques; PID must be calibrated
to 10 ppm for isobutelyne,
air monitoring must be recorded every 15 minutes at a number of
locations. The revised CAP should
include a schedule for submission of a site investigation plan in
order to address any
contamination documented by the TRC Environmental Corporation s Phase
II Baseline Environmental
Assessment Report for the Bayside Fuel Oil Site. April 25, 2003: BBL
concurs with NYSDEC comments
of April 4. May 2, 2003: a letter from Chevron Product Company,
commenting on a drafted CO, denies
its responsibilities for the spill and identifies Star Enterprise as
the respondent. Also, Chevron
doubts the bona fides of the Stipulation. According to Chevron, Star
is responsible for surface
contamination; deeper soil layers have been affected by the MGP. May
6, 2003: David Rubinton of
NYSDEC responses to Chevron’s letter of May 2, 2003. He rebuts a
Chevron s claim that Texaco

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

Refining and Marketing, Inc., was not the responder of the stipulation. Rubinton writes that the current Stipulation will have to be replaced and a Consent Order will be necessary. May 20, 2003: Anthony Sigona, in his letter to Chevron Products Company, approves a revised CAMP, dated May 13, 2003, upon inclusion of stringent levels of detectable hydrocarbons and monitoring of indoor air quality. May 22, 2003: BBL submits a CAMP, revised according to the May 6 NYSDEC comments. May 23, 2003: BBL sends to NYSDEC results of waste characterization sampling of the excavated C&D debris. None of the constituents analyzed were detected except for lead. May 23, 2003: Anthony Sigona requests that the CAP and the CAMP be implemented within seven business days. June 17, 2003: Deputy Commissioner, James Ferreira, responses to a citizen suit notice concerning alleged contamination from the Williamsburg MGP property affecting the Bayside site. The property is owned by Citi Storage/Citi Postal and Steinhardt Management /Fifty Kent Avenue Associates LLP. NYSDEC has plans to pursue Keyspan (the former owner) for the remediation of the property, located on two parcels between North 11th and 12th Streets. July 2, 2003: BBL submits a corrective action report, as required by NYSDEC in its letter of May 20, 2003.The report indicates that C&D debris had no excessive concentrations of SVOCs, VOCs. Only lead was detected at 0.91 ppm (TCLP limit is 5.0 ppm). C&D debris was disposed at CWM Chemical Services, Model City. The UST was left in place and filled with concrete slurry. The existing sheeting and sand cover remain in place. July 23, 2003: Chevron sends a letter to Sigona in response to his letter of July 14 (not in the DEC files). Chevron indicates that the corrective CAP has been approved by NYSDEC. Chevron also responds to Sigona s request concerning the submission of a site investigation plan (to address petroleum contamination documented by the TRC Environmental Corporation s Phase II Baseline Environmental Assessment Report, dated December 2002). Chevron, before the submission of such a plan, needs to receive DEC s final comments concerning the TRC report. July 23, 2003: Sigona sends a commentary letter in response to Chevron today s letter. He says that while NYSDEC recognizes that there is evidence that coal gasification waste might have migrated onto CPC s former site; there is also evidence that CPC or its predecessors have discharged petroleum at this site. By August 1, 2003, CPC must submit a proposal for additional borings and well installations as well as Remedial Investigation Work Plan in accordance with DER-11. Section 3, Paragraph 3.3. August 29, 2003: BBL submits a Site Investigation Plan for the former Star Enterprise

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

facility, in accordance with DEC
Stipulation Agreement, dated July 27, 1998. The investigation will be conducted according to DER-10
and a site-specific Health and Safety Plan/Community Air Monitoring Plan (approved by NYSDEC on
April 2, 2003). The plan includes test borings, soil analyses, well installations, and groundwater
samplings. September 10, 2003: Sigona sends comments to Chevron Product Company concerning BBL s
Proposed Site Investigation Work Plan, dated August 29. NYSDEC requires that the results of the
proposed BBL Work Plan be implemented in accordance with an approved schedule referenced in an
executed Order on Consent (not in DEC files). April 14(?), 2004: commenting on the CAP, dated April
15, 2004, Sigona requests that Chevron submits a revised CAP by June 30, 2004, including a
justification for a manual gauging and bailing instead of selecting of other remedial strategies.
Earlier, NYSDEC decided to cease temporarily high-vacuum extraction events in order to investigate
alterative remedial strategies. August 12, 2004: Blasland, Bouck & Lee, Inc., (BBL) on behalf of
Chevron Product Company sends a revised Corrective Action Plan. Anthony Sigona approves the PSH
Recovery Plan. A final remediation report must comply with DER #10; quarterly groundwater
monitoring must contain petroleum constituents, dissolved oxygen, pH, alkalinity and hardness.
September 16, 2004: Chevron Environmental Management Company sends a letter to NYSDEC summarizing
the results of agreement between NYSDEC and Chevron on future environmental response actions at the
site. BBL, the Chevron consultant, will perform bimonthly bailing and recovery of PSH; BBL will
prepare an Exposure Assessment, focused on shallow zone impacts associated with the site (less than
20 feet below a land surface) by the end of year 2004. A one round of groundwater samples,
including BTEX and MTBE, will be included in the Exposure Assessment. December 27, 2004: BBL
submits results of the September 2004 groundwater sampling conducted at 20 monitoring wells.
Benzene was detected in B-1 (100 ppb); MW-1 (6 ppb); MW-5 (2 ppb): MW-6 (41ppb); MW-8 (61 ppb);
MW-9 (9 ppb); MW-12 (3 ppb); MW-14R (380 ppb); MW-15 (120 ppb); MW-18 (31 ppb); MW-19 (59ppb).
Toluene was detected in B-1 (15 ppb); MW-9 (16 ppb); MW-14R (57 ppb). Ethylbenzene was detected in
B-1 (16 ppb); MW-9 (45 ppb); MW-14R (110 ppb); MW-18 (140 ppb); MW-19 (63 ppb). Total xylenes were
detected in B-1 (64 ppb); MW-9 (45 ppb); MW-14R (280 ppb); MW-15 (11 ppb); MW-19 (10 ppb). MTBE was
detected in MW-6 (67 ppb). PSHs were observed in EPA-3 (sheen); MW-9 (0.01 feet); MW-11 (film);
MW-12 (film). Conclusions: four wells contained detectable PSH; the plume is stable and has been

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

delineation to the central portion of the site; natural attenuation is occurring on the site.
December 27, 2004: the Human Health Exposure Assessment, prepared by BBL, concludes that BTEX and
MTBE are present in groundwater at concentrations exceeding NYSWQS. However, the groundwater at
this site is not potable, and potential exposures would most likely be limited to direct contact
with groundwater and inhalation of indoor air vapors. Potential exposure encountered during
excavation could be mitigated through the use of properly trained personnel and protective
equipment. Since available soil and soil vapor data is limited, they have not been evaluated.
September 2, 2005: BBL submits a report on the second quarter 2005 bimonthly gauging as specified
in the DEC-approved CAP. No SPH was detected in any of 21 monitoring wells during any of 8 gauging
events. January 31, 2006: BBL submits a report on the bimonthly gauging as specified in the
DEC-approved CAP, from August 2005 through December 2005. PSH was detected in MW-18 on December 8,
2005 (0.01 feet); 21 wells were gauged during 9 events. August 7, 2006: BBL submits a report on the
twice-a-month gauging from January 2006 through March 2006; 21 wells were gauged on 5 occasions; no
PSH was detected. October 6, 2006: BBL sends a report concerning gauging from April 2006 to July
2006; 21 wells were gauged, and no PSH was detected on any of 8 events. Chevron Environmental
Management company proposes quarterly gauging and twice-a-year reporting. November 7, 2006: BBL, an
ARCADIS Company, submits a report on the twice-a-month gauging as specified in the DEC-approved
CAP, from August 2006 through September 2006; 21 wells were gauged on 4 occasions; no SPH was
detected. December 14, 2006: Leszek Zielinski of NYSDEC approves the semiannual gauging and
groundwater elevation measurements. The absence of PSH had been observed since December 8, 2005,
when 0.01 foot of free product in Well MW-18 was found. The data sufficiently demonstrates that
asymptotic conditions have been reached. The department approves BBL's request to perform quarterly
gauging of the monitoring wells for the presence of PSH. Similarly, the department approved a
request concerning the semiannual reporting on a groundwater elevation and a PSH thickness at these
wells. January 4, 2007: ARCADIS BBL submits a report on the bimonthly well gauging from October
2006 through December 2006. PSH (0.09 feet) was detected in MW-18 on December 11, 2006. 21 wells
were gauged during 5 events. August 22, 2007: ARCADIS BBL submits a report on the bimonthly well
gauging from January 2007 through May 2007. PSH was observed in MW-06 (0.01 feet) in February 2007;
MW-18 (0.01 feet) on February 8, 2007, and (0.01 feet) on May 15,

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000351174**

2007. Wells were gauged 4 times
in this period. Prior to Sept. 2004 data translation this spill
Lead_DEC Field was ZHAO This site
cleanup has been consolidated under Spill No. 9804544. 4/22/2004 -
Spill case is reassigned to
Zhao. On July 16, 1998, DEC SIGONA RECEIVED PROPOSED site
investigation plan. Letter sent to STar
Enterprise on 7/17/98 approving plan. Stipulation Agreement sent to
Star for signature on 7/10/98.
In response to a complaint over elevated vapors on March 5th, 2003,
filed under Spill Investigation
No. 0211984, the DEC issued a verbal Order to Cease and Desist all
remedial activity at the site
pursuant to the Blasland, Bouck & Lee, Inc. (BBL) corrective action
plan (CAP), dated November 25,
2002. The DEC confirmed that the excessive vapors generated by the
excavation of petroleum
contaminated soils at the site under the November 25th CAP, were shown
to impact worker health and
safety at the affected site at CitiStorage. As a direct result of
these vapor problems associated
with the implementation of the November 25th, 2002 CAP, the DEC has
determined that it has become
necessary to modify of the CAP conditionally approved by DEC in a
letter to CPC, dated December 27,
2002. The CAP must now be modified to continue to satisfy paragraph
III of the DEC's Stipulation
Agreement with Texaco Refining & Marketing, Inc., dated July 27, 1998.
DEC's comments regarding
Blasland, Bouck & Lee, Inc. (BBL) revised Community Air Monitoring
Plan (CAMP), dated May 22, 2003,
to address emission of odors, vapors and dust during the remedial work
proposed in the revised CAP.
The DEC accepts the proposed CAMP which has addressed the comments in
our May 20, 2003 letter to
CPC. CPC must now implement the Blasland, Bouck & Lee, Inc. (BBL)
revised corrective action plan
(CAP), dated April 2, 2003, and revised CAMP, dated May 22, 2003.

Remarks: Ground water monitoring revealed the presents of petroleum in groundwater star enterprise is developing a remediation plan with DEC (Sigona).

BAYSIDE OIL (Continued) **S113922082**

Region:	2
Town:	New York City
Acres:	8.000
Date Record Added:	06/04/2002
Date Record Updated:	10/30/2009
Updated By:	MOBARRIE
Site Description:	The TransGas Energy (TGE) Facility is a project for a new energy facility located on the East River waterfront between the Greenpoint and Williamsburg sections of Brooklyn. TGE proposed to construct and operate an 1100-megawatt gas-fired plant on the Brooklyn waterfront near Bushwick Inlet between the communities of Greenpoint and Williamsburg. For over 100 years, the Site has been operated as a fuel oil storage and distribution facility. Site soils and groundwater are contaminated with Petroleum spill contaminants, MGP Waste and heavy metal contamination. TGE entered the Department?s Voluntary Cleanup Program (VCP) in December 2002. The current owner of the Site is the Bayside Fuel Oil Depot. Under Bayside Fuel and previous owners (which include Socony Mobil, Texaco Refining and Marketing and others), the Site has been operated as a fuel oil storage and distribution facility for over 100 years. The Phase II assessment was completed in January 2003 and confirmed widespread groundwater and soil contamination with MGP waste and petroleum related contaminants. RI is on-going. The VCP Agreement was terminated in 2009 for lack of progress. There is an existing oil spill stipulation (Spill No. 9804544) with Texaco Refining and Marketing that has resulted in ongoing recovery of free-product and contaminated-groundwater. See also site no. 224055 (Williamsburg Works MGP) for further information.
Env Problem:	Previous studies at the Site confirm widespread petroleum contamination with MGP involvement. For example, fuel oil and naphthalene odors are reported in boring logs as deep as 60 feet, and in July 2002 TRC Environmental (TGE?s consultant) found heavy staining and MGP waste in a boring 20 feet below grade and reported the occurrence to NYSDEC as a spill (No. 0203677). In addition to organic pollutants, a 1997 investigation also found soil samples with elevated levels of lead. The Phase II assessment was completed in January 2003 and confirmed widespread groundwater and soil contamination with MGP waste and petroleum related contaminants. Heavy staining and odors (coal tar) observed from 20 feet depths to top of clay at 60 feet depths. VOCs and PAH exceed RSCOs below 20 feet depth. Benzene concentrations below 20 feet depth observed up to 864,000 ppb. Off-site benzene detected upto 128,000 ppb. Free product observed (wells B4, MW7). On-site groundwater impacted from water table to top of clay by petroleum and coal tar related compounds. Benzene detected throughout the site at concentrations of 6.5 ppb to 29,500 ppb (in MWB-11). MTBE ranged from 1.2 to 329 ppb and naphthalene ranged from 1.6 to 579 ppb.

Site Description: Location: The 2825 square foot site is located at 134 Metropolitan Avenue in the Borough of Brooklyn, Kings County, NY in an urban area. The site is bounded by Metropolitan Avenue to the north, a movie theater to the east, North 1st Street to the south, and a commercial/residential building to the west. Site Features: The Site is approximately 2,825 square-feet and is currently occupied by a two-story commercial building with partial basement (30% of site) and a partial sub-basement. Current Zoning and Land Use: The site is

134 METROPOLITAN AVENUE-OER (Continued) **S108076312**

currently zoned as M1-2 (manufacturing) with an R6A (residential) overlay. The on-site building was most recently occupied by a bar/nightclub which closed in 2016. Past Use of the Site: Historic uses at the Site include wire works (prior to 1887), a machine shop (1887-1905), and manufacturing (1951). The current owner plans to add 3 additional floors on the building for residential use. Site Geology and Hydrogeology: According to maps and reports published by the United States Geological Survey (USGS), the Property is situated at approximately 36 feet above mean sea level and is underlain by glaciofluvial deposits of Upper Cretaceous and/or Quaternary age consisting of sand, silt, clay gravel, cobbles and boulders. These deposits rest unconformably on crystalline bedrock of early Paleozoic and/or Precambrian age. Soil borings were completed during the investigation to depths ranging from approximately 20 to 39 feet below land surface. Depth to water readings collected during this investigation indicate shallow groundwater beneath the Site ranges from 19.83 feet below grade at GW-5 to 38.97 feet below grade at GW-1. Based upon regional maps published by the USGS shallow groundwater flow appears to be moving in a westerly direction.

Env Problem: Nature and Extent of Contamination: This site was referred to the Department from the NYC Office of Environmental Remediation (OER). A soil vapor intrusion investigation was undertaken on the site under the direction of OER as a result of an environmental e designation on the site. Historic uses at the site include wire works (prior to 1887), a machine shop (1887-1905), and unspecified manufacturing (1951). The site is currently occupied by a two-story commercial building with partial basement and a partial sub-basement. Based on the soil vapor investigation conducted under OER, the chlorinated solvents tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE) and 1,2 dichloroethene (DCE) were detected at maximum concentrations of PCE at 223,000 micrograms per cubic meter (ug/m3), TCE at 203 ug/m3, and DCE at 114 ug/m3. Subsequently, a site characterization (SC) was conducted under a NYSDEC consent order. Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides and per and polyfluoroalkyl substances (PFAS). Soil vapor was sampled for VOCs. During the SC, the soil vapor concentrations identified in the initial OER investigation were not duplicated. Soil During the site characterization investigation, No PID readings exceeded zero parts per million (ppm) in any of the screened soil samples and no VOCs were detected at concentrations above their respective restricted residential soil cleanup objectives (RRSCOs) and protection of groundwater soil cleanup objectives (PGWSCOs) in soil samples collected at the site. SVOCs were detected at concentrations exceeding the RRSCOs in shallow soil at the site. SVOCs include benzo(a)anthracene (max of 11 ppm; RRSCO is 1 ppm), benzo(a)pyrene (max of 8.7 ppm; RRSCO is 1 ppm), benzo(b)fluoranthene (max of 11 ppm; RRSCO is 1 ppm), dibenzo(a,h)anthracene (max of 1.3 ppm; RRSCO is 0.33 ppm), and Indeno(1,2,3-cd)pyrene (max of 5.5 ppm; RRSCO is 0.5 ppm). Metals were detected above their respective RRSCOs including mercury (max of 1.87 ppm; RRSCO is 0.81 ppm), and lead (max of 475 ppm; RRSCO is 400 ppm). 1,4-dioxane was not detected in any soil samples. PFOA and PFOS were not found at concentrations exceeding either the restricted-residential use or the protection of groundwater guidance values. Data does not indicate any off-site impacts in soil related to this site. Groundwater Chlorinated - VOCs

134 METROPOLITAN AVENUE-OER (Continued) **S108076312**

were found in groundwater on the south of the site one off-site well. VOCs exceeding their respective ambient water quality standards (AWQS) include trichloroethene (max 97 parts per billion (ppb); AWQS is 5 ppb), and cis-1,2-Dichloroethene (max 43 ppb; AWQS is 5 ppb). SVOCs detected in groundwater above the AWQS include benzo(a)anthracene at a maximum concentration of 0.12 (AWQS is 0.002 ppb), benzo(a)pyrene at a maximum concentration of 0.11 (AWQS is non-detect), benzo(b)fluoranthene at a maximum concentration of 0.13 (AWQS is 0.002 ppb), benzo(k)fluoranthene at a maximum concentration of 0.04 (AWQS is 0.002 ppb) and chrysene at a maximum concentration of 0.1 (AWQS is 0.002 ppb). In groundwater, lead was detected at a maximum concentration of 45.92 ppb compared to 25 ppb and mercury was at 2.03 ppb compared to 0.7 ppb. Only naturally occurring dissolved metals (manganese, sodium, magnesium) were detected at concentrations exceeding AWQS. PFOS was detected at a maximum concentration of 7.72 parts per trillion (ppt) compared to the Maximum Contaminant Level of 10 ppt, and PFOA at a maximum concentration of 62 ppt (MCL 10 ppt). No Pesticides, PCBs and 1,4 -dioxane were identified above ambient water quality standards in any groundwater samples. Data does not indicate any off-site impacts in groundwater related to this site.
Sub-slab soil Vapor and Indoor Air Low-levels of VOCs were detected in on-site sub slab soil vapor. The maximum concentration of tetrachloroethylene (PCE) and trichloroethylene (TCE) were detected in sub slab soil vapor samples at 6.39 micrograms per cubic meter (ug/m3), and 1.2 ug/m3, respectively. PCE was detected in the indoor air at a maximum concentration of 0.346 ug/m3. No TCE were detected in the indoor air. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem: People will not come into contact with contaminated soil or groundwater unless they dig below the ground surface. People are not drinking the groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via soil vapor intrusion is not a current concern, however the potential exists for soil vapor intrusion to occur and affect the indoor air of any future occupied buildings on the site. An evaluation of the potential for soil vapor intrusion to occur will be completed should the current use of the site change. Environmental sampling indicates that the potential for exposure due to soil vapor intrusion from site contaminants is not a concern off-site.

BROWNFIELDS:

Name:	FORMER ANGLO CHEMICAL AND RUBBER SITE
Address:	1-9 WYTHE AVENUE
City,State,Zip:	BROOKLYN, NY 11222
Program:	BCP
Site Code:	624874
Acres:	0.380
HW Code:	C224337
SWIS:	2401
Town:	New York City
Record Added Date:	09/23/2021
Record Updated Date:	11/05/2021
Update By:	AMSERVIS
Site Description:	Site Location: The site s address is 1-9 Wythe Avenue, Brooklyn, NY 11222. The site is located in Kings County, New York and is identified as Brooklyn Block 2641 Lots 1, 3 & 4. The site is located in an urban area of the Greenpoint neighborhood of Brooklyn, NY on the south side of Wythe Avenue between Banker Street and N 15th Street and approximately 800 feet east of the East River. Site Size: The site is 0.380 acres in size. Site Features: The site is currently a triangular shaped partially lot with three one-story manufacturing facilities located in the northern portion of the property, with a rear yard on the southern portion. Current Zoning and Land Use: The site is currently partially developed land that is zoned for industrial and commercial use. The surrounding properties are currently used for commercial and warehousing/manufacturing purposes. Past Land Use: As found during the Phase I Environmental Site Assessments, the site was developed between 1916 and 1942 with a 1-story building noted as a Paint and Varnish Manufacturer on the eastern portion, barrel storage on the western portion and manufacturing in the northern and central portion. In 1951 the barrel storage area was expanded to the southeastern portion of the subject property. Between 1965-1981 the layout of the subject property remained the same, however, the operations were updated as inflammable liquid canning . Between 1982 and 1993 the subject property was noted as unspecified manufacturing, with an additional warehouse erected in the southwest corner of the property. Recently the site was used for multiple commercial operations including active furniture woodworking and a kitchen counter remodeling shop. The site is currently improved with three one-story warehousing and is vacant. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists primarily of urban fill extending to approximately 10 feet below ground surface (ft bgs) underlain by a layer of gray black sand with varying amounts of silt and clay extending to approximately 10 ft bgs. This layer is underlain by grey poorly graded sand to 15 ft bgs. Groundwater was encountered at approximately 9 ft bgs and groundwater flow is to the west.
Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

HW Code:	224397
Record Add:	05/11/2023
Record Upd:	07/05/2023
Updated By:	WBBENNET

Site Description: Site Location: The proposed site is located at 9 North 15th Street in Kings County, and is identified as Block 2614, Lot 16 on the New York City Tax Map. Site Features: The site is a 0.145-acre lot including one-story warehouse building. Current Zoning and Land Use: The site is zoned M102 (manufacturing district) and is currently unoccupied. The site was used by Linaire Sheet Metal Corp. between 1994 to 2021. The surrounding parcels are currently used for a combination of light manufacturing, commercial uses, and parking. Past Uses: The existing building was constructed in early 1930 s. Previous industrial uses include manufacturing, a construction company, a garage, and a sheet metal facility. From 1976 to 1995, the site was listed as a RCRA generator (EPA ID no. NYD001486885) of corrosive wastes, chromium, and electroplating treatment sludges. The facility operated as V E 2 Plating and as Presto Electro Plating Corp. Historically the electroplating operations extended onto the adjacent BCP site, 12 Franklin Street (C224286). Site Geology and Hydrogeology: The depth to groundwater is approximately five to nine feet below grade, based on groundwater elevations at sites in the surrounding area. Groundwater flows to the west/southwest through the site toward Bushwick Inlet but may be tidally influenced.

Env Problem: Soil, groundwater, soil vapor, and indoor air samples were collected at the site under an investigation overseen by NYC Office of Environmental Remediation between February and April of 2022. Nineteen soil borings were installed. Elevated levels of tetrachloroethene (PCE) and trichloroethene (TCE) were detected, with maximum concentrations of 100 parts per million (ppm) and 400 ppm respectively compared to their respective protection of groundwater soil cleanup objectives (POGSCOs) of 1.3 ppm and 0.47 ppm. Several semi-volatile organic compounds (SVOCs) and metals were detected above their respective unrestricted use SCOs (UUSCOs). One emerging contaminant, perfluorooctanesufonic acid (PFOS) (max. 9.6 ppb), was found above its protection of groundwater guidance value. Six permanent monitoring wells and three temporary monitoring wells were installed at the site. Groundwater flows west/southwest towards Bushwick Inlet, which is located approximately 250 feet from the site. Chlorinated Volatile Organic Compounds (CVOCs) were detected at concentrations exceeding ambient water quality standards including PCE (max. 570 parts per billion, or ppb), TCE (max. 65 ppb), cis-1,2-dichloroethene (max. 60 ppb), and vinyl chloride (max 55 ppb). Multiple PFAS compounds were also detected at concentrations

FORMER PRESTO ELECTROPLATING (Continued) **S130462534**

exceeding guidance values. Two temporary soil vapor points were installed with co-located indoor air (IA) and sub-slab soil vapor (SV) samples taken at each location. Chlorinated VOCs were detected in both soil vapor and indoor air, including PCE (max. 32,000 micrograms per cubic meter, or ?g/m3 in soil vapor, max. 2.9 ?g/m3 in indoor air), TCE (max. 190,000 ?g/m3 SV, max. 4.2 ?g/m3 IA), cis-1,2-dichloroethene, or DCE (max. 1500 ?g/m3 SV, max. 0.1 ?g/m3 IA), and vinyl chloride (9.0 ?g/m3 SV, max. 0.1 ?g/m3 IA). According to NYSDOH decision matrices, the concentrations of PCE, TCE, and cis-1,2-DCE require mitigation.

Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DEC Memo:	see also two former closed spills #0801333 & #060249. OER received a community complaint and inspected the site yesterday. There were strong odors present at the site from both an impacted stock pile on the west side of the site as well as creosol and decomposing organics smell on the east side. Doug Harm (consultant) and Tucker (GC) we required immediate actions to be taken to take

235-247 & 253-263 NORTH 9TH STREET (Continued) **S113817673**

care of the problem. 5/29/14 - Austin - Reassigned from Rahman to Mahat - end 9/25/14: Mahat T/C :
A phone call was received from the consultant of the potential buyer inquiring about the spill
status. OER Voluntary clean up case number : 13CVCP086K DEC is waiting for a closure report from
consultant. 10/7/14: Mahat DEC Mahat received a tank closure report from the contractor and it is
uploaded on D2 for reference. 12/29/14: Mahat report review : DEC Mahat reviewed the UST. End point
samples were below CP 51 guidnace value. All contaminated soil were removed from the site. No
further investigation for remediation and deliniation is warrented by the Department. Hence, the
spill case will be closed on the database and OER will continue with their program.

Remarks: possible historic spill - U/G tank also found in concrete - cleanup pending

Spiller Company: 999
Contact Name: AMANDA
DEC Memo: 10/25/17 TJD Spill assigned to Rick Lin as per Vought. 10/26/17- Lin - Received emails from Vought
with reports. No alternate address or PBS registration found. Review reports with Vought: Remedial
Investigation Report (Langan October 2017 Draft) prepared for RedSky Capital, 3 Hope Street,
Brooklyn, NY 11211. The Site is 5,000-square feet and is bounded by North 4 Street followed by
Public School 017, which consists of a five-story public use building and open air playground, to
the north, a four-story mixed use residential/commercial building to the south, a two-story
manufacturing building to the east, and Driggs Avenue followed by an open-air parking lot to the
west. Currently, the Site is an asphalt-paved lot used for storage of stone slab building materials
and is enclosed by a perimeter fence along the property boundary. The proposed future use of the
Site will consist of a six-story mixed-use commercial and residential building, with a single
below-grade cellar level. The building s below-grade cellar will be used for storage (including
residential tenant storage), pet grooming, and building mechanical equipment rooms. Parking
proposed for second floor. Excavation will be performed as part of construction of the cellar to a
depth of approximately 15.5-feet below sidewalk grade across the entire Site footprint; an elevator
pit in the south-central portion of the lot will be excavated to approximately 19.5-feet below
sidewalk grade. Work performed under remedial investigation: Conducted a Site inspection to
identify AOCs and physical obstructions (i.e. structures, buildings, etc.). Installed five soil
borings across the entire project Site, and collected 10 soil samples for chemical analysis from
the soil borings to evaluate soil quality. Installed three temporary groundwater monitoring wells
throughout the Site to establish groundwater flow and collected three groundwater samples for
chemical analysis to evaluate groundwater quality. Installed three soil vapor probes around Site
perimeter and collected three samples for chemical analysis. Environmental findings: Elevation of
the property ranges from 24 to 26-feet with respect to the North American Vertical Datum of 1988
(NAVD 88). Depth to groundwater ranges from 18.5- to 21-feet below existing site grade at the Site.
Groundwater flow is inferred to be from southeast to northwest beneath the Site. The stratigraphy
of the site, from the surface down, consists of approximately 5.5- to 10-feet of historic fill
material underlain by native sands with varying amounts of gravel and

MIXED USE SITE (Continued) **S121119942**

ug/l(LMW-3) 10/27/2017 -Lin/Vought- Redevelopment of the property is
anticipated to begin in 2017.
A Remedial Action Work Plan to address the hazardous material portion
of the E-Designation will be
provided within one week of the submittal of this Remedial
Investigation Report. DEC possibly
requires: 1) Air Monitoring due to adjacent playground/school 2)
Submission of Transaction Screen
Environmental Site Assessment Report prepared by LCS Inc for M&T bank
on behalf of RedSky Capital
dated June 2015 as per the RIR. 3) Hotspot excavation, if found, as
groundwater is contaminated and
no vertical pathway has been found to date in soil sample. 4) Soil
vapor mitigation after
discussion with NYSDOH Walz due to up to 250 ug/m^3 TCE 5) Question on
presence of underground

MIXED USE SITE (Continued) **S121119942**

gasoline tanks due to consultant review of transaction Screen
Environmental Site Assessment Report
11/1/2017- Lin/Vought- Lin and Vought had the conference call with
Walz from NYSDOH and
Samantha/Shaminder from OER. Per Shaminder, the consultant estimated
that only 22'' between the
foundation and the water table, so there might not be enough room to
install a SSDS (subslab
depressurization system). Installation of a vapor barrier. PID during
excavation and hot spot
excavation. Remedial action plan with community air monitoring plan
will come in this week. Nathan
suggested a permanent air monitoring set up in the direction of the
school. 8/23/21-Lin-Depth to
groundwater is at 18.5' to 21'. The groundwater flow direction is to
the northwest toward east
river. Two (2) 275 gallon and one (1) 550 gallon USTs were removed.
Since the tanks were found near
the site boundary, three (3) sidewall soil samples toward the site
boundary were taken. All three
(3) soil samples came back clean. Soil on site was excavated to a
depth of 15' to 16' bgs. A
hotpsot identified during the RI was excavated down to 20' bgs. Five
(5) endpoint bottom samples
were taken across the site and two of the samples were taken in the
hotspot area. All five (5)
endpoint soil samples came back clean. Dissolved contamination in the
groundwater is expected to
attenuate over time as no contaminated soil remains on site. An
engineering composite and vapor
barrier system were installed. An active SSDS was installed. Case
closed.

Remarks: cleanup pending - would like to have assigned to Ricky Linn

DEC Memo:	4/24/2009 TTF letter sent to: NYC Dept of Field Operations Fuel Division Mr. James Merlo 44-36 Vernon Blvd Long Island City, NY 11101 6/12/09. J.Krimgold reviewed and approved the proposed scope of work outlined in the letter report submitted by TRC and dated June 2, 2009. 01/28/10. J.Krimgold reviewed the SIR dated 08/07/09 and concurs with conclusions and recommendations of the report. However, requested closure of waste oil tank and submittal of appropriate Bulk Storage Application. 02/17/11 - LZ The waste oil tank was permanently closed in place (edocs), which meets DEC requirements. An application was submitted to change the status of the tank. However, it has been returned to the applicant since the tightness test for another tank at the facility is overdue. The spill case is closed.
Remarks:	TANK TEST FAILURE ON A 1000 GALLON UST UNK IF ANY PRODUCT WAS SPILLED. Not reported

DEC Memo:	3/21/2005 There was an earlier tank test failure spill number (0004062-DeMeo) which has now been closed out in favor of this new spill number. Earth Tech believes that the old tank was relined after the tank failed the prior tank test several years ago, however no work was ever done to remediate the contamination which occurred because of that leak. Earth Tech believes that approx 2 years ago this buried tank was taken out of service. Since that time the building has been supplied by an above ground 5,000 gal tank. Unknown if the buried tank was ever emptied. Earth Tech recently did soil borings around the UST area and came back with high contamination levels. This information was forwarded to the City SCA (SCA Contact:Lee Guterman 718-472-5802) SCA has now decided to removed the UST and excavate out the contaminated soil around it. Earth Tech is modifying the standard city bid package to site specific conditions and will work with the city as they put the excavation/remediation work out to bid. Bid package should go out around April 1st, 2005. Work should be done summer 2005. 04/13/06- Case was transferred from Jake Krimgold to Koon Tang. ---------- ---------- 7/9/07: Reassigned from Koon Tang to Kartik Chanda (Chanda) 7/18/07: Kartik Chanda of DEC reviewed all documents regarding this spill case. On 7/18/07, Chanda sent a letter to Ms. Lee Guuterman, Manager IEH Department, NYC School Construction Authority, requiring that the following documents be submitted to the DEC for review by 9/4/07. 1. An explanation of the cause of the tank system failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation. 10/29/07: Chanda called Mr. Drew Pardus(NYCSCA) to get updated information regarding this spill site. He stated that NYCSCA is finding the information regarding this spill. NYCSCA will send an investigation report shortly. 12/6/07: Chanda received an email (see edocs) from Ms. Lee Guterman, NYCSCA. She stated that The Investigation Summary Report for Automotive Trade HS has been prepared and is under my review. A Remedial Action Plan is being prepared and is anticipated to be completed by 12/15/07. 2/12/08: Chanda received a Subsurface Investigation Summary Report from NYCSCA, prepared by TRC Engineers, Inc. (TRC), dated November 9, 2007. 2/28/08: Chanda has reviewed the Subsurface Investigation Summary Report and has the following comments: -Subsurface investigation report regarding the 20,000-gallon #4 fuel oil UST. - About two years ago, a tank tightness test was performed and the tank failed. At that time UST was taken out of service and a temporary 5,000-gallon AST was installed to supply #2 fuel oil to the boiler. - The soil data indicated that the UST had leaked and had contaminated the surrounding soils near the UST and the supply line to the building. VOCs and SVOCs were detected in soil samples. The greatest impacts appear to be in the immediate vicinity of the UST and just below the depth of UST near the water table. -VOC were not detected in groundwater beneath the site. Several SVOCs were detected in groundwater beneath the site. -The results of finger print analysis indicate that the impacts are associated with #4 fuel oil. - The groundwater table has been measured between 10 and 11 feet bgs. - Removal of UST and associated impacted soil could potentially damage the adjacent school building and concrete vehicle access ramp. 3/3/08: Chanda discussed with Joe Sun (supervisor),and sent a letter with Stips and generalized Corrective Action Plan via certified mail to RP (Ms. Lee Guterman) and Mr. Drew Pardus (NYCSCA). The Department requires installation of permanent monitoring wells to determine the correct groundwater flow direction at the site. The signed STIP must be submitted to DEC by 3/25/08. 3/24/08: The Stipulation Agreement was signed by the RP (The New York City Department of Education). 3/31/08: Chanda sent a fully executed STIP to the RP and required that a Subsurface investigation and monitoring well installation report be submitted to DEC by 6/2/08 for review and approval. 4/3/08: Chanda

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

received a Subsurface
Investigation Work Plan from NYCSCA, prepared by TRC Engineers, Inc. (TRC)dated March 18, 2008.
4/4/08: Chanda has reviewed the Subsurface Investigation Work Plan and has the following comments:
-TRC will advance ten (10) soil borings across the Site as part of monitoring well installation.
Soil samples will be analyzed for the STARS volatile organic compounds (VOCs) and STARS SVOCs. -TRC
will install nine (9) two-inch diameter and one (1) four inch diameter flush mounted permanent
groundwater monitoring wells. The wells will be screened approximately 5 feet above the water table
and 10 feet below the water table. The samples will be analyzed for STARS VOCs and STARS SVOCs.
4/7/08: Chanda sent the work plan approval letter to Ms. Lee Guterman, NYCSCA and her consultant
(TRC Engineers Inc.), requiring that an Investigation Report must be submitted to the Department by
June 2, 2008 for review and approval. 4/17/08: Chanda received the following email from Mr. Drew
Pardus, NYCSCA: TRC is scheduled to start preforming the field work for the investigation on April
24, 2008. We will provide the investigation report as soon as it is available. Please feel free to
contact me if you have any questions or comments. Sincerely, Drew Pardus 6/2/08: Chanda received an
email from Mr. Bob Kanaparthi, NYCSCA, regarding one week time extension to submit the
Investigation Report for this site. Chanda sent an extension approval letter to Ms. Guterman,
NYCSCA. The Deadline is extended to 6/9/08. 6/9/08: Chanda received a Site Investigation Report
from NYCSCA, prepared by TRC Engineers, Inc., dated June 6, 2008. (see eDocs) 7/3/08: Chanda has
reviewed the site investigation report and has the followings: -The site consists of a three-story
public school building with basement, and asphalt-paved parking and landscaped areas. -The results
of the analyses of the soil samples revealed detectable concentrations of VOCs and SVOCs. -
Permanent flush mounted ten (10)GW monitoring wells were installed at the site. -The depth to
groundwater measured at the Site is approximately 8 to 10 feet bgs. -No SVOCs detected in GW at
concentrations exceeding Class GA Values. -Several VOCs were detected in GW samples. -NAPL was not
encountered in any of the GW monitoring wells during gauging with an oil /water interface probe.
-Based on GW table surface elevation measurements, only a slight gradient, indicating a predominant
inward flow direction, exists beneath the site. Based on the results of site investigation, and
considering the result of previous investigation, TRC concluded that there is a potential damage of
school building that could result from attempting to remove the 20,000-gallon UST from the site.

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

TRC recommended the following: * Permanently close-in-place the 20,000-gallon UST; * In-service waste oil UST identified during the geophysical survey is registered, operated and maintained in accordance with applicable regulations; * Close or take out of service the concrete vault in accordance with applicable regulations; * Monthly monitoring of the permanent groundwater monitoring wells for light NAPL to confirm that it is not present; * Implement a program to ensure proper maintenance of the asphalt pavement in the vicinity of the UST and impacted subsurface soil;
7/9/08: Chanda discussed with Joe Sun, NYSDEC regarding the findings of the Site Investigate Report. It is concluded that the Department (DEC) requires that a Remedial Action Work Plan to remove all contaminated media from this subject site. 7/11/08: Chanda sent a letter to RP (Ms. Lee Guterman, NYCSCA) and her consultant (TRC) requiring that a Remedial Action Plan (RAP) be submitted to DEC by 9/11/08 for review and approval. 8/1/08: A meeting was held on 7/30/08 among DER staff, NYCSCA and TRC Environmental Consultant Inc. (TRC) to discuss the site investigation results and Remedial Action Plan (RAP) to remediate all the contaminated media. The meeting s consensus was that a RAP be submitted to DEC by 9/11/2008 for review and approval.
9/11/08: A follow-up meeting was held on 9/10/08 among DER Staff, Mr. Drew Pardus(NYCSCA), and Mr. David Glass (TRC Environmental) regarding the findings of the recent inspection of the school building basement for this site. As agreed at the meeting, NYCSCA will conduct the following activities associated with the Site: Clean the 20,000-gallon UST in accordance with applicable regulation but leave it unfilled to use a monitoring point for a short time. Clean the standing oil into the concrete vault. Evaluate the size and structure of the concrete vault and determine the piping layout associated with the vault. Also, determine if the pumping system is still in operation or needs to be. Clean the oil strains inside the basement areas and tank vault area to see if they return.
Advance several monitoring wells in the vicinity of the 20,000-gallon UST. Prepare and submit a brief work plan with borings and monitoring well locations. Include an implementation schedule.
9/11/08: Chanda sent a letter to Ms. Lee Guterman requiring that a brief work plan be submitted to DEC by 10/12/08 for review and approval. 10/10/08: Chanda received a Site Investigation and Interim Remedial Scope of Work from NYCSCA prepared by TRC Engineers, Inc., dated 10/7/08. Chanda reviewed the work plan. The work plan has the following: * Investigation of Concrete Valt *Removal and Monitoring of Seeps * UST and Vault Cleaning and Inspection

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

*Geophysical Survey * Four groundwater
Monitoring Wells Installation and Sampling in the vicinity of the
20,000-gallon UST 10/31/08: A
meeting was held on 10/21/08 between DER staff and NYCSCA to discuss
the project status and
investigation work plan regarding this site. On 10/30/08, DEC approved
the work plan. Chanda sent a
letter to NYCSCA and Consultant (TRC) requiring that a report
summarizing the findings of the
investigation be submitted to the Department by December 30,2008.
05/13/2009: This spill case was
transferred to A. Doronova. - AD Reviewed the file. The investigation
summary report requested by
Kartik Chanda of DEC was not submitted yet. AD 12/04/2009: Received a
RAP. Will review. PDF copy is
missing. To request its submission. AD 12/08/2009: Received a pdf
copy. DL to eDocs. AD 12/30/2009:
Reviewed the RAP. It states that based on previous investigations,
evidence of a UST defect was not
found; free product is present in soil and GW in the vicinity of UST,
and is apparently being
conveyed to the concrete vault via subsurface drainage system beneath
the building basement;
dissolved phase impacts to GW from the release are minimal and limited
to the immediate vicinity of
the UST. The RAP proposes the following: closure-in-place of
20,000-gallon UST and annual
inspection of a concrete vault, the pump pit in the boiler room, and
monitoring wells with removal
of accumulated oil (if present). Proposed course of actions is
questionable. To discuss the RAP
with J. Kolleeny. AD 01/06/2010: Discussed the RAP with J. Kolleeny of
DEC. Called and spoke with
D. Pardus of SCA regarding the RAP and vault investigation. He
requested a meeting with DEC.
Scheduled the meeting for January 21, 2010. AD 01/21/2010: I and J.
Kolleeny of DEC met with Drew
Pardus and Bob Kanaparthi of NYCSCA and Charles Guder of TRC.
Discussed the proposed RAP. It was
agreed that two additional soil borings will be adwanced in the
vicinity of the concrete vault, and
based in the field observation of the soil samples, one boring will be
finished as a permanent
monitoring well. It was decided that gauging of the site monitoring
wells and vault pumping will be
performed quarterly and GW sampling will be semi-annually. Addendum to
the RAP will be submitted to
DEC for review and approval. AD 04/30/2010: Called and spoke with D.
Pardus regarding submission of
the addendum to the RAP. He said that it was prepared and is now under
review for budgetary
approval. AD 06/20/2011: Received an e-mail from Drew Pardus saying:
Ainura, In order to continue
progress at Automotive Trade HS to remediate DEC Spill 0413160 and in
light of constrained City
budgets, an inspection of the out-of-service pump station where oil
accumulates was performed. TRC

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

s observations of this inspection and removal of oil from the out-of-service pump station (by PTC on behalf of DSF) are provided below. Another site inspection and visual monitoring of the permanent wells will be performed in approximately three months to determine if free product is observed. If no free product is observed after multiple inspections, SCA will request that the fuel oil tank may filled (i.e., closed via abandonment) and no further action for Spill Case 0413160. Please feel free to contact me at 646-577-8280 if you have any questions. Sincerely, Drew Pardus DL the attached document to eDocs. AD 03/27/2012: Received an e-mail from S. Kline of SCA saying: Ms. Doronova- As per your request, our consultant (TRC) has prepared the attached remediation action work plan addendum for the above referenced spill case. Our consultant will proceed with the scope of work described in the attached documents as soon as we have NYSDEC approval and we have secured funding for these additional remedial measures. Since Drew Pardus is no longer working on this project, I will be the SCA point of contact for this project moving forward. Please contact me with and questions or comments. Regards- Stephen Kline, P.E. NYC School Construction Authority IEH Division 30-30 Thomson Avenue Long Island City, NY 11101 Cell (347) 242-7109 Stephen.kline@gza.com DL the attached report and letter to eDocs. Will review. AD 04/20/2012: Reviewed the work plan. It states that TRC proposes to do site investigation via advancing two soil borings with collection of soil sampling; installation on one monitoring well; quarterly groundwater monitoring and free product recovery. Soil sampling will include the following: TRC will advance two (2) soil borings (TRC-SB-1 and TRC-SB-2) adjacent to the subsurface drainage pipe between the concrete vault and the building (refer to Figure 1 for the boring locations). Geologic descriptions of the soil and field screening results will be recorded in field logs. One groundwater monitoring well (TRC-MW15) will be installed in one of the boreholes. The well will be installed in TRC-SB-1 as shown if no evidence of contamination is observed during the subsurface investigation. If contamination is observed, the monitoring well will be installed in the borehole showing the highest evidence of contamination. Quarterly groundwater monitoring will be performed for a period of one year. - Monitoring wells TRC-MW-1, TRC-MW-2, TRC-MW-3, TRC-MW-4, TRC-MW-5, TRC-MW-6, TRC-MW-7, TRC-MW-8, TRC-MW-9, TRC-MW-10, TRC-MW-11, TRC-MW-12, TRCMW-13, TRC-MW-14, and TRC-MW-15 will be inspected and gauged. Any wells found to be damaged will be assessed for re-installation. - The entire monitoring well network will be gauged and sampled during the first quarterly

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

monitoring event. If LNAPL is present in a well, groundwater will not be analyzed from that monitoring well. If the results of the analyses of groundwater from monitoring wells TRC-MW- 6, TRC-MW-8, and TRC-MW-10 (upgradient wells) from the first quarterly sampling round are below Class GA Values, these wells will not be sampled during subsequent quarterly events. However, all wells will be gauged during each quarterly event. A quarterly monitoring report with conclusions and recommendations for further actions, if necessary, will be submitted to DEC. Vault Inspections and Product Removal: TRC will perform the following activities under this task: - periodic inspections and product removal at the concrete vault for a period of one year. For the first quarter, TRC anticipates performing 6 events (three during the first month, two during the second month, and one during the third month). Inspections/product removal events will occur once per quarter thereafter. - If oil is present in the vault, the procedure below will be followed: - The depth to the oil will be gauged and recorded; - The thickness of the oil and the thickness of the water will be gauged and recorded; and, - The oil and water will be removed from the vault by a vacuum truck for off-Site disposal. If no oil is detected in the concrete vault, the depth to the liquid in the vault will be gauged and recorded. - Similarly the boiler room pump pit and on-Site monitoring wells will be gauged for oil. If oil is detected in a groundwater monitoring well, the depth and thickness (if possible) of the oil will be measured and recorded, and the oil will be removed by a vacuum truck for off-Site disposal. If oil is detected in the boiler room pump pit, the pump system will be immediately shut down and the NYCDOE Division of School Facilities and the NYCSCA will be contacted to determine the appropriate course of action. - Waste generated will be properly transported off-Site for disposal in accordance with applicable laws and regulations. - The information collected during the vault inspections/product removal will be submitted with the quarterly monitoring reports. AD 04/24/2012: Discussed the work plan with J. Kolleeny of DEC. AD 04/25/2012: issued and sent an approval letter to L. Guterman of SCA. DL pdf copy of the letter to eDocs. AD 12/21/2012: Received a Project Progress Report #1 from TRC. DL the report to eDocs. Will review. AD 02/01/2013: Reviewed the report. It states that field activities were conducted at the Site between July 14 and October 18, 2012. During this period, the following activities were completed at the site: In-place closure of the 20,000-gallon underground storage tank (UST); A 20,000-gallon UST, which is located beneath an

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

asphalt paved parking lot north of the school building, was formerly used to store No. 4 and No. 6 fuel oil for the school s boiler and was taken out-of-service in 2003 and was cleaned in 2009. In accordance with the NYSDEC-approved RAP and RAP Addendum, the 20,000-gallon UST was permanently closed in-place in accordance with the applicable requirements of the NYSDEC and the FDNY on July 26, 2012. Prior to closing the UST in place, the UST was inspected to verify that the UST did not require additional cleaning. The UST was observed to contain a small amount of water but there was no evidence of residual product. The remaining contents of the 20,000-gallon UST were removed utilizing a vacuum truck and the UST and concrete hatch were then completely filled with concrete slurry. Geophysical survey; Subsurface soil investigation and installation of a permanent monitoring well; A hollow stem auger rig was used to retrieve soil samples. Soil samples were collected and screened for evidence of field contamination continuously from the ground surface to the boring completion depth. No visual or olfactory indications of contamination were observed in any of the soil samples collected. Soil boring TRC-SB-1/MW15 was advanced, east of and adjacent to the subsurface drainage pipe, to approximately 21 feet bgs. One discrete soil sample, collected from 9 to 11 feet bgs, was selected for laboratory analysis. Groundwater was encountered at approximately 11 feet bgs in TRC-SB-1/MW15. Soil boring TRC-SB-2 was advanced, west of and adjacent to the subsurface drainage pipe, to approximately 21 feet bgs. One discrete soil sample, collected from 9 to 11 feet bgs, was selected for laboratory analysis. Groundwater was encountered at approximately 11 feet bgs in TRC-SB-2. Soil boring location TRC-SB-1/MW15 was converted into a permanent monitoring well and soil boring location TRC-SB-2 was patched at the surface with concrete. VOCs and SVOCs were not detected in any of the soil samples at concentrations above the SCLs for Fuel Oil Contaminated Soil found in Table 3 of CP-51. One round of Quarterly groundwater sampling; The first round of quarterly groundwater samples were collected from existing permanent monitoring wells TRC-MW1, TRC-MW3, TRC-MW4, TRC-MW-5, TRC-MW6, TRC-MW7, TRC-MW8, TRCMW9, and TRC-MW10, and from newly installed permanent monitoring well TRC-MW15 on July 26, 2012, July 30, 2012 and August 2, 2012. LNAPL was present in monitoring wells TRC-MW2, TRCMW11, TRC-MW12, TRC-MW13, and TRC-MW14 and these wells were therefore not sampled. The thickness of LNAPL in these monitoring wells could not be accurately gauged due to the viscosity of the LNAPL. An obstruction (debris) was encountered in TRC-MW9 on July 26, 2012, which was

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

cleared by TRC on July 27, 2012
using one-inch PVC well screen. The well was redeveloped by TRC on July 30, 2012 and an inspection
of the well and purge water indicated that the well was suitable for sampling. TRC-MW9 was sampled
on August 2, 2012. The results of the analysis of groundwater sampling indicate that MTBE was the
only VOC detected at a concentration exceeding the corresponding Class GA Value. MTBE was detected
at a concentration of 8.3 ug/l in well TRC-MW8, which slightly exceeds the Class GA Value of 5 ?g/L
for MTBE. Monitoring well TRC-MW8 is upgradient of the Site and TRC concludes that the
concentration of MTBE in the well is likely attributable to an
off-site source and not to an
on-site release. No other VOCs were detected in any of the groundwater samples at concentrations
exceeding Class GA Values. SVOCs were not detected in any of the groundwater samples at
concentrations exceeding Class GA Values. With the exception of a marginal exceedance of MTBE in
TRC-MW8, which is attributable to an off-site source or regional conditions, VOCs and SVOCs were
not detected in groundwater samples collected. Therefore, TRC recommends that upgradient monitoring
wells TRC-MW6 and TRC-MW10 will not be sampled during subsequent quarterly groundwater sampling
rounds. Four months of concrete vault and boiler room pump pit inspections; Four months of
monitoring well gauging; and Four months of light non-aqueous phase liquid (LNAPL) recovery events.
The concrete vault north of the school building, the boiler room pump pit, and the groundwater
monitoring well network were inspected and gauged for the presence of LNAPL on July 26, August 2,
August 9, September 5, September 26, and October 18, 2012 by TRC. LNAPL was present during these
events in the concrete vault and monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and
TRC-MW14. The thickness of the LNAPL could not be accurately determined due to the high viscosity
of the oil identified in the concrete vault and monitoring wells.
However, based on observations
noted using a bailer, monitoring well TRC-MW11 was observed to contain only minimal amounts of
LNAPL. LNAPL was not present in monitoring wells TRC-MW1, TRC-MW3 through TRC-MW10, TRC-MW15 and in
the boiler room pump pit. LNAPL Product Recovery Periodic recovery of LNAPL on behalf of the NYCSCA
has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of
the school building and groundwater monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and
TRC-MW14 on July 26, August 2, August 9, September 5, September 26, and October 18, 201. During the
recovery events, the thickness of the LNAPL could not be accurately determined due to the high

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

viscosity of the LNAPL; however, based on observations noted using a bailer, the thickness of the LNAPL was estimated to be less than 6 inches. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: The contents of the bottom of the concrete vault were removed below the elevation of the subsurface drainage pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14). Since monitoring well TRC-MW11 was observed to contain only minor amounts of LNAPL, an oil absorbent sock was placed in this well for product recovery. The oil absorbent sock was removed and replaced during each recovery event and containerized in a 55-gallon steel drum which is staged on site. Approximately 15,604 gallons of LNAPL and water has been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July through October 2012. Table 5 presents the amount of LNAPL and water recovered during each extraction event. The following activities are planned by TRC during the second quarter. - Quarterly inspections and product removal of the concrete vault and monitoring wells TRCMW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 will continue. Progress Report #2 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in January 2013. - The entire monitoring well network will be gauged during subsequent quarterly events. Quarterly sampling of the monitoring well network (with the exception of upgradient monitoring wells TRC-MW6, TRC-MW10, and any monitoring well which contains LNAPL) will continue. Progress Report #2 will include groundwater sampling results from the next round of groundwater sampling, which was performed in October 2012. AD 03/04/2013: Received a project progress Report # 2. DL the report to eDocs. Will review. AD 04/08/2013: Reviewed the report. It states that TRC performed field activities at the site between October 18, 2012 and January 25, 2013. During this period, the following activities were completed: - Two rounds of quarterly groundwater sampling (October 2012 and January 2013); - Concrete vault and boiler room pump pit inspection (January 2013); - Monitoring well gauging (January 2013); and - LNAPL recovery event (January 2013). Quarterly Groundwater Sampling: Groundwater samples were collected from 8 permanent monitoring wells: TRC-MW1, TRC-MW3, TRCMW4, TRC-MW5, TRC-MW7, TRC-MW8,

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

TRC-MW9, and TRC-MW15 on
October 17 and 18, 2012 and on January 21 and 22, 2013. LNAPL was present in 5 monitoring wells:
TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 and therefore, these wells were not sampled.
The results of the analysis of groundwater sampling indicate the VOC methyl tert-butyl ether (MTBE)
was the only VOC detected at a concentration exceeding the corresponding Class GA Value during the
October 2012 and January 2013 sampling events in well TRC-MW8: MTBE - 12ppb in October 2012 -
5.1ppb in January 2012 Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging:
The concrete vault north of the school building, the boiler room pump pit, and the groundwater
monitoring well network were inspected and gauged for the presence of LNAPL on January 21, 2013 by
TRC. LNAPL was present in the concrete vault and in 5 monitoring wells: TRC-MW2, TRC-MW11, TRCMW12,
TRC-MW13, and TRC-MW14. LNAPL was not present in the boiler room pump pit or in monitoring wells
TRC-MW1, TRC-MW3 through TRC-MW9, and TRC-MW15. The thickness of the LNAPL cannot be accurately
determined due to the high viscosity of the oil identified in the concrete vault and monitoring
wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW2,
TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 on January 21, 2013. An oil/water interface probe was
used to measure the thickness of LNAPL by lowering the probe to the depth of LNAPL, then submerging
the probe into the water until the sound indicated the presence of water, then raising the probe
until the oil indicator sounded. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of
the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete
vault north of the school building and groundwater monitoring wells TRC-MW2, TRC-MW12, TRC-MW13,
and TRC-MW14 on January 21, 2013, consistent with the NYSDEC-approved RAP and RAP Addendum. During
the recovery event, the thickness of the LNAPL in the concrete vault could not be accurately
determined due to the high viscosity of the LNAPL. LNAPL was removed from the concrete vault and
groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the Site
consisted of the following: - The contents of the concrete vault were removed below the elevation
of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete
vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. - The vacuum
truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW2,
TRC-MW12, TRC-MW13, and TRC-MW14). The oil absorbent sock present in TRC-MW11 was saturated with

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

LNAPL and was removed and replaced. The saturated sock was containerized in a 55-gallon steel drum which is staged on site. Approximately 3,650 gallons of LNAPL and water was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) on January 21, 2013. A total of approximately 40 gallons of LNAPL and water were removed from each monitoring well and approximately 3,490 gallons of LNAPL and water were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 19,254 gallons of LNAPL and water has been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to January 2013. Table 3 presents the amount of LNAPL and water recovered during each extraction event. Although accurate measurements of LNAPL thicknesses in the wells were not able to be obtained during previous events, based on measurements obtained during the January 2013 extraction event, previous observations made via bailing and also during the extraction events, TRC states that the LNAPL thicknesses in the wells appear to be decreasing. TRC will continue with quarterly inspection and LNAPL removal from the concrete vault and monitoring wells. Progress Report #3 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in April 2013. AD 05/24/2013: Received the following e-mail from TRC: Ainura, Attached is Progress Report #3 for Spill Case No. 0413160 (Automotive Trade High School). Please review and contact me with any questions or comments. Thank you, Charles Guder Senior Project Manager DL the report to eDocs. Will review. AD 08/30/2013: Reviewed the report. It states that TRC performed field activities at the Site between April 9 and April 19, 2013. During this period, the following activities were completed: - Quarterly groundwater sampling; - Concrete vault and boiler room pump pit inspection; - Removal of ancillary tank gauges and piping from the boiler room; - Monitoring well gauging; and - LNAPL recovery. Quarterly Groundwater Sampling; Groundwater samples were collected from monitoring wells TRC-MW1, TRC-MW2, TRC-MW3, TRC-MW4, TRC-MW5, TRC-MW7, TRC-MW8, TRC-MW9, TRC-MW11, TRC-MW14, and TRC-MW15 on April 18 and 19, 2013. TRC did not collect a groundwater sample from monitoring wells TRC-MW2, TRC-MW11 and TRC-MW14 during previous sampling events (October 2012 and January 2013) due to the presence of LNAPL in the monitoring wells. LNAPL was not present in these wells during this

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

sampling event. In accordance
with procedures detailed in the NYSDEC-approved RAP and RAP Addendum, sampling of upgradient
monitoring wells TRC-MW6 and TRC-MW10 were discontinued after the initial quarterly groundwater
sampling event. In addition, LNAPL was present in monitoring wells TRC-MW12 and TRC-MW13,
therefore, these wells were not sampled. The results of the analysis of groundwater sampling
indicate there were no VOCs or SVOCs detected at concentrations exceeding their corresponding Class
GA Values. Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging: - The
concrete vault north of the school building, the boiler room pump pit, and the groundwater
monitoring well network were inspected and gauged for the presence of LNAPL on April 9, 2013 by
TRC. Also on April 9, 2013, remnant gauges and piping associated with the closed-in-place
20,000-gallon UST were removed and wall pipe openings were sealed with cement. LNAPL was present in
the concrete vault and monitoring wells TRC-MW12 and TRC-MW13. LNAPL was not present in the boiler
room pump pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14, and TRC-MW15. As indicated
previously, LNAPL was previously measured in monitoring wells TRC-MW2, TRC-MW11 and TRC-MW14 during
the previous gauging events (October 2012 and January 2013). The thickness of the LNAPL could not
be accurately determined due to the high viscosity of the oil identified in the concrete vault and
monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring
wells TRC-MW12 (0.07') and TRC-MW13 (0.1') on April 9, 2013. LNAPL Product Recovery: Periodic
recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was
removed from the concrete vault north of the school building and groundwater monitoring wells
TRC-MW12 and TRC-MW13 on April 9, 2013. LNAPL was removed from the concrete vault and groundwater
monitoring wells using a vacuum truck. Approximately 3,600 gallons of water mixed with LNAPL was
removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on
April 9, 2013. A total of approximately 25 gallons of water mixed with LNAPL were removed from each
of monitoring wells and approximately 3,550 gallons of water mixed with LNAPL were removed from the
concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside
Environmental, Inc. under the supervision of TRC and transported to Clean Water of New York, Inc.,
of Staten Island, New York (Clean Water) for disposal. Although accurate measurements of LNAPL
thicknesses in the wells were not able to be obtained during previous events, three wells which

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

previously contained LNAPL do not currently contain LNAPL and observations made during bailing and the extraction events indicate that LNAPL thicknesses in the wells are decreasing. TRC is planning the following activities for the fourth quarterly LNAPL removal and groundwater sampling event: - Quarterly inspection and LNAPL removal from the concrete vault and monitoring wells. An additional vacuum truck will be used during the next LNAPL removal event to ensure LNAPL present in the building underdrain pipe will flow out of the pipe and be removed from the vault. - Progress Report #4 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in July 2013. - The monitoring well network will be gauged during the 4th quarterly event. Quarterly sampling of the monitoring well network (with the exception of upgradient monitoring wells TRC-MW6, TRC-MW10, and any monitoring well which contains LNAPL) will be performed during this event. No response needed. AD 09/06/2013: Received a Progress Report # 4 for the site. DL the report to eDocs. Will review. AD 10/15/2013: Reviewed the report. It states that between July 19 and July 24, 2013 TRC conducted at the site following field activities: -Quarterly groundwater sampling; -Concrete vault and boiler room pump pit inspection; -Monitoring well gauging; -LNAPL recovery. Groundwater samples were collected from permanent monitoring wells TRC-MW1 through TRC-MW5, TRC-MW7 through TRC-MW9, and TRC-MW11 through TRC-MW15 from July 22 through July 24, 2013. Monitoring wells TRC-MW12 and TRC-MW13 contained LNAPL at minimal thicknesses (approximately 0.03 feet) when gauged on July 19, 2013; however, following vacuum extraction, measurable LNAPL was not detected, and these wells were sampled. The results of the analysis of groundwater sampling indicate that there were no VOCs or SVOCs detected at concentrations exceeding their corresponding Class GA Values. Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging: The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 19, 2013 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW1 through TRCMW11, TRC-MW14, and TRC-MW15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW12(0.03') and TRC-MW13(0.03) on July 19, 2013 with an

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

oil/water interface probe. LNAPL
Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRC-MW13 on July 19, 2013 using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13). The oil absorbent sock present in TRC-MW11 was removed and was placed in a 55-gallon steel drum on-site. A new oil absorbent sock was replaced in this well. Approximately 5,626 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on July 19, 2013. A total of approximately 25 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 5,576 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water waste was transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 28,480 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to July 2013. In accordance with the NYSDEC-approved RAP and RAP Addendum, quarterly groundwater monitoring, inspections, and product recovery have been completed for a period of one year. The source of LNAPL at the site - the former 20,000-gallon UST, has been closed-in-place in accordance with 6 NYCRR Part 614. Approximately 28,480 gallons of groundwater/LNAPL mixture have been removed from the concrete vault and monitoring wells. At the initiation of the LNAPL removal program, measurable LNAPL was present in five monitoring wells (TRC-MW2, TRC-MW11, TRCMW12, TRC-MW13, and TRC-MW14). As of July 2013, there is measurable LNAPL in only two (2) monitoring wells (TRC-MW12 and TRC-MW13), at minimal thicknesses (approximately 0.03 feet). According to TRC, the results of groundwater sampling conducted to date show that, with the exception of the concentration of MTBE detected in well TRC-MW-8 during one sampling round, VOCs and SVOCs have not been detected at concentrations above Class GA Values. Therefore, the remaining residual LNAPL in the area of the closed-in-place UST and

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

in the building under drain system is not impacting groundwater at the Site. TRC recommends the following: - Based on the analytical results, sampling of the monitoring well network is no longer required. - Bi-annual inspection and gauging of the monitoring well network should be performed. Absorbent socks should be placed (and replaced, as necessary) in monitoring wells containing measurable LNAPL. - Bi-annual (twice yearly) inspection and LNAPL removal from the concrete vault should continue until LNAPL is no longer observed for two consecutive six month periods. AD 03/17/2014: Reveived Received a Progress Report #5 for the site. DL the report to eDocs. Will review. AD 04/24/2014: Reviewed the report. It states that field activities were conducted at the site on January 20, 2014 and consisted of the following: Concrete vault and boiler room pump pit inspection; Monitoring well gauging; and LNAPL recovery. The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on January 20, 2014 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW-12 and TRC-MW-13, which is consistent with historic data. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW-1 through TRC-MW-11, TRC-MW-14, and TRC-MW-15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, an oil/water interface probe was used to approximate the thickness of LNAPL by lowering the probe to the depth of LNAPL, then submerging the probe into the water until the sound indicated the presence of water, then raising the probe until the oil indicator sounded. According to the data: TRC-MW-12 - 0.03’ of free product; TRC-MW-13 - 0.09’ of free product. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW-12 and TRC-MW-13 on January 20, 2014. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the site consisted of the following: The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13). The oil absorbent sock present in TRC-MW-11 was removed

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

and was placed in a 55-gallon steel drum on-site. A new oil absorbent sock was replaced in this well. Approximately 3,703 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13) on January 20, 2014. A total of approximately 35 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 3,633 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside Environmental, Inc. under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 32,183 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-2, TRC-MW-12, TRC-MW-13, and TRC-MW-14) from July 2012 to January 20, 2014. PLANNED ACTIVITIES: The following activities are planned for the next bi-annual inspection and LNAPL removal event: The monitoring well network will be gauged. Inspection and LNAPL removal from the concrete vault and monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing measurable LNAPL. Project progress Report #6 will be submitted to the DEC following the next inspection and product removal event, which will be performed in July 2014. AD 10/20/2014: Reveived Received a Progress Report #6 for the site. Will review. AD 12/10/2014: Reviewed the report. It states that field activities were conducted at the site on July 28, 2014 and consisted of the following: Concrete vault and boiler room pump pit inspection; Monitoring well gauging; and LNAPL recovery. The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 28, 2014 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW-12 and TRC-MW-13, which is consistent with historic data. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW-1 through TRC-MW-11, TRC-MW-14, and TRC-MW-15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, an oil/water interface probe was used to approximate the thickness of LNAPL by lowering the probe to the depth of LNAPL, then submerging the probe into the water until the sound indicated the presence of water, then raising the probe until the oil indicator sounded. According to the data: TRC-MW-12 - 0.02’ of free product; TRC-MW-13 - 0.05’ of free product. LNAPL

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW-12 and TRC-MW-13 on July 28, 2014. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the site consisted of the following: The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13). New oil absorbent socks were replaced in these wells. Approximately 3,119 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13) on July 28, 2014. A total of approximately 35 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 3,049 gallons of water mixed with LNAPL were removed from the concrete vault for off-site disposal. The LNAPL and water removal was performed by Brookside Environmental, Inc. under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 35,302 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-2, TRC-MW-12, TRC-MW-13, and TRC-MW-14) from July 2012 to July 28, 2014. PLANNED ACTIVITIES: The following activities are planned for the next bi-annual inspection and LNAPL removal event: The monitoring well network will be gauged. Inspection and LNAPL removal from the concrete vault and monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing measurable LNAPL. Project progress Report #7 will be submitted to the DEC following the next inspection and product removal event, which will be performed in January 2015. NRN. AD 02/12/2015: Received the following e-mail from C. Guder: Ainura Attached is Progress Report #7 for Spill Case No. 0413160 associated with Automotive Trades High School, Brooklyn, NY. Please review and contact us with any questions or comments. Thank you, Charles Guder Senior Project Manager Will review. AD 03/24/2015: Reviewed the report. It states that field activities were conducted at the Site on January 19, 2015 and consisted of the following: - Concrete vault and boiler room ejector pit inspection; - Monitoring well gauging; and - LNAPL recovery. Concrete

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

Vault/Boiler Room Ejector Pit
Inspections and Monitoring Well Gauging: The concrete vault, located north of the school building, the boiler room ejector pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on January 19, 2015 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13, which is consistent with historic data. LNAPL was not present in the boiler room ejector pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14, and TRC-MW15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. LNAPL has only been measured in monitoring wells TRC-MW12 and TRC-MW13 since April 2013. The LNAPL thickness measured in wells TRC-MW12 and TRC-MW13 have also decreased since April 2013. The LNAPL thickness measurements (feet) recorded in monitoring wells TRC-MW12 and TRC-MW13 in April 2013 were 0.07 and 0.10, respectively. LNAPL Product Recovery: Periodic recovery of LNAPL has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRCMW13 on January 19, 2015 using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: - The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. - The vacuum truck was then used to pump oil and water from the monitoring wells containing measurable LNAPL (TRC-MW12 and TRC-MW13). - The oil absorbent socks present in the monitoring wells around the closed-in-place UST (i.e.,TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW-13, TRC-MW14) were found to be saturated with oil. With the exception of monitoring wells TRC-MW12 and TRC-MW13, measurable LNAPL was not identified in the monitoring wells after removal of the oil absorbent socks. The oil absorbent socks present in the monitoring wells were removed and replaced with new ones. Approximately 5,724 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on January 19, 2015. A total of approximately 25 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 5,674 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. Approximately 41,026 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13,

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

and TRC-MW14) from July 2012 to January 2015. PLANNED ACTIVITIES: In connection with the NYSDEC approval letter dated October 15, 2013, the following activities are planned for the next bi-annual inspection and LNAPL removal event: - The monitoring well network will be gauged. - Inspection and LNAPL removal from the concrete vault and monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing LNAPL. - Project Progress Report #8 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in July 2015. AD 08/12/2015: Received a Progress Report # 8. Will review. AD 10/02/2015: Reviewed the report. It states that field activities were conducted at the Site on July 27, 2015 and consisted of the following: - Concrete vault and boiler room ejector pit inspection; - Monitoring well gauging; and - LNAPL recovery. Concrete Vault/Boiler Room Ejector Pit Inspections and Monitoring Well Gauging: The concrete vault, the boiler room ejector pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 27, 2015 by TRC. LNAPL was only present in the concrete vault and wells TRC-MW12 and TRC-MW13, which is consistent with historic data. LNAPL was not present in the boiler room ejector pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14, and TRC-MW15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. LNAPL has only been measured in monitoring wells TRC-MW12 and TRC-MW13 since April 2013. The LNAPL thickness measured in wells TRC-MW12 and TRC-MW13 have also decreased since April 2013. The LNAPL thickness measurements (feet) recorded in monitoring wells TRC-MW12 and TRC-MW13 in July 2015 were 0.03 and 0.03, respectively. LNAPL Product Recovery: Periodic recovery of LNAPL has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRCMW13 on July 27, 2015 using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: - The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. - The oil absorbent socks present in the monitoring wells TRC-MW12, TRC-MW-13 were found to be saturated with oil and removed. A vacuum truck was then used to pump LPAPL and water from TRC-MW12 and TRC-MW13. After pumping was complete, new oil absorbent socks were placed into TRC-MW12, TRC-MW13.

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

Approximately 2,606 gallons of water
mixed with LNAPL was removed from the concrete vault and monitoring wells (TRC-MW12 and TRC-MW13)
on July 27, 2015. Approximately 50 gallons of water mixed with LNAPL were removed from each of
monitoring wells and approximately 2,506 gallons were removed from the concrete vault for off-site
disposal. Approximately 43,632 gallons of water/LNAPL mixture have been removed from the site for
the period from July 2012 to July 2015. PLANNED ACTIVITIES: The following activities are planned
for the next bi-annual inspection and LNAPL removal event: - The monitoring well network will be
gauged. - Inspection and LNAPL removal from the concrete vault and monitoring wells will continue.
Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing LNAPL. -
Project Progress Report #9 will be submitted to the NYSDEC following the next inspection and
product removal event, which will be performed in January 2016. AD 02/17/2016: Received Progress
Report #9. Will review. AD 03/29/2016: Reviewed the report. It states that field activities were
conducted at the site on on January 18, 2016 and consisted of the following: Concrete vault and
boiler room ejector pit inspection; Monitoring well gauging; and LNAPL recovery. Concrete
Vault/Boiler Room Ejector Pit inspections and Monitoring Well Gauging: The concrete vault (located
north of the school building), the boiler room ejector pit, and the groundwater monitoring well
network were inspected and gauged for the presence of LNAPL on January 18, 2016 by TRC. LNAPL was
only present in the concrete vault and monitoring wells TRC-MW 12 and TRCMW-13, which is consistent
with inspection results since April 9, 2013. The oil absorbent socks present in monitoring wells
TRC-MW 12 and TRC-MW 13 we re also found to be saturated with oil. LNAPL was not present in the
boiler room ejector pit or in monitoring wells TRC-MW-1 through TRC-MW-11, TRCMW-14, and TRC-MW-15.
An oil/water interface probe was used to approximate the thickness of LNAPL by lowering the probe
to the depth o f LNAPL, then submerging the probe into the water until the sound indicated the
presence of water, then raising the probe until the oil indicator sounded. The thickness of the
LNAPL could not be accurately determined due to the high viscosity of the oil identified in the
concrete vault and monitoring wells. Since April 201 3, only monitoring wells TRC-MW12 and TRC-MW13
have had measureable LNAPL. The LNAPL thicknesses measured in monitoring wells TRC-MWl2 and TRCMW13
have decreased since April 2013. The LNAPL thickness measurements recorded in monitoring wells
TRC-MW12 and TRC-MWl3 in April 201 3 were 0.07 and 0.10 feet, respectively. Periodic recovery of

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

LNAPL has been performed at the Site since July 201 2. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW 12 and TRCM W 13 on January 18, 2016 using a vacuum truck. The procedure for measurement and removal of LNAPL at the Site consisted of the following: - The contents o f the concrete vault were removed below the elevation of the building under drain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water were then pumped from the concrete vault into the vacuum truck. - The oil absorbent socks present in monitoring wells TRC-MW12 and TRC-MW13 were found to be saturated with oil and we re removed. A vacuum truck was then used to pump LNAPL and water from monitoring wells TRC-MW12 and TRC-MW13. After pumping of LNAPL and water from monitoring wells TRC-MW12 and TRC-MW13 was complete, new oil absorbent socks were placed into monitoring wells TRC-MW12 and TRC-MW13. A total of approximately 3,248 gallons o f water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MWl2 and TRC-MW13) on January 18, 2016. Approximately 25 gallons of water mixed with LNAPL were removed from each of the monitoring wells and approximately 3,198 gallons of water mixed with LNAPL were removed from the concrete vault for off-site disposal.
Approximately 46,880 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to January 2016. In connection with the NYSDEC approval letter dated October 15 , 20 13, the following activities are planned for the next bi-annual inspection and LNAPL removal event: The monitoring well network will be gauged. Inspection of and LNAPL removal (if required) from the concrete vault and monitoring wells. Absorbent socks will be replaced, as necessary, in monitoring wells containing LNAPL. Project Progress Report #10 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in July 2016. AD. 08/20/2016:
Received progress Report #10. Will review. AD 09/29/2016: Reviewed the report. It states that field activities were conducted at the Site on July 5, 2016 and consisted of the following: - Concrete vault and boiler room ejector pit inspection; - Monitoring well gauging; and - LNAPL recovery. The concrete vault (located north of the school building), the boiler room ejector pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 5, 2016 by TRC. LNAPL was only present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13, which is consistent with inspection results since April 9,

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

2013. The oil absorbent socks present in monitoring wells TRC-MW12 and TRC-MW13 were also found to be partially saturated with oil. LNAPL was not present in the boiler room ejector pit or in monitoring wells TRC-MW1 through TRCMW11, TRC-MW14, and TRC-MW15. A minimal amount of LNAPL was recovered by the oil absorbent socks installed in monitoring wells TRC-MW2, TRC-MW11, and TRC-MW14. An oil/water interface probe was used to approximate the thickness of LNAPL in TRC MW-12 and TRC MW-13 by lowering the probe to the depth of LNAPL, then submerging the probe into the liquid until the sound indicated the presence of water, then raising the probe until the oil indicator sounded. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. Since April 2013, only monitoring wells TRC-MW12 and TRC-MW13 have had measureable LNAPL. The LNAPL thicknesses measured in monitoring wells TRC-MW12 and TRC-MW13 have decreased since April 2013. The LNAPL thickness measurements recorded in monitoring wells TRC-MW12 and TRC-MW13 during the previous event on January 18, 2016 were 0.03 and 0.03 feet, respectively. Thickness measurements on April 9, 2013 were 0.07 feet in TRC-MW12 and 0.10 feet in TRC-MW13. LNAPL recovery: Periodic recovery of LNAPL has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRC-MW13 on January 18, 2016 using a vacuum truck. The procedure for measurement and removal of LNAPL at the Site consisted of the following: The contents of the concrete vault were removed below the elevation of the building under-drain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water were then pumped from the concrete vault into the vacuum truck. The oil absorbent socks present in monitoring wells TRC-MW12 and TRC-MW13 were found to be partially saturated with oil and were removed. A vacuum truck was used to pump LNAPL and water from monitoring wells TRC-MW12 and TRC-MW13. After pumping of LNAPL and water from monitoring wells TRC-MW12 and TRC-MW13 was complete, new oil absorbent socks were placed into monitoring wells TRC-MW12 and TRC-MW13. Approximately 2,862 gallons of water mixed with LNAPL were removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on July 5, 2016. Approximately 50 gallons of water mixed with LNAPL were removed from each of the monitoring wells and approximately 2,762 gallons of water mixed with LNAPL were removed from the concrete vault for off-site disposal. Approximately 49,472 gallons of water mixed with LNAPL have

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12,
TRC-MW13, and TRC-MW14) from July 2012 to July 2016. Planned activities: In connection with the
NYSDEC approval letter dated October 15, 2013, the following activities are planned for the next
bi-annual inspection and LNAPL removal event: The monitoring well network will be gauged.
Inspection of and LNAPL removal (if required) from the concrete vault and monitoring wells.
Absorbent socks will be replaced, as necessary, in monitoring wells containing LNAPL. Project
Progress Report #11 will be submitted to the NYSDEC following the next inspection and product
removal event, which will be performed in January 2017. AD 05/05/2017: Had a conversation with TRC,
Philip Castellano requested a meeting with DEC to discuss the site. TRC thinks that the site is
ready for closure. Discussed the dates with J. Kolleeny. Sent the invitation to TRC. Booked the
conference room for May 9, 2017. AD 05/09/2017: J. Kolleeny and I had a meeting with Lee Guterman
and Bob Kanaparthi of NYCSCA and their consultants Philip Castellano of TRC and Michael Sherwood of
Sherwood Environmental. Lee Guterman said that they performed extensive remediation at the site, it
was effective, and only two site wells now have 0.01' of free product. According to Ms. Guterman,
NYCSCA had exhausted their funds for further remediation at this site, and questions its
effectiveness. We discussed the remediation performed at the site, site specific conditions and
what further actions should be taken. Since the last gauging event was in January 2017, it was
agreed that TRC will remove absorbent socks from the monitoring wells and will gauge them few weeks
after for LNAPL presence. Final closure report will be prepared with case closure request
justification, stating all the performed remedial activities, site specific conditions, sensitive
receptors survey and other related data. Jon and I had discussed the above-referenced site and
request for spill case closure with Vadim Brevdo. He agreed with the proposed course of actions
such as: removing absorbent socks from the monitoring wells and gauging them few weeks after for
LNAPL presence and preparing final closure report. Sent an e-mail to Ms. Guterman confirming
Vadim's agreement with the proposed course of actions. AD 06/29/2017: Received the following e-mail
from Bob Kanaparthi: Dear Ms. Doronova, Attached please find the requested Spill Closure Report for
Automotive Trades High School, Spill Case No. 04-13160. Please contact me with any questions or
comments. Thank you, Bob Kanaparthi Industrial Hygienist C Industrial and Environmental Hygiene
Division New York City School Construction Authority 30-30 Thomson

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

Ave, Long Island City, New York
11101 Email: skanaparthi@nycsca.org Telephone: (718) 472-8620 Fax: (718) 472-8500 Will review. AD
07/05/2017: Reviewed the submitted report. It states that on May 10, 2017 the oil-absorbent socks
installed in monitoring wells around the perimeter of the closed-in-place UST were removed. The
socks, previously installed on January 16, 2017, were stained but were not saturated with LNAPL.
Following removal of the socks, monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and
TRC-MW14 were gauged. No measurable quantities of LNAPL were present in the wells. On May 24, 2017,
two (2) weeks following removal of the socks, the wells were gauged again, and no LNAPL was present
in the wells. CONCLUSIONS: Based on the information collected during remedial efforts conducted
on-site to date, the following can be concluded: - Gauging data collected since 2012 has
demonstrated that there is no potential for migration of LNAPL off Site. - Since July 2014 (5
gauging events), LNAPL has been detected in only two wells, with measured thicknesses less than
0.05 feet. - LNAPL was not detected in the wells adjacent to the UST on May 10, 2017 following
removal of the oil-absorbent socks installed on January 16, 2017. - LNAPL was not detected in the
wells adjacent to the UST, two (2) weeks after sock removal, on May 24, 2017. - Based on the age of
the release, the absence of dissolved phase groundwater impacts, and observations during remedial
measures conducted to date, mobile petroleum-related impacts are not present at the Site.
Considering the above conclusions, TRC recommends closure of Spill No. 04-13160. Will discuss with
J. Kolleeny of DEC. AD 07/07/2017: Discussed the site with J. Kolleeny. Based on the newly
submitted data regarding absence of the LNAPL in the all site wells, performed remediation, nature
of the product (#6 oil) and absence of dissolved phase, it was decided to approve case closure
request. Issued and sent an approval letter to Lee Guterman. Case closed. AD

Remarks: OLD TANK THAT WAS INSTALLED AND WANTED IT TO BE REOVED. THEY TOOK TESTS AND FOUND THAT THE TANK HAS LEAKED. THE TANK HAS FAILED MANY TIMES BEFORE. TOOK TESTS FROM THE SOIL. HAS NOT BEEN CLEANED OR REMOVED. OUTSIDE UNDERGROUND TANK. 20,000 GAL CAPACITY.

Town:	New York City
Record Added Date:	10/29/2018
Record Updated Date:	11/15/2023
Update By:	WBBENNET
Site Description:	Site Location: The site is located at 12 Franklin Street, in the Greenpoint neighborhood of Brooklyn, New York. The site is located on the northwestern part of the city block bordered by Meserole Avenue to the north, Gem Street to the east, North 15th Street to the southwest, and Franklin Street to the west. The site is bordered to the southeast by a one story warehouse building, and the Bushwick Inlet of the East River is located about 400 feet west of the site. Site Features The site consists of three vacant one-story buildings

LOT 3,TAXBLOCK 2614 (Continued) **S122877518**

and one vacant two-story building. The one-story building in the northeastern portion of the site has a partial cellar (about 300 square feet) extending to about 4.5 feet below sidewalk grade. Current Zoning and Land Use The site is located in the M1 2 manufacturing district. M1 districts typically include light industrial and commercial uses, as well as office and retail spaces. The surrounding area includes commercial, industrial, and open space. Past Use of the Site The site has been occupied by commercial and industrial facilities since the early 1900s. Historical uses of the site included: a lumber company and trucking company in 1916, food manufacturing in the 1930 s and 40 s, a garage with gasoline tanks in the 1940 s and 50 s. A chipping, blasting, and finishing of magnesium castings in 1945, Superior Bearing Bronze Company in 1951, an Electroplating company in 1960 s through 2012, a polyethylene and cellophane bag manufacturer in 1970 through 2013, and an auto shop in 2000. Site Geology and Hydrogeology The inferred regional groundwater flow direction for the area surrounding the site is to the west toward the East River and Bushwick Inlet, located about 400 feet from the site. Groundwater underlying the site was observed at depths ranging from 5 to 9 feet bgs across the site footprint. The subsurface stratigraphy at the site consists of historic fill underlain by bands of silts and sand with varying amounts of gravel, followed by a clay confining layer. Historic fill was find ranging from 2.5-13 feet bgs and the clay layer was found ranging from 7.5 to 15.5 feet bgs ranging in thickness from about 6 inches to 5 feet. Bedrock is expected to be at 110 feet bgs.

Env Problem:

Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, per- and polyfluoroalkyl substances (PFAS), and metals. Soil vapor samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include VOCs in soil vapor. Soil - Soil samples were collected during the Remedial Investigation (RI) at depths ranging from the site s current grade to 20 feet below grade. Several SVOCs exceed restricted residential use soil cleanup objectives (RRUSCOs) across the site including benzo(a)anthracene at a maximum concentration of 220 parts per million (ppm), benzo(b)fluoranthene at a maximum concentration of 240 ppm, and Indeno (1,2,3-cd)pyrene at a maximum concentration of 110 ppm all compared to their respective RRUSCOs of 5.6 ppm; benzo(a)pyrene at a maximum concentration of 210 ppm compared to its RRUSCO of 1.0 ppm, benzo(k)fluoranthene at a maximum concentration of 74 ppm compared to its RRUSCO of 56 ppm, and dibenzo(a,h)anthracene at a maximum concentration of 22 ppm compared to its UUSCO of 0.56 ppm. There were exceedances of RRUSCOs for metals in soils, including arsenic at a maximum concentration of 31.6 ppm (RRUUSCO is 16 ppm), barium at a maximum concentration of 623 ppm (RRUSCO is 400 ppm), copper at a maximum concentration of 1,600 ppm (RRUSCO is 270 ppm), cyanide at a maximum concentration of 110 ppm (RRUSCO is 27 ppm), and lead at a maximum concentration of 2,700 ppm (RRUSCO is 1,000 ppm). The emerging contaminants perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were not sampled for in soil during the remedial investigation. 1,4-Dioxane was detected at a maximum concentration of 0.56 ppm. No VOCs, PCBs or pesticides were detected at concentrations exceeding their respective RRUSCOs. Groundwater: Eleven VOCs were detected in groundwater above their respective Ambient Water Quality Standards (AWQSs) including 1,1-dichloroethane

LOT 3,TAXBLOCK 2614 (Continued) **S122877518**

at a maximum concentration of 250 parts per billion, or ppb (AWQS is 5 ppb), 1,2,4,5-trimethylbenzene at a maximum concentration of 79 ppb (AWQS is 5 ppb), benzene at a maximum concentration of 3.1 ppb (AWQS is 1 ppb), ethylbenzene at a maximum concentration of 12 ppb (AWQS is 5 ppb), m,p-xylene at a maximum concentration of 12 ppb (AWQS is 5 ppb), naphthalene at a maximum concentration of 130 ppb (AWQS is 10 ppb), n-propylbenzene at a maximum concentration of 12 ppb (AWQS is 5 ppb), o-xylene at a maximum concentration of 3.3 ppb (AWQS is 5 ppb), sec-butylbenzene was detected at a maximum concentration of 5.3 ppb (AWQS is 5 ppb), and total xylenes were detected at a maximum concentration of 17 ppb (AWQS is 5 ppb). The following SVOCs were detected at concentrations exceeding their respective standards: benzo(a)anthracene at a maximum concentration of 0.27 ppb (AWQS is 0.002 ppb); benzo(a)pyrene at a maximum concentration of 0.09 ppb (AWQS is 0.002 ppb); benzo(b)fluoranthene at a maximum concentration of 0.1 ppb (AWQS is 0.002 ppb); biphenyl at a maximum concentration of 7.6 ppb (AWQS is 5 ppb); chrysene at a maximum concentration of 0.2 ppb (AWQS is 0.002 ppb); and phenol at a maximum concentration of 4.5 ppb (AWQS is 1 ppb). Dissolved metals detected on-site in filtered groundwater samples exceeded AWQS for iron at a maximum concentration 29,900 ppb (AWQS is 300 ppb), magnesium at 176,000 ppb (AWQS is 35,000 ppb), manganese at 1,958 ppb (AWQS is 300 ppb), and sodium at 1,260,000 ppb (AWQS is 20,000 ppb). The emerging contaminant perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 406 ppt, and perfluorooctanoic acid (PFOA) was detected at 79.4 ppt. 1,4-Dioxane was detected at a maximum concentration of 17.2 ppb. Soil Vapor: Tetrachloroethene was detected at a maximum concentration of 13,200 micrograms per cubic meter (ug/m3), and trichloroethene was detected at a maximum concentration of 10,300 ug/m3. 1,1,1-Trichloroethane was detected at a maximum concentration of 237,000 ug/m3. 1,1-Dichloroethane was detected at a maximum concentration of 24,600 ug/m3. Cis-1,2-Dichloroethene was detected at a maximum concentration of 167,000 ug/m3. Vinyl Chloride was detected at a maximum concentration of 644 ug/m3.

Health Problem: Access to the site is restricted and direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil), may move into structures and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of structures, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern, however it may represent a potential concern for future buildings on-site. Environmental sampling indicates that contaminated soil vapor may be migrating off-site and there is a potential for indoor air quality in nearby structures to be affected.

DEC Memo:	9/17/18 Paul from Langan sent the following email As discussed, we identified petroleum impacts to soil and groundwater during a subsurface investigation. The site address is 12 Franklin Street in Brooklyn, NY, it comprises Lots 1, 3 and 8 of Block 2614 on the Brooklyn Borough Tax map. The investigation included advancement of 6 soil borings and installation of 3 monitoring wells and 3 soil vapor points. See attached map. Evidence of petroleum impacts (e.g., odors, staining, and/or PID readings of up to 4,690 parts per million [ppm]) were observed in four soil borings (EB01, EB03, EB04 and EB06) Petroleum-related VOCs (1,2,4-trimethylbenzene, benzene, ethylbenzene, and total xylenes) and SVOCs (naphthalene) were detected in soil at concentrations above the Unrestricted Use SCOs in boring EB06 and EB01. Petroleum-related VOCs (1,2,4,5-tetramethylbenzene, chloroethane, n-propylbenzene) and SVOCs (naphthalene) were detected in groundwater at concentrations above the NYSDEC TOGS SGVs for Class GA water in monitoring well MW03. 11/14/19- DEC Piper - Spill project transferred to MD Hoque as per Vadim Brevdo. 12/10/2019-M.Hoque: A remedial investigation is on-going under the NYSDEC BCP program (BCP site# C224286). (MDH) 12/12/2019-M. Hoque: Spoke to Paul McMohan of Langan, consultant for the open spill case and the BCP site# C224286. He told that a remedial investigation completed at the site under BCP program and a RI report will submit to DEC in a upcoming month. RI report will address the spill case to resolve/closure of the spill. (MDH) 11/20/2020-M. Hoque: A tele conference was held with Paul McMohn of Langan Environmental regarding site status. The site is under DEC BCP program and RI completed. A remedial investigation report is still under their internal review to submit to DEC. I

LOT 3,TAXBLOCK 2614 (Continued) **S122877518**

requested him to send me a copy of RIR for review.(MDH) 3/31/21-J. Grathwol This spill will be
remediated under the BCP, Site Code C224286. This project is transferred to Richard Mustico. (JCG)
Remarks: contamination based on sample results

CON ED-N 1ST ST FUEL OIL TERMINAL (Continued) **S102240470**

hours Robert Epps notified P.
tokarz of sheen found in excavation at North 1st Street. Mr. Manfre was called and reported that
the excavation (est. 2'x2'x5') had a sheen on the rainwater. Mr. Manfre said the sheen was from a
diesel Air Compreessor used to dig the hole. He stated that the rainwater washed the fuel from the
air compressor to the excavation. The Air Compressor was removed and the excavation was emptied of
the oily water by Vendor (LMS). 08-DEC-1999 phone message from Joe Manfre stating that cleanup
completed at 13:55 hours

Remarks: LEAKED FROM A AIR COMPRESSOR - CLEANUP IS IN PROGRESS REF #129235

Contact Name:	CHRIS TOMASELLO
DEC Memo:	Phase 2 - soil samples have contamination in it - Owner wants to move this to brownfields. 7/23/07 - Raphael Ketani. I have heard nothing in a long time regarding this site as to whether it is part of the voluntary cleanup program (VCP). So I talked to Jocelyn Shapiro, EG I of unit A of DER Region 2, as she is involved in some VCP projects. She said it wasn't her site and directed me to Jane O'Connell or the unit head, Dan Walsh, EG III. I spoke to Mr. Walsh. He said that there was a pre-application meeting in January 2007, but nothing else happened. I looked for the site in the DER database and found nothing. Therefore, I am going to start the process of investigating this site as a spill location and I will send out a CSL. The block and lot are: 02353 and 0013. The main address is 291 Metropolitan Avenue. The alternate addresses are: 146 Roebling Street and 206 to 212 North 4th Street. The site has two PBS records, #2-145726 and

G&A AUTO REPAIR (Continued) **S108294903**

#2-455083. #2-145726 is a closed case
with the name as Arvy Service Station Inc./Getty. Six 550 gas tanks are listed as administratively
closed on 4/1/95. #2-455083 is active with the name G&A Auto Repair. One 250 waste oil tank is in
service with the other six gas tanks listed as closed in place. There are two owners: C&H Holding
Corp., 1394 Third Avenue, NY, 10021; 291 Metropolitan Avenue, LLC, 861 Manhattan Avenue, Suite 14,
Brooklyn, NY, 11222. I sent out the CSLs to both owners. 7/26/07 - Raphael Ketani. Eva Krocka of
Minnow Associates (291 Metropolitan Avenue, LLC) called to say that the site is part of the
brownfield program. I told her that the DEC doesn't have anything confirming this and that their
site does not appear in the DEC Remediation database. She said that Advanced Site Restoration Co.
(212) 809-1110 was remediating the site and was supposed to take care of everything. She said that
DEC was sent reports. I told her that we have nothing in our files regarding the site. She said she
will get back to me. A new search of the Remediation database revealed that 291 Metropolitan Avenue
has made an application to be part of the BCP. The case number is C224124. The case manager is
Sondra Martinkat of DER Region 2 Unit A. I spoke to her and she said that the site is not yet
approved for the BCP, but she expected them to be so very soon. She said that she was willing to
accept the spill case. I spoke to Randall Austin, Chief of the Spills Unit, and he told me to
change the case manager to Ms. Martinkat. I changed the case manager to her name. 8/5/09: BCP
termination letter sent by OGC (D. Tuohy) - see eDocs. Management of site reverts back to Region 2
spills. Transferred to R. Ketani. (JHO) 8/6/09 - Raphael Ketani. I was assigned the spill case
yesterday. So I talked to the former case manager, Brian (York) Wong from Unit A of Region 2 DER.
He said that he was waiting for the project to be accepted into the BCP, but this never happened as
the corporation fell apart. He said that no cleanup or development has taken place regarding the
case since 2007. I made an unannounced site visit and took several pictures (see E-docs). The site
consists of a service station. There is an old, small, three story walk up apartment building to
the west of the service station. The service station has a sign that displays G&A Auto Diagnostic
Center (718) 486-3700. The apartment building is the other property that the corporation had owned.
I met a person who worked at the service station. He said that a waste oil UST and the gas USTs
were closed in place with cement. He showed me the many cement filled boring locations that are on
site. He said that there were no problems. I asked him who he was, but he just said that he was

G&A AUTO REPAIR (Continued) **S108294903**

someone who works here. However, he did say that C&H owned the site. After this I left. 8/7/09 - Raphael Ketani. I tried to contact Chris Tomasello of ASR (212) 809-1110 regarding the site and its ownership, but could only leave a message. I reviewed the October 2006 ISR. The elevation of the site is at 23' above mean sea level. Groundwater was encountered at a depth of 17' to 20' below grade. However, Section 9 of the ISR states that groundwater is 9' to 10' below grade. Groundwater flow direction is unknown. There is a school directly across the street to the northeast. Soil contamination that exceeds TAGM was present at SB-5 at 10' to 16.' Groundwater contamination with high exceedences was found at SB-2 and SB-3. There is also a page with case manager notes that refer to wells marked AOC and TW, but there are no diagrams depicting these wells in the case file. 8/10/09 - Raphael Ketani. Mr. Tomasello returned my call. He talked about the site. He mentioned that the partnership broke up and the property was sold about a year ago. The former owner was Robert Vigorito of C&H Holding Corp., 1394 Third Avenue, NY, 10021. Mr. Tomasello has had no contact with the former or present owners since then. I looked up the property ownership on Property Shark and on ACRIS. The property was sold on 9/6/09 or 9/15/09, respectively. The new owner is: 291 Metropolitan Avenue, LLC, 861 Manhattan Avenue, Suite 14, Brooklyn, NY, 11222. I wrote a revised CSL for the sole owner, 291 Metropolitan Avenue, LLC, and sent it out with a green return card. 9/10/09 - Raphael Ketani. The deadline for a response to the CSL was today and there has been no response from the owners of the site. I have not received the green return card, either. I will wait until 9/17/09 before sending a more strongly worded letter to the owners. 9/14/09 - Raphael Ketani. The CSL came back unopened and marked Unclaimed/Unable to Forward on the envelope. I checked PBS record #2-455083 for any contact information. The record showed the name Ismael Cisneros, Jr. (718) 384-4141. I spoke to Mr. Cisneros. He said that the owner had moved to Manhattan. I asked him who the owner was. He didn't want to say. However, he said that if I sent a letter directly to the service station, then he will forward it to the owners. I told him that I will do this. I resent the CSL to G&A Auto Repair, 291 Metropolitan Avenue, Brklyn, 11211 by regular mail and by green return card. However, according to the property database ACRIS, 291 Metropolitan Avenue LLC at 861 Manhattan Avenue is still listed as the owner. 9/21/09 - Raphael Ketani. I received the green return receipt card signed by Mendes. 10/29/09 - Raphael Ketani. The owners of the site failed to respond to the CSL by the deadline of

G&A AUTO REPAIR (Continued) **S108294903**

October 14, 2009. So I drafted a strongly worded letter stating that the DEC will take legal action if the investigation plan is not received by November 13, 2009. The draft letter was submitted to Randall Austin, Chief of the Spills Unit, for his approval. 11/2/09 - Raphael Ketani. I spoke to Mr. Austin about the case and the letter that I wanted to send. He said that I should submit a Case Initiation Package. 11/3/09 - Raphael Ketani. I put together the Case Initiation Package and submitted it to Mr. Austin for his signature. Mr. Austin signed the CIP and it was hand delivered to the legal department. 4/26/10 - Raphael Ketani. John Urda, Assistant Regional Attorney for Region 2 of DEC, sent Jerrietta Hollinger, a principal of 291 Metropolitan LLC, a STIP agreement today by e-mail. Her address is: Jerrietta R. Hollinger, Esq. Ganz & Hollinger 1394 Third Avenue New York, New York 10075 Ms. Hollinger responded back by e-mail that she will submit the document to her members and get back to Mr. Urda in a week. 5/13/10 - Raphael Ketani. Ms. Hollinger sent the following e-mail to Mr. Urda: I expect to review the Stip with Mr. Cisneros next Tues. I am out of office tomorrow and Monday and will contact you by middle of next week. 5/20/10 - Raphael Ketani. Ms. Hollinger requested a change in the STIP package CAP that was sent to her by Mr. Urda. She wanted the deadline for submission of the Remedial Investigation Work Plan changed from 15 days to 30 days (paragraph one). Mr. Urda agreed to the change and sent her a STIP with a CAP wherein the owners have 30 days to submit the RIWP (see E-docs). 5/24/10 - Raphael Ketani. The owners of the site signed the STIP. 5/25/10 - Raphael Ketani. The Region 2 director signed the STIP and, thus, it was fully executed and in effect (see E-docs). 7/14/10 - Raphael Ketani. To date, the owners of the site have not submitted the RIWP. The deadline was July9 25, 2010. I drafted a letter to Ms. Hollinger for the review of John Urda of the Office of General Counsel. Mr. Urda reviewed the letter and it was sent out today. 7/15/10 - Raphael Ketani. Ms. Hollinger called me today. She said that P.W. Grosser (the consulting company) is supposed to get back the groundwater analytical data for the site. They will send the DEC a report soon. 7/27/10 - Raphael Ketani. Ms. Hollinger called today. She said that Mr. Wenskus of P.W. Grosser is working on the analytical report for DEC and should submit it in the very near future. The report will state that the soil is alright, but that the groundwater is contaminated. I told Ms. Hollinger that, at the very least, the groundwater contamination needs to be delineated. 8/3/10 - Raphael Ketani. I reviewed the July 30, 2010 P.W. Grosser Phase II ESA report. The scope

G&A AUTO REPAIR (Continued) **S108294903**

of the work was based on P.W. Grosser's 6/21/10 proposal and Advanced Site Restoration's October 2006 ISR. The tanks have fuel oil, waste oil, and gasoline. In October 2006, the site was operated only as a car repair shop. Groundwater is at about 18' to 20' below grade and flows north-northwest. ASR found contamination in soil borings at SB-1, 3, 5, and 6. There were also elevated levels of arsenic, cadmium and lead at SB-1. There was elevated groundwater contamination at SB-2 and SB-3. There had been no subsequent investigations or remedial efforts since ASR's 2006 investigation. P.W. Grosser did a Phase II in July 2010. The locations of SB-1, 3, 5, and 6 were utilized for this investigation. P.W. Grosser took soil samples to 20' below grade. Groundwater was sampled from SB-1 to SB-3. The soil results for VOCs and SVOCs were below TAGM RSCOs. Arsenic, cadmium, and lead were below the RSCOs. However, mercury was above its respective RSCO. The groundwater results from SB-6 (downgradient) were completely non-detect. However, there was 22 ppb of naphthalene at SB-3 and 392 ppb of naphthalene at SB-2, with several other low exceedences. MTBE was 421 ppb at SB-1 and 1370 ppb at SB-3. SB-2 had 112,000 ppb of MTBE and 6 other VOC exceedences above 1,000 ppb. P.W. Grosser recommends removing the tanks and quarterly monitoring. I sent an e-mail to Mr. Wenskus (631) 589-6353 with the following questions and comments: 1) why wasn't a boring done in the vicinity of the fuel oil tank to the northwest? 2) is the fuel oil tank a UST or an AST? 3) was staining observed in the vicinity of the fuel oil tank? 4) why wasn't a boring conducted directly to the northwest of the gasoline tanks? 5) why weren't borings conducted next to the waste oil tank? The DEC concurs with the removal of the gas and oil tanks. Groundwater should be collected from SB-2 in order to reduce the MTBE concentration at this location. 8/6/10 - Raphael Ketani. Mr. Wenskus responded back by e-mail today: 1) Due to the presence of debris in the area, PWGC was unable to access the immediate vicinity of the fuel oil tank. During the inspection, PWGC did not see evidence of an AST in the area of the fuel oil tank as identified on the figure. Additionally, PWGC utilized the figure that was provided in the 2006 ASR Phase II for approximate locations of borings and other site conditions. 2) This is unknown at this time; however, according to the ASR report, the fuel oil tank is a UST. As stated above, there was no evidence of an AST in that vicinity. PWGC will contact the property owner to confirm the presence of the fuel oil tank. 3) No staining was observed in the area where the fuel oil tank is reportedly located. 4) As stated above, Mr. Cisneros wanted to confirm the findings of the 2006 Phase

G&A AUTO REPAIR (Continued) **S108294903**

II and requested that only the impacted borings from that Phase II be re-sampled. 5) The exact location of the Waste oil UST was unknown and PWGC placed the boring SB-1 in the vicinity of the former boring. The location of SB-1 in the PWGC site plan; however, is incorrect. In addition, the tank locations on our site plan are approximate, based upon the ASR Phase II site plan. The site plan will be corrected to show the correct location of boring SB-1. I responded back and stated that the DEC still wants a boring performed to the northwest of the gas USTs, next to the waste oil tank, and next to the fuel oil UST to the northwest. Also, P.W. Grosser must submit a site plan which is to scale and which shows the actual location of all appertenances, tanks and pump islands. Mr. Wenskus replied back that the borings will be performed. 8/12/10 - Raphael Ketani. Mr. Wenskus sent me an e-mail that he informed the owners about DEC's request for additional investigative work. However, he has not heard back from them. 8/18/10 - Raphael Ketani. Mr. Wenskus sent me an e-mail that the drilling for the three additional borings will take place on 8/24/10. 9/27/10 - Raphael Ketani. I received the Supplemental Phase II Environmental Site Assessment report dated 9/22/10 from P.W. Grosser. I began my review. 9/28/10 - Raphael Ketani. I finished my review of the Supp. Phase II. There was no soil contamination above TAGM standards. However, groundwater was found to be impacted. LNAPL was found near the waste oil tank and oil based liquids in the tank. Concentrations of total VOCs were detected up to 128,988 ppb in the immediate vicinity of the gas USTs. SB-2 was the most contaminated groundwater location. SB-3 had elevated groundwater contamination. P.W. Grosser recommends the following: proper closure of the gas and waste oil USTs removal and disposal of all impacted soil injection of oxidants to breakdown the contamination collection of end point samples installation of groundwater wells removal of LNAPL quarterly groundwater monitoring I sent an e-mail to Mr. Wenskus asking him to proceed with the remediation as soon as possible. 11/19/10 - Raphael Ketani. Mr. Wenskus sent the November 2010 Remedial Action Plan by e-mail. I reviewed the plan and it formalized and expanded the remediation plan that was initially described in the Supplemental Phase II. The RAP looked fine, but they weren't planning to install a monitoring well downgradient of the waste oil UST. So I let Mr. Wenskus know that the DEC wanted a well installed in this location and to submit a revised site map showing this well. Mr. Wenskus responded back that a well will be installed downgradient of the waste oil UST. 2/25/11 - Raphael Ketani. I spoke

G&A AUTO REPAIR (Continued) **S108294903**

to Mr. Wenskus (631) 589-6353 and asked him about progress on the site. He said that the owners had
received P.W. Grosser's proposal. They told him that they needed to secure funding for the project.
However, that was back a couple of months ago. Mr. Wenskus hasn't heard anything since. I asked Mr.
Wenskus to contact the owners anyway and to try and find out what is happening. Ms. Hollinger sent
me an e-mail asking whether there was any type of funding that could be obtained for doing the
additional work. I wrote that there wasn't and to commence the work immediately. 3/2/11 - Raphael
Ketani. Today I received the January 27, 2011 investigation and remediation work proposal and cost
estimate from Mr. Wenskus at P. W. Grosser. I reviewed the proposal and it seemed to cover the work
that the DEC had asked to be performed. I spoke to Mr. Wenskus (631) 589-6353 and told him that the
DEC found the proposal to be acceptable. I asked him whether he had heard from Ms. Hollinger. He
said that he hadn't. I told him to call her and to let her know that the DEC is concerned that no
progress is being made. He said that he will. 3/3/11 - Raphael Ketani. Mr. Wenskus sent Ms.
Hollinger an e-mail (with me as a c-c) stating that the DEC had the approved work plan. He also
wrote in the e-mail that P.W. Grosser was ready to go to work on the site as soon as a retainer is
submitted. 3/7/11 - Raphael Ketani. Mr. Wenskus said that he hasn't received approval yet to start
the work. 4/5/11 - Raphael Ketani. I received an e-mail today from Mr. Wenskus as a c-c. In the
e-mail, Mr. Wenskus stated that he hasn't heard from Ismael Cisneros, Jr. in two weeks. In
response, I sent an e-mail to Mr. Urda of DEC Region 2 stating that it appears as if work at the
site has come to a standstill for this spill. 4/22/11 - Raphael
Ketani. Mr. Wenskus sent an e-mail
to M I Mechanical requesting a startup date for the work at the site. Ms. Hollinger responded back
by e-mail that Mr. Cisneros was out of town, but would be back next week. Once he is back, Ms.
Hollinger wrote, Mr. Cisneros will set up a starting date. 4/27/11 - Raphael Ketani. I sent an
e-mail to Ms. Hollinger asking whether Mr. Cisneros had returned and whether a starting date had
been picked. 5/17/11 - Raphael Ketani. Mr. Wenskus sent me an e-mail that the work will re-start
during either later June or early July 2011. 6/6/11 - Raphael Ketani. Mr. Wenskus sent me an e-mail
that work will resume at the site on July 18. 7/7/11 - Raphael Ketani. Mr. Wenskus (631) 589-6353
sent me an e-mail that work will start on July 18. He expects the work to take 2 weeks. 7/14/11 -
Raphael Ketani. Jerry Hickson of G. Construction Enterprises (631) 206-3700 ext 100 called. His
company will be pulling 7 tanks on either tuesday or wednesday. They

G&A AUTO REPAIR (Continued) **S108294903**

will remove 3 gas tanks, 3
diesel tanks, and 1 waste oil tank. 7/20/11 - Raphael Ketani. I
received the following e-mail today
from Mr. Wenskus: The implementation of the approved RAP began today.
The site activities today
included the following: Expose the seven onsite 550-gallon tanks to
determine their current
condition, Assess the tanks to determine their contents (each
contained oily water) Pump the tanks
out approximately 2,200 gallons removed Each tank, with the exception
of the waste oil tank was
encased in concrete. No tanks were removed from the ground today;
excavation of the tanks will
continue tomorrow. 7/22/11 - Raphael Ketani. Mr. Wenskus (631)
589-6353 called me in a conference
call with Jen Lewis of P.W. Grosser. He said that the 7 USTs had been
removed. There was a concrete
slab beneath them. The tanks were all in good shape. However, there
were signs of a little
associated pipe leaking. The contractor had excavated 15 feet down to
remove the contaminated soil,
but there still was contamination and he hadn't reached the water
table, which is at 18 feet below
grade. Mr. Wenskus and Ms. Lewis were asking whether the digging could
stop as the contractor would
have to get a larger machine, and this would take time, and as he
would also have to get special
permits for digging deeper. Mr. Wenskus added that the contractor had
dug pretty close to the
building and the sidewalk and they didn't want to jeopardize their
integrity. I told Mr. Wenskus
that the contractor could either install shoring to hold up the sides
of the hole or backfill and
do treatment solution injections where there still is contamination
deep down and under the
sidewalk. Mr. Wenskus opted to backfill and treat. I asked him whether
the contractor could dig out
more contamination laterally. Ms. Lewis said that he could. I told Mr.
Wenskus and Ms. Lewis to do
all of the calculations necessary, including permeability, to
determine what it will take to
effectively treat the remaining contamination. They said that they
will. Later, Mr. Wenskus (631)
589-6353 called me back. He said that he talked to his supervisor
about the treatment solution
injections proposed for the contaminated dry soil. They agreed that
the solutions would work
initially, but that they would stop as soon as they would dry out and,
therefore, wouldn't be very
effective. Mr. Wenskus will have the contractor get a larger excavator
and dig deeper. I asked him
about the contamination under the sidewalk. I added that this couldn't
be left in place. He said
that he wasn't sure where the contamination will end. I told him to
keep field screening with a PID
meter and to eventually take end points to determine whether they
needed to excavate further. He

G&A AUTO REPAIR (Continued) **S108294903**

said that he will. 9/12/11 - Raphael Ketani. I tried to contact Mr. Wenskus (631) 589-6353, but I could only leave a message regarding progress at the site. 9/13/11 - Raphael Ketani. Mr. Wenskus called me back. He said that the work at the site has stopped as P.W. Grosser isn't getting paid. The owners, 291 Metropolitan LLC, want to save some money with the remediation project and want to put in fewer wells and do less soil removal. He said that 80 tons have already been removed, as best as he can guess (he doesn't have the disposal manifests). A large covered soil pile is sitting at the site. Mr. Wenskus said he told them that the DEC had approved the work plan and so any changes were not likely to be accepted. After this, the conversation ended. 9/15/11 - Raphael Ketani. I reviewed the November 2010 RAP for the work schedule. While the tanks (item 1) had been removed, the soil excavation was not completed by the allotted time as more soil needed to be removed than had been previously estimated. I sent Mr. Wenskus an e-mail requesting a revised work schedule. 10/13/11 - Raphael Ketani. I contacted Mr. Wenskus (631) 589-6353. He said that 291 Metropolitan LLC still hasn't paid P.W. Grosser for the rest of the work. So nothing is happening. Mr. Wenskus said that he had spoken with Ms. Hollinger about a couple of weeks ago, but she gave no indication that payments would be forthcoming. He said that he will try contacting her today. As no work had been taking place for over a month, I drafted a letter to 291 Metropolitan, LLC stating that they were in violation of the STIP and the environmental law. The letter was sent to Mr. Urda and approved. I sent it out today with an October 28 deadline for re-starting the work, or else legal action will be taken. 10/20/11 - Raphael Ketani. Ms. Hollinger (212) 517-5500 called regarding the soil excavation and planned well installation. She said that P.W. Grosser dug out a lot more dirt than had been planned and that this has become very expensive. She asked what could be done about this and whether the number of planned groundwater monitoring wells could be reduced in order to save money. I told her that contaminated soil has to be dug out to the extent practical and that if they have to remove the sidewalks to do it, then that's what is necessary. I added that P.W. Grosser should be screening the soil with a PID meter as they go so that they can see whether there is more contaminated soil to remove. Then, once they have very low PID hits or no hits, they can take end point samples and have them analyzed to be sure that they have removed all of the soil with elevated contamination. Ms. Hollinger asked whether one or two wells could be cut out from the plan. I told her that the DEC didn't ask for more wells than were

G&A AUTO REPAIR (Continued) **S108294903**

necessary in order to monitor the groundwater contamination. I added that if contaminated soil is left in place and the groundwater starts circulating through it, then the groundwater will carry weathered gasoline and vapors downgradient to the school behind the service station. I said that, so far, there are no vapors in the school, but this can still happen if contaminated soil is left. I mentioned that there are kids in the school. She said that she was just concerned about how much soil was removed because it was truck loads and truck loads. I told her that P.W. Grosser was removing what was necessary and that this is good. Ms. Hollinger said that she will talk to Mr. Wenskus and discuss the issue. Then she will get back to me. Later, Ms. Hollinger sent me the following e-mail: After we spoke, I had a telephone call with Rocky. He said he was in the middle of finishing another project but would review the test results and call you next week to see if it is possible to amend the plan to be more economical and to make certain contamination is cleared. The necessary wells will then be installed. As mentioned the work done to date cost more than twice the estimated amount. Soil Safe carted away 447.2 tons of soil. 10/26/11 - Raphael Ketani. Mr. Wenskus (631) 589-6353 called with a progress update. He said that, right now, work still has not resumed. He said that he had spoken to Ms. Hollinger about the site and the soil contamination that still exists. He said that the concentrations of the individual analytes is in the hundreds of thousands of parts per billion for the soil in the sidewall of the pit that is next to the sidewalk. I told him that this soil, the soil under the sidewalk and possibly the soil under the street must come out. Mr. Wenskus said that the additional remediation will be performed as in the approved RAP. He mentioned possibly collecting the contaminated groundwater. I told him that it would probably be cheaper to dig out the contaminated soil and get rid of the contamination once and for all. Then he wont have to worry about groundwater contamination. I also told Mr. Wenskus that I will let Mr. Urda know about the impass with Ms. Hollinger. 10/27/11 - Raphael Ketani. I made an unannounced site visit today. I took 3 pictures. I could see a gravel area where the gasoline USTs used to be and a sandy soil area where the waste oil UST used to be. There was no other changes to the site conditions. So I left the site. 10/28/11 - Raphael Ketani. A Case Initiation package was signed by Hassan Hussein, Supervisor of the RCRA-Remediation Unit, and sent to the Office of General Counsel. 11/29/11 - Raphael Ketani. Ms. Hollinger (212) 517-5500 sent me an e-mail that the well installations will

G&A AUTO REPAIR (Continued) **S108294903**

take place soon. I responded back that the excavation also needed to resume. 12/27/11 - Raphael
Ketani. Nick Pressly of Pressly & Associates Inc. (607) 264-9521/cell (607) 435-9589 called. He
said that he has been retained by Ms. Hollinger to continue the work at the site. We discussed the
present site status and what still needed to be done. Mr. Pressly said that the DEC will receive a
work plan by January 9, 2012. 1/18/12 - Raphael Ketani. Mr. Pressly sent me the 1/9/12 work plan by
e-mail. The plan called for the installation of 6 soil borings and the construction of 4 monitoring
wells. Some of the wells would be constructed in such a manner as to allow their use for SVE or air
sparging. I found the locations of two of the proposed wells to be unacceptable as they are not
downgradient of the former gasoline UST locations and the waste oil tank location. Also, if some
wells are used for SVE or air sparging, then they can't be used for groundwater monitoring. So more
wells are needed. They also did not mention continuing the excavation both deeper and under the
sidewalk. Lastly, they did not mention sending the DEC the manifests for the soil that has been
excavated, nor product collection or quarterly groundwater sampling and reporting. I sent an e-mail
to Mr. Pressly indicating the disapproval and the need for including the above comments in a new
work plan. Mr. Pressly sent me the manifests for the soil that had already been removed. I spoke to
Mr. Pressly (607) 264-9521/cell (607) 435-9589 about the above comments. There is a 1 inch well
next to the waste oil tank. He believes that there is a lot of oil on the water table. Due to the
waste oil, air sparging will not be possible. The waste oil will be addressed in a separate plan.
Mr. Pressly will add two additional wells due to the presence of the LNAPL. The other well
positions can be adjusted to be downgradient. SVE wells will be installed near the sidewalk in an
upgradient position. Borings will be done right up against the sidewalk. Wells for just monitoring
during SVE or air sparging will be installed. He will resubmit the work plan next week. Also, he
expects to start the work by January 30, 2012. I told him that will be fine. 1/25/12 - Raphael
Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 sent me the 1/20/12 Revised Subsurface
Investigation Work Plan for installing SVE wells, AS wells and monitoring wells. I reviewed the
work plan. 1/30/12 - Raphael Ketani. I finished my review of the 1/20/12 work plan. There was one
proposed monitoring well far upgradient of the waste oil UST and no well directly downgradient of
the waste oil UST. I determined that they should install wells at positions that are a short
distance downgradient of the waste oil UST and the former tank field.

G&A AUTO REPAIR (Continued) **S108294903**

I also stated that there
should be separate monitoring wells at P.W. Grosser's SB-7 boring, which had NAPL, and at P.W.
Grosser's SB-3, which had contaminated groundwater. I added that groundwater extraction should take
place at SB-3 and product collection should take place at SB-7 before AS or SVE takes place.
Lastly, I asked for the details of the proposed AS and SVE systems: soil permeability, air flow or
vacuum calculations, material specs and the design layouts.I sent a letter disapproving the work
plan and including the above comments. The due date for the revised work plan was set at February
29. Mr. Pressly sent me a revised map/plan for the locations of the proposed monitoring wells. I
responded back that the well for the waste oil UST should be more upgradient than sidegradient. I
asked him to fix this and then the plan would be fine. Also, he will hold off installing the SVE
and AS wells for now. 2/1/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 sent
me an e-mail containing the second revision of the Revised Subsurface Investigation Work Plan. Four
instead of five wells were proposed, but the locations were as requested in DEC's 1/30/12 letter.
However, there was no mention of extracting contaminated groundwater at SB-2 and product at SB-7. I
responded back and let him know about the deficiencies. Mr. Pressly wrote back that, presently
there were no wells at SB-3 and SB-7, these were only former soil boring locations. However, a well
will be installed at the former location of SB-3. He asked that installing a well at SB-7 for
product collection be put on hold for now so that the work plan can be approved and work can
proceed. I responded back that the DEC was approving the 2/1/12 work plan and to proceed with the
investigation. Mr. Pressly wrote that the work is tentatively scheduled to start on February 8.
2/3/12 - Raphael Ketani. Mr. Pressly sent me an e-mail that the drilling will definitely start on
February 6. 2/6/12 - Raphael Ketani. Mr. Pressly called today. He said that he was at the site, but
that there was a problem. He stated that the downgradient well for the waste oil UST would be right
against the wall of the building. So it can't be drilled right there. He suggested moving the
well's locations to where the A in LNAPL (for SB-7) is on revision 4 of the map which is attached
to the 2/1/12 work plan. This would still put the well in a downgradient position. I told him this
would be fine. 2/8/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 called today
with an update. First, he stated that P.W. Grosser's boring SB-7 was found to be much closer to the
waste oil UST than was drawn on the map. He put in a new well mid-way between the building and the

G&A AUTO REPAIR (Continued) **S108294903**

UST about 3 feet from SB-7. However, no oil was found, only a sheen. Mr. Pressly believes that the
oil that was found at SB-7 was very localized and that maybe P.W. Grosser hit the edge of the tank
pit that was holding the free oil. Once the pit was nicked, the oil flowed to the location of SB-7.
I told Mr. Pressly this was possible. He responded by saying that he will re-drill SB-7 and put in
a 2 inch recovery well. Also, there was no odor of gasoline at SB-7 and that it looks like there
are 2 plumes. One for the gasoline that is flowing due north, and another plume that is flowing
more northwest. A boring was done through the sidewalk. It was found to be a gasoline contamination
hot spot. So an extra sparge well was installed in the center of the former UST field. A well was
put in at SB-3, but no odors of gasoline were found. Another well by the building had gasoline
odors. A well couldn't be put in far downgradient inside the building as the geoprobe wouldn't fit.
The soil profile is from 6 to 8 feet of silt and clay, then glacial till, and finally at 19 feet
below grade there is gravelly brown sand. Groundwater is at about 22 feet below grade. 2/9/12 -
Raphael Ketani. Mr. Pressly called me today. He said that they had overdrilled SB-7 and found a
black slime on their augers when they pulled them up. He believes that the slime is sludge from the
waste oil tank. Next, they moved the rig over to where the waste oil tank used to be and drilled
another hole. However, they didn't find oil, but hit a cavernous spot many feet down. When the
equipment was pulled out, he could see pieces of metal in the cavern. Another hole was drilled and
they hit gasoline contaminated groundwater. Mr. Pressly said that it smelled like weathered
gasoline. 3/9/12 - Raphael Ketani. I spoke to Mr. Pressly (607) 264-9521 today. He said that he
found 1500 to 2000 ppb of MTBE in the perimeter wells. He recommended to the client to have more
wells put in. Two sparge wells have been installed. He also recommended to the client to have the
site capped very soon. The other wells don't have MTBE, but do have BTEX. Groundwater appears to go
northwest. An upgradient well was installed, but the MTBE is about 1500 ppb. However, the southeast
part of the property is full of concrete urban fill. The waste oil tank is above the fill. They
broke tools trying to drill in the southeast part of the property. 3/14/12 - Raphael Ketani. I
received the 3/8/12 Subsurface Investigation Report from Pressly & Associates. I began my review.
3/16/12 - Raphael Ketani. I finished reviewing the SIR. The investigation work took place from
2/6/12 to 2/13/12. Monitoring wells MW-1 to MW-3, SVE-1 and HVE-1 were constructed of 2 inch PVC.
MW-4 was constructed of 1 inch PVC. Refusal was hit at 3 locations to

G&A AUTO REPAIR (Continued) **S108294903**

the southeast of MW-3. There
was native soil at MW-1 to MW-3 and at SVE-1 down to 18 feet bgs. The soil consisted of fine to
medium sand with silt and clay. Urban fill was encountered at MW-4 and HVE-1 to 15 feet bgs. Below
15 feet, there was native sand. Groundwater was encountered at 18 feet bgs (elevation 80' to 83').
SB-7 had a 1 inch PVC riser with oil sludge at the bottom. HVE-1 was installed within the footprint
of the waste oil UST excavation patch. Waste oil was not detected within the former waste oil tank
area (MW-4 and HVE-1). A 3 inch band of oily soil was observed at 19 feet bgs. MW-2 had 113 ppm of
total VOC vapors at the 15 to 20 foot interval. SVE-1 had from 173 ppm to 332 ppm of total VOC
vapors from 5 to 20 feet below grade. The soil sample from SVE-1 had the highest total VOCs at
112910 ppb. Groundwater total VOC concentrations varied from a low of 927 ppb at MW-1 to a high of
21,169 ppb at SVE-1. NAPL was not seen on the water table at any location. A subsurface release was
not detected in the soil and the groundwater within the former waste oil UST area. The elevated VOC
concentrations at SVE-1 correspond to the former location of a fill line. The higher concentrations
at SVE-1 and lower concentrations at MW-2 suggest that the source is upgradient near the sidewalk.
The MTBE concentrations suggest that it has migrated beyond SVE-1 and MW-2. The sludge at SB-7 is
considered to be an anomalie by Mr. Pressly. In the report, it is recommended that another
monitoring well be installed to the northwest in order to monitor the MTBE. The pavement should be
replaced at the location of the excavation in order to prevent groundwater mounding and
infiltration. Additional wells should be installed for the SVE/AS system for recovering the MTBE.
Lastly, the SVE/AS system should be installed to remove the VOCs. A letter was drafted for the
review of Hassan Hussein, EE 3 and head of the Hazardous Materials Unit. The letter was addressed
to Mr. Pressly and approved the SIR and the recommendations. However, the DEC requested that soil
samples be taken upgradient of SVE-1 in order to fully delineate the extent of the contamination. A
deadline of April 20 was set for starting the work. 3/22/12 - Raphael Ketani. The letter was
approved by Mr. Hussein and was sent out today to Mr. Pressly and to Ms. Hollinger. 4/25/12 -
Raphael Ketani. Mr. Pressly (607) 264-9521 left me a message today. He said that he needed more
time to contract a drilling company and mobilize to start the work that was requested in the
3/22/12 letter. I gave him until 5/25/12 to start the work. 5/9/12 - Raphael Ketani. Mr. Pressly
sent me an e-mail. He stated that the additional monitoring wells will be installed on May 29 and

G&A AUTO REPAIR (Continued) **S108294903**

the piping and other parts of the SVE/AS system will be installed during the same week. 6/19/12 - Raphael Ketani. Mr. Pressly sent me an e-mail stating that the new monitoring wells and the SVE/AS system had been installed. A report containing the system results will be forthcoming in the near future. 8/7/12 - Raphael Ketani. I reviewed the Pressly & Associates 7/23/12 Supplemental Subsurface Investigation Report. The supplemental investigation took place during 6/5/12 to 6/14/12. MW-5 was installed to the north and downgradient. MW-6 was installed to the southeast of SVE-1 through the sidewalk that runs parallel to Metropolitan Avenue. The SVE system consists of 3 SVE wells (SVE-1 to SVE-3) and 5 AS wells (AS-1 to AS-5). The SVE wells averaged 60 scfm, 40 psi with a ROI of 20 feet. The AS wells averaged 4 scfm, 4 psi with a ROI of 10 feet. Total VOCs at MW-5 were 13.1 ppb. Total VOCs at MW-6 were 22,530 ppb. The system was started on 7/20/12. The AS operating pressure was 3 psi with a flow rate of 4 scfm. The SVE well head vacuum was 45 inches of water and a total flow rate of 120 scfm. A grab air sample was taken with a summa canister and the results will be available in two weeks. Pressly & Associates recommends collecting system PID, flow and pressure data from individual SVE/AS wells on a quarterly basis and the collection of well head vacuum readings from on site wells to evaluate the effective ROI of the system and the collecting of SVE off gas samples on a quarterly basis. Quarterly reporting will be made to the DEC for the system. I found the SSIR to be acceptable and drafted an approval letter for the review of Mr. Hussein. The requirement that confirmatory soil samples be taken once remediation by the SVE/AS is deemed complete was added to the letter. A deadline of October 31, 2012 was set for the submission of the first quarterly SVE/AS system report. The letter was approved and was sent out. 8/16/12 - Raphael Ketani. Jay Stockwell of Blue Zs Realestate, LLC (212) 965-0298 called. He said that he was a real estate developer and he was interested in buying the property. He said that the present owners are trying to sell it again. He said that he was interested in putting up an apartment building with stores in the first floor. He asked how long it would take for the SVE/AS system to remediate the site. I told him that they started the system during July 2012. So it has not been running long. I told him that my best estimate for how long it will take to clean up the site is one year. However, every site is different and there is a lot of contamination under the sidewalk and the street. Mr. Stockwell said that this was what he had expected. With that, the conversation ended. 11/9/12 - Raphael Ketani. I tried to contact Mr. Pressly (607)

G&A AUTO REPAIR (Continued) **S108294903**

264-9521 by e-mail regarding
the first quarterly SVE/AS remediation report was due on 10/31/12, but the e-mails bounced back. I
then left a message on his voice mail. I tried contacting Mr. Pressly at his cell phone (607)
435-9589, but I could only leave a message. Next, I tried to contact Ms. Hollinger (212) 517-5500,
but, again, I could only leave a message. Later, Ms. Hollinger called me back. She said that she
thought the September 2012 quarterly report had been submitted. She said that he was paid for the
report. She will try calling him later to see what happened to the report. 11/12/12 - Raphael
Ketani. Ms. Hollinger sent me an e-mail stating that Mr. Pressly was sending me the report.
11/26/12 - Raphael Ketani. I received the 11/26/12 SVE/AS OM&M Status Report. I reviewed the
report. An exhaust sample was collected on 7/19/12. There were 8 VOC hits in the sample. Another
exhaust sample was collected on 9/22/12. There was only 1 hit of 41 ug/m3 of methylene chloride.
The next site visit will be on December 4, 2012. I had no comments and approved the report.
11/28/12 - Raphael Ketani. Ms. Hollinger sent a letter to John Urda, Region 2 Assistant Regional
Attorney, stating that the ownership of the property had been transferred to 291 Metropolitan
Realty, LLC. Also, Mr. Pressly sent me an e-mail stating that he was still balancing the SVE/AS
system. 12/4/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 called today. He
said that he was going to meet with the attorney for the new owner, Joel Grunfeld, 277 Classon
Avenue, Brooklyn, 11238, (917) 470-3650, jig@sygrealties.com. He will try to explain to him that
the SVE/AS process has to continue and that the DEC wants the site cleaned up. Regarding the SVE
and AS system. There is an SVE well and a monitoring well next to the sidewalk hotspot. The radius
of influence of each SVE well is assumed to be 20 ft. The radius of inlfuence for each AS well is
assumed to be 15 to 20 ft. However, a pilot test was never done to find out the real radius of
influence. The estimated radius was taken from information regarding a sandy soil. I told Mr.
Pressly to keep the DEC informed regarding what transpires at his meeting and whether he will be
retained. I added that Ms. Hollinger should be told that her client is still responsible for the
contamination. Mr. Pressly said that he told her this. 12/5/12 - Raphael Ketani. Mr. Pressly
called. He met with Mr. Grunfeld. Mr. Grunfeld said that he wanted to remediate the site as quickly
as possible so that he can build a new building there. Mr. Pressly brought up the idea of solution
injection to treat the contamination. He also explained that whether solution injection is used or

G&A AUTO REPAIR (Continued) **S108294903**

excavation, the additional remedial actions may cost from $50,000 to $100,000. Mr. Grunfeld was concerned about the range of pricing, but he told Mr. Pressly that he wanted things to move forward. Mr. Pressly explained to me that he will send a work plan for installing a well in the sidewalk and a well in the road in order to find out what the concentrations of the contaminants are at these locations. He added that the SVE and AS functioning will be modified in order to try and remove more of the contaminants. 12/7/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 called. He said that the owner wants to build his building quickly and has contacted the NYC OER in order to move the process along for the remediation of the site. Mr. Pressly stated that the drilling contractor is hesitant to drill in the street due to logistical reasons and would prefere to install wells in the adjacent sidewalk and across the street in the distant sidewalk. Mr. Pressly added that he would like to install additional wells in the sidewalk in order to laterally delineate the contamination. After this, he would install SVE/AS wells in the edge of the sidewalk where it meets the road which have a 20 foot radius of influence (the road is 40 feet wide) in order to remove any contamination under the road. I told him that this sounded fine. He said that he will talk to the owner about this and put together a work plan. 12/27/12 - Raphael Ketani. Shaminder Chawla of the NYC OER (212) 442-3007/ shaminderc@dep.nyc.gov/100 Gold Street, 2nd Floor, New York, NY 10038 sent me the following e-mail: 291 Metropolitan Avenue property has a new developer/owner who has approached us to enter NYC Voluntary Cleanup program. Previous owner has a stip agreement and an approved RAP (with multiple SVE points)from you. Their development/ remedy has changed and includes excavation of entire property to at least 10 to 12 feet depths. OER is sending them back to field to conduct additional soil, soil vapor and groundwater investigation. OER informed them that they need to approach you and get spill approvals exclusively from DEC. We will accept your approved RAP and add additional requirement that we need to issue Notice to Proceed. I forwarded this information to Mr. Pressly and he responded with the e-mail below: Hi Rafiel, The last time I emailed Joel Gruenfeld was about a week ago and he said he was going to get back to me regarding a proposal I sent about 2 -3 weeks ago to investigate the road and the sidewalk. For this I had proposed 5 soil borings with 3 to be completed as MWs to get lateral and southern extent. I had also advised him to get OER involved sooner than later. I have not heard back from him. since. I also gave him options to clean the on-site

G&A AUTO REPAIR (Continued) **S108294903**

groundwater problem quicker
using chemical oxidation with direct push (20 points) to facilitate building construction. In
addition, I had proposed SVE AS system as possible remedy for sidewalk/ road to be incorporated
into any new building construction. NYC VCP may be good to make this an engineering/institutional
control? The building design was recommended to include a special XP equipment room for this
purpose in the basement. I'll give him a call and let you know what I find out. Best, Nik 12/28/12
- Raphael Ketani. Charles Sosik, PG, Environmental Business Consultants (631) 504-6000, ext
112/csosik@ebcincny.com called me today. 1/2/2013 - Raphael Ketani. I spoke to Mr. Sosik today
about the remediation of the site. He said that he has been in contact with the NYC OER and they
told him to talk to me about what should be done. We discussed the site history and what Mr.
Pressly's company had been doing regarding SVE and AS. Mr. Sosik said that he went to the site to
see what the present conditions were and found that the SVE air blower and other equipment was
missing. Mr. Sosik also asked for the P.W. Grosser 9/22/10 Supplemental Phase II and the Pressly
and Associates 3/8/13 Subsurface Investigation Report. I sent him the reports. Later, he sent me
the EBC 12/28/12 Phase II Work Plan. I reviewed the work plan. Four soil borings will be installed:
B1 to B4. Soil samples will be taken from 0 to 2 feet below grade and from 10 to 12 feet below
grade. The soil and groundwater samples will be tested via methods 8260, 8270, 8082 for PCBs, 8081
for pesticides and methods 6010 and 7471 for metals. Temporary well MW-6 will be installed at
boring B4. Wells MW-1 to MW-3 and MW-6 will be sampled for groundwater. Soil vapor testing will be
performed at 4 locations at 12 feet below grade. Subslab, soil gas and indoor air sampling will
take place for VOCs. I drafted a letter approving the work plan with comments. First, soil sampling
should take place at the most contaminated horizon. If no contamination is found at the boring
location, then a sample should be taken just above the water table. Soil borings must also be
performed at the locations of the Pressly & Associates wells SVE-1 (extremely high total VOCs) and
MW-6 (high total VOCs) and to the south of MW-6 to confirm the contaminant concentrations. All
results should be compared to the CP-51 standards for soil and the TOGS 1.1.1 standards for
groundwater. Additionally, TCLP method 1311 must be used to test for lead and the results must be
compared to the limits in Part 371.3(e). A revised work plan must be submitted by January 31, 2012.
The letter was sent to Mr. Hussein for his review. 1/3/13 - Raphael Ketani. Mr. Hussein approved

G&A AUTO REPAIR (Continued) **S108294903**

the letter and it was sent out. According to deed dated 11/27/12 shown in ACRIS, the new owner for
291 Metropolitan Avenue, Brooklyn, 11211 (block and lot 2353/13) is 291 Metropolitan Realty, LLC,
199 Lee Avenue, Ste 693, Brklyn, 11211. Another company is also at this address, 64 St. James
Realty, LLC. Later, Mr. Sosik sent me an e-mail stating that the boring work will start on 1/4/13.
Later, Mr. Sosik sent me a revised Phase II Work Plan dated 1/3/13 which was also a Scope of Work.
This work plan incorporated the comments from the DEC 1/3/13 letter. Otherwise, it was the same
work plan. However, more comments were generated. These were that the Department still wanted a
boring in the street south of MW-6. Also, subslab soil vapor sampling must take place at three (3)
locations along the west wall of the garage and at two (2) locations along the east wall of the
garage. The extra boring location and the extra soil vapor sampling locations were indicated on two
attachments to the DEC work plan approval letter. Lastly, all seven wells must be sampled during
the same sampling event and well redevelopment should take place if necessary for the older wells.
The letter was submitted to Mr. Hussein for his review. 1/14/13 - Raphael Ketani. Mr. Hussein
approved the letter and it was sent out with an attachment indicating where the Department wanted a
boring in the street and additional soil vapor samples within the garage footprint. Later, Mr.
Sosik sent me the following e-mail: The work plan was approved with conditions on 1/3/13. We
accepted those conditions and returned the revised plan as requested the same day. The work has
already been completed. Eight soil gas samples is a lot of samples for a property this size. Also
we cannot access the 3 western locations you are requesting. As you know the bulk of the
contamination is in front of the building in the former tank area. There is no difference between
conditions beneath the garage and those outside of the building as all are taken at the basement
level depth. The four samples provide good coverage across the site and will be representative of
conditions. The highest concentrations will be in the SG2 location and will represent a worst case
condition. Subsequent to this, I called Mr. Sosik (631) 504-6000, ext 112. We discussed the soil
vapor sampling. He said that the issue was that he could not get a piece of equipment into the
garage, due to its low clearance, that can bore down 12 feet to take soil gas samples. I told Mr.
Sosik that he didn't need to go down 12 feet. That the Department simply wanted more information
regarding what the vapors may be in the shallow subsurface. Mr. Sosik responded that he could have
holes drilled by hand and then have samples taken. I told him this

G&A AUTO REPAIR (Continued) **S108294903**

would be fine. He said he will do this, but that he thought there were too many vapor sampling locations for a site this size. I told him that, from my professional experience, the number of sampling locations were alright. Mr. Sosik agreed to do the work. 2/6/13 - Raphael Ketani. I spoke to Mr. Sosik today. He said that the vapor sampling took place, but the street boring hasn't been done. A permit is needed to perform this boring. 3/8/13 - Raphael Ketani. I received 3 documents for the site from Shaminder Chawla of the NYC Office of Environmental Remediation. These documents included a pdf containing Tables 2 to 11, which consisted of soil, groundwater and vapor data. The second pdf contained boring logs for borings B1 to B5. The last pdf contained 6 maps with soil, groundwater and soil gas data. I looked at all of the information. The data tables showed that there were significant soil exceedences at borings B1, B2 and B5 for VOCs and SVOCs when compared to the CP-51 standards. Some metals, such as lead and mercury also had significant exceedences in samples from the shallow subsurface, but the results were for total metals, not TCLP analysis. So it was not clear whether these results were a concern. Groundwater exceedences of the TOGS 1.1.1 standards were present in samples from MW-2 and MW-6. Mr. Chawla wrote that the site will be excavated down to 11 feet below grade. However, this doesn't address the contamination under Metropolitan Avenue to the south of MW-6. 3/12/13 - Raphael Ketani. A conference call took place between Mr. Chawla, Hannah Moore (engineer) and myself. We discussed the site and the environmental issues present. It was mentioned that excavation will take place down to 11 or 12 feet below grade. This will remove all of the shallow contamination. However, there is contamination at the water table which is 18 to 20 feet down. Ms. Moore and Mr. Chawla stated that this will be addressed by the injection of treatment solutions at depth. I told them that the most contaminated areas are B1, B2, B5, MW-2 and MW-6. They said that these areas will be targeted. I also stated that more investigation needed to take place south of MW-6 to see how much contamination is under the street. I asked that a treatment and investigation work plan be submitted by Mr. Sosik. They said the DEC will receive the work plan. 3/18/13 - Raphael Ketani. I reviewed the February 2013 Remedial Investigation Report that was submitted by Environmental Business Consultants. It was a compilation of the reports that had been submitted by the previous consultants and also contained many Sanborn maps. The only new information was the soil vapor and sub-slab vapor data. BTEX was found at a maximum of 21.29 ug/m3 in the soil vapor. The sub-slab

G&A AUTO REPAIR (Continued) **S108294903**

vapor reached a maximum of 31.07 ug/m3. PCE concentrations at all 4 soil vapor sites and in the 3
sub-slab vapor sites varied from 4.13 ug/m3 to 37.8 ug/m3. TCE was present in 1 of the 4 soil vapor
locations at 0.537 ug/m3 and in 1 of the 3 sub-slab vapor locations at 4.89 ug/m3. According to the
report, the results were below NYS DOH monitoring levels for the soil vapor guidance matrix. Next,
I reviewed the February 2013 Remedial Action Work Plan. They will do community air monitoring,
remove all tanks, remove soil and fill exceeding the restricted residential standards, sample and
have analyzed all excavated material, collect and analyze the end point samples, install a vapor
barrier, generally excavate to 12 feet below grade - though they will excavate deeper in the UST
and pump island areas, if necessary, inject chemical oxidants to reduce groundwater contamination.
The health and safety plan was included in the document. A Remedial Action Report will be submitted
by the EBC. I found both the Remedial Investigation Report and the Remedial Action Work Plan to be
acceptable. However, I noted in the letter that they must compare all of the soil analytical
results to the unrestricted residential standards in CP-51 and the groundwater results to TOGS
1.1.1. Also, all contaminated soil which is found at 12 feet below grade which exceeds the
unrestricted standards will have to be removed. 3/19/13 - Raphael Ketani. Mr. Hussein approved the
letter and it was sent out. 4/11/13 - Raphael Ketani. I received and reviewed the EBC 4/11/13
additional 3 borings report. The borings were conducted in the vicinity of MW-6. They were
designated as B6 to B8. B6 was just to the west of MW-6. B7 was about 17 feet west of B6. B8 was
about 13 feet east of MW-6. Sampling was continuous from grade to 20 feet bgs. The sample with the
highest PID detection in the respective boring and the sample at the bottom of each boring were
retained and sent to the lab for analysis. The total VOCs ranged from 432 ppb in the 18 to 20 foot
sample from B7 to 113,100 ppb in the 18 to 20 foot sample from B6. B6 had the most contamination in
the 18 to 20 foot sample with the highest analyte concentration as 32,000 ppb of total xylenes. B7
had the most contamination in the 3 to 5 foot sample with the highest analyte concentration as 4160
ppb total xylenes. B8 had the most contamination in the 13 to 15 foot sample with the highest
analyte concentration as 8400 ppb of ethylbenzene. The SVOC results were mostly non-detect with
many low benzo series hits in the 3 to 5 foot sample from B7. However, naphthalene hits were
present in the 18 to 20 foot sample from B6 and in both samples from B8. I drafted a letter
approving the report and stating that the Department required the

G&A AUTO REPAIR (Continued) **S108294903**

remediation of the contamination
at the locations of B6 to B8 and MW-6. The letter was submitted to Mr. Hussein for his approval.
4/17/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out with a due date of
May 24, 2013 for the submission of the work plan for remediating the contamination under the
sidewalk and the street. 4/24/13 - Raphael Ketani. Mr. Sosik submitted an addendum to the 3/2/13
RAWP dated April 24, 2013. The only change from the previous RAWP was that treatment solution
injections will take place in the vicinity of MW-6 in order to remediate the soil contamination at
this location. I approved the addendum and responded via e-mail, but I strongly warned Mr. Sosik
that he and 291 Metropolitan Realty were responsible for obtaining all of the necessary permits to
conduct the injections and must consult with Con Edison, the NYC DEP, the NYC DOT and other
concerned parties regarding the work he intends to perform. I also warned him that confirmatory
soil samples and groundwater samples will need to be taken in each treatment area and that if the
results are still well above the CP-51 standards and the TOGS 1.1.1 standards, then solution
injections will have to be done again. I told him to make sure that the solutions travel to the
contamination under the road. 6/14/13 - Raphael Ketani. I called Mr. Sosik (631) 504-6000, ext 112
regarding progress at the site. He said that the service station building will be demolished next
week. This will be followed by the site excavation the following week. 8/12/13 - Raphael Ketani. I
called Mr. Sosik today to find out what progress had been made at the site. He said that the
building had been demolished and test pits had been performed to characterize the waste. The soil
results indicated that they could dispose of the material at either Clean Earth of Soil Safe.
However, the excavation contractor has not made contact with Mr. Sosik in some time. The permits
are in place and NYC OER has given the go ahead to do the work and to construct the building. I
told Mr. Sosik that the permits have expiration dates. So he should get ahold of the contractor and
start the work before they expire. Mr. Sosik said that he knows this and he will call the
contractor and find out what the hold up is regarding doing the excavation. Mr. Sosik said that he
will send an e-mail when he has a definite start date. I told him that will be fine. 8/27/13 -
Raphael Ketani. A meeting took place today at the office of the NYC OER. In attendance were Mr.
Grunfeld, Mr. Sosik, and Dan Walsh, Mr. Chawla and Ms. Moore (212) 442-6372 of the NYC OER, and
myself. The meeting was held in order to iron out some of the details of the work that will take

G&A AUTO REPAIR (Continued) **S108294903**

place and associated matters. The topics discussed included: excavating the site down to 12 feet below grade, treating all of the hot spots (both within the building footprint and under the Metropolitan Avenue sidewalk) with solution injections, monitoring truck traffic and dust, monitoring odors and noise during the excavating and construction, the submission of a work plan for the excavating and solution injections to the DEC for approval and sending progress updates to OER and DEC. Mr. Grunfeld stated that digging should start tomorrow and continue for two to three months. An estimated 3,000 cu. yds. of soil will be removed. The soil will go to Soil Safe in Carteret, NJ and Prospect Park, NJ. Soil Safe will supply all of the trucks. Manifests will be received by EBC for each load of soil. A vapor barrier, VB20, will be installed as part of the building construction. Mr. Sosik stated that there will be 8 injection points. I mentioned that confirmatory soil samples and groundwater samples will need to be taken 1 month after each injection round. Mr. Sosik said that this will be done. One of Mr. Grunfeld's assistants mentioned that the floor of the excavation will remain as open dirt until the soil treatment is finished. After this, a concrete slab will be poured. I mentioned that removing as much of the soil contamination was important because VOCs can get washed down into the groundwater by the rain, make there way under the school which is downgradient and result in vapors coming up into the school. Mr. Grunfeld said that they will make sure that the soil is treated. He also stated that the school will be notified about the excavation plan. I asked whether the community board had been notified about the impending work. Mr. Chawla said that they had been. One of Mr. Grunfeld's assistants stated that the dirt trucks will enter and leave the site from Metropolitan Avenue, not the street next to the school. Work will start at 7:30AM and end at 3:30PM. I suggested that both dust and noise monitoring take place during the excavating in particular. I also added that the soil results must meet the unrestricted residential standards and the groundwater must meet the TOGS 1.1.1 standards for the case to be closed. Everyone agreed that they understood what was to take place and the meeting adjourned. 10/18/13 - Raphael Ketani. I spoke to Kevin Brussee and Mr. Sosik (631) 504-6000, ext 112 by phone regarding progress at the site. They mentioned that the construction crew had been working at the site for only 6 full days. They had to do some site preparation work before conducting the excavating. The excavating is taking place starting at the rear of the property and they will work towards the front. Right now, they are

G&A AUTO REPAIR (Continued) **S108294903**

digging just to make the pit for
the building. They will dig to remove the contamination later. The
crew is putting in the footings,
but only in the back. Progress reports are being sent to the NYC OER
and will be sent to the DEC. I
received 9 Daily Status Report documents for the period from 9/11/13
to 10/15/13. They indicated
that the contaminated soil was being sent to Soil Safe in New Jersey
and that the clean soil was
being sent to the Malanka Landfill in New Jersey. Pictures of the
clean soil showed red brown
glacial till with a few boulders and cobbles and a good percentage of
fines. The north half of the
site had been excavated by 10/15/13. A vapor barrier was installed
under the footings. Concrete
buttoning up had been done in the northwest corner where the
neighboring building was still
standing. Other pictures showed rebar form work taking place in the
northeast corner by 10/15/13. I
had no comments about the reports. Later, Mr. Brussee sent me the
following documents: Soil Safe
8/28/13 approval letter for receiving excavated soil from 0 to 6 feet
below grade Fill Material
Certification Letter dated 9/3/13 for the Malanka Landfill for soil
originating from greater than 6
feet below grade Test Pit location map with the 7/16/13 soil
analytical report I reviewed the
documents, but had no comments. 10/28/13 - Raphael Ketani. Mr. Brussee
sent me some pictures of a
previously unknown UST that was uncovered under the southeast corner
of the property. He explained
in the e-mail that: One 275-gallon UST was encountered at 291
Metropolitan Avenue today. I will
prepare an updated PBS application once excavation is completed just
in case we find another one
later. Although there were some rust holes in the tank, it does not
appear as though the tank
leaked. The tank is still full and no contaminated soil below the tank
was observed. A tank removal
company will be retained to cut and clean the tank, and I'll be sure
they issue a NYCFD tank
removal affidavit. I responded back by e-mail that a site map from ASR
dated 8/6/09 shows the
existence of a waste oil UST at the same location. I added that people
need to look at the old maps
and see where other features may be in order to avoid tearing them
open and creating a spill.
10/29/13 - Raphael Ketani. I reviewed the October 28, 2013 Daily
Status Report. Seventeen truck
loads of contaminated soil were sent to Soil Safe. Excavation in the
southeast corner of the site
went down from 0' to 6' below grade. The foundation wall was installed
in the northern part of the
site. Troy Cutter came and removed the 275 gal. tank after it had been
cleaned out. Picture 4 of
the report shows a worker shoveling out thick sludge from the tank.
The tank appears to have been

G&A AUTO REPAIR (Continued) **S108294903**

filled completely with sludge. The air monitoring results were within ambient air limits. I approved the report. However, I sent an e-mail to EBC stating that the DEC wanted confirmation that the area where the UST had been emptied was clean. Later, Mr. Brussee sent me 3 photos showing the handling of the tank and the work area after the tank was emptied and removed. The floor in the area looked clean. 11/4/13 - Raphael Ketani. Mr. Brussee sent me copies of the tank removal paperwork. 12/2/13 - Raphael Ketani. I spoke to Mr. Brussee (631) 504-6000 regarding progress at the site. He said that they had basically dug down 12 feet below grade throughout the site. However, there is one corner with gray soil. He added that they want to remove this area of gray soil and then bring in a geoprobe to put in the injection wells. The construction crew may be putting in footings now. Otherwise, nothing else significant is happening. 12/18/13 - Raphael Ketani. I had a phone conversation with Mr. Sosik (631) 504-6000, ext 112. He said that the contractor is presently removing the contaminated soil in the excavation pit. Also, a drilling rig was lowered into the pit in order to drill holes for treatment solution injection. I told Mr. Sosik that the contractor should follow the soil contamination in order to remove as much contamination as possible. 2/12/14 - Raphael Ketani. I tried to contact Mr. Sosik regarding progress at the site, but I could only send an e-mail. 2/24/14 - Raphael Ketani. I made an unannounced site visit today to see the physical status of the site. I took a few pictures. A large pit had been excavated. The building was being constructed. The steel frame had been partially completed. Workers were pouring concrete and doing masonry work. The sidewalk did not appear to have been dug up in order to remove the contamination at the location of MW-6 and borings B-6 to B-8. In fact, the plywood wall along the sidewalk obscured the location of MW-6 and B-6 to B-8. There were viewing portals in the plywood walls, but there was nothing else to see except the construction that was taking place. So, I left the site. 2/26/14 - Raphael Ketani. I spoke to Mr. Sosik (631) 504-6000, ext 112 today regarding the submission of the remediation report. He told me that the remediation hadn't been completed yet and that is why DEC didn't get the report. He added that the contaminated soil was dug out from under the sidewalk. End point samples were taken about 2 months ago in the excavation pit. The injection points were installed, but the solution injections have not taken place yet. He wasn't sure why. Mr. Sosik will send the NYC OER Interim report. However, he was not sure when this report will be completed as he has to follow a very specific format

G&A AUTO REPAIR (Continued) **S108294903**

and there is a lot of
information to include in the report. 5/20/14 - Raphael Ketani. As progress reports have not been
submitted. I sent Mr. Sosik (631) 504-6000, ext 112 an e-mail requesting the NYC OER Interim
Report. 5/21/14 - Raphael Ketani. Mr. Sosik responded by e-mail stating that there will not be an
Interim Report. A Final Report to OER will be submitted. Mr. Sosik added that it will take several
weeks to put the report together. 6/23/14 - Raphael Ketani. As I hadn't received the Final Report
from Mr. Sosik (631) 504-6000, ext 112/(631) 357-4927, I left a voice message on both of his phones
requesting this report. 8/25/14 - Raphael Ketani. Since my last voice message to Mr. Sosik, we had
discussed the submission of a final report for the site. He had told me weeks ago that the NYC OER
had a rigid format that must be followed regarding report submission and what each report must
contain. So, he couldn't submit the final report at the time. However, he had told me that he would
send it eventually. As the report still hasn't been received, I sent him [(631) 504-6000, ext
112/csosik@ebcincny.com] an e-mail requesting it. 11/25/14 - Raphael Ketani. As Mr. Sosik hasn't
sent the final report, I sent him another e-mail requesting the report. 11/26/14 - Raphael Ketani.
Mr. Sosik responded by e-mail today that the site is on his list of projects to finish. He added
that there were endpoints taken from the sidewalk and injections performed. 3/10/15 - Raphael
Ketani. I sent an email to Mr. Sosik (631) 504-6000, ext 112/(631) 357-4927 /csosik@ebcincny.com
requesting the closure report. 6/26/15 - Raphael Ketani. As there has been no response from Mr.
Sosik in some time, I sent an email to Ms. Hollinger (jrhollinger@juno.com) stating that the
Department was owed the closure report as part of the requirements of the Stipulation Agreement in
order to close the spill case. Ms. Hollinger responded back that she was waiting to hear from the
R.P.'s attorney. 6/29/15 - Raphael Ketani. I made an unannounced site visit today. The building had
been completely constructed. It appeared that they had finished construction just recently as the
planting areas between the sidewalks and the street were still just areas of dirt. I saw some
construction workers standing outside the front of the building (which faces the school). They were
not going into the building and the building itself was locked and dark. I took a picture of the
building and the sidewalk along Metropolitan Avenue which still had access ports for 3 wells. After
this, I left the site. 9/16/15 - Raphael Ketani. The excavation within the footprint of the new
building was deep enough (about 20 feet) to remove the great majority of the soil contamination and

G&A AUTO REPAIR (Continued) **S108294903**

almost all of the groundwater contamination. The only soil contamination which remained was in the
area of the former remote fill port, which was under the utilities and could not be removed easily
or treated. Given the present condition of the site, I determined that the spill had effectively
been remediated and that the residual contamination was not a threat to the public or the
environment. Therefore, I closed the spill case effective today.

Remarks: not yet cleaned

BROWNFIELDS:

Name:	FYN PAINT AND LACQUER CO., INC.
Address:	230 KENT AVENUE
City,State,Zip:	BROOKLYN, NY 11249
Program:	BCP
Site Code:	502562
Acres:	0.125
HW Code:	C224154
SWIS:	2401
Town:	New York City
Record Added Date:	12/04/2014
Record Updated Date:	06/07/2021
Update By:	JHOCONNE
Site Description:	Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site

FYN PAINT AND LACQUER CO., INC. (Continued) **S128906180**

contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.

Env Problem: Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Description: This site has been accepted into the Brownfield Cleanup Program - Site Code C224154. Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing until 2010. The site has a RCRA Closure Work Plan which started to be performed in 2011 and continues in 2014. Current

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the past ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. In 1999 RGJ contractor closed in place 14 USTs used to store VOCs. RGJ reported soil contamination around the USTs. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001, after Con Edison, the owner of the adjacent property discovered Volatile Organic Compounds (VOCs) under their parking lot and sued Fyn Paint Co. The investigation at the site revealed soil and groundwater highly contaminated with VOCs. After multiple phase investigation in January 2007, an IRM/pump and treatment of the groundwater was installed and operated. The RAWP was approved in 2009, and an excavation of the contaminated soil around six of the USTs constituting the source of VOCs was completed in 2010. Additional remedial design for a dual phase extraction system (DPES) was approved. In June 2014, the DPES was operating at the site. In November 2011, RCRA Closure field work started under EPA supervision and it continued through 2014. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of a layer of antropogenic fill material (0-12 feet and the rest to 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Env Problem: See also Site No. V00380. Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP)was approved for off site (OU-2)contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed in May- June 2014. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated and the

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

	remedial action will be completed under the State Superfund Program. In March 2015, the site was accepted in the Brownfield Cleanup Program (BCP) with the index # C224154.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Updated By:	YYWONG
Site Description:	Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.

Env Problem: Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

	ug/m3. Contaminants in sub slab vapor extend to the property boundaries.
Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Updated By:	YYWONG
Site Description:	Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.

Env Problem: Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem: Remedial actions are complete and measures are in place to prevent

Site Description:	Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.

Env Problem: Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Description:	Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Env Problem: Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP)was approved for off site (OU-2)contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated. In March 2015, a new owner applied and the site was accepted into the Brownfield Cleanup Program under site no. C224154.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Site Code: 56974
Site Description: Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.
Env Problem: Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP)was approved for off site (OU-2)contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated. In March 2015, a new owner applied and the site was accepted into the Brownfield Cleanup Program under site no. C224154.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Site Code: 502562
Site Description: Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.

Env Problem: Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Code: 502562
Site Description: Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison’s former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.

Env Problem: Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

HW Code: C224154
Control Code: 14
Control Type: INST
Dt record added: 03/24/2015
Dt rec updated: 12/11/2023
Updated By: YYWONG
Site Code: 502562
Site Description: Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison’s former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement.

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.

Env Problem: Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Updated By: YYWONG
Site Code: 502562
Site Description: Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general,

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.

Env Problem: Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Updated By: JHOCONNE
Site Description: Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Env Problem: Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP)was approved for off site (OU-2)contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated. In March 2015, a new owner applied and the site was accepted into the Brownfield Cleanup Program under site no. C224154.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Update By:	HMDUDEK
Site Description:	The area of concern subject to this work is considered off-site from BCP site C224154 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224154 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The Fyn Paint and Lacquer Co., Inc.- Off-Site is located in an urban area in Brooklyn, Kings County. The site is situated on the block bounded by Kent Avenue to the east, Metropolitan Avenue to the north, North First Street to the south and River Street to the west. Site Features: The site consists of the areas surrounding the Fyn Paint facility. Site Geology and Hydrogeology: Based on information collected during the investigation of C224154, shallow soil consist fill material followed by medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (bgs). Groundwater flow direction is toward the west. The depth to groundwater is approximately 12 to 15 ft below grade. The East River

FYN PAINT AND LACQUER CO., INC. - OFF-SITE (Continued) **S128906188**

	is located approximately 500 feet to the west of the Fyn Paint site.
Env Problem:	Nature and Extent of Contamination: The remedial investigation for the C224154 site revealed: a) contamination: the soil, soil vapor and the groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes which have migrated off-site from C224154. b) areal/depth extent: the VOC plume from site C224154 extends across the footprint of the Fyn Paint building under the adjacent sidewalks, parking lot and streets. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in on-site and off-site monitoring wells.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Town:	New York City
Record Added Date:	06/01/2007
Record Updated Date:	08/07/2009
Update By:	yywong
Site Description:	This is a new BCP application which pertains to properties located at 285 and 291 Metropolitan Ave., Brooklyn, Kings County. This site is approximately 0.25 acres in size in an urban area. Surrounding uses are commercial and residential. Directly to the north, across the street from the site on North 4th Street, is a public school. The site consists of an automobile repair facility (former gas station) and a neighboring garage with residential uses on the second floor. The future use for this site is residential and commercial. Suspected and known contaminants are petroleum and metals and MTBE which are impacting the soil and groundwater. This BCP application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility. Review of application terminated since the applicant is no longer an entity authorized in NYS to make the application. Following termination of the BCP application, the site was referred back for investigation and remediation under spill no. 0607903.
Env Problem:	A limited investigation was performed on 291 Metropolitan Ave in October 2006 and spill number 0607903 was assigned. From four soil borings, one soil sample was collected from each. From another two soil borings, two samples were collected from each. From two borings, a grab groundwater was collected in each. The groundwater was contaminated with BTEX compounds and MTBE. Additional investigation will be required to define the extent of contamination.

DEC Region:	2
DER Facility ID:	96623
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 3/20/03 - AUSTIN, DDO - SENT OUT TTF LETTER TO BOB KNOZELMAN OF WH CHRISTIAN & sONS 1/7/04-Vought-Spill transferred from Vought to Austin. 1/27/04 - Sawyer - Spill transferred from Austin to Sawyer. 10/5/04 - Sawyer - Received another failed tank test from Pro Test with a letter informing the Department of repair attemps made and the ultimate removal of tank from service. Pro Test will update on further action, investigation and remediation. 03/04/05 - Sawyer - Jim from Protest called me about begining excavation at the above site 0n 3/08/05. They are going to remove the tank an about 60 cubic yards of contamination. 03/30/05 - Sawyer - Met Tom Leddy and Ted Dros of Protest Environmental at excavation. They will pump and pad the pit to clean sheen off water in pit. Clean endpoint samples and a ground water sample will then be needed. 5/26/05 - Sawyer - Received endpoint samples from Protest on 4/12/05 and though some of the groundwater samples were above ground water criteria, this property was included in the Greenpoint Plume. This is the reason there are gasoline constituents in the gw sample. The groundwater is between 12-15 and this is an industrial area. No further action required. Closed.
Remarks:	tank failure, possible bad vent line

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Region:	2
DER Facility ID:	240308
DEC Memo:	8/24/05, Dyber: No contact from Konzelman. Referred to region. Next Step: Perform state-funded investigation. 8/3/05, Dyber: I have not received closure report. Left message for Konzelman. If no return call or report, refer to region. 7/21/05, Dyber: Lavin called and said he has no information about any cleanup. His firm just does tank tests. Called WH Christian and talked with Bob Konzelman. He said that the tank was removed in 1997. He will send the closure report. 7/18/05 and 7/21/05, Dyber: Left messages for Tom Lavin. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C PBS # DOES NOT MATCH FACILITY. PBS RECORD FOR FACILITY2-233447 DOES NOT MATCH TANKS. 4/12/04-Vought-Spill transferred from Mulqueen to Rommel as per Rommel. 11/23/09 bf: Sent ttf letter to: William H. Christian W.H. Christian & Sons Inc. 22 Franklin Street Brooklyn, NY 11222 12/15/09 Received faxed letter on 12/10/09 from Isaac Mungra of IJM Mechanical Corp. Vent line was the cause of the failure. No contamination was present during the excavation of the vent line replacement. Tank was retested and passed. No report available. Tank was closed in-place. NFA.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:

Name:	33 FRANKLIN
Address:	33 FRANKLIN STREET
City,State,Zip:	BROOKLYN, NY 11222
Program:	BCP
Site Code:	596022
Acres:	0.482
HW Code:	C224303
SWIS:	2401
Town:	New York City
Record Added Date:	11/04/2019
Record Updated Date:	12/27/2022
Update By:	AMSERVIS
Site Description:	Location: The site is located at 33 Franklin Street in the Greenpoint section of Brooklyn, NY and is currently identified as Block 2589 and Lot 13 on the New York City Tax Map. The site is an irregular shaped lot located on the west side of Franklin Street, south side of Calyer Street and north side of Quay Street for a total of approximately 0.43 acres. Site Features: The site is currently undergoing redevelopment. Current Zoning and Land Use: The site is zoned M1-2 (manufacturing) with an R6A (residential) overlay. The site is located within a Special Mixed-Use District (MX) which was established in 1997 to encourage investment in, and enhance the vitality of, existing neighborhoods with mixed residential and industrial uses in close proximity and create expanded opportunities for new mixed-use communities. Surrounding land use includes single family residential, mixed-use commercial/retail/residential and office buildings to the east, industrial/manufacturing facilities to the south and commercial/industrial buildings to the west. Past Use of the Site: The site was developed with three, 3-story dwellings with rear yards and one, 2-story stable fronting to the north along Calyer Street from at least 1887, with a carpenter and an iron foundry occupying the rear of the site. By 1905, one of the dwellings was identified as an office and foundry. By 1951, the 2- to 3-story dwelling had been converted to White Metal Foundry, with two additional 1-story foundry structures in the rear yard. By 1965, the majority of the site was undeveloped, with portions of a factory remaining on the southern border along Quay Street. By 1978, the site was redeveloped with the existing 1-story manufacturing/warehouse building with a mezzanine, which covered the entirety of the lot. The Sanborn maps identified the building with a new construction date of 1968. The site was utilized as storage for an art gallery known as Marlborough Gallery from 1984 to April 2020. The site is currently vacant. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of approximately four feet below grade followed by native fine to medium sand. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately thirteen feet above mean sea level. The topography within the immediate area slopes gradually to the west. Groundwater occurs beneath the site at a depth of approximately seven feet below grade under water table conditions. Based on investigations conducted to date, groundwater flow is generally west.

33 FRANKLIN (Continued) **S125896292**

Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs and metals in soil. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use.
Health Problem:	Remedial actions are complete and the potential for exposure to site contaminants was addressed by the remedy.
