BROWNFIELDS:
Name: FORMER CONSOLIDATED FREIGHTWAYS TRUCK TERMINAL
Address: 29 WEST STREET
City,State,Zip: BROOKLYN, NY 11222
Program: BCP
Site Code: 494074
Acres: 6.948
HW Code: C224191
SWIS: 2401
Town: New York City
Record Added Date: 04/24/2014
Record Updated Date: 06/07/2021
Update By: JHOCONNE
Site Description: Location: The site is located at 29 West Street in Brooklyn, NY. The site is an urban area in the Greenpoint neighborhood of Brooklyn and is denoted on the New York City Tax Maps as Block 2570, Lots 1, 10, 20, 30, 40, 50 (formerly Lot 1). The site is bordered on the east by West Street, on the west by the East River, on the north by Oak Street and the Greenpoint Marina BCP site (C224190), and on the south by Quay Street. Site Features: The site is approximately 6.948 acres in size and is currently undergoing redevelopment. The site was previously improved with three buildings and was occupied by a lumber and building materials supplier and a commercial space leasing company. Current Zoning and Land Use: The site is zoned R6 R7 (residential) with C2 4 (commercial) overlay which allows some ground floor retail. It is subject to New York City Office of Environmental Remediation (OER) E designation program due to the presence of underground gasoline storage tanks. Past Use of the Site: The site was developed prior to 1887 as a shipyard and iron works known as Samuel Sneden & Company and its successor, Continental Iron works. The latter company was contracted to build iron water pipes, boilers, iron ferryboat, steamboats and Ironclad warships for the United State Navy during the Civil War. The company focused on building marine boilers and iron components for gas works after the Civil War. The site was vacated sometime between 1916 and 1942. Between 1942 and 1951, the site began operation as a lumber yard, which was later replaced by a machine shop and welding company. The current building was constructed in 1965. Auto repair shops were identified in the east and west end of the building with a fueling station shown on the north side of the building in 1965. In 1978, Consolidated Freightways replaced Associated Transport and occupied the property until the company filed for bankruptcy in 2002. Site Geology and Hydrogeology:

P. CHIMENTO TRUCKING, INC (Continued) **U003074667**

	Subsurface soils at the site include a mixture of fill materials consisting of bricks and other rubble in a silty soil matrix. The thickness of the fill ranges from 5 to more than 10 feet. Below the fill material is a silty sand. Groundwater is present under water table conditions at a depth of approximately 5 8 feet below the ground surface and flows southwest. Elevation of the site varies from 1 to 9 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the west toward the East River.
Env Problem:	Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related contaminants, semi-volatile organic compounds (SVOCs) and metals including barium, lead, fluoranthene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, chrysene, isopropylbenzene, n-propylbenzene, arsenic, mercury, and 1,1,1-trichloroethane. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan.Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related contaminants, semi-volatile organic compounds (SVOCs) and metals including barium, lead, fluoranthene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, chrysene, isopropylbenzene, n-propylbenzene, arsenic, mercury, and 1,1,1-trichloroethane. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site.

DER Facility ID:	61317
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 10/10/95: This is additional information about material spilled from the translation of the old spill file: CONTAM MONITORING. 402 Metropolitan Avenue, Brooklyn Owner: Estate of James J. Mannix and Joseph M. Mattone Leased by: Joseph Macchia - Northland Marketing Spill #8907310 reported on 10/24/89 when four 550 gallon underground storage tanks (USTs) failed a tank test. Spill #9212269 was reported on 1/28/93 when Soil Mechanics (hired by the Estate of James Mannix and Joseph Mattone) installed three on-site monitoring wells and encountered 3 1/4 feet of gasoline in MW3. Spill # 9213355 reported

402 METROPOLITAN AV/BKLYN (Continued) **S100494817**

on 3/2/93 when six 550 USTs failed a tightness test. Repairs were made to the stick box and vent lines and the tanks passed a retest on 4/2/93 3/9/93 Case No. R2-0941-93-03 initiated. 12/6/94 Order on Consent No. R2-0966-93-03 signed by Joseph Macchia. All three spill numbers cited in Schedule B - Petroleum Discharge and Clean-Up Violations. After the signing of the Consent Order, Macchia contracted Berninger Environmental as their consultant. Including the three wells installed by Soil Mechanics, there is now a total of thirteen monitoring wells both on and off-site. The site is currently on a monthly monitoring and bailing schedule. According to the February 2001 Monitoring Report, the hottest well is MW-3 (in the middle of the property, downgradient of the tank mat) with a total of .97 feet of floating product. The report also indicates that a total of 304 gallons of free product has been bailed from the site wells during these monthly visits. In numerous meetings and letters dated 8/12/98 and 1/22/99 and 9/30/97, DEC required Northland to periodically perform Vacuum Enhanced Fluid Recovery (VEFR) until the tanks are removed and a permanent remediaton system installed. According to DEC's file, VEFR was only performed on five occasions with a total of 267 gallons of free product recovered. 9/12/03 Letter mailed to Joe Macchia requiring additional investigation and remediation. 09/23/03 Reassigned from Rommel to Sun. 02/12/04-Sun-File Update by Sun: -On 09/22/03, Joe Sun sent and also faxed a letter and Stipulation Agreement to Joseph Macchia, Jr. of Northland Marketing Corp. requesting complete delineation of petroleum contamination, submittal of Investigation Summary Report followed by a submittal of a Remedial Action Plan. The investigation must include, but not limited to the following: (1) Confirm groundwater flow direction by surveying site wells, (2) Install additional wells to delineate the contamination to the west, (3) Implemenmt a sampling program, on a quarterly basis, for all non-product monitoring wells and analyze for EPA Method 8270 B/N and 8021 including MTBE, (4) Determine the type of product in MW-9 via product ID analysis, (5) Repair MW-3. Currently the cap for the 2 PVC casing cannot be placed due to insufficient clearance between top of casing and its manhole cover. The PVC casing needs to be shortened. The Department set a deadline of October 3, 2003 for signing of the Stipulation Agreement by the Respondent. -Monthly Monitoring Report (January 2004, by Berninger Environmental, Inc. (Water Berninger, 631-588-2251): The monitoring wells were gauged on 12/22/03. The free phase products were detected on three monitoring wells: 0.59 feet on MW-1, 0.93 feet on MW-3 and 1.20 feet on MW-6. Snow/ice covered the following monitoring wells:MW-7, MW-8, MW-12 and Mw-13, and thus those wells were not gauged. Consultant's Report stated that it appears that other contractors are working on site, areas fenced off with locked gates, thus denying access to monitoring wells, for at least the sixth time drum for bailing product is missing, various utility mark outs, missing well designation markings etc. -02/12/04-Joe Sun called the Manager of the current Used Car4 Services on-site (Alex Tulchistka, 718-388-2424) about what kind of construction activities are being performed onsite. He replied that no new construction activity is performed and no fence or locked gate was installed onsite as far as he knew. Joe Sun then called Walter Berninger again and informed him the conflict information from the Car Service Manager. Berninger will take the picture next time when they perform the monitoring activity and provide more details on gauging the monitoring wells. 12/30/04 File Update by Sun: On

402 METROPOLITAN AV/BKLYN (Continued) **S100494817**

12/21/04, Joe Sun mailed a letter to Kenneth Raisch and Christopher Todd of The Estate of James Mannix and Joseph Matton informing them that the Remedial Action Plan (RAP) submitted by their consultant, Advanced Site Restoration (ASR)has been reviewed by the Department and has the following comments: - ASR proposed two remedial approached for managing the petroleum-contaminated soil to be excavated on site. The first approach, transport off-site and proper disposal, is approved by the Department. The alternative, stabilization/solidification approach, is not approved as proposed. If ASR still wishes to pursue this approach the Department has the following comments and requirements which need to be addressed and a revised RAP needs to be resubmitted for review: 1. To evaluate the effectiveness of the proposed remedial process on the subject site, the horizontal hydraulic gradient at the site must be determined, and the hydraulic conductivity and porosity of the soil must be estimated. The seepage velocity and direction of the ground water flow must be calculated. 2. Redraft the Soil Remediation section (page 5) for clarity, and refer to the product as cold mix asphalt as is done in the applicable Beneficial Use Determination (BUD) approvals. 3. The use of the term cement based (page 6, second to last paragraph) is potentially confusing. The 2001 amendment to BUD Approval 93-0007 allows for the addition of Portland Cement to improve the physical properties of the product, but the petroleum contamination is still stabilized with asphalt emulsion. 4. The sampling schedule required by the BUD (sampling method, analytical method, number of samples and timing of samples) should be tabulated and included in the RAP. 5. The proposed uses for the cold mix asphalt (see page 6, second to last paragraph) are not consistent with the BUD (see 2001 amendment to BUD Approval 93-0007, Operational Requirements, bullet 2). Use of this material as a substitute for conventional asphalt pavement would be a more appropriate application. The Department has the following comments regarding the proposed free product recovery and groundwater remediation. These issues must be addressed in the revised RAP: 1. Provide the formula used to calculate the amount of BioRem required. 2. The plan to periodically re-inoculate the site with BioRem is troubling. If conditions are suitable for the constituent bacteria in BioRem to grow, re-inoculation would be unnecessary. If conditions are unsuitable for growth, the addition of more of the same bacteria will not change things. BioRem should be contacted to learn the optimum conditions for growth, and the acceptable concentrations. A sampling plan to determine if conditions on the site are within these ranges should be provided for review. BioRem should also provide information about the terminal electron acceptors utilized by their proprietary bacteria so the attenuative capacity of the site can be estimated, and compared to the concentration of residual contamination. This comparison is best done with TPH data, rather than the STARS list of compounds for gasoline spills that is usually requested. 3. There is a potential for LNAPL to be present in areas outside the limits of the proposed excavation. If this is confirmed, depending upon the estimated amount of LNAPL, another technology in addition to BioRem may be required for remediation. 4. The 8 to 18 month time frame allotted for bio-remediation is considerably longer than the 7 to 14 weeks stated in the BioRem H-10 Specification Sheet. A soil and ground water monitoring plan to track the bio-remediation should be developed, and included for review in the re-drafted RAP 5. The RAP should have a provision that samples will be collected and analyzed

402 METROPOLITAN AV/BKLYN (Continued) **S100494817**

at the discretion of the ASR site supervisor (see page 9, second to last paragraph) or the direction of the DEC project manager. 6. If soil excavation does not commence soon after the product is removed from the wells with the vac-truck, the wells should be monitored daily for free product and the vac-truck recalled when appropriate. 03/01/05 File Update by Sun: On 02/28/05, Sun sent a letter to the property owner informing him that the Department has reviewed the revised remedial action plan (RAP), prepared by Advanced Site Restoration, LLc dateted February 17, 2005. ASR proposed to excavate the contaminated soil and dispose of property off-site and use Bio Rem product H-10 for subsurface bioremediation of hydrocarbon contamination in groundwater. ASR also proposed to remove the free product with a vacuum truck if free-floating hydrocarbons are detected. The Department approves the revised RAP proposed in Reference 1, as noted below: 1. Collection of Soil Samples: As per DER-10 Section 5.4, soil samples must be collected from the bottom of each sidewall for every 30 linear feet of sidewall and one sample from the bottom for every 900 square feet of bottom area. In all cases, samples should be biased toward locations of highest expected contamination as indicated by field evidence or PID measurements. 2. Salvage of Existing Groundwater Monitoring Wells: Page 4 of the revised RAP in Reference 1 under Section 5.0 Groundwater Remediation stated that ASR will attempt to salvage any groundwater observation wells still existing on the site. If addition wells are needed, they will be installed strategically, to maximize the data that can be obtained. It should be noted that according to the historical data, free product was detected in monitoring wells MW-1, MW-3, MW-6 and MW-11. These four monitoring wells and other existing wells must be restored at the same locations or at the locations to be consulted with the Department if they were destroyed during excavation. 11/11/05: Sun received UST Closure Report for the subject site, dated 11/07/05. 11/23/05: Review of the monthly report dated 10/19/05 indicated that Total BTEX ranged from <MDL to 20,900 ppb, and MTBE ranged from <NDL to 6,300ppb. A total of 16 Moniroring wells were gauged and sampled. Only one well (MW-11) had free phased product with thickness of 0.23 feet. (Sun) 12/13/05: Review of the monthly report dated 11/10/05 indicated that Total BTEX ranged from <MDL to 20,900 ppb (October, 2005), and MTBE ranged from <NDL to 6,300ppb (October, 2005). A total of 16 Moniroring wells were gauged and sampled. Only two wells (MW-11 & MW-12) had free phased product with max thickness of 0.49 feet. (Sun) 02/21/06: Review of the monthly report dated 02/10/06 indicated that Total BTEX ranged from <MDL to 13,060 ppb (December, 2005), and MTBE ranged from <NDL to 10,000ppb (December, 2005). A total of 16 Moniroring wells were gauged and sampled. Only two wells (MW-11 & MW-12) had free phased product with max thickness of 0.27 feet. (Sun) 11/14/06-Sun: Based on the Quarterly Report, dated 9/11/06, BTEX ranged 5,258 to 11,180 ppb, and MTBE ranged from 170 ppb to 8000 ppb. (Sun) 04/13/07-Sun: Sun the following email to Chris Tomasello: Hi Chris, I have reviewed the Remediation Progress Report, submitted by ASR, dated January 2007. The Department approves the following recommendations: 1. Stop sampling MW-4, MW-5, MW-6, MW-8, MW-10, MW-12, MW-13. and MW-16. 2. Continue to sample and monitor the remaining groundwater monitoring wells for VOCs only using EPA 8260 method. 3. Continue to monitor the concentrations of BTEX, MTBE, and Total VOCs from MW-1, MW-2, MW-3, MW-11, and MW-14. 4. Continue to monitor the plate counts to determine the colony count for the bacteria. Upon review of the

402 METROPOLITAN AV/BKLYN (Continued) **S100494817**

analytical results of new round of groundwater sampling data, the Department will determine if quarterly sampling event shall continue or petition for a NFA is warranted. The Department requires five days advanced notice of any remedial and/or monitoring events at the site. (Sun) 07/17/07-Sun: Review of the Remediation Progress report dated June 2007 prepared by Advanced Site Restoration, LLC (ASR) indicated that a total of five (5) groundwater monitoring wells were sampled on 5/2/07. Of the five (5) samples analyzed, four (4) indicated a total BTEX concentration of between 150 and 6,700 parts per billion (ppb), and the remaining one (1) well had total BTEX concentrations of non-detect level. MTBE was detected above the New York State Water Quality Standards in two (2) of the five (5) groundwater monitoring wells. The concentration of the MTBE in both of these two (2) groundwater monitoring wells, was the lowest ever recorded during the twenty month samplin period. High levels of dissolved hydrocarbons have historically been detected in MW-14. MW-14 continues to show the highest levels of dissolved hydrocarbons, although they are at the lowest levels recoreded during twenty month history of sampling the site. Low levels of dissolved hydrocarbons also appeared in MW-1, MW-2.MW-3. AST proposes to monitor the concentration of BTEX, MTBE, and total VOCs by collecting and analyzing groundwater samples frm Mw-1, MW-2, MW-3, Mw-11 and MW-14. ASR will continue to monitor the heterotrophic plate counts to determine the colony count for the bacteria. ASR will continue to document the downward of the residual contamination, to demonstrate that concentrations will continue to acceptable TAGM 4046 Groundwater Standards. 07/20/07-Sun: Review of the groundwater sampling report dated July 14, 2007 prepared by Advanced Site Restoration, LLC (ASR) indicated that the groundwater sample collected from MW-14 wells on 7/12/07 indicated a total BTEX concentration at 318 parts per billion (ppb), including Benzene concentration at 52 ppb, and MTBE concentration at 340 ppb. MW-14 has been historically the hot spot with highest BTEX and MTBE concentrations. Based on these low concentratiuons of BTEX and MTBE and continued downward trend in concentrations of BTEX and MTBE, the spill is closed and NFA letter will be issued. (Sun) 08/16/07-NFA letter was sent to RP and ASR. (Sun)

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	D004
Waste Description:	Arsenic
Waste Code:	D005
Waste Description:	Barium

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code:	D006
Waste Description:	Cadmium
Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D008
Waste Description:	Lead
Waste Code:	D018
Waste Description:	Benzene
Waste Code:	D019
Waste Description:	Carbon Tetrachloride
Waste Code:	D020
Waste Description:	Chlordane
Waste Code:	D021
Waste Description:	Chlorobenzene
Waste Code:	D022
Waste Description:	Chloroform
Waste Code:	D023
Waste Description:	O-Cresol
Waste Code:	D024
Waste Description:	M-Cresol
Waste Code:	D025
Waste Description:	P-Cresol
Waste Code:	D026
Waste Description:	Cresol
Waste Code:	D027
Waste Description:	1,4-Dichlorobenzene
Waste Code:	D028
Waste Description:	1,2-Dichloroethane
Waste Code:	D029
Waste Description:	1,1-Dichloroethylene
Waste Code:	D030
Waste Description:	2,4-Dinitrotoluene
Waste Code:	D031
Waste Description:	Heptachlor (And Its Epoxide)
Waste Code:	D032
Waste Description:	Hexachlorobenzene
Waste Code:	D033
Waste Description:	Hexachlorobutadiene

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: D034
Waste Description: Hexachloroethane

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: D036
Waste Description: Nitrobenzene

Waste Code: D038
Waste Description: Pyridine

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: D042
Waste Description: 2,4,6-Trichlorophenol

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These

RADIAC RESEARCH CORP (Continued) **1000245435**

Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F010
Waste Description: Quenching Bath Residues From Oil Baths From Metal Heat Treating Operations In Which Cyanides Are Used In The Process.

Waste Code: F011
Waste Description: Spent Cyanide Solutions From Slat Bath Pot Cleaning From Metal Heat Treating Operations.

Waste Code: F012
Waste Description: Quenching Wastewater Treatment Sludges From Metal Heat Treating Operations In Which Cyanides Are Used In The Process.

Waste Code: F019
Waste Description: Wastewater Treatment Sludges From The Chemical Conversion Coating Of Aluminum, Except From Zirconium Phosphating In Aluminum Can Washing When Such Phosphating Is An Exclusive Conversion Coating Process.

Waste Code: P001
Waste Description: 2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code:	P002
Waste Description:	1-Acetyl-2-Thiourea (Or) Acetamide, N-(Aminothioxomethyl)-
Waste Code:	P003
Waste Description:	2-Propenal (Or) Acrolein
Waste Code:	P004
Waste Description:	1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-Hexa-Chloro-1,4,4a,5,8,8a,-Hexahydro-, (1alpha, 4alpha, 4abeta, 5alpha, 8alpha, 8abeta)- (Or) Aldrin
Waste Code:	P005
Waste Description:	2-Propen-1-Ol (Or) Allyl Alcohol
Waste Code:	P006
Waste Description:	Aluminum Phosphide (R,T)
Waste Code:	P007
Waste Description:	3(2h)-Isoxazolone, 5-(Aminomethyl)- (Or) 5-(Aminomethyl)-3-Isoxazolol
Waste Code:	P008
Waste Description:	4-Aminopyridine (Or) 4-Pyridinamine
Waste Code:	P009
Waste Description:	Ammonium Picrate (R) (Or) Phenol, 2,4,6-Trinitro-, Ammonium Salt (R)
Waste Code:	P010
Waste Description:	Arsenic Acid H3aso4
Waste Code:	P011
Waste Description:	Arsenic Oxide As2o5 (Or) Arsenic Pentoxide
Waste Code:	P012
Waste Description:	Arsenic Oxide As2o3 (Or) Arsenic Trioxide
Waste Code:	P013
Waste Description:	Barium Cyanide
Waste Code:	P014
Waste Description:	Benzenethiol (Or) Thiophenol
Waste Code:	P015
Waste Description:	Beryllium
Waste Code:	P016
Waste Description:	Dichloromethyl Ether (Or) Methane, Oxybis[Chloro-
Waste Code:	P017
Waste Description:	2-Propanone, 1-Bromo- (Or) Bromoacetone
Waste Code:	P018
Waste Description:	Brucine (Or) Strychnidin-10-One, 2,3-Dimethoxy-
Waste Code:	P020
Waste Description:	Dinoseb (Or) Phenol, 2-(1-Methylpropyl)-4,6-Dinitro-
Waste Code:	P021

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Description: Calcium Cyanide (Or) Calcium Cyanide Ca(Cn)2

Waste Code: P022
Waste Description: Carbon Disulfide

Waste Code: P023
Waste Description: Acetaldehyde, Chloro- (Or) Chloroacetaldehyde

Waste Code: P024
Waste Description: Benzenamine, 4-Chloro- (Or) P-Chloraniline

Waste Code: P026
Waste Description: 1-(O-Chlorophenyl)Thiourea (Or) Thiourea, (2-Chlorophenyl)-

Waste Code: P027
Waste Description: 3-Chloropropionitrile (Or) Propanenitrile, 3-Chloro-

Waste Code: P029
Waste Description: Copper Cyanide (Or) Copper Cyanide Cu(Cn)

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: P031
Waste Description: Cyanogen (Or) Ethanedinitrile

Waste Code: P033
Waste Description: Cyanogen Chloride (Or) Cyanogen Chloride (Cn)Cl

Waste Code: P034
Waste Description: 2-Cyclohexyl-4,6-Dinitrophenol (Or) Phenol, 2-Cyclohexyl-4,6-Dinitro-

Waste Code: P036
Waste Description: Arsonous Dichloride, Phenyl- (Or) Dichlorophenylarsine

Waste Code: P037
Waste Description: 2,7:3,6-Dimethanonaphth[2,3-B]Oxirene, 3,4,5,6,9,9-Hexachloro-1a,2,2a,3,6,6a,7,7a-Octahydro-, (1aalpha, 2beta, 2aalpha, 3beta, 6beta, 6aalpha, 7beta, 7aalpha)- (Or) Dieldrin

Waste Code: P038
Waste Description: Arsine, Diethyl- (Or) Diethylarsine

Waste Code: P039
Waste Description: Disulfoton (Or) Phosphorodithioic Acid, O,O-Diethyl S-[2-(Ethylthio)Ethyl] Ester

Waste Code: P040
Waste Description: O,O-Diethyl O-Pyrazinyl Phosphorothioate (Or) Phosphorothioic Acid, O,O-Diethyl O-Pyrazinyl Ester

Waste Code: P041
Waste Description: Diethyl-P-Nitrophenyl Phosphate (Or) Phosphoric Acid, Diethyl 4-Nitrophenyl Ester

Waste Code: P042
Waste Description: 1,2-Benzenediol, 4-[1-Hydroxy-2-(Methylamino)Ethyl]-, (R)- (Or)

RADIAC RESEARCH CORP (Continued) **1000245435**

Epinephrine

Waste Code: P043
Waste Description: Diisopropylfluorophosphate (Dfp) (Or) Phosphorofluoridic Acid, Bis(1-Methylethyl) Ester

Waste Code: P044
Waste Description: Dimethoate (Or) Phosphorodithioic Acid, O,O-Dimethyl S-[2-(Methylamino)-2-Oxoethyl] Ester

Waste Code: P045
Waste Description: 2-Butanone, 3,3-Dimethyl-1-(Methylthio)-, O-[Methylamino)Carbonyl] Oxime (Or) Thiofanox

Waste Code: P046
Waste Description: Alpha,Alpha-Dimethylphenethylamine (Or) Benzeneethanamine, Alpha, Alpha-Dimethyl-

Waste Code: P047
Waste Description: 4,6-Dinitro-O-Cresol, & Salts (Or) Phenol, 2-Methyl-4,6-Dinitro-, & Salts

Waste Code: P048
Waste Description: 2,4-Dinitrophenol (Or) Phenol, 2,4-Dinitro-

Waste Code: P049
Waste Description: Dithiobiuret (Or) Thioimidodicarbonic Diamide [(H2n)C(S)]2nh

Waste Code: P050
Waste Description: 6,9-Methano-2,4,3-Benzodioxathiepin,6,7,8,9,10,10-Hexachloro-1,5,5a,6, 9,9a-Hexahydro-,3-Oxide (Or) Endosulfan

Waste Code: P051
Waste Description: 2,7:3,6-Dimethanonaphth[2,3-B]Oxirene, 3,4,5,6,9,9-Hexachloro-1a,2,2a,3,6,6a,7,7a-Octahydro-, (1aalpha, 2beta, 2abeta, 3alpha, 6alpha, 6abeta, 7beta, 7aalpha)- & Metabolites (Or) Endrin (Or) Endrin, & Metabolites

Waste Code: P054
Waste Description: Aziridine (Or) Ethyleneimine

Waste Code: P056
Waste Description: Fluorine

Waste Code: P057
Waste Description: Acetamide, 2-Fluoro- (Or) Fluoroacetamide

Waste Code: P058
Waste Description: Acetic Acid, Fluoro-, Sodium Salt (Or) Fluoroacetic Acid, Sodium Salt

Waste Code: P059
Waste Description: 4,7-Methano-1h-Indene, 1,4,5,6,7,8,8-Heptachloro-3a,4,7,7a-Tetrahydro- (Or) Heptachlor

Waste Code: P060
Waste Description: 1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-Hexa-Chloro-1,4,4a,5,8,8a,-Hexahydro-, (1alpha, 4alpha,

RADIAC RESEARCH CORP (Continued) **1000245435**

4abeta, 5beta, 8beta, 8abeta)- (Or) Isodrin

Waste Code: P062
Waste Description: Hexaethyl Tetraphosphate (Or) Tetraphosphoric Acid, Hexaethyl Ester

Waste Code: P063
Waste Description: Hydrocyanic Acid (Or) Hydrogen Cyanide

Waste Code: P064
Waste Description: Methane, Isocyanato- (Or) Methyl Isocyanate

Waste Code: P065
Waste Description: Fulminic Acid, Mercury(2+) Salt (R,T) (Or) Mercury Fulminate (R,T)

Waste Code: P066
Waste Description: Ethanimidothioic Acid, N-[[(Methylamino)Carbonyl]Oxy]-, Methyl Ester (Or) Methomyl

Waste Code: P067
Waste Description: 1,2-Propylenimine (Or) Aziridine, 2-Methyl-

Waste Code: P068
Waste Description: Hydrazine, Methyl- (Or) Methyl Hydrazine

Waste Code: P069
Waste Description: 2-Methyllactonitrile (Or) Propanenitrile, 2-Hydroxy-2-Methyl-

Waste Code: P070
Waste Description: Aldicarb (Or) Propanal, 2-Methyl-2-(Methylthio)-, O-[(Methylamino)Carbonyl]Oxime

Waste Code: P071
Waste Description: Methyl Parathion (Or) Phosphorothioic Acid, O,O,-Dimethyl O-(4-Nitrophenyl) Ester

Waste Code: P072
Waste Description: Alpha-Naphthylthiourea (Or) Thiourea, 1-Naphthalenyl-

Waste Code: P073
Waste Description: Nickel Carbonyl (Or) Nickel Carbonyl Ni(Co)4, (T-4)-

Waste Code: P074
Waste Description: Nickel Cyanide (Or) Nickel Cyanide Ni(Cn)2

Waste Code: P075
Waste Description: Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts

Waste Code: P076
Waste Description: Nitric Oxide (Or) Nitrogen Oxide No

Waste Code: P077
Waste Description: Benzenamine, 4-Nitro- (Or) P-Nitroaniline

Waste Code: P078
Waste Description: Nitrogen Dioxide (Or) Nitrogen Oxide No2

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code:	P081
Waste Description:	1,2,3-Propanetriol, Trinitrate (R) (Or) Nitroglycerine (R)
Waste Code:	P082
Waste Description:	Methanimine, N-Methyl-N-Nitroso- (Or) N-Nitrosodimethylamine
Waste Code:	P084
Waste Description:	N-Nitrosomethylvinylamine (Or) Vinylamine, N-Methyl-N-Nitroso-
Waste Code:	P085
Waste Description:	Diphosphoramide, Octamethyl- (Or) Octamethylpyrophosphoramide
Waste Code:	P087
Waste Description:	Osmium Oxide Oso4, (T-4)- (Or) Osmium Tetroxide
Waste Code:	P088
Waste Description:	7-Oxabicyclo[2.2.1]Heptane-2,3-Dicarboxylic Acid (Or) Endothall
Waste Code:	P089
Waste Description:	Parathion (Or) Phosphorothioic Acid, O,O-Diethyl-O-(4-Nitrophenyl) Ester
Waste Code:	P092
Waste Description:	Mercury, (Acetato-O)Phenyl- (Or) Phenylmercury Acetate
Waste Code:	P093
Waste Description:	Phenylthiourea (Or) Thiourea, Phenyl-
Waste Code:	P094
Waste Description:	Phorate (Or) Phosphorodithioic Acid, O,O-Diethyl S-[(Ethylthio)Methyl] Ester
Waste Code:	P095
Waste Description:	Carbonic Dichloride (Or) Phosgene
Waste Code:	P096
Waste Description:	Hydrogen Phosphide (Or) Phosphine
Waste Code:	P097
Waste Description:	Famphur (Or) Phosphorothioic Acid O-[4-[(Dimethylamino)Sulfonyl]Phenyl] O,O-Dimethyl Ester
Waste Code:	P098
Waste Description:	Potassium Cyanide (Or) Potassium Cyanide K(Cn)
Waste Code:	P099
Waste Description:	Argentate (1-), Bis(Cyano-C)-, Potassium (Or) Potassium Silver Cyanide
Waste Code:	P101
Waste Description:	Ethyl Cyanide (Or) Propanenitrile
Waste Code:	P102
Waste Description:	2-Propyn-1-Ol (Or) Propargyl Alcohol
Waste Code:	P103
Waste Description:	Selenourea

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: P104
Waste Description: Silver Cyanide (Or) Silver Cyanide Ag(Cn)

Waste Code: P105
Waste Description: Sodium Azide

Waste Code: P106
Waste Description: Sodium Cyanide (Or) Sodium Cyanide Na(Cn)

Waste Code: P107
Waste Description: Strontium Sulfide Srs

Waste Code: P108
Waste Description: Strychnidin-10-One, & Salts (Or) Strychnine, & Salts

Waste Code: P109
Waste Description: Tetraethyldithiopyrophosphate (Or) Thiodiphosphoric Acid, Tetraethyl Ester

Waste Code: P110
Waste Description: Plumbane, Tetraethyl- (Or) Tetraethyl Lead

Waste Code: P111
Waste Description: Diphosphoric Acid, Tetraethyl Ester (Or) Tetraethyl Pyrophosphate

Waste Code: P112
Waste Description: Methane, Tetranitro- (R) (Or) Tetranitromethane (R)

Waste Code: P113
Waste Description: Thallic Oxide (Or) Thallium Oxide Tl2o3

Waste Code: P114
Waste Description: Selenious Acid, Dithallium (1+) Salt (Or) Thallium(I) Selenite

Waste Code: P115
Waste Description: Sulfuric Acid, Dithallium (1+) Salt (Or) Thallium(I) Sulfate

Waste Code: P116
Waste Description: Hydrazinecarbothioamide (Or) Thiosemicarbazide

Waste Code: P118
Waste Description: Methanethiol, Trichloro- (Or) Trichloromethanethiol

Waste Code: P119
Waste Description: Ammonium Vanadate (Or) Vanadic Acid, Ammonium Salt

Waste Code: P120
Waste Description: Vanadium Oxide V2o5 (Or) Vanadium Pentoxide

Waste Code: P121
Waste Description: Zinc Cyanide (Or) Zinc Cyanide Zn(Cn)2

Waste Code: P122
Waste Description: Zinc Phosphide Zn3p2, When Present At Concentrations Greater Than 10% (R,T)

Waste Code: P123

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Description:	Toxaphene
Waste Code:	U001
Waste Description:	Acetaldehyde (I) (Or) Ethanal (I)
Waste Code:	U002
Waste Description:	2-Propanone (I) (Or) Acetone (I)
Waste Code:	U012
Waste Description:	Aniline (I,T) (Or) Benzenamine (I,T)
Waste Code:	U014
Waste Description:	Auramine (Or) Benzenamine, 4,4'-Carbonimidoylbis[N,N-Dimethyl-
Waste Code:	U015
Waste Description:	Azaserine (Or) L-Serine, Diazoacetate (Ester)
Waste Code:	U016
Waste Description:	Benz[C]Acridine
Waste Code:	U017
Waste Description:	Benzal Chloride (Or) Benzene, (Dichloromethyl)-
Waste Code:	U018
Waste Description:	Benz[A]Anthracene
Waste Code:	U019
Waste Description:	Benzene (I,T)
Waste Code:	U020
Waste Description:	Benzenesulfonic Acid Chloride (C,R) (Or) Benzenesulfonyl Chloride (C,R)
Waste Code:	U021
Waste Description:	[1,1'-Biphenyl]-4,4'-Diamine (Or) Benzidine
Waste Code:	U022
Waste Description:	Benzo[A]Pyrene
Waste Code:	U023
Waste Description:	Benzene, (Trichloromethyl)- (Or) Benzotrichloride (C,R,T)
Waste Code:	U024
Waste Description:	Dichloromethoxy Ethane (Or) Ethane, 1,1'-[Methylenebis(Oxy)]Bis[2-Chloro-
Waste Code:	U025
Waste Description:	Dichloroethyl Ether (Or) Ethane, 1,1'-Oxybis[2-Chloro-
Waste Code:	U026
Waste Description:	Chlornaphazin (Or) Naphthalenamine, N,N'-Bis(2-Chloroethyl)-
Waste Code:	U027
Waste Description:	Dichloroisopropyl Ether (Or) Propane, 2,2'-Oxybis[2-Chloro-
Waste Code:	U028
Waste Description:	1,2-Benzenedicarboxylic Acid, Bis(2-Ethylhexyl) Ester (Or)

RADIAC RESEARCH CORP (Continued) **1000245435**

Diethylhexyl Phthalate

Waste Code: U029
Waste Description: Methane, Bromo- (Or) Methyl Bromide

Waste Code: U030
Waste Description: 4-Bromophenyl Phenyl Ether (Or) Benzene, 1-Bromo-4-Phenoxy-

Waste Code: U031
Waste Description: 1-Butanol (I) (Or) N-Butyl Alcohol (I)

Waste Code: U032
Waste Description: Calcium Chromate (Or) Chromic Acid H2cro4, Calcium Salt

Waste Code: U033
Waste Description: Carbon Oxyfluoride (R,T) (Or) Carbonic Difluoride

Waste Code: U034
Waste Description: Acetaldehyde, Trichloro- (Or) Chloral

Waste Code: U035
Waste Description: Benzenebutanoic Acid, 4-[Bis(2-Chloroethyl)Amino]- (Or) Chlorambucil

Waste Code: U036
Waste Description: 4,7-Methano-1h-Indene,
1,2,4,5,6,7,8,8-Octachloro-2,3,3a,4,7,7a-Hexahydro- (Or) Chlordane,
Alpha & Gamma Isomers

Waste Code: U037
Waste Description: Benzene, Chloro- (Or) Chlorobenzene

Waste Code: U038
Waste Description: Benzeneacetic Acid, 4-Chloro-Alpha-(4-Chlorophenyl)-Alpha-Hydroxy-,
Ethyl Ester (Or) Chlorobenzilate

Waste Code: U039
Waste Description: P-Chloro-M-Cresol (Or) Phenol, 4-Chloro-3-Methyl-

Waste Code: U041
Waste Description: Epichlorohydrin (Or) Oxirane, (Chloromethyl)-

Waste Code: U042
Waste Description: 2-Chloroethyl Vinyl Ether (Or) Ethene, (2-Chloroethoxy)-

Waste Code: U043
Waste Description: Ethene, Chloro- (Or) Vinyl Chloride

Waste Code: U044
Waste Description: Chloroform (Or) Methane, Trichloro-

Waste Code: U045
Waste Description: Methane, Chloro- (I,T) (Or) Methyl Chloride (I,T)

Waste Code: U046
Waste Description: Chloromethyl Methyl Ether (Or) Methane, Chloromethoxy-

Waste Code: U047

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Description: Beta-Chloronaphthalene (Or) Naphthalene, 2-Chloro-

Waste Code: U048
Waste Description: O-Chlorophenol (Or) Phenol, 2-Chloro-

Waste Code: U049
Waste Description: 4-Chloro-O-Toluidine, Hydrochloride (Or) Benzenamine, 4-Chloro-2-Methyl-, Hydrochloride

Waste Code: U050
Waste Description: Chrysene

Waste Code: U051
Waste Description: Creosote

Waste Code: U052
Waste Description: Cresol (Cresylic Acid) (Or) Phenol, Methyl-

Waste Code: U053
Waste Description: 2-Butenal (Or) Crotonaldehyde

Waste Code: U055
Waste Description: Benzene, (1-Methylethyl)- (I) (Or) Cumene (I)

Waste Code: U056
Waste Description: Benzene, Hexahydro- (I) (Or) Cyclohexane (I)

Waste Code: U057
Waste Description: Cyclohexanone (I)

Waste Code: U058
Waste Description: 2h-1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide

Waste Code: U059
Waste Description: 5,12-Naphthacenedione, 8-Acetyl-10-[(3-Amino-2,3,6-Trideoxy)-Alpha-L-Lyxo-Hexopyranosyl)Oxy]-7,8,9,10-Tetrahydro-6,8,11-Trihydroxy-1-Methoxy-, (8s-Cis)- (Or) Daunomycin

Waste Code: U060
Waste Description: Benzene, 1,1'-(2,2-Dichloroethylidene)Bis[4-Chloro- (Or) Ddd

Waste Code: U061
Waste Description: Benzene, 1,1'-(2,2,2-Trichloroethylidene)Bis[4-Chloro- (Or) Ddt

Waste Code: U062
Waste Description: Carbamothioic Acid, Bis(1-Methylethyl)-, S-(2,3-Dichloro-2-Propenyl) Ester (Or) Diallate

Waste Code: U063
Waste Description: Dibenz[A,H]Anthracene

BROWNFIELDS:

Name:	FORMER DRIGGS PLYWOOD CORP. - OFF-SITE
Address:	11 JACKSON STREET
City,State,Zip:	BROOKLYN, NY 11211
Program:	BCP
Site Code:	508516
Acres:	Not reported
HW Code:	C224178A
SWIS:	2401
Town:	New York City
Record Added Date:	06/01/2015
Record Updated Date:	10/21/2019
Update By:	GWBURKE
Site Description:	Location: Former Driggs Plywood off-site is an undefined area near the on-site area where additional investigation is planned. The off-site area is within a residential area immediately north of the Former Driggs Plywood (Driggs) Brownfield site at 11 Jackson Street in the Williamsburg section of Brooklyn (Kings County). Site Features: The site is a urban residential area of single-family houses immediately north of Driggs. Current Zoning and Land Use: Jackson Street intersects with Meeker Avenue at the southeast corner of the site. Meeker Avenue is a commercial corridor that runs under the Brooklyn-Queens Expressway. Immediately north and behind the site is a street of single family homes. Nearby, there is significant redevelopment that is occurring or has recently been completed that largely consists of multi-story, multi-unit residential buildings. Past Use of the Site: The on-site area was first developed sometime prior to 1887 as three residential lots. Circa 1962 until about 1973, Driggs Plywood operated at the site. From the early 1950s through 2007 the three lots were combined as one and occupied by a building labeled lumber storage that encompassed the entire lot. Arnmart Beer Distributors occupied a portion of the site in the late 1990s and Car Fashion Seat Covers operated on site in the 2000s. The building is currently vacant but was most recently occupied by a charter bus maintenance/repair garage in the western half of lot and a metal fabrication shop on the east. Site Geology and Hydrogeology: Subsurface soils at Driggs include a mixture of silty non-native fill to approximately 6 feet below grade followed by sandy-silt to approximately 10 feet below grade. Groundwater table at the site is approximately 8 feet below surface grade within the native silty-sand. Based upon regional contour maps groundwater flow is expected to be west toward the East River.
Env Problem:	Nature and Extent of Contamination: Relative to the on-site area of the Former Driggs Plywood BCP site, various VOCs were detected in on-site soil vapor. PCE and TCE were detected at maximum concentrations of 8,270 g/M3 and 12,300 g/M3, respectively. No off-site investigation work has been conducted yet. The on-site soil and groundwater data don t show evidence of significant contamination, but the elevated VOCs in soil vapor indicate the potential for an as-yet undetected on-site source. Soil vapor samples will be collected on-site following remediation of the on-site area; based on that data it will be determined if off-site soil vapor sampling is needed.

FORMER DRIGGS PLYWOOD CORP. - OFF-SITE (Continued) **S128906187**

Health Problem:	People are not drinking contaminated groundwater because the area is served by a public water supply not affected by the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion represents a concern for on and off-site structures and additional evaluation is necessary to determine the potential for exposure to contamination in this media.

Updated By:	MDMACCAB
Site Description:	Location: The BCP site is located in the Williamsburg section of Brooklyn (Kings County) at 11 Jackson Street at the intersection with Meeker Avenue where it runs under the Brooklyn-Queens Expressway. Site Features: Prior to redevelopment, the site contained one one-story building covered the entire 0.20 acre site. Redevelopment consisted of construction of a eight-story multi-family apartment building with surface parking behind the building. Current Zoning and Land Use: The site is zoned R6-Residential. In 2005 the site was rezoned from M1-2 industrial to R6-Residential as part of the Greenpoint-Williamsburg Rezoning Action to provide opportunities for the development of residential uses on underutilized and vacant land and legalize existing non-conforming uses. Jackson Street intersects with Meeker Avenue at the southeast corner of the site. Meeker Avenue is a commercial corridor that runs under and parallel to the Brooklyn-Queens Expressway. Immediately north and behind the site is a street of single family homes. Nearby, there is significant redevelopment that is ongoing or has recently been completed that largely consists of multi-story, multi-unit residential buildings. Past Use of the Site: The site was first developed sometime prior to 1887 as three residential lots. Circa 1962 until about 1973, Driggs Plywood operated at the site. From the early 1950s through 2007 the three lots were combined as one and occupied by a building labeled lumber storage that encompassed the entire lot. Arnmart Beer Distributors occupied a portion of the site in the late 1990s and Car Fashion Seat Covers operated on site in the 2000s. Prior to redevelopment, the site was most recently occupied by a bus maintenance facility in the western half of the lot and a metal fabrication shop on the east. Site Geology and Hydrogeology: Subsurface soils at the site include a mixture Groundwater table at the site is approximately 8 feet below surface grade within the native silty-sand. Groundwater flow is generally westerly toward the East River.
Env Problem:	Nature and Extent of Contamination: Remediation of the site is complete. The remedial action consisted of excavation across the entire site to approximately five feet below grade. Post excavation confirmatory sampling showed that on-site meets Track 2, restricted residential use soil cleanup objectives to a depth of at least 15 feet. There were three monitoring wells at the site; one compound, bis(2-ethylhexyl)phthalate, was detected in groundwater just above its groundwater standard. Only one other semi-volatile organic compound (SVOC) and two VOCs (MTBE and PCE) were detected in groundwater, but at concentrations well below their respective standards. In the filtered groundwater samples analyzed for metals, only naturally occurring iron, sodium, magnesium and manganese were above standards.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 483489
Site Description: Location: The BCP site is located in the Williamsburg section of Brooklyn (Kings County) at 11 Jackson Street at the intersection with Meeker Avenue where it runs under the Brooklyn-Queens Expressway. Site Features: Prior to redevelopment, the site contained one one-story building covered the entire 0.20 acre site. Redevelopment consisted of construction of a eight-story multi-family apartment building with surface parking behind the building. Current Zoning and Land Use: The site is zoned R6-Residential. In 2005 the site was rezoned from M1-2 industrial to R6-Residential as part of the Greenpoint-Williamsburg Rezoning Action to provide opportunities for the development of residential uses on underutilized and vacant land and legalize existing non-conforming uses. Jackson Street intersects with Meeker Avenue at the southeast corner of the site. Meeker Avenue is a commercial corridor that runs under and parallel to the Brooklyn-Queens Expressway. Immediately north and behind the site is a street of single family homes. Nearby, there is significant redevelopment that is ongoing or has recently been completed that largely consists of multi-story, multi-unit residential buildings. Past Use of the Site: The site was first developed sometime prior to 1887 as three residential lots. Circa 1962 until about 1973, Driggs Plywood operated at the site. From the early 1950s through 2007 the three lots were combined as one and occupied by a building labeled lumber storage that encompassed the entire lot. Arnmart Beer Distributors occupied a portion of the site in the late 1990s and Car Fashion Seat Covers operated on site in the 2000s. Prior to redevelopment, the site was most recently occupied by a bus maintenance facility in the western half of the lot and a metal fabrication shop on the east. Site Geology and Hydrogeology: Subsurface soils at the site include a mixture Groundwater table at the site is approximately 8 feet below surface grade within the native silty-sand. Groundwater flow is generally westerly toward the East River.
Env Problem: Nature and Extent of Contamination: Remediation of the site is complete. The remedial action consisted of excavation across the entire site to approximately five feet below grade. Post excavation confirmatory sampling showed that on-site meets Track 2, restricted residential use soil cleanup objectives to a depth of at least 15 feet. There were three monitoring wells at the site; one compound, bis(2-ethylhexyl)phthalate, was detected in groundwater just above its groundwater standard. Only one other semi-volatile organic compound (SVOC) and two VOCs (MTBE and PCE) were detected in groundwater, but at concentrations well below their respective standards. In the filtered groundwater samples analyzed for metals, only naturally occurring iron, sodium, magnesium and manganese were above standards.
Health Problem: Remedial actions are complete and measures are in place to control

Site Code: 483489
Site Description: Location: The BCP site is located in the Williamsburg section of Brooklyn (Kings County) at 11 Jackson Street at the intersection with Meeker Avenue where it runs under the Brooklyn-Queens Expressway. Site Features: Prior to redevelopment, the site contained one one-story building covered the entire 0.20 acre site. Redevelopment consisted of construction of a eight-story multi-family apartment building with surface parking behind the building. Current Zoning and Land Use: The site is zoned R6-Residential. In 2005 the site was rezoned from M1-2 industrial to R6-Residential as part of the Greenpoint-Williamsburg Rezoning Action to provide opportunities for the development of residential uses on underutilized and vacant land and legalize existing non-conforming uses. Jackson Street intersects with Meeker Avenue at the southeast corner of the site. Meeker Avenue is a commercial corridor that runs under and parallel to the Brooklyn-Queens Expressway. Immediately north and behind the site is a street of single family homes. Nearby, there is significant redevelopment that is ongoing or has recently been completed that largely consists of multi-story, multi-unit residential buildings. Past Use of the Site: The site was first developed sometime prior to 1887 as three residential lots. Circa 1962 until about 1973, Driggs Plywood operated at the site. From the early 1950s through 2007 the three lots were combined as one and occupied by a building labeled lumber storage that encompassed the entire lot. Arnmart Beer Distributors occupied a portion of the site in the late 1990s and Car Fashion Seat Covers operated on site in the 2000s. Prior to redevelopment, the site was most recently occupied by a bus maintenance facility in the western half of the lot and a metal fabrication shop on the east. Site Geology and Hydrogeology: Subsurface soils at the site include a mixture Groundwater table at the site is approximately 8 feet below surface grade within the native silty-sand. Groundwater flow is generally westerly toward the East River.
Env Problem: Nature and Extent of Contamination: Remediation of the site is complete. The remedial action consisted of excavation across the entire site to approximately five feet below grade. Post excavation confirmatory sampling showed that on-site meets Track 2, restricted residential use soil cleanup objectives to a depth of at least 15

FORMER DRIGGS PLYWOOD CORP. (Continued) **S108076630**

feet. There were three monitoring wells at the site; one compound, bis(2-ethylhexyl)phthalate, was detected in groundwater just above its groundwater standard. Only one other semi-volatile organic compound (SVOC) and two VOCs (MTBE and PCE) were detected in groundwater, but at concentrations well below their respective standards. In the filtered groundwater samples analyzed for metals, only naturally occurring iron, sodium, magnesium and manganese were above standards.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Name:	BQE/ANSBACHER COLOR & DYE FACTORY
Address:	MEEKER AVENUE
City,State,Zip:	BROOKLYN, NY
Program:	HW
Site Code:	55913
Classification:	Does not present a significant threat to the public health or the environment - action may be deferred.
Region:	2
Acres:	0.600
HW Code:	224016
Record Add:	11/18/1999
Record Upd:	08/01/2022
Updated By:	JHOCONNE

Site Description: Location: The site is located in the Williamsburg section of Brooklyn. The site is bounded by Havemeyer Street to the northwest, North 6th Street to the southwest, Macri Triangle park to the southeast, and North 8th Street to the northeast. Site Features: The site is completely covered with buildings in the northwest section; and covered with asphalt, concrete, and open park space in the southeast section. The site is bisected by an elevated portion of I-278 (the Brooklyn-Queens Expressway (BQE)) adjacent to the park.The former footprint of the Ansbacher Color and Dye Factory was identified to extend to Lot 9, Lot 20, Lot 45, portions of I-278 (Brooklyn Queens Expressway (BQE) and parts of Marci Triangle park. Current Zoning and Land Use(s): The site is zoned for residential, manufacturing, and commercial uses. The residential area is in the northwest section of the site. The manufacturing building along Meeker Avenue is unoccupied. Past Use of the Site: According to Sanborn maps, the former Ansbacher Color and Dye Factory (Ansbacher)

BQE/ANSBACHER COLOR & DYE FACTORY (Continued) **S106780917**

occupied multiple buildings along North 6th Street, North 7th Street, and Metropolitan Avenue from ~1887 to ~1945. The assumed use of the facility was to manufacture paints and/or pigments for commercial and industrial use. In the early 1950's, the buildings in the southeastern section of the site were torn down to make room for the construction of the BQE. It is believed that during this construction, waste material and debris from the former Ansbacher plant may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation (NYSDOT) in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed by the New York State Department of Environmental Conservation (NYSDEC) during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. In 2015, the NYSDEC initiated an investigation on the perimeter of the site to identify the origin of chlorinated solvents found in groundwater beneath the sidewalk as part of routine sampling. Site Geology and Hydrogeology: The site is underlain by fine to medium sands; with limited quantities of coarse sand, gravel, and silt throughout the site at varying intervals. Groundwater is approximately 9.5 - 12.5' below grade. Flow direction in shallow groundwater is toward the west-southwest, while deeper groundwater appears to flow towards the east. (This may be due to the presence of the L train subway tunnel underneath North 7th Street.)

Env Problem: Nature and Extent of Contamination: - Soil Sampling was completed in multiple stages from 1988 to 1999. The primary contaminants of concern in soil at this site are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 7,500 ppm, well above the cleanup objective for commercial use (16 ppm). This soil failed for EP Toxicity (48 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Lead has been found at concentrations up to 10,600 ppm, well above the cleanup objective for commercial use (1,000 ppm). This soil failed for EP Toxicity (20.3 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Mercury was also found at concentrations up to 294 ppm, well above the cleanup objective for commercial use (2.8 ppm). These concentrations were all found in the vicinity of the Arsenate Of Lead building in the southeast area of the site, which is now located in the footprint of the BQE. - Groundwater Sampling has been completed in multiple stages from 1988 to 2015. The primary contaminants of concern in groundwater are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 15,500 ppb, well above the Class GA standard of 25 ppb. Lead has been found at concentrations up to 431 ppb, above the Class GA standard of 25 ppb. Mercury has been found at concentrations up to 75 ppb, well above the Class GA standard of 0.7 ppb. These concentrations were all found in the vicinity of the Arsenate Of Lead building in the southeast area of the site, which is now located in the footprint of the BQE. In 2015, groundwater in the northwest

BQE/ANSBACHER COLOR & DYE FACTORY (Continued) **S106780917**

	portion of the site was also found to contain tetrachloroethene (PCE) up to 1,900 ppb, trichloroethene (TCE) up to 120 ppb, and cis-1,2-dichloroethene (DCE) up to 320 ppb. PCE, TCE, and DCE all have a Class GA standard of 5 ppb. Significant Threat: The site does not constitute a significant threat to human health or the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. Portions of the former factory have been redeveloped into commercial/residential buildings.
Health Problem:	Residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt, thereby preventing direct contact. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Groundwater in the area is not used, since public water is available. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was K FOLEY 3/14/03 REASSIGNED FROM TIBBE TO VOUGHT. 12/1/03 Transferred from Vought to Foley. 10/16/06 reassigned from Foley to Tang. (Sun) 11/06/08: This spill case transferred from K. Tang to J. Kolleeny. Recommended to Vadim Brevdo that this spill be added to MTBE Pilot Project, Vadim agreed. - J. Kolleeny 02/05/09: Contacted Jay Semelmacher (emergency contact on PBS form, #2-247405). He didn't have any information regarding the site and suggested sending a letter to Spartan Petroleum. Spartan Petroleum Corp. 333 New Hyde Park Road Suite 201 New Hyde Park, NY 11042 (JK/KG) 02/09/09: Letter sent to Spartan requiring: 1. Tank closure assessment report, 2. Explanation of the cause of the release, 3. Subsurface investigation report, including a site location map and a site plan showing the former and current locations of underground storage tanks and soil and groundwater sampling locations. A North arrow and scale bar must be included on the site plan. If no tank closure report was prepared or no subsurface investigation previously conducted, the Department requires that a work plan for a site assessment including a soil and groundwater investigation be prepared and submitted. The work plan should include a site location map and a site plan showing proposed soil and groundwater sampling locations, as well as current and former tank locations. A North arrow and scale bar must be included on the site plan. Report due 03/19/2009. (JK/KG) 02/12/09: Rec'd letter dated 02/10/2009 from Kevin Kleaka of Impact Environmental stating that this spill has already been closed. Included was the UST Closure Report prepared by Impact dated 10/6/2004 and the No Further Action Letter dated 10/7/2004. Upon review of the documents, the spill was closed by Kevin Hale (central office) in 2004. At that time, this spill was not closed in the NYSDEC database. The spill is now closed in the database and the UST closure report and NFA letter have been uploaded to eDocs. (JK/KG)

Remarks: GEO PROBE SURVEY ON SITE, FOUND CONTAMINATION.

Spiller Address:	243 MEEKER AVE
Spiller Company:	999
Contact Name:	CHARLIE SOSIK
DEC Memo:	5/7/2012 - KGH Spoke to Charlie Sossik of EBC. Site is a vacant gas station (over a decade) and the site of closed spill #9414922. Residual soil contamination encountered outside the footprint of former excavation during Phase Two Investigation for prospective buyer. Photo of site from Google Earth entered into EDOCs. According to EBC groundwater beneath the site was clean providing further evidence that remedial efforts at the site were largely successful. For further information please refer to spill # 9414922. Spill Closed. KGH
Remarks:	old gas station - large amount in soil - history spill - clean up pending - underground tanks - were removed a while ago old spill # 94-14922

DEC Memo:	01/27/2006 Kuldeep received the Fax from Brumer, but again information not adequate and need more follow up. 01/23/2006 Kuldeep sent a letterfor more information. 01/09/2006 Kuldeep Gupta- Facility Faxed on -01/06/2006 copy of consent Order. Region 2 Nick Lombardo on 01/09/2006 Faxed Report of 5000 gallon Tank Test report of 01/05/2004. 01/06/06 Kuldeep Gupta talked to Ms. Jill Huey and she need a letter in writing what document we need. She wanted to fax it at 1-718-486-6862. DEC Faxed the letter as requested. Kuldeep discussed with Philip Lodico Senior Attorney DEC and found Consent order signed on 03/24/2003 for not this spill. Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE Does not appear on PBS database. Called Jill Huey. She stated that she received a Consent Order to bring the facility in compliance with state laws. The tank is 5000 gallons. 3/11/2003 ars. DEC Sigona sent TTF notice on March 14, 2003. 9/11/06 This case was transfered from Albany to Region 2. Zhune spoke to Jill Huey (ph: 718-9052) She doesn't want phone calls. She wants every thing by writing. 9/11/06 A TTF letter was sending to : Jill Huey 498 Leonard Street Brooklyn, NY 11222 09/18/06 Ms. Huey sent a package of documents the passing tank test from 2003 was missing. 09/19/06 I sent a letter requesting her the tank test results from 2003. 09/22/03 Ms. Huey sent a package of 8 pages including the passing tank test results from 2003, letters stated the fallowing: The system test passed. After the system test failed in October due to a vent bad line, we decided to replace all pipes just to be sure we would pass. Also we would like to convey to your department that no contamination was detected in our system. What was the cause of the tank test failure on March 3, 2003? Water in tank issue. Piping needed to be replaced was replaced and systems test passed as a result of replacement. 09/27/06 This case was closed for V. Zhune in accordance with J. Vought.

Contact Name:	EZGY KARAYEL
DEC Memo:	Sangesland spoke to Ezgy (As-Gee). (See eDocs for Phase 2 Report) She said the property is a 2 story industrial building being sold to a developer who will tear it down for a new residential building. City has placed an e-designation on the property because it’s changing from industrial to residential. Problem is associated with leaking from a 5,000 gal buried oil tank. Hydro Tech was hired by the potential buyer and found contamination. Hydro Tech will continue to work on the site and come up with a plan to solve the spill problems and close them out. 6/12/13-Vought-Received call from and spoke to OER Chawla (212-442-3007) and the groundwater is 12-13’bg and proposed full excavation to the water table as part of redevelopment however contamination extends down to 30’bg. They are willing to do additional remedial action but would not like to excavate into groundwater and developer needs to decide by today or he will walk away. Three other developers walked away

BRUMAR SHEET METAL INC (Continued) **S108076226**

from site (was previously HydroTech). Former use of site is a plating site. Site was discussed with
DEC Cozzy as per Chawla and Cozzy noted that it did not qualify for State BCP and Cozzy did talk to
Demeo re site as per OER Chawla. Vought spoke to DEC Demeo and this spill transferred from Demeo to
Patel for followup. 06/12/13-Hiralkumar Patel. little 'E' desgination for Hazmat ----------
alternate address: 498-502 Leonard Street PBS #: 2-608752. as per PBS record, the site has oe 5,000
gal #2 oil UST, in-service, installed in Jan. 1929. tank system was tested on 01/20/2010. other
spills: 0212132, 1206982 spill # 0212132 was reported on 03/10/2003 due to tank test failure. tank
system failed test due to bad vent line. lines were changed and system passed. no contamination
found. case closed. spill # 1206982 was reported on 10/16/2012 due to tank test failure of 5,000
gal #2 oil UST. case is still open. 2:02 PM:- left message for Mr. Chawla at NYC OER. asked him to
submit available reports. 2:39 PM:- received email from William Wong from NYC OER including link to
reports. William H. Wong Ph. (212) 341-0659 Fax (212) 788-1482 email: WiWong@dep.nyc.gov reviewed
available information:

n-Propylbenzene--------3,700--------270-----12,000------2,900 3) 12/13/2012: DEC Demeo sent letter
requiring documents regarding tank test failure. 4) 02/12/2013: Phase I Environmental Site
Assessment: - proposed plan is to demolish the existing structure and construct a multi-story
residential building that includes a 65 ft by 74 ft basement - the building was purchased in 1979
and turned into a steel manufacturing company, but this is not indicated on the map
---------- 5) 06/24/2013: Remedial Investigation Report: - Phase II conducted by Hydrotech in
Oct. 2012 identified the presence of elevated SVOCs, metals and pesticides in surficial soil
samples collected from the depth of 0-2 ft bg and elevated VOCs, SVOCs, metals and pesticides in
soil samples collected from 10-12 ft bg - in Oct. 2012, Hydrotech installed 13 wells on the site
and adjacent sidewalk. groundwater table elevations were measured between 14.77 and 15.71 ft
---------- - stratigraphy of the site from surface down consists of a layer of historic fill
material from approx. 0 to 12 ft bg, sand, gravel and silty with heavy petroleum impacts from 12-16
ft bg, visible petroleum staining from 16-30 ft bg in the area of the UST and an impacted layer of
highly compressible organic peat, clay and silt from 16-28 ft bg and highly compressible layer of
clay/silt at approx. 28-34 ft bg - schools within 0.2 miles to the south ---------- - in Feb.
2013, GRANT installed five soil borings (SB-01 to SB-05) surrounding the UST in the southwest
portion of the site and only visual inspection of the borings were performed (no samples were
collected) ---------- - in Apr. 2013, GRANT installed seven soil borings (SB-06 to SB-12) across
the entire site and collected 19 soil samples; 7 of 19 soil samples

BRUMAR SHEET METAL INC (Continued) **S108076226**

were analyzed for finger
printing - borings SB-01 through SB-12 exhibited visual evidence of a petroleum discoloration layer
from approx. 4 to 30 ft bg and free product observed from approx. 10 to 12 ft bg - free product
noted on between 12 and 24 ft bg in borings SB-02, SB-03, SB-04 and SB-05, these borings were
located around the UST ---------- - elevated PID readings were observed ranging from 455 ppm to
895 ppm in borings SB-7 through SB-12 - in Apr. 2013, GRANT installed 3 temporary wells (TWP-01 to
TWP-03) towards the northwestern, northeastern and southeastern portions of the site, respectively
- temporary wells were installed to a depth of 20 ft bg, with 10 ft of screen (means there were no
screen above water table) ---------- - in Apr. 2013, GRANT installed 3 soil vapor probes (SVP-01
to SVP-03) and collected 3 samples - depth to groundwater was present at approx. 10 ft bg
---------- - groundwater flow direction is generally from the south towards the north
---------- - found mostly sec/n/tert-Butylbenzene in soil samples - high metals found in samples
--*-

BRUMAR SHEET METAL INC (Continued) **S108076226**

about installation of wells. asked him to submit property owner's contact info, missing appendices of Feb. 2013 Phase I and investigation report for work done by HydroTech in Oct. 2013. discussed with DEC Jane regarding metal/PCBs in soil/groundwater samples. she and DEC Cozzy have discussed data with Mr. Chawla and NYC OER will manage remediation of metal/PCB contamination. 11:20 AM:- spoke with Mr. Fung, property owner. he mentioned that they are planning to build a four (4) story apartment building with one-level basement. the basement floor will be at 7.5 ft bg. they will excavate site to 10 ft bg for foundation work. currently, there is a vacant one-story warehouse at the site. scheduled a site inspection at 10:30 AM on 12/09/13. East Star Realty LLC. **property owner** 1740 East 27th Street Brooklyn, NY 11229 Attn.: Tin See Fung PH. (917) 662-3803 email: jacktinfung@gmail.com 12/09/13-Hiralkumar Patel. 10:20 AM:- visited site. met Mr. Fung. found multiple wells on-site. the tank is located under the floor, in area of one of the rolling door. found fill port and vent pipe at the foundation wall. suggested Mr. Fung to pump out the tank and seal the fill port to prevent any misdelivery and possible spill from tank. asked Mr. Fung to gauge all the wells and implement IRM, if product exists in well. he will contact his environmental contractor. found RAWP on NYC OER website. abstract of RAWP: - proposed plan to demolish the existing structure and construct a multi-story residential building that is expected to include a 65 ft by 74 ft cellar - the proposed building is planned to constructed starting from the property line along the length of Leonard St and extending east - depth to groundwater was present at approx. 10 ft bg - HydroTech installed thirteen (13) monitoring wells - wells were surveyed and groundwater table elevations were measured between 14.77 and 15.71 ft - groundwater flow direction is generally from the south towards the north - soil excavation below the water table is anticipated for the area surrounding the UST in the southwest portion of the site - will collect endpoint samples - will install a vapor barrier and an active SSDS beneath the proposed building 11:13 AM:- spoke with Stephen Morse at Grant Engineering. inquired him about spill remediation work plan, that he mentioned as attachement F in RAWP for NYC OER. Steve mentioned that such work plan is not ready yet. discussed about well gauging and implementation of IRM. Steve will talk to Mr. Fung and try to conduct well gauging prior to meeting with NYC OER on 12/13/13. Stephen Morse Grant Engineering Ph. (212) 464-8689 email: smorse@grantpllc.com 11:25 AM:- left message for Mr. Chawla. 12/10/13-Hiralkumar Patel. 11:40 AM:- left message for Steve inquiring

BRUMAR SHEET METAL INC (Continued) **S108076226**

about well gauging, prior to
upcoming meeting on 12/13/13. 12/17/13-Hiralkumar Patel. 1:17 PM:-
left message for Steve. 1:18
PM:- left message for Mr. Chawla. 12/20/13-Hiralkumar Patel. 10:01
AM:- spoke with Steve. they met
with NYC OER on 12/13/13 and discussed remedial action plan. Steve
mentioned that owner has not
hired his firm to gauge wells and remove any product in well(s). 10:05
AM:- spoke with Mr. Fung.
informed him that the Department requires gauging of all existing
wells and immediate removal of
any product in well(s). he will talk to Steve. 1:04 PM:- received call
from Andrew from Grant
Engineering inquiring about what work needs to be done. informed him
that the Department requires
well gauging and removal of any free product from wells, until
permanent remediation system is
installed. informed him that well gauging must be done by end of
12/27/13. also recommended
removing oil from the UST. Andrew Rizk Grant Engineering Ph. (212)
464-8689 Ext. 2 email:
arizk@grantpllc.com 01/08/14-Hiralkumar Patel. 10:01 AM:- received
call from Andrew. they gauged 12
out of 13 wells installed for the subject project. one well was
installed across the site which is
inside construction zone and was not accessible for gauging. out of 12
wells, free phase product
found in 3 wells. about 4 inch product found in one of the well and
less than 1 inch product found
in remaining two wells. Andrew will submit memo, once he gets previous
well survey data from
record. Andrew confirmed that the on-site tank was also pumped out
last week. informed Andrew that
the department requires implementation of interim remedial measures
until permanent remedial system
in in operation. 01/09/14-Hiralkumar Patel. received email from Andrew
(at 6:59 PM on 01/08/14)
including well gauging data. total of 13 wells (MW-1 through MW-13)
were installed previously by
Hydrotech. well MW-7 is located on west sidewalk of Leonard St, across
from the site. well MW-7 was
inaccessible due to the presence of green construction fence directly
over top of the well. out of
12 remaining wells, product found in three wells (MW-1, MW-2 and MW-8)
between 2 and 4 inches.
01/13/14-Hiralkumar Patel. 12:49 PM:- left message for Mr. Fung. 12:50
PM:- left message for Mr.
Chawla. 01/27/14-Hiralkumar Patel. 11:12 AM:- received email from Mr.
Chawla including owner's
letter and OER briefing. property owner Mr. Fung stated that the
entire site will be excavated down
to 13 ft bg (into groundwater table). Mr. Chawla included copy of ORC
application plan. 4:09 PM:-
sent email to Mr. Chawla and informed him that the Department has not
received any ORC treatment
work plan and such plan is not approved prior to reviewing tank
removal report with endpoint sample

BRUMAR SHEET METAL INC (Continued) **S108076226**

results. email copied to Mr. Wong at OER. 01/28/14-Hiralkumar Patel. 9:12 AM:- left message for Mr. Chawla. 9:41 AM:- received call from Mr. Chawla and Mr. Wong from NYC OER. Mr. Chawla mentioned that they received a revised RAWP and ready to issue Notice to Proceed letter. he wanted to know any requirements from DEC, prior to sending letter to property owner. revised RAWP will be forwarded for review. 12:29 PM:- received email from Mr. Chawla including link to RAWP Stipulation List. abstract of RAWP Stipulation List to NYC OER: - entire site will be excavated to 13 ft bg, with additional excavation in locations where further pockets of contamination is observed - collection and analysis of 22 endpoint samples from the bottom of excavation will be collected - a minimum of 20-millimeter vapor barrier will be installed beneath te structure's slab and along foundation wall - dewatering will be performed - excavation of the impacted soil will be performed following the removal of existing tanks abstract of site-specific groundwater treatment and monitoring plan dated 01/21/14: - remaining product from 5,000 gal tank was pumped from the tank on 12/27/13 - proposes to mitigate the contamination in three stages: 1) the existing site will be remediated via purging of product from the existing wells on a monthly basis, 2) site will be excavated to approx. 13 ft bg, or deeper in locations where contamination is present and the open excavation will be treated with chemical application, and 3) monitoring wells and contingency injection wells will be installed in the cellar level of the proposed development to allow for future chemical injections, if necessary - prior to construction, the assessment of groundwater quality will include the collection of groundwater samples from the existing wells 01/29/14-Hiralkumar Patel. 12:46 PM:- sent letter to Mr. Fung requiring bi-weekly monitoring of wells, product removal from impacted wells and monthly submission of well monitoring reports. informed him that the department only approves tank removal work (as listed in appendix 1 of RAWP Stipulation List submitted to NYC OER) and required submission of tank removal report. also informed him that the department may require additional investigation, after reviewing the tank removal report, prior to any comment on in-situ remediation, if needed. letter emailed to Mr. Fung, Mr. Chawla, Mr. Wong, Steve and Andrew. 12:53 PM:- spoke with Mr. Fung and informed him about letter sent in email. he will discuss with Grant Engineering. 02/20/14-Hiralkumar Patel. 1:06 PM:- received email from Andrew. he mentioned that while drilling borings for geotechnical investigation, a second UST was found, directly east of the existing

BRUMAR SHEET METAL INC (Continued) **S108076226**

5,000 gal UST. unknown UST had
about an inch of product. he confirmed that product from 5,000 gal
tank was pumped out on 12/27/13.
they pumped out product from impacted wells (MW1, MW2 and MW) on
02/07/14. 03/04/14-Hiralkumar
Patel. 1:32 PM:- received email from Andrew including interim remedial
measure letter report.
between 1 and 6 inches of product noted in three wells (MW-1, MW-2 and
MW-8). 04/09/14-Hiralkumar
Patel. received email from Steve (at 5:39 PM on 04/08/14) including
interim remedial measure letter
report. wells were monitored on 03/07/14 and 03/21/14. between 2.5 and
6.6 inches of product noted
in three wells (MW-1, MW-2 and MW-8). 04/18/14-Hiralkumar Patel.
received email from Steve (at 8:09
PM on 04/17/14). he mentioned that bi-weekly groundwater gauging,
monitoring and reporting will not
be conducted this week due to the building currently undergoing
asbestos abatement activities. he
also mentioned that the existing building will be immediately
demolished once the abatement work is
completed. Steve mentioned that well gauging will resume, if
demolition does not occur.
04/28/14-Hiralkumar Patel. 3:33 PM:- sent email to Steve inquiring
updates. 04/29/14-Hiralkumar
Patel. 10:15 AM:- received email from Steve. he mentioned that
currently, the building is under a
stop work order and full vacate order. the owner and asbestos
abatement contractor are taking steps
to address this. 08/19/14-Hiralkumar Patel. 11:58 AM:- received
message from Ray Kahn from ESPL.
08/22/14-Hiralkumar Patel. 2:39 PM:- spoke with Mr. Kahn. ESPL has
been hired for required work at
the site and they are ready to start soil excavation. asked Mr. Kahn
to provide work schedule for
site work. he will send email. 11/14/14-Hiralkumar Patel. 10:16 AM:-
left message for Mr. Kahn.
11/18/14-Hiralkumar Patel. 12:04 PM:- received call from Mr. Kahn. he
mentioned that site
excavation has not begun yet as owner has planned to change design of
new building. Mr. Kahn will
talk to property owner about required well gauging/product removal.
12/17/14-Hiralkumar Patel. 1:21
PM:- spoke with Mr. Kahn. he mentioned that property owner has met
with NYC OER and planning to
start excavation on 01/05/15. he mentioned that well
monitoring/gauging/product removal has not
been conducted yet since Feb. 2014. 1:22 PM:- left message for Mr.
Wong at NYC OER. 1:44 PM:- spoke
with Shaminder Chawla at NYC OER and informed him about property
owner's failure to comply with the
well monitoring/report submission requirements as per the letter dated
01/29/14. informed him that
the case may be referred for legal enforcement. Mr. Chawla has no
objection to DEC's enforcement.
01/07/15-Hiralkumar Patel. 11:52 AM:- spoke with Mr. Kahn. after
discussion on 12/17/14, ESPL

BRUMAR SHEET METAL INC (Continued) **S108076226**

installed a test pit next to the UST. the test pit was dug down to 9 ft bg, where groundwater was found. free phase product was noted on groundwater and product recovered using absorbent pads. asked Mr. Kahn to submit letter summarizing test pit work and monitoring data. Mr. Kahn mentioned about chemical treatment of contamination. informed him that the department does not approve chemical treatment at this time and requires submission of endpoint soil and groundwater samnple results prior to finalizing a remedial method. 01/21/15-Hiralkumar Patel. 9:08 AM:- received email from Mr. Kahn including test pit letter report. three test pits were excavate on 12/19/14 to a depth of 11 ft bg (2 ft below groundwater) and 8 ft wide. product found on water in test pit #1 which is located east of the tank farm. product is being collected using absorbent pads. on 01/12/15, a stop work order was issued by NYC DOB. interim cleanup will continue by capturing the product using adsorption pads and pump-out methods until the actual tank removal and spill clean-up can be conducted. 9:11 AM:- sent email to Mr. Kahn and asked him to submit a scaled site map with existing well, tank and test pit locations. email copied to Mr. Chawla. 01/23/15-Hiralkumar Patel. received email from Mr. Kahn (at 8:16 PM on 01/22/15) including site map. he also mentioned that the stop work order was removed and the shoring conctractor is driving the beams into the ground in the west and north side of the site. 01/28/15-Hiralkumar Patel. received email from Mr. Kahn (at 2:54 PM on 01/25/15) including test pit/UST plan and shoring plan. he mentioned that two USTs were exposed on 01/23/15 to prepare the site location plan. both tanks were found containing water. 01/29/15-Hiralkumar Patel. 9:58 AM:- received call from Mr. Kahn. today they pumped out and removed two tanks. excavation was about 9 ft bg and groundwater was not found in the excavation. due to structural safety of the adjoining building, they have to backfill the excavation. Mr. Kahn mentioned that contaminated soils will be removed once underpinning for adjoining building is done (possibly within two weeks depends on weather). 02/05/15-Hiralkumar Patel. 2:14 PM:- received email from Mr. Chawla. William Wong of OER visited site and noted petroleum odors while tank piping being removed. 02/06/15-Hiralkumar Patel. 10:30 AM:- visited site. met with on-site supervisor. crew was underpining adjacent building in area where the USTs were located. no petroleum odors noted in work zone. 02/11/15-Hiralkumar Patel. 1:32 PM:- received message from Mr. Kahn. 02/12/15-Hiralkumar Patel. 10:03 AM:- received call from Mr. Kahn. during underpining operation, crew found set of ten (10) 1,000 gal tanks in rear portion of the site. Mr. Kahn spoke with

BRUMAR SHEET METAL INC (Continued) **S108076226**

neighbours and reviewed
sanborn maps. maps shows location of ten tanks. Mr. Kahn has collected liquid samples from these
ten tanks. asked him to send site map with these tank location, sanborn map and tank removal plan.
also asked him to submit results of liquid samples from the tank, once available.
03/03/15-Hiralkumar Patel. 10:38 AM:- received email from Mr. Kahn including link to UST removal
report. abstract: - previously known USTs # 1 & 2 were removed on 01/29/15 - during underpinning of
the adjacent structure, two additional tanks (UST # 3 & 4 - size: 5.5 ft dia x 7 ft long) were
discovered approx. 3 ft bg on 02/09/15, which were removed - during further work, an additional
eight (8) USTs were identified (UST # 5, 6, 7, 8, 9, 10, 11 & 12) on 02/11/15; these tanks were
buried vertically approx. 2.5 ft bg - USTs # 5-12 were identified on 1942-1965 Sanborn Maps - USTs
5-12 were encased in concrete - based on site history and shape of tanks # 5-12 and interior
structure, it was concluded that the tanks could have been used for mixing operation which is
consistent with the site history of a carpet dying operation during 1940's and 1960's - dimensions
of tanks # 5-12 varied: 5 ft dia x 6 ft long (1,000 gal) & 5 ft dia x 4 ft long (500 gal) -
additional soil excavation will continue Mr. Kahn included copy of PBS application form (signed on
02/11/15) to register previously unknown tanks, but no records found in PBS record.
03/31/15-Hiralkumar Patel. 9:06 AM:- received call from Mr. Kahn. he mentioned that soil from
almost entire footprint of the site has been removed to a depth of approx. 11 ft bg. they removed
about 3,028 tons of soil. currently, the site excavation is filled with groundwater. the north and
south sidewall of the excavations are concrete underpining under adjacent buildings and there is a
shoring along the west sidewall to pretect the sidewalk. asked Mr. Kahn to collect endpoint soil
samples from east sidewall, water sample from excavation pool and groundwater samples from
monitoring wells on sidewalk. asked him to analyze all samples for full list VOCs/SVOCs. informed
Mr. Kahn that the department does not approve application of any chemical prior to reviewing
soil/groundwater samples. he mentioned that the new foundation will be at around 9.5 ft bg.
04/01/15-Hiralkumar Patel. 8:45 AM:- went to site for inspection, but site was closed. looked
through opening in construction fence. the entire excavation was filled with water. no petroleum
sheen or odors were observed. 04/09/15-Hiralkumar Patel. 10:55 PM:- received email from Mr. Kahn
including status report. abstract: - composite soil sample was collected from east sidewall -

BRUMAR SHEET METAL INC (Continued) **S108076226**

groundwater samples were collected from excavation pool and wells MW-5 and MW-6 - no contamination found in any sample based on available documents/information, no further work is needed and case is closed. 3:01 PM:- spoke with Mr. Chawla at NYC OER and informed him about case closure. Mr. Chawla confirmed that a moisture/vapor barrier will be installed underneath the new building. 3:19 PM:- sent spill closure letter to Mr. Fung. letter emailed to Mr. Fung, Mr. Chawla and Mr. Kahn. **also refer to spill #: 1206982.**

Remarks: tank is in place, soil samples confirm contamination

Department as soon as
possible. 10/6/2016: Rashad Spill will be reassigned to DEC Omar from DEC Mahat. 10/11/2016: Rashad
502 Metropolitan Avenue does not have an alternate address. No additional spills or PBS
registrations found for site. No documents found in D2. Emailed Sean Harrison about status of
closure report. 10/13/2016: Rashad Sean replied on 10/12 and will check the status of report.
11/1/2016: Rashad Received report from Sean Harrison, it has been uploaded to D2. Review of UST
closure report is as follows: During excavation activities on 2/6/14, three fuel oil USTs were
encountered. The site is currently being redeveloped and is E-Designated. Impacted soils and strong
petroleum odors were identified in the northwest corner of the site, adjacent to the intersection
of Rodney Street and Metropolitan Avenue. Brinkerhoff collected five soil samples to delineate the
extent of the petroleum impacted soil. The northern most UST was filled with liquid consisting of a
water-sludge mixture, the two southernmost USTs were filled in with concrete. The tank was pumped,
cleaned and removed, the other 2 USTs were also removed. A total of 280 tons of soil was excavated
and properly disposed of. On 9/29/14 additional impacted soil was identified within the location of
the former USTs. On 10/6/14 the material was excavated, and one sample was taken, almost 25 tons of
soil was removed. The site is currently being redeveloped as a 14 story mixed use building (hotel
rooms and residential apartments). Additionally the site development consists of underground
parking and underground and ground floor retail space. In conclusion, Brinkerhoff is requesting
spill closure. Review of 2/4/14 sample data: Minor SVOC exceedances in SB-2 (5.5-6ft). VOC
exceedances in SB-4 (5.5-6ft): Xylene-2.8ppm, Toluene-.96ppm, benzene-.18ppm Review of 2/28/14
sample data (similar locations to SB): Minor SVOC exceedances in PE-2 (10-10.5ft). Minor SVOC
exceedances in PE-3 (10-10.5ft) Review of 10/6/14 sample S-9 taken at the base of the excavation at
12 ftbgs yielded no exceedances in VOCs or SVOCs. Review of 1/6/15 sample EP-7 taken as Endpoint
bottom sample at 15 ftbgs yielded no exceedances in VOCs and SVOCs. Area of concern SB-4 which
recorded the highest VOC values was further excavated as reflected by sample S-9 and EP-7 which
were in the same area. Spill will be closed as final sampling shows no elevations of VOCs or SVOCs
after excavation activities. In addition USTs have been removed and decommissioned. Closure letter
will be prepared and sent to owner as per tax records: 475 Keap Street, LLC 512 7th Ave Ny, NY
10018 Letter will also be emailed to Sean Harrison of Brinkerhoff. Closure letter uploaded to D2.

DEC Memo:	3-2-16 - obligado - Desk duty - I spoke to Jennifer Lewis. She said this was part of a limited Phase II. A previous PHase 2 was already performed at the site for OER. They gauged 2 wells and they found free product in one well at 0.09 ft. Another well had a sheen. They suspect the product to be gasoline but are not sure yet. They collected a sample of the product and may send it to a lab for laboratory analysis. She said the neighboring property has an open spill #1411729 - 65 Eckford Street. She will send me an email regarding the product they found today and also the prior phase II. 3-3-16 - obligado - I received the Phase II from Jennifer. This spill is assigned to Kumar Patel. 03/03/16-Hiralkumar Patel. alternate address: none site has little E designation for 'hazmat' (# 14EHAZ403K). ---------- NYC VCP #: 15CVCP034K ---------- no other spills found. PBS #: 2-607449. as per the PBS record, the site has one (1) 250 gal waste oil AST in contact with soil, in-service, installed in Jan. 2002. PBS registration expired on 02/25/2007. 03/07/16-Hiralkumar Patel. found remedial investigation report and remedial action work plan on NYCOER database. RIR included copy of former Phase I and Phase II conducted in 2013 by MIB Environmental Consulting. abstract of Phase I by MID Env. Consulting dated 08/06/2013: - report does not include historical use of the property - site has two (2) 275 gal waste oil tanks under stairway to mezzanine - hydrocarbon stains on concrete slabs - south parcel at #65 (possibly 65 Eckford St) was a metal plating shop for about 30 years ---------- abstract of Phase II dated 07/25/2013: - four soil borings (S1, S2, S4 and S6) were drilled - one soil sample was collected from each boring at 10 ft depth - groundwater sample was collected from boring S1 and S6, at 11.5-12 ft depth ---------- - report is missing lab report abstract of RIR dated Mar. 2014: - block #: 2698 / lot #: 25 - elevation of the property ranges from 15 to 20

VACANT - PHASE II (Continued) **S118636463**

ft - depth to groundwater
ranges from 11.5 to 12.5 ft bg - groundwater flow is generally from
northwest to the East River -
currently, the site is used for an auto repair shop and contains a
one-story building, built to the
property lines - the existing one story building will be partially
demolished and a four story
building with a penthouse and cellar is to be constructed - proposed
future use of the site will
consist of four-story residential building, with the first floor used
for retail, a cellar used for
mechanical and storage and a rear yard - cellar will be approx. 10 ft
bg and will be used to house
the building's utilities and storage space - excavation is not
anticipated to go below the water
table, since the water table is approx. 12 ft bg ---------- -
based on the available sanborn
maps dated from 1887 to 2007, the site was developed after to 1887 for
use as sash storage in 1905.
from at least 1942 to 1951, the site was a poultry market. the site
was developed as a welding and
auto repair from 1965 to present (more details provided in report
dated 07/08/16; listed below)
-------- - a GPR survey was conducted on 03/05/14 which identified
anomalies in the area near the
front bathroom and office ---------- - installed five (5) soil borings
(SB-1 through SB-5) to a
maximum depth of 18-19 ft bg and collected ten soil samples - found
high PID readings and petroleum
odors in almost all five borings - petroleum odors were detected from
8-16 ft in SB-1; 12-16 ft in
SB-2; and 8-12 ft in SB-3, SB-4 and SB-5 - discrete grab soil samples
from 0-2 ft and 16-18 ft were
collected - no petroleum VOCs were detected in shallow soil samples -
method detection limits for
petroleum VOCs were much higher than cleanup standard for soil samples
from deeper zone except for
boring SB-5 ---------- - found TCE in soil samples (620 ppb in
0-2 ft sample from SB-2 and
1,800 ppb in 0-2 ft sample from SB-5) ---------- - installed
two (2) 1-inch diameter
groundwater monitoring wells (MW-1 and MW-2) in soil borings SB-1 and
SB-2, with 10 ft of screen -
collected two groundwater samples for analysis - no contamination
noted in groundwater samples -
installed three soil-vapor probes (SVP-1 through SVP-3) to a depth of
18 ft bg and collected three
soil-vapor samples (at 0-2 ft from SVP-1, at 0-4 ft from SVP-2 and at
8-12 ft from SVP-3), one
indoor air sample and one ambient sample for analysis - found
chlorinated solvent contamination
(TCE: 66 ug/m3 and PCE: 92.2 ug/m3) in sample from SVP-1 (0-2 ft
depth) as per RAWP dated Sep.
2014, a minimum 20 mil thick vapor barrier will be installed beneath
the building slab and outside
foundation walls below grade. an active SSDS will also be installed.

VACANT - PHASE II (Continued) **S118636463**

03/08/16-Hiralkumar Patel. 1:39 PM:- spoke with Jennifer at PW Grosser. she mentioned that Canton K & J LLC. has recently purchased the property and is modifying the redevelopment plans. as required by OER, PW Grosser conducted further groundwater investigation via installation of two additional monitoring wells MW-3 and MW-4. Jennifer believes that contamination was not noted in soil phase during installation of monitoring wells. they collected groundwater samples for metal analysis as required by OER. during investigation, 0.09 ft of product noted in well MW-4. product sample was collected for fingerprint analysis. groundwater sample from MW-4 was collected for VOC analysis also. informed Jennifer that based on review of all available information, the department requires resampling of all four monitoring wells at the site for VOCs (full list) and SVOCs; and survey of existing wells to define site-specific groundwater flow direction. Jennifer will submit results of recent sampling and schedule for well survey and re-sampling, by end of this week. PW Grosser will submit revised redevelopment plans and addendum to RAWP. informed Jennifer that the Department may require a Phase I investigation, as available Phase I report (dated Aug. 2013) is not complete.
Canton K & J LLC. 900 Grand Street Brooklyn, NY 11211 Attn.: Howard Ng PH. (917) 628-3318 email: howard.ng@gmail.com Jennifer Lewis P.W. Grosser Consulting PH. (631) 589-6353 Fax (631) 589-8705 email: jenniferl@pwgrosser.com 03/25/16-Hiralkumar Patel. 3:24 PM:- sent email to Jennifer inquiring updates. 04/12/16-Hiralkumar Patel. 10:04 AM:- left message for Jennifer.
04/18/16-Hiralkumar Patel. received email from Jennifer (at 5:23 PM on 04/15/16). she spoke with OER and waiting for copy of the RIR for 65 Eckford Street.
06/10/16-Hiralkumar Patel. 12:48 PM:- left message for Jennifer. 12:54 PM:- sent email to Jennifer inquiring about additional investigation report. email copied to OER Shaminder. found Mr. Ng's email address on DOB permit.
12:57 PM:- forwarded former email to Jennifer, to Mr. Ng. 1:44 PM:- received email from Jennifer.
she is gathering some additional information regarding the neighboring properties and has FOILed OER for their files related to 498 Leonard St as this site appeared to be another likely source of the LNAPL that has migrated onto the subject site. she requested copies of documents that DEC has related to 498 Leonard St. 1:53 PM:- received call from Jennifer. she mentioned that they got results of additional investigation required by OER and result of fingerprint analysis. asked her to submit these results immediately. she mentioned that due to possibilities of off-site source for LNAPL found in well at the site, they are looking for more information

VACANT - PHASE II (Continued) **S118636463**

on neighboring properties.
as such they have not re-sampled existing wells or defined
site-specific groundwater flow direction
as discussed on 03/08/16. informed Jennifer that the Department
requires well survey/re-sampling
prior to commenting on possibilities of off-site source. asked her to
submit schedule for well
survey/re-sampling by 06/14/16. also asked her to submit FOIL request
for any documents related to
neighboring properties. 2:09 PM:- sent email to Jennifer and asked her
to immediately submit
results of additional investigation conducted at the site. also asked
her to submit schedule for
well survey/re-sampling by the end of 06/14/16. email copied to Mr. Ng
and OER Shaminder.
06/14/16-Hiralkumar Patel. 9:43 AM:- received email from Jennifer. she
mentioned that they went to
the site yesterday to collect groundwater samples from all accessible
wells and surveyed the wells.
06/22/16-Hiralkumar Patel. received email from Jennifer (at 4:55 PM on
06/21/16). she mentioned
that they have not received SVOC results yet. 06/28/16-Hiralkumar
Patel. 11:33 AM:- spoke with
Jennifer. they are still waiting for SVOC results for sampling
conducted on 06/14/16. she will
follow-up with the lab. Jennifer mentioned that during well survey,
they found 0.02 ft difference
on water table between on-site wells. as such, they will use water
table data from neighbouring
sites to define regional groundwater flow direction. informed Jennifer
that available sampling
results and well survey data should be submitted by tomorrow and SVOC
data can be submitted later,
once available. 07/11/16-Hiralkumar Patel. received email from
Jennifer (at 4:56 PM on 07/08/16)
including spill closure request report. she mentioned that based upon
the investigation work that
was conducted on-site, the evidence points to the LNAPL being from
off-site source, likely the
spill at neighbouring property at 65 Eckford St. abstract of spill
closure request report: -
construction of cellar has been removed from the renovation plans
--------- - on 02/25/16, two
monitoring wells (MW-3 and MW-4) were installed within the existing
building - contractor returned
on 03/02/16 for well gauging and sampling. during the well gauging, an
unidentified LNAPL was
identified in MW-4 - product sample was collected for lab analysis
which indicated that the LNAPL
is an unresolved complex mixture (UCM) similar to a mineral spirits,
paint thinner, or Stoddard
solvent type of product. also present was a lesser UCM that was
extremely weathered; therefore, a
quantitative identification could not be determined ---------- -
after collecting product
sample from MW-4, the well was purged and groundwater sample was
collected from MW-3 and MW-4 - all

VACANT - PHASE II (Continued) **S118636463**

four wells were surveyed and resampled in June 2016 - during well gauging in June, a thin layer of
LNAPL was identified in MW-4 - after purging wells, groundwater samples were collected from all
four wells for full list VOCs and SVOCs - groundwater flow direction was inconclusive due to the
small size of the property and the relatively flat gradient across the site. based upon regional
groundwater flow direction and the groundwater flow direction indicated on neighbouring sites, the
presumed groundwater flow direction at the site is towards the north or northwest ----------
- as per Sanborn maps, subject site was undeveloped in 1887, used as sash storage in 1905, an
unknown use with a gasoline tank in 1916, a poultry market from at least 1942 through 1951, welding
from at least 1965 through 1991, and an auto repair shop from at least 1993 to when it ceased
operations around 2013 report included summary of record review for neighbouring site at 65 Eckford
St: - site 65 Eckford St was most recently known as Carter Spray Finishing Corp. - site 65 Eckford
St was a conditionally exempt small quantity generator that generated wastes such as spent
halogenated solvents used in degreasing (waste code F001) and spent non-halogenated solvents (waste
codes F003 and F005) - there were two (2) 275 gal ASTs containing TCE at site 65 Eckford St which
were removed/closed in place in 1998 - air emissions in excess of 9,000 pounds per year of
1,1,1-trichloroethane related to the activities conducted under Carter Spray Finishing Corp. -
according to sanborn maps, site 65 Eckford St was undeveloped in 1887, identified as
Meisel-Danowitz Company (a manufacturer of millwork and hardwood trim) in 1905, Eckford Garage from
at least 1916 to 1942 which contained a gasoline tank near the northern property boundary, wood box
manufacturing and lacquer spraying in 1951, and a metal finishing company (Carter Spray Finishing
Corp.) from at least 1965 through 1989 - as per certificate of occupancy from 1963 and 1973
indicate that a paint spraying booth for metals were present at 65 Eckford St based on following,
PW Grosser recommends closure of the subject spill case: - site 75 Eckford St is located
hydraulically down-gradient of site 65 Eckford St - there is no known historic use of mineral
spirits, paint thinner, or Stoddard solvent at 75 Eckford St - there is a long historic usage
related to lacquering and painting at 65 Eckford St - subject property will continue redevelopment
activities, including proper soil management practices and the installation of a SSDS under the
oversight of NYC OER reviewed remediation database and found an active BCP case for site 65 Eckford
St (#: C224218). 07/12/16-Hiralkumar Patel. 10:57 AM:- sent email to

VACANT - PHASE II (Continued) **S118636463**

Jennifer and asked her to
submit missing boring/well logs for MW3 and MW4. email copied to Mr. Ng and OER Shaminder. 1:07
PM:- spoke with DEC Conor Shea, BCP case manager. informed him about possible off-site impact from
site 65 Eckford St. 1:38 PM:- received boring logs and well construction log from Jennifer. total
borehole depth during installation of MW-3 and MW-4 was 18.5 ft. soil was screened from 0 to 10 ft
bg in both boreholes where no odors or PID readings were noted, and as such soil samples were not
collected. after that, wells were installed with direct push method. wells were installed with 10
ft of screen from 8 to 18 ft bg. summary: - during remedial investigation (report dated Mar. 2014),
five soil borings (SB-1 through SB-5) were installed - borings SB-1 and SB-2 were installed to a
depth of 16 ft bg - borings SB-3, SB-4 and SB-5 were installed to a depth of 12 ft bg - petroleum
odors with higher PID readings (112 to 1,180 ppm) were detected in 8-12 ft interval (and below if
borings installed to deeper zone) in soil borings SB-1 through SB-4 - two soil samples were
collected from all five borings: one from shallow zone (0-2 ft bg) and one from deeper zone (8-12
ft bg) - no petroleum VOCs noted in soil samples from shallow zone - TCE found in shallow samples
from two borings: SB-2 (620 ppb) and SB-5 (1,800 ppb) - petroleum VOCs were non-detect in deeper
soil samples, but reporting limits were much higher than cleanup standards for soil samples from
SB-1 through SB-4 - chlorinated solvent contamination noted in soil-vapor samples (TCE: 1.34 to 66
ug/m3; PCE: 1.08 to 92.2 ug/m3) - two wells (MW-1 and MW-2) were installed in borings SB-1 and SB-2
- two additional wells (MW-3 and MW-4) were installed during further investigation conducted in
Feb. 2015 - in June 2016, all four wells on the property were surveyed and groundwater was found
between 11.45 and 13.95 ft bg based on available information, petroleum odors/PID readings were
detected at/near/below water table and LNAPL noted in upgradient well (MW-4) on the property.
discussed case with DEC Jane regarding TCE contamination in shallow soil. as site has
e-designation, she is going to discuss with OER on how to handle remediation of TCE impacted
material. she requested site maps with sample analyticals. 2:54 PM:- sent email to DEC Jane
including site maps with sample analyticals. email copied to DEC Austin. 08/01/16-Hiralkumar Patel.
12:09 PM:- received message from Jennifer. discussed with DEC Jane. after discussing with DEC Cozzy
and OER Shaminder, based on available information, DEC Jane asked to transfer case to her name
after sending P-site memo. 3:14 PM:- spoke with Jennifer and asked her to contact DEC Jane.

VACANT - PHASE II (Continued) **S118636463**

09/20/16-Hiralkumar Patel. sent p-site memo to DEC Jane. 10/14/16-Hiralkumar Patel. after discussing with DEC Jane, case assigned to her. 6/7/19: Site was remediated under oversight of NYCOER's Voluntary Cleanup Program (site no. 15CVCP034K). Site development includes the construction of a 4-story mixed-use residential and commercial building with commercial space, two apartments, and two parking spaces. There is no basement and no open space. Remedy included: 1) Excavation: soil was removed to a depth of 4 feet from grade beneath the full area of the new building, 4 to 5 feet in the AOC-1 and AOC-3 hotspots, and to a depth of 12 feet in the AOC-2 hotspot. A total of 483.4 tons of soil/fill was excavated and removed from the property. 2) Collected and analyzed 14 end-point samples (6 in AOC-1, 3 in AOC-2, 4 in AOC-3 and I in general area) to determine attainment of SCOs. Additional excavation was required in two hotspot areas to achieve Track 4 SCOs. All end point sample results were below the Site Specific Track 4 SCOs. 3) Engineering Controls: a. Installed a Vapor Barrier System; b. Constructed an engineered Composite Cover System consisting of 8 to 14 inches of concrete slab c. Installed and are operating an active Sub-Slab Depressurization System (SSDS) consisting of one horizontal branch installed beneath the centerline of the building, running east to west 5) Institutional Controls: a. Deed Restrictions are placed on property. b. E Designation for future permits c Site Management Plan Based on the remediation completed, the spill is closed. (JHO)

Remarks: contamination found during testing

Site Description: Location: The 0.49 acre site is located at 98, 100, and 104 South 4th Street in the Borough of Brooklyn, Kings County, NY in an urban area. It was previously known as 98-116 South 4th Street. Site Features: The site consists of three buildings: 98-102 (now 98), 104-114 (now 100) and 116 (now 104) South 4th Street. Occupying almost the entirety of the site is a multi-story structure made up of a 7 story structure in the center (100 South 4th St.) flanked by two smaller 1 story structures. Two of the buildings were constructed in 1910 and the third was constructed in 1950. All three buildings were renovated in the early 2000s. The 7 story structure is a residential building with approximately 74 units. Current Zoning and Land Use: The site is currently zoned as M1-2/R6 and is surrounded by residential, commercial and industrial uses. It is identified as a single tax lot, Block 2443, Lot 13 and is a rectangular shaped parcel along the southern side of South 4th St., between Berry St. and Bedford Ave. Past Use of the Site: The site previously had a variety of manufacturing uses, including an adhesives factory (98 S. 4th St, formerly 98-102 S 4th St), an electroplating operation, a laboratory (100 S. 4th St, formerly 104-114 S 4th St), and a dye factory (116 S 4th St). Carmin Industries was identified as a Large Quantity Generator of hazardous wastes, including undefined hazardous wastes, ignitable hazardous wastes, corrosive hazardous wastes, reactive hazardous wastes, chromium, lead and cyanides. Site Geology and Hydrogeology: Soil borings conducted in 1996 identified fill materials to a depth of approximately 7 feet below grade from the first floor of 98 S. 4th St and to a depth of approximately 6 feet below the basement floor of 100 S. 4th St. Beneath the surface fill layer is sand and silt to a depth of at least 17 feet below grade. Groundwater is present at a depth of approximately 15-17 feet below grade.

Env Problem: Nature and Extent of Contamination: A subsurface investigation was performed in 1997 in support of an application to participate in the Voluntary Cleanup Program (see site no. V00094). Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and polychlorinated biphenyls (PCBs). Groundwater samples were analyzed for VOCs only. Soil A total of nine soil borings were advanced throughout buildings 2 and 3 (access to building 1 was precluded by structural deficiencies). Samples were collected from nine soil borings. Various VOCs were detected at concentrations exceeding the unrestricted use soil cleanup objectives (SCOs), including: tetrachloroethylene (PCE) at a maximum concentration of 5.5 parts per million (ppm); trichloroethene (TCE) at 3.7 ppm; and toluene at 1.4 ppm. SVOCs were also detected above the unrestricted use SCOs including: fluoranthene at a maximum concentration of 14 ppm; phenanthrene at 19 ppm; and pyrene at 19 ppm. The majority of the contaminants appear to be found beneath building 3 (the western one-story building). Groundwater Groundwater samples were collected from 3 locations on-site. PCE was detected at a maximum concentration of 86 parts per billion (ppb), TCE at 100 ppb, and toluene at 28 ppb. In addition, groundwater samples

FORMER EL PUENTE (Continued) **S121933853**

collected from a property immediately adjacent to the south of the site (BCP site no. C224233) identified PCE at a maximum concentration of 71.4 ppb and TCE at 27.2 ppb. Soil Vapor No soil vapor samples were collected. Groundwater samples collected from a property immediately adjacent to the south of the site (BCP site no. C224233) identified PCE at a maximum concentration of 2870 micrograms per cubic meter (ug/m3) and TCE at 3510 ug/m3. Further delineation of the soil vapor was performed at 2 residential buildings located to the west of the Site on Berry Street identified the need for mitigation. See also site no. C224260.

Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DEC Memo:	1/24/08 - Raphael Ketani. I spoke with Jeff Bohlen of EnviroTract (631) 924-3001. He said he represented the potential buyer, Krzysztof Kielan, Millenium Development and Construction, LLC, 57 Ballard Street, Valley Stream, NY, 11580. He said that the site is still an active cabinet making business and is owned by Henryk Zawojek. Mr. Bohlen went on to say that the site is a 1 story commercial building. There is a gas tank (UST) in the building and a dispenser and remote fill outside. All three are out of service. Three borings were performed, one at each part of the fuel system. There are low hits of BTEX in the soil which are below TAGM. Two wells were installed. One well had 0.73 ppb benzene and one well had 1.3 ppb benzene. Total xylenes were 6.80 ppb. The site has an E designation, but no one has been assigned to the case. The contact is Dan Cole, Deputy Director, NYC DEP, 59-17 Junction Blvd., 11 Floor, Flushing, NY, 11373. His phone number is (718) 595-4536. A CSL was sent to Mr. Zawojek with a c-c to Mr. Cole. 3/5/08- DEC Piper - I met Envirotrac and sub contractor AARCO, onsite today. They were uncovering at least 1 550 ust that contained gasoline for motor fueling. They will remove tanks soil and piping and collect endpoints to be submitted in closure report. 3/27/08- DEC Piper recieved and reviewed closure report. Approx 19 tons of soil were removed. Endpoints were below tagm. This spill is closed. See e-docs if warranted.
Remarks:	phase two and found contaminated soil

Site Description:	The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. This site was listed in the Eckhardt subcommittee report as a disposal site. Investigation by the NYSDEC Regional offices indicate that this is an industrial operation to recycle, recover and refurbish drums and that no apparent disposal of hazardous or toxic waste have occurred here.
Env Problem:	None known. No apparent disposal of significant quantities of any hazardous waste.

DEC Memo:	DEC Piper left message for Danny at Don Carlo. Site is in NYC BCP and OER is involved. Assigned to DEC Zhune. 1/14/16-Vought-This spill transferred from DEC Zhune to DEC Omar as per DEC Demeo. 1/15/2016: Rashad 173 Bayard Street does not have an alternate address. No spill or PBS registration found for site. No documents found in D2. 5/16/2016: Rashad Received email from Shaminder (forwarded from Kumar): Development Update: End point samples after the tank removal were collected and this portion of the site was excavated down to 12 feet and EBC collected additional RAWP end points in this area. Tank end point sample results are attached. We are waiting on final report. In the mean time see attached end point results. They might have already be provided to you previously. Chawinie Reilly creilly@ebcincny.com at EBC is managing this project. Attached was analytical results from end points, they were uploaded to D2, and all

171-173 BAYARD STREET (Continued) **S117852202**

results are ND. 5/17/2016:
Rashad Replied to Shaminder: Thank you for the soil data. I look
forward to receiving the report.
Thank you. 11/28/2016: Rashad Emailed Shaminder asking about completed
report. Chawinie of EBC
replied saying that project is coming to an end and report should be
submitted within a couple of
months. 1/13/2017 Austin This spill report is being transferred from
Rashad Omar to Pratik Lakhani
end. 2/7/17-Vought-Copied on email from OER Chawla to DEC Omar that
Rashad: We are reviewing the
final report for the above spill. Draft report can be downloaded from
the link below. Development
on this site is complete. Post excavation sample results are attached.
We are looking to close this
spill. Let us know if you need additional info. Thanks, . Vought sent
reply to OER Chawla that
Shaminder, This spill is now being managed by Pratik Lakhani who is
out this week taking his 40
Hour Hazwoper training. He will be in on Monday and will put the
report in his que for review,
Thanks. 02/13/17 - Lakhani Remedial Action Report (EBC - Ariel
Czemerinski, 01/2017) - The
redevelopment consists of two (2) new 4-story residential buildings
with full cellars. The new
buildings cover 70% of the lot. The Site is equipped with a 30 x 40
rear yard. A 112 x 16 deck was
installed in the rear yard of each building. No residential units are
located on in the cellar.
Cellars are equipped with storage for units on the 1st floor,
sprinkler rooms, and electrical
rooms. Soil was excavated to a depth of approx. 12'bg for the first
80' of the property to
construct the foundation and footings for the new buildings. The slab
of the new building is
installed at a depth of approx. 12'bg which required excavation to
approx. 12' for footings and
installation of the SSDS. A total of approx. 1787.25 tons of
non-hazardous fill material was
excavated for construction of the new building. 171 Bayard Street
included a 1-story building
occupied by a coal & oil company, wood workshop, syrup
manufacturer/distributor, tech company, iron
works, contracting company, window/door manufacturer, and most
recently an art studio. At 173
Bayard the 1-story building was occupied by a refrigerator
manufacturer. In 1958 the NYCFD approved
a permit for a gasoline storage tank. Site inspection revealed the
potential presence of a UST(s).
Depth to groundwater ranges from 9.35' to 12.85' at the Site.
Groundwater flow is generally to
northeast. Five (5) soil borings were installed across the entire
project Site, and collected ten
(10) soil samples and one duplicate soil sample. Installed two (2)
groundwater wells throughout the
Site and used one existing monitoring well to establish groundwater
flow and collected six (6)

171-173 BAYARD STREET (Continued) **S117852202**

groundwater samples and one duplicate groundwater sample. Installed one (1) sub-slab soil vapor probes and four (4) soil vapor probes around Site perimeter and collected five (5) samples. Soil samples are as such: 1,2,4 - trimethylbenzene 5000 ppb(B4,11'-13'bg). Groundwater samples were as such: MTBE 30 ug/L(GW1), MTBE 14 ug/L(MW1), MTBE 14 ug/L(duplicate). Soil vapor results are as such: PCE 773 ug/m3(SG-1), PCE 218 ug/m3(SG-3), PCE 104 ug/m3(SG-4), PCE 50.1 ug/m3(SG-2), PCE 74.6 ug/m3(SG-5), TCE 7.63 ug/m3(SG-4), benzene 32900 ug/m3(SG-1), ethylbenzene 4860 ug/m3(SG-1), m,p-xylene 9760 ug/m3(SG-1), o-xylene 3580 ug/m3(SG-1), toluene 65900 ug/m3(SG-1), o-xylene 3.95 ug/m3(SG-3), o-xylene 4.99 ug/m3(SG-4), m,p-xylene 7.85 ug/m3(SG-3), m,p-xylene 10.5 ug/m3(SG-4), ethylbenzene 3.78 ug/m3(SG-3), ethylbenzene 5.47 ug/m3(SG-4), 1,3,5-trimethylbenzene 2.36 ug/m3(SG-2), 1,3,5-trimethylbenzene 2.65 ug/m3(SG-3), 1,3,5-trimethylbenzene 3.59 ug/m3(SG-4), 1,2,4-trimethylbenzene 6.39 ug/m3(SG-2), 1,2,4-trimethylbenzene 6.63 ug/m3(SG-3), 1,2,4-trimethylbenzene 5.55 ug/m3(SG-4). one (1) 1080 gallon UST was removed from the Site.
Installed and operating an active SSDS, installed beneath the cellar slab. Exhaust is located a min. of 10' from the window and ventilation inlets. Installed a vapor barrier system behind all foundation walls and the new 4 concrete slab beneath the cellar slab of the building. SSDS to be inspected monthly by superintendent and inspected annually by Qualified Environmental Professional.
Sent RAR to NYSDOH Nathan Walz to determine whether there are any concerns with the active SSDS.
Nathan responded I reviewed the RAR, it appears that they SSDS is performing as designed based on the pressure differential readings that were provided. If OER is receiving and reviewing the annual reports I don t see a need to be copied on them. I have no comments on the SMP for the site. The following email was sent to OER Chawla: I have reviewed the RAR and everything seems fine. The spill is closed. Please let the property owner and the QEP know to include the DEC on the inspection and monitoring reports for the SSD system. As per DEC Vought, spill is closed. Spill closure with residual soil contamination letter was sent to owner.
04/28/17 - Lakhani FactSheet uploaded to OER EPIC stating that OER has determined that the cleanup requirements to address contamination at the site have been met.

Remarks: tank removal - found product in soil - clean up pending

Record Updated Date:	03/27/2023
Update By:	SMQUANDT
Site Description:	Site Location: The Site s address is 210 Greenpoint Avenue, Brooklyn, NY 11222. The Site is located in Kings County, New York and is identified as Block 2576 Lot 7. The Site is located in a mixed-use residential and commercial section of the Greenpoint neighborhood of Brooklyn, NY on the south side of Greenpoint Avenue between McGuinness Boulevard and Eckford Street. The Site is located approximately 0.5 miles west of Newtown Creek. The Site is bounded by Greenpoint Avenue followed by mixed-use commercial and residential buildings to the north, McGuinness Boulevard followed by a commercial building, Key Foods Grocery Store , to the east, a mixed-use commercial and residential building to the south, and a residential apartment building to the west. The Site is 13,675 square feet (0.31 acres) in size. Site Features: The Site is improved with two one-story buildings; one of which is utilized for storage, and the other as a retail building/office space. The buildings do not include cellar levels. There are five 4,000-gallon gasoline/ethanol gasoline USTs and one 550-gallon tank classified as other currently in use at the Site. Current Zoning and Land Use: The Site is currently occupied by an active retail petroleum station and is zoned R7-A and R6-B for residential use with a commercial C2-4 overlay. The surrounding properties are currently used for commercial and residential purposes. The nearest residential buildings are directly adjoining to the south and west of the Site. The proposed development of this property is consistent with the current zoning. As a result of the CEQR process, Block 2576 Lot 7 was assigned an environmental E-Designation (E-287) 209-231 McGuinness Boulevard Rezoning Action, for hazardous materials, noise (window wall attenuation & alternate means of ventilation), and air (HVAC fuel limited to natural gas & exhaust stack location limitations) resulting from a CEQR effective 10 December 2012 (CEQR 10DCP024K). Satisfaction of the E-Designation requirements is subject to review and approval by the NYCOER to obtain a NTP or NNO prior to obtaining building permits. Past Land Use: The Site was developed in the late 1800s and was occupied by commercial, residential, and vacant properties until the early 1940s, from the early 1940s to the late 1970s the Site operated as several auto-related facilities, from the late 1970s through the present the Site has operated as a gasoline filling station. Site Geology and Hydrogeology: The stratigraphy of the Site, from the surface down, consists primarily of urban fill extending to approximately 5.5 ft bgs (terminus of each soil boring). Groundwater was not encountered during the November 2021 investigation; however, it is anticipated at approximately 7 to 10 ft bgs. Groundwater flow is anticipated toward the northeast.
Env Problem:	Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs (primarily PAHs), and metals. Soil: Exceedances of the Unrestricted Use Soil Cleanup

HESS#32516 (Continued) **1000263799**

Objectives (UUSCOs) and in some cases Protection of Groundwater Soil Cleanup Objective (PGWSCOs) were primarily found in the historic fill layer which extends from 9 - 13 ft. across the site. In general, the highest concentrations were detected in the upper 10 ft. of site soils. However, elevated concentrations of VOCs and metals did extend into deeper soils (28 - 30 ft.) at SB-1 in the western portion of the site. VOCs detected at levels exceeding UUSCOs and PGWSCOs include: acetone up to 0.09 mg/kg (UUSCO of 0.05 mg/kg), benzene up to 1.4 mg/kg (UUSCO and PGWSCO of 0.6 mg/kg), ethylbenzene up to 74 mg/kg (UUSCO of 1 mg/kg, PGWSCO of 5.5 mg/kg, and RRSCO of 41 mg/kg), isopropyl benzene up to 16 mg/kg (PGWSCO of 2.3 mg/kg), naphthalene up to 69 mg/kg (PGWSCO of 13 mg/kg), n-butylbenzene up to 13 mg/kg (PGWSCO of 12 mg/kg), n-propyl benzene up to 40 mg/kg (PGWSCO of 3.7 mg/kg), toluene up to 12 mg/kg (PGWSCO of 1.5 mg/kg), 1,3,5-trimethylbenzene up to 140 mg/kg (PGWSCO of 3.3 mg/kg), 1,2,4-trimethylbenze up to 340 mg/kg (PGWSCO of 13 mg/kg), and xylenes up to 320 mg/kg (PGWSCO of 1.2 mg/kg). SVOCs detected at levels exceeding UUSCOs and PGWSCOs from 0 - 10 ft. bgs. include: benzo(a)anthracene up to 7.5 mg/kg (PGWSCO of 3 mg/kg), benzo(a)pyrene up to 6.2 mg/kg (PGWSCO 1.1 mg/kg), benzo(b)fluoranthene up to 6.3 mg/kg (PGWSCO of 1.1 mg/kg), benzo(k)fluoranthene up to 1.6 mg/kg (PGWSCO of 1.1 mg/kg), chrysene up to 5.8 mg/kg (PGWSCO of 0.4 mg/kg), dibenzo(a,h)anthracene up to 0.76 mg/kg (UUSCO of 0.33 mg/kg), indeno(1,2,3-cd)pyrene up to 3.8 mg/kg (PGWSCO of 3.2 mg/kg), and naphthalene up to 21 mg/kg (PGWSCO of 13 mg/kg). Metals detected at levels exceeding UUSCOs include: arsenic at a concentration of 13.2 mg/kg (UUSCO of 13 mg/kg), copper up to 77.2 mg/kg (UUSCO of 50 mg/kg), lead up to 590 mg/kg (UUSCO of 63 mg/kg), mercury up to 2.67 mg/kg (UUSCO of 0.18 mg/kg), zinc up to 1,230 mg/kg (UUSCO of 109 mg/kg). The PFAS compounds perfluorooctanoic acid (PFOA) was detected in soil at concentrations above the respective unrestricted use guidance value of 0.66 parts per billion (ppb) at a concentration of 0.695 ppb. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: VOCs detected above Class GA Ambient Water Quality Standards (AWQS) include: benzene up to 240 parts per billion (ppb) with an AWQS value of 1 ppb, ethylbenzene up to 5,100 ppb, isopropyl benzene up to 320 ppb, naphthalene up to 660 ppb, n-propyl benzene in one sample at 540 ppb, o-xylene up to 6,800 ppb, p/m-xylene up to 18,000 ppb, sec-butylbenzene up to 11 ppb, tert-butylbenzene up to 6.3 ppb, toluene up to 9,100 ppb, 1.2.4-Tetramethylbenzene in one sample at 140 ppb, 1,2,4-Trimethylbenzene up to 3,3300 ppb, and 1,3,5-Trimethylbenzene in one sample at 790 ppb, all with an AWQS value of 5 ppb. SVOCs detected above AWQS include: acenaphthene with one sample at 110 ppb (AWQS of 20 ppb), naphthalene up to 470 ppb (AWQS of 10 ppb), benzo(a)anthracene up to 0.27 benzo(a)anthracene, benzo(a)pyrene up to 0.13 benzo(a)pyrene, benzo(b)fluoranthene up to 0.19 ppb benzo(k)fluoranthene up to 0.06 ppb, chrysene up to 0.15 ppb, and indeno(1,2,3-c,d)pyrene up to 0.09 ppb, all with an AWQS of 0.002 ppb. Excluding naturally occurring minerals, no metals were detected above their respective AWQS. No pesticides or PCBs were detected above their AWQS either. For PFAS compounds, PFOA and PFOS were reported at concentrations up to 92.2 parts per trillion (ppt) and 55 ppt respectively, exceeding the Maximum Contaminant Levels (MCLs)(drinking water standard) of 10 ppt each in groundwater. The compound 1,4- dioxane was not detected above the MCL of 1 ppb. There are no public water supply wells within a half a mile and there is a

HESS#32516 (Continued) **1000263799**

	municipal prohibition for use of groundwater at the site. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: The total cumulative maximum concentrations for benzene, toluene, ethylbenzene, and xylenes (BTEX) compounds was 190.7 micrograms per cubic meter (ug/m3). Multiple VOCs were detected in soil vapor samples collected throughout the site. The most elevated concentrations detected were collected from SG-1 near the former USTs on the west side of the site. This includes: n-hexane, benzene, cyclohexane, 2,2,4-trimethylpentane, and heptane which were detected with maximum concentrations of 356,000 ug/m3, 45,400 ug/m3, 328,000 ug/m3, 2,120,000 ug/m3, and 107,000 ug/m3 respectively. Data does not indicate any off-site impacts in soil vapor related to this site.
Health Problem:	Access to the site is restricted by a fence. The site is covered by concrete foundation slabs and pavement so people are not expected to come in contact with site contaminants in soil. However, persons who enter the site could contact contaminants in the soil by digging below the surface/site cover or otherwise disturbing the soil. Contaminated groundwater is not used for drinking and the site and surrounding areas are served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Environmental sampling indicates soil vapor intrusion from site contamination is not a concern for off-site buildings.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 12/23/05- Andersen - Reviewed quarterly report dated 11/7/05. Eight MW sampled on September 23, 2005. Max BTEX 729ppb (MW5), max MTBE 352ppb (MW3). SVE system shut down May 5, 2005 due because low influent vapors. RAP required for remaining contamination. 12/29/05: RAP required letter sent. RAP due 2/9/06. 1/26/06: 1/25/06 meeting with Quantum, NYSDEC, and ET. A sensitive receptor survey and soil vapor survey will be performed, and then site closure will be considered. A kiosk vapor abatement system is in place. 2/2/06: Reviewed the fourth 2005 quarterly report. Max BTEX 497 ppb (MW5), max MTBE 351 ppb (MW6). A sensitive receptor survey will be prepared. 6/30/06: Meeting on 6/28/06 with Hess, Quantum, NYSDEC, EnviroTrac and GSC. Will submit request for closure. Sub slab vapor sampling conducted. 7/25/06: Received the results of sub-slab sampling and a sensitive receptor survey. Two sub slab samples were collected from beneath the kiosk on site. MTBE and BTEX were not detected above method detection limits. The sensitive receptor survey revealed that residential houses with basements are located within 1,000 ft of the site. Closure was requested. 10/6/06: Emailed Dawn Coughlin to followup on quarterly report. Received email from Ed Russo: the site was sampled on August 15, 2006. Results indicated concentrations that we feel warrant closure, especially due to the positive results of the soil-gas sampling and sensitive receptor survey. The report was just finalized yesterday, so you should be receiving it by the middle of next week. 11/1/06: Received closure request. Max benzene 158ppb in MW3, MTBE 338 in MW3. Continued groundwater sampling required. 1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. 1/23/07: Received update report. Wells samples on 11/8/06. Max BTEX 63 (MW3), max MTBE 222 (MW6). 4/20/07: Reviewed update report. Max BTEX 12.3 ppb (MW1). As reportedin the sensitive receptor survey, soil vapor sampling showed soil gas MTBE and BTEX concentrations ND. ND concentrations in downgradient wells. NFA issued.
Remarks:	SOIL FOUND IN TANK PULL - SOIL BEING STODE PILED.

state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site Description:	Site Location: The Site s address is 210 Greenpoint Avenue, Brooklyn, NY 11222. The Site is located in Kings County, New York and is identified as Block 2576 Lot 7. The Site is located in a mixed-use residential and commercial section of the Greenpoint neighborhood of Brooklyn, NY on the south side of Greenpoint Avenue between McGuinness Boulevard and Eckford Street. The Site is located approximately 0.5 miles west of Newtown Creek. The Site is bounded by Greenpoint Avenue followed by mixed-use commercial and residential buildings to the north, McGuinness Boulevard followed by a commercial building, Key Foods Grocery Store , to the east, a mixed-use commercial and residential building to the south, and a residential apartment building to the west. The Site is 13,675 square feet (0.31 acres) in size. Site Features: The Site is improved with two one-story buildings; one of which is utilized for storage, and the other as a retail building/office space. The buildings do not include cellar levels. There are five 4,000-gallon gasoline/ethanol gasoline USTs and one 550-gallon tank classified as other currently in use at the Site. Current Zoning and Land Use: The Site is currently occupied by an active retail petroleum station and is zoned R7-A and R6-B for residential use with a commercial C2-4 overlay. The surrounding properties are currently used for commercial and residential purposes. The nearest residential buildings are directly adjoining to the south and west of the Site. The proposed development of this property is consistent with the current zoning. As a result of the

HESS#32516 (Continued) **1000263799**

CEQR process, Block 2576 Lot 7 was assigned an environmental E-Designation (E-287) 209-231 McGuinness Boulevard Rezoning Action, for hazardous materials, noise (window wall attenuation & alternate means of ventilation), and air (HVAC fuel limited to natural gas & exhaust stack location limitations) resulting from a CEQR effective 10 December 2012 (CEQR 10DCP024K). Satisfaction of the E-Designation requirements is subject to review and approval by the NYCOER to obtain a NTP or NNO prior to obtaining building permits. Past Land Use: The Site was developed in the late 1800s and was occupied by commercial, residential, and vacant properties until the early 1940s, from the early 1940s to the late 1970s the Site operated as several auto-related facilities, from the late 1970s through the present the Site has operated as a gasoline filling station. Site Geology and Hydrogeology: The stratigraphy of the Site, from the surface down, consists primarily of urban fill extending to approximately 5.5 ft bgs (terminus of each soil boring). Groundwater was not encountered during the November 2021 investigation; however, it is anticipated at approximately 7 to 10 ft bgs. Groundwater flow is anticipated toward the northeast.

Summary: Access to the site is restricted by a fence. The site is covered by concrete foundation slabs and pavement so people are not expected to come in contact with site contaminants in soil. However, persons who enter the site could contact contaminants in the soil by digging below the surface/site cover or otherwise disturbing the soil. Contaminated groundwater is not used for drinking and the site and surrounding areas are served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Environmental sampling indicates soil vapor intrusion from site contamination is not a concern for off-site buildings.

Summary: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs (primarily PAHs), and metals. Soil: Exceedances of the Unrestricted Use Soil Cleanup Objectives (UUSCOs) and in some cases Protection of Groundwater Soil Cleanup Objective (PGWSCOs) were primarily found in the historic fill layer which extends from 9 - 13 ft. across the site. In general, the highest concentrations were detected in the upper 10 ft. of site soils. However, elevated concentrations of VOCs and metals did extend into deeper soils (28 - 30 ft.) at SB-1 in the western portion of the site. VOCs detected at levels exceeding UUSCOs and PGWSCOs include: acetone up to 0.09 mg/kg (UUSCO of 0.05 mg/kg), benzene up to 1.4 mg/kg (UUSCO and PGWSCO of 0.6 mg/kg), ethylbenzene up to 74 mg/kg (UUSCO of 1 mg/kg, PGWSCO of 5.5 mg/kg, and RRSCO of 41 mg/kg),

HESS#32516 (Continued) **1000263799**

isopropyl benzene up to 16 mg/kg (PGWSCO of 2.3 mg/kg), naphthalene up to 69 mg/kg (PGWSCO of 13 mg/kg), n-butylbenzene up to 13 mg/kg (PGWSCO of 12 mg/kg), n-propyl benzene up to 40 mg/kg (PGWSCO of 3.7 mg/kg), toluene up to 12 mg/kg (PGWSCO of 1.5 mg/kg), 1,3,5-trimethylbenzene up to 140 mg/kg (PGWSCO of 3.3 mg/kg), 1,2,4-trimethylbenze up to 340 mg/kg (PGWSCO of 13 mg/kg), and xylenes up to 320 mg/kg (PGWSCO of 1.2 mg/kg). SVOCs detected at levels exceeding UUSCOs and PGWSCOs from 0 - 10 ft. bgs. include: benzo(a)anthracene up to 7.5 mg/kg (PGWSCO of 3 mg/kg), benzo(a)pyrene up to 6.2 mg/kg (PGWSCO 1.1 mg/kg), benzo(b)fluoranthene up to 6.3 mg/kg (PGWSCO of 1.1 mg/kg), benzo(k)fluoranthene up to 1.6 mg/kg (PGWSCO of 1.1 mg/kg), chrysene up to 5.8 mg/kg (PGWSCO of 0.4 mg/kg), dibenzo(a,h)anthracene up to 0.76 mg/kg (UUSCO of 0.33 mg/kg), indeno(1,2,3-cd)pyrene up to 3.8 mg/kg (PGWSCO of 3.2 mg/kg), and naphthalene up to 21 mg/kg (PGWSCO of 13 mg/kg). Metals detected at levels exceeding UUSCOs include: arsenic at a concentration of 13.2 mg/kg (UUSCO of 13 mg/kg), copper up to 77.2 mg/kg (UUSCO of 50 mg/kg), lead up to 590 mg/kg (UUSCO of 63 mg/kg), mercury up to 2.67 mg/kg (UUSCO of 0.18 mg/kg), zinc up to 1,230 mg/kg (UUSCO of 109 mg/kg). The PFAS compounds perfluorooctanoic acid (PFOA) was detected in soil at concentrations above the respective unrestricted use guidance value of 0.66 parts per billion (ppb) at a concentration of 0.695 ppb. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: VOCs detected above Class GA Ambient Water Quality Standards (AWQS) include: benzene up to 240 parts per billion (ppb) with an AWQS value of 1 ppb, ethylbenzene up to 5,100 ppb, isopropyl benzene up to 320 ppb, naphthalene up to 660 ppb, n-propyl benzene in one sample at 540 ppb, o-xylene up to 6,800 ppb, p/m-xylene up to 18,000 ppb, sec-butylbenzene up to 11 ppb, tert-butylbenzene up to 6.3 ppb, toluene up to 9,100 ppb, 1.2.4-Tetramethylbenzene in one sample at 140 ppb, 1,2,4-Trimethylbenzene up to 3,3300 ppb, and 1,3,5-Trimethylbenzene in one sample at 790 ppb, all with an AWQS value of 5 ppb. SVOCs detected above AWQS include: acenaphthene with one sample at 110 ppb (AWQS of 20 ppb), naphthalene up to 470 ppb (AWQS of 10 ppb), benzo(a)anthracene up to 0.27 benzo(a)anthracene, benzo(a)pyrene up to 0.13 benzo(a)pyrene, benzo(b)fluoranthene up to 0.19 ppb benzo(k)fluoranthene up to 0.06 ppb, chrysene up to 0.15 ppb, and indeno(1,2,3-c,d)pyrene up to 0.09 ppb, all with an AWQS of 0.002 ppb. Excluding naturally occurring minerals, no metals were detected above their respective AWQS. No pesticides or PCBs were detected above their AWQS either. For PFAS compounds, PFOA and PFOS were reported at concentrations up to 92.2 parts per trillion (ppt) and 55 ppt respectively, exceeding the Maximum Contaminant Levels (MCLs)(drinking water standard) of 10 ppt each in groundwater. The compound 1,4- dioxane was not detected above the MCL of 1 ppb. There are no public water supply wells within a half a mile and there is a municipal prohibition for use of groundwater at the site. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: The total cumulative maximum concentrations for benzene, toluene, ethylbenzene, and xylenes (BTEX) compounds was 190.7 micrograms per cubic meter (ug/m3). Multiple VOCs were detected in soil vapor samples collected throughout the site. The most elevated concentrations detected were collected from SG-1 near the former USTs on the west side of the site. This includes: n-hexane, benzene, cyclohexane, 2,2,4-trimethylpentane, and heptane which were detected with maximum concentrations of 356,000 ug/m3, 45,400 ug/m3,

HESS#32516 (Continued) **1000263799**

328,000 ug/m3, 2,120,000 ug/m3, and 107,000 ug/m3 respectively. Data does not indicate any off-site impacts in soil vapor related to this site.

Water Type: perfluorooctanoic acid

DEC Memo: Sangesland found no historical spills or PBS on site. Property Shark says legal address is: 194-200 Franklin St, Brooklyn, NY 11222 Contaminated Soil Letter sent to: Property Owner Int'l Stripping & Dye Company 200 Franklin St Brooklyn, NY 11222 8/10/2005 Sangesland spoke with Carolyn Cadalaso of Advanced Cleanup Technology. She asked what work was needed. She was told a letter went out to the building owner (she will try to get a copy through the owner). Advanced Cleanup Tech completed a Phase 2 report on the site. Sangesland asked her to review the DEC letter, prepare a work plan to resolve the contamination and then submit a package to Mr. Koon Tang. 10/31/05 - Carla Sullivan wrote in her email: ...The three gasoline USTs, filled with concrete, were removed. The tanks were found tight, and the concrete vault and surrounding soils were found free of contamination and set at 7 feet below grade.The contamination is below 8' bgs. Apparently, the tanks were installed in a dirty hole . All work is being conducted within the confines of the building, and due to structural concerns, not all of the contaminated soil can be removed. The depth of the contamination is in the GW at ~15' bgs, GW will be treated with 2,000 pounds of ORC. - KST 10/31/05 - send Carla Sullivan an email asking for RI Report and a RAP for the contaminated soil and GW. - KST 11/01/05: This spill case transferred from K. Tang to J. Kolleeny. Reviewed ACT Phase II report which indicated closed gasoline tanks impacted soil and groundwater; reviewed 10/14/05 work plan letter from Laurel Env'tal stating that closed tanks will be removed and ORC applied to groundwater. Spoke with Carla Sullivan and Scott Yanuck of Laurel - working inside existing site building, they removed concrete-filled tanks and encountered substantial contaminated soil starting at 8 feet below grade. Contaminated soil will be removed to extent possible without endangering building, end-point soil samples will be collected, ORC will be applied to water table, and 2 wells will be installed inside building. JK of DEC sent email to Ms. Sullivan (cc'ed Yanuck) requesting that wells be gauged to determine water table elevations & GW flow direction, and sampled, and that a summary report be prepared and submitted with soil and groundwater data and recommendations for further investigation/remediation as necessary. - J. Kolleeny 12/22/05: Received remediation report summarizing remedial activities at site (tank removal, soil excavation, application of ORC), and

(Continued) **S106970369**

requesting spill closure, via email on 12/21/05. Entered report into eDocs on 12/22/05. Report will
be reviewed. - J. Kolleeny 01/06/06: In response to email from Scott Yanuck of Laurel Env'tal
inquiring about status of my report review, I sent him an email on 1/4/06 with preliminary review
observations, stating: I looked quickly at the report, and usually in a case like this, with some
residual soil contamination and a downgradient well with 1,800 ppb of benzene and 3,570 ppb total
BTEX, we would require follow-up groundwater monitoring to evaluate effectiveness of ORC that was
applied, and request installation of an off-site well to delineate leading edge of the plume. I
understand and appreciate that Laurel did a lot of source removal work and applied a lot of ORC,
but I want to see that plume is stable (not migrating), with groundwater contaminant levels
decreasing, before I can close out spill. As of 1/6/06, have not received any response from S.
Yanuck. - J. Kolleeny 01/24/06: Received email from S. Yanuck of Laurel Env'tal on 1/23/06 asking
if DEC has made a decision on Remedial Corrective Action Report and request for spill closure, and
stating that if spill is to remain open, they will collect another round of GW samples from
existing wells, but they would strongly prefer not to install off-site well. I sent email reply on
1/24/06 saying that K. Tang agreed spill cannot be closed yet, and reiterating need for an off-site
well to delineate leading edge of plume. Sent letter on 1/24/06 to Mr. Jan Chmielewski of 200
Franklin LLC, with copy to S. Yanuck, requesting installation of off-site well across Franklin
Street to the west, plus at least 2 rounds of groundwater monitoring; asked that a work plan be
submitted. - J. Kolleeny 02/03/06: Received email from S. Yanuck of Laurel Env'tal stating that
off-site well would be installed on Monday Feb.6th, with attached copy of sidewalk permit and site
plan showing proposed well location. I emailed back that proposed well location looked good, and
stated that soil should be screened with PID during installation, and at least one soil sample
collected, probably at groundwater interface. Scott did not respond. - J. Kolleeny 02/24/06: Sent
email to Scott Yanuck of Laurel Env'tal asking if off-site well was installed as planned, and if he
has any data, including field observations, PID readings, etc., to report. - J. Kolleeny 02/27/06:
S. Yanuck of Laurel sent email late on 2/24/06 (at 8:19 pm) saying well was installed, no PID
reading or odor in soil, very low VOCs in GW; he will forward over a letter report early next week.
- JK 2/28/06: Received letter report from S. Yanuck, via email, with groundwater sampling results
for new off-site well MW-4 and 3 existing wells. Data show contaminant

(Continued) **S106970369**

levels stayed much the same
in on-site wells MW-3 (total BTEX just under 4 ppm) and MW-1 (total BTEX about 1 ppm), and low
exceedances for benzene (9 ppb) and MTBE (27 ppb) in off-site well MW-4. Laurel argues that plume
is stable and has not migrated; they request spill closure. Changed spill priority status to P2,
since site is in monitoring phase. - J. Kolleeny 03/06/06: Received email from S. Yanuck asking if
I'd made a decision regarding request for spill closure. I sent email response saying that spill
cannot be closed yet and noting that my letter of January 24, 2006 required at least two quarterly
rounds of groundwater monitoring to establish that remedial actions were effective (i.e., resulting
in decreasing trend of dissolved contamination) and that plume is stable and not migrating. I
pointed out that the Feb. 6th groundwater results show contamination on-site has not decreased, and
low levels of benzene and MTBE in well MW-4 suggest edge of plume extends off-site. Said I would
send out a response letter in next day or so. - J. Kolleeny 03/07/06: Sent letter to Jan
Chmielewski of 200 Franklin LLC (the RP), with cc to Scott Yanuck of Laurel, responding to latest
groundwater report, stating that spill cannot be closed at this time, requesting water levels
measurements to determine up-to-date groundwater flow direction, and another round of GW sampling
within 3 months. - J. Kolleeny 03/13/06: Received email from Scott Yanuck of Laurel Envt'l with
attached letter stating that they have surveyed the new well MW-4 top of casing, taken depth to
water measurements from all four wells and determined up-to-date groundwater flow direction, and
attached the updated groundwater flow map as requested in my 3/7/06 letter, and they will schedule
another quarterly groundwater sampling event. - J. Kolleeny 03/14/06: Sent email to Scott Yanuck
saying new groundwater flow map is ok, but doesn't show water table contours as requested. He sent
email reply that he will work on drawing in inferred contour lines, but that there is not enough
data for Surfer (a program that takes water elevation data to generate water table contour maps) to
work with. - J. Kolleeny 05/26/06: Received electronic copy of May '06 Groundwater Monitoring
Report via email from Scott Yanuck of Laurel Env'tal. - JK 06/02/06: Received hard copy of May '06
groundwater monitoring report. Will review. - JK 06/14/06: Reviewed report, groundwater contaminant
levels in wells MW-1 and MW-3 have declined substantially, but significant contamination remains.
Issued letter to RP (and copied Scott Yanuck) asking for another round of quarterly sampling, plus
a sensitive receptor survey, indoor air monitoring and soil gas sampling from beneath earthen floor

(Continued) **S106970369**

of site building. - JK 08/14/06: Received work plan for groundwater monitoring and sensitive receptor survey (soil gas and indoor air sampling) dated Aug. 4, 2006 from Scott Yanuck, Laurel Envt'l (in eDocs). Plan involves round of groundwater sampling, and sampling soil gas at two locations 2 feet below earthen floor, plus indoor and outdoor (for background) air samples. I sent email okaying plan on 8/14/06. - J. Kolleeny 10/05/06: Received email on 9/26/06 from Scott Yanuck of Laurel Envt'l with report attached summarizing round of groundwater sampling, indoor/outdoor air sampling, and soil vapor sampling at the site in August 2006. After preliminary review of report, I sent email to Scott on 10/3/06 noting that the groundwater results only provide data for BTEX + MTBE, whereas earlier sampling rounds were analyzed for full range of gasoline-related VOCs. Scott sent email reply that he would ask the lab to re-evaluate data from the GC runs, if possible. I replied that was fine, and that if they can provide data for all VOCs, I'd like Scott to revise data table to include line for total VOCs, in addition to total BTEX. Also asked for revised figure showing two soil vapor sampling locations, and for clarification of soil vapor sample nomenclature, since samples are named SV North and SG-4. - J. Kolleeny 10/06/06: Received email from Scott Yanuck late on 10/5/06 with revised report, including groundwater results for all gasoline VOCs (revised Table I), fig. 3 showing soil gas sampling locations, and revised Table II with soil gas samples labelled SV North and SV South. Table I still lacks line for total VOCs, which I requested on two occasions. Report is in eDocs. - J. Kolleeny 10/20/06: Issued reply letter (in eDocs) to Laurel Environmental report dated 9/26/06. My letter notes that indoor air sampling and sub-slab soil gas sampling suggest no serious impact to indoor air from the spill, but also states that the spill cannot be closed at this time, due to rebound of contamination in well MW-1 and change in groundwater flow direction, which suggests plume is not adequately delineated to the south. I stated that contaminant levels in MW-1 warrant additional monitoring and possibly additional remediation, and I requested installation of an additional monitoring well immediately south of former tank location (i.e., inside building), or if that isn't feasible, in sidewalk along India Street south of site building. - J. Kolleeny 11/03/06: Received email from Scott Yanuck of Laurel Envt'l with work plan dated Oct. 31, 2006 for installation of requested additional well and possible replacement of damaged well MW-1 (in eDocs). Work plan also discussed 3 possible approaches for additional remediation, but says a final choice will be

(Continued) **S106970369**

made after well installation
and latest groundwater data. I sent email approving plan with modifications: 1. Proposed well MW-5
should be installed as close as possible to location of end-point soil sample EP-S. During well
installation, soil should be screened with a PID; a sample from interval with highest PID reading
and a sample from just above water table should be submitted for laboratory analysis of
gasoline-related VOCs. 2. After installation of new well(s), groundwater samples should be
collected from all existing wells and analyzed for gasoline-related VOCs (i.e., not simply for BTEX
compounds). DEC will refrain from commenting on three remedial strategies mentioned in work plan
until one of these strategies is formally proposed, based on results of upcoming round of
groundwater sampling. - J. Kolleeny 02/09/07: Reviewed Laurel Envt'l report dated Jan. 30, 2007
with proposed additional remedial activities, plus revised text and figs submitted on Feb. 6 and 9,
2007 (in eDocs). Report presents results of additional borings and wells installed at site in Nov.
2006, with soil and groundwater data showing significant residual soil contamination in two areas
and increases in groundwater contaminant levels in wells MW-1 & MW-3 (significant GW contam. also
in new wells MW-5 & MW-6, minor contam. in MW-8 & MW-10). Laurel proposes additional soil
excavation in two areas, plus installation of 4 injection wells to apply ozone to groundwater, to
oxidize hydrocarbons and increase dissolved O2 to stimulate biorem. I sent letter approving plan to
RP Jan Chmielewski by mail and to Scott Yanuck of Laurel by email, on 2/9/07. - J. Kolleeny
02/28/07: Visited site with Ainura Doronova (new employee in training) to observe excavation of
contaminated soil as proposed in additional remedial activities plan. Arrived at 11:00 A.M., they
were digging with backhoe inside the building, and fairly strong odors were evident; workers were
wearing half-face respirators with cartridges. Met with Scott Yanuck of Laurel Envt'l and Jan
Chmielewski, owner. They had dug down about 7-8 feet and intended to go to 13-14 feet, where they
expect water table to be. Stockpile of removed contaminated soil had PID readings of 300-400 ppm.
Took 2 photos (in eDocs image folder). - J. Kolleeny 03/02/07: Received email on 3/1/07 from Scott
Yanuck regarding on-going remediation work: We stayed late yesterday and finished the excavation
and endpoint sampling - samples were taken from all four sidewalls at a depth of 10' - 12'; PID
readings were all well below 50 parts per million on these samples. Got bottom as clean as
possible, but never hit groundwater even down to 14.5', which was the extent of reach on the

(Continued) **S106970369**

extendahoe backhoe. We will be installing the injection and monitoring wells tomorrow. - J.
Kolleeny 05/24/07: Received email on 5/23/07 from Scott Yanuck of Laurel Env'tal with attached
Report On Additional Remedial Activities, dated 5/22/07 (in eDocs). Report summarizes excavation of
an additional 182 tons of contaminated soil performed in February-March '07, with end-point soil
sample results showing almost no petroleum-related compounds detected, and no TAGM 4046
exceedances. Also summarizes installation of 8 1-inch ozone injection wells, with ozone injection
beginning on March 22, 2007. Report states that quarterly GW monitoring commenced on May 18, 2007.
Scott's email states that GW results will be available next week. I sent email reply stating:
Thanks for report. Please include north arrow on site plans for future reports. Also, would it be
possible to sample more of 1-inch ozone injection wells during future GW sampling events? It makes
me uneasy when wells with contamination are destroyed and replacement wells are installed some
distance away from original well - if sampling of new wells shows much lower contaminant levels,
I'm not sure if results are truly representative, or if some quirk of subsurface geology has
resulted in new well missing GW contamination. Could wells IP-6, IP-5 and IP-1 be added to list of
wells being sampled for next event? If sample results suggest that they are redundant of other
wells being sampled, they could be dropped from list for subsequent sampling events. - J. Kolleeny
05/25/07: Received email reply from Scott Yanuck late on 5/24/07: Will make sure north arrow is
added on future reports. I don't think that it will be a problem to add additional wells for
sampling in the next round....I am hopeful that we can close after next round if everything looks
OK. - J. Kolleeny 06/13/07: Received Groundwater and Ozone Injection System Monitoring report by
Laurel Environmental, dated June 11, 2007 (in eDocs). Report states that ozone injection system
began operating on 3/22/07, and that weekly or bi-weekly sites visits are conducted to confirm that
ozone is reaching groundwater, rather than air above injection wells. Report also presents results
of 5/18/07 groundwater sampling event, along with past GW data. Results show significant decreases
in contaminant levels: MW-1 went from 10,000 ug/L total VOCs on 11/6/06 to 392 ppb total VOCs on
5/18/07 (benzene went from 3,500 ppb to 150 ppb), MW-3 went from 1,410 ug/L total VOCs on 11/6/06
(280 ppb benzene) to 734 ppb total VOCs on 5/18/07 (benzene 120 ppb), MW-8 went from 57 ppb total
VOCs to 0 ppb. Report states that another quarterly sampling event will be performed. No DEC
response required. I noticed mistake in Table 1 - GW data, incorrect

(Continued) **S106970369**

sampling dates for well MW-8;
emailed to Scott Yanuck of Laurel, who sent corrected table (in eDocs). - J. Kolleeny 08/07/2007:
This spill case was transferred to A. Doronova. -AD 08/25/2007:
Received Groundwater and Ozone
Injection System Monitoring Report submitted by Laurel Env. dated August 22, 2007. The report
states: The ozone system has been running nearly continuously since begining of the operation on
March 22, 2007. The injection of ozone was rotated between the eight injection points, with four
points receiving ozone at one time. During weekly monitoring of levels of DO, dissolved ozone,
ozone headspace and ambient ozone, elevated levels of DO and dissolved ozone were detected at each
site visit. On August 1, 2007 a round of GW samples was collected from the three on-site and two
off-site wells. The results of groundwater sampling indicated that total concentration of VOCs in
each monitoring wells were below 1,000 ppb. The labdata show increasing of total VOCs in MW-1 from
392 ppb (05/2007) to 444 ppb (08/2007); decrease of total VOCs in MW-3 from 734 ppb to 357 ppb and
same ND level for wells - MW-2 and MW-8. Injection points were sampled for the first time and
showed following concentrations of total VOCs: O ppb for IP-1; 144 ppb for IP-2 and 251 ppb for
IP-3. The GW flow direction was to the west during reported round of surveying. Based on the
results of this monitoring round Laurel Env. states that GW quality continuing to improve with time
at the site and requests to close this spill case. AD 09/06/2007:
Received an email from S. Yanuck.
He proposed to install one temporary monitoring well across the Franklin Street to investigate if
there is any off-site plume migration. Sent an email with well installation approval and saying
that, if no any petroleum contamination will be detected in a newly installed well, case closure
request might be approved. AD 09/24/2007: Received an email and e-copy of a letter report from S.
Yanuck of LEA regarding installation of one temporary well across Franklin Street. A groundwater
sample was collected for VOCs. The report states that no VOCs were detected in the collected
sample. Based on the result of this sampling event and on the data of previous monitoring rounds
LEA requests a closure of this spill case. AD 09/24/2007: Issued a NFA letter addressed to Simon
Whitley of Complete Management Services (site owner) cc: to J. Kolleeny; S. Yanuck and file. This
decision was made based on submitted analytical data and remedial actions performed at the site. In
addition, this site is listed as E restricted by NYCDEP, so future mitigation work such as: -
removal of any additional contaminated soil found during pre-construction excavation at the site; -

(Continued) **S106970369**

installation of vapor barrier beneath new slab; - installation of sub-slab depressurisation system;
will be required at the site by the NYCDEP in conjunction with the construction of the proposed
building. AD

DEC Memo:	07/14/17 - Lakhani Spoke to PWG Jennifer who informed that the site is an OER VCP site. The site is going to be redeveloped. During waste characterization, PWG installed fifteen (15) borings. Soils from one (1) of the borings was returned contaminated by petroleum. PWG previously completed a groundwater investigation which revealed no contamination to the groundwater. OER PM is Sarah Pong. Jennifer will be sending data. 07/17/17 - Lakhani OER Shaminder sent the following email: Hi Pratik Nathan and Jeff: During waste characterization sampling at above address, an anomaly and oil like material was encountered at around 4 feet and above spill was called in and assigned to you. Approved Remedy (before Spill called in) components are listed below. This Site is in New York City Voluntary Cleanup Program. Redevelopment requires excavation to depths of 10 feet below grade. RIR and RAWP was prepared on this Site. Remedy was discussed with Mr. Bob

IN THE SOIL - OER (Continued) **S121100522**

Cozzy in January. A copy of
briefing is attached here. You can access the RIR and RAWP at our website through the link below:
http://www.nyc.gov/html/oer/html/repository/RBrooklyn.shtml You are also added as contact in EPIC
to get these documents. Please note that Pre-construction meeting is being held today and
remediation will begin soon. Please let us know if you have any additional requirements for Spill
remediation. Approved Remedy (before Spill called in) includes: 1. Excavation and removal of
soil/fill exceeding Track 4 Site-Specific SCOs. 2. For development purposes, the entire site,
excluding the existing partial basement and the narrow concrete walkway at the rear of the
building, will be excavated to a depth of 10 feet below grade. A 5 foot by 5 foot hot-spot
excavation will be conducted around the existing basement pit. The concrete walkway will be
excavated to a depth of 2 feet below grade. Additional excavation will be required for footings,
including within the existing basement. 3. Excavation and removal of soils within the hotspot
basement pit. If the pit integrity was compromised and grossly contaminated material is observed
beneath it; additional hot-spot excavation may be required to meet Track 4 Site-Specific SCOs. 4.
Installation of a vapor barrier system below the concrete slab of the building as well as around
foundation walls of the proposed building. 5. Construction and maintenance of an engineered
composite cover consisting of a minimum 18-inch thick concrete building slab. If you need any other
info, please call my project manager Sarah Pong at 212?442?8342 or call me. Thanks, Shaminder RIR
(PWGC, 01/2017) - Currently, the ground level floor is being cleared out and was most recently
utilized in the manufacturing of umbrellas. The upper level floors are currently utilized as loft
apartments. The proposed future use of the Site will consist of the renovation of the existing
buildings and the construction of additional floors on both buildings to create one 7-story
mixed-use commercial and residential building. The cellar level will consist of a stacking car park
system, storage, a gym, a children s recreation room, and the lower floors of eight duplex
apartments. The existing partial basement on Lot 14 will be enlarged to encompass the entire
footprint of both buildings on Lots 13 and 14. The final depth of the entire basement will be
approximately 10 feet below grade; therefore, excavation in the existing basement will be limited
to approximately 2 feet for new footings and excavation beneath the rest of the building will be
between 10 to 12 feet for the basement and footings. The water table is expected at approximately

IN THE SOIL - OER (Continued) **S121100522**

20 feet below grade surface (bgs) [between 21' and 26'bg]. Historic usage of the Site included
metal manufacturing, finishing and utilization as an oil and grease warehouse including the use of
solvents. This usage reportedly included the presence of a solvent vault. The Site contained a
vault in the basement with a 3,000 gallon #2 fuel oil aboveground storage tank. The vault was
inaccessible. A 550 gallon AST reportedly observed during HTEC s walkthrough was not observed in
PWGC s walkthrough. No soil sample exceedances. No groundwater exceedances except in GW001 where
PCE 17 ug/L. There were many VOC soil vapor exceedances. Maximum concentrations of PCE and TCE were
29.8 ug/m3 and 1.12 ug/m3 respectively. RAWP (PWGC, 06/2017) - Work plan includes the following:
(1) Excavation and removal of soil/fill exceeding Track 4
Site-Specific SCOs. For development
purposes, the entire site, excluding the existing partial basement and the narrow concrete walkway
at the rear of the building, will be excavated to a depth of 10 feet below grade. A 5 foot by 5
foot hot-spot excavation will be conducted around the existing basement pit. The concrete walkway
will be excavated to a depth of 2 feet below grade. Additional excavation will be required for
footings, including within the existing basement. Approximately 2,500 cubic yards of soil will be
removed from the Site and properly disposed of at an appropriately licensed or permitted facility,
(2) Excavation and removal of soils within the hotspot basement pit. If the pit integrity was
compromised and grossly contaminated material is observed beneath it; additional hotspot excavation
may be required to meet Track 4 Site-Specific SCOs, (3) Removal of all underground storage tanks
encountered during soil/fill removal actions, (4) Installation of a vapor barrier system below the
concrete slab of the building as well as around foundation walls of the proposed building, (5)
Construction and maintenance of an engineered composite cover consisting of a minimum 18-inch thick
concrete building slab underlain by native material or a suitable sub-base material (to avoid
damage to the vapor barrier) to prevent human exposure to residual soil/fill remaining under the
Site. DEC Vought responded to OER Shaminder's email: Shaminder, I took a look at the attached site
briefing and groundwater at the site is 21-26 bg and has up to 17ppb PCE suggesting that there is
indeed a soil contamination pathway down to the water and hence soil contamination, albeit possible
minimal contamination, under the proposed concrete slab with vapor barrier. Also as the site will
only be excavated to 10 there may be potential for SVI. As such I will defer to Nathan via this
email as to whether an SSDS is warranted. I have also attached PBS

IN THE SOIL - OER (Continued) **S121100522**

registration for the site
showing an in-service 3000-galllon #2 fuel oil AST that has not been closed, has no tank testing
data, and will need resubmission reflecting the AST closure associated with redevelopment. It is
also possible that any buried lines with associated with this AST may have resulted in petroleum
contamination. Pratik will review the EPC reports as well and may have additional requirements. You
noted that the pre-construction meeting is today and remediation will begin soon. Please keep in
mind for that with approximately 70 cases and an active schedule, Pratik needs as much time as
possible to review the reports in EPIC and I have a feeling Nathan will concur with this sentiment
on timeliness. So future sites, please give as us much time as possible to review and respond.
Regardless, thank though for your email and seeking our feedback.
Nathan, Do you think the vapor
mitigation efforts are sufficient or do we need an SSDS installed?
NYSDOH Nathan responded: I
quickly reviewed the Decision Document (DD) and briefing document. My concern with this as Jeff
brought up is that SVI could be a concern at this location, I haven t yet had a chance to review
the RIR. However, the DD states that a portion of the cellar level will be used for a gym and child
recreation room, this is an SVI exposure concern. The DOH does not concur that installation of
vapor barrier alone is adequate to mitigate vapor intrusion. My recommendation at this point is to
have an SSDS installed in those areas that will contain the gym and child recreation room, or
verify that the AMV air handling system is creating a positive pressure in those areas to mitigate
the potential for vapor intrusion to occur. This will need to be verified thru pressure
differential testing and seasonal air sampling to make sure SVI is not occurring. ***THE NYSDOH
DOES NOT CONCUR THAT INSTALLATION OF VAPOR BARRIER ALONE IS ADEQUATE TO MITIGATE VAPOR INTRUSION.
NYSDOH RECOMMENDS TO HAVE AN SSDS INSTALLED IN THOSE AREAS THAT WILL CONTAIN THE GYM AND CHILDREN'S
RECREATION ROOM, OR VERFIY THAT THE AMV AIR HANDLING SYSTEM IS CREATING A POSITIVE PRESSURE IN
THOSE AREAS TO MITIGATE THE POTENTIAL FOR VAPOR INTRUSION TO OCCUR.***
OER PM is Sarah Pong.
07/21/17 - Lakhani Conference call with OER Sarah Pong, OER Shaminder, and NYSDOH Nathan Walz to
discuss potential vapor issues at the site along with further delineation of soil and groundwater
contamination. OER reports that the 300 gallon AST and 550 gallon AST are located in the
northwestern portion of Lot 14. OER also believes that the historic solvent tank is in the vicinity
of the ASTs, however an exact location is unknown. Groundwater at the site was not measured,

IN THE SOIL - OER (Continued) **S121100522**

however a regional groundwater flow direction was measured and there are no wells downgradient from
the ASTs and solvent tank. Therefore, the DEC and NYSDOH proposes two (2) sampling locations for
all three (3) phases north of SP-3/GP-3. Both of these sampling locations would be located
downgradient of the two ASTs: one (1) of these two (2) locations would be located on the sidewalk.
Furthermore, the DEC requires endpoint sampling beneath the two (2) ASTs as they are planned to
closed. Pit 1 is the presumed location of the solvent tank as the soils indicated elevated
concentrations of metals. Therefore, the Pit 1 area is referred to as a hotspot. There is soil
vapor concern as the initial soil vapor sampling completed was not done during normal occupancy of
the building. Therefore, NYSDOH has required a follow-up SVI study due to the gym and children's
rec room. NYSDOH required an SSDS to be installed beneath the gym and rec room. However, OER
reported that the developer was reluctant to do so. RAWP will be revised with the submission of a
stipulation letter. OER Shaminder reports that a subway line runs beneath the sidewalk and one (1)
of the sampling locations is not possible. Waste characterization data, which was used to report
the spill, indicates petroleum compound exceedances in SB-6: 1,2,4-trimethylbenzene 10000 ppb(SB-6,
8'-12'bg), naphthalene 13000 ppb(SB-6, 8'-12'bg). Conference call with PWGC Jennifer Lewis, OER,
and NYSDOH regarding additional sampling. Two (2) sampling locations are not feasible as the subway
runs beneath the sidewalk. Therefore, one (1) sampling location 10' north of SP-3 will completed.
At this location, a well will be installed, soil vapor will be sampled and the highest PID soil
sample will be analyzed. NYSDOH also requires another soil vapor sample to be collected at SV003,
the location of the gym and rec room. 08/02/17 - Lakhani PWGC Janelle Cooley, Field Hydrogeologist,
clarified that WC003 (8-12) is a composite sample from all those soil borings in the WC003 area on
the figure. SB-6 (8-12) is just a sample of the soil from SB-6 (8-12). They both share the same
discrete VOC sample grab which was taken from SB-6 (8-12). 09/15/17 - Lakhani PWG Jennifer emailed
informing that well installation and sampling work will take place once the pile work is completed
in a few weeks. A site plan with sample location and a scope of work will be submitted to the DEC
beforehand. 10/04/17 - Lakhani PWGC Jennifer Lewis emailed the site plan with proposed sample
locations. The scope of work includes: - Conduct soil borings via Geoprobe approx. 20' north of
SP-3 boring - terminate at groundwater table (estimated at 21'-26' below sidewalk level - Collected
one (1) soil sample from the 2' intercal above the water table and

IN THE SOIL - OER (Continued) **S121100522**

collect one (1) soil sample from
the 2' interval exhibiting the highest PID reading or evidence of
petroleum impact (if applicable).
Samples to be analyzed for VOC and SVOCs, CP-51 - Convert soil boring
into a 2 diameter monitoring
well with a 10' screen that will be installed 5' into the groundwater
table. Gauge the well for
LNAPL. If LNAPL is present, try to sample it for fingerprint analysis.
If not, sample the water for
VOCs full list - Install two (2) sub-slab vapor probes, 2 hour
regulators, sample for VOCs TO-15
10/12/17 - Lakhani PWGC Jennifer Lewis informed that work will be
conducted on 10/20/17. 10/19/17 -
Lakhani PWGC Jennifer Lewis emailed to inform that the work has been
postponed. She will inform DEC
of the new date. 12/01/17 - Lakhani PWGC Lewis confirmed that work
will resume on 12/13/17.
12/14/17 - Lakhani PWGC Jennifer emailed to inform that the well
installation will be conducted on
Friday, 12/22/17. 01/31/18 - Lakhani On 01/17/18, PWGC made an
addendum to the RAWP, proposing to
replace the proposed vapor barrier system with an EPro system. The
underslab protection will be
provided by E.Proformance, a three (3) layer barrier that is
constructed of an 18 mil thick E.Base
205 membrane, a 60 mil thick E.Spray layer, and an 18 mil thick
E.Shield 205 membrane. Spec for the
EPro system revealed that a limitation of the EPro vapor barrier is
that a sub-slab vapor
collection, passive or active, is suggested in addition to
E.Proformance for site impacted with
contamination. DEC Lakhani could not approve the EPro without
sufficient proof that the SSDS is not
needed. NYSDOH Nathan Walz concurs with the DEC. As per NYSDOH,
neither of the individual
components of the composite system alone meet the requirements of a
vapor barrier. Nathan
recommends that the area within the basement that will have the
children's play area and gym have
SSDS piping and pressure monitoring/sampling ports installed. SVI
testing after the building is
completed and the heating system is running can be used to determine
whether the system needs to be
made active. DEC concurs with NYSDOH's recommendation. PWGC Jennifer
Lewis responded with the
following message: We are going to revise the RAWP Addendum. Instead
of the ESpray system on the
foundation walls, the EProformance will be the only barrier used, both
beneath the slab and on the
foundation walls. Regarding the SSDS installation, since the concern
is related to the children s
recreation room which no longer exists, we propose to install a
passive SSDS beneath the
residential areas of the basement that could be used for long-term
usage as opposed to short-term
usage rooms like maintenance rooms or the trash room or the parking
garage area which will have its

IN THE SOIL - OER (Continued) **S121100522**

own ventilation system. Please see the attached marked up plan with the proposed horizontal piping location. I have also attached copies of the revised cellar and first floor plans the most notable change is that the parking garage area footprint has increased to include a portion of the western half of the building. If the proposed coverage area is ok with everyone, we will begin preparing the SSDS design and include it in the revised RAWP addendum letter which I would be looking to get to you by next week. The SSDS will have a contingency to be converted to active, if necessary, which will be determined by sub-slab and indoor air sampling after construction of the cellar is substantively completed. The gym is still in place and the SSDS will cover it. 02/14/18 - Lakhani PWGC Jennifer Lewis submitted the revised RAWP Addendum with the SSDS design. The SSDS will consist of two legs of 4 inch diameter slotted HDPE corrugated piping installed horizontally in a minimum 12 inch deep trench of gravel beneath the southwestern section of the building. The area encompassing the residential units will be completed with a 6 inch layer of gravel beneath the concrete slab to increase permeability of the area. The slotted piping will be connected to a 4 inch diameter solid ductile pipe which will be routed towards the western wall of the building towards a utility chase. The piping will then be connected to a vertical 4 inch solid cast iron pipe that will penetrate the concrete slab and extend up to above the roofline. The vertical pipe will be completed with a 6 inch diameter turbine ventilator and will be installed a minimum of 10 feet from windows, doors, air intakes, louvers, vents, or other building openings on the subject property or neighboring properties. Two vapor monitoring points will be installed within the vented zone to a depth of 6 inches below the concrete slab and will be constructed of 1 inch diameter schedule 40 slotted PVC well screen. The vapor monitoring points will also be used for collecting sub?slab vapor samples. To determine if the SSDS should be converted to an active system, sub?slab and indoor air sampling will be completed. Sub?slab samples will be collected from the two vapor monitoring points and two indoor air samples will be collected adjacent to the sub?slab monitoring points. NYSDOH Nathan Walz finds the RAWP and SSDS design plans acceptable. 03/13/18 - Lakhani PWGC Jennifer Lewis informed that a 3000 gallons fuel oil tank was uncovered last week in the vicinity of the spill. Jennifer claims that it apparently does look like it’s a fairly old tank. The tank will be pumped out and removed on 03/14/18. 05/07/18 - Lakhani PWGC Jennifer Lewis submitted the updated PBS form following removal of the 3000 gallon fuel oil UST. A

IN THE SOIL - OER (Continued) **S121100522**

hard copy will be mailed to
Region 2 DEC. 10/24/18 - Lakhani PWG Jennifer Lewis emailed: A second tank was found. This tank is
approximately 120 gallons and was located on the far west side of the property. Please see the
attached site plan and pictures. It looks like the tank may have been previously abandoned and was
approximately half filled with water. There was a slight petroleum odor from inside the tank. The
tank was resting on a 3 inch piece of concrete with a thin layer of soil sandwiched between the
tank and concrete. There were no indications of a release from the tank. A sample of the sandwiched
soil was collected and, while moving the tank out of the way for excavation, some of the water
spilled on exposed soils, so a sample of that soil was collected, as well. Due to the potential for
the tank to have been a waste oil tank, the sample beneath it is being analyzed for VOCs CP-51,
SVOCs CP-51, and RCRA metals. The sample from the spilled water is just being sampled for VOCs and
SVOCs, CP-51. I ll share the results when they come in next week. The tank and the soil with the
spilled water (~2 cubic yards) have been isolated and placed on poly sheeting. 08/05/19 - Lakhani -
Spill being transferred to Lin. 09/13/23-Lin-No petroleum related compounds exceedances were found
in the soil or groundwater. The entire site was excavated down to 12' bgs. A hotspot for heavy
metal (mercury, copper, and lead) was excavated down to 6' bgs. Two (2) USTs were discovered during
excavation. One 3,000 gallon fuel oil UST and one 120 gallon waste oil tank. Contaminated soil was
excavated down to 12' bgs and the waste oil tank was excavated down to 4' bgs. Three (3) endpoint
samples were collected from the UST locations. The endpoint samples came back clean. Eleven (11)
endpoint samples were collected across the site and came back clean. A passive SSDS, vapor barrier,
and a composite cover were installed as engineering controls for the site. Case closed.

Remarks: Spill in the soil. Unknown amount. Samples came back from a boaring.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Contact Name:	JERRY PRATT
DEC Memo:	DEC Piper spoke with DEC Jerry Pratt. He was inspecting site yesterday and noticed housekeeping issues. Speedy dry put down but not swept. Puddles of waste oil, etc. Site is a listed site and he will talk with RP to have Tenant clean area and be more aware of spilling. Spill closed. 2/21/18- DEC Piper re-opened case as problem has not been resolved. 2-612201 11/5/20- DEC Piper spoke with DEC Pratt. Spill area satisfactory. Site is in BCP. any additional issues will be addressed through that program. Spill closed.
Remarks:	Loss discovered during inspection. Pictures available

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the

KIEN IMPORT CORPORATION (Continued) **1000164221**

Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Registry ID: 110004334872

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

SHWS:

Name:	FORMER GOODMAN BROTHERS STEEL DRUM CO.
Address:	18 DIVISION PLACE
City,State,Zip:	BROOKLYN, NY 11222
Program:	HW
Site Code:	505634
Classification:	Significant threat to the public health or environment - action required.
Region:	2
Acres:	0.670
HW Code:	224211
Record Add:	03/18/2015
Record Upd:	01/18/2024
Updated By:	HMDUDEK
Site Description:	Location: The 0.67 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the south side of Division Place between Kingsland and Debevoise Avenues. Site Features: The site is mostly covered with one-story buildings, with a

GOODMAN BROTHERS CO STEEL DRUM DIV (Continued) **1000190383**

storage yard located on the south side along Richardson Street. Current Zoning and Land Use: The site is zoned for manufacturing. The site is currently used for storage and light manufacturing. Numerous commercial, industrial, and residential properties surround the site. Past Use of the Site: Goodman Brothers began operations in 1909 as a re-conditioner and recycler of used steel drums for re-use or disposal. The Department's initial involvement with the facility was a RCRA inspection conducted in September 1982, as the company was a large quantity generator of hazardous waste above a sole-source aquifer. The company went out of business in June 2002. During the last 20 years of its operation, Goodman Brothers entered into one consent order with the USEPA (1983), and two consent orders with the Department (1987 and 2003), and agreed to pay penalties in the overall amount of $28,000 for numerous violations. Site Geology and Hydrogeology: The site is underlain by a sand/silty sand unit (~15-35' thick), a discontinuous sand/gravel unit within the sand/silty sand unit (~5' thick), a discontinuous clayey silt unit within the sand/silty sand unit (~5' thick), and a sand unit below. Groundwater is approximately 15-20' below grade in the immediate vicinity of the site. Groundwater below the site flows toward the east in the direction of Newtown Creek (~3,600' away).

Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminants in groundwater are Volatile Organic Compounds or VOCs and Per/ polyfluoroalkyl substances (PFAS). For example, the chlorinated VOC, cis-1,2 dichloroethene (DCE) was detected up to 61,000 parts per billion or ppb, compared to groundwater standard of 5 ppb. The PFAS compound Perfluorooctanoic acid (PFOA) was detected up to 5,100 parts per trillion or ppt, compared to a groundwater standard of 10 ppt. - Soil The primary contaminants in soil are VOCs and Polychlorinated Biphenyls (PCBs). For example, the chlorinated VOC, tetrachloroethene (PCE) was detected up to 1,200 parts per million or ppm. This exceeds the commercial Soil Cleanup Objective (SCO) of 150 ppm. Total PCBs were detected up on 130 ppm, which exceeds the commercial SCO of 1 ppm. Soil Vapor: Numerous VOCs were detected in soil vapor. For example, DCE was detected up to 5,600,000 micrograms per cubic meter (ug/m3). Numerous Significant Threat: The site poses a significant environmental threat due to ongoing releases of PCE (and its breakdown products), BTEX compounds, and PCBs from source areas into soil groundwater and soil vapor.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion in on-site and off-site structures exists and should be evaluated and may need to be evaluated for off-site structures.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes

GOODMAN BROTHERS CO STEEL DRUM DIV (Continued) **1000190383**

information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Spiller Address:	1202 LEXINGTON AVE STE 255
Spiller Company:	999
Contact Name:	EDWARD IAMICELI
DEC Memo:	3/30/16-Zhune spoke to Edward Iamicelli (845)567-6656. Edward said they were doing geotechnical borings. As they drilled they noticed odor and saw oil in a borehole. The existing building will be demolished and a new building will be developed. A CSL letter was sent to: Ms. Elaine Hsu GlovalServ Property One, LLC 1202 Lexington Avenue, Suite 255 New York, NY 10028 Spill referred to Rashad Omar (Runner). 3/31/2016: Rashad 264 East 7th Street does not have an alternate address. No additional spills or PBS registrations found for site. 5/2/2016: Rashad Receieved two voice messages from Alla about site, 212-665-4129 or 212-685-2715. Called Alla back, she said they discovered contamination when doing borings and remediation will take place once the demo and redevelopment begins in August (the final tenant leaves in August). Alla will keep me updated once redevelopment begins. She also gave me spill number for previous spill

264 EAST 7TH STREET (Continued) **S118637212**

on site: 0608798. Spill
0608790 was called in for 260 East 7th Street which is adjacent
property to 264 East 7th Street.
During redevelopment on 260 East 7th Street contaminated soil was
found, and it was found to be
flowing from 262 East 7th Street spill number 0651463, contaminated
soil was removed, and a further
remediation plan was made to do treatment by injection by Langan
Engineering. After the project
manager reviewed groundwater analyticals and soil samples, the spill
was closed, it should be noted
that there was some contamination left behind, as the homeowners could
not afford a more thorough
investigation/cleanup. Spill 0651463 needs review as well. 7/19/2016:
Rashad Received call from
Charles of Manhattan Renovations (Charles@manhattanrenovations.com) he
was calling to discuss
remediation process. He will be taking additional soil sample this
week and was wondering if he
should send it to the lab. I let him know that if he is doing site
wide excavation that the soil
that he will encounter will likely be removed and that he should do
site wide endpoint samples upon
completion of excavation for foundation. I sent him a copy of
contractor list to aid in selection.
The demolition date is set to begin in Mid December. 11/22/2016:
Rashad Received call from
HydroTech, they will be doing preliminary investigation, involving
soil borings, a few wells, and
soil vapor samples to identify extent/any contamination. In addition
they will be conducting GPR
survey to see if their were any tanks. Site is also E-designated.
1/13/2017 Austin This spill
report is being transferred from Rashad Omar to Pratik Lakhani end.
01/31/17 - Lakhani Called
HydroTech (6314625866) and found out that the PM is Rachel Ottoman.
She is currently out on
disability. DEC Lakhani left contact with HydroTech. 03/03/17 -
Lakhani Sent the following email to
Manhattan Renovation Charles: I am the new project manager for this
spill case as Rashad Omar is no
longer at the DEC. Before Rashad left, he noted that he spoke to you
regarding the remediation
process for the site. Have soil samples been taken from the site and
sent to the lab? Is a site
wide excavation taking place? Please provide me with any further
updates on the site. I would like
to be aware of all remediation activities. Has a consultant been hired
to complete the remediation?
If so, please share their contact with me. 03/06/17 - Lakhani
Manhattan Renovation Charles Bagby
responded informing that Manhattan Renovation was asked to halt this
project last year, hence the
remediation never started. The client/owner later sold the building.
Charles was not in direct
contact with the buyers or the agents and so he has no more
information on this project. As per

264 EAST 7TH STREET (Continued) **S118637212**

ACRIS, the property owner still is: GlobalServ Property One, LLC 1202 Lexington Avenue #255 New
York, NY 10028 Managing Agent: Elaine Hsu Manhattan Renovations Barbara informed that the current
owner is no longer GlobalServ Property One. 03/16/17 - Lakhani Called HydroTech. Rachel Ottoman is
out on maternity leave and Erica Johnston has take responsibility of the site. She informed that
HydroTech has not done any work at the site. 03/20/17 - Lakhani Sent CSL to the following address:
264 East 7th Holdings, LLC 555 Madison Avenue, 6th Floor New York, NY 10022 Attn.: Alan Cohen and
required effective removal of contamination, installation of borings/wells, and delineation of soil
and groundwater contamination. 04/17/17 - Lakhani Langan Joe Good (212-479-5448, Cell:
847-971-1972, jgood@langan.com) contacted DEC Lakhani regarding the site. They were recently hired
by the new property owner. Joe informed that the site is E-designated and OER will be involved with
the site. DEC Lakhani sent the following email to Joe: Great speaking with you today. Below is the
information I have regarding the above site: Tectonic Engineering was installing geotechnical
borings on 03/30/16 at the site. As they were drilling, they noticed an odor and saw oil in a
borehole. There were plans to demolish the existing building and redevelop the site. There was a
former spill on the property, reported on 10/31/06, which is now closed after receiving a Site
Screening Report dated 12/17/07 from Langan Engineering. The report included the analytical results
for the groundwater grab samples taken on 04/23/07 and 09/26/07. The 04/23/07 sample had six (6)
very low hits. The 09/26/07 sample had very slight TAGM groundwater. Manhattan Renovations
contacted the DEC in July 2016 informing us that they would be taking additional soil samples.
However, Manhattan Renovations was asked to halt this project due to the change in ownership of the
property. HydroTech was once involved with the site as well but completed no work. Given this
information, I sent a requirement letter requiring the removal of contamination from the site and
the installation of borings and wells to delineate the extent of the soil and groundwater
contamination. Depending on the redevelopment of the site, a soil vapor intrusion study may also be
necessary. Please share your report with me as soon as possible, so I could send you and updated
requirement letter. If you have any questions, please contact me at (718) 482-4038. 04/20/17 -
Lakhani File Review: Geotechnical Evaluation (Tectonic, 10/20/16) - The project site consists of a
three-story brick masonry building with a partially below grade basement. Based on the test pits,
the existing foundations are approx. 7’ to 8’ below the sidewalk

264 EAST 7TH STREET (Continued) **S118637212**

elevation in front of the
building. The building id currently being used for residential space. The site is bound by similar
masonry buildings to east and west; a small courtyard and a single story brick building to the
south; and by 7th Street to the north. The proposed project will consist of demolition of the
existing building and construction of a six-story building with a full basement. Drilling,
sampling, and logging of two (2) additional test borings, at the rear of the existing building, to
depths of approx. 11.5' and 60'bg and excavation of two (2) test pits along the foundations of the
existing building were completed. Groundwater was encountered at a depths between 7.5'-8'bg.
Sampling Summary Report (Tectonic, 10/17/16) - The East River is approx. 1300' east of the site.
Historic mapping of this section of lower Manhattan indicates the area was a tidal marsh with small
streams flowing roughly west to east. On 03/25/16, Tectonic performed a geotechnical soil boring in
the sidewalk in front of the building. During the geotechnical investigation, petroleum sheen and
odor was encountered around 6'-8'bg. Tectonic reviewed spill cases for the neighborhood and found a
previous spill case number 0608798 reported for the private dwelling located at 260 East 7th
Street. The spill report indicated that unknown quantity of #2 fuel oil was released on 10/31/06.
The spill was closed on 12/18/07. 260 East 7th St is located approx. 23' to the east of the subject
property. Another fuel oil spill was reported on 07/03/14 at 243 East 7th St, which is located
approx. 150' northwest of the project site. Tectonic mobilized to the site to collect environmental
soil samples from two (2) test pit locations. Soils in each test pit was screened with a PID. The
test pits were terminated when groundwater was encountered. Then a post hole digger was used to
excavate 1' below the water table and install a 2 PVC well screen, which was backfilled with well
sand. Tectonic mobilized to the site to inspect the performance of two (2) soil borings and collect
environmental soil samples. Boring B-2 was advanced to a depth of 62'bg, while boring B-3 was
advanced to 11.5'. One sample was retrieved within boring B-3 at a depth of 8' to 10'. For the
remaining analyses, one (1) composite sample per boring was created via the following methodology:
two (2) grab samples from each vertical interval within each boring were collected with a dedicated
plastic scoop and placed into a single flood-grade plastic bag. Groundwater was encountered in all
of the borings and test pits. Groundwater elevations indicate that there is no measureable gradient
across the site. PID readings above background were observed in borings B-2 and B-3 and in test pit

264 EAST 7TH STREET (Continued) **S118637212**

TP-1 and TP-2. Additionally, petroleum like odors were observed in all three (3) borings and two
(2) test pits and staining was observe in test pits TP-1 and TP-2, indicating the presence of
petroleum hydrocarbon compounds. No PID readings are available for B-1 was it was not part of the
original geotechnical investigation. BTEX in soil samples were below CP-51 unrestricted use SCOs.
n-butylbenzene 6700 ppm(TP-2, 3'bg), sec-butylbenzene 5600 ppm(TP-2, 3'bg), isopropylbenzene 2000
ppm(TP-2, 3'bg), n-propylbenzene 4400 ppm(TP-2, 3'bg). Groundwater: sec-butylbenzene 8 ug/L(TP-1),
isopropylbenzene 7.8 ug/L(TP-1), n-propylbenzene 8.4 ug/L(TP-1). The soils and groundwater on the
site have likely been impacted by a petroleum spill. The petroleum contamination is at least 2'
below the existing basement elevation, therefore, currently there is no exposure pathway for nearby
receptors. Tectonic inspected the basement areas of the subject building including the area around
the existing AST. No evidence of a spill source such as staining or odors on the subject property
was observed during their investigation. Tectonic recommends the following: 1) the historic fill
should be excavated down to at least the groundwater elevation 2) dewatering 08/15/17 - Lakhani
Langan Joe Good (212-479-5448) informed that the site will be applied to OER VCP program. 09/25/17
- Lakhani Langan has met with OER to discuss the anticipated site investigation to satisfy the
E-designation and spill delineation requirements at 264 East 7th Street. Langan anticipates sending
the RIWP to OER this week for review (9/25 - 9/29). 10/30/17 - Lakhani The site was enrolled in the
OER VCP program. OER Shaminder emailed DEC Lakhani and NYSDOH Nathan with the RIWP attached. Work
is scheduled for next week and involves three (3) groundwater wells, four (4) soil boring and three
(3) soil vapor points on the 25' x 100' site. Development is only restoration of existing structure
and adding one(1) floor on top. Previously, elevated PID readings were observed in borings B-2 and
B-3 and in test pits TP-1 and TP-2, and petroleum-like odors were observed in all three (3) borings
and both test pits. Rememdial Investigation Work Plan (Langan, 10/27/17) - GPR will be performed at
the site to locate utilities, USTs and subsurface structures or anomalies. A soil investigation
will be performed to identify the nature of soil conditions at the site. Four (4) soil borings will
be completed. Where possible, a minimum of two (2) discrete soil samples will be collected from all
four (4) of the test borings (one from between 0'-2'bg and another from immediately above the
groundwater interface. A groundwater investigation will be performed to evaluate groundwater
quality at the site and identify potential off-site contamination that

264 EAST 7TH STREET (Continued) **S118637212**

may be migrating on to the
site. Up to three (3) groundwater monitoring wells will be installed. Approx. one (1) week after
the monitoring wells are developed, three (3) groundwater samples will be collected. Soil vapor
samples will be collected to evaluate the potential for infiltration of contaminated soil vapor
into the proposed building. Three (3) soil vapor points will be installed at the site. An ambient
air sample will be collected concurrently with the sub-slab soil vapor samples. 10/31/17 - Lakhani
DEC Lakhani approved the RIWP. 11/14/17 - Lakhani OER #17TMP0176M 01/31/18 - Lakhani As per OER
Shaminder, the site is not going through the City VCP. On 11/21/17, NAPL was observed in monitoring
well MW01 during the Phase II Site Investigation. Langan collected a sample of the NAPL using a
dedicated bailer for fingerprint analysis. Analytical results from the fingerprint analysis
identified the product as potential weathered #2 fuel oil/diesel oil. TPH was detected at a
concentration of 886,000 ppm in the product sample collected. Langan will be directly working with
DEC for this site. The Langan contact is: Joseph Good 212-479-5448 jgood@langan.com Phase II
Environmental Site Investigation Report (Langan, 01/25/18) - Site development will include
renovation of the existing vacant 3-story development into a new 4-story multifamily residence with
a full cellar. Work performed under the Phase II Environmental Site Investigation include: 1)
conducted a geophysical survey, 2) completed an indoor air chemical inventory, 3) Advanced four
soil borings across the site, and collected nine (9) soil samples for chemical analysis, 4)
installed three (3) groundwater monitoring wells throughout the site to establish groundwater flow
and collected three (3) groundwater samples, and 5) installed two (2) soil vapor and one (1)
sub-slab soil vapor probes and collected two (2) soil vapor, one (1) sub-slab soil vapor, one (1)
indoor air, and one (1) ambient air samples for chemical analysis. Depth to groundwater ranges from
4.13’ - 4.87’ below the cellar slab. Groundwater flow is generally east-northeast. NAPL was
identified in off-site monitoring well MW01. Product thickness post well development was 4 .
Groundwater results are as follow: isopropylbenzene 7.3 ug/L(MW02), n-propylbenzene 8.9 ug/L(MW02),
sec-butylbenzene 7.6 ug/L(MW02). Soil results do not indicate VOCs above CP-51 standards. Soil
vapor results are as follow: acetone 65.8 ug/m3(SV03), carbon tetrachloride 0.484 ug/m3(AA01),
carbon tetrachloride 0.478 ug/m3(IA01), carbon tetrachloride 1.26U ug/m3(SV01), carbon
tetrachloride 2.52U ug/m3(SV02), carbon tetrachloride 2.52U ug/m3(SV03), m/p-xylene 12.3

264 EAST 7TH STREET (Continued) **S118637212**

ug/m3(SV01), m/p-xylene 6.47 ug/m3(SV03), o-xylene 5.08 ug/m3(SV01), PCE 2.71U ug/m3(SV02), PCE
2.71 ug/m3(SV03), PCE 1.36U ug/m3(SV01), TCE 1.07U ug/m3(SV01), TCE 2.15U ug/m3(SV02), TCE 2.15U
ug/m3(SV03), vinyl chloride 0.511U ug/m3(SV01), vinyl chloride 1.02U ug/m3(SV02), vinyl chloride
1.02U ug/m3(SV03). 03/14/18 - Lakhani Langan Joe Good sent the following email: Based on our prior
conversations regarding NYSDEC Spill No. 15-12347, we will begin bi-weekly NAPL recovery of
monitoring well MW01 at the 264 East 7th Street property this week. Purged NAPL and groundwater
will be containerized into a NYSDOT-approved 55-gallon drum prior to off-site disposal. If NAPL is
not observed in the well following the recovery events, Langan will collect one groundwater sample
from MW01 for VOC and SVOC analysis. We will prepare a sampling summary letter and laboratory
analytical results for review and consideration for closure of Spill No. 15-12347. 04/27/18 -
Lakhani Langan Joe Good informed that the product gauging has been going well with product
thickness decreasing from about 20 to about 7 over the past four (4) recovery events. 05/03/18 -
Lakhani Four (4) recovery events have taken place: 3/15, 3/28, 4/13, 4/26. LNAPL found in MW01.
Product thicknesses prior to recovery were 20 , 13 , 8 and 7 for 3/15, 3/28, 4/13, and 4/26
respectively. 06/18/18 - Lakhani The proposed development includes the proposed renovation of the
existing vacant three-story development into a four-story multi-family residence with a full
cellar, which will require limited excavation below the existing cellar level for construction go a
cellar expansion. Approx. 15 cu. yds. of material are anticipated to be excavated. A vapor barrier
will be installed in the cellar as part of the general construction. SMMP uploaded to D2. 08/05/19
- Lakhani - Spill being transferred to Lin. 11/23/2020-Lin-Based based on Phase II report. The
spill did not come from 264 E 7th Street, Manhattan. MW-1 in front of the site has 0.25' of product
remaining based on the last gauging event that took place on 2/6/2020. 6/8/23-Lin-Spill closed due
to small volume of product left in a isolated well. The oil is contained and not traveling
downgradient.

Remarks: boring done on sidewalk in sidewalk, sheen discovered. Spill was reported at site in 2006

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/20/2023

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

UTM Y (Meters):	4508009.0
Elevation:	33 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

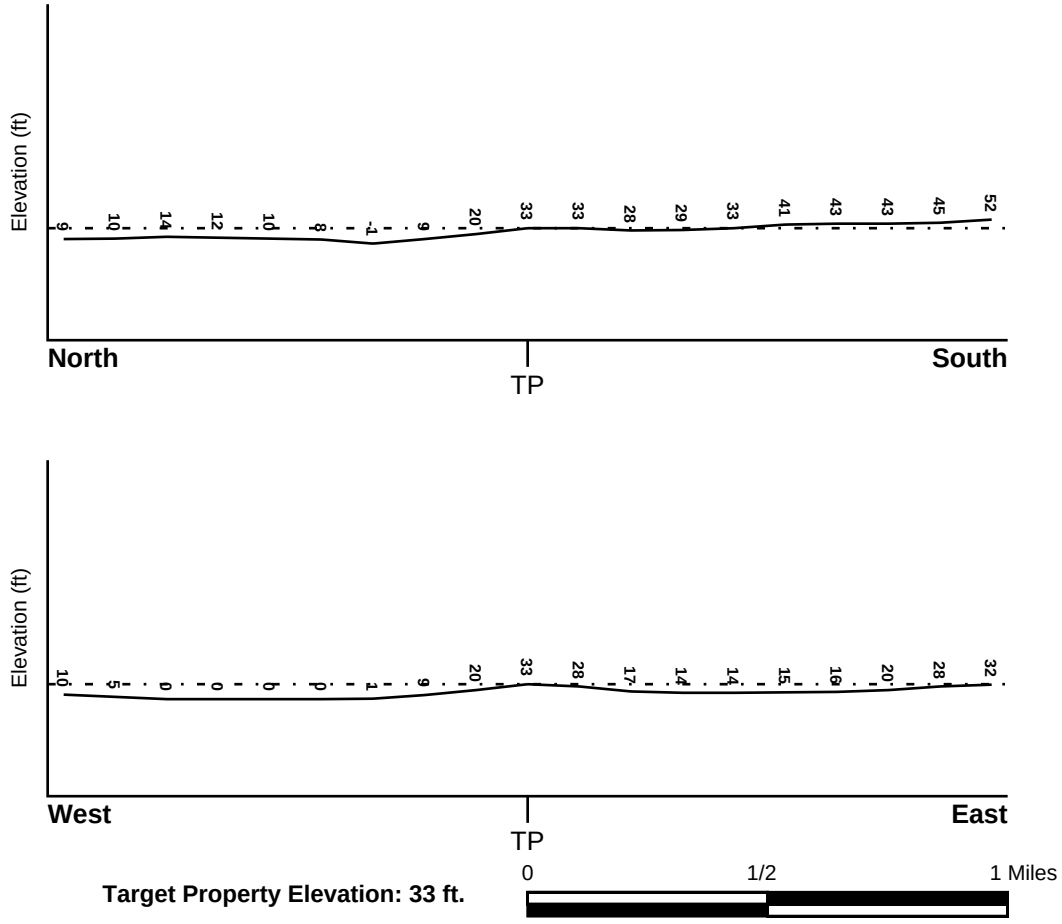
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970202F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970201F	FEMA FIRM Flood data

3604970204F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician

Code:	Oe *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Appendix J - User Questionnaire

ATTACHMENT A: PHASE I ESA USER QUESTIONNAIRE

Site Name: 92-94 North 9th Street, Brooklyn, New York

Title and Signature of Person Completing Questionnaire

Name: Elad Ben-Khiwa Date: 6-19-2024

The following are a series of questions from ASTM 1527-21 that must be answered in order to qualify for Landowner Liability Protection under CERCLA. Please provide an answer to each question or attach pertinent information.

1. Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state, or local law?

(No) Yes (Describe or attach information) Attachment No. _____

2. Are you aware of any Activity and Use Limitations (AULs), such as engineering controls (e.g. engineered caps, foundations, liners, treatment methods, etc. in use to prevent contamination from migrating to surrounding areas), land use restrictions or institutional controls (e.g. administrative measures restricting groundwater use, construction, or property use) that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

(No) Yes (Describe or attach information) Attachment No. _____

3. Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

(No) Yes (Describe or attach information) Attachment No. _____

4. Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

No (Yes) (Describe or attach information) Attachment No. _____

5. If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property?*

No (Yes) (Describe or attach information) Attachment No. _____

Are you aware of commonly known or reasonable ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as User,

a. Do you know the past uses of the property? NO

Vacant Land

No Yes (Describe or attach information) Attachment No. _____

b. Do you know of specific chemicals that are present or once were present at the property?

No Yes (Describe or attach information) Attachment No. _____

c. Do you know of spills or other chemical releases that have taken place at the property?

No Yes (Describe or attach information) Attachment No. _____

d. Do you know of any environmental cleanups that have taken place at the property?

No Yes (Describe or attach information) Attachment No. _____

6. As the User of the ESA, based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?

No Yes (Describe or attach information) Attachment No. _____

7. ASTM identifies certain documents as "Helpful Documents" for the understanding of environmental conditions at the Site. Are you aware of any of the following documents; and if so, can they be made available?

No Yes (Describe or attach information) Attachment No. _____

Prior Environmental Assessments	Risk Assessments
Compliance Reports	Hazardous Waste Generation Notices
Environmental Permits	Notices from Environmental Agencies
Tank Registrations	Underground Injection System Registrations
Material Safety Data Sheets (MSDS)	Community Right to Know Plans
Safety or Spill Protection Plans	Hydrogeologic or Geotechnical Reports

8. Do you know who the past owners of the property are, and can you provide contact information?

No Yes (Describe or attach information) Attachment No. _____

9. Do you have a complete site plan of the property that shows property boundaries, and can you make it available?

No Yes (Describe or attach information) Attachment No. _____

See Attached survey

Appendix K - Qualifications of Environmental Professional

Victoria Whelan, PG, QEP

Associate Principal

Summary of Experience

Ms. Whelan is a Certified Professional Geologist and Qualified Environmental Professional with nearly 20 years of experience in environmental assessment. She has performed and managed field investigations and remedial activities at numerous sites on Long Island and throughout the Metro New York area. She has skillfully conducted all aspects of environmental investigations and remediation. Her primary focus is to accurately assess, investigate, remediate, and maintain environmental integrity for real estate transactions and the redevelopment of brownfield or similarly environmental impaired properties.

She manages all aspects of projects with the New York State Department of Environmental Conservation (NYSDEC) Brownfield (BCP) and Voluntary Cleanup Program (VCP), the New York City Office of Environmental Remediation (NYC OER), the New York City Department of Environmental Protection (NYCDEP) and the United States Environmental Protection Agency (USEPA).

Education

B.S., Geology, State University of New York at Oswego, 2001-2005; James Cook University 2004-2005

Licenses & Registrations

Registered Professional Geologist – 2017, New York, # 000318

Certified Professional Geologist, New York State

Qualified Environmental Professional, Institute of Professional Environmental Practice

Areas of Specialization

- Geology
- NYCOER VCP
- NYSBCP
- Environmental Assessments
- Environmental Site Investigation and Remediation
- UST Closures/Assessments
- Regulatory Compliance Planning and Permitting

Relevant Project Experience

NYCOER PROJECTS

Project Manager, Chester Street Brooklyn Supportive Housing Project, Brooklyn, New York. Managed all aspects of environmental project from due diligence investigation services, Phase I Environmental Site Assessment, and Phase II Environmental Site Investigation services to assisting client through NYCOER Voluntary Cleanup Program (VCP). Submitted and received approval for remedial investigation work plan, remedial investigation report, remedial action work plan, and construction health and safety plan, including a community air monitoring program. Managed removal of 12 buried aboveground storage tanks (ASTs). Managed waste characterization study to evaluate various soil types for disposal. Cost effectively utilized the NYC Clean Soil Bank as a disposal site and backfill source. Secured grant funding after receiving Notice of Satisfaction (NOS) for a Track 1 Cleanup.

Environmental Project Manager, Manhattan Avenue, Affordable Housing Project, Brookyn, New York. Member of team that helped Ownership develop a new seven-story residential building on former factory site. Proposed development covered nearly 8,000 square feet of the property, including affordable housing with amenities such as a rear yard, recreation space, and children's play place. Site's contaminants included heavy metals and semi-volatile organic compounds. Hazardous and non-hazardous waste and non-hazardous was removed from the property as part of remediation efforts to address source material. Goal Soil Cleanup Objectives (SCOs) could not be achieved after remediation due to shallow groundwater. A track 4 Cleanup was achieved on this site by installing a composite cover inclusive of a vapor barrier. The project was completed on-time and on budget for the client to receive a NOS.

Project Manager, Bronx Community Development Project, Bronx, New York. Provided environmental services as client purchased, investigated, and remediated site for 81-unit community development, parking area and recreational area. The project is enrolled in NYC OER's VCP. Completed a Phase I ESA, VEA, Phase II ESI, RAWP and RAR.

Victoria Whelan, PG, QEP

Associate Principal

During remediation perimeter air monitoring was performed as per the CAMP. Designed oversaw removal of contaminated soil and installation of chemical vapor barrier during redevelopment.

NYSDEC BROWNFIELD PROJECTS

Principal-in-Charge, Former Auto Wreckers Site, Bronx, New York. Project is in the NYSDEC BCP with a planned Track 1 Cleanup. The site was successfully rezoned, and the proposed project will include 212 affordable housing apartments, 22,000 square feet (sf) of retail space, and parking. As remedial excavation was conducted it was quickly determined that the initial remedial plan would not satisfy the requirements for the project. As PIC, worked with the ownership, architect, accountant and construction team to steer the project towards new remedial goals without impacting project schedule. Remedial elements include a large-scale groundwater treatment system to address petroleum impacted groundwater and excavation of all source material ranging from depths of 2 to 15 feet below grade.

Environmental Project Manager, Confidential Residential Development, Bronx, New York. The 1.5-acre property was enrolled in the NYSDEC Brownfield Cleanup Program. Remedial components included excavation of soil exceeding the Site-specific Track 4 SCOs ranging from 2-22 feet, construction and maintenance of a composite cover system, removal of multiple underground storage tanks (USTs) and injection of Regenox and ORC Advanced (ISCO treatment) into the groundwater. Remediation also involved implementation of a CAMP. The site building was equipped with a vapor barrier and an active sub-slab depressurization system (SSDS). Throughout the process, assisted with design, maintaining a schedule and development of a Site Management Plan (SMP) and Final Engineering Report (FER).

Principal-in-Charge, Clay Street, NYCOER to NYSBCP Site, Brooklyn New York. Project consists of three parcels that share a property boundary and is in an area known to have heavy contamination. As the Principal-in-Charge, guided a team including ownership, developer and architect from the NYCOER VCP to the NYSDEC BCP based on contamination identified during the initial Remedial Investigation. Strategically conducted additional investigation to get multiple parts of the project eligible for the program and to maximize the tax credits available. Development will include a much-needed community facility in the way of a medical center, an indoor children's play center, and residential house.

USEPA PROJECTS

Project Manager, Remediation System, Confidential Client, Hicksville, New York. Managed this USEPA Superfund site for nearly 15 years through the operations and maintenance phase including a long-term groundwater treatment program, off-site soil vapor intrusion evaluations, and a large-scale groundwater sampling program. Contaminants of concern included PCBs and volatile organic compounds (VOCs). The site was complicated by multiple overlapping plumes of groundwater contamination. Collaborated with multiple property owners and their consultants to successfully drive the remediation.

NYS SPILLS PROJECTS

Project Manager, Spill Investigation and Remediation Services, Hempstead, New York. Performed a Phase I Environmental Site Assessment (ESA) that identified a gas station on the Site from 1940 through 1962, until redevelopment in the 1970s as a current commercial building. A subsequent Phase II Environmental Site Investigation (ESI) identified petroleum impacted soils, groundwater, and the presence of light non-aqueous phase liquids (LNAPL). A NYSDEC Spill Case was opened, and a Spill Investigation Work Plan was approved. Managed the spill investigation activities which included a work plan of Vacuum Enhanced Fluid Recovery (VEFR) events to evaluate feasibility of collecting residual petroleum contamination from beneath the Site building using VEFR. As part of long-term remedial plan, Monitored Natural Attenuation (MNA) and biodegradation to assess MNA is viable remedial strategy for the Site after the remediation of the LNAPL.

Certifications/Training

- 40-Hour OSHA HAZWOPER Training and 8-Hour Refreshers
- 10-Hour OSHA Construction Safety Course

Victoria Whelan, PG, QEP

Associate Principal

- First Aid/CPR Training
- LIRR Roadway Worker Training required by 49 CFR Part 214 Subpart C
- ARC Flash Training
- Confined Space Entry

Affiliations/Memberships

- Board Member - New York City Brownfield Partnership (NYCBP) 2022- present
- Committee Chair - Small Business Committee (NYCBP) 2022- present
- Member, New York State Council of Professional Geologists (NYSCPG)
- Member, American Council of Engineering Companies
- Member, Long Island Association of Professional Geologist

Honors & Awards

- Big Apple Brownfield Award - Hour Apartment House III
- Supportive Living Affordable Housing Award - Putnam Court
- Who's Who in Green Award - Atlantic Terrace

GZA GeoEnvironmental of New York
