Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Current owner listed as: Steven Hagerman, 1042 50th St, Brooklyn, NY 11219 See top and front view photos in eDocs. 08/11/10-Hiralkumar Patel. discussed with DEC Steve. he spoke with NYC DEP who confirmed that site is vacant lot and as per zoning data, owner can park vehicles on property. recently, one of the neighbour complained about contaminated soil due to leaking vehicle(s) on property. property owner (from ACRIS and anywho.com): Steven Hagerman 1042 50th Street Brooklyn, NY 11219 Ph. (718) 438-5662 3:45 PM:- left message at 718-438-5662. reviewed google pics on website (which could not be most updated) and found 'for sale' notice on front gate of property and Rita Knox Realty is involved. Rita Knox Realty PH. (718) 965-2722 email: ritaknoxrealty@aol.com 3:48 PM:- left message at Rita Knox Realty. 08/13/10-Hiralkumar Patel.

209 BUTLER STREET (Continued) **S110490514**

10:33 AM:- received call from Ms.
Knox. she mentioned that she was involved with this property couple of years ago. she will look for
owner's contact info. 08/16/10-Hiralkumar Patel. 3:00 PM:- visited site. met Steven Hagerman
(917-807-3587) and person from Designer Auto Body and Towing Inc. site is rented to Desginer Towing
and is being used to store vehicles involved in traffic accident. as per person from Designer, they
tow vehicles to this site. but if vehicle is leaking any fluid, they tow it to their shop and drain
liquid out. inspected site. found some minor oil stains only. based on observation during the site
visit, case closed.

Remarks: multiple vehicles stored at the site, all appear to be leaking oil.
Soil is saturated

Site Description:	"Location: The 33,550 square foot site is located in the Gowanus neighborhood of Brooklyn, NY and is identified as Tax Block 433, Lot 28. The site was formerly comprised of two separate tax lots (Lot 28 and Lot 46) but was recently merged into a single tax lot. Site Features: The site is being redeveloped with a new mixed-use structure containing 224 residential apartments above a portion of the first floor/street level commercial and lobby space under which is a sub-grade cellar. Current Zoning and Land Use: The Site was rezoned to M1-4/R7A designation; the M1-4 is a light manufacturing district where manufacturing, commercial and community facilities are permitted and the R7A is a contextual residential district. The surrounding parcels are used for a combination of residential, commercial, and light industrial/manufacturing purposes. Past Use of the Site: Historic Sanborn Fire Insurance maps indicate that as early as 1889, former lot 28 was used as a timber yard and former lot 46 contained a single building used as a paint shop. The 1938 map depicts water distilling on former lot 46, and former lot 28 was improved with the current warehouse structure which was utilized by the NY Fire Department as an automobile repair garage and by the Telegraph Department for storage. By 1950, former lot 28 was used by the NY Fire Department Telegraph Bureau, and by 1982, the South Brooklyn Casket Company occupied the entire site. Site Geology and Hydrogeology: The site-specific geology observed during the advancement of soil borings indicates fill material to 5 feet below grade surface (ft bgs) across most of the site. to 10 ft bgs predominantly on the southern portion of the site, and to 15 ft bgs in the east, central and south-central portions of the site. The fill material is described as brown to dark brown medium to coarse sand with gravel, rock and anthropogenic materials consisting of concrete and brick fragments, coal, cinders, pieces of glass, tile, ceramics and/or wood. The soil identified beneath the fill material is generally described as brown to red brown and/or light grey fine to coarse sand with some gravel, rock fragments, silt and clay with organics in some borings to depths of 15 to 20 fbg. Bedrock was not encountered during the remedial investigation. Groundwater was encountered at depths ranging between approximately 9 and 13 ft bgs and flows in a west- southwest direction beneath the site towards the Gowanus Canal, which is located approximately 530 feet from the site."
	Not reported
Env Problem:	"Remediation at the site is completed. Prior to remediation the primary contaminants of concern were detected in on-site soil including volatile organic compounds (VOCs) such as xylenes; semi

585 UNION STREET (Continued) **S127750710**

volatile organic compounds (SVOCs) such as benzo(k)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd) pyrene; metals such as barium, mercury, and arsenic. Prior to remediation the primary contaminants of concern were detected in on-site groundwater including VOCs such as 1,2,4,5-tetramethylbenzene, benzene, p/m xylene, isopropylbenzene, sec-butylbenzene and n-propylbenzene; SVOCs such as benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, and indeno (1,2,3-cd) pyrene; perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) ; 1,4 -dioxane was also detected in groundwater samples. Prior to remediation the primary contaminants of concern were detected in on-site sub-slab and indoor air carbon tetrachloride as well as methylene chloride. Prior to remediation the primary contaminants of concern was detected in on-site soil vapor was VOCs such as toluene. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Site Code: 619763
Site Description: "Location: The 33,550 square foot site is located in the Gowanus neighborhood of Brooklyn, NY and is identified as Tax Block 433, Lot 28. The site was formerly comprised of two separate tax lots (Lot 28 and Lot 46) but was recently merged into a single tax lot. Site Features: The site is being redeveloped with a new mixed-use structure containing 224 residential apartments above a portion of the first floor/street level commercial and lobby space under which is a sub-grade cellar. Current Zoning and Land Use: The Site was rezoned to M1-4/R7A designation; the M1-4 is a light manufacturing district where manufacturing, commercial and community facilities are permitted and the R7A is a contextual residential district. The surrounding parcels are used for a combination of residential, commercial, and light industrial/manufacturing purposes. Past Use of the Site: Historic Sanborn Fire Insurance maps indicate that as early as 1889, former lot 28 was used as a timber yard and former lot 46 contained a single building used as a paint shop. The 1938 map depicts water distilling on former lot 46, and former lot 28 was improved with the current warehouse structure which was utilized by the NY Fire Department as an automobile repair garage and by the Telegraph Department for storage. By 1950, former lot 28 was used by the NY Fire Department Telegraph Bureau, and by 1982, the South Brooklyn Casket Company occupied the entire site. Site Geology and Hydrogeology: The site-specific geology observed during the advancement of soil borings indicates fill material to 5 feet below grade surface (ft bgs) across most of the site. to 10 ft bgs predominantly on the southern portion of the site, and to 15 ft bgs in the east, central and south-central portions of the site. The fill material is described as brown to dark brown medium to coarse sand with gravel, rock and anthropogenic materials consisting of concrete and brick fragments, coal, cinders, pieces of glass, tile, ceramics and/or wood. The soil identified beneath the fill material is generally described as brown to red brown and/or light grey fine to coarse sand with some gravel, rock fragments, silt and clay with organics in some borings to depths of 15 to 20 fbg. Bedrock was not encountered during the remedial investigation. Groundwater was encountered at depths ranging between approximately 9 and 13 ft bgs and flows in a west- southwest direction beneath the site towards the Gowanus Canal, which is located approximately 530 feet from the site."
Not reported
Env Problem: "Remediation at the site is completed. Prior to remediation the primary contaminants of concern were detected in on-site soil including volatile organic compounds (VOCs) such as xylenes; semi volatile organic compounds (SVOCs) such as benzo(k)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd) pyrene; metals such as barium, mercury, and arsenic. Prior to remediation the

585 UNION STREET (Continued) **S127750710**

primary contaminants of concern were detected in on-site groundwater including VOCs such as 1,2,4,5-tetramethylbenzene, benzene, p/m xylene, isopropylbenzene, sec-butylbenzene and n-propylbenzene; SVOCs such as benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, and indeno (1,2,3-cd) pyrene; perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) ; 1,4 -dioxane was also detected in groundwater samples. Prior to remediation the primary contaminants of concern were detected in on-site sub-slab and indoor air carbon tetrachloride as well as methylene chloride. Prior to remediation the primary contaminants of concern was detected in on-site soil vapor was VOCs such as toluene. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Site Code: 619763
Site Description: "Location: The 33,550 square foot site is located in the Gowanus neighborhood of Brooklyn, NY and is identified as Tax Block 433, Lot 28. The site was formerly comprised of two separate tax lots (Lot 28 and Lot 46) but was recently merged into a single tax lot. Site Features: The site is being redeveloped with a new mixed-use structure containing 224 residential apartments above a portion of the first floor/street level commercial and lobby space under which is a sub-grade cellar. Current Zoning and Land Use: The Site was rezoned to M1-4/R7A designation; the M1-4 is a light manufacturing district where manufacturing, commercial and community facilities are permitted and the R7A is a contextual residential district. The surrounding parcels are used for a combination of residential, commercial, and light industrial/manufacturing purposes. Past Use of the Site: Historic Sanborn Fire Insurance maps indicate that as early as 1889, former lot 28 was used as a timber yard and former lot 46 contained a single building used as a paint shop. The 1938 map depicts water distilling on former lot 46, and former lot 28 was improved with the current warehouse structure which was utilized by the NY Fire Department as an automobile repair garage and by the Telegraph Department for storage. By 1950, former lot 28 was used by the NY Fire Department Telegraph Bureau, and by 1982, the South Brooklyn Casket Company occupied the entire site. Site Geology and Hydrogeology: The site-specific geology observed during the advancement of soil borings indicates fill material to 5 feet below grade surface (ft bgs) across most of the site. to 10 ft bgs predominantly on the southern portion of the site, and to 15 ft bgs in the east, central and south-central portions of the site. The fill material is described as brown to dark brown medium to coarse sand with gravel, rock and anthropogenic materials consisting of concrete and brick fragments, coal, cinders, pieces of glass, tile, ceramics and/or wood. The soil identified beneath the fill material is generally described as brown to red brown and/or light grey fine to coarse sand with some gravel, rock fragments, silt and clay with organics in some borings to depths of 15 to 20 fbg. Bedrock was not encountered during the remedial investigation. Groundwater was encountered at depths ranging between approximately 9 and 13 ft bgs and flows in a west- southwest direction beneath the site towards the Gowanus Canal, which is located approximately 530 feet from the site."
Not reported
Env Problem: "Remediation at the site is completed. Prior to remediation the primary contaminants of concern were detected in on-site soil including volatile organic compounds (VOCs) such as xylenes; semi volatile organic compounds (SVOCs) such as benzo(k)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd) pyrene; metals such as barium, mercury, and arsenic. Prior to remediation the primary contaminants of concern were detected in on-site groundwater including VOCs such as 1,2,4,5-tetramethylbenzene, benzene, p/m xylene, isopropylbenzene, sec-butylbenzene and n-propylbenzene; SVOCs such as benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, and indeno (1,2,3-cd) pyrene; perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) ; 1,4 -dioxane

585 UNION STREET (Continued) **S127750710**

was also detected in groundwater samples. Prior to remediation the primary contaminants of concern were detected in on-site sub-slab and indoor air carbon tetrachloride as well as methylene chloride. Prior to remediation the primary contaminants of concern was detected in on-site soil vapor was VOCs such as toluene. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

DEC Memo:	3/3/2021- DEC Piper spoke with consultant. Site had several investigations done in recent years and found low level soil and groundwater contamination. Owner is looking to enter the VCP program and has already hada pre-application meeting with DEC. Application has not been submitted though will be shortly. Site will have to adhere to spills requirements if not accepted. Report to be sent to DEC Piper and DEC Kim for review. 12/21/2021- email sent to and received by consultant. site entered VCP program c224329, managed by Nathan Freeman in Albany. Spill transferred to Nathan for follow up and closure. 12/21/2023: The site spill was remediated through Track 4 Cleanup under the BCP program, and hereby the spill is closed.
Remarks:	soil and ground water affect by historic spill. Phase two investigation was reason for the dig, this is for potential redevelopment of the site, clean-up pending.

Update By:	LAGORTON
Site Description:	"Location: The site is situation in an urban areas surrounded historically by mainly industrial properties. The Gowanus Canal, a USEPA National Priorities List (NPL) site, is located directly adjacent to the site and was once a vital cargo transportation hub prior to the mid-20th century. The subject property has a total footprint of approximately 102, 070 square feet (SF). Site Features: the main site feature are one (1) single-story commercial building and a bulkhead along Gowanus Canal frontage. Current Zoning and Land Use: The site is currently zoned with the M1-4/R7-2 designation, which is representative of residential zoning. The site, prior to a zoning change that went into effect in November 2021 by the NYCDCP, was previously located within a M2-1 designation. The M2-1 designation is a district characterized by a middle g60round between light and heavy industrial areas. The surrounding parcels have also been re-zoned and presently are within the M1-4/R7-2 designation as well. Past Use of the Site: Historic Sanborn Fire Insurance maps indicate that the site was used as a lumber yard as early as 1886 through the 1910s. Kopper s Seaboard Coke Co. is depicted as the occupant of the site from circa 1922 until the 1950s, during this time the site was used as a yard designed to receive coke for barges, screen and deliver to trucks for distribution to consumers. The current on-site structure was reportedly constructed in 1958 and was occupied by a motor freight stations through the 1960s through the late 1970s. Subsequently, the building was utilized by NY Telephone Co., Bell Atlantic and Verizon. Site Geology and Hydrogeology: The ground surface within the site is generally flat and the elevation of the property is approximately +10 (NAVD-88) feet. During previous

318 NEVINS STREET (Continued) **S128529087**

investigation activities, groundwater was encountered at depths ranging from 5 to 7.5 feet below ground surface (bgs). Based on United States Geological Survey (USGS) mapping, groundwater is inferred to flow to the west-northwest toward the Gowanus Canal, which is located directly adjacent to the site. According to the Federal Emergency Management Agency (FEMA), the site is located within a Special Flood Hazard Area (SFHA), Zone AE, characterized by having a 1 percent annual chance of flooding. Historic investigation reports prepared for the site characterized subsurface soil as historic fill material consisting of fine-grained sand with varying amounts of gravel, brick and concrete. The fill material was encountered at grade to depths of 6 to 9 feet bgs throughout the majority of the site. The fill material was reportedly underlain by sand and clay. In addition, a clay layer was observed at approximately 10 feet bgs throughout the site. Bedrock was not encountered during historic investigations. "

Env Problem: "Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor was sampled for VOCs. Based on the investigations conducted to date, the primary contaminants of concern are SVOCs and metals in soil; SVOCs and metals in groundwater; and VOCs in soil vapor. Soil SVOCs and metals were found at concentrations exceeding the applicable restricted residential soil cleanup objectives (RRSCOs) and Protection of Groundwater soil cleanup objectives (PGSCOs) including benzo(a)anthracene (max of 9.26 parts per million (ppm); RRSCO is 1 ppm and PGSCO is 1 ppm), benzo(a)pyrene (max of 12.7 ppm; RRSCO is 1 ppm and PGSCO is 22 ppm), benzo(b)fluoranthene (max of 9.9 ppm; RRSCO is 1 ppm and PGSCO is 1.7 ppm), benzo(k)Fluoranthene (max of 10.9 ppm; RRSCO is 3.9 ppm and PGSCO is 1.7 ppm), Chrysene (max of 8.92 ppm; RRSCO is 3.9 ppm and PGSCO is 1 ppm) and Lead(max of 2,900; RRSCO is 400 ppm) Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations below soil cleanup guidance values for restricted residential use and protection of groundwater within soil. Data does not indicate any impacts in soil related to this site. Groundwater: Exceedances of the ambient groundwater quality standards (AWQS) for SVOCs including benzo(a)anthracene (max of 0.789 parts per million (ppm) ; AWQS of 0.002 ppb), benzo(a)pyrene (max of 1.090 ppm; AWQS of 0.002 ppb), benzo(b)fluoranthene (max of 0.756 ppm; AWQS of 0.002 ppb), benzo(k)Fluoranthene (max of 0.833 ppm; AWQS of 0.002 ppb), Chrysene (max of v0.789 ppm; AWQS of 0.002 ppb). Data collected to date does not indicate off-site impacts in groundwater related to this site. Soil Vapor: The site is currently undeveloped. Three soil vapor samples were collected on-site with elevated concentrations of chlorinated VOCs. Max concentrations of trichloroethylene (TCE) are 1,396.6 micrograms per cubic meter (ug/m3), and tetrachloroethylene (PCE) 813.5 ug/m3. Data does not indicate there is potential for off-site impacts in soil vapor related to this site. "

Health Problem: "The site is completely fenced, which restricts public access, and is covered by asphalt or concrete so people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Soil/sediment that is found on the banks of the site is contaminated with coal tar and is likely a contributing source for off-site contamination. People using the Canal for recreational purposes such as swimming and boating may come into direct contact

318 NEVINS STREET (Continued) **S128529087**

with chemical contaminants on the banks of the site. Contaminated groundwater is not used for drinking, and the site and surrounding areas are served by a public water supply that obtains water from a different source not affected by this contamination. Because the site is vacant, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Environmental sampling indicates soil vapor intrusion associated with site-related contamination is not a concern for off-site buildings."

HW Code:	C224316
SWIS:	2401
Town:	New York City
Record Added Date:	12/23/2020
Record Updated Date:	05/15/2025
Update By:	LAGORTON
Site Description:	"Location The approximate 51,400 -square-foot (1.18 acres) site is located at 210 Douglass Street in the Gowanus neighborhood of Brooklyn, NY, and is identified as Block 417 and Lots 21, 14 and 10 on the New York City Tax Map. The site is bounded to the north by Douglass Street followed by a one-story commercial building, a three-story residential building, and the New York City Department of Environmental Protection (NYCDEP) Gowanus Pumping Station and Flushing Tunnel facility, to the east by the Gowanus Canal, a USEPA Superfund Site, to the south by Degraw Street followed by a mixed use commercial/residential building, and to the west by Bond Street followed by 2 two- to three-story residential buildings, a two-story mixed used residential and commercial building, and 2 two-story industrial and manufacturing buildings. Site Features The site is located in an urban area and is currently undeveloped. The Gowanus Canal, a USEPA Superfund site, is located adjacent to the east of the subject property. The site is currently vacant. Current Zoning and Land Use The site is located in a M1-4/R7-2 manufacturing district which allows for mixed-use commercial/residential buildings. Historical Site Use The review of Sanborn Maps revealed historic site operations of concern at adjacent properties to the north, south, and west, including a coal yard (1886), a paper box factory (1915), a

210 DOUGLASS STREET (Continued) **S127478129**

machine shop (1950), and a metal manufacturer (1969 - 2007) to the north; a coal yard (1886- 1915, 1938), a fuel company (1928), a wooden box manufacturer (1950), an auto repair shop (1969), and a truck rental company (1979-2007) to the south; and a coal yard (1886), lather (1886), ice factory (1904-1950), unspecified manufacturing (1969-2007), and an electrical manufacturer (1938-2007) to the west. Site Geology and Hydrogeology Miscellaneous fill consisting of a heterogeneous mixture of fine to coarse sand, silt, and fine gravel with variable concentrations of brick, asphalt and concrete was observed as deep as 16.5 feet. Material beneath the fill layer generally consisted of alluvial/marsh deposits, glacial outwash, and till deposits including of sand, silt, and/or clay. According to the USGS Bedrock and Engineering Geologic Maps (Baskerville, 1994), the site is underlain by the Hartland Formation, consisting mainly of gray muscovite-biotite-quartz schist. Groundwater was found at depths ranging from 2.3 to 9.3 feet below grade and, based on observed water level measurements, flows to the east towards the Gowanus Canal. "

Env Problem: "Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor, sub-slab soil vapor, and indoor air samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern are non-aqueous phase liquid (NAPL), grossly contaminated media (GCM), VOCs and SVOCs in soil and groundwater, and VOCs in soil vapor. Soil: Soil samples were analyzed from one hundred and forty seven soil borings and exceedances of the restricted residential soil cleanup objectives (RRSCOs) and the protection of groundwater soil cleanup objective (PGSCOs) were found. For VOCs, the most notable exceedances included maximum concentrations of trichloroethene (TCE) at 1.6 parts per million (ppm) (PGSCO: 0.47 ppm), benzene at 0.37 ppm (PGSCO: 0.06 ppm), and ethylbenzene at 2.3 ppm (RRSCO: 1 ppm, PGSCO: 1ppm). Maximum concentrations of SVOCs include acenaphthene at 100 ppm (RRSCO: 100 ppm, PGSCO: 98 ppm), benzo(a)pyrene at 170 ppm (RRSCO: 1 ppm, PGSCO: 22 ppm), benzo(a)anthracene at 80 ppm (RRSCO: 1 ppm, PGSCO: 1 ppm), benzo(b)fluoranthene at 210 ppm (RRSCO: 1 ppm, PGSCO: 1.7 ppm), and naphthalene at 99 ppm (PGSCO: 12 ppm). The primary metal detected was lead detected at a maximum concentration of 4,010 ppm (RRSCO: 400 ppm and PGSCO: 450 ppm). In addition, NAPL/GCM indicative of coal tar was found on-site along the eastern boundary of the property bordering the Gowanus Canal National Priority List site. Data does not indicate there are off-site impacts in soil related to the site. Groundwater: Groundwater samples were collected from twenty-nine locations and exceedances of the applicable NYS Ambient Water Quality Standards and Guidance Values (AWQSGVs) were found. For VOCs, the maximum concentrations detected include benzene at 320 parts per billion (ppb) (AWQSGV: 1 ppb), ethylbenzene at 1,100 ppb (AWQSGV: 5 ppb), and vinyl chloride at 7.8 ppb (AWQSGV: 2 ppb). Maximum concentrations of SVOCs include acenaphthene at 170 ppb (AWQSGV: 20 ppb), benzo(a)anthracene at 4.6 ppb (AWQSGV 0.002 ppb), benzo(b)fluoranthene at 4.2 ppb (AWQSGV: 0.002 ppb), and naphthalene at 8,400 ppb (AWQSGV: 10 ppb). For metals, dissolved lead detected at a maximum concentration of 26.14 ppb (AWQSGV: 25 ppb). For PCBs, total PCBs were detected at a maximum concentration f 0.21 ppb (AWQSGV: 0.09 ppb). PFOS was detected at a maximum concentration of 36.6 parts per trillion (ppt) and PFOA was

210 DOUGLASS STREET (Continued) **S127478129**

detected at a maximum concentration of 110 ppt (AWQSGV 2.7 and 6.7 ppt respectively). No pesticides were detected above NYS Ambient Water Quality Standards and Guidance Values. Data does indicate the potential for off-site impacts in groundwater related to the site.
Soil Vapor: The site is currently vacant. Six sub-slab vapor/indoor air samples from the former buildings and eight soil vapor samples were collected on-site. Maximum concentrations for TCE were 10.9 micrograms per cubic meter (ug/m3) in sub-slab vapor, 0.151 ug/m3 in indoor air, and 908 ug/m3 in soil vapor. Maximum concentrations for tetrachloroethylene (PCE) were 359 ug/m3 in sub-slab vapor, 2.22 ug/m3 in indoor air, and 369 ug/m3 in soil vapor. Off-site soil vapor intrusion sampling was performed at 6 properties off-site of 210 Douglass Street. Maximum concentrations for TCE were 710 ug/m3 in sub-slab vapor and 3.4 ug/m3 in indoor air. Maximum concentrations for tetrachloroethylene (PCE) were 81 ug/m3 in sub-slab vapor and 2.57 ug/m3 in indoor air. "

Health Problem: "The site is vacant. Since the site is fenced and covered by asphalt or concrete, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. However, the inhalation of site-related contaminants due to soil vapor intrusion is a concern for future development. Environmental sampling indicates soil vapor intrusion from site contaminants is a potential concern for off-site buildings."

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

601-607 UNION STREET (Continued) **S131764053**

Site Description: "Location: 601 607 Union Street (the Site) is located at 601 607 Union Street on the east side of Third Avenue between Sackett Street to the north and Union Street to the south in the Borough of Brooklyn, New York. The Site is surrounded by a 4-story mixed residential and commercial building, four 4-story residential buildings, a 1-story office and warehouse to the south and an 8-story commercial building to the east and a 1-story, a 2-story and 3-story commercial buildings to the north. The property to the west is a vacant lot, which is currently under development (most recently developed with a 1-story industrial building). Site Features: Currently, the Subject Property contains two Tax Lots (Lot 1 and Lot 12) with a total area of 37,553 square feet (SF). Lot 1 is fully developed with a 1-story office/warehouse with a partial cellar (appr. 500 SF) located in the northeastern portion. The slab-on-grade portion and the partial cellar of the building are covered with concrete building slab/cellar slab except a small area was exposed due to historic tank removal and/or other intrusive work as per current owner. Lot 12 is utilized as open parking and storage yard with an asphalt cover throughout. As part of the development, the two current lots will be merged and the new Subject Property will include 100% of the current Lot 1 and 12. Therefore, the proposed BCP site will cover the entire current Lot 1 and 12. The proposed development plan consists of two mixed residential and commercial buildings in the western and southeastern portion and one commercial building in the northeastern portion occupying 70% of the merged lots and private yard occupying the remaining 30% area. Current Zoning and Land Use: The site is zoned M1-4/R7A (manufacturing district). The current use of the site is commercial/manufacturing only. The current zoning allows residential, community and commercial/manufacturing and use. Past Use of the Site: Based upon the historic Sanborn Maps and City Directory Records, the current Lot 1 was developed with a lumber yard with several 1- & 2-story lumber sheds in the western portion as early as 1906. The development remained the same on this lot till 1950s where the existing building was constructed and operated as auto repair/service station for trucks and buses till now. The current Lot 12 was developed with four 4-story residential buildings in the southern portion prior to 1906. The residential buildings were no longer observed, and a 1-story office building was mapped in the eastern half of the lot. The lot became vacant with no development prior to 1970s and started being used for truck parking since early 2000s. No remedial activities have been performed prior to the submission of this Brownfield Cleanup Application. Site Geology and Hydrology: The Site is located in western portion of Brooklyn, New York. The elevation of the Subject Property is approximately 18 feet above mean sea level (USGS 7.5-Minute Brooklyn, New York Quadrangle, 2013). Brooklyn, New York is located in the western portion of Long Island. Long Island consists of a wedge-shaped mass of unconsolidated deposits that overlie ancient basement rock. The thickness of these deposits ranges from approximately 100 feet on the Island s north shore to approximately 2,000 feet in some portions of the south shore. These deposits contain ground water that is the sole source of drinking water for the Island s over 3.1 million residents. The major landforms of Long Island of importance to the hydrologic system are the moraines and outwash plains, which originated from glacial activity. The moraines represent the farthest extent of the glacial advances. The moraines consist of till, which is a poorly sorted mixture of sand, silt, clay, gravel and boulders. The till is poor to

601-607 UNION STREET (Continued) **S131764053**

moderately permeable in most areas. Outwash plains are located to the south of the moraines. The outwash plains were formed by the action of glacial melt water streams, which eroded the headland material of the moraines and laid down deposits of well-sorted sands, silts and gravels. These outwash deposits have a moderate to high permeability. The Upper Glacial Aquifer is the uppermost hydrogeologic unit. This aquifer encompasses the moraine and outwash deposits, in addition to some localized lacustrine, marine and reworked materials. A relatively high horizontal hydraulic conductivity and a low vertical hydraulic conductivity characterize the outwash plain portion of this unit. Since the water table is situated in the Upper Glacial Aquifer. The Magothy Formation directly underlies the Upper Glacial Aquifer in the vicinity of the site. This formation is a Cretaceous coastal-shelf deposit, which consists principally of layers of sand and gravel with some interbedded clay. This formation ranges from moderate to highly permeable. A clay layer in some parts of Long Island confines the uppermost portion of the aquifer. The Magothy is Long Island s principal aquifer for public water supply. The United States Environmental Protection Agency (USEPA) has classified the Long Island aquifer system as a sole source aquifer. The Raritan Formation is the deepest unit and rests directly above the bedrock units. This formation is comprised of a sand member (Lloyd Aquifer) and a clay member (Raritan Clay). The Lloyd sand extends southward from Flushing Bay to the Atlantic Ocean. The thickness of the sand member ranges in depth from 200 to 800 feet below sea level and increases in thickness to the southeast. The clay member acts as an aquitard confining the lower Lloyd aquifer between the clay and the underlying bedrock. According to the investigation, groundwater was encountered from 12.30 to 13.75 feet below ground surface (bgs). According to the investigation performed at 585 Union Street (BCP Site #C224329) located on the west side of Third Avenue between Sackett Street and Union Street and less than 100 feet from the Subject Property, groundwater flow direction is toward the west-southwest, in the direction of Gowanus Canal. "

DEC Memo:	11/28/05: This spill transferred from J.Kolleeny to S.Kraszewski. 07/17/06: NYCHA update summary states that two 25K tanks installed in December 1966 were replaced by one 15K tank installed in December 1999. Contaminated soil was encountered during the tank replacement. A.L. Eastmond performed GW sampling that show no exceedances but the soil conditions

WYCKOFF GARDENS -NYCHA (Continued) **S100781767**

remain unknown. NYCHA
recommends a round of soil borings in the tank farm area. - SK
02/08/07 : J.kann - DEC lead changed
from S. Kraszewski to J. Kann. 06/05/17: J.Kann - GSIP for
investigation at this site was approved
in an email 5/31/17. Contractor must provide sampling location diagram
prior to work starting. SIR
due 12/31/17. Spill reassigned to Andre Obligado. 1/14/19 - Obligado -
I reviewed the investigation
report. 11 soil borings were advanced. Only one soil boring at the
remote fill location at 6-8 ft
bgs had VOCs above SCOs - 6 ppm 1,2,4 trimethylbenzene, 3.1 pm
xylenes. All other samples were
below SCOs. Most borings had elevated SVOCs which the report
attributes to urban fill. Soil borings
do not show any evidence of petroleum impact (elevated PIDs or
staining) at the groundwater which
supports the assertion that the SVOCs are due to fill. The minor
exceedence at the fillport is not
likely to have significantly impacted groundwater. This spill does not
appear to be a threat to
human health or the environment. Spill closed.

Remarks: contaminated soil found during the removal of 1 25,000 gal tank. excavation and replacement of tank

DEC Memo:	8/5/2020 - Feng - Desk Duty in office. spoke to Nelson Diaz. The mobile boiler strainer failure and leaked about 6 gallons fuel oil. Provide him email for him to forward the photos over. received email Good afternoon all, Today a spill was called in today at 3:30 PM that occurred at 2PM. This spill was called in to dispatcher #51 and approximately 6 gallons was spilled. DETAILS: Today at 2PM the heating department found a spill because of a leaking fuel oil strainer (mechanical failure). Heating replaced the strainer. FORU is currently on site for spill clean up. We will degrease and hot pressure wash all affected areas and vacuum all water/oil mix. Will provide an update upon completion and send after photos. Thank you. Nelson Diaz Assistant Superintendent Technical Services Department 24 02 49th Ave , LIC , NY 11101 Tel. +1 (718) 707-8688 Cel. +1 (917) 841-6552 Nelson.Diaz1@nycha.nyc.gov New York City Housing Authority - nyc.gov/nycha The Before Photos show spill on the pavement and water in the catch basin. POST SPILL CLEAN UP: Good evening all, Attached you will find photos after clean up. And a total of 120 gallons of contaminated water was recovered for disposal at clean water. Post cleanup photos show the spill has been cleaned up and the water in the catch basin has been vacuumed out. Spill has been cleaned up. Spill is closed.

Record Added Date:	05/23/2023
Record Updated Date:	02/20/2025
Update By:	LAGORTON
Site Description:	"Location: The site is identified on New York City tax maps as Brooklyn block 432, lot 7501. The property is bordered by Union Street to the south and Nevins Street to the east. Site Features: The property consists of a four-story, approximately 8,000 square foot building, a 1,200 square foot boiler house, and a paved courtyard used for parking vehicles. A driveway entrance to the courtyard from Nevins Street is located on the east side of the building. Current Zoning and Land Use: The property is currently zoned for manufacturing and residential use. The 4-story building is currently

543 UNION STREET - EPA REMOVAL (Continued) **S128902375**

operated as a condominium with privately owned units which are used as commercial offices and art studios. The lowest level of the building consists of an unoccupied cellar which is not used for any purpose other than utility access. The cellar floor consists of a concrete slab in poor condition with large sections of slab broken or missing. Foundation walls consist of stone and brick. Groundwater intrusion occurs throughout the cellar and standing water is present in some areas. Past Use: A review of historical Sanborn fire insurance maps indicates the building currently on the Site has been present since at least 1904. The Site has historically operated as Adam s Lime, Brick, and Lath Yard (1886) and a lumbermill (1904-1938). The Site building and properties to the north and west (all of modern-day block 432) is labeled as James H. Dykeman Packaging Cases or some variation on the 1915, 1922, and 1928 Sanborn maps. The front of the building is painted National Packaging Box Factory James H. Dykeman. On the 1950-2007 Sanborn maps the Site is labeled as F(M) indicating factory, manufacturing. Geology and Hydrogeology: The Site and surrounding area are relatively flat at an elevation of approximately 10 ft above mean sea level (amsl). Regional topography slopes west towards the Gowanus Canal. Based on soil borings installed in sidewalks adjacent to the Site to a maximum depth of 20 feet below grade (ft bg), soils generally consist of brown sand with varying amounts of silt and gravel overlain by up to 10 feet of fill material consisting of silty sand and gravel with varying amounts of concrete, cinders and coal ash, and brick. Based on measurements collected from monitoring wells located on Nevins Street and Union Street sidewalks, depth to groundwater is approximately 8-9 ft below sidewalk grade and groundwater elevation is approximately 1-2 ft amsl. Based on measurements recorded by pressure transducer data loggers in the sidewalk monitoring wells, groundwater elevation fluctuates approximately 0.1-0.2 ft per day. The groundwater elevation fluctuations occur in a diurnal sinusoidal pattern indicating that groundwater is tidally influenced."

Env Problem: "Nature and Extent of Contamination: Soil Vapor - The site 543 Union Street was sampled for soil vapor intrusion (SVI) under the 473 President Street Off-site investigation. In February 2023, SVI sampling performed in the building showed elevated concentrations of trichloroethene (TCE) detected in basement indoor air at 900 micrograms per cubic meter [mcg/m3] and first floor indoor air at 170 mcg/m3. The TCE concentrations exceeded the New York State Department of Health (NYSDOH) Air Guideline Value (AGV) of 2 mcg/m3 and Immediate Action Level (IAL) of 20 mcg/m3. Perchloroethene (PCE) was also detected at 65 mcg/m3 and cis-1,2-dichloroethene (cis-1,2-DCE) was detected at 230 mcg/m3. Soil Grab soil samples were collected from exposed soils in the basement, results had low levels of TCE at 5.2 ppm and PCE at 1.2 ppm. Groundwater - Grab groundwater samples were collected from the groundwater seeps coming into the basement, TCE was detected at a concentration of 1,600 micrograms per liter (mcg/l) in the southeast corner of the building. PCE was also detected at 20 mcg/l and cis-1,2-DCE at 360 mcg/l."

Program:	BCP
Site Code:	637074
Acres:	0.310
HW Code:	C224368
SWIS:	2401
Town:	New York City
Record Added Date:	06/03/2022
Record Updated Date:	03/27/2023
Update By:	HMDUDEK
Site Description:	"Location: The site's application to the Brownfield Cleanup Program (BCP) was terminated at the request of the owner. The site is located at 164 4th Avenue, Brooklyn, New York (Site). The site is identified as Tax Block 420, Lot 37 in Kings County. Site Features: The proposed BCP site boundary is equivalent to the parcel s tax map metes and bounds. The total surface area of the site is 13,480-square feet. The site is currently used as a BP-branded gasoline filling station with a convenience store. The building used as the convenience store is a one-story, masonry and steel building that does not contain a basement. The building was constructed in 1988 and is approximately 1,300 square feet in surface area. The existing surface improvements at the site consist of asphalt parking areas and concrete walkways. There are three active underground storage tanks (USTs) existing on-site (one 12,000-gallon and two 10,000-gallon gasoline, double wall, fiberglass, installed in 1997), one inactive UST (550-gallon fuel oil, installed in 1997), and six gasoline fuel dispensers. Current Zoning and Land Use: The current zoning designation of the site is C4-4D. The current land use is commercial. Properties adjacent to the Site and respective land uses are summarized as follows: to the north, Douglass Street and mixed residential/commercial buildings across the street; to the south, commercial warehouses; to the east, 4th avenue and an underground MTA subway (N, R and D lines), across 4th Avenue are multi-family residential lots, one mixed-use residential and commercial lot, and a vacant parcel; and, to the west, a commercial office building and industrial/manufacturing warehouses. Past Use of the Site: The Phase I Environmental Site Assessment Report (ESA) prepared by Impact Environmental in 2011 summarizes the past uses and ownership of the site. According to the Phase I ESA, the site was first developed in 1906 with two residential dwellings. As of 1926, the western portion of the site maintained lumber storage, the eastern portion of the site maintained a gasoline filling station with at least three gasoline USTs, and the northern portion of the site was used for automobile repair and sales. From 1951 to 1980 the southern and western portion of the site were used for truck sales, and the northeastern portion of the site maintained a gasoline filling station with at least four USTs. By 1965, the USTs associated with the gas station were located further north than the previous USTs documented in 1926. In 1988, the site continued to be used for truck sales and as a gasoline filling station, with the addition of a metal canopy in the central portion of the site. Since 1926, the site has maintained at least four generations of USTs. In 1998, 14 inactive USTs were removed from the site including four (4) 4,000-gallon gasoline USTs; two (2) 550-gallon waste oil USTs; several abandoned 550-gallon gasoline USTs; and associated piping. No documentation was available regarding the proper decommission of structures and/or chemicals associated with former automotive repair activities (e.g., oil/water separators, lifts, solvents). A total of 1,498 tons of

BP PRODUCTS NORTH AMERICA (Continued) **1004572334**

petroleum-impacted soil were removed from the site between March 23 and April 8, 1998, by Baltec on behalf of BP (Impact, 2011). The material was transported by Indian Valley Bulk Carriers and disposed of by Soil Safe Incorporated located in Salem, New Jersey. Endpoint samples collected from the 1998 UST removal excavation detected the presence of volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) above the guideline criteria (concentrations detected and criteria used for data comparison is unknown) and a spill incident was reported to the New York State Department of Environmental Conservation (NYSDEC). The spill was recorded by NYSDEC as spill #97-13442 for the release of unknown quantities of gasoline and methyl-tert-butyl ether (MTBE) from historical USTs. The spill was open at the site from 1998 to 2017, during which several environmental investigations occurred including subsurface hydrocarbon assessments (2004-2005) and quarterly groundwater monitoring (2005-2010, 2012-2014, and 2017) performed by Delta Environmental Consultants, Inc (Delta), EnviroTrac Environmental Services (EnviroTrac), and Antea Group. Several off-site confirmed or potential contamination sources were identified during previous investigations, including a historical Manufactured Gas Plant (MGP) that was maintained approximately 350 feet northwest of the site. A gasometer tower associated with the MGP was located on the western end of Block 420 (same block as the Site), along 3rd Avenue. Upon rezoning of the site and the Gowanus neighborhood at the end of 2021, E-Designations for hazardous materials and noise were assigned to the site through New York City Office of Environmental Remediation (NYCOER). Since the end of 2021, Heron Fourth Avenue LLC and Roux have worked with NYCOER to investigate the site through the E Designation Program. A Remedial Investigation (RI) was performed at the site by Roux in 2021 for the characterization of environmental conditions. Site Geology and Hydrogeology: The existing grade of the site varies from approximately elevation 24.1 to elevation 27.5 feet [North American Vertical Datum of 1988]. The site slopes slightly to the east/southeast towards 4th Avenue with an approximate gradient of 2 to 4 percent. The stratigraphy of the site observed during the Remedial Investigation from the surface to depths ranging from 10 to 26 ft bls consists of urban fill containing fine to coarse sand and silt with some brick, concrete, asphalt, and traces of other inorganic fill materials. The average depth of the bottom of the urban fill layer is approximately 17 ft bls. Below the fill is native soil consisting of primarily of sand and gravel, with some silt lenses. An ash layer was identified within the urban fill later beneath the mid to western portions of the site at thicknesses ranging from 1 to 9 feet. The ash layer was considered a separate and distinct layer from the typical urban fill observed in the other areas and depths at the site. Bedrock was not encountered in any of the RIR or geotechnical soil borings. The deepest geotechnical soil boring advanced at the site was 102 ft. The average depth to groundwater at the site is 18 ft bls and the range in depth is approximately 15 ft bls to 21 ft bls. Groundwater beneath the site generally flows from the north to the south-southwest. "

Env Problem: "Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Longitude: -73.9819610
DEC Memo: 03/17/03 REASSIGNED FROM ROMMEL TO VOUGHT. 8/5/03 Received email from A. Lapine, Delta. Delta proposing to install three off-site monitoring wells; one on the west-side sidewalk off of 4th Ave and the other two on the east-side sidewalk of Degraw. 12/3/03 Reassigned from Vought to Foley. Avg depth to groundwater: 19'bgs Flow generally southwest Total BTEX: ND-5541ppb (9/4/03) Total MTBE: 0.48-386,000ppb (9/4/03) 0.41', 0.66', 0.42, 0.38, 0.17' LNAPL detected in MW-2 (5/10/02, 8/8/02, 12/4/02, 3/26/03 and 9/4/03 respectively) 0.05', 0.37' and 0.29' LNAPL detected in MW-4 (8/8/02, 12/4/02, 3/26/03) Off-site delineation to start Q4 2003 with 3 monitoring wells. File review: Subsurface Hydrocarbon Assessment Report (Delta, 10/3/01) Report references Baltec 6/10/98 UST Closure Report for 14 USTs. Lab analysis of soil samples from excavation identified VOCs/SVOCs in excess of guidance values. 11/10-11/11/99 Delta advanced 12 soil borings between 7 to 20 ft. Lab analysis of soil samples identified between one and eight VOCs in excess of TAGM in 11 of 14 samples. Four of those were samples where methylene chloride was the only VOC identified(a common lab contaminant). 5/22-5/23/00 Delta installed three monitoring wells and collected soil samples for VOC analysis. BTEX ranged from 213ppb(MW-1, 10-12') to 106,370ppb (MW-1, 20-22'). MTBE ranged from 58.6ppb (MW-2, 20-22') to 313ppb (MW-1, 20-22'). Total VOCs ranged from 736ppb (MW-1, 10-12') to 415,493ppb(MW-1, 20-22'). 6/28/00 Gauged four tank wells and three monitoring wells. Groundwater samples were collected from three monitoring wells. Tank wells were dry. Total BTEX ranged from 53ppb(MW-3) to 2009ppb(MW-1). MTBE ranged from 7ppb(MW-3) to 1430ppb(MW-1). Total VOCs ranged from 126ppb(MW-3) to 6282ppb(MW-1). 4/2/01 & 4/26/01 Delta gauged 5 monitoring wells and 4 tank wells and collected samples. Total BTEX ranged from 141ppb(MW-3) to 11798ppb(MW-4). MTBE ranged from 17ppb(MW-3) to 7030ppb(MW-4). Total VOCs ranged from 191ppb(MW-3) to 19,702ppb(MW-4). 12/9/03 Received 2002 quarterly reports and second quarter 2003 report.(KMF) 4/2/04 Received Nov 2003 SHAR Addendum report (Delta, 3/31/04) for installation of three downgradient wells (MW-8, MW-9, MW-10) on other side of building. DTW 16.5'bgs. Installed to 24'bgs. No VOCs detected in soil samples. Need more recent monitoring reports. 8/9/04 3Q03 - BTEX from ND(MW-3) to 5541ppb (MW-6). MTBE from ND(MW-3) to 386,000ppb (MW-6). 0.17' LNAPL detected in MW-2. 8/9/04 4Q03 - BTEX from ND(MW-3 and MW-8) to 44,755ppb (MW-2). MTBE from ND(MW-3) to 63,500ppb (MW-6). 0.01' LNAPL detected in MW-2. 8/9/04 1Q04 - BTEX from ND(MW-3) to 14,823ppb (MW-2). MTBE from 0.79(MW-3) to 34,100ppb (MW-6).

BP SITE 25716 (Continued) **S103036428**

8/9/04 2Q04 - BTEX from ND(MW-3, MW-8 and MW-9) to 4,797ppb (MW-4). MTBE from ND(MW-3) to 9,850ppb (MW-5). 0.07' LNAPL in MW-2. 4/27/05 Portfolio meeting- Source is dispensers. GW 16-20'bgs. Will verify if gw is perched. Indoor air model completed 2/05 which lead Delta to install cluster vapor well and run TO-3 analysis. Summa canister will be done since benzene MDL less than 80ug/m3. Reassess exposure. Soil gas survey to define LNAPL impacts. 6/1/05 Subsurface Hydrocarbon Assessment Report received for installation of MW-11 and MW-12, offsite. No BTEX/VOCs detected above RSCOs in soil. 8/1/05 3Q04 - No LNAPL present. DTW 16-20'bgs. BTEX from ND(MW-3,8,9) to 17040(MW-4). MTBE from ND(MW-3) to 38500ppb(MW-6). 6/28/05 4Q04- 0.02' LNAPL in MW-2. BTEX from ND(MW-3,9,11,12) to 13360ppb(MW-4). MTBE from ND(MW-3) to 21900ppb(MW-5). 8/2/05 Subsurface Hydrocarbon Assessment Report received for MW-13 and MW-14, offsite. No BTEX, MTBE or other VOCs in excess of RSCOs. Napthalene was detected in MW-13 above GWQS. 11/9/05: Reviewed the quarterly monitoring report dated October 7, 2005. Fourteen wells sampled on 2/15/05. No free product present. Max BTEX is 16390ppb in MW-4 and max MTBE is 22500ppb in MW5. BTEX and MTBE increased in MW-1 and MW-2. 11/25/05: Reviewed the quarterly report dated 11/3/05. Fourteen monitoring wells sampled on May 27, 2005. Max BTEX is 8190ppb (MW4) and max MTBE is 18200ppb (MW5). Fluctuating concentrations in some wells. 11/29/05 3Q05- DTW 15.45-20.81'bgs. No LNAPL present since 5/04. BTEX from ND(MW-3,8,9,11,12,13,14) to 5847ppb(MW-4). MTBE from ND(MW-3) to 13900ppb(MW-5). 12/19/05 Received Subsurface Assessment Report dated 12/6/05 which documents installation of one cluster well(VCW-1) for vapor monitoring installed 4/4/05. DTW on 5/12/05 ranged from 15.51-20.08'bgs. GW movement varies in relation to topography, lithology, elevations of recharge and discharge areas and man-made influences but generally flows to the west-southwest. VCW-1 was advanced to 21'bgs(approx DTW). Soil samples collected at (17-18'bgs) and (20-21'bgs) showed total BTEX at ND and 220ppb respectively and MTBE at 596ppb and 789ppb respectively. Three vapor samples were collected (VCW-1A(17.5-18'bgs), VCW-1B(11.5-12'bgs), VCW-1C(5.5-6'bgs)) by Summa canister on 4/14/05 and 7/19/05. Total BTEX in VCW-1A was 20mg/m3. VCW-1B and VCW-1C were both ND. MTBE was detected in soil above RSCOs during installation. 3/3/06 Received 4Q05 report- Sampled 8 of 14 wells. DTW 13.35-20.25'bgs. No LNAPL. BTEX from ND(MW-3,8,11,12,13,14) to 17916ppb(MW-4). MTBE from ND(MW-3,8) to 298000ppb(MW-6). Additional on-site data to be collected to enhance site conceptual model for RAP preparation. 3/16/06 Met with BP and Delta. DTW

BP SITE 25716 (Continued) **S103036428**

16-20'bgs. MTBE spike in MW-6 may be
due to rise in watertable. Installed cluster vapor well downgradient
of MW-5 & MW-6. Vapors only at
interval right above watertable. 6/8/2006 - Feng - project reassigned
to RJFeng. (RJF) 9/26/2006 -
Feng - Quarterly Monitoring Report, 1Q2006, 7/26/2006, by Delta.
Sampled on 2/15/2006. DTW 13.50'
to 20.38' bg. Flows to south-southwest. No LNAPL. Total BTEX range
from ND (MW-3, 8, 9, 11, 12, 13,
and 14) to 12,850 ppb (MW-4). MTBE from ND (MW-3, 12) to 131,000 ppb
(MW-6). (RJF) 9/28/2006 - Feng
- Portfolio meeting with BP and Delta. Residual contaminant probably
beneath the pump island area,
but delineation can't be done under the pump island canopy due to the
safety issue. Delta will
continue to monitor and evaluate the site model and remedial
alternatives. IRM of bioBarrier in
downgradient to treat the groundwater before it migrate off site
submitted next quarter. (RJF)
1/4/2007 - Feng - 2Q2006, 11/29/2006, by Delta. Groundwater sampled
and gauged 6/6/2006, 14/14
monitoring wells. DTW 14.91' to 20.23' bg. Flows west. No LNAPL. MW-1,
5,664 ppb BTEX, 49.3 ppb
MTBE. MW-2, 5,610.2 ppb BTEX, 311 ppb MTBE. MW-3, ND BTEX, less than 1
ppb MTBE. MW-4, 15,207 ppb
BTEX, 82 ppb MTBE. MW-5, 3,074.2 ppb BTEX, 2,810 ppb MTBE. MW-6, 3,348
ppb BTEX, 133,000 ppb MTBE.
MW-7, 38.2 ppb BTEX, 7,450 ppb MTBE. MW-8, ND. MW-9, ND. MW-10, 80.14
ppb BTEX, 127 ppb MTBE.
MW-11, ND BTEX, 34.4 ppb MTBE. MW-12, ND BTEX, 4.8 ppb MTBE. MW-13, ND
BTEX, 9.3 ppb MTBE. MW-14,
ND BTEX, 4.8 ppb MTBE. (RJF) 6/12/2007 - Feng - 3Q2006, 1/29/2007.
Groundwater sampled 8/28/2006.
14/14 monitoring wells were sampled. DTW 14.14' to 20.05' bg. Flows to
southwest. No LNAPL. MW-1,
5,655 ppb BTEX, 42.9 ppb MTBE. MW-2, 5,658 ppb BTEX, 308 ppb MTBE.
MW-3, ND. MW-4, 14,250 ppb BTEX,
121 ppb MTBE. MW-5, 3,237 ppb BTEX, 1,520 ppb MTBE. MW-6, 3,604 ppb
BTEX, 109,000 ppb MTBE. MW-7,
152 ppb BTEX, 8,190 ppb MTBE. MW-10, 84 ppb BTEX, 174 ppb MTBE. MW-11,
20.7 ppb MTBE. MW-8, MW-9,
MW-12, MW-13, and MW-14, ND. 6/13/2007 - Feng - 4Q2006, 3/6/2007.
Groundwater sampled 11/27/2006.
DTW 14.79' to 20.27' bg. Flows to west. No LNAPL. MW-1, 1,378 ppb
BTEX, 118 ppb MTBE. MW-2, 3,040

2009. (RJF) 10/8/2009 -
2Q2009, 8/21/2009, by EnviroTrac. Active BP Service Station. The monitoring well network was gauged
and sampled on 5/18/2009. 3 monitoring wells were installed in 6/2009. SHARA summarizing the well
installation activities will be submitted under separate cover. 14 wells were gauged. LNAPL in MW-2
(0.04'). DTW 15.07' to 20.59' bg. Flows to west southwest. 13 wells were sampled. MW-2 was not
sampled. Max benzene 1,100 ug/L (MW-4). Max BTEX 6,362 ug/L (MW-4). Max MTBE 2,400 ug/L (MW-5).
(RJF) 10/16/2009 - Reviewed Subsurface Hydrocarbon Assessment Report Addendum, dated August 20,
2009, by Delta. On June 25, 2009, three monitoring wells MW-15, MW-16 and MW-17 were installed
using a Geoprobe 6610 hollow stem auger and direct push. Final depth to 22 feet for MW-15, 23 feet
for MW-16 and 21 feet for MW-17. 7 soil samples were collected. MW-15 (13-13.5'), ND. MW-15
(15.5-16'), 217 ug/kg BTEX, 580 ug/kg VOCs. MW-15 (19.5-20'), 33,800 ug/kg BTEX, 57,340 ug/kg VOCs.
MW-16 (9.5-10'), 150 ug/kg BTEX, 840 ug/kg VOCs. MW-16 (16.5-17'), BTEX ND, 860 ug/kg VOCs. MW-16
(19.5-20'), 160 ug/kg BTEX, 800 ug/kg VOCs. MW-17 (14.5-15'), ND. All the wells were guaged on
8/6/2009, DTW 14.78' (MW-13) to 20.26' (MW-5). MW-15, 19,010 ug/L BTEX, 24,029 ug/L VOCs. MW-16, 44
ug/L BTEX, 101 ug/L VOCs. MW-17, ND. Delta also proposes a pilot study for sulfate solution
injection. 1,000 gallons of MgSO4 in concentration of 25,000 mg/L will be injected into MW-15 and
monitor the rest of the monitoring wells. Comments on the pilot study to Delta. NO monitoring wells
shall be used as application wells and do not use wells at the edge of the plume where also near
the subway tunnel. Revised work plan within 30 days. (RJF) 10/30/2009 - Tibbe forwarded the MSDS of
Megnesium Sulfate Heptahydrate to NYCT for review. 11/5/2009 - email from Jennifer Wuotinen of
NYCT. Mark, Our Industrial Hygiene group does not see any issues with BP Amoco using this product.
11/5/2009 - 3Q2009, 10/30/2009, pdf, by EnviroTrac. Active BP Service station. The monitoring well
network was gauged and sampled on August 6, 2009. the site was re-surveyed on August 19, 2009. 17
wells were gauged. NO LNAPL. DTW 14.78' to 20.26' bg. Flows to west southwest. 17 wells were
sampled. Max benzene 820 ug/L (MW-5). Max BTEX 19,010 ug/L (MW-15). Max MTBE 1,600 ug/L (MW-5).
(RJF) 2/2/2010 - approval of the sulfate pilot work plan is sent to BP. The report summarizing the
pilot result will be in by 7/2010. (RJF) 6/8/2010 - 4Q2009, 2/5/2010, by EnviroTrac. Active BP
service station. The monitoring well network was gauged and sampled on 11/23/2009. 17 wells were
gauged. NO LNAPL. DTW 15.29 - 20.71' bg. Flows to west-southwest. 17 wells were sampled. Max

5.0 MTBE. 11/15/2012 - Reviewed the Work Plan Execution-30 Day Notification Letter and
Bioremediation Application Program Work Plan Addendum, dated August 14, 2012. There will be 12
injection events, 1,000 gallon of sulfate solution at concentration of 25,000 mg/L will be injected
into MW-1 and MW-5 in each event. Reviewed 3Q2012, dated 10/31/2012 and couldn't find the injection
information. DEC was also copied on the letter to EPA for UIC notification. email to Chris Meyer of
Antea Group Have you started the sulfate injection yet? I looked at

BP SITE 25716 (Continued) **S103036428**

the Notification Letter but I
didn't find anything in the quarterly report. Please include all the information regarding the
injection in the quarterly report, like what you did for some other injection sites, so I could
know what you are doing. As I see, what you proposed is more of a gradually process. There will be
12 injection events, 1,000 gallon of sulfate solution will be injected into MW-1 and MW-5 in each
event. Since this site is near the subway line, you may need to have MTA's permission before
injecting the solution. Let me know. Well Abandonment Report, 11/9/2012. Abandoned monitoring well
MW-11. 4/22/2013 - 4Q2012, 1/31/2013, by Antea Group. MW-1, 1,330 BTEX, 10 MTBE. MW-2, 761 BTEX, 74

5/31/2017 - Feng - This spill is transferred from June Feng to Jeffrey Vought as per Jeffrey
Vought. 8/2/17-Vought-Received phone call and email from Antea(Meyer) with respect to status of
RAWP. Vought asked him to resend RAWP. Meyer sent email dated 7/11/17 with RAWP and email that As
discussed. Aside from BP s motivations to push this forward, the property owner is also concerned
with progress. Vought performed a preliminary review of the proposal and data and noted: a maximum
residual BTEX concentration of around 4000ppb Total BTEX in MW-15 which was directly on the
sidewalk adjacent to the R,N,D Subway Line; depth to groundwater is from 15-20'bg and depth of
adjacent subway is much greater and groundwater contour maps do not reflect a flow direction
towards the subway; a decrease in Total BTEX concentration in MW-15 since 2011; the proposal
included approximately 9000-gallons of water with a total mass loading of 18,000 pounds; MTA
approval is needed for the bio application work. Vought discussed site with RSE and then sent email
to Antea(Meyer) with cc to BP Onufrak that Chris, When you get a chance please give me a call
regarding this site. After further consideration, review of the data and discussion with Randy, I
think the spill may warrant closure without the carbon injection and a confirmatory call to NYCT
Transit to ensure no impact, but I know consistency is important to BP and I don t want to alter
from the established course. Thanks! . Vought added RAWP to D2. 8/3/17-Vought-Received voicemail
message from Meyer and Onufrak. Vought returned call and spoke to Meyer and he noted that neither
Antea or ARCADIS had any objections to spill closure. Spill closure based on following: maximum
residual BTEX concentration of around 4000ppb Total BTEX in MW-15 which was directly on the
sidewalk adjacent to the R,N,D Subway Line; depth to groundwater is

BP SITE 25716 (Continued) **S103036428**

from 15-20'bg and depth of
adjacent subway is much greater and groundwater contour maps do not reflect a flow direction
towards the subway at MW-15 which is the remaining hotspot of groundwater contamination; a
significant decrease in Total BTEX concentration in MW-15 where in 2011 at was 17,450ppb Total BTEX
and now is around 5000ppb Total BTEX indicating that the remaining groundwater contamination is
naturally attenuating; proposal included approximately 9000-gallons of water with a total mass
loading of 18,000 pounds which may impair structure of adjacent NYCT subway which is a sensitive
receptor; MTA review would be needed for the bio application work and would likely have concerns
regarding the proposed injection next to their subway; no reported impacts to adjacent
down-gradient NYCT subway considering 20 years since spill was opened and contamination was much
worse during early spill history; spill is not a threat to the wider community as per DEC Central
Office guidance; further soil and groundwater cleanup is not feasibly cost effective as per CP-51
Soil Cleanup Guidance. Vought sent email to NYCT Michael Mandac with cc to Meyer/Onufrak that Mike,
I hope this email finds you well in your new position at NYCT Systems Safety. I am looking to close
a BP Spill at the above address that has had a long investigation and cleanup history over the past
20 years. The remaining residual groundwater contamination is in a well in the sidewalk at the gas
station that is immediately adjacent to the R/N/D subway line along 4th Avenue and the Department
recognizes that that residual groundwater contamination in the sidewalk will continue to naturally
attenuate over time. Question for you before we close the spill: Do we have any reported petroleum
issues in the subway adjacent to this address? Thanks! Vought received reply from Onufrak that Hi
Jeff, We are not aware of any planned use change for this site. We are a tenant. Our landlord has
not made us aware of any changes. 8/4/17-Vought-Received reply from NYCT Mandac that Hi Jeff,Thanks
for the kinds words. I ll need a couple of days to get some answers from the different groups
involved with the subway station itself and the subway lines. Vought sent reply with cc to Onufrak
and Meyer that Mike, Thanks for looking into it and we look forward to your reply! Received reply
from NYCT Mandac that Jeff, The different station and MOW engineering groups have both reported no
petroleum issues along the D/N/R/W line and by the 4th Avenue station. NYCT has no objections to
the DEC closing out this spill. Vought replied to NYCT Mandac with thanks and note that spill will
be closed. Spill closed by Vought and closure letter sent to BP Onufrack with cc to Meyer and added

BP SITE 25716 (Continued) **S103036428**

to D2.
Remarks: UNKNOWN EXACT DATE OF THE SPILL.THEY GOT THE RESULTS BACK TODAY FROM GROUND SAMPLES TAKEN.SPILL HAS NOT BEEN CLEANED UP. SPILL REASSIGNED FROM O'DOWD TO ROMMEL.

DEC Memo:	10/11/23-Lin- OER site (OER#22CVCP087k). All the tanks and lines were removed. During excavation for petroleum, they encountered staining and petroleum odor. Historical spill onsite (spill#9713442) was closed out in 2017 due to dissolved phase groundwater contamination that was trending down. Phase I and phase II was done by Roux associates in 2022. Caller will share the reports with DEC PM. 10/12/23-Ye-Spoke with the caller, from AKRF, and OER Chawla. Received a 2011 and 2023 Phase I ESA, a 2022 RIR and RAP, a 2023 Stipulation List, and a 2023 UST Closure Report for the gas station. OER Chawla said that they dug down to 18 ft and encountered contaminated soil, odors, and PID readings up to 2,000 ppm. GW's around 17 feet. They had been working with DEC's Central Office/DEC O'Connell, and DOH, and had an approved remedial action plan that would include a soil vapor barrier for 60% of the site, and not the entire site, due to a new slab that would be 4-5ft deep. The contamination was found in an area that would not have the barrier. Scheduled a meeting next week to discuss. OER PM Singleton. 10/16/23-Ye-Looked over the March 2022 RIR. Rezoning of the Gowanus neighborhood was completed at the end of 2021. A new 17-story mixed use residential and commercial building is planned, with plans to excavate the entire property to approximately 24 feet below street grade. The site had a lumber storage on the western part of the property, a gasoline filling station on the eastern side, and an automobile repair and sales business to the north. There is an historic MGP site 350' NW of the site, with a gasometer tower located along 3rd Ave. Groundwater is from 15-21' and flows from north to south/southwest. Between 1/17/22 and 1/21/22, Roux installed 12 soil borings and 6 gw monitoring wells across the site and 6 soil vapor probes around the perimeter. They collected 30 soil samples, 6 gw samples, and 6 soil vapor samples. Soil: - VOCs highest in SB-13, 21-23' bls (greater than 3,000 ppm) - near oldest USTs and existing dispenser islands - SVOCs highest in SB-03, 5-7' bls (greater than 50 ppm) - SE portion of site, outside historical lumber storage area Groundwater: - Highest VOCs were found in RXMW-01, located in the NE historical auto repair area (greater than

BP SITE 25716 (Continued) **S103036428**

1,300 ug/L) - PFAS exceedances
were found in all but one of the samples, with the highest in RXMW-04, in the northmost fuel
dispenser island, near a historical UST area (greater than 350 ng/L) - Highest benzene and MTBE in
RXMW-04 - 180 ug/L and 170 ug/L, respectively Soil Vapor: - Highest values were found in RXSV-06,
south side of the site, where 850,000 ug/m3 and 150,000 ug/m3 2,2,4-Trimethylpentane and butane,
respectively, were found - Highest CVOCs were found in RXSV-01, where 460 ug/m3 PCE and 8.2 ug/m3
TCE (estimated) were detected, on the south side of the historical auto repair area Looked over the
2023 UST Closure Report. Between 1/16/23 and 1/20/23, BP's consultant Salomone removed 2
10,000-gallon and one 12,000-gallon double-walled, fiberglass gasoline USTs from a single tank
cavity located in the northern portion of the site. The USTs were observed to be intact with no
visible holes or signs of pitting, and had a 12-inch thick concrete slab underneath. There were no
signs of petroleum impacts. Between 1/20/23 and 1/23/23, they excavated 6 dispensers and associated
piping. Endpoint samples showed no VOC concentrations in exceedance of NYSDEC CP-51 SCOs for
gasoline-contaminated soils. Total VOCs ranged from ND to 178 ug/kg. PBS 2-337722 shows a
550-gallon tank installed 1997 and closed in place in 1998. Met with OER, AKRF, and the owner to
discuss the site. Correction: There will be a vapor barrier for the whole site; SSDS will be
installed in the western portion of the site, where there will be a 9-10 slab. There will be a
cellar NE of the site, where they plan to excavate up to 15.5' and which would have a 42 thick
slab. They plan to excavate 3-6' below grade SE of the site and install a 42 -53 concrete slab.
They had applied to be part of the BCP but were not accepted because the cleanup would be for
residual contamination for a spill that had already been closed. They were accepted into OER's
voluntary cleanup program and that's when they changed their plans for excavation/foundation
design. Their most recent plans are in the 2023 RAWP Stipulation List. DOH and DEC Central
Office/Jane have reviewed the project for the BCP and have approved of the SSDS. Based off recent
excavation observations (PID readings over 50 ppm), they believe their excavation endpoint samples
will not meet protection of GW and would like to propose a one-time ORC injection in 2 or 3
locations, from around 4' to the smear zone, around 10' above GW, before pouring a slab, to
mitigate the spill. They are not proposing any continued monitoring to see results/effectiveness,
since there is another property downgradient and an MTA line acts as a barrier to the east. They

BP SITE 25716 (Continued) **S103036428**

had dug a test pit to 11' and found contaminated soil to at least that depth. They cannot excavate more because that will undermine the friction piles they already put in, which rely on the strength of the soil, and other injections may corrode the foundation. OER approves their plan to install a passive SSDS and conduct an SVI study after the first two stories of the building are enclosed, to see whether an active SSDS is necessary. They would like DEC-Spills to review the ORC proposal, which is new. Requested a work plan for ORC injections to review while I continue reviewing all the documents and data from the old spill. OER said the building has a deadline to complete the building by July of next year for tax credits. 11/10/23-Ye-On 10/17, discussed with the RRE and RSE. Scheduled a meeting with OER, AKRF, and the owner to get more details about the remediation proposal. Asked about where the 550-gallon tank that was closed in place is, and plans for the tank. On 10/17, received a Site Chronology from OER that included additional information, such as proposed endpoint sample locations and supplemental soil samples taken in April 2023. They planned to present the briefing to the RRE on 10/18. The briefing showed that construction started in July 2023. Staining and high PID readings were encountered below the final excavation depth, and they do not believe they will be able to meet Track 4 SCOs for Protection of Groundwater Standards for VOCs. Timeline: - Spill 9713442: Opened 3/4/1998, closed 8/4/2017 - DEC Briefing 1: 3/3/22 - Contained original plans for deeper excavation to 24-26' bgs - 6/6/22 RAWP Track 4 SCOs established: - Total SVOCs: 100 ppm - Arsenic: 16 ppm - Lead: 1000 ppm - Mercury: 2.5 ppm - VOCs: Protection of Groundwater Standards - UST Closure Report: 3/9/23 (see above notes) - DEC Briefing 2: 3/22/23 - Excavation is more shallow and varies across site; SSDS added to a portion of the site - DOH Walz briefed on 4/18/23 - 4/28/23 - Supplemental Remedial Investigation Report - On 4/6/23, 4 borings (RI-SB-01 - RI-SB-04) were advanced 5-6 feet bgs for the collection of one VOC grab sample from each, and 1 boring (RI-SB-05) was advanced 17 feet bgs for collection of VOCs, SVOCs, pesticides, PCBs, and metals, as directed by OER. RI-SB-01 and RI-SB-02 are located by the NW and SE corners, respectively, of the one story brick building at the historical lumber storage area; RI-SB-03 is by the historical lumber storage area, east of RI-SB-01; RI-SB-04 was located by the SE side of the site, south of the dispenser islands; and RI-SB-05 by the historical 1965 UST Area, NE of the historical lumber storage area - Elevated PID readings and/or odors were noted in RI-SB-03 - RI-SB-05 - Staining, elevated PID readings, and petroleum-like odors

BP SITE 25716 (Continued) **S103036428**

were observed in RI-SB-05,
with the highest PID reading at 960 ppm at approximately 15 to 17' bgs - Acetone was detected above
its UUSCO of 0.05 mg/kg in RI-SB_03_5-6 and RI-SB-04_5-6 at 0.092 mg/kg and 0.085 mg/kg,
respectively - Benzene was detected in RI-SB-05_15-17 at 0.97 mg/kg, above its UUSCO of 0.06 mg/kg;
ethylbenzene and total xylenes exceeded RRSCOs, with 95 mg/kg and 430 mg/kg, respectively - 12
endpoint samples were proposed to be collected throughout the site - A proposed SSDS was included
on the western side of the site, with 3 vapor monitoring points - 5/26/23 - New Stipulation Letter
with Diagram with Proposed Endpoint Sample Locations - 3 in the NE corner of the site will be dug
around 15' bgs, while 9 in the rest of the site will be dug 2-4' bgs - 6/13/23 - OER Notice to
Proceed - Current Spill 2305953 opened 10/11/23: Recent test pits in 3 shallow areas (EP-06, EP-07,
and EP-09) and 1 deep area (NE side - EP-04) show contamination extending to at least 11-14' bgs -
In EP-04, where excavation will extend below groundwater to a depth of 15.5', ORC is proposed at
the bottom of excavation - In the other areas, excavation will only extend to 3-6'and ORC
injections are proposed down through the smear zone - There is no space for installation of a
downgradient well to evaluate the efficacy of ORC. 11/20/23 - Ye - On 10/20, AKRF sent the GPR
figure from the Roux RIR and said: Regarding the Closed-in-place tank, the remedy in the Remedial
Action Plan includes the below item regarding the tank. 'Removal of three active UST s (one
12,000-gallon and two 10,000-gallon gasoline) from the northeastern portion of the Site and
potentially one inactive UST (550-gallon fuel oil, exact location unknown), if encountered.' While
the exact location is unknown, there was an anomaly depicted in the GPR report included in the 2022
Remedial Investigation Report conducted by ROUX that indicates it could be located just north of
the old building and south of the adjacent building to the northwest of the site. There is
currently equipment stored in this location. see attached. Met on 10/23, where RRE recommended
delineating the contamination and using SVE or in-situ solidification (ISS), with
monitoring/testing afterwards. On 10/27, AKRF said they were advancing delineation borings. On
10/30, they provided a daily report for the soil delineation testing and intend to include
installation of an SVE system, with an assumed ROI of 30 feet each, for 2 SVE wells. The Daily
Status Report showed that 8 soil borings (DB-1 - DB-8) were advanced 20-25 feet (approximately 5
feet beneath the water table) using a Geoprobe Direct Push Probe to delineate contaminated soil

BP SITE 25716 (Continued) **S103036428**

near EP-09. One sample was collected from each boring at the interval with the highest PID reading
for VOCs. A sample was also collected at DB-7 at the approximate depth of the proposed foundation.
The soil was stockpiled and enveloped in poly-sheeting for disposal on 10/30. Depths with highest
PID readings ranged from to 7-7.5' below grade for DB-1 to 15-15.5' below grade for DB-5. An
additional sample was collected 2-2.5' below grade for DB-7, at the approximate depth of the
proposed foundation. On 11/10, AKRF provided an IRM work plan with a conceptual layout for an SVE
system. According to the plan, on 10/11/23, petroleum contaminated soil was encountered
approximately 4.5' below sidewalk grade at EP-09, with staining and VOCs up to 1,400 ppm. On 10/11
and 10/12, test pits were advanced 11-15' below sidewalk grade, with evidence of petroleum
contamination throughout. The 8 soil borings advanced by Eastern Environmental on 10/27 were offset
approximately 15 to 35' from EP-09. DB-4, to the west of EP-09, was the most contaminated, with
1,400 ppm and 1,300 mg/kg of 1,2,4-trimethylbenzene at approximately 16' below sidewalk grade.
2/5/24 - Ye - In their 11/10 plan, AKRF proposed 3 SVE wells and 2 soil vapor monitoring points
(SVMPs) in the building footprint with the shallow excavation (3.6' below grade), in the central
portion of the site. The radius of influence for each well was conservatively estimated to be 25',
but have reduced effectiveness for SVE-2, under the 42 to 53 thick slabs to be installed in the NE
part of the site, due to the limited space between the slab and water table. Each well will have a
screen from 5-15' below grade, with an applied vacuum of 20 inches H2O and air flow rate of 40
scfm. Met to discuss the plan on 11/13. The RRE recommended a screen to 17' below grade for SVE-2
to capture the contamination found in RI-SB-05, where the elevator pit was planned to be, as well
as installing an additional vapor monitoring point, to be collocated with a vapor monitoring point
on the western side of the building for the SSDS system, to measure system performance. The 2 SVMPs
will be installed to a total depth of 15 feet below grade, while the third SVMP will be screened
from 10 to 10.5 feet below grade (building excavation will be 2 feet below grade). Received a
revised IRM work plan on 11/13 reflecting the changes. They planned to install the wells and
monitoring points on 11/16. Approved the plan on 11/15. On 11/17, AKRF said they installed the 3
SVE wells and 3 SVMPs and are working with the development team to prepare SVE design plans for
system construction purposes. They'll be in touch when the plans are ready and/or if any additional
site work is planned in connection with the spill. They sent a Daily

BP SITE 25716 (Continued) **S103036428**

Status Report showing 2 CAMP stations set up, with PID readings of 0.14 ppm in high conditions. Drilling spoils were stockpiled for off-site disposal at Clean Earth. On 2/5/24, was notified by OER that SVE-01, SVE-02, and SVMP-02 were damaged during construction on 2/1. They planned to remove and replace the installations on 2/5. Received the update later from Thomas Giordano of AKRF that the structures were reinstalled at the original locations to the original specifications. Reviewed the Daily Report for 2/1. AKRF inspected the wells and SVMPs upon notification from the Field Superintendant, and SVE-02 and SVMP-02 were found to have sustained damage during construction. Photos showed the riser was broken at SVMP-01 and SVMP-02. According to the Daily Report for 2/2, an AKRF Project Engineer visited the site and determined that SVE-01, SVE-02, and SVMP-02 must be removed and reinstalled to their original specifications. Other activities for the week involve installation of the SVE below-grade system infrastructure alongside building foundation work, as well as below-grade SSDS piping. 2/6/25 - Ye - Met with the project team, OER, and RRE and DEC-Central Office on 10/21/24 to discuss the timeline for the remaining RA and IRM work. Reviewed a draft RAR on EPIC.

Remarks: Historic spill, OER cleanup pending

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:

Name: 514 UNION STREET
Address: 514 UNION STREET
City,State,Zip: BROOKLYN, NY 11215
Program: BCP
Site Code: 615885
Acres: 0.445
HW Code: C224318
SWIS: 2401
Town: New York City
Record Added Date: 01/21/2021
Record Updated Date: 06/14/2024
Update By: WBBENNET
Site Description: "Location: The approximately 0.39-acre site is in an urban area in the Gowanus neighborhood of Brooklyn, New York, comprising Brooklyn Borough Tax Block 440, Lot 12. The site is located on the block bound by Union Street to the north, 3rd Street to the east, President Street to the south, and Nevins Street to the west. Surrounding properties include single- and multi-story buildings occupied by industrial, commercial, and residential occupants. Site Features: The site is improved with a one-story brick building occupied by The Royal Palms Shuffleboard Club. The south-adjoining property is the 473 President Street site in NYSDEC s Brownfield Cleanup Program (BCP) (BCP Site No. C224220). The east- and west-adjoining parcels are also in the NYSDEC s BCP (President Street Properties site, BCP Site No. C224309). The Gowanus Canal is located about 375 feet west of the site. Current Zoning and Land Use: The site is in an M1-2 manufacturing zoning district. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale and storage facilities. Offices, hotels, and most retail uses are also permitted in M1 districts. Past and Current Use of the Site: The site has been occupied by commercial and industrial facilities since as early as 1886. The site is currently occupied by The Royal Palms Shuffleboard Club. The historical and current site uses include: The Royal Palms Shuffleboard Club (2014 present); Manufacturing and Storage (1993 2007); Dolin Metal Manufacturing Co. (1969 1992); Coca-Cola Bottling Co. of NY (1938 1950); Albro J. Newton Co. Trim and Planning Mill (1904 1915); Kenyon and Newton Sash and Door Factory (1886). Site Geology and Hydrogeology: Soil and bedrock stratigraphy throughout Brooklyn typically consists of a layer of historic fill material that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. The stratigraphy of the site consists of historic fill material underlain by native soil generally characterized as fine- to medium-grained sand with varying amounts of silt, clay, and gravel. Groundwater at the site was encountered at elevations ranging from 9.5 to 10.5 feet below grade. The groundwater flow direction is generally to the west towards the Gowanus Canal. "

514 UNION STREET (Continued) **S127750694**

Env Problem:

"Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, emerging contaminants, and metals. Sub-slab soil vapor and indoor air samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include VOCs, SVOCs, and metals in soil and VOCs in groundwater and soil vapor. Soil: Subsurface soil samples were collected from soil borings which were advanced beneath the site as part of the Remedial Investigation. Soil samples were collected from depths of 0 to 21 feet beneath the site. VOCs were detected in soil at concentrations above applicable Protection of Groundwater Soil Cleanup Objectives (POGSCOs) and VOCS, SVOCs and metals were detected in soils at concentrations above applicable commercial soil cleanup objectives (CSCOs). Detected VOCs included 1,2,4- trimethylbenzene (maximum concentration 260 parts per million (ppm), POGSCO 3.6 ppm, CSCO 190 ppm), benzene (maximum concentration 7.8 ppm, POGSCO 0.06 ppm), ethylbenzene (maximum concentration 85 ppm, POGSCO - 1 ppm), xylene (maximum concentration 210 ppm, POGSCO 0.26 ppm), and trichloroethene (TCE) (maximum concentration 140 ppm, POGSCO 0.47 ppm). SVOCs and metals encountered in soil above CSCOs included benzo(a)anthracene (maximum concentration 110 ppm, CSCO - 5.6 ppm), benzo(a)pyrene (maximum concentration of 91 ppm, CSCO - 1 ppm), benzo(b)fluoranthene (maximum concentration of 110 ppm, CSCO - 5.6 ppm), and lead (maximum concentration of 5,550 ppm, CSCO - 1,000 ppm). There is no evidence soil contamination is migrating off-site. Groundwater: Six monitoring wells were installed on-site and sampled as part of the Remedial Investigation of the site. VOCs were detected in groundwater samples collected from these wells over Ambient Water Quality Standards (AWQS) including benzene at 16 parts per billion (ppb) (AWQS 5 ppb), cis-1,2-dichloroethene at 440 ppb (AWQS - 5 ppb), TCE at 340 ppb (AWQS 5 ppb), tetrachloroethene (PCE) at 12 ppb (AWQS 5 ppb), vinyl chloride at 3.8 ppb (AWQS 2 ppb). The perfluoroalkyl substance (PFAS) perfluorooctanoic acid (PFOA) was detected in site groundwater at concentrations exceeding its guidance value of 10 ppt at a maximum concentration of 37.5 ppt. Site groundwater contamination is part of a contaminant plume that is contiguous across three sites. Groundwater contamination originates beneath the 473 President Street site (C224220) to the south, crosses beneath a portion of the 514 Union Street site, then continues through to the President Street Properties site (C224309) to the east. An Interim Remedial Measure is underway to address contaminated groundwater at the 514 Union Street site and remedial actions will soon begin to address contaminated groundwater at the 473 President Street and President Street Properties sites. Sub-Slab Soil Vapor and Indoor Air: Sub-slab soil vapor and indoor air samples were collected from the on-site building, prior to the site s entry into the Brownfield Cleanup Program (BCP). Indoor air samples were co-located with sub-slab soil vapor samples. TCE was detected in indoor air at concentrations of 1.9 micrograms per meter cubed (ug/m3), 2.2 ug/m^3, 18 ug/m^3, and 43 ug/m^3. TCE was detected at corresponding sub-slab soil vapor locations at concentration of 1,600 ug/m^3, 270 ug/m^3, 0.23 ug/m^3 and 21,000 ug/m^3. An Interim Remedial Measure (IRM) was completed in September 2022 to mitigate soil vapor intrusion impacts to the on-site building. Indoor air samples collected in November 2022 and March 2023 show TCE concentrations in indoor are below NYSDOH air guidelines. Off-site soil vapor intrusion impacts from the 473 President Street, President Street Portfolio, and 514 Union

514 UNION STREET (Continued) **S127750694**

	Street sites are being addressed under a Site Characterization currently underway for the 473 President Street Off-Site site (C224220A). "
Health Problem:	"The entire site is covered by a commercial building. Therefore, people will not come into contact with contaminated soil or groundwater unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. As of November 2023, an active mitigation system was installed in the on-site building and is effectively addressing soil vapor intrusion in the on-site building. The mitigation system and indoor air will continue to be monitored to ensure indoor air quality is not affected by site contaminants. Off-site potential for soil vapor intrusion associated with this site exists, however this area is being investigated under the adjacent 473 President Street Off-site project (C224220A)."

DEC Memo:	02-06-12 - LZ The 01-25-12 semi-annual well gauging report (eDocs) and the 02-02-12 request for spill closure (eDocs) show that during two-year gauging of the five monitoring wells at the site no free product was detected except the March 2011 event (less than 0.01 foot in MW-4). Soil contamination was evaluated in the February 2010 revised Site Assessment Report and Remedial Action Plan. The spill case has been closed, and a spill closure letter sent to the facility owner. 04-28-11 - LZ The Annual Well Gauging Summary Report, dated March 18, 2011, prepared by AKRF, Inc. (eDocs) provides results of four quarterly rounds of well inspections. Five site monitoring wells were gauged for LNAPL; no LNAPL was observed in any of the wells in April, July, or October 2010. During both March gauging events, an immeasurable skim layer (less than 0.01 foot) of LNAPL was noted in MW-4. An oil-absorbent sock was placed across the water table in MW-4. AKRF will continue quarterly gauging in accordance with the Revised RAP. The next report to DEC will follow the March 2012 gauging. 09/29/10 - LZ The AKRF, Inc., report (eDocs), dated July 28. 2010, provides data from April and July gauging of monitoring wells. No free product was detected in any wells. Next report is due January 2011. 03/24/10 - LZ Reviewed the February 2010 revised Site Assessment Report (SAR) and Remedial Action Plan (RAP)(eDocs), prepared by AKRF, Inc. Approved the revised submittals and required that the gauging be performed for two years, and reports reflecting the results of it twice a year. NYSDEC may require that the site achieve more stringent SCOs than for industrial use if the site zoning is to be changed or development of the site is inevitable. 12/22/09 - LZ The November 5th revised RAP (eDocs) includes advancing of two additional borings and installation of two monitoring wells. Soil from these borings would be analyzed for the presence of VOCs ans SVOCs. On December 22th, AKRF performed two borings as provided in the revised RAP. A report summarizing December activities and soil analytical results will be submitted by January 31st. 10/23/09 - LZ I has reviewed the October 14, 2009, Remedial Action Plan (RAP), prepared by AKRF, Inc. The RAP proposes installation of a monitoring well in the area where significant contamination was discovered to monitor and remove encountered free-phase product. I disapproved the proposed RAP

BAYSIDE FUEL OIL DEPOT CORP. (Continued) **S109826460**

since it does not address adequately the visual and olfactory contamination detected in borings
B-10, B-13, and B-14. A revised RAP should be submitted by November 27, 2009. 08/17/09 - LZ In her
letter (eDocs) of June 15, 2009, Kathleen Brunner of AKRF asserts that a investigation report will
be submitted by July 17, 2009. 08-11-9 - LZ DEC approved the site assessment report and in its
August 11th letter (eDocs)required a remediation action plan be prepared and submitted by October
14, 2009.

Remarks: Field tests revealed soil contamination at the above sight. MOSF 2-1220 Case Manager name: Leszek Zielinski Stipulation agreement that is in place: R2-20081209-603

DEC Memo:	4/6/2023 - Feng - Desk Duty. Spoke to Inez of Con Ed. Con Ed said they have a project to install a utility line/box for one of the building. They noted petroleum odor from the excavation but they don t see any stain or sheen or oil. They stopped the work and will sample to see what is going on. As per R. Austin, Eric Kim will inspect the site. Spill is assigned to E. Kim for follow up. 4/7/23 - Kim - DEC Austin received a call from DEC-CO Aaron Fischer, DER project manager overseeing remediation projects along the Gowanus Canal, BCP site C224080: Gowanus Canal Northside. One of his contractor field inspectors (Sun Lei, 646-243-2972) discovered petroleum odors from a street excavation being conducted by Con Ed at Bond St and Sackett St to install a utility line/service box. The Con Ed project manager for that excavation work is Tommy Busacca at 718-690-6605. I inspected the spill site and met DEC Contractor Sun Lei with WRS and Tommy with Con Ed. Contaminated soil was discovered when Con Ed was excavating underneath Sackett St to put in a service box for Block:431 Lot:12, 498 Sackett St, Brooklyn. The location of this excavation was in the street but closer to Block:424 Lot:1, 267 Bond St, Brooklyn approximately 90ft east of the intersection of Sackett and Bond. Con Ed plans were to also dig a trench to get utility service from the service box excavation, across Sackett St, to Block:431 Lot:12, 498 Sackett St, Brooklyn. There were odors coming from the excavation and it looked like there was some staining about 2ft bgs. The odors did not travel far; I didn t smell anything on Bond St. Sun Lei noted that PID readings were about 5,000ppm when they were screening the soil that was excavated by Con Ed. Con Ed stopped excavation work and covered the excavation with metal plates as I was leaving. Con Ed took samples from the pile of excavated soil, which was placed on and covered with poly when I arrived. 4/7/23 - Kim - Con Ed provided an update that the excavated soil was temporarily placed back in the excavation and plates were placed on top of the filled-in excavation. Con Ed will come back and

BAYSIDE FUEL OIL DEPOT CORP. (Continued) **S109826460**

remove the soil when they have the disposal lab results, which will be in approximately 5-6 days
from now. EMIS 291293 - Con Ed report of 3rd party spill discovered when excavating and installing
service boxes for temporary service to a new construction project. Soil sample sent to Con Ed Chem
Lab. 3/15/24 - Kim - Con Ed Lab analysis results (Con Ed approval date: 4/14/23) indicated the
presence of VOCs and SVOCs in soil, including Isopropylbenzene at 6,800ug/kg-dry, Total Xylenes at
2,000ug/kg-dry, Benzo(a)anthracene at 2,710ug/kg-dry, Benzo(a)pyrene at 1,720ug/kg,
Benzo(b)fluoranthene at 1,400ug/kg dry, Benzo(k)fluoranthene at 1,500ug/kg-dry, Chrysene at
2,270ug/kg-dry, and Indeno(1,2,3-cd)pyrene at 788ug/kg-dry. On 4/24/23, Con Ed vendor ACV Enviro
removed one 20cy container of non-hazardous soil excavated from underneath Sackett St in Brooklyn,
NY. The soil was loaded by MECC contractor and transported in a lined 20cy container to Bayshore
Recycling by ACV Enviro. Con Ed removed the contaminated soil from a 3rd party spill and had it
properly disposed of. See document files for further information Spill closed end

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 01/07/04 ALso refer to Spill #04-07082 9/27/04-Reassinged from Rommel to sun. 9/28/04 File Update by Sun: On 9/29/04, Joe Sun conducted a site visit. Sun spoke to Mark Turoff of Environmental System Group (Tel: 917-750-1483) about the site investigation he has recently performed. Per Turoff, his company had installed twelve soil temporary wells on 9/27/04 and had collected soil and groundwater samples from eleven wells except one which contained one foot of free phase product. He will send me the invstigation report after the laboratory report is complete. 10/7/04 Sun received an e-mail from Lauren Gallagher, Project Manager from NYCDEP on 10/7/04 for this Little E Restricted site. She will fax to me a copy of Phase II testing and accompanying HASP which they approved on 9/8/04. 04/08/05-File Update by Sun: The Stipulation Agreement was signed by the owner and executed by the Department on 12/15/04. -On April 6, 2005, DEC received an Investigation Summary Report from owner's consultant, Advanced Site Restoration, LLC. Joe Sun called the owner (Paul Rigas)on 04/08/05, informing him that the Department disapproved the report, since it does not delineate the off-site contamination. A meeting is scheduled for April 19, 2005 at the site between the DEC and the owner to discuss the location of off-site wells. -WJS 04/25/05-File Update by Sun: On 5/25/05, Sun sent a letter to the property owner (George Rigas), informing him that the Department has reviewed and approved the Investigation Summary Report with the incorporation of the following items: 1. Install two (2) two-inch (minimum) off-site monitoring wells in sidewalk east of Butler Street between 3rd Avenue and 4th Avenue in Brooklyn, New

126 4TH AVENUE - MISC (Continued) **S118953804**

York. The monitoring wells should be selected at locations down-gradient of the existing monitoring wells TMW-16 and TMW-17. The new wells will provide the additional off-site delineation of dissolved groundwater contamination plumes. Pursuant to the Stipulation Agreement signed and dated effective December 15, 2004, the Department requires a Remedial Action Plan (RAP) be submitted by June 24, 2005. THe Department requires that the RAP shall detail the work proposed to remediate all contaminated media (groundwater and soil) and provide a detailed descriptions of a vapor mitigation efforts used in the construction of the residence including the installation of vapor barriers and sub-foundation venting systems. (WJS) 06/29/05 File Update by Sun: On 06/29/05, Sun sent a letter to the property owner (George Rigas), informing him that the Department has reviewed and approved the Remedial Action Plan, prepared by Advanced Cleanup Technologies, Inc., with the incorporation of the following items: 1. The OMMP shall describe and tabulate the operation, maintenance and monitoring schedule (frequency) for system equipment and their performance, influent and effluent water sample, system influent and effluent air emission, all monitoring wells and soil vapor monitoring points. EPA Method TO-14A, not TO-02 as stated in Reference 1, shall be used to sample and analyze air stream before and after carbon treatment. 2. Soil Vapor Extraction System (SVES) Data sheet and Air Stripper Data Sheet shall be completed and submitted to the Department by November 15, 2005 for review. The Blank SVES and Air Stripper Data sheets are attached here for your reference. 3.Measurements of groundwater levels in all area are to be conducted monthly for the first three months, and then quarterly. Collection and analysis of groundwater and soil vapor samples shall be conducted monthly for all monitoring wells and soil vapor monitoring points. (Sun) 12/09/05-Sun: Sun received an email from Paul Stewart of ACT, Inc., informing the Department on the current status of the projec: The owner modified development plans for the property to include a full basement with elevator room and underground parking rather than a partial basement with elevator room only. The NYCDEP required modifications to the work plan approved by the NYSDEC to account for the full basement. The modified work plan was approved by the NYCDEP and includes a vapor barrier under the entire property and a more extensive subslab ventilation system. A supplemental soil and ground water investigation is currently being performed and should be completed by Friday. The existing cased wells were surveyed and a flow direction to the west was calculated. The results of the supplemental investigation will be used to size and locate the soil vapor extraction and ground water recovery systems. (Sun) 01/11/06-Sun: Sun sent a letter to the property owner, Paul Bregianos of Arc Electrical and Mechanical, approving the revised Remedial Action Plan prepared by Advanced Cleanup Technologies, Inc. dated 01/04/06, as noted below: Soil Vapor Extraction System (SVES) data sheet and Air Stripper Data Sheet shall be completed and submitted to the Department by March 31, 2006 for review, (2)The owner must notify the Department of site status change from Closed-In Place to Closed-Removed for seven (7) 550-gallon gasoline underground storage tanks (USTs) within 30 days prior to sustantially modifying a facility. (Sun) 03/27/06-Sun received an email from Paul Stewart of ATC on 03/06/06 informing DEC that they are planning to issue to DEC a formal report on the extent of free product and dissolved gasoline in ground water beneath the site. It will also contain a summary of underground storage tank closure activities as requested in DEC's

126 4TH AVENUE - MISC (Continued) **S118953804**

correspondence to the property owner. We should have the report to DEC by the end of this week. (Sun) 03/27/06-Sun sent an email to Paul Stewart of ATC stating that DEC is still waiting to receive a report from ATC on the extent of free product and dissolved gasoline in ground water beneath the siteand a summary of underground storage tank closure activities as requested in DEC's correspondence to the property owner. (Sun) 06/16/06-Sun: Paul Stewart of ACT (Consultant for RP) informed the Department that installation of the recovery well, monitoring wells and vapor monitoring points is complete. The horizontal ventilation screens and piping associated with the vapor extraction wells is also complete. Tomorrow,we will be overseeing installation of the vapor extraction wells. We will also be connecting those wells to piping leading to the location of the treatment system. Next week we will be installing the remaining sections of the 20 mil HDPE liner. The concrete foundation floor will be poured soon after that. Once the first floor parking garage has been completed, we will perform a ground water pump test and a pilot soil vapor extraction test to size a treatment system. Installation of the treatment system will depend upon the construction schedule and access to the alleyway where it will be located. We expect that will take place this fall. (Sun) 09/06/06-Sun: Sun received an email dated 09/04/06 from Paul Stewart of ACT (Consultant for RP)as follows: All wells and subsurface piping have been installed. We are waiting for completion of the first floor so we can install a pilot system and perform a pilot SVE and ground water pump test. I expect that should take place in October . (Sun) 12/13/06-Sun: Sun received an email from Paul Stewart on 10/30/06, stating taht All of the wells and piping for a pump and treat system, vapor extraction system and subslab depssurization system have been installed. He is currently waiting for completion of the first floor of the building so he can install a pilot system and perform a pilot SVE and ground water pump test. He spoke with Paul Bregianos who said the first floor would be completed after the steel was installed which should be this winter. (Sun) 03/23/07-Sun: On 03/23/07 Sun received the following email from Paul Stewart: We completed piping the soil vapor extraction and recovery well conduits to the western portion of the utility room and the concrete floor was installed. We are now awaiting installation of electric service to the utility room in order to perform a pilot SVE and pump test. I will notify you when the pilot tests are scheduled. (Sun) 10/19/07-Sun: On 10/18/07 Sun received the following email from Paul Stewart of ACT for the status of this projec We performed a pilot test of the soil vapor extraction system and a pump test on the recovery well last week and plan to have a pilot test report issued next week. The full scale remedial system should be installed before Thanksgiving . (Sun) 12/18/07-Sun: Sun received the following email from Paul Stewart of ACT, A pump test performed on the recovery well indicated that ground water could not be recovered at a flow rate that could contain the ground water plume. Therefore, we will rely upon two 15 Hp regenerative blowers to remediate soil and ground water in the 6 SVE wells installed beneath the site. A 5.5 Hp regenerative blower for a sub-slab depressurization system is also being installed as a precaution to protect building occupants. The remedial system is being delivered this week and will be installed and put into operation the first week of January, 2008. I will forward a startup report to you and the NYCDEP once the remedial system has been rendered operational. (Sun) 2/25/08-Sun: Sun received the following email from Paul Stewart of ACT, the consultant for the

126 4TH AVENUE - MISC (Continued) **S118953804**

RP, The remedial system has been completely installed and is ready for full scale operation. We are waiting for the owner to provide us with an active telephone line to permit unattended operation. The telephone line should be installed within 10 days at which time the remedial system will be turned on. A Startup Report and an Operation, Maintenance and Monitoring Plan will be forwarded to your attention in approximately 2 weeks. A Closure Report will also be submitted to the NYCDEP with a copy to you. (Sun) 3/12/08-Sun: Sun visited the site to witness the start-up of the remedial system. (Sun) 4/2/08-Sun; Sun received the Remedial System Operation, Maintenance and Monitoring Plan (OMMP) from Paul Stewart of ACT, Inc. (Phone # 631-293-4992). (Sun) 4/11/08: Sun sent the following email to Paul Stewart: Hi, Paul, While I was reviewing the Remedial System OMMP, submitted by you, dated April 1, 2008 for the above referenced site, I found the following documents are missing in the OMMP report: 1. Figure 1: Remedial System Layout 2. Figure 2: Treatment Room Equipment Layout 3. Table 1: Troubleshooting Guidance Table I also noticed that P&ID was not included in the OMMP. The P&ID is a very important document which shows all the equipment, and instrumentation and control. Please revise your OMMP to include P&ID. I have reviewed SVES Data Sheet and found one error on Item #12 (Contaminant). Based on 33 ft of Stack Height and 250 CFM of Air Flow Rate, the Permissible Air Output Concentration for Benzene is 0.02206 LBS/HR, NOT 0.00494 LBS/HR as indicated in your SVES Data Sheet. (Please note that 0.00494 LBS/HR is based on 15 ft of Stack Height). Please address the above comments and resubmit. (Sun) 4/22/08-Sun: Sun reviwed the Remedial System Operation, Maintenance and Monitoring Plan (OMMP), dated 3/31/08, submitted by RP's consultant, Advanced Cleanup Technologies, Inc. (ACT). The Department also reviewed the supplemental documents submitted by ACT on April 16, 2008, including Figure 1 through 3 and Table 1 which were missing in Reference 1 and a revised SVES Data Sheet indicating the correct Permissible Air Output Concentration for Benzene as 0.002206 LBS/HR. The Department approved the OMMP with the condition that a third Pressure gauge & sampling port be installed on inter-connection between two Vapor Carbon Filters. (Sun) 6/24/08-Sun: Sun received the following email from Paul Stewart of ACT, Operation, maintenance and monitoring of the remedial system is being performed on a monthly basis. A quarterly monitoring report will be prepared for submittal in August. (Sun) 8/1/2008 - Project reassigned to Feng. 1/21/2009 - Quarterly Monitoring Report, 4/2008 - 7/2008, 10/3/2008, by ACT. The site is occupied by a ten-story residential apartment building. A remdial program was started 3/12/2008 consisting of an active SVE and treatment system and an active sub-slab depressurization system and treatment system. There are 3 vacuum probes VP-1 to VP-3 for monitoring sub-slab vacuum monthly and Groundwater monitoring wells MW-01 and MW-03 for quarterly monitoring, are located in the cellar floor. Additional monitoring well RW-01 is located in the first floor treatment room. A circuit breaker malfunctioned on the B-200 SVE blower causing it to remain off since 5/30/2008. The two SVE manifolds were joined together. Increased pressure in the B-100 carbon units required the B-100 SVE blower to be shut down unitl the problem could be resolved. Average DTW 11.71 feet. 4 wells were sampled on 4/28/2008. BTEX range 600 ug/L in MW-01 to 9,842 ug/L in MW-02. MTBE range from 23.1 ug/L in MW-01 to 229 ug/L in MW-02. (RJF) 1/26/2009 - Letter to Paul Bregianos (Arc Electrical and Mechanical). DEC requires 1) explanation of the reason why groundwater treatment

126 4TH AVENUE - MISC (Continued) **S118953804**

is missing, 2)surrounding map, 3) delineation work plan for offsite. Investigation work plan include addressing the above comments by 3/16/2009. (RJF) 10/1/2009 - Site Status Report for 2/2009 to 7/2009, dated 9/2/2009, by Advanced Cleanup Technology. On July 16, 2009, a low flow pump test was performed on RW-01. Groundwater recharge is relatively fast. On July 22, 2009, the configuration of the SSD and SVE piping was modified by connecting the casing to RW-01 and the influent piping from the SSD system to the influent piping for SVE Blower B-100. The modified configuration was operated for a few days when high room temp required shut down of the B-100 blower. The ball valves for the SSD piping were re-directed to the 5.5 Hp B-300 blower which was turned on. The B-100 blower was turned off until ambient temp decrease this fall. DTW 13.53' in MW-02 to 14.05' in MW-01. DTW in RW-01 was 22.84'. Groundwater was sampled on 7/22/2009. BTEX range 177 ug/L in MW-01 to 7,200 ug/L in MW-03. MTBE range 15 ug/L in MW-01 to 76 ug/L in MW-03. Will continue monthly system operation, maintenance and monitoring and quarterly groundwater sampling. (RJF) 5/19/2010 - received inquiry regarding the two monitoring wells in front of the 355 Butler Street. The two wells were installed back in 5/2005, sampled once during installation, but no included in the quarterlys. 6/1/2010 - email to Paul Steward (ACT) for information on these two wells, and required site plan with all the wells, their monitoring data and contour map in the next quarterly. 11/4/10. Site Status Report was due in early September 2010. Breen 11/20/10. Sent e-mail to Paul Steward asking for status reports subsequent to 9-2-09. 06/28/2012 - V. Brevdo - Discussed project with Paul Stuart of ATC Environmental via telephone(Phone # 631-293-4992). Sent the following e-mail to Mr. Stuart: June 28, 2012 Dear Mr. Stuart: Thank you for discussing status of the project with me earlier today. It is my understanding that the project has undergone investigation, remediation and is currently in operations, maintenance and monitoring stage with groundwater monitoring ongoing. I also appreciate your thoughts regarding further course of action for the project. It is my understanding that you will be preparing a Project Status Update report and you intend to submit status update report to the Department for review within 30 days . You also agreed to e-mail me a synopsis /briefing describing main highlights of the project and its current status and accomplishments. We agreed that you and I will further evaluate whether current site conditions and remedial progress at this project may advance it into a spill closure status. In evaluation of spill closure potential I would like you to be cognizant of the main criteria which we, in the Division of Environmental Remediation, Region 2 office are looking at when making a spill closure decision. These spill closure criteria are as follows: free product must be removed, grossly contaminated soil with visible staining must be removed, source of contamination must be removed, concentrations of contaminants in soil and groundwater are either at the levels of cleanup guidance values or higher but within acceptable range to DEC, no migration of contaminant off site occurs, remaining contamination is contained, no threat of exposure to vapors from remaining contamination exists, and site poses no further threat to human health and environment. We also use engineering controls such as vapor barriers and SSDS system where necessary. Please note that it is DEC's strong preference that SSDS system remain in operation and be maintained and functioning as an engineering control after spill case is closed . The system must be monitored and maintained in accordance with the procedures set forth in the future

126 4TH AVENUE - MISC (Continued) **S118953804**

Spill Closure Report (when DEC agrees that spill closure is appropriate), including all system equipment such as piping, fans, vacuum gauge and low vacuum visual alarm. Furthermore, the Department strongly recommends the performance of an annual inspection of the system and requires notification of significant operational and maintenance related issues. I look forward to receiving a project synopsis via e-mail as well as Project Status Update report. Please note that I need one hard copy and one electronic PDF copy on CD of all the submissions (except e-mails). Please contact me at 718-482-4928 or via e-mail if you have questions regarding this matter. Respectfully, Vadim Brevdo 01/11/2013 - V. Brevdo Left telephone voice mail to Paul Stuart, requested a return call to discuss project's status. Paul Stuart returned call and said will submit report within a week. V. Brevdo 01/17/2013 - V. Brevdo E-mail from consultant, submitted spill closure request report dated January 17, 2013 with the following e-mail: Vadim, Attached please find an electronic copy of our report for the above-referenced property entitled Request for Spill Closure. Please contact me if you would like a CD or hard copy of our report or if you require further information concerning remedial activities at the subject property. Thank you for your assistance and cooperation in this matter. Regards, Paul P. Stewart, President Advanced Cleanup Technologies, Inc. 960 South Broadway, Suite 100 Hicksville, New York 11801 Phone: (516) 933-0655 x 12 Cell: (516) 840-8197 Fax: (516) 933-0659 Email: pauls@actenvirons.com 01/18/2013 - V. Brevdo Reviewed January 17, 2013 Spill Closure Report and spill closure request. The site consists of a ten-story residential apartment building surrounded by commercial and residential properties. The site was utilized as a gasoline service station from 1963 to 2000 which resulted in impacted soil and ground water beneath the site. Remedial activities have taken place at the site from 2005 through the current date. Petroleum storage facilities and impacted soil were removed from the site during construction of the existing building and below grade parking garage. Residual soil and ground water contamination have been remediated through the installation and operation of a pump and treat system, soil vapor extraction and sub-slab depressurization (SVE/SSD) system that has continually operated from March 2008 to date. Recent ground water quality data indicate that asymptotically low levels of petroleum constituents have been attained in ground water beneath the site. Advanced Cleanup Technologies, environmental engineering consultant for the responsible party, submitted January 17, 2013 remediation report and requested closure of spill case. SSD component of the remedial system will remain in operation as an engineering control to ensure that there is no threat of exposure to vapors from the remaining residual contamination. The Department reviewed remediation report, including analytical data for the site, and concluded that closure of the spill case is appropriate based on the following: 1) Free-phase product has not been identified at the site since underground storage tanks were removed and petroleum impacted soil was excavated during construction of the existing building. 2) All underground storage tanks and petroleum-impacted soil were removed and properly disposed of during site development as indicated in ACT s March 31, 2008 Closure Report. 3) A review of historical ground water quality data demonstrates an asymptotic improvement in water quality beneath the site. 4) Air beneath building remains under negative pressure due to the active SSD system and as a result no migration of vapors from remaining contaminants into the building

126 4TH AVENUE - MISC (Continued) **S118953804**

will occur. 5) Tthe site poses no further threat to human health and the environment. Spill is closed effective January 18, 2013. Spill Closure Letter sent to Paul Stuart of ACT with the following e-mail: January 17, 2013 Dear Mr. Stuart: The Department reviewed Spill Closure Report and request for spill closure dated January 17, 2013. Based on the review of the report, investigative and remedial activities completed to date, analytical data presented in the report, and Conclusions/Recommendations section of the Report, the Department agree that the closure of this spill case is appropriate at this time. Therefore, spill case is closed effective January 17, 2013. Spill closure letter is attached for your file. It is my understanding that the SSD system will remain in operation at the site as an engineering control to prevent possibility of exposure to potential vapors from remaining residual contamination beneath the site. If you have questions regarding this matter, please contact me. Respectfully, Vadim Brevdo

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	232808
Material Code:	0022
Common Name of Substance:	Waste Oil/Used Oil

Equipment Records:

A00 - Tank Internal Protection - None
E00 - Piping Secondary Containment - None
G10 - Tank Secondary Containment - Impervious Underlayment
G11 - Tank Secondary Containment - Double-bottom (Aboveground)
H00 - Tank Leak Detection - None
I00 - Overfill - None
K01 - Spill Prevention - Catch Basin
B00 - Tank External Protection - None

RIDGE COMPLETE AUTO (Continued) **A100348969**

C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
D00 - Pipe Type - No Piping
L00 - Piping Leak Detection - None
J00 - Dispenser - None

Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/02/1999
Capacity Gallons:	250
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

DEC Memo:	2/5/2024 - Feng - Desk Duty. Spoke to Alexandra Keenan of Impact Environmental. It is BCP C224350. They located an abandoned tank in the northern portion of the site near Union St. The tank is encased in concrete and believe is a 550-gallon. They believe it is petroleum content. They excavated this morning and found contaminated soil, i.e., staining, odor, dark and high PID reading in the side of the tank. The tank is still in the ground. They will have someone to pump out the tank content and then remove the tank. The schedule will let Aaron Fischer knows. They believed the tank is not broken by the excavator, so no actively leaking. I advised her that to remove as much as impacted soil possible after the tank is yanked out, then collect the endpoint samples, then submit the endpoint sampling results to Aaron Fischer. Assigned the spill to Aaron Fischer, PM for BCP C224350. Alexandra Keenan Impact Environmental 516-301-0675
Remarks:	unk tank with soil contamination possible petroleum but unsure req a fisher

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN transfered from tang/sullivan to tibbe. see also 9314103 and 0306012 at the same location. 09/23/03 Transferred from Tibbe to Sun 10/01/03 Joe Sun of NYSDEC spoke to Jeff Bohlen of Envirotrac (Consultant to Verizon) regarding the removal of two (2)x4000 gallon FRP USTs, which are scheduled to be removed today, 10/01/03. J.Bohlen stated that they will take the end samples next Tuesday or Wednesday . He will call again to confirm the time and date for DEC people to be at the site to witness the soil sampling. 10/02/03- Sun- Faxed letter to John Quatrale of Verizon and Jeff Bohlen of EnviroTrac requesting the area to be excavated in conjunction with the tank removal activities currently progressing on site. Soil excavation will remove the source of the groundwater contamination, and accelerate the remediation of the spill site. Since source material exists under the sidewalk, an attached letter can be used to expedite the DOT permit acquisition. 10/03/2003-Sun-Spoke with John Quatrale of Verizon about excavation of contaminated soils at 318 Nevins Street. He stated that he agrees with DEC’s recommendation to excavate the area on south side of Union Stret. Per DEC’s request, Verizon will proceed to expedite the DOT permit acquisition immediately. We will meet next week at the site to further survey the facility when Envirotrac starts to take end samples. 10/7/2003-Sun & Vought visited the Verizon’s site and met John Quatrale of Verizon and Jeff Bohlen of Envirotrac. At the time of our visit, one 4000 gallon gasoline FRP UST was already removed. Based on our discussion, Verizon will take one end sample for every twenty five (25) feet on each side wall and one ground water sample on the bottom of the tank. The extent of excavation will be based on the PID readings. The analysis of volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) will be performed using EPA Methods 8260 & 8270, respectively. Verizon will excavate another 4000 gallon fiberglass coated steel UST (diesel

NEVIN ST GARAGE (Continued) **S103274088**

tank) on 10/9/2003. 1/5/06:
Case reassigned to Andersen. Reviewed the quarterly report for April - June 2005. There is a strong
decrease in contaminants by natural attentuation. Max BTEX 2,855 (MW8) and max MTBE 110 (MW 8 and
9). 1/12/06: Reviewed quarterly third 2005 quarterly report. Increase in contaminant concentration
in the hotspot (MW-8 and MW12). Wait one more quarter and send and RAP required letter. Max BTEX
6,791 ppb (MW8) and max MTBE 145 ppb (MW8). 2/9/06: Reviewed fourth quarterly 2005 report.
Fluctuating concentrations in MW-8. Max BTEX 3991 ppb and max MTBE 137 ppb. Sent RAP required
letter. 4/6/06: RAP approved. Two closed-in-place 2,000 gallon tanks will be removed and soil
excavated. 4/27/06: Meeting with Verizon, NYSDEC, and EnviroTrac. Two closed in place tanks will be
removed. There is old fill material and concrete remnants of old buildings in the ground. This site
is adjacent to the Gowanus Canal. 5/4/06: Access letter sent to envirotrac for MTA permit. 5/11/06:
Received first quarterly 2006 report. Excavation and tank removal planned for 5/15/06. Max BTEX
4,348ppb (MW8), max MTBE 61 ppb. 8/25/06: One 2,000 gallon diesel and one 2,000 gallon gasoline
previously abandoned USTs were removed in May 2006. Impacted soil was removed to limits of
excavation (tieback wall of gowanus canal and retaining wall). A petroleum sheen was seen in water
in excavation and 838 gallons of was were removed with a vacuum truck. Two endpoint samples
collected, no VOC exceedances, some sVOC exceedances. Two monitoring wells were installed in the
excavation (MW16 and MW17). Groundwater sampled on 6/15/06. Max BTEX 3,806 ppb in MW8, max MTBE
27ppb in MW17. Third quarter 2006 gw sampling scheduled for September. 11/27/06: Received July -
September 2006 update report. Wells sampled on 9/11/06. Max BTEX 5,164 ppb in MW8. Fluctuating gw
concentrations. This is the second sampling event since source removal. An RAP may be required
after next sampling event. 2/22/07: Reviewed update report. Wells sampled on 12/15/06. Max BTEX
1,648 ppb (MW8), max MTBE 46 ppb (MW17). Local treatment of MW8 may be required if it does not
naturally attenuate. 5/24/07: RAP required for groundwater treatment of MW8. Due 7/5/07. 7/6/07:
Received RAP for MNA until the end of 2007. At that time, if the level of contamination warrants
remedial action, the feasibility of chemical oxidation in the area of mw8 will be evaluated .
8/30/07: Reviewed update report. Wells sampled on 6/8/07. Max BTEX 833 ppb (MW8), max MTBE 120 ppb
(MW17). MNA until fourth quarter 2007. 7/2/08 - Carlson: Reviewed January - March 2008 update
report. Wells sampled on 3/26/08. Max BTEX 1,848 ppb (MW8). Report states a workplan will be

NEVIN ST GARAGE (Continued) **S103274088**

submitted under a separate cover. Emailed Tom Bosshard - what is the expected workplan submittal
date. 7/3/08 - Carlson: Received email from Tom Bosshard. RAP will be submitted by July 31, 2008.
8/6/08 - Carlson: Approved Remedial Work Plan for the use of Regenox. Regenox will be injected into
four new injection wells in the sidewalk adjacent to wells MW8 and MW12. 8/7/08 - Carlson: Received
email from John Quatrale: Labor negotiations are ongoing and the union is working without a
contract since August 3, this may drag on for some time. That said, I am still trying to get the
work done before the end of the month and will advise as to the actual scheduled date. 8/25/08 -
Carlson: Received OMMP report dated 8/25/08. Injection well installation scheduled for 9/9/08.
Received email from Tom Bosshard : Please note that baseline monitoring for parameters outlined in
the OMMP will be conducted during the third quarter ground-water sampling event, which will be
conducted during the week of September 8th. We expect to conduct the RegenOx injection in late
September or October, prior to the fourth quarter ground-water sampling event scheduled for
December. Reviewed April through June 2008 Update Report. Wells sampled on June 20, 2008. Depth to
water 4 - 9 ft. Maximum BTEX concentration 12,370 ppb (MW8). 10/17/08 - Carlson: Reviewed July 2008
- September 2008 Update Report. Wells sampled on 9/7/08. Maximum BTEX concentration 720 ppb in
MW12. Six injection wells installed and Regenox injected in September 2008. Monitoring wells MW8
and MW12 will be sampled in October 2008 to evaluate Regenox effectiveness. 3/5/09 - Carlson:
Reviewed October - December 2008 Quarterly Report. Regenox injected in November. Spike in MW8 may
be from dissolution resulting from Regenox. Regenox injection planned again in May 2009. 5/4/09 -
Carlson: Reviewed update report. General decrease in contaminant concentrations. Another regenox
injection planned in may 2009. 8/20/09 - Carlson: Reviewed April 2009 through June 2009 Update
Report. A third injection event was performed in May 2009. BTEX,TVOCs are still high in MW8.
12/18/09 - Carlson: Reviewed update report. EFR planned on December 10 to recover contaminants
desorbed by Regenox. 2/19/2010 - Carlson: Reviewed update report. EFR conducted in December 2009
prior to December sampling event. Impacted groundwater remains in MW8. Another EFR planned prior to
March sampling event. 5/13/2010 - Carlson: Reviewed update report. EFR on 3/3/2010. Wells sampled
on 3/30/2010. Low dissolved concentrations. Another EFR event planned prior to June sampling event.
8/27/2010 - Carlson: Reviewed April 2010 through June 2010 Update Report. EFR conducted from MW8.
Spike in concentration in MW8. Quarterly EFR and groundwater sampling

NEVIN ST GARAGE (Continued) **S103274088**

to continue. 11/9/2010 -
Breen. July through September Update report received from Environtrac. EFR extraction at MW-8 on
9-7-10. Next event scheduled for December. 2/17/2011 - Breen. Paper copy of October-December 2010
Update rpt received from Environtrac. 08/08/11: This spill case transferred from G. Breen to J.
Kolleeny. Reviewed Update Rpt for Jan. thru March 2011 by EnviroTrac, submitted on 5/9/11 (in
eDocs). Rpt gives results of 3/29/11 GW sampling event. High levels of contam continue to persist
in MW-8, which had 7,410 ug/L total VOCs (down from 13,031 ug/L in Dec. 2010). Off-site up-gradient
well MW-11 had 343 ug/L tVOCs (up a little from 322 ug/L in Dec. 2010), and up-gradient on-site
well MW-12 had 401 ug/L tVOCs, up from 320 ug/L in Dec. 2010; contam in both MW-11 and MW-12 is
primarily benzene (320 ug/L benzene in MW-11; 400 ug/L in MW-12). Rpt states that EFR events will
continue at MW-8 on regular basis, with next EFR event scheduled for June 2011, and GW sampling to
be conducted 2 or 3 weeks after that. Spoke with Tom Bosshard of EnviroTrac, who mentioned they
found an unknown monitoring well across Union St. from MW-8, and wondered if I knew who installed
it and if it would be OK for them to sample it for addt'l up-gradient GW data. I could not find a
nearby open spill case, but told Tom I see no reason not to sample well. I suggested that they
should measure depth to bottom of well and determine screened interval to make sure well will
provide reliable data. He said they would. Changed site priority ranking to P2, because site is in
post-injection monitoring phase. - J. Kolleeny 03/16/12: On 3/13/12, got phone message from Gavin
Zollo of EnviroTrac asking that I review proposal in Sept. - Dec. 2011 Update Rpt to remove a
number of monitoring wells from quarterly sampling program. I reviewed EnviroTrac's Update Rpts for
April-June 2011, July-Sept. 2011, and Oct.-Dec. 2011, submitted 8/9/11, 11/18/11, and 3/13/11,
resp. (all in eDocs). Rpts show no impacts in wells proposed for removal from quarterly GW mon.
program, but increasing total VOCs in well MW-8 and to lesser extent in off-site wells MW-11 and
MW-18 (across Union St. from MW-8). For June 2011 sampling event, MW-8 had 11,381 ug/L total VOCs,
MW-11 had 439 ug/L tVOCs (MW-18, referred to in rpt as unknown well, was not sampled, but rpt
states that well will be inspected during Sept. 2011 event and if in satisfactory condition, will
be sampled). In Sept. 2011, MW-8 had 12,671 ug/L tVOCs, MW-11 had 331 ug/L tVOCs, and MW-18 had 36
ug/L tVOCs. (Rpt notes that DEC conducted a spill search of area which did not reveal any open or
closed spills that might explain presence of well MW-18; also says EnviroTrac requests that DEC

NEVIN ST GARAGE (Continued) **S103274088**

conduct addt'l review of properties up-gradient of site to northeast of Verizon site to try to find reason this well was installed, and states that it appears that an off-site source is impacting Verizon's up-gradient monitoring well network.) For Dec. 2011 sampling event, MW-8 had 16,454 ug/L tVOCs, MW-11 had 423 ug/L tVOCs, and MW-18 had 343 ug/L tVOCs. Rpt recommends removing wells MW-3, MW-4, MW-6, MW-7, MW-10, MW-13, MW-15, MW-16 & MW-17 from quarterly GW sampling schedule; these wells would continue to be gauged for depth to water and presence of product on quarterly basis and would be sampled annually during September GW monitoring event. On 3/16/12, I sent email to Gavin Zollo of EnviroTrac: Gavin, I've looked over EnviroTrac's Update Rpt for Sept. thru Dec. 2011 for this spill site, dated 3/13/12, and want to send out email approving recommendations to eliminate most on-site wells from quarterly sampling program but to continue to gauge them quarterly and sample them annually. Can you please provide contact info for your client, including name, position, address and email address? Also, looking back over last three quarterly status rpts, I notice that total VOC concentrations in problematic well MW-8 have steadily increased, from about 11,000 ug/L to over 16,000 ug/L! This is in spite of EnviroTrac performing quarterly EFR events on well and recently adding air sparging at several nearby wells that were installed for chem ox injections. Do you have any thoughts as to what might be going on at well MW-8? If you're going to suggest an up-gradient off-site source, I'm sorry but I don't buy it. First, even tho EnviroTrac's rpts refer to MW-8 as an off-site well, I don't consider it to be off site, just because it's in sidewalk. It's in immediate vicinity of Verizon's USTs that are known to have leaked. Second, concentrations in wells across street, MW-18 and MW-11, are much lower, which argues against an off-site plume reaching MW-8 from an up-gradient source. Third, as concentrations in MW-8 have increased, moderate VOC levels in wells across street have also increased, suggesting to me that they are responding to whatever is going on at MW-8; possibly there is some tidal effect from nearby Gowanus Canal smearing contamination in MW-8 over toward MW-18 and MW-11. Anyway, please let me know your thoughts on this, and please provide contact info for someone at Verizon. Gavin wrote back: Jon, Please send all correspondence for any Region 2 Verizon facilities, including 318 Nevins Street, to Tom Bosshard. After a recent rearrangement of their envt'l group he is current Envt'l Manager for Verizon in NY area. His info is below: Thomas H. Bosshard, CPG Environmental Manager, Verizon Global EH&S Compliance 501 North Ocean Avenue, Patchogue, New

York 11772 O: 631-654-7920,
F: 631-475-2217, C: 631-901-8272 thomas.bosshard@verizon.com Jeff Bohlen, who is out in field
today, and myself will review other points mentioned in your email and get back with you next week.
Thank you for expediting your review of current rpt prior to our next sampling event. We appreciate
your efforts. - J. Kolleeny 03/19/12: I sent email to Tom Bosshard of Verizon, cc to Gavin Zollo of
EnviroTrac: Dear Mr. Bosshard: I have reviewed Update Rpt for Sept. thru Dec. 2011 pertaining to
this spill site, prepared by EnviroTrac Envt'l Svcs and submitted on 3/13/12. Rpt presents results
of GW sampling performed at site in Dec. 2011, as well as historical GW sampling data. Based on
data, EnviroTrac recommends removing monitoring wells MW-3, MW-4, MW-6, MW-7, MW-10, MW-13, MW-15,
MW-16 & MW-17 from quarterly GW sampling schedule; these wells would continue to be gauged for
depth to water and presence of free product on quarterly basis and would be sampled annually during
September GW monitoring event. This recommendation is approved. However, DEC notes that contaminant
levels in well MW-8, located in sidewalk along Union Street and in vicinity of removed gasoline &
diesel USTs, have steadily increased over last three sampling events, from ~11,000 ug/L total VOCs
in June 2011 to over 16,000 ug/L total VOCs in Dec. 2011. This increase has occurred in spite of
quarterly enhanced fluid recovery events being performed on this well, plus recent addition of air
sparging using several nearby injection wells installed for application of chemical oxidant. DEC
requests that EnviroTrac review available historical soil data from UST removal and from install'n
of monitoring and injection wells to evaluate possibility that residual soil contamination in this
area may be acting as an ongoing source of GW contamination. If contaminant levels in MW-8 continue
to remain elevated, addt'l remedial actions may be required to address contamination. Please feel
free to contact me if you have any questions. - J. Kolleeny 03/20/12: Received email response from
Gavin Zollo of EnviroTrac, with cc's to Jeff Bohlen of EnviroTrac and Tom Bosshard of Verison
Envt'l: John, Per your request, attached is hydrograph of MW-8 with notes of significant events. As
you can see, water table elevation has increased over last few years by approx 2-3 ft. A rise in
water table appears to correlate with higher BTEX concentrations and following injection of
RegenOx, BTEX apparently desorbed from soil resulting in higher BTEX concentrations as compared to
previous levels (this is common with RegenOx and tapers off with time). I suggest we continue with
EFR/Air Sparging schedule and evaluate BTEX levels after 6 months (following 3rd quarter sampling

NEVIN ST GARAGE (Continued) **S103274088**

in September). If you have any questions, please contact me. I wrote back, with same cc's: Gavin,
Thanks for your comments and for hydrograph of well MW-8. It is very possible that rise in water
table elevation and effects of RegenOx injections may explain increase in VOC concentrations in
well MW-8. I agree with your suggestion that EnviroTrac continue with EFR/air sparging program and
re-evaluate GW conditions after 3rd quarter 2012 sampling event. Email exchange is in eDocs, with
hydrograph attached as last page. - J. Kolleeny 07/05/12: Reviewed Update Rpt - Jan. thru March
2012 by EnviroTrac, submitted with transmittal sheet dated 4/13/12 and received 4/16/12 (in eDocs).
Rpt states that enhanced fluid recovery was performed on worst well, MW-8, on 3/16/12, recovering
1,536 gals of GW, and portable air sparge system was also used to enhance recovery of residual soil
vapors in vicinity of MW-8 by injecting air into surrounding injection wells IW-1 thru IW-3;
effluent air had PID readings up to 31 ppm. GW samples were collected on 3/30/12 from wells MW-8,
MW-9, MW-11, MW-12 and MW-18. Well MW-8 had 11,344 ug/L total BTEX (down from 12,018 ug/L in
December 2011) and 17,528 ug/L total VOCs (up from 16,454 ug/L in December 2011); MW-11 had 344.5
ug/L tVOCs (down from 423.2 ug/L in Dec. 2011), MW-12 had 200 ug/L tVOCs (down from 261.1 ug/L in
Dec. 2011), and MW-18 (which rpt refers to as up-gradient) had 272.5 ug/L tVOCs (down from 343.4
ug/L in Dec. 2011). Well MW-18 seems to be cross-gradient to me, and contam there is likely due to
tidal smearing from nearby Gowanus Canal. Rpt states that EFR events in conjunction with air
sparging events will continue at MW-8 on quarterly basis, with next event scheduled for June 2012,
followed by GW sampling 2-3 weeks later. - J. Kolleeny 09/14/12: Reviewed Update Rpt April-June
2012 by EnviroTrac, submitted with transmittal sheet dated 8/20/12 (in eDocs). GW sampling on
6/28/12 showed worst well, MW-8, had 10,487 ug/L total VOCs (down from 17,528 ug/L in March 2012);
well MW-11 had 501 ug/L tVOCs (up from 345 ug/L in March 2012) and well MW-18 had 341 ug/L tVOCs
(up from 273 ug/L in March 2012). Rpt states that quarterly EFR events will continue to be
performed on MW-8 in conjunction with AS events at surrounding injection wells, with next event
scheduled for Sept. 2012; 3rd quarter 2012 GW sampling event will be conducted 2 or 3 weeks after
EFR/AS event. Also, received phone call from Mark Godick of AKRF (914-922-2356), consultant to
property owner (Verizon is tenant), who is trying to get NYC to rezone property. They plan to
develop property with a bldg in a year or so; bldg will likely cover former UST area (but not
sidewalk where MW-8 is located), and they will likely be excavating

NEVIN ST GARAGE (Continued) **S103274088**

soil, perhaps dewatering, and
installing vapor barrier beneath bldg (GW too shallow for SSDS). They will be doing a RAP for
NYCOER related to this. We discussed remedial options for Verizon and whether re-development could
interfere with spill cleanup, and agreed that this is unlikely since main residual impacts appear
to be in sidewalk along Union St., not in former UST area. Mark will be in touch in future. - JK
10/25/12: Met with Tom Bosshard of Verizon and Jeff Bohlen of EnviroTrac; Vadim Brevdo and Paul
John of DEC also attended (sign-in sheet in eDocs). Verizon's lease expires at end of 2013, and
they plan to close bldg by mid-December 2012. To expedite spill closure, they propose to excavate
soil in sidewalk area around problem well MW-8 down to GW. I suggested they also apply oxidizing
chemicals to GW in excavation; they agreed. They will prepare and submit work plan for excavation,
separate from 3rd quarter monitoring rpt. - J. Kolleeny 12/04/12:
Reviewed Update Rpt July 2012
through Sept. 2012 by EnviroTrac, submitted under transmittal letter dated 11/28/12 (in eDocs). Rpt
summarizes performance of EFR on well MW-8, and presents results of Sept. 2012 GW sampling event.
EFR was done on Sept. 8, 2012, recovering total of ~1,135 gals of GW. Results of GW sampling on
Sept. 25, 2012 show MW-8 had 7,147 ug/L total VOCs, down from 10,487 ug/L in June 2012; MW-11 had
381 ug/L tVOCs, down from 501 ug/L in June 2012; MW-12 had 330 ug/L tVOCs, up from 230 ug/L in June
2012; MW-18 had 92 ug/L tVOCs, down from 341 ug/L in June 2012. Rpt states that remedial
alternatives for area of MW-8 are currently being evaluated; in meantime, quarterly GW monitoring
and EFR events will continue, with next round scheduled for December 2012. - J. Kolleeny 01/30/13:
Reviewed Update Rpt Oct. thru Dec. 2012 by EnviroTrac, dated 1/23/13 (in eDocs). EFR was conducted
on MW-8 on 12/11/12, with air sparging at nearby injection wells; during EFR with sparging, PID
monitoring of effluent air stream at MW-8 gave readings up to 101 ppm. Vacuum measurements taken at
nearby wells show no measurable vacuum influence; however, water levels in nearby wells decreased
slightly, indicating creation of capture zone around MW-8. Total of 600 gals of water were
recovered during 8-hr event. GW sampling on 12/28/12 showed significant decrease in VOCs in worst
well MW-8, which had 2,690 ug/L total VOCs, down from 7,147 ug/L in Sept. 2012, and was 3rd
consecutive quarterly decrease. Well MW-11 had 206 ug/L tVOCs (down from 381 ug/L in Sept. 2012)
and well MW-12 had 331 ug/L tVOCs (~same as 330 ug/L in Sept. 2012). Rpt states that quarterly GW
monitoring will continue, and that remedial plan to address area of MW-8 will be submitted under

NEVIN ST GARAGE (Continued) **S103274088**

separate cover. - J. Kolleeny 02/01/13: Reviewed Addt'l Remedial Work Plan by EnviroTrac, dated
1/31/13 (in eDocs). Work Plan proposes excavation of soil from vicinity of persistently
most-contaminated well MW-8, in sidewalk along Union St adjacent to site, and application of
RegenOx and ORC Advanced to excavation. Existing on-site monitoring wells will be abandoned, and
any wells destroyed during excavation will be replaced for post-excavation GW monitoring, which
will be performed and reported on quarterly basis. Work plan includes a Community Air Monitoring
Plan (after request by DEC). I sent letter (in eDocs) to Tom Bosshard of Verizon, cc to Jeff Bohlen
of EnviroTrac, approving plan but asking that end-pt soil samples be collected from excavation
sidewalls if feasible, to document soil conditions at excavation limits. - J. Kolleeny 08/07/13:
Reviewed 4/29/13 Update Rpt Jan. thru March 2013 by EnviroTrac (in eDocs as Post-Excavation Status
Rpt). Summarizes excavation of contam soil in sidewalk area along Union St. during Feb. 2013.
Excavation done in two parts; from first area, two sidewall and one bottom end-pt soil samples were
collected, results showed no significant residual impacts. In 2nd area, one bottome end-pt sample
was collected (due to sheeting, no sidewalls could be collected); results again showed no
significant residual impacts. Prior to backfilling, RegenOx and ORC Advanced were applied to both
excavation areas. Well MW-8 (historically worst well) was destroyed during excavation but was
reinstalled during backfilling. Total of 82.64 tons of soil were removed. After excavation, all
on-site monitoring wells were properly abandoned (as previously approved by DEC). On March 29,
2013, off-site (i.e., sidewalk) wells MW-8, MW-9, MW-11, MW-12 and MW-18 were gauged and sampled.
No free product detected. Results show MW-8 had 8,644 ug/L total VOCs, up from 2,690 ug/L in Dec.
2012; well MW-11 had 214.5 ug/L tVOCs, up from 206 ug/L in Dec. 2012. EnviroTrac states that
increases are likely due to disturbance of subsurface by excavation and application of chem ox.
Quarterly GW monitoring will continue, with next event to be in June 2013. - J. Kolleeny 12/04/13:
Reviewed 8/27/13 Update Rpt April-June 2013 by EnviroTrac (in eDocs). Results of June 2013 GW
sampling event show well MW-8 had 4,052 ug/L total VOCs (down from 8,644 ug/L in March 2013), well
MW-12 had 220 ug/L tVOCs (same as in March 2013), well MW-18 had 81 ug/L tVOCs (up from 37 ug/L in
March 2013). EnviroTrac attributes tVOCs decrease in MW-8 to excavation of contam soil source
material and subsequent chem ox application, states that well network will continue to be sampled
on quarterly basis, in Sept. and Dec. 2013. - JK 01/27/14: Reviewed

NEVIN ST GARAGE (Continued) **S103274088**

10/29/13 Update Rpt June-Sept.
2013 by EnviroTrac (in eDocs). Results of Sept. 2013 GW sampling event show well MW-8 had 4,378
ug/L total VOCs (up from 4,052 ug/L in June 2013), well MW-12 had 391 ug/L tVOCs (up from 220 ug/L
in June 2013), well MW-18 had 9 ug/L tVOCs (down from 81 ug/L in June 2013). EnviroTrac notes that
total BTEX in well MW-8 decreased from 1,983 ug/L in June 2013 to 1,814 ug/L in Sept. 2013, and
attributes this to excavation of contaminated source material and subsequent chem ox/ORC
application. Rpt states that well network will continued to be sampled quarterly, with Dec. 2013
event. - J. Kolleeny 02/18/14: Reviewed 1/15/14 Update Rpt Sept.-Dec. 2013 by EnviroTrac (in
eDocs). Results of 12/24/13 GW sampling show well MW-8 had 11,332 ug/L total VOCs (up from 4,378
ug/L in Sept. 2013), well MW-11 had 155 ug/L tVOCs (up from 72 ug/L in Sept. 2013), well MW-12 had
280 ug/L tVOCs (down from 391 ug/L in Sept. 2013). Rpt states that rebounding of VOC concentrations
in GW is common after chem ox / ORC applications and is likely cause of increase in VOCs in well
MW-8. This seems somewhat dubious, as RegenOx & ORC Advanced were applied to open excavation (i.e.,
not injected) in Feb. 2013, and this was 4th GW sampling event since then. On 1/15/14, Gavin Zollo
of EnviroTrac sent email noting that 4th Quarter 2013 rpt being sent summarizes 4th quarterly event
since remedial actions, and requesting meeting to discuss future options. On 2/12/14, I did prelim
review of rpt and emailed Gavin with suggested meeting date of 3/5/14; on 2/14/14, Gavin confirmed
date was good for meeting. - J. Kolleeny 03/07/14: On 3/5/14, met with Tom Bosshard of Verizon and
Jeff Bohlen of EnviroTrac to discuss site status and future course of action. DEC stated that spill
cannot be closed yet in light of increased VOC concentrations in well MW-8; Verizon & EnviroTrac
agreed, but noted that many remedial actions have been performed at site, including two UST
removals with soil excavation, chem ox injections, vacuum-enhanced fluid recovery plus air
sparging, and most-recent soil excavation in sidewalk area of MW-8 (well was replaced) plus
application of chem ox to open excavation. I suggested further quarterly monitoring of well MW-8
only, with annual sampling of other wells; however, if results for MW-8 show decreasing trend
before year is over, other wells should be sampled in support of spill closure. Verizon/EnviroTrac
agreed with this suggestion. After meeting, on 3/6/14, Tom Bosshard sent email to document these
discussions: Jon, Thank you to Vadim and yourself for your time in meeting with Jeff and myself
yesterday to discuss spill case. As you know, Verizon NY has expended a great deal of effort in

NEVIN ST GARAGE (Continued) **S103274088**

remediating this spill site, and is appreciative of DEC s continued guidance as we continue on path to spill closure. Most recently, remedial efforts included soil excavation and chemical oxidation application in area of off-site monitoring well MW-8 in Feb. 2013, followed by four quarters of GW monitoring and sampling through Dec. 2013 utilizing five off-site monitoring wells. As discussed and mutually agreed during yesterday s meeting, Verizon NY proposes to continue quarterly monitoring and sampling at monitoring well MW-8 in 2014 during months of March, June, September and December, and conducting annual monitoring and sampling at monitoring wells MW-9, 11, 12 and 18 during month of December 2014, at which time request for spill closure will again be considered. Results of quarterly monitoring and sampling at MW-8 will also be continually evaluated, and MW-9, 11, 12 and 18 may be monitored and sampled prior to December 2014 if a trend in quarterly dissolved concentrations at MW-8 supports a spill closure request. I sent email reply: Tom, Thanks for your email documenting our discussions from Wednesday's meeting and agreed-upon future course of action for this spill site. - J. Kolleeny 05/28/14: Reviewed Update Rpt January thru March 2014 by EnviroTrac, dated 4/25/14 (in DecDocs). Rpt presents results of GW sampling of well MW-8 on 3/20/14, showing well had 2,725 ug/L total VOCs, down from 11,332 ug/L in Dec. 2013. Rpt states that monitoring of MW-8 will continue, with next sampling event scheduled for June 2014. - J. Kolleeny 10/15/14: Reviewed Update Rpt April-June 2014 by EnviroTrac, dated 7/1/14 (in DecDocs). Rpt presents result of June 20, 2014 sampling of well MW-8, showing well had 3,248 ug/L total VOCs (up from 2,725 ug/L in March 2014). Rpt states that GW monitoring will continue, with next sampling event for MW-8 in Sept. 2014, and with annual sampling of all remaining wells (MW-8, MW-9, MW-11, MW-12 & MW-18) in Dec. 2014, at which time results will be re-evaluated for petitioning for spill closure. - J. Kolleeny 12/15/14: Reviewed Update Rpt July-Sept 2014 by EnviroTrac, dated 11/7/14 (in DecDocs). Sampling of well MW-8 in Sept 2014 showed 2,658 ug/L total VOCs (down from 3,248 ug/L in June 2014). Rpt states that wells MW-8, MW-9, MW-11 and MW-18 will be sampled in Dec. 2014 for annual GW sampling event. Rpt also states that well MW-12 (in Union St sidewalk to SE of MW-8) was found to have been destroyed, and that Verizon does not intend to replace well. Rpt states that results of post-remediation quarterly GW monitoring will continue to be summarized in quarterly reports and continually evaluated for request of spill closure. - JK 02/23/15: Reviewed Update Rpt Oct.-Dec. 2014 by EnviroTrac, dated 1/12/15 (in DecDocs). GW sampling

NEVIN ST GARAGE (Continued) **S103274088**

on 12/19/14 showed well MW-8
had 7,260 ug/L total VOCs (up from 2,658 ug/L in Sept. 2014), well
MW-9 had 4.3 ug/L tVOCs (had 4.8
ug/L tVOCs when last sampled in Dec. 2013), well MW-11 had 158.6 ug/L
tVOCs (had 155.1 ug/L tVOCs
when last sampled in Dec. 2013), well MW-12 had 282.4 ug/L tVOCs (had
280 ug/L when last sampled in
Dec. 2013), well MW-18 had 7.9 ug/L tVOCs (had 3.2 ug/L tVOCs when
last sampled in Dec. 2013). Rpt
notes that construction activities in sidewalk along Union St. were
noted during Sept. 2014 GW
sampling event, and EnviroTrac speculates that such ground disturbance
activities may have caused
increase in VOCs in MW-8 this quarter, which was a departure from
previous 3 quarters. EnviroTrac
recommends another GW sampling event in March 2015 to evaluate request
for spill closure. - JK
06/04/15: Reviewed Update Rpt & Request for Spill Closure, Jan.
through March 2015 by EnviroTrac,
dated 4/3/15 (in DecDocs). On 3/16/15, a GW sample was collected only
from problem well MW-8, as I
agreed to in discussions with EnviroTrac. Sample result showed well
MW-8 had 1,158 ug/L total VOCs
(down from 7,260 ug/L in Dec. 2014, an upward fluctuation or spike
which EnviroTrac stated was
likely attributable to construction activities in Union Street
sidewalk near MW-8 in Fall 2014,
possibly related to subsurface utilities). Well MW-8 had only 12 ug/L
of benzene (down from 72 ug/L
in Dec. 2014). Based on overall decreasing trend in VOC levels in
MW-8, absence of significant
impacts in other site-related wells, and substantial remedial efforts
undertaken at site (including
UST removals, soil excavations, application of oxygen-releasing
material and chemical oxidant (to
open excavations and via injections), performance of vac truck
extraction events, EnviroTrac
requests spill closure. I agree spill closure is appropriate based on
remedial actions performed,
relatively low residual contaminant levels, and decreasing trend in
contaminant levels, which is
likely to continue by natural attenuation processes. I closed spill
case, sent spill closure letter
(in DecDocs) to Thomas Bosshard of Verison, cc to Jeff Bohlen of
EnviroTrac. - J. Kolleeny

DEC Memo:	8/15/2012 TTF Spill Case transferred to DEC Tim DeMeo. 03-31-2015 - V. Brevdo As per discussion with Chief of Spill Response Section, this Tank Test Failure Spill Case is transferred to Remediation Section B for management of the project. Spill Case is further assigned to Jonathan Kolleeny. VB 2/23/18 TJD Teleconference with Dave at Riteway - regarding investigative/remedial actions performed at this site. Spill reassigned back to DeMeo. Dave emailed closure report to DeMeo. As per report, RiteWay proceeded to trouble shoot the tank test failure and it was determined that fill line was the point of failure (please see enclosed line test report). The point of failure on the fill line was at the interior of the foundation wall. There was staining on the interior of the building wall at the point of the fill line penetration. No contamination was observed elsewhere. Rite Way core drilled along the path of the original fill line and retrieved 6 samples at an overall depth of 3' below grade (please see site map and photos). Please note: sample closest to the building wall was taken at an angle via hand auger to get specimen against the wall. The fill line was approximately 8 below grade. Samples were placed into approved jars onsite and sent to a certified lab via chain of custody for analysis. Samples returned clean and within NYSDEC CP-51 regulatory guidelines (please see enclosed analytical report). RiteWay installed a new fill with spill box, relocated to the building wall, adjacent to the vent. The entire tank and system was tested on November 13, 2017 and passed (please see enclosed tank test report). Based upon the documentation provided no further action is required at this time. All documentation, including lab report, site plan and tank testing reports, has been uploaded to

TANK TEST FAILURE - TTF (Continued) **S110762260**

DECDOCS. Spill closed.
Remarks: 5000g tank. Unknown why failed

DEC Memo:	06/10/08 - LZ This spill has been consolidated with spill # 9810785 since they are related to this same property occupied by Bayside Fuel Oil Depot Company. See information about Spill #9810785 in the cabinet files. Especially, a report by a Cleaner Environment, dated 3/2/99 brings detailed information about contaminated soil at 267/285 Bond Street. 267 Bond Street is the address of the office and 285 Bond Street is the address of the service garage on this same property belonging to Bayside Fuel Oil Depot Company. Both the spills refer to contaminated soil found outside those buildings; Spill # 9810785 refers to contaminated soil in connection to removed USTs; Spill # 0208144 is about contaminated soil found at undetermined location on the site 08/21/07 - Zielinski Spoke with Tom Gibbons; he said that the department would determine soon whether the site is accepted into the Brownfield Cleanup Program; he would copy me on the decision. 08-14-07 - Zielinski In his letter, dated August 7, 2007, (eDocs) Marcus Simons of AKRF asserts that the spill site has been accepted into Brownfield Cleanup Program, BCP # C224080. Tom Gibbons of DEC is the project manager. 07/05/07- Zielinski Spill #9810785 related to the the subject spill. See information about Spill #9810785 in the cabinet files. Especially, a report by a Cleaner Environment, dated 3/2/99 brings detaied information about contaminated soil at 267/285 Bond Street. 267 Bond Street is the address of the office and 285 Bond Street is the address of the service garage on this same property belonging to Bayside Fuel Oil Depot Company. Both the spills refer to contminated soil found outside those buildings; Spill #9810785 refers to contaminated soil in connection to removed USTs; Spill # 0208144 is about contaminated soil found at undetermined location on the site 05/25/07 - Zielinski Sent a letter to Vincent Allegretti,Bayside Fuel Oil Depot Corp.,1776 Shore Parkway Brooklyn, NY, requesting information about a cause of the release and summarizing the cleanup activities, observations, post-excavation sampling results (if necessary), and also including contaminated material disposal manifests or any other documentation (i.e. invoices, bills, etc.) of cleanup activities must be submitted to this office no later than one month from the date of this letter, Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO contaminated soil letter sent/od/mt 11/14/03 TJD

BAYSIDE FUEL OIL DEPOT (Continued) **U003074649**

Marcus Simons (AKRF) @ 646 459
3527 called today to inform DEC that AKRF has been retained by prospective purchaser to perform
investigation in accordance with DEC directives. AKRF was given 30 additional days to submit an
investigation work plan for this site. 3/28/05 - Austin - Reassigned from DeMeo to Zhao - site is a
former MOSF - work done under VCP agreement? - review for closure - end

Remarks: caller was hired to do aphase 2 test while doing testing contaminated soil was discovered on the site property owner is victor allegretti 1776 shore parkway brooklyn 11214 soil samples are being sent out for testing caller will contact regional office with more info

BROWNFIELDS:

Name:	GOWANUS CANAL NORTHSIDE
Address:	267-285 BOND STREET AND 510 SACKETT STREET
City,State,Zip:	BROOKLYN, NY 11231
Program:	BCP
Site Code:	57787
Acres:	2.265
HW Code:	C224080
SWIS:	2401
Town:	New York City
Record Added Date:	06/07/2004
Record Updated Date:	02/27/2025
Update By:	LAGORTON
Site Description:	"Location: The Gowanus Canal Northside site is located in an urban area in the Gowanus section of Brooklyn, NY. The site is bounded by DeGraw Street to the north, the Gowanus Canal to the east, Union Street and multiple-story commercial buildings to the south, and Bond Street and multiple-story commercial buildings to the west. Site Features: The site is approximately 2.27 acres in size and is comprised of two lots transected by Sackett Street. Multi-story buildings are under construction on both lots. A new sealed bulkhead was installed along the eastern edge of the site, adjacent to the Gowanus Canal, to support the dredging in the canal. Current Zoning and Land Use: The site is located in the newly rezoned M1(3)/R7-2 mixed use district. Each lot will be improved with a mixed-use residential and commercial building. Past Use of the Site: The site was formerly occupied by Bayside Fuel Oil Depot Corporation, a registered inactive major oil storage facility (MOSF). An IRM was completed in 2015 to remove storage tanks associated with the MOSF. Other historic uses of the site include a box manufacturer, coal yard, fuel depot, and service garage. Site Geology and Hydrogeology: Subsurface strata at the site consist of historic fill (sand, gravel, and silt with varying amounts of asphalt, wood, ash, and coal slag) extending to depths ranging from 4 to 14 feet below ground surface (bgs). The fill layer was underlain by fine sand and silt, with varying percentage of clay increasing with proximity to the Gowanus Canal. Bedrock underlying the site is part of the Hartland Formation, which is comprised of mica schist and quartz-feldspar granulite, with localized intrusions of granite and pegmatite. It is inferred to be approximately 100 feet deep. Groundwater at the site has been observed at between approximately 2 and 8 feet bgs. In general, shallow groundwater flows to the east, toward the Gowanus Canal. Deep groundwater generally flows toward the south. "

GOWANUS CANAL NORTHSIDE (Continued) **S131541404**

Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) and metals in soils; PAHs in groundwater; CVOCs and petroleum products and Chlorinated Volatile Organic Compounds (VOCs) in soil vapor. The PAHs, metals, and CVOCs are petroleum related. Dense non-aqueous phase liquid (DNAPL) impacts were also observed. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Updated By:	WBBENNET
Site Description:	"Location: The 0.726-acre site is located in an urban area in the Gowanus neighborhood of Brooklyn and consists of two non-contiguous parcels on Brooklyn Borough Tax Block 440, Lot 1: the E Waste Parcel and the Pontone Parcel. The two parcels are separated by BCP site No. C224220, 473 President Street. The primary addresses associated with the site is 499 President Street. The site is located on the block bounded by Union Street to the north, 3rd Street to the east, President Street to the south, and Nevins Street to the west. The Gowanus Canal, a National Priorities List (NPL) site, is located about 275 feet west of the E Waste Parcel. Site Features: The site is currently under development. Formerly, the E-Waste Parcel contained a one-story brick and concrete building which had been occupied by an electronics recycling facility. The ground floor of the E-Waste Parcel was used as a warehouse and an office, and a partial second floor level was used for office space. The Pontone Parcel consisted of an interconnected one- to three-story brick building which had been occupied by a casket manufacturer and had offices on the second and third floors. Current Zoning and Land Use: According to the New York City (NYC) Planning Commission Zoning Map 16c, the site is located in an M1-2 manufacturing zoning district. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale and storage facilities. Offices, hotels and most retail uses are also permitted in M1 districts. The 30 January 2019 draft Gowanus zoning proposal by the NYC Department of City Planning (DCP), if approved, would rezone the site to a mixed-use district that permits residential uses (M1(3)/R6A and M1(3)/R7A). Surrounding properties include single and multi-story buildings occupied by industrial, commercial and residential tenants. Past and Current Use of the Site: The site has been occupied by commercial and industrial facilities since as early as 1886. The E-Waste Parcel was used as a blacksmithery, rag storage facility, dental manufacturing facility, parking area, warehouse, and electronics recycling facility. The E-Waste Parcel is currently unoccupied. The Pontone Parcel was used as a factory, woodworking and engraving facility, auto repair shop, painting place, and casket manufacturing facility. The Pontone Parcel is currently unoccupied. Proposed development calls for demolition of existing structures and construction of a mixed-use residential and commercial building with ground floor. Site Geology and Hydrogeology: Soil and bedrock stratigraphy throughout Brooklyn typically consists of a layer of historic fill material that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. Based on a previous study at a

473 PRESIDENT STREET (Continued) **S126218335**

neighboring property, bedrock is present at about 200 feet below grade surface (bgs). Site stratigraphy consists of historic fill material underlain by native soil generally characterized as fine- to medium-grained sand with varying amounts of silt, clay, and gravel. Historic fill material, characterized as unconsolidated, fine-grained sand with varying amounts of gravel, brick, coal, concrete, glass, slag, organics, tar-like material, white ashy material, and silt, was encountered beneath the site to depths ranging from about 6 to 14 feet bgs. Groundwater at the site was encountered at elevations ranging from about 9 to 13 feet bgs. The inferred groundwater flow direction is generally to the west-northwest toward the Gowanus Canal and former Mill Pond. Groundwater flow is restricted by predominantly fine-grained deposits (silt) to the west of the Pontone Parcel. These fines create a localized rise in groundwater elevation that drops as grain size coarsens towards the E-Waste Parcel, continuing towards the Gowanus Canal."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), lead, mercury, and arsenic in soil and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil vapor extraction system) of the remedy will be operated and maintained under the SMP."

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

These fines create a localized rise in groundwater elevation that drops as grain size coarsens towards the E-Waste Parcel, continuing towards the Gowanus Canal."

Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), lead, mercury, and arsenic in soil and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil vapor extraction system) of the remedy will be operated and maintained under the SMP."
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Site Description: "Location: The 499 President Street site is located in an urban area in Brooklyn, NY. It is located in the southern portion of Block 440, Lot 1. The Gowanus Canal is approximately 350 ft to the west of the site. The site is bounded by a shuffleboard club to the north, a former electronics-waste recycler to the west, President Street to the south, and a former casket company to the east. Site Features: The site was comprised of a 1 story warehouse that was demolished. The site is currently undergoing redevelopment. Current Zoning and Land Use: The was a former bicycle retailer, a furniture maker, and a showroom for a light designer. It is currently zoned M1-2 (commercial and light industrial uses). The development project is a mixed-use residential and commercial building, in accordance with zoning laws for that area, with ground floor retail and parking. The development coincides with the development activities at the neighboring site, President St. Portfolio, BCP Site No. C224309. The nearest residential area is across President Street, but the proposed redevelopment will be largely residential. Past Use of the Site: The site has an industrial history dating to the 1880s. From 1886 to 1928, the site was a sash and door factory, and later a mill with a machine shop and boilers. In 1938 the Coca-Cola Bottling Co. operated two gasoline underground storage tanks (USTs) as part of their site activities. From 1969 to the 1990s, the site was occupied by Dolin Metal Manufacturing Co. From 1993 to 2007, the building was occupied by manufacturing and storage. There is an open spill from a failed tank test which resulted in petroleum-contaminated soils on-site. The spill number is 9412605. Site Geology and Hydrogeology: The soils of the area consist of urban fill in the upper 10 feet. The fill consists of brown, medium to fine sand with varying amounts of gravel, brick, concrete, asphalt, coal fragments, coal ash, slag, and wood. Hardened coal tar was observed within the fill layer in a boring located in the southeastern portion of the site. The fill layer was underlain mainly by brown fine sand with varying amounts of silt and clay. Groundwater is approximately 10 feet below ground surface. The regional groundwater table is relatively flat with a slight gradient to the west towards the Gowanus Canal. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), lead, mercury, and arsenic in soil and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil vapor extraction system) of the remedy will be operated and maintained under the SMP."
Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Updated By:	WBBENNET
Site Description:	"Location: The 499 President Street site is located in an urban area in Brooklyn, NY. It is located in the southern portion of Block 440, Lot 1. The Gowanus Canal is approximately 350 ft to the west of the site. The site is bounded by a shuffleboard club to the north, a former electronics-waste recycler to the west, President Street to the south, and a former casket company to the east. Site Features: The site was comprised of a 1 story warehouse that was demolished. The site is currently undergoing redevelopment. Current Zoning and Land Use: The was a former bicycle retailer, a furniture maker, and a showroom for a light designer. It is currently zoned M1-2 (commercial and light industrial uses). The development project is a mixed-use residential and commercial building, in accordance with zoning laws

473 PRESIDENT STREET (Continued) **S126218335**

for that area, with ground floor retail and parking. The development coincides with the development activities at the neighboring site, President St. Portfolio, BCP Site No. C224309. The nearest residential area is across President Street, but the proposed redevelopment will be largely residential. Past Use of the Site: The site has an industrial history dating to the 1880s. From 1886 to 1928, the site was a sash and door factory, and later a mill with a machine shop and boilers. In 1938 the Coca-Cola Bottling Co. operated two gasoline underground storage tanks (USTs) as part of their site activities. From 1969 to the 1990s, the site was occupied by Dolin Metal Manufacturing Co. From 1993 to 2007, the building was occupied by manufacturing and storage. There is an open spill from a failed tank test which resulted in petroleum-contaminated soils on-site. The spill number is 9412605. Site Geology and Hydrogeology: The soils of the area consist of urban fill in the upper 10 feet. The fill consists of brown, medium to fine sand with varying amounts of gravel, brick, concrete, asphalt, coal fragments, coal ash, slag, and wood. Hardened coal tar was observed within the fill layer in a boring located in the southeastern portion of the site. The fill layer was underlain mainly by brown fine sand with varying amounts of silt and clay. Groundwater is approximately 10 feet below ground surface. The regional groundwater table is relatively flat with a slight gradient to the west towards the Gowanus Canal. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), lead, mercury, and arsenic in soil and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil vapor extraction system) of the remedy will be operated and maintained under the SMP."

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Updated By:	WBBENNET
Site Description:	"Location: The 0.726-acre site is located in an urban area in the Gowanus neighborhood of Brooklyn and consists of two non-contiguous parcels on Brooklyn Borough Tax Block 440, Lot 1: the E Waste Parcel and the Pontone Parcel. The two parcels are separated by BCP site No. C224220, 473 President Street. The primary addresses associated with the site is 499 President Street. The site is located on the block bounded by Union Street to the north, 3rd Street to the east, President Street to the south, and Nevins Street to the west. The Gowanus Canal, a National Priorities List (NPL) site, is located about 275 feet west of the E Waste Parcel. Site Features: The site is currently under development. Formerly, the E-Waste Parcel contained a one-story brick and concrete building which had been occupied by an electronics recycling facility. The ground floor of the E-Waste Parcel was used as a warehouse and an office, and a partial second floor level was used for office space. The Pontone Parcel consisted of an interconnected one- to three-story brick building which had been occupied by a casket manufacturer and had offices on the second and third floors. Current Zoning and Land Use: According to the New York City (NYC) Planning Commission Zoning Map 16c, the site is located in an M1-2 manufacturing zoning district. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale and storage facilities. Offices, hotels and most retail uses are also permitted in M1 districts. The 30 January 2019 draft Gowanus zoning proposal by the NYC Department of City Planning (DCP), if approved, would rezone the site to a mixed-use district that permits residential uses (M1(3)/R6A and M1(3)/R7A). Surrounding properties include single and multi-story buildings occupied by industrial, commercial and residential tenants. Past and Current Use of the Site: The site has been occupied by commercial and industrial facilities since as early as 1886. The E-Waste Parcel was used as a blacksmithery, rag storage facility, dental manufacturing facility, parking area, warehouse, and electronics recycling facility. The E-Waste Parcel is currently unoccupied. The Pontone Parcel was used as a factory, woodworking and engraving facility, auto repair shop, painting place, and casket manufacturing facility. The Pontone Parcel is currently unoccupied. Proposed development calls for demolition of existing structures and

473 PRESIDENT STREET (Continued) **S126218335**

construction of a mixed-use residential and commercial building with ground floor. Site Geology and Hydrogeology: Soil and bedrock stratigraphy throughout Brooklyn typically consists of a layer of historic fill material that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. Based on a previous study at a neighboring property, bedrock is present at about 200 feet below grade surface (bgs). Site stratigraphy consists of historic fill material underlain by native soil generally characterized as fine- to medium-grained sand with varying amounts of silt, clay, and gravel. Historic fill material, characterized as unconsolidated, fine-grained sand with varying amounts of gravel, brick, coal, concrete, glass, slag, organics, tar-like material, white ashy material, and silt, was encountered beneath the site to depths ranging from about 6 to 14 feet bgs. Groundwater at the site was encountered at elevations ranging from about 9 to 13 feet bgs. The inferred groundwater flow direction is generally to the west-northwest toward the Gowanus Canal and former Mill Pond. Groundwater flow is restricted by predominantly fine-grained deposits (silt) to the west of the Pontone Parcel. These fines create a localized rise in groundwater elevation that drops as grain size coarsens towards the E-Waste Parcel, continuing towards the Gowanus Canal."

Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), lead, mercury, and arsenic in soil and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil vapor extraction system) of the remedy will be operated and maintained under the SMP."
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Control Name: Ground Water Use Restriction
HW Code: C224220
Control Code: 08
Control Type: INST
Dt record added: 06/16/2025
Dt rec updated: 01/06/2026
Updated By: WBBENNET
Site Code: 507634
Site Description: "Location: The 499 President Street site is located in an urban area in Brooklyn, NY. It is located in the southern portion of Block 440, Lot 1. The Gowanus Canal is approximately 350 ft to the west of the site. The site is bounded by a shuffleboard club to the north, a former electronics-waste recycler to the west, President Street to the south, and a former casket company to the east. Site Features: The site was comprised of a 1 story warehouse that was demolished. The site is currently undergoing redevelopment. Current Zoning and Land Use: The was a former bicycle retailer, a furniture maker, and a showroom for a light designer. It is currently zoned M1-2 (commercial and light industrial uses). The development project is a mixed-use residential and commercial building, in accordance with zoning laws for that area, with ground floor retail and parking. The development coincides with the development activities at the neighboring site, President St. Portfolio, BCP Site No. C224309. The nearest residential area is across President Street, but the proposed redevelopment will be largely residential. Past Use of the Site: The site has an industrial history dating to the 1880s. From 1886 to 1928, the site was a sash and door factory, and later a mill with a machine shop and boilers. In 1938 the Coca-Cola Bottling Co. operated two gasoline underground storage tanks (USTs) as part of their site activities. From 1969 to the 1990s, the site was occupied by Dolin

473 PRESIDENT STREET (Continued) **S126218335**

Metal Manufacturing Co. From 1993 to 2007, the building was occupied by manufacturing and storage. There is an open spill from a failed tank test which resulted in petroleum-contaminated soils on-site. The spill number is 9412605. Site Geology and Hydrogeology: The soils of the area consist of urban fill in the upper 10 feet. The fill consists of brown, medium to fine sand with varying amounts of gravel, brick, concrete, asphalt, coal fragments, coal ash, slag, and wood. Hardened coal tar was observed within the fill layer in a boring located in the southeastern portion of the site. The fill layer was underlain mainly by brown fine sand with varying amounts of silt and clay. Groundwater is approximately 10 feet below ground surface. The regional groundwater table is relatively flat with a slight gradient to the west towards the Gowanus Canal. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), lead, mercury, and arsenic in soil and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil vapor extraction system) of the remedy will be operated and maintained under the SMP."

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Site Code: 507634
Site Description: "Location: The 499 President Street site is located in an urban area in Brooklyn, NY. It is located in the southern portion of Block 440, Lot 1. The Gowanus Canal is approximately 350 ft to the west of the site. The site is bounded by a shuffleboard club to the north, a former electronics-waste recycler to the west, President Street to the south, and a former casket company to the east. Site Features: The site was comprised of a 1 story warehouse that was demolished. The site is currently undergoing redevelopment. Current Zoning and Land Use: The was a former bicycle retailer, a furniture maker, and a showroom for a light designer. It is currently zoned M1-2 (commercial and light industrial uses). The development project is a mixed-use residential and commercial building, in accordance with zoning laws for that area, with ground floor retail and parking. The development coincides with the development activities at the neighboring site, President St. Portfolio, BCP Site No. C224309. The nearest residential area is across President Street, but the proposed redevelopment will be largely residential. Past Use of the Site: The site has an industrial history dating to the 1880s. From 1886 to 1928, the site was a sash and door factory, and later a mill with a machine shop and boilers. In 1938 the Coca-Cola Bottling Co. operated two gasoline underground storage tanks (USTs) as part of their site activities. From 1969 to the 1990s, the site was occupied by Dolin Metal Manufacturing Co. From 1993 to 2007, the building was occupied by manufacturing and storage. There is an open spill from a failed tank test which resulted in petroleum-contaminated soils on-site. The spill number is 9412605. Site Geology and Hydrogeology: The soils of the area consist of urban fill in the upper 10 feet. The fill consists of brown, medium to fine sand with varying amounts of gravel, brick, concrete, asphalt, coal fragments, coal ash, slag, and wood. Hardened coal tar was observed within the fill layer in a boring located in the southeastern portion of the site. The fill layer was underlain mainly by brown fine sand with varying amounts of silt and clay. Groundwater is approximately 10 feet below ground surface. The regional groundwater table is relatively flat with a

473 PRESIDENT STREET (Continued) **S126218335**

slight gradient to the west towards the Gowanus Canal. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), lead, mercury, and arsenic in soil and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil vapor extraction system) of the remedy will be operated and maintained under the SMP."
Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

The regional groundwater table is relatively flat with a slight gradient to the west towards the Gowanus Canal. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), lead, mercury, and arsenic in soil and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil vapor extraction system) of the remedy will be operated and maintained under the SMP."

473 PRESIDENT STREET (Continued) **S126218335**

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Site Code: 602138
Site Description: "Location: The 0.726-acre site is located in an urban area in the Gowanus neighborhood of Brooklyn and consists of two non-contiguous parcels on Brooklyn Borough Tax Block 440, Lot 1: the E Waste Parcel and the Pontone Parcel. The two parcels are separated by BCP site No. C224220, 473 President Street. The primary addresses associated with the site is 499 President Street. The site is located on the block bounded by Union Street to the north, 3rd Street to the east, President Street to the south, and Nevins Street to the west. The Gowanus Canal, a National Priorities List (NPL) site, is located about 275 feet west of the E Waste Parcel. Site Features: The site is currently under development. Formerly, the E-Waste Parcel contained a one-story brick and concrete building which had been occupied by an

473 PRESIDENT STREET (Continued) **S126218335**

electronics recycling facility. The ground floor of the E-Waste Parcel was used as a warehouse and an office, and a partial second floor level was used for office space. The Pontone Parcel consisted of an interconnected one- to three-story brick building which had been occupied by a casket manufacturer and had offices on the second and third floors. Current Zoning and Land Use: According to the New York City (NYC) Planning Commission Zoning Map 16c, the site is located in an M1-2 manufacturing zoning district. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale and storage facilities. Offices, hotels and most retail uses are also permitted in M1 districts. The 30 January 2019 draft Gowanus zoning proposal by the NYC Department of City Planning (DCP), if approved, would rezone the site to a mixed-use district that permits residential uses (M1(3)/R6A and M1(3)/R7A). Surrounding properties include single and multi-story buildings occupied by industrial, commercial and residential tenants. Past and Current Use of the Site: The site has been occupied by commercial and industrial facilities since as early as 1886. The E-Waste Parcel was used as a blacksmithery, rag storage facility, dental manufacturing facility, parking area, warehouse, and electronics recycling facility. The E-Waste Parcel is currently unoccupied. The Pontone Parcel was used as a factory, woodworking and engraving facility, auto repair shop, painting place, and casket manufacturing facility. The Pontone Parcel is currently unoccupied. Proposed development calls for demolition of existing structures and construction of a mixed-use residential and commercial building with ground floor. Site Geology and Hydrogeology: Soil and bedrock stratigraphy throughout Brooklyn typically consists of a layer of historic fill material that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. Based on a previous study at a neighboring property, bedrock is present at about 200 feet below grade surface (bgs). Site stratigraphy consists of historic fill material underlain by native soil generally characterized as fine- to medium-grained sand with varying amounts of silt, clay, and gravel. Historic fill material, characterized as unconsolidated, fine-grained sand with varying amounts of gravel, brick, coal, concrete, glass, slag, organics, tar-like material, white ashy material, and silt, was encountered beneath the site to depths ranging from about 6 to 14 feet bgs. Groundwater at the site was encountered at elevations ranging from about 9 to 13 feet bgs. The inferred groundwater flow direction is generally to the west-northwest toward the Gowanus Canal and former Mill Pond. Groundwater flow is restricted by predominantly fine-grained deposits (silt) to the west of the Pontone Parcel. These fines create a localized rise in groundwater elevation that drops as grain size coarsens towards the E-Waste Parcel, continuing towards the Gowanus Canal."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), lead, mercury, and arsenic in soil and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil vapor extraction system) of the remedy will be operated and maintained under the SMP."

Updated By: WBBENNET
Site Code: 602138
Site Description: "Location: The 0.726-acre site is located in an urban area in the Gowanus neighborhood of Brooklyn and consists of two non-contiguous parcels on Brooklyn Borough Tax Block 440, Lot 1: the E Waste Parcel and the Pontone Parcel. The two parcels are separated by BCP site No. C224220, 473 President Street. The primary addresses associated with the site is 499 President Street. The site is located on the block bounded by Union Street to the north, 3rd Street to the east, President Street to the south, and Nevins Street to the west. The Gowanus Canal, a National Priorities List (NPL) site, is located about 275 feet west of the E Waste Parcel. Site Features: The site is currently under development. Formerly, the E-Waste Parcel contained a one-story brick and concrete building which had been occupied by an electronics recycling facility. The ground floor of the E-Waste Parcel was used as a warehouse and an office, and a partial second floor level was used for office space. The Pontone Parcel consisted

473 PRESIDENT STREET (Continued) **S126218335**

of an interconnected one- to three-story brick building which had been occupied by a casket manufacturer and had offices on the second and third floors. Current Zoning and Land Use: According to the New York City (NYC) Planning Commission Zoning Map 16c, the site is located in an M1-2 manufacturing zoning district. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale and storage facilities. Offices, hotels and most retail uses are also permitted in M1 districts. The 30 January 2019 draft Gowanus zoning proposal by the NYC Department of City Planning (DCP), if approved, would rezone the site to a mixed-use district that permits residential uses (M1(3)/R6A and M1(3)/R7A). Surrounding properties include single and multi-story buildings occupied by industrial, commercial and residential tenants. Past and Current Use of the Site: The site has been occupied by commercial and industrial facilities since as early as 1886. The E-Waste Parcel was used as a blacksmithery, rag storage facility, dental manufacturing facility, parking area, warehouse, and electronics recycling facility. The E-Waste Parcel is currently unoccupied. The Pontone Parcel was used as a factory, woodworking and engraving facility, auto repair shop, painting place, and casket manufacturing facility. The Pontone Parcel is currently unoccupied. Proposed development calls for demolition of existing structures and construction of a mixed-use residential and commercial building with ground floor. Site Geology and Hydrogeology: Soil and bedrock stratigraphy throughout Brooklyn typically consists of a layer of historic fill material that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. Based on a previous study at a neighboring property, bedrock is present at about 200 feet below grade surface (bgs). Site stratigraphy consists of historic fill material underlain by native soil generally characterized as fine- to medium-grained sand with varying amounts of silt, clay, and gravel. Historic fill material, characterized as unconsolidated, fine-grained sand with varying amounts of gravel, brick, coal, concrete, glass, slag, organics, tar-like material, white ashy material, and silt, was encountered beneath the site to depths ranging from about 6 to 14 feet bgs. Groundwater at the site was encountered at elevations ranging from about 9 to 13 feet bgs. The inferred groundwater flow direction is generally to the west-northwest toward the Gowanus Canal and former Mill Pond. Groundwater flow is restricted by predominantly fine-grained deposits (silt) to the west of the Pontone Parcel. These fines create a localized rise in groundwater elevation that drops as grain size coarsens towards the E-Waste Parcel, continuing towards the Gowanus Canal."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), lead, mercury, and arsenic in soil and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil vapor extraction system) of the remedy will be operated and maintained under the SMP."

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Site Code: 602138
Site Description: "Location: The 0.726-acre site is located in an urban area in the Gowanus neighborhood of Brooklyn and consists of two non-contiguous parcels on Brooklyn Borough Tax Block 440, Lot 1: the E Waste Parcel and the Pontone Parcel. The two parcels are separated by BCP site No. C224220, 473 President Street. The primary addresses associated with the site is 499 President Street. The site is located on the block bounded by Union Street to the north, 3rd Street to the east, President Street to the south, and Nevins Street to the west. The Gowanus Canal, a National Priorities List (NPL) site, is located about 275 feet west of the E Waste Parcel. Site Features: The site is currently under development. Formerly, the E-Waste Parcel contained a one-story brick and concrete building which had been occupied by an electronics recycling facility. The ground floor of the E-Waste Parcel was used as a warehouse and an office, and a partial second floor level was used for office space. The Pontone Parcel consisted of an interconnected one- to three-story brick building which had been occupied by a casket manufacturer and had offices on the second and third floors. Current Zoning and Land Use: According to the New

473 PRESIDENT STREET (Continued) **S126218335**

York City (NYC) Planning Commission Zoning Map 16c, the site is located in an M1-2 manufacturing zoning district. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale and storage facilities. Offices, hotels and most retail uses are also permitted in M1 districts. The 30 January 2019 draft Gowanus zoning proposal by the NYC Department of City Planning (DCP), if approved, would rezone the site to a mixed-use district that permits residential uses (M1(3)/R6A and M1(3)/R7A). Surrounding properties include single and multi-story buildings occupied by industrial, commercial and residential tenants. Past and Current Use of the Site: The site has been occupied by commercial and industrial facilities since as early as 1886. The E-Waste Parcel was used as a blacksmithery, rag storage facility, dental manufacturing facility, parking area, warehouse, and electronics recycling facility. The E-Waste Parcel is currently unoccupied. The Pontone Parcel was used as a factory, woodworking and engraving facility, auto repair shop, painting place, and casket manufacturing facility. The Pontone Parcel is currently unoccupied. Proposed development calls for demolition of existing structures and construction of a mixed-use residential and commercial building with ground floor. Site Geology and Hydrogeology: Soil and bedrock stratigraphy throughout Brooklyn typically consists of a layer of historic fill material that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. Based on a previous study at a neighboring property, bedrock is present at about 200 feet below grade surface (bgs). Site stratigraphy consists of historic fill material underlain by native soil generally characterized as fine- to medium-grained sand with varying amounts of silt, clay, and gravel. Historic fill material, characterized as unconsolidated, fine-grained sand with varying amounts of gravel, brick, coal, concrete, glass, slag, organics, tar-like material, white ashy material, and silt, was encountered beneath the site to depths ranging from about 6 to 14 feet bgs. Groundwater at the site was encountered at elevations ranging from about 9 to 13 feet bgs. The inferred groundwater flow direction is generally to the west-northwest toward the Gowanus Canal and former Mill Pond. Groundwater flow is restricted by predominantly fine-grained deposits (silt) to the west of the Pontone Parcel. These fines create a localized rise in groundwater elevation that drops as grain size coarsens towards the E-Waste Parcel, continuing towards the Gowanus Canal."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), lead, mercury, and arsenic in soil and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil vapor extraction system) of the remedy will be operated and maintained under the SMP."

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

473 PRESIDENT STREET (Continued) **S126218335**

Site Description:	"Location: The 499 President Street site is located in an urban area in Brooklyn, NY. It is located in the southern portion of Block 440, Lot 1. The Gowanus Canal is approximately 350 ft to the west of the site. The site is bounded by a shuffleboard club to the north, a former electronics-waste recycler to the west, President Street to the south, and a former casket company to the east. Site Features: The site was comprised of a 1 story warehouse that was demolished. The site is currently undergoing redevelopment. Current Zoning and Land Use: The was a former bicycle retailer, a furniture maker, and a showroom for a light designer. It is currently zoned M1-2 (commercial and light industrial uses). The development project is a mixed-use residential and commercial building, in accordance with zoning laws for that area, with ground floor retail and parking. The development coincides with the development activities at the neighboring site, President St. Portfolio, BCP Site No. C224309. The nearest residential area is across President Street, but the proposed redevelopment will be largely residential. Past Use of the Site: The site has an industrial history dating to the 1880s. From 1886 to 1928, the site was a sash and door factory, and later a mill with a machine shop and boilers. In 1938 the Coca-Cola Bottling Co. operated two gasoline underground storage tanks (USTs) as part of their site activities. From 1969 to the 1990s, the site was occupied by Dolin Metal Manufacturing Co. From 1993 to 2007, the building was occupied by manufacturing and storage. There is an open spill from a failed tank test which resulted in petroleum-contaminated soils on-site. The spill number is 9412605. Site Geology and Hydrogeology: The soils of the area consist of urban fill in the upper 10 feet. The fill consists of brown, medium to fine sand with varying amounts of gravel, brick, concrete, asphalt, coal fragments, coal ash, slag, and wood. Hardened coal tar was observed within the fill layer in a boring located in the southeastern portion of the site. The fill layer was underlain mainly by brown fine sand with varying amounts of silt and clay. Groundwater is approximately 10 feet below ground surface. The regional groundwater table is relatively flat with a slight gradient to the west towards the Gowanus Canal. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), lead, mercury, and arsenic in soil and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil vapor extraction system) of the remedy will be operated and maintained under the SMP."
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Record Updated Date:	12/16/2025
Update By:	WBBENNET
Site Description:	"Location: The 0.726-acre site is located in an urban area in the Gowanus neighborhood of Brooklyn and consists of two non-contiguous parcels on Brooklyn Borough Tax Block 440, Lot 1: the E Waste Parcel and the Pontone Parcel. The two parcels are separated by BCP site No. C224220, 473 President Street. The primary addresses associated with the site is 499 President Street. The site is located on the block bounded by Union Street to the north, 3rd Street to the east, President Street to the south, and Nevins Street to the west. The Gowanus Canal, a National Priorities List (NPL) site, is located about 275 feet west of the E Waste Parcel. Site Features: The site is currently under development. Formerly, the E-Waste Parcel contained a one-story brick and concrete building which had been occupied by an electronics recycling facility. The ground floor of the E-Waste Parcel was used as a warehouse and an office, and a partial second floor level was used for office space. The Pontone Parcel consisted of an interconnected one- to three-story brick building which had been occupied by a casket manufacturer and had offices on the second and third floors. Current Zoning and Land Use: According to the New York City (NYC) Planning Commission Zoning Map 16c, the site is located in an M1-2 manufacturing zoning district. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale and storage facilities. Offices, hotels and most retail uses are also permitted in M1 districts. The 30

473 PRESIDENT STREET (Continued) **S126218335**

January 2019 draft Gowanus zoning proposal by the NYC Department of City Planning (DCP), if approved, would rezone the site to a mixed-use district that permits residential uses (M1(3)/R6A and M1(3)/R7A). Surrounding properties include single and multi-story buildings occupied by industrial, commercial and residential tenants. Past and Current Use of the Site: The site has been occupied by commercial and industrial facilities since as early as 1886. The E-Waste Parcel was used as a blacksmithery, rag storage facility, dental manufacturing facility, parking area, warehouse, and electronics recycling facility. The E-Waste Parcel is currently unoccupied. The Pontone Parcel was used as a factory, woodworking and engraving facility, auto repair shop, painting place, and casket manufacturing facility. The Pontone Parcel is currently unoccupied. Proposed development calls for demolition of existing structures and construction of a mixed-use residential and commercial building with ground floor. Site Geology and Hydrogeology: Soil and bedrock stratigraphy throughout Brooklyn typically consists of a layer of historic fill material that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. Based on a previous study at a neighboring property, bedrock is present at about 200 feet below grade surface (bgs). Site stratigraphy consists of historic fill material underlain by native soil generally characterized as fine- to medium-grained sand with varying amounts of silt, clay, and gravel. Historic fill material, characterized as unconsolidated, fine-grained sand with varying amounts of gravel, brick, coal, concrete, glass, slag, organics, tar-like material, white ashy material, and silt, was encountered beneath the site to depths ranging from about 6 to 14 feet bgs. Groundwater at the site was encountered at elevations ranging from about 9 to 13 feet bgs. The inferred groundwater flow direction is generally to the west-northwest toward the Gowanus Canal and former Mill Pond. Groundwater flow is restricted by predominantly fine-grained deposits (silt) to the west of the Pontone Parcel. These fines create a localized rise in groundwater elevation that drops as grain size coarsens towards the E-Waste Parcel, continuing towards the Gowanus Canal."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), lead, mercury, and arsenic in soil and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (e.g., soil vapor extraction system) of the remedy will be operated and maintained under the SMP."

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE 3500 gallon tank unregistered. Property contact is Steve Zakheim at 718-629-3333. Zakheim stated that this area was addressed and will send in documentation. Other tank and subsurface work has been conducted under different #s at this site in past. Check other files to determine if this area has been addressed. 05/22/09-Zhune called Mr. Zakheim. Could not get him. Left message. 04/03/13- Zhune spoke to Stella. She said Mr. Steve Zakhein is going to be absent for long time call Joseph at 718-629-1000 Ext. 383. 10/4/13- Zhune called Joseph. he indicated he is no longer managing the building. Bruce Ribelnon 4 wheeler Drive Huntintong Station NY 11746 631-673-9884 Second address: 514 Union Street 4/30/15-Albert Tashji from Langan Engineerring (212-479-5508) called to say that they are in the process to fill an aplication for BCP at this site. He needs to know is the site has a Consent Order. He also said the site is currently a warehouse and is going to be develop. 8/26/19 - Spill reassigned to Kim as per Obligado. 8/27/19 - Kim - Spill reassigned to Melissa Sweet Project Manager for C224220. 5/12/21 - Melissa - Spill reassigned to Richard Mustico Project Manager for C224220

BROWNFIELDS:

Name:	473 PRESIDENT STREET - OFF-SITE
Address:	473 PRESIDENT STREET
City,State,Zip:	BROOKLYN, NY 11215
Program:	BCP
Site Code:	568180
Acres:	Not reported
HW Code:	C224220A
SWIS:	2401
Town:	New York City
Record Added Date:	03/22/2018
Record Updated Date:	06/14/2024
Update By:	WBBENNET
Site Description:	"This site is identified as the offsite component of the current Brownfield project located at 473 President Street, site #C224220. Location: The on-site 473 President Street site is located in an urban area in Brooklyn, Kings County. It is located in the southern portion of Block 440 Lot 12. The Gowanus Canal is approximately 350 ft to the west of the site. Site is bounded by a shuffleboard club to the north, an e-waste recycler to the west, President Street to the south, and a casket company to the east. Fulton Works MGP site is 1 block to the north. Site Features: The site was comprised of a 1 story warehouse that was recently demolished. The site is currently undergoing redevelopment. Current Zoning and Land Use: The site is an active warehouse for a bicycle company, a furniture maker, and a showroom for a light designer. It is currently zoned for M1-2, commerical to light industrial. The nearest residential area is across President Street. Past Use of the Site: The on-site has an industrial history back to the 1880s. In 1886 to 1928, the site was a sash and door factory and later a trim and planing mill with machine shop and boilers. In 1938 the Coca-Cola Bottling Co was the operator with two gasoline USTs. In 1969 to the 1990s, the site was occupied by Dolin Metal Manufacturing Co. From 1993 to 2007, the building was occupied by manufacturing and storage. Currently the site is occupied by a furniture maker, a lighting designer, and a bicycle retailer. There is an open spill from a failed tank test which may have resulted in BTEX-contaminated soils on-site. The spill number is 9412605. Site Geology and Hydrogeology: The soils of the area consist of urban fill for the top 10 feet. The groundwater is approximately 10 foot below ground surface at the site. Based on the topography of the land, the local groundwater flows in a westerly direction, towards the Gowanus Canal. "
Env Problem:	"The on-site investigation yielded the following results: Soil was analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs)(only during the pre-application investigation), pesticides, and metals. Groundwater was analyzed for VOCs, SVOCs, pesticides, and metals. Based upon investigations conducted to date, the primary contaminants of concern for the site include TCE, BTEX (Benzene, Toluene, Ethylbenzene, Xylene), naphthalene, Polycyclic Aromatic Hydrocarbons (PAHs - a class of SVOCs), Lead, Mercury, and Arsenic. Soil Soil borings were installed and samples collected as part of the remedial investigation. Concentrations exceeding the Commercial SCOs were found for PAHs, arsenic, lead, and mercury. Primarily the top 10 foot of material, known as historic fill, exceeds the SCOs for PAHs, lead, mercury, and arsenic. Spatially, the native materials were most contaminated in the northern corner near a suspected gasoline tank

473 PRESIDENT STREET LLC - BCP SITE #C224220 (Continued) **S101508966**

	with trichloroethene (TCE) and BTEX. Groundwater TCE and its associated degradation products are found in groundwater on the northern half of the site moderately exceeding groundwater standards (5 ug/L) with a maximum concentration of 1300 ug/L. Fuel breakdown products (i.e. BTEX and naphthalene) were found in groundwater on the northern portion of the site at concentrations exceeding the standard near the suspected gasoline tank. Soil Vapor TCE, tetrachloroethene (PCE), and cis-1,2-dichloroethene (DCE), were detected in sub-slab soil vapor at significantly elevated concentrations. "
Health Problem:	"Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion is potential concern for area buildings and investigations are underway."

Environmental Interest/Information System:

ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the

RT 109-S FELIZ S/S 12884 (Continued) **1000693825**

Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:

Name:	DIAGRAVURE FILM MANUFACTURING SITE
Address:	268 BERGEN ST, 287 WYCKOFF ST. & N/A WYCKOFF ST.
City,State,Zip:	BROOKLYN, NY 11217
Program:	BCP
Site Code:	658842
Acres:	1.163
HW Code:	C224403
SWIS:	2401
Town:	New York City
Record Added Date:	11/13/2023
Record Updated Date:	12/18/2023
Update By:	LSZINOMA
Site Description:	"Site Location: The Site is located at the follow addresses: - 268 Bergen Street (f/k/a 264-298 Bergen St)- - Brooklyn-388-19 - 287 Wyckoff Street-Brooklyn-388-42 - N/A Wyckoff Street (f/k/a 273 Wyckoff St)- Brooklyn-388-51 The Site is located in Brooklyn, New York 11217. The surrounding area is occupied by a mix of residential, commercial, and industrial buildings. Site Features: The Site was formerly occupied by a film screen-printing company as recently as March 2023, but is now a vacant Site. The buildings on the Site include an office building located at 287 Wyckoff Street and a factory manufacturing building where the former screen-printing facility building was located at 268 (f/n/a 280) Bergen Street, which can be accessed via the office building and the loading dock area located on Bergen Street. An empty lot is located at N/A (f/n/a 273)

DIAGRAVURE FILM MANUFACTURING SITE (Continued) **S131764063**

Wyckoff Street and is accessed via a gate on Wyckoff Street on the southern part of the site. The parking lot for 268 Bergen Street is also accessed via a gate on Wyckoff Street. The lot at N/A (formerly 273) Wyckoff Street has been vacant since at least 1969. The one-story office building at 287 Wyckoff Street has been vacant since April 2023. The manufacturing building located at 268 (f/n/a 280) Bergen Street has been vacant since April 2023. The closest water body, the Gowanus Canal, is located approximately 1,100 feet from the Site. The Site is not in a flood zone. Current Zoning and Land Use: The Site is currently located in the R7-A District, R7-D District and the C4-2 Overlay District. The Site has been used as a manufacturing facility, office, and parking lot until March 2023, when the former manufacturing facility vacated the Site. The surrounding properties include a gas station to the east, apartment buildings to the south and east, a mixed-use building to the south, a parking lot to the southwest, apartments to the west, and office buildings and a church to the north, as well some apartment buildings. The nearest residential areas are located adjacent to the Site to the north, east, south, and west. The nearest rail line is .3 miles away to northeast of the Site. Past Use of the Site: The Site at different times has been home to a lumberyard, a brewery, a milk company, a sign manufacturer, a film manufacturer, and a screen printer and manufacturer. Site Geology and Hydrogeology: According to the U.S. Geological Services topographic map the Site sits 24 feet above mean sea level. Its on-Site topographic gradient is generally flat, but the regional topography slopes slightly downward to the southeast towards the Gowanus Canal. According to the U.S. Department of Agriculture, Natural Resources Conservation Service, Web Soil Survey for Kings County, the soils on-Site are classified as urban land, till substratum with zero to three slopes with very low available water capacity. The soil observed beneath the foundation slab and paved surfaces on-Site contained fill material, medium-brown sand, silt, coarse gravel, and clay lenses at different locations. From visual observation by the consultants, surface water percolates into the ground through the dry well located in the vacant lot at N/A Wyckoff Site at Lot 388-51, or it enters any of the stormwater basins that surround the Site. Based on the topographic gradient and the relative direction of the Gowanus Canal, groundwater likely flows to the southeast. However, based on a previous report done for an adjacent gas station, groundwater flowed to the north, northwest under a low hydraulic gradient. Based on results from the Limited Phase II ESA, depth to groundwater ranged from 18.1 to 20.4 feet. No wetlands or surface water exist on the Site. The closest water body is the Gowanus Canal, which is located about 1,100 feet to the southeast. "

Env Problem: "Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Latitude: 40.6778444
Longitude: -73.9829531
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 01/23/2004-Sun-File Review by Sun: Site Status Update Report, Aprip 2003 through August 2003, by Geological Services Corp (GSC), dated 10/16/2003: Six (6) monitorin wells were gauged and sampled on July 17, 2003. A soil vaplr extraction well (SVE-1) was installed on July 30, 2003 and pilot test on SVE-1 was conducted on August 8, 2003. No LPH was detected. The groundwater depth ranged from 11.74 feet to 15.68 feet, and groundwater flow was in northwest direction. MW-2 has the maximum BTEX concentration of 11,400 ug/l and maimum MTBE concentration of 1,800 ug/l. Work performed during this period included repair and patch leak from wall in oil closet located in the subway, installation of three additional wells. A remedial action plan will be submitted by GSC based on the results of the pilot test. Per Hess' letter to DEC dated 10/28/2003, Hess is working with the New York City Transit Authority (NYCTA) to address an apparent hydrocarbon sheen in conjunction with groundwater seepage within a subsurface subway station utility closet. (Sun) 01/22/2004- Site visit by Joe Sun and Mark Tibbe on 1/22/2004. Inspection with Mike Matri of Hess and William Schaefer of GSC showed that some slight infiltration of groundwater continues where the urethane grout waterproofing did not adhere to the concrete. GSC has recommended a second waterproofing event utilizing a hydraulic concrete product. The product is now waiting for NYCTA's approval. (Sun) SEE Also Spill Nos. 0104798/0201876. 05/05/04-File Update by Sun: On 05/05/04 Sun sent a letter to Hess requiring complete delineation of soil and groundwater contamination, submittal of an Investigation Summary report followed by a Remedial Action Plan. The Department set a deadline of May 28, 2004 for signing the Stipulation Agreement. (Sun) 06/06/05 File Update by Sun: On 06/06/05, Sun sent a letter to Hess' Project Manager, Mike Matri, informing him that the Department approves Hess proposed plan to take the opportunity of station renovation commencing in June, 2005 to install below ground environmental remediation infrastructure for future remediation of petroleum impacted soil and groundwater. Specifically, the Department approves the following planned installations at the station: 1. Installation of three additional SVE wells (PMW-8 through PMW-10). 2. Modification of existing 2-inch well FW-7 to include a 1-inch injection line which will be piped to the proposed remediation system location, The piping will potentially be used in the future for injection purposes (e.g., Biosolve, chemical oxidation and/or bioremediation). 3. Monitoring

HESS STATION 32530 (Continued) **S104276740**

wells SVE-1, MW-2, and the three
proposed SVE wells (PMW-8 through PMW-10) will have environmental piping installed from the wells
to the proposed system location area. The Department requires a formal Remedial Action Plan (RAP)
in conjunction with the station redevelopment activities be submitted by Hess during the third
quarter of 2005. (Sun) 10/19/2005: Project reassigned from Sun to Andersen 10/19/2005: Reviewed
hydrogeologic groundwater report dated 8/29/2005. Report indicated liquid phase hydrocarbons and
BTEX concentrations of up to 19,520 ppb. Report indicated that informal proposed remedial action
plan discussed in abovementioned 6/6/05 entry is delayed and possibly canceled. The report states
Amerada Hess Corporation will either request an extension to submit the currently proposed Remedial
Action Plan or to submit a revised Remedial Action Plan . The next triannual sampling event is
scheduled for November 2005. Additionally, a Stip was sent out on 5/5/04, which was never signed
due to Hess waiting for a Consent Order. 10/25/05: Mailed a failure to sign Stip letter. Stip
signature due on 11/15/2005. 1/26/06: 1/25/06 meeting between Quantum, NYSDEC, and GSC/Kleinfelder.
The site in under redevelopment. An RAP will be prepared. Delineation will be investigated on the
other side of 4th avenue. 3/1/06: Signed stipulation agreement, effective date 2/23/06.
Investigation plan due 4/24/06. 4/24/06: Reviewed the site status update report/investigation plan
dated 4/21/06. Report indicates that additional delineation on the east side of 4th avenue is not
feasible due to utilites. Max BTEX 28,587 ppb (SVE1) and max MTBE 1,710 ppb (MW2). Depth to water
10-15 ft. RAP due 6/22/06. 5/25/06: Pilot testing on 5/25/06
6/29/2006: Meeting with Hess, NYSDEC,
Quantum, EnviroTrac and GSC on 6/28/2006. RAP in progress. Endpoint sampling will be submitted for
spill bucket replacement excavation. 7/28/06: RAP submission deadline extended to 9/21/06. 8/9/06:
Conference call with Hess, Quantum, and GSC/Kleinfelder. The ROI during SVE pilot testing was only
10 ft. A Hivac pilot test will be performed on 8/10/06 to try to increase the ROI. If it fails an
extension will be required to perform additional testing prior to RAP submittal. 8/11/06: Received
phone call from Gail Helfrick. A HVAC test was performed which did not result in a significant
increase in the RIO. An RAP will be submitted on 9/21/06 as planned, but will require additional
sampling to improve the ROI. 8/15/06: See spill 06-02980. The RAP should include remediation for
the soil contamination from spill 06-02980. 9/12/06: Received RAP. SVE proposed. Pilot testing was
conducted on May 25, 2006 and August 10, 2006. Two existing wells (MW-3 and SVE-1), and six

HESS STATION 32530 (Continued) **S104276740**

proposed wells (SVE-2 - SVE-7) wil be used as extraction points to be connected to a SVE
remediation system. The ROI varies from 10 to 50 feet throughout the site. Soil samples will be
collected during installation of the new SVE wells, as well as from a soil boring proposed adjacent
to MW-6. During system startup operation and maintenance visits will be conducted daily for three
days, followed by weekly for the first monthy, followed by monthly. Based on start-up testing, a
determination will be made as to whether emission treatment is necessary. Contamination from spill
06-02980 addressed, spill 06-02980 closed and consolidated with 9605719. Numerous sensitive
receptors: subway, utilities, basements, schools, Gowanus Canal. AS not proposed due to the
proximity of the subway, which runs parrallel and adjacent to the site. RAP conditionally approved,
with additional groundwater treatment required. 9/21/06: Received phone call from Gail Helfrick
(Quantum) and Al Tonn (GSC-K) requesting that the RAP be approved without additional gw treatment.
Confirmed that additional gw treatment is required for MW-2, SVE-1, and FW-8. 10/3/06: Received
email from gail helfrick: This email is to confirm our conversation on Tuesday, September 26, 2006
regarding the Remedial Action Plan (RAP) for Hess Station # 32530 in Brooklyn, New York. In the
RAP, Hess proposed the installation and operation of a Soil Vapor Extraction system at the site.
The NYSDEC approved the proposal for SVE, and also requested groundwater remediation. Based on our
conversations, it was agreed that Hess would install underground piping for groundwater treatment
during the installation of the SVE system. It was further agreed that Hess would operate the SVE
system for 1 full year, and during that year, Hess would 1) evaluate the performance of the SVE
system on a monthly basis, 2) continue to monitor roundwater quality (March, July and November),
and 3) submit progress reports to the NYSDEC (May, September and January). If after that 1 year
period, the data demonstrates that groundwater remediation is necessary, alternative remedial
technologies will evaluated and discussed with the NYSDEC. 10/4/06: Received update report dated
9/27/06. Groundwater samples collected on 7/27/06. BTEX 38,200 ppb (SVE1), mtbe 208 ppb (SVE1). SVE
implementation required. 12/11/06: Sent email to Hess to followup on implementation schedule.
12/18/06: Received email from Hess: We still hope to be able to obtain the MTA permits needed to
complete the subsurface intrusive work by January 10, 2007. Once these permits are obtained, we
will provide the NYSDEC a schedule for system installation. 1/17/07: Meeting on 1/16/07 with Hess,
Delta, NYSDEC. SVE implementation in progress. 3/26/07: Reviewed

HESS STATION 32530 (Continued) **S104276740**

update report. Wells sampled on
12/26/06. Max BTEX 30,720 ppb (SVE1). Max MTBE 1,000 ppb (MW2). SVE implementation in progress.
5/31/07: Reviewed site status report. Wells sampled on 3/16/07. Max BTEX 25,280 ppb (SVE1). Max
MTBE 410 ppb (MW2). SVE installation in progress. 9/20/07: Reviewed site status report. Wells
sampled in July 2007. LNAPL in MW 2 (0.03 ft).Max BTEX 30,370 ppb (SVE1). SVE startup planned for
November 2007. Sent letter requiring RAP addendum for groundwater treatment (pipes for water
removal are planned on being installed as a back-up plan). And increased sampling frequency to
quarterly sampling. 5/14/08 - Carlson: Meeting on May 7th 2008 - Hess/Envirotrac will submit a RAP
addendum. Reviewed First Quarterly 2008 Update Report. Wells sampled on 2/5/08. Max BTEX
concentration 24,220 ppb (SVE1), max MTBE concentration 71 ppb (SVE1). MW-2 was dry. 8/7/08 -
Carlson: Reviewed July 2008 Update Report. Wells sampled on 5/22/08. Maximum BTEX concentration
43,693 ppb (SVE1). Maximum MTBE concentration 554 ppb (MW2). RAP Addendum will be submitted under a
separate cover. Emailed Hess/Envirotrac requiring submission of RAP Addendum by 9/8/08. Received
email from Ed Russo stating that 9/8/08 deadline can probably be met. 9/8/08 - Carlson: The
Department approved an extension until 10/1/08 to submit an RAP Addendum. 10/22/08 - Carlson:
Meeting with Hess/Envirotrac. RAP Addendum will be submitted by 12/15/08. 11/20/08 - Carlson:
Reviewed October 2008 Update Report. Wells sampled on 8/14/08. Maximum BTEX concentration 41,837
ppb (SVE1). RAP Addendum not received. Sent failure to comply letter. Start legal proceedings if
RAP Addendum not submitted by 12/5/08. 12/23/08 - Carlson: Received Remedial Action Plan Addendum.
Two SVE system, two wells strippers, and monthly dual phase extraction events proposed. Revised RAP
Addendum required with following modifications: 1) removal of two wells from SVE system, 2)
relocation of two of the proposed monitoring wells, 3) startup report must be submitted, 4)
inclusion of more detailed information about the well strippers. 2/19/09 - Carlson: Received email
from Ed Russo in response to 12/23/08 letter. Monthly O&M visits requiring monthly WS water
effluent testing, monthly SVE air discharge testing by PID, and quarterly SVE air discharge testing
by laboratory. Revised letter addendum required. 3/11/09 - Carlson: Reviewed update report dated
January 2009. Wells gauged and sampled on 11/5/08. LNAPL at depth of 0.02 ft in MW2. Maximum BTEX
concentration 12,672 ppb (SVE1). 3/18/09 - Carlson: Meeting with Hess/Envirotrac. Revised addendum
due in April 2009. 5/7/09 - Carlson: Reviewed April 2009 Update Report. Revised addendum letter

HESS STATION 32530 (Continued) **S104276740**

overdue. Emailed John Schenkewitz about overdue letter/report. 5/11/09 - Carlson: Received revised
RAP Addendum letter. Issued approval letter. 5/28/09 - Carlson: Well installation scheduled for
6/22/09. 8/7/09 - Carlson: Reviewed update report. Monthly EFR IRM ongoing. What is status of RAP
implementation? 8/19/09 - Carlson: Meeting with Hess. RAP addendum will be submitted to include air
sparge on the eastern portion on the site. 10/21/09 - Carlson: Reviewed RAP addendum. Issued
approval letter. SVE/AS will be installed, except in sidewalk (because of subway). SVE in sidewalk
with HVAC events to treat impacted groundwater. 11/17/09 - Carlson: Reviewed update report. Monthly
HVAC events from sidewalk wells ongoing. SVE/AS system installation in progress. 1/27/2010 -
Carlson: Meeting with Hess. 2/5/2010 - Carlson: Reviewed update report. EFR conducted in September
and October. SVE/AS installation not begun yet. 5/20/2010 - Carlson: Meeting with Hess. They are
working with MTA because the property is adjacent to the subway. 5/27/2010 - Carlson: Reviewed
April 2010 Update Report. Six AS wells and one MW installed. HVAC was not conducted this quarter.
7/22/2010 - Carlson: Reviewed wastewater UST closure report. Tank abandoned in place with concrete
slurry. Endpoint samples collected from the east wall (clean) and north wall (trace VOCs/sVOCs
detected). West wall/south wall were not accessible for sample collection. 8/13/2010 - Carlson:
Reviewed July 2010 Update Report. EFR events ongoing. System construction pending NYCTA permits.
5/9/11 - Obligado - This spill transferred to Obligado as per Brevdo. I reviewed the 4Q10 update
report. Free product (0.03 ft) was found in MW2. MAx BTEX 17674 ug/L in SVE1. They are still
waiting for MTA permits. 8/30/11 - Obligado - I reviewed the 2Q11 update report. They are still
waiting on NYCTA permits. Max BTEX is 9800 ug/L. No product detected this quarter. 11/14/11 -
Carlson: Reviewed October 2011 update report. System construction pending NYCTA permits. Monthly
EFR ongoing. 3/13/2012 - The site has SVE/AS system operation pending on the NYCTA’s permission.
Spoke to the consultant who works for the property owner next door in the Union Street. Groundwater
contamination was identified during their Phase 2 investigation. Advised to call in for a spill
number and prove to DEC it is from Hess site as they believe. 8/23/2012 - 1Q2012, 4/30/2012, by
EnviroTrac. The groundwater was sampled on 2/13/2012. DTW 9.98 to 15.70 feet. Flows to north. No
LNAPL. The remediation system construction is pending permit approval by NYCTA. CW-9, 560.1 BTEX,

Flows to north. CW-9, 53.9 BTEX, 55.7 MTBE. MW-2, 2,189.5 BTEX, 34.6 MTBE. FW-9, 426.1 BTEX. SVE-1, 1,161.4 BTEX. 3/30/2016 Feng This spill is transferred from J. Feng to V. Brevdo as per J. Vought. 3/30/16 - Raphael Ketani. This spill case has been assigned to me effective today. According to ACRIS, the block and lot are 434 and 35. The latest deed is dated 4/24/14. The property owner is HESS Retail Stores, LLC, 1 HESS Plaza, Woodbridge, NJ, 07095. The PBS record is #2-297666. The owner is Speedway #7835. Seven USTs were closed and removed from 6/1/92 to 8/1/96. Thirty seven USTs (mostly gasoline 550 gallon tanks) were closed in place on 12/1/79. There are 5 active 4000 gallon USTs - 4 gasoline and 1 diesel. These tanks were installed on 8/1/96. The contacts are as follows: Speedway/Hess contact: Matthew Butler, (732) 738-2924, MButler1@Speedway.com Consultants: Edward Russo (EnviroTrac), (631) 924-3001, EDR@EnviroTrac.com Joseph Rennie (EnviroTrac), (631) 924-3001, JoeR@EnviroTrac.com 4/26/16 - Raphael Ketani. Today I received the EnviroTrac 4/25/16 Quarterly Update Report. On 12/9/15, 1/28/16 and on 2/1/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 2/11/16 MW-2 to 6, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were gauged. MW-2 to 6, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were sampled on 2/11/16. Product was not measured in any of the wells. Groundwater was measured at 6.79’ and 15.66’ below grade and was determined to be flowing northerly. Total BTEX was 2968.1 ppb (856 ppb) at MW-2, non-detect at MW-3 to MW-6 and MW-8 and FW-7, 138.7 ppb (15 ppb benzene) at FW-8, 201.7 ppb (8 ppb benzene) at FW-9, 3.6 ppb at CW-8, 22.1 ppb (13.2 ppb benzene) at CW-9 and 450.3 ppb (12 ppb benzene) at SVE-1. 7/26/16 - Raphael Ketani. Today I received the EnviroTrac July 2016 Quarterly Update Report dated 7/26/16 for the period March to May 2016. On 3/1/16, 4/20/16 and on 5/6/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 5/13/16 MW-1

HESS STATION 32530 (Continued) **S104276740**

to 8, FW-7, CW-8, CW-9, SVE-1
and SVE-7 were gauged. MW-1 to 8, FW-7, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 5/13/16.
Product was not measured in any of the wells. Groundwater was measured at 8.76' and 16.03' below
grade and was determined to be flowing northerly. Total BTEX was non-detect at MW-1, 929.9 ppb (254
ppb) at MW-2, non-detect at MW-3 to MW-8, 143.8 ppb (non-detect benzene) at FW-7, non-detect at
CW-8 and at CW-9, 427 ppb (62.9 ppb benzene) at SVE-1 and non-detect at SVE-7. 10/24/16 - Raphael
Ketani. I reviewed the EnviroTrac August 2016 Quarterly Update Report dated 10/24/16 for the period
June to August 2016. On 6/8/16, 7/13/16 and on 8/9/16 VEFRing was conducted at SVE-1 and short term
remediation events were conducted at SVE-6/AS-1. On 8/10/16 MW-1 to 8, FW-7 to 9, CW-8, CW-9, SVE-1
and SVE-7 were gauged. MW-1 to 8, FW-7 to FW-9, CW-8, CW-9, SVE-1 and SVE-7 were sampled on
8/10/16. Product was not measured in any of the wells. Groundwater was measured at 9.09' and 15.67'
below grade and was determined to be flowing northerly. Total BTEX was non-detect at MW-1 and MW-4
to MW-8. MW-2 was 568.5 ppb (247 ppb benzene). FW-7 had 469.5 ppb (20.2 ppb benzene). FW-8 had
180.8 ppb (19.9 ppb benzene). FW-9 had 231.2 ppb (23 ppb benzene). CW-8 had 4.4 ppb. CW-9 had 2.3
ppb. SVE-1 had 373.8 ppb (15.9 ppb benzene). SVE-7 had 4.2 ppb BTEX. 12/19/16 - Raphael Ketani.
Today I received an email as a c-c from Ryan Piper, Engineering Geologist I at DEC Region 2,
concerning a new spill (#1608842)at the site. The spill concerned oil contaminated surface water
flowing off of the site and onto the street in front due to a clogged drain at the northern end of
the property. There was an odor complaint as a result. I sent an email to Mr. Fleming, the
representative of Speedway, stating that they faced possible fines and legal action for violating
the SPDES regulation, 6 NYCRR Part 750.1.3. I also stated that the subject northern drain must be
cleaned out immediately and that Speedway must check the drains at its other stations and make sure
they can receive precipitation. Mr. Ryan's original email to Mr. Fleming is as below: A neighbor
complained about a diesel spill/ condition at the station that is affecting the surrounding
neighborhood. I performed a site visit on Sunday Dec 18th in which I observed the condition.
Apparently, there are a number of storm drains on the premises, particularly the drain on the north
side of the property, that are clogged with sediment causing large puddles to run off into and down
the street to a NYCDEP storm drain. Combined with poor housekeeping and minor spilling at the
Diesel pump island on the North side of the property, this is causing a nuisance odor and adverse

HESS STATION 32530 (Continued) **S104276740**

condition down the road. Therefore I am directing you to take the appropriate action to address
this issue as follows. Control of Storm Water Emanating from 204-222 4th Ave, Brooklyn, NY: As per
6 NYCRR Part 750.1.3, The following discharges into the waters of the State are hereby prohibited,
and no SPDES or other permit shall be issued authorizing any such discharge: (d) any discharge from
a point source, which is in conflict with a plan or amendment thereto approved pursuant to section
208(b) of the Act and 40 CFR part 35 (see section 750-1.24 of this Part), or any other discharge
not permitted by this Part, ECL Article 17, other rules and regulations adopted or applicable
pursuant thereto or to the Act, or the provisions of an SPDES permit. During the site visit
referenced above, evidence was observed of storm water flowing from 204-222 4th Ave, Brooklyn, NY
to the street. As such the Department requires that the storm water from 204-222 4th Ave be
directed to onsite drainage systems. Documentation of catch basin cleaning must be submitted to the
Department no more than 1 month from the date of this email. Mr. Fleming responded back quickly by
email stating that the problem will be immediately corrected. 1/19/17 - Raphael Ketani. Today I
received an email from Mr. Russo [(631) 924-3001, EDR@EnviroTrac.com] regarding the plugged drains
at the site (spill #1608842). The email had attachments consisting of a site plan showing the 6
catch basin locations, photos of the basins taken on 12/20/16 and photos of the basins taken on
1/17/17. Mr. Russo explained in his email that 3 of the catch basins were noted as not draining
during EnviroTrac's 12/20/16 inspection. All of the catch basins were cleaned of debris and jetted
for 70 feet by a Speedway contractor on 12/31/16. On 1/17/17, the site was inspected again. This
time only CB-3 was not draining properly. Mr. Russo stated that this drain will be addressed again
by Speedway's contractor. He stated that he will send the DEC an update regarding the
re-establishment of drainage at CB-3. 2/2/17 - Raphael Ketani. I reviewed the EnviroTrac January
2017 Quarterly Update Report dated 1/31/17 for the period September to November 2016. On 9/2/16,
10/17/16 and on 11/8/16 VEFRing was conducted at SVE-1 and short term remediation events were
conducted at SVE-6/AS-1. On 11/23/16 MW-1 to 6, MW-8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were
gauged. MW-1 to 6, MW-8, FW-7, FW-9, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 11/23/16. Product
was not measured in any of the wells. Groundwater was measured at 7.55' and 15.55' below grade and
was determined to be flowing northerly. Total BTEX was non-detect at MW-1, 3 to 6, 8 and SVE-7. The
samples for FW-9, CW-8, CW-9 and SVE-1 had 1 to 3 low hits. MW-2 was

HESS STATION 32530 (Continued) **S104276740**

1091.1 ppb (487 ppb benzene).
FW-7 had 899.6 ppb (45.6 ppb benzene). 4/28/17 - Raphael Ketani. Today I received an email from Mr.
Butler that he is leaving Speedway. He stated that John Engdahl [jjengdahl@speedway.com (732)
738-2923] will take over his duties. 5/2/17 - Raphael Ketani. I reviewed the EnviroTrac April 2017
Quarterly Update Report dated 4/28/17 for the period December to February 2017. On 12/7/16, 1/11/17
and on 2/2/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were
conducted at SVE-6/AS-1. On 2/7/17, MW-1 to 6, MW-8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were
gauged and sampled. Product was not measured in any of the wells. Groundwater was measured at 7.57'
and 15.48' below grade and was determined to be flowing northerly. BTEX was non-detect at MW-3 to
6, 8 and CW-9. The samples for MW-1, FW-7 to FW-9, CW-8 and SVE-7 had 1 to 4 low hits. MW-2 was
3876.1 ppb (991 ppb benzene). SVE-1 was 1329.4 ppb (38.3 ppb benzene). The PID effluent
concentration a SVE-6/AS-1 was 665.3 ppm, 405.6 ppm and 290.8 ppm on 12/7/16, 1/11/17 and 2/2/17,
respectively. I approved the report with a comment to Mr. Rennie asking him to explain the
extremely high benzene concentration in the groundwater at MW-2. 8/1/17 - Raphael Ketani. I
reviewed the EnviroTrac July 2017 Quarterly Update Report dated 7/28/17 for the period March to May
2017. On 3/7/17, 4/7/17 and on 5/3/17 VEFRing was conducted at SVE-1 and short term remediation
events (STREs) were conducted at SVE-6/AS-1. On 5/30/17, MW-1 to 8, FW-7 to 9, CW-8, CW-9, SVE-1
and SVE-7 were gauged and sampled. Product was not detected in any of the wells. Groundwater was
measured at 8.00' to 18.42' below grade and was determined to be flowing northerly. BTEX was
non-detect or low at MW-1, 3 to 6, 8, FW-8, CW-8, CW-9 and SVE-7. MW-2 was 2699.1 ppb (563 ppb
benzene). MW-7 was 110.6 ppb (90 ppb benzene). FW-7 was 252.5 ppb (non-detect for benzene). FW-9
was 81.1 ppb (30.8 ppb benzene). SVE-1 was 5475.7 ppb (48.7 ppb benzene). The PID effluent
concentration at SVE-6/AS-1 was 324.1 ppm and 175.5 ppm on 3/7/17 and 4/7/17, respectively.
10/31/17 - Raphael Ketani. I reviewed the EnviroTrac October 2017 Quarterly Update Report dated
10/30/17 for the period June to August 2017. On 6/14/17, 7/12/17 and on 8/15/17 VEFRing was
conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On
8/23/17, MW-1 to 3, 5 to 8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged and sampled. Product
was not detected in any of the wells. Groundwater was measured at 8.44' to 15.08' below grade and
was determined to be flowing northerly. BTEX was non-detect or low at MW-1, 3 to 6, 8, FW-8, CW-8,

HESS STATION 32530 (Continued) **S104276740**

CW-9 and SVE-7. MW-2 was 2269.9 ppb (481 ppb benzene). MW-7 was 129.5 ppb (115 ppb benzene). FW-7 was 122 ppb (non-detect for benzene). FW-9 was 126.3 ppb (48 ppb benzene). SVE-1 was 1558.1 ppb (83.1 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 95.3 ppm, 165.4 ppm and 131.2 ppm on 6/14/17, 7/12/17 and 8/15/17, respectively. EnviroTrac requested permission to abandon upgradient and side-gradient wells MW-1, 4, 5, 6, and SVE-7 based upon historical and current analytical data results. I reviewed the data for these wells and determined that their abandonment would not impact the monitoring of the site. 1/31/18 - Raphael Ketani. I reviewed the EnviroTrac January 2018 Quarterly Update Report dated 1/31/18 for the period September to November 2017. On 9/14/17, 10/30/17 and on 11/6/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 11/21/17, MW-2, 3, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were gauged and sampled. Product was not detected in any of the wells. Groundwater was measured at 8.25' to 15.64' below grade and was determined to be flowing northerly. Wells MW-1, 4 to 6 and SVE-7 were abandoned on 11/6/17. BTEX was non-detect or low at MW-3, 8, FW-7 to 9, CW-8 and CW-9. MW-2 was 3550.6 ppb (791 ppb benzene). MW-7 was not sampled. SVE-1 was 1126.5 ppb (69.5 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 408.1 ppm, 77.7 ppm and 360.9 ppm on 9/14/17, 10/30/17 and 11/6/17, respectively. 05/01/2018: This spill case was transferred to A. Doronova - AD. AD Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com DL the report to DDocs. Will review. AD 05/29/2018: Reviewed the report. It states that the spill case was reported when petroleum-impacted soil were encountered during underground storage tank (UST) upgrade activities in August 1996. This report covers monitoring period from December 2017 to February 2018. On December 11, 2017, January 16, and February 1, 2018 - EnviroTrac conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. On February 6, 2018 - the consultant gauged ten (10) and sampled eight (8) monitoring wells. On April 12, 2018 EnviroTrac sampled three (3) monitoring wells. Wells Gauged: MW-2, 3, 7, 8; FW-7, 8, 9; CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.68 feet- 18.58 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 355

HESS STATION 32530 (Continued) **S104276740**

micrograms per liter (ug/L)
(MW-2) Maximum MTBE Concentration: 30.6 ug/L (MW-2) BTEX: highest concentrations are in well MW-2
(900ppb) EnviroTrac will continue quarterly groundwater sampling, with the next sampling event
scheduled for May 2018. An Update Report summarizing these activities will be submitted to NYSDEC
in July 2018. Monthly EFR and STRE events to continue. AD 07/18/2018: Received the following e-mail
from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the
above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old
Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will
review. AD 07/26/2018: Reviewed the report. This report covers monitoring period from March 2018
May 2018. On March 5, April 11, and May 3, 2018 - the consultant conducted enhanced fluid recovery
(EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. -
April 12, 2018 four (4) wells were gauged and three (3) monitoring wells were sampled. - May 8,
2018 nine (9) wells were gauged and eight (8) monitoring wells were sampled. Wells Gauged: MW-2, 3,
8; FW-7, 8, 9; CW-8, 9, and SVE-1. Wells Containing LPH (feet): None Groundwater Depth: 8.32 feet -
15.32 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 8; FW-7, 9; CW-8, 9, and SVE-1
Maximum Benzene Concentration: 620 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration:
56.7 ug/L (MW-2) BTEX concentrations ranged in the site wells from ND in MW-3, MW-8, CW-9 to
2,600ppb in the most contaminated site well MW-2. Current Plans/Proposals: Continue quarterly
groundwater sampling, with the next sampling event scheduled for August 2018. An Update Report
summarizing these activities will be submitted to NYSDEC in October 2018. Continue monthly EFR and
STRE events. AD 10/29/2018: Received the following e-mail from Mr. Rennie: Dear Ms. Doronova,
Please find attached the most recent Update Report for the above referenced location. Sincerely,
Joe Rennie Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980
631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 11/23/2018:
Reviewed the report for the monitoring period: June 2018 August 2018. Work Performed: - June 13,
July 24, & August 7, 2018 - Conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1
and short term remediation events (STREs) on SVE-6/AS-1. - August 30, 2018 Gauged and sampled ten
(10) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9,
and SVE-1. Wells Containing LPH (feet): None. Groundwater Depth: 8.19 feet - 15.02 feet.

HESS STATION 32530 (Continued) **S104276740**

Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1. Maximum Benzene Concentration: 802 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 44.1 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 4,440.2 ug/L Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for November 2018. An Update Report summarizing these activities will be submitted to NYSDEC in January 2019. Continue monthly EFR and STRE events. AD 01/29/2019: Received the following e-mail from Ed Russo: Ainura attached is the most recent update report for your review/files. Let us know if you have any questions or comments. Thanks. Edward Russo - Senior Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - 516.523.6714 (Cell) - edr@envirotrac.com Will review. AD 02/15/2019: Reviewed the report. It states that for the monitoring period: September 2018 November 2018, the following work was performed at the site: - September 4 & November 6, 2018 - Conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. - October 11, 2018 Conducted EFR on monitoring well SVE-1. - November 12, 2018 Gauged and sampled ten (10) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.11 feet - 15.23 feet. Groundwater Flow: Northerly. Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1. Maximum Benzene Concentration: 640 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 33.8 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 2,656.8 ug/L Recommendations: the consultant will continue quarterly groundwater sampling, with the next sampling event scheduled for February 2019. An Update Report summarizing these activities will be submitted to NYSDEC in April 2019. EnviroTrac will continue monthly EFR and STRE events. AD 04/18/2019: Received the following e-mail from Mr. Rennie: Please find attached the most recent Update Report for the above referenced location. Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 05/01/2019: Reviewed the report. It states that for the monitoring period: December 2018 February 2019 the following work was performed at the site: - December 4, 2018 and January 16 & February 7, 2019 - Conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short-term remediation events (STREs) on SVE-6/AS-1. - February 26, 2019 Gauged and sampled ten (10) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8,

9, and SVE-1. Wells
Containing LPH (feet): None Groundwater Depth: 6.71 feet 15.62 feet.
Groundwater Flow: Northerly
Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum
Benzene Concentration: 694
micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 37.6
ug/L (MW-2) Total VOCs Range:
Non-detect (ND) 4,116.0 ug/L Recommendations: Continue quarterly
groundwater sampling, with the
next sampling event scheduled for May 2019. An Update Report
summarizing these activities will be
submitted to NYSDEC in July 2019. Continue monthly EFR and STRE
events. AD 05/07/2019: I had an
internal meeting with DEC BCP regarding this site, and was informed
that they received an
application for this spill case to enter into BCP. If their
application will be approved, this
spill case will be transferred to BCP section. AD 07/31/2019: Received
the following e-mail from
Mr. Rennie: Ainura - Please find attached the most recent Update
Report for the above referenced
location. Joseph Rennie Project Manager phone: 631.924.3001 - email:
joer@envirotrac.com EnviroTrac
Ltd., 5 Old Dock Road Yaphank, NY 11980 Will review, AD 08/02/2019:
Reviewed the report. It states
that for the monitoring period: March May 2019, the following work was
performed: at the site: -
March 29, April 5, & May 2, 2019 - Conducted EFR events on monitoring
well SVE-1 and STREs on
SVE-6/AS-1. - May 15, 2019 Gauged and sampled ten (10) monitoring
wells. GW monitoring: Wells
Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1 Wells Containing
LPH (feet): None Groundwater
Depth: 7.67 feet 15.24 feet Groundwater Flow: Northerly Wells Sampled:
MW-2, 3, 7, 8; FW-7, 9;
CW-8, 9, and SVE-1 Maximum Benzene Concentration: 719 micrograms per
liter (ug/L) (MW-2) Maximum
MTBE Concentration: 37.4 ug/L (MW-2) Total VOCs Range: Non-detect (ND)
3,439.5 ug/L
Recommendations: This site will potentially be approved into the New
York State Brownfields
Program. Until the site is approved into this program, Speedway will
continue quarterly groundwater
sampling, with the next sampling event scheduled for August 2019. An
Update Report summarizing
these activities will be submitted to NYSDEC in October 2019. Continue
monthly EFR and STRE events.
AD 08/23/2019: Received the following e-mail from Mr. Rennie: Ainura -
Please find attached the
most recent Update Report for the above referenced location. Joseph
Rennie Project Manager
EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old
Dock Road Yaphank, NY 11980
- https://envirotrac.com Will review. AD 09/19/2019: Reviewed the
report. It states that the site
is now active gas station. The spill was reported when
petroleum-impacted soils were encountered

HESS STATION 32530 (Continued) **S104276740**

during UST upgrade activities in August 1996. Site Remediation Activities: - June and September 2004 BioSolve injection events were completed in select on-site wells. - October 2008 Monthly Enhanced Fluid Recovery (EFR) events commenced on select wells. - December 2014 Monthly Soil Vapor Extraction (SVE)/Air Sparge (AS) Short-Term Remediation Events (STREs) events commenced on select wells. For the reported monitoring Ppriod: June - August 2019, the following work was performed at the site: - June 6, July 10, & August 1, 2019 - Conducted EFR events on monitoring well SVE-1 and STREs on SVE-6/AS-1. - August 12, 2019 Gauged ten (10) and sampled nine (9) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.48 feet 15.33 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 489 ug/L (MW-2) Maximum MTBE Concentration: 28.8 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 3,901.3 ug/L (MW-2) GW data: Well 08/2018 08/2019 (TVOCs in ppb) MW-2 4440 3900 MW-3 26 ND MW-7 37 19 MW-8 ND ND FW-7 468 52 FW-8 75 NS FW-9 139 1020 CW-8 69 148 CW-9 116 ND SVE-1 4035 863 Recommendations: This site will potentially be approved into the New York State Brownfields Program for a redevelopment project. Speedway is scheduled to complete divestment/UST system removal activities in September 2019. UST system closure reporting and future monitoring/reporting related to this site, if needed, will be conducted by the new property owner (assuming the site is approved into the Brownfields Program). AD 04/21/2020: Received the following email from Mr. Morley of PWG: ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails. Ainura, Please find attached the 1st Quarter 2020 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan -- Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 05/12/2020: Reviewed the report. It states that The property ownership changed in November 2019 and PWGC was retained to continue groundwater monitoring at the site. A Supplemental Remedial Investigation (SRI) was performed as part of the sites enrolment into the New York State Department of Environmental Conservation s (NYSDEC s) Brownfield Cleanup Program (BCP) which included groundwater sampling. The groundwater sampling performed during the SRI substituted for the fourth quarter 2019 monitoring event. The subject property is a former retail gasoline fueling station, fueling

HESS STATION 32530 (Continued) **S104276740**

operations ceased in October 2019.
The lot measures approximately 19,000 square-feet and is bounded by Sackett Street to the north,
commercial properties to the west, 4th avenue to the east, and Union Street to the south. The
property is improved with a 360-square foot at-grade storage building, and a cashier s kiosk. In
October 2019, four (4) 4,000-gallon gasoline USTs, one (1)
4,000-gallon diesel UST, and one (1)
550-gallon wastewater UST were closed and removed from the property. An abandoned 2,000-gallon fuel
oil UST near the storage building at the northwest corner of the Site was partially exposed,
however the UST was not removed due to nearby utilities and potential for undermining the sidewalk
and onsite storage building. Upon completing UST removal, associated product and vent lines were
exposed and removed. During the October 2019 UST removal activities, monitoring well MW-3, which
was located near the storage building, was destroyed. During the November 2019 SRI, GW018 was
installed on the northwest corner of the site. Based on information documented in previous
monitoring events, regional groundwater flow is towards the north. GW sampling: PWGC mobilized to
the site on Monday, March 9, 2020 to perform quarterly groundwater monitoring activities.
Groundwater analytical results were compared to the NYSDEC Ambient Groundwater Quality Standards
(AWQS). Samples were collected from 7 wells: CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9.
Monitoring wells FW-8 and FW-9 were dry and were not sampled. Analytical results for samples
collected at CW-8, MW-8, GW018, FW-7, MW-2, MW-7 and CW-9 were compared to AWQS. MBTE was detected
in MW-2, GW018, FW-7, MW-7, and CW-9 and BTEX was detected in MW-2, CW-8, FW-7, and MW-7. The
highest concentration of MBTE was detected in CW-9 (11.0 ug/L). The lowest detectable concentration
of MBTE was in GW018 (1.9 ug/L). The highest concentration of BTEX was detected in MW-2 (117.47
ug/L). The lowest detectable concentration of BTEX was in MW-7 (0.16 ug/L). Additionally, the
highest concentrations of isopropylbenzene were detected at MW-2, FW-7, and CW-8. Based on these
results, the highest degree of impact appears to be located adjacent to the former UST locations
located in the central and western portions of the property. Generally, these concentrations were
similar to previous sampling events. GW data: Well 08/2018 08/2019 03/2020 (TVOCs in ppb) MW-2 4440
3900 248 MW-3 26 ND destr MW-7 37 19 ND MW-8 ND ND ND FW-7 468 52 49.5 FW-8 75 NS NS dry FW-9 139
1020 NS dry CW-8 69 148 67 CW-9 116 ND 11 SVE-1 4035 863 NS GW018 ND Removal of the sourse of
contamination significantly decreased TVOCs in the most contaminated site well MW-2 from 3900 ppb

HESS STATION 32530 (Continued) **S104276740**

in August 2019 to 248 ppb in march of 2020. The consultanr states that based on analytical data, it appears that the highest levels of residual impact are located adjacent to the former UST areas located in the central and western portions of the site. Analytical results were generally consistent with previous monitoring events performed by Envirotrac. At this time, PWGC offers the following recommendations for the site: - Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for May 2020. AD 08/21/2020: Received the following email from Mr. Morley: Ainura, Please find attached the 2nd Quarter 2020 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 09/23/2020: Reviewed the 2nd quarter 2020 report. It states that PWGC mobilized to the site on Thursday, June 18, 2020 to perform quarterly groundwater monitoring activities. Groundwater monitoring consisted of measuring depth to water and total well depth measurements for the nine monitoring wells at the site. Groundwater analytical results were compared to the NYSDEC Ambient Groundwater Quality Standards (AWQS). Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring wells FW-7, FW-8 and FW-9 were observed to be dry at the time of field activities and could not be sampled. The samples were analyzed for the presence of: Volatile Organic Compounds (VOCs) by USEPA method 8260 NYSDEC CP-51 List. Monitoring Well Sampling Results: Analytical results for samples collected at CW-8, MW-8, GW018, MW-2, MW-7, and CW-9 were compared to AWQS. Samples collected from MW-8, GW018, MW07, and CW-9 yielded concentrations of VOCs less than AWQS. MBTE was detected in CW-8, GW018, MW-2 and MW-7, with the concentrations of each under the AWQS of 10 ug/L. The highest concentration of MBTE was detected in MW-7 (9.6 ug/L). The lowest detectable concentration of MBTE was in CW-8 (0.75 ug/L). Detectable concentrations of MBTE were less than AWQS at each sampling location. Benzene was detected at concentrations greater than AWQS at monitoring wells MW-2 and CW-8 with the highest concentration, 35 ug/L, detected at MW-2. Ethylbenzene was detected at a concentration grater than AWQS at MW-2 with a concentration of 11 ug/L. The highest BTEX (benzene, toluene, ethylbenzene, and xylene) was detected in MW-2 (46 ug/L). Additionally, isopropylbenzene and n-propylbenzene was detected above AWQS in samples from MW-2 and CW-8 (11 ug/L and 13 ug/L : 20 ug/L and 15 ug/L, respectively). 1,2,4-trimethylbenzene was detected

HESS STATION 32530 (Continued) **S104276740**

at a concentration of 77 ug/l
at MW-2. 1,2,4-trimethylbenzene, isopropylbenzene, and n-propylbenzene are common compounds
associated with petroleum impact. Based on these results, the highest degree of impact appears to
be located adjacent to the former UST locations located in the central and western portions of the
property. Generally, these concentrations were similar to previous sampling events. At this time,
PWGC offers the following recommendations for the site: Continue quarterly groundwater sampling at
CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for September
2020. AD 11/10/2020: Received the following email from Mr. Morley: Ainura, Please find attached the
3rd Quarter 2020 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me
know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson
Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 12/11/2020: Reviewed
the report. It states that The property ownership changed in November 2019 and PWGC was retained to
continue groundwater monitoring at the site. The subject property is a former retail gasoline
fueling station, fueling operations ceased in October 2019. The lot measures approximately 19,000
square-feet and is bounded by Sackett Street to the north, commercial properties to the west, 4th
avenue to the east, and Union Street to the south. The property is improved with a 360-square foot
at-grade storage building, and a cashier s kiosk. PWGC mobilized to the site on Wednesday,
September 23, 2020 to perform quarterly groundwater monitoring activities. Samples were collected
from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring wells FW-7, FW-8 and FW-9 were observed to
be dry at the time of field activities and could not be sampled. Total BTEX was detected in MW-2 at
a concentration of 1,015 ug/L. Minimal concentrations or non-detectable concentrations of total
were observed in the remaining monitoring wells. Based on these results, remaining petroleum impact
in groundwater above AWQS appears to be located adjacent to the former UST locations located in the
central and western portions of the property. At this time, PWGC offers the following
recommendations for the site: - Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7,
MW-2, MW-7, and CW-9. The next sampling event is scheduled for December 2020. 04/22/2021: Received
the following email from Mr. Morley: Ainura, Please find attached the first quarter 2021 spill
monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any
questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY

HESS STATION 32530 (Continued) **S104276740**

11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 05/26/2021: Reviewed the report. It states that PWGC mobilized to the site on Wednesday, March 17, 2021 to perform quarterly groundwater monitoring activities. Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring well FW-7 was observed to be dry at the time of field activities and could not be sampled. The samples were analyzed for the presence of: Volatile Organic Compounds (VOCs) by USEPA method 8260 NYSDEC CP-51 List Monitoring Well Sampling Results: Analytical results for samples collected at CW-8, MW-8, GW018, MW-2, MW-7, and CW-9 were compared to AWQS. Samples collected from wells MW-8, GW018, and CW-9 indicated VOCs less than AWQS. MBTE was detected in MW-2 at 11 ug/L, which is slightly more than the AWQS of 10 ug/L. Sample results from the five other wells yielded concentrations of MBTE that were below AWQS or below the laboratory detection limit. Benzene was detected in the sample collected from MW-7 at 6.9 ug/L. Sample results from the five other wells for benzene were below AWQS or below the laboratory detection limit. Concentrations of total BTEX comprised of solely the detections of Benzene, as the other three compounds were not detected at any of the six monitoring wells. Additionally, isopropylbenzene was detected at a concentration greater than AWQS in the sample collected from CW-8 with a result of 5.3 ug/L. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. Analytical results were generally consistent with previous monitoring events in terms of which locations exhibited the highest degree of impact, however the concentrations of VOCs were significantly lower than concentrations reported during previous sampling events. Recommendations: At this time, PWGC offers the following recommendations for the site: - Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for June 2021. AD 11/05/2021: Received the following email from Mr. Morley: Ainura, Please find attached the third quarter 2021 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 12/02/2021: Reviewed the 3rd quarter 2021 report. It states that PWGC mobilized to the site

HESS STATION 32530 (Continued) **S104276740**

on Monday September 13, 2021
to perform quarterly groundwater monitoring activities. Groundwater monitoring consisted of
measuring depth to water and total well depth measurements for the nine monitoring wells at the
site. Water levels were collected using a Solinst Oil / Water Interface Probe. Groundwater
analytical results were compared to the NYSDEC Ambient Groundwater Quality Standards (AWQS).
Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring well FW-7 was
observed to be dry at the time of field activities and could not be sampled. The samples were
analyzed for the presence of: Volatile Organic Compounds (VOCs) by USEPA method 8260 NYSDEC CP-51
List Monitoring Well Sampling Results: Analytical results for samples collected at CW-8, MW-8,
GW018, MW-2, MW-7, and CW-9 were compared to NYSDEC s AWQS. Samples collected from wells MW-2,
MW-8, and GW018 indicated VOCs less than AWQS. MBTE was detected below the AWQS of 10 ug/L in all
six samples. Benzene was detected in the samples collected from MW-7, CW-8, and CW-9 at
concentrations of 22 ug/L, 12 ug/L, and 5.7 ug/L, respectively, which are greater than the AWQS of
1 ug/L. Sample results from the three other wells yielded concentrations of benzene below the
laboratory detection limit. Concentrations of BTEX comprised of solely the detections of Benzene,
as the other three compounds were not detected at any of the six wells. Isopropylbenzene was
detected in the samples collected from MW-7, CW-8, and CW-9 at of 95 ug/L, 110 ug/L and 6.2/L,
respectively, which are greater than the AWQS of 5 ug/L. N-proplybenzene was detected in MW-7 and
CW-8 at 150 ug/L and 140 ug/L, respectively, which are greater than the AWQS of 10 ug/L.
Sec-butylbenzene was detected in MW-7 and CW-8 at 23 ug/L and 9.5 ug/L, respectively, which are
greater than the AWQS of 5 ug/L. Napthalene was detected in the sample collected from CW-8 at a
concentration of 12 ug/L which is greater than the AWQS of 5 ug/L. N-butylbenzene was detected in
the sample collected from CW-8 at 6.2 ug/L which is greater than the AWQS of 5 ug/L. VOs levels
have increased when compared to last quarter s sampling event but overall show decreasing
concentrations when compared to previous sampling events. Hydrographs have been developed for each
of the seven monitoring wells illustrating the trends in BTEX and MBTE concentrations over time
compared to groundwater elevations dating back to May 2016. Based on these results, remaining
petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST
locations located in the central and western portions of the property. Analytical results were

HESS STATION 32530 (Continued) **S104276740**

generally consistent with previous monitoring events in terms of which locations exhibited the highest degree of impact, however the concentrations of VOCs were generally lower than concentrations reported during previous sampling events. At this time, PWGC offers the following recommendations for the site: Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for December 2021. Given that BTEX ranges in the site well s from ND to 27 ppb in well MW-7, his site is a good candidate for a case closure in the future. AD 12/8/21 - Spill transferred to Steven Wu for tracking under BCP site no. C224295. JHO 12/27/23 - Spill remediated through cleanup/excavation, 13,500 tons of soil exceeding SCOs removed from site. COC executed for BCP no. C224295. SW

Remarks: removal of under ground tanks-poss soil contamination

Spiller Company:	001
Contact Name:	MICHAEL MATRI
Latitude:	40.6780927
Longitude:	-73.9827983
DEC Memo:	6/19/06: Left Mike Matri a voice message requesting a report with endpoint sampling. Received voice message from Mike Matri, post-excavation sampling results will be submitted. 8/7/06: Sent followup email for endpoint sampling results to Dawn Coughlin of Hess. 8/15/06: Received the results of endpoint sampling conducted during spill bucket replacement. Contaminants exceeding TAGM standards were found in both samples. A monitoring well is required adjacent to endpoint sampling locations. If possible, the RAP due for Spill 96-05719 should include remediation of spill 06-02980. 9/12/06: Consolidated with spill 96-05719. A RAP for installation of a SVE system was approved which will remediate spills 96-05719 and 06-02980.
Remarks:	SPILL BUCKET LEAKING. IMPACT TO SOIL. SOIL EXCAVATED. HESS WAS UPGRADING SPILL BUCKET. IDENTIFIED CONTAMINATED SOIL. STATION HAS EXISTING DEC SPILL . CASE MGR IS SARAH ANDERSON - REGION 2

204 4TH AVENUE (Continued) **S125298840**

Updated By: AAOBLIGA

Site Description: "Location The site is located at 204 4th Avenue in an urban area in the Gowanus neighborhood of Brooklyn. The site is bounded by Sackett Street to the north, Union Street to the south, 4th Avenue to the east, and commercial properties to the west. Site Features The site was a gasoline filling station and was previously improved with a 360 square foot storage building, a cashier's kiosk, and a canopy covering the pump islands. Remediation has been completed and the site is undergoing development. Current Zoning and Land Use The site is zoned M1-2 for light manufacturing and is surrounded by similarly zoned properties and residential zoned properties to the east. Past Use of the Site The site was first developed in approximately 1906 and used for residential/commercial purposes from approximately 1906 to 1961. In the early 1960s, the residential/commercial buildings were demolished, and a gasoline station was constructed in 1965. The site has been used as a gasoline station until October 2019. Site Geology and Hydrogeology The site is at an elevation of 25 feet above the National Geodetic Vertical Datum and is generally flat. The stratigraphy of the site, from the surface down, consists of primarily historic urban fill, characterized by loosely compacted fine to coarse sand with fragments of brick and concrete, to depths ranging from 12 to 21 feet below grade across the site. The fill material is underlain by silty light brown sand, and by a layer of grey sandy clay material with organic matter (wood, roots) present in the matrix. Groundwater at the site is approximately 13 to 16 feet below grade and generally flows towards the north/northwest. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Remediation: This section summarizes the assessment of existing and potential future environmental impacts presented by the site. Environmental impacts may include existing and potential future exposure pathways to fish and wildlife receptors, wetlands, groundwater resources, and surface water. The RI report presents a detailed discussion of any existing and potential impacts from the site to fish and wildlife receptors. Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor samples were analyzed for VOCs. Based on the investigations done to date, the primary contaminants of concern for the site include VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Soil - Soil sample results were compared against either the restricted residential soil cleanup objectives (RRSCOs) or the applicable protection of groundwater SCOs (PGSCOs). The highest concentrations of petroleum-related VOCs were detected in the central portion of the site in the vicinity of the underground storage tanks, including 1,2,4-trimethylbenzene at maximum concentration of 2,100 parts per million, or ppm (PGWSCO of 3.6 ppm), 1,3,5-trimethylbenzene at a maximum concentration of 730 ppm (PGWSCO of 8.4 ppm), toluene at a maximum concentration of 11 ppm (PGWSCO of 0.7 ppm), and xylene (total) was found at a maximum concentration of 50 ppm (PGWSCO of 1.6 ppm). The highest concentration of SVOCs were detected in the

204 4TH AVENUE (Continued) **S125298840**

northern portion of the site at 2-4 ft below grade including benzo(a)anthracene at a maximum concentration of 11 ppm (PGWSCO of 0.002 ppm and RRSCO of 1 ppm), benzo(a)pyrene at a maximum concentration of 10 ppm (RRSCO of 1 ppm). Metals were found throughout the site including lead at a maximum concentration of 3,170 ppm (RRSCO of 400 ppm). Mercury was found in the central region of the site at concentration of 5.84 ppm (RRSCO of 0.81 ppm. No PFAS were detected above their respective restricted residential guidance values or protection of groundwater guidance values. Data does not indicate any off-site impacts in soil related to this site.
Groundwater - Petroleum VOCs were detected in the central portion of the site at concentrations exceeding Ambient Water Quality Standards (AWQS) including 1,2,4-trimethylbenzene at a maximum concentration of 1,400 parts per billion, or ppb (AWQS of 5 ppb) and toluene at maximum concentration of 320 ppb (AWQS of 5 ppb). For SVOCs, benzo(a)anthracene was found at a maximum concentration of 460 ppb (AWQS of 0.002 ppb). Perfluorooctanesulfonic acid (PFOS) and Perfluorooctanoic acid (PFOA) were detected at maximum concentrations of 164 parts per trillion (ppt) and 48 ppt, respectively, compared to the maximum contaminant level (drinking water standard) of 10 ppt each. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor, Sub-slab Soil Vapor and Indoor Air - VOCs were detected at elevated concentrations in soil vapor. The VOC, 2,2,4-trimethylpentane, was detected at 509,000 ug/m3 at the northern site boundary. Tetrachloroethylene (PCE) and trichloroethylene (TCE) were both not detected on the site. However, as a result of the 2,2,4-trimethylpentane detection, supplemental soil vapor sampling was conducted off-site across the street to the north of the site and in the building immediately west of the site. The VOC, 2,2,4-trimethylpentane, was not detected in any of the samples collected off-site. PCE was not detected and TCE was detected at 1.76 ug/m3 in soil vapor across Sackett Street. In the building next door to the site, PCE was not detected and TCE was detected at 2.28 ug/m3 in sub-slab soil vapor and 3.57 ug/m3 in indoor air. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Site Code: 587854
Site Description: "Location The site is located at 204 4th Avenue in an urban area in the Gowanus neighborhood of Brooklyn. The site is bounded by Sackett Street to the north, Union Street to the south, 4th Avenue to the east, and commercial properties to the west. Site Features The site was a gasoline filling station and was previously improved with a 360 square foot storage building, a cashier's kiosk, and a canopy covering the pump islands. Remediation has been completed and the site is undergoing development. Current Zoning and Land Use The site is zoned M1-2 for light manufacturing and is surrounded by similarly zoned properties and residential zoned properties to the east. Past Use of the Site The site was first developed in approximately 1906 and used for residential/commercial purposes from approximately 1906 to 1961. In the early 1960s, the residential/commercial buildings were demolished, and a gasoline station was constructed in 1965. The site has been used as a gasoline station until October 2019. Site Geology and Hydrogeology The site is at an elevation of 25 feet above the National Geodetic Vertical Datum and is generally flat. The stratigraphy of the site, from the surface down, consists of primarily historic urban fill, characterized by loosely compacted fine to coarse sand with fragments of brick and concrete, to depths ranging from 12 to 21 feet below grade across the site. The fill material is underlain by silty light brown sand, and by a layer of grey sandy clay material with organic matter (wood, roots) present in the matrix. Groundwater at the site is approximately 13 to 16 feet below grade and generally flows towards the north/northwest. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Remediation: This section summarizes the assessment of existing and potential future environmental impacts presented by the site. Environmental impacts may include existing and potential future exposure pathways to fish and wildlife receptors, wetlands, groundwater resources, and surface water. The RI report presents a detailed discussion of any existing and potential impacts from the site to fish and wildlife receptors. Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor samples were analyzed for VOCs. Based on the investigations done to date, the primary contaminants of concern for the site include VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Soil - Soil sample results were compared against either the restricted residential soil cleanup objectives (RRSCOs) or the applicable protection of

204 4TH AVENUE (Continued) **S125298840**

groundwater SCOs (PGSCOs). The highest concentrations of petroleum-related VOCs were detected in the central portion of the site in the vicinity of the underground storage tanks, including 1,2,4-trimethylbenzene at maximum concentration of 2,100 parts per million, or ppm (PGWSCO of 3.6 ppm), 1,3,5-trimethylbenzene at a maximum concentration of 730 ppm (PGWSCO of 8.4 ppm), toluene at a maximum concentration of 11 ppm (PGWSCO of 0.7 ppm), and xylene (total) was found at a maximum concentration of 50 ppm (PGWSCO of 1.6 ppm). The highest concentration of SVOCs were detected in the northern portion of the site at 2-4 ft below grade including benzo(a)anthracene at a maximum concentration of 11 ppm (PGWSCO of 0.002 ppm and RRSCO of 1 ppm), benzo(a)pyrene at a maximum concentration of 10 ppm (RRSCO of 1 ppm). Metals were found throughout the site including lead at a maximum concentration of 3,170 ppm (RRSCO of 400 ppm). Mercury was found in the central region of the site at concentration of 5.84 ppm (RRSCO of 0.81 ppm. No PFAS were detected above their respective restricted residential guidance values or protection of groundwater guidance values. Data does not indicate any off-site impacts in soil related to this site.
Groundwater - Petroleum VOCs were detected in the central portion of the site at concentrations exceeding Ambient Water Quality Standards (AWQS) including 1,2,4-trimethylbenzene at a maximum concentration of 1,400 parts per billion, or ppb (AWQS of 5 ppb) and toluene at maximum concentration of 320 ppb (AWQS of 5 ppb). For SVOCs, benzo(a)anthracene was found at a maximum concentration of 460 ppb (AWQS of 0.002 ppb). Perfluorooctanesulfonic acid (PFOS) and Perfluorooctanoic acid (PFOA) were detected at maximum concentrations of 164 parts per trillion (ppt) and 48 ppt, respectively, compared to the maximum contaminant level (drinking water standard) of 10 ppt each. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor, Sub-slab Soil Vapor and Indoor Air - VOCs were detected at elevated concentrations in soil vapor. The VOC, 2,2,4-trimethylpentane, was detected at 509,000 ug/m3 at the northern site boundary. Tetrachloroethylene (PCE) and trichloroethylene (TCE) were both not detected on the site. However, as a result of the 2,2,4-trimethylpentane detection, supplemental soil vapor sampling was conducted off-site across the street to the north of the site and in the building immediately west of the site. The VOC, 2,2,4-trimethylpentane, was not detected in any of the samples collected off-site. PCE was not detected and TCE was detected at 1.76 ug/m3 in soil vapor across Sackett Street. In the building next door to the site, PCE was not detected and TCE was detected at 2.28 ug/m3 in sub-slab soil vapor and 3.57 ug/m3 in indoor air. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor, Sub-slab Soil Vapor and Indoor Air - VOCs were detected at elevated concentrations in soil vapor. The VOC, 2,2,4-trimethylpentane, was detected at 509,000 ug/m3 at the northern site boundary. Tetrachloroethylene (PCE) and trichloroethylene (TCE) were both not detected on the site. However, as a result of the 2,2,4-trimethylpentane detection, supplemental soil vapor sampling was conducted off-site across the street to the north of the site and in the building immediately west of the site. The VOC, 2,2,4-trimethylpentane, was not detected in any of the samples collected off-site. PCE was not detected and TCE was detected at 1.76 ug/m3 in soil vapor across Sackett Street. In the building next door to the site, PCE was not detected and TCE was detected at 2.28 ug/m3 in sub-slab soil vapor and 3.57 ug/m3 in indoor air. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Site Code: 587854
Site Description: "Location The site is located at 204 4th Avenue in an urban area in the Gowanus neighborhood of Brooklyn. The site is bounded by Sackett Street to the north, Union Street to the south, 4th Avenue to the east, and commercial properties to the west. Site Features The site was a gasoline filling station and was previously improved with a 360 square foot storage building, a cashier's kiosk, and a canopy covering the pump islands. Remediation has been completed and the site is undergoing development. Current Zoning and Land Use The site is zoned M1-2 for light manufacturing and is surrounded by similarly zoned properties and residential zoned properties to the east. Past Use of the Site The site was first developed in approximately 1906 and used for residential/commercial purposes from approximately 1906 to 1961. In the early 1960s, the residential/commercial buildings were demolished, and a gasoline station was constructed in 1965. The site has been used as a gasoline station until October 2019. Site Geology and Hydrogeology The site is at an elevation of 25 feet above the National Geodetic Vertical Datum and is generally flat. The stratigraphy of the site, from the surface down, consists of primarily historic urban fill, characterized by loosely compacted fine to coarse sand with fragments of brick and concrete, to depths ranging from 12 to 21 feet below grade across the site. The fill material is underlain by silty light brown sand, and by a layer of grey sandy clay material with organic matter (wood, roots) present in the matrix. Groundwater at the site is approximately 13 to 16 feet below grade and generally flows towards the north/northwest. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Remediation: This section summarizes the assessment of existing

204 4TH AVENUE (Continued) **S125298840**

and potential future environmental impacts presented by the site. Environmental impacts may include existing and potential future exposure pathways to fish and wildlife receptors, wetlands, groundwater resources, and surface water. The RI report presents a detailed discussion of any existing and potential impacts from the site to fish and wildlife receptors. Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor samples were analyzed for VOCs. Based on the investigations done to date, the primary contaminants of concern for the site include VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Soil - Soil sample results were compared against either the restricted residential soil cleanup objectives (RRSCOs) or the applicable protection of groundwater SCOs (PGSCOs). The highest concentrations of petroleum-related VOCs were detected in the central portion of the site in the vicinity of the underground storage tanks, including 1,2,4-trimethylbenzene at maximum concentration of 2,100 parts per million, or ppm (PGWSCO of 3.6 ppm), 1,3,5-trimethylbenzene at a maximum concentration of 730 ppm (PGWSCO of 8.4 ppm), toluene at a maximum concentration of 11 ppm (PGWSCO of 0.7 ppm), and xylene (total) was found at a maximum concentration of 50 ppm (PGWSCO of 1.6 ppm). The highest concentration of SVOCs were detected in the northern portion of the site at 2-4 ft below grade including benzo(a)anthracene at a maximum concentration of 11 ppm (PGWSCO of 0.002 ppm and RRSCO of 1 ppm), benzo(a)pyrene at a maximum concentration of 10 ppm (RRSCO of 1 ppm). Metals were found throughout the site including lead at a maximum concentration of 3,170 ppm (RRSCO of 400 ppm). Mercury was found in the central region of the site at concentration of 5.84 ppm (RRSCO of 0.81 ppm. No PFAS were detected above their respective restricted residential guidance values or protection of groundwater guidance values. Data does not indicate any off-site impacts in soil related to this site. Groundwater - Petroleum VOCs were detected in the central portion of the site at concentrations exceeding Ambient Water Quality Standards (AWQS) including 1,2,4-trimethylbenzene at a maximum concentration of 1,400 parts per billion, or ppb (AWQS of 5 ppb) and toluene at maximum concentration of 320 ppb (AWQS of 5 ppb). For SVOCs, benzo(a)anthracene was found at a maximum concentration of 460 ppb (AWQS of 0.002 ppb). Perfluorooctanesulfonic acid (PFOS) and Perfluorooctanoic acid (PFOA) were detected at maximum concentrations of 164 parts per trillion (ppt) and 48 ppt, respectively, compared to the maximum contaminant level (drinking water standard) of 10 ppt each. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor, Sub-slab Soil Vapor and Indoor Air - VOCs were detected at elevated concentrations in soil vapor. The VOC, 2,2,4-trimethylpentane, was detected at 509,000 ug/m3 at the northern site boundary. Tetrachloroethylene (PCE) and trichloroethylene (TCE) were both not detected on the site. However, as a result of the 2,2,4-trimethylpentane detection, supplemental soil vapor sampling was conducted off-site across the street to the north of the site and in the building immediately west of the site. The VOC, 2,2,4-trimethylpentane, was not detected in any of the samples collected off-site. PCE was not detected and TCE was detected at 1.76 ug/m3 in soil vapor across Sackett Street. In the building next door to the site, PCE was not detected and TCE was detected at

204 4TH AVENUE (Continued) **S125298840**

	2.28 ug/m3 in sub-slab soil vapor and 3.57 ug/m3 in indoor air. Data does not indicate any off-site impacts in soil vapor related to this site. "

Site Code: 587854
Site Description: "Location The site is located at 204 4th Avenue in an urban area in the Gowanus neighborhood of Brooklyn. The site is bounded by Sackett Street to the north, Union Street to the south, 4th Avenue to the east, and commercial properties to the west. Site Features The site was a gasoline filling station and was previously improved with a 360 square foot storage building, a cashier’s kiosk, and a canopy covering the pump islands. Remediation has been completed and the site is undergoing development. Current Zoning and Land Use The site is zoned M1-2 for light manufacturing and is surrounded by similarly zoned properties and residential zoned properties to the east. Past Use of the Site The site was first developed in approximately 1906 and used for residential/commercial purposes from approximately 1906 to 1961. In the early 1960s, the residential/commercial buildings were demolished, and a gasoline station was constructed in 1965. The site has been used as a gasoline station until October 2019. Site Geology and Hydrogeology The site is at an elevation of 25 feet above the National Geodetic Vertical Datum and is generally flat. The stratigraphy of the site, from the surface down, consists of primarily historic urban fill, characterized by loosely compacted fine to coarse sand with fragments of brick and concrete, to depths ranging from 12 to 21 feet below grade across the site. The fill material is underlain by silty light brown sand, and by a layer of

204 4TH AVENUE (Continued) **S125298840**

grey sandy clay material with organic matter (wood, roots) present in the matrix. Groundwater at the site is approximately 13 to 16 feet below grade and generally flows towards the north/northwest. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Remediation: This section summarizes the assessment of existing and potential future environmental impacts presented by the site. Environmental impacts may include existing and potential future exposure pathways to fish and wildlife receptors, wetlands, groundwater resources, and surface water. The RI report presents a detailed discussion of any existing and potential impacts from the site to fish and wildlife receptors. Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor samples were analyzed for VOCs. Based on the investigations done to date, the primary contaminants of concern for the site include VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Soil - Soil sample results were compared against either the restricted residential soil cleanup objectives (RRSCOs) or the applicable protection of groundwater SCOs (PGSCOs). The highest concentrations of petroleum-related VOCs were detected in the central portion of the site in the vicinity of the underground storage tanks, including 1,2,4-trimethylbenzene at maximum concentration of 2,100 parts per million, or ppm (PGWSCO of 3.6 ppm), 1,3,5-trimethylbenzene at a maximum concentration of 730 ppm (PGWSCO of 8.4 ppm), toluene at a maximum concentration of 11 ppm (PGWSCO of 0.7 ppm), and xylene (total) was found at a maximum concentration of 50 ppm (PGWSCO of 1.6 ppm). The highest concentration of SVOCs were detected in the northern portion of the site at 2-4 ft below grade including benzo(a)anthracene at a maximum concentration of 11 ppm (PGWSCO of 0.002 ppm and RRSCO of 1 ppm), benzo(a)pyrene at a maximum concentration of 10 ppm (RRSCO of 1 ppm). Metals were found throughout the site including lead at a maximum concentration of 3,170 ppm (RRSCO of 400 ppm). Mercury was found in the central region of the site at concentration of 5.84 ppm (RRSCO of 0.81 ppm. No PFAS were detected above their respective restricted residential guidance values or protection of groundwater guidance values. Data does not indicate any off-site impacts in soil related to this site. Groundwater - Petroleum VOCs were detected in the central portion of the site at concentrations exceeding Ambient Water Quality Standards (AWQS) including 1,2,4-trimethylbenzene at a maximum concentration of 1,400 parts per billion, or ppb (AWQS of 5 ppb) and toluene at maximum concentration of 320 ppb (AWQS of 5 ppb). For SVOCs, benzo(a)anthracene was found at a maximum concentration of 460 ppb (AWQS of 0.002 ppb). Perfluorooctanesulfonic acid (PFOS) and Perfluorooctanoic acid (PFOA) were detected at maximum concentrations of 164 parts per trillion (ppt) and 48 ppt, respectively, compared to the maximum contaminant level (drinking water standard) of 10 ppt each. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor, Sub-slab Soil Vapor and Indoor Air - VOCs were detected at elevated concentrations in soil vapor. The

204 4TH AVENUE (Continued) **S125298840**

VOC, 2,2,4-trimethylpentane, was detected at 509,000 ug/m3 at the northern site boundary. Tetrachloroethylene (PCE) and trichloroethylene (TCE) were both not detected on the site. However, as a result of the 2,2,4-trimethylpentane detection, supplemental soil vapor sampling was conducted off-site across the street to the north of the site and in the building immediately west of the site. The VOC, 2,2,4-trimethylpentane, was not detected in any of the samples collected off-site. PCE was not detected and TCE was detected at 1.76 ug/m3 in soil vapor across Sackett Street. In the building next door to the site, PCE was not detected and TCE was detected at 2.28 ug/m3 in sub-slab soil vapor and 3.57 ug/m3 in indoor air. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

DEC Memo:	DEC spoke with Brookside Env. Estimated 1000 gal waste oil UST uncovered during excavation. tank had holes in bottom. Brookside arrived on site and pumped out tank . Tank was partially removed from ground and spilled oil floating was observed on groundwater. Additional excavation will be needed. PW Grosser is env consultant. PBS 2-297666 Open Spill - 9605719 BCP - C224295 Summary email with contacts will be sent by Brookside. ---------- Spill area over-excavated to 16 feet under BCP program. Sidewall and bottom samples had no VOC exceedances above protection of groundwater SCOs, some SVOCs were detected, very likely due to historic fill. Will be closing out spill - SW 3/7/23
Remarks:	Excavating and found a waste oil tank with holes in it estimating a 1000 gallon tank

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Historic Generators:

Receive Date:	19990708
Handler Name: CRUSADER CANDLE CO INC	
Federal Waste Generator Description:	Not a generator, verified
State District Owner:	Ny
Large Quantity Handler of Universal Waste:	No
Recognized Trader Importer:	No
Recognized Trader Exporter:	No
Spent Lead Acid Battery Importer:	No
Spent Lead Acid Battery Exporter:	No
Current Record:	No
Non Storage Recycler Activity:	Not reported
Electronic Manifest Broker:	Not reported
Receive Date:	20060101
Handler Name: CRUSADER CANDLE CO INC	
Federal Waste Generator Description:	Very Small Quantity Generator (formerly Conditionally-Exempt Small Quantity Generator
State District Owner:	Ny
Large Quantity Handler of Universal Waste:	No
Recognized Trader Importer:	No
Recognized Trader Exporter:	No
Spent Lead Acid Battery Importer:	No
Spent Lead Acid Battery Exporter:	No
Current Record:	No

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of

ULANO CORP-280 BERGEN ST (Continued) **1000317853**

These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U007
Waste Description: 2-Propenamide (Or) Acrylamide

Waste Code: U031
Waste Description: 1-Butanol (I) (Or) N-Butyl Alcohol (I)

Waste Code: U069
Waste Description: 1,2-Benzenedicarboxylic Acid, Dibutyl Ester (Or) Dibutyl Phthalate

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U220
Waste Description: Benzene, Methyl- (Or) Toluene

Last Modified:	05/09/2022

Equipment Records:

D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
H00 - Tank Leak Detection - None
I00 - Overfill - None

ULANO CORP-280 BERGEN ST (Continued) **1000317853**

C02 - Pipe Location - Underground/On-ground
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser

Tank Number:	007
Tank ID:	47449
Tank Status:	Closed - Removed
Material Name:	Closed - Removed
Capacity Gallons:	550
Install Date:	12/01/1946
Date Tank Closed:	12/01/1993
Registered:	True
Tank Location:	Underground
Tank Type:	Steel/carbon steel
Material Code:	0009
Common Name of Substance:	Gasoline

Spiller Address:	450 UNION ST
Spiller Company:	999
Contact Name:	JAMES RIGNEY
Latitude:	40.6799302
Longitude:	-73.9896544
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 7/16/2001 Testing was done. Borings along Union st. all samples were high Took water samples along union St. along Gowanas Canal and inside the building (all water samples were clean). Bayside Fuel is across the street from this site. 10/2/09 - Austin - Spill transferred from Albany staff to Ketani, for further investigation - end 10/27/09 - Raphael Ketani. The spill took place on 6/8/01. It involved the discovery of oil contaminated soil at the site. Bayside Fuel is across the street. The site is 450 Union Street. The main address is 316 Bond Street. The alternate addresses are 446-450 Union Street. The block and lot are 437 and 36. The building was built in 1910. It is a four story brick apartment building on the corner. It was sold on 4/21/88 to Union Bond Realty, Ltd., c/o Joseph Giardina, 916 Washington Avenue, Westwood, NJ, 07675. There is no PBS registration. The only contact was James Rigney (718) 923-8003. There is no case file, nor any E-docs. I will make a site visit. 12/9/09 - Raphael Ketani. I made an unannounced site visit. The address 450 Union Street belongs to a green painted warehouse near the Gowanus Canal (see E-docs). The warehouse now appears to be an artist's workshop. There was no one home. I walked up the street to the Canal and found Bayside Fuel. However, I didn't find the apartment building. The only possible location for the apartment building may be a cinder block wall with a door which has no street number (see E-docs). The wall may have been part of a building, but the back of the building has collapsed (see E-docs). I did not see a sheen in the water next to Bayside Fuel. 12/11/09 - Raphael Ketani. I tried to contact Mr. Rigney, but the phone number belongs to someone else and they didn't answer. I will send a letter to Mr. Giardina requesting information about the spill.

VACANT APARTMENT BUILDING (Continued) **S105057992**

12/14/09 - Raphael Ketani.
The letter to Mr. Giardina went out today by regular mail and by certified mail with a return card.
12/17/09 - Raphael Ketani. I received a call today from Donna Giardina. She said that she had
received my letter. However, her father doesn't own 450 Union Street. She said that this address is
the long green building and the broken concrete building that is attached to it. She said that her
father owns 316 and 318 Bond Street. I told her that the property databases that I had used had
indicated that Joseph Giardina (201) 666-2031 owns 450 Union Street and that he bought it on
4/21/88. She said that the purchase date for the properties sounds right, but 450 Union is not his.
She said that it belongs to a Jewish organization which owns the green building. They have parties,
religious services and such there. She said that her father has received tickets from DOS and other
fines for garbage left out infront of 450 Union, but this is not her property. She said that there
have been other points of confusion and mistaken ownership by other City agencies. She said that
their garbage is picked up on Bond Street. I told her that I will look into the matter and do more
research. I checked the Property Shark listings for 316 Bond Street and 318 Bond Street. Union Bond
Realty owns both sites. Both are apartment buildings. 446 and 450 Union Street are listed as
alternate addresses for 316 Bond Street. I did see a street number of 446 Union Street for the
Union Street side of the corner apartment building. However, 316 Bond Street is at the corner of
Bond and Union and physically across from 450 Union. It is not clear how the two addresses can be
listed together. Both are block 437 and lot 36 - with Bond Street dividing them. 318 Bond Street is
block 437 and lot 37 with no alternate addresses. It may be that, at one time, the two Union Street
numbers (446 and 450) were associated with 316 Bond Street. I checked Google Maps and the air photo
shows 316 and 318 Bond Street to be across from the long green building at 450 Union. Google Maps
also shows a vacant lot across Union Street from the 316 and 318 Bond with a few cars parked in
side. It is unclear whether this used to be a tanker truck storage facility. Though, there is no
indication of this. The spill report mentions an apartment building across from the Bayside Fuel
facility, but this is not possible. As there is not enough information to determine where the site
is, or used to be. Therefore, it is not possible to investigate this spill case. Therefore, I am
closing the spill case. 12/29/09 - Raphael Ketani. The green return receipt card arrived today. It
was signed by Joseph Giardina and dated 12/18/09.

Remarks: CONTAMINATED SOIL FOUND AT LOCATION AFTER SOIL SAMPLES WERE TAKEN.

Site Description:	"Location: The site is approximately 0.65 acres in size and is located in an urban area at 450 Union Street in the Gowanus neighborhood of Brooklyn, New York. The site is bounded by Union Street to the north, the Gowanus Canal to the east, a parking lot followed by President Street to the south, and Bond Street to the west. Site Features: The site is currently improved with a one-story building and two storage sheds. The exterior portion of the property contains an enclosed area for social events, a parking lot and driveway, and storage areas. A bulkhead separates the property from the Gowanus Canal. Current Zoning and Land Use: The site is zoned M2-1 (manufacturing/industrial) and is currently used as a private event space, an art gallery, and an outdoor restaurant. Past Use of the Site: The site was historically occupied by a coal and wood yard (1886-1928); a granite works (1915); a die casting/electroplating facility (1922); a garage (1918-1930); a fuel company, garage and office (1931); and a foundry (1930-2007). Geology and Hydrogeology: The site sits at an elevation of approximately 10 feet above mean sea level and slopes down to the east towards the Gowanus Canal. The subsurface strata at the site is comprised of historic urban fill consisting of sand with varying amounts of gravel, silt, brick, coal, wood and concrete fragments. The historic fill layer extends to a depth of about 15 feet below grade surface and is underlain by clay and silt. The groundwater interface is at depths between 7 and 11 feet below grade surface. Groundwater beneath the site flows southeast toward the Gowanus Canal, which adjoins the site to the east. "

450 UNION STREET (Continued) **S117936660**

Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs and metals in soil, and coal tar in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to prevent potential exposure to remaining contamination on the site. "

Site Code: 507633
Site Description: "Location: The site is approximately 0.65 acres in size and is located in an urban area at 450 Union Street in the Gowanus neighborhood of Brooklyn, New York. The site is bounded by Union Street to the north, the Gowanus Canal to the east, a parking lot followed by President Street to the south, and Bond Street to the west. Site Features: The site is currently improved with a one-story building and two storage sheds. The exterior portion of the property contains an enclosed area for social events, a parking lot and driveway, and storage areas. A bulkhead separates the property from

450 UNION STREET (Continued) **S117936660**

the Gowanus Canal. Current Zoning and Land Use: The site is zoned M2-1 (manufacturing/industrial) and is currently used as a private event space, an art gallery, and an outdoor restaurant. Past Use of the Site: The site was historically occupied by a coal and wood yard (1886-1928); a granite works (1915); a die casting/electroplating facility (1922); a garage (1918-1930); a fuel company, garage and office (1931); and a foundry (1930-2007). Geology and Hydrogeology: The site sits at an elevation of approximately 10 feet above mean sea level and slopes down to the east towards the Gowanus Canal. The subsurface strata at the site is comprised of historic urban fill consisting of sand with varying amounts of gravel, silt, brick, coal, wood and concrete fragments. The historic fill layer extends to a depth of about 15 feet below grade surface and is underlain by clay and silt. The groundwater interface is at depths between 7 and 11 feet below grade surface. Groundwater beneath the site flows southeast toward the Gowanus Canal, which adjoins the site to the east. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs and metals in soil, and coal tar in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan."
Health Problem: "Remedial actions are complete and measures are in place to prevent potential exposure to remaining contamination on the site. "

BROWNFIELDS:

Name:	450 UNION STREET
Address:	450 UNION STREET
City,State,Zip:	BROOKLYN, NY 11231
Program:	BCP
Site Code:	507633
Acres:	0.654
HW Code:	C224219
SWIS:	2401
Town:	New York City
Record Added Date:	05/08/2015
Record Updated Date:	02/27/2025
Update By:	LAGORTON
Site Description:	"Location: The site is approximately 0.65 acres in size and is located in an urban area at 450 Union Street in the Gowanus neighborhood of Brooklyn, New York. The site is bounded by Union Street to the north, the Gowanus Canal to the east, a parking lot followed by President Street to the south, and Bond Street to the west. Site Features: The site is currently improved with a one-story building and two storage sheds. The exterior portion of the property contains an enclosed area for social events, a parking lot and driveway, and storage areas. A bulkhead separates the property from the Gowanus Canal. Current Zoning and Land Use: The site is zoned M2-1 (manufacturing/industrial) and is currently used as a private event space, an art gallery, and an outdoor restaurant. Past Use of the Site: The site was historically occupied by a coal and wood yard (1886-1928); a granite works (1915); a die casting/electroplating

450 UNION STREET (Continued) **S117936660**

facility (1922); a garage (1918-1930); a fuel company, garage and office (1931); and a foundry (1930-2007). Geology and Hydrogeology: The site sits at an elevation of approximately 10 feet above mean sea level and slopes down to the east towards the Gowanus Canal. The subsurface strata at the site is comprised of historic urban fill consisting of sand with varying amounts of gravel, silt, brick, coal, wood and concrete fragments. The historic fill layer extends to a depth of about 15 feet below grade surface and is underlain by clay and silt. The groundwater interface is at depths between 7 and 11 feet below grade surface. Groundwater beneath the site flows southeast toward the Gowanus Canal, which adjoins the site to the east. "

Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs and metals in soil, and coal tar in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to prevent potential exposure to remaining contamination on the site. "

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 4/30/04 TJD As per direction of RSE, site transferred Demeo >>> Kolleeny as spill location is at NYCHA owned facility. 11/07/05: This spill transferred from J.Kolleeny to S.Kraszewski. 12/23/05: Only thing on file is spill report. - SK 07/07/06: NYCHA summary report states that two 25K USTs are currently in service. The man way gasket leaked, was repaired and retested. No recovery system or MWs on-site, soil/GW conditions are unknown and no site assessment available. NYCHA recommends closure. - SK 02/06/07 - J.Kann - site reassigned from S. Kraszewski to J.Kann. 09/23/08: Documents related to tank tightness testing submitted to the Department. Results indicate that manway gasket nuts and bolts were cause of testing failure, they were replaced and the tank passed testing. Spill closed based on this information. J.kann
