CON EDISON (Continued) **1010327270**

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:

Name:	PRESIDENT STREET PROPERTIES
Address:	BOND, CARROLL AND PRESIDENT STREETS
City,State,Zip:	BROOKLYN, NY 11231
Program:	BCP
Site Code:	507648
Acres:	2.123
HW Code:	C224221
SWIS:	2401
Town:	New York City
Record Added Date:	05/08/2015
Record Updated Date:	06/14/2024
Update By:	WBBENNET
Site Description:	"Location: The President Street Properties site is a 2.1-acre site located in the Gowanus neighborhood of Brooklyn, NY and is comprised of seven parcels identified as Block 438, Lots 1, 2, and 3, and Block 445, Lots 8, 11, 20, and 50. The site is bounded by another BCP site (450 Union Street, site no. C224219) followed by Union Street to the

PRESIDENT STREET PROPERTIES (Continued) **S117936663**

north, the Gowanus Canal to the east, Carroll Street to the south, and Bond Street to the west. Site Features: The site is currently under development. The site was previously improved with an asphalt parking lot, and a two-story commercial storage building. The former section of President Street runs east-west between the Gowanus Canal and Bond Street and is included in the site. Current Zoning and Land Use: The site is zoned in an M1-4/ R7-2 mixed manufacturing and residential district. The past use of the site was for commercial and industrial use. The intended use of the site will be for restricted-residential use. Past Use of the Site: Historical uses of the property include a cement pipe company as well as a lime company and stone yard as early as 1855. From 1886 to about 1928, the site operated as a coal yard, masonry operation, wood factory, and wagon painting shop. In 1928, an iron works and welding shop occupied the southern portions of the site. Between about 1950 and 2007, the site was occupied by auto parking and repair shops, and gasoline storage was depicted in the central area of the site. In addition, the site was used for auto wrecking and salvaging from 1969 to 2007. Geology and Hydrogeology: The site surface sits at an elevation of approximately 10 feet above mean sea level. The topography of the site is generally level, and the surrounding area slopes gently east toward the Gowanus Canal. The subsurface strata at the site consists of non-native fill material ranging in depth from 2 to 17 feet below grade and characterized by sand with silt, brick, coal, mortar, ash, slag, wood, and gravel. The on-site fill layer is underlain by either an organic layer consisting of clay, peat or by a fine to medium grained sand layer with varying amounts of silt and gravel. Bedrock is anticipated to be upwards of 80 feet below grade. Depth to groundwater ranges from 2.5 to 14 feet below grade with the highest elevation being in the northwestern region of the site. Groundwater flows east-southeast towards the Gowanus Canal."

Env Problem:

"Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, emerging contaminants, metals, and cyanide. Soil vapor samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include VOCs, SVOCs, PCBs, and metals in soils, VOCs and SVOCs in groundwater, and VOCs in soil vapor. Soil: VOCs, SVOCs, PCBs, and metals were detected above the applicable restricted-residential soil cleanup objectives (RRSCOs) in site soils. Several VOCs and SVOCs were also detected in groundwater above groundwater standards and exceed the applicable protection of groundwater soil cleanup objectives (PGWSCOs) in the soil. VOCs detected in soil include benzene at a maximum concentration of 38 parts per million, or ppm (RRSCO is 4.8 ppm, PGWSCO is 0.06 ppm), ethylbenzene at a maximum concentration of 200 ppm (RRSCO is 41 ppm, PGWSCO is 1 ppm), 1,2,4-trimethylbenzene at a maximum concentration of 95 ppm (RRSCO is 52 ppm, PGWSCO is 3.6 ppm), and toluene at a maximum concentration if 130 ppm (RRSCO is 100 ppm, PGWSCO is 0.7 ppm). SVOCs detected in soil include benzo(a)anthracene at a maximum concentration of 260 ppm (RRSCO and PGSCO are both 1 ppm), benzo(a)pyrene at a maximum concentration of 220 ppm (RRSCO is 1 ppm, PGWSCO is 1.7 ppm), benzo(b)fluoranthene at a maximum concentration of 150 ppm (RRSCO is 1 ppm, PGWSCO 1.7 ppm), benzo(k)fluoranthene at a maximum concentration of 52 ppm (RRSCO is 3.9 ppm, PGWSCO is 1.7 ppm), chrysene at a maximum concentration of 230 ppm (RRSCO is 3.9 ppm, PGWSCO is 1 ppm), indeno(1,2,3-cd)pyrene at a maximum

PRESIDENT STREET PROPERTIES (Continued) **S117936663**

concentration of 130 ppm (RRSCO is 0.5 ppm, PGWSCO is 8.2 ppm), and naphthalene at a maximum concentration of 2,500 ppm (RRSCO is 100 ppm, PGWSCO is 12 ppm). Polychlorinated Biphenyls (PCBs) were detected at a maximum concentration of 5.22 ppm (RRSCO 1 ppm). Metals detected included lead at a maximum concentration of 3,220 ppm (RRSCO 400 ppm), and mercury at a maximum concentration of 210 ppm (RRSCO 0.81 ppm). Per- and polyfluoroalkyl substances (PFAS) were not detected at concentrations exceeding the restricted-residential guidance values. 1,4-Dioxane was not detected in any of the soil samples. Soil contamination is present at concentrations above RRSCOs in soils from 0 to 2 feet below grade throughout the site. The highest concentrations of VOCs and SVOCs detected at the site were encountered in the northeast corner of the site and along the eastern boundary of the site at depths of 19 to 36 feet below grade in areas, where grossly contaminated material (GCM) was observed. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: VOCs detected at a concentration exceeding the Class GA Ambient Water Quality Standards (AWQS) in site groundwater include 1,2,4-trimethylbenzene at a maximum concentration of 100 parts per billion, or ppb (AWQS 5 ppb), benzene at a maximum concentration of 160 ppb (AWQS 1 ppb), ethylbenzene at a maximum concentration of 370 ppb (AWQS 5 ppb)), toluene at a maximum concentration of 130 ppb (AWQS 5 ppb), and total xylenes at a maximum concentration of 410 ppb (AWQS 5 ppb). SVOCs detected at concentrations exceeding the AWQS in site groundwater include benzo(a)anthracene at a maximum concentration of 1.1 ppb (AWQS 0.002 ppb), benzo(a)pyrene at a maximum concentration of 0.63 ppb (AWQS is non-detect), benzo(b)fluoranthene at a maximum concentration of 0.53 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at a maximum concentration of 0.18 ppb (AWQS is 0.002 ppb), chrysene at a maximum concentration of 0.93 ppb (AWQS 0.002 ppb), indeno(1,2,3-cd)pyrene at a maximum concentration of 0.29 ppb (AWQS 0.002 ppb), naphthalene at a maximum concentration of 3,900 ppb (AWQS 10 ppb). The highest concentrations of VOCs and SVOCs specified above in groundwater were encountered in deep monitoring well MW-29 which is screened from 23.5 to 33.5 feet below grade and is located in the northeast corner of the site. Dense Non-Aqueous Phase Liquid (DNAPL) was encountered in monitoring well MW-30 which is screened from 22.5 to 37.5 feet below grade and is also located in the northeast corner of the site. Several metals were encountered in filtered groundwater above AWQS including antimony, iron, magnesium, manganese, and sodium. The presence of these metals in site groundwater is likely related to road salt applications or natural phenomenon. No PCBs or pesticides were detected in site groundwater. The PFAS compounds perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were detected in site groundwater at concentrations exceeding their guidance values. PFOA was found at a maximum concentration of 74.5 ppt (Guidance value of 6.7 ppt) and PFOS was found at a maximum concentration of 30.5 ppt (Guidance value of 2.7 ppt). Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor and Sub-Slab Soil Vapor: Six soil vapor points and three sub-slab vapor points were collected to investigate the potential for soil vapor intrusion. PCE was detected at a maximum concentration of 251 micrograms per cubic meter (ug/m3) in a sub-slab sample, TCE was detected at a maximum concentration of 7.36 ug/m3 in a sub-slab sample. Data does not indicate any off-site impacts on soil vapor related to the site."

Health Problem: "The site is currently fenced and access is controlled. People will

PRESIDENT STREET PROPERTIES (Continued) **S117936663**

not come into contact with contaminated soil or groundwater unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern, however it may represent a potential concern for future buildings on-site. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site buildings."

Update By:	brwolose
Site Description:	"This is a new BCP application and pertains to the Gowanus Village I, LLC-420 Carroll Street located at 420 Carroll Street, Brooklyn, Kings County. This site is approximately .92 acres in size. Current use of this site is commercial and future use of this site will be residential. Suspected contaminants at this site are chlorinated solvents, pesticides, SVOCs and PCBs. These contaminants are impacting the soil and groundwater. This BCP application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility in conjunction with the Department of Health. 8/30/06: the BCP Application was denied."
Env Problem:	"Information submitted with the BCP application and additional information submitted regarding the environmental conditions at the site were reviewed. It was determined that due to lack of known contamination and the unlikely potential for contamination would not

Contact Name:	RACHEL MILLER
Latitude:	40.6778764
Longitude:	-73.9885073
DEC Memo:	8/11/22 - Kim - Desk Duty - The tanks that were discovered were unknown and unregistered tanks that contained a water and slurry mix that had some sheen. Miller stated that the liquid in the tanks was mostly water. This site is a NYCDEP OER site in the Voluntary Cleanup Program, Project #22EH-A153K, 22CVCP045K, 420-430 Carroll Street, under OER Case Manager Yolanda. One tank was pulled and a vac truck removed liquids from both tanks. The 550gal tank was removed, put on poly, and cleaned. The 3,000gal tank had concrete piles driven through during previously completed construction and has not been removed. Roux is deciding whether to pull the whole mass up or to cut and remove the tank. Roux will have the tanks registered with NYSDEC PBS unit. rmiller@rouxinc.com 08/12/22-Hiralkumar Patel. alternate address: 404-440 Carroll Street 420 Carroll LLC. **property owner** 11 Park Place New York, NY 10007 Attn.: Stephen Ohnemus Ph. (914) 263-2378 email: s.ohnemus@vorea.com 08/16/22-Hiralkumar Patel. 10:04 AM:- spoke with Rachel. she mentioned that both tanks have been removed and they have collected endpoint samples. she will send sample results next week. 09/22/22-Hiralkumar Patel. 10:35 AM:- spoke with Rachel about spill closure report. she mentioned that OER project manager has approved to include spill cleaning details in a final report

LOT 1,TAXBLOCK 453 (Continued) **S128901808**

to OER upon completion of the project. informed Rachel that the department requires submission of
spill closure report, if cleanup has completed. 10:38 AM:- sent email to Rachel and asked her to
submit a spill closure report. email copied to OER Shaminder. 10/07/22-Hiralkumar Patel. 9:48 AM:-
spoke with Rachel and inquired her about spill closure report. she asked if they could submit spill
closure as part of final report to OER upon completion of project. informed her that as spill
cleanup is completed, the department requires submission of a spill closure report. asked her to
submit report by COB 10/21/22. 9:50 AM:- sent email to Rachel and asked her to submit spill closure
report by 10/21/22. email copied to OER Shaminder. 12/15/22-Hiralkumar Patel. 12:52 PM;- sent email
to Wendy Shen at Roux inquiring updates on spill closure report. email copied to Rachel. Wendy Shen
Roux Associates PH. (631) 232-2600 / (631) 630-2331 (718) 913-6240
Email: wshen@rouxinc.com
01/05/23-Hiralkumar Patel. received email from Wendy (at 3:19 PM on 01/04/23) including a spill
closure report. - one (1) 550 gal UST (UST-1) and one (1) 2,000 gal UST (UST-2) were removed during
site development - total of 1,410 gal of oil-water mixture were pumped out from both tanks - UST-1
was 6 ft long and 4 ft wide and tank top was at elevation of 3.67 ft - UST-2 was 13 ft long and 5
ft side and tank top was at elevation of 4.58 ft - total area that was excavated for UST-1 was 18
ft long by 15 ft wide and 5 ft deep - total area that was excavated for UST-2 was 25 ft long by 23
ft wide and 6 ft deep - total of approx. 60 cubic yard of soil removed from both excavations - five
endpoint samples (one bottom and four sidewalls) were collected from UST-1 excavation - six
endpoint samples (two bottom and four sidewalls) were collected from UST-2 excavation - no
contamination noted in endpoint samples the report includes confusing details about depth of tank
top and excavation bottom. 01/10/23-Hiralkumar Patel. 1:18 PM:- sent email to Wendy and asked her
to provide final depth of excavation for both tanks and depth of each endpoint sample. email copied
to OER. 01/13/23-Hiralkumar Patel. 8:58 AM:- received email from Wendy including a site sketch. as
per the sketch, site grade elevation was +5.5 ft. based on this, top of UST-1 was 1.83 ft below
site grade and UST-2 was 0.92 ft below site grade. 8:59 AM:- received call from Wendy. she
mentioned that on-site structure was demolished prior to Roux's involvement in the project and site
may have been re-graded after building demolition and this could be a reason for having tank tops
within 1-2 ft of the site grade. she confirmed that bottom of excavation for UST-1 was 5-6 ft below
top of the tank and for UST-2 was 7 ft below top of the tank. case

DEC Memo: 1/27/23 - Ye - DDO - Spoke with DEP Okali on 1/26, who said that they received a report of muddy
water entering the Gowanus Canal near 420 Carroll Street. He was

LOT 1,TAXBLOCK 453 (Continued) **S128901808**

currently heading to the site and
has some people on location to investigate the source. They had received a similar complaint via
email on 1/20, around 3pm. They do not believe the discharge has a sheen or contains petroleum. I
said that we will probably not be sending anyone unless they would like someone there, because it
seems like a non-petroleum sewer discharge issue, but to keep us updated if they find anything
otherwise. I offered to report the discharge to the water body to NRC/Coast Guard, since Okali was
driving. I provided DEP Okali's contact to NRC Incident Report 1358618. The Coast Guard called me
shortly to confirm material was not petroleum/non-hazardous. I said it is likely not, but they can
get updates from the DEP, who is onsite. They said they will probably not be investigating. When
speaking with DEC Dispatch about another spill, they mentioned that ECO Currey and ECO Kortz will
stop by the site on their way home. Spoke with ECO Currey, who said they are on site and met some
other people from DEP; DEP Okali was still on the way. They were unable to see much because the
site was gated off, but they saw some photos and the discharge looked murky, with no sheen. They
were going to see if they could see anything on the other side of the canal. I said that Spills
will not be responding, but to keep us posted if they find anything. There was a recent spill that
was closed by DEC Patel on 1/13, Spill #2204170. 1 550-gallon tank and 1 2000-gallon tank were
removed, with no contamination noted in endpoint samples. DEC Patel recommended briefing OER
Chawla. Emailed OER Chawla and CC'ed DEP Okali, saying that Spills will not be investigating any
further. OER Chawla notified their consultant, saying: We received a report of discharges from this
Site to Gowanus. Your daily report from 1/24 does not mention any discharges. DEC inspected this
site, but were not able to enter property as it was gated. See DEC email below. Please look into
this and let us know. Spill forwarded to the Water Division (DEC Southwell). Spill closed.

Remarks: muddy waters going into waterway (NY bight). Unknown source Update: ECO Currey (929) 505-6868 and ECO Kortz (929) 598-5860 responding to location for investigation.

335 BOND STREET - OFF-SITE (Continued) **S128901806**

Site Description: "The area of concern subject to this work is considered off-site from BCP site C224225 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224225 for further information regarding the status of the site in the Brownfield Cleanup program"

Env Problem: "C224225A is an off-site investigation of BCP C224225, 335 Bond Street. On-site soil, groundwater, and soil vapor has been impacted by chlorinated solvents. The main VOC contaminant of concern is Tetrachloroethene, or PCE. Concentrations in the groundwater and soil gas have created a potential impact to indoor air and created a situation generating a positive significant threat. An off-site investigation will be performed Soil Boring Sampling Results- Semi-volatile organic compounds (SVOCs) for Poly-nuclear Aromatic Hydrocarbons were detected at concentrations above their respective NYSDEC Part 375 UUSCOs ranging from non-detect to 4.72 mg/kg. Metals including Lead, Zinc, and Mercury, Arsenic, Nickel, Copper were detected at concentrations above their respective NYSDEC Part 375 restricted use Residential restricted soil cleanup objectives (RUSCOs) ranging from non-detect to 842 mg/kg, 528mg/kg, 4.36 mg/kg, 22.6 mg/kg, 50.1 mg/kg and 97.3 mg/kg respectively. Groundwater Sampling Results- Soil sample results from all soil borings were compared to the NYSDEC Part 375 restricted use Residential restricted soil cleanup objectives (RUSCO s). Volatile organic compounds (VOCs) including tetrachloroethylene, trichloroethethylene, dichlorethylene, vinyl chloride, Benzene and chlorobenzene were detected above appropriate standards raging from non-detect to 90.1ug/l, 142 ug/l, 1,930 ug/l, 1,270 ug/l, 56 ug/l and 15 ug/l respectively. Metals Chromium Hexavalent, Lead, Manganese, Magnesium, and Sodium were detected above appropriate standards raging from non-detect to 99 ug/l, 893 ug/l, 2,350 ug/l, 58,400 ug/l, and 223,000 ug/l repsectively. Emerging Contaminant Groundwater Results- Per- and polyfluoroalkyl substances (PFAS): PFAS compounds were detected fairly ubiquitously in the upgradient and downgradient onsite monitoring wells. PFOA concentrations ranged from 27.3 to 91.6 ng/l and PFOS concentrations ranged from 1.21 to 19.3 ng/l. Groundwater analytical results for 1, 4 Dioxane were all non-detect. On-site Soil Vapor Sampling Results- Based upon the analytical laboratory data, the presence of petroleum-related and solvent-related vapors were confirmed in the subsurface and ambient air at concentrations above their respective NYSDOH 25th and/or 75th percentile concentrations for Indoor Air. These compounds for sub-slab values included Tetrachloroethylene, Acetone, Toluene, Benzene, P&M Xylenes, 1,2,4-trimethylbenzene, 2-butanone, cyclohexane, Methylene Chloride, and Isopropanol ranging from non-detect to 280 mg/m3, 790 mg/m3,28 mg/m3, 8.5 mg/m3, 22 mg/m3, 12 mg/m3, 51 mg/m3, 790 mg/m3, 8.3 mg/m and 660 mg/m3 respectively. "

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

DEC Memo: 8/8/23 - Ye - DDO - The caller said they are currently working under a site management plan with BCP #C224225 (DEC PM Fischer). When removing the building slab and wall, they encountered 2 previously unknown 1000-gallon USTs, and the wall jostled one of the tanks, releasing around 15 gallons of petroleum sludge. The other tank is half full. They told the construction manager to stop work until they can get a tank contractor. They've notified DEC Fischer and are working on putting together a more detailed email and registering the tanks with PBS. Spill assigned to DEC Fischer to manage.
Remarks: Unexpected sludg discovered. Further investigation.

Site Description: "Location: The site is located in an urban area, in the Gowanus neighborhood of Brooklyn. The site is bound by a two-story residential building and a multi-story residential building under construction to the north; a a multi-story residential building under construction to the east; Carroll Street to the south; and Bond Street to the west. Site Features: The is approximately 0.36-acre site is currently under construction with a mixed residential

335 BOND STREET (Continued) **S117936667**

	commercial building. Current Zoning and Land Use: The site is currently zoned as M1-4 (manufacturing)/R7-2 (residential). Past Use of the Use: Past uses include a masonry materials, lath and lumber yard from 1886 to 1922, a garage with possible auto servicing and gasoline storage from 1925 to 1938, a commercial delivery service from 1969 to 1980, manufacturing from 1981 to 1996, and a commercial car/livery service from 2002 to present). Site Geology and Hydrogeology: Subsurface strata at the site consists of fill material characterized by loose, brown, fine to coarse sand with some brick and concrete fragments, and trace coal ash. The fill layer extends to depths ranging from approximately 4 feet below ground surface (bgs) to 8.5 feet bgs and is intersected by layers of degraded concrete and brick at varying depths. The fill layer is underlain by native soil characterized by sands and silty sands. Bedrock is part of the Hartland Formation. Groundwater occurs at depths ranging from approximately 6 to 8.5 feet bgs. "
Env Problem:	"Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, chlorinated volatile organic compounds (CVOCs), semi-volatile organic compounds (SVOCs) and non-aqueous phase liquid. Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s restricted residential use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and groundwater monitoring. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Site Description:	"Location: The site is located in an urban area, in the Gowanus neighborhood of Brooklyn. The site is bound by a two-story residential building and a multi-story residential building under construction to the north; a a multi-story residential building under construction to the east; Carroll Street to the south; and Bond Street to the west. Site Features: The is approximately 0.36-acre site is currently under construction with a mixed residential commercial building. Current Zoning and Land Use: The site is currently zoned as M1-4 (manufacturing)/R7-2 (residential). Past Use of the Use: Past uses include a masonry materials, lath and lumber yard from 1886 to 1922, a garage with possible auto servicing and gasoline storage from 1925 to 1938, a commercial delivery service from 1969 to 1980, manufacturing from 1981 to 1996, and a commercial car/livery service from 2002 to present). Site Geology and Hydrogeology: Subsurface strata at the site consists of fill material characterized by loose, brown, fine to coarse sand with some brick and concrete fragments, and trace coal ash. The fill layer extends to depths ranging from approximately 4 feet below ground surface (bgs) to 8.5 feet bgs and is intersected by layers of degraded concrete and brick at varying depths. The fill layer is underlain by native soil characterized by sands and silty sands. Bedrock is part of the Hartland Formation. Groundwater occurs at depths ranging from approximately 6 to 8.5 feet bgs. "
Env Problem:	"Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, chlorinated volatile organic compounds (CVOCs), semi-volatile organic compounds (SVOCs) and non-aqueous phase liquid. Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s restricted residential use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and groundwater monitoring. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Site Code: 507653
Site Description: "Location: The site is located in an urban area, in the Gowanus neighborhood of Brooklyn. The site is bound by a two-story residential building and a multi-story residential building under construction to the north; a a multi-story residential building under construction to the east; Carroll Street to the south; and Bond Street to the west. Site Features: The is approximately 0.36-acre site is currently under construction with a mixed residential commercial building. Current Zoning and Land Use: The site is currently zoned as M1-4 (manufacturing)/R7-2 (residential). Past Use of the Use: Past uses include a masonry materials, lath and lumber yard from 1886 to 1922, a garage with possible auto servicing and gasoline storage from 1925 to 1938, a commercial delivery service from 1969 to 1980, manufacturing from 1981 to 1996, and a commercial car/livery service from 2002 to present). Site Geology and Hydrogeology: Subsurface strata at the site consists of fill material characterized by loose, brown, fine to coarse sand with some brick and concrete fragments, and trace coal ash. The fill layer extends to depths ranging from approximately 4 feet below ground surface (bgs) to 8.5 feet bgs and is intersected by layers of degraded concrete and brick at varying depths. The fill layer is underlain by native soil characterized by sands and silty sands. Bedrock is part of the Hartland Formation. Groundwater occurs at depths ranging from approximately 6 to 8.5 feet bgs. "
Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, chlorinated volatile organic compounds (CVOCs), semi-volatile organic compounds (SVOCs) and non-aqueous phase liquid. Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s restricted residential use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and groundwater monitoring. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."

335 BOND STREET (Continued) **S117936667**

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Updated By:	SXDEYETT
Site Description:	"Location: This site is made up of two adjacent parcels, one located at 388 Carroll Street and one located at 363 Bond Street in Brooklyn, NY. The eastern edge of the site borders the Gowanus Canal. Site Features: A portion of the site contained a one- and two-story light industrial building and another portion was improved with a two-story residential building. Four decommissioned above ground storage tanks (ranging from 5,000 to 10,000 gallon capacity) also existed on the property. All buildings and structures were demolished in 2014 to facilitate remediation of the site. The site is now redeveloped as a five to twelve-story mixed used commercial/residential building with a partial basement, a water from esplanade, a pedestrian walkway and northern portion of the new First Street roadway and sidewalk. The area of the two parcels that make up the site is approximately 1.293 acres. Current Zoning and Land Use: The site is currently vacant. The site is current zoned MX-11 which is a mixed use district that allows residential, commercial, and industrial uses. The site is bounded to the north by a City of New York EMS station, to the east by the Gowanus Canal, to the south an active redevelopment site, and to the west by a three-story mixed-use commercial and residential building and a six-story residential building. Past Use of the Site: Portions of this site have historically been used as paint manufacturer (1915), an oil terminal (1916 1950), and a warehouse (1950 1986). Other recorded uses of the site include an automobile storage and repair facility and a lumber company. Site Geology and Hydrogeology: The site is underlain by an approximately 6-to-17 foot thick layer of miscellaneous fill which is underlain by a clay layer. Groundwater

388 CARROLL STREET AND 363 BOND STREET (Continued) **S116041498**

	was generally observed at depths ranging from five to eight feet below ground surface. Groundwater flow is generally to the east but is affected by the tidal influence from the Gowanus Canal. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluorathene in soil, and naphthalene, 1,2,4 trimethylbenzene, toluene, and xylene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Sampling indicates that the potential for soil vapor intrusion to occur needs to be evaluated off-site. "

Site Description:	"Location: This site is made up of two adjacent parcels, one located at 388 Carroll Street and one located at 363 Bond Street in Brooklyn, NY. The eastern edge of the site borders the Gowanus Canal. Site Features: A portion of the site contained a one- and two-story light industrial building and another portion was improved with a two-story residential building. Four decommissioned above ground storage tanks (ranging from 5,000 to 10,000 gallon capacity) also existed on the property. All buildings and structures were demolished in 2014 to facilitate remediation of the site. The site is now redeveloped as a five to twelve-story mixed used commercial/residential building with a partial basement, a water from esplanade, a pedestrian walkway and northern portion of the new First Street roadway and sidewalk. The area of the two parcels that make up the site is approximately 1.293 acres. Current Zoning and Land Use: The site is currently vacant. The site is current zoned MX-11 which is a mixed use district that allows residential, commercial, and industrial uses. The site is bounded to the north by a City of New York EMS station, to the east by the Gowanus Canal, to the south an active redevelopment site, and to the west by a three-story mixed-use commercial and residential building and a six-story residential building. Past Use of the Site: Portions of this site have historically been used as paint manufacturer (1915), an oil terminal (1916 1950), and a warehouse (1950 1986). Other recorded uses of the site include an automobile storage and repair facility and a lumber company. Site Geology and Hydrogeology: The site is underlain by an approximately 6-to-17 foot thick layer of miscellaneous fill which is underlain by a clay layer. Groundwater was generally observed at depths ranging from five to eight feet below ground surface. Groundwater flow is generally to the east but is affected by the tidal influence from the Gowanus Canal. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluorathene in soil, and naphthalene,

388 CARROLL STREET AND 363 BOND STREET (Continued) **S116041498**

	1,2,4 trimethylbenzene, toluene, and xylene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Sampling indicates that the potential for soil vapor intrusion to occur needs to be evaluated off-site. "

Site Code: 478612
Site Description: "Location: This site is made up of two adjacent parcels, one located at 388 Carroll Street and one located at 363 Bond Street in Brooklyn, NY. The eastern edge of the site borders the Gowanus Canal. Site Features: A portion of the site contained a one- and two-story light industrial building and another portion was improved with a two-story residential building. Four decommissioned above ground storage tanks (ranging from 5,000 to 10,000 gallon capacity) also existed on the property. All buildings and structures were demolished in 2014 to facilitate remediation of the site. The site is now redeveloped as a five to twelve-story mixed used commercial/residential building with a partial basement, a water from esplanade, a pedestrian walkway and northern portion of the new First Street roadway and sidewalk. The area of the two parcels that make up the site is approximately 1.293 acres. Current Zoning and Land Use: The site is currently vacant. The site is current zoned MX-11 which is a mixed use district that allows residential, commercial, and industrial uses. The site is bounded to the north by a City of New York EMS station, to the east by the Gowanus Canal, to the south an active redevelopment site, and to the west by a three-story mixed-use commercial and residential building and a six-story residential building. Past Use of the Site: Portions of this site have historically been used as paint manufacturer (1915), an oil terminal (1916 1950), and a warehouse (1950 1986). Other recorded uses of the site include an automobile storage and repair facility and a lumber company. Site Geology and Hydrogeology: The site is underlain by an approximately 6-to-17 foot thick layer of miscellaneous fill which is underlain by a clay layer. Groundwater was generally observed at depths ranging from five to eight feet below ground surface. Groundwater flow is generally to the east but is affected by the tidal influence from the Gowanus Canal. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluorathene in soil, and naphthalene, 1,2,4 trimethylbenzene, toluene, and xylene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan."
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Sampling indicates that the potential for soil vapor intrusion to occur needs to be evaluated off-site. "

All buildings and structures were demolished in 2014 to facilitate remediation of the site. The site is now redeveloped as a five to twelve-story mixed used commercial/residential building with a partial basement, a water from esplanade, a pedestrian walkway and northern portion of the new First Street roadway and sidewalk. The area of the two parcels that make up the site is approximately 1.293 acres. Current Zoning and Land Use: The site is currently vacant. The site is current zoned MX-11 which is a mixed use district that allows residential, commercial, and industrial uses. The site is bounded to the north by a City of New York EMS station, to the east by the Gowanus Canal, to the south an active redevelopment site, and to the west by a three-story mixed-use commercial and residential building and a six-story residential building. Past Use of the Site: Portions of this site have historically been used as paint manufacturer (1915), an oil terminal (1916 1950), and a warehouse (1950 1986). Other recorded uses of the site include an automobile storage and repair facility and a lumber company. Site Geology and Hydrogeology: The site is underlain by an approximately 6-to-17 foot thick layer of miscellaneous fill which is underlain by a clay layer. Groundwater was generally observed at depths ranging from five to eight feet below ground surface. Groundwater flow is generally to the east but is affected by the tidal influence from the Gowanus Canal. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluorathene in soil, and naphthalene, 1,2,4 trimethylbenzene, toluene, and xylene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Sampling indicates that the potential for soil vapor intrusion to occur needs to be evaluated off-site. "

DEC Memo:	09/30/10 - LZ Reviewed correspondence (eDocs) from Bethlehem Lutheran Church concerning repairs done to the tank after it failed the tightness test. After the fill line had been replaced, the tank passed the tightness test. Obviously, the tank is located in a subterranean vault without access, but the UIS shows the tank as aboveground (see cross-reference). Sent out a spill closure letter that contains a requirement for tank information correction. The spill case is closed. 11/24/2009 TTF letter sent to: Rev. Paul Knudsen Bethlehem Lutheran Church 490 Pacific Street Brooklyn, NY 11217
Remarks:	TANK TEST FAILURE ON A 1500 GALLON UST.

Site Description:	"Location: The site is located at 272 4th Avenue, Block 456, Lot 13 (formerly 272 4th Ave, Lot 23, 274 4th Ave, Lot 13, and 538 Carroll Street, Lot 17). The site is located in the Gowanus section of Brooklyn, NY. The site is abutted to the northeast by Carroll St. followed by a cafe; to the northwest by an auto repair shop followed by a community garden; to the southeast by 4th Ave. followed by apartment buildings and a furniture store; and to the southwest by a bar/cafe, followed by a New York City Transit (NYCT) system substation. Site Features: The site has completed remedial field work and is currently undergoing redevelopment. Current Zoning and Land Use: The site was formerly zoned M1-2 (manufacturing); however, it was rezoned as part of the City-led Gowanus Rezoning and is currently zoned C4-4D (commercial) with an R9A (residential) equivalent. Past Use of the Site: Historical records indicate that the site had numerous historical automotive uses, with some commercial and residential uses. The site was apparent marshland with a single dwelling and a stable with attached sheds in 1888. The apparent marshland was filled in some time before 1906, when the site was partially developed as a bottle facility with a bottle dealer building, a shed, a stable, a washhouse, and bottle racks. By 1926, the bottle facility had been demolished and the site contained a two-story garage with two gasoline tanks (Lot 23), a single-story structure used by a wheelwright (Lot 13), and a stone yard with a single-story shed (Lot 17). By 1951, the first floor of the garage was converted into an auto repair shop with a filling station and gasoline tanks, while the second floor remained a garage (Lot 23) and the remainder of the site was depicted as an automobile garage (Lot 13) and a metal and wood finishing facility (Lot 17). In 1965, the site was depicted as an auto sales and service shop with a garage (Lot 23), part of a machine shop (Lot 13), and an automobile repair facility (Lot 17). Between 1982 and the present, the site remained an automobile service and repair facility (Lot 23), an office (Lot 13), and an unspecified manufacturing facility (Lot 17). Site Geology and Hydrology: The elevation of the site is between 19.08 and 19.72 feet above the North American Vertical Datum of 1988 (NAVD88), which is an approximation of mean sea level. The site surface topography is relatively level, and the regional surface topography generally slopes west-southwest towards the Gowanus Canal and Gowanus Bay. The stratigraphy of the Site, from the surface down, generally consists of historic fill material comprising brown sand, silt, and gravel with trace amounts of brick, glass, porcelain fragments, and concrete from surface grade to depths ranging between approximately 12 and 15 feet below sidewalk grade, underlain by presumed native gray and brown sand and gravel with some silt up to 20 feet below grade surface (bgs) (the terminus of the deepest soil boring). Groundwater beneath the site ranges from elevation 3.46 feet to 6.33 feet NAVD88 (between approximately 12.75 and 15.33 feet bgs). Based on topography, regional groundwater is anticipated to flow in westerly toward the Gowanus Canal. However, groundwater beneath the site appears to flow in a south-southwesterly direction, which may be due

272 4TH AVENUE (Continued) **S125465242**

to and/or affected by dewatering within the southwest-adjacent NYCT system substation and the east-adjacent NYCT subway lines below 4th Avenue for the D, N and R trains. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for multiple uses, including unrestricted use, and restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil - The highest concentrations of VOCs on-site were detected in the northern section of the site at 12-14 ft below grade. 1,2,4-trimethylbenzene was found at a maximum concentration of 5 parts per million (ppm), which exceeds the applicable protection of groundwater soil cleanup objectives (PGSCO) of 3.6 ppm. Chlorobenzene was found at a maximum concentration of 1.9 ppm (PGSCO is 1.1 ppm). The highest concentrations of SVOCs on-site were detected in the western section of the site at 0-2 ft below grade. Benzo(a)anthracene was found at a maximum concentration of 33 ppm, which exceeds the applicable restricted residential soil cleanup objective (RRSCO) of 1 ppm and PGSCO of 1ppm. Benzo(a)pyrene was found at a maximum concentration of 30 ppm, which exceeds the applicable RRSCO of 1 ppm and PGSCO of 22 ppm. Lead was detected in multiple locations throughout the site and at a maximum concentration of 6,100 ppm (RRSCO is 400 ppm). Mercury was detected at a maximum concentration of 24.1 ppm (RRSCO is 0.81 ppm). For the emerging contaminants, neither PFOA nor PFOS exceeded the protection of groundwater guidance value. Data does not indicate any off-site impacts in soil related to this site. Sediment A total of five sediment samples were collected from on-site drains located within the former on-site buildings. Contaminants detected were mainly metals, including lead at 1640 ppm which exceeds RRSCOs of 400ppm. Mercury was detected at 0.312 ppm, RRSCO of 0.81 ppm. Data does not indicate any off-site impacts in sediment related to the site. Groundwater - The highest concentrations of VOCs on-site were detected in the southern portion of the site at concentrations exceeding Ambient Water Quality Standards (AWQS) including chlorobenzene at a maximum concentration of 580 parts per billion (ppb) compared to the AWQS of 5 ppb, 1,2,4-trimethylbenzene at a maximum concentration of 160 ppb (AWQS is 5 ppb), and xylene was found at a maximum concentration of 580 ppb (AWQS is 5 ppb). The highest concentrations of SVOCs were detected in the northwestern portion of the site including benzo(a)anthracene at a maximum concentration of 1.6 ppb (AWQS of 0.002 ppb), and benzo(a)pyrene at a maximum concentration of 1.8 ppb (AWQS of non-detect). PFOS was detected at a maximum concentration of 29.1 parts per trillion (ppt) and PFOA was detected at a maximum concentration of 104 ppt compared with the maximum contaminant level (drinking water standard) of 10 ppt each. Data does not indicate any offsite impacts in groundwater related to this site. Sub-slab Soil Vapor and Indoor Air - Sub-slab soil vapor and concurrent indoor air samples were evaluated using New York State Department of Health Guidance for Evaluating Soil Vapor Intrusion in the State of New York. Trichloroethene (TCE) was detected at the central region of the site at 109 micrograms per cubic meter (ug/m3) in sub-slab soil vapor and 0.29 ug/m3 in indoor air. Tetrachloroethene (PCE) was detected at 1270 ug/m3 in sub-slab soil vapor and 0.515 ug/m3 in indoor air. Data does not indicate any offsite impacts in soil-vapor related to this

HW Code:	C224298
Control Code:	15
Control Type:	ENG
Date Record Added:	11/22/2024
Date Rec Updated:	01/03/2025
Updated By:	SXWU
Site Description:	"Location: The site is located at 272 4th Avenue, Block 456, Lot 13 (formerly 272 4th Ave, Lot 23, 274 4th Ave, Lot 13, and 538 Carroll Street, Lot 17). The site is located in the Gowanus section of Brooklyn, NY. The site is abutted to the northeast by Carroll St. followed by a cafe; to the northwest by an auto repair shop followed by a community garden; to the southeast by 4th Ave. followed by apartment buildings and a furniture store; and to the southwest by a bar/cafe, followed by a New York City Transit (NYCT) system substation. Site Features: The site has completed remedial field work and is currently undergoing redevelopment. Current Zoning and Land Use: The site was formerly zoned M1-2 (manufacturing); however, it was rezoned as part of the City-led Gowanus Rezoning and is currently

272 4TH AVENUE (Continued) **S125465242**

zoned C4-4D (commercial) with an R9A (residential) equivalent. Past Use of the Site: Historical records indicate that the site had numerous historical automotive uses, with some commercial and residential uses. The site was apparent marshland with a single dwelling and a stable with attached sheds in 1888. The apparent marshland was filled in some time before 1906, when the site was partially developed as a bottle facility with a bottle dealer building, a shed, a stable, a washhouse, and bottle racks. By 1926, the bottle facility had been demolished and the site contained a two-story garage with two gasoline tanks (Lot 23), a single-story structure used by a wheelwright (Lot 13), and a stone yard with a single-story shed (Lot 17). By 1951, the first floor of the garage was converted into an auto repair shop with a filling station and gasoline tanks, while the second floor remained a garage (Lot 23) and the remainder of the site was depicted as an automobile garage (Lot 13) and a metal and wood finishing facility (Lot 17). In 1965, the site was depicted as an auto sales and service shop with a garage (Lot 23), part of a machine shop (Lot 13), and an automobile repair facility (Lot 17). Between 1982 and the present, the site remained an automobile service and repair facility (Lot 23), an office (Lot 13), and an unspecified manufacturing facility (Lot 17). Site Geology and Hydrology: The elevation of the site is between 19.08 and 19.72 feet above the North American Vertical Datum of 1988 (NAVD88), which is an approximation of mean sea level. The site surface topography is relatively level, and the regional surface topography generally slopes west-southwest towards the Gowanus Canal and Gowanus Bay. The stratigraphy of the Site, from the surface down, generally consists of historic fill material comprising brown sand, silt, and gravel with trace amounts of brick, glass, porcelain fragments, and concrete from surface grade to depths ranging between approximately 12 and 15 feet below sidewalk grade, underlain by presumed native gray and brown sand and gravel with some silt up to 20 feet below grade surface (bgs) (the terminus of the deepest soil boring). Groundwater beneath the site ranges from elevation 3.46 feet to 6.33 feet NAVD88 (between approximately 12.75 and 15.33 feet bgs). Based on topography, regional groundwater is anticipated to flow in westerly toward the Gowanus Canal. However, groundwater beneath the site appears to flow in a south-southwesterly direction, which may be due to and/or affected by dewatering within the southwest-adjacent NYCT system substation and the east-adjacent NYCT subway lines below 4th Avenue for the D, N and R trains. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for multiple uses, including unrestricted use, and restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil - The highest concentrations of VOCs on-site were detected in the northern section of the site at 12-14 ft below grade. 1,2,4-trimethylbenzene was found at a maximum concentration of 5 parts per million (ppm), which exceeds the applicable protection of groundwater soil cleanup objectives (PGSCO) of 3.6 ppm. Chlorobenzene was found at a maximum concentration of 1.9 ppm (PGSCO is 1.1 ppm). The highest concentrations of SVOCs on-site were detected in the western section of the site at 0-2 ft below grade. Benzo(a)anthracene was found at a maximum concentration of 33 ppm, which exceeds the

272 4TH AVENUE (Continued) **S125465242**

applicable restricted residential soil cleanup objective (RRSCO) of 1 ppm and PGSCO of 1ppm. Benzo(a)pyrene was found at a maximum concentration of 30 ppm, which exceeds the applicable RRSCO of 1 ppm and PGSCO of 22 ppm. Lead was detected in multiple locations throughout the site and at a maximum concentration of 6,100 ppm (RRSCO is 400 ppm). Mercury was detected at a maximum concentration of 24.1 ppm (RRSCO is 0.81 ppm). For the emerging contaminants, neither PFOA nor PFOS exceeded the protection of groundwater guidance value. Data does not indicate any off-site impacts in soil related to this site. Sediment A total of five sediment samples were collected from on-site drains located within the former on-site buildings. Contaminants detected were mainly metals, including lead at 1640 ppm which exceeds RRSCOs of 400ppm. Mercury was detected at 0.312 ppm, RRSCO of 0.81 ppm. Data does not indicate any off-site impacts in sediment related to the site. Groundwater - The highest concentrations of VOCs on-site were detected in the southern portion of the site at concentrations exceeding Ambient Water Quality Standards (AWQS) including chlorobenzene at a maximum concentration of 580 parts per billion (ppb) compared to the AWQS of 5 ppb, 1,2,4-trimethylbenzene at a maximum concentration of 160 ppb (AWQS is 5 ppb), and xylene was found at a maximum concentration of 580 ppb (AWQS is 5 ppb). The highest concentrations of SVOCs were detected in the northwestern portion of the site including benzo(a)anthracene at a maximum concentration of 1.6 ppb (AWQS of 0.002 ppb), and benzo(a)pyrene at a maximum concentration of 1.8 ppb (AWQS of non-detect). PFOS was detected at a maximum concentration of 29.1 parts per trillion (ppt) and PFOA was detected at a maximum concentration of 104 ppt compared with the maximum contaminant level (drinking water standard) of 10 ppt each. Data does not indicate any offsite impacts in groundwater related to this site. Sub-slab Soil Vapor and Indoor Air - Sub-slab soil vapor and concurrent indoor air samples were evaluated using New York State Department of Health Guidance for Evaluating Soil Vapor Intrusion in the State of New York. Trichloroethene (TCE) was detected at the central region of the site at 109 micrograms per cubic meter (ug/m3) in sub-slab soil vapor and 0.29 ug/m3 in indoor air. Tetrachloroethene (PCE) was detected at 1270 ug/m3 in sub-slab soil vapor and 0.515 ug/m3 in indoor air. Data does not indicate any offsite impacts in soil-vapor related to this site. "

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Site Description: "Location: The site is located at 272 4th Avenue, Block 456, Lot 13 (formerly 272 4th Ave, Lot 23, 274 4th Ave, Lot 13, and 538 Carroll Street, Lot 17). The site is located in the Gowanus section of Brooklyn, NY. The site is abutted to the northeast by Carroll St. followed by a cafe; to the northwest by an auto repair shop followed by a community garden; to the southeast by 4th Ave. followed by apartment buildings and a furniture store; and to the southwest by a bar/cafe, followed by a New York City Transit (NYCT) system substation. Site Features: The site has completed remedial field work and is currently undergoing redevelopment. Current Zoning and Land Use: The site was formerly zoned M1-2 (manufacturing); however, it was rezoned as part of the City-led Gowanus Rezoning and is currently zoned C4-4D (commercial) with an R9A (residential) equivalent. Past Use of the Site: Historical records indicate that the site had numerous historical automotive uses, with some commercial and residential uses. The site was apparent marshland with a single dwelling and a stable with attached sheds in 1888. The apparent marshland was filled in some time before 1906, when the site was partially developed as a bottle facility with a bottle dealer building, a shed, a stable, a washhouse, and bottle racks. By 1926, the bottle facility had been demolished and the site contained a two-story garage with two gasoline tanks (Lot 23), a single-story structure used by a wheelwright (Lot 13), and a stone yard with a single-story shed (Lot 17). By 1951, the first floor of the garage was converted into an auto repair shop with a filling station and gasoline tanks, while the second floor remained a garage (Lot 23) and

272 4TH AVENUE (Continued) **S125465242**

the remainder of the site was depicted as an automobile garage (Lot 13) and a metal and wood finishing facility (Lot 17). In 1965, the site was depicted as an auto sales and service shop with a garage (Lot 23), part of a machine shop (Lot 13), and an automobile repair facility (Lot 17). Between 1982 and the present, the site remained an automobile service and repair facility (Lot 23), an office (Lot 13), and an unspecified manufacturing facility (Lot 17). Site Geology and Hydrology: The elevation of the site is between 19.08 and 19.72 feet above the North American Vertical Datum of 1988 (NAVD88), which is an approximation of mean sea level. The site surface topography is relatively level, and the regional surface topography generally slopes west-southwest towards the Gowanus Canal and Gowanus Bay. The stratigraphy of the Site, from the surface down, generally consists of historic fill material comprising brown sand, silt, and gravel with trace amounts of brick, glass, porcelain fragments, and concrete from surface grade to depths ranging between approximately 12 and 15 feet below sidewalk grade, underlain by presumed native gray and brown sand and gravel with some silt up to 20 feet below grade surface (bgs) (the terminus of the deepest soil boring). Groundwater beneath the site ranges from elevation 3.46 feet to 6.33 feet NAVD88 (between approximately 12.75 and 15.33 feet bgs). Based on topography, regional groundwater is anticipated to flow in westerly toward the Gowanus Canal. However, groundwater beneath the site appears to flow in a south-southwesterly direction, which may be due to and/or affected by dewatering within the southwest-adjacent NYCT system substation and the east-adjacent NYCT subway lines below 4th Avenue for the D, N and R trains. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for multiple uses, including unrestricted use, and restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil - The highest concentrations of VOCs on-site were detected in the northern section of the site at 12-14 ft below grade. 1,2,4-trimethylbenzene was found at a maximum concentration of 5 parts per million (ppm), which exceeds the applicable protection of groundwater soil cleanup objectives (PGSCO) of 3.6 ppm. Chlorobenzene was found at a maximum concentration of 1.9 ppm (PGSCO is 1.1 ppm). The highest concentrations of SVOCs on-site were detected in the western section of the site at 0-2 ft below grade. Benzo(a)anthracene was found at a maximum concentration of 33 ppm, which exceeds the applicable restricted residential soil cleanup objective (RRSCO) of 1 ppm and PGSCO of 1ppm. Benzo(a)pyrene was found at a maximum concentration of 30 ppm, which exceeds the applicable RRSCO of 1 ppm and PGSCO of 22 ppm. Lead was detected in multiple locations throughout the site and at a maximum concentration of 6,100 ppm (RRSCO is 400 ppm). Mercury was detected at a maximum concentration of 24.1 ppm (RRSCO is 0.81 ppm). For the emerging contaminants, neither PFOA nor PFOS exceeded the protection of groundwater guidance value. Data does not indicate any off-site impacts in soil related to this site. Sediment A total of five sediment samples were collected from on-site drains located within the former on-site buildings. Contaminants detected were mainly metals, including lead at 1640 ppm which exceeds RRSCOs of 400ppm. Mercury was detected at 0.312 ppm, RRSCO of 0.81 ppm. Data does not indicate any off-site impacts in

272 4TH AVENUE (Continued) **S125465242**

sediment related to the site. Groundwater - The highest concentrations of VOCs on-site were detected in the southern portion of the site at concentrations exceeding Ambient Water Quality Standards (AWQS) including chlorobenzene at a maximum concentration of 580 parts per billion (ppb) compared to the AWQS of 5 ppb, 1,2,4-trimethylbenzene at a maximum concentration of 160 ppb (AWQS is 5 ppb), and xylene was found at a maximum concentration of 580 ppb (AWQS is 5 ppb). The highest concentrations of SVOCs were detected in the northwestern portion of the site including benzo(a)anthracene at a maximum concentration of 1.6 ppb (AWQS of 0.002 ppb), and benzo(a)pyrene at a maximum concentration of 1.8 ppb (AWQS of non-detect). PFOS was detected at a maximum concentration of 29.1 parts per trillion (ppt) and PFOA was detected at a maximum concentration of 104 ppt compared with the maximum contaminant level (drinking water standard) of 10 ppt each. Data does not indicate any offsite impacts in groundwater related to this site. Sub-slab Soil Vapor and Indoor Air - Sub-slab soil vapor and concurrent indoor air samples were evaluated using New York State Department of Health Guidance for Evaluating Soil Vapor Intrusion in the State of New York. Trichloroethene (TCE) was detected at the central region of the site at 109 micrograms per cubic meter (ug/m3) in sub-slab soil vapor and 0.29 ug/m3 in indoor air. Tetrachloroethene (PCE) was detected at 1270 ug/m3 in sub-slab soil vapor and 0.515 ug/m3 in indoor air. Data does not indicate any offsite impacts in soil-vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Site Description: "Location: The site is located at 272 4th Avenue, Block 456, Lot 13 (formerly 272 4th Ave, Lot 23, 274 4th Ave, Lot 13, and 538 Carroll Street, Lot 17). The site is located in the Gowanus section of Brooklyn, NY. The site is abutted to the northeast by Carroll St. followed by a cafe; to the northwest by an auto repair shop followed

272 4TH AVENUE (Continued) **S125465242**

by a community garden; to the southeast by 4th Ave. followed by apartment buildings and a furniture store; and to the southwest by a bar/cafe, followed by a New York City Transit (NYCT) system substation. Site Features: The site has completed remedial field work and is currently undergoing redevelopment. Current Zoning and Land Use: The site was formerly zoned M1-2 (manufacturing); however, it was rezoned as part of the City-led Gowanus Rezoning and is currently zoned C4-4D (commercial) with an R9A (residential) equivalent. Past Use of the Site: Historical records indicate that the site had numerous historical automotive uses, with some commercial and residential uses. The site was apparent marshland with a single dwelling and a stable with attached sheds in 1888. The apparent marshland was filled in some time before 1906, when the site was partially developed as a bottle facility with a bottle dealer building, a shed, a stable, a washhouse, and bottle racks. By 1926, the bottle facility had been demolished and the site contained a two-story garage with two gasoline tanks (Lot 23), a single-story structure used by a wheelwright (Lot 13), and a stone yard with a single-story shed (Lot 17). By 1951, the first floor of the garage was converted into an auto repair shop with a filling station and gasoline tanks, while the second floor remained a garage (Lot 23) and the remainder of the site was depicted as an automobile garage (Lot 13) and a metal and wood finishing facility (Lot 17). In 1965, the site was depicted as an auto sales and service shop with a garage (Lot 23), part of a machine shop (Lot 13), and an automobile repair facility (Lot 17). Between 1982 and the present, the site remained an automobile service and repair facility (Lot 23), an office (Lot 13), and an unspecified manufacturing facility (Lot 17). Site Geology and Hydrology: The elevation of the site is between 19.08 and 19.72 feet above the North American Vertical Datum of 1988 (NAVD88), which is an approximation of mean sea level. The site surface topography is relatively level, and the regional surface topography generally slopes west-southwest towards the Gowanus Canal and Gowanus Bay. The stratigraphy of the Site, from the surface down, generally consists of historic fill material comprising brown sand, silt, and gravel with trace amounts of brick, glass, porcelain fragments, and concrete from surface grade to depths ranging between approximately 12 and 15 feet below sidewalk grade, underlain by presumed native gray and brown sand and gravel with some silt up to 20 feet below grade surface (bgs) (the terminus of the deepest soil boring). Groundwater beneath the site ranges from elevation 3.46 feet to 6.33 feet NAVD88 (between approximately 12.75 and 15.33 feet bgs). Based on topography, regional groundwater is anticipated to flow in westerly toward the Gowanus Canal. However, groundwater beneath the site appears to flow in a south-southwesterly direction, which may be due to and/or affected by dewatering within the southwest-adjacent NYCT system substation and the east-adjacent NYCT subway lines below 4th Avenue for the D, N and R trains. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for multiple uses, including unrestricted use, and restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil - The highest concentrations of VOCs on-site were detected in the northern section of the site at 12-14 ft below grade.

272 4TH AVENUE (Continued) **S125465242**

1,2,4-trimethylbenzene was found at a maximum concentration of 5 parts per million (ppm), which exceeds the applicable protection of groundwater soil cleanup objectives (PGSCO) of 3.6 ppm. Chlorobenzene was found at a maximum concentration of 1.9 ppm (PGSCO is 1.1 ppm). The highest concentrations of SVOCs on-site were detected in the western section of the site at 0-2 ft below grade. Benzo(a)anthracene was found at a maximum concentration of 33 ppm, which exceeds the applicable restricted residential soil cleanup objective (RRSCO) of 1 ppm and PGSCO of 1ppm. Benzo(a)pyrene was found at a maximum concentration of 30 ppm, which exceeds the applicable RRSCO of 1 ppm and PGSCO of 22 ppm. Lead was detected in multiple locations throughout the site and at a maximum concentration of 6,100 ppm (RRSCO is 400 ppm). Mercury was detected at a maximum concentration of 24.1 ppm (RRSCO is 0.81 ppm). For the emerging contaminants, neither PFOA nor PFOS exceeded the protection of groundwater guidance value. Data does not indicate any off-site impacts in soil related to this site. Sediment A total of five sediment samples were collected from on-site drains located within the former on-site buildings. Contaminants detected were mainly metals, including lead at 1640 ppm which exceeds RRSCOs of 400ppm. Mercury was detected at 0.312 ppm, RRSCO of 0.81 ppm. Data does not indicate any off-site impacts in sediment related to the site. Groundwater - The highest concentrations of VOCs on-site were detected in the southern portion of the site at concentrations exceeding Ambient Water Quality Standards (AWQS) including chlorobenzene at a maximum concentration of 580 parts per billion (ppb) compared to the AWQS of 5 ppb, 1,2,4-trimethylbenzene at a maximum concentration of 160 ppb (AWQS is 5 ppb), and xylene was found at a maximum concentration of 580 ppb (AWQS is 5 ppb). The highest concentrations of SVOCs were detected in the northwestern portion of the site including benzo(a)anthracene at a maximum concentration of 1.6 ppb (AWQS of 0.002 ppb), and benzo(a)pyrene at a maximum concentration of 1.8 ppb (AWQS of non-detect). PFOS was detected at a maximum concentration of 29.1 parts per trillion (ppt) and PFOA was detected at a maximum concentration of 104 ppt compared with the maximum contaminant level (drinking water standard) of 10 ppt each. Data does not indicate any offsite impacts in groundwater related to this site. Sub-slab Soil Vapor and Indoor Air - Sub-slab soil vapor and concurrent indoor air samples were evaluated using New York State Department of Health Guidance for Evaluating Soil Vapor Intrusion in the State of New York. Trichloroethene (TCE) was detected at the central region of the site at 109 micrograms per cubic meter (ug/m3) in sub-slab soil vapor and 0.29 ug/m3 in indoor air. Tetrachloroethene (PCE) was detected at 1270 ug/m3 in sub-slab soil vapor and 0.515 ug/m3 in indoor air. Data does not indicate any offsite impacts in soil-vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Benzo(a)anthracene was found at a maximum concentration of 33 ppm, which exceeds the applicable restricted residential soil cleanup objective (RRSCO) of 1 ppm and PGSCO of 1ppm. Benzo(a)pyrene was found at a maximum concentration of 30 ppm, which exceeds the applicable RRSCO of 1 ppm and PGSCO of 22 ppm. Lead was detected in multiple locations throughout the site and at a maximum concentration of 6,100 ppm (RRSCO is 400 ppm). Mercury was detected at a maximum concentration of 24.1 ppm (RRSCO is 0.81 ppm). For the emerging contaminants, neither PFOA nor PFOS exceeded the protection of groundwater guidance value. Data does not indicate any off-site impacts in soil related to this site. Sediment A total of five sediment samples were collected from on-site drains located within the former on-site buildings. Contaminants detected were mainly metals, including lead at 1640 ppm which exceeds RRSCOs of 400ppm. Mercury was detected at 0.312 ppm, RRSCO of 0.81 ppm. Data does not indicate any off-site impacts in sediment related to the site. Groundwater - The highest concentrations of VOCs on-site were detected in the southern portion of the site at concentrations exceeding Ambient Water Quality Standards (AWQS) including chlorobenzene at a maximum concentration of 580 parts per billion (ppb) compared to the AWQS of 5 ppb, 1,2,4-trimethylbenzene at a maximum concentration of 160 ppb (AWQS is 5 ppb), and xylene was found at a maximum concentration of 580 ppb (AWQS is 5 ppb). The highest concentrations of SVOCs were detected in the northwestern portion of the site including benzo(a)anthracene at a maximum concentration of 1.6 ppb (AWQS of 0.002 ppb), and benzo(a)pyrene at a maximum concentration of 1.8 ppb (AWQS of non-detect). PFOS was detected at a maximum concentration of 29.1 parts per trillion (ppt) and PFOA was detected at a maximum concentration of 104 ppt compared with the maximum contaminant level (drinking water standard) of 10 ppt each. Data does not indicate any

272 4TH AVENUE (Continued) **S125465242**

	offsite impacts in groundwater related to this site. Sub-slab Soil Vapor and Indoor Air - Sub-slab soil vapor and concurrent indoor air samples were evaluated using New York State Department of Health Guidance for Evaluating Soil Vapor Intrusion in the State of New York. Trichloroethene (TCE) was detected at the central region of the site at 109 micrograms per cubic meter (ug/m3) in sub-slab soil vapor and 0.29 ug/m3 in indoor air. Tetrachloroethene (PCE) was detected at 1270 ug/m3 in sub-slab soil vapor and 0.515 ug/m3 in indoor air. Data does not indicate any offsite impacts in soil-vapor related to this site. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Updated By: SXWU
Site Code: 590723
Site Description: "Location: The site is located at 272 4th Avenue, Block 456, Lot 13 (formerly 272 4th Ave, Lot 23, 274 4th Ave, Lot 13, and 538 Carroll Street, Lot 17). The site is located in the Gowanus section of Brooklyn, NY. The site is abutted to the northeast by Carroll St. followed by a cafe; to the northwest by an auto repair shop followed by a community garden; to the southeast by 4th Ave. followed by apartment buildings and a furniture store; and to the southwest by a bar/cafe, followed by a New York City Transit (NYCT) system substation. Site Features: The site has completed remedial field work and is currently undergoing redevelopment. Current Zoning and Land Use: The site was formerly zoned M1-2 (manufacturing); however, it was rezoned as part of the City-led Gowanus Rezoning and is currently zoned C4-4D (commercial) with an R9A (residential) equivalent. Past Use of the Site: Historical records indicate that the site had numerous historical automotive uses, with some commercial and residential uses. The site was apparent marshland with a single dwelling and a stable with attached sheds in 1888. The apparent marshland was filled in some time before 1906, when the site was partially developed as a bottle facility with a bottle dealer building, a shed, a stable, a washhouse, and bottle racks. By 1926,

272 4TH AVENUE (Continued) **S125465242**

the bottle facility had been demolished and the site contained a two-story garage with two gasoline tanks (Lot 23), a single-story structure used by a wheelwright (Lot 13), and a stone yard with a single-story shed (Lot 17). By 1951, the first floor of the garage was converted into an auto repair shop with a filling station and gasoline tanks, while the second floor remained a garage (Lot 23) and the remainder of the site was depicted as an automobile garage (Lot 13) and a metal and wood finishing facility (Lot 17). In 1965, the site was depicted as an auto sales and service shop with a garage (Lot 23), part of a machine shop (Lot 13), and an automobile repair facility (Lot 17). Between 1982 and the present, the site remained an automobile service and repair facility (Lot 23), an office (Lot 13), and an unspecified manufacturing facility (Lot 17). Site Geology and Hydrology: The elevation of the site is between 19.08 and 19.72 feet above the North American Vertical Datum of 1988 (NAVD88), which is an approximation of mean sea level. The site surface topography is relatively level, and the regional surface topography generally slopes west-southwest towards the Gowanus Canal and Gowanus Bay. The stratigraphy of the Site, from the surface down, generally consists of historic fill material comprising brown sand, silt, and gravel with trace amounts of brick, glass, porcelain fragments, and concrete from surface grade to depths ranging between approximately 12 and 15 feet below sidewalk grade, underlain by presumed native gray and brown sand and gravel with some silt up to 20 feet below grade surface (bgs) (the terminus of the deepest soil boring). Groundwater beneath the site ranges from elevation 3.46 feet to 6.33 feet NAVD88 (between approximately 12.75 and 15.33 feet bgs). Based on topography, regional groundwater is anticipated to flow in westerly toward the Gowanus Canal. However, groundwater beneath the site appears to flow in a south-southwesterly direction, which may be due to and/or affected by dewatering within the southwest-adjacent NYCT system substation and the east-adjacent NYCT subway lines below 4th Avenue for the D, N and R trains. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for multiple uses, including unrestricted use, and restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil - The highest concentrations of VOCs on-site were detected in the northern section of the site at 12-14 ft below grade. 1,2,4-trimethylbenzene was found at a maximum concentration of 5 parts per million (ppm), which exceeds the applicable protection of groundwater soil cleanup objectives (PGSCO) of 3.6 ppm. Chlorobenzene was found at a maximum concentration of 1.9 ppm (PGSCO is 1.1 ppm). The highest concentrations of SVOCs on-site were detected in the western section of the site at 0-2 ft below grade. Benzo(a)anthracene was found at a maximum concentration of 33 ppm, which exceeds the applicable restricted residential soil cleanup objective (RRSCO) of 1 ppm and PGSCO of 1ppm. Benzo(a)pyrene was found at a maximum concentration of 30 ppm, which exceeds the applicable RRSCO of 1 ppm and PGSCO of 22 ppm. Lead was detected in multiple locations throughout the site and at a maximum concentration of 6,100 ppm (RRSCO is 400 ppm). Mercury was detected at a maximum concentration of 24.1 ppm (RRSCO is 0.81 ppm). For the emerging contaminants, neither PFOA nor PFOS exceeded the protection of groundwater guidance

272 4TH AVENUE (Continued) **S125465242**

value. Data does not indicate any off-site impacts in soil related to this site. Sediment A total of five sediment samples were collected from on-site drains located within the former on-site buildings. Contaminants detected were mainly metals, including lead at 1640 ppm which exceeds RRSCOs of 400ppm. Mercury was detected at 0.312 ppm, RRSCO of 0.81 ppm. Data does not indicate any off-site impacts in sediment related to the site. Groundwater - The highest concentrations of VOCs on-site were detected in the southern portion of the site at concentrations exceeding Ambient Water Quality Standards (AWQS) including chlorobenzene at a maximum concentration of 580 parts per billion (ppb) compared to the AWQS of 5 ppb, 1,2,4-trimethylbenzene at a maximum concentration of 160 ppb (AWQS is 5 ppb), and xylene was found at a maximum concentration of 580 ppb (AWQS is 5 ppb). The highest concentrations of SVOCs were detected in the northwestern portion of the site including benzo(a)anthracene at a maximum concentration of 1.6 ppb (AWQS of 0.002 ppb), and benzo(a)pyrene at a maximum concentration of 1.8 ppb (AWQS of non-detect). PFOS was detected at a maximum concentration of 29.1 parts per trillion (ppt) and PFOA was detected at a maximum concentration of 104 ppt compared with the maximum contaminant level (drinking water standard) of 10 ppt each. Data does not indicate any offsite impacts in groundwater related to this site. Sub-slab Soil Vapor and Indoor Air - Sub-slab soil vapor and concurrent indoor air samples were evaluated using New York State Department of Health Guidance for Evaluating Soil Vapor Intrusion in the State of New York. Trichloroethene (TCE) was detected at the central region of the site at 109 micrograms per cubic meter (ug/m3) in sub-slab soil vapor and 0.29 ug/m3 in indoor air. Tetrachloroethene (PCE) was detected at 1270 ug/m3 in sub-slab soil vapor and 0.515 ug/m3 in indoor air. Data does not indicate any offsite impacts in soil-vapor related to this site. "

272 4TH AVENUE (Continued) **S125465242**

Site Code: 590723

Site Description: "Location: The site is located at 272 4th Avenue, Block 456, Lot 13 (formerly 272 4th Ave, Lot 23, 274 4th Ave, Lot 13, and 538 Carroll Street, Lot 17). The site is located in the Gowanus section of Brooklyn, NY. The site is abutted to the northeast by Carroll St. followed by a cafe; to the northwest by an auto repair shop followed by a community garden; to the southeast by 4th Ave. followed by apartment buildings and a furniture store; and to the southwest by a bar/cafe, followed by a New York City Transit (NYCT) system substation. Site Features: The site has completed remedial field work and is currently undergoing redevelopment. Current Zoning and Land Use: The site was formerly zoned M1-2 (manufacturing); however, it was rezoned as part of the City-led Gowanus Rezoning and is currently zoned C4-4D (commercial) with an R9A (residential) equivalent. Past Use of the Site: Historical records indicate that the site had numerous historical automotive uses, with some commercial and residential uses. The site was apparent marshland with a single dwelling and a stable with attached sheds in 1888. The apparent marshland was filled in some time before 1906, when the site was partially developed as a bottle facility with a bottle dealer building, a shed, a stable, a washhouse, and bottle racks. By 1926, the bottle facility had been demolished and the site contained a two-story garage with two gasoline tanks (Lot 23), a single-story structure used by a wheelwright (Lot 13), and a stone yard with a single-story shed (Lot 17). By 1951, the first floor of the garage was converted into an auto repair shop with a filling station and gasoline tanks, while the second floor remained a garage (Lot 23) and the remainder of the site was depicted as an automobile garage (Lot 13) and a metal and wood finishing facility (Lot 17). In 1965, the site was depicted as an auto sales and service shop with a garage (Lot 23), part of a machine shop (Lot 13), and an automobile repair facility (Lot 17). Between 1982 and the present, the site remained an automobile service and repair facility (Lot 23), an office (Lot 13), and an unspecified manufacturing facility (Lot 17). Site Geology and Hydrology: The elevation of the site is between 19.08 and 19.72 feet above the North American Vertical Datum of 1988 (NAVD88), which is an approximation of mean sea level. The site surface topography is relatively level, and the regional surface topography generally slopes west-southwest towards the Gowanus Canal and Gowanus Bay. The stratigraphy of the Site, from the surface down, generally consists of historic fill material comprising brown sand, silt, and gravel with trace amounts of brick, glass, porcelain fragments, and concrete from surface grade to depths ranging between approximately 12 and 15 feet below sidewalk grade, underlain by presumed native gray and brown sand and gravel with some silt up to 20 feet below grade surface (bgs) (the terminus of the deepest soil boring). Groundwater beneath the site ranges from elevation 3.46 feet to 6.33 feet NAVD88 (between approximately 12.75 and 15.33 feet bgs). Based on topography, regional groundwater is anticipated to flow in westerly toward the Gowanus Canal. However, groundwater beneath the site appears to flow in a south-southwesterly direction, which may be due to and/or affected by dewatering within the southwest-adjacent NYCT system substation and the east-adjacent NYCT subway lines below 4th Avenue for the D, N and R trains. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Remedial actions have

272 4TH AVENUE (Continued) **S125465242**

successfully achieved soil cleanup objectives for multiple uses, including unrestricted use, and restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil - The highest concentrations of VOCs on-site were detected in the northern section of the site at 12-14 ft below grade. 1,2,4-trimethylbenzene was found at a maximum concentration of 5 parts per million (ppm), which exceeds the applicable protection of groundwater soil cleanup objectives (PGSCO) of 3.6 ppm. Chlorobenzene was found at a maximum concentration of 1.9 ppm (PGSCO is 1.1 ppm). The highest concentrations of SVOCs on-site were detected in the western section of the site at 0-2 ft below grade. Benzo(a)anthracene was found at a maximum concentration of 33 ppm, which exceeds the applicable restricted residential soil cleanup objective (RRSCO) of 1 ppm and PGSCO of 1ppm. Benzo(a)pyrene was found at a maximum concentration of 30 ppm, which exceeds the applicable RRSCO of 1 ppm and PGSCO of 22 ppm. Lead was detected in multiple locations throughout the site and at a maximum concentration of 6,100 ppm (RRSCO is 400 ppm). Mercury was detected at a maximum concentration of 24.1 ppm (RRSCO is 0.81 ppm). For the emerging contaminants, neither PFOA nor PFOS exceeded the protection of groundwater guidance value. Data does not indicate any off-site impacts in soil related to this site. Sediment A total of five sediment samples were collected from on-site drains located within the former on-site buildings. Contaminants detected were mainly metals, including lead at 1640 ppm which exceeds RRSCOs of 400ppm. Mercury was detected at 0.312 ppm, RRSCO of 0.81 ppm. Data does not indicate any off-site impacts in sediment related to the site. Groundwater - The highest concentrations of VOCs on-site were detected in the southern portion of the site at concentrations exceeding Ambient Water Quality Standards (AWQS) including chlorobenzene at a maximum concentration of 580 parts per billion (ppb) compared to the AWQS of 5 ppb, 1,2,4-trimethylbenzene at a maximum concentration of 160 ppb (AWQS is 5 ppb), and xylene was found at a maximum concentration of 580 ppb (AWQS is 5 ppb). The highest concentrations of SVOCs were detected in the northwestern portion of the site including benzo(a)anthracene at a maximum concentration of 1.6 ppb (AWQS of 0.002 ppb), and benzo(a)pyrene at a maximum concentration of 1.8 ppb (AWQS of non-detect). PFOS was detected at a maximum concentration of 29.1 parts per trillion (ppt) and PFOA was detected at a maximum concentration of 104 ppt compared with the maximum contaminant level (drinking water standard) of 10 ppt each. Data does not indicate any offsite impacts in groundwater related to this site. Sub-slab Soil Vapor and Indoor Air - Sub-slab soil vapor and concurrent indoor air samples were evaluated using New York State Department of Health Guidance for Evaluating Soil Vapor Intrusion in the State of New York. Trichloroethene (TCE) was detected at the central region of the site at 109 micrograms per cubic meter (ug/m3) in sub-slab soil vapor and 0.29 ug/m3 in indoor air. Tetrachloroethene (PCE) was detected at 1270 ug/m3 in sub-slab soil vapor and 0.515 ug/m3 in indoor air. Data does not indicate any offsite impacts in soil-vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Control Type: INST
Dt record added: 11/22/2024
Dt rec updated: 01/03/2025
Updated By: SXWU
Site Code: 590723
Site Description: "Location: The site is located at 272 4th Avenue, Block 456, Lot 13 (formerly 272 4th Ave, Lot 23, 274 4th Ave, Lot 13, and 538 Carroll Street, Lot 17). The site is located in the Gowanus section of Brooklyn, NY. The site is abutted to the northeast by Carroll St. followed by a cafe; to the northwest by an auto repair shop followed by a community garden; to the southeast by 4th Ave. followed by apartment buildings and a furniture store; and to the southwest by a bar/cafe, followed by a New York City Transit (NYCT) system substation. Site Features: The site has completed remedial field work and is currently undergoing redevelopment. Current Zoning and Land Use: The site was formerly zoned M1-2 (manufacturing); however, it was rezoned as part of the City-led Gowanus Rezoning and is currently zoned C4-4D (commercial) with an R9A (residential) equivalent. Past Use of the Site: Historical records indicate that the site had numerous historical automotive uses, with some commercial and residential uses. The site was apparent marshland with a single dwelling and a stable with attached sheds in 1888. The apparent marshland was filled in some time before 1906, when the site was partially developed as a bottle facility with a bottle dealer building, a shed, a stable, a washhouse, and bottle racks. By 1926, the bottle facility had been demolished and the site contained a two-story garage with two gasoline tanks (Lot 23), a single-story structure used by a wheelwright (Lot 13), and a stone yard with a single-story shed (Lot 17). By 1951, the first floor of the garage was converted into an auto repair shop with a filling station and gasoline tanks, while the second floor remained a garage (Lot 23) and the remainder of the site was depicted as an automobile garage (Lot 13) and a metal and wood finishing facility (Lot 17). In 1965, the site was depicted as an auto sales and service shop with a garage (Lot 23), part of a machine shop (Lot 13), and an automobile repair facility (Lot 17). Between 1982 and the present, the site remained an automobile service and repair facility (Lot 23), an office (Lot 13), and an unspecified manufacturing facility (Lot 17). Site Geology and Hydrology: The elevation of the site is between 19.08 and 19.72 feet above the North American Vertical Datum of 1988 (NAVD88), which is an

272 4TH AVENUE (Continued) **S125465242**

approximation of mean sea level. The site surface topography is relatively level, and the regional surface topography generally slopes west-southwest towards the Gowanus Canal and Gowanus Bay. The stratigraphy of the Site, from the surface down, generally consists of historic fill material comprising brown sand, silt, and gravel with trace amounts of brick, glass, porcelain fragments, and concrete from surface grade to depths ranging between approximately 12 and 15 feet below sidewalk grade, underlain by presumed native gray and brown sand and gravel with some silt up to 20 feet below grade surface (bgs) (the terminus of the deepest soil boring). Groundwater beneath the site ranges from elevation 3.46 feet to 6.33 feet NAVD88 (between approximately 12.75 and 15.33 feet bgs). Based on topography, regional groundwater is anticipated to flow in westerly toward the Gowanus Canal. However, groundwater beneath the site appears to flow in a south-southwesterly direction, which may be due to and/or affected by dewatering within the southwest-adjacent NYCT system substation and the east-adjacent NYCT subway lines below 4th Avenue for the D, N and R trains. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs, and metals in soil, and VOCs in groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for multiple uses, including unrestricted use, and restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil - The highest concentrations of VOCs on-site were detected in the northern section of the site at 12-14 ft below grade. 1,2,4-trimethylbenzene was found at a maximum concentration of 5 parts per million (ppm), which exceeds the applicable protection of groundwater soil cleanup objectives (PGSCO) of 3.6 ppm. Chlorobenzene was found at a maximum concentration of 1.9 ppm (PGSCO is 1.1 ppm). The highest concentrations of SVOCs on-site were detected in the western section of the site at 0-2 ft below grade. Benzo(a)anthracene was found at a maximum concentration of 33 ppm, which exceeds the applicable restricted residential soil cleanup objective (RRSCO) of 1 ppm and PGSCO of 1ppm. Benzo(a)pyrene was found at a maximum concentration of 30 ppm, which exceeds the applicable RRSCO of 1 ppm and PGSCO of 22 ppm. Lead was detected in multiple locations throughout the site and at a maximum concentration of 6,100 ppm (RRSCO is 400 ppm). Mercury was detected at a maximum concentration of 24.1 ppm (RRSCO is 0.81 ppm). For the emerging contaminants, neither PFOA nor PFOS exceeded the protection of groundwater guidance value. Data does not indicate any off-site impacts in soil related to this site. Sediment A total of five sediment samples were collected from on-site drains located within the former on-site buildings. Contaminants detected were mainly metals, including lead at 1640 ppm which exceeds RRSCOs of 400ppm. Mercury was detected at 0.312 ppm, RRSCO of 0.81 ppm. Data does not indicate any off-site impacts in sediment related to the site. Groundwater - The highest concentrations of VOCs on-site were detected in the southern portion of the site at concentrations exceeding Ambient Water Quality Standards (AWQS) including chlorobenzene at a maximum concentration of 580 parts per billion (ppb) compared to the AWQS of 5 ppb, 1,2,4-trimethylbenzene at a maximum concentration of 160 ppb (AWQS is 5 ppb), and xylene was found at a maximum concentration of 580 ppb (AWQS is 5 ppb). The highest concentrations of SVOCs were detected in the northwestern portion of the site including benzo(a)anthracene at

272 4TH AVENUE (Continued) **S125465242**

a maximum concentration of 1.6 ppb (AWQS of 0.002 ppb), and benzo(a)pyrene at a maximum concentration of 1.8 ppb (AWQS of non-detect). PFOS was detected at a maximum concentration of 29.1 parts per trillion (ppt) and PFOA was detected at a maximum concentration of 104 ppt compared with the maximum contaminant level (drinking water standard) of 10 ppt each. Data does not indicate any offsite impacts in groundwater related to this site. Sub-slab Soil Vapor and Indoor Air - Sub-slab soil vapor and concurrent indoor air samples were evaluated using New York State Department of Health Guidance for Evaluating Soil Vapor Intrusion in the State of New York. Trichloroethene (TCE) was detected at the central region of the site at 109 micrograms per cubic meter (ug/m3) in sub-slab soil vapor and 0.29 ug/m3 in indoor air. Tetrachloroethene (PCE) was detected at 1270 ug/m3 in sub-slab soil vapor and 0.515 ug/m3 in indoor air. Data does not indicate any offsite impacts in soil-vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Updated By:	WBBENNET

Site Description: "Site Location: The 21 Denton Place site is a 0.083-acre site located in the Gowanus section of Brooklyn, NY. Site Features: The site is a paved parking lot enclosed by a sheet metal fence and gate on its westernmost boundary. There are no on-site buildings. Current Zoning and Land Use: The site is currently used as a parking lot and is zoned for industrial usage (zone M1-4). Past Use of the Site: Previously, the site was a residential dwelling from 1906 to 1951 and was used as a parking lot from 1965 to 2007. Site Geology and Hydrogeology: The stratigraphy of the site consists of 8 feet of dark brown, sandy soil and historic fill material (crushed red brick, concrete) underlain by 4 feet of silty clay soil. Groundwater is 11-12 feet below sidewalk grade and flows westerly."

Env Problem: "Nature and Extent of Contamination: Soil: Ten soil samples were collected from five installed soil borings. Trichloroethene (max. 3.9 ppm) was detected exceeding its UUSCO in two soil sampling locations. Ten SVOCs Benzo(a)anthracene (max. 290 ppm), Benzo(a)pyrene (max. 240 ppm), Benzo(b)fluoranthene (max. 210 ppm), Chrysene (max. 280 ppm), Dibenzo(a,h)anthracene (max. 39 ppm), Fluoranthene (max. 510 ppm), Indeno(1,2,3-cd)pyrene (max. 160 ppm), Phenanthrene (max. 530 ppm), Pyrene (max. 410 ppm), and Anthracene (max. 130 ppm) were detected in shallow soils. Five metals including lead (max. 15300 ppm) and mercury (max. 5.69 ppm) were detected, with the maximum lead concentration occurring at a deeper depth of 10-12 ft bgs. Groundwater: In groundwater, three monitoring wells were installed with a single sample taken from each. Groundwater is 11-12 ft bgs and flows westerly. Ten SVOCs were detected exceeding their respective AWQS: 2-Methylnaphthalene (max. 84 ppb), Acenaphthene (max. 69 ppb);

LOT 6,TAXBLOCK 456 (Continued) **S128902302**

Naphthalene (max. 260 ppb); Phenanthrene (max. 70 ppb), Benz(a)anthracene (max. 0.97 ppb); Benzo(a)pyrene (max. 0.25 ppb); Benzo(b)fluoranthene (max. 0.53 ppb); Benzo(k)fluoranthene (max. 0.4 ppb); Chrysene(max. 1.7 ppb); and Indeno(1,2,3-cd)pyrene (max. 0.28 ppb). Several metals, Aluminum (max. 12200 ppb), Arsenic (max. 93 ppb), Iron (max. 52300 ppb), Manganese (max. 1390 ppb), and Sodium (max. 22100 ppb) were found above their respective AWQS. PFAS compounds were also detected in all groundwater samples ranging from 2.09 ppt to 152 ppt. Soil Vapor: Five soil vapor implants were installed on the site. TCE and PCE were detected with maximum concentrations of 1980 ug/m3 and 16.8 ug/m3 respectively. Total BTEX ranged from 5.38 ug/m3 to 1700 ug/m3 beneath the site."

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 4/28/04. All State is an insurance carrier for home owner hired Milro to clean up. They found cracks on the concrete floor slab and belief that some oil went through. YK. 5/10/04. J.Krimgold spoke to Poul (Milro). They removed concrete around cracks and found substantial soil contamination. Currently they excavated 6'x6' area to the depth of 3-4' and will take post excavation samples. 6/01/04. J.Krimgold spoke to Poul (Milro). Soil analytical show some contaminants above TAGM levels. However, due to a construction constraints further excavation is not feasible. Agreed to cease excavation, apply bio nutrients into excavation pit, fill with clean soil, seal with concrete and epoxy paint. NFA.
Remarks:	Tank has a hole in it which caused the leak. The spill is currently being cleaned up.

Site Description:	"Location: The property is an approximately 2.5 acre site located in a commercial/industrial area of Brooklyn at 153 2nd Street a/k/a 322 3rd Avenue. The Gowanus Canal is located adjacent to the site to the northwest. Site Features: A 24,200 square foot, three story structure occupies the eastern portion of the site. The building has a basement

GOWANUS VILLAGE I (Continued) **S121933912**

floor that is a 13 foot thick concrete slab that extends below the water table. The remainder of the site is covered by the final site cover system. Current Zoning and Land Use: The site is currently inactive and is zoned as a manufacturing district (M2-1) by the City of New York. The property uses surrounding the site are primarily light industrial, with a small concentration of residential use. The closest residential properties are located approximately 300 feet to the northeast of the site near the intersection of 3rd Avenue and Carroll Street. The site is bordered to the north by a 60 foot wide filled-in canal (former 1st Street Basin), which is to be restored as part of the Gowanus Canal NPL site remedy. To the east is a storage facility, a Verizon truck depot is located south of the site, and the Gowanus Canal, which is approximately 100 feet wide, lies directly west of the site. Past Use of the Site: Sanborn maps dating back to 1886 indicate that the site was occupied by Nassau Sulfur Works and Smith and Shaw Mattress Materials and Paper Stock. In 1904, the property was transferred to the Brooklyn Rapid Transit R.R. Power Plant. Under their ownership, it appears that coal was delivered by water and transported beneath the site via coal tunnel. In 1938, the property was turned over to the Williamsburg Power Plant Corporation and used as a central power station. The property was transferred to the New York City Transit System in 1950, where it was used as an electrical sub-station and switching yard until 1996. Site Geology and Hydrogeology: The site is underlain by urban fill, generally to a depth of about 8 feet, but reportedly ranging to depths up to 24 feet in some areas. Below the fill is a layer of organic silt indicative of a historic wetland. The depth to groundwater ranges from about 7 feet to 20 feet with groundwater movement generally to the northwest toward the Gowanus Canal. "

Env Problem:	"Remediation at the site is complete. Prior to remediation the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and polychlorinated biphenyls (PCBs). Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

GOWANUS VILLAGE I (Continued) **S121933912**

Site Description: "Location: The property is an approximately 2.5 acre site located in a commercial/industrial area of Brooklyn at 153 2nd Street a/k/a 322 3rd Avenue. The Gowanus Canal is located adjacent to the site to the northwest. Site Features: A 24,200 square foot, three story structure occupies the eastern portion of the site. The building has a basement floor that is a 13 foot thick concrete slab that extends below the water table. The remainder of the site is covered by the final site cover system. Current Zoning and Land Use: The site is currently inactive and is zoned as a manufacturing district (M2-1) by the City of New York. The property uses surrounding the site are primarily light industrial, with a small concentration of residential use. The closest residential properties are located approximately 300 feet to the northeast of the site near the intersection of 3rd Avenue and Carroll Street. The site is bordered to the north by a 60 foot wide filled-in canal (former 1st Street Basin), which is to be restored as part of the Gowanus Canal NPL site remedy. To the east is a storage facility, a Verizon truck depot is located south of the site, and the Gowanus Canal, which is approximately 100 feet wide, lies directly west of the site. Past Use of the Site: Sanborn maps dating back to 1886 indicate that the site was occupied by Nassau Sulfur Works and Smith and Shaw Mattress Materials and Paper Stock. In 1904, the property was transferred to the Brooklyn Rapid Transit R.R. Power Plant. Under their ownership, it appears that coal was delivered by water and transported beneath the site via coal tunnel. In 1938, the property was turned over to the Williamsburg Power Plant Corporation and used as a central power station. The property was transferred to the New York City Transit System in 1950, where it was used as an electrical sub-station and switching yard until 1996. Site Geology and Hydrogeology: The site is underlain by urban fill, generally to a depth of about 8 feet, but reportedly ranging to depths up to 24 feet in some areas. Below the fill is a layer of organic silt indicative of a historic wetland. The depth to groundwater ranges from about 7 feet to 20 feet with groundwater movement generally to the northwest toward the Gowanus Canal. "

Env Problem: "Remediation at the site is complete. Prior to remediation the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and polychlorinated biphenyls (PCBs). Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 332623
Site Description: "Location: The property is an approximately 2.5 acre site located in a commercial/industrial area of Brooklyn at 153 2nd Street a/k/a 322 3rd Avenue. The Gowanus Canal is located adjacent to the site to the northwest. Site Features: A 24,200 square foot, three story structure occupies the eastern portion of the site. The building has a basement floor that is a 13 foot thick concrete slab that extends below the water table. The remainder of the site is covered by the final site cover system. Current Zoning and Land Use: The site is currently inactive and is zoned as a manufacturing district (M2-1) by the City of New York. The property uses surrounding the site are primarily light industrial, with a small concentration of residential use. The closest residential properties are located approximately 300 feet to the northeast of the site near the intersection of 3rd Avenue and Carroll Street. The site is bordered to the north by a 60 foot wide filled-in canal (former 1st Street Basin), which is to be restored as part of the Gowanus Canal NPL site remedy. To the east is a storage facility, a Verizon truck depot is located south of the site, and the Gowanus Canal, which is approximately 100 feet wide, lies directly west of the site. Past Use of the Site: Sanborn maps dating back to 1886 indicate that the site was occupied by Nassau Sulfur Works and Smith and Shaw Mattress Materials and Paper Stock. In 1904, the property was transferred to the Brooklyn Rapid Transit R.R. Power Plant. Under their ownership, it appears that coal was delivered by water and transported beneath the site via coal tunnel. In 1938, the property was turned over to the Williamsburg Power Plant Corporation and used as a central power station. The property was transferred to the New York City Transit System in 1950, where it was used as an electrical sub-station and switching yard until 1996. Site Geology and Hydrogeology: The site is underlain by urban fill, generally to a depth of about 8 feet, but reportedly ranging to depths up to 24 feet in some areas. Below the fill is a layer of organic silt indicative of a historic wetland. The depth to groundwater ranges from about 7 feet to 20 feet with groundwater movement generally to the northwest toward the Gowanus Canal. "
Env Problem: "Remediation at the site is complete. Prior to remediation the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and polychlorinated biphenyls (PCBs). Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 1/7/04-Vought-Spill transferred from Vought to Austin. 01/27/04 - Sawyer - Spill transferred from Austin to Sawyer. 12/1/05- DEC Piper spoke w/ property managerSteve Colavito. He stated that he doesn't know much though he will look into it. I then spoke w/ the building super Jean Menos. He stated that the tank is underground in a concrete vault beneath the sidewalk. FIR must be adjusted. I left a message for steve to call me back. I also place d a call into PTC to provide documentation of work performed. 12/5/05- DEC Piper received info on repairs. Replaced Vent line retested, passed.
Remarks:	RECOMMEND TO CLEAN TANK-RE TEST AND INSPECT.

City,State,Zip:	BROOKLYN, NY 11231
Site Code:	478842
HW Code:	C224174
Control Code:	15
Control Type:	ENG
Date Record Added:	10/21/2015
Date Rec Updated:	01/02/2026
Updated By:	SXDEYETT
Site Description:	"Location: The site is located at 365 Bond Street, Brooklyn, Kings County. The site is south of the intersection of Bond Street and First Street. It is bounded to the northeast by First Street, to the southeast by the Gowanus Canal, to the southwest by Second Street and to the northwest by Bond Street. Site Features: The site is 2.066 acres in area. The former vacant lot is has been re-developed into a 12-story mixed use commercial and residential building. Current Zoning and Land Use(s): The site is zoned as M1-4/R7-2, a Special Mixed Use District comprised of light industrial, commercial and community facility (residential) uses. The site is bounded to the north by 1st Street across which is located a BCP site, to the east by the Gowanus Canal, to the south by 2nd Street across which are located three-story residential buildings and one- and two-story commercial facilities, and to the west by Bond Street across which are located three-story mixed-use commercial and residential buildings. Past Use of the Site: Past uses of the site include oil terminal (1886 through 1939); a building materials warehouse (1886 through 1915); a lumber company (1939); a paper products warehouse (1950); an electric wire and cable company (1969); and a warehouse (1977 through 1986). Other recorded uses of the site include an automobile storage and repair facility, and a dry cleaning facility. The previous owner performed the Phase I and the Phase II Environmental Site Assessments in 2004. Site Geology and Hydrogeology: The site is underlain by an approximately 5.5- to 13-foot thick layer of miscellaneous fill material that is underlain by a 5- to 8-foot thick continuous clay confining layer. Groundwater is approximately 2.5 to 10 feet below ground surface (bgs). Due to the site's proximity to the Canal, groundwater flow is tidally influenced but generally flows to east/northeast. The clay confining unit is located approximately 9 feet to 10 feet bgs and separates the shallow aquifer from the lower groundwater unit. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, arsenic, lead, barium, mercury, xylene, trichloroethene (TCE), propylbenzene, tetrachloroethylene (PCE), benzene, phenol, n-propylbenzene, isopropyl benzene in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil is being managed under a Site Management Plan. Groundwater contamination is nominal and will

365 BOND STREET (Continued) **S106720972**

	improve since the removal of contaminated soil is completed. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Code: 478842
Site Description: "Location: The site is located at 365 Bond Street, Brooklyn, Kings County. The site is south of the intersection of Bond Street and First Street. It is bounded to the northeast by First Street, to the southeast by the Gowanus Canal, to the southwest by Second Street and to the northwest by Bond Street. Site Features: The site is 2.066 acres in area. The former vacant lot is has been re-developed into a 12-story mixed use commercial and residential building. Current Zoning and Land Use(s): The site is zoned as M1-4/R7-2, a Special Mixed Use District comprised of light industrial, commercial and community facility (residential) uses. The site is bounded to the north by 1st Street across which is located a BCP site, to the east by the Gowanus Canal, to the south by 2nd Street across which are located three-story residential buildings and one- and two-story commercial facilities, and to the west by Bond Street across which are located three-story mixed-use commercial and residential buildings. Past Use of the Site: Past uses of the site include oil terminal (1886 through 1939); a building materials warehouse (1886 through 1915); a lumber company (1939); a paper products warehouse (1950); an electric wire and cable company (1969); and a warehouse (1977 through 1986). Other recorded uses of the site include an automobile storage and repair facility, and a dry cleaning facility. The previous owner performed the Phase I and the Phase II Environmental Site Assessments in 2004. Site Geology and Hydrogeology: The site is underlain by an approximately 5.5- to 13-foot thick layer of miscellaneous fill material that is underlain

365 BOND STREET (Continued) **S106720972**

by a 5- to 8-foot thick continuous clay confining layer. Groundwater is approximately 2.5 to 10 feet below ground surface (bgs). Due to the site's proximity to the Canal, groundwater flow is tidally influenced but generally flows to east/northeast. The clay confining unit is located approximately 9 feet to 10 feet bgs and separates the shallow aquifer from the lower groundwater unit. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, arsenic, lead, barium, mercury, xylene, trichloroethene (TCE), propylbenzene, tetrachloroethylene (PCE), benzene, phenol, n-propylbenzene, isopropyl benzene in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil is being managed under a Site Management Plan. Groundwater contamination is nominal and will improve since the removal of contaminated soil is completed. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Code: 478842
Site Description: "Location: The site is located at 365 Bond Street, Brooklyn, Kings County. The site is south of the intersection of Bond Street and First Street. It is bounded to the northeast by First Street, to the southeast by the Gowanus Canal, to the southwest by Second Street and to the northwest by Bond Street. Site Features: The site is 2.066 acres in area. The former vacant lot is has been re-developed into a 12-story mixed use commercial and residential building. Current Zoning and Land Use(s): The site is zoned as M1-4/R7-2, a Special Mixed Use District comprised of light industrial, commercial and community facility (residential) uses. The site is bounded to the north by 1st Street across which is located a BCP site, to the east by the Gowanus Canal, to the south by 2nd Street across which are located three-story residential buildings and one- and two-story commercial facilities, and to the west by Bond Street across which are located three-story mixed-use commercial and residential buildings. Past Use of the Site: Past uses of the site include oil terminal (1886 through 1939); a building materials warehouse (1886 through 1915); a lumber company (1939); a paper products warehouse (1950); an electric wire and cable company (1969); and a warehouse (1977 through 1986). Other recorded uses of the site include an automobile storage and repair facility, and a dry cleaning facility. The previous owner performed the Phase I and the Phase II Environmental Site Assessments in 2004. Site Geology and Hydrogeology: The site is underlain by an approximately 5.5- to 13-foot thick layer of miscellaneous fill material that is underlain by a 5- to 8-foot thick continuous clay confining layer. Groundwater is approximately 2.5 to 10 feet below ground surface (bgs). Due to the site's proximity to the Canal, groundwater flow is tidally influenced but generally flows to east/northeast. The clay confining unit is located approximately 9 feet to 10 feet bgs and separates the shallow aquifer from the lower groundwater unit. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, arsenic, lead, barium, mercury, xylene, trichloroethene (TCE), propylbenzene, tetrachloroethylene (PCE), benzene, phenol, n-propylbenzene, isopropyl benzene in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil is being managed under a Site Management Plan. Groundwater contamination is nominal and will improve since the removal of contaminated soil is completed. "
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil is being managed under a Site Management Plan. Groundwater contamination is nominal and will improve since the removal of contaminated soil is completed. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

DEC Memo:	8/26/22 - Ye, DDO - Spoke to the caller, who is the Health and Safety Officer for Cashman Dredging. While dredging, a fitting broke on the grab bucket, possibly due to debris getting caught. The bucket was put on a mini hopper and a safety boat deployed oil absorbent sausage booms north and south of the barge, in the Gowanus Canal near 365 Bond Street. A skiff was used to clean up the oil within the area. Cleanup is expected to be completed within 5 minutes. Spill closed.

DEC Memo:	CSL has been sent to: Joseph Fillips P.O.Box 451 New York, NY 10028-0018 YK. 10/18/04. Paul Casowitz (212-421-2150)an attorney for Mr. J. Fillips called and informed that he is a contact person for this case. And a formal letter in response to our CSL will be sent soon. Y.K. 08/30/05: I attempted to return Paul Casowitz's phone call. His message stated that his client would be filing a brownfields application to handle all the environmental concerns. I will check on this. Steve Scharf Pcasowitz@sprlaw.com Paul Casowitz Sive Paget & Riesel, P.C. 460 Park Avenue New York, NY 10022 AKRF Inc. (Ally, King, Rosen and Fleming) will be consultant submitting application. Toll Brothers Inc., is buying the property. description: Phillips Bros is a trust, the purchase money is going mostly into escrow until the environmetnal issues are resolved. site is on the erie basin of the Gowonus canal. There was some free product identivied in the due diligance environmental sampling. Sampling was done by Petroleum Tank cleaners (718)624-4842. S. Scharf 09/07/05 Sent the following e-mail to Paul Casowitz 2/28/06- I am following up on 365 Bond Street. You were going to get back to me with regard to the open spill, spill No. 0407393, on the property and whether your client was going to file a Brownfields application. thanks Steven M. Scharf, P.E. Reply: Steven, My client is the owner--Toll Bros is the contract vendee, they may have closed on title, I am not sure. Toll Brothers filed the BCP application for the site. I am away on vacation from 3/1-8--let me know if you have an application from Toll Bros. Of course in real estate, one never knows the name---special purpose entities being the rule. The BCP group should be able to advise you by the site location.- Paul Casowitz-Sive Paget & Riesel, P.C., 460 Park Avenue New York, NY 10022 03/02/06: Copy of E-mail to Paul Casowitz: Paul, What I'm being told is that, under the NYS Navigation Law (Article 12), the owner at the time (your client) of the reported spill is responsible for remediation of the discharge. thanks, Steven M. Scharf, P.E. greater than greater than greater than Paul Casowitz 3/2/2006 9:44:11 AM greater than greater than greater than Steve,

365 BOND STREET (Continued) **S106720972**

Good---I assume any issues re the spill will be addressed to the applicant. Paul:
pcasowitz@sprlaw.com From: Steven Scharf [mailto:sxscharf@gw.dec.state.ny.us] Sent: Thu 3/2/2006 9:33 AM To: Paul Casowitz Subject: RE: 365 Bond Street, Brooklyn, Spill no 0407393 Paul, FYI, A BCP application, App. No. C224116, was processed on 6/7/05. Thanks: Steven Scharf, P.E. NYSDEC refer to John Grathwol. Working on brownfield. S. scharf Previously assigned to S. Scharf and J. Grathwol in Albany office. 10/11/06 - Austin - Reassigned from Central Office staff to Piper, for follow up and closure - end Due to rezoning issues. the applicant withdrew the BCP application in December 2006.
12/08/2008: This spill case was transferred to A. Doronova. AD From now on the progress on this case should be tracked under spill case No.0400876. Toll Brothers is potential buyer who will redevelop the site. AD 04/2010: This site was listed as a part of Gowanus Cannal to EPA's Superfund Program. AD 04/29/2010: Received an e-mail from Mr. Yudelson (attorney for Toll Brothers) saying:
Ainura This email is to confirm that I have met with EPA and EPA indicated they will not be in a position to determine what, if any, remedial activities they will require at the Bond Street properties regarding the Superfund Site until the fall. I expect to meet with them again and will inform you if anything changes. Dave (917)295-6449 06/2010: Called and spoke with Mr. Yudelson. He told me that Toll Brothers is no longer interested in buying the site, after it was listed as a Superfund site. Mr. Yudelson gave me a contact info in EPA: Mr. Brian Carr, phone: (212)637-3170.
AD 07/26/2010: Called and left a message to D. Yudelson. AD 07/28/2010: Called and left a message to Mr. P. Casowitz - attorney for Mr. Joseph Phillips. Later received a call from D. Yudelson. He told me that the site is owned by Mr. Phillips and Citibank. The site is currently for sale, and Mr. Yudelson is representing a potential buyer. He is going to meet with Mr. Phillips regarding the site cleanup and will contact us later with the results. AD 08/04/2010: Called and spoke with Mr. Yudelson. He gave me a contact info of Mr. Niel Dorman (212)753-7500 - attorney for Mr. Phillips.
Will call him. AD 12/2/11 - Austin - Received call from Craig (917-952-8216), an independent consultatnt, who wished to know who the DEC project manager was for this spill report. I provided him DEC Doronova's name and phone #. He indicated that he was working with Dave Yudelson on this site, onbehalf of a new buyer (who, according to Craig, was a different buyer than was prevously involved with Mr. Yudelson). - end 12/02/2011: Received a messade from Craig Puerta, phone:
917-952-8216. Called and spoke with him regarding site remediation.

365 BOND STREET (Continued) **S106720972**

Mr. Puerta said that they plan to do remedial excavation instead of soil stabilization as per old approved work plan. Requested him to submit revised work plan for review. AD 01/06/2012: Called and spoke with Mr. Puerta. He told me that his company did not signed the contract yet with the potential buyer, so they are waiting for buyer's decision. Called and spoke with D. Yudelson. He informed me that he is working for the potential buyer, who wants to buy all three properties, previously known as Tall Brooklyn Project and included three spill sites: # 0407393, # 0501697 and # 0400876. Mr. Yudelson said that the contract will be probably singed within next weeks. Mr. Graig Puerta is working with Mr. Yudelson and will be performing environmnetal services to the buyer. Mr. Yudelson will contact me, when contract will be finalazied. AD 08/22/2012: Received the following e-mail from D. Yudelson: Ainura - This project is under consideration and I represent the prospective purchaser, Lightstone Group. The attached is proposed additional delineation sampling with an objective of amending the RAP s for excavation like at 400 Carroll. I believe if this is a go work will start this winter. We are coordinating with EPA and NYC as well. I will keep you posted on the progress and let me know if you have questions. Dave From: David Yudelson Sent: Monday, July 23, 2012 10:19 AM To: Cole, Daniel (DanielCo@dep.nyc.gov) Cc: Steve Ciambruschini (sciambruschini@Langan.com); Christopher McMahon (cmcmahon@Langan.com) Subject: Need to schedule a meeting asap Dan Attached are compilations of all existing data and proposed sampling locations. Soil gas has been added on each site and additional delineation is proposed. There is also an approved DEC work plan for 400 which provides for excavation. I need to know if the additional sampling is adequate as we are doing it asap during due diligence. Dave DL documents into eDocs. AD 10/22/2012: Called and spoke with D. Yudelson. He said that they planning to start additional investigation soon, and that a work plan for such investigation will be submitted in one week. AD This site entered into BCP agreement and is managed by Albany. Site's PM is John Grathwol. 12/5/13: Under BCP site code C224174, IRM Work Plan is approved to be release for public comment. Citizen Participation Plan is under Department review. A public availability session will be held during the public comment period. It is anticipated that the spill contamination will be removed during this IRM. The 2014 Decision Document will address the remaining, if any, contamination. (Grathwol) 11/6/15: Department approved Final Engineering Report and executed the Certificate of Completion for the site owner. Spill

DEC Memo:	DEC Piper spoke with Neal Tomasseti. Building is under renovation after fire 2 years ago. Site has a 16K AST on saddles installed in 1960. 2-333735 1-16K #2 oil tank on saddles. While installing footings for additional structural support, globules of oily water were observed entering excavation. Additionally, two nearby sumps also had small amounts of oily water. East coast placed absorbent pads in pits and will monitor over next two weeks. Lines should be tested and if problem persists, several borings should be placed in basement to delineate. TTF letter sent to MICHAELANGELO GIIK FLATIRON LLC c/o GFP REAL ESTATE, LLC 594 BROADWAY Suite 311 New York, NY 10012 Property Manager- Art D'Estrada GFP REAL ESTATE, LLC o-(212) 625-6203 c-914-760-9816 email-adestrada@gfpre.com 03/24/23-Hiralkumar Patel. 8:00 AM:- received email from Neil. he mentioned that while working at the site monitoring the current #6 oil spill, they inspected the oil tank and found a very small #2 oil leak at the East end of the tank. the tank is set on concrete saddles and each saddle is progressively shorter running West to East where the East end is in contact with the concrete pad beneath the tank. East Coast tested the tank early this morning and the system failed the test. they disconnected the piping and tested each pipe line (fill, vent, supply and return) and the piping passed. the tank only failed the test with a leak below the liquid level. as of this morning there s only 12 inches of product in the tank (#2 Oil) and East Coast is in process of pumping out the tank. they will also seal the fill port. Neil sent pictures

175 FIFTH AVENUE (Continued) **S129994758**

of the corrosion at both end of the tank beneath the saddle supports. Neil stated that the oil leak
at the East end is very small and could not amount to more than a quart of oil but has been lying
on the ground for some-time because the epoxy coating has blistered/bubbled. there are no breaks in
the concrete pad and is not associated with the current # 6 oil leak. 03/30/23-Hiralkumar Patel.
11:39 AM:- spoke with Neil and asked him about tank room floor condition. he confirmed that no
cracks were noted in epoxy coated tank room floor, but floor beneath the tank's east end can not be
inspected as tank touches the floor. asked him to confirm floor integrity where tank touches ground
or collect samples to confirm no subsurface impact. also asked Neil about oily material noted on
water within footers. he mentioned that some oil drops were noted on water within footing
excavation which is 3 ft deep. they used absorbent pads to collect oily material. asked Neil to
submit pics of footing area. he also stated that the site has two rectangular riveted hydraulic
tanks which were taken out of service long time ago. as tank tops are open, these tanks can not be
pressure/vacuum tested. 03/31/23-Hiralkumar Patel. received email from Neil (at 4:00 PM on
03/30/23) including site pics. he mentioned that oil droplets were noted on top of water in an
excavation for foundation for new stairwell support beam and also in sump #6. no more oil observed
after cleaning out droplets. water sample with oil has been collected for fingerprint analysis.
Neil mentioned that the 16,000-gal tank will be removed and they will inspect floor underneath the
tank. Neil plans to visit site weekly to inspect sumps and will provide updates.
04/05/23-Hiralkumar Patel. received email from Marie Broderick (mbroderick@ace-atlas.com) from ACE
Atlas (at 12:32 PM on 04/04/23) including copy of a PBS pre-work notification for removal of the
16,000-gal tank. 04/07/23-Hiralkumar Patel. 1:36 PM:- sent email to Neil inquiring about
observations during a weekly visit. email copied to Robert Knief (rob@ace-atlas.com).
04/10/23-Hiralkumar Patel. received email from Neil (at 4:11 PM on 04/07/23). he visited the site
on 4/5/23 and removed absorbent pads covering the water in all the sumps and found the water to be
clean with no signs of oil in all the sumps except sump #6. sump # 6 had some oil droplets but no
large accumulation. Neil has sent a water sample to lab for fingerprint analysis to see if it is
actually oil or hydraulic fluid being that is an empty tank on site. 05/05/23-Hiralkumar Patel.
received email from Neil (at 3:56 PM on 05/04/23) including site pics and tank removal affidavit.
Neil mentioned that there are no breaks observed in concrete floor

175 FIFTH AVENUE (Continued) **S129994758**

where noticeable oil spill
occurred at end of the tank. Neil also confirmed that sumps were found clean during weekly
inspection for three weeks in row. even after couple of heavy rains in past two weeks, no oil has
risen in the sumps. Neil suspects some historical release in a boiler room (which is at a lower
level then sumps) as a source for oil droplets observed in sumps. Neil will reinspect the site and
provide updates. 05/19/23-Hiralkumar Patel. 1:222 PM:- received email from Neil including site
pics. he revisited the site on 05/17/2023. as there were no heavy rain events recently, the water
in the sumps has receded with no signs of oil mixed with water or soil. 05/26/23-Hiralkumar Patel.
12:05 PM:- visited site and inspected one sump in the building basement. noted clear water within
the sump. no petroleum sheen/droplets/odors were noted. also inspected former tank room. noted some
oil stains on tank room concrete floor, but floor was found in good condition. 05/30/23-Hiralkumar
Patel. case closed based on available information.

Remarks: spotty oil and water come up from the ground when digging holes for footings - cleanup pending

Update By:	DMMOLOUG
Site Description:	"Remediation of the site is proposed under the Brownfield Cleanup Program. The Toll Brooklyn, LP site is located in Kings County, NY and is comprised of three separate parcels, which were investigated separately between 1997 and 2005. The parcels include 363 Bond Street (Tax Block 452, Lot 1), 365 Bond Street (Tax Block 458, Lot 1) and 400 Carroll Street (Tax Block 452, Lot 15). The specific addresses listed in the BCP Application are: 64-98 1st Street; 82-107 1st Street; 119-145 2nd Street; 357-379 Bond Street; and 400-402 Carroll Street. Residential use is proposed for the Toll Brooklyn, LP site. Due to rezoning issues, the applicant withdrew their BCP application without prejudice in December 2006."
Env Problem:	"Despite the termination of this project, there is an ongoing spill investigation at this site. Spill #04-07393 was referred to the DEC Region 2 spills office in Long Island City, Queens County."

Record Updated Date:	08/29/2024
Update By:	DKMACNEA
Site Description:	"Location The Site is located at 41 First Street in the Gowanus neighborhood of Brooklyn, New York. The Site is bound by Carroll Street, followed by residential and commercial buildings to the north; Bond Street, followed by residential and commercial buildings and Gowanus Canal to the east; residential buildings followed by First Street to the south; and residential buildings to the west. The Site is located in a predominantly residential and commercial area with some open space/parks and industrial/manufacturing uses. The Site contains an E-Designation for hazardous materials and noise and is listed in the New York City Department of City Planning E-Designation database as E-601. E-601 was established following the review of an Environmental Assessment Statement (EAS) prepared to satisfy the requirements of the City Environmental Quality Review (CEQR) for the Gowanus Neighborhood Rezoning. Site Features The approximately 0.501-acre Site is currently vacant and comprises landscaped areas and asphalt-paved parking currently serving the existing residential building on remainder of Lot 25. The Site lies at elevations ranging from approximately 11 (eastern portion, along Bond Street) to 19 feet (western portion, along Carroll Street) above the National Geodetic Vertical Datum of 1988 (an approximation of sea level). Current Zoning and Land Use The Site is currently zoned as R6A(residential). The greater surrounding area consists of residential and commercial properties with some open space/parks, and industrial/manufacturing uses. Past Use of the Site Based on the review of the historical fire insurance maps included in ALC Environmental s June 2022 Phase I Environmental Site Assessment (ESA) (completed for a larger area that included the Site), the Site was historically occupied by mixed-use residential and retail buildings along Carroll Street, residential buildings along Bond Street and a portion of a factory constructed prior to 1886. Throughout its history, the factory consisted of various operations, including

JOHN TYNAN SENIOR RESIDENCE (Continued) **S131541420**

tobacco manufacturing, metal packaging, paper products and box manufacturing, as well as other various manufacturing processes, and a baking company. According to the City Directory listings, Cafaro Jos A. Trucking Co and Fine Arts Lamps Ltd, and Fine Arts In Plastic Inc., were also former tenants. Former structures were demolished sometime between 1982 and 1986, and the Site has remained vacant since. Currently, the Site is comprised of two parking lot areas and landscaping for the adjacent Mary Star of the Sea apartment complex building (constructed on the remainder of Lot 25). Site Geology and Hydrogeology On-Site surface topography slopes down to the east with elevations ranging from approximately 19 feet in the western portion to approximately 11 in the eastern portion, above the National Geodetic Vertical Datum of 1988 (an approximation of sea level). The surrounding area topography also slopes to the east. During a subsurface investigation, the depth to water was recorded at approximately 11.6 to 11.9 feet below existing grade on the western portion, at approximately 9.8 feet below existing grade in the central portion, and at approximately 8 feet below existing grade in the eastern portion of the Site. Based upon the topography and subsurface investigation findings, groundwater is expected to flow in an easterly direction toward the Gowanus Canal. Actual groundwater table depth and flow direction at the Site may be affected by subsurface openings or obstructions such as basements or underground utilities. Groundwater in Brooklyn is not used as a source of potable water (the municipal water supply uses upstate reservoirs). Additionally, groundwater use is restricted by local New York City (NYC) law. The stratigraphy of the Site observed during the Phase II Investigation consists of fill material (sand, gravel, silt, concrete, wood, brick, ceramic, slag, debris, asphalt, and glass) to boring termination, which was at a maximum depth of approximately 15 feet below grade. Bedrock was not encountered during the investigation. "

Env Problem:	"Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

DEC Memo:	Dry leak, tank empty, RiteWay performing oil to gas conversion, bad fill/vent. 5/29/14 - Austin - Reassigned from Rahman to Mahat - end 6/5/15: Mahat e/c: An email has been sent out to Dave Chan (RiteWay) to provide paper work for the closure confirmation. 6/8/15: Mahat e/c: DEC Mahat received an email update from the retained contractor. The tank ended up being removed and replaced with a rectangular 5,800 gallon tank. The subsequent install work was awarded to Cardinal Tank Corp. We only have pictures showing the hole on top of the tank, since there was no contamination, no samples were taken. Please let me know if you need anything else. Best regards, David Chan Riteway Tank Maintenance Corp. 700 Hicks Street. Brookllyn, NY 11231 tel - 718-855-7272 fax - 718-855-7244 All the pics, passing TT and closure letter has been uploaded on D2 for reference. Based on the closure report, the Department does not warrant any further investigation on spill case. It will be closed on DEC Spill Database.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE DEC Investigation to dtermine source of product flowing into 37 West 12th Street. DEC Tomasello is supervising investigation under a PIN Contract. On August 8, 2000 (Tuesday) a follow-up test was performed by Pro-Test Danny Lopez Certification No. 82-7683 Expires 07/15/2001. DEC (Sigona and Tipple) witnessed the inspection of the 4,500 gallon No. 4 fuel Oil Tank located underground from the basement. DEC hired EAR (Michael Danny) to audio-video record the inspection of the inside of the UST. The tank was cleaned by Petroleum Tank Cleaners on 8/7/2000. The receipt indicates that the tank has a concrete lining and was used to store No. 4 fuel oil The lining is cracking according to PTC. The DEC Sigona met with Chief Engineer Nick Kyriacou (212)620-2355 for Forbes. Mr. Kyriacou indicated that the tank was lined before his employment with the building. He obtained copy of the test by Pro-Test on 4/20/2000 which failed the gross test. DEC Sigiona also obtained a receipt from Forbes on the tank cleaning from PTC. Danny Lopez entered the tank using level C and inspected the tank. He located the concrete lining and reported cracks in the lining on the top half of the tank along the centerline. The pies could not be isolated from the tank before they did not have screw fitings. The pipes were connected with concrete and inserted into larger openings. DEC Sigona Tipple and EAR (Danny) inspected the rear of the building and located an area which could be accessible to install groundwater monitoring wells. DEC Sigona Tipple and EAR met with Mgr Karl Agro (212)620 2277 to discuss PBS requirements for tank repair, closure and replacment. Provided a copy of the PBS rules and regulations. Also requested permission for the State funded contractor to isntall wells in the alcove. Will followup with a written request, with consulation with DEC Austin. Left site at 1:30 P.M. 8/8/ 2000. The facility has no PBS registration. 8/5/03 transferred from Sigona to Tipple Tipple was on site for the installation of all borings and wells and determined that the Forbes oil tank was not a contributing factor of the contamination found down gradient of the building. END
Remarks:	DEC WAS ON SITE

Town: New York City
Record Added Date: 02/12/2015
Record Updated Date: 07/17/2025
Update By: DKMACNEA
Site Description: "Location: The site is approximately 3.2 acres and is designated as Block 972, Lot 58 (formerly Lots 1, 43, and 58) located at 225 3rd Street in the Gowanus neighborhood of Brooklyn, New York. The site is bounded to the north by a closed section of 2nd Street, to the east by 3rd Avenue, to the south by 3rd Street, and to the west by the Gowanus Canal. Site Features: The rectangular-shaped site was most recently occupied by a Verizon service center. The site is currently fenced on all the landward sides. The westernmost part of the site is generally capped with a gravel cover and does not contain structures or foundations. The middle portion of the site contains an approximate 8,300-square-foot single-story brick building and asphalt paved parking areas. The easternmost lot contains asphalt-paved parking areas and an approximate 7,100-square-foot, single-story, prefabricated building with sheet metal walls. All buildings are currently vacant. Current Zoning and Land Use: The site is currently zoned M1-4/R7-2 (manufacturing/residential) on the western portion of the property, and M1-4/R7X (manufacturing/residential) on the eastern portion of the property. Properties surrounding the site are occupied by commercial and industrial uses. Past Use of the Site: Historical use of the site includes a coal and stone yard with wagon painting (1886 to 1904), blacksmith (1904), a transit facility with iron coal conveyor transecting the site from east to west (1915 to 1938), an

175-225 3RD STREET (Continued) **S117535357**

automobile wrecking facility (1934 to 1950), a filling station with gasoline tanks (1950 to 1977), and automobile repair facilities with hydraulic lifts, drums, and waste oil storage (1950 to present). Site Geology and Hydrogeology: The site sits at an average elevation of approximately 10 feet above mean sea level (MSL, NAVD88), ranging from an elevation of 17 feet MSL in the southeast to 9.4 feet MSL in the southwest. The topography of the site is generally level, and slopes gently toward the southwest. The subsurface consists of historic urban fill characterized by brown silty sand with gravel, concrete, wood, brick, stone and debris extending to varying depths of 8 to 15.25 feet below grade. The fill material is underlain by either an organic layer consisting of soft silt and clay or by a fine- to coarse-grained sand layer with varying amounts of silt and gravel. Groundwater is present beneath the site at 3.5 to 8.75 feet below surface grade or elevation 1.83 feet MSL at low tide to elevation 8.54 feet MSL at high tide. Groundwater flow is to the west toward the Gowanus Canal. "

Env Problem:

"Nature and Extent of Contamination: Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and polychlorinated biphenyls (PCBs). Soil and groundwater samples were analyzed for VOCs, SVOCs, metals, PCBs, per- and polyfluoroalkyl substances (PFAS), and 1,4-dioxane. Soil vapor, sub-slab and indoor air samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include SVOCs and metals in soils, VOCs and SVOCs in groundwater and VOCs in soil vapor. Soil Soil data were compared to Protection of Groundwater Soil Cleanup Objectives (PGWSCO), and Restricted Residential Soil Cleanup Objectives (RRSCO). VOCs, SVOCs, and petroleum impacts are present primarily on the western portion of the site from depths of 2 to 10 feet below surface grade. VOCs detected in the soil exceeding applicable SCOs include maximum concentrations of 1,2,4-trimethylbenzene at 96 parts per million, or ppm (PGWSCO is 3.6 ppm, RRSCO is 52 ppm), ethylbenzene at 160 ppm (PGWSCO is 1 ppm, RRSCO of 41 ppm), and xylenes at 120 ppm (PGWSCO is 1.6 ppm, RRSCO is 100 ppm). SVOCs that exceed the applicable SCOs include maximum concentrations of acenaphthene at 1,530 ppm (PGWSCO is 98 ppm, RRSCO of 100 ppm); benzo(a)anthracene at 274 ppm (PGWSCO and RRSCO is 1 ppm); benzo(a)pyrene at 153 ppm (PGWSCO is 22 ppm, RRSCO is 1 ppm); chrysene at 352 ppm (PGWSCO is 1 ppm, RRSCO is 3.9 ppm); and naphthalene at 14,700 ppm (PGWSCO is 12 ppm, RRSCO is 100 ppm). Metals were detected in soil including maximum concentrations of arsenic at 81.7 ppm (PGSCO and RRSCO is 16 ppm); lead at 7,190 ppm (PGWSCO is 450 ppm, RRSCO is 400 ppm); and mercury at 26.4 ppm (PGWSCO is 0.73, RRSCO is 0.81 ppm). Two samples exceeded the RCRA hazardous waste regulatory limit for lead, as determined by Toxic Characteristic Leachate Procedure (TCLP) analysis. Two TCLP samples had concentrations of 7.57 ppm and 25.7 ppm compared to the RCRA standard of 5 ppm. PCBs were not detected above RRSCOs. During the investigation, neither PFAS nor pesticides were sampled. Data does not indicate any off-site impacts to soil related to this site.
Groundwater The primary contaminants of concern in groundwater are VOCs and SVOCs. VOCs in groundwater that exceed the Ambient Water Quality Standards and Guidance Values (AWQSGVs) include maximum concentrations of 1,2,4-trimethylbenzene at 71 parts per billion (ppb); ethylbenzene at 770 ppb; n-propylbenzene at 26 ppb; toluene at 190 ppb; and total xylenes at 630 ppb (all of which have a AWQSGV of 5 ppb); and benzene at 24 ppb (AWQSGV is 1 ppb). SVOCs in groundwater

175-225 3RD STREET (Continued) **S117535357**

that exceed the AWQSGVs include maximum concentrations of benzo(a)anthracene at 0.49 ppb; benzo(a)pyrene at 1.03 ppb; benzo(k)fluoranthene at 0.32 ppb; and chrysene at 0.38 ppb (all of which have AWQSGV of 0.002 ppb); and naphthalene at 7,070 ppb (AWQSGV is 10 ppb). PFOA and PFOS were reported at concentrations of up to 167 and 30.9 parts per trillion (ppt), respectively, compared to the groundwater guidance values of 6.7 ppt for PFOA and 2.7 ppt for PFOS. PCBs were not detected above AWQSGV. Data does not indicate any off-site impacts to groundwater related to this site. Soil vapor Petroleum-related VOCs and chlorinated VOCs concentrations were detected within soil vapor, sub-slab soil vapor and indoor air throughout the Site. PCE was detected in soil vapor samples at concentrations up to 19 ug/m3, in sub-slab soil vapor samples up to 510 ug/m3, and in indoor air samples up to 108 ug/m3, respectively. TCE was detected in soil vapor samples at concentrations up to 300 ug/m3, in sub-slab soil vapor samples up to 199 ug/m3, and in indoor air samples up to 7.2 ug/m3, respectively. Heptane was detected in soil vapor samples at concentrations up to 18 ug/m3, in sub-slab soil vapor samples up to 248 ug/m3, and in indoor air samples up to 451 ug/m3, respectively. Data does not indicate any off-site impacts to soil vapor related to this site. "

Health Problem: "Since the site is fenced and covered by asphalt or concrete, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no occupied on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a current concern. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. In addition, sampling indicates soil vapor intrusion from site contamination is not a concern for off-site buildings."

Site Code:	533255
Acres:	6.770
HW Code:	C224245
SWIS:	2401
Town:	New York City
Record Added Date:	10/05/2016
Record Updated Date:	04/14/2025
Update By:	LAGORTON
Site Description:	"Location: The BCP site is the Con Edison Third Avenue Yard Service Center located in an urban area in Brooklyn, NY. The Property occupies a city block (approximately 6.77 acres) and is bounded to the north by 1st Street, to the south by 3rd Street, to the west by 3rd Avenue, and to the east by 4th Avenue. Current Site Features: The Property is entirely covered by contiguous impervious surfaces consisting of buildings, asphalt pavement and concrete. The property is fenced in with secure access points located on 3rd and 1st Streets. Seven functional areas are present at the Property: Stores Building; Operations and Transportation Buildings; Pole/Cable Reel Storage Area; Flush Truck Facility (used to receive and treat flush truck wastes); South Undergound Storage Tanks (UST) Area (contains two 2,500 gallon USTs containing gasoline and diesel fuel); Former North UST Area (previously contained gasoline and diesel USTs) and paved parking lots. Current Zoning and Land Use: The Property is zoned M1 2 (commercial/industrial). Con Edison currently uses the Property as a utility service center. Operations include indoor storage, pole/cable reel storage, operation of fleet fuel dispensing, auto repair garage, parking of fleet and staff vehicles, administrative offices, and flush truck area. The surrounding area is mostly commercial/light industrial. Past Use of the Site: The property consisted of a tidal wetland until 1860 when the property was backfilled. A baseball stadium was present until approximately

THIRD AVENUE YARD (Continued) **S120706183**

1918, when it was converted into warehouse space. Between 1918 and the time the Property was acquired by Brooklyn Edison Company, Inc. (predecessor to the current owner) in 1925 the property was used mainly for warehouse and trucking operations. After being acquired by Brooklyn Edison, the Property has been used as an electric utility work out location. From at least 1933 to 1964, a portion of the Property fronting Fourth Avenue also housed gasoline service stations leased to third party operators. In 1947, a concrete pit was constructed on the southern corner of the property for dewatering sludge recovered from Con Edison electric manholes/vaults. This pit was connected to the municipal sewer and was utilized until 1974 when it was decommissioned and the current Flush Truck facility was constructed in the same location. Site Geology and Hydrogeology: The subsurface soil includes three primary lithologies that include urban fill, the naturally occurring marsh deposits and underlying sands and silt. The urban fill is continuous across the Property, extends from ground surface to 20 to 25 feet below ground surface (ft bgs) and consists of sand and silt, gravel, cobbles, concrete, brick, slag, cinders, coal fragments, glass, wood, shells, and metal. Beneath the fill and on top of the silt clay layer are discrete lenses of more coarse grained sand and gravel. Underlying fill at the Property is naturally occurring deposits, which consist primarily of silt, clay and peat. The presence of shell and plant fragments suggests that these are tidal marsh deposits. The shallow water table occurs in the fill layer beneath the Property at depths ranging from 7 12 ft bgs. Generally, groundwater flow at the property is to the west. "

Env Problem:

"Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals, and pesticides. Groundwater samples were analyzed for per- and polyfluoroalkyl substances (PFAS), and 1,4-dioxane. Based upon investigations conducted to date, the primary contaminants of concern include petroleum related VOCs, SVOCs and metals in soil and groundwater, PCBs in soil. Soil VOCs, SVOCs, metals and PCBs were detected above Protection of Groundwater Soil Cleanup Objectives (PGSCO) and/or Commercial Soil Cleanup Objectives (CSCO). VOCs exceeding applicable SCOs in soil include benzene at 1.7 ppm (PGSCO: 0.06 ppm), ethylbenzene at 45.4 ppm (PGSCO: 1 ppm), and xylene at 25 ppm (PGSCO: 1.6 ppm). SVOCs exceeding applicable SCOs in soil include benzo(a)anthracene at 330 ppm (CSCO: 5.6 ppm and PGSCO: 1 ppm), benzo(a)pyrene at 260 ppm (CSCO: 1.0 ppm and PGSCO: 22 ppm), benzo(b)fluoranthene at 290 ppm (CSCO: 56 ppm and PGSCO: 1.7 ppm), benzo(k)fluoranthene at 110 ppm (CSCO: 56 ppm and PGSCO: 1.7 ppm), chrysene at 280 ppm (CSCO: 56 ppm and PGSCO: 1 ppm), fluoranthene at 850 (CSCO: 500 ppm), indeno(1,2,3-cd)pyrene at 100 ppm (CSCO: 5.6 ppm and PGSCO: 8.2 ppm), naphthalene at 19,600 ppm (CSCO: 500 ppm and PGSCO: 12 ppm), phenanthrene at 1,700 ppm (CSCO: 500 ppm and PGSCO: 1,000 ppm), and pyrene at 1,090 ppm (CSCO: 500 ppm and PGSCO: 1,000 ppm). Metals exceeding applicable SCOs include arsenic at 234 ppm (CSCO and PGSCO: 16 ppm), barium at 1,590 ppm (CSCO: 820 ppm and PGSCO: 400 ppm), lead at 13,600 ppm (CSCO: 1,000 ppm and PGSCO: 450 ppm) and mercury at 23 ppm (CSCO: 2.8 ppm and PGSCO: 0.73 ppm). PCBs were detected at 941 ppm, exceeding the respective CSCO of 1 ppm and PGSCO of 3.2 ppm. Groundwater: Groundwater samples collected exceeded the Ambient Water Quality Standards (AWQSs) for VOCs, SVOCs, metals, and PFAS. VOCs exceeding applicable AWQS in groundwater include benzene at 317 ppb (AWQS: 1 ppb), ethylbenzene at 2,130 ppb (AWQS: 5 ppb), toluene at 145 ppb (AWQS: 5 ppb), and xylene at 2,740 ppb

THIRD AVENUE YARD (Continued) **S120706183**

	(AWQS: 2,740 ppb). SVOCs exceeding applicable AWQS in groundwater include acenaphthene at 757 ppb (AWQS: 20 ppb), benzo(a)anthracene at 4.6 ppb (AWQS: 0.002 ppb), benzo(a)pyrene at 5.9 ppb (AWQS: ND), benzo(b)fluoranthene at 6 ppb (AWQS: 0.002 ppb), benzo(k)fluoranthene at 2.3 ppb (AWQS: 0.002 ppb), chrysene at 4.8 ppb (AWQS: 0.002 ppb), indeno(1,2,3-cd)pyrene at 5.1 ppb (AWQS: 0.002 ppb), naphthalene at 13,200 ppb (AWQS: 10 ppb), phenanthrene at 111 ppb (AWQS: 50 ppb), and 1,1 -biphenyl at 263 ppb (AWQS: 5 ppb). Metals exceeding applicable AWQS in groundwater include arsenic at 323 ppb (AWQS: 25 ppb), barium at 2,760 ppb (AWQS: 1,000 ppb), cadmium at 14.2 ppb (AWQS: 5 ppb), chromium at 2,870 ppb (AWQS: 50 ppb), mercury at 0.95 ppb (AWQS: 0.7 ppb), thallium at 126 ppb (AWQS: 0.5 ppb), and lead at 30.42 ppb (AWQS: 25 ppb). The contaminants PFAS were detected at a maximum concentration of 125.6 parts per trillion (ppt), above the AWQS of 70 ppt. Free-phase oil or light non-aqueous phase liquid (LNAPL) was encountered floating of the water table in the northeastern corner of the site where gasoline and diesel underground storage tanks were previously located."
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Record Added Date:	11/17/2021
Record Updated Date:	01/12/2026
Update By:	LAGORTON
Site Description:	"Location: The 0.47-acre site is located at 125 3rd Street in the Gowanus neighborhood of Brooklyn. The site occupies Block 462, Lot 6. The site is bound to the north by 2nd Street and a residential building: to the northeast by an industrial building; to the east by a parking lot and an industrial building; to the south by 3rd Street, an industrial building, and vacant land; and to the west by a vacant lot and a residential building. Site Features and Current Use: Two mixed-use commercial and residential buildings are under construction on the site. The site is zoned manufacturing and residential (M1-4/R7-2). Past Uses of the Site: The site was occupied by commercial and industrial facilities since the late 1800s. Historical uses include painting company, stone cutting facility and carpenter, mattress and quilt manufacturing, brewing and bottling, garage, waste rag and paper bailing, freight depot, and unknown manufacturing. Site Geology and Hydrology: The site is underlain by historic fill material extending to approximately 3 to 12 feet below ground surface (ft bgs). The fill material consists of sand, silt, gravel, coal, coal ash, slag, construction debris, asphalt, glass, metal, ceramics, and wood. Fill material is underlain by medium to fine native sand with gravel and silt extending to approximately 2 to 7 feet thick. The native sand layer was underlain by an organic clay layer with marsh deposits approximately 7 to 18.5 feet thick. Bedrock was not encountered. Groundwater was observed approximately 3.5 to 7 ft bgs and flows east towards the Gowanus Canal. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) and metals in soils; PAHs and metals in groundwater; and Chlorinated Volatile Organic Compounds (CVOCs) and petroleum products in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Record Updated Date:	12/09/2025
Update By:	LAGORTON
Site Description:	"Location: The about 45,500-square-foot (about 1.03 acre) site is located in the Gowanus neighborhood of Brooklyn, New York and is identified as Block 462, Lot 14 on the Brooklyn Borough Tax Map. The site is bound by 2nd Street to the north; the Gowanus Canal to the east; 3rd Street to the south; and parking facilities and commercial

141 3RD STREET (Continued) **S127990284**

and residential buildings followed by Bond Street to the west. Site Features: The site is currently used as an office space, parking lot and construction materials storage for Monadnock Construction. A June 28, 2021 boundary & topographic survey, prepared by Control Point Associates Inc., indicates that the site ground surface slopes down from west (elevation [el]1 9.5) to east (el 5.5), toward the Gowanus Canal. A new steel sheet pile bulkhead was installed along the eastern boundary of the site and completed in August 2017. As part of the construction, dead man piles were installed about 50 feet inland of the canal, connected to the bulkhead with double channel wales. Sheet piles were installed to approximately el -34. Current Zoning and Land Use: The site is zoned for industrial/manufacturing use. The entire site is located in the M2-1 manufacturing district. The surrounding area includes commercial, industrial, residential, and transportation/utility buildings, as well as vacant lots, construction sites, and open space. Past Use of the Site: The site historically operated as a grain and feed mill and woodworking facility from as early as 1886 until at least 1928, a coal company from as early as 1928 until at least 1950, and an automobile salvage yard from as early as 1977 until at least 1986. During the 2011 Site Characterization performed by the ELM Group, droplets of light non-aqueous phase liquids (LNAPL) were observed in one soil boring at the soil/water table interface. Based upon the findings, the New York State Department of Environmental Conservation (NYSDEC) was notified and Spill No. 11-11444 was assigned to the site. A remedial investigation (RI) was performed in March 2012 to further investigate and delineate the extents of the spill impacts. The RI included the installation of delineation borings from the boring location where LNAPL was previously identified, installation of a groundwater monitoring well, and the collection of a groundwater sample. Soil and groundwater analytical results identified that the LNAPL appeared to be bound in the soil and was not impacting the groundwater at the site. LNAPL impacts were limited to an about 20-foot-long, 10-foot-wide, and 6-foot-deep area, which was excavated and removed from site between March and June 2012. A review of groundwater analytical results from samples collected from the remedial excavation indicated target compound list (TCL) volatile organic compounds (VOCs) and semivolatile organic compounds (SVOCs) were not detected, indicating successful LNAPL removal. The excavated area was backfilled and capped to match surrounding grade. The NYSDEC closed the spill on 6 August 2012. A new bulkhead along the eastern boundary of the site was constructed and completed in August 2017. Site Geology and Hydrogeology: Langan s June 2021 limited subsurface investigation at the site identified an about 4-inch-thick asphalt cover in the parking lot area, and an about 7-inch-thick concrete cover near the existing office building. The cover was underlain by contaminated fill predominantly consisting of fine- to medium-grained sand with varying amounts of silt, gravel, concrete, brick, wood, glass, organics and shell fragments. The contaminated fill was observed from surface grade to about 11.5 to 16 feet below grade surface (bgs). Fine-grained silty sand with varying amounts of clay, shells fragments, organics, and gravel was observed below the fill. An approximately 3-foot layer of dark grey silt was observed from approximately 27 to 30 feet bgs. Beneath the silt layer, the soil consisted of reddish brown to brown, fine- to medium-grained sands with varying amounts of silt, fine gravel and clay. Bedrock was not encountered during the June 2021 limited subsurface investigation;

141 3RD STREET (Continued) **S127990284**

however, based on Langan s experience in the surrounding area, bedrock is expected at approximately 150 feet bgs. A 2011 investigation performed by The ELM Group identified a layer of fine- to coarse-grained sands containing varying amounts of silt and gravel from immediately below the asphalt/concrete pavement to an approximate depth of about 6 feet bgs across the site was identified. Isolated lenses of contaminated fill containing varying amounts of brick, wood, concrete and glass were observed from immediately below the asphalt/concrete pavement to approximately 2 to 4 feet bgs across the site. The groundwater flow direction for the area surrounding the site is tidally influenced. Shallow, intermediate, and deep groundwater flow east towards Gowanus Canal. Groundwater underlying the site was observed at about 6 to 9 feet bgs. "

Env Problem:

"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor was analyzed for VOCs. Based on the investigations conducted to date, the primary contaminants of concern are coal tar GCM, SVOCs and metals in soil; coal tar NAPL, SVOCs and metals in groundwater; and VOCs in soil vapor. Soil - Grossly contaminated material and non-aqueous phase liquid (GCM/NAPL) associated with MGP coal tar contamination from the Gowanus Canal NPL site has been encountered in on-site borings and delineated along the bulkhead and inland on the eastern portion of the site. VOCs, SVOCs, and metals were found at concentrations exceeding the applicable restricted residential soil cleanup objectives (RRSCOs) and protection of groundwater soil cleanup objectives (PGSCOs) including benzene (max of 6.10 parts per million (ppm); RRSCO is 4.8 ppm and PGSCO is 0.06 ppm), ethylbenzene (max of 130 ppm; RRSCO is 41 ppm and PGSCO is 1 ppm), tetrachloroethylene (PCE) (max of 32 ppm; RRSCO is 19 ppm), toluene (max of 37 ppm; RRSCO is 100 ppm and PGSCO is 0.7 ppm), benzo(a)anthracene (max of 490 ppm; RRSCO is 1 ppm and PGSCO is 1 ppm), benzo(a)pyrene (max of 350 ppm; RRSCO is 1 ppm and PGSCO is 22 ppm), benzo(b)fluoranthene (max of 260 ppm; RRSCO is 1 ppm and PGSCO is 1.7 ppm), benzo(k)fluoranthene (max of 79 ppm; RRSCO is 3.9 ppm and PGSCO is 1.7 ppm), chrysene (max of 450 ppm; RRSCO is 3.9 ppm and PGSCO is 1 ppm), naphthalene (max of 3,200 ppm; RRSCO is 100 ppm and PGSCO is 12 ppm), mercury (max is 0.892 ppm; RRSCO is 0.81 ppm), arsenic (max is 31.1 ppm; RRSCO is 16 ppm) and lead (max of 83,800 ppm; RRSCO is 400 ppm). Non-aqueous phase liquid (NAPL) was encountered in soil borings along the eastern boundary of the site along the bulkhead and delineated in-land to the west. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations below soil cleanup guidance values for restricted residential use and protection of groundwater. Data does not indicate any off-site impacts in soil related to this site. Groundwater - Exceedances of the ambient groundwater quality standards (AWQS) for VOCs, and SVOCs including benzene (max of 36 parts per billion (ppb); AWQS of 1 ppb), ethylbenzene (max of 210 ppb; AWQS of 5 ppb), toluene (max of 14 ppb; AWQS of 5 ppb), benzo(a)anthracene (max of 2.20 ppb; AWQS of 0.002 ppb), benzo(a)pyrene (max of 2.20 ppb; AWQS of 0.002 ppb), benzo(b)fluoranthene (max of 2.80 ppb; AWQS of 0.002 ppb), benzo(k)fluoranthene (max of 0.86 ppb; AWQS of 0.002 ppb), chrysene (max of 1.8 ppb; AWQS of 0.002 ppb), and naphthalene (max of 1,800 ppb; AWQS of 10 ppb). NAPL was encountered during monitoring well

141 3RD STREET (Continued) **S127990284**

development and groundwater sampling. Groundwater impacts have the potential to migrate off-site into the Gowanus Canal. PFOS was detected above the maximum contaminant limit (MCL - drinking water standard) of 10 parts per trillion (ppt) at a maximum concentration of 1340 ppt. PFOA was detected above the maximum contaminant limit (MCL - drinking water standard) of 10 parts per trillion (ppt) at a maximum concentration of 501 ppt. Data indicates off-site impacts in groundwater related to this site. Soil Vapor - Seven soil vapor samples were collected on- and off-site which identified elevated concentrations of chlorinated VOCs. The maximum concentration of trichloroethylene (TCE) was 1,070 micrograms per cubic meter (ug/m3), and tetrachloroethylene (PCE) was 7,800 ug/m3. Data does indicate there is potential for off-site impacts in soil vapor related to this site. "

Health Problem: "The site is completely fenced, which restricts public access, and covered by former building slabs, asphalt or concrete. People will not come in contact with site-related soil and groundwater contamination unless they dig below the ground surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil), may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Since the site is vacant, soil vapor intrusion is not a current concern. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in any future on-site redevelopment or occupancy. Furthermore, environmental sampling indicates soil vapor intrusion may be a concern for off-site buildings."

The site is fenced and is bordered on the south by 4th Street Basin (Gowanus Canal), on the north by 3rd Street, on the west by privately owned real

190-220 THIRD STREET STORE LLC (Continued) **1015747246**

property, and on the east by 3rd Avenue. Current Zoning/Uses: The property is zoned as medium manufacturing in a commercial area. The site is currently owned by 190-220 Third Street Store, LLC and has a building operating as a food store. The surrounding parcels are currently used for a combination of mixed light industrial, commercial and residential. The closest residential area is believed to be on 4th Avenue. Historical Uses: The subject site formerly consisted of several interconnected buildings and an open rear area that bordered the Gowanus Canal. The buildings prior uses that appear to have led to possible contamination include a coal yard, oil company, and junkyard and auto repair business. All buildings have been demolished. Site Geology and Hydrogeology: The Site is underlain by urban fill that varies in thickness from approximately 5 feet to 25 feet. The urban fill is underlain by an organic layer composed of varying proportions of silt and clay that varied in thickness from approximately 10 feet to 25 feet. The top of the organic layer likely represents the original surface of the Site, prior to filling in the late 1800s. The organic layer is underlain by a mixture of fine to coarse sands with increasing percentages of gravel and coarser sands with depth (coarsening downward sequence). Exploration borings were advanced to a total depth of approximately 77 feet below grade. The bedrock surface was not encountered in any of the test borings. Shallow groundwater is present in the overburden fill material beneath the Site. Groundwater is tidally influenced, but generally flows toward the 4th Street Basin in both high and low tide conditions. The groundwater level within the overburden aquifer ranges from an elevation of approximately 3 feet at the northwest boundary of the site to an elevation of approximately 8 feet in the southeast boundary of the site. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were associated with historic fill material, including semi-volatile organic compounds (specifically PAHs) and metals. Residual contamination at site will be managed in accordance with the Site Management Plan to ensure compliance with all the institutional/engineer controls required by the environmental easement. "

Health Problem: "Since some contaminated soils remain at the site below clean backfill, people will not come in contact with contaminated soils unless they dig below the surface. People are not expected to come into direct contact with contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants of concern due to vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings."

Site Code: 333299
Site Description: "Location: The Whole Foods site is located in the vicinity of the intersection of 3rd Street and 3rd Avenue in Kings County, NY. Site Features: The site consists of approximately 2.101-acres with a building operating as a food store and parking. The site is fenced and is bordered on the south by 4th Street Basin (Gowanus Canal), on the north by 3rd Street, on the west by privately owned real property, and on the east by 3rd Avenue. Current Zoning/Uses: The property is zoned as medium manufacturing in a commercial area. The site is currently owned by 190-220 Third Street Store, LLC and has a building operating as a food store. The surrounding parcels are currently used for a combination of mixed light industrial, commercial and residential. The closest residential area is believed to be on 4th Avenue. Historical Uses: The subject site formerly consisted of several interconnected buildings and an open rear area that bordered the Gowanus Canal. The buildings prior uses that appear to have led to possible contamination include a coal yard, oil company, and junkyard and auto repair business. All buildings have been demolished. Site Geology and Hydrogeology: The Site is underlain by urban fill that varies in thickness from approximately 5 feet to 25 feet. The urban fill is underlain by an organic layer composed of varying proportions of silt and clay that varied in thickness from approximately 10 feet to 25 feet. The top of the organic layer likely represents the original surface of the Site, prior to filling in the late 1800s. The organic layer is underlain by a mixture of fine to coarse sands with increasing percentages of gravel and coarser sands with depth (coarsening downward sequence). Exploration borings were advanced to a total depth of approximately 77 feet below grade. The bedrock surface was not encountered in any of the test borings. Shallow groundwater is present in the overburden fill material beneath the Site. Groundwater is tidally influenced, but generally flows toward the 4th Street Basin in both high and low tide conditions. The groundwater level within the overburden aquifer ranges from an elevation of approximately 3 feet at the northwest boundary of the site to an elevation of approximately 8 feet in the southeast boundary of the site. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were associated with historic fill material, including semi-volatile organic compounds (specifically PAHs) and metals. Residual contamination at site will be managed in accordance with the Site Management Plan to ensure compliance with all the institutional/engineer controls required by the environmental easement. "

190-220 THIRD STREET STORE LLC (Continued) **1015747246**

Health Problem: "Since some contaminated soils remain at the site below clean backfill, people will not come in contact with contaminated soils unless they dig below the surface. People are not expected to come into direct contact with contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants of concern due to vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings."

Name: WHOLE FOODS SITE
Address: 214 3RD ST.
City,State,Zip: BROOKLYN, NY 11215
Site Code: 333299
Control Name: Building Use Restriction
HW Code: C224100
Control Code: 26
Control Type: INST
Dt record added: 07/11/2011
Dt rec updated: 09/07/2021
Updated By: JXPEREZM
Site Code: 333299
Site Description: "Location: The Whole Foods site is located in the vicinity of the intersection of 3rd Street and 3rd Avenue in Kings County, NY. Site Features: The site consists of approximately 2.101-acres with a building operating as a food store and parking. The site is fenced and is bordered on the south by 4th Street Basin (Gowanus Canal), on the north by 3rd Street, on the west by privately owned real property, and on the east by 3rd Avenue. Current Zoning/Uses: The property is zoned as medium manufacturing in a commercial area. The site is currently owned by 190-220 Third Street Store, LLC and has a building operating as a food store. The surrounding parcels are currently used for a combination of mixed light industrial, commercial and residential. The closest residential area is believed to be on 4th Avenue. Historical Uses: The subject site formerly consisted of several interconnected buildings and an open rear area that bordered the Gowanus Canal. The buildings prior uses that appear to have led to possible contamination include a coal yard, oil company, and junkyard and auto repair business. All buildings have been demolished. Site Geology and Hydrogeology: The Site is underlain by urban fill that varies in thickness from approximately 5 feet to 25 feet. The urban fill is underlain by an organic layer composed of varying proportions of silt and clay that varied in thickness from approximately 10 feet to 25 feet. The top of the organic layer likely

190-220 THIRD STREET STORE LLC (Continued) **1015747246**

represents the original surface of the Site, prior to filling in the late 1800s. The organic layer is underlain by a mixture of fine to coarse sands with increasing percentages of gravel and coarser sands with depth (coarsening downward sequence). Exploration borings were advanced to a total depth of approximately 77 feet below grade. The bedrock surface was not encountered in any of the test borings. Shallow groundwater is present in the overburden fill material beneath the Site. Groundwater is tidally influenced, but generally flows toward the 4th Street Basin in both high and low tide conditions. The groundwater level within the overburden aquifer ranges from an elevation of approximately 3 feet at the northwest boundary of the site to an elevation of approximately 8 feet in the southeast boundary of the site. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were associated with historic fill material, including semi-volatile organic compounds (specifically PAHs) and metals. Residual contamination at site will be managed in accordance with the Site Management Plan to ensure compliance with all the institutional/engineer controls required by the environmental easement. "

Health Problem: "Since some contaminated soils remain at the site below clean backfill, people will not come in contact with contaminated soils unless they dig below the surface. People are not expected to come into direct contact with contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants of concern due to vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings."

DEC Memo:	3/24/06 Diaz - Next steps required - review file, track down contacts. 9/21/06 called Dry as a Bone (tank tester) (516)678-5515 for status of tank. Acris: owner bought proprety in 2003. Mousa Khalil 47 74th St. Brooklyn, NY 11209 3 pm - Jerry from Dry as a Bone called to get tank test date to look up records. He returned call with no luck. I left name of technician who called in tank failure. Will get back to me if he can find any info. bf 9/22/06 sent ttf to owner at above address. bf 9/29/06 recived ttf letter back. RETURN TO SENDER NOT DELIVERABLE AS ADDRESSED UNABLE TO FORWARD bf 10/6/06 sent ttf letter to: Mousa Khalil 122 Hoyt Street Brooklyn, NY 11201 bf 8/17/12 Spill re-assigned to T. Demeo as per RSE. bf 10/10/14-Hiralkumar Patel. reviewed available information for DEC DeMeo. alternate address: none no PBS or other spill record found. as per NYC ACRIS record, current property owner purchased property in 2003. Mousa A. Khalil **property owner** DEC Falvey has contacted spill caller, but no records found in file. 2/12/15 TJD Spill reassigned from DeMeo to Patel. 02/19/15-Hiralkumar Patel. went to site for inspection, but no access as building is vacant. its four story row house building. fill/vent pipes were not visible. as no documents available confirming actual release from the tank system and no complaints indicating off-site impact, case closed administratively.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE SEE ALSO SPILL #0200983 4/29/02 7500 GAL #6 OIL TANK RUPTURED IN TANK ROOM IN BASEMENT. TANK WAS FULL AT TIME OF RUPTURE, PETROLEUM TANK CLEANERS DOING INITIAL RESPONSE. THE BUILDING IS SCHEDULED TO GO TO CLOSING ON MONDAY 4/29. SPOKE WITH REPRESENTATIVES FROM BOTH THE BUYER AND THE SELLER, BOTH WERE TOLD THAT THERE NEED TO BE BORINGS DONE ONCE THE INITIAL CLEANUP IS COMPLETED TO DETERMINE IF ANY FUTURE REMEDIATION IS NECESSARY. MICKEY GRUDA SUPER. 212-684-2621 5/1/02 SITE VISIT REVEALED WHAT APPEARED TO BE #6 OIL SEEPING UP THROUGH THE TILED FLOOR IN THE BOILER ROOM 5/2/02 EAR HAS BEEN RETAINED TO DO A FEW BORINGS TO SEE IF THERE IS SUBSURFACE CONTAMINATION AND IF SO, TO WHAT EXTENT 5/8/02 tank removal scheduled for next week, after tank is removed, borings will be installed to investigate potential contaminants NEW PROPERTY MANAGER KIETH HOLMES 212-481-8311 6/11/02 Petroleum tank stated that end borings were take and were clean. A site visit revealed oil seaping up out of the floor around grout joints, cracks, edges of walls, and in the soil trench that can be seen in the hall a few yards from the entrance to the boiler room and extends through the adjacent room, etc... More remedial work is needed 11/06/2002 SITE VISIT REVEALED CONTAMINANTS REMOVED, SOIL TRENCH IS A CONCRETE TRENCH ONCE THE DEBRIS WAS REMOVED, JOINTS CLEANED, BORINGS REVEAL CLEAN SOIL.
Remarks:	caller recieved a call about the spill and is hired to do cleanup

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 01/26/04 Transferred from Rommel to Austin 02/17/04: Reassigned from AUSTIN to KRIMGOLD. 11/05/2005 Left messages for Dean Peterson at new location at Community Living (718-855-4035). Did not receive a callback. Bishop 09/13/06 This case was transferred from Albany to Region 2. Zhune called Mr. Petersen several times. He never call back. A TTF letter was sent to: Mr. Dean Petersen 40 Rector Street New York, NY 10006 08/14/08-Zhune visited the site spoke to Tiffany Adams Office/Building Manager (718) 855-4035 ext. 1303. Tiffany called Crris Heighter the Director of the Institue of Community Living celll 347- 219-8991, office 718- 272-6046. He said by the time that the tank failed the test in 2001 he was not the Director of the Community Living. The 3000 gallons # 2 fuel tank was recently tested by ACR Mechanical and passed the test. He will be back from vacation on september and will search for papers work. A TTF lettter was sent to: The Institute of Community Living 2384

COMMUNITY LIVING (Continued) **S105135276**

Atlantic Ave. Brooklyn NY 11233 Att: Chris Heighter 09/19/08 Chris Heighter sent the result for the last Tightness test. The 3000 gallons #2 fuel tank was tested on 05/07/08. The result indicates that the tank passed the test Therefore DEC is asking for information that happened in 2001. 09/30/08- Zhune called Chris and gave him the phone # of Crown Leak Detection which was the company that tested the tank on 07/30/2001. 11/26/08-Chris sent the 02/21/03 tank test results thst was done by Protest. 11/26/08-Zhune spoke to Bob from Protest. As per Bob the tank system was tested in December, 2002 and failed the test with a Ullage (dry) leak. They replaced the remote fill and the vent line. On 02/21/03 the system was restested and passed the test. He also said that he did not see any note about contamination at this site. Worker who did this job are no longer with Protest Spill closed.

Remarks: caller found the tank that may be connected to an abandoned tank and he believes that is why the tank test failed

DEC Memo:	10/4/04 Met with GSC and ExxonMobil on site. Station was under construction due to the retrofitting of steel product delivery lines with fiberglass. Discussed the location of the two downgradient monitoring points to evaluate the effectiveness of the ORC. Downgradient monitoring wells will be installed on the same side of Flatbush Ave as the station. Waiting for GSC include in the RAP the location of the downgradient monitoring wells. 2/7/05 Approved Remedial Action Plan dated 9/28/04. January 2010 - Haggerty: assumed management of spill April 2010 - PM approved request to install ORC socks, but required additional delineation 1/14/10. Additional off-site wells installed, report due by the end of May 2010 May 2010 - SIR report due May 31
Remarks:	NYCFD ON SITE, ISSUED VIOLATION FOR NO TIGHTNESS TEST, GASOLINE RAN ALONG GOLD STREET, SAND WAS APPLIED, ENGINE 207 RESPONDED.

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing

PATTERSON CHEMICAL CO INC (Continued) **1000403436**

Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

PATTERSON CHEMICAL CO INC (Continued) **1000403436**

Waste Code: F010
Waste Description: Quenching Bath Residues From Oil Baths From Metal Heat Treating Operations In Which Cyanides Are Used In The Process.

Waste Code: F012
Waste Description: Quenching Wastewater Treatment Sludges From Metal Heat Treating Operations In Which Cyanides Are Used In The Process.

Waste Code: F017
Waste Description: Not Defined

Waste Code: F018
Waste Description: Not Defined

Waste Code: K086
Waste Description: Solvent Washes And Sludges, Caustic Washes And Sludges, Or Water Washes And Sludges From Cleaning Tubs And Equipment Used In The Formulation Of Ink From Pigments, Driers, Soaps, And Stabilizers Containing Chromium And Lead.

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: U101
Waste Description: 2,4-Dimethylphenol (Or) Phenol, 2,4-Dimethyl-

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	2/10/2004: This spill case was reassigned from Sigona to Rommel for management. (Sigona) 7/2/2004:

MOBIL S/S (Continued) **S104513535**

Site transferred to D. Harrington (Central Office) for management. (Rommel) 12/2/2004: Sent letter to Exxon Mobil approving RI work plan. Monitoring well installation to occur on the west side of Sullivan Street. Monthly EFR events to begin in mid-January 2005. (Harrington) 10/18/2005: Sent letter to Exxon Mobil approving the supplemental SI report. Closed spill nos. 04-01621, 04-11106, and 04-12443. (Harrington) 6/2/2006: Sent e-mail to Exxon Mobil requesting clarification on the proposed remedial work plan. Specifically requested more info on the chem-ox and ORC injection program. (Harrington) 6/13/2006: Product no longer observed in on-site monitoring wells. EFR events have been discontinued. (Harrington) 8/15/2006: Sent e-mail to Exxon Mobil approving the remedial work plan. Plan calls for chem-ox and ORC injections in source areas throughout the southern portion of the site. (Harrington) 10/26/07 - Tom Gibbons is PM for site. An approved CAP was provided to the DEE attorney and a draft CO was sent to EM on February 13, 2007. DEC received a draft RAP on March 2, 2007 and comments were issued on March 13, 2007. A revised RAP was received on March 14, 2007 and a final approval letter was issued. Implementation of the RAP began on March 28, 2007. The onsite borings and two rounds of ISCO injections were largely completed by mid April. Demolition of the onsite building is complete. Following demo, additional injection wells (both onsite and offsite) and onsite monitoring wells were installed and ISCO injections completed May18, 2007. The post-injection soil data was presented in a Supplemental Remedial Work Plan and recommended a third injection. This work plan was approved August 7 and the work was conducted the week of August 20, 2007. A second round of post-injection soil sampling was completed on September 24, 2007. Waiting on data to determine if a fourth injection is warranted. May 2010 - Implementation of the RAP began on March 28, 2007. Three rounds of ISCO injections have been completed since this work plan was approved. A Remedial Action Report was received on September 11, 2007 and comments were issued on September 27, 2007. A RAR Addendum was received on November 7, 2007 and was approved on November 28, 2007. The Site Status Update Report was received on April 24, 2008 and a Supplemental Remedial Action Plan (SRAP) was received on May 21, 2008. Comments have been issued on the Supplemental Remedial Action Report (June 16, 2008) and SRAP on June 17, 2008. Received request on April 16, 2009 to change the groundwater sampling schedule and this request was approved on May 26, 2009. Another ISCO injection was conducted on July 22-23, 2009. The last SSUR was issued on February 23, 2010. The latest rounds of groundwater

MOBIL S/S (Continued) **S104513535**

samples were collected on
December 7, 2009 and March 29, 2010. The results will determine the need for further remedial
action in the form of additional ISCO injections. July 2010 - Another ISCO injection was conducted
July 27-28, 2010. Oct. 2010 - A SSUR was received. Feb.2011 - An SSUR was received. July 2011 -
Another ISCO injection was conducted on July 11-12, 2011. A telephone conference was held with EM
and the owner and new developer to discuss the RAWP. They wanted to change the RAWP to minimize the
excavation since it wasn't necessary for the new proposed building. Staff said no, follow the RAWP
as per the consent order. Sept.2011 - a consultant for the developer submitted a report regarding
excavation at the site, again, trying to minimize the excavation. This is being reviewed by staff.
SSUR was submitted on 9/9/11. Oct.2011 - the report and data were reviewed by staff. It contained a
vague proposal for limited excavation at the site. The proposal was rejected by staff. 11/22/2011 -
Site transferred to R. Keating for management. 12/13/2011 - Site visit made with representatives
from ExxonMobil, Kleinfelder, Langan, Mueser Rutledge, and Madison Equities, LLC. The purpose was
to do a site walkover and become familiar with the site. 12/20/2011 - Response letter sent to
Kleinfelder to the letter they sent on November 1, 2011 regarding modifications to the Supplemental
Revised Remedial Action Plan (SRRAP). A conference call was held to discuss the comments presented
in the letter. 1/25/2012 - Kleinfelder submitted a revised SRRAP. Comments were sent via email to
add specific groundwater goals to the SRRAP so that the remediation can be monitored more closely
to determine if remedial goals are being achieved. The consultant is revising the report. 2/28/2012
- The SRRAP was approved. 4/26/2012 - The start of the Remedial Action is planned for the spring of
2012. The site owner is in the process of obtaining permits to do the work. 5/24/2012 - The SSUR
was submitted. 7/24/2012 - Klienfelder indicated that the site owner still has not received permits
to discharge water into the sewer system. They indicated that the site owner is still in the
process of obtaining permits to do the work. 8/20/2012 - The developer having some difficulty
obtaining the dewatering discharge permits. They anticipate starting the work under the SRRAP in
fourth quarter of 2012. 11/26/2012 - Klienfelder asked for an interpretation of the limits of the
excavation as detailed in the SRRAP. The developer seemed satified with the explaination and
believes that field work will be done in the spring of 2013. 1/10/2013 - A groundwater sampling
event was completed on November 8, 2012 and a SSUR will be submitted to the on January 15, 2013.

MOBIL S/S (Continued) **S104513535**

Development activities have not yet started at the site, but is anticipated to start in the near future since the remedial agreement between ExxonMobil and the site developer is close to approval. 2/25/2013 - There are still some permit issued holding up the start of this project. It might be April that the developer starts work. 6/24/2013 - The developer s construction plans have changed and the consultant is in the process of reviewing the developer s changes. They will evaluate the possible effects to the Revised Supplemental Remedial Action Plan (RSRAP) that was approved on February 28, 2012. 8/16/2013 - A new development plan may be proposed for this site. It might impact the approved SRRAP. 12/24/2013 - The consulant indicated that all the off site wells were being destroyed in the process of shoring the side walls of the excavation for the construction of the new building. These wells will be replaced after the constuction work is done. 12/24/2013 - The consulant indicated that all the off site wells were being destroyed in the process of shoring the side walls of the excavation for the construction of the new building. 01/28/2014 - The consulant submitted a plan which was approved to destroy all site wells and conduct temporary groundwater sampling. This was necessary in order to do shoring for the construction of the new building. New permanent wells will be installed after the shoring is complete. 04/28/2014 - The consulant indicated that excavation activities will begin in early May 2014. 6/26/2014 - Field work began in May 2014 with the excavation shoring being installed. There were two site visits done with the DEC where the contractor and consultant conducted test pits down to 23 feet below surface. It was clear that a significant contaminated layer was evident from about 18 ft down. More test pits will be done after additional fill material above the contaminated zone is remove. 9/11/2014 - Field work continues at this site with the excavation down to the bottom depth across about half the site. Additional site visits were done by the DEC when the contractor did end point sampling and applied ORC to the groundwater. Addition end point sampling is planned as the excavation continues. 3/29/2016 - Previous Project Manager retired. John Durnin is the new Project Manager. A site visit was made on March 10, 2016. The new multi-story building has been erected but construction work continues. All the existing monitoring wells were destroyed to build the building. New MWs were replaced by Langan Engineering with oversight by Kleinfelder for ExxonMobil. Four MWs were installed under the floor of the new building with remote access. All the other MWs are currently inaccessible due construction materials (covering sidewalks). The

MOBIL S/S (Continued) **S104513535**

latest Site Status Update Report (SSUR) was submitted on October 23, 2015. As of August 11, 2015, BTEX levels in the 4 wells beneath the floor were less than 1.0 ppb to 1,484 ppb; MTBE less than 1.0 ppb to less than 50 ppb; Benzene less than 0.50 ppb to 1,260 ppb. Langan Engineering is required to submit the well logs for the new MWs. ExxonMobil submits quarterly groundwater monitoring reports. Langan Engineering has not submitted the well logs for the new MWs. (3/31/2017) Site Description: The site is a triangular property at the intersection of Sullivan Street and Avenue of the Americas in Manhattan, NY. There is an April 10, 2007 Consent Order D2-0030-02-07SWO. The subway is adjacent to the west side of the site. Tax Block 490, Lot Nos. 27 through 31 (former Lot Nos. 27 and 35). Site Status: The former ExxonMobil Station was demolished and a new multi-story apartment building has been constructed. A Construction Completion Report was approved on March 22, 2018 (in DD2). There are 4 monitoring wells under the new building (remote access) and 6 monitoring wells in the sidewalks. 8 of the 10 wells are acceptable for closure. The remaining two wells, MW-8R and MW-17, have elevated BTEX (MW-8R, 1,396 ppb and MW-17, 8,580 ppb). Site History: See page 2 of the March 14, 2018 Construction Completion Report and the most recent Site Status Update Report (SSUR). This spill site will be transferred to NYSDEC Region 2 since the current Project Manager, John Durnin, is retiring. (3/28/2018) March 29, 2018 - V. Brevdo As per request from Janet Brown, Chief, Bureau B, Section B in DER Albany and due to pending retirement of project manager John Durnin, this spill case is reassigned to Remedial Section B in Region 2 DER office, Vadim Brevdo is new project manager. VB Site name: Former Mobil Service Station No. 16280 (17-AML) 140-52 6th Avenue, New York, NY Spill Number: 9207631 Contacts: Karen Bourque, Project Manager Kleinfelder, Inc. 300 Westage Business Center Drive, Suite 407 Fishkill, New York 12524 d- 845-231-2535 o- 845-231-2500 m- 203-731-9329 ExxonMobil Environmental Services Company Elaine Lamm, EM Project Manager 832-624-6182 elaine.m.lamm@exxonmobil.com Site Description: The site is a triangular property at the intersection of Sullivan Street and Avenue of the Americas in Manhattan, NY. There is an April 10, 2007 Consent Order D2-0030-02-07SWO. The subway is adjacent to the west side of the site. Tax Block 490, Lot Nos. 27 through 31 (former Lot Nos. 27 and 35). Site Status: The former ExxonMobil Station was demolished and a new multi-story apartment building has been constructed. A Construction Completion Report was recently approved (in DD2). There are 4 monitoring wells under the new

MOBIL S/S (Continued) **S104513535**

building (remote access) and 6 monitoring wells in the sidewalks. 8 of the 10 wells are acceptable for closure. The remaining two wells, MW-8R and MW-17, have elevated BTEX (MW-8R, 1,515j ppb and MW-17, 7,340 ppb). Site History: See page 2 of the March 14, 2018 Construction Completion Report and the most recent Site Status Update Report (SSUR). VB 6/19/2018 - V. Brevdo Kleinfelder submitted June 19, 2018 Site Status Update Report. On May 9, 2018 Kleinfelder gauged six and sampled ten groundwater monitoring wells. Laboratory analytical data indicates benzene, toluene, ethylbenzene, and total xylenes (BTEX) concentrations ranged from below the laboratory reporting limit (BRL) in MW-12R, MW-13R, and MW-14R to 5,904 micrograms per liter (?g/L) in MW-17. Methyl tertiary-butyl ether (MTBE) concentrations ranged from BRL in seven wells to 18 ?g/L in MW-10R. Groundwater monitoring will continue on a quarterly schedule. The next sampling event is scheduled for August 2018. VB 6/27/2018 - V. Brevdo June 27, 2018 Mr. Vadim Brevdo, P.E. New York State Department of Environmental Conservation 47-40 21st Street Long Island City, NY 11101 Re: Change in EMES Project Manager Former Mobil Service Station No. 13198 (17-FLG) 252 Atlantic Avenue Brooklyn, New York NYSDEC Case No. 04-09632 Order on Consent No. 2-157449 Former Mobil Service Station No. 16280 (17-AML) 140-52 Sixth Avenue New York, New York NYSDEC Case No. 92-07631 Order on Consent: D2-0030-02-07SWO Dear Mr. Brevdo, Kleinfelder, Inc. (Kleinfelder), on behalf of ExxonMobil Environmental Services (EMES), is submitting notification to the New York State Department of Environmental Conservation (NYSDEC) of a change in EMES Project Manager. Effective June 25, 2018, Margaret Omori replaced Elaine Lamm as the new EMES Project Manager for the above referenced site. Should you require any further information or have any questions relative to this letter, please do not hesitate to contact the undersigned at (845) 231-2535 or Margaret Omori whose contact information is provided below. Ms. Margaret Omori ExxonMobil Environmental Services Company 38 Varick Street Brooklyn, New York 11222 Email: margaret.t.omori@exxonmobil.com Telephone: 646-573-6130 (cell) Sincerely, Kleinfelder, Inc. Karen Bourque Senior Project Manager September 26, 2018 - V. Brevdo Former Mobil Service Station No. 16280 (17-AML) 140-52 Sixth Avenue New York, New York NYSDEC Case No. 92-07631 Order on Consent: D2-0030-02-07SWO On September 25, 2018, Kleinfelder submitted Site Status Update Report (SSUR) dated 9/25/2018. SSUR states the following: The Site has undergone property development and remedial excavation activities which will be reported under a separate cover as per the February 2012 Revised Supplemental Remedial

MOBIL S/S (Continued) **S104513535**

Action Plan (RSRAP). On
August 15, 2018 Kleinfelder gauged six and sampled ten groundwater monitoring wells. Laboratory
analytical data indicates benzene, toluene, ethylbenzene, and total xylenes (BTEX) concentrations
ranged from below the laboratory reporting limit (BRL) in MW-12R, MW-13R, MW-14R, and MW-18 to
15,280 micrograms per liter (?g/L) in MW-17. Methyl tertiary-butyl ether (MTBE) concentrations
ranged from BRL in six wells to 18.0 ?g/L in MW-10R. A summary of liquid-level gauging and
groundwater analytical results are included on Table 1. A groundwater hydrocarbon distribution map
is provided on Figure 3. A complete laboratory analytical report is included in Appendix A.
Groundwater monitoring will continue on a quarterly schedule. The next sampling event is scheduled
for November 2018. The Department completed review of the report on September 26, 2018. VB February
7, 2019 - V. Brevdo Former Mobil Service Station/Multi-Story Apartment Building 140-52 6th Avenue,
Manhattan (Spill No. 9207631) The site is a triangular property at the intersection of Sullivan
Street and Avenue of the Americas in Manhattan. There is an April 10, 2007 Consent Order
D2-0030-02-07SWO between Exxon Mobil and the Department. The subway is adjacent to the west side of
the site. The former ExxonMobil Station was demolished, and a new multi-story apartment building
has been constructed in 2016. Site remediation has been implemented from March 2007 to March 2018
and included In-Situ Chemical Oxidation, excavation of approximately half of the site to the depth
of 18-23 ft., removal and disposal of five 4,000-gallon USTs, dispenser islands, and associated
underground piping. Approximately 269 tons of contaminated soil was excavated during USTs removal
and disposed of at regulated facility. Remediation also included application of Oxygen Releasing
Compounds to remediate groundwater. Kleinfelder has been conducting groundwater monitoring at the
site. On February 7, 2019, Kleinfelder current environmental engineering consultant for Exxon Mobil
submitted Site Status Update Report. On December 17, 2018 Kleinfelder gauged six and sampled ten
groundwater monitoring wells. No free product is observed in any of the monitoring wells. BTEX
concentrations ranged between non-detect in four wells and moderately elevated levels in one well.
MTBE ranged between non-detect to very low levels. Kleinfelder will continue groundwater monitoring
quarterly. The next sampling event is scheduled for February 2019. VB April 10, 2019 - V. Brevdo
Former Mobil Service Station/Multi-Story Apartment Building 140-52 6th Avenue, Manhattan (Spill No.
9207631) The site is a triangular property at the intersection of Sullivan Street and Avenue of the

MOBIL S/S (Continued) **S104513535**

Americas in Manhattan. There is an April 10, 2007 Consent Order D2-0030-02-07SWO between Exxon Mobil and the Department. The subway is adjacent to the west side of the site. The former ExxonMobil Station was demolished, and a new multi-story apartment building has been constructed in 2016. Site remediation has been implemented from March 2007 to March 2018 and included In-Situ Chemical Oxidation, excavation of approximately half of the site to the depth of 18-23 ft., removal and disposal of five 4,000-gallon USTs, dispenser islands, and associated underground piping. Approximately 269 tons of contaminated soil was excavated during USTs removal and disposed of at regulated facility. Remediation also included application of Oxygen Releasing Compounds to remediate groundwater. Kleinfelder, current environmental engineering consultant for Exxon Mobil, has been conducting groundwater monitoring at the site. On April 8, 2019, Kleinfelder submitted Remedial Action Report, including spill closure petition on behalf of Exxon Mobil. On February 22, 2019, Kleinfelder gauged six and sampled ten groundwater monitoring wells. No free product is observed in any of the monitoring wells. BTEX concentrations ranged between non-detect in five wells and moderately elevated levels in one well which have been showing established declining trend. MTBE ranged between non-detect to very low levels. Based on the limited sensitive receptors in the vicinity of the site, the highly unlikely exposure potential to residual contamination in the groundwater in one well, post-excavation soil data, absence of free product, and the stable decreasing groundwater trend in the aforementioned well, Kleinfelder concluded that no additional remedial actions are either warranted or feasible, and that the residual groundwater impacts in one well will attenuate to below groundwater standards over time. Based on the Department s review of the remedial action report and historic project documentation, the Department concurred with Kleinfelder s conclusion and rationale for spill closure. The Department closed spill case on April 10, 2019.

DEC Memo:	08/9/13- John Bonanno called and said the remote fill line is corrored and need to be replace. 9/7/13- As per Arlene Gianchetta (Owner's wife). They are refinancing the building and the bank recommended to the owner to hire ARRCO to test the oil tank. 9/7/13-Arlene sent an email with invoice of the company (Harris Plumbing $ Heating) that fixed the fill line dated 8/15/13. The invoice stated the following: Cut out and discard the defective 2 oil line into the existing oil tamk. Installed a new 2 oil fill line from the tank up to the cellar door stairway instead of up the first street level. 9/7/13-Arlene sent an email with result of the tightness test performed after the line was fixed and dated 8/19/13. The system was tested by Petroleum Tank Cleaner. The result indicated the system passed the test. 9/10/13-Zhune visited the site. Based on the inspection spill closed.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 10/25/2002 Sangesland was on Desk Duty and sent out a tank test failure form letter 11/1/2002: RECEIVED FAX FROM FRANK DIANDREA WHICH INDICATE THAT THE TANK PASSED THE TEST TODAY. THEY FOUND 2 MANWAY GASKETS BAD. THEY WILL BE TESTING PIPING WHEN THEY CAN LOCATE BUILDING PLAN TO DETERMINE WHERE PIPING TRAVELS. FAX FILED WITH LETTER OF TANK TEST FAILURE. ARS. 1/30/2003-Vought-Duty Desk received message from Rich Baldwin (631-499-2222) inquiring about project manager. Vought called Baldwin and spoke with him. Baaldwin will be performing three soil borings along two parallel fill lines. If soil contamination is found lines will be replaced. Tipple will require work invoice, passing system test and soil samples if old fill line needs to be abandoned in place. 3/6/03 Tipple spoke with R. Baldwin and suggested staggering the borings along the piping run if the markouts show that it is feasable. If contaminated soil is encountered in the borings no analyticals need be tested at this point in the investigation if a digout is to follow. 4/8/03 Tipple spoke with R. Baldwin contamination found to a depth of approx.17 ft bgs. to be delineated laterally and a work plan to be produced. 4/10/03 Summary of field activities submitted to DEC continued investigation planned. see file 6/26/03 tipple reviewed investigation report and nfa was issued

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 5/26/2004 Sangesland spoke to William Schlageter of Freudenthal & Elkowitz. He said he works for the property owner and finally got approval today to call in a spill that was discovered on May 18th. On May 18th, during a walk through of a subbasement, several puddles of fuel oil were found outside of an oil tank containment room. The room contains two 7,000 AST's that were probably installed around 1928. At some point in the history of the building, they believe the room was filled in with cement. This now means that the two tanks are totally encased in cement up to several feet thick around the tanks. The tanks were recently presure tested. One tank passed, the other tank had an inconclusive test result. This tank has been taken out of service and has been drained (except for the final 400 gal which can't be easily removed). Mr. Schlageter's company is coming up with a plan to completely clean out this inconclusive tank, clean up the site and then identify the extent of contamination on the site. Contaminated Soil Letter sent to: William Schlageter Freudenthal & Elkowitz 368 Veterans Memorial Hwy Commack, NY 11725 6/7/04 - Sawyer - Received a detailed work plan through e-mail from William of F&E. 1/21/05 - Sawyer - Met Richard Baldwin &

(Continued) **S105997119**

Bill Schlaghter of Freudenthal
& Elkowitz Consulting Group at the above address. Received basic tour of affected areas and witness
working recovery system in basement. Checked outside to see how close to subway exterior wall is
located. Rich and Bill proposed insitu remediation for the contaminated soil between the outside
wall and the subway. They will send more information. Transferred to CO (MJSCIBEL) 5/30/2006 - Mike
- Contacted Freudenthal & Elkowitz Consulting and asked for an update on the project. 7/26/06 -
Mike - Left another message for an update with F+E. 3/30/07 - Austin - Trasferred to Patel for
further review - end 04/10/07-Hiralkumar Patel. alternate addresses: 325-351 Ashland Place, 1-9
Hanson Place PBS #: 2-607998. as per PBS record, the site had one 7,000 gal AST on saddles and one
7,500 gal AST in subterranean vault with access. both tanks were used to store #2 oil and were
closed-in-place. other spills: 8605094, 9710706, 0103988, 0207736, 0211355, 0412697 spill #:
8605094 was reported on 11/10/1986 as ethylene chloride was seeping into air conditioning system.
case closed. spill #: 9710706 was reported on 12/19/1997 by ConEd, due to transformer oil leak into
vault. case closed. spill #: 0103988 was reported on 07/14/2001 by ConEd, due to transformer oil
leak into vault. case closed. spill #: 0207736 was reported on 10/25/2002 due to tightness test
failure for two #2 oil tanks. during subsequent work, contamination was found along the two fill
lines. case closed after reviewing investigation report. spill #: 0211355 was reported on
02/13/2003 due to transformer oil leak into vault. case closed. spill #: 0412697 was reported on
03/03/2005 by ConEd, due to oil in vault. case closed. the subject spill reported after findings of
oil/water in crawl space under sub-basement.
----------**********----------**********----
---------- review of
available documents under spill #: 0207736: 1) 10/25/2002: Duty desk officer sent TTF to HSBC Bank.
2) 10/31/2002: fax from Island Pump and Tank Corp.: - after replacing bad manway gaskets, two tanks
passeed test - will test piping 3) 03/04/2003: Site Investigation Plan: - work plan for subsurface
investigation along leaking fill lines - fill line runs about 15 ft under sidewalk - proposed to
install three borings: one at fill port, one in midway and one at the building wall 4) 04/02/2003:
Soil Investigation Results: - ASTs are located in vaults in sub-basement level of the building -
two sets of fill port piping and conduits located along the western side of the property - fill
piping was probed (using fill port) utilizing a steel measuring tape and determined to elbow 90
degrees (from vertical to horizontal) towards the exterior building

(Continued) **S105997119**

wall at a depth of 89 inches
(7.4 ft) bgs less than ========== - two pipes were determined to occupy an area between 24 to 27
inches and the interior walls were determined to be aprpox. 6 to 8 inches apart - two subgrade
natural gas lines were traced from connection boxes located within the sidewalk to the north of the
location of the fill port piping. the natural gas lines were determined to transect the location of
the fill lines in a north-south direction approx. 7.5 ft west of the exterior building wall less
than ========== - building drawings indicate that a subway wall runs in a north-south direction
at an unknown depth, approx. 8 ft from exterior building wall less than ========= - three soil
borings (B-1, B-2 and B-3) were installed along fill lines - boring B-1 was installed 50 inches
west of the exterior building wall, in order to avoid the building foundation which extended
approx. 3 ft to the west of the building wall less than ======== - refusal encountered at a depth
of 12 ft bg in boring B-1, in the form of brick and concrete debris believed to be potentially
associated with the underlying subway system - boring B-2 was installed to a depth of 20 ft bg - no
contamination noted in soil from 18-20 ft depth in boring B-2 - boring B-3 was installed to a depth
of 10 ft bg where refusal encountered - petroleum-impacted soil was discovered in depth from
aprpox. 6 to 17 ft bg - no samples were submitted for lab analysis 5) 06/25/2003: Summary of Spill
Investigation: - installed 12 soil borings - the area of impact was estimated to be approx. 15.25
ft from north to south and extend the entire width of the concrete sidewalk (15 ft) along the
western portion of the site - based upon field characteristics, four soil samples (B-5, B-11, B-13
and B-14) were collected from the edges of the area of impact less than ======= - soil samples were
collected to be representative of the depth at which the most significant field characteristics of
fuel oil impact (ranging from 7.5 to 11 ft bgs) were observed in borings with the area of impact -
based upon a review of MTA drawings, the roof of the subway tunnel is situated at a depth of
approx. 27 ft below the concrete sidewalk and approx. 20 ft below the fuel oil fill line less than
========== - based upon the vertical delineation of the area of impact (17 ft bg), the roof of the
subway lines is 7 ft below the fuel oil-impacted soils 6) 06/26/2003: DEC Tipple issued no further
action letter.
----------**********----------**********----------
review of available documents for the subject spill:
--*-

(Continued) **S105997119**

05/26/2004: DEC Sangesland sent letter requiring subsurface investigation. 2) 06/07/2004:
Investigation Work Plan, submitted by F&E: - subject property is situated at the northwest corner
of the intersection of Hanson Place and Ashland Place - the property is currently improved with a
commercial clock-tower building constructed circa 1927-1928 - two 7000 gal #2 ASTs are located
within a vault in the sub-basement level adjacent to the west wall of the building along Ashland
Place - floor of the sub-basement floor where the access hatch to the top of the AST vault is
located, is at approx. 40 ft bgs - did tightness test on both tanks on 05/06/04: found Tank #2
(eastern side tank) tight and Tank #1 (western side tank) failed less than ---------- - area of
fuel oil was observed within the crawl space beneath an out-of-service flash tank formerly
associated with the building's steam boiler system - area of fuel oil is located outside the
northwest corner of the bottom of tank vault, at the northern base of AST #1 - during tightness
test on 10/25/2002, found both tanks tight but fill lines were leaking (spill #: 0207736) less than
--------- - based upon following results of investigation after leaking fill line findings, spill #
0207736 was closed: * depth of fuel oil impacted soils below the concrete surface (6-17 ft bgs) was
such that the underlying NYC subway line was not being impacted from same * relativerly low
concentrations of remnant fuel oil in subsurface soils * discountinued future use of the fuel lines
* constraints due to subsurface features (subway line, natural gas utility) - groundwater is
discharged, from area inside crawl space 30-40 ft away from fuel oil impacted area, by a sump pump
system at over 100 gallon per minute to sewer system less than ---------- - based on tank chart on
wall, the ASTs are 70 inches in diameter, 33 ft 4 inches long - based upon the reported depths of
the sub-basement floor (40 ft bgs) and crawl space (45 ft bgs), and the dimensions of the ASTs (70
inches in diameter), the bottom of the ASTs and the associated vault, are at the same elevation of
the crawl space and the fuel oil impacted area less than ========== 3) 07/14/2004: Interim
Investigation Report, submitted by F&E: - fuel oil from AST #1 was removed - upon opening of the
AST, several heating coils were observed within tank, likely utilized when the tank stored #4 or #6
fuel oil in the past less than ========== - total of 578 gal of remnant fuel oil and bottom
sludges were removed - bottom of the tank was observed to be slightly deteriorated in some
locations, but no holes were observed within the wall of the AST - 3/4 inch diameter exploratory
holes were cut through the north end of the tank at heights of approx.

(Continued) **S105997119**

52 inches, 35 inches and 17
inches above the bottom of the tank - a 10 by 10 inch hole was cut in the north end cap at 7 inches
above the bottom of the tank to allow for the evaluation in the bottom conditions of the tank vault
- dry fine-grained sand was observed to immediately pour into the AST from holes - no evidence of
fuel oil impacts was observed within any of sands entering AST - northern vault wall was approx. 3
ft off the end of AST #1 - backfill material (fine sand) was not observed under the southern end of
the tank - bottom of AST lies approx. 33 inches above the base of concrete vault floor - top of the
vault floor appears to occur several inches below the top of the crawl space floor less than
========== - based upon the water observed entering the weep hole in crawl space, the base of
the vault may be constructed below the local water table. if correct, the groundwater is not
entering into the vault indicating that vault is water tight.
therefore, if oil had been released
it would not likely have leaked through the water-tight vault less than ========== - after cleaning
impacted area in crawl space, approx. 4 inch tall by 6 inch wide hole was observed within the
western wall of the crawl space beneath the souther end of flash tank - hole is located at the base
of the out-of-service elevator shaft and may be a weep hole for same less than ========== - mix of
fuel oil and water enter the crawl space through the weep hole - conducted an initial mecahnical
probe of the interior of the hole. it appears that the hole accesses a channel cut beneath the base
of the out-of-service elevator shaft less than ========= - according to facility personnel, the
former elevator equipment was pully driven and didn't utilized hydraulic-oil containing equipment -
bottom of weep hole appeared to be at least 3 inches below the floor of the crawl space. pooled
water with floating oil was observed in the bottom of weep hole less than ---------- 4) 07/30/2004:
Investigation report and Proposed Remedial Action Plan, submitted by F&E: - subway line runs
approx. 7.3 ft west of building wall and the top of the tunnel is at 27 ft bgs, base of tunnel is
at approx. 52 ft bgs - did soil borings 2.5 ft away from building wall - five borings (B-1A, B-2A,
B-3A, B-4A and B-5A) were installed - oil impacts were not observed in boring #s 1A, 4A and 5A -
only minor fuel oil impacts were observed in the unsaturated soils, from approx. 20-24 ft bgs in
boring # 2A - soil impacted by fuel oil were observed from 4 ft bg through the entire unsaturated
soil column (40-42 ft bgs) in boring # 3A - impacted soils appears to be limited to a 15 ft area
between boring 2A and 4 (boring in April 2003) in the north-south direction - extent of impact to

(Continued) **S105997119**

west could not be confirmed due to the presence of burried utilities and NYC subway (as per letter from NYC Transit: NYCT could not approve the proposed boring locations associated with the installation of test product recovery well and bio-vent cluster wells proposed to be installed within the sidewalk adjacent to the exterior western wall of the building. letter was issued on 12/15/2004) less than ---------- - unsaturated soil in the area of concern were composed of fill materisl consisting of a heterogeneous mix of sand, silt, clay, gravel, concrete, brick, wood and other un-identifiable debris - native materials, consisting of gray fine and medium grained sand and/or silty sand, was encountered at approx. 40-42 ft bgs, coincident with the first occurrence of groundwater - groundwater was encountered in boring #s 1A, 2A, 3A and 5A (all borings terminated at depth of about 42 ft bgs) less than ---------- (borings done deeper than that done in 2003) - 0.5 inch to 1 inch of light non-aqueous-phase liquid (NAPL) was observed on water table in borings B-1A, B-2A, B-3A and B-5A - unmarked monitoring well observed in the sidewalk adjacent to Hanson Place. no NAPL was observed and groundwater was measured at 43.44 ft from the elevation mark on the well - groundwater was observed entering the crawl space of the building to the southeast of the oil impacted water in the weep hole. no odors were associated with this groundwater and no LNAPL or significant sheen. therefore, it does not appear that the LNAPL layer extends under the footprint of the building less than ========== - conclusion: neither of 7000 gal ASTs appeared to have leaked and contaminants are not present in the associated vault. fuel oil impacted soils area present from approx. 4 ft bgs to water table in the vicinity of boring 3A. 0.5 inch to 1 inch thick layer of NAPL is present along the western exterior of the building footprint less than ---------- 5) 12/15/2004: Update on Remedial Activities: - installation of LNAPL recovery system within the crawl space is scheduled of 12/20/04 - MTA indicated that wells could be installed within the sidewalk at the desired locations, however, the depth of the wells could only be completed to a depth within 5 ft of the roof of the underlying subway tunnel (which means wells allowed only to 22 ft bg) less than ====== 6) 09/29/2006: Project Update: - both ASTs have been abandoned-in-place less than --------- - F&E installed a concrete berm to contain the water/LNAPL mix entering the building's sub-basement through the weep hole less than ---------- - the containmnent berm is equipped with a product-only pump which has successfully removed 70-80 gal of oil - due to presence of the subway line, the NYCTA will only allow

(Continued) **S105997119**

biovent test wells to be
installed to a max depth of 20 ft bgs - new owner of site: CJUF - CJUF conducting major renovation
activities within the building, which has included the removal of the majority of the former
equipment associated with the building's heating system - part of the sub-basement activities, the
immediate vicinity of the LNAPL-recovery system has been isolated from the remainder of the
sub-basement area by newly-constructed walls lined with plastic sheeting (the floor area had also
been lined with plastic sheeting) less than ----- - water level is well above the top of the weep
hole through which the LNAPL had previously entered into building - elevated water level is likely
attributable to the cessation of the high-capacity pumps formerly utilized to remove groundwater
from the sub-basement crawl space area - F&E plan to seal the weep hole and remove any related
equipment and accumulated groundwater from the containment area, if DEC approves it. - F&E
requested closure of case based on following information: * primary potential route of exposure for
LNAPL was through weep hole which is below water level now * extent of remnant fuel oil within the
unsaturated zone underlying the sidewalk along Ashland Place is believed to be limited and present
below 6 ft bgs, the invert elevation of the former product delivery lines * ongoing source of fuel
oil (former leaking product lines) and two ASTs have been abandoned-in-place, thus no potential for
future releases of fuel oil F&E recommended to conduct an exposure assessment to evaluate realistic
potential exposure pathways before closing the case.
--*-

(Continued) **S105997119**

or subway lines which is
running next to building. Austin asked for engineering evaluation of building at site and also
sesitive receptor survey in area alongwith investigation inside subway tunnel. he also asked to
contact NYC Transit regarding this matter. spoke with Mr. Baldwin and explained him the same. he
will send report at end of work. 04/17/07-Hiralkumar Patel. left message for Mr. Kurkis at Dermont
company. left message for Liz Deluca (718-694-4271) at NYC Transit system safety.
04/18/07-Hiralkumar Patel. spoke with Mr. Krukis. he will ask property owner/representative to
call. 04/19/07-Hiralkumar Patel. received message from Kristin Neil (212-488-1622). left message
for Kristin. spoke with Liz at NYC Transit. she will send crew to check subway tunnel (servicing
the M, N and R lines) for any oil leak into tunnel and will call back. 04/20/07-Hiralkumar Patel.
received call from Ms. Neil from Dermot company. they are aware of contamination and remediation at
site and as per their agreement with HSBC, prior owner, HSBC will continue remediation at site. Ms.
Neil will be contact person at new management. explained Ms. Neil that as part of remediation, the
department may require installation of equipment inside building, which Ms. Neil agree with.
04/23/07-Hiralkumar Patel. received call from Liz from NYC Transit. they checked subway tunnel and
found no oil leak or odors inside tunnel. 04/24/07-Hiralkumar Patel. received email from Mr.
Baldwin with contact info for person in HSBC: Christopher Philipp Director, Environmental Health &
Safety HSBC Bank USA, National Association 2700 Sanders Road Prospect Heights, IL 60070 ph. (847)
564-6634 fax (847) 205-7542 email: chris.c.philipp@us.hsbc.com sent letter to Mr. Philipp (previous
owner and responsible party) and Ms. Neil (current owner) requiring Exposure Assessment and
soil/groundwater delineation via monitoring wells. letter emailed to Mr. Philipp, Ms. Neil
(kneil@dermotcompany.com), Mr. Baldwin at F&E and Ms. Deluca (Elizabeth.DeLuca@nyct.com) in NYC
Trasit. 04/27/07-Hiralkumar Patel. received email from Mr. Baldwin requesting deadline extension
for report submission. reason for extension is getting permits from city agencies for sidewalk
borings. approved his request with condition of regular updates on the project. 05/10/07-Hiralkumar
Patel. received call from Steven Kaplan (631-499-2222), who will handle this project as Mr. Baldwin
no longer work with F&E. 06/14/07-Hiralkumar Patel. left message for Mr. Philipp.
06/20/07-Hiralkumar Patel. received message from Gregory Ernst (631-499-2222). left message for Mr.
Ernst. 06/21/07-Hiralkumar Patel. received call from Mr. Ernst. he mentioned that site is currently

(Continued) **S105997119**

under construction and have crane on sidewalk, where the department requires monitoring wells for
delineation and as per construction manager, crane will be there for about nine months. and without
site specific groundwater flow direction, Mr. Ernst can't do receptor survey. asked Mr. Ernst to
send contact info for property owner and construction manager. Gregory Ernst Senior Project Manager
Freudenthal & Elkowitz Consulting Group, Inc. Ph. (631) 499-2222 (O) (516) 815-5151 (C) Fax (631)
499-5928 email: gernst@fecg.us received email from Mr. Ernst. he spoke with property owner Ms.
Neil. Ms. Neil mentioned that they have construction hoist on sidewalk, installed on concrete base
and not possible to remove until project finish (at least 9-12 months). Mr. Ernst asked for site
visit to locate sampling location. Kristin Neil **current owner's representative** Ph. (212)
488-1622 email: kneil@dermotcompany.com sent email back to Mr. Ernst informing that before any site
visit, the department requires work plan submitted. asked Mr. Ernst to visit site with Ms. Neil and
submit work plan with scaled site map including: all former boring/well locations, proposed new
well locations and location of construction hoist. aksed Mr. Ernst to submit work plan by 06/29/07.
06/29/07-Hiralkumar Patel. received email from Mr. Ernst. he is preparing work plan and will submit
by July 13, 2007. they will start exposure assessment once they get approval on work plan. Mr.
Ernst mentioned that they can't install any monitoring wells for groundwater delineation as
construction hoist is on sidewalk and drilling machine can't fit under scaffolding. based on
construction schedule, monitoring well installation will be done after nine months.
07/10/07-Hiralkumar Patel. discussed with DEC Austin. he asked to start dewatering from crwal space
again to bring water level down to remove free product. left message for Ms. Neil (property owner)
to install pumping system for such oil recovery. spoke with Mr. Ernst and asked him to contact
owner for such installation. Mr. Ernst will contact owner and will call back. 07/11/07-Hiralkumar
Patel. received call from Ms. Neil. explained her that as monitoring well installation is not
possible on sidewalk, the department wants pump installed (again) in basement to reduce water
level, so oil can be recovered from basement area (as before). 07/13/07-Hiralkumar Patel. received
email from Mr. Ernst. abstract: - the pumping system which previously operated in the building has
been removed and the basement walls and drainage areas grouted up to seal-off further groundwater
infiltration into the building. therefore will not be able to restart groundwater pumping to renew
free product recovery in the weep hole along Ashland Place. - have

(Continued) **S105997119**

identified an opportunity to
install two groundwater monitoring wells along the exterior of the building adjacent to Ashland
Place in the vicinity of former boring locations B-3A and B-4A. as part of the reconstruction
activities, a new sewer line is schedule to be excavated and installed approximately 20 feet north
of the abandoned elevator shaft where the previous soil borings were drilled. During the sewer line
excavation, the adjacent scaffolding and access ramp to the construction hoist will be temporarily
dismantled. - currently plan to gain access to the former boring locations immediately following
backfilling the sewer line excavation and prior to re-assembling the scaffolding and access ramp.
the current schedule for the sewer line excavation and installation is for that work to begin
within the next couple weeks and is expected to take six weeks to complete, thereby allowing us
access for drilling in roughly six to eight weeks. - Freudenthal & Elkowitz will: prepare a work
plan as you requested to conduct an Exposure Assessment and install the groundwater
monitoring/product recovery well; prepare an access request and drilling permit application and
site plan to NYCTA to inspect the subway tunnel for indication of petroleum leakage and to install
vibration monitoring equipment needed during drilling operations adjacent to the subway, and
initiate Exposure Assessment activities of the surrounding properties.
07/19/07-Hiralkumar Patel.
spoke with Mr. Ernst regarding boring locations (B-3A and B-4A) that he mentioned in last email.
from site map, B-3A was located closed to old fill port (source area, south of weep hole) and B-4A
was located north of weep hole. both boring locations are about 30 ft apart. Mr. Ernst mentioned
that owner is installing sewer line about 20 ft north of elevator shaft (weep hole) and after
backfilling excavated area for sewer line, they have opportunity to install wells at some boring
locations. Mr. Ernst mentioned that they will install monitoring wells (if get permission from MTA
due to subway running parallel to site) at B-3A (close to source site) and B-1A (close to weep
hole). Mr. Ernst also mentioned that boring B-4A was terminated at 27 ft depth (could be because of
subway structure) before groundwater. asked Mr. Ernst to install well at location B-4A also and if
get refusal before groundwater, asked him to try other point around B-4A (to see any oil going
north of weep hole). asked Mr. Ernst to check possibility for monitoring well installation on south
of previous boring location B-5A (for delineation purpose). mentioned to Mr. Ernst that if it
requires to go across the street (Hanson Place) then install well on sidewalk on other side of

(Continued) **S105997119**

street, eventhough that location is far away (by considering that due to parellel subway line
groundwater must be flowing either in north or in south direction, so oil can be detected in
monitoring well across the street) spoke with Mr. Neil. she will meet at site at 1:30 PM.
07/20/07-Hiralkumar Patel. visited site. met Ms. Neil. went to basement. Ms. Neil mentioned that
they have filled entire sub-basement/crawl space except part of weep hole area. there is no
opportunity to install any pump for dewatering. Ms. Neil mentioned that they will remove
scaffolding for sewer line installation. told Ms. Neil not to re-install scaffolding until they
install monitoring wells on sidewalk. found one monitoring well in front of building entrance along
Hanson Place. 07/23/07-Hiralkumar Patel. spoke with Mr. Ernst. asked him to install monitoring
wells on south of previous boring B-5A also and asked him to check one well in front of building
(that was observed during site visit). Mr. Ernst will submit all plan to MTA and once he hear from
them, he will forward all to the department. 10/11/07-Hiralkumar Patel. left message for Mr. Ernst.
spoke with Mr. Neil. they are still waiting for permit for sewer line installation. once they
receive permit, they will remove scaffolding and will install require wells. 11/07/07-Hiralkumar
Patel. spoke with Mr. Ernst. he has submitted all required plan and documents to MTA, but hasn't
got final authorization from MTA. he will call once gets approval and schedule for work.
01/14/08-Hiralkumar Patel. spoke with Mr. Ernst. they are still waiting for approval from MTA. he
mentioned that owner has changed plan to install sewer line. now they will not install sewer line
where the department wants monitoring wells, in that case scaffolding will be removed only once
project is finished. 03/20/08-Hiralkumar Patel. spoke with Mr. Ernst. they got verbal approval from
MTA. asked him to submit copy of written approval from MTA, once available, alongwith copy of plan
submitted to MTA. as per Mr. Ernst, scaffolding may be removed in July 2008. 12/01/08-Hiralkumar
Patel. spoke with Mr. Ernst. he mentioned that scaffolding is still in place and according to
owner, it will be removed in this month. left message for Mr. Krukis and Ms. Neil.
12/15/08-Hiralkumar Patel. received message from Mr. Krukis. he mentioned that as construction is
still going on, they can't install monitoring wells.
12/17/08-Hiralkumar Patel. spoke with Mr.
Krukis. he mentioned that sidewalk scaffolding will stay at the site for another four months, so
they can't install wells that are required to delineate groundwater contamination.
06/22/09-Hiralkumar Patel. 4:32 PM:- received email from Mr. Ernst. he

(Continued) **S105997119**

mentioned that scaffolding
hasn't removed yet and trying to contact Mr. Krukis. he sent new
office address for Christopher
Philipp at HSBC. HSBC North America 26525 N. Riverwoods Blvd. Mettawa,
IL 60045 Attn.: Christopher
Philipp Ph. (224) 544-2838 Fax (224) 552-2838 email:

Milstein. 1:58 PM:- left message for Mr. Philipp. 3:08 PM:- received call from Mr. Milstein.
informed him about open case. Mr. Milstein was not aware of this open case. informed him that the
department requires further investigation/remediation. tried phone number for Christopher Philipp,
but that number is assigned to Capital One IT department and could not confirm Mr. Philipp's
address. discussed with DEC legal and decided to send letter to current property owner only as
could not find previous owner(s). Harvey Kreiswirth **condo board president** 1 Hanson Place, Unit
14D Brooklyn, NY 11248 email: harvey@usa.com Yury Vinokur **building super** email:
rmhanson_place@yahoo.com 4:06 PM:- sent letter to Mr. Milstein and Mr. Kreiswirth requiring
submission of investigation work plan for delineation and exposure assessment. asked them to submit
work plan by the end of 07/08/13. letter emailed to Mr. Milstein and Mr. Kreiswirth. 4:29 PM:-
received email from Mr. Kreiswirth confirming receipt of the letter. 04/12/13-Hiralkumar Patel.
1:50 PM:- received call from John Gear from Enviroscience. he was contacted by Mr. Milsteain. John
inquired about available documents. informed him that documents will be sent to Mr. Milsteain. 1:52
PM:- sent email to Mr. Milsteain including copy of work plan/reports. 07/02/13-Hiralkumar Patel.
3:57 PM:- received call from Kevin Hogan, attorney representing HSBC. he mentioned that condo
owners has provided the department's letter dated 04/08/13, to HSBC and HSBC took responsibility
for required investigation/remediation. currently, HSBC is working with environmental consultant.
Mr. Hogan requested time extension to submit work plan. based on available information, approved
his request and asked to submit work plan by the end of 09/02/2013. during conversation, Mr. Hogan
mentioned about scaffolding around the site. informed him that property owner must address
environmental issue and department may not approve anymore extension due to scaffolding around site
(since 2008). Kevin Hogan **attorney for HSBC** Phillips Lytle LLP. 3400 HSBC Center Buffalo, NY
14203 Ph. (716) 847-8331 Fax (716) 852-6100 email: khogan@phillipslytle.com Mr. Hogan mentioned
that Christopher Philipp is the person in-charge at HSBC. Christopher Philipp **HSBC's
representative** VP Environmental Health & Safety HSBC North America HSBC Technology and Services,

chris.c.philipp@us.hsbc.com 4:10 PM:- left message for Mr. Milstein. informed him about extension
for submission of work plan. also informed him that the department may not approve any extension
due to scaffolding and case may be referred for enforcement if work

(Continued) **S105997119**

does not begin soon. 4:15 PM:-
sent email to Mr. Hogan. asked him to submit work plan by the end of 09/02/13. email copied to Mr.
Milstein and Mr. Kreiswirth. 07/03/13-Hiralkumar Patel. 11:21 AM:-
received call from Mr. Milstein.
informed him about time extension approved for submission of investigation work plan. asked him to
dicuss with HSBC and their contractor regarding scaffolding around site. informed him that
environmental investigation must begin soon. 08/21/13-Hiralkumar Patel. 11:55 AM:- received call
from Ernie Rossano and Nicole Reptti from Environmental Resources Management. Mr. Rossano mentioned
that due to subway along side of the building, well installation may not be possible. he also
mentioned about no impact in current building and sub-basement area is filled with at least 5 ft of
concrete. informed Mr. Rossano that having no issue in on-site building does not mean no impact to
other structures in area. as such, the department do require subsurface investigation. Mr. Rossano
also mentioned about scaffolding around the building which can not be removed until building
project is completed. asked Mr. Rossano to contact MTA regarding possiblity well installation, and
building management to facilitate well installation. informed Mr. Rossano that response is due on
09/02/13. Ernie Rossano Environmentl Resources Management Ph. (631) 756-8917 email:
ernie.rossano@erm.com Nicole Repetti Environmentl Resources Management Ph. (631) 756-8957 / 8900
(516) 315-4440 (C) email: nicole.repetti@erm.com 08/29/13-Hiralkumar Patel. 9:39 AM:- received
email from Nicole from ERM, including letter in response to the department’s letter dated 04/08/13.
Nicole stated that ERM has submitted written request to NYCTA to review and copy the maps. Nicole
requested time extension for the work plan submission until 11/18/13. 09/09/13-Hiralkumar Patel.
11:52 AM:- sent email to Nicole approving time extension for submission of investigation work plan
until 11/18/13. email copied to Mr. Rossano, Mr. Philipp, Mr. Milstein and Mr. Kreiswirth. 12:28
PM:- received email from Mr. Kreiswirth. he requested that future correspondences should be sent to
Kevin Jones, instead of him. Kevin Jones **condo board member** email: kevin_p_jones@hotmail.com
11/26/13-Hiralkumar Patel. 1:16 PM:- received email from Ms. Rossano including an investigation
work plan. abstract: - current owner filled in the crawl space that was located beneath the entire
building footprint with approx. 3,000 yards of concrete and a vapor barrier to seal the space
beneath the building - since 2006, no LNAPL has been reportedly observed entering the building or
the adjacent NYCTA subway tunnel - three (3) soil borings (B-3A, B-4A and B-5A) which were

(Continued) **S105997119**

previously installed by F&E will be re-installed using a hollow stem auger drilling rig - boring
B-3A will be installed directly north of the former northern fill line - boring B-4A will be
installed approx. 35 ft north of the former northern fill line - boring B-5A will be installed
approx. 15 ft south of the former southern fill line - approx. 10 ft of material will be removed
from each boring location with a vacuum extraction system - soil samples will be collected
continuously from 10 ft to at least two ft into the water table (approx. 40 ft bg) using 2 ft long
split spoon - at a minimum, all soil borings will extend below the water table by at least 2 ft or
the vertical extent of contamination or to 50 ft bg maximum ---------- - two samples (at highest
PID and deepest dry) will be analyzed from each boring for VOCs and SVOCs - all three soil borings
will be converted to 1 inch wells, with 10 ft of screen - will perform an exposure assessment -
currently scaffolding along the entire length of the proposed investigation area and is scheduled
to be removed in early 2014 - will submit investigation schedule once scaffolding removed discussed
with DEC Austin and DEC Vought. due to no activities since 2007, Austin asked to check with MTA
regarding impact to nearby subway tunnel and drawdown well of the subway system. 2:56 PM:- left
message for Rajen Udeshi (646-252-3673) at NYC Transit. 5:42 PM:- received call from Dana from Mr.
Udeshi's office. she asked to contact John Malvasio in MTA's Maintenance of Way. John Malvasio
Maintenance of Way MTA Ph. (718) 694-1358 5:50 PM:- left message for Mr. Malvasio.
12/05/13-Hiralkumar Patel. 3:13 PM:- left message for Mr. Malvasio. 12/20/13-Hiralkumar Patel.
11:45 AM:- left message for Mr. Malvasio. 12:26 PM:- received call from Mr. Malvasio. he asked to
contact William Detore in his section, who handles environmental issues. 12:28 PM:- left message
for Bill. Bill Detore MTA Ph. (718) 694-1488 email: william.detore@nyct.com 01/28/14-Hiralkumar
Patel. 4:09 PM:- left message for Bill. 01/29/14-Hiralkumar Patel. 8:34 AM:- received message from
Bill. 2:37 PM:- left message for Bill. 01/30/14-Hialkumar Patel. 9:33 AM:- spoke with Bill at NYC
Transit. informed him about ongoing spill investigation. asked him about any impact to nearby
subway system. Bill will check available record and inspect the area. 10:30 AM:- sent email to Bill
with site summary. asked him to provide following information: - any oil seepage into the tunnel in
the area - the nearest water pumping well 02/24/14-Hiralkumar Patel. 2:03 PM:- left message for
(and sent email to) Bill inquiring update. 05/14/14-Hiralkumar Patel. 3:55 PM:- sent email to Bill
inquiring updates. 02/10/15-Hiralkumar Patel. 1:54 PM:- received email

(Continued) **S105997119**

from Nicole from ERM
inquiring about comments on proposed delineation work plan. 04/14/15-Hiralkumar Patel. 1:38 PM:-
spoke with Bill. he confirmed no oil seepage into any subway tunnels nearby the subject site. he
will provide location of nearest pumping well location. 1:55 PM:- sent email to Nicole requesting a
call back. 04/15/15-Hiralkumar Patel. received message from Eugene Gabay (at 4:07 PM on 04/14/15)
from ERM. 04/16/15-Hiralkumar Patel. 1:43 PM:- spoke with Eugene at ERM and informed him about case
closure. Eugene Gabay ERM PH. (631) 756-8954 email: Eugene.Gabay@erm.com after discussing with DEC
Austin and DEC DeMeo, case is being closed based on following: - elimination of the source (leaking
fill lines) and conversion to gas heating system - sealing of sub-basement and crawl space at the
site - no impact to nearby subway tunnels (confirmed twice - 2007 and 2015) which are closest
sensitive receptors 04/27/15-Hiralkumar Patel. 3:22 PM:- sent spill closure letter to Mr. Philipp.
letter emailed to Mr. Philipp, Mr. Milstein and Eugene.

Remarks: Above ground tank leak Jones Lang LaSalle also owns the buidling.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND PBS #2109851 3/6/2006 Sangesland spoke to building super Mr. White at 212-255-4870 He said both the 10,000 gal and 5,000 gal tank were in operation and they now run on #2 fuel oil. He didn't know about any tank failures. Mr. White suggested I call the building manager: Susan Seckel 212-924-1023 Sangesland left a voice message with Ms. Seckel. 3/6/2006 In 2004 boiler was replaced and the fuel changed from #6 to #2. At that time the 2 tanks were tested and the 5,000 gal tank failed the test. The tank was isolated and retested and passed. The line from the tank to the boiler was found to leak. This line was repaired and retested and passed. Spill closed.
Remarks:	TEST FAILED.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Address: CORNER OF 5TH STREET & SMITH STREET
City,State,Zip: BROOKLYN, NY 11218
Program: HW
Site Code: 55912
Classification: A
Region: 2
Acres: 10.350
HW Code: 224012
Record Add: 11/18/1999
Record Upd: 01/05/2026
Updated By: LAGORTON

Site Description: "Location: The 3/4 acre Carroll Gardens/Public Place property is located on the bank of the Gowanus Canal in Brooklyn. Site Features: The site is comprised of one parcel, Parcel 4 of the former Carroll Gardens Voluntary Cleanup Site. The first three parcels are being administered under the Brownfield Cleanup Program. Current Zoning and Land Use: The site is zoned M3-1 and is currently used for commercial use. Food vendor trucks currently occupy the site and the site is used for storage of the trucks. Past Uses of the Site: The site was used as a manufactured gas plant(MGP) for approximately 100 years. Site Geology and Hydrogeology: The site is underlain by a deep sand deposit, which has enabled the coal tar released from the former MGP to migrate both vertically and horizontally. Two other MGPs are also located nearby, and it is not always possible to tell where the tar plume from one site ends and the next begins."

Env Problem: "Nature and Extent of Contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. During the RI, samples were analyzed for VOCs, SVOCs, metals and cyanide. Soil: MGP impacts have been observed in the subsurface soil at Parcel IV. In general impacts observed at less than 10 feet deep consist of stained soil. However, lenses of MGP saturation were observed in borings CGGP-10 and CGGP-45 at approximately 8 feet. The most significant impacts were observed outside the holder along the southern and eastern edge of the property at depths ranging from 3 feet to fifty feet. Impacts range from stained soil to NAPL blebs, sheens, coated and saturated soil."

Health Problem: "The portion of the site which is vacant is fenced, although the fence is occasionally damaged. The site is located in a densely populated residential and commercial area. There is evidence of occasional trespass and illegal dumping. The site contains 55 gallon drums and other debris. The soil and groundwater are contaminated with volatile and semi-volatile organic compounds in the part per million range. The Gowanus canal is contaminated with these compounds up to 420 ug/l at points upstream, at, and downstream of the site.

K - CITIZENS MGP - CARROLL GARDEN (Continued) **S109823631**

The contribution of the site to surface water contamination is not clear. The groundwater in the area is not used for drinking water purposes and the whole area is served by the new york city water system. The groundwater may discharge to the canal and thence into upper new york bay. Occasional trespassers could be exposed to contaminated soil and to drum contents."

MGP:

Site ID:	224012
Name:	K - CITIZENS MGP - CARROLL GARDEN
Address:	CORNER OF 5TH STREET & SMITH STREET
City,State,Zip:	BROOKLYN, NY 11218
Region:	2
Class:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Swis Code:	2401
Town:	New York City
Disp Start:	1860’s
Disp Term:	1960’s
Acres:	10.35
Fuse:	Restricted-Residential
Description:	Location: The 3/4 acre Carroll Gardens/Public Place property is located on the bank of the Gowanus Canal in Brooklyn. Site Features: The site is comprised of one parcel, Parcel 4 of the former Carroll Gardens Voluntary Cleanup Site. The first three parcels are being administered under the Brownfield Cleanup Program. Current Zoning and Land Use: The site is zoned M3-1 and is currently used for commercial use. Food vendor trucks currently occupy the site and the site is used for storage of the trucks. Past Uses of the Site: The site was used as a manufactured gas plant(MGP) for approximately 100 years. Site Geology and Hydrogeology: The site is underlain by a deep sand deposit, which has enabled the coal tar released from the former MGP to migrate both vertically and horizontally. Two other MGPs are also located nearby, and it is not always possible to tell where the tar plume from one site ends and the next begins.
Assess Env:	Nature and Extent of Contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. During the RI, samples were analyzed for VOCs, SVOCs, metals and cyanide. Soil: MGP impacts have been observed in the subsurface soil at Parcel IV. In general impacts observed at less than 10 feet deep consist of stained soil. However, lenses of MGP saturation were observed in borings CGGP-10 and CGGP-45 at approximately 8 feet. The most

K - CITIZENS MGP - CARROLL GARDEN (Continued) **S109823631**

	significant impacts were observed outside the holder along the southern and eastern edge of the property at depths ranging from 3 feet to fifty feet. Impacts range from stained soil to NAPL blebs, sheens, coated and saturated soil.
Assess Doh:	The portion of the site which is vacant is fenced, although the fence is occasionally damaged. The site is located in a densely populated residential and commercial area. There is evidence of occasional trespass and illegal dumping. The site contains 55 gallon drums and other debris. The soil and groundwater are contaminated with volatile and semi-volatile organic compounds in the part per million range. The Gowanus canal is contaminated with these compounds up to 420 ug/l at points upstream, at, and downstream of the site. The contribution of the site to surface water contamination is not clear. The groundwater in the area is not used for drinking water purposes and the whole area is served by the new york city water system. The groundwater may discharge to the canal and thence into upper new york bay. Occasional trespassers could be exposed to contaminated soil and to drum contents.

Update By:	LAGORTON
Site Description:	"Location: The 6 acre Carroll Gardens/Public Place property is located on the bank of the Gowanus Canal in Brooklyn. It is bounded by Smith Street, 5th Street, the property at 459 Smith Street and the Gowanus Canal. Surrounding land uses range from industrial to residential. The nearest residential structure is located directly across 5th St. from the site. Site Features: The site is comprised of two parcels which are owned by the City of New York, and are currently vacant. A third parcel was recently removed from the site and has applied to enter the Brownfield Cleanup Program (BCP) as a standalone site. A fourth parcel was part of the original manufactured gas plant (MGP) plant, but is not included in the Brownfield site and is being managed separately. This privately owned fourth parcel, currently houses a trucking company, and is subject to a consent order with National Grid. Current Zoning and Land Use: The site is zoned M3-1. The parcels owned by NYC are planned for a mixture of residential and commercial space, with provisions for public access to the banks of the canal. Past Uses of the Site: The site was used as an MGP operation for approximately 100 years.

CARROLL GARDENS/PUBLIC PLACE FORMER MGP SITE (Continued) **S127282797**

Operable Units: The site has been divided into 2 Operable Units (0Us). OU1 consists of the site itself and includes 2 parcels. OU2 consists of off site impacted areas. Site Geology and Hydrogeology: The site is underlain by a deep sand deposit, which has enabled the coal tar released from the former MGP to migrate both vertically (downward) and horizontally. Two other MGPs are also located nearby, and it is not always possible to tell where the tar plume from one site ends and the next begins. Current Status: Remedial Construction is underway including installation of the bulkhead along the Gowanus Creek and excavation and removal of contaminated soil. "

Env Problem:

"Remediation is Underway: The site was heavily contaminated with MGP residuals, including coal tar and petroleum products. However, remediation has been completed to address the former MGP structures and associated impacts. Former MGP structures, including gas holders, a tar separator and various associated MGP piping, and have been removed along with a significant amount of coal tar and petroleum impacted soils to depths up to 26 feet below ground surface (bgs). A sealed bulkhead/barrier has been installed to prevent migration of contamination into the Gowanus Canal. A coal tar collection system has also been installed behind the sealed bulkhead/barrier wall to capture and remove residual coal tar at depth. This recovery system along with the sealed bulkhead/barrier wall will prevent off-site migration of residual coal tar. A sitewide cover will also be installed to address direct contact with residual surface contamination, which consists of historic fill containing semi-volatile organic compounds (SVOCs) and metals as is typical in urban environments across the state. Vapor intrusion mitigation systems will be installed in all future buildings constructed at the site. Nature and Extent of Contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. During the RI, samples were analyzed for VOCs, SVOCs, metals and cyanide. Soil: Coal tar has been observed, in soil, across the site at various depths ranging from approximately seven to one hundred fifty feet below grade. Shallower coal tar impacts were observed in soil at locations which generally correspond to locations of former MGP structures. Tar saturation thickness varies across the site and ranges from bands less than an inch to several feet of coal tar. Coal tar has migrated off-site at depths over 100 feet. PAHs were observed in soil at varying depths across the site. PAHs were typically highest where tar was observed. The maximum concentration of total PAHs was observed on Parcel 1 at a concentration of 44,140 mg/kg in a sample collected from the interval at 19-22 feet below grade. Groundwater: Groundwater at the site has been impacted by MGP related contaminants of concern including coal tar in the form of non-aqueous phase liquid. Total BTEX, PAHs and cyanide were detected above groundwater quality standards in groundwater samples across many areas of the site. Total BTEX in groundwater ranged from non-detect (ND) to 49, 400 parts per billion (ppb). Total PAHs in groundwater ranged from ND to 9,390 ppb. Total cyanide concentrations in groundwater ranged from ND to 1,410 parts per million (ppm). Soil Vapor/Sub-slab Vapor: Soil vapor and sub-slab vapor samples were collected at the site to assess vapor intrusion conditions. BTEX compounds were detected in only one soil vapor sample at the site at

CARROLL GARDENS/PUBLIC PLACE FORMER MGP SITE (Continued) **S127282797**

	a concentration of 4.1 micrograms per cubic meter (ug/m^3). Special Resources Impacted/Threatened: The nearest environmental receptor is the Gowanus Canal, where significant discharges of coal tar from the site in the past have been observed in the past. "
Health Problem:	"Since the site is fenced and covered by two feet of crushed stone, people will not come into contact with site?related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. Because the site is vacant soil vapor intrusion is not a current concern. The potential for indoor air impacts via the soil vapor intrusion pathway exists for any future on-site buildings. Environmental sampling indicates that soil vapor intrusion from site contaminants is not a concern for off-site properties."

Site Description:	This site was formerly owned by the Brooklyn Union Gas Company, which operated a coal gasification plant. It is believed that products from previous operations may have been disposed at this site. The site is currently vacant and located in a mixed industrial/residential area. Single family homes and a concrete product manufacturing plant are adjacent to the site. At one time, residential housing was proposed for construction at this location. The lot is littered with debris piles, cinder blocks, old lumber and at least fourteen 55-gallon drums embedded in concrete. The NYSDEC has received the final Phase II site investigation report, but is awaiting the analytical results of the sampling of the 55 gallon drums disposed on site. These drums were sampled separately in December 1990. Analytical data for the 3 drums sampled in 1990 revealed that the waste present in the drums originated from a petroleum hydrocarbon source and is not classified as hazardous waste.

DEC Memo:	05/19/21-Hiralkumar Patel. 4:31 PM:- spoke with Joel. he mentioned that the site enrolled in NYC VCP and OER asked to report spill. asked Joel to submit available reports for review. Joel Kane Fleming-Lee Shue, Inc. Ph. (212) 675-3225 (406) 321-0586 Fax (212) 675-3224 email: joel@flemingleeshue.com 05/20/21-Hiralkumar Patel. received email from

PARKING GARAGE (Continued) **S127584843**

OER confirming access to
EPIC folder for this project. briefly reviewed remedial investigation
report dated May 2021, which
shows presence of some VOC/SVOC contamination at the site. spoke with
Joel regarding need to report
spill. he mentioned that OER asked to report spill based on high PID
readings (up to 5,000 ppm) and
strong petroleum odors in borings B3 and B7 which were installed in
the suspected UST area. Joel
stated that these tanks were in use in 1930s. as part of site
development, soil will be removed to
a depth of 1 ft above groundwater depth, and any tanks found will be
removed. a RAWP is being
drafted at this point. asked Joel to include endpoint sampling from
contaminated areas as per
DER-10 and vapor mitigation plan in the RAWP. 1:27 PM:- received email
from OER Shaminder. he
mentioned that this 19,580 sf site is currently being used for
mixed-use commercial residential
properties and a large parking garage. the proposed future use of the
Site will consist of a new
52-story mixed-use commercial/residential building with two subgrade
parking floors (cellar and
sub-cellar). groundwater was found at 27 ft bg. three lots (# 25, 26
and 29) on block # 2095 are
included in this project. alternate address: 170-194 Ashland Place,
96-104 DeKalb Ave no PBS or
other spills found. site has e designation for hazmat. Ashland Dekalb
LLC. **property owner** c/o
Rockrose Development LLC. 15 East 26th Street, 7th Floor New York, NY
10010 05/21/21-Hiralkumar
Patel. 10:37 AM:- sent email to OER Shminder. informed him that the
case will be managed by DEC
Sekhon. asked Shaminder to provide EPIC folder access to Sekhon and
send future correspondences to
Sekhon. email copied to OER Shirley Chen, DOH Nathan, DEC Sekhon and
Joel. case assigned to DEC
Sekhon. 1/14/22 - Sekhon 9/28/21 - Sekhon forwarded draft RAWP send by
OER reviewed and discussed
with OER & send to RP by Shirley Chen as email - Good morning Joel,
Thank you for addressing OER's
comments. Please see the attached document with minor edits to the
text. As per DEC's advisement,
Volatile Organic Compounds must meet Protection of Groundwater
Standards. Language has been added
to Section 4.2 Soil Cleanup Objectives and Soil/Fill Management to
reflect this. Additionally, the
elevator pit detail drawing in the vapor barrier diagram (Figure 8)
should be revised to show the
vapor barrier installation along the bottom and up around the elevator
pit. Currently, only the
bottom of the elevator pit is shown. The foundation sidewall detail
drawing (top left circle) is
missing the 3 layer of aggregate and should be addressed to match the
composite cover description.
Please finalize the RAWP and submit a full PDF version with text,
figures, and appendices. Also

PARKING GARAGE (Continued) **S127584843**

attached is a draft Stipulation letter. The vapor barrier figure should be revised and attached in the RAWP PDF. If not addressed in the RAWP, please attach the revised figure in the Stipulation letter. Lastly, OER will forward the draft RAWP to DEC Spills to coordinate any additional requirements for addressing the open spill. Any items requested by DEC may be included in the Stip Letter. Please let me know if you have any questions. Thank you, Shirley Chen Project Manager - Office of Environmental Remediation 100 Gold Street, 2nd Fl, New York, NY 10038 shchen@dep.nyc.gov 11/3/21 - Sekhon Remedial Investigative report & final Remedial Action Work Plan submitted. DECDOCS The proposed remedial action consist of: Performance of a Community Air Monitoring Program for particulates and volatile organic carbon compounds. Excavation and removal of soil/fill exceeding Track 2 Restricted Residential SCOs. The majority of the subcellar footprint will be excavated approximately 16 feet below the existing basement grade (i.e. 22-24 NAVD88) to a depth of approximately 5.6 (NAVD88) for development purposes. Within this area, the proposed elevator pit footprint will be excavated approximately an additional 9 feet to a final depth of approximately -3 4 (NAVD88). Additionally, the northwestern section of the Site in Lots 25 and 26 will be excavated to accommodate the proposed slab-on-grade parking ramp. Excavation depth will vary with maximum excavation expected to be approximately 12.7 below existing street grade (i.e. 29 NAVD88) to a maximum depth of 16.3 (NAVD88). Approximately 15,500 tons of soil/fill will be removed from the Site and properly disposed at an appropriately licensed or permitted facility. Screening of excavated soil/fill during intrusive work for indications of contamination by visual means, odor, and monitoring with a PID. Management of excavated materials including temporarily stockpiling and segregating in accordance with defined material types and to prevent co-mingling of contaminated material and non-contaminated materials. Removal of all known underground storage tanks and other USTs that are encountered during soil/fill removal actions, and bulk removal of petroleum contaminated soil from below each tank and from around each tank in accordance with applicable laws & regulations. Registration of tanks and reporting of any petroleum spills associated with USTs and appropriate closure of these petroleum spills in compliance with applicable local, State and Federal laws and regulations. Spill closure and any associated groundwater remediation will be managed under NYSDEC authority for Spill No. 2101542. RP will submit Spill closure report for closure. 8/26/22 - Sekhon Joel kane (Fleming Lee Shue) called and

PARKING GARAGE (Continued) **S127584843**

told that some light intrusive
work for this project has begun and they have begun some UST removal. Contractor will remove the
soil beneath UST to the areas to the planned development cut depth (approximately 14-20 feet below
the tanks) and collect confirmation samples at that depth. 4/14/23 - Sekhon Updates from Joel Kane
- Remedial Action As a reminder, the remedial investigation identified petroleum impacts in the
southeastern section of the Site derived from suspected USTs in the parking garage basement. The
proposed redevelopment of the Site included excavation of the bulk of the Site (including the
impacted area) down approximately 20 below existing street level to make way for a sub-cellar
parking garage. As such the proposed redevelopment would largely over-excavate the UST areas.
Original Site elevation ranged from approximately 29 34 NAVD88. Water table is expected at
approximately 5 to 8 NAVD88. Following demolition of the existing on-Site buildings support of
excavation (SOE) piles were installed around the Site s perimeter. All drill cutting were screened
with a photoionization detector (PID) and for visual and olfactory evidence of petroleum impacts.
Evidence of petroleum impacts were isolated to the areas in the vicinity of suspected USTs in the
southeastern area of the Site. Following SOE install, incremental Site excavation occurred. A total
of seven (7) USTs found on Site were removed, cleaned and properly disposed of. Tanks are in the
process of being registered and subsequently closed with NYSDEC. Following additional SOE
installation, the bulk of the Site was excavated approximately 20 feet below street level to its
current elevation of 10 NAVD88. All excavated soil was screened with a PID and two CAMP stations
monitored VOC and particulate concentrations during all intrusive work. Again, the only remaining
petroleum impacts appear isolated to the southeastern portion of the Site. All soil was managed
according to the approved Soil Materials Management Plan (SMMP). Next Steps The remaining impacted
area in the southeastern section of the Site will be hotspot excavated in conjunction with the
planned pile cap install in the area. Pile cap excavation is expected to go to approximately
groundwater depth (approximately 5-6 NAVD88). Endpoint samples in that area will be collected per
DER-10 (i.e. 1 sidewall sample per 30 linear feet of hot-spot excavation and 1 bottom sample per
900 square feet of area). Additionally, per your request we will develop a separate NYSDEC spill
closure report for your files summarizing all endpoint sample results. Thanks again, Joel Kane
Director Fleming-Lee Shue 158 West 29th Street New York, NY, 10001 P: (212) 675-3225 F: (212)

PARKING GARAGE (Continued) **S127584843**

675-3224 C: (406) 321-0586 12/28/23 - Sekhon closure report submitted for depatmental review.
DECDOCS 1/2/23 - Sekhon UST Removal A total of seven (7) USTs were removed from the Site. USTs were
at various depths including four (4) below the existing basement garage and an additional three (3)
USTs below the sidewalk and street-level building slabs. As such, UST removal occurred throughout
the remedial excavation process over a period from September 13, 2022 to February 2, 2023. In
addition to the four (4) 550-gallon USTs originally identified in the 1938 Sanborn Fire Insurance
Map, FLS encountered an additional three (3)USTs located throughout the Site. This included a
3,000-gallon gasoline UST located beneath the sidewalk in the vicinity of the spill impact area.
All USTs were removed according to best practices and applicable regulations. This generally
included vacuuming out remaining contents, filling the tank with inert gas to avoid spark risk,
removal and cleaning of the tank, and finally off-site disposal at a recycling facility. All USTs
were registered and subsequently closed with PBS # 2613477. Remedial Excavation Per the approved
RAWP, FLS proposed over-excavation of the UST area as a part of the redevelopment of the area to a
sub-cellar parking garage. Elevation varies on Site, but for the purposes of this report, 30 ft.
NAVD88 is considered street-level and all below-grade depths discussed herein are relative to this
elevation. Final development excavation depth on Site varied and consisted of four primary target
depths as shown on Figure 4. As a part of development, soils within the majority of the spill area
(i.e., the proposed sub-cellar garage) were excavated approximately 21 ft. from street level to
approximately 9 ft. NAVD88. Within the building core excavation, including a portion of the spill
area, soils were excavated an additional 6 ft. to an approximate depth of 3 ft. NAVD88. The
elevator pit was excavated to a depth of -10 ft. NAVD88 or approximately 40 ft. from street-level.
The Site includes two out-facing lots to DeKalb Avenue, neither of which had documented impacts
from the on-Site spill. The western lot was excavated along a gradient ranging from street level on
its northern edge, to a depth of approximately 21 ft. NAVD88, 9 ft. below street-level, on its
southern edge. The eastern DeKalb facing lot is a slab-on-grade development and was not excavated.
Overall, a total of 19,330 cubic yards (28,995 tons) of soil were removed from the proposed garage
area, which included the UST spill area. Of the total volume removed, 10,000 cubic yards (15,000
tons) were removed as non-hazardous, petroleum-contaminated soil. During excavation, soil was
screened for indications of contamination by visual means, odor, and

PARKING GARAGE (Continued) **S127584843**

monitoring with a PID.
Management of excavated materials included temporarily stockpiling and segregating them in
accordance with defined material types to prevent comingling of contaminated material and
non-contaminated materials. All excavated soil was disposed of at pre-approved, appropriately
licensed and/or permitted facilities. Deviations from the RAWP The approved RAWP initially outlined
over-excavation of impacted soils within the spill area to groundwater depth, which was projected
at 4 ft. NAVD88. However, during intrusive activity, neighboring structures along the southern edge
of the Site experienced extraneous movement, as documented by motion sensors installed within their
basements. As such, excavation of the impacted area to groundwater depth was no longer considered
safe or practical. This information was relayed to both NYCOER and NYSDEC, and a secondary
excavation and sampling plan was developed. The southeast section of the Site would be excavated to
the final slab depth of 9 ft. NAVD88, and additional excavation ranging from 3 to 5 ft. NAVD88
would occur in the footprints of the proposed foundation elements (i.e., pile caps) as shown in
Figure 3. FLS proposed collecting additional endpoint samples at final excavation depth and within
each pile cap area to document remaining conditions and concentrations of any contamination left in
place. NYSDEC and NYCOER approved of this sampling plan on April 25, 2023. Post-Excavation Soil
Sampling Sampling Scope A total of twenty-two (22) post-excavation soil samples were collected
following remedial excavation. All samples were collected per DER-10, including the bottom and
sidewalls of all pile caps near the area where leaking USTs were found and removed. All soil
samples were shipped under proper chain of custody protocol via courier to SGS North America Inc.,
a New York State ELAP-certified laboratory. The soil samples were analyzed for Target Compound List
VOCs by U.S. Environmental Protection Agency (EPA) Method 8260, SVOCs by EPA Method 8270, Target
Analyte List (TAL) Metals by EPA Methods 200.7/SW846 6010, and Target Analyte Pesticides and
Polychlorinated Biphenyls (PCBs) by EPA Method 8081 and 8082, respectively. Sampling Results
Sampling results were compared to the New York State Unrestricted Use SCOs (UUSCOs), Restricted
Residential SCOs (RRSCOs), and Protection of Groundwater SCOs (PGWSCOs). Volatile Organic Compounds
(VOCs) VOCs were generally non-detect throughout the Site with the exception of some low
concentrations of various compounds including the petroleum compounds cyclohexane (123 ug/kg),
benzene (20.9 ug/kg), ethylbenzene (1,390 ug/kg), isopropyl benzene (739 ug/kg), methylcyclohexane

PARKING GARAGE (Continued) **S127584843**

(705 ug/kg), toluene (29.7 ug/kg), and total xylene (92.5 ug/kg). Of these, only two VOCs were
detected at concentrations exceeding regulatory standards: the concentration of acetone within
sample EP-11 (27) (87 ug/kg) exceeded Unrestricted Use SCOs (50 ug/kg) and the NYS Protection of
Groundwater SCOs (50 ug/kg). Similarly, the concentration of ethylbenzene (1,390 ug/kg) within
sample SW-6 (26) exceeded both Unrestricted Use SCOs (1,000 ug/kg) and NYS Protection of
Groundwater SCOs (1,000 ug/kg), but did not exceed Restricted Residential SCOs (41,000 ug/kg).
Semi-Volatile Organic Compounds (SVOCs) SVOCs were generally non-detect throughout the Site with
the exception of some low concentrations of polycyclic aromatic hydrocarbons (PAHs). Low
concentrations of various compounds below SCOs were detected, including 1,1 -biphenyl (116 ug/kg),
acenaphthene (1,410 ug/kg), anthracene (515 ug/kg),
benzo(g,h,i)perylene (508 ug/kg),
benzo(k)fluoranthene (479 ug/kg), dibenzo(a,h)anthracene (175 ug/kg), fluoranthene (2,230 ug/kg),
fluorene (1,180 ug/kg), naphthalene (3,640 ug/kg), phenanthrene (4,980 ug/kg), and pyrene (1,860
ug/kg). Concentrations of SVOCs exceeded regulatory standards within only one sample, SW-9 (26).
Concentrations of benzo(a)anthracene (1,230 ug/kg), benzo(a)pyrene (1,080 ug/kg),
benzo(b)fluoranthene (1,090 ug/kg), chrysene (1,060 ug/kg), and indeno(1,2,3-cd)pyrene (524 ug/kg)
all exceeded their respective Unrestricted Use SCOs. Of these compounds, all but chrysene exceeded
their respective Restricted Residential SCOs as well.
Indeno(1,2,3-cd)pyrene s exceeded Restricted
Residential SCO was 500 ug/kg, while benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene
each exceeded their Restricted Residential SCOs of 1000 ug/kg. The total concentration of SVOCs
detected ranged from 103.9 ug/kg to 31,364.0 ug/kg across the spill area. Total SVOCs did not
exceed the approved Site-Specific SCO of 200 ppm at any location.
Metals - Metals were found
throughout the Site including lead (23.2 mg/kg), nickel (96.4 mg/kg), arsenic (6.4 mg/kg), barium
(47.3 mg/kg), chromium (19.9 mg/kg), cobalt (8.1 mg/kg), and vanadium (26.1 mg/kg). All metal
compounds were detected below Unrestricted Use SCOs with the exception of nickel. Nickel was
detected at concentrations exceeding the NYS Unrestricted Use SCOs (30 mg/kg) in thirteen (13)
samples, ranging from 30.3 mg/kg to 96.4 mg/kg. There were no analyte concentrations, including
nickel, that exceeded the Restricted Residential SCOs. Polychlorinated Biphenyls (PCBs) - PCBs were
non-detect throughout the Site, with the exception of two instances. Concentrations of Aroclor 1242
exceeded Unrestricted Use SCOs within samples SW-8 (26) (240 ug/kg)

PARKING GARAGE (Continued) **S127584843**

and EP-8 (26) (161 ug/kg).
PCBs on Site did not exceed Restricted Residential SCOs. Pesticides Pesticides were largely
non-detect throughout the Site with the exception of some low concentrations of 4,4 -DDE (1.8
ug/kg), 4,4 -DDT (3.1 ug/kg), alpha-BHC (0.63 ug/kg), and endosulfan-I (0.88 ug/kg). Concentrations
of pesticides on Site did not exceed Unrestricted Use SCOs.
Engineering Control Installation At the
time of RAWP acceptance, the exact products and placements of all subgrade vapor
barrier/waterproofing products was not known and placeholders were used and a construction update
confirming the vapor barrier products and layouts planned for the Site was submitted to OER on May
12, 2022. Ultimately however, the final installation plans of the vapor barrier system differed
slightly from the specifications outlined in both the original RAWP and the construction update
letter. The completed vapor barrier system in the parking garage area of the Site was largely
unchanged from the approved RAWP and featured a Grace Preprufe 300R Plus layer below the slab and a
Grace Preprufe 160R Plus layer up to grade along the north, west, and south garage boundaries. The
east boundary instead featured Bituthene 4000 up to grade. Within deeper structural or foundational
excavations within the parking garage area, Grace Preprufe 300R Plus was installed along vertical
surfaces along with infrequent use of 4000 Bituthene and Aquafin-1C Crystalline products.
Similarly, the two outfacing areas along DeKalb Avenue were both underlain and bounded up to grade
by Grace Preprufe 300R Plus,but feature sparing use of Aquafin-1C Crystalline waterproofing, Grace
Preprufe 160R Plus, and 4000 Bituthene in select areas. Additionally, the northeastern outfacing
lot features additional installations of Grace Preprufe 300R Plus around foundation and structural
elements. These product and layout updates to the vapor barrier system conformed to the
requirements of the approved RAWP and are protective of public health and the environment by
mitigating soil vapor migration into the constructed building. The composite cover system installed
throughout the Site is composed of a 6- to 18-inchthick concrete building slab, the vapor barrier
system, and an approximately 3-inch-thick concrete mud slab over undisturbed compacted soil.
Additionally, the use of a garage ventilation system throughout the sub-cellar parking garage area
will further mitigate any human exposure to soil vapors. Summary and Recommendation As a part of
the redevelopment of the property into mixed-use development with a sub-cellar garage, an NYCOER
and NYSDEC approved RAWP was implemented at the Site. A total of seven (7) USTs were removed,

PARKING GARAGE (Continued) **S127584843**

cleaned, disposed of, and ultimately closed on-Site. As a part of redevelopment, initial excavation was planned to the groundwater table (i.e., approximately 4 ft. NAVD88 or 26-ft. below street level); however, excavation to this depth was later found to be infeasible and unsafe due to extraneous movement in neighboring structures during excavation. It was then determined by FLS, NYCOER, and NYSDEC that due to these safety restrictions some residual contamination may ultimately remain in place. Per the new approved excavation and sampling plan, the spill impact area was excavated to a depth of 9 ft. NAVD88 or approximately 21 ft. from street-level with additional excavations down to 3 to 5 ft. NAVD88 for various foundation elements throughout the area. Overall, 19,330 cubic yards (28,995 tons) of soil were removed from the proposed garage area, which included the UST spill area. Of this, 10,000 cubic yards (15,000 tons) were removed as non-hazardous petroleum contaminated soil. A total of twenty-two (22) endpoint samples were collected on Site and analytical results show the vast majority of compounds meet Unrestricted Use SCOs. Regulatory exceedances beyond Unrestricted Use appear limited to relatively low concentrations of nickel throughout the Site, and a few isolated samples with exceedances of PCBs, VOCs and SVOCs. Concentrations of nickel did not exceed Restricted Residential SCOs at any location. PCB exceedances were limited to two detections of Aroclor 1242, which similarly did not exceed Restricted Residential SCOs. VOC exceedances were limited to two compounds, acetone and ethylbenzene, detected in two separate samples, neither of which exceeded Restricted Residential SCOs. SVOC concentrations were limited to PAH compounds within a single sample SW-9 (26). Concentrations of these compound modestly exceeded Restricted Residential SCOs and were present in concentrations consistent with Urban Fill. However, concentrations of Total SVOCs remain well below Site Specific SCOs. The vast majority of impacts from site have been successfully removed, but due to limitations in the excavation derived from extraneous movement in neighboring structures, some isolated contamination was left in place. Nonetheless, the installation of the engineering controls including a vapor barrier, a composite cover system, and the garage ventilation system will adequately mitigate any human exposure. Based upon to the provided information spill closed.

Remarks: Soil testing showing impacted soil. Further investigation and cleanup is pending. Caller requesting callback.

Class: Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Swis Code: 2401
Town: New York City
Disp Start: Not reported
Disp Term: Not reported
Acres: 3.8
Fuse: Not Identified
Description: Location: The site occupies about 3.81 acres and is identified as Block 471, Lot 200 on the Kings County tax map. The Gowanus Canal, a USEPA Superfund site, adjoins the site to the east and is hydraulically connected to 459 Smith Street pending construction of an impermeable bulkhead along the shoreline. The site is located on the southern portion of Block 471 and is bound by Lot 1 followed by 5th Street to the north, the Gowanus Canal to the east, Huntington Street to the south, and Smith Street to the west. Site Features: The site encompasses an area of 165,840 square feet (about 3.8 acres) and is currently used as a staging area in support of the Gowanus Canal Superfund remediation. There are no buildings on the site. The site elevation ranges from about el 10 feet (North American Vertical Datum of 1988 [NAVD88]) along the Gowanus Canal to between el 17 and 22 along Smith Street (sloping up from south to north). Current Zoning and Land Use: The site is zoned for industrial use. The entire site is located in the M3-1 manufacturing district. The surrounding area includes commercial, industrial, residential, and transportation/utility buildings, as well as, vacant lots, construction sites, and open space. Most of the site is not paved except for the eastern part of the site, between the bulkhead and the foundation wall of the former warehouse. The site is not improved with any structures. The site is currently being used as a staging area for the Gowanus Canal Superfund project. Past Use of the Site: The site was occupied by a fertilizer plant from as early as 1886 until some point between 1904 and 1915. The Former Citizens Manufactured Gas Plant (MGP) Site was constructed on the adjoining properties to the north around the 1860s, and expanded to include this site between 1904 and 1915. The MGP operation on the site continued to expand between 1915 and 1948 and included a tar separator, tar handling facilities, oil storage tanks, and a 1-million-gallon oil tank. The MGP site was demolished in the early 1960s. Site Geology and Hydrogeology: The USGS ?Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and

LOT 200,TAXBLOCK 471 (Continued) **S128901965**

Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey? indicates that the bedrock underlying the site is part of the Hartland Formation. During the 2005 remedial investigation by GEI Consultants, Inc., historic fill was identified from surface grade to about 8 to 15 feet below grade surface (bgs) across the site, and predominately consisted of loose, non-cohesive silt, sand, and gravel with brick, concrete, coal, wood, metal, ash, slag, and clinkers. Alluvial/Marsh deposit generally consisting of grey to brown clay, silt and organic silts was observed beneath the fill layer. Glacial till generally consisting of brown, fine to medium sand with varying amounts of silt, clay, and gravel was observed beneath the alluvial/marsh deposit. The groundwater flow direction for the area surrounding the site is tidally influenced. Shallow, intermediate, and deep groundwater flow was generally observed flowing to the south-southwest. Groundwater underlying the site was observed at elevations ranging from about 7 to 0 NAVD88.

Assess Env: Remediation is Underway: The site was heavily contaminated with MGP residuals, including coal tar and petroleum products. However, remediation has been completed to address the former MGP structures and associated impacts. Former MGP structures, including gas holders, a tar separator and various associated MGP piping, and have been removed along with a significant amount of coal tar and petroleum impacted soils to depths up to 26 feet below ground surface (bgs). A sealed bulkhead/barrier has been installed to prevent migration of contamination into the Gowanus Canal. A coal tar collection system has also been installed behind the sealed bulkhead/barrier wall to capture and remove residual coal tar at depth. This recovery system along with the sealed bulkhead/barrier wall will prevent off-site migration of residual coal tar. A sitewide cover will also be installed to address direct contact with residual surface contamination, which consists of historic fill containing semi-volatile organic compounds (SVOCs) and metals as is typical in urban environments across the state. Vapor intrusion mitigation systems will be installed in all future buildings constructed at the site. Nature and Extent of Contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. During the RI, samples were analyzed for VOCs, SVOCs, metals and cyanide. Soil: Coal tar has been observed, in soil, across the site at various depths ranging from approximately seven to one hundred fifty feet below grade. Tar saturation thickness varies across the site and ranges from bands of a few inches to several feet of coal tar. The areas of heaviest tar saturation were observed in the vicinity of the tar separator. Total BTEX concentrations were observed in soil ranging from ND to 3,080 parts per million (ppm) in a sample at 52 feet below grade. Total PAHs ranged from ND to 47,070 ppm in a sample at 83-85 feet below grade. Coal tar has migrated off-site at depth. Groundwater: Groundwater at the site has been impacted by MGP related contaminants of concern including coal tar in the form of non-aqueous phase liquid. Total BTEX, PAHs and cyanide were detected above groundwater quality standards in groundwater samples across many areas of the site. Total BTEX in groundwater ranged from non-detect (ND) to 49, 400 parts per billion (ppb). Total PAHs in groundwater ranged from ND to 9,390 ppb. Total cyanide

LOT 200,TAXBLOCK 471 (Continued) **S128901965**

concentrations in groundwater ranged from ND to 1,410 parts per million (ppm). Soil Vapor/Sub-slab Vapor: Sub-slab vapor samples were collected from beneath the former warehouse building on the site. The results indicated that BTEX compounds were present in the samples but not at levels that posed a concern to people in the former structure. Special Resources Impacted/Threatened: The nearest environmental receptor is the Gowanus Canal, where significant discharges of coal tar from the site in the past have been observed in the past.

Assess Doh: The site is fenced with partial asphalt cover. People could come in contact with contaminated soil and groundwater if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. Because the site is vacant soil vapor intrusion is not a current concern. The potential for indoor air impacts via the soil vapor intrusion pathway exists for any future on-site buildings. Environmental sampling indicates that soil vapor intrusion from site contaminants is not a concern for off-site properties.

DEC Memo:	07/19/12- Zhune spoke to Charles Power from Aldi Development 516-032-3228. he said they were doing support excavation. They found a 550- gallons gasoline tank. Thank was removed and soil contaminated excavated. About 40 yards of soil contaminated was excavated. Endpoint collected. 10/26/12- Called Aldi Development spoke to Gim Vanhorn said the closure report is going to be send in two weeks. 11/13/14-Wala Canation from CNC Management Corp.emailed the Remedial Action report including the Phase I and the Phase II. Phase I.-Complety by FLS and Biene dated 1/2007 (with Phase I update dated April 2008) REC identified st the subject site by

TARGET STORE T2850 (Continued) **S112147654**

Biene, included a parking garage
with ten gasoline USTs. a filling station with eight gasoline USTs, former painting operations, and
other past sites occupanciesn mauy have utilized hazardous and/or petroleum products as part of
therir operations. A CEQR E designation was also identified, being placed on the site by the
Department of City Planning as part of the Downtown Brooklyn Developmen for potential hazardous
materials and noise impacts based upon its historiacl use. The Phase I update dated April 2008 did
not identified any other REC than that stated within the previous Phase I. Phase II.- On 1/11/11
and 2/17/11, CNS advanced a total of nine (9) borings (ACRS-SBO1 through ACRS-SB09).On 10/31/11
through 11/8/11, CNS advanced an additional thirty-one borings ACRS-SB10 throught
ACRS-SB-40)Subsurface borings were advanced to a depth of 30 feet bg or refusal, which is two feet
below the planned excavation depthof 28 ft bgs or the anticipated foundation grade level of 44'
bgs. A total of (61) composite soil samples were obtained from ACRS-SB-10 through ACRS-SB40. The
analitycal result indicate no exceeding of the NYSDEC CP-51/soil cleanup guidance within the
collected soil samoles. Only sample ACRS-SB)5-S5B collected from 8'-16' bgs indicate low-level of
SVOC contituents consisting of Benzo(a)anthracene 3.8 ppm, Benzo (a)pyrene 3.2 ppm, Benzo
(b)fluoranthene 3.9 ppm and Indeno(1,2,3,-cd)pyrene)which was detected slightly above the
standards. On 8/3/11, CNS collected samples from the three remaining monitoring wells at the City
Development site, installed by FLS between 11/2007 to 01/2008. Monitoring well MW-1(FLS'MW5) is
located western portion of hte site, were groundwater was encountered at 43'4 bgs. Monitoring well
MW-2(FLS'MW-3) and MW-3(FLS'MW-2A) are located within the portion tax lot 101, where groundwater is
encountered at 45' 4 bgs and 42' 0 bgs. The groundwater analytical result did not identified any
VOC or Metal contaminants above the the NYSDEC TOGS Standards within any of the three groundwater
samples. However SVOCs contituents were identified. Both Benzo(a)anthracene and
Benzo(b)fluoranthene were detected slightly above the NYSDEC TOGS within monitoring well MW-1 0.05
ppb and monitoring well MW-2 0.05 ppb. Benzo (a)pyrene 0.06 ppb and Benzo(b)fluoranthene 0.06 ppb
were detected above the standards in monitoting welll MW-3. On 11/13/11, CNS installed a total of
four(4)soil gas at the site labeled SG-01 through SG-04 Analitycal results of all four soil-gas
samples did not identify any volatile chemicals exceeding the air guideline values. Remedial Action
Plan.- The proposed remedial action will consist of: 1.- Perform a Community Air Monitoring Program

TARGET STORE T2850 (Continued) **S112147654**

. 2.- Utilize site -specific Restricted-Residencail Soil Cleanup Objectives (SCOs) for contaminants of concer. Excavation and removal os all soi/fill to the depths of 44'bgs including soil/fill exceeding SCOs, where aplicable. 3.- Collection and analysis of end-point samples. 4.- Removal of undergraund storage tanks 5.- Construction and maintenance of an Engineering composite cover consisting of building slab. 6.- Installation of vapor barrier system. 7.- demarcation of residul soil/fill. 8.- transportation and of -site disposal of all soil/fill material. 9.- Screening of excavated soil/fill. 10.-Site movilization involving site security setup, equipment mobilization, utility mark out and marking & staking excavation areas. 11.-Implementation of storm-water pollution prevention measures. 12.-Performance of all activitities required for the remedial action 13.-Submission of a remedial Closure Report (RCR). 11/14/14-Wala Canario from CNS Environmental Corp. emailed the Tank Closure Report dated 10/5/12. The report stated that Tank Area # 1, discovered on 7/12/12 is located within the east /southeast portion of the site (Grid SB-23) where a 550 gallon gasoline UST was idientified during redevelopment activities. The UST, which was filled with an inert material was cut, cleaned and removed from the site. Prior to the tank removed off -site, the area demostrated olfatory evidence of a potential release within the soil was identified beneath the UST. Soil was excavated from the UST area. ACO # 1, discovered 7/26/12 is located within the central portion of the site (Grid # 27) where elevated PID readings and a gasoline odor were idintified during excavation activities. Upon completion of the excavation activities CNS subsequently collected a total of (5) soil endpoint grab samples from each excavation area. Endpoint soil samples collected from Area # 1 are: T1-Ep-NS-S1A (north sidewall),T1-Ep-ES-S2A (east sidewall), T1-Ep-SS-S3A (south sidewall),T1-Ep-WS-S4A (West sidewall),T1-Ep-BE-S5A (bottom of the excavation). Endpoint soil samples collected from AOC #1 are: ACC1-EP-NS-S1A (North sidewall), ACC1-EP-ES-S2A (east sidewall), ACC1-EP-SS-S3A (south sidewall), ACC1-EP-WS-S4A (West sidewall), ACC1-EP-BE-S5A (bottom of the excavation). The soil analytical results of the endpoint samples from both excavation Tahnk #1 and AOC #1 did not identity any VOC or SVOC contminants exceeding the standards. spill closed.

Remarks: DURING EXCAVATION, A 550 GALLON GASOLIN TANK WAS UNEARTHED.

Update By: CXMAYCOC
Site Description: "Location: The site is located at 88 9th Street (Tax Block 1007, Lot 20) in the Gowanus neighborhood of Brooklyn, New York. The site is bound by 9th Street to the north followed by a 1-story industrial warehouse with a parking lot, a 4-story commercial office building to the east followed by 2nd Avenue, 10th Street to the south followed by a Lowe s Home Improvement store and parking lot which are situated within the boundaries of the former Metropolitan Works Manufactured Gas Plant Voluntary Cleanup Program site (Site No. V00405), and an outdoor architectural salvage market operating out of an otherwise unimproved parking lot to the west followed by the Gowanus Canal State Superfund site (Site No. 224133). The site is approximately 370-feet (ft) east of the Gowanus Canal and sits in-between two of the canal s southernmost tributaries. The site is also underneath an approximately 70-ft high New York City Metropolitan Transit Authority (NYC MTA) viaduct which services the F and G subway lines. Site Features: The approximately 45,600-square-ft (sq-ft), or 1.05-acre, site is entirely paved with asphalt and is currently used by a tenant that leases outdoor parking spaces and shipping containers for miscellaneous storage. The site includes multiple self-storage units, an approximately 1,175-sq-ft 1-story office building at the northern entrance, and an approximately 2,830-sq-ft storage building to the east. Users of the storage facility include a landscaping company, a metalworking company, a construction company, and monthly private self-storage renters. Twenty-one of the structural piles for the overhead NYC MTA viaduct are embedded across the central portion of the site. Current Zoning and Land Use: The site is zoned M2-1 for medium performance manufacturing. M2 districts typically include intermediate industrial use as well as limited commercial use and are mainly located in the city s older industrial areas along the waterfront. The surrounding area includes commercial and office buildings, industrial and manufacturing areas, and parking facilities. Historical Site Use: The site was first improved in the 1880s with a carpet lining mill, followed by a paint factory and then a calcium carbonate (whiting) mill that specialized in manufacturing putty and chalk in the 1900s. By 1915 the on-site building was being used for cabinet furniture manufacturing, and by 1933 all on-site structures were demolished to allow for construction of the overhead subway viaduct. The site has been used for vehicle parking and miscellaneous storage ever since, with the existing self-storage

88 9TH STREET (Continued) **S128043911**

units being added in the early 2000s. A spill was reported to NYSDEC in January 2022 (Spill No. 2108113) after a site investigation found several petroleum-related volatile organic compounds (VOCs) in one soil sample. The spill was closed in February 2022. Site Geology and Hydrology: Site grades vary between elevation (el) 7.5 and 11.7 of the North American Vertical Datum (NAVD88), and tend to slope down to the northwest toward the Gowanus Canal. Previous investigations have encountered urban fill from site grade to depths ranging from 3 to 18.5-ft below grade (ft-bg) which predominantly consist of grey to dark brown fine sand with varying proportions of silt, clay, gravel, glass, brick, concrete, woody debris, metal, coal, and coal ash. Fill is underlain by native soil primarily composed of clay, though sand was observed in one soil boring located in the central part of the site. The measured depth to groundwater is between 1.05 and 5.14 ft-bgs (el 5.03 to 6.16 NAVD88). Groundwater flow is determined to flow to the north towards the Gowanus Canal and may be tidally influenced. "

Env Problem: "Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor and indoor air samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include petroleum-related VOCs, SVOCs, and metals, specifically arsenic, in soil and groundwater, and VOCs in soil vapor. Soil: Five petroleum-related VOCs were detected above the Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) in shallow soil in the northeast quadrant of the site, including maximum concentrations of 1,2,4-trimethylbenzene at 13 parts per million (ppm) (PGWSCO is 3.6 ppm), benzene at 0.064 ppm (PGWSCO is 0.06 ppm), ethylbenzene at 4.9 ppm (PGWSCO is 1 ppm), toluene at 3.3 ppm (PGWSCO is 0.7 ppm), and total xylene at 24 ppm (PGWSCO is 1.6 ppm). Several SVOCs were detected above the Commercial Use SCOs (CSCO) from grade to deep soil, including maximum concentrations of benzo(a)anthracene at 46 ppm (CSCO is 5.6 ppm), benzo(a)pyrene at 47 ppm (CSCO is 1 ppm), benzo(b)fluoranthene at 49 ppm (CSCO is 5.6 ppm), dibenz(a,h)anthracene at 6.1 ppm (CSCO is 0.56 ppm), and indeno(1,2,3-cd)pyrene at 31 ppm (CSCO is 5.6 ppm). Several metals were detected above the CSCOs and/or PGWSCOs from grade to very deep soil, including maximum concentrations of arsenic at 90,000 ppm (CSCO and PGWSCO is 16 ppm), barium at 959 ppm (CSCO is 400 ppm, PGWSCO is 820 ppm), copper at 8,220 ppm (CSCO is 270 ppm), lead at 4,010 ppm (CSCO is 1,000 ppm, PGWSCO is 450 ppm), mercury at 181 ppm (CSCO is 2.8 ppm, PGWSCO is 0.73 ppm), nickel at 321 ppm (CSCO is 310 ppm), and zinc at 14,200 ppm (CSCO is 10,000, PGWSCO is 2,480 ppm). For PFAS compounds, perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA), were detected in shallow to moderately deep soil above the Protection of Groundwater Guidance Values of 1 part per billion (ppb) and 0.8 ppb at maximum concentrations of 2.48 ppb and 1.31 ppb, respectively. PCBs and pesticides were detected in exceedance of the Unrestricted Use SCOs (UUSCOs), but none were found above the CSCOs. Data does not indicate that there are any off-site impacts in soil related to this site. Groundwater: Two petroleum-related VOCs, xylene (max. 5.5 ppb) and naphthalene (max. 21 ppb), were detected in groundwater above their respective Ambient Water Quality Standards and Guidance Values (AWQSGVs) of 5 ppb and 10 ppb. Emerging contaminant 1,4-dioxane was detected at a maximum of

88 9TH STREET (Continued) **S128043911**

1.07 ppb, exceeding the AWQSGV of 0.35 ppb. Several SVOCs were detected above the AWQSGVs including maximum concentrations of benzo(a)anthracene at 0.5 ppb, benzo(b)fluoranthene at 0.45 ppb, benzo(k)fluoranthene at 0.13 ppb, chrysene at 0.47 ppb, and indeno(1,2,3-cd)pyrene at 0.23 ppb. The AWQSGV for each of these contaminants is 0.002 ppb. Benzo(a)pyrene was also detected at a maximum of 0.36 ppb (AWQSGV is non-detect), and phenol was detected at 1.8 ppb (AWQSGV is 1 ppb). Dissolved arsenic and barium were detected above the AWQSGVs at maximum concentrations of 5,443 ppb (AWQSGV is 25 ppb) and 2,608 ppb (AWQSGV is 1,000 ppb), respectively. Other dissolved metals detected in exceedance of the AWQSGV included iron, manganese, and sodium, however, these are naturally occurring minerals and are not considered to be site-specific contaminants. PFOS and PFOA were found at maximum concentrations of 416 parts per trillion (ppt) and 474 ppt, exceeding their respective AWQSGVs of 2.7 ppt and 6.7 ppt. Neither PCBs nor pesticides were detected in any groundwater samples. Data indicates off-site impacts in groundwater related to this site. Soil Vapor, Indoor Air, and Sub-Slab Vapor: Trace detections of chlorinated VOCs were found in soil vapor samples, including maximum concentrations of tetrachloroethylene (PCE) at 3 g/m3, trichloroethylene (TCE) at 5.23 g/m3, and methylene chloride at 14.5 g/m3. Chlorinated VOCs were also detected in indoor air samples taken at the on-site office and storage building, including maximum concentrations of PCE at 1.57 g/m3, methylene chloride at 14 g/m3, and trans-1,2-dichloroethene at 170 g/m3. PCE was also detected at 2.11 g/m3 in a sub-slab vapor sample taken from the on-site storage building. Petroleum-related VOCs were detected in soil vapor across the site, including maximum concentrations of 1,2,4-trimethylbenzene at 40.3 g/m3, 1,3,5-trimethylbenzene at 39.8 g/m3, benzene at 15.7 g/m3, ethylbenzene at 9.77 g/m3, toluene at 22 g/m3, total xylene at 82.1 g/m3, heptane at 22.7 g/m3, and hexane at 18.5 g/m3. These contaminants were also detected in indoor air and sub-slab samples, including maximum concentrations of 1,2,4-trimethylbenzene at 3.78 g/m3 and 3.91 g/m3; 1,3,5-trimethylbenzene at 1.09 g/m3 and 1.26 g/m3; benzene at 2.02 g/m3 and 1.82 g/m3; ethylbenzene at 4.78 g/m3 and 2.86 g/m3; toluene at 10.7 g/m3 and 9.65 g/m3; xylene at 24.5 g/m3 and 13.4 g/m3; heptane at 2.14 g/m3 and 3.9 g/m3; and hexane at 4.58 g/m3 and 2.74 g/m3. Data does not indicate off-site impacts in soil vapor related to this site."

Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

DEC Memo:	12/7/2021 - Feng - Desk Duty. Spoke to Patrick Farnham of Langan Engineering. It is a storage facility with storage containers. They want to develop the site with storage building instead of the containers. They did a Phase 1 and found the site has been for manufacturing and industry uses and no record of petroleum use at the site. Then they did a Phase 2 investigation. 5 soil borings were installed in mid 11/2021. In one of the soil borings, there was mild petroleum odor right beneath the pavement. Two soil samples were collected at shallow depth and deeper depth, and temporary well was installed and groundwater was collected. The shallow soil sample was detected with 50 ppm BTEX. The deeper depth soil sample show no BTEX exceedance. No VOCs in groundwater. The Phase 1 and Phase 2 reports will be sent over when ready. Discussed with V. Zhune and spill is assigned to her for further follow up. Patrick Farnham Langan Engineering 646-593-0849 PFarnham@Langan.com 2/7/22 - Obligado - In addition to petroleum

88 9TH STREET (Continued) **S128043911**

contamination, the Phase 2 report
documented elevated Mercury and Arsenic contamination likely from historic manufacturing site use.
After discussion with DEC O'Connell, P-Site Memo to be drafted for potential transfer to Section C.
2/18/22 - Obligado - As per Jane O'Connell, Spill number closed.
P-Site created. See HW Site No
224355.

Remarks: cleanup pending

Site Description:	"Location: The site is located at 88 9th Street (Tax Block 1007, Lot 20) in the Gowanus neighborhood of Brooklyn, New York. The site is bound by 9th Street to the north followed by a 1-story industrial warehouse with a parking lot, a 4-story commercial office building to the east followed by 2nd Avenue, 10th Street to the south followed by a Lowe s Home Improvement store and parking lot which are situated within the boundaries of the former Metropolitan Works Manufactured Gas Plant Voluntary Cleanup Program site (Site No. V00405), and an outdoor architectural salvage market operating out of an otherwise unimproved parking lot to the west followed by the Gowanus Canal State Superfund site (Site No. 224133). The site is approximately 370-feet (ft) east of the Gowanus Canal and sits in-between two of the canal s southernmost tributaries. The site is also underneath an approximately 70-ft high New York City Metropolitan Transit Authority (NYC MTA) viaduct which services the F and G subway lines. Site Features: The approximately 45,600-square-ft (sq-ft), or 1.05-acre, site is entirely paved with asphalt and is currently used by a tenant that leases outdoor parking spaces and shipping containers for

88 9TH STREET (Continued) **S128043911**

miscellaneous storage. The site includes multiple self-storage units, an approximately 1,175-sq-ft 1-story office building at the northern entrance, and an approximately 2,830-sq-ft storage building to the east. Users of the storage facility include a landscaping company, a metalworking company, a construction company, and monthly private self-storage renters. Twenty-one of the structural piles for the overhead NYC MTA viaduct are embedded across the central portion of the site. Current Zoning and Land Use: The site is zoned M2-1 for medium performance manufacturing. M2 districts typically include intermediate industrial use as well as limited commercial use and are mainly located in the city s older industrial areas along the waterfront. The surrounding area includes commercial and office buildings, industrial and manufacturing areas, and parking facilities. Historical Site Use: The site was first improved in the 1880s with a carpet lining mill, followed by a paint factory and then a calcium carbonate (whiting) mill that specialized in manufacturing putty and chalk in the 1900s. By 1915 the on-site building was being used for cabinet furniture manufacturing, and by 1933 all on-site structures were demolished to allow for construction of the overhead subway viaduct. The site has been used for vehicle parking and miscellaneous storage ever since, with the existing self-storage units being added in the early 2000s. A spill was reported to NYSDEC in January 2022 (Spill No. 2108113) after a site investigation found several petroleum-related volatile organic compounds (VOCs) in one soil sample. The spill was closed in February 2022. Site Geology and Hydrology: Site grades vary between elevation (el) 7.5 and 11.7 of the North American Vertical Datum (NAVD88), and tend to slope down to the northwest toward the Gowanus Canal. Previous investigations have encountered urban fill from site grade to depths ranging from 3 to 18.5-ft below grade (ft-bg) which predominantly consist of grey to dark brown fine sand with varying proportions of silt, clay, gravel, glass, brick, concrete, woody debris, metal, coal, and coal ash. Fill is underlain by native soil primarily composed of clay, though sand was observed in one soil boring located in the central part of the site. The measured depth to groundwater is between 1.05 and 5.14 ft-bgs (el 5.03 to 6.16 NAVD88). Groundwater flow is determined to flow to the north towards the Gowanus Canal and may be tidally influenced. "

Summary: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Summary: "Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor and indoor air samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include petroleum-related VOCs, SVOCs, and metals, specifically arsenic, in soil and groundwater, and VOCs in soil vapor. Soil: Five petroleum-related VOCs were detected above the Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) in shallow soil in the northeast quadrant of the site, including maximum concentrations of 1,2,4-trimethylbenzene at 13 parts per million (ppm) (PGWSCO is 3.6 ppm), benzene at 0.064 ppm (PGWSCO is 0.06 ppm), ethylbenzene at 4.9 ppm (PGWSCO is 1 ppm), toluene at 3.3 ppm (PGWSCO is 0.7 ppm), and

88 9TH STREET (Continued) **S128043911**

total xylene at 24 ppm (PGWSCO is 1.6 ppm). Several SVOCs were detected above the Commercial Use SCOs (CSCO) from grade to deep soil, including maximum concentrations of benzo(a)anthracene at 46 ppm (CSCO is 5.6 ppm), benzo(a)pyrene at 47 ppm (CSCO is 1 ppm), benzo(b)fluoranthene at 49 ppm (CSCO is 5.6 ppm), dibenz(a,h)anthracene at 6.1 ppm (CSCO is 0.56 ppm), and indeno(1,2,3-cd)pyrene at 31 ppm (CSCO is 5.6 ppm). Several metals were detected above the CSCOs and/or PGWSCOs from grade to very deep soil, including maximum concentrations of arsenic at 90,000 ppm (CSCO and PGWSCO is 16 ppm), barium at 959 ppm (CSCO is 400 ppm, PGWSCO is 820 ppm), copper at 8,220 ppm (CSCO is 270 ppm), lead at 4,010 ppm (CSCO is 1,000 ppm, PGWSCO is 450 ppm), mercury at 181 ppm (CSCO is 2.8 ppm, PGWSCO is 0.73 ppm), nickel at 321 ppm (CSCO is 310 ppm), and zinc at 14,200 ppm (CSCO is 10,000, PGWSCO is 2,480 ppm). For PFAS compounds, perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA), were detected in shallow to moderately deep soil above the Protection of Groundwater Guidance Values of 1 part per billion (ppb) and 0.8 ppb at maximum concentrations of 2.48 ppb and 1.31 ppb, respectively. PCBs and pesticides were detected in exceedance of the Unrestricted Use SCOs (UUSCOs), but none were found above the CSCOs. Data does not indicate that there are any off-site impacts in soil related to this site. Groundwater: Two petroleum-related VOCs, xylene (max. 5.5 ppb) and naphthalene (max. 21 ppb), were detected in groundwater above their respective Ambient Water Quality Standards and Guidance Values (AWQSGVs) of 5 ppb and 10 ppb. Emerging contaminant 1,4-dioxane was detected at a maximum of 1.07 ppb, exceeding the AWQSGV of 0.35 ppb. Several SVOCs were detected above the AWQSGVs including maximum concentrations of benzo(a)anthracene at 0.5 ppb, benzo(b)fluoranthene at 0.45 ppb, benzo(k)fluoranthene at 0.13 ppb, chrysene at 0.47 ppb, and indeno(1,2,3-cd)pyrene at 0.23 ppb. The AWQSGV for each of these contaminants is 0.002 ppb. Benzo(a)pyrene was also detected at a maximum of 0.36 ppb (AWQSGV is non-detect), and phenol was detected at 1.8 ppb (AWQSGV is 1 ppb). Dissolved arsenic and barium were detected above the AWQSGVs at maximum concentrations of 5,443 ppb (AWQSGV is 25 ppb) and 2,608 ppb (AWQSGV is 1,000 ppb), respectively. Other dissolved metals detected in exceedance of the AWQSGV included iron, manganese, and sodium, however, these are naturally occurring minerals and are not considered to be site-specific contaminants. PFOS and PFOA were found at maximum concentrations of 416 parts per trillion (ppt) and 474 ppt, exceeding their respective AWQSGVs of 2.7 ppt and 6.7 ppt. Neither PCBs nor pesticides were detected in any groundwater samples. Data indicates off-site impacts in groundwater related to this site. Soil Vapor, Indoor Air, and Sub-Slab Vapor: Trace detections of chlorinated VOCs were found in soil vapor samples, including maximum concentrations of tetrachloroethylene (PCE) at 3 g/m3, trichloroethylene (TCE) at 5.23 g/m3, and methylene chloride at 14.5 g/m3. Chlorinated VOCs were also detected in indoor air samples taken at the on-site office and storage building, including maximum concentrations of PCE at 1.57 g/m3, methylene chloride at 14 g/m3, and trans-1,2-dichloroethene at 170 g/m3. PCE was also detected at 2.11 g/m3 in a sub-slab vapor sample taken from the on-site storage building. Petroleum-related VOCs were detected in soil vapor across the site, including maximum concentrations of 1,2,4-trimethylbenzene at 40.3 g/m3, 1,3,5-trimethylbenzene at 39.8 g/m3, benzene at 15.7 g/m3, ethylbenzene at 9.77 g/m3, toluene at 22 g/m3, total xylene at 82.1 g/m3, heptane at 22.7 g/m3, and hexane at

88 9TH STREET (Continued) **S128043911**

18.5 g/m3. These contaminants were also detected in indoor air and sub-slab samples, including maximum concentrations of 1,2,4-trimethylbenzene at 3.78 g/m3 and 3.91 g/m3; 1,3,5-trimethylbenzene at 1.09 g/m3 and 1.26 g/m3; benzene at 2.02 g/m3 and 1.82 g/m3; ethylbenzene at 4.78 g/m3 and 2.86 g/m3; toluene at 10.7 g/m3 and 9.65 g/m3; xylene at 24.5 g/m3 and 13.4 g/m3; heptane at 2.14 g/m3 and 3.9 g/m3; and hexane at 4.58 g/m3 and 2.74 g/m3. Data does not indicate off-site impacts in soil vapor related to this site."

Longitude: -73.9853910
DEC Memo: Sangesland spoke to Eric Telemaque at Emteque. Area is being excavated for new construciton. They found tanks and pulled them. They are in the process of removing the contaminated soil from the area. They will take end point samples of the bottom and sidewall. They will forward a report to DEC when the work is completed. 08/06/08-Hiralkumar Patel. left message for Eric at Emteque. received message from Rene from Emteque. they finished remediation and are preparing closure report and will submit report by end of 08/15/08. visited site. on-going excavation at the site. no petorleum odors. high school next to the site at 374-382 Bridge Street. received call from Eric. asked him to submit tank closure report. he will submit report by 08/15/08. asked him to contact owner to hold any foundation work until the department reviews the tank closure report. 08/18/08-Hiralkumar Patel. spoke with Eric. he will submit report tomorrow. 08/19/08-Hiralkumar Patel. received draft copy (not signed by authorized person) of spill closure report. abstract: - site address: 384-394 Bridge Street, Block #: 152, Lots #: 37 & 118 - e designated site: DEP #: 07DEPTECH258K <---------- - will develope residential tower <---------- - during excavation found seven tanks (six USTs and one AST) from the site - tanks were belived to have stored gasoline and waste oil - took endpoint samples after tanks removed, samples taken at depth of 12 ft bg and found clean Eric Telemaque EMTEQUE Corporation Ph. (212) 631-9000 Ext 100 (646) 529-6526 (C) Fax (212) 631-8066 email: eric@emteque.com 08/20/08-Hiralkumar Patel. spoke with Eric. asked him to submit all previous reports (Phase I, Phase II, Construction Health & Safety Plan and RAP). Eric mentioned that they found another area of contamination. visited site. met Jake Hawkes (cell: 917-769-2618) from Emteque at the site. they found two more areas with contamination. will collect endpoint samples. Jake mentioned that there was a drycleaner at the site. 08/21/08-Hiralkumar Patel. received emails from Eric with few documents, but all confusing. sent email to Eric to submit complete reports. also asked to submit property owner's information. Jim Farley 384 Bridge Street Associates, LLC **property owner** c/o Stahl Real Estate Co. 277 Park Avenue, 47th floor New York, NY 10017 Ph. (212) 826-7060 Fax (212) 223-4609 email: jfarley@stahlre.com 08/28/08-Hiralkumar Patel. received Phase I, Phase II reports and copy of DEP correspondence from Eric. subject site includes properties along Bridge Street (384-394 Bridge Street) and also along Lawrence Street (141-145 Lawrence street) abstract of Phase I report: - in the early 1900s the site was primarily

384 BRIDGE STREET, LLC. (Continued) **1000188813**

residential and retail - in 1938 the site is listed as taxi garage <---------- - from 1950 to the present site has been used as retail, DRY CLEANING and training facility <---------- according to Phase I, previous owner Victoria Aviles, who has knowledge of the facility since 1985, indicated that she has no knowledge of gasoline tanks in the ground. (means nobody has information about dispenser island or remote fill port). discussed with DEC Jacob regarding tank registration. he mentioned as there was no gasoline tank use since 1985, no registration required. <------ abstarct of Phase II: - advanced ten borings to a maximum depth of 10 ft bg - site elevation is approx. 37 ft above mean sea level - topography in surrounding area is gently sloping to the west towards East river <--------- - one soil sample collected at 2 ft bg and second composite sample from 0-10 ft bg from each borings <---- - found high Naphthalene in samples from 384 Bridge Street site - high SVOC contamiantion found in all samples from parcels along Bridge street (384-388-390 Bride street) - found PCE (Tetrachloroethene) in all samples from site along Bridge street (dry cleaner was located at 384 Bridge Street and highest PCE found 480 ppb in soil sample from 384 Bridge Street parcel) <---------- - mercury contamination found in almost all samples <-------- according to DEP correspondence dated 04/16/07, after reviewing RAP and construction health and safety plan, DEP rejected it and asked for following additional work: - endpoint samples at the end of excavation - an active SSDS and vapor barrier according to letter from DEP, dated 03/18/08, they approved to excavate and for foundation work based on submitted revised RAP/CHASP, but no approval for building construction has issued yet. spoke with Eric. he mentioned that owner is planning to excavate to depth of approx. 30 ft bg. Eric doesn't know depth of groundwater, but owner has done geotechnical investigation and they have groundwater depth detail in it. asked Eric to submit RAP and geotechnical investigation report. also asked Eric to contact site owner to hold any construction activities until further soil and groundwater investigation is done (which is required as found PCE in soil at 10 ft depth and site had dry cleaner since 1950s). spoke with Mr. Schreiber at DEP regarding project manager. he will call back with project manager's information. received call from Mr. Winter from DEP, who is project manager for the subject site. Maurice Winter **project manager at DEP** NYC DEP Ph. (718) 595-4514 email: mwinter@dep.nyc.gov DEP tracking #: 07DEPTECH258K <---------- 08/29/08-Hiralkumar Patel. received geotechnical report from Huy Pham from Cauldwell Wingate. abstract: - proposed building will be 54 stories hith with

two levels of basement
extending about 26 ft below sidewalk grade <---------- - subway lines runs under Fulton Street and
Willoughby street, less than 200 ft from site - eight borings were installed: two on sidewalk and
six inside building at different location - sidewalk borings were installed to depth of 102 ft and
borings inside previous building were installed to depth of 60 ft bg - piezometers were installed
at borings B-1P and B-8P installed on sidewalk - groundwater found at depth of 43 ft bg Huy Pham
geotech consultant Cauldwell Wingate Co. LLC Bridge Street Construction Field Office 131
Lawrence St Brooklyn, NY 11201 Ph. (718) 852-7909 (Ext. 104) (917) 841-8827 (C) Fax (718) 858-0315
email: hpham@cwingate.com received RAP (previously approved by DEP) from Eric. abstract: - endpoint
samples shall be restricted to 384, 388 Bridge street location <------- - in the event that
elevated levels of VOCs continue to exist and can't be removed, a SSDS will be installed <--------
- vapor barrier will be installed - if dewatering occurs, will collect groundwater samples for
required permits RAP not acceptable for following reasons: - proposing to collect endpoint samples
in area of 384 & 388 Bridge street only and not throughout the site - proposing to install SSDS if
only any contamiantion left, but the department requires SSDS installed as site had gas tanks and
dry cleaner 09/03/08-Hiralkumar Patel. spoke with Eric. Eric asked about number of monitoring wells
at the site. asked Eric to collect endpoint soil samples throughout the site (regardless of
previous sampling results) to characterize soil beneath new foundation and based on endpoint sample
analyticals, monitoring well locations will be decided. also asked to install SSDS and vapor
barrier, throughout site, regardless of endpoint sample analyticals. discussed with DEC Jane. Jane
mentioned that regardless of endpoint soil sample results, the department requires sampling of
groundwater and also soil-vapor delineation in area close to school site at 374 Bridge street.
09/04/08-Hiralkumar Patel. discussed with DEC Austin regarding sampling requirements. Austin
mentioned that the Department only requires endponit soil samples, groundwater samples from three
wells at previous dry cleaner site with site specific groundwater flow direction and installation
of SSDS. Austin mentioned that soil vapor samples only be required if finds contamination in soil
or groundwater and at that point case will be transferred to remediation section C . sent letter to
Mr. Farley requiring endpoint soil samples throughout the site, groundwater samples via three
wells/piezometers and site specific groundwater flow direction. also asked to install vapor barrier

384 BRIDGE STREET, LLC. (Continued) **1000188813**

and SSDS after review and approval of investigation report. letter emailed to Mr. Farley, Eric and
Mr. Winter (at DEP). 09/09/08-Hiralkumar Patel. received email from Eric with endpoint sample
analyticals. Eric mentioned that wells has been installed and will be sampled this week. Eric asked
to proceed with installation of mud slab. asked Eric to wait until gets groundwater sample
analyticals. (analyticals stored on e-docs). 09/10/08-Hiralkumar Patel. received call from Ivy from
PW Grosser. Ivy mentioned that they installed wells at the site. now as they are waiting for a week
prior to sampling these wells, property owner wants to install Rat Slab which comprises of
concrete, stone and other material and which will be maximum of 2 to 3 inches thick. owner wants to
install such slab to save time. explained to Ivy that if any contamination found in groundwater,
then the department requires complete groundwater delineation with more wells on-site as well as
off-site. and installation of on-site wells will requires holes in newly installed slab. Ivy
mentioned that owner is ready to take such chance. asked Ivy to call owner to call me to discuss
regarding such work. 09/11/08-Hiralkumar Patel. received email from Eric. he asked whether SSDS
required even no contamination found in groundwater. Eric mentioned that new structure will be
structural slab on grade and not a spread footing system and any disturbance to existing soils and
the installation of an SSDS system has potential structural implications, since a significant load
will be sitting on the piping system. also received site map with endpoint sampling locations and
well locations. spoke with Eric and Mr. Farley regarding rat slab and SSDS installation. mentioned
to them that the department requires installation of SSDS based on site history (dry cleaner and
repair shop). told them that if any contamination found in grondwater then SSDS is must. regarding
rat slab, Mr. Farley agreed to drill through new slab if finds contamination in groundwater samples
lateron. 09/22/08-Hiralkumar Patel. received call from Eric. they found perc in groundwater. they
also performed vapor intrusion study. they have SSDS design ready. asked Eric to hold all
construction activities and to submit investigation report with system design. left message for Mr.
Farley to hold construction activities until get approval from the department. received email from
Eric with SSDS drawings. drawings were not signed off by lincensed engineer. sent email to Eric
requiring drawings signed by licensed engineer. 09/23/08-Hiralkumar Patel. received SSDS design
from Eric in mail (not signed by licensed engineer).
09/24/08-Hiralkumar Patel. received
groundwater sample analyticals (only) from Eric. found high PERC

MW-3----------1,070 09/25/08-Hiralkumar Patel. visited site
yesterday evening. tried to contact
school supervisor, but left for the day. doorman asked to contact Ms.
Gallagagr. Sister Joan
Gallagagr Principal St. Joseph High School 80-86 Willoughby St /
374-382 Bridge St Ph. (718)
624-3618 email: jgallagher@sjhsbridge.org left message for Ms.
Gallagagr. after discussing with DEC
Austin and DEC Amar, sent permit revoke request letter to NYC DOB, NYC
DOH, NYC DEP and NYC Dept.
of City Planning. letter emailed to Mike Hughes at NYS DOH, Mr. Nieves
at NYC DOH
(RNIEVES1@health.nyc.gov), Mr. Winter at NYC DEP, DEC Krimgold, Mr.
Farley and Eric. received email
from Mike Hughes from NYS DOH. he mentioned that as site has only PERC
contamination and doesn't
have petroleum contamination, site will be monitored by Bureau of
Environmental Exposure
Investigation (BEEI). he asked to send correnspondence to Joe Crua,
Section Chief. Joseph P. Crua
Chief, Metro Section Bureau of Environmental Exposure Investigation
New York State Department of
Health Ph. (518) 402-7880 email: jpc04@health.state.ny.us after
discussing the DEC Austin, sent
chlorinated solvent notification letter to Mr. Farley and informed him
that remediation section
will provide further direction in this matter. letter emailed to Mr.
Farley, Eric, DEC Jacob, Mr.
Winter at DEP and Mr. Crua at DOH (BEEI section). received email from
Mr. Crua from BEEI, NYS DOH.
he has assigned case to Bridget Callaghan in his office. received
email from Ms. Callaghan from NYS
DOH requesting submission of all available documents. Bridget K.
Callaghan Public Health Specialist
II NYS DOH PH. (518) 402-7850 email: bkc01@health.state.ny.us
09/26/08-Hiralkumar Patel. received
message from Sister Joan from St. Joseph High school. spoke with
Sister Joan at high school. she
mentioned that they have cafeterial and utility rooms (maintenance
office, boiler room etc) in
basement. 09/29/08-Hiralkumar Patel. sent CD, with all available
documents, to Ms. Callaghan to NYS
DOH (DHL tracking #: 77482194543). received message from Mr. Russo,
owner's attroney. left message
for Mr. Russo. Steven Russo **owner's attorney** Sive, Paget & Riesel,
P.C. 460 Park Avenue New
York, New York 10022 Ph. (646) 378-7273 -- direct (212) 421-2150 --
main Fax (212) 421-1891 email:
srusso@sprlaw.com 09/30/08-Hiralkumar Patel. received email from Mr.
Russo with copy of letter to
NYC DOB. he mentioned that owner has voluntarily ceased all
construction activities. discussed with
DEC Amar, Vought, Joe O'Connell and Jannifer Kann. after reviewing
available documents and

384 BRIDGE STREET, LLC. (Continued) **1000188813**

information, Amar asked Ms. Kann for conference call with DEC Bob Cozzy. sent documents, which are
not on e-docs (because waiting for complete report), to DEC Kann. 10/03/08-Hiralkumar Patel. spoke
with Eric at Emteque. they are no longer working at the site. owner has hired Fleming Lee Shue.
Eric mentioned that he has gave soil-gas data, groundwater analyticals and draft report to Fleming
Lee Shue for review. left message for Mr. Ahmed at Fleming lee shue. Mohamed Ahmed Fleming Lee Shue
Ph. (212) 675-3225 (O) (917) 612-6018 (C) Fax (212) 675-3224 email: mohamed@flemingleeshue.com
spoke with Mr. Ahmed regarding groundwater and soil-gas investigation report. Mr. Ahmed mentioned
that he only has lab data and nothing else. he mentioned that Eric supposed to send complete
report. asked Mr. Ahmed to submit soil-gas data received soil-gas analyticals. he mentioned that
methodology for soil-gal sampling and QA/QC is not available to him. found chlorinated compounds in
soil-gas results. 10/03/08-Hiralkumar Patel. case transferred to DEC Jennifer Kann. 10/06/08-
J.Kann - Discussed the site with B. Cozzy, and agreed it qualifies for a non-petroleum stip. Spoke
with Mohamed Ahmed of FlemingLeeShue on 10/6, who requested a meeting to discuss requirements for
the site. Agreed to meet on Thursday october 9 at 10AM. Mohamed said an investigative work plan
will be submitted to the Department on october 7. 10/7/08 - J.kann - Consultant (Mohamed Ahmed of
FLS 212.675.3225) requested the meeting be moved to the 14. Due to scheduling conflicts, it could
not be rescheduled until October 16. A work plan should be submitted by October 10. Mohamed
discussed doing grid sampling on site around the location of the former dry cleaner, as well as
installing off-site wells. He was informed that the plan should also include soil gas sampling in
the sidewalk adjacent to the private high school. 10/16/08: - J.Kann - J. Krimgold and J.Kann met
with the consultant (M. Ahmed and A. Fleming) to discuss the work plan which was submitted on
October 10. Informed them of changes the Department wants- a sampling grid which covers the entire
lot of the former dry cleaning facility, as well as an off-site well in front of the active dry
cleaners. They were informed that they should enter a stipulation agreement, and were told that
John Urda would be the DEC legal contact. FLS will revise the work plan and resubmit it. 10/24/08:
J.Kann - revised work plan submitted on October 23. Work Plan approved via email provided two
comments were addressed - an additional soil vapor sample collected and one shallow boring extended
to groundwater. CAP provided to J. Urda. 10/27/08 - J.Kann - spoke with Mohamed of FLS. He agreed
to address the two comments (the deeper soil gas may need to be

384 BRIDGE STREET, LLC. (Continued) **1000188813**

performed inside the property line
where the soils have been excavated). Also spoke with John Urda, who said he will contact Steve
Russo and forward a non-petroleum stip to him. 10/30/08: J.Kann - visited site. Field work
commenced. 11/14/08: J.Kann - J.Urda sent stip to RPs attorney on 11/10. Attorney verbally said
they will enter into stipulation agreement. 12/24/08 - J.Kann Stipulation agreement executed
(edocs). RP sent preliminary results of soil gas and groundwater findings and requested a meeting.
12/31/08- J.Kann - Meeting scheduled for January 6, 2009 at 10AM. Letter received from NYCDOB
stating they have no authority to enforce such state and federal requirements . This letter was a
response to the DEC's September 25, 2008 letter requesting building permits be revoked. (edocs)
1/2/2009 - J.Kann - letter sent to NYCDOB, NYCDEP, City Planning and NYCDOH rescinding DEC's
request to have permits revoked, because the RP has entered into a stipulation agreement. (edocs)
1/6/09 - J.Kann - meeting held with the RP, James Farley, his consultants, Arnold Fleming and
Mohamed Ahmed of FLS, and Michael Bogin of Sive Paget and Reisel. DEC present, J Krimgold, J Urda
and J.Kann. Teleconferenced NYSDOH Bridget Calaghan and DEC's Jim Harrington. RP's consultant to
submit a brief work plan by Monday January 12. Indoor air and subslab sampling to be proposed in
the adjacent HS. Additional gw levels will also need to be taken to confirm gw flow direction.
1/13/09 - J.Kann - received Indoor Air Quality Work Plan on January 12. 5 sub-slab and concurrent
indoor air samples will be collected on janaury 19. One outdoor air will also be collected. DOH
(Bridget Calaghan) reviewed the work plan and had no comments. Approval letter was sent to
consultant today. 1/29/09 - J.Kann - preliminary results of IAQ received on 1/27 indicated elevated
levels of PCE in indoor air and sub-slab. A conference call was held today with the consultant and
DOH to determine how to proceed. It was decided that the principal must be informed immediately.
The RP said that he will try and contact her to arrange a conference call. 1/30/09 - J.kann -
Contacted RP's consultant, mohamed ahmed of FLS and asked if call with Principal was scheduled.
Mohammed said that they tried to contact her on 1/29, but were not able to reach her. They will try
again today. I will follow up at the end of the day. 2/2/09 - J.Kann - Conference call with St
Joseph's Principal, Sr. Joan Gallagher,DOH (B. Calaghan and Joe Crua), DEC (T. Morenzi, J.
Krimgold, J. Urda and J.Kann), FLS (Art Fleming, M. Ahmed), SPR (M. Bogan) and Stahl (J. Farley)
occured at 11 AM this morning. Sr. Joan was informed of the levels found in the school. Highest

384 BRIDGE STREET, LLC. (Continued) **1000188813**

indoor air concentration of PCE was 355 ug/m3. DOH guidance uses 100 ug/m3 to mitigate and 1000
ug/m3 requiring immediate response. DOH explained this to sister joan. Sister Joan was explained
the steps that were to follow and that included sealing of any cracks in the basement floor or
walls, sealing the door to the boiler room and possible replacement of the fan in the boiler room,
and the installation and operation of two temporary scrubber units. These are temporary actions,
and long term measure will be looked into. DOH said that Sister Joan will need to notify the
students and their parents and that DOH would help her with the preparation of that letter and they
would supply a Fact Sheet on vapor intrusion. Initial work (sealing, scrubbers) will start week of
February 6. 2/9/09 - J.Kann - Visited site on 2/6. Air scrubbers were to be delivered by COB
Friday. FLS was intending on running them over the weekend (will need to verify today if they were
received on time to be started). FLS will finalize a report including the investigative work
performed on the Bridge Street site and the IAQ work performed at St. Joseph's and will submit it
by mid-February. Cracks were sealed in the basement of St. Joseph's and the boiler room door was
better sealed. A walk through was performed on 2/6 and additional cracks were noticed and will be
sealed. In addition, some sheetrock work will be done in one basement storage room (no ceiling
tiles between this area and 1st floor auditorium). Indoor air will be performed again after the
scrubber is run for approximately a week. 2/10/09 - J.Kann - Spoke with FLS - scrubbers were only
received on 2/9. They were installed in the basement of St. Joseph's on 2/9 and are currently
running. FLS will be submitting a report by February 13 which includes the work performed at 384
Bridge in fall of 2008 and the sampling performed at St. Joseph's in January 2009. Bridget Calaghan
of DOH has been in contact with Sr. Joan, principal, and has provided her with sample letter and
fact sheets to use for parent/student notification. DOH spoke with the principal on 2/6 at which
time the principal did not commit to a date for notification. Air sampling will be performed the
week of February 16 to confirm effectiveness of scrubbers. 02/25/09 - J. Kann - The principal, Sr.
Joan, mailed notifications to the student s parents on February 13. The letter, prepared by the
principal, did not list DOH or DEC as contacts, and therefore no inquiries have been made to us. A
second round of indoor air sampling was performed in the basement and first floor of the school on
February 19. The sampling results are expected the first week of March. The St. Joseph's Indoor Air
Sampling Report was submitted to DEC and DOH on February 13.

384 BRIDGE STREET, LLC. (Continued) **1000188813**

Groundwater flow direction at the
Bridge Street site has not been established. FLS is collected another round of groundwater
measurements on 2/26. The investigative report for Bridge Street will be submitted after these
measurements are completed and encorporated into the report. 03/05/09- J.Kann - receive results of
second round of indoor air sampling. No significant change noted in the basement air levels. First
floor levels are fine with the exception of a sample collected near the elevators. FLS, the
consultant, will be collecting a sample in the pit on Saturday March 7 to determine if the elevator
pit is a source. 03/10/09 - J.Kann - DOH reviewed data and requested a meeting with FLS. I spoke to
FLS and provided the following information to DOH via email: 1. The installation of the air
scrubbers consisted of just plugging them in . He can not say for sure why they aren't working
because FLS's initial calculations said the concentrations would be reduced within 24 hours. The
scrubbers were running 10 days before the follow up sampling was performed. 2. FLS is working with
a Mechanical Engineer to attempt to fix the existing HVAC system at the school so that fresh air
can be directed into the basement. By the end of this week they hope to have a report indicating
what repairs/modifications will need to be done. 3. Results from the sample collected in the
elevator pit is expected by the end of the week. If this is confirmed as a source, FLS will provide
a coating around the elevator pit. 03/12/09: J.Kann - DOH requested a teleconference. Arranged
teleconference for 2:30 Friday March 13. FLS said the attorney and RP would be on the call. DEC
Legal, Urda, was notified. 03/13/09: J.kann - Teleconference participants included DOH, FLS, DEC,
RP and his councel) Teleconference basically discussed the items sent to DOH in the march 10 email.
DOH requested any draft information provided by the Mechanical Engineer be sent to them. This will
likely be early next week. FLS has a structural engineer exploring the options for a final
solution, a SSDS system. This process is taking longer than expected because no original drawings
for the building exist. Results of the sample collected in the elevator pit are expected early next
week. A vapor barrier will be installed in the elevator pit if the results confirm it as a source.
03/19/09: J.Kann - REceived an email from Mohammed of FLS summarizing their proposal of planned
actions for the school. Information from the email is below: 1. Immediate action (within two weeks)
a. The existing air scrubbers will continue operating b. Vent existing indoor air and replace with
fresh air. A total of twelve air exchanges @ 2,000 CFM are planned. c. Re-activate existing

384 BRIDGE STREET, LLC. (Continued) **1000188813**

basement outside air heating and ventilation unit to replace air being exhausted by basement
kitchen hood system. d. Refurbish existing H-V unit including a new fan belt, lubricate bearings if
applicable, new air filters, vacuum inside of unit, and resume unit s operation. e. Install remote
kitchen hood fan starter buttons in kitchen area. 2. Long Term Action (operational within 4 months)
a. Design dehumidification system which will manage basement humidity levels and avert possibility
of mold propagation. b. Upgrade existing H-V unit motor drive to variable speed, and set for two
levels of operation, one without kitchen hood exhaust operational, and the second with kitchen
exhaust in operation. Interconnect kitchen exhaust fan starter with H-V drive unit for coordinated
operation. c. Design and installation of sub-slab venting system. 3/20/09: J.Kann -An email was
sent to the consultant indicating the following: DEC and DOH have no objections to your approach to
minimize indoor air concentrations in the basement. It is important to note that any modifications
to the HV system are short term solutions only and that installation and design of a SSDS must also
remain a priority. 3/31/09: J.Kann - A letter was submitted on remedy selection for the Bridge
Street site. The letter was forwarded to DOH and Albany (Mike MacCabe). An application was received
for the BCP on March 3 and a determination has not yet been made as far as eligibility. 4/22/09:
J.Kann - During a discussion with regional HWE, I was informed that the standard proceedure for
spill sites, that have applications in with the BCP, is to handle them as spill sites until a BCP
agreement is signed. Since a determination for BCP eligability has not been made to date, with the
concurrence of Jacob Krimgold, the review of remedy selection for the site will move forward. I
spoke with DOH today and they agree with the consultants proposal. The consultant proposes to do
soil vapor extraction on the site and want to start a pilot test as soon as possible. Once written
DOH concurrence is received by DEC an email will be prepared and sent to the consultant. 05/04/09:
Internal discussions at DEC about the use of SVE to treat groundwater indicate that it may not be
effective. The consultant was contacted and more information was requested to be provided on their
proposal, specifically if any case studies are available. The HV system in the adjacent school was
repaired and operational effective April 21. The consultant was asked if an additional round of
indoor air sampling was planned. 05/08/09: J.Kann - FLS provided the following email on 05/07 : The
indoor air sampling inside the school will be scheduled for the weekend of May 16, 2009. As we
spoke this morning, the case study of using SVE to remediate

384 BRIDGE STREET, LLC. (Continued) **1000188813**

groundwater contamination was for a NYSDEC spill site. The spill closure letter is attached. Please let me know if you have any question. (reference is made to spill 9605688) 6/23/09: J.Kann - SSDS design information for St. Joseph's and the results of an additional round of indoor air samples were submitted on 6/2/09. No significant change was noted in the indoor air samples collected. DOH comments on the SSDS were forwarded to the consultant on 6/9/09. Received an email from Mike McCabe of Albany on 6/22/09. He visited the site last week and noticed that an elevator pit was installed. I informed him that earlier this year the consultant had requested permission to construct the elevator pit only, and they were verbally told it was okay as long as proper vapor mitigation measures were installed. The area of the elevator pit, as far as I was told, was not in the former dry cleaner portion of the site. Based on the investigative work performed, soils remaining at the site do not contain VOCs above the RSCOs. 6/24/09: J.Kann - spoke with M. Ahmed of FLS. The RP is trying to coordinate the installation of the SSDS during the summer months while school is not in session with Sr. Joan of St. Joseph's School. They are hoping to speak with her and set a schedule sometime this week. The site, 384 Bridge Street, is being backfilled due to pressure from DOB. The RP is waiting on a determination regarding eligibility into the brownfields program before moving forward with on-site work and remediation. Spoke with J. Urda of legal who indicated that the RPs attorney will be dealing directly with Albany to resolve any issue regarding BCP eligibility. 8/13/09: J.Kann - a supplemental remedial investigation work plan was submitted on July 9. An email accepting the plan was sent to FLS on July 16. The site was accepted into the BCP on August 12. Site to be transferred to Mike MacCabe. 08/18/09: J.Kann. BCP Agreement signed for this site by Dale Desnoyers on August 13, 2009. On-site and off-site contamination is covered under the BCA. As per Amar Nagi, spill closed. See cross referenced remediation site number C224134 for additional information. **e designated site.** <----------

Remarks: unknown amount; gasoline and water mixed; tanks were uncovered during excavation; spill will be cleaned up as part of excavation;

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

HW Code:	224046
Record Add:	10/27/2006
Record Upd:	04/18/2023
Updated By:	WBBENNET
Site Description:	"Location: The Metropolitan Gas Works site is located at the intersection of 12th Street and Second Avenue in South Brooklyn. It is bounded on the west by the Gowanus Canal, on the north by 10th St., on the east by 2nd Avenue and on the south by 13th St. Site Features: The site is approximately 11 acres and completely developed. The original plant footprint is occupied by a large home improvement center, a strip mall and parking lots that serve them. The surrounding neighborhood is primarily industrial and commercial, with some residential properties within a few blocks. Past use of the site: The site was occupied by a large manufactured gas plant (MGP) from the late 1800s to the late 1930s. The MGP converted coal and petroleum products to gas, which was used for heating, cooking, and lighting purposes in the surrounding areas. The process produced large amounts of coal tar wastes which have heavily contaminated the

K - METROPOLITAN MGP (Continued) **S108667326**

soils beneath the site. The southeastern portion of the plant was remediated in 2001 to 2003. The remediation consisted of the excavation of 3 gas holders and the installation of a Dense Non-Aqueous Phase Liquid (DNAPL) recovery system that is currently operating. The western third of the site (where the actual gas plant was located) is now occupied by a multi-story brick commercial building including a Pathmark grocery store. A Remedial Investigation was conducted in this area between 2009 and 2013. Site Geology and Hydrogeology: Soils on the site consist of fill that overlies a peat/silt/clay meadow mat marsh deposit that lies approximately 16 feet below ground surface (bgs). Beneath the meadow mat are sand and silt glacial outwash deposite. Bedrock is greater than 150 ft.bgs. Groundwater flow is southwest, toward the Gowanus Canal. "

Env Problem: "From 2001 through 2003, the eastern portion of the historic MGP and two adjacent parcels were investigated and portions remediated through excavation of the former oil tanks and Holders No. 1 through 3. In addition, approximately 45 recovery wells were installed along 12th Street and perpendicular to 12th, northeast of Hamilton Place, to allow recovery of non-aqueous phase liquid (NAPL). Coal tar recovery from productive wells has been conducted since installation. At present, three recovery wells continue to collect coal tar. These remedial actions resulted in the eastern portion of the former MGP site and the two adjacent parcels to be administratively closed. A remedial investigation (RI) was performed on other portions of the former MGP site between 2010 and 2012, and a supplemental RI was performed between 2017 and 2019 to investigate the remaining areas of the site previously not accessible. Throughout the course of site investigations, soil and groundwater have been analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), cyanide, metals, pesticides and herbicides. Soil vapor and indoor air have been analyzed for VOCs. A barrier wall is being designed to prevent migration of contamination into the Gowanus Canal and is anticipated to be completed in 2023. This project and timeline follow the EPA s plan and schedule for remediation of the Gowanus Canal. Monitoring/recovery wells will be installed behind the sealed bulkhead/barrier wall to capture and remove any collectable residual coal tar at depth. This recovery system along with the barrier wall will remove mobile coal tar from the site and prevent any off-site migration of residual coal tar. Nature and Extent of Contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Subsurface impacts were observed in the following general areas: the area of former oil and tar tanks, located in the western portion of the former Pathmark footprint; in the area of former gas Holder No. 4 located beneath the central portion of the former Pathmark building extending to the west; and, in the area of former gas Holder No. 5 and downgradient of former gas Holder No. 1 through 3, near the intersection of 12th Street and Hamilton Place. Soil: Coal tar impacts have been observed across the site at various depths ranging from approximately one to 75 feet below grade (ft bg). MGP-related impacts to site soils primarily consist of BTEX and PAH compounds. The impacted soils are observed to generally correspond with locations of former MGP structures. Both the maximum BTEX and

K - METROPOLITAN MGP (Continued) **S108667326**

PAH concentrations were identified in samples collected from the area of former Holder No. 5 in the interval at 35 to 40 ft bg. The maximum BTEX concentration was 1,639 mg/kg and the maximum PAH concentration was 14,106.2 mg/kg. Cyanide was detected at low, estimated concentrations, with a maximum detection of 0.24 mg/kg in the 35-40 ft bg interval. There were two detections of PCBs in soils across the site, the maximum detection was 0.081 mg/kg in the 46 to 47.5 ft bg interval. Several metals, including arsenic, barium, copper, lead and mercury, have been detected in soils exceeding the corresponding Soil Cleanup Objectives (SCOs). There have been no detections of pesticides or herbicides above site SCOs. Groundwater: Groundwater at the site has been impacted by MGP related contaminants of concern including coal tar in the form of non-aqueous phase liquid. Groundwater exceedances of standards and guidance values primarily included total BTEX, PAHs, and metals with limited occurrences of cyanide. No PCBs, pesticides or herbicides were detected in groundwater above respective standards. In general, the greatest impacts were detected in the intermediate groundwater zone, consistent with the highest impacted soil horizon. MGP-related impacts in the deep groundwater zone appear to be limited to the area of the former tar tanks. Total BTEX in groundwater ranged from non-detect (ND) to 15,100 parts per billion (ppb). Total PAHs in groundwater ranged from ND to 5,885 ppb. Numerous metals were detected above their corresponding standards, including arsenic, iron, lead, magnesium, manganese, and sodium, likely associated with regional conditions rather than historical site operations. Total cyanide concentrations in groundwater ranged from ND to 279 parts per million (ppm). Soil Vapor: Soil vapor and indoor air samples were collected at the site to assess vapor intrusion conditions. No potentially MGP-related constituents were detected in indoor air or sub-slab soil vapor above the typical background indoor air concentrations from public and commercial buildings. Non MGP-related constituents were either not detected in indoor air and sub-slab soil vapor or detected in concentrations that indicated an indoor source of VOCs was present. Paired indoor air and sub-slab soil vapor samples do not indicate a complete vapor intrusion pathway. Special Resources impacted: No special resources were identified. The adjacent portion of the Gowanus Canal is heavily contaminated from a variety of sources including other MGP sites nearby, but specific impacts to the canal from this particular MGP site have not been identified. Any off-site tar migration appears to be taking place at depths below the bottom of the canal. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates soil vapor intrusion is not a concern for onsite or offsite buildings."

Acres:	11
Fuse:	Not Identified
Description:	The Metropolitan Gas Works site is located at the intersection of 12th Street and Second Avenue in South Brooklyn. It is bounded on the west by the Gowanus Canal, on the north by 10th St., on the east by 2nd Avenue and on the south by 13th St. Site Features: The site is approximately 11 acres and completely developed. The original plant footprint is occupied by a large home improvement center, a strip mall and parking lots that serve them. The surrounding neighborhood is primarily industrial and commercial, with some residential properties within a few blocks. Past use of the site: The site was occupied by a large-manufactured gas plant (MGP) from the late 1800s to the late 1930s. The MGP converted coal and petroleum products to gas, which was used for heating, cooking, and lighting purposes in the surrounding areas. The process produced large amounts of coal tar wastes which have heavily contaminated the soils beneath the site. The southeastern portion of the plant was remediated in 2001 to 2003. The remediation consisted of the excavation of 3 gas holders and the installation of a Dense Non-Aqueous Phase Liquid (DNAPL) recovery system that is currently operating. The western third of the site (where the actual gas plant was located) is now occupied by a multi-story brick commercial building (former Pathmark building) including a thrift store, gym, and equipment rental supplier. A Remedial Investigation was conducted in this area between 2009 and 2013. Site Geology and Hydrogeology: Soils on the site consist of fill that overlies a peat/silt/clay "meadow mat" marsh deposit that lies approximately 16 feet below ground surface (bgs). Beneath the meadow mat are sand and silt glacial outwash deposits. Bedrock is greater than 150 ft. bgs. Groundwater flow is southwest, toward the Gowanus Canal.
Assess Env:	From 2001 through 2003, the eastern portion of the historic MGP and two adjacent parcels were investigated and portions remediated through excavation of the former oil tanks and Holders No. 1 through 3. In addition, approximately 45 recovery wells were installed along 12th Street and perpendicular to 12th, northeast of Hamilton Place,

K - METROPOLITAN MGP (Continued) **S108667326**

to allow recovery of non-aqueous phase liquid (NAPL). Coal tar recovery from productive wells has been conducted since installation. At present, three recovery wells continue to collect coal tar. These remedial actions resulted in the eastern portion of the former MGP site and the two adjacent parcels to be administratively closed. A remedial investigation (RI) was performed on other portions of the former MGP site between 2010 and 2012, and a supplemental RI was performed between 2017 and 2019 to investigate the remaining areas of the site previously not accessible. Throughout the course of site investigations, soil and groundwater have been analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), cyanide, metals, pesticides and herbicides. Soil vapor and indoor air have been analyzed for VOCs. A barrier wall is being designed to prevent migration of contamination into the Gowanus Canal and is anticipated to be completed in 2023. This project and timeline follow the EPA?s plan and schedule for remediation of the Gowanus Canal. Monitoring/recovery wells will be installed behind the sealed bulkhead/barrier wall to capture and remove any collectable residual coal tar at depth. This recovery system along with the barrier wall will remove mobile coal tar from the site and prevent any off-site migration of residual coal tar. Nature and Extent of Contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Subsurface impacts were observed in the following general areas: the area of former oil and tar tanks, located in the western portion of the former Pathmark footprint; in the area of former gas Holder No. 4 located beneath the central portion of the former Pathmark building extending to the west; and, in the area of former gas Holder No. 5 and downgradient of former gas Holder No. 1 through 3, near the intersection of 12th Street and Hamilton Place. Soil: Coal tar impacts have been observed across the site at various depths ranging from approximately one to 75 feet below grade (ft bg). MGP-related impacts to site soils primarily consist of BTEX and PAH compounds. The impacted soils are observed to generally correspond with locations of former MGP structures. Both the maximum BTEX and PAH concentrations were identified in samples collected from the area of former Holder No. 5 in the interval at 35 to 40 ft bg. The maximum BTEX concentration was 1,639 mg/kg and the maximum PAH concentration was 14,106.2 mg/kg. Cyanide was detected at low, estimated concentrations, with a maximum detection of 0.24 mg/kg in the 35-40 ft bg interval. There were two detections of PCBs in soils across the site, the maximum detection was 0.081 mg/kg in the 46 to 47.5 ft bg interval. Several metals, including arsenic, barium, copper, lead and mercury, have been detected in soils exceeding the corresponding Soil Cleanup Objectives (SCOs). There have been no detections of pesticides or herbicides above site SCOs. Groundwater: Groundwater at the site has been impacted by MGP related contaminants of concern including coal tar in the form of non-aqueous phase liquid. Groundwater exceedances of standards and guidance values primarily included total BTEX, PAHs, and metals with limited occurrences of cyanide. No PCBs, pesticides or herbicides were detected in groundwater above respective standards. In general, the greatest impacts were detected in the intermediate groundwater zone,

K - METROPOLITAN MGP (Continued) **S108667326**

consistent with the highest impacted soil horizon. MGP-related impacts in the deep groundwater zone appear to be limited to the area of the former tar tanks. Total BTEX in groundwater ranged from non-detect (ND) to 15,100 parts per billion (ppb). Total PAHs in groundwater ranged from ND to 5,885 ppb. Numerous metals were detected above their corresponding standards, including arsenic, iron, lead, magnesium, manganese, and sodium, likely associated with regional conditions rather than historical site operations. Total cyanide concentrations in groundwater ranged from ND to 279 parts per million (ppm). Soil Vapor: Soil vapor and indoor air samples were collected at the site to assess vapor intrusion conditions. No potentially MGP-related constituents were detected in indoor air or sub-slab soil vapor above the typical background indoor air concentrations from public and commercial buildings. Non MGP-related constituents were either not detected in indoor air and sub-slab soil vapor or detected in concentrations that indicated an indoor source of VOCs was present. Paired indoor air and sub-slab soil vapor samples do not indicate a complete vapor intrusion pathway. Special Resources impacted: No special resources were identified. The adjacent portion of the Gowanus Canal is heavily contaminated from a variety of sources including other MGP sites nearby, but specific impacts to the canal from this particular MGP site have not been identified. Any off-site tar migration appears to be taking place at depths below the bottom of the canal.

Assess Doh: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates soil vapor intrusion is not a concern for onsite or offsite buildings.

Address: 2ND AVENUE AND 12TH STREET
City,State,Zip: BROOKLYN, NY 11215
Program Type: VCP
Site Code: 58108
HW Code: V00405
Site Class: C
SWIS: 2401
Region: 2
Town: New York City
Acres: 9.400
Date Record Added: 11/30/2000
Date Record Updated: 04/18/2023
Updated By: WBBENNET
Site Description: "The USPS Gowanus Site, (also known as the K Metropolitan MGP, site 224046) is located between Gowanus Canal, 11th St. Basin, 12th Street, and Second Ave., Brooklyn, NY 11215. Commercial operations on the site include a Lowes home improvement center and the former Pathmark Supermarket building. Other commercial businesses in the area include an oil distribution terminal, a garbage truck maintenance facility, a school district warehouse, a cement mixing facility, a rental truck company, and a junk yard. Residential areas exist within a few blocks of the site. From 1880 to the late 1930's, the Metropolitan Works manufactured gas plant (MGP) operated on the site. Commercial buildings, including a 4 story post office, have been built on the remaining foundations of the MGP. The US Postal Service Gowanus operated until 2000, when it was demolished for redevelopment. During the demolition and regrading of the site, the MGP gas holders were discovered, full of tar mixed with construction debris. The MGP tars have significantly contaminated soil and groundwater. In 2002-2003 approximately 34,000 tons of contaminated material was excavated, transported and thermally treated off-site under a Voluntary Cleanup Program remediation agreement. A release and covenant not to sue was issued on August 6, 2003. Additional information on the investigation and remediation of the Metropolitan site can be located using the site ID, 224046. "
Env Problem: "Nature and Extent of Contamination: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals. Soil vapor samples were also analyzed for VOCs. Based upon investigations conducted to date, the primary contaminant of concern for the site is coal tar. Coal tar is

USPS GOWANUS SITE, FORMER MGP METROPOLIT (Continued) **S105003695**

	a dark, oily liquid which was produced as a byproduct of manufactured gas plant (MGP) operations, and which leaked from subsurface structures and pipes into the surrounding soil. It contains both volatile and semi-volatile organic compounds. Specific volatile organic compounds (VOCs) of concern are benzene, toluene, ethylbenzene and xylenes (BTEX). Specific semi-volatile organic compounds (SVOCs) of concern are polycyclic aromatic hydrocarbons (PAHs). Coal tar belongs to a category of environmental contaminants known as non-aqueous phase liquids (NAPLs). Although NAPLs do not readily dissolve in water, they can dissolve to a small degree over long time periods, thus contaminating the groundwater which comes into contact with NAPL wastes. This contaminated water can then move along with natural groundwater flow beyond the contaminated source areas. In 2002/2003 two interim remedial measures were completed. The first, approximately 34,000 tons of material contaminated with MGP byproducts were excavated, transported and thermally treated off-site. The second, a series of coal tar recovery wells were installed in an excavated trench. During the installation of the recovery wells approximately 900 tons of soil contaminated with coal tar was removed and transported off-site for disposal. Monitoring and recovery of coal tar from the wells has been ongoing since 2003. The Interim Remedial Measures were conducted under the supervision of the NYSDEC manufactured gas plant program under a voluntary cleanup agreement. "
Health Problem:	"Public water is provided to the area, thereby preventing exposures to groundwater. Most of the contaminated soil has been removed from the site. The site has been redeveloped at into a retail store and the entire site has been covered with a building, pavement or landscaped areas, thereby preventing direct contact with residual contamination. Region:	2
Class:	Completed: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

DEC Memo:	4/28/17 - Obligado - Desk Duty - I called Mr. Sharma. L left a message with Mr. Sharma. This is an OER site - 15-RHn387k. Doing excavation for the foundation. On 4/25 on the northern part of the property on the 25th they found a tank. Today they removed about 50 gallons of waste oil from the tank and cleaned and removed the tank. They found PID and odors in the

LOT 26,TAXBLOCK 2009 (Continued) **S120702363**

eastern wall. No staining
observed but elevated PID. Lower readings below the tanks. There is a OER RAP for the site. They
plan to dig to 20 ft for the foundation. GW at 50 ft. In the next week or two they will excavate in
the tank area to clean endpoints 4 sidewall 1 bottom and submit a closure letter. RXR 810 Fulton

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 04/12/04 TRANSFERRED FROM ODOWD TO ROMMEL March 22, 2006, Jones, no recent work done on this site. Contacts provided in spill report unsuccessful. March 29, 2006, next step, establish contact with current site occupant. 5/22/2006 - Mike Scibel - Current Occupant is McDonalds, property shark reveals owner as an Mmb Associates, reverse phone directory has no listing for address given

CON EDISON (Continued) **S103571868**

by property shark. Currently
can not contact owner. From file DEC requested 3MW's, soil delineation and documentaion in 2000.
Need to find if those tests were performed. Needs additional work.
2/23/10 - Austin - Reassigned to
Ketani to followup and bring spill to closure - end 3/3/10 - Raphael Ketani. I restarted the
management of the spill case. The spill was called in on 3/19/1998 due to the discovery of
contaminated soil while removing gasoline tanks from this former gas station. The caller was Marc
Godick of Lexicon Environmental Associates (516) 488-8742. Twelve 550 gal. gas tanks were removed.
They appeared to be in good condition. The source of the gas was believed to be the pump island.
Initially, 200 cubic yards of contaminated soil were removed by Lexicon. The site is at the
intersection of Atlantic and Vanderbilt avenues (northern edge of Prospect Heights). From Property
Shark, the block and lot are 1122 and 0001. The prime address is 547 Vanderbilt Avenue. The
alternates are 850-852 Atlantic Avenue, 855-857 Pacific Street (the lot extends to the south side
of the block). A DOB picture shows a TEXACO gas station. A 2006 picture shows a McDonalds with a
paved area in front. ACRIS lists the ownership as follows: Janet H. Brooks sold the property to M&B
Associates c/o Crosstown Management on 10/27/99 (she was a 1/4 owner of the property - M&B owned
the other 3/4); in 2/2/2000 M&B assigned a lease to the McDonald's Corp; in 1/29/04 Musto of M&B
sold the property to MMB Associates, LLC, 320 Heather Lane, Hewlett Harbor, NY, 11557 (MMB consists
of the three people who always owned the property). An attempt was made to locate a PBS record for
the site using all of the known addresses. However, nothing could be found. As the tanks were never
registered, this is a violation of 6 NYCRR Part 612 and Part 613. The situation was referred to
Leszek Zielinski, EE I of the PBS Unit, for action. The E-docs contains only one document file.
This file contains the 6/2/98 Underground Storage Tank Closure Report, and the 8/21/98 Subsurface
Investigation Report. The 6/2/98 Underground Storage Tank Closure Report was written by Lexicon
Environmental Assessment for Yellowstone Industries (which has since gone out of business). The
USTs were removed, but the piping was left in place. 200 to 300 cu. yds. of contaminated soil were
removed. The tanks were in good condition with no holes. The excavation went down to 10' to 12',
and to within 10' of the sidewalk. Groundwater was not encountered. End point samples ranged in
total VOC concentration from 7 ppb to 1,149,000 ppb (bottom of pit). Four of the eight samples were
above TAGM limits. No wells were installed. The end points were taken at 11.5' below grade. Samples

CON EDISON (Continued) **S103571868**

3 to 5 and 8 were below TAGM. Samples 1 and 2 had high VOCs above TAGM. Sample 6 had high VOC hits
with 480,000 ppb total xylenes. Sample 7 had high VOC hits with 524,000 ppb total xylenes. The
8/12/98 Subsurface Investigation Report was written by Lexicon. The site elevation was indicated as
70' to 75' above sea level. (From the USGS maps, groundwater is at about 15' above sea level.)
Borings were drilled to 53' below grade. From 0' to 15' was natural fill. From 15' to 53' was
cobbles and boulders with thin layers of natural fill. Nine (9) borings were performed in the
vicinity of the former UST locations from 6/22-30/98. SB-3 at 12.5' to 13' was 42,946 total VOCs.
SB-4 at 8.5' to 9' was 7,698,160 total VOCs. SB-4 at 12.5' to 13' was much lower, but above TAGM.
SB-5 and SB-7 to SB-9 were drilled to 53' and there were no VOC concentrations above the DEC
Alternative Guidance Value standards. SB-6 at 11.5' to 12' was drilled, according to the drawings,
at the location of SS-7 of the UST Closure Report, but the results were non-detect for the soil
sample. It is not known how the SS-7 sample with total VOCs of over one million parts per billion
could have dropped to non-detect during a time interval of several months. The locations of the two
borings must have been far enough removed from each other to be in separate geochemical regimes.
There are no other spill cases associated with this site. 3/4/10 - Raphael Ketani. I reviewed the
5/19/99 Site Remediation Report that was produced by HydroScience, Inc. From the analytical results
and figures contained in the report, it appears that all of the contamination that was above the
TAGM RSCO limits was removed, except for the West Wall-3 location and the Southwest Bottom
location. There were only 2 and 3 analytes, respectively, that had exceeded the TAGM limits at
these locations. Given that 11 years have passed since the samples were taken, it is believed that
natural attenuation and evaporation of the volatile components have reduced the concentrations
further. The sampling at depth below 15' also showed that the contaminant concentrations were very
far below the TAGM limits and would not have been a threat to the groundwater, which was about 60
feet below the site. Given the data in the HydroScience Site Remediation Report, I have determined
that the residual contamination at the site is not a threat to the public or the environment.
Therefore, I am closing the spill case. 6/24/10 - Raphael Ketani.
Anthony Musto (718) 937-8100
called today. He said that he had been talking to Leszek Zielinski, acting head of the PBS Unit.
Mr. Zielinski had referred him to me. He said that he had never known he was supposed to register
the tanks that had been pulled. He said that he thought the contractor

CON EDISON (Continued) **S103571868**

was going to do this 11
years ago. I told Mr. Musto that the contractors don't always do the PBS registrations unless they
are asked to. He asked who he is supposed to talk to regarding registering the tanks. I told him
that Mr. Zielinski is in charge of the PBS Unit here in Region 2. Mr. Musto said that he was given
the telephone number of the PBS Bureau in Albany and that he saw the name John Urda on a piece of
correspondence. I told him to talk to both parties in order to resolve the matter. He asked how
much the registration will cost. I told him that it is relatively inexpensive, when compared to any
fines or penalties. I added that since Mr. Urda is involved there may be fines and penalties as
there are outstanding violations because the tanks were never registered. Mr. Musto said that he
will talk to Albany PBS and Mr. Urda.

Remarks: UPON EXCAVATION OF 12 (550) GAL TANKS SOIL CONTAMINATION WAS DISCOVERED. 200 CUBIC YARDS OF IMPACTED SOIL WAS REMOVED AND POST EXCAVATION SAMPLING COMPLETED AND AWAITING DATA.

DEC Memo:	e2mis no. 156133: 11/5/04 11:20 HRS ENV OPS C. LUGO #03594 ENV OPS REPORTS FINDING APPROX 1 PT OF UNKNOWN OIL ON APPROX 5 GAL OF WATER IN V4724. THIS WAS FOUND WHILE ATTEMPTING TO CLEAN STRUCTURE FOR BQE WHO WAS THERE TO REPLACE A SUMP PUMP ON ACCT#C3275. THE SOURCE AND CAUSE OF THE SPILL IS UNKNOWN. THERE WERE NO SUBSTANTIAL CRACKS IN THE STRUCTURE AND THE STANDING WATER HAD NO MOVEMENT. THERE DID NOT APPEAR TO BE ANY SEWER CONNECTIONS AND THERE IS A CONCRETE SUMP. ENV STOP TAG# 45119 WAS PLACED AND ONE LIQUID SAMPLE TAKEN ON E PRIORITY FOR PCB ANALYSIS ON CHAIN OF CUSTODY# DD11404. HISTORICAL RECORDS INDICATE PCB 1PPM DATED 11/29/01. THE BQE CREW ON LOCATION WAS ADVISED TO PRESSURE TEST THE UNIT. CLEANUP IS PENDING LAB RESULTS. UPDATE 11/5/04 12:59 HRS BQE J. GUARDARRAMA REPORTS THE UNIT PASSED THE PRESSURE TEST. Lab Sequence Number: 04-09232-001 TOTAL PCB: 83 ppm Saturday, November 06, 2004 9:12 PM An Environmental Crew made up of A. Gladowski, R. Vega and R. Esponda completed the cleanup of VS 4724 on 6 Nov 04. The structure was double washed with 5 gal. Biogen 760, 5 gal. of Biogen 715 and 5 gal. bulldog. 110 gal. of liquid were removed via Astoria >50 tanker. Three drums of debris were removed and brought to 3rd Ave Yard via the 'one trip rule'. The sump was found cemented. Environmental stop tag # 45119 was pulled from the structure.
Remarks:	1 PINT OIL ON 5 GALS OF WATER. NO TO ALL 5 QUESTIONS. SPILL COMING OFF 24 HR PROGRAM DUE TO LACK OF RESOURCES. CON ED REF # 156133.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2026

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2025

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

PFAS: PFAS Contamination Site Location Listing

DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/01/2026
Date Data Arrived at EDR: 02/03/2026

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

West Map:	50026933 JERSEY CITY, NJ
Version Date:	2023

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

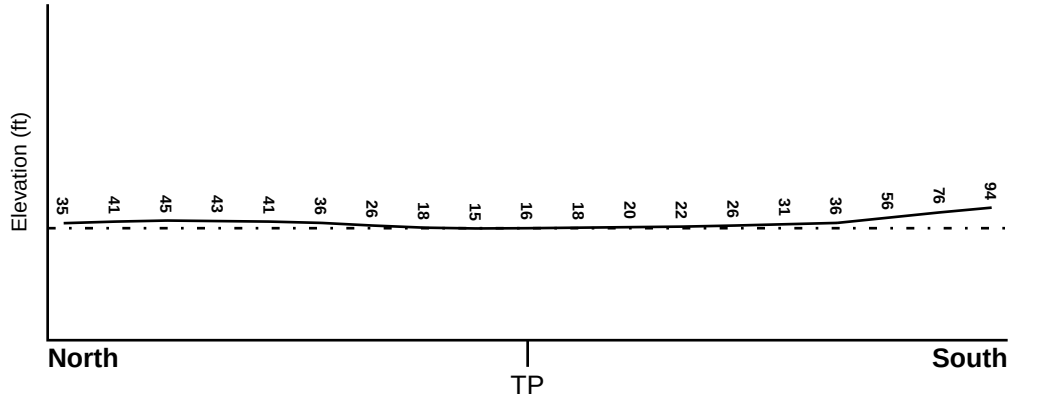
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

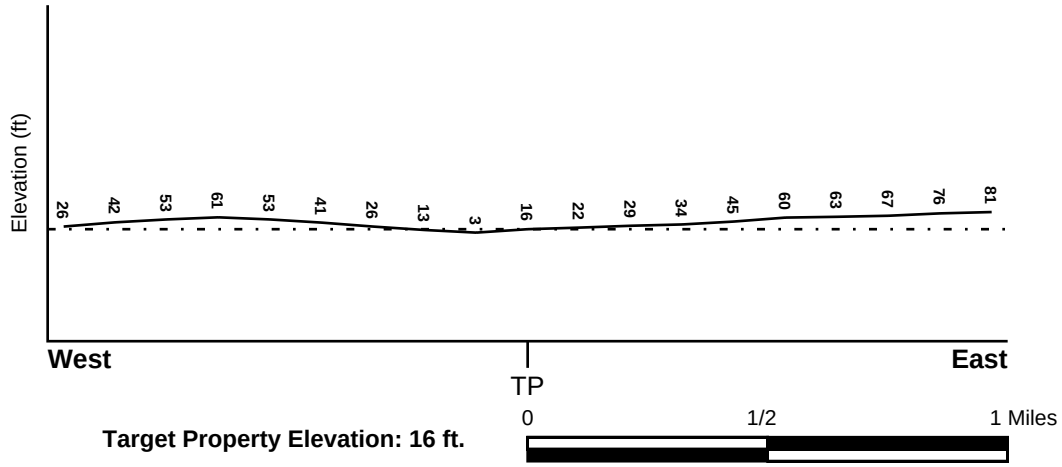
GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION



Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 16 ft.

0 1/2 1 Miles

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970211F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970184F	FEMA FIRM Flood data
3604970203F	FEMA FIRM Flood data
3604970204F	FEMA FIRM Flood data

3604970063B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile WSW
Site Name:	Vidan Auto Salvage
Site EPA ID Number:	NYD986961167
Groundwater Flow Direction:	SW TOWARD THE NARROWS.
Inferred Depth to Water:	approximately 38 feet.
Hydraulic Connection:	The surficial aquifer and underlying aquifer are hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 9 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
255 DOUGLASS STREET 255 DOUGLASS STREET BROOKLYN, NY 11217	NY E DESIGNATION NY NYC LAND USE	N/A
LOT 45,TAXBLOCK 412 261 DOUGLASS STREET BROOKLYN, NY	NY E DESIGNATION NY NYC LAND USE	N/A

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: A review of the NPL list, as provided by EDR, and dated 03/26/2026 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Version Date:	2023

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

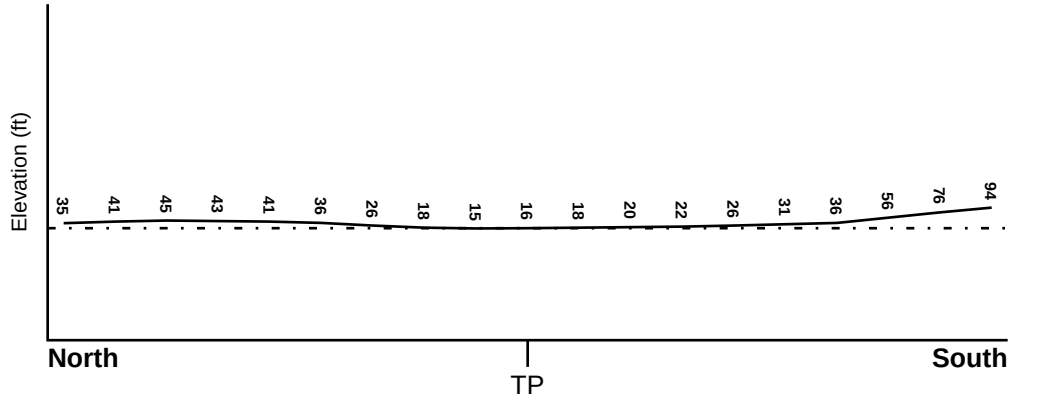
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

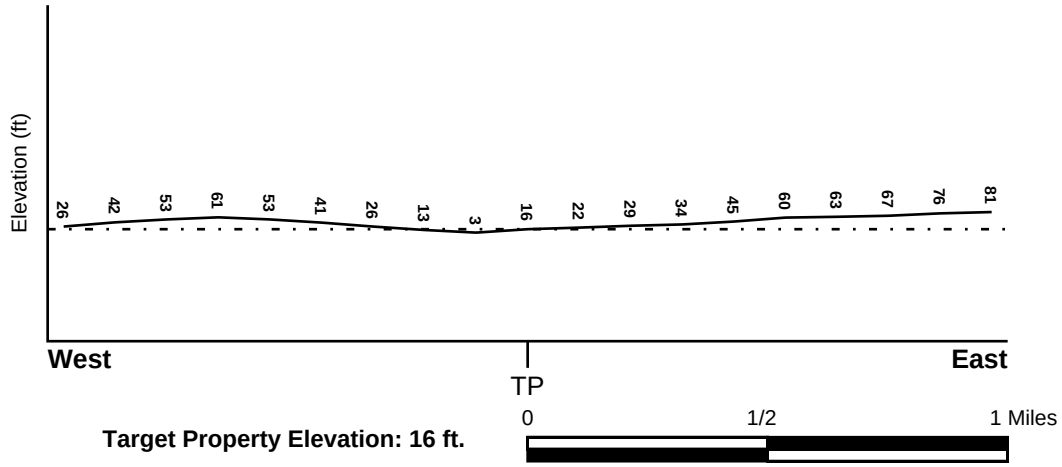
GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION



Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 16 ft.

0 1/2 1 Miles

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970211F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970184F	FEMA FIRM Flood data
3604970203F	FEMA FIRM Flood data

3604970063B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile WSW
Site Name:	Vidan Auto Salvage
Site EPA ID Number:	NYD986961167
Groundwater Flow Direction:	SW TOWARD THE NARROWS.
Inferred Depth to Water:	approximately 38 feet.
Hydraulic Connection:	The surficial aquifer and underlying aquifer are hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

CERTIFICATE WILL BE NULL AND VOID IF ALTERED IN ANY MANNER OR ADDITIONS ARE MADE THERETO.

(Page 1)

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary," it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises, upon payment of a fee of fifty cents per copy.
