Attention: Mr. Konstantin Gubareff

RE: Limited Phase II Environmental Site Investigation Summary
Proposed 255-261 Douglass Street Redevelopment
255-261 Douglass Street
Brooklyn, New York

Dear Mr. Gubareff:

As requested, H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York), is providing this letter to 255 261 Douglas Street LLC summarizing the results of the Limited Phase II Environmental Site Investigation (ESI) completed at the property located at 255-261 Douglass Street (the "Site") between April 27 through May 7, 2026.

SITE LOCATION

The Site, identified as Block 412, Lots 45 and 48 on the New York City tax map, is approximately 0.30 acres (13,000 square feet) in size and is located in the Gowanus neighborhood of Brooklyn, New York. The property is currently improved by a two-story structure, which is currently vacant in lot 48, and transitions to a 1-story industrial building, which is currently operated as a rental rehearsal studio space for musicians as Band Spaces NYC in lot 45.

The property is located within a light manufacturing district (M1-4) and a medium-density residential zoning area (R7X) with special Gowanus mixed use district overlay (G) and is surrounded by a mix of manufacturing and industrial properties, as well as mixed residential and commercial properties. The Site is bounded to the north by two two-story warehouses and a one-story warehouse divided into three tenant spaces occupied by a beverage and grocery distributor and a furnishings/display warehouse distributor, followed by Butler Street; to the east by a four-story commercial building occupied by a weightlifting gym and a three-story commercial and office building occupied by an emergency animal hospital; to the south by Douglass Street, followed by Thomas Greene Playground; and to the west by a fifteen-story mixed-use residential and commercial building under construction, followed by Nevins Street. A Site Locus is provided as Figure 1.

BACKGROUND

According to Sanborn Maps, aerial photographs, and City Directory records, the Site was undeveloped in 1886. By 1904, the Site was partially developed and operated by J.S. Loomis Co. Lumber Yard on Lot 45,

which was improved with four sheds, a lumber yard, and a carriage house. The western portion of the Site, on Lot 48, was developed with a paint house, a glass storage building, and a two-story dwelling. By 1938, the storage building on Lot 48 had been expanded to incorporate the former dwelling, while the lumber yard on Lot 45 was further developed with a cooperage building. By 1950, the improvements on Lot 48 were converted to a wood box manufacturing operation, including a warehouse and shavings room, while the cooperage building on Lot 45 remained relatively unchanged.

City Directory listings indicate that Douglass Woodworking Corp. operated on Lot 48 from 1945 through 1949, followed by Quality Woodworking Corp. from 1952 through 2022. On Lot 45, Bay Ridge Cooperage Co. is documented as operating from 1928 through 1949. By 1977, the cooperage operation on Lot 45 was depicted as a general manufacturing building, while the warehouse, shavings room, and wood box manufacturing operations on Lot 48 remained unchanged through 2007. City Directory listings indicate that Lot 45 was operated by Band Spaces LLC from 2014 to 2017 and is currently operated as NY Drum School. According to City Directories, Lot 48 was briefly operated by Gemini & Scorpio, an event venue, in 2017, and is currently vacant.

Properties surrounding the Site were historically utilized for various commercial, industrial, and manufacturing operations, including door and blind factory operations, marble works, coal yard operations, gas company operations, button factory operations, stone works operations, clothing manufacturing, wood box manufacturing, warehouse operations, auto repair, and beverage and grocery distribution.

PREVIOUS ENVIRONMENTAL REPORTS

A Phase I Environmental Site Assessment (ESA) was prepared Haley & Aldrich of New York concurrently with Phase II activities in May 2026. At the time of the Phase I ESA Site Reconnaissance, the subject property was partially vacant and partially operating as a music rehearsal space. Haley & Aldrich of New York identified the following recognized environmental conditions (RECs) and other findings associated with the subject property:

- **REC #1: Historical Use of Subject Property -** Historical uses of the subject property included operations by J.S. Loomis Co. Lumber Yard in the 1900s, as well as operations associated with a paint house and a glass storage building. Additional historic uses included operations by Bay Ridge Cooperage Co. from the 1920s through 1950, wood box manufacturing, operations by Douglass Woodworking Corp. from 1945 to 1949, and operations by Quality Woodworking Corp. from 1952 to 2022. These historic uses are considered a REC, as potential or undocumented releases of petroleum products, solvents, paints, wood treatment compounds, and other hazardous materials may have adversely affected soil, groundwater, and/or soil vapor at the subject property.

- **REC #2: Documented Subsurface Contamination at the Adjacent Property -** The west adjacent property, located at Block 412, Lot 50, was identified in the Brownfield database for several historical industrial uses that resulted in subsurface contamination. Historical operations at the west adjacent property included Bradley & Son Stone Works, Scranton & Lehigh Coal Co., and a private garage. This site was accepted into the Brownfield Cleanup Program (BCP), with remedial

activities commencing in October 2023 and concluding in December 2025. Prior to remediation, contaminants of concern included coal tar grossly contaminated material (GCM), semi-volatile organic compounds (SVOCs), and metals in soil; coal tar non-aqueous phase liquid (NAPL), volatile organic compounds (VOCs), SVOCs, and metals in groundwater; and VOCs in soil vapor. Remedial activities included the removal of five underground storage tanks (USTs), contaminated soil disposal, and DNAPL recovery. Post-remedial sampling results indicated that remaining contamination includes SVOCs, and metals in soil, VOCs and SVOCs in groundwater, and VOCs in soil vapor. The property is currently being managed under a Site Management Plan (SMP) with engineering and institutional controls with requirements for controlling vapor intrusion. As this property contains residual impacts in soil, groundwater, and soil vapor, this adjacent property is considered a potential source that may have adversely impacted subsurface conditions at the subject property.

- **REC #3: Historical and Current Uses of Surrounding Properties -** Properties surrounding the subject property were historically utilized for various commercial, industrial, and manufacturing operations, including stone works, clothing manufacturing, wood box manufacturing, supply manufacturing, coal company operations, truck garages, auto repair shops, button manufacturing, bluestone works, the Brooklyn Union Gas Company Fulton Municipal Branch, marble works operations, sash, door, and blind manufacturing, and coal yard operations. Several of these surrounding properties are listed in the Resource Conservation and Recovery Act (RCRA) database as generators of hazardous waste and have also been identified in spill incident databases. The historical uses of these surrounding properties are considered a REC, as potential or undocumented releases from these adjacent and upgradient properties may have adversely impacted soil, groundwater, and/or soil vapor, with the potential to migrate onto the subject property.

- **Other Finding #1: New York City E-Designation -** The subject property was identified as an E-Designation site by the NYCOER. The property was assigned E-601 for Air Quality- HVAC fuel limited natural gas with low Nox only, exhaust stack location limitations, and hazardous materials Phase I and Phase II Testing Protocol. The designation also includes Window Wall Attenuation and alternate ventilation requirements (CEQR No. 19DCP157K). The E-Designation program requires satisfaction of the procedures outlined for hazardous materials potentially present at the subject property.

- **Other Finding #2: Urban Fill -** The overburden on the subject property is classified as Urban Land, which refers to soils that have been altered by human activities, thus making them unidentifiable. Typically, these soils have been mixed with other materials, such as brick and concrete (urban fill).

Haley & Aldrich of New York completed a Phase I ESA, provided as a standalone document, concurrently with this Phase II ESA, the findings herein were considered in assessing recognized environmental conditions (RECs) for the Site in the Phase I ESA.

LIMITED SUBSURFACE INVESTIGATION

On April 28, 2026, Haley & Aldrich of New York mobilized to the Site with Coastal Environmental Solutions (Coastal) to perform the Limited Phase II ESI soil investigation, which included the installation of ten soil borings, four temporary soil vapor points, and four temporary groundwater monitoring wells using a limited access 420M Geoprobe® drill rig. On April 28, 2026, Haley & Aldrich of New York also mobilized to the Site with Warren George Inc. to perform geotechnical borings and evaluate the deeper soil for environmental analysis, which included the installation of two soil borings using a limited access mud rotary drill rig. Sample locations are shown in Figure 2. A sample collection summary is provided as Table 1, and a photo log documenting the Limited Phase II is provided in Attachment B.

Haley & Aldrich of New York field personnel were on the Site to document field observations and to collect soil, soil vapor, and groundwater samples. Boring locations were chosen to assess the environmental conditions at the Site. Ten shallow soil borings (B-1 through B-10) were installed throughout the Site, five at grade areas to a depth of 15 feet (ft) below ground surface (bgs) and five in the cellar to 17.5 ft bgs (12 ft below cellar grade). Two deep soil borings, HA-B1 and HA-B2, were installed throughout the Site to 52.5 and 50 ft bgs, respectively. Two temporary soil vapor points, SV-1 and SV-2, were installed sub-slab in the cellar and two more were installed approximately 2 ft above the observed groundwater level in the eastern section of the building containing no cellar. Four temporary groundwater monitoring wells, TWP-1 through TWP-4, were installed at boring locations B-2, B-4, B-7, and B-10, respectively.

Concrete surface cover was found to extend to approximately 0.5 ft bgs. Underlying the surficial sidewalk grade concrete slab was urban fill generally consisting of tan, grey, light brown to dark brown and black fine to coarse sand with varying amounts of silt, coal, gravel, slag, ceramic, and brick observed to depths of 10 to the completion depth of some borings at 17.5 ft bgs. At all boring locations that were advanced past fill, the fill was underlain by potential native material consisting of grey, dark grey, dark brown and black silty sand with varying amounts of gravel from depths ranging from 8.5 ft bgs to the completion depth of some borings at 17.5 ft bgs. At three of the boring locations, B-1, HA-B1,and HA-B2 a potential peat layer between 1 and 4 ft in thickness was observed beneath the fill layer at depths between 11.5 and 12.5 ft bgs (in B-1), 16.5 and 20.5 ft bgs (in HA-B1), and 25 -27 ft bgs (in HA-B2).

Soil samples were collected continuously, characterized, and screened for visual and olfactory evidence of contamination such as staining and odors. Instrumental screening for the presence of organic vapors was performed using a photoionization detector (PID). Olfactory characteristics and instrumental measurements consistent with subsurface impacts were observed in three of twelve soil borings. At B-1 petroleum-like odors were accompanied by PID readings ranging between 0.1-0.9 parts per million (ppm) at depths of 8.5 to 14.5 ft bgs. In the deeper borings, petroleum like odor, some visual staining and PID readings between 4.5 and 152 ppm were detected from 30.5 to 52.5 ft bgs in HA-B1 and PID readings between 0.1 and 29 ppm were detected at depths of 10 and 50 ft bgs in HA-B2. Multiple borings had an organic odor ranging from 10 ft bgs to 20.5 ft bgs. A slight petroleum-like odor was detected in one shallow soil sample, B-1 starting at 10 ft bgs, broken up by an organic odor from 11.5 bgs to 13.5 bgs and continuing to 17.5 ft bgs. A petroleum like odor was detected in both deeper soil borings starting from 30 ft bgs to the end of exploration at 52.5 ft bgs and 50 ft bgs in HA-B1 and HA-B2, respectively.

Groundwater was encountered between 6.5 to 10 ft bgs, and temporary wells were installed to between 5 and 15 ft bgs to facilitate the collection of groundwater samples.

Two soil samples were collected from each of the shallow soil boring and biased towards intervals of observed impacts (elevated PID measurements, staining, odors, etc.). Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and total metals. For the two deeper soil borings, samples were only collected if visual coal tar staining or a strong petroleum-like odor was detected within the soil recovered in the two ft spoon. Six samples were collected total, four from HA-B1 and two from HA-B2, and these soil samples were collected and analyzed for SVOCs and VOCs. Soil boring logs are included in Attachment C.

Four groundwater samples were collected from temporary wells TWP-1 through TWP-4. After each well was installed, groundwater was purged for three well volumes, or until silt had cleared from the sample. Groundwater samples were analyzed for VOCs and dissolved metals. Groundwater sampling logs are included in Attachment D.

Four soil vapor samples were collected over a two-hour period into 2.7-liter (L) stainless-steel summa canisters supplied by the laboratory and analyzed for VOCs. Soil vapor sampling logs are included in Attachment E.

All samples were collected into laboratory-provided containers, placed on ice in coolers, and shipped by courier to ALS Global Laboratories (ALS) of Stratford, Connecticut, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory.

RESULTS

Full analytical results for soil, soil vapor, and groundwater are provided in Tables 2, 3, 4, and 5; detections above regulatory criteria and/or guidance values are summarized in Figures 3, 4, and 5; and laboratory analytical reports are provided in Attachment F.

Soil

Soil analytical results were compared to NYSDEC Title 6 NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), and Restricted-Residential Use SCOs (RRSCOs), the Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) if applicable[1], and the United States Environmental Protection Agency (USEPA) Allowable Limit for Toxicity Characteristic.

Shallow soil

In shallow soil samples, one VOC, Acetone, exceeding UUSCOs was detected in two samples collected from historical fill. These UUSCO exceedances were in B-2_5.5-7.5 (concentration of 0.052 kg.mg) and B-7_14.5-16.5 (concentration of 0.058 mg/kg). No additional VOC exceedances above UUSCOs were reported and no VOC exceedances above RRSCOs were reported. These two VOC UUSCO exceedances also exceeded applicable PGWSCOs.

[1] PGWSCOs applied if compound identified in groundwater above applicable criteria.

Fifteen SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), were detected in historic fill at concentrations exceeding UUSCOs in eight of the shallow soil samples analyzed. All fifteen of these SVOCs were detected at maximum concentrations exceeding UUSCOs in soil sample B-5_12.5-14.5 after dilution. Above UUSCOs, these maximum concentrations detected in soil sample B-5_12.5-14.5 included: anthracene (concentration of 117 mg/kg), benzo(a)anthracene (concentration of 95.6 mg/kg), benzo(a)pyrene (concentration of 57.6 mg/kg), benzo(b)fluoranthene (concentration of 43.4 mg/kg), benzo(g,h,i)perylene (concentration of 17.5 mg/kg), benzo(k)fluoranthene (concentration of 57.4 mg/kg), chrysene (concentration of 97.4 mg/kg), dibenz(a,h)anthracene (concentration of 8.29 mg/kg), dibenzofuran (concentration of 53.4 mg/kg), fluoranthene (concentration of 286 mg/kg), fluorene (concentration of 92.4 mg/kg), indeno(1,2,3-cd)pyrene (concentration of 19.4 mg/kg), naphthalene (concentration of 14.9 mg/kg), phenanthrene (concentration of 409 mg/kg), and in pyrene (concentration of 210 mg/kg). Of the 15 UUSCO exceedances in SVOCs, all but fluorene and naphthalene also exceed RRSCOs, and seven also exceed applicable PGWSCOs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, and naphthalene).

Nine metals were identified in historical fill at concentrations exceeding UUSCOs, including: arsenic (maximum concentration of 80.9 mg/kg in soil sample B-9_0-2), barium (maximum concentration of 1230 mg/kg in soil sample B-4_6-8), cadmium (maximum concentration of 2.74 mg/kg in soil sample B-9_0-2), copper (maximum concentration of 2040 mg/kg in soil sample B-10_0-2), lead (maximum concentration of 1540 mg/kg in soil sample B-10_0-2), mercury (maximum concentration of 5.14 mg/kg in soil sample B-2_15.5-17.5), nickel (maximum concentration of 164 mg/kg in soil sample B-9_0-2), silver (maximum concentration of 3.18 mg/kg in soil sample B-4_6-8), and zinc (maximum concentration of 1270 mg/kg in soil sample B-9_0-2). Of these, six exceed RRSCOs (arsenic, barium, cadmium, copper, lead, and mercury), and six exceeded the applicable PGWSCOs (arsenic, barium, copper, lead, mercury, and nickel).

Deeper Soil

Ten VOCs were detected at concentrations exceeding UUSCOs in 5 of the 6 samples collected from the two deeper soil borings. Nine of the highest VOC exceedances in deeper soil were detected in soil sample HA-B1_35.5-37.5 after dilution and included 1,2,4-trimethylbenzene (concentration of 240 mg/kg), 1,2-dichloroethane (concentration of 13 mg/kg), 1,3,5-trimethylbenzene (concentration of 73 mg/kg), benzene (concentration of 290 mg/kg), ethylbenzene (concentration of 1600 mg/kg), naphthalene (concentration of 19,000 mg/kg), n-propylbenzene (concentration of 23 mg/kg), toluene (concentration of 19000 mg/kg), and total xylenes (concentration of 760 mg/kg). All of these exceedances in HA-B1-35.5-37.5 also exceeded the RRSCOs except for 1,2,4-trimethylbenzene and n-propylbenzene which only exceeded UUSCOs. The maximum acetone exceedance was a UUSCO exceedance detected in HA-B1_30.5-32.5 (concentration of 0.19 mg/kg). All ten of the above VOCs also exceeded applicable PGWSCOs.

Sixteen SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), were detected at concentrations exceeding UUSCOs in one of the deeper soil samples analyzed, HA-B1_35.5-37.5 after dilution. Above UUSCOs, these maximum concentrations detected in soil sample HA-B1_35.5-37.5 included: acenaphthene (concentration of 24.8 mg/kg), acenaphthylene (concentration of 244 mg/kg)

benzo(a)anthracene (concentration of 62.9 mg/kg), benzo(a)pyrene (concentration of 32.9 mg/kg), benzo(b)fluoranthene (concentration of 12.2 mg/kg), benzo(g,h,i)perylene (concentration of 13 mg/kg), benzo(k)fluoranthene (concentration of 20.1 mg/kg), chrysene (concentration of 58.7 mg/kg), dibenz(a,h)anthracene (concentration of 4.39 mg/kg), dibenzofuran (concentration of 12.1 mg/kg), fluoranthene (concentration of 109 mg/kg), fluorene (concentration of 1.9 mg/kg), indeno(1,2,3-cd)pyrene (concentration of 10.1 mg/kg), naphthalene (concentration of 1410 mg/kg), phenanthrene (concentration of 296 mg/kg), and in pyrene (concentration of 136 mg/kg). Of the 16 UUSCO exceedances in SVOCs, all but acenaphthene and dibenzofuran also exceed RRSCOs, and seven also exceed applicable PGWSCOs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, and naphthalene).

Groundwater

No VOCs were detected above AWQS in groundwater samples.

Dissolved metal results exceeded AWQS for four metal compounds: dissolved arsenic (maximum concentration of 41 µg/L in sample TWP-2), dissolved iron (maximum concentration of 319 µg/L in sample TWP-3), dissolved manganese (maximum concentration of 838 µg/L in sample TWP-1), and dissolved sodium (maximum concentration of 309,000 µg/L in sample TWP-4).

Sub-Slab Vapor

Total VOC concentrations in soil vapor samples ranged from 90.21 micrograms per cubic meter (µg/m^3) in SV-1 to 392.39 µg/m^3 in sample SV-4. Total chlorinated VOCs (CVOCs) ranged from non-detected in SV-1 to 45.75 µg/m^3 in SV-4. Total BTEX concentrations ranged from non-detected in SV-01 to 35.96 µg/m^3 in SV-2. Soil gas quality measurements are reported in Table 5.

Two CVOCs were detected in soil vapor samples above laboratory method detection limits. 1,1,1-trichloroethane was detected in SV-4 at a concentration of 40.5 µg/m^3 and tetrachloroethene (PCE) was detected in three soil vapor samples with a maximum concentration of 5.25 µg/m^3 in SV-4.

Multiple petroleum-related VOCs were detected at elevated concentrations at least one of the four soil vapor samples, including 1,2,4-trimethylbenzene (maximum concentration of 33.3 µg/m^3 in SV-4), 1,3,5-trimethylbenzene (maximum concentration of 7.96 µg/m^3 in SV-2), 1,3-butadiene (maximum concentration of 13.3 µg/m^3 in SV-4), 1,4-dichlorobenzene (maximum concentration of 4.7.63 g/m^3 in SV-1), 2-butanone (maximum concentration of 16.8 µg/m^3 in SV-04), 4-ethyltoluene (maximum concentration of 20.5 µg/m^3 in SV-4), acetone (maximum concentration of 67.4 µg/m^3 in SV-4), acrylonitrile (maximum concentration of 27.1 µg/m^3 in SV-2), benzene(maximum concentration of 6.07 µg/m^3 in SV-4), carbon disulfide (maximum concentration of 12.1 µg/m^3 in SV-4), chloroform (maximum concentration of 51.2 µg/m^3 in SV-2), ethyl acetate (maximum concentration of 5.98 µg/m^3 in SV-1), ethylbenzene (maximum concentration of 5.6 µg/m^3 in SV-3), hexane (maximum concentration of 5.6 µg/m^3 in SV-4), isopropyl alcohol (maximum concentration of 62.6 µg/m^3 in SV-1), m,p-xylenes (maximum concentration of 20.8 µg/m^3 in SV-4) , o-xylenes (maximum concentration of 7.16 µg/m^3 in SV-02), n-

butylbenzene (maximum concentration of 6.25 µg/m^3 in SV-4), propylene (maximum concentration of 123 µg/m^3 in SV-4), and toluene (maximum concentration of 10.5 µg/m^3 in SV-2).

CONCLUSIONS

Field observations and analytical results identified shallow soil consisting of urban fill contaminated with heavy metals and SVOCs (specifically PAHs) and total metals at concentrations consistent with characteristics of urban fill found throughout the New York City area. Underlying the surficial sidewalk grade concrete slab was urban fill generally consisting of tan, grey, light brown to dark brown and black fine to coarse sand with varying amounts of silt, coal, gravel, slag, ceramic, and brick observed to depths up to 17.5 ft bgs. SVOCs and total metals exceeding RRSCOS, UUSCOs, and applicable PGWSCOs were observed to be widely distributed laterally throughout the Site and in shallow sample intervals extending up to 17.5 ft bgs. The VOC Acetone exceeded UUSCOs in shallow urban fill samples (up to 16.5 ft bgs). These exceedance results in shallow soils are consistent with characteristic urban fill and historical manufacturing and industrial uses onsite.

In deeper soil, multiple VOCs and SVOCs were reported to exceed UUSCOs, along with observed RRSCO and PWGSCO exceedances (up to 52.5 ft bgs), throughout the Site. The visible coal tar staining, elevated PID readings, and petroleum like odor suggest potential relation to an offsite source from the properties surrounding the Site historically utilized for various commercial, industrial, and manufacturing operations. This can be supported by the finding in REC#2: Documented Subsurface Contamination at the Adjacent Property and REC#3: Historical and Current Uses of Surrounding Properties identified in the May 2026 Phase I ESA was prepared Haley & Aldrich of New York.

Groundwater results indicate the presence of dissolved metals exceeding AWQS. Throughout the Site, soil vapor contains elevated concentrations of chlorinated and petroleum VOCs, including BTEX compounds.

Should you have any questions regarding the findings or recommendations, please do not hesitate to contact us.

Sincerely,
H & A OF NEW YORK ENGINEERING AND GEOLOGY, LLP

James M. Bellew

NOTES

1. ALL LOCATIONS AND DIMENSIONS ARE APPROXIMATE.
2. 'SOIL ANALYTICAL RESULTS ARE COMPARED TO THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION (NYSDEC) TITLE 6 OF THE OFFICIAL COMPILATION OF NEW YORK CODES, RULES, AND REGULATIONS (NYCRR) PART 375 UNRESTRICTED USE SOIL CLEANUP OBJECTIVES (SCO), RESTRICTED-USE RESIDENTIAL SCOS, AND PROTECTION OF GROUNDWATER SCO'S.
3. EXCEEDANCES OF THE PROTECTION OF GROUNDWATER CRITERIA ARE SHOWN IN ITALICS.
4. EXCEEDANCES OF THE UNRESTRICTED SCOS ARE SHADED GRAY. EXCEEDANCES OF THE RESTRICTED SCOS ARE SHADED YELLOW.
5. DEFINITIONS:
   NY-PGW = NYSDEC PART 375 PROTECTION OF GROUNDWATER CRITERIA
   NY-RESR = NYSDEC PART 375 RESTRICTED-USE RESIDENTIAL SCOs
   NY-UNRES + NYSDEC PART 375 UNRESTRICTED USE SCOs
   J = ESTIMATED VALUE
   D = THE SAMPLE WAS DILUTED BEFORE ANALYSIS
   E = THE CONCENTRATION INDICATED FOR THIS ANALYTE IS AN ESTIMATED VALUE ABOVE THE CALIBRATION RANGE OF THE INSTRUMENT.
   ND (2.5) = NOT DETECTED, NUMBER IN PARANTHESES IS THE LABORATORY REPORTING LIMIT
   mg/kg = MICROGRAM PER KILOGRAM

ABBREVIATIONS AND NOTES:
mg/kg: milligram per kilogram

-: Not Analyzed
J: Value is estimated.
D: The sample was diluted before analysis.
E: The concentration indicated for this analyte is an estimated value above the calibration range of the instrument.
bgs: below ground surface
ft: feet
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit

- For test methods used, see the laboratory data sheets.
- Soil analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (SCO), Restricted-Use Residential SCOs, and Protection of Groundwater SCO's.
- ***Bold italic*** values indicate an exceedance of the Protection of Groundwater Criteria.
- Grey shading indicates an exceedance of the Unrestricted Use Soil Cleanup Objectives.
- Yellow shading indicates an exceedance of the Restricted Use Residential Soil Cleanup Objectives.

Re: Geophysical Engineering Survey (GES) Report
Commercial Property
255-261 Douglass Street,
Brooklyn, NY 11217

Dear Ms. Reach,

Nova Geophysical Services (NOVA) is pleased to provide the findings of the geophysical engineering survey (GES) at the above referenced project site: 255-261 Douglass Street, Brooklyn, NY (the "Site").

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a geophysical engineering survey (GES) consisting of a Ground Penetrating Radar (GPR) and Electromagnetic (EM) survey at the site. The purpose of this survey is to locate and identify utilities, underground storage tanks and other substructures at the project site on April 27th, 2025.

The equipment selected for this investigation was a GSSI UtilityScan 350 MHz ground penetrating radar (GPR) with a shielded antenna Sensors and Software Noggin 250 MHz GPR with a shielded antenna and a RadioDetection RD7100 Electromagnetic utility locator. A GPR system consists of a radar control unit, control cable, and transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250/350 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulse into bipolar pulses that are radiated to the

surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

A typical electromagnetic (EM) utility locating system consists of a transmitter unit and a receiver unit. The receiver unit can be used independently of the transmitter unit in order to detect utility lines with an inherent EM signature (electric utility lines, water lines, etc.). If needed a current at a specific frequency can also be placed on a utility that is being located. This can be done via the transmitter unit by either direct connection or induction via an EM field varying at specific frequency. The receiver unit is then set to the selected frequency and the electromagnetic field created by the current running through the utility can be located allowing the utility to be marked.

GEOPHYSICAL METHODS

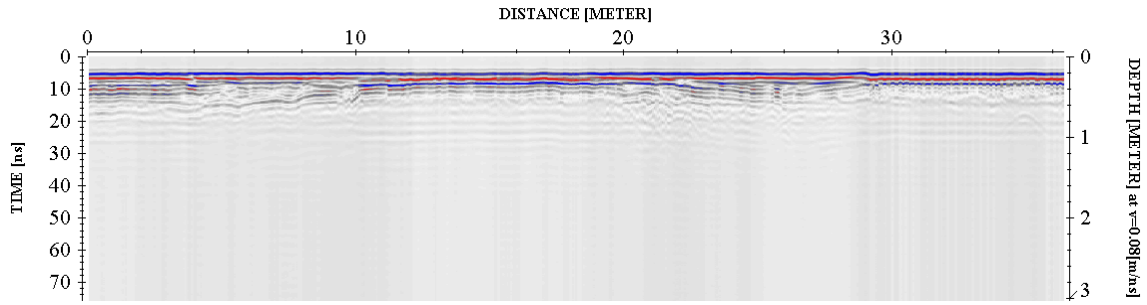

The project site was screened using GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface. An EM utility locator was used to help determine the locations of utilities within the survey area.

EM data was collected and interpreted on site and suspected utilities marked as needed. GPR data profiles were collected for the areas of the Site specified by the client and processed as specified below.

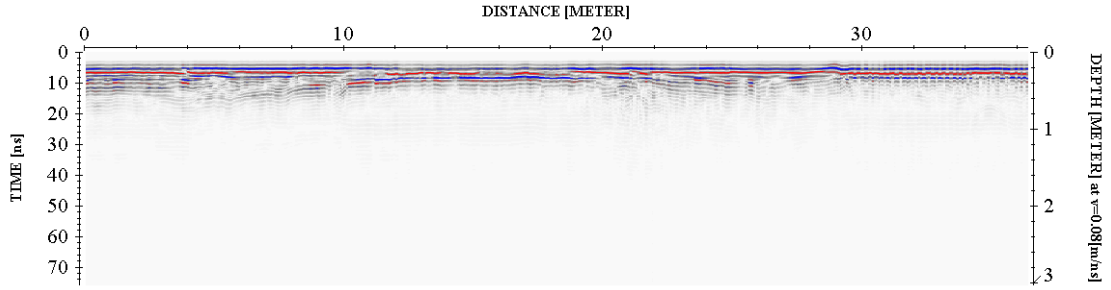

DATA PROCESSING

In order to improve the quality of the results and to better identify anomalies NOVA processed the collected data. The processing work flow is briefly described in this section.

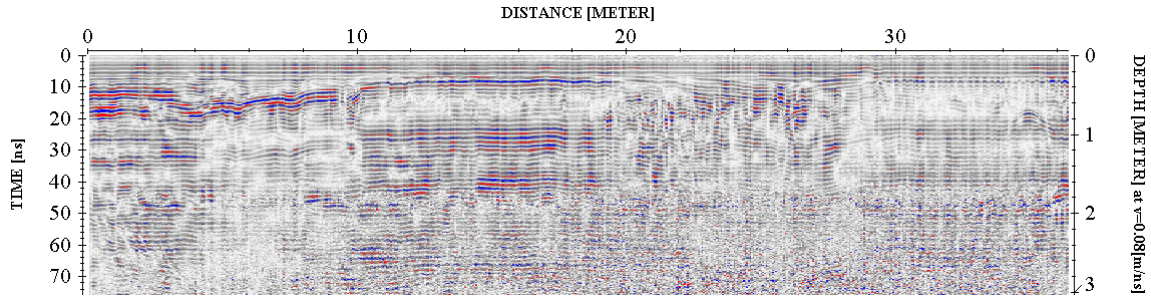

Step 1. Import Raw RAMAC data to standard processing format

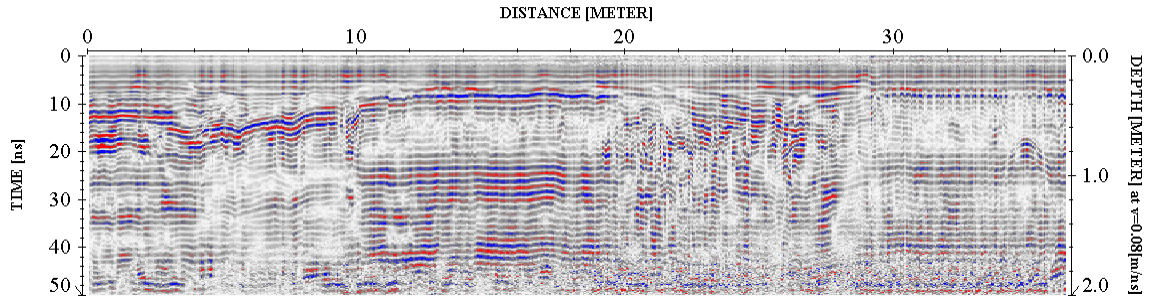

Step 2. Remove instrument noise *(dewow)*

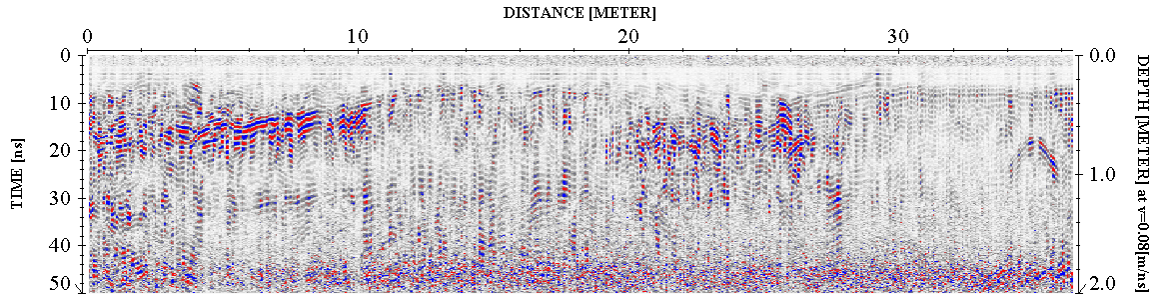

Step 3. Correct for attenuation losses *(energy decay function)*

Step 4. Remove static from bottom of profile *(time cut)*

Step 5. Mute horizontal ringing/noise *(subtracting average)*

The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and represents the subsurface anomalies much more accurately.

PHYSICAL SETTINGS

NOVA observed the following physical conditions at the time of the survey.

Weather: Sunny

Temperature: 60° F

Surface: Concrete

Survey Parameters: GPR scans were conducted within the survey area as shown on the survey plan. In tandem with the GPR, scans were conducted with an RD7100 Electromagnetic utility locator. Surveying was conducted over proposed drilling locations and additional areas of interest.

Limitations: The geophysical noise level (GNL) at the site was high due to being in an urban environment as well as construction operations occurring on-site.

RESULTS

The results of the geophysical engineering survey (GES) identified the following at the project site:

- Anomalies resembling potential subsurface utilities (such as water, sewer, sewer/ Drainage, Electric and gas) were identified within the surveyed areas. The approximate locations are shown in the survey plan.
- The GES identified an above ground storage tank (AST) during the GPR survey of the site within the cellar of the site.
- The GES identified that all utilities within the site buildings are overhead or along the walls.
- The GES identified that utilities entered the site from Douglass Street.
- The GES identified that sewer utilities enter the site building at 6’ below ground surface (BGS).
- The GES identified that electric enters at 3’ BGS,
- The GES identified that water enters at 4’ BGS.
- The GES identified that gas enters at 2.5’ BGS.
- The GES identified a drain within the site alleyway that is located at 1’ BGS.
- The GES identified a water line within the alleyway that is at 4’ BGS
- The GES identified a linear anomaly in the studio building at 1.5’ BGS.

- NOVA cleared and marked all proposed boring locations and moved any that were within proximity to any buried utilities or anomalies.

If you have any questions, please do not hesitate to contact the undersigned.

Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.
Project Manager

General Notes:

1. Refer to Key to Exploration Logs for explanation of descriptions and symbols.
2. Material stratum lines are interpretive and actual changes may be gradual.
3. USCS designations are generally based on visual-manual identification (ASTM D 2488), unless otherwise supported by laboratory testing (ASTM D 2487).
4. Groundwater level, if indicated, is at time of drilling/excavation (ATD) or for date specifed. Level may vary with time.
5. Location and ground surface elevations are approximate.

Report Date: 05/15/2026
Client Project ID: 0214417 (255-261 Douglass Street)
Project (SDG) No.: 26D1541

Haley & Aldrich, Inc. (NYC)
213 W 35th St. 7th Floor
New York NY, 10123
Attention: Luke McCartney

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 28, 2026 and listed below. The project was identified as your project: **0214417 (255-261 Douglass Street)**.

The analyses were conducted utilizing appropriate EPA methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

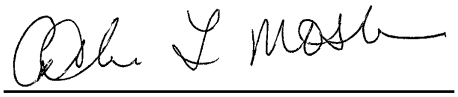

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

Please contact Client Services at 203.325.1371 with any questions regarding this report or e-mail nastr.clientservices@alsglobal.com.

Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
26D1541-01	SV-1_20260428	Soil Vapor	04/28/2026	04/28/2026
26D1541-02	SV-2_20260428	Soil Vapor	04/28/2026	04/28/2026

General Notes for Project (SDG) No.: 26D1541

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. ALS' liability for the above data is limited to the dollar value paid to ALS for the referenced project.
4. This report shall not be reproduced without the written approval of ALS, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by ALS.
8. Analyses conducted at ALS, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at ALS, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

SUBCONTRACT Notification, Purchase Order and Chain-of-Custody

Project No.: 26D1541

This information is being sent to inform you that ALS-Stratford intends to subcontract certain samples to another licensed laboratory for specific parameters that we cannot perform in-house. The specific paramters that will be subcontracted are detailed below. Do not contact the subcontract laboratory directly. Please contact your project manager for further information.

E-mail lab reports to: USAEnviro.Stratford@alsglobal.com **Sample confirmations to: NASTR.Subcontract@alsglobal.com**
Mail Hard Copies to: The address below

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 28, 2026 and listed below. The project was identified as your project: **0214417 (255-261 Douglass Street)**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

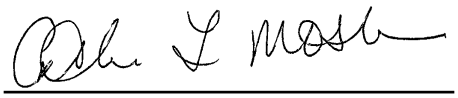

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for Project (SDG) No.: 26D1542

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. ALS' liability for the above data is limited to the dollar value paid to ALS for the referenced project.
4. This report shall not be reproduced without the written approval of ALS, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by ALS.
8. Analyses conducted at ALS, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at ALS, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By: 

Date: 05/08/2026

Cassie Mosher
Laboratory Manager - Stratford

Sample and Data Qualifiers Relating to This Work Order

/\	Analyte is not certified but the state of sample origination offer certification for the Analyte
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
IS-01	This internal standard did not meet acceptance criteria. The sample was reanalyzed to confirm matrix interference. The associated compounds have been flagged IS-HI or IS-LO accordingly.
IS-08	Recovery of this internal standard was outside QC limits.
IS-HI	The internal std associated with this target compound did not meet acceptance criteria (area >200% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-08	The recovery of this surrogate was outside of QC limits.

CLP Flags

B	Blank Contamination. The analyte was also detected in the method blank.
D	Diluted sample result. The sample was diluted before analysis.
E	Exceeds Calibration range. Result is above the instruments' linear calibration range.
H	Holding time exceeded. The sample was anlayzed after the recommended/required holding time.
J	Estimated Value. Result is above the Method Detection Limit (MDL) but below the Reporting Limit (RL).
N	Tentatively Identified Compound (TIC). The compound is presumptively identified but not confirmed with a standard.
P	Poor Precision / duplicate variance. Indicates poor agreement between duplicates (e.g. matrix spike duplicates or lab duplicates).
U	Not Detected. Analyte not detected above laboratory's established reporting limit.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.

Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, ALS reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Attention: Luke McCartney

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 29, 2026 and listed below. The project was identified as your project: **0214417 (255-261 Douglass Street)**.

The analyses were conducted utilizing appropriate EPA methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

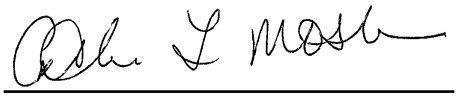

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

Please contact Client Services at 203.325.1371 with any questions regarding this report or e-mail nastr.clientservices@alsglobal.com.

Sample ID	Client Sample ID	Matrix	Date Collected	Date Received

General Notes for Project (SDG) No.: 26D1605

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. ALS' liability for the above data is limited to the dollar value paid to ALS for the referenced project.
4. This report shall not be reproduced without the written approval of ALS, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by ALS.
8. Analyses conducted at ALS, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at ALS, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

Parameter	ppbv Result	ppbv RL	ug/m3 Result	ug/m3 RL	Date/Time	By	Dilution

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Sample Criteria Exceedances Report

GCV96292 - YORK

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

SUBCONTRACT Notification, Purchase Order and Chain-of-Custody

Project No.: 26D1605

This information is being sent to inform you that ALS-Stratford intends to subcontract certain samples to another licensed laboratory for specific parameters that we cannot perform in-house. The specific paramters that will be subcontracted are detailed below. Do not contact the subcontract laboratory directly. Please contact your project manager for further information.

E-mail lab reports to: USAEnviro.Stratford@alsglobal.com **Sample confirmations to:** NASTR.Subcontract@alsglobal.com
Mail Hard Copies to: The address below

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 29, 2026 and listed below. The project was identified as your project: **0214417 (255-261 Douglass Street)**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

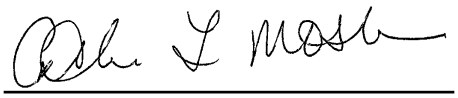

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for Project (SDG) No.: 26D1611

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. ALS' liability for the above data is limited to the dollar value paid to ALS for the referenced project.
4. This report shall not be reproduced without the written approval of ALS, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by ALS.
8. Analyses conducted at ALS, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at ALS, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

/\	Analyte is not certified but the state of sample origination offer certification for the Analyte
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
E-dil	Actual amount is greater than the reported value. Error capacity of the analysis is compromised by further dilution.
IS-01	This internal standard did not meet acceptance criteria. The sample was reanalyzed to confirm matrix interference. The associated compounds have been flagged IS-HI or IS-LO accordingly.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-08	The recovery of this surrogate was outside of QC limits.

CLP Flags

B	Blank Contamination. The analyte was also detected in the method blank.
D	Diluted sample result. The sample was diluted before analysis.
E	Exceeds Calibration range. Result is above the instruments' linear calibration range.
H	Holding time exceeded. The sample was anlayzed after the recommended/required holding time.
J	Estimated Value. Result is above the Method Detection Limit (MDL) but below the Reporting Limit (RL).
N	Tentatively Identified Compound (TIC). The compound is presumptively identified but not confirmed with a standard.
P	Poor Precision / duplicate variance. Indicates poor agreement between duplicates (e.g. matrix spike duplicates or lab duplicates).
U	Not Detected. Analyte not detected above laboratory's established reporting limit.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.

NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, ALS reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Corrective Action: Only a terracore kit was received for sample HA-B1_30.5-32.5 which is for VOCs. The requested SVOCs and TAL Metals have been removed. The client was notified. Per client request 5/1/26, metals analysis was removed from sample -12.

New York NY, 10123
Attention: Luke McCartney

Report Date: 05/06/2026
Client Project ID: 0214417 (255-261 Douglass Street)
Project (SDG) No.: 26D1612

Report Date: 05/06/2026
Client Project ID: 0214417 (255-261 Douglass Street)
Project (SDG) No.: 26D1612

Haley & Aldrich, Inc. (NYC)
213 W 35th St. 7th Floor
New York NY, 10123
Attention: Luke McCartney

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 29, 2026 and listed below. The project was identified as your project: **0214417 (255-261 Douglass Street)**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

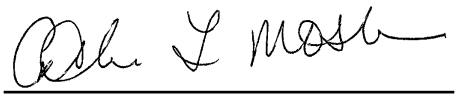

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for Project (SDG) No.: 26D1612

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. ALS' liability for the above data is limited to the dollar value paid to ALS for the referenced project.
4. This report shall not be reproduced without the written approval of ALS, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by ALS.
8. Analyses conducted at ALS, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at ALS, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

/\	Analyte is not certified but the state of sample origination offer certification for the Analyte
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.

CLP Flags

B	Blank Contamination. The analyte was also detected in the method blank.
D	Diluted sample result. The sample was diluted before analysis.
E	Exceeds Calibration range. Result is above the instruments' linear calibration range.
H	Holding time exceeded. The sample was anlayzed after the recommended/required holding time.
J	Estimated Value. Result is above the Method Detection Limit (MDL) but below the Reporting Limit (RL).
N	Tentatively Identified Compound (TIC). The compound is presumptively identified but not confirmed with a standard.
P	Poor Precision / duplicate variance. Indicates poor agreement between duplicates (e.g. matrix spike duplicates or lab duplicates).
U	Not Detected. Analyte not detected above laboratory's established reporting limit.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis

Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, ALS reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Technical Report

prepared for:

Haley & Aldrich, Inc. (NYC)
213 W 35th St. 7th Floor
New York NY, 10123
Attention: Luke McCartney

Report Date: 05/12/2026
Client Project ID: 0214417 (255-261 Douglass Street)
Project (SDG) No.: 26D1667

Report Date: 05/12/2026
Client Project ID: 0214417 (255-261 Douglass Street)
Project (SDG) No.: 26D1667

Haley & Aldrich, Inc. (NYC)
213 W 35th St. 7th Floor
New York NY, 10123
Attention: Luke McCartney

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 30, 2026 and listed below. The project was identified as your project: **0214417 (255-261 Douglass Street)**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

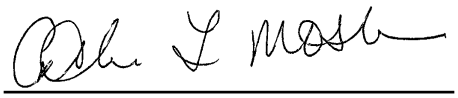

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
26D1667-01	HA-B1_45.5-47.5	Soil	04/30/2026	04/30/2026

General Notes for Project (SDG) No.: 26D1667

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. ALS' liability for the above data is limited to the dollar value paid to ALS for the referenced project.
4. This report shall not be reproduced without the written approval of ALS, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by ALS.
8. Analyses conducted at ALS, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at ALS, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Lab ID	Client Sample ID	Volatile Sample Container
26D1667-01	HA-B1_45.5-47.5	40mL Vial with Stir Bar-Cool 4° C
26D1667-02	HA-B1_50.5-52.5	40mL Vial with Stir Bar-Cool 4° C

Sample and Data Qualifiers Relating to This Work Order

/\	Analyte is not certified but the state of sample origination offer certification for the Analyte
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.

CLP Flags

B	Blank Contamination. The analyte was also detected in the method blank.
D	Diluted sample result. The sample was diluted before analysis.
E	Exceeds Calibration range. Result is above the instruments' linear calibration range.
H	Holding time exceeded. The sample was anlayzed after the recommended/required holding time.
J	Estimated Value. Result is above the Method Detection Limit (MDL) but below the Reporting Limit (RL).
N	Tentatively Identified Compound (TIC). The compound is presumptively identified but not confirmed with a standard.
P	Poor Precision / duplicate variance. Indicates poor agreement between duplicates (e.g. matrix spike duplicates or lab duplicates).
U	Not Detected. Analyte not detected above laboratory's established reporting limit.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, ALS reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on May 06, 2026 and listed below. The project was identified as your project: **0214417 (255-261 Douglass Street)**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

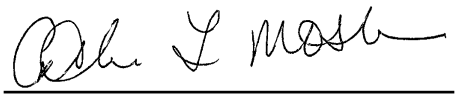

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
26E0271-01	HA-B2_28.5-30.5	Soil	05/06/2026	05/06/2026
26E0271-02	HA-B2_38.5-40.5	Soil	05/06/2026	05/06/2026

General Notes for Project (SDG) No.: 26E0271

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. ALS' liability for the above data is limited to the dollar value paid to ALS for the referenced project.
4. This report shall not be reproduced without the written approval of ALS, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by ALS.
8. Analyses conducted at ALS, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at ALS, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Volatile Analysis Sample Containers

Lab ID	Client Sample ID	Volatile Sample Container
26E0271-01	HA-B2_28.5-30.5	40mL Vial with Stir Bar-Cool 4° C
26E0271-02	HA-B2_38.5-40.5	40mL Vial with Stir Bar-Cool 4° C

Sample and Data Qualifiers Relating to This Work Order

/\	Analyte is not certified but the state of sample origination offer certification for the Analyte
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.

CLP Flags

B	Blank Contamination. The analyte was also detected in the method blank.
D	Diluted sample result. The sample was diluted before analysis.
E	Exceeds Calibration range. Result is above the instruments' linear calibration range.
H	Holding time exceeded. The sample was anlayzed after the recommended/required holding time.
J	Estimated Value. Result is above the Method Detection Limit (MDL) but below the Reporting Limit (RL).
N	Tentatively Identified Compound (TIC). The compound is presumptively identified but not confirmed with a standard.
P	Poor Precision / duplicate variance. Indicates poor agreement between duplicates (e.g. matrix spike duplicates or lab duplicates).
U	Not Detected. Analyte not detected above laboratory's established reporting limit.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, ALS reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Corrective Action: Per client request 5/6/27, the client sample IDs for -01 and -02 have been revised. An updated COC was provided by the client on 5/8/26.
