Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Name:	CITY BARREL CO.
Address:	421-429 MEEKER STREET
City,State,Zip:	BROOKLYN, NY 11378
Program:	HW
Site Code:	55909
Classification:	N
Region:	2
Acres:	Not reported
HW Code:	224005
Record Add:	11/18/1999
Record Upd:	12/16/2003
Updated By:	kstang
Site Description:	The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. This site was listed in the Eckhardt subcommittee report as a disposal site. Investigation by the NYSDEC Regional offices indicate that this is an industrial operation to recycle, recover and refurbish drums and that no apparent disposal of hazardous or toxic waste have occurred here.
Env Problem:	None known. No apparent disposal of significant quantities of any hazardous waste.

DEC Memo:	Spill remediation is being tracked under spill no. 90-07766. See also spill nos. 05-08671 and 07-10898. 11/6/2000: Reassigned from Sullivan to Sigona. PBS records indicate that 14 x 550-gallon, 1 x 4,000-gallon and 1 x 1,000-gallon USTs were either closed in-place or removed from this site. (Sigona) 12/12/2003: Reassigned from Roberts to Harrington (central office) for management. (Rommel) 5/6/2005:

MOBIL S/S #17-FX9 (Continued) **S118953716**

Sent letter to Exxon Mobil approving off-site RI work plan. (Harrington) 7/18/2005: Sent letter to Exxon Mobil approving revised RAP. EFR events @ MW-3 and MW-4 will be conducted semi-annually. FS to address dissolved BTEX @ MW-3 will be submitted along with off-site RI report. (Harrington) 10/7/2005: Sent e-mail to Exxon Mobil approving the sensitive receptor survey. (Harrington) 11/28/2005: Sent Exxon Mobil letters approving the SI report and the supplemental SI work plan for the off-site plume delineation. Additional work was required due to the discovery of free product west of McGuinness Boulevard. (Harrington) 7/31/2006: Approved supplemental SI report. Monthly EFR events will now be conducted at wells MW-3, MW-4, MW-11, MW-12, and MW-15A. Work plan for recovery well installation near MW-15 is expected in October. (Harrington) 10/14/2006: Sent an e-mail to Exxon Mobil approving the SI work plan. Plan calls for the installation of six (6) monitoring wells along the west side of McGuinness Boulevard between Bayard and Newton Streets in order to fully delineate and recover the free product observed in this area. (Harrington) 3/2/2007: Sent e-mail to Exxon Mobil approving the UST divestiture and excavation work plan. EM will be removing all USTs, distribution lines, vent lines, hydraulic lifts, and contaminated soil identified during this effort. (Harrington) 4/20/2007: Sent e-mail to Exxon Mobil approving the SI report which documented the off-site work completed along McGuiness Boulevard in support of LPH recovery efforts. (Harrington) 6/22/2007: PM visited the site along with Kleinfelder personnel. Excavation work has been completed. Report expected in the Fall. (Harrington) 10/29/2007: Sent e-mail to Exxon Mobil approving the Tank Excavation Assessment Report. The revised RAP will be submitted in mid-December. (Harrington) 12/4/2007: PM approved the feasibility testing work plan during a site visit with Kleinfelder personnel. SVE/AS and chem-ox injection technologies will be evaluated. (Harrington) 12/13/2007: PM conducted a site visit during monitoring well installation as part of the recently-approved FS work plan. Field work began on December 10th. (Harrington) 1/15/2008: Kleinfelder encountered LPH in a newly-installed monitoring well on-site during pilot testing efforts. Kleinfelder personnel contacted the PM, who instructed them to call it in as a spill. The spill number (07-10898) was administratively closed by Region 2 personnel. (Harrington) 5/1/2008: PM sent an e-mail to Exxon Mobil approving the off-site subsurface investigation work plan. This effort will begin to fully delineate the free-product plume west of McGuinness Boulevard. (Harrington) 5/6/2008: PM conducted a site meeting with Exxon Mobil's consultant (Kleinfelder East, Inc.). During the meeting, the PM approved the IRM work plan, which calls for excavation of soils in the area of the former dispenser islands. Given that this area is adjacent to McGuinness Boulevard, sheeting and shoring will be required. (Harrington) 6/24/2008: PM conducted a site visit with Exxon Mobil personnel (Drake) and their consultant (Kleinfelder) in order to discuss recent developments. Apparently, Exxon Mobil has been denied further access to the site by the owner thus delaying implementation of the IRM. Additional off-site investigation will be required due to the continued presence of LPH along McGuinness Boulevard. This will involve well installation further west along Newton Street. (Harrington) 9/7/2008: PM sent an e-mail to Exxon Mobil approving the updated version of the IRM work plan. Work plan calls for additional excavation of petroleum-contaminated soils on-site and post-excavation sampling. Work is scheduled to begin on September

MOBIL S/S #17-FX9 (Continued) **S118953716**

15th. (Harrington) 4/3/09 - Haggerty: approved Excavation Report. With this excavation, over 7000 tons of contaminated soil has been removed from the site. My comments were as follows: 1. A No Further Action letter can not be granted for just the on-site soils. If the replacement monitoring wells are installed and groundwater meets with DEC approval, a No Further Action letter will be issued for the spill 90-07766 and I will re-open spill 05-08671 for the off-site contamination. 2. Resend the Off-Site Investigation Work Plan under a separate cover. Dave Harrington disregarded the 8/29/08 RRAP and therefore I have not been able to review the work plan contained therein. After I have approved it, I will forward the DOT sidewalk permit letter. 3. I have spoken with the Developer's consultant. The Developer's consultant, George Kavrakis, states the layout of the station has been approved and is not subject to change. Therefore, proceed with the installation of the on-site replacement wells within the next 60 days. I also informed him that if the monitoring wells are damaged during the construction of the new station, it will be their responsibility to re-install them. I have attached the site plan for the new station which appears to match the layout provided in your report. 4. I spoke with the BEST Squad Demolition Supervisor who was holding up the redevelopment at the property and wrote him a letter (attached) requesting he allow redevelopment to begin. Once he receives the letter, he states construction can proceed. According to George Kavrakis, once they receive permission from the BEST Squad, construction will begin. Please coordinate with Mr. Kavrakis (516 298 2355) 6/19/09 - Haggerty: had conference call with Ken Drake (ExxonMobil) and Kleinfelder. New station under construction and will not be completed for the next month. Installation of on-site and off-site MW's will be completed at the same time once construction of the new station is complete. June 2010 - required additional delineation of MTBE plume August 2010 - received Supplemental Subsurface Investigation Work Plan. Under review 11-4-10 - Austin - Had a discussion with Sally Dewes of DEC/Albany - Sampling at this site recently yielded the discovery of ethanol, indicating that there may be a new release on this site - we agreed that this would be called in as a new spill report, for investigation by Region 2 Spills - end March 2011 - reviewed SIR and sent comment email requiring work plan to remediate off-site LPH. EFR events over the past 3 years have not reduced LPH thickness May 2011 - Work plan overdue June 2011 - approved plan to increase efficiency of LPH removal using HIT events. Also, the new owner had a Spill called in under the his name due to ethanol detections November 2011 - Feasibility Report due in December December 2011 - Feasibility Report under review January 2012 - using VER events. percent level vapors were being collected. Considering this is ~200ft for the site, it appears a plume of product has broken off for the source. Remedial alternatives being evaluated March 2012 - met with new Project Manager, Heather Cloud, from GES and discussed project. A plume of free product has broken off from the site and is slowly moving across Humboldt. We discussed the fact that the plume will be persistant for years. She requested 2 months to meet internally as to the next step. I told to look for a possible locations for a SVE system shed in the adjacent properties May 2012 - nothing substantive regarding a solution has been proposed. Conference call required June 2012 - approved EMs soil boring/sampling work plan along McGuiness where the product has been consistant for years December 2012 - GES proposed excavating the sidewalk on McGuiness Blvd into the groundwater to remove the product

MOBIL S/S #17-FX9 (Continued) **S118953716**

beneath it. EM fully excavated the station and the remaining contamination has detached from the original site. Even if they did excavate the sidewalk which a don't believe the DOT would allow, more product may migrate below the sidewalk October 2013 - approved EM work plan to perform 2 DPE events to determine the vapor mass in the subsurface. Groundwater is only 10fbg and free product is present near buildings with basements April 25, 2014: Haggerty - Conference call including: EM territory manager Laurie McCarthy, EM legal Counsel Andrew Torrent, EM consultant GES, OGC Scott Caruso, Jim Moras and PM. We discussed the fact that EM was not in compliance with the Consent Order over the past seven months. PM approved a work plan to perform 2 Dual-Phase Extraction events 9/24/13 to determine the vapor mass in the subsurface as well as to estimate how fast the vapor mass is rebounding. Only one DPE event was conducted and it took seven months to receive the report. As this point, it may be necessary to involve the DOH. EM scheduled another conference for a week later (5/2/14) with proposals to deal with the vapor mass as well as remediation of the Spill. May 2, 2014 - Haggerty - EM agreed to install SVE/AS system across McGuiness Blvd. at 179 Bayard Street. May 13, 2014 - Haggerty - approved revised CAP with supersedes the original CAP with the Consent Order. 7/29/14 - Haggerty: RAP to install SVE/AS system approved 11/16/15 - Haggerty: AS pilot test work plan approved. 12/3/15 - Haggerty: SVE/AS pilot test conducted to determine requirements to treat influent vapor concentrations. 2/17/16 - Haggerty: Spill management transferred to Caroline Eigenbrodt. Caroline, Haggerty and Section Chief, Sally Dewes, had a conference call with GES project manager, Michael DeGloria, to facilitate the transition. We reviewed the SVE/AS installation schedule provided by DeGloria and discussed logistical issues to operate the system (access agreement with the adjacent property owner, potential building modifications, permit requirements, etc.) System operation proposed for the winter of 2016. 9/1/16 - Haggerty: Spill management transferred back to Haggerty 4/3/17 - Haggerty: Approved revised schedule provide 3/17/17. System will not be operational until December 2017 at best (3.5 years after RAP approval). PM required quarterly 1-day soil vapor extraction events as an interim remedial measure (IRM) until the system is operational. Please submit a letter IRM work plan within 30 days. 6/30/2022-M. Hoque: As per discussion and communication between Vadim Brevdo and Mike Haggerty, spill case manager reassigned from Mike Haggerty to MD Hoque effective June 30, 2022. (MDH) 7/11/2022-M. Hoque: A site update email below received from the consultant: From: Douglas Ferraiolo Sent: Monday, July 11, 2022 9:36 AM To: Haggerty, Michael J (DEC) Cc: Wood, Ben ; Brian Morrissey ; Dana Hignell ; Hoque, MD S (DEC) ; Alysha Alfieri ; Adesa Boja Subject: RE: Former Mobil Station #17-FX9 Quarterly Monitoring Report Mike, Thank you for informing us of the management change. As an update on the DOB permit, Bohler has met with the NYC DOB NOW Plan Examiner and revised the system permit application based on their comments. The revised application is currently in the NYC DOB NOW Plan Examiner s queue for review. We expect to receive the approved system permit application shortly as the shed permit application has been approved and we hope to begin installation of the AS/SVE system this summer. Let me know if you have any questions or comments at this time. Thank you again for assistance on this project, Mike and we re looking forward to working with you, MD. Douglas Ferraiolo - Project Geologist - Roux 209 Shafter Street, Islandia, New York 11749 Main: 631.232.2600 - Direct:

MOBIL S/S #17-FX9 (Continued) **S118953716**

631.630.2421 - Mobile: 631.806.0689 -MD 8/12/2022-M. Hoque: On August 12, DEC received a 2nd quarter 2022 monitoring report. Wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and groundwater samples were collected from the wells MW-15A, MW-16A, MW-17, MW-18, MW-19, MW-21, MW-22, MW-28, MW-30, MW-31, MW-33, MW-34, MW-35, and SVE-2 for VOCs analysis. LNAPL was detected at MW-17 during the gauging event with thickness of 0.01 feet and during initiation of the IRM event at MW-17 with thickness of 0.09 feet. BETX in groundwater were detected slightly above standards. Rous will continue IRM events on a quarterly basis, including monitoring well gauging, LNAPL recovery (as necessary), and SVE operations. (MDH) 11/17/2022-M. Hoque: DEC reviewed a 3rd quarter 2022 site status update report. Eighteen (18) monitoring wells were gauged during the 3rd Quarter of 2022. LNAPL was detected at MW-15B and MW-17 at thicknesses of 0.24 foot and 0.10 foot, respectively. LNAPL was also detected during initiation of the IRM event at MW-15B and MW-17 with LNAPL thicknesses of 0.28 foot and 0.09 foot, respectively. Thirteen (13) monitoring wells (MW-15A, MW-16A, MW-18, MW-19, MW-21, MW-22, MW-28, MW-30, MW-31, MW-33, MW-34, MW-35, and SVE-2) were sampled on August 25, 2022. Well MW-17 was not sampled due to the detection of LNAPL during gauging. BETX were fond from non-detect to 150 ug/L in well MW-22. MTBE was detected ranging from 1.6 ug/L in MW-22 to 440 ug/L in MW-21. The product was recovered by VEFR. Roux will continue quarterly well gauging, product recovery, and reporting. (MDH) 2/3/2023-M. Hoque: On February 3, 2023, DEC received a 4th quarter 2022 SSUR. 2/8/2023-M. Hoque: DEC reviewed a 4th quarter 2022 site status update report. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged on December 22, 2022. LNAPL was detected at concentrations of 0.08-foot 0.34 foot in MW-15B and 0.08 foot to 0.11 foot in MW-17. LNAPL was also detected during initiation of the IRM event at MW-15B and MW-17 with LNAPL thicknesses of 0.34 feet and 0.08 feet, respectively. Quarterly groundwater sampling were conducted in monitoring wells MW-15A, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 was conducted on December 22, 2022. MW-17 was not sampled due to the detection of LNAPL during gauging. BETX were fond from non-detect to 200 ug/L in well MW-33. MTBE was detected 440 ug/L in MW-21. The product was recovered from MW-15 by VEFR. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 5/16/2023-M. Hoque: On May 3, 2023, DEC received a 1st quarter 2023 site status update report. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and sampled monitoring wells MW-15A, MW-17, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 on March 16, 2023. No measurable LNAPL was detected in any of the monitoring wells during the 1st Quarter of 2023. BETX were detected benzene ND to to 5.3 ug/L (MW-33), ethylbenzene from ND to 280 ug/L (MW-22), toluene from ND to 0.54 J ug/L (MW-17), xylenes ranged from ND to 230 ug/L (MW-22); and MTBE from 0.59 J ug/L (MW-22) to 550 ug/L (MW-21). Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 6/9/2023-M. Hoque: Roux informed DEC that the shed permit renewal received from the DOB. Construction of the equipment shed is scheduled to resume on Monday, 6/12. Roux will notify DEC once the shed construction has been completed. Roux still

MOBIL S/S #17-FX9 (Continued) **S118953716**

awaiting receipt of the remediation system permit and will notify DEC once the remediation system permit application has been approved. (MDH) 7/7/2023-M. Hoque: On July 7, 2023, Roux updated DEC that the equipment shed construction and the remediation system equipment transport into the shed were completed on 6/30/23. Roux still awaiting receipt of the remediation system permit from NYCDOB to startup the remediation system. (MDH) 8/2/2023-M. Hoque: ROn August 1, 2023, DEC received a 2nd quarter 2023 site monitoring report. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells MW-15A, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 were sampled on June 29, 2023. LNAPL was detected thickness ranging from 0.01 foot to 0.02 foot in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 8.5 ug/L in well MW-34, ethylbenzene ranging from ND to 290 ug/L in well MW-22, toluene 2 ug/L in well MW-34, xylenes from ND to 570 ug/L in well MW-34, and MTBE 540 ug/L in MW-21. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. The existing SVE system is comprised of three monitoring wells in MW-15B, MW-21, and MW-22. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 11/2/2023-M. Hoque: A 3rd quarter 2023 monitoring report received on 11/2/2023. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells MW-15A, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 were sampled in September 2023. LNAPL was detected thickness of 0.04 foot in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 1.6 ug/L in well MW-33, ethylbenzene ranging from ND to 87 ug/L in well MW-22, and xylenes from ND to 42 ug/L in well MW-33. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. The existing SVE system is comprised of three monitoring wells in MW-15B, MW-21, and MW-22. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 2/5/2024-M. Hoque: A 4th quarter 2023 monitoring report received on 2/2/2024. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells MW-15A, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 were sampled on December 8, 2023. LNAPL was detected thickness of 0.01 foot in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 32 ug/L well MW-34, ethylbenzene ranging from ND to 140 ug/L in well MW-22, and xylenes from ND to 93 ug/L in well MW-34. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. The existing SVE system is comprised of three monitoring wells in MW-15B, MW-21, and MW-22. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 5/9/2024-M. Hoque: A 1st quarter 2024 monitoring report received on 5/8/2024. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells (MW-15A, , MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2) were sampled on March 26, 2024. LNAPL was detected thickness of 0.04 foot in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 1.5 ug/L in

MOBIL S/S #17-FX9 (Continued) **S118953716**

well MW-18, ethylbenzene ranging from ND to 230 ug/L in well MW-22, and xylenes from ND to 140 ug/L in well MW-22. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. The existing SVE system is comprised of three monitoring wells in MW-15B, MW-21, and MW-22. After multiple correspondences with the NYC DOB NOW plan examiner, the remediation system permit application was approved and the PAA plans were obtained on February 2, 2024. Electrical upgrades required to run the remediation system equipment (single phase to 3-phase) were completed from March 28, 2024 to March 29, 2024. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 8/21/2024-M. Hoque: On 8/15/2024, DEC received a 2nd quarter 2024 site status update report. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells (MW-15A, MW-16A, MW-18, MW-19, MW-21, MW-22, MW-28, MW-30, MW-31, MW-33, MW-34, MW-35, and SVE-2 on June 27, 2024. LNAPL was detected thickness of 0.01 foot in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 3.2 ug/L in well MW-18, ethylbenzene ranging from ND to 16 ug/L in well MW-22, and xylenes from ND to 22 ug/L in well SVE-22. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. The existing SVE system is comprised of three monitoring wells in MW-15B, MW-21, and MW-22. After multiple correspondences with the NYC DOB NOW plan examiner, the remediation system permit application was approved and the PAA plans were obtained on February 2, 2024. Electrical upgrades required to run the remediation system equipment (single phase to 3-phase) were completed from March 28, 2024 to March 29, 2024. Due to the delays attempting to find another contractor that had ICE equipment, the IRM event was not completed during the Second Quarter 2024 and instead, was completed on July 30, 2024. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 11/12/2024-M. Hoque: On 11/5/2024, DEC received a 3rd quarter 2024 monitoring report. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells MW-15A, MW-17, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 were sampled during this quarter. A trace amount of LNAPL was detected in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 1.8 ug/L in well MW-33, ethylbenzene ranging from ND to 110 ug/L in well MW-22, and xylenes from ND to 56 ug/L in well MW-33. Five soil vapor monitoring points (RSV-1 through RSV-5) were installed on the Bayard Street and McGuinness Boulevard sidewalks on October 1 and October 2, 2024. These monitoring points were installed approximately one to two feet off the building structures on Bayard Street and McGuinness Boulevard at two to three feet below land surface (ft bls) to closely represent the sub-slab conditions within the adjacent businesses. Three of the monitoring points (RSV-2 through RSV-4) were installed directly adjacent to wells (MW-15B, MW-21, and MW-22) where elevated concentrations in soil vapor have been observed in the past. The other two monitoring points (RSV-1 and RSV-5) were installed to the north and south of the MW-15B, MW-21, and MW-22 area on the McGuiness and Bayard Street sidewalks, respectively. the soil vapor monitoring points were sampled 24 hours after installation on October 3, 2024. Low concentrations of petroleum-related VOCs were detected throughout the

MOBIL S/S #17-FX9 (Continued) **S118953716**

soil vapor samples. The Third Quarter 2024 IRM event was completed September 17, 2024. The GAC drum used during the July 30, 2024, and September 17, 2024. The construction contractor, United Industries & Construction Corp., is currently prepared to pull the NYC DOB permit to continue AS/SVE system installation. However, upon review of the soil vapor sampling results and the groundwater sampling results from the Third Quarter 2024 sampling event, the basis for the system installation was re-evaluated by Roux/ExxonMobil. The BTEX and MTBE groundwater concentrations within the proposed system treatment area have been consistently decreasing up to an order of magnitude below the highest concentrations. no immediate human health or safety issues have been identified, and ExxonMobil proposes revising the treatment remedy to monitored natural attenuation (MNA) to address the residual petroleum contamination. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 2/19/2025-M. Hoque: On 2/7/2025, DEC received a 4th quarter 2024 site monitoring report. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged during this. LNAPL was detected raging from 0.03 foot to 0.09 foot in well MW-15B. A trace amount of LNAPL was observed in well MW-17. Due to the trace amount of LNAPL detected within MW-15B and MW-17, no LNAPL was recovered during the reporting period. Wells MW-15A, MW-17, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 were sampled for VOCs analysis. Benzene was detected ranging from non-detect (ND) to 3.5 ug/L in well MW-33, 11 ug/L in well MW-33; xylenes was detected 130 ug/L in MW-33); and MTBE of 450 ug/L in MW-21. As part of the IRM activities, seven monitoring wells (MW-15B, MW-17, MW-18, MW-19, MW-21, MW-22, and MW-28) were gauged. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. Following completion of the First Quarter of 2025 events, the quarterly IRM events will be discontinued, and the quarterly groundwater sampling will be altered to an MNA strategy to address the residual contamination. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 5/20/2025-M. Hoque: On 5/16/2025, Received a revised 1Q25 site monitoring report. The 1q25 report review completed and send the email below: Good morning, Mr. Ferraiolo: The New York State Department of Environmental Conservation (the Department) has reviewed the revised 1st Quarter 2025 Monitoring Report dated May 16, 2025, for the above referenced spill site prepared by Roux Environmental Engineering & Geology, D.P.C on behalf of ExxonMobil. Based on review of the report, the Department understands the following: On March 27, 2025, eighteen (18) monitoring wells were gauged and wells MW-15A, MW-17, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 were sampled. No measurable LNAPL was detected in any of the monitoring wells during this quarter. Benzene was detected in groundwater samples ranging from non-detect (ND) to 2.5 ?g/L in well SVE-2; ethylbenzene was detected ranging from ND to 140 ?g/L in well MW-22; toluene was not detected; xylenes was detected ranging from ND to 55 ?g/L in well MW-21; and MTBE was detected ranging from 0.68 ug/L to 510 ?g/L in well MW-21. As part of the IRM activities, monitoring wells MW-15B, MW-17, MW-18, MW-19, MW-21, MW-22, and MW-28 were gauged and no LNAPL was observed during this quarter. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. The SVE system is comprised of the monitoring wells MW-15B, MW-21, and MW-22. The BTEX

MOBIL S/S #17-FX9 (Continued) **S118953716**

and MTBE concentrations in groundwater within the proposed system treatment area have been consistently decreasing up to an order of magnitude below the highest concentrations. The site and near the commercial building receptors do not indicate a vapor intrusion risk. There is no groundwater consumption identified in the area, and the current concentrations of BTEX and MTBE in groundwater have significantly decreased since 2018. Therefore, no immediate human health or safety issues have been identified and ExxonMobil proposes revising the treatment remedy to monitored natural attenuation (MNA) to address the residual petroleum contamination. On November 22, 2024, the Department approved ExxonMobil/Roux proposals that completion of the quarterly groundwater sampling and IRM events during the Fourth Quarter of 2024 and First Quarter of 2025, the quarterly IRM events will be discontinued following the 1st Quarter 2025 sampling event and the groundwater sampling will be altered to an MNA treatment remedy to address the residual petroleum contamination. Based on decreasing trends of petroleum VOCs and MTBE in groundwater, ExxonMobil/Roux proposes that the quarterly IRM events will be discontinued, and the quarterly groundwater sampling will be altered to an MNA strategy to address the residual contamination starting in the Second Quarter of 2025, and Submission of a MNA sampling plan to DEC for review and approval. The Department herby approves the May 16, 2025-1st Quarter 2025 Monitoring Report and the above proposals. Feel free to contact me, if you have any questions. Thanks, 7/10/2025-M. Hoque: Received a MNA Sampling Plan. (MDH) 7/21/2025-M. Hoque: I reviewed the MNA Sampling Plan. The MNA Sampling plan proposed the following: Semi- annually gauging the monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 and removal of LNAPL, as necessary. If LNAPL observed in any monitoring wells during gauging at a thickness of greater than 0.5 foot, LNAPL will be removed from the well using by absorbent socks, bailing, vacuum truck, as appropriate. Collection of MNA groundwater samples via no-purge sampling and passive samplers from the monitoring wells MW-18, MW-19, MW-22, MW-31, and MW-33 semi-annually. Analysis of the groundwater samples for the MNA parameters Target Compound List (TCL) SVOCs, Target Analyte List (TAL) Metals (Total and Dissolved), Mercury (Total and Dissolved), Mercury, Nitrate, Nitrite, Sulfate, Gasoline Range Organics (GRO), Diesel Range Organics (DRO), Total Dissolved Solids (TDS), Methane, Total Alkalinity, Dissolved Oxygen (DO), Oxidation Reduction Potential (ORP), pH, Temperature and as well as BTEX and MTBE, and Submission of an MNA sampling report to the NYSDEC within 90 days of the receipt of laboratory results for each semi-annual event of sampling. The MNA sampling program will be conducted until groundwater achieves the NYSDEC groundwater standards. The July 10, 2025 MNA Sampling approved and an approval email sent to Exxon Mobil/Roux. (MDH)

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD See file Eng. CO. 229 @ 75 Richardson Ave. 09/10/03. J.Krimgold spoke over the phone with Iradg Youssefinia from NY Petroleum, Inc. @ 251 Post Ave., Westbury, NY 11590 (516) 338-0626. He is a consultant/contractor preparing proposal to investigate this site for Mr. Morris Borenboum (new owner?). He will submit an investigation plan for the Departmental review. 6/16/2004 Attorney for new owner called to ask what needed to be done to close out the case. Sangesland told him to ask Krimgold. Attorney said he has a report from Dr. Yousefinia showing clean water and soil samples. Sangesland told him to mail in a copy of the report to Krimgold for review. 8/2/04. J.Krimgold has reviewed the Phase II report submitted by NY Petroleum and Driling Co. and dated 06/10/04. The report was not approved and a letter requesting to make corrections ans resubmit the report has been sent to Mr. Borenbaum and Mr. I Youssefnia. 11/01/04. J.Krimgold has reviewed a corrected report dated 09/16/04. The report still cannot be approved due to the lack of information (Phase I is missing). J.Krimgold requested an on-site meeting with a consultant. 12/03/04. J.Krimgold met with Mr. I. Youssefnia at the site and maped locations of additional soil borings. See also 0409303. Rommel 2/18/05. J.Krimgold reviewed the Ground Water Investigation report submitted on January 13, 2005 by NY Petroleum and Drilling Corp. Based on the findings of this and previouis reports no contamination was found at this property. NFA letter.
Remarks:	NYSDEC has performed a subsurface investigation on adjacent property Spill # 9703488 @ 75 Richardson Ave. and determined that the motor fuel storage systems located on this property might have been a source of contamination.

Spill No. 9711173, 2310 Tillotson Avenue, Bronx; 12. Spill No. 9609282, 1781 Arthur Kill Rd., Staten Island; 13. Spill No. 9501327, 2701 Knapp Stret, Brooklyn; 14. Spill No. 8905358, 32-32 Queens Boulevard, New York; 15. Spill No. 8904831, 38-15 Queens Boulevard, Queens; 16. Spill No. 8904151, 161-15 46th Avenue, New York; 17. Spill No. 8808987, 135-45 Cross Bay Boulevard, Queens; 18. Spill No. 8706272. 2052 Victory Boulevard, Staten Island. From now on, please submit all your future documentation (letters, reports, work plans, RAPs) related to these spill cases to my attention. Please note, that you should submit one hard copy of the document (report/work plan) and e-copy on a CD by regular mail. Please, do not submit large size documents via e-mail, since we have limited

MOBIL OIL CORP SS #FX9 (Continued) **1000553844**

storage capacity, so it should be used only for correspondence. Feel free to contact me if you have
any questions. Thank you. Sincerely, Ainura Doronova Environmental Engineer 1 Division of
Environmental Remediation NYS Department of Environmental Conservation Region 2 (718) 482-6453 AD
02/2015: Contacted Mr. Fiorentine of Clean Globe Environmental (Sunoco's consultant) regarding
general Sunoco's sites meeting. Requested list of the Sunoco sites managed by Clean Globe Anv. AD
03/20/2015: Received the following response from Mr. Fiorentine: Hello Ms. Doronova, Clean Globe
Environmental is currently responsible for the following 11 Sunoco spill sites: 2319 Tillotson
Avenue, Bronx 32 Highland Boulevard, Brooklyn 805 65th Street, Brooklyn 1781 Bay Ridge Parkway,
Brooklyn 161-15 46th Avenue, Flushing 38-15 Queens Boulevard, Long Island City 32-32 Queens
Boulevard, Long Island City 135-45 Cross Bay Boulevard, Ozone Park 1650 Forest Avenue, Staten
Island 1781 Arthur Kill Road, Staten Island 2052 Victory Boulevard, Staten Island Let me know if
you have any dates that are free so that we may set up a meeting to review the status of these
sites. Thank you , Tony Fiorentine Anthony M. Fiorentine / Principal / CGE / P.O. Box 446, Kings
Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax / afiorentine@cg-env.com
03/24/2015: The meeting was scheduled for April 23, 2015. AD
04/23/2015: DEC met with a Sunoco
representative - Russel Hummond and Sunoco s consultants: Tony Fiorentino of Clean Globe Env.
(CGE), and Todd Painter of Environmental assesment and Remediation (EAR) to discuss the current
status of each site, go over historical monitoring and recovery data, and discuss further actions
to help expedite closure of the spills. DEC received updated remedial progress and monitoring
reports. High-priority sites and potential spill closure candidates were discussed. Sunoco s
consultants reported overall progress in reducing BTEX levels in soil and groundwater at the sites.
It was agreed that reports recommending spill closure will be prepared for several sites. On this
meeting, DEC was informed by the Sunoco representative that this particular site is not Sunoco's.
Will look for the RP info. AD 05/12/2015: Looked for the site info in ACRIS database. Due to the
issues with Java, it was not possible to see documents on ACRIS. AD
06/16/2015: Looked for info on
PBS database. According to the file, the site owner is: Bolla Operating Corp. Mailing address is:
Bolla Operating Corp. 7300 W. Friendly Avenue, MS F-76 Greensboro, NC 27420 Site owner address:
Bolla Operating Corp. 809 Stewart Avenue Garden City, NY 11530 There is no name of the emergency
contact person, only phone numbers: (516) 512-6125 (800) 253-8054 AD

MOBIL OIL CORP SS #FX9 (Continued) **1000553844**

06/23/2015: Looked into the old spill case associated with this property # 9007766. It is active and under remediation. The PM for the older spill case is Michael Haggerty. According to the DEC remarks, Ethanol was detected in on-site monitoring well MW-34 on June 3 and September 3, 2010. A DEC's PM for the old spill had a discussion with Sally Dewes of DEC/Albany, stating that GW sampling at this site recently yielded the discovery of ethanol, indicating that there may be a new release on this site, so it was agreed that this would be called in as a new spill report, for investigation by Region 2 Spills . Looked into 2010 GW monitoring report for the Spill # 9007766. Ethanol was detected in MW-34 on June 3 (273ppb) and September 3, 2010 (307ppb). Total BTEX were 147ppb and 173ppb accordingly. This is the only well with detected Ethanol. Tried to reach Michael Haggerty - a PM for the older spill. AD 06/24/2015: Called and spoke with Michael Haggerty regarding the site. Asked him for the recent GW data. Later in the day received a report for the March of 2015. According to the data, no Ethanol was found in the well MW-34, but three other wells showed elevated Ethanol levels only in this sampling round: 1. MW-12 - 1,320ppb; 2. MW-36 - 544ppb; 3. MW-37 - 110ppb. These wells are located far apart throughout the property, and wells in between them do not indicate Ethanol contamination, which does not support idea about single source of contamination. This looks like a bad housekeeping issues with small spills. Discussed the site with J. Kolleeny. AD 06/30/2015: Called and spoke with Paul Pingile of Bolla Operating Corp. His phone number is: (516) 240-8657. Explained to him why the new spill was called in on this property. Requested to check the last time when the tank system was tightness tested and tightness of the wells' covers at the site. AD 05/12/2017: Received a phone call from Mr. Haggerty from Albany office. He said that latest data indicate low levels of contamination in the on-site wells. We discussed closure/consolidation options for this more recent spill case, since the site is remediated under his management for older spill. Later in the day, received the following e-mail from Mr. Haggerty: Hi Ainura, As we discussed, I ve attached the most recent quarterly report. The report includes a request to stop sampling the on-site wells which I agree with. The Spill assigned to you (1011266) was called in due to elevated ethanol concentrations but it was never associated with a release of gasoline. This Spill was called in during the current owner s operation. The Spill I manage (9007766) is related to the former operation of the property as ExxonMobil station. Mobil conducted a large-scale excavation of the

MOBIL OIL CORP SS #FX9 (Continued) **1000553844**

gas station property so the remaining contamination requiring remediation is off-site. If you agree, I propose you transfer Spill 1011266 to me, I closed it, allow Mobil to abandon the on-site wells and continue off-site remediation under Spill 9007766. Please contact me with any questions. Thanks, Mike Michael Haggerty, Q.E.P. Project Manager Division of Environmental Remediation New York State Department of Environmental Conservation 625 Broadway, Albany, NY 12233-7016 P: (518) 402-9767 - michael.haggerty@dec.ny.gov www.dec.ny.gov Discussed the case transferring option with J. Kolleeny. He agreed to it. Sent an e-mail to Mr. Haggerty confirming spill case transfer. Transferred the spill case. AD 8/28/17 - Haggerty: Spill closed. The Spill was called in due to the presence of elevated ethanol concentrations in on-site monitoring wells. The monitoring wells were part of a ExxonMobil well network related to Spill 9007766. ExxonMobil remediated the property via excavation and were conducting post-remediation groundwater monitoring when the ethanol was detected. Groundwater has been monitoring quarterly for years and the ethanol detected was never tied to another release. Off-site contamination will continue to be remediated under Spill 9007766.

Remarks: test data show NEW release/9007766

DEC Memo:	5,000 gal UST access is a manway from sidewalk. 3ft below sidewalk is access to manway to a vault. They would like to retest the tank. They will clean out the manway/vault and then retest.... Paul from Milro is working on this. 11/8/2011 Sangesland sent an e-mail to Lance Steinberg (212-925-1950) lance@raberenterprises.com ********** RE: Tank Test Failure at 50 Bayard St, Manhattan - June 1, 2011 5,000 gal - #4 Oil Tank Mr. Steinberg, The NYSDEC has an open spill violation case for this property dated 6/1/2011. - Spill#1102362 If the tank has been repaired and retested, please forward a statement with the following data: 1) Tank Test Passing Report 2) Statement of what work was done to the tank to make it now pass. 3) Statement that NO CONTAMINATION OR SPILL WAS FOUND DURING REPAIRS. When we get a report with these items, this case will be closed out. Thanks, Steve Sangesland P.E. Environmental Engineer NYSDEC Region 2 - Spills Unit **********

PRIVATE DWELLING - TTF (Continued) **S111063846**

8/15/2012 TTF Spill Case transferred to DEC Tim DeMeo. 03-31-2015 - V. Brevdo As per discussion with Chief of Spill Response Section, this Tank Test Failure Spill Case is transferred to Remediation Section B for management of the project. Spill Case is further assigned to Jonathan Kolleeny. VB 03/31/15: I sent email to Mr. Lance Steinberg, site contact person as identified above in Steve Sangesland's notes: Dear Mr. Steinberg: Review of NYSDEC records indicates that there is an open petroleum spill case at this location, resulting from a tank test failure at site in June 2011. I have attached a pdf file of spill rpt. I have also attached a copy of a letter sent to you by Mr. Timothy DeMeo of our staff on Dec. 13, 2012, listing Dept s requirements for closing out this spill case. I have no record of any response from you since that letter was issued. As noted in Mr. DeMeo s letter, this open spill case constitutes a violation of New York State Envt'l Conservation Law and State Navigation Law. Failure to comply with Dept s requirements may result in referral of this case to our legal staff for initiation of an enforcement action, which may involve substantial financial penalties. Please indicate your receipt of this email, and provide information required to address this open spill case as soon as possible. Feel free to contact me if you have any questions. - JK 04/07/15: Received phone call from Lance Steinber, site contact. He stated that tank test rpt identified cause of failure as dry leak. I said this may make it possible to close out spill and asked that he forward pdf file of tank test rpt. He sent email back with attached rpt (in DecDocs): Jonathan, As discussed, I am forwarding you a letter from Empire Envt'l Services. On third page it shows that it is a dry spill. If you need anything else please let me know. Thank You for your help. Review of tank test rpt shows tester identified leak as dry (ullage) leak. I reviewed our Spill Response guidelines for management and closure of TTF spills, found it states that an ullage leak must be further investigated to determine if there was any release of product to environment. I sent back email to Lance Steinberg: Mr. Steinberg, Thank you for tank test results showing that tank failed tightness test due to an Ullage (Dry) Portion Leak. While this information is helpful, it is not conclusive with regard to question of whether or not there was a release of fuel oil from tank. Ullage portion of tank is part of tank s interior which is empty at time of tightness test; however, each time tank is filled to capacity, ullage portion is reduced to almost nothing, and it is quite possible that a leak or hole that was in ullage portion of tank at time of tightness test would come into contact with fuel oil when tank is filled. Do you have, or can you get hold of, any addt'l information from tank tester regarding whether or not tester was able to identify specific location of leak that caused test failure? If so, were repairs made and tank re-tested? Can tank tester affirm that leak that caused test failure did not involve any release of fuel oil to environment? For example, a dry leak identified in tank s vent pipe or due to a loose gasket on a fitting on top of tank (i.e., areas that do not normally come into contact with fuel oil) could have caused tank to fail test but would not have involved a release of fuel to environment. If you cannot obtain this information, you will need to have tank tested again. NYSDEC Petroleum Bulk Storage regulations require that this tank pass a tightness test every five years. Attached PBS Facility Information Rpt [in DecDocs] indicates that tank last passed a test in 2006, and was due to be tested again in 2011; that must ve been test that failed. Tank should ve been

PRIVATE DWELLING - TTF (Continued) **S111063846**

repaired and re-tested at that time, and results submitted to DEC s PBS Unit and to DEC case manager for Spill No. 1102362. In any case, even if tank had passed first test (or a re-test) in 2011, it is due for testing again in 2016. Please let me know if you are able to locate and provide addt'l information I need in order to close out spill, and if not, please let me know when another tank tightness test has been scheduled. Feel free to contact me if you have any questions. - J. Kolleeny 04/23/15: Received email from Lance Steinberg: Jonathan, Thanks for your reply. Company that did test and gave us response, and at time a verbal also that there was no oil leakage, has not responded to our request for a written letter. We will be moving forward to replace tank after our local law 11 work is complete and scaffold is removed so that we can get to tank. I will have Board President forward you information as soon as it is available. I sent email reply: Lance, Thanks for getting back to me on this. If you will be removing and replacing fuel oil tank, a closure assessment should be performed, involving screening of soil in tank excavation with a photo-ionization detector (commonly referred to as a PID) and collection of end-point soil samples from walls and bottom of tank excavation for lab analysis; if there are obvious signs of contam in soil (staining, petroleum odors, elevated PID readings), contaminated material should be dug out to extent feasible, and disposed of off-site. Then a tank closure rpt should be prepared and submitted. Also, our PBS unit must be notified of upcoming tank closure within 30 days prior to work. Please feel free to contact me (or have your Board President contact me) if you have any questions about this. - J. Kolleeny 06-25-2020 - V. Brevdo Spill Case is reassigned from Jonathan Kolleeny to MD Hoque within Remediation Section B. The reassignment is to optimize work load within the program. VB 11/18/2020-M.Hoque: At 12pm, Called Mr. Lance Steinberg's office. He was out of the office and I gave my number to receptionist for call back to me. An email sent to Lance Steinberg to get a site update. (MDH) 5/18/2021-M. Hoque: I spoke to Mr. Lance Steinberg(212-925-1950)and he told that they have not been maintaining the property sine 2015. he provided me the new management company's name and contact no. New Mgt company: T.U.C Management Company 200 W 57th Street, New York, NY 10019. Contact Name: John Kline Contact Number: 212-765-7900, ext-1340 5/10/2021-M. Hoque: Called John Kline and left a voice message to call me back. (MDH) 12/9/2021-M.Hoque: Spoke to Jon Klein(212-765-7900) of MMS Group and discussed about the site remediation. He requested me to send the spill incident report for his review. Sent spill incident report to his attention at jonklein@mmsgroup.com (MDH) 3/10/2022-M. Hoque: MMS Group informed DEC that they planned to decommission the tank and will begin work shortly. MMS will submit a report with a spill closure request. (MDH) 10/20/2022-M. Hoque: Mr. Jonathon Klein of MMS Group informed that the tank excavated and has been decommissioned. MMS group will provide a site completion report soon. (MDH) 11/17/2022-M.Hoque: Spoke to James Jebaily of Aggressive Heating, a contractor and worked for MMS Group. Aggressive abandoned the existing 10,000 oil tank in place and was collected 10 soil samples for analysis for VOCs and for DEC to close out the spill report. DEC hasn't received any report. I requested James a report send to me for review and decision. (MDH) 4/10/2023-M. Hoque: All Boro Tank informed ((718) 489-4244) DEC that soil samples will be collected on Thursday 4/13. Upon receiving the sampling results, All Boro will submit a report for review and approval. (MDH) 9/26/2023-M. Hoque: DEC hasn't

PRIVATE DWELLING - TTF (Continued) **S111063846**

received any soil sampling report. (MDH) December 1, 2023 - MD Hoque / Vadim Brevdo Re: Rationale for Closure of the Spill Case No. 1102362 Private Dwelling, 50 Bayard Street, Manhattan, New York (Spill No. 1102362) Spill was reported when a 10, 000-gallon underground storage tank (UST) failed tightness test in June 2011. An investigation was conducted and found an ullage (Dry) portion leak of the tank. DEC directed to further investigate whether or not there was a release of fuel oil from tank into subsurface. In April 2015, a new contractor informed DEC that the previous contractor updated them that no release occurred. In May 2021, DEC contacted to the property management company, MMS Group to get a site status update report. On November 8, 2023, All Boro Environmental,LLC submitted a site remediation completion report with spill closure request. On May 16, 2022, the contractor, Aggressive Heating abandoned the existing 10,000 oil tank in-place. About 3,600 gallons of waste oil and wash water were removed during the tank abandonment. The tank was cleaned, cut, capped the vent line, and removed all the oil lines from the tank to the burner. Aggressive filled the fill line with cement at the street to prevent any accidental deliveries. Prior to filling with cement, ten soil samples were collected for analysis for VOCs and SVOCs. No VOCs and SVOCs were found above the standards. Groundwater was not encountered during the investigation and soil sampling. No contamination is present at the site at the levels of concern and the site no longer poses threat to human health and the environment for residents and/or the community. All Boro concluded/ recommended that no further remedial action is warranted at this location and requested for closure of the spill case. The Department reviewed the spill closure report and documentation and concluded that the spill case closure is appropriate at this time. The Department closed spill case on December 1, 2023. MDH/VB

Remarks: TANK TEST FAIL.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	65077
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

J02 - Dispenser - Suction Dispenser
I05 - Overfill - Vent Whistle
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
C01 - Pipe Location - Aboveground

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 5/19/99 SPOKE TO REED TUROFF (TRINITY CONSULTING - 718-257-8470) HE SAID THE OLD TANKS WERE PULLED IN APRIL. SINCE A PROBLEM WAS FOUND, NO NEW TANKS HAVE BEEN INSTALLED AND THE OWNER & OPERATOR ARE IN DISCUSSIONS AS TO WHO IS RESPONSIBLE AND WHAT WILL BE DONE. ACCORDING TO MR. TUROFF, THE OPERATORS ARE: KAY SINGH AND K. JANGI (718-388-3329). OWNERS ARE: DIMITRI (DAVID) SHTAIRMAN AND WALTER ROMANSKY (718-388-3464) 7/28/99 SPOKE WITH DIMITRI SHTAIRMAN - HE SAYS A NEW LEASE WAS SIGNED WITH KAY SINGH FOR THE STATION AND MR. SINGH AS OPERATOR IS RESPONSIBLE FOR ALL ENVIRONMENTAL WORK ON THE SITE. DIMITRI SAYS THAT ALL CONTAMINATED SOIL HAS BEEN DUG OUT AND REMOVED. HE SAYS END POINT SAMPLES OF THE OPEN HOLE WERE TAKEN BY ASTEM LAB INC (DR. NORMAN MUNROE 718-459-3770). RIGHT NOW THE SITE HAS A LARGE OPEN HOLE AND THEY ARE NOW WAITING FOR THE CONTRACTOR TO INSTALL THE NEW TANK & SYSTEM, BACKFILL AND REPAVE THE SITE. 8/10/99 - ASTEM LABORATORIES, INC. SUBMITTED A REPORT SHOWING 6 END POINT SAMPLES (1 EACH SIDE, 2 BOTTOM) TAKEN FROM PIT WHERE 550 TANKS WERE. ALL SAMPLES WERE TESTED FOR 8021 + MTBE. ALL RESULTS INDICATE BTEX AND MTBE WERE <50 PPB. CLOSE OUT (CPT SAYS OK)
Remarks:	CALLER STATES THAT DURING REMOVAL OF 550 GAL TANKS CONTAMINATED SOIL WAS FOUND.

Longitude:	-73.9483090
DEC Memo:	Vought was on off hours 8/16/10 - Raphael Ketani. The spill was called in on 12/20/06 by the NYPD and Gabriel Kapur of the NYCDEP (917) 682-3753. The spill was large gas puddles on the surface of the site. The site is block and lot 2733 and 7. It was sold on 7/28/87 by Lawrence Sievers of 5 Mt. Logan Court, Farmingville, NY to Walter Romansky and Dimitri Shtairman of 2421 East 74 Street, Brklyn, NY. There are two PBS registrations. PBS #2-510793 is for the 278 Fuel Stop, Inc. It lists four 4,000 gal. USTs and one 550 UST as still active with gasoline and diesel. The 4,000 gal. tanks were installed in either 1972 or 1999. The 550 UST was installed in 1939. There were 4 USTs that were closed and removed in 1939. The owner of the site is 278 Fuel Stop, Inc. (718) 388-3329. The contact is Kuldeep S. Sakota (718) 388-3329/(201) 548-1658. PBS #2-611136 is for A-1 Auto Repairs, Inc. It lists just a 275 gal. waste oil tank as being in service that was installed in 6/1/08. The owner of the site is Avtar Singh, 126 Berwood Drive, Linden, NJ 07036 (908) 486-0412. Mr. Singh is also at (718) 388-3464. There is no paper file and there are no E-docs. There are two other spill cases, both of which were closed by Steve Sangesland of Spills. They are #9900802 and #0310672. Case #9900802 was opened on 4/21/99 and closed on 8/10/99. It was based upon the discovery of oil contaminated soil when they pulled the 550 gal. UST. The soil was dug out and the end point samples were below 50 ppb. Case #0310672 was opened on 12/16/03 and closed on 12/16/03. There was an annonymous call regarding someone sweeping gas into the sewers. 8/25/10 - Raphael Ketani. I made an unannounced site visit today. It was raining moderately, but I felt that it would still be possible to determine the site conditions. The site fronts on Leonard Street and on Meeker Avenue, where it parallels the Brooklyn Queens Expressway. There wasn't much to see from the Leonard Street side. There is a corrugated still building that opens onto Leonard Street. It has a sloping roof (see

GAS STATION/ 278 FUEL STOP (Continued) **S104648903**

E-docs). The building was being used as a metal fabrication shop. The floor was clean. Next, I went
to the Meeker Avenue side of 278 Fuel Stop. Even though it was raining, I didn't see any sheen on
the pavement in the fueling area (see E-docs). There appeared to be some small (about 6 diameter)
stains on the, but nothing else. Next, the gas station manager showed me the repair area. The area
was largely try as it was mostly covered by a roof. There were several trucks in and next to the
garage. I didn't see any free product on the pavement, but there were some old stains. I told the
station manager to make sure that any spills that occur are cleaned up quickly. After this, I left
the site. As the spills mentioned in the original spill report are no longer present, and as there
appeared to be no new spills, I have determined that there is no threat to the environment or the
public. Therefore, I am closing the spill case.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	4/24/2009 TTF letter sent to: NYC Dept of Field Operations Fuel Division Mr. James Merlo 44-36 Vernon Blvd Long Island City, NY 11101 6/12/09. J.Krimgold reviewed and approved the proposed scope of work outlined in the letter report submitted by TRC and dated June 2, 2009. 01/28/10. J.Krimgold reviewed the SIR dated 08/07/09 and concurs with conclusions and recommendations of the report. However, requested closure of waste oil tank and submittal of appropriate Bulk Storage Application. 02/17/11 - LZ The waste oil tank was permanently closed in place (edocs), which meets DEC requirements. An application was submitted to change the status of the tank. However, it has been

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

returned to the applicant since the tightness test for another tank
at the facility is overdue. The spill case is closed.
Remarks: TANK TEST FAILURE ON A 1000 GALLON UST UNK IF ANY PRODUCT WAS SPILLED.

DEC Memo:	3/21/2005 There was an earlier tank test failure spill number (0004062-DeMeo) which has now been closed out in favor of this new spill number. Earth Tech believes that the old tank was relined after the tank failed the prior tank test several years ago, however no work was ever done to remediate the contamination which occurred because of that leak. Earth Tech believes that approx 2 years ago this buried tank was taken out of service. Since that time the building has been supplied by an above ground 5,000 gal tank. Unknown if the buried tank was ever emptied. Earth Tech recently did soil borings around the UST area and came back with high contamination levels. This information was forwarded to the City SCA (SCA Contact:Lee Guterman 718-472-5802) SCA has now decided to removed the UST and excavate out the contaminated soil around it. Earth Tech is modifying the standard city bid package to site specific conditions and will work with the city as they put the excavation/remediation work out to bid. Bid package should go out around April 1st, 2005. Work should be done summer 2005. 04/13/06- Case was transferred from Jake Krimgold to Koon Tang. ---------- ---------- 7/9/07: Reassigned from Koon Tang to Kartik Chanda (Chanda) 7/18/07: Kartik Chanda of DEC reviewed all documents regarding this spill case. On 7/18/07, Chanda sent a letter to Ms. Lee Guuterman, Manager IEH Department, NYC School Construction Authority, requiring that the following documents

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

be submitted to the DEC for review by 9/4/07. 1. An explanation of the cause of the tank system failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation. 10/29/07: Chanda called Mr. Drew Pardus(NYCSCA) to get updated information regarding this spill site. He stated that NYCSCA is finding the information regarding this spill. NYCSCA will send an investigation report shortly. 12/6/07: Chanda received an email (see edocs) from Ms. Lee Guterman, NYCSCA. She stated that The Investigation Summary Report for Automotive Trade HS has been prepared and is under my review. A Remedial Action Plan is being prepared and is anticipated to be completed by 12/15/07. 2/12/08: Chanda received a Subsurface Investigation Summary Report from NYCSCA, prepared by TRC Engineers, Inc. (TRC), dated November 9, 2007. 2/28/08: Chanda has reviewed the Subsurface Investigation Summary Report and has the following comments: -Subsurface investigation report regarding the 20,000-gallon #4 fuel oil UST. - About two years ago, a tank tightness test was performed and the tank failed. At that time UST was taken out of service and a temporary 5,000-gallon AST was installed to supply #2 fuel oil to the boiler. - The soil data indicated that the UST had leaked and had contaminated the surrounding soils near the UST and the supply line to the building. VOCs and SVOCs were detected in soil samples. The greatest impacts appear to be in the immediate vicinity of the UST and just below the depth of UST near the water table. -VOC were not detected in groundwater beneath the site. Several SVOCs were detected in groundwater beneath the site. -The results of finger print analysis indicate that the impacts are associated with #4 fuel oil. - The groundwater table has been measured between 10 and 11 feet bgs. - Removal of UST and associated impacted soil could potentially damage the adjacent school building and concrete vehicle access ramp. 3/3/08: Chanda discussed with Joe Sun (supervisor),and sent a letter with Stips and generalized Corrective Action Plan via certified mail to RP (Ms. Lee Guterman) and Mr. Drew Pardus (NYCSCA). The Department requires installation of permanent monitoring wells to determine the correct groundwater flow direction at the site. The signed STIP must be submitted to DEC by 3/25/08. 3/24/08: The

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

Stipulation Agreement was signed by
the RP (The New York City Department of Education). 3/31/08: Chanda sent a fully executed STIP to
the RP and required that a Subsurface investigation and monitoring well installation report be
submitted to DEC by 6/2/08 for review and approval. 4/3/08: Chanda received a Subsurface
Investigation Work Plan from NYCSCA, prepared by TRC Engineers, Inc. (TRC)dated March 18, 2008.
4/4/08: Chanda has reviewed the Subsurface Investigation Work Plan and has the following comments:
-TRC will advance ten (10) soil borings across the Site as part of monitoring well installation.
Soil samples will be analyzed for the STARS volatile organic compounds (VOCs) and STARS SVOCs. -TRC
will install nine (9) two-inch diameter and one (1) four inch diameter flush mounted permanent
groundwater monitoring wells. The wells will be screened approximately 5 feet above the water table
and 10 feet below the water table. The samples will be analyzed for STARS VOCs and STARS SVOCs.
4/7/08: Chanda sent the work plan approval letter to Ms. Lee Guterman, NYCSCA and her consultant
(TRC Engineers Inc.), requiring that an Investigation Report must be submitted to the Department by
June 2, 2008 for review and approval. 4/17/08: Chanda received the following email from Mr. Drew
Pardus, NYCSCA: TRC is scheduled to start preforming the field work for the investigation on April
24, 2008. We will provide the investigation report as soon as it is available. Please feel free to
contact me if you have any questions or comments. Sincerely, Drew Pardus 6/2/08: Chanda received an
email from Mr. Bob Kanaparthi, NYCSCA, regarding one week time extension to submit the
Investigation Report for this site. Chanda sent an extension approval letter to Ms. Guterman,
NYCSCA. The Deadline is extended to 6/9/08. 6/9/08: Chanda received a Site Investigation Report
from NYCSCA, prepared by TRC Engineers, Inc., dated June 6, 2008. (see eDocs) 7/3/08: Chanda has
reviewed the site investigation report and has the followings: -The site consists of a three-story
public school building with basement, and asphalt-paved parking and landscaped areas. -The results
of the analyses of the soil samples revealed detectable concentrations of VOCs and SVOCs. -
Permanent flush mounted ten (10)GW monitoring wells were installed at the site. -The depth to
groundwater measured at the Site is approximately 8 to 10 feet bgs. -No SVOCs detected in GW at
concentrations exceeding Class GA Values. -Several VOCs were detected in GW samples. -NAPL was not
encountered in any of the GW monitoring wells during gauging with an oil /water interface probe.
-Based on GW table surface elevation measurements, only a slight gradient, indicating a predominant

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

inward flow direction, exists beneath the site. Based on the results of site investigation, and considering the result of previous investigation, TRC concluded that there is a potential damage of school building that could result from attempting to remove the 20,000-gallon UST from the site. TRC recommended the following: * Permanently close-in-place the 20,000-gallon UST; * In-service waste oil UST identified during the geophysical survey is registered, operated and maintained in accordance with applicable regulations; * Close or take out of service the concrete vault in accordance with applicable regulations; * Monthly monitoring of the permanent groundwater monitoring wells for light NAPL to confirm that it is not present; * Implement a program to ensure proper maintenance of the asphalt pavement in the vicinity of the UST and impacted subsurface soil;
7/9/08: Chanda discussed with Joe Sun, NYSDEC regarding the findings of the Site Investigate Report. It is concluded that the Department (DEC) requires that a Remedial Action Work Plan to remove all contaminated media from this subject site. 7/11/08: Chanda sent a letter to RP (Ms. Lee Guterman, NYCSCA) and her consultant (TRC) requiring that a Remedial Action Plan (RAP) be submitted to DEC by 9/11/08 for review and approval. 8/1/08: A meeting was held on 7/30/08 among DER staff, NYCSCA and TRC Environmental Consultant Inc. (TRC) to discuss the site investigation results and Remedial Action Plan (RAP) to remediate all the contaminated media. The meeting s consensus was that a RAP be submitted to DEC by 9/11/2008 for review and approval. 9/11/08: A follow-up meeting was held on 9/10/08 among DER Staff, Mr. Drew Pardus(NYCSCA), and Mr. David Glass (TRC Environmental) regarding the findings of the recent inspection of the school building basement for this site. As agreed at the meeting, NYCSCA will conduct the following activities associated with the Site: Clean the 20,000-gallon UST in accordance with applicable regulation but leave it unfilled to use a monitoring point for a short time. Clean the standing oil into the concrete vault. Evaluate the size and structure of the concrete vault and determine the piping layout associated with the vault. Also, determine if the pumping system is still in operation or needs to be. Clean the oil strains inside the basement areas and tank vault area to see if they return.
Advance several monitoring wells in the vicinity of the 20,000-gallon UST. Prepare and submit a brief work plan with borings and monitoring well locations. Include an implementation schedule.
9/11/08: Chanda sent a letter to Ms. Lee Guterman requiring that a brief work plan be submitted to DEC by 10/12/08 for review and approval. 10/10/08: Chanda received a

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

Site Investigation and Interim
Remedial Scope of Work from NYCSCA prepared by TRC Engineers, Inc., dated 10/7/08. Chanda reviewed
the work plan. The work plan has the following: * Investigation of Concrete Valt *Removal and
Monitoring of Seeps * UST and Vault Cleaning and Inspection *Geophysical Survey * Four groundwater
Monitoring Wells Installation and Sampling in the vicinity of the 20,000-gallon UST 10/31/08: A
meeting was held on 10/21/08 between DER staff and NYCSCA to discuss the project status and
investigation work plan regarding this site. On 10/30/08, DEC approved the work plan. Chanda sent a
letter to NYCSCA and Consultant (TRC) requiring that a report summarizing the findings of the
investigation be submitted to the Department by December 30,2008. 05/13/2009: This spill case was
transferred to A. Doronova. - AD Reviewed the file. The investigation summary report requested by
Kartik Chanda of DEC was not submitted yet. AD 12/04/2009: Received a RAP. Will review. PDF copy is
missing. To request its submission. AD 12/08/2009: Received a pdf copy. DL to eDocs. AD 12/30/2009:
Reviewed the RAP. It states that based on previous investigations, evidence of a UST defect was not
found; free product is present in soil and GW in the vicinity of UST, and is apparently being
conveyed to the concrete vault via subsurface drainage system beneath the building basement;
dissolved phase impacts to GW from the release are minimal and limited to the immediate vicinity of
the UST. The RAP proposes the following: closure-in-place of 20,000-gallon UST and annual
inspection of a concrete vault, the pump pit in the boiler room, and monitoring wells with removal
of accumulated oil (if present). Proposed course of actions is questionable. To discuss the RAP
with J. Kolleeny. AD 01/06/2010: Discussed the RAP with J. Kolleeny of DEC. Called and spoke with
D. Pardus of SCA regarding the RAP and vault investigation. He requested a meeting with DEC.
Scheduled the meeting for January 21, 2010. AD 01/21/2010: I and J. Kolleeny of DEC met with Drew
Pardus and Bob Kanaparthi of NYCSCA and Charles Guder of TRC. Discussed the proposed RAP. It was
agreed that two additional soil borings will be adwanced in the vicinity of the concrete vault, and
based in the field observation of the soil samples, one boring will be finished as a permanent
monitoring well. It was decided that gauging of the site monitoring wells and vault pumping will be
performed quarterly and GW sampling will be semi-annually. Addendum to the RAP will be submitted to
DEC for review and approval. AD 04/30/2010: Called and spoke with D. Pardus regarding submission of
the addendum to the RAP. He said that it was prepared and is now under review for budgetary

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

approval. AD 06/20/2011: Received an e-mail from Drew Pardus saying: Ainura, In order to continue progress at Automotive Trade HS to remediate DEC Spill 0413160 and in light of constrained City budgets, an inspection of the out-of-service pump station where oil accumulates was performed. TRC s observations of this inspection and removal of oil from the out-of-service pump station (by PTC on behalf of DSF) are provided below. Another site inspection and visual monitoring of the permanent wells will be performed in approximately three months to determine if free product is observed. If no free product is observed after multiple inspections, SCA will request that the fuel oil tank may filled (i.e., closed via abandonment) and no further action for Spill Case 0413160. Please feel free to contact me at 646-577-8280 if you have any questions. Sincerely, Drew Pardus DL the attached document to eDocs. AD 03/27/2012: Received an e-mail from S. Kline of SCA saying: Ms. Doronova- As per your request, our consultant (TRC) has prepared the attached remediation action work plan addendum for the above referenced spill case. Our consultant will proceed with the scope of work described in the attached documents as soon as we have NYSDEC approval and we have secured funding for these additional remedial measures. Since Drew Pardus is no longer working on this project, I will be the SCA point of contact for this project moving forward. Please contact me with and questions or comments. Regards- Stephen Kline, P.E. NYC School Construction Authority IEH Division 30-30 Thomson Avenue Long Island City, NY 11101 Cell (347) 242-7109 Stephen.kline@gza.com DL the attached report and letter to eDocs. Will review. AD 04/20/2012: Reviewed the work plan. It states that TRC proposes to do site investigation via advancing two soil borings with collection of soil sampling; installation on one monitoring well; quarterly groundwater monitoring and free product recovery. Soil sampling will include the following: TRC will advance two (2) soil borings (TRC-SB-1 and TRC-SB-2) adjacent to the subsurface drainage pipe between the concrete vault and the building (refer to Figure 1 for the boring locations). Geologic descriptions of the soil and field screening results will be recorded in field logs. One groundwater monitoring well (TRC-MW15) will be installed in one of the boreholes. The well will be installed in TRC-SB-1 as shown if no evidence of contamination is observed during the subsurface investigation. If contamination is observed, the monitoring well will be installed in the borehole showing the highest evidence of contamination. Quarterly groundwater monitoring will be performed for a period of one year. - Monitoring wells TRC-MW-1, TRC-MW-2, TRC-MW-3, TRC-MW-4, TRC-MW-5,

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

TRC-MW-6, TRC-MW-7, TRC-MW-8,
TRC-MW-9, TRC-MW-10, TRC-MW-11, TRC-MW-12, TRCMW-13, TRC-MW-14, and TRC-MW-15 will be inspected and
gauged. Any wells found to be damaged will be assessed for
re-installation. - The entire monitoring
well network will be gauged and sampled during the first quarterly
monitoring event. If LNAPL is
present in a well, groundwater will not be analyzed from that
monitoring well. If the results of
the analyses of groundwater from monitoring wells TRC-MW- 6, TRC-MW-8,
and TRC-MW-10 (upgradient
wells) from the first quarterly sampling round are below Class GA
Values, these wells will not be
sampled during subsequent quarterly events. However, all wells will be
gauged during each quarterly
event. A quarterly monitoring report with conclusions and
recommendations for further actions, if
necessary, will be submitted to DEC. Vault Inspections and Product
Removal: TRC will perform the
following activities under this task: - periodic inspections and
product removal at the concrete
vault for a period of one year. For the first quarter, TRC anticipates
performing 6 events (three
during the first month, two during the second month, and one during
the third month).
Inspections/product removal events will occur once per quarter
thereafter. - If oil is present in
the vault, the procedure below will be followed: - The depth to the
oil will be gauged and
recorded; - The thickness of the oil and the thickness of the water
will be gauged and recorded;
and, - The oil and water will be removed from the vault by a vacuum
truck for off-Site disposal. If
no oil is detected in the concrete vault, the depth to the liquid in
the vault will be gauged and
recorded. - Similarly the boiler room pump pit and on-Site monitoring
wells will be gauged for oil.
If oil is detected in a groundwater monitoring well, the depth and
thickness (if possible) of the
oil will be measured and recorded, and the oil will be removed by a
vacuum truck for off-Site
disposal. If oil is detected in the boiler room pump pit, the pump
system will be immediately shut
down and the NYCDOE Division of School Facilities and the NYCSCA will
be contacted to determine the
appropriate course of action. - Waste generated will be properly
transported off-Site for disposal
in accordance with applicable laws and regulations. - The information
collected during the vault
inspections/product removal will be submitted with the quarterly
monitoring reports. AD 04/24/2012:
Discussed the work plan with J. Kolleeny of DEC. AD 04/25/2012: issued
and sent an approval letter
to L. Guterman of SCA. DL pdf copy of the letter to eDocs. AD
12/21/2012: Received a Project
Progress Report #1 from TRC. DL the report to eDocs. Will review. AD
02/01/2013: Reviewed the

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

report. It states that field activities were conducted at the Site between July 14 and October 18, 2012. During this period, the following activities were completed at the site: In-place closure of the 20,000-gallon underground storage tank (UST); A 20,000-gallon UST, which is located beneath an asphalt paved parking lot north of the school building, was formerly used to store No. 4 and No. 6 fuel oil for the school s boiler and was taken out-of-service in 2003 and was cleaned in 2009. In accordance with the NYSDEC-approved RAP and RAP Addendum, the 20,000-gallon UST was permanently closed in-place in accordance with the applicable requirements of the NYSDEC and the FDNY on July 26, 2012. Prior to closing the UST in place, the UST was inspected to verify that the UST did not require additional cleaning. The UST was observed to contain a small amount of water but there was no evidence of residual product. The remaining contents of the 20,000-gallon UST were removed utilizing a vacuum truck and the UST and concrete hatch were then completely filled with concrete slurry. Geophysical survey; Subsurface soil investigation and installation of a permanent monitoring well; A hollow stem auger rig was used to retrieve soil samples. Soil samples were collected and screened for evidence of field contamination continuously from the ground surface to the boring completion depth. No visual or olfactory indications of contamination were observed in any of the soil samples collected. Soil boring TRC-SB-1/MW15 was advanced, east of and adjacent to the subsurface drainage pipe, to approximately 21 feet bgs. One discrete soil sample, collected from 9 to 11 feet bgs, was selected for laboratory analysis. Groundwater was encountered at approximately 11 feet bgs in TRC-SB-1/MW15. Soil boring TRC-SB-2 was advanced, west of and adjacent to the subsurface drainage pipe, to approximately 21 feet bgs. One discrete soil sample, collected from 9 to 11 feet bgs, was selected for laboratory analysis. Groundwater was encountered at approximately 11 feet bgs in TRC-SB-2. Soil boring location TRC-SB-1/MW15 was converted into a permanent monitoring well and soil boring location TRC-SB-2 was patched at the surface with concrete. VOCs and SVOCs were not detected in any of the soil samples at concentrations above the SCLs for Fuel Oil Contaminated Soil found in Table 3 of CP-51. One round of Quarterly groundwater sampling; The first round of quarterly groundwater samples were collected from existing permanent monitoring wells TRC-MW1, TRC-MW3, TRC-MW4, TRC-MW-5, TRC-MW6, TRC-MW7, TRC-MW8, TRCMW9, and TRC-MW10, and from newly installed permanent monitoring well TRC-MW15 on July 26, 2012, July 30, 2012 and August 2, 2012. LNAPL was present in monitoring wells

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

TRC-MW2, TRCMW11, TRC-MW12,
TRC-MW13, and TRC-MW14 and these wells were therefore not sampled. The thickness of LNAPL in these
monitoring wells could not be accurately gauged due to the viscosity of the LNAPL. An obstruction
(debris) was encountered in TRC-MW9 on July 26, 2012, which was cleared by TRC on July 27, 2012
using one-inch PVC well screen. The well was redeveloped by TRC on July 30, 2012 and an inspection
of the well and purge water indicated that the well was suitable for sampling. TRC-MW9 was sampled
on August 2, 2012. The results of the analysis of groundwater sampling indicate that MTBE was the
only VOC detected at a concentration exceeding the corresponding Class GA Value. MTBE was detected
at a concentration of 8.3 ug/l in well TRC-MW8, which slightly exceeds the Class GA Value of 5 ?g/L
for MTBE. Monitoring well TRC-MW8 is upgradient of the Site and TRC concludes that the
concentration of MTBE in the well is likely attributable to an off-site source and not to an
on-site release. No other VOCs were detected in any of the groundwater samples at concentrations
exceeding Class GA Values. SVOCs were not detected in any of the groundwater samples at
concentrations exceeding Class GA Values. With the exception of a marginal exceedance of MTBE in
TRC-MW8, which is attributable to an off-site source or regional conditions, VOCs and SVOCs were
not detected in groundwater samples collected. Therefore, TRC recommends that upgradient monitoring
wells TRC-MW6 and TRC-MW10 will not be sampled during subsequent quarterly groundwater sampling
rounds. Four months of concrete vault and boiler room pump pit inspections; Four months of
monitoring well gauging; and Four months of light non-aqueous phase liquid (LNAPL) recovery events.
The concrete vault north of the school building, the boiler room pump pit, and the groundwater
monitoring well network were inspected and gauged for the presence of LNAPL on July 26, August 2,
August 9, September 5, September 26, and October 18, 2012 by TRC. LNAPL was present during these
events in the concrete vault and monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and
TRC-MW14. The thickness of the LNAPL could not be accurately determined due to the high viscosity
of the oil identified in the concrete vault and monitoring wells. However, based on observations
noted using a bailer, monitoring well TRC-MW11 was observed to contain only minimal amounts of
LNAPL. LNAPL was not present in monitoring wells TRC-MW1, TRC-MW3 through TRC-MW10, TRC-MW15 and in
the boiler room pump pit. LNAPL Product Recovery Periodic recovery of LNAPL on behalf of the NYCSCA
has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

the school building and groundwater monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 on July 26, August 2, August 9, September 5, September 26, and October 18, 201. During the recovery events, the thickness of the LNAPL could not be accurately determined due to the high viscosity of the LNAPL; however, based on observations noted using a bailer, the thickness of the LNAPL was estimated to be less than 6 inches. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: The contents of the bottom of the concrete vault were removed below the elevation of the subsurface drainage pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14). Since monitoring well TRC-MW11 was observed to contain only minor amounts of LNAPL, an oil absorbent sock was placed in this well for product recovery. The oil absorbent sock was removed and replaced during each recovery event and containerized in a 55-gallon steel drum which is staged on site. Approximately 15,604 gallons of LNAPL and water has been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July through October 2012. Table 5 presents the amount of LNAPL and water recovered during each extraction event. The following activities are planned by TRC during the second quarter. - Quarterly inspections and product removal of the concrete vault and monitoring wells TRCMW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 will continue. Progress Report #2 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in January 2013. - The entire monitoring well network will be gauged during subsequent quarterly events. Quarterly sampling of the monitoring well network (with the exception of upgradient monitoring wells TRC-MW6, TRC-MW10, and any monitoring well which contains LNAPL) will continue. Progress Report #2 will include groundwater sampling results from the next round of groundwater sampling, which was performed in October 2012. AD 03/04/2013: Received a project progress Report # 2. DL the report to eDocs. Will review. AD 04/08/2013: Reviewed the report. It states that TRC performed field activities at the site between October 18, 2012 and January 25, 2013. During this period, the following activities were completed: - Two rounds of quarterly groundwater sampling (October 2012 and January 2013); - Concrete vault

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

and boiler room pump pit
inspection (January 2013); - Monitoring well gauging (January 2013);
and - LNAPL recovery event
(January 2013). Quarterly Groundwater Sampling: Groundwater samples
were collected from 8 permanent
monitoring wells: TRC-MW1, TRC-MW3, TRCMW4, TRC-MW5, TRC-MW7, TRC-MW8,
TRC-MW9, and TRC-MW15 on
October 17 and 18, 2012 and on January 21 and 22, 2013. LNAPL was
present in 5 monitoring wells:
TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 and therefore,
these wells were not sampled.
The results of the analysis of groundwater sampling indicate the VOC
methyl tert-butyl ether (MTBE)
was the only VOC detected at a concentration exceeding the
corresponding Class GA Value during the
October 2012 and January 2013 sampling events in well TRC-MW8: MTBE -
12ppb in October 2012 -
5.1ppb in January 2012 Concrete Vault/Boiler Room Pump Pit Inspections
and Monitoring Well Gauging:
The concrete vault north of the school building, the boiler room pump
pit, and the groundwater
monitoring well network were inspected and gauged for the presence of
LNAPL on January 21, 2013 by
TRC. LNAPL was present in the concrete vault and in 5 monitoring
wells: TRC-MW2, TRC-MW11, TRCMW12,
TRC-MW13, and TRC-MW14. LNAPL was not present in the boiler room pump
pit or in monitoring wells
TRC-MW1, TRC-MW3 through TRC-MW9, and TRC-MW15. The thickness of the
LNAPL cannot be accurately
determined due to the high viscosity of the oil identified in the
concrete vault and monitoring
wells. However, TRC determined the approximate thickness of the LNAPL
in monitoring wells TRC-MW2,
TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 on January 21, 2013. An
oil/water interface probe was
used to measure the thickness of LNAPL by lowering the probe to the
depth of LNAPL, then submerging
the probe into the water until the sound indicated the presence of
water, then raising the probe
until the oil indicator sounded. LNAPL Product Recovery: Periodic
recovery of LNAPL on behalf of
the NYCSCA has been performed at the site since July 2012. LNAPL was
removed from the concrete
vault north of the school building and groundwater monitoring wells
TRC-MW2, TRC-MW12, TRC-MW13,
and TRC-MW14 on January 21, 2013, consistent with the NYSDEC-approved
RAP and RAP Addendum. During
the recovery event, the thickness of the LNAPL in the concrete vault
could not be accurately
determined due to the high viscosity of the LNAPL. LNAPL was removed
from the concrete vault and
groundwater monitoring wells using a vacuum truck. The procedure for
removal of LNAPL at the Site
consisted of the following: - The contents of the concrete vault were
removed below the elevation
of the building underdrain pipe. This allowed LNAPL present in the
pipe to flow into the concrete

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. - The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14). The oil absorbent sock present in TRC-MW11 was saturated with LNAPL and was removed and replaced. The saturated sock was containerized in a 55-gallon steel drum which is staged on site. Approximately 3,650 gallons of LNAPL and water was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) on January 21, 2013. A total of approximately 40 gallons of LNAPL and water were removed from each monitoring well and approximately 3,490 gallons of LNAPL and water were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 19,254 gallons of LNAPL and water has been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to January 2013. Table 3 presents the amount of LNAPL and water recovered during each extraction event. Although accurate measurements of LNAPL thicknesses in the wells were not able to be obtained during previous events, based on measurements obtained during the January 2013 extraction event, previous observations made via bailing and also during the extraction events, TRC states that the LNAPL thicknesses in the wells appear to be decreasing. TRC will continue with quarterly inspection and LNAPL removal from the concrete vault and monitoring wells. Progress Report #3 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in April 2013. AD 05/24/2013: Received the following e-mail from TRC: Ainura, Attached is Progress Report #3 for Spill Case No. 0413160 (Automotive Trade High School). Please review and contact me with any questions or comments. Thank you, Charles Guder Senior Project Manager DL the report to eDocs. Will review. AD 08/30/2013: Reviewed the report. It states that TRC performed field activities at the Site between April 9 and April 19, 2013. During this period, the following activities were completed: - Quarterly groundwater sampling; - Concrete vault and boiler room pump pit inspection; - Removal of ancillary tank gauges and piping from the boiler room; - Monitoring well gauging; and - LNAPL recovery. Quarterly Groundwater Sampling; Groundwater samples were collected from monitoring wells TRC-MW1, TRC-MW2, TRC-MW3, TRC-MW4, TRC-MW5, TRC-MW7, TRC-MW8, TRC-MW9, TRC-MW11, TRC-MW14, and TRC-MW15

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

on April 18 and 19, 2013. TRC did not collect a groundwater sample from monitoring wells TRC-MW2, TRC-MW11 and TRC-MW14 during previous sampling events (October 2012 and January 2013) due to the presence of LNAPL in the monitoring wells. LNAPL was not present in these wells during this sampling event. In accordance with procedures detailed in the NYSDEC-approved RAP and RAP Addendum, sampling of upgradient monitoring wells TRC-MW6 and TRC-MW10 were discontinued after the initial quarterly groundwater sampling event. In addition, LNAPL was present in monitoring wells TRC-MW12 and TRC-MW13, therefore, these wells were not sampled. The results of the analysis of groundwater sampling indicate there were no VOCs or SVOCs detected at concentrations exceeding their corresponding Class GA Values. Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging: - The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on April 9, 2013 by TRC. Also on April 9, 2013, remnant gauges and piping associated with the closed-in-place 20,000-gallon UST were removed and wall pipe openings were sealed with cement. LNAPL was present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14, and TRC-MW15. As indicated previously, LNAPL was previously measured in monitoring wells TRC-MW2, TRC-MW11 and TRC-MW14 during the previous gauging events (October 2012 and January 2013). The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW12 (0.07') and TRC-MW13 (0.1') on April 9, 2013. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRC-MW13 on April 9, 2013. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. Approximately 3,600 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on April 9, 2013. A total of approximately 25 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 3,550 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

Environmental, Inc. under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Although accurate measurements of LNAPL thicknesses in the wells were not able to be obtained during previous events, three wells which previously contained LNAPL do not currently contain LNAPL and observations made during bailing and the extraction events indicate that LNAPL thicknesses in the wells are decreasing. TRC is planning the following activities for the fourth quarterly LNAPL removal and groundwater sampling event: - Quarterly inspection and LNAPL removal from the concrete vault and monitoring wells. An additional vacuum truck will be used during the next LNAPL removal event to ensure LNAPL present in the building underdrain pipe will flow out of the pipe and be removed from the vault. - Progress Report #4 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in July 2013. - The monitoring well network will be gauged during the 4th quarterly event. Quarterly sampling of the monitoring well network (with the exception of upgradient monitoring wells TRC-MW6, TRC-MW10, and any monitoring well which contains LNAPL) will be performed during this event. No response needed. AD 09/06/2013: Received a Progress Report # 4 for the site. DL the report to eDocs. Will review. AD 10/15/2013: Reviewed the report. It states that between July 19 and July 24, 2013 TRC conducted at the site following field activities: -Quarterly groundwater sampling; -Concrete vault and boiler room pump pit inspection; -Monitoring well gauging; -LNAPL recovery. Groundwater samples were collected from permanent monitoring wells TRC-MW1 through TRC-MW5, TRC-MW7 through TRC-MW9, and TRC-MW11 through TRC-MW15 from July 22 through July 24, 2013. Monitoring wells TRC-MW12 and TRC-MW13 contained LNAPL at minimal thicknesses (approximately 0.03 feet) when gauged on July 19, 2013; however, following vacuum extraction, measurable LNAPL was not detected, and these wells were sampled. The results of the analysis of groundwater sampling indicate that there were no VOCs or SVOCs detected at concentrations exceeding their corresponding Class GA Values. Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging: The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 19, 2013 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW1 through TRCMW11, TRC-MW14, and TRC-MW15. The thickness

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW12(0.03') and TRC-MW13(0.03) on July 19, 2013 with an oil/water interface probe. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRC-MW13 on July 19, 2013 using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13). The oil absorbent sock present in TRC-MW11 was removed and was placed in a 55-gallon steel drum on-site. A new oil absorbent sock was replaced in this well. Approximately 5,626 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on July 19, 2013. A total of approximately 25 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 5,576 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water waste was transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 28,480 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to July 2013. In accordance with the NYSDEC-approved RAP and RAP Addendum, quarterly groundwater monitoring, inspections, and product recovery have been completed for a period of one year. The source of LNAPL at the site - the former 20,000-gallon UST, has been closed-in-place in accordance with 6 NYCRR Part 614. Approximately 28,480 gallons of groundwater/LNAPL mixture have been removed from the concrete vault and monitoring wells. At the initiation of the LNAPL removal program, measurable LNAPL was present in five monitoring wells (TRC-MW2, TRC-MW11, TRCMW12, TRC-MW13, and TRC-MW14). As of July 2013, there is measurable LNAPL in only two (2) monitoring wells (TRC-MW12 and TRC-MW13), at minimal thicknesses (approximately 0.03 feet). According to TRC, the results of groundwater sampling

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

conducted to date show that, with the exception of the concentration of MTBE detected in well TRC-MW-8 during one sampling round, VOCs and SVOCs have not been detected at concentrations above Class GA Values. Therefore, the remaining residual LNAPL in the area of the closed-in-place UST and in the building under drain system is not impacting groundwater at the Site. TRC recommends the following: - Based on the analytical results, sampling of the monitoring well network is no longer required. - Bi-annual inspection and gauging of the monitoring well network should be performed. Absorbent socks should be placed (and replaced, as necessary) in monitoring wells containing measurable LNAPL. - Bi-annual (twice yearly) inspection and LNAPL removal from the concrete vault should continue until LNAPL is no longer observed for two consecutive six month periods. AD 03/17/2014: Reveived Received a Progress Report #5 for the site. DL the report to eDocs. Will review. AD 04/24/2014: Reviewed the report. It states that field activities were conducted at the site on January 20, 2014 and consisted of the following: Concrete vault and boiler room pump pit inspection; Monitoring well gauging; and LNAPL recovery. The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on January 20, 2014 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW-12 and TRC-MW-13, which is consistent with historic data. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW-1 through TRC-MW-11, TRC-MW-14, and TRC-MW-15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, an oil/water interface probe was used to approximate the thickness of LNAPL by lowering the probe to the depth of LNAPL, then submerging the probe into the water until the sound indicated the presence of water, then raising the probe until the oil indicator sounded. According to the data: TRC-MW-12 - 0.03’ of free product; TRC-MW-13 - 0.09’ of free product. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW-12 and TRC-MW-13 on January 20, 2014. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the site consisted of the following: The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13). The oil absorbent sock present in TRC-MW-11 was removed and was placed in a 55-gallon steel drum on-site. A new oil absorbent sock was replaced in this well. Approximately 3,703 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13) on January 20, 2014. A total of approximately 35 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 3,633 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside Environmental, Inc. under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal.
Approximately 32,183 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-2, TRC-MW-12, TRC-MW-13, and TRC-MW-14) from July 2012 to January 20, 2014. PLANNED ACTIVITIES: The following activities are planned for the next bi-annual inspection and LNAPL removal event: The monitoring well network will be gauged.
Inspection and LNAPL removal from the concrete vault and monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing measurable LNAPL.
Project progress Report #6 will be submitted to the DEC following the next inspection and product removal event, which will be performed in July 2014. AD 10/20/2014: Reveived Received a Progress Report #6 for the site. Will review. AD 12/10/2014: Reviewed the report. It states that field activities were conducted at the site on July 28, 2014 and consisted of the following: Concrete vault and boiler room pump pit inspection; Monitoring well gauging; and LNAPL recovery. The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 28, 2014 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW-12 and TRC-MW-13, which is consistent with historic data. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW-1 through TRC-MW-11, TRC-MW-14, and TRC-MW-15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, an oil/water interface probe was used to approximate the thickness of

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

LNAPL by lowering the probe to the depth of LNAPL, then submerging the probe into the water until
the sound indicated the presence of water, then raising the probe until the oil indicator sounded.
According to the data: TRC-MW-12 - 0.02' of free product; TRC-MW-13 - 0.05' of free product. LNAPL
Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site
since July 2012. LNAPL was removed from the concrete vault north of the school building and
groundwater monitoring wells TRC-MW-12 and TRC-MW-13 on July 28, 2014. LNAPL was removed from the
concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of
LNAPL at the site consisted of the following: The contents of the concrete vault were removed below
the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into
the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck.
The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL
(TRC-MW-12 and TRC-MW-13). New oil absorbent socks were replaced in these wells. Approximately
3,119 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells
containing LNAPL (TRC-MW-12 and TRC-MW-13) on July 28, 2014. A total of approximately 35 gallons of
water mixed with LNAPL were removed from each of monitoring wells and approximately 3,049 gallons
of water mixed with LNAPL were removed from the concrete vault for off-site disposal. The LNAPL and
water removal was performed by Brookside Environmental, Inc. under the supervision of TRC and
transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for
disposal. Approximately 35,302 gallons of water mixed with LNAPL have been removed from the
concrete vault and monitoring wells containing LNAPL (TRC-MW-2, TRC-MW-12, TRC-MW-13, and
TRC-MW-14) from July 2012 to July 28, 2014. PLANNED ACTIVITIES: The following activities are
planned for the next bi-annual inspection and LNAPL removal event: The monitoring well network will
be gauged. Inspection and LNAPL removal from the concrete vault and monitoring wells will continue.
Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing
measurable LNAPL. Project progress Report #7 will be submitted to the DEC following the next
inspection and product removal event, which will be performed in January 2015. NRN. AD 02/12/2015:
Received the following e-mail from C. Guder: Ainura Attached is Progress Report #7 for Spill Case
No. 0413160 associated with Automotive Trades High School, Brooklyn, NY. Please review and contact
us with any questions or comments. Thank you, Charles Guder Senior

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

Project Manager Will review. AD
03/24/2015: Reviewed the report. It states that field activities were conducted at the Site on
January 19, 2015 and consisted of the following: - Concrete vault and boiler room ejector pit
inspection; - Monitoring well gauging; and - LNAPL recovery. Concrete Vault/Boiler Room Ejector Pit
Inspections and Monitoring Well Gauging: The concrete vault, located north of the school building,
the boiler room ejector pit, and the groundwater monitoring well network were inspected and gauged
for the presence of LNAPL on January 19, 2015 by TRC. LNAPL was present in the concrete vault and
monitoring wells TRC-MW12 and TRC-MW13, which is consistent with historic data. LNAPL was not
present in the boiler room ejector pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14,
and TRC-MW15. The thickness of the LNAPL could not be accurately determined due to the high
viscosity of the oil identified in the concrete vault and monitoring wells. LNAPL has only been
measured in monitoring wells TRC-MW12 and TRC-MW13 since April 2013. The LNAPL thickness measured
in wells TRC-MW12 and TRC-MW13 have also decreased since April 2013. The LNAPL thickness
measurements (feet) recorded in monitoring wells TRC-MW12 and TRC-MW13 in April 2013 were 0.07 and
0.10, respectively. LNAPL Product Recovery: Periodic recovery of LNAPL has been performed at the
Site since July 2012. LNAPL was removed from the concrete vault north of the school building and
groundwater monitoring wells TRC-MW12 and TRCMW13 on January 19, 2015 using a vacuum truck. The
procedure for removal of LNAPL at the Site consisted of the following: - The contents of the
concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL
present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the
concrete vault into the vacuum truck. - The vacuum truck was then used to pump oil and water from
the monitoring wells containing measurable LNAPL (TRC-MW12 and TRC-MW13). - The oil absorbent socks
present in the monitoring wells around the closed-in-place UST (i.e.,TRC-MW2, TRC-MW11, TRC-MW12,
TRC-MW-13, TRC-MW14) were found to be saturated with oil. With the exception of monitoring wells
TRC-MW12 and TRC-MW13, measurable LNAPL was not identified in the monitoring wells after removal of
the oil absorbent socks. The oil absorbent socks present in the monitoring wells were removed and
replaced with new ones. Approximately 5,724 gallons of water mixed with LNAPL was removed from the
concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on January 19, 2015. A
total of approximately 25 gallons of water mixed with LNAPL were removed from each of monitoring

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

wells and approximately 5,674 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. Approximately 41,026 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to January 2015. PLANNED ACTIVITIES: In connection with the NYSDEC approval letter dated October 15, 2013, the following activities are planned for the next bi-annual inspection and LNAPL removal event: - The monitoring well network will be gauged. - Inspection and LNAPL removal from the concrete vault and monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing LNAPL. - Project Progress Report #8 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in July 2015. AD 08/12/2015: Received a Progress Report # 8. Will review. AD 10/02/2015: Reviewed the report. It states that field activities were conducted at the Site on July 27, 2015 and consisted of the following: - Concrete vault and boiler room ejector pit inspection; - Monitoring well gauging; and - LNAPL recovery. Concrete Vault/Boiler Room Ejector Pit Inspections and Monitoring Well Gauging: The concrete vault, the boiler room ejector pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 27, 2015 by TRC. LNAPL was only present in the concrete vault and wells TRC-MW12 and TRC-MW13, which is consistent with historic data. LNAPL was not present in the boiler room ejector pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14, and TRC-MW15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. LNAPL has only been measured in monitoring wells TRC-MW12 and TRC-MW13 since April 2013. The LNAPL thickness measured in wells TRC-MW12 and TRC-MW13 have also decreased since April 2013. The LNAPL thickness measurements (feet) recorded in monitoring wells TRC-MW12 and TRC-MW13 in July 2015 were 0.03 and 0.03, respectively. LNAPL Product Recovery: Periodic recovery of LNAPL has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRCMW13 on July 27, 2015 using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: - The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. - The oil

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

absorbent socks present in the
monitoring wells TRC-MW12, TRC-MW-13 were found to be saturated with oil and removed. A vacuum
truck was then used to pump LPAPL and water from TRC-MW12 and TRC-MW13. After pumping was complete,
new oil absorbent socks were placed into TRC-MW12, TRC-MW13. Approximately 2,606 gallons of water
mixed with LNAPL was removed from the concrete vault and monitoring wells (TRC-MW12 and TRC-MW13)
on July 27, 2015. Approximately 50 gallons of water mixed with LNAPL were removed from each of
monitoring wells and approximately 2,506 gallons were removed from the concrete vault for off-site
disposal. Approximately 43,632 gallons of water/LNAPL mixture have been removed from the site for
the period from July 2012 to July 2015. PLANNED ACTIVITIES: The following activities are planned
for the next bi-annual inspection and LNAPL removal event: - The monitoring well network will be
gauged. - Inspection and LNAPL removal from the concrete vault and monitoring wells will continue.
Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing LNAPL. -
Project Progress Report #9 will be submitted to the NYSDEC following the next inspection and
product removal event, which will be performed in January 2016. AD 02/17/2016: Received Progress
Report #9. Will review. AD 03/29/2016: Reviewed the report. It states that field activities were
conducted at the site on on January 18, 2016 and consisted of the following: Concrete vault and
boiler room ejector pit inspection; Monitoring well gauging; and LNAPL recovery. Concrete
Vault/Boiler Room Ejector Pit inspections and Monitoring Well Gauging: The concrete vault (located
north of the school building), the boiler room ejector pit, and the groundwater monitoring well
network were inspected and gauged for the presence of LNAPL on January 18, 2016 by TRC. LNAPL was
only present in the concrete vault and monitoring wells TRC-MW 12 and TRCMW-13, which is consistent
with inspection results since April 9, 2013. The oil absorbent socks present in monitoring wells
TRC-MW 12 and TRC-MW 13 we re also found to be saturated with oil. LNAPL was not present in the
boiler room ejector pit or in monitoring wells TRC-MW-1 through TRC-MW-11, TRCMW-14, and TRC-MW-15.
An oil/water interface probe was used to approximate the thickness of LNAPL by lowering the probe
to the depth o f LNAPL, then submerging the probe into the water until the sound indicated the
presence of water, then raising the probe until the oil indicator sounded. The thickness of the
LNAPL could not be accurately determined due to the high viscosity of the oil identified in the
concrete vault and monitoring wells. Since April 201 3, only monitoring wells TRC-MW12 and TRC-MW13

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

have had measureable LNAPL. The LNAPL thicknesses measured in monitoring wells TRC-MWl2 and TRCMW13 have decreased since April 2013. The LNAPL thickness measurements recorded in monitoring wells TRC-MW12 and TRC-MWl3 in April 201 3 were 0.07 and 0.10 feet, respectively. Periodic recovery of LNAPL has been performed at the Site since July 201 2. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW 12 and TRCM W 13 on January 18, 2016 using a vacuum truck. The procedure for measurement and removal of LNAPL at the Site consisted of the following: - The contents o f the concrete vault were removed below the elevation of the building under drain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water were then pumped from the concrete vault into the vacuum truck. - The oil absorbent socks present in monitoring wells TRC-MW12 and TRC-MW13 were found to be saturated with oil and we re removed. A vacuum truck was then used to pump LNAPL and water from monitoring wells TRC-MW12 and TRC-MW13. After pumping of LNAPL and water from monitoring wells TRC-MW12 and TRC-MW13 was complete, new oil absorbent socks were placed into monitoring wells TRC-MW12 and TRC-MW13. A total of approximately 3,248 gallons o f water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MWl2 and TRC-MW13) on January 18, 2016. Approximately 25 gallons of water mixed with LNAPL were removed from each of the monitoring wells and approximately 3,198 gallons of water mixed with LNAPL were removed from the concrete vault for off-site disposal.
Approximately 46,880 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to January 2016. In connection with the NYSDEC approval letter dated October 15 , 20 13, the following activities are planned for the next bi-annual inspection and LNAPL removal event: The monitoring well network will be gauged. Inspection of and LNAPL removal (if required) from the concrete vault and monitoring wells. Absorbent socks will be replaced, as necessary, in monitoring wells containing LNAPL. Project Progress Report #10 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in July 2016. AD. 08/20/2016:
Received progress Report #10. Will review. AD 09/29/2016: Reviewed the report. It states that field activities were conducted at the Site on July 5, 2016 and consisted of the following: - Concrete vault and boiler room ejector pit inspection; - Monitoring well gauging; and - LNAPL recovery. The concrete vault (located north of the school building), the boiler room

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

ejector pit, and the
groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 5,
2016 by TRC. LNAPL was only present in the concrete vault and monitoring wells TRC-MW12 and
TRC-MW13, which is consistent with inspection results since April 9, 2013. The oil absorbent socks
present in monitoring wells TRC-MW12 and TRC-MW13 were also found to be partially saturated with
oil. LNAPL was not present in the boiler room ejector pit or in monitoring wells TRC-MW1 through
TRCMW11, TRC-MW14, and TRC-MW15. A minimal amount of LNAPL was recovered by the oil absorbent socks
installed in monitoring wells TRC-MW2, TRC-MW11, and TRC-MW14. An oil/water interface probe was
used to approximate the thickness of LNAPL in TRC MW-12 and TRC MW-13 by lowering the probe to the
depth of LNAPL, then submerging the probe into the liquid until the sound indicated the presence of
water, then raising the probe until the oil indicator sounded. The thickness of the LNAPL could not
be accurately determined due to the high viscosity of the oil identified in the concrete vault and
monitoring wells. Since April 2013, only monitoring wells TRC-MW12 and TRC-MW13 have had
measureable LNAPL. The LNAPL thicknesses measured in monitoring wells TRC-MW12 and TRC-MW13 have
decreased since April 2013. The LNAPL thickness measurements recorded in monitoring wells TRC-MW12
and TRC-MW13 during the previous event on January 18, 2016 were 0.03 and 0.03 feet, respectively.
Thickness measurements on April 9, 2013 were 0.07 feet in TRC-MW12 and 0.10 feet in TRC-MW13. LNAPL
recovery: Periodic recovery of LNAPL has been performed at the Site since July 2012. LNAPL was
removed from the concrete vault north of the school building and groundwater monitoring wells
TRC-MW12 and TRC-MW13 on January 18, 2016 using a vacuum truck. The procedure for measurement and
removal of LNAPL at the Site consisted of the following: The contents of the concrete vault were
removed below the elevation of the building under-drain pipe. This allowed LNAPL present in the
pipe to flow into the concrete vault. LNAPL and water were then pumped from the concrete vault into
the vacuum truck. The oil absorbent socks present in monitoring wells TRC-MW12 and TRC-MW13 were
found to be partially saturated with oil and were removed. A vacuum truck was used to pump LNAPL
and water from monitoring wells TRC-MW12 and TRC-MW13. After pumping of LNAPL and water from
monitoring wells TRC-MW12 and TRC-MW13 was complete, new oil absorbent socks were placed into
monitoring wells TRC-MW12 and TRC-MW13. Approximately 2,862 gallons of water mixed with LNAPL were
removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

July 5, 2016. Approximately 50 gallons of water mixed with LNAPL were removed from each of the
monitoring wells and approximately 2,762 gallons of water mixed with LNAPL were removed from the
concrete vault for off-site disposal. Approximately 49,472 gallons of water mixed with LNAPL have
been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12,
TRC-MW13, and TRC-MW14) from July 2012 to July 2016. Planned activities: In connection with the
NYSDEC approval letter dated October 15, 2013, the following activities are planned for the next
bi-annual inspection and LNAPL removal event: The monitoring well network will be gauged.
Inspection of and LNAPL removal (if required) from the concrete vault and monitoring wells.
Absorbent socks will be replaced, as necessary, in monitoring wells containing LNAPL. Project
Progress Report #11 will be submitted to the NYSDEC following the next inspection and product
removal event, which will be performed in January 2017. AD 05/05/2017: Had a conversation with TRC,
Philip Castellano requested a meeting with DEC to discuss the site. TRC thinks that the site is
ready for closure. Discussed the dates with J. Kolleeny. Sent the invitation to TRC. Booked the
conference room for May 9, 2017. AD 05/09/2017: J. Kolleeny and I had a meeting with Lee Guterman
and Bob Kanaparthi of NYCSCA and their consultants Philip Castellano of TRC and Michael Sherwood of
Sherwood Environmental. Lee Guterman said that they performed extensive remediation at the site, it
was effective, and only two site wells now have 0.01' of free product. According to Ms. Guterman,
NYCSCA had exhausted their funds for further remediation at this site, and questions its
effectiveness. We discussed the remediation performed at the site, site specific conditions and
what further actions should be taken. Since the last gauging event was in January 2017, it was
agreed that TRC will remove absorbent socks from the monitoring wells and will gauge them few weeks
after for LNAPL presence. Final closure report will be prepared with case closure request
justification, stating all the performed remedial activities, site specific conditions, sensitive
receptors survey and other related data. Jon and I had discussed the above-referenced site and
request for spill case closure with Vadim Brevdo. He agreed with the proposed course of actions
such as: removing absorbent socks from the monitoring wells and gauging them few weeks after for
LNAPL presence and preparing final closure report. Sent an e-mail to Ms. Guterman confirming
Vadim's agreement with the proposed course of actions. AD 06/29/2017: Received the following e-mail
from Bob Kanaparthi: Dear Ms. Doronova, Attached please find the

AUTOMOTIVE TRADES VOC HS - BROOKLYN K610 (Continued) **U000409472**

requested Spill Closure Report for
Automotive Trades High School, Spill Case No. 04-13160. Please contact me with any questions or
comments. Thank you, Bob Kanaparthi Industrial Hygienist C Industrial and Environmental Hygiene
Division New York City School Construction Authority 30-30 Thomson Ave, Long Island City, New York
11101 Email: skanaparthi@nycsca.org Telephone: (718) 472-8620 Fax: (718) 472-8500 Will review. AD
07/05/2017: Reviewed the submitted report. It states that on May 10, 2017 the oil-absorbent socks
installed in monitoring wells around the perimeter of the closed-in-place UST were removed. The
socks, previously installed on January 16, 2017, were stained but were not saturated with LNAPL.
Following removal of the socks, monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and
TRC-MW14 were gauged. No measurable quantities of LNAPL were present in the wells. On May 24, 2017,
two (2) weeks following removal of the socks, the wells were gauged again, and no LNAPL was present
in the wells. CONCLUSIONS: Based on the information collected during remedial efforts conducted
on-site to date, the following can be concluded: - Gauging data collected since 2012 has
demonstrated that there is no potential for migration of LNAPL off Site. - Since July 2014 (5
gauging events), LNAPL has been detected in only two wells, with measured thicknesses less than
0.05 feet. - LNAPL was not detected in the wells adjacent to the UST on May 10, 2017 following
removal of the oil-absorbent socks installed on January 16, 2017. - LNAPL was not detected in the
wells adjacent to the UST, two (2) weeks after sock removal, on May 24, 2017. - Based on the age of
the release, the absence of dissolved phase groundwater impacts, and observations during remedial
measures conducted to date, mobile petroleum-related impacts are not present at the Site.
Considering the above conclusions, TRC recommends closure of Spill No. 04-13160. Will discuss with
J. Kolleeny of DEC. AD 07/07/2017: Discussed the site with J. Kolleeny. Based on the newly
submitted data regarding absence of the LNAPL in the all site wells, performed remediation, nature
of the product (#6 oil) and absence of dissolved phase, it was decided to approve case closure
request. Issued and sent an approval letter to Lee Guterman. Case closed. AD

Remarks: OLD TANK THAT WAS INSTALLED AND WANTED IT TO BE REOVED. THEY TOOK TESTS AND FOUND THAT THE TANK HAS LEAKED. THE TANK HAS FAILED MANY TIMES BEFORE. TOOK TESTS FROM THE SOIL. HAS NOT BEEN CLEANED OR REMOVED. OUTSIDE UNDERGROUND TANK. 20,000 GAL CAPACITY.

DEC Memo:	3/11/03 - SAMUEL- File available in active unassigned spill files. 4/3/06 Diaz - Next Steps - February 2000 Investigation report stated further investigation & possible remedial work recommended. Verify & conduct work or close site. 6/28/07. J.Krimgold reviewed and approved IWP submitted by FPM Group (631-737-6200)on June 27, 2007. The plan calls for 4 soil/gw samples around tanks excavation pit 5/21/08.

64 FROST ST (Continued) **S102232676**

email from FPM's Ben Cancemi informed that excavation and sampling activities will commence on 5/22/08. 02/12/09-Hiralkumar Patel. contamianted groundwater (with sheen) was discovered under basement floor at 684 Lorimer Street, site located behind subject gas station. based on location of both sites, contamination under house at 684 Lorimer street might be orinigated from subject gas station site. based on recent findings, case transferred from DEC Jacob to DEC Patel. found following documents for the subject site: - tank closure environmental site assessment, Nov. 1999 - subsurface investigation report, Feb. 2000 - subsurface investigation work plan, Jun. 27, 2007 - subsurface investigation report and remedial action plan, Sep. 10, 2007 abstract of tank closure report, Nov. 1999: - total of eight 550 gal and one 3000 gal USTs were removed including all pipings and portions of pump islands - all of the tank in very good condition and exhibited no evidence of corrosion - five of the tanks were empty, and three tanks were filled with concrete - 3000 gal tank contained approx. 1300 gal of water and petroleum products - total of eight soil and water samples were collected after tank removal - depth to groundwater ranged from 14-16 ft bg <--------- - according to fire department record, in Nov. of 1984, the eight 550 gal tanks failed the official 10 year test - in sept. of 1985, three 550 gal were purged and filled with concrete - one pump was removed and all associated lines were sealed - highest PID readings were noted at an average depth of 10 to 15 ft <---------- - fine to medium sized grain sand with clay lenses were found to a level of 12 to 14 ft bg - a layer of one foot in thickness of peat-like material intermixed with clay occurred at about 16 ft bg - found xylene contamination in east and north sidewall samples - found contamination in groundwater samples soil analyticals: --------Xylene North----4,600 East----13,500 groundwater analyticals: ----------west bottom pit------east bottom pit Benzene----------160----------230 Toluene----------200----------230 Ethylbenzene--------97----------120 Xylene----------1,410----------1,520 Naphthalene--------390----------640 MTBE----------1,900----------2,300 abstract of subsurface investigation report, feb. 2000: - eight borings (B1 thru B8) were advanced and collected soil and groundwater samples from borings - borings B1, B2 and B5 thru B8 were advanced in the immediate vicinity of the former tank field and borings B3 and B4 advanced near the west property line - groundwater found at 10 ft depth- soil samples collected at 8-10 ft depth from each boring except boring B4 where no sample collected; additional soil sample collected from boring B1 at 0-4 ft depth - high PID reading found during borings - contamination found in soil and groundwater samples PID readings: ----------0-4-------4-8-------8-10 B1----------1,120-----1,160------1,190 B5----------110--------20---------55 B6----------2,010 B7----------640 soil analyticals: ----------B1----------B1----------B6 0-4 ft 8-10 ft 8-10 ft Benzene----------<250 Xylene----------25,000---------5,300----------1,200 1,2,4-Trimethylbenzene--14,000 1,3,5-Trimethylbenzene--23,000---------3,200 groundwater analyticals: ----------GW1-----GW-3-----GW-4-----GW-5-----GW-6----- GW-7-----GW-8 Benzene----------

700----7,200 abstract of subsurface investigation report, Sep., 2007: - four soil boring were installed to final depth of 15 ft bg - soils encountered at the property generally consisted of fine to medium grained sand with gravel and trace amount of silt and clay from just below grade to the top of blue-green clay layer - the top of the blue-green clay layer was evident in all of the borings at depths ranging from approx. 12.5 to 14.5 ft bg - the blue-green clay layer showed no indications of potential contamination and was not fully penetrated by any of the borings - staining and petroleum odors were generally observed in the soils from all of the borings in an interval near the water table surface, which was generally encountered at 8 to 8.5 ft bg - interval of staining/odor was variable in thickness and ranged from approx. one foot at boring B4 to approx. 7 ft at boring B1 - PID readings in stained soils generally ranged between 10 and 60 ppm - groundwater samples collected from each borings - no free-phase product was observed in any borings - found contamination in soil and groundwater samples soil analyticals: ----------B1 (7-8 ft depth) Benzene----------7,000 Toluene----------200,000 Ethylbenzene----------110,000 Xylene----------620,000 Naphthalene----------56,000 1,2,4-Trimethylbenzene--510,000 1,3,5-Trimethylbenzene--150,000 groundwater analyticals: ----------B1-AQ---------B2-AQ---------B3-AQ--------- B4-AQ Benzene----------1,500 Toluene----------3,700 Ethylbenzene----------1,100 Xylene----------4,900 Naphthalene----------470----------120 MTBE----------
--300 1,2,4-Trimethylbenzene------1,500----------140----------440 1,3,5-Trimethylbenzene--------370 abstract of remedial action plan, Sept. 2007: - proposed to excavate impacted soils in the vicinity of boring B1 - based on relatively low levels of groundwater impact, its apparently limited extent, and the apparent absence of free-phase product, no groundwater remediation recommended - three groundwater wells are proposed to be installed for groundwater flow direction determination - each well will be installed to a depth of no more than 14 ft, so as not to penetrate the clay underlying the property - each well will be installed with 10 ft of screen summary: - groundwater found at different depths: 14-16 ft during tank removal, 10 ft during subsurface investigation in 2000 and at 8.5 ft during subsurface investigation in 2007 - no groundwater flow direction

64 FROST ST (Continued) **S102232676**

available - no permanent wells installed at the site - heavy soil and groundwater contamiantion found during each investigation - contamination found in all sides of previous tank location - DEC Jacob issued RAP approval letter on Oct. 4, 2007 <---------- - as per email from Ben Cancemi from FPM group, excavation according to approved RAP was scheduled on 05/22/08 <-------- Paul's LLC **site owner** 318 Grand Street Brooklyn, NY 11211 Attn.: Paul Joffe Ph. (718) 486-6916 (O) (917) 693-3292 (C) email: pauljoffe@pauljoffe.com according to building department permit record, Mr. Joffe applied for permit to convert service station into dinning location. found another spill case reported at the gas station site. - 9806871: spill called in by citizen on 09/04/1998 about abandoned tanks; tipped over. spill closed on 02/26/2003. left message for Mr. Joffe. received call from Mr. Carter from Mr. Joffe's office. informed him about situation. Mr. Carter doesn't know much about this site but will ask Mr. Joffe to call back. Nathan Carter Ph. (718) 486-6804 02/13/09-Hiralkumar Patel. left message for Mr. Joffe. left message for Ben Cancemi, consultant who was going to perform remedial activities. Ben T. Cancemi, CPG FPM Group Ph. (631) 737-6200 Fax (631) 737-2410 email: b.cancemi@fpm-group.com 02/17/09-Hiralkumar Patel. received call from Ben from FPM Group. they excavated contaminated soil to water table in front of stores and installed three monitoring wells in June 2008. but haven't got authorization to sample these wells. Ben mentioned that endpoint sample analyticals were clean. asked Ben to submit sample analytical summary table and scaled site map with locations of endpoint samples and wells. also asked him to include approx. location of tank and dispenser islands. received email from Ben with sample analytical summary table with site plan showing endpoint sample and well locations. site plan shows that wells were installed in front of stores on-site. but no well observed during site visit, but found some fresh patches in concrete (which could be location of wells). received call from Mr. Joffe. asked him to submit remedial action report by the end of March 06, 2009. he mentioned that area between his property and houses along Lorimer street is a commercial property at 297 Meeker Ave which is a paint shop. 02/18/09-Hiralkumar Patel. received email from Ben. they will do well sampling on 02/20/09. 02/20/09-Hiralkumar Patel. visited site. met Mr. Joffe and John (FPM group). monitoring wells found in front of store. groundwater was found around 6-7 ft bg. found sheen on water from each wells. will submit sample analyticals and groundwater flow direction. during site visit, noticed an auto repair shop at 59 Frost Street. met store manager. site has one 275 gal waste oil AST. tank is not registered. asked manager to register tank. sent email to DEC Jacob regarding un-registered waste oil tank at 59 Frost St. no parts cleaning operation at the auto repair shop. Billy Alex Unique Auto Repair 59 Frost St Brooklyn, NY 11211 PH. (718) 387-7537 Fax (718) 384-6180 email: uniqueauto59@gmail.com during site visit, Mr. Joffe mentioned that site at 297 Meeker Ave runs from Meeker Ave to Frost Street, between the subject gas station and house at 684 Lorimer st where contaminated water was found. Mr. Joffe mentioned that there is painting business at 297 Meeker Ave. owner's address for 297 Meeker Ave, from property shark: Wanda Berry 56 Frost St. Brooklyn, NY 11211 Ph. (516) 627-4245 owner's address for 297 Meeker Ave, from ACRIS: Wanda Berry PO Box 131 Manhasset, NY 11030-0131 02/23/09-Hiralkumar Patel. received email from Mr. Joffe. he found from NYC DOB that site across frost st was dry cleaner and had seven 1000 gal USTs. 03/06/09-Hiralkumar Patel. received remedial

64 FROST ST (Continued) **S102232676**

action report from Ben. abstract: - 186.34 tons of contaminated soils were excavated from southern portion of the former UST area and in proximity to the location of a reported former fuel dispensing island - two endpoint bottom samples and four endpoint sidewall samples collected from excavation - found some contamination in endpoint bottom sample from north end of excavation - additional soil was removed from the north end and collected additional endpoint bottom sample - sidewall samples were taken at 7 ft bg and bottom samples taken at 11 ft bg (means bottom endpoint samples were taken below water table) - three monitoring wells (MW-1 through MW-3) were installed in proximity to the former soil boring locations B1 through B3 (borings that done during subsurface investigation in 2007) - well MW-2 installed at previous boring B1 and MW-3 installed at previous boring B3 - wells were installed to a depth of approx. 14 ft bg and completed with ten feet of screen - groundwater was found at around 8 ft depth <---------- - site-specific groundwater flow direction is to the northeast <---------- - no free-phase product or other visible indications of potential contamination were observed - found MTBE contamination in all three wells ---------MTBE MW-1------12 MW-2-----150 MW-3------50 report missing scaled site map. 03/13/09-Hiralkumar Patel. spoke with Ben at FPM. asked him to subimt scaled site map with all previous sampling/well locations. asked Ben about any dewatering as soil was removed from below water table also. Ben mentioned that water was coming into excavation so slowly. they were removing soil from excavation and wait till water from excavation bucket drain out before loading soil for disposal. so no dewatering happened. summary: during all previous investigations, highest contamination was found towards the west end of property, in close proximity to existing well MW-2. and MW-2 is the downgradient well at the property edge. based on results of high soil and groundwater contamination in area of MW-2 and groundwater flow direction, requires off-site groundwater investigation. requires off-site well downgradient from existing well MW-2. spoke with Mr. Joffe. explained him findings of previous investigations and asked him for one more well downgradient from well MW-2. sent letter to Mr. Joffe requiring delineation of possible soil and groundwater contamination, downgradient from well MW-2. letter emailed to Mr. Joffe and Ben. 03/27/09-Hiralkumar Patel. received email from Mr. Cancemi with site map including location of proposed downgradient well. 03/30/09-Hiralkumar Patel. received email from Mr. Cancemi. he is planning to install well on April 08, 2009. sent email to Mr. Cancemi approving proposed location. 05/11/09-Hiralkumar Patel. 1:35 PM:- received report from Mr. Cancemi. abstract: - off-site well installed (MW-4), about 20 ft downgradient from well MW-2 - well installed to a depth of approx. 14 ft bg with 10 ft of screen - soil generally consisted of fine to medium-grained silty sand with gravel and trace amount of clay. brick, wood, coal, ash and concrete fragments were noted in the entire screen interval, but were more abundant in the top five ft of boring - faint petroleum odors and PID responses were noted on soils from 8 to 9 ft interval; no odor or PID noticed in other intervals - groundwater was found at approx. 7.5 ft bg <-------- - one soil sample collected just above water table and one at 8-9 ft depth (below water table) - no free product observed in any wells on site - groundwater flow towards northeast <--------- - 1,400 ppb of MTBE found in soil sample at 8-9 ft depth - 98 ppb of MTBE found in groundwater sample from MW-4 05/29/09-Hiralkumar Patel. 10:46 AM:- sent letter to Mr. Joffe requiring surrounding area site

64 FROST ST (Continued) **S102232676**

map (with possible off-site source) and quarterly groundwater monitoring and sampling for a period of one year (including wells gauging during each sampling events to define site specific groundwater flow direction). letter emailed to Mr. Joffe and Mr. Cancemi. 09/24/09-Hiralkumar Patel. 3:20 PM:- spoke with Ben. they submitted proposal to Mr. Joffe but hasn't heard back. 3:22 PM:- spoke with Mr. Joffe. he will ask Ben to conduct groundwater sampling. 09/29/09-Hiralkumar Patel. 12:13 PM:- received email from Ben. he will sample wells on 10/01/09. he mentioned that previous samples were analyzed for VOCs only as gasoline spill was the cause. he asked whether SVOC analysis needed for groundwater samples. 12:45 PM:- sent email to Ben to analyze samples for VOCs only. 12/01/09-Hiralkumar Patel. 3:26 PM:- spoke with Mr. Joffe. he spoke with Ben today. Ben is preparing report. asked Mr. Joffe to submit report by the end of 12/11/09. 12/02/09-Hiralkumar Patel. 11:20 AM:- received quarterly groundwater sampling reprt from Ben. sampled all four wells in Oct. 2009. minor MTBE contamination found in samples. will sample all wells again in Jan. 2010. 12:42 PM:- sent email to Ben asking to submit next quarterly report by end of Feb. 2010. email copied to Mr. Joffe. 12/11/09-Hiralkumar Patel. 11:20 AM:- received email from Ben including site map showing surrounding area use. 01/25/10-Hiralkumar Patel. 3:41 PM:- received message from Daniel Cole (212-341-0964) from NYC DEP. he mentioned that subject site is e-designated and currently reviewing closure report. Mr. Cole wants to know spill status. 01/26/10-Hiralkumar Patel. 2:40 PM:- received email from Ben. they collected second round of groundwater sampling last week and will submit second quarterly report once lab data is available. 3:06 PM:- spoke with Mr. Cole. Mr. Cole asked if DEC requires anything more than quarterly monitoring. informed Mr. Cole that the department may require additional work based on quarterly groundwater sampling reports. Mr. Cole mentioned that owner did air monitoring. asked Mr. Cole to send copy of air monitoring report. he will email the report. 02/11/10-Hiralkumar Patel. 8:23 AM:- received second quarterly report from Ben. minor MTBE contamination found in groundwater samples (MW-3: 20 ppb, MW-4: 40 ppb). will sample wells in Apr. 2010. 05/12/10-Hiralkumar Patel. 1:56 PM:- received third quarterly report from Ben. minor MTBE contamination found in groundwater samples (MW-3: 23 ppb, MW-4: 57 ppb). will sample wells in July 2010. 08/05/10-Hiralkumar Patel. 8:57 AM:- received fourth quarterly report from Ben. minor MTBE contamination found in groundwater samples (MW-3: 20 ppb, MW-4: 25 ppb). based on submitted documents, case closed. 2:50 PM:- spill closure letter emailed to Mr. Joffe. email copied to Ben.

Remarks: caller belives its a bad line - 5 - 550 gal tanks manifolded together

Longitude:	-73.9215800
DEC Memo:	1/24/08 - Raphael Ketani. I spoke with Jeff Bohlen of EnviroTract (631) 924-3001. He said he represented the potential buyer, Krzysztof Kielan, Millenium Development and Construction, LLC, 57 Ballard Street, Valley Stream, NY, 11580. He said that the site is still an active cabinet making business and is owned by Henryk Zawojek. Mr. Bohlen went on to say that the site is a 1 story commercial building. There is a gas tank (UST) in the building and a dispenser and remote fill outside. All three are out of service. Three borings were performed, one at each part of the fuel system. There are low hits of BTEX in the soil which are below TAGM. Two wells were installed. One well had 0.73 ppb benzene and one well had 1.3 ppb benzene. Total xylenes were 6.80 ppb. The site has an E designation, but no one has been assigned to the case. The contact is Dan Cole, Deputy Director, NYC DEP, 59-17 Junction Blvd., 11 Floor, Flushing, NY, 11373. His phone number is (718) 595-4536. A CSL was sent to Mr. Zawojek with a c-c to Mr. Cole. 3/5/08- DEC Piper - I met Envirotrac and sub contractor AARCO, onsite today. They were uncovering at least 1 550 ust that contained gasoline for motor fueling. They will remove tanks soil and piping and collect endpoints to be submitted in closure report. 3/27/08- DEC Piper recieved and reviewed closure report. Approx 19 tons of soil were removed. Endpoints were below tagm. This spill is closed. See e-docs if warranted.
Remarks:	phase two and found contaminated soil

DEC Memo:	8/05-Spoke with A-1 Crown leak. Will get back to me with the owner information. 9/05-Spoke to Stephanie Eisenberg. tank is no longer in use. Will send in paperwork. S. Scharf 4/06- Called stepahnie Eisenberg- reminded her to send in the paperwork that tanks is empty and building now uses gas. 9/14/06 called Stephanie Eisenberg (owner) - left message. bf 9/21/06 ttf letter sent to S. Eisenberg. bf 4/29/09 On 3/30/09, received letter from Mark Salamack of PTC. Tank failed because of many connections to heaters throughout the building were not properly sealed off. No contamination found when tank was removed. No odors or staining of soil found. Three samples taken from under the tank. Minor exceedances in 1 Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene. NFA. bf

DEC Memo:	Site is being excavated under an E designation with the city because of lead contamination. One of the dump trucks hit a pylon and ruptured a diesel saddle tank. Area was soil, but was contained as best they could. ABC Pumped out the puddles & scraped up the contaminated soils. The area is being excavated and end point samples will be taken. Kevin Brussee will forward a spill closure report to DEC within the next couple of weeks. 05/21/14-Hiralkumar Patel. found report dated 05/06/10. as per the report, about 100 gal diesel spilled into construction site due to puncture in saddle tank on dump truck. contaminated soil was removed and endpoint samples were collected. no contmaination found in endpoint samples. based on available information, case closed administratively.
Remarks:	A dump truck drove over a obstacle puncturing its fuel tank spilling its fuel onto the soil. A vac truck is enroute, and soil will be removed at a later date.

SWIS: 2401
Town: New York City
Record Added Date: 11/02/2015
Record Updated Date: 10/21/2022
Update By: JBSWARTO
Site Description: Location: The site is located in an urban area in the Williamsburg section of Brooklyn (Kings County) on the northeast corner of North 10th Street and Roebling Street. Site Features: The site was formerly developed with two single-story industrial buildings and two smaller one-story structures, which are surrounded by parking areas. The buildings were demolished in May 2018. No water bodies are present on site. A mixed-use commercial and residential building is currently under construction on the site. Current Zoning and Land Use: The site is a parcel currently undergoing redevelopment within a special mixed use zoning district (M1-2/R6A), which is characterized by light industrial use (woodworking shops, repair shops, storage facilities) and allows for mixed-use residential buildings. The surrounding parcels are currently used for a combination of residential, commercial, transportation, and open park space. Past Use of the Site: A review of Sanborn Fire Insurance maps show that the site was used for manufacturing and industrial operations that include a dry color and paint storage facility, a varnish research works, and a chemical warehouse. The 1942 Sanborn map also identified one benzene and two gasoline underground storage tanks (USTs). Prior uses of the site that appear to have led to contamination are the varnish research works and USTs, both of which are associated with the use of chlorinated solvents that have potential for release to the environment. Site Geology and Hydrogeology: Site elevation ranges from about 9 to 13 feet above sea level and gradually slopes downward to the east. The subsurface stratigraphy consists of historic fill to about 4 feet below grade surface (bgs), underlain by brown sand, red clay, brown clay, black gravel, and black/brown silt. Predominant geological surface features were not reported and bedrock was not encountered during the 2015 investigation. Depth to groundwater ranges from about 6 to 7 feet bgs and appears to flow towards the west. The site is located within a Zone AE designated flood zone, which is identified as a high risk flood area.
Env Problem: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs, trichloroethene, and its breakdown products, zinc, nickel, arsenic, mercury, and lead in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for residential use to 15 feet below ground surface. Residual contamination in the soil and groundwater is being managed under an local groundwater controls. Prior to Completion of Remediation: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals during the Remedial Investigation. Polychlorinated biphenyls (PCBs) and pesticides were also analyzed for during the preliminary investigation and were not found to exceed standards. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include trichloroethene (TCE) and its breakdown products, cis-1,2-dichloroethene (DCE) and vinyl chloride, lead, mercury, arsenic, and SVOCs (e.g. benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene). Soil-Metals, such as lead, mercury, and arsenic, were found across the Site in shallow and deep soils. Concentrations of arsenic found on

215 NORTH 10TH STREET (Continued) **S121933762**

Site (maximum of 95.4 parts per million [ppm]) significantly exceeded the soil cleanup objective (SCO) for unrestricted use (UUSCO) and restricted residential use soil cleanup objective (RRUSCO) (13 and 16 ppm respectively). Lead found on-site (maximum concentration of 5,630 ppm) exceeded the UUSCO and RRUSCO (63 and 400 ppm). Concentrations of mercury found on-site (maximum of 160 ppm) significantly exceeded the UUSCO and RRUSCO (0.18 and 0.81 ppm respectively). SVOCs (mostly polycyclic aromatic hydrocarbons (PAHs) were noted mainly in shallow soils throughout the site, and one deep soil location on the northern portion of the site. Concentrations of SVOCs, such as benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene had maximum concentrations ranging from of 5.1 ppm to 6.5 ppm which exceeded the UUSCO and RRUSCO (all contaminants are 1 ppm for both the UUSCO and RRUSCO). TCE was noted on the northern portion of the Site in shallow soils with a maximum concentration of 30 ppm which exceeds the 0.47 ppm UUSCO and the 21 ppm RRUSCO. Vinyl chloride was noted in shallow soils with a concentration of 1.6 ppm; which exceeds the 0.02ppm UUSCO and the 0.9 ppm RRUSCOs. Other volatile organic compounds noted that exceeded the UUSCO include 1,2,4-trimethylbenzene, methyl ethyl ketone, cis-1,2-dichlorothene (DCE), naphthalene, and tetrachloroethene. Groundwater - TCE (maximum concentration of 21 parts per billion [ppb]) and its associated degradation products (DCE at 40 ppb) are found in the groundwater on the central and southern portion of the site, exceeding the groundwater standard of 5 ppb. It is suspected that these contaminants may migrate off-site. Dense Non-Aqueous Phase Liquid (DNAPL) was noted in a central monitoring well (MW-3) during the preliminary investigation, but was not seen during the Remedial Investigation. SVOCs, such as benzo(a)anthracene (maximum of 0.45 ppb), chrysene (maximum of 0.48 ppb), and benzo(b)fluoranthene(maximum of 0.6 ppb), were noted to be greatest at the eastern (most downgradient) monitoring well (exceeding the standard of 0.002 ppb for all named contaminants), and potentially are migrating off-site. Contaminants in this class exceeded the groundwater standards in all wells. Metals, such as lead, mercury, and arsenic, were found across the Site in groundwater. Concentrations of total and dissolved arsenic were found to exceed (maximum of 120.6 ppb) the groundwater standard (25 ppb) in MW4. Concentrations of total lead (maximum of 359 ppb) were found to exceed the groundwater standard (25 ppb) in 16MW2 and 16MW3. Concentrations of total mercury were found to exceed (maximum of 20.05 ppb) the groundwater standard (0.7 ppb) in 16MW2. Additional metals found to exceed the groundwater standard were total and dissolved nickel and zinc. Soil Vapor - TCE was detected at significantly elevated concentrations, up to 243,000 micrograms per cubic meter (ug/m3). PCE was detected at significantly elevated concentrations up to 7,730 ug/m3. Carbon tetrachloride was noted at a maximum concentration of 6,350 ug/m3 and 1,1,1-trichloroethane was noted with a maximum concentration of 6,000 ug/m3. Soil vapor samples were collected at 6 feet below sidewalk grade. Additional soil vapor and soil vapor intrusion sampling is being conducted to determine whether actions are needed off-site to address exposures associated with soil vapor intrusion.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with contamination remaining at the site. Investigation and remediation of offsite contamination will be conducted under a separate program.

Update By: JBSWARTO
Site Description: The following Site Description is for the associated BCP on-site: Location: The site is located in an urban area in the Williamsburg section of Brooklyn (Kings County) on the northeast corner of North 10th Street and Roebling Street. Site Features: The site was formerly developed with two single-story industrial buildings and two smaller one-story structures, which are surrounded by parking areas. The buildings were demolished in May 2018. No water bodies are present on site. A mixed-use commercial and residential building was constructed on the site. Current Zoning and Land Use: The on-site is a parcel that was redeveloped within a special mixed use zoning district (M1-2/R6A), which is characterized by light industrial use (woodworking shops, repair shops, storage facilities) and allows for mixed-use residential buildings. The current on-site land use is a mixed-use commercial and residential building. The surrounding parcels are currently used for a combination of residential, commercial, transportation, and open park space. Past Use of the Site: A review of Sanborn Fire Insurance maps shows that the site was used for manufacturing and industrial operations that include a dry color and paint storage facility, a varnish research works, and a chemical warehouse. The 1942 Sanborn map also identified one benzene and two gasoline underground storage tanks (USTs). Prior uses of the site that appear to have led to contamination are the varnish research works and USTs, both of which are associated with the use of chlorinated solvents that have potential for release to the environment. Site Geology and Hydrogeology: Site elevation ranges from about 9 to 13 feet above sea level and gradually slopes downward to the east. The subsurface stratigraphy consists of historic fill to about 4 feet below grade surface (bgs), underlain by brown sand, red clay, brown clay, black gravel, and black/brown silt. Predominant geological surface features were not reported and bedrock was not

NYSDEC (Continued) **S123661448**

	encountered during the 2015 investigation. Depth to groundwater ranges from about 6 to 7 feet bgs and appears to flow towards the west. The site is located within a Zone AE designated flood zone, which is identified as a high risk flood area.
Env Problem:	Prior to completion of remediation: Soil contamination was not identified in off-site area. Groundwater was analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, Pesticides, and PFAS during the Site Characterization. Indoor air was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include PFOA, benzene, and methylene chloride. Groundwater Benzene and PFOA were found in the off-site area moderately exceeding their respective standards in groundwater (1 ppb and 10 ppt). The greater concentrations were seen in wells downgradient of the on-site and in the deeper monitoring wells (15-20 ft bgs). Indoor Air TCE, carbon tetrachloride, and methylene chloride were detected at elevated concentrations in indoor air. TCE was detected at elevated concentrations up to 2.7 ug/m3. Carbon tetrachloride was noted at a maximum concentration of 0.58 ug/m3 and methylene chloride was noted with a maximum concentration of 90 ug/m3. Post-Remediation: Remediation at the on-site is complete to Track 2 standards and received a COC in 2020. It did not require a site management plan. People are not exposed to the contaminated groundwater because the area is served by a unimpacted public water supply. Mitigation was completed at the off-site area to control soil vapor intrusion.
Health Problem:	Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion.

DEC Memo:	2/27/2019 - Feng - Duty Desk. Spoke to DEP Okoli who found the spill while responding to a sewage complaint. He stated that it is a construction site and they are doing excavation now. There is heavy equipment which broke down and spilled oil on the soil. He could not quantify how big the spill is. He could not provide photo picture nor the contact information of any personnel at the site. NYCDEP Okoli 347-672-6059 Searched the database and found Spill 15-05078 and Superfund 224229. Talked to Jane O'Connell and she said the only active one is C224229 for this address. She

NYSDEC (Continued) **S123661448**

had unsuccessful attempts to call Albany. She recommended to email Melissa Sweet and copied Eric
Obrecht and John Swartwout. email to Melissa Sweet Hi Melissa, We received the above referenced
spill reported this morning. I spoke to DEP Okoli who found the spill while responding to a sewage
complaint. He stated that it is a construction site and they are doing excavation now. There is
heavy equipment which broke down and spilled oil on the soil. He could not quantify how big the
spill is. He could not provide photo picture nor the contact information of any personnel at the
site. I searched the database and found Spill 15-05078 and Superfund 224229. I talked to Jane and
she said the only active one is C224229 for this address. So I am asking if you can call the
consultant PM to see what happened and if anything done to address the spill. If you need Region 2
staff to inspect the site, let us know. 2/27/19-Lin-Responded to site regarding report of an oil
spill from DEP. Spoke to the site representative and was informed that someone tipped over a bucket
of hydraulic oil (less than 5 gallons) last week. They did not notice the spill right away due to a
snow event last week. They put down some speedy dry on the location of the spill. There was no
petroleum odor when I was on-site. Case closed.

Remarks: found in roadway

Updated By:	JHOCONNE
Site Description:	Location: The site is located at 215 North 10th Street in the Borough of Brooklyn, NY. The site is bordered on the south by North 10th Street with residential buildings on the opposite side of the street, to the west by a parking garage, to the north by a six story residential building, and to the east by Roebling Street with residential buildings on the opposite side of the street Site Features: The Site currently developed with one-story industrial building, two smaller one-story structures and parking areas. The Site is currently partially occupied by a motorcycle sales and service company and a marble importer/manufacturer. Current Zoning and Land Use: The site is currently zoned M1-2 (light manufacturing) with an R6A (residential) overlay. The site has a New York City e

215 NORTH 10TH STREET (Continued) **S121933833**

designation for hazardous materials as a result of recent rezoning from the previous MX8 zoning (heavy industrial use). Past Use of the Site: The Site appears to have been developed sometime prior to 1887 and has been occupied by various industrial uses including a dry color and paint storage, a varnish research works (which utilized two benzene tanks and a gasoline tank) and a chemical warehouse. The site is listed as an inactive facility in the Chemical Bulk Storage database as site no. 2-000052 for storage of muriatic acid, ammonium hydroxide and nitric acid. Site Geology and Hydrogeology: NYSDEC has not received any reports including these details.

Env Problem: SEE SITE NO C224229 FOR FUTURE UPDATES Nature and Extent of Contamination: Based on preliminary sampling, contaminants of concern include volatile organic compounds (VOCs) in soil, groundwater and soil vapor. Samples were analyzed for VOCs, semi-volatile organic compounds (SVOCs), metals, PCBs and pesticides. Soil A total of eleven (11) soil borings were installed and from which twenty-five (25) soil samples were collected for analysis. Petroleum and chlorinated solvent-related VOCs were identified in soil samples. Benzene was found at a maximum concentration of 5.7 parts per million (ppm), ethylbenzene at a maximum concentration of 10 ppm, 1,3,5-trimethylbenzene at a maximum concentration of 35 ppm, tetrachloroethylene (PCE) at a maximum concentration of 9.4 ppm, trichloroethylene (TCE) at a maximum concentration of 220 ppm, cis-1,2-dichloroethylene (cis-1,2-DCE) at a maximum concentration of 36 ppm, vinyl chloride (VC) at a maximum concentration of 0.46 ppm and naphthalene at a maximum concentration of 100 ppm. Groundwater As per the site map, total of four (4) monitoring wells were installed and sampled. Due to insufficient sample volume, only 3 of the wells were analyzed for VOCs (the likely downgradient well was not analyzed for VOCs). TCE was detected at a maximum concentration of 170 parts per billion (ppb), cis-1,2-DCE at a maximum concentration of 16 ppb, VC at a maximum concentration of 15 ppb and naphthalene at a maximum concentration of 31 ppb. Soil Vapor A total of six (6) soil-vapor probes were installed, including one location beneath the occupied on-site building. Petroleum and chlorinated solvent contamination noted in soil-vapor samples including PCE at a maximum concentration of 7730 micrograms per cubic meter (ug/m3), TCE at a maximum concentration of 243,000 ug/m3, cis-1,2-DCE at a maximum concentration of 11,000 ug/m3 and VC at a maximum concentration of 1650 ug/m3. Significant Threat: Determination of significant threat will be made following completion of the Site Characterization.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was K FOLEY 3/14/03 REASSIGNED FROM TIBBE TO VOUGHT. 12/1/03 Transferred from Vought to Foley. 10/16/06 reassigned from Foley to Tang. (Sun) 11/06/08: This spill case transferred from K. Tang to J. Kolleeny. Recommended to Vadim Brevdo that this spill be added to MTBE Pilot Project, Vadim agreed. - J. Kolleeny 02/05/09: Contacted Jay Semelmacher (emergency contact on PBS form, #2-247405). He didn't have any information regarding the site and suggested sending a letter to Spartan Petroleum. Spartan Petroleum Corp. 333 New Hyde Park Road Suite 201 New Hyde Park, NY 11042 (JK/KG) 02/09/09: Letter sent to Spartan requiring: 1. Tank closure assessment report, 2. Explanation of the cause of the release, 3. Subsurface investigation report, including a site location map and a site plan showing the former and current locations of underground storage tanks and soil and groundwater sampling locations. A North arrow and scale bar must be included on the site plan. If no tank closure report was prepared or no subsurface investigation previously conducted, the Department requires that a work plan for a site assessment including a soil and groundwater investigation be prepared and submitted. The work plan should include a site location map and a site plan showing proposed soil and groundwater sampling locations, as well as current and former tank locations. A North arrow and scale bar must be included on the site plan. Report due 03/19/2009. (JK/KG) 02/12/09: Rec'd letter

UNDERGROUND (Continued) **S102149558**

dated 02/10/2009 from Kevin Kleaka of Impact Environmental stating that this spill has already been
closed. Included was the UST Closure Report prepared by Impact dated 10/6/2004 and the No Further
Action Letter dated 10/7/2004. Upon review of the documents, the spill was closed by Kevin Hale
(central office) in 2004. At that time, this spill was not closed in the NYSDEC database. The spill
is now closed in the database and the UST closure report and NFA letter have been uploaded to
eDocs. (JK/KG)

DEC Memo:	5/7/2012 - KGH Spoke to Charlie Sossik of EBC. Site is a vacant gas station (over a decade) and the site of closed spill #9414922. Residual soil contamination encountered outside the footprint of former excavation during Phase Two Investigation for prospective buyer. Photo of site from Google Earth entered into EDOCs. According to EBC groundwater beneath the site was clean providing further evidence that remedial efforts at the site were largely successful. For further information please refer to spill # 9414922. Spill Closed. KGH
Remarks:	old gas station - large amount in soil - history spill - clean up pending - underground tanks - were removed a while ago old spill # 94-14922

Latitude:	Not reported
Longitude:	Not reported
DEC Memo:	7/28/2015 - Feng - Duty Desk. Talked to Kim Somers of EBC (631-504-6000). The site is being developed under the OER BCP program. OER has approved the RAWP already. They have installed borings/wells and found soil and groundwater contamination. Soil consist of historical fill and 1,000 ppb benzene, 1,600 ppb toluene at 1-2 feet. Groundwater was found to have 420 ug/L MTBE and SVOCs. DTW is at 5-7 feet. They probably start the excavation in 1 month pending the Notice to Proceed letter from OER and the DOB's permit. The investigation was done in 2/2015 and EBC reported it to OER and reported to DEC now. The RAWP calls for excavation of 10 feet in the north portion, 3 feet in the south portion and no excavation in the 25 feet of midsection. The RAWP calls for vapor barrier also. They are building a 4-story mixed use building which expand the existing building. Partial cellar to 10 feet for the 25 feet of the new building. Contact: EBC, Kim Somers, KSomers@EBCIncNY.com NYCOER, Shaminder Chawla, ShaminderC@dep.nyc.gov Horase Zhang, 212-788-8484 Discussed with the runner K. Patel and spill is assigned to K. Patel. 07/28/15-Hiralkumar Patel. alternate address: 202-226 N 10th Street no PBS or other spill records found. Shirley Dorto / Joseph A. Dorto **property owner** 39 Linden Street Malverne, NY 11565 Kimberly Somers Environmental Business Consultants Ph. (631) 504-6000 Fax (631) 924-2870 email: ksomers@ebcincny.com 07/29/15-Hiralkumar Patel. received reports from Kim. abstract of Phase I: - according to the sanborn maps, the site appears to have been originally developed sometime between 1887 and 1905 with two, one-story structures identified as sheds with an office, and an attached two-story structure in the southern rear portion of the lot - site appears to have been redeveloped

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

in 1970 with the currently existing, one-story industrial warehouse building - the building is
slab-on-grade - site was identified as a private garage (1951, 1965), an auto repair use (1978) and
a warehouse (2007) - no ASTs or evidence of USTs were observed - site was assigned an E-designation
hazmat ---------- abstract of RIR: - proposed future use of the site will consist of the
redevelopment of the existing structure in two, 4-story mixed use (commercial and residential)
buildings with a mezzanine level and partial cellars - the cellar level will require excavation to
a depth of approx. 11 ft bg across the first 36 ft of the site from N 10th St - the first floor
sunken level in the rear 50 ft portion of the building will require excavation of at least 3 ft bg
- elevation of the site is approx. 14 ft - water table is present at a depth of approx. 7 ft bg -
installed nine borings (SB1 through SB4 on 07/19/14 and SB5 through SB9 on 02/11/15) - borings SB1
through SB4 were installed to a depth of 16 ft bg; borings SB5 through SB7 were installed to a
depth of 15 ft bg; boring SB8 was installed to a depth of 7 ft bg and boring SB9 was installed to a
depth of 10 ft bg - borings installed in Feb. 2015 were at or in close proximity to previous
borings installed in Jul. 2014 (SB5 near SB4, SB6 near SB3, SB8 near SB2, SB9 near SB1) -
stratigraphy of the site consists of 3 to 5 ft of historic fill, underlain by native brown sand -
no PID readings above background concentrations were detected (but as per borings logs, PID values
and odors were detected in borings SB5 and SB7) - total of fourteen (14) soil samples were
collected for VOC and SVOC analyses: one from borings SB1 through SB4 (shallow soil samples from
SB1 through SB4 were not analyzed for VOC/SVOC) and two from borings SB5 through SB9 - three (3)
temporary 1-inch diameter groundwater monitoring wells (MW1 through MW3) were installed to a depth
of 15 ft bg; with 20 ft screen at MW2 and 10 ft screen at MW1 and MW3, set to intersect the water
table - free product was noted in GW2 (or MW-2??) during the Feb. 2015 sampling. the thickness of
the product layer was not measured - well GW2 installed in boring B7 where contamination noted in
shallow soil ------- - installed four soil gas implants to a depth of approx. 5 to 6 ft bg and
collected four soil vapor samples - found some VOC contamination in soil samples, with maximum at
0-2 ft in boring SB7 but no contamination noted on deeper soil sample (at 11-13 ft bg) in SB7. the
deeper soil sample was collected from below the water table and free phase product noted in well
GW2 which was installed at/near SB7 ---------- - found SVOC contamination in almost all soil
samples, mostly in shallow soil samples - free phase product noted in

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

well GW2 --------- - some
VOCs detected in soil vapor samples (maximum: 47.9 ug/m3 in SG-3) soil analyticals:
----------B1----------B2----------B7 13-14 ft 8-10 ft 0-2 ft
Benzene----------340*----------1,000
Toluene----------1,600
Xylene----------540---------940--------1,640
MTBE----------680*--------570*
* - higher reporting limit the submitted RIR has following information incorrect, confusing or
missing: - as per table 1, monitoring wells were installed to a depth of 15 feet below grade; but
as per text on page #8, wells were installed with 20 feet of screen at MW2 - as per text on page
iii, groundwater flow is west-northwest; but as per figure 9, groundwater flows to the east - as
per text on page 8, no PID readings above background concentrations were detected; but as per
borings logs, PID values and odors were detected in borings SB5 and SB7 - report missing detailed
boring logs for soil borings SB1 through SB4 and well installation logs - as per table 6, 420 ppb
of MTBE was detected in groundwater sample from well MW2 during sampling in July 2014; but as per
the lab report, MTBE was non-detect abstract of RAWP: - will remove any USTs encountered during
excavation - will collect and analyze endpoint samples - dewatering will occur - will install
waterproofing/vapor barrier system below the concrete slab of the building as well as behind
foundation walls 08/04/15-Hiralkumar Patel. 11:07 AM:- spoke with Kim. informed her about
missing/confusing/incorrect information in the remedial investigation report. asked her to submit a
revised report. also asked her about status of monitoring wells. informed her that the department
requires re-gauging of existing wells to confirm depth of groundwater and product thickness. 11:11
AM:- spoke with Mr. Finnican. he leased this property. inquired him about reason for not reporting
spill in July 2014 when contamination was detected first time. he mentioned that EBC was handling
this case from beginning and NYC OER was aware of the findings. asked him to provide contact
information for property owners. Thomas Finnican **leasee** 202 North 10th LLC. 144 North 7th
Street, Suite # 408 Brooklyn, NY 11249 Ph. (646) 688-5144 email: tfinnican@patoma.com 11:33 AM:-
sent email to Kim and Mr. Finnican. asked Kim to submit revised remedial investigation report
including correct/missing information and results of re-gauging of existing wells to confirm depth
of groundwater and product thickness. asked Mr. Finnican to submit contact information for property
owners. email copied to OER Chawla and Charles Sosik. 11:48 AM:- sent email to Kim and Mr. Finnican

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

and asked them to submit signed copy of RAWP. email copied to OER Chawla and Charles.
08/06/15-Hiralkumar Patel. 8:57 AM:- sent email to OER Chawla requesting call back to discuss spill
notification issue. 08/07/15-Hiralkumar Patel. received message from Hanna Moore (at 5:36 PM on
08/06/15) from OER. she mentioned that OER was informed about contamination at the site in Mar.
2015 and since then they have asked property owner/operator to report spill. 08/19/15-Hiralkumar
Patel. 9:05 AM:- sent email to Kim and Mr. Finnican. asked Kim to submit revised report and signed
copy of RAWP along with results of re-gauging of existing monitoring wells. asked Mr. Finnican to
submit property owners' contact information. email copied to OER Chawla and Charles.
09/16/15-Hiralkumar Patel. 10:49 AM:- spoke with Kim and inquired her about revised RAR and signed
RAWP. she mentioned that she has sent link to those documents on 08/28/15, but I have not received
it. asked her to resend it. also asked her about product thickness in impacted the well. during
regauging, they found 0.03 ft of product. Kim mentioned that they have received Notice to Proceed
from NYC OER. 10:56 AM:- spoke with Mr. Finnican and asked him to provide property owner's contact
info. 10:56 AM:- received email from Kim including copy of OER's Notice to Proceed letter. searched
online and found number for property owner. 11:14 AM:- spoke with Ms. Dorto (516-887-1006) and
informed her about open spill case at the site. she mentioned that the site has been leased out and
she asked to contact leasee. 11:24 AM:- received email from Kim including GW elevation table and
map. as per the map, groundwater flows to the north and well MW2 is the downgradient well. there is
typo in GW elevation table. as per depth to water and depth to product data, 7.85 ft of product
noted in well MW-2. 11:32 AM:- spoke with Kim and informed her about typo in elevation table. she
will submit revised one. also asked her to submit RIR and RAWP via mail. 11:51 AM:- received email
from Mr. Finnican including Mr. Dorto's phone number. Shirley Dorto / Joseph A. Dorto **property
owners** 39 Linden Street Malverne, NY 11565 Ph. (516) 887-1006 (516) 643-0133 received revised RIR
and signed copy of RAWP. 12:11 PM:- received email from Kim including revised GW elevation table
and map. after using correct information from field notes, groundwater flow found towards the
northeast. 11/20/15-Hiralkumar Patel. 11:02 AM:- spoke with Kim inquiring updates. she was out of
office and will call back next week after reviewing file.
12/08/15-Hiralkumar Patel. 1:49 PM:- sent
email to OER Hannah inquiring update. email copied to OER Shaminder.
12/10/15-Hiralkumar Patel.
2:53 PM:- spoke with Kim. she mentioned that the developer has

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

received notice to proceed from NYC
OER, but project has not started yet. 2:56 PM:- tried Mr. Finnican's phone number multiple times,
but no response. 2:58 PM:- spoke with OER Hanna. she has not heard from property developer yet. she
checked NYC DOB record and noted that the developer has not received required DOB permit yet.
03/31/16-Hiralkumar Patel. 8:58 AM:- spoke with Kim and inquired her about current status. she
mentioned that site redevelopment is on hold. asked her to re-gauge existing wells.
04/01/16-Hiralkumar Patel. 2:54 PM:- received email from Kim. she mentioned that they are going to
the site next week to re-gauge the monitoring well. she inquired if product sample needs to be
collected for fingerprint analysis, if found in monitoring well. 3:42 PM:- sent email to Kim and
asked her to collect product sample for fingerprint analysis, if found. 04/26/16-Hiralkumar Patel.
9:21 AM:- received report from EBC. abstract: - three monitoring wells (MW-1 through MW-3) were
gauged on 04/04/16 - found approx. 1-inch product in well MW-2 - depth to groundwater ranges in
depth from 5.85 to 7.94 ft bg - depth to groundwater in MW-2 could not be determined due to
thickness of product present - product sample from MW-2 was collected for fingerprint anslysis -
lab findings for the petroleum ID on the oil sample from MW-2 was inconclusive, with majority of
mass listed as unidentified . the chromatogram in general, however was noted to resemble that of
motor oil ---------- 12:05 PM:- spoke with OER Hannah inquiring about current status of project in
OER file. she will talk to project manager (Horace Zhang) and will call back. 04/28/16-Hiralkumar
Patel. 9:31 AM:- spoke with Kim. inquired her about current status of the site. she mentioned that
the developer is revising redevelopment plans due to revised floodplain maps. 12:58 PM:- spoke with
Mr. Finnican. he mentioned that they have not received required permit from NYCDOB yet. due to
revised floodplain maps, now they will not create a cellar and on-site building will not be
demolished. a new footings will be installed to extend existing one-story building into four-story
building. as redevelopment plan changed and there will be no basement, need a revised RAWP. 2:38
PM:- sent letter to Mr./Ms. Dorto and Mr. Finnican requiring implementation of interim remedial
measures (weekly well gauging/product removal) and determination of site-specific groundwater flow
direction (via installation of additional well). also asked them to collect endpoint samples, if
soil excavation occurs. asked them to submit report, including plans for remediation of all
contaminated media and vapor mitigation details, by the end of 07/01/16. letter emailed to Mr.

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

Finnican, OER Shaminder and Kim. 05/26/16-Hiralkumar Patel. received email from OER Horace Zhang
(at 5:21 PM on 05/25/16) including summary of meeting between OER, property owner and property
owner's consultant. he mentioned that additional investigation scheduled for Friday 5/27 to -
install 1 additional groundwater well (MW4) to determine flow direction - convert MW2 to a 2 inch
well for increased product recovery - collect soil samples to delineate the extent of contamination
in 10 increments outward from MW2 he mentioned that because the development plans don t require
site-wide excavation, owner is also exploring the possibility of conducting test pits to delineate
the contamination/ potentially identify source.
construction/remediation is expected to begin in 2
to 3 months. the partial cellar is being eliminated to comply with DOB flood zone requirements. new
plans with finalized excavation depths will be submitted when the foundation design is completed.
11:40 AM:- received email from Kim. she mentioned that the following steps will be implemented at
the site to address the free-phase petroleum identified in monitoring well MW2: 1) installation of
a permanent groundwater monitoring well in the vicinity of MW2 2) replacement of existing
monitoring well MW2 with a 2-inch diameter well to improve product recovery efforts 3) gauging all
monitoring wells on-site and implementing product recovery of any free-phase product present 4)
installation of test borings around MW2 at 10ft intervals to delineate the extent of the
contamination. soils from each test boring will be screened with a PID and inspected for physical
evidence of petroleum contamination. test borings will extend from the location of MW2 in 10-ft
intervals until field conditions/PID readings do not indicate evidence of petroleum contamination
5) soil samples will be collected from the driest deepest depth of the test borings where visible
contamination is not present to confirm the horizontal extent of the petroleum-impacted soils. 6)
soils from the well installations will be screened continuously with a PID. soils samples from the
deepest driest interval and the interval with the highest PID reading will be retained for
laboratory analysis of VOCs and SVOCs (CP-51) Kim mentioned that the above work is scheduled to
commence at the site tomorrow, Friday 5/27. well gauging and product recovery efforts will continue
on a weekly basis. documentation of the weekly gauging/product removal will be submitted to NYSDEC
and OER for review. Kim submitted a site map with proposed well and test pit locations.
05/27/16-Hiralkumar Patel. 12:30 PM:- visited site and met Tom from EBC. he drilled couple of
borings, including proposed well MW4, around existing well MW2. well

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

MW4 is installed west of well
MW2, where some oil staining noted. Trans Boro Fuel Oil is located to the west of the subject site.
Trans Boro Fuel Oil 481 Driggs Ave (alternate address: 198-200 N 10th St) Brooklyn, NY PH. (718)
389-1466 no PBS or spill record found for 481 Driggs Ave.
06/02/16-Hiralkumar Patel. received email
from Kim (at 10:04 AM on 06/01/16) including summary of observations during well/borings
installation on 05/27/16. stained soils/odors were detected in four test borings west of MW2 at
approximately 8-10 ft bg and extending to the western site boundary. PID readings were highest in
the boring where MW4 was installed, approximately 10 ft west of MW2, 40 ppm at 8-10 ft bg. borings
installed 10 ft north and south of MW2 contained minor staining at the 8-10 ft interval and PID
readings were low (0.0-1.8 ppm). test boring to the east of MW2 did not have any visual or
olfactory evidence of petroleum-impacted soils and PID readings at the 8-10 ft interval were 0.0
ppm. total of 12 soil samples were retained for laboratory analysis of VOC and SVOCs. the four
monitoring wells at the site were gauged and sampled on May 31, 2016. a less than 1 layer of thick
free-phase petroleum product was detected in MW2 and MW4. four groundwater samples were retained
for laboratory analysis of VOC and SVOCs. groundwater flow direction was reassessed and appears to
flow towards the northeast. 9:44 AM:- spoke with a person (who did not provide his name) at Trans
Boro Fuel. he mentioned that they only park fuel oil truck at the site and don’t have any storage
tanks or repair shop at 481 Driggs Ave. 06/10/16-Hiralkumar Patel. 8:53 AM:- received email from
Kim including results of weekly product removal conducted on 05/27/16 and 06/08/16. 0.03 ft of
product found in well MW2 on 05/27/16. on 06/08/16, depth of product in MW2 could not be determined
because the probe was coated with product. total of 24 oz of product/water mix was removed from MW2
on 06/08/16. 06/17/16-Hiralkumar Patel. 1:24 PM:- received email from Kim including results of
weekly well gauging conducted on 06/16/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. depth of
product in MW2 could not be determined because the probe was coated with product. total of 28 oz of
product/water mix was removed from MW-2. 06/28/16-Hiralkumar Patel. received email from Kim (at
4:32 PM on 06/27/16) including results of weekly well gauging conducted on 06/23/16. wells MW-1,
MW-2, MW-3 and MW-4 were gauged. depth of product in MW2 could not be determined because the probe
was coated with product. total of 1/2 gal of product/water mix was removed from MW-2. faint reading
indicating product noted in well MW-4. 06/30/16-Hiralkumar Patel. 8:12 AM:- received email from Kim

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

including sampling report for delineation work conducted on 05/27/16. abstract: - installed total
of eight soil borings (SBD1 through SBD8) within the vicinity of MW2 to horizontally delineate
extent of petroleum-impacted soils - soil borings were installed to a depth of 10 ft bg - visually
contaminated soil (grey/black stained) and PID readings were identified in three soil borings
(SBD4, SBD6 and SBD7), all of which are located west of MW2 ----------
- as per site map, boring
SBD2 was installed to replace well MW2 - total of 12 soil samples were collected for analysis: two
each from SBD1, SBD3, SBD4, SBD6 and SBD7; and one each from SBD5 and SBD8 - installed a new 2-inch
well MW4 west of existing well MW2 - existing 1-inch well MW2 was replaced with a 2-inch well -
wells were installed with 10 ft of screen - depth to groundwater is approx. 7 ft bg - direction of
groundwater flow appears to flow towards the east/northeast ----------
- four groundwater samples
were collected - free-phase product is present in wells MW2 and MW4 - petroleum-impacted soils
appear to be concentrated in the area of MW2, extending west towards the property line at the 6-10
ft bg interval - found sandy silt with clay with ash in soil borings - less than 10 ppm recorded on
PID in soil borings, excepts SBD4 (40 ppm at 8 ft bg) and SBD7 (29.6 ppm at 8 ft bg) - no
contamination noted in groundwater samples - found VOC contamination in deeper soil samples from
SBD1, SBD4, SBD6 and SBD7 - highest contamination noted in boring SBD6 which is along the western
boundary of the site soil analyticals:
----------SBD1----------SBD4----------SBD6----------SB

recommendations from contractor: -
continuation of product removal effort on a weekly basis until site redevelopment begins -
excavation to a depth of groundwater in the area of MW2 and MW4, without compromising integrity of
existing structure or the adjacent structure, during site excavation activities for the proposed
new building footings - collection and analysis of endpoint samples the report does not include any
details about vapor mitigation efforts. 07/01/16-Hiralkumar Patel. 1:33 PM:- received email from
Kim including results of weekly well gauging conducted on 06/30/16. wells MW-1, MW-2, MW-3 and MW-4
were gauged. no solid tone was detected for either well, indicating no

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

product. but when the probe
was removed, there was trace amount of product on probe for both MW-2 and MW-4. 07/05/16-Hiralkumar
Patel. reviewed weekly well gauging data and soil/gw delineation
results. based on well gauging
reports, groundwater found at around 8 ft bg in well MW-1; and between 5 and 6 ft bg in wells MW-2,
MW-3 and MW-4. based on these, heaviest soil contamination noted in soil boring SBD6 was noted
below water table and no contamination noted in groundwater sample from well MW-4, which is less
than 10 ft away from borings SBD6. 10:42 AM:- sent email to Kim and asked her to submit a revised
RAWP as redevelopment plan has changed. email copied to Mr. Finnican. 10:45 AM:- received email
from Kim. she mentioned that RAWP will be revised once the finalized plans are received from the
developer. 07/11/16-Hiralkumar Patel. received email from Kim (at 1:53 PM on 07/08/16) including
results of weekly well gauging conducted on 07/07/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged.
no solid tone was detected for either well, indicating no product. but when the probe was removed,
there was trace amount of product on probe for MW-2. MW-4 had no trace product. 07/18/16-Hiralkumar
Patel. 9:53 AM:- received email from Kim including results of weekly well gauging conducted on
07/13/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. no solid tone was detected for either well,
indicating no product. but when the probe was removed, there was trace amount of product on probe
for MW-2. MW-4 had no trace product. 07/22/16-Hiralkumar Patel. 9:18 AM:- received email from Kim
including results of weekly well gauging conducted on 07/21/16. wells MW-1, MW-2, MW-3 and MW-4
were gauged. no solid tone was detected for either well, indicating no product. but when the probe
was removed, there was trace amount of product on probe for MW-2. MW-4 had no trace product.
08/05/16-Hiralkumar Patel. received email from Thomas Gallo (at 4:15 PM on 08/04/16) from EBC
including results of weekly well gauging conducted on 08/03/16. wells MW-1, MW-2, MW-3 and MW-4
were gauged. thick product encountered in MW-2. product coated interface meter probe preventing
depth to water reading in MW-2. trace product noted in MW-4. 08/31/16-Hiralkumar Patel. received
email from Thomas Gallo (at 8:12 PM on 08/14/16) including results of weekly well gauging conducted
on 08/11/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product encountered below
groundwater interface and in bottom 3 ft (12-15 ft bg) in MW-2. trace product noted in MW-4.
received email from Thomas Gallo (at 8:06 PM on 08/21/16) from EBC including results of weekly well
gauging conducted on 08/19/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

encountered in MW-2. trace product noted in MW-4. 09/01/16-Hiralkumar Patel. 9:31 AM:- received email from EBC including results of weekly well gauging conducted on 08/26/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product encountered in MW-2. trace product noted in MW-4. 09/12/16-Hiralkumar Patel. received email from EBC (at 8:52 PM on 09/11/16) including results of weekly well gauging conducted on 09/02/16 and 09/09/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product coated probe at MW-2 and trace product noted in MW-4 during both events. 09/23/16-Hiralkumar Patel. received email from EBC (at 5:40 PM on 09/22/16) including results of weekly well gauging conducted on 09/15/16 and 09/22/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product coated probe at MW-2 and some light staining on tubing from well MW-4 during both monitoring events. 10/13/16-Hiralkumar Patel. received email from EBC (at 7:09 PM on 10/12/16) including results of weekly well gauging conducted on 09/29/16. 0.03 ft of product noted in MW-2 and some light staining on tubing from well MW-4. 11/01/16-Hiralkumar Patel. received email from EBC (at 1:36 PM on 10/31/16) including results of weekly well gauging conducted on 10/12/16. 0.05 ft of product noted in MW-2 and some yellow staining on tubing from well MW-4. 11:45 AM:- received email from Kim including results of weekly well gauging conducted on 10/28/16. thick product coated probe at MW-2 and some yellow staining on tubing from well MW-4. 11/16/16-Hiralkumar Patel. 8:34 AM:- received email from Kim including results of weekly well gauging conducted on 11/04/16 and 11/11/16. thick product coated probe at MW-2 and some yellow staining on tubing from well MW-4 during both monitoring events. 11/23/16-Hiralkumar Patel. 11:08 AM:- received email from Kim including results of weekly well gauging conducted on 11/22/16. no product was detected with interface probe in MW-2, but mostly yellow oil mix in purged groundwater and thick product coated outside of tubing. no product in purged groundwater from MW-4, but some yellow staining on tubing. 12/05/16-Hiralkumar Patel. 12:30 PM:- received email from Kim including results of weekly well gauging conducted on 12/02/16. no product was detected with interface probe in MW-2, but mostly yellow oil mix in purged groundwater and thick product coated outside of tubing. no product in purged groundwater from MW-4, but some yellow staining on tubing. 12/13/16-Hiralkumar Patel. 2:44 PM:- received email from Kim including results of weekly well gauging conducted on 12/09/16. no product was detected with interface probe in MW-2, but thick product coated bottom and sides of tubing. no product in purged groundwater from MW-4, but some thick

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

product at the tip of tubing.
12/27/16-Hiralkumar Patel. 9:33 AM:- received email from Kim including results of weekly well
gauging conducted on 12/16/16. light film of product on interface probe in well MW-2. product seen
on bailer at 4 ft below groundwater interface in MW-2. MW-4 had no product in purged groundwater,
but some yellow staining on bailer and tubing. 01/10/17-Hiralkumar Patel. 10:44 AM:- received email
from Kim including results of weekly well gauging conducted on 01/09/17. 0.02 ft of product was
detected in MW-2 including thick film of product coated on interface probe. also thick product
lined inside and outside of tubing during purging of well. MW-4 had small amount of staining on
bottom, inside tubing from purging. 02/01/17-Hiralkumar Patel. 2:34 PM:- received email from Kim
including results of weekly well gauging conducted on 01/18/17 and 01/26/17. during both events, no
product detected with interface meter, but small particles of product in purged groundwater from
MW-2. also thick product lined inside and outside of tubing during purging of well MW-2. MW-4 had
small amount of staining on bottom, inside tubing during purging. 02/14/17-Hiralkumar Patel. 9:23
AM:- received email from Kim including results of weekly well gauging conducted on 02/02/17. small
amount of product in purged groundwater from wells MW-2 and MW-4. 02/27/17-Hiralkumar Patel. 9:03
AM:- received email from Kim including results of weekly well gauging conducted on 02/17/17 and
02/24/17. 0.01 ft of product noted in well MW-2 during both gauging events. no product found in
MW-4. 03/21/17-Hiralkumar Patel. 9:51 AM:- received email from Kim including results of weekly well
gauging conducted on 03/03/17 and 03/16/17. 0.01 ft of product noted in well MW-2 during both
gauging events. no product found in MW-4. 04/25/17-Hiralkumar Patel. received email from Kim
including results of weekly well gauging conducted on 03/23/17, 03/30/17, 04/06/17 and 04/20/17.
during all four gauging events, trace amount of product noted around casing in well MW-2. based on
gauging results, Kim proposes to install a filter sock in the well to reduce the frequency of
product removal. 05/04/17-Hiralkumar Patel. 2:31 PM:- spoke with Kim. informed her that based on
review of available information, the Department agrees with proposal of installation of filter sock
in affected well MW-2, but recommends sock in well MW-4 also as had product in past. Kim agrees
with it and proposes to monitor wells twice a month at beginning and modify frequency based on
monitoring results. asked Kim to send email including proposed well monitoring frequency. also
asked her to submit revised RAWP as site development plans have changed. 05/10/17-Hiralkumar Patel.

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

3:51 PM:- received email from Kim. she mentioned that based on the recent inspections at the site,
the majority of free-phase petroleum product has been removed via weekly purging efforts. remnants
of free-phase product are visible on product removal tubing over the last four rounds of removal,
which appears to be only from product coating on the PVC piping. Kim proposed installation of an
absorbent sock for monitoring wells MW2 and MW4 where free-phase product has previously been
detected. the socks at each well will be inspected on a bi-monthly basis. during each inspection, a
groundwater interface probe will be used to identify the presence of any free-phase product within
each of the wells. any free-phase product will subsequently be pumped out and drummed on-site. Kim
mentioned that there is no proposed cellar in the revised redevelopment plans; therefore, she will
be submitting a revised Remedial Action Workplan shortly. 3:58 PM:- received email from Kim
including link to revised redevelopment plans. 05/11/17-Hiralkumar Patel. 8:39 AM:- received email
from Kim including results of weekly well gauging conducted on 05/05/17. found 0.02 ft of product
in well MW2. Kim mentioned about report dated 04/27/17, but email included report for 03/16/17.
05/19/17-Hiralkumar Patel. 2:10 PM:- sent email to Kim and asked her to submit missing well
monitoring report for 04/27/17. 05/22/17-Hiralkumar Patel. 7:57 AM:- received email from Kim
including well gauging report for 04/27/17. found 0.01 ft of product in well MW2. 1:36 PM:- left
message for Kim. informed her that based on all available information, the Department agrees with
proposal to place absorbent socks in wells MW2 and MW4 and monitor those on bi-monthly basis.
inquired her about revised remedial action work plan.
06/14/17-Hiralkumar Patel. 9:41 AM:- received email from Kim including well gauging report for 06/07/17. found 0.02 ft of product in well MW2.
absorbent socks were installed in wells MW2 and MW4.
07/11/17-Hiralkumar Patel. received email from Kim (at 4:31 PM on 07/10/17) including link to revised redevelopment plans (previously submitted).
received email from Kim (at 4:37 PM on 07/10/17) including copy of a revised stipulation list (OER
document). summary: - revised stipulation list serves as an addendum to the RAWP - proposed
building will no longer feature a cellar level - excavation will be limited to approx. 3 ft bg
across the site for structural footings/pile caps, and to a 5 ft for an elevator pit - first floor
will feature a residential lobby and a retail/commercial unit - the mezzanine level above the first
floor will feature a mechanical room, retail space and an outdoor retail terrace - second through
fourth floors will features residential units - delineation and

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

remediation of two hotspots: 1)
mercury hotspot at sample B6, and 2) SVOC hotspot at sample B8 - a composite cover (comprised of
concrete foundation/slabs) will be placed over the entire footprint of the site - collection and
analysis of four (4) end-point samples from the bottom of the excavation to evaluate the
performance of the remedy with respect to attainment of Track 4 SCOs - a 20-mil waterproofing
membrane/vapor barrier will be installed beneath the structure's slab and along foundation
sidewalls the revised stipulation list (addendum to RAWP) does not include any discussion about
remediation of petroleum contaminated materials noted in area around wells MW2 and MW4. 12:18 PM:-
spoke with OER Shaminder and OER Horace and discussed submitted revised stipulation list. informed
Shaminder that the department requires remediation of petroleum contaminated materials noted in
area around MW2/MW4, collection of endpoint samples after remediation in area around MW2/MW4 and
installation of SSDS (if required by NYSDOH) based on known petroleum impact beneath the site.
12:31 PM:- sent email to OER Shaminder and OER Horace including above discussion. asked them to
provide a revised RAWP including the missing info. 07/13/17-Hiralkumar Patel. received email from
OER Shaminder (at 12:28 PM on 07/12/17) including updated briefing. he has asked EBC to prepare a
new RAWP including DEC requirements listed in email dated 07/11/17. email was copied to DOH Nathan
inquiring about SSDS requirement. 3:38 PM:- received email from DOH Nathan. he mentioned that SSDS
is not needed based on the fact that the structure will be slab on grade, proposed excavation of
hot spots, minimal detects in GW and soil vapor results.
08/04/17-Hiralkumar Patel. 11:09 AM:-
received email from OER Shaminder including revised draft RAWP. plan proposes excavation for
development to 3 feet across entire site; three hotspots removal for mercury, SVOCs and petroleum
soil; collection/analysis of endpoint samples; and installation of vapor barrier and an active
SSDS. 09/20/17-Hiralkumar Patel. 9:58 AM:- sent email to OER Shaminder and informed him that no
comments from DEC. asked him to submit final copy of RAWP and work schedule. email copied to OER
Horace. 09/28/17-Hiralkumar Patel. 10:36 AM:- received email from Kim. she mentioned that
developers will be commencing excavation in near future, but they are concerned about structural
integrity of existing foundation wall (which will remain as part of redevelopment) during
excavation of petroleum impacted soils. Kim proposed to either excavate soil in slope (which will
leave contamination in area of SBD6 in-place) or dug near the foundation wall to a depth of

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

groundwater and immediately backfill the excavation. Kim inquired about any further remediation needed if excavation extends to the groundwater and chemical oxidant applied in excavation prior to backfilling. 12:48 PM:- spoke with Kim and recommended her to excavate to water table near the foundation, only if it is safe (or using shoring). informed her that remediation of any remaining soil contamination beneath the water table may not be needed based on available soil and groundwater data. Kim will discuss excavation options with site developer. 11/01/17-Hiralkumar Patel. 1:07 PM:- received email from Kim including soil sample results summary table. she mentioned that the area of petroleum soil was excavated last week. soil endpoint samples were collected from the base of the excavation (10.5ft) and sidewalls. the excavation was extended to the north by 2-3 ft where initial endpoint samples failed to meet soil cleanup objectives. soil endpoint samples from the western sidewall and bottom sample also failed to meet soil cleanup objectives; these locations could not be excavated further without compromising the structural integrity of the adjacent foundation wall. the final depth of the excavation was completed to 10.5 ft. no staining was apparent on soils from the 10 ft below grade interval. prior to backfilling, a chemical oxidant was applied to the base of the excavation. report will be submitted soon. as per sample result summary table, endpoint sample from north sidewall showed presence of contamination which was removed via further excavation. some contamination noted in endpoint sample from west sidewall (3,390 ppb total BTEX) and bottom (305 ppb total BTEX). 11/30/17-Hiralkumar Patel. 12:33 PM:- Kim sent spill closure report via DEC's file transfer service. 12/06/17-Hiralkumar Patel. after reviewing all available information (product removal from impacted wells, removal of contaminated soil, results of endpoint samples, proposed installation of vapor barrier and an active SSDS), no further investigation/remediation is required in area around well MW2 where petroleum impact was noted. spill case can be closed upon receipt of confirmation for installation of proposed vapor barrier and SSDS, unless contamination noted in other areas during site's redevelopment. 10:07 AM:- left message for Kim. 10:17 AM:- sent email to Kim. informed her that no further investigation/remediation is required in the area around well MW2 where petroleum impact was noted. also informed her that the subject spill case can be closed upon receipt of confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact noted in other areas during site s redevelopment. asked her to provide estimated

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

schedule for installation of
vapor barrier/SSDS. email copied to Mr. Finnican, OER Shaminder and DOH Nathan. 10:30 AM:- received
email from Kim stating that Patrick Recio will be managing this project. Patrick Recio EBC Ph.
(631) 504-6000 email: precio@ebcincny.com 08/09/18-Hiralkumar Patel. 10:59 AM:- sent email to
Patrick inquiring project update. email copied to Mr. Finnican, OER Shaminder and OER Samantha.
12:04 PM:- received email from Patrick. he mentioned that there has not been much activity at the
site since December of 2017. there was minimal excavation of the elevator pits towards the front of
the site that were lined with Graceprufe 300R waterproofing/vapor barrier and inspected by EBC. a
few trucks of soil were removed from the site since beginning of 2018 and that material had no
evidence of petroleum contamination. the SSDS and the vapor barrier have not yet been installed.
07/16/20-Hiralkumar Patel. 11:31 AM:- sent email to Patrick inquiring updates. email copied to OER
Shaminder, OER Samantha, Kim and Mr. Finnican. 11:48 AM:- received email from Charlie Sosik from
EBC stating that Robert Bennett is currently managing project at EBC. 07/21/20-Hiralkumar Patel.
9:51 AM:- sent email to Robert inquiring updates. email copied to Charlie, OER Shaminder and OER
Samantha. Robert Bennett EBC Ph. (631) 504-6000 Ext. 116 email: rmbennett@ebcincny.com
07/22/20-Hiralkumar Patel. 9:07 AM:- received email from OER Shaminder. he mentioned that
remediation at the site started in October 2017 and development work was completed by January 2020.
OER recently (July 10th) reviewed final report and sent back comments. OER will send revised report
once available. 02/25/21-Hiralkumar Patel. 2:08 PM:- sent email to Robert and asked him to submit
report. email copied to OER Shaminder and Charlie. 2:21 PM:- received email from OER Shaminder
stating that they have provided comments on revised RAR last month and waiting on final report
soon. 04/14/21-Hiralkumar Patel. received email from OER Shaminder (at 3:52 PM on 04/13/21)
including link to remedial action report and requesting spill closure. he mentioned that following
activities occurred at the site: - performed Waste Characterization on July 17, 2017 - following
excavations were performed: excavation to 3 ft bg across the site. the elevator pit was excavated
to a final depth of 5 ft. in addition, a 6 ft by 6ft area around EP 1 (mercury hotspot) was
excavated an additional 6 inches and a 6 ft by 6 ft area around EP2 (SVOC hotspot) was excavated an
additional foot. - free product removal: from May 27 2016, to June 7, 2017, monitoring wells MW2
and MW4 were gauged weekly and any free-phase product present in the monitoring wells was removed

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

by bailer and containerized in a 55-gallon drum. absorbent socks were installed in both monitoring
wells on June 7, 2017, and weekly product removal efforts were decreased to bi-monthly until Site
excavation commenced - petroleum impacted soil removal: on October 23, 2017, the area delineated as
the petroleum hotspot was excavated using a track-mounted excavator to the fullest extent possible.
a 3 ft setback from the western foundation wall was required in order not to compromise the
integrity of the adjacent foundation wall. the final excavation area was approximately 22 ft by 22
ft. petroleum impacted soil was excavated to approximately 4 to 10.5 ft below grade. no odors or
staining were observed at the 8-10 ft below grade interval. EBC collected four sidewall endpoint
soil samples (Hot Spot S, Hot Spot W, Hot Spot E, Hot Spot N) and a bottom endpoint soil sample
(Hot Spot Bottom) from the petroleum hotspot excavation. to address the residual VOCs detected in
the endpoint soil samples, a powdered chemical oxidant was applied directly to the residual soil
and raked in with the excavator before backfilling - collected and analyzed seventeen (17) endpoint
samples from bottom of excavations and from hotspot areas to determine the performance of the
remedy with respect to attainment of Track 4 Site-Specific SCOs - track 4 remedy was achieved -
Composite cover - Vapor barrier; and - site management plan as per the report, a 20-mil thick vapor
barrier was installed beneath the building/elevator pits. the report also states that on
05/16/2019, OER determined that an active SSDS was no longer required at the site.
---------- 04/19/21-Hiralkumar Patel. 5:04 PM:- sent email to OER Shaminder and asked him
to call back to discuss reason for not installing SSDS. email copied to OER Samantha.
04/23/21-Hiralkumar Patel. 12:38 PM:- received email from OER Shaminder. he mentioned that OER
reevaluated soil and soil vapor contamination and agreed with development team that implemented
remedy (only vapor barrier and no SSDS) is protective of environment and public health. he also
stated that the development team will obtain one round of indoor and outdoor air samples prior to
spill closure. OER plans to issue Notice of Satisfaction this week for building occupancy and
Notice of Completion will be issued after spill is closed.
04/30/21-Hiralkumar Patel. as per the
RAR, remedial actions begun on 10/13/2017 and was completed on 01/06/2020. all endpoint samples
were collected in Oct. 2017 and those results were previously submitted in spill closure report
dated Nov. 2017. based on those samples results, the property owner/consultant were informed via
email on 12/06/2017 that no further investigation/remediation is

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

required in the area around well
MW2 where petroleum impact was noted, and the subject spill case can be closed upon receipt of
confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact
noted in other areas during site s redevelopment . OER reevaluated sample results and agreed not to
install a SSDS. a vapor barrier has been installed beneath the building. 10:25 AM:- sent email to
OER Shaminder. informed him that the submitted Remedial Action Report dated March 2021 includes
result of endpoint samples collected in/around Oct. 2017 and these sample results were already
submitted in the Spill Closure Report dated Nov. 2017. based on these sample results and other
information available at that time, an email was sent to Kim at EBC (copied to NYSDOH, NYCOER and
property owner) on 12/06/2017 stating Based on review of all available information, the Department
does not require further investigation/remediation in the area around well MW2 where petroleum
impact was noted. Please note that the subject spill case can be closed upon receipt of
confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact
noted in other areas during site s redevelopment. informed OER Shaminder that as NYCOER determined
no need for SSDS and a vapor barrier has been installed beneath the building, the Department will
wait for results of indoor/outdoor air sampling during the next heating season prior to considering
spill closure. asked him to provide air sampling schedule, once available. email copied to OER
Samantha and Kevin (EBC). 12:37 PM:- received copy of Notice of Satisfaction from NYC OER.
08/04/21-Hiralkumar Patel. 9:05 AM:- received email from OER Shaminder including an indoor air
sampling report. summary: - one indoor air (IA1) and one outdoor air (OA1) were collected - sample
IA1 was collected in the breathing zone at a height of 3-4 ft above the floor, from the rear of the
commercial space of the 202 N 10th St building - petroleum VOCs (max. 41.7 ug/m3 of Xylene) and PCE
(1.25 ug/m3) were noted in indoor air sample; similar compounds were also noted in outdoor air
sample 08/05/21-Hiralkumar Patel. 1:36 PM:- forwarded indoor air sampling report to DOH Nathan for
review. 08/06/21-Hiralkumar Patel. 10:28 AM:- received email from DOH Nathan stating that based on
remediation conducted at the site and the low levels of VOCs detected in indoor air, he does not
believe additional sampling will be necessary; however, should odors appear at a later date or
during the heating season, additional sampling may be warranted. 08/12/21-Hiralkumar Patel. case
closed based on review of all available information. 12:14 PM:- sent email to OER Shaminder and

LOT 9,TAXBLOCK 2306 (Continued) **S118141503**

Remarks: informed him about spill closure. email copied to OER Samantha. Phase 2 revealed contaminated groundwater and soil. Clean up is pending OER approval.

Date Record Added:	12/21/2024
Date Rec Updated:	06/06/2025
Updated By:	WBBENNET
Site Description:	Site Location: The site located at 1-9 Wythe Avenue, in the Greenpoint neighborhood of Brooklyn, NY. The 0.387-acre site is identified on the New York City tax map as Block 2641 Lot 4. The site is bound by Wythe Avenue followed by a vacant lot to the north, Banker Street followed by three 1-story industrial use buildings and a vacant lot to the east, North 15th Street followed by a 1-story and a 2-story industrial use buildings to the west, and the intersection of North 15th Street and Banker Street to the south. Site Features: The site is a triangular shaped vacant lot which formerly had three one-story manufacturing facilities located in the northern portion of the property. The former buildings were demolished in 2022. The site is currently under development. Current Zoning and Land Use: The site is zoned for M1-2 which allows for light manufacturing, commercial and residential uses. The surrounding properties are currently used for commercial and warehousing/manufacturing purposes. Past Land Use: The site was developed between 1916 and 1942 with a 1-story building noted as a paint and varnish manufacturer on the eastern portion, barrel storage on the western portion and manufacturing on the northern and central portions. In 1951 the barrel storage area was expanded to the southeastern portion of the site. Between 1965 and 1981 the layout of the site remained the same; however, the operations were updated as inflammable liquid canning. Between 1982 and 1993 the site use consisted of unspecified manufacturing, and an additional warehouse was erected in the southwest corner of the property. Recently the site was used for multiple commercial operations including active furniture woodworking and a kitchen counter remodeling shop. Site Geology and Hydrogeology: The stratigraphy of the site consists of approximately 3 feet of historic fill underlain by 5 feet of brown sand with varying degrees of silt, and gravel. Groundwater was encountered at approximately 9 ft below grade surface and groundwater flow is to the west towards Bushwick inlet, which is located approximately 1,000 feet from the site.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern for the site included SVOCs and metals (primarily arsenic) in soil, VOCs and arsenic in groundwater,

FORMER ANGLO CHEMICAL AND RUBBER SITE (Continued) **S132956645**

	and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls in the remedy will be operated and maintained under the SMP.
Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination.

Name:	FORMER ANGLO CHEMICAL AND RUBBER SITE
Address:	1-9 WYTHE AVENUE
City,State,Zip:	BROOKLYN, NY 11222
Site Code:	624874
HW Code:	C224337
Control Code:	36
Control Type:	ENG
Date Record Added:	12/21/2024
Date Rec Updated:	06/06/2025
Updated By:	WBBENNET
Site Description:	Site Location: The site located at 1-9 Wythe Avenue, in the Greenpoint neighborhood of Brooklyn, NY. The 0.387-acre site is identified on the New York City tax map as Block 2641 Lot 4. The site is bound by Wythe Avenue followed by a vacant lot to the north, Banker Street followed by three 1-story industrial use buildings and a vacant lot to the east, North 15th Street followed by a 1-story and a 2-story industrial use buildings to the west, and the intersection of North 15th Street and Banker Street to the south. Site Features: The site is a triangular shaped vacant lot which formerly had three one-story manufacturing facilities located in the northern portion of the property. The former buildings were demolished in 2022. The site is currently under development. Current Zoning and Land Use: The site is zoned for M1-2 which allows for light manufacturing, commercial and residential uses. The surrounding properties are currently used for commercial and warehousing/manufacturing purposes. Past Land Use: The site was developed between 1916 and 1942 with a 1-story building noted as a paint and varnish manufacturer on the eastern portion, barrel storage on the western portion and manufacturing on the northern and central portions. In 1951 the barrel storage area was expanded to the southeastern portion of the site. Between 1965 and 1981 the layout of the site remained the same; however, the operations were updated as inflammable liquid canning. Between 1982 and 1993 the site use consisted of unspecified manufacturing, and an additional warehouse was erected in the southwest corner of the property. Recently the site was used for multiple commercial operations including active furniture woodworking and a kitchen counter remodeling shop. Site Geology and Hydrogeology: The stratigraphy of the site consists of approximately 3 feet of historic fill underlain by 5 feet of brown sand with varying degrees of silt, and gravel. Groundwater was encountered at approximately 9 ft below grade surface and groundwater flow is to the west towards Bushwick

FORMER ANGLO CHEMICAL AND RUBBER SITE (Continued) **S132956645**

	inlet, which is located approximately 1,000 feet from the site.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern for the site included SVOCs and metals (primarily arsenic) in soil, VOCs and arsenic in groundwater, and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls in the remedy will be operated and maintained under the SMP.
Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination.

Groundwater was encountered at approximately 9 ft below grade surface and groundwater flow is to the west towards Bushwick inlet, which is located approximately 1,000 feet from the site.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern for the site included SVOCs and metals (primarily arsenic) in soil, VOCs and arsenic in groundwater, and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls in the remedy will be operated and maintained under the SMP.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination.

Site Description: Site Location: The site located at 1-9 Wythe Avenue, in the Greenpoint neighborhood of Brooklyn, NY. The 0.387-acre site is identified on the New York City tax map as Block 2641 Lot 4. The site is bound by Wythe Avenue followed by a vacant lot to the north, Banker Street followed by three 1-story industrial use buildings and a vacant lot to the east, North 15th Street followed by a 1-story and

FORMER ANGLO CHEMICAL AND RUBBER SITE (Continued) **S132956645**

a 2-story industrial use buildings to the west, and the intersection of North 15th Street and Banker Street to the south. Site Features: The site is a triangular shaped vacant lot which formerly had three one-story manufacturing facilities located in the northern portion of the property. The former buildings were demolished in 2022. The site is currently under development. Current Zoning and Land Use: The site is zoned for M1-2 which allows for light manufacturing, commercial and residential uses. The surrounding properties are currently used for commercial and warehousing/manufacturing purposes. Past Land Use: The site was developed between 1916 and 1942 with a 1-story building noted as a paint and varnish manufacturer on the eastern portion, barrel storage on the western portion and manufacturing on the northern and central portions. In 1951 the barrel storage area was expanded to the southeastern portion of the site. Between 1965 and 1981 the layout of the site remained the same; however, the operations were updated as inflammable liquid canning. Between 1982 and 1993 the site use consisted of unspecified manufacturing, and an additional warehouse was erected in the southwest corner of the property. Recently the site was used for multiple commercial operations including active furniture woodworking and a kitchen counter remodeling shop. Site Geology and Hydrogeology: The stratigraphy of the site consists of approximately 3 feet of historic fill underlain by 5 feet of brown sand with varying degrees of silt, and gravel. Groundwater was encountered at approximately 9 ft below grade surface and groundwater flow is to the west towards Bushwick inlet, which is located approximately 1,000 feet from the site.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern for the site included SVOCs and metals (primarily arsenic) in soil, VOCs and arsenic in groundwater, and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. Between 1982 and 1993 the site use consisted of unspecified manufacturing, and an additional warehouse was erected in the southwest corner of the property. Recently the site was used for multiple commercial operations including active furniture woodworking and a kitchen counter remodeling shop. Site Geology and Hydrogeology: The stratigraphy of the site consists of approximately 3 feet of historic fill underlain by 5 feet of brown sand with varying degrees of silt, and gravel. Groundwater was encountered at approximately 9 ft below grade surface and groundwater flow is to the west towards Bushwick inlet, which is located approximately 1,000 feet from the site.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern for the site included SVOCs and metals (primarily arsenic) in soil, VOCs and arsenic in groundwater, and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls in the remedy will be operated and maintained under the SMP.
Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination.
Dump:	False

Site Code: 624874
Site Description: Site Location: The site located at 1-9 Wythe Avenue, in the Greenpoint neighborhood of Brooklyn, NY. The 0.387-acre site is identified on the New York City tax map as Block 2641 Lot 4. The site is bound by Wythe Avenue followed by a vacant lot to the north, Banker Street followed by three 1-story industrial use buildings and a vacant lot to the east, North 15th Street followed by a 1-story and a 2-story industrial use buildings to the west, and the intersection of North 15th Street and Banker Street to the south. Site Features: The site is a triangular shaped vacant lot which formerly had three one-story manufacturing facilities located in the northern portion of the property. The former buildings were demolished in 2022. The site is currently under development. Current Zoning and Land Use: The site is zoned for M1-2 which allows for light manufacturing, commercial and residential uses. The surrounding properties are currently used for commercial and warehousing/manufacturing purposes. Past Land Use: The site was developed between 1916 and 1942 with a 1-story building noted as a paint and varnish manufacturer on the eastern portion, barrel storage on the western portion and manufacturing on the northern and central portions. In 1951 the barrel storage area was expanded to the southeastern portion of the site. Between 1965 and 1981 the layout of the site remained the same; however, the operations were updated as inflammable liquid canning. Between 1982 and 1993 the site use consisted of unspecified manufacturing, and an additional warehouse was erected in the southwest corner of the property. Recently the site was used for multiple commercial operations including active furniture woodworking and a kitchen counter remodeling shop. Site Geology and Hydrogeology: The stratigraphy of the site consists of approximately 3 feet of historic fill underlain by 5 feet of brown sand with varying degrees of silt, and gravel. Groundwater was encountered at approximately 9 ft below grade surface and groundwater flow is to the west towards Bushwick inlet, which is located approximately 1,000 feet from the site.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern for the site included SVOCs and metals (primarily arsenic) in soil, VOCs and arsenic in groundwater, and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the

Name:	FORMER F&S CENTRAL MANUFACTURING CORP. SITE
Address:	103 NORTH 13TH STREET
City,State,Zip:	BROOKLYN, NY 11249
Program:	BCP
Site Code:	517727
Acres:	0.279
HW Code:	C224230
SWIS:	2401
Town:	New York City
Record Added Date:	12/07/2015
Record Updated Date:	01/02/2018
Update By:	BXANDERS
Site Description:	Location: The Former F&S Central Manufacturing site is located at 103 North 13th Street, identified as Block 2279, Lot 34 in the Greenpoint section of Brooklyn. Site Features: The site is comprised of a single tax parcel totaling 12,500 square feet (0.29 acres), and is currently vacant. The exterior walls and concrete slab of a former one-story manufacturing building remain, with the slab approximately 3 feet above sidewalk grade. Current Zoning and Land Use: The site is zoned as a M1-2 district which allows both commercial and light industrial use. The surrounding parcels are used for a combination of commercial and light industrial. Prior to acceptance into the BCP, the site was used for commercial warehouse space. The nearest residential area is approximately 1000 feet to the south. Past Use of the Site: The site was undeveloped prior to 1905. From 1916 to 1930, the site was developed with three small one-story sheds/storage rooms and a portion of a single-story commercial building. The former one-story warehouse/manufacturing building was constructed in 1930. The building was used as an iron pipe warehouse (1940s 1950s), a paper storage warehouse (1960s), metal pipe hanger manufacturing facility (1970s), contractor s storage facility (1990s) and a food storage warehouse (2000s). Site Geography and Hydrogeology: Bedrock

FORMER F&S CENTRAL MANUFACTURING CORP. SITE (Continued) **S118372394**

in this area of Brooklyn is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth as great as 13 feet below the existing building slab (10 feet below sidewalk grade), followed by a native grey (wet) sandy silt. Bedrock was not encountered at the site. The elevation of the site is approximately 14 feet above mean sea level and gradually slopes to the northwest. The depth to groundwater beneath the site is approximately 7 feet below sidewalk grade. The groundwater flows to the north-northwest.

Env Problem:

Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzene, ethylbenzene, total xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benz(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, chromium, lead, arsenic and mercury in soil; and 1,1,1-trichloroethane and trichloroethene (TCE) in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and PCB/pesticides. Based upon investigations conducted to date, the primary contaminants of concern include benzene, ethylbenzene, total xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benz(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, chromium, lead, arsenic and mercury in soil; and 1,1,1-trichloroethane and trichloroethene (TCE) in soil vapor. Soil - The VOCs found in subsurface soils were predominantly in the shallower soils (0-5 feet bgs). Concentrations were found as high as 0.2 ppm for benzene; 7.1 ppm for ethylbenzene, and 31 ppm for total xylene. Both 1,2,4-trimethylbenzene (24 ppm) and 1,3,5-trimethylbenzene (23 ppm) were found in deeper soils at 7 to 11 feet bgs. Offsite investigations were not conducted as the adjacent properties are fully built out with existing structures. The SVOCs were found in the shallower soils. These were found as high as 2.4 ppm for benz(a)anthracene; benzo(a)pyrene (1.7 ppm); benzo(k)fluoranthene (1.5 ppm); and chrysene (3.8 ppm). The exception to this was in the southwest corner of the site, where the same SVOC constituents were found at concentrations approximately 12 to 15 times higher at 12 to 16 feet bgs. The metal constituents were also found mostly in the shallower soils. Chromium was found as high as 381 ppm; lead at 37,500 ppm; barium at 6,840 ppm; and mercury at 11.4 ppm. Hazardous levels of lead (as high as 14.9 mg/L TCLP) were found between 4 and 13 feet bgs in the western half of the site. All soil borings were drilled to 20 feet bgs, and there were no detections of any contaminant below 13 feet bgs. Bedrock was not encountered during the investigation. Groundwater - Both lead and chromium were found to slightly exceed groundwater standards on-site, as well as naturally occurring metals including, sodium, manganese and iron. There were no VOC or SVOC constituents detected in groundwater. Soil Vapor - Soil vapor was sampled at depths ranging from 5 to 6 feet below ground surface (bgs) and low levels of petroleum-related VOCs were noted. Also, TCE and 1,1,1-trichloroethane were detected as high as 173

FORMER F&S CENTRAL MANUFACTURING CORP. SITE (Continued) **S118372394**

micrograms per cubic meter (ug/m3) and 2,090 ug/m3 respectively, and are attributed to a suspected off-site source.

Health Problem:	Remedial actions are complete and have eliminated the potential for contact with site-related contaminants.

DEC Memo:	see also two former closed spills #0801333 & #060249. OER received a community complaint and inspected the site yesterday. There were strong odors present at the site from both an impacted stock pile on the west side of the site as well as creosol and decomposing organics smell on the east side. Doug Harm (consultant) and Tucker (GC) we required immediate actions to be taken to take care of the problem. 5/29/14 - Austin - Reassigned from Rahman to Mahat - end 9/25/14: Mahat T/C : A phone call was received from the consultant of the potential buyer inquiring about the spill status. OER Voluntary clean up case number : 13CVCP086K DEC is waiting for a closure report from

COMMERCIAL PROPERTY (Continued) **S113817673**

consultant. 10/7/14: Mahat DEC Mahat received a tank closure report from the contractor and it is
uploaded on D2 for reference. 12/29/14: Mahat report review : DEC Mahat reviewed the UST. End point
samples were below CP 51 guidnace value. All contaminated soil were removed from the site. No
further investigation for remediation and deliniation is warrented by the Department. Hence, the
spill case will be closed on the database and OER will continue with their program.

Remarks: possible historic spill - U/G tank also found in concrete - cleanup pending

BROWNFIELDS:
Name: FORMER DUTCH MASTERS PAINT AND VARNISH CO.
Address: 29-41 WYTHE AVENUE AND 180 N. 14TH STREET
City,State,Zip: BROOKLYN, NY 11249
Program: BCP
Site Code: 551700
Acres: 0.650
HW Code: C224262
SWIS: 2401
Town: New York City
Record Added Date: 06/14/2017
Record Updated Date: 12/26/2024
Update By: AAOBLIGA
Site Description: Location: The site is comprised of two parcels designated as block 2279, lots 1 and 9, totaling 0.65 acres, and is located at 29-41 Wythe Avenue and 180 North 14th Street in the Williamsburg neighborhood of Brooklyn, NY. Site Features: Lot 1 was improved with a 1-2 story industrial building constructed circa 1925. Lot 9 was improved with a 1-story industrial building constructed circa 1950. Both buildings were recently demolished. Current Zoning and Land Use: The site is currently zoned M1-1 (manufacturing). M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. The site is currently vacant, with concrete covering the entire site. The land use in the immediate vicinity of the site includes an industrial manufacturing building and new development project to the west, a new hotel and retail shops to the south, new construction, a high school and an existing office building to the east, and an industrial/manufacturing property to the north. Past Use of the Site: A portion of Lot 1 was occupied by a varnish factory beginning sometime prior to 1887. The varnish works expanded to cover the entirety of Lot 1 by 1942. Records show that, by 1951, this lot was occupied by the Dutch Masters Paint and Varnish company until 2007. This lot was also used as a manufacturer of typewriter ribbon, a clothing warehouse, a motorcycle repair shop and art studio. A portion of Lot 9 was used as a foundry for the manufacture of window weights from 1902 through 1916. By 1942, the property was used as a bed spring manufacturer. Dutch Masters Paint and Varnish took a mortgage on this lot in 1969. Later, the property was used as a warehouse for typewriter ribbons and a clothing warehouse. In 2009, it was rented out as music studios. Site Geology

FORMER DUTCH MASTERS PAINT AND VARNISH CO. (Continued) **S121493079**

and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of approximately 8 to 10 feet below the surface, followed by native silty-sand and clay layers. The elevation of the property is approximately 12-13 feet above mean sea level. The area topography gradually slopes to the north toward the East River. Groundwater is 7.5-11.8 feet below grade under water table conditions and flows to the north east toward the East River. The entire site is located within a designated moderate risk flood zone area with a portion of Lot 1 in a high-risk flood area.

Env Problem:

Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides, and emerging contaminants (per and polyfluorinated alkyl substances, or PFAS, and 1,4-dioxane) in groundwater. Soil vapor samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include trichloroethene (TCE), and petroleum related SVOCs. Soil - TCE was found in shallow soil across the site. The maximum concentration of trichloroethene was 3.1 parts per million (ppm), which exceeds the applicable protection of groundwater soil cleanup objective (0.47 ppm). Historic fill material has been identified across the site to depths of 15-17 feet. Analysis of the material showed benzo(a)anthracene at 32 ppm, benzo(a)pyrene at 31 ppm, benzo(b)fluoranthene at 24 ppm, chrysene at 51 ppm compared the unrestricted SCO of 1 ppm, and indeno(1,2,3-CD)pyrene at 18 ppm compared to the unrestricted SCO of 0.5 ppm. Data does not indicate any off-site impacts in soil related to this site. Groundwater - TCE was also found in groundwater at the site at a maximum concentration of 8.7 parts per billion (ppb), which slightly exceeds the groundwater standard of 5 ppb. Petroleum related SVOCs were detected across both lots on the site, including benzo(a)anthracene at 66 ppb, benzo(a)pyrene at 61 ppb, benzo(b)fluoranthene at 31 ppb, chrysene at 58 ppb, and indeno(1,2,3-CD)pyrene at 26 ppb, all above the standard of 0.002 ppb. Several metals were detected above standards, including iron, magnesium, manganese and sodium in the majority of samples. These exceedances are not considered contaminants of concern and are likely naturally occurring. Emerging contaminants (i.e., PFAS) were detected at maximum combined concentration of 134.37 parts per trillion. There were no PCBs, pesticides detections above standards. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - Petroleum related VOCs were detected at low levels in soil vapor samples across the site. TCE was detected in soil vapor at concentrations ranging from 0.24 micrograms per cubic meter (ug/m3) to 320 ug/m3. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem:

Access to the site is restricted, which prohibits public access. Persons who enter the site could contact contaminated soil or groundwater by disturbing the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are currently no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern. However, the potential

FORMER DUTCH MASTERS PAINT AND VARNISH CO. (Continued) **S121493079**

	exits for the inhalation of site contaminants for any future onsite development and occupancy. Environmental sampling indicates that soil vapor intrusion is not a concern for offsite buildings.

Site Code:	483489
Site Description:	Location: The BCP site is located in the Williamsburg section of Brooklyn (Kings County) at 11 Jackson Street at the intersection with Meeker Avenue where it runs under the Brooklyn-Queens Expressway. Site Features: Prior to redevelopment, the site contained one

FORMER DRIGGS PLYWOOD CORP. (Continued) **S108076630**

one-story building covered the entire 0.20 acre site. Redevelopment consisted of construction of a eight-story multi-family apartment building with surface parking behind the building. Current Zoning and Land Use: The site is zoned R6-Residential. In 2005 the site was rezoned from M1-2 industrial to R6-Residential as part of the Greenpoint-Williamsburg Rezoning Action to provide opportunities for the development of residential uses on underutilized and vacant land and legalize existing non-conforming uses. Jackson Street intersects with Meeker Avenue at the southeast corner of the site. Meeker Avenue is a commercial corridor that runs under and parallel to the Brooklyn-Queens Expressway. Immediately north and behind the site is a street of single family homes. Nearby, there is significant redevelopment that is ongoing or has recently been completed that largely consists of multi-story, multi-unit residential buildings.
Past Use of the Site: The site was first developed sometime prior to 1887 as three residential lots. Circa 1962 until about 1973, Driggs Plywood operated at the site. From the early 1950s through 2007 the three lots were combined as one and occupied by a building labeled lumber storage that encompassed the entire lot. Arnmart Beer Distributors occupied a portion of the site in the late 1990s and Car Fashion Seat Covers operated on site in the 2000s. Prior to redevelopment, the site was most recently occupied by a bus maintenance facility in the western half of the lot and a metal fabrication shop on the east. Site Geology and Hydrogeology: Subsurface soils at the site include a mixture Groundwater table at the site is approximately 8 feet below surface grade within the native silty-sand. Groundwater flow is generally westerly toward the East River.

Env Problem: Nature and Extent of Contamination: Remediation of the site is complete. The remedial action consisted of excavation across the entire site to approximately five feet below grade. Post excavation confirmatory sampling showed that on-site meets Track 2, restricted residential use soil cleanup objectives to a depth of at least 15 feet. There were three monitoring wells at the site; one compound, bis(2-ethylhexyl)phthalate, was detected in groundwater just above its groundwater standard. Only one other semi-volatile organic compound (SVOC) and two VOCs (MTBE and PCE) were detected in groundwater, but at concentrations well below their respective standards. In the filtered groundwater samples analyzed for metals, only naturally occurring iron, sodium, magnesium and manganese were above standards.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 483489
Site Description: Location: The BCP site is located in the Williamsburg section of Brooklyn (Kings County) at 11 Jackson Street at the intersection with Meeker Avenue where it runs under the Brooklyn-Queens Expressway. Site Features: Prior to redevelopment, the site contained one one-story building covered the entire 0.20 acre site. Redevelopment consisted of construction of a eight-story multi-family apartment building with surface parking behind the building. Current Zoning and Land Use: The site is zoned R6-Residential. In 2005 the site was rezoned from M1-2 industrial to R6-Residential as part of the Greenpoint-Williamsburg Rezoning Action to provide opportunities for the development of residential uses on underutilized and vacant land and legalize existing non-conforming uses. Jackson Street intersects with Meeker Avenue at the southeast corner of the site. Meeker Avenue is a commercial corridor that runs under and parallel to the Brooklyn-Queens Expressway. Immediately north and behind the site is a street of single family homes. Nearby, there is significant redevelopment that is ongoing or has recently been completed that largely consists of multi-story, multi-unit residential buildings. Past Use of the Site: The site was first developed sometime prior to 1887 as three residential lots. Circa 1962 until about 1973, Driggs Plywood operated at the site. From the early 1950s through 2007 the three lots were combined as one and occupied by a building labeled lumber storage that encompassed the entire lot. Arnmart Beer Distributors occupied a portion of the site in the late 1990s and Car Fashion Seat Covers operated on site in the 2000s. Prior to redevelopment, the site was most recently occupied by a bus maintenance facility in the western half of the lot and a metal fabrication shop on the east. Site Geology and Hydrogeology: Subsurface soils at the site include a mixture Groundwater table at the site is approximately 8 feet below surface grade within the native silty-sand. Groundwater flow is generally westerly toward the East River.
Env Problem: Nature and Extent of Contamination: Remediation of the site is complete. The remedial action consisted of excavation across the entire site to approximately five feet below grade. Post excavation confirmatory sampling showed that on-site meets Track 2, restricted residential use soil cleanup objectives to a depth of at least 15 feet. There were three monitoring wells at the site; one compound, bis(2-ethylhexyl)phthalate, was detected in groundwater just above

FORMER DRIGGS PLYWOOD CORP. (Continued) **S108076630**

its groundwater standard. Only one other semi-volatile organic compound (SVOC) and two VOCs (MTBE and PCE) were detected in groundwater, but at concentrations well below their respective standards. In the filtered groundwater samples analyzed for metals, only naturally occurring iron, sodium, magnesium and manganese were above standards.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Location: The BCP site is located in the Williamsburg section of Brooklyn (Kings County) at 11 Jackson Street at the intersection with Meeker Avenue where it runs under the Brooklyn-Queens Expressway. Site Features: Prior to redevelopment, the site contained one one-story building covered the entire 0.20 acre site. Redevelopment consisted of construction of a eight-story multi-family apartment building with surface parking behind the building. Current Zoning and Land Use: The site is zoned R6-Residential. In 2005 the site was

FORMER DRIGGS PLYWOOD CORP. (Continued) **S108076630**

rezoned from M1-2 industrial to R6-Residential as part of the Greenpoint-Williamsburg Rezoning Action to provide opportunities for the development of residential uses on underutilized and vacant land and legalize existing non-conforming uses. Jackson Street intersects with Meeker Avenue at the southeast corner of the site. Meeker Avenue is a commercial corridor that runs under and parallel to the Brooklyn-Queens Expressway. Immediately north and behind the site is a street of single family homes. Nearby, there is significant redevelopment that is ongoing or has recently been completed that largely consists of multi-story, multi-unit residential buildings.
Past Use of the Site: The site was first developed sometime prior to 1887 as three residential lots. Circa 1962 until about 1973, Driggs Plywood operated at the site. From the early 1950s through 2007 the three lots were combined as one and occupied by a building labeled lumber storage that encompassed the entire lot. Arnmart Beer Distributors occupied a portion of the site in the late 1990s and Car Fashion Seat Covers operated on site in the 2000s. Prior to redevelopment, the site was most recently occupied by a bus maintenance facility in the western half of the lot and a metal fabrication shop on the east. Site Geology and Hydrogeology: Subsurface soils at the site include a mixture Groundwater table at the site is approximately 8 feet below surface grade within the native silty-sand. Groundwater flow is generally westerly toward the East River.

Env Problem: Nature and Extent of Contamination: Remediation of the site is complete. The remedial action consisted of excavation across the entire site to approximately five feet below grade. Post excavation confirmatory sampling showed that on-site meets Track 2, restricted residential use soil cleanup objectives to a depth of at least 15 feet. There were three monitoring wells at the site; one compound, bis(2-ethylhexyl)phthalate, was detected in groundwater just above its groundwater standard. Only one other semi-volatile organic compound (SVOC) and two VOCs (MTBE and PCE) were detected in groundwater, but at concentrations well below their respective standards. In the filtered groundwater samples analyzed for metals, only naturally occurring iron, sodium, magnesium and manganese were above standards.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Update By: GWBURKE
Site Description: Location: Former Driggs Plywood off-site is an undefined area near the on-site area where additional investigation is planned. The off-site area is within a residential area immediately north of the Former Driggs Plywood (Driggs) Brownfield site at 11 Jackson Street in the Williamsburg section of Brooklyn (Kings County). Site Features: The site is a urban residential area of single-family houses immediately north of Driggs. Current Zoning and Land Use: Jackson Street intersects with Meeker Avenue at the southeast corner of the site. Meeker Avenue is a commercial corridor that runs under the Brooklyn-Queens Expressway. Immediately north and behind the site is a street of single family homes. Nearby, there is significant redevelopment that is occurring or has recently been completed that largely consists of multi-story, multi-unit residential buildings. Past Use of the Site: The on-site area was first developed sometime prior to 1887 as three residential lots. Circa 1962 until about 1973, Driggs Plywood operated at the site. From the early 1950s through 2007 the three lots were combined as one and occupied by a building labeled lumber storage that encompassed the entire lot. Arnmart Beer Distributors occupied a portion of the site in the late 1990s and Car Fashion Seat Covers operated on site in the 2000s. The building is currently vacant but was most recently occupied by a charter bus maintenance/repair garage in the western half of lot and a metal fabrication shop on the east. Site Geology and Hydrogeology: Subsurface soils at Driggs include a mixture of silty non-native fill to approximately 6 feet below grade followed by sandy-silt to approximately 10 feet below grade. Groundwater table at the site is approximately 8 feet below surface grade within the native silty-sand. Based upon regional contour maps groundwater flow is expected to be west toward the East River.
Env Problem: Nature and Extent of Contamination: Relative to the on-site area of

FORMER DRIGGS PLYWOOD CORP. - OFF-SITE (Continued) **S128906187**

	the Former Driggs Plywood BCP site, various VOCs were detected in on-site soil vapor. PCE and TCE were detected at maximum concentrations of 8,270 g/M3 and 12,300 g/M3, respectively. No off-site investigation work has been conducted yet. The on-site soil and groundwater data don t show evidence of significant contamination, but the elevated VOCs in soil vapor indicate the potential for an as-yet undetected on-site source. Soil vapor samples will be collected on-site following remediation of the on-site area; based on that data it will be determined if off-site soil vapor sampling is needed.
Health Problem:	People are not drinking contaminated groundwater because the area is served by a public water supply not affected by the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion represents a concern for on and off-site structures and additional evaluation is necessary to determine the potential for exposure to contamination in this media.

Updated By:	YXPALUMB
Site Description:	Location: The site is located in an urban area in the Williamsburg neighborhood of Brooklyn, NY. The approximately 35,942 square-foot (0.825-acre), irregularly shaped site is bounded to the north by North 12th Street, to the east by Berry Street, to the west by a warehouse building used by the Brooklyn Brewery, and to the south by North 11th Street and two buildings containing residential apartments. Site Features: The site is developed with an L-shaped, seven-story residential building that fronts Berry and North 12th Streets, with an open courtyard area located behind the building in the central portion of the site. A basement level parking garage is located under the building and courtyard, with an entrance ramp located on North 11th Street. A small, street-level valet parking lot is also located on North 11th Street, immediately east of the garage entrance ramp. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). The surrounding area is developed primarily with residential and commercial properties. Past Use of the Site: Historic records indicated that the site was developed with industrial and manufacturing uses, including the New York Quinine and Chemical Works between 1887 and 1951. After 1951, the site was used for freight loading and parking of vehicles. Sanborn maps from 1965 to 2006 (after decommissioning of the quinine factory) depict a large 2-story freight loading facility and warehouse in the western portion of the site, a 2-story truck repair facility/warehouse and a 4-story unspecified manufacturing facility in the southwestern portion of the site, and a parking lot in the eastern portion of the site containing two gasoline tanks of unspecified capacity. All on-site buildings were demolished starting in April 2008, and construction of the existing residential structure started in June 2008. Building construction was completed in early 2009. Site Geology and Hydrogeology: The surface topography in the surrounding area is flat, gradually sloping northwest towards the

34 BERRY STREET (Continued) **S121933779**

East River, which is located approximately 1,100 feet from the site. The site lies at an elevation of approximately 20 feet above sea level. Prior to development, shallow subsurface soils included urban fill material containing brick, asphalt, and concrete fragments to approximately 6 to 10 feet below ground surface (bgs), underlain by apparent native silty sand and silt. Most of the fill was removed during development to construct the current structure. Depth to bedrock at the site is expected to be approximately 100 feet bgs. The dominant groundwater flow direction at the site is to the north and northeast, with some variations to the northwest. Groundwater is present at depths ranging from approximately 5 to 8 feet below the basement garage floor, which corresponds to approximate depths of approximately 11 to 14 feet bgs. There are no surface water bodies or streams on or immediately adjacent to the site.

Env Problem: Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were Light Non-Aqueous Phase Liquid (LNAPL) associated with fuel oil leaks from USTs and volatile organic compounds (VOCs) namely 1,2-dichloroethane (DCA). The VOCs were detected in groundwater at concentrations exceeding ambient water quality standards. Remedial actions have successfully achieved the site cleanup objectives under a track 4 cleanup which included a site cover, enhanced recovery of the LNAPL through injection of a surfactant blend and biological treatment of the groundwater to reduce VOC contamination. Sub-slab/soil vapor is not a concern at the site. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: During the Remedial Investigation soil and groundwater were sampled and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Sub-slab soil vapor and indoor air were analyzed for VOCs. Based upon the investigations conducted, the primary contaminants of concern were identified as petroleum in the form of Light Non-Aqueous Phase Liquid (LNAPL)and chlorinated VOCs. Soil - The investigation documented that VOC contamination in soil is present in two distinct contaminant zones: 1,2-dichloroethane (DCA) on the eastern side of the site, and petroleum LNAPL on the western side of the site. Fingerprint analysis completed during a previous investigation identified the LNAPL as fuel oil. Since 2009 the NAPL has been managed by a collection system, which was upgraded as an IRM during the Spring of 2019. Quarterly gauging of monitoring wells indicates the extent and thickness of the plume has been reduced by the LNAPL collection system. One VOC, 1,2-DCA, was detected at a concentration in excess of its restricted residential soil cleanup objective (RRSCO) at a depth of 14 to 15 feet below garage basement grade (bbg) (the water table is at 6ft-bbg), at a concentration of 7.9 parts per million (ppm) compared to a RRSCO of 3.1 ppm and the applicable protection of groundwater SCO (PGWSCO) of 0.02 ppm. 1,2-DCA was not detected in any other soil sample collected during the RI, or all the previous investigations at the site, that would indicate any additional source areas. Trivalent chromium was found at a concentration of 251 ppm, which exceeds the applicable RRUSCO of 180 ppm. This metal appears to be attributable to historic fill. Fourteen per- and polyfluoroalkyl substances (PFAS) were detected in one or more soil samples at concentrations ranging from an estimated 0.017 parts per billion (ppb) to 0.12 ppb. None of the detected PFAS compounds had

34 BERRY STREET (Continued) **S121933779**

concentrations above the screening level of 1 ppb. Perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.12 ppb and perfluorooctanoic acid (PFOA) was detected at a maximum of 0.039 ppb. 1,4-dioxane was not detected in soil samples. No SVOCS, PCBs or pesticides were detected at concentrations exceeding the unrestricted use SCOs. Data does not indicate any off-site impacts in soil related to this site. Groundwater - Eight VOCs were detected at concentrations above their respective Ambient Water Quality Standards (AWQS) in one or more samples. These included the petroleum VOCs related to the LNAPL zone, and chlorinated solvents. The petroleum VOCs include benzene at a maximum concentration of 430 ppb compared to the AWQS of 1 ppb and toluene at a maximum concentration of 17 ppb (AWQS is 5 ppb). Chlorinated VOCs include 1,2-DCA at a maximum concentration of 660 ppb (AWQS is 0.6 ppb), 1,2-dichloropropane at a maximum concentration of 160 ppb (AWQS is 1.0 ppb), trichloroethene (TCE) at a maximum concentration of 21 ppb (AWQS is 5.0 ppb), chlorobenzene at a maximum concentration of 5.7 ppb (AWQS is 5.0 ppb), chloroform at a maximum concentration of 34 ppb (AWQS is 7.0 ppb), and tetrachloroethene (PCE) at a maximum concentration of 13 ppb (AWQS is 5.0 ppb). PFOS and PFOA were detected at concentrations above the NYSDEC screening level of 10 parts per trillion (ppt) each with the maximum PFOA concentration of 130 ppt and the maximum PFOS concentration of 47.7 ppt. 1,4-Dioxane was detected at a maximum concentration of 0.69 ppb, below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem: Measures are in place to prevent exposures to remaining contaminants.

Control Type: ENG
Date Record Added: 07/29/2022
Date Rec Updated: 06/12/2025
Updated By: YXPALUMB
Site Description: Location: The site is located in an urban area in the Williamsburg neighborhood of Brooklyn, NY. The approximately 35,942 square-foot (0.825-acre), irregularly shaped site is bounded to the north by North 12th Street, to the east by Berry Street, to the west by a warehouse building used by the Brooklyn Brewery, and to the south by North 11th Street and two buildings containing residential apartments. Site Features: The site is developed with an L-shaped, seven-story residential building that fronts Berry and North 12th Streets, with an open courtyard area located behind the building in the central portion of the site. A basement level parking garage is located under the building and courtyard, with an entrance ramp located on North 11th Street. A small, street-level valet parking lot is also located on North 11th Street, immediately east of the garage entrance ramp. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). The surrounding area is developed primarily with residential and commercial properties. Past Use of the Site: Historic records indicated that the site was developed with industrial and manufacturing uses, including the New York Quinine and Chemical Works between 1887 and 1951. After 1951, the site was used for freight loading and parking of vehicles. Sanborn maps from 1965 to 2006 (after decommissioning of the quinine factory) depict a large 2-story freight loading facility and warehouse in the western portion of the site, a 2-story truck repair facility/warehouse and a 4-story unspecified manufacturing facility in the southwestern portion of the site, and a parking lot in the eastern portion of the site containing two gasoline tanks of unspecified capacity. All on-site buildings were demolished starting in April 2008, and construction of the existing residential structure started in June 2008. Building construction was completed in early 2009. Site Geology and Hydrogeology: The surface topography in the surrounding area is flat, gradually sloping northwest towards the East River, which is located approximately 1,100 feet from the site. The site lies at an elevation of approximately 20 feet above sea level. Prior to development, shallow subsurface soils included urban fill material containing brick, asphalt, and concrete fragments to approximately 6 to 10 feet below ground surface (bgs), underlain by apparent native silty sand and silt. Most of the fill was removed during development to construct the current structure. Depth to bedrock at the site is expected to be approximately 100 feet bgs. The dominant groundwater flow direction at the site is to the north and northeast, with some variations to the northwest. Groundwater is present at depths ranging from approximately 5 to 8 feet below the basement garage floor, which corresponds to approximate depths of approximately 11 to 14 feet bgs. There are no surface water bodies or streams on or immediately adjacent to the site.
Env Problem: Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were Light Non-Aqueous Phase Liquid (LNAPL) associated with fuel oil leaks from USTs and volatile organic compounds (VOCs) namely 1,2-dichloroethane

34 BERRY STREET (Continued) **S121933779**

(DCA). The VOCs were detected in groundwater at concentrations exceeding ambient water quality standards. Remedial actions have successfully achieved the site cleanup objectives under a track 4 cleanup which included a site cover, enhanced recovery of the LNAPL through injection of a surfactant blend and biological treatment of the groundwater to reduce VOC contamination. Sub-slab/soil vapor is not a concern at the site. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: During the Remedial Investigation soil and groundwater were sampled and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Sub-slab soil vapor and indoor air were analyzed for VOCs. Based upon the investigations conducted, the primary contaminants of concern were identified as petroleum in the form of Light Non-Aqueous Phase Liquid (LNAPL)and chlorinated VOCs. Soil - The investigation documented that VOC contamination in soil is present in two distinct contaminant zones: 1,2-dichloroethane (DCA) on the eastern side of the site, and petroleum LNAPL on the western side of the site. Fingerprint analysis completed during a previous investigation identified the LNAPL as fuel oil. Since 2009 the NAPL has been managed by a collection system, which was upgraded as an IRM during the Spring of 2019. Quarterly gauging of monitoring wells indicates the extent and thickness of the plume has been reduced by the LNAPL collection system. One VOC, 1,2-DCA, was detected at a concentration in excess of its restricted residential soil cleanup objective (RRSCO) at a depth of 14 to 15 feet below garage basement grade (bbg) (the water table is at 6ft-bbg), at a concentration of 7.9 parts per million (ppm) compared to a RRSCO of 3.1 ppm and the applicable protection of groundwater SCO (PGWSCO) of 0.02 ppm. 1,2-DCA was not detected in any other soil sample collected during the RI, or all the previous investigations at the site, that would indicate any additional source areas. Trivalent chromium was found at a concentration of 251 ppm, which exceeds the applicable RRUSCO of 180 ppm. This metal appears to be attributable to historic fill. Fourteen per- and polyfluoroalkyl substances (PFAS) were detected in one or more soil samples at concentrations ranging from an estimated 0.017 parts per billion (ppb) to 0.12 ppb. None of the detected PFAS compounds had concentrations above the screening level of 1 ppb. Perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.12 ppb and perfluorooctanoic acid (PFOA) was detected at a maximum of 0.039 ppb. 1,4-dioxane was not detected in soil samples. No SVOCS, PCBs or pesticides were detected at concentrations exceeding the unrestricted use SCOs. Data does not indicate any off-site impacts in soil related to this site. Groundwater - Eight VOCs were detected at concentrations above their respective Ambient Water Quality Standards (AWQS) in one or more samples. These included the petroleum VOCs related to the LNAPL zone, and chlorinated solvents. The petroleum VOCs include benzene at a maximum concentration of 430 ppb compared to the AWQS of 1 ppb and toluene at a maximum concentration of 17 ppb (AWQS is 5 ppb). Chlorinated VOCs include 1,2-DCA at a maximum concentration of 660 ppb (AWQS is 0.6 ppb), 1,2-dichloropropane at a maximum concentration of 160 ppb (AWQS is 1.0 ppb), trichloroethene (TCE) at a maximum concentration of 21 ppb (AWQS is 5.0 ppb), chlorobenzene at a maximum concentration of 5.7 ppb (AWQS is 5.0 ppb), chloroform at a maximum

34 BERRY STREET (Continued) **S121933779**

concentration of 34 ppb (AWQS is 7.0 ppb), and tetrachloroethene (PCE) at a maximum concentration of 13 ppb (AWQS is 5.0 ppb). PFOS and PFOA were detected at concentrations above the NYSDEC screening level of 10 parts per trillion (ppt) each with the maximum PFOA concentration of 130 ppt and the maximum PFOS concentration of 47.7 ppt. 1,4-Dioxane was detected at a maximum concentration of 0.69 ppb, below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site.

Site Code: 564025
Site Description: Location: The site is located in an urban area in the Williamsburg neighborhood of Brooklyn, NY. The approximately 35,942 square-foot (0.825-acre), irregularly shaped site is bounded to the north by North 12th Street, to the east by Berry Street, to the west by a warehouse building used by the Brooklyn Brewery, and to the south by

34 BERRY STREET (Continued) **S121933779**

North 11th Street and two buildings containing residential apartments. Site Features: The site is developed with an L-shaped, seven-story residential building that fronts Berry and North 12th Streets, with an open courtyard area located behind the building in the central portion of the site. A basement level parking garage is located under the building and courtyard, with an entrance ramp located on North 11th Street. A small, street-level valet parking lot is also located on North 11th Street, immediately east of the garage entrance ramp. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). The surrounding area is developed primarily with residential and commercial properties. Past Use of the Site: Historic records indicated that the site was developed with industrial and manufacturing uses, including the New York Quinine and Chemical Works between 1887 and 1951. After 1951, the site was used for freight loading and parking of vehicles. Sanborn maps from 1965 to 2006 (after decommissioning of the quinine factory) depict a large 2-story freight loading facility and warehouse in the western portion of the site, a 2-story truck repair facility/warehouse and a 4-story unspecified manufacturing facility in the southwestern portion of the site, and a parking lot in the eastern portion of the site containing two gasoline tanks of unspecified capacity. All on-site buildings were demolished starting in April 2008, and construction of the existing residential structure started in June 2008. Building construction was completed in early 2009. Site Geology and Hydrogeology: The surface topography in the surrounding area is flat, gradually sloping northwest towards the East River, which is located approximately 1,100 feet from the site. The site lies at an elevation of approximately 20 feet above sea level. Prior to development, shallow subsurface soils included urban fill material containing brick, asphalt, and concrete fragments to approximately 6 to 10 feet below ground surface (bgs), underlain by apparent native silty sand and silt. Most of the fill was removed during development to construct the current structure. Depth to bedrock at the site is expected to be approximately 100 feet bgs. The dominant groundwater flow direction at the site is to the north and northeast, with some variations to the northwest. Groundwater is present at depths ranging from approximately 5 to 8 feet below the basement garage floor, which corresponds to approximate depths of approximately 11 to 14 feet bgs. There are no surface water bodies or streams on or immediately adjacent to the site.

Env Problem: Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were Light Non-Aqueous Phase Liquid (LNAPL) associated with fuel oil leaks from USTs and volatile organic compounds (VOCs) namely 1,2-dichloroethane (DCA). The VOCs were detected in groundwater at concentrations exceeding ambient water quality standards. Remedial actions have successfully achieved the site cleanup objectives under a track 4 cleanup which included a site cover, enhanced recovery of the LNAPL through injection of a surfactant blend and biological treatment of the groundwater to reduce VOC contamination. Sub-slab/soil vapor is not a concern at the site. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: During the Remedial Investigation soil and groundwater were sampled and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Sub-slab soil vapor and

34 BERRY STREET (Continued) **S121933779**

indoor air were analyzed for VOCs. Based upon the investigations conducted, the primary contaminants of concern were identified as petroleum in the form of Light Non-Aqueous Phase Liquid (LNAPL)and chlorinated VOCs. Soil - The investigation documented that VOC contamination in soil is present in two distinct contaminant zones: 1,2-dichloroethane (DCA) on the eastern side of the site, and petroleum LNAPL on the western side of the site. Fingerprint analysis completed during a previous investigation identified the LNAPL as fuel oil. Since 2009 the NAPL has been managed by a collection system, which was upgraded as an IRM during the Spring of 2019. Quarterly gauging of monitoring wells indicates the extent and thickness of the plume has been reduced by the LNAPL collection system. One VOC, 1,2-DCA, was detected at a concentration in excess of its restricted residential soil cleanup objective (RRSCO) at a depth of 14 to 15 feet below garage basement grade (bbg) (the water table is at 6ft-bbg), at a concentration of 7.9 parts per million (ppm) compared to a RRSCO of 3.1 ppm and the applicable protection of groundwater SCO (PGWSCO) of 0.02 ppm. 1,2-DCA was not detected in any other soil sample collected during the RI, or all the previous investigations at the site, that would indicate any additional source areas. Trivalent chromium was found at a concentration of 251 ppm, which exceeds the applicable RRUSCO of 180 ppm. This metal appears to be attributable to historic fill. Fourteen per- and polyfluoroalkyl substances (PFAS) were detected in one or more soil samples at concentrations ranging from an estimated 0.017 parts per billion (ppb) to 0.12 ppb. None of the detected PFAS compounds had concentrations above the screening level of 1 ppb. Perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.12 ppb and perfluorooctanoic acid (PFOA) was detected at a maximum of 0.039 ppb. 1,4-dioxane was not detected in soil samples. No SVOCS, PCBs or pesticides were detected at concentrations exceeding the unrestricted use SCOs. Data does not indicate any off-site impacts in soil related to this site. Groundwater - Eight VOCs were detected at concentrations above their respective Ambient Water Quality Standards (AWQS) in one or more samples. These included the petroleum VOCs related to the LNAPL zone, and chlorinated solvents. The petroleum VOCs include benzene at a maximum concentration of 430 ppb compared to the AWQS of 1 ppb and toluene at a maximum concentration of 17 ppb (AWQS is 5 ppb). Chlorinated VOCs include 1,2-DCA at a maximum concentration of 660 ppb (AWQS is 0.6 ppb), 1,2-dichloropropane at a maximum concentration of 160 ppb (AWQS is 1.0 ppb), trichloroethene (TCE) at a maximum concentration of 21 ppb (AWQS is 5.0 ppb), chlorobenzene at a maximum concentration of 5.7 ppb (AWQS is 5.0 ppb), chloroform at a maximum concentration of 34 ppb (AWQS is 7.0 ppb), and tetrachloroethene (PCE) at a maximum concentration of 13 ppb (AWQS is 5.0 ppb). PFOS and PFOA were detected at concentrations above the NYSDEC screening level of 10 parts per trillion (ppt) each with the maximum PFOA concentration of 130 ppt and the maximum PFOS concentration of 47.7 ppt. 1,4-Dioxane was detected at a maximum concentration of 0.69 ppb, below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the

34 BERRY STREET (Continued) **S121933779**

on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem: Measures are in place to prevent exposures to remaining contaminants.

Site Code: 564025
Site Description: Location: The site is located in an urban area in the Williamsburg neighborhood of Brooklyn, NY. The approximately 35,942 square-foot (0.825-acre), irregularly shaped site is bounded to the north by North 12th Street, to the east by Berry Street, to the west by a warehouse building used by the Brooklyn Brewery, and to the south by North 11th Street and two buildings containing residential apartments. Site Features: The site is developed with an L-shaped, seven-story residential building that fronts Berry and North 12th Streets, with an open courtyard area located behind the building in the central portion of the site. A basement level parking garage is located under the building and courtyard, with an entrance ramp located on North 11th Street. A small, street-level valet parking lot is also located on North 11th Street, immediately east of the garage entrance ramp. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). The surrounding area is developed primarily with residential and commercial properties. Past Use of the Site: Historic records indicated that the site was developed with industrial and manufacturing uses, including the New York Quinine and Chemical Works between 1887 and 1951. After

34 BERRY STREET (Continued) **S121933779**

1951, the site was used for freight loading and parking of vehicles. Sanborn maps from 1965 to 2006 (after decommissioning of the quinine factory) depict a large 2-story freight loading facility and warehouse in the western portion of the site, a 2-story truck repair facility/warehouse and a 4-story unspecified manufacturing facility in the southwestern portion of the site, and a parking lot in the eastern portion of the site containing two gasoline tanks of unspecified capacity. All on-site buildings were demolished starting in April 2008, and construction of the existing residential structure started in June 2008. Building construction was completed in early 2009. Site Geology and Hydrogeology: The surface topography in the surrounding area is flat, gradually sloping northwest towards the East River, which is located approximately 1,100 feet from the site. The site lies at an elevation of approximately 20 feet above sea level. Prior to development, shallow subsurface soils included urban fill material containing brick, asphalt, and concrete fragments to approximately 6 to 10 feet below ground surface (bgs), underlain by apparent native silty sand and silt. Most of the fill was removed during development to construct the current structure. Depth to bedrock at the site is expected to be approximately 100 feet bgs. The dominant groundwater flow direction at the site is to the north and northeast, with some variations to the northwest. Groundwater is present at depths ranging from approximately 5 to 8 feet below the basement garage floor, which corresponds to approximate depths of approximately 11 to 14 feet bgs. There are no surface water bodies or streams on or immediately adjacent to the site.

Env Problem: Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were Light Non-Aqueous Phase Liquid (LNAPL) associated with fuel oil leaks from USTs and volatile organic compounds (VOCs) namely 1,2-dichloroethane (DCA). The VOCs were detected in groundwater at concentrations exceeding ambient water quality standards. Remedial actions have successfully achieved the site cleanup objectives under a track 4 cleanup which included a site cover, enhanced recovery of the LNAPL through injection of a surfactant blend and biological treatment of the groundwater to reduce VOC contamination. Sub-slab/soil vapor is not a concern at the site. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: During the Remedial Investigation soil and groundwater were sampled and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Sub-slab soil vapor and indoor air were analyzed for VOCs. Based upon the investigations conducted, the primary contaminants of concern were identified as petroleum in the form of Light Non-Aqueous Phase Liquid (LNAPL)and chlorinated VOCs. Soil - The investigation documented that VOC contamination in soil is present in two distinct contaminant zones: 1,2-dichloroethane (DCA) on the eastern side of the site, and petroleum LNAPL on the western side of the site. Fingerprint analysis completed during a previous investigation identified the LNAPL as fuel oil. Since 2009 the NAPL has been managed by a collection system, which was upgraded as an IRM during the Spring of 2019. Quarterly gauging of monitoring wells indicates the extent and thickness of the plume has been reduced by the LNAPL collection system. One VOC, 1,2-DCA, was detected at a concentration in excess of its restricted residential soil cleanup objective (RRSCO) at a

34 BERRY STREET (Continued) **S121933779**

depth of 14 to 15 feet below garage basement grade (bbg) (the water table is at 6ft-bbg), at a concentration of 7.9 parts per million (ppm) compared to a RRSCO of 3.1 ppm and the applicable protection of groundwater SCO (PGWSCO) of 0.02 ppm. 1,2-DCA was not detected in any other soil sample collected during the RI, or all the previous investigations at the site, that would indicate any additional source areas. Trivalent chromium was found at a concentration of 251 ppm, which exceeds the applicable RRUSCO of 180 ppm. This metal appears to be attributable to historic fill. Fourteen per- and polyfluoroalkyl substances (PFAS) were detected in one or more soil samples at concentrations ranging from an estimated 0.017 parts per billion (ppb) to 0.12 ppb. None of the detected PFAS compounds had concentrations above the screening level of 1 ppb. Perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.12 ppb and perfluorooctanoic acid (PFOA) was detected at a maximum of 0.039 ppb. 1,4-dioxane was not detected in soil samples. No SVOCS, PCBs or pesticides were detected at concentrations exceeding the unrestricted use SCOs. Data does not indicate any off-site impacts in soil related to this site.
Groundwater - Eight VOCs were detected at concentrations above their respective Ambient Water Quality Standards (AWQS) in one or more samples. These included the petroleum VOCs related to the LNAPL zone, and chlorinated solvents. The petroleum VOCs include benzene at a maximum concentration of 430 ppb compared to the AWQS of 1 ppb and toluene at a maximum concentration of 17 ppb (AWQS is 5 ppb). Chlorinated VOCs include 1,2-DCA at a maximum concentration of 660 ppb (AWQS is 0.6 ppb), 1,2-dichloropropane at a maximum concentration of 160 ppb (AWQS is 1.0 ppb), trichloroethene (TCE) at a maximum concentration of 21 ppb (AWQS is 5.0 ppb), chlorobenzene at a maximum concentration of 5.7 ppb (AWQS is 5.0 ppb), chloroform at a maximum concentration of 34 ppb (AWQS is 7.0 ppb), and tetrachloroethene (PCE) at a maximum concentration of 13 ppb (AWQS is 5.0 ppb). PFOS and PFOA were detected at concentrations above the NYSDEC screening level of 10 parts per trillion (ppt) each with the maximum PFOA concentration of 130 ppt and the maximum PFOS concentration of 47.7 ppt. 1,4-Dioxane was detected at a maximum concentration of 0.69 ppb, below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not

34 BERRY STREET (Continued) **S121933779**

necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem: Measures are in place to prevent exposures to remaining contaminants.

Site Code: 564025
Site Description: Location: The site is located in an urban area in the Williamsburg neighborhood of Brooklyn, NY. The approximately 35,942 square-foot (0.825-acre), irregularly shaped site is bounded to the north by North 12th Street, to the east by Berry Street, to the west by a warehouse building used by the Brooklyn Brewery, and to the south by North 11th Street and two buildings containing residential apartments. Site Features: The site is developed with an L-shaped, seven-story residential building that fronts Berry and North 12th Streets, with an open courtyard area located behind the building in the central portion of the site. A basement level parking garage is located under the building and courtyard, with an entrance ramp located on North 11th Street. A small, street-level valet parking lot is also located on North 11th Street, immediately east of the garage entrance ramp. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). The surrounding area is developed primarily with residential and commercial properties. Past Use of the Site: Historic records indicated that the site was developed with industrial and manufacturing uses, including the New York Quinine and Chemical Works between 1887 and 1951. After 1951, the site was used for freight loading and parking of vehicles. Sanborn maps from 1965 to 2006 (after decommissioning of the quinine factory) depict a large 2-story freight loading facility and warehouse in the western portion of the site, a 2-story truck repair facility/warehouse and a 4-story unspecified manufacturing facility in the southwestern portion of the site, and a parking lot in the eastern portion of the site containing two gasoline tanks of unspecified capacity. All on-site buildings were demolished starting in April 2008, and construction of the existing residential structure started in June 2008. Building construction was completed in early 2009. Site Geology and Hydrogeology: The surface topography in the surrounding area is flat, gradually sloping northwest towards the East River, which is located approximately 1,100 feet from the site. The site lies at an elevation of approximately 20 feet above sea

34 BERRY STREET (Continued) **S121933779**

level. Prior to development, shallow subsurface soils included urban fill material containing brick, asphalt, and concrete fragments to approximately 6 to 10 feet below ground surface (bgs), underlain by apparent native silty sand and silt. Most of the fill was removed during development to construct the current structure. Depth to bedrock at the site is expected to be approximately 100 feet bgs. The dominant groundwater flow direction at the site is to the north and northeast, with some variations to the northwest. Groundwater is present at depths ranging from approximately 5 to 8 feet below the basement garage floor, which corresponds to approximate depths of approximately 11 to 14 feet bgs. There are no surface water bodies or streams on or immediately adjacent to the site.

Env Problem: Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were Light Non-Aqueous Phase Liquid (LNAPL) associated with fuel oil leaks from USTs and volatile organic compounds (VOCs) namely 1,2-dichloroethane (DCA). The VOCs were detected in groundwater at concentrations exceeding ambient water quality standards. Remedial actions have successfully achieved the site cleanup objectives under a track 4 cleanup which included a site cover, enhanced recovery of the LNAPL through injection of a surfactant blend and biological treatment of the groundwater to reduce VOC contamination. Sub-slab/soil vapor is not a concern at the site. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: During the Remedial Investigation soil and groundwater were sampled and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Sub-slab soil vapor and indoor air were analyzed for VOCs. Based upon the investigations conducted, the primary contaminants of concern were identified as petroleum in the form of Light Non-Aqueous Phase Liquid (LNAPL)and chlorinated VOCs. Soil - The investigation documented that VOC contamination in soil is present in two distinct contaminant zones: 1,2-dichloroethane (DCA) on the eastern side of the site, and petroleum LNAPL on the western side of the site. Fingerprint analysis completed during a previous investigation identified the LNAPL as fuel oil. Since 2009 the NAPL has been managed by a collection system, which was upgraded as an IRM during the Spring of 2019. Quarterly gauging of monitoring wells indicates the extent and thickness of the plume has been reduced by the LNAPL collection system. One VOC, 1,2-DCA, was detected at a concentration in excess of its restricted residential soil cleanup objective (RRSCO) at a depth of 14 to 15 feet below garage basement grade (bbg) (the water table is at 6ft-bbg), at a concentration of 7.9 parts per million (ppm) compared to a RRSCO of 3.1 ppm and the applicable protection of groundwater SCO (PGWSCO) of 0.02 ppm. 1,2-DCA was not detected in any other soil sample collected during the RI, or all the previous investigations at the site, that would indicate any additional source areas. Trivalent chromium was found at a concentration of 251 ppm, which exceeds the applicable RRUSCO of 180 ppm. This metal appears to be attributable to historic fill. Fourteen per- and polyfluoroalkyl substances (PFAS) were detected in one or more soil samples at concentrations ranging from an estimated 0.017 parts per billion (ppb) to 0.12 ppb. None of the detected PFAS compounds had concentrations above the screening level of 1 ppb. Perfluorooctanesulfonic acid (PFOS) was detected at a maximum

34 BERRY STREET (Continued) **S121933779**

concentration of 0.12 ppb and perfluorooctanoic acid (PFOA) was detected at a maximum of 0.039 ppb. 1,4-dioxane was not detected in soil samples. No SVOCS, PCBs or pesticides were detected at concentrations exceeding the unrestricted use SCOs. Data does not indicate any off-site impacts in soil related to this site.
Groundwater - Eight VOCs were detected at concentrations above their respective Ambient Water Quality Standards (AWQS) in one or more samples. These included the petroleum VOCs related to the LNAPL zone, and chlorinated solvents. The petroleum VOCs include benzene at a maximum concentration of 430 ppb compared to the AWQS of 1 ppb and toluene at a maximum concentration of 17 ppb (AWQS is 5 ppb). Chlorinated VOCs include 1,2-DCA at a maximum concentration of 660 ppb (AWQS is 0.6 ppb), 1,2-dichloropropane at a maximum concentration of 160 ppb (AWQS is 1.0 ppb), trichloroethene (TCE) at a maximum concentration of 21 ppb (AWQS is 5.0 ppb), chlorobenzene at a maximum concentration of 5.7 ppb (AWQS is 5.0 ppb), chloroform at a maximum concentration of 34 ppb (AWQS is 7.0 ppb), and tetrachloroethene (PCE) at a maximum concentration of 13 ppb (AWQS is 5.0 ppb). PFOS and PFOA were detected at concentrations above the NYSDEC screening level of 10 parts per trillion (ppt) each with the maximum PFOA concentration of 130 ppt and the maximum PFOS concentration of 47.7 ppt. 1,4-Dioxane was detected at a maximum concentration of 0.69 ppb, below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem: Measures are in place to prevent exposures to remaining contaminants.

Sanborn maps from 1965 to 2006 (after decommissioning of the quinine factory) depict a large 2-story freight loading facility and warehouse in the western portion of the site, a 2-story truck repair facility/warehouse and a 4-story unspecified manufacturing facility in the southwestern portion of the site, and a parking lot in the eastern portion of the site containing two gasoline tanks of unspecified capacity. All on-site buildings were demolished starting in April 2008, and construction of the existing residential structure started in June 2008. Building construction was completed in early 2009. Site Geology and Hydrogeology: The surface topography in the surrounding area is flat, gradually sloping northwest towards the East River, which is located approximately 1,100 feet from the site. The site lies at an elevation of approximately 20 feet above sea level. Prior to development, shallow subsurface soils included urban fill material containing brick, asphalt, and concrete fragments to approximately 6 to 10 feet below ground surface (bgs), underlain by apparent native silty sand and silt. Most of the fill was removed during development to construct the current structure. Depth to bedrock at the site is expected to be approximately 100 feet bgs. The dominant groundwater flow direction at the site is to the north and northeast, with some variations to the northwest. Groundwater is present at depths ranging from approximately 5 to 8 feet below the basement garage floor, which corresponds to approximate depths of approximately 11 to 14 feet bgs. There are no surface water bodies or streams on or immediately adjacent to the site.
Env Problem:	Post-Remediation: Remediation of the site is complete. Prior to

34 BERRY STREET (Continued) **S121933779**

remediation the primary contaminants of concern were Light Non-Aqueous Phase Liquid (LNAPL) associated with fuel oil leaks from USTs and volatile organic compounds (VOCs) namely 1,2-dichloroethane (DCA). The VOCs were detected in groundwater at concentrations exceeding ambient water quality standards. Remedial actions have successfully achieved the site cleanup objectives under a track 4 cleanup which included a site cover, enhanced recovery of the LNAPL through injection of a surfactant blend and biological treatment of the groundwater to reduce VOC contamination. Sub-slab/soil vapor is not a concern at the site. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: During the Remedial Investigation soil and groundwater were sampled and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Sub-slab soil vapor and indoor air were analyzed for VOCs. Based upon the investigations conducted, the primary contaminants of concern were identified as petroleum in the form of Light Non-Aqueous Phase Liquid (LNAPL)and chlorinated VOCs. Soil - The investigation documented that VOC contamination in soil is present in two distinct contaminant zones: 1,2-dichloroethane (DCA) on the eastern side of the site, and petroleum LNAPL on the western side of the site. Fingerprint analysis completed during a previous investigation identified the LNAPL as fuel oil. Since 2009 the NAPL has been managed by a collection system, which was upgraded as an IRM during the Spring of 2019. Quarterly gauging of monitoring wells indicates the extent and thickness of the plume has been reduced by the LNAPL collection system. One VOC, 1,2-DCA, was detected at a concentration in excess of its restricted residential soil cleanup objective (RRSCO) at a depth of 14 to 15 feet below garage basement grade (bbg) (the water table is at 6ft-bbg), at a concentration of 7.9 parts per million (ppm) compared to a RRSCO of 3.1 ppm and the applicable protection of groundwater SCO (PGWSCO) of 0.02 ppm. 1,2-DCA was not detected in any other soil sample collected during the RI, or all the previous investigations at the site, that would indicate any additional source areas. Trivalent chromium was found at a concentration of 251 ppm, which exceeds the applicable RRUSCO of 180 ppm. This metal appears to be attributable to historic fill. Fourteen per- and polyfluoroalkyl substances (PFAS) were detected in one or more soil samples at concentrations ranging from an estimated 0.017 parts per billion (ppb) to 0.12 ppb. None of the detected PFAS compounds had concentrations above the screening level of 1 ppb. Perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.12 ppb and perfluorooctanoic acid (PFOA) was detected at a maximum of 0.039 ppb. 1,4-dioxane was not detected in soil samples. No SVOCS, PCBs or pesticides were detected at concentrations exceeding the unrestricted use SCOs. Data does not indicate any off-site impacts in soil related to this site.
Groundwater - Eight VOCs were detected at concentrations above their respective Ambient Water Quality Standards (AWQS) in one or more samples. These included the petroleum VOCs related to the LNAPL zone, and chlorinated solvents. The petroleum VOCs include benzene at a maximum concentration of 430 ppb compared to the AWQS of 1 ppb and toluene at a maximum concentration of 17 ppb (AWQS is 5 ppb). Chlorinated VOCs include 1,2-DCA at a maximum concentration of 660 ppb (AWQS is 0.6 ppb), 1,2-dichloropropane at a maximum concentration

34 BERRY STREET (Continued) **S121933779**

of 160 ppb (AWQS is 1.0 ppb), trichloroethene (TCE) at a maximum concentration of 21 ppb (AWQS is 5.0 ppb), chlorobenzene at a maximum concentration of 5.7 ppb (AWQS is 5.0 ppb), chloroform at a maximum concentration of 34 ppb (AWQS is 7.0 ppb), and tetrachloroethene (PCE) at a maximum concentration of 13 ppb (AWQS is 5.0 ppb). PFOS and PFOA were detected at concentrations above the NYSDEC screening level of 10 parts per trillion (ppt) each with the maximum PFOA concentration of 130 ppt and the maximum PFOS concentration of 47.7 ppt. 1,4-Dioxane was detected at a maximum concentration of 0.69 ppb, below its screening level of 1 ppb. There is no record of use of PFAS or 1,4-dioxane at this site and the site is not considered a source of emerging contaminants. No SVOCS, PCBs or pesticides were found exceeding AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air - SVI sampling was performed both on-site and in the adjacent commercial/residential building to the southeast of the site. For the on-site building, the following VOCs were detected in sub-slab vapor samples during the October 2018 sampling event: mixed xylenes at a maximum concentration of 1780 micrograms per cubic meter (g/m3); ethylbenzene at a maximum concentration of 190 g/m3; PCE at a maximum concentration of 5.3 g/m3; TCE at a maximum concentration of 12 g/m3; and vinyl chloride at a maximum concentration of 9.4 g/m3. 1,2-DCA was not detected in any of the sub-slab vapor samples. On-site indoor air samples collected in the basement parking garage during the October 2018 sampling event found the following maximum concentrations of VOCs: xylenes at 8.l4 g/m3; ethylbenzene at 1.9 g/m3; PCE at 2.8 g/m3; and TCE at 0.21 g/m3. An additional round of sampling was completed in August 2019 and TCE was not detected in any of the samples (soil vapor or indoor air). The results of the second round of sampling determined that additional monitoring is not necessary provided that the existing parking garage ventilation system and passive SSDS installed as part of the building redevelopment in 2008 are properly maintained. Sampling will occur as part of the remedy for this site to ensure these systems continue to be effective at preventing potential indoor air impacts via the soil vapor intrusion pathway. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem:	Measures are in place to prevent exposures to remaining contaminants.

Site Description:	BCP Denial Letter signed by DER Div Director on 2/19/14. Site Location: The proposed 94 N. 13th Street BCP site is located in the Williamsburg section of Brooklyn, Kings County. The site is made up

94 N. 13TH STREET (Continued) **S116041508**

of two tax parcels and is bordered by Wythe Avenue, N. 12th Street, and N. 13th Street. Site Features: The site is developed with two-one story commercial/industrial buildings which were built in the 1960's and are occupied. There is a small parking area and buildings cover most of the site area, which is approximately 1.147 acres in size. Current Zoning and Land Use: The site is zoned M1-2 which includes light industrial uses and is currently used by a manufacturer of clear plastic bags, and a manufacturer of wooden pallets. Past Uses of the Site: Previous uses were manufacturing and include the storage of manufactured gas and also as a plating facility. Site Geology and Hydrogeology: The geologic setting of Long Island is well documented and consists of crystalline bedrock overlain by layers of unconsolidated deposits. The bedrock in this area is igneous intrusive classified as the ravenwood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisteing of dredge spoils, rubble and/or other materials have historically been used to raise and improve the drainage of low lying areas. Subsurface soils consist of a mixture of a silty non-native fill, to a depth of approximately 12 feet below grade followed by sand and gravel. The elevation of the site is 15 feet above National Geodetic Vertical Datum (NGVD) and the area topography gradually slopes to the northwest. Groundwater is present at a depth of approximately 7 feet below the surface and is expected to flow north.

Env Problem: Nature of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include benzene, toluene, ethylbenzene and xylene (BTEX), napthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene; various SVOCs (PAHs), including benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene; and several metals (lead, mercury, barium, nickel, zinc and copper). Soil- Subsurface soil contains maximum concentrations of BTEX (944 ppm), napthalene (280 ppm), total PAHs (218 ppm), lead (920 ppm), mercury (18 ppm). The metals concentrations were 920 ppm for lead, 18 ppm for mercury, 160 ppm for copper, 52 ppm for nickel, 2,300 ppm for zinc, and 2,400 ppm for barium. Groundwater- On-site groundwater contained low levels of PAHs, with a maximum concentration of total PAHs of 7 ug/L. Lead was detected at a maximum concentration of 254 ug/L. Off-site groundwater contained BTEX concentrations as high as 6,480 ug/L, 1,600 ug/L of napthalene, total PAHs of 1,670 ug/L, 600 ug/L of 1,2,4-trimethylbenzene,and 160 ug/L of 1,3,5-trimethylbenzene.

DEC Memo:	06/27/14-Hiralkumar Patel. alternate addresses: 94-102 North 13th Street, 45-59 Wythe Ave, 103-109 North 12th Street 3:51 PM:- DEC Vought sent copy of email he received from DEC Rivera. DEC Rivera received inquiry from Lisa Bloodgood. Ms. Bloodgood visited site on 06/26/14 and noted awful odors at the site. 4:30 PM:- visited site. noted very strong odors in and around the subject site. at the time of inspection, site construction activities were not happening, but a groundwater treatment system was running. site soil has been disturbed and some areas have been excavated to groundwater which is about 10-15 ft bg. met with Terrance, person who is monitoring groundwater treatment system. he mentioned that system will operate 24/7. noted white smoke from pump on the treatment system. spoke with Raphael Rivera (973-417-4467), person who has rented the treatment system. he mentioned that the system uses biodegradable oil and smoke from the system is not hazardous. spoke with Mordy Steinfeld (on-site) and Charles Sosik (over the phone).

94 N. 13TH STREET (Continued) **S116041508**

they are working to get
contractor to resolve odor issue. also spoke with John Brooks (over the phone), attorney
representing the site owner/developer. he will discuss with National Grid. Mordy Steinfeld **site
developer** Level Hotel Ph. (718) 599-1145 (o) (432) 363-5377 (c) Email: mordy@levelhotel.com John
Brook **attorney for site owner/developer** PH. (516) 455-0215
received call from Mr. Brook. he
mentioned that developer's crew will cover site excavation area with tarp to control any odors from
open excavation. while waiting for response from property owner/developer's crew, met with Mr.
Morang from GEI, around 7 PM. at this time, the site was locked and no access provided to GEI. GEI
represents National Grid. Mr. Morang mentioned that GEI has four air monitoring stations within the
property, along the perimeter. he noted that there were no PID readings during work hours today.
but after site work was completed, the groundwater treatment system was turned on. he also
mentioned that the treatment system was installed recently. Mr. Morang suspects odors due to
improper installation of the treatment system, but it can not be confirmed as no site access
available. alongwith Mr. Morang, we checked air quality near corner of Wythe Ave and N 13th Street
(where the treatment system is located) and found PID readings around 0.4 ppm. at this time, air
quality was improved, but there were still some pockets of strong odors. Mr. Morang mentioned that
from next week, GEI will use foam to abate any odors from the site. Russell Morang GEI Consultants,
Inc. Ph. (860) 368-5416 (O) (860) 608-1438 (C) Email: rmorang@geiconsultants.com Donald Campbell
National Grid Ph. (718) 963-5453 (O) (347) 452-5983 (C)
06/30/14-Hiralkumar Patel. 9:40 AM:-
visited site. noted tarp in deeper excavation areas where groundwater was visible during earlier
site visit. also noted a tarp on the entire frac tank. some odors noted near the intersection of
Wythe Ave and N 13th St. DEC Scott Deyette (BCP # C224186) is managing this former MGP site. after
discussing with DEC Austin, case closed. refer to BCP # C224186.
07/01/14-Hiralkumar Patel. 2:37
PM:- spoke with DEC Scott. informed him that as per Mr. Morang, GEI was planning to use foam to
abate odors. Scott has discussed with involved parties and mentioned that GEI is there only for air
monitoring and property owner is responsible to address any environmental issues. Scott asked to
provide his cell phone number (518-461-3721) to whoever has any inquiry about remediation.

Remarks: Lisa Bloodgood went to site on 06/26/14 and noted odors at the site.

Longitude:	-73.9557892
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 3/20/03 - AUSTIN, DDO - SENT OUT TTF LETTER TO BOB KNOZELMAN OF WH CHRISTIAN & sONS 1/7/04-Vought-Spill transferred from Vought to Austin. 1/27/04 - Sawyer - Spill transferred from Austin to Sawyer. 10/5/04 - Sawyer - Received another failed tank test from Pro Test with a letter informing the Department of repair attemps made and the ultimate removal of tank from service. Pro Test will update on further action, investigation and remediation. 03/04/05 - Sawyer - Jim from Protest called me about begining excavation at the above site 0n 3/08/05. They are going to remove the tank an about 60 cubic yards of contamination. 03/30/05 - Sawyer - Met Tom Leddy and Ted Dros of Protest Environmental at excavation. They will pump and pad the pit to clean sheen off water in pit. Clean endpoint samples and a ground water sample will then be needed. 5/26/05 - Sawyer - Received endpoint samples from Protest on 4/12/05 and though some of the groundwater samples were above ground water criteria, this property was included in the Greenpoint Plume. This is the reason there are gasoline constituents in the gw sample. The groundwater is between 12-15 and this is an industrial area. No further action required. Closed.
Remarks:	tank failure, possible bad vent line

Tank Info:

Tank Number:	002
Tank Id:	217529
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	K00 - Spill Prevention - None L09 - Piping Leak Detection - Exempt Suction Piping D01 - Pipe Type - Steel/Carbon Steel/Iron A00 - Tank Internal Protection - None J02 - Dispenser - Suction Dispenser G01 - Tank Secondary Containment - Diking (Aboveground) H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G) I05 - Overfill - Vent Whistle F00 - Pipe External Protection - None B05 - Tank External Protection - Jacketed C01 - Pipe Location - Aboveground E01 - Piping Secondary Containment - Diking (AG only)
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel Tank in Concrete
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	10/25/2005
Capacity Gallons:	2500
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	04/29/2024
Register:	True
Modified By:	nFormUpd
Last Modified:	05/17/2024

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and

WH CHRISTIAN & SONS (Continued) **1000171081**

compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Class:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Swis Code:	2401
Town:	New York City
Disp Start:	Not reported
Disp Term:	Not reported
Acres:	2
Fuse:	Restricted-Residential
Description:	Location: The former Wythe Avenue Station is located in the Williamsburg neighborhood of Brooklyn, New York, Kings County. The site occupies nine parcels, and is bounded by North 13th Street to the north, North 12th Street to the south, Berry Street to the east and Wythe Avenue to the west. These nine parcels are identified as Block 2283, Lots 1, 25, 28, 31, 33, 35, 38, 41 and 43, and comprise approximately 2.07 acres. Site Features: The site is comprised of commercial and industrial properties, and site topography is nearly flat. Lot 1 (OU1) contains a newly constructed twenty-one story hotel and retail stores, the remaining eight lots (OU2) comprise several one-story warehouse buildings on the east half of the site which are currently occupied by the Mirtex Trading Corporation. Current Zoning and Land Use: The area is zoned M1-1 and M1-2, which allow for light industrial and commercial uses. The site is surrounded by mixed use parcels, including light industrial, commercial and residential. The nearest residential area is within 100 feet to the southwest. Past Use of the Site: The site was operated as a Manufactured Gas Plant (MGP) holder station by Brooklyn Union Gas Co. from approximately 1903 to 1965. The station operated solely for gas distribution, and no gas production facilities were present at the site. Over the life

K - WYTHE AVE STATION (Continued) **S113916545**

of facility, manufactured gas, and possibly natural gas, based on the years of operation, was stored at the facility. In 1965 the holders and all associated MGP buildings were dismantled when the property was sold. Subsequent development of the site included two one-story buildings on the western two parcels, used for manufacturing and warehousing, in 1968. The eastern portion of the site was redeveloped with several warehouse buildings between 1985 and 1991. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of a release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) consists of the parcel (Lot 1) owned by Wythe Berry LLC on the western half of the site (approximate size of 1.15 acres). Operable unit 2 (OU2) consists of the remaining eight parcels owned by Mihata Corporation on the eastern half of the site (approximate size of 0.92 acres). Geology and Hydrogeology: The site is underlain by up to 12 feet of urban fill material, then various layers of gravelly sands, silts and clays. Bedrock is approximately 100 feet below the ground surface. Groundwater is encountered at depths of 7 to 10 feet beneath the site, and generally flows to the north in the western portion of the site, and to the east in the eastern portion of the site.

Assess Env: Prior to Completion of Remediation For OU 1: Lot 1 Parcel Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU 1 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). Prior to the IRM, the subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 70 parts per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 550 ppm (0.7 SCO), ethylbenzene as high as 270 ppm (1 ppm SCO), and total xylenes as high as 610 ppm (0.26 ppm SCO). Naphthalene was detected as high as 9,400 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 96 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1400 ppm (63 ppm SCO); mercury as high as 18 ppm (0.18 ppm SCO); and arsenic as high as 40 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was only sampled at one on-site location during the investigation due to existing buildings, and was found to be impacted by SVOCs and lead. Lead was detected at a concentration of 254 ppb (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.08 ppb, with a standard of 0.002 ppb. Groundwater sampled at two offsite locations was found to be impacted by VOCs and SVOCs. Soil Vapor - There were no soil vapor samples collected at OU-1. Post-remediation (OU1 only): An IRM was performed at OU1 in 2014 that removed approximately 68,000 tons of impacted material to depths ranging from 15 to 30 feet below ground surface. Prior to remediation, the primary contaminants of concern were BTEX and naphthalene (VOCs), and PAHs (SVOCs). Of the 28 confirmatory samples taken, 25 met the site remedial action SCOs for restricted residential use. The three samples which did not meet the

K - WYTHE AVE STATION (Continued) **S113916545**

SCOs, and which exceeded only for metals and PAHs, were found at depths greater than 15 feet below ground surface. Groundwater samples collected post-IRM indicated a decrease in concentrations of detected constituents. Prior to Completion of Remediation For OU2 Parcel: Mihata Corporation Properties Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU2 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). a full investigation of these media could not be performed due to the presence of existing buildings. The subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 330 pats per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 840 ppm (0.7 SCO), ethylbenzene as high as 1,200 ppm (1 ppm SCO), and total xylenes as high as 1,600 ppm (0.26 ppm SCO). Naphthalene was detected as high as 1,300 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 13 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1,600 ppm (63 ppm SCO); mercury as high as 2.3 ppm (0.18 ppm SCO); and arsenic as high as 77 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was sampled at two on-site locations during the investigation due to existing buildings, with one location within the holder footprint, and the other at the site boundary. The location within the holder was impacted by SVOCs and lead, while the boundary location had impacts from VOCs and one SVOC. Lead was detected at a concentration of 35 parts per billion (ppb) (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.25 ppb, with a standard of 0.002 ppb. The VOCs found to exceed standards were benzene at 2,200 ppb (1 ppb standard), toluene at 1,200 ppb (5 ppb standard), ethylbenzene at 600 ppb (5 ppb standard), xylene at 2,480 ppb (standard of 5 ppb), isopropyl benzene at 30 ppb (5 ppb standard), naphthalene at 1,200 ppb (guidance value of 10 ppb), n-propylbenzene at 42 ppb (5 ppb standard), styrene at 690 ppb (5 ppb standard), 1,2,4-trimethylbenzene at 600 ppb (5 ppb standard), and 1,3,5-trimethylbenzene at 160 ppb (5 ppb standard). Naphthalene was the SVOC which was found at 1,100 ppb (guidance value of 10 ppb). Groundwater sampled at one offsite location was found to be impacted by VOCs and SVOCs. Soil Vapor- There were three soil vapor samples collected at OU2 during the investigation. The sub-slab vapor samples contained compounds, including BTEX and trimethylbenzenes, which may be associated with gas holder operations and which are common petroleum products. One compound, TCE, was detected at 11 micrograms per cubic meter. This compound is a chlorinated solvent, which is not associated with former gas holder operations. In 2018, several monitoring wells were sampled for PFAS and 1,4-diaxane as part of the Department’s Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfanoic acid (PFOS) were reported at concentrations of up to 66 and 15 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. Individual PFAS exceeding the 100 ppt screening level included perfluorohexanoic acid (PFHxA) at a concentration of 272

K - WYTHE AVE STATION (Continued) **S113916545**

ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations of up to 679 ppt, which is above the 500 ppt screening level for total PFAS in groundwater. The residual contamination in soil and groundwater is being managed under an Interim Site Management Plan.

Assess Doh: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining in Operable Unit 1. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered with pavement and buildings. Volatile organic compounds in the contaminated soil or contamination groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying structures and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion for any future on-site redevelopment of Operable Unit 2. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

Naphthalene was the SVOC which was found at 1,100 ppb (guidance value of 10 ppb). Groundwater sampled at one offsite location was found to be impacted by VOCs and SVOCs. Soil Vapor- There were three soil vapor samples collected at OU2 during the investigation. The sub-slab vapor samples contained compounds, including BTEX and trimethylbenzenes, which may be associated with gas holder operations and which are common petroleum products. One compound, TCE, was detected at 11 micrograms per cubic meter. This compound is a chlorinated solvent, which is not associated with former gas holder operations. In 2018, several monitoring wells were sampled for PFAS and 1,4-diaxane as part of the Department’s Emerging Contaminants initiative. Perfluorooctanoic acid

K - WYTHE AVE. STATION (Continued) **S110487593**

	(PFOA) and perfluorooctanesulfanoic acid (PFOS) were reported at concentrations of up to 66 and 15 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. Individual PFAS exceeding the 100 ppt screening level included perfluorohexanoic acid (PFHxA) at a concentration of 272 ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations of up to 679 ppt, which is above the 500 ppt screening level for total PFAS in groundwater. The residual contamination in soil and groundwater is being managed under an Interim Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining in Operable Unit 1. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered with pavement and buildings. Volatile organic compounds in the contaminated soil or contamination groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying structures and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion for any future on-site redevelopment of Operable Unit 2. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

Site Description: Location: The former Wythe Avenue Station is located in the Williamsburg neighborhood of Brooklyn, New York, Kings County. The site occupies nine parcels, and is bounded by North 13th Street to the north, North 12th Street to the south, Berry Street to the east and Wythe Avenue to the west. These nine parcels are identified as Block 2283, Lots 1, 25, 28, 31, 33, 35, 38, 41 and 43, and comprise approximately 2.07 acres. Site Features: The site is comprised of commercial and industrial properties, and site topography is nearly flat. Lot 1 (OU1) contains a newly constructed twenty-one story hotel and retail stores, the remaining eight lots (OU2) comprise several one-story warehouse buildings on the east half of the site which are currently occupied by the Mirtex Trading Corporation. Current Zoning and Land Use: The area is zoned M1-1 and M1-2, which allow for light industrial and commercial uses. The site is surrounded by mixed use parcels, including light industrial, commercial and residential. The nearest residential area is within 100 feet to the southwest. Past Use of the Site: The site was operated as a Manufactured Gas Plant (MGP) holder station by Brooklyn Union Gas Co. from approximately 1903 to 1965. The station operated solely for gas distribution, and no gas production facilities were present at the site. Over the life of facility, manufactured gas, and possibly natural gas, based on the years of operation, was stored at the facility. In 1965 the holders and all associated MGP buildings were dismantled when the property was sold. Subsequent development of the site included two one-story buildings on the western two parcels, used for manufacturing and warehousing, in 1968. The eastern portion of the site was redeveloped with several warehouse buildings between 1985 and 1991. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of a release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) consists of the parcel (Lot 1) owned by Wythe Berry LLC on the western half of the site (approximate size of 1.15 acres). Operable unit 2 (OU2) consists of the remaining eight parcels owned

K - WYTHE AVE. STATION (Continued) **S110487593**

by Mihata Corporation on the eastern half of the site (approximate size of 0.92 acres). Geology and Hydrogeology: The site is underlain by up to 12 feet of urban fill material, then various layers of gravelly sands, silts and clays. Bedrock is approximately 100 feet below the ground surface. Groundwater is encountered at depths of 7 to 10 feet beneath the site, and generally flows to the north in the western portion of the site, and to the east in the eastern portion of the site.

Env Problem: Prior to Completion of Remediation For OU 1: Lot 1 Parcel Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU 1 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). Prior to the IRM, the subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 70 parts per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 550 ppm (0.7 SCO), ethylbenzene as high as 270 ppm (1 ppm SCO), and total xylenes as high as 610 ppm (0.26 ppm SCO). Naphthalene was detected as high as 9,400 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 96 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1400 ppm (63 ppm SCO); mercury as high as 18 ppm (0.18 ppm SCO); and arsenic as high as 40 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was only sampled at one on-site location during the investigation due to existing buildings, and was found to be impacted by SVOCs and lead. Lead was detected at a concentration of 254 ppb (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.08 ppb, with a standard of 0.002 ppb. Groundwater sampled at two offsite locations was found to be impacted by VOCs and SVOCs. Soil Vapor - There were no soil vapor samples collected at OU-1. Post-remediation (OU1 only): An IRM was performed at OU1 in 2014 that removed approximately 68,000 tons of impacted material to depths ranging from 15 to 30 feet below ground surface. Prior to remediation, the primary contaminants of concern were BTEX and naphthalene (VOCs), and PAHs (SVOCs). Of the 28 confirmatory samples taken, 25 met the site remedial action SCOs for restricted residential use. The three samples which did not meet the SCOs, and which exceeded only for metals and PAHs, were found at depths greater than 15 feet below ground surface. Groundwater samples collected post-IRM indicated a decrease in concentrations of detected constituents. Prior to Completion of Remediation For OU2 Parcel: Mihata Corporation Properties Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU2 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). a full investigation of these media could not be performed due to the presence of existing buildings. The subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 330 pats per million (ppm), compared to an SCO

K - WYTHE AVE. STATION (Continued) **S110487593**

of 0.06 ppm. Toluene was found as high as 840 ppm (0.7 SCO), ethylbenzene as high as 1,200 ppm (1 ppm SCO), and total xylenes as high as 1,600 ppm (0.26 ppm SCO). Naphthalene was detected as high as 1,300 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 13 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1,600 ppm (63 ppm SCO); mercury as high as 2.3 ppm (0.18 ppm SCO); and arsenic as high as 77 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was sampled at two on-site locations during the investigation due to existing buildings, with one location within the holder footprint, and the other at the site boundary. The location within the holder was impacted by SVOCs and lead, while the boundary location had impacts from VOCs and one SVOC. Lead was detected at a concentration of 35 parts per billion (ppb) (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.25 ppb, with a standard of 0.002 ppb. The VOCs found to exceed standards were benzene at 2,200 ppb (1 ppb standard), toluene at 1,200 ppb (5 ppb standard), ethylbenzene at 600 ppb (5 ppb standard), xylene at 2,480 ppb (standard of 5 ppb), isopropyl benzene at 30 ppb (5 ppb standard), naphthalene at 1,200 ppb (guidance value of 10 ppb), n-propylbenzene at 42 ppb (5 ppb standard), styrene at 690 ppb (5 ppb standard), 1,2,4-trimethylbenzene at 600 ppb (5 ppb standard), and 1,3,5-trimethylbenzene at 160 ppb (5 ppb standard). Naphthalene was the SVOC which was found at 1,100 ppb (guidance value of 10 ppb). Groundwater sampled at one offsite location was found to be impacted by VOCs and SVOCs. Soil Vapor- There were three soil vapor samples collected at OU2 during the investigation. The sub-slab vapor samples contained compounds, including BTEX and trimethylbenzenes, which may be associated with gas holder operations and which are common petroleum products. One compound, TCE, was detected at 11 micrograms per cubic meter. This compound is a chlorinated solvent, which is not associated with former gas holder operations. In 2018, several monitoring wells were sampled for PFAS and 1,4-diaxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfanoic acid (PFOS) were reported at concentrations of up to 66 and 15 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. Individual PFAS exceeding the 100 ppt screening level included perfluorohexanoic acid (PFHxA) at a concentration of 272 ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations of up to 679 ppt, which is above the 500 ppt screening level for total PFAS in groundwater. The residual contamination in soil and groundwater is being managed under an Interim Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining in Operable Unit 1. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered with pavement and buildings. Volatile organic compounds in the contaminated soil or contamination groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying structures and affect the indoor air quality.

K - WYTHE AVE. STATION (Continued) **S110487593**

This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion for any future on-site redevelopment of Operable Unit 2. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

K - WYTHE AVE. STATION (Continued) **S110487593**

Updated By: GHPRATT

Site Description: Location: The former Wythe Avenue Station is located in the Williamsburg neighborhood of Brooklyn, New York, Kings County. The site occupies nine parcels, and is bounded by North 13th Street to the north, North 12th Street to the south, Berry Street to the east and Wythe Avenue to the west. These nine parcels are identified as Block 2283, Lots 1, 25, 28, 31, 33, 35, 38, 41 and 43, and comprise approximately 2.07 acres. Site Features: The site is comprised of commercial and industrial properties, and site topography is nearly flat. Lot 1 (OU1) contains a newly constructed twenty-one story hotel and retail stores, the remaining eight lots (OU2) comprise several one-story warehouse buildings on the east half of the site which are currently occupied by the Mirtex Trading Corporation. Current Zoning and Land Use: The area is zoned M1-1 and M1-2, which allow for light industrial and commercial uses. The site is surrounded by mixed use parcels, including light industrial, commercial and residential. The nearest residential area is within 100 feet to the southwest. Past Use of the Site: The site was operated as a Manufactured Gas Plant (MGP) holder station by Brooklyn Union Gas Co. from approximately 1903 to 1965. The station operated solely for gas distribution, and no gas production facilities were present at the site. Over the life of facility, manufactured gas, and possibly natural gas, based on the years of operation, was stored at the facility. In 1965 the holders and all associated MGP buildings were dismantled when the property was sold. Subsequent development of the site included two one-story buildings on the western two parcels, used for manufacturing and warehousing, in 1968. The eastern portion of the site was redeveloped with several warehouse buildings between 1985 and 1991. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of a release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) consists of the parcel (Lot 1) owned by Wythe Berry LLC on the western half of the site (approximate size of 1.15 acres). Operable unit 2 (OU2) consists of the remaining eight parcels owned by Mihata Corporation on the eastern half of the site (approximate size of 0.92 acres). Geology and Hydrogeology: The site is underlain by up to 12 feet of urban fill material, then various layers of gravelly sands, silts and clays. Bedrock is approximately 100 feet below the ground surface. Groundwater is encountered at depths of 7 to 10 feet beneath the site, and generally flows to the north in the western portion of the site, and to the east in the eastern portion of the site.

Env Problem: Prior to Completion of Remediation For OU 1: Lot 1 Parcel Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU 1 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). Prior to the IRM, the subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 70 parts per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 550 ppm (0.7 SCO), ethylbenzene as high as 270 ppm (1 ppm SCO), and total xylenes as high as 610 ppm (0.26 ppm SCO). Naphthalene was detected

K - WYTHE AVE. STATION (Continued) **S110487593**

as high as 9,400 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 96 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1400 ppm (63 ppm SCO); mercury as high as 18 ppm (0.18 ppm SCO); and arsenic as high as 40 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was only sampled at one on-site location during the investigation due to existing buildings, and was found to be impacted by SVOCs and lead. Lead was detected at a concentration of 254 ppb (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.08 ppb, with a standard of 0.002 ppb. Groundwater sampled at two offsite locations was found to be impacted by VOCs and SVOCs. Soil Vapor - There were no soil vapor samples collected at OU-1. Post-remediation (OU1 only): An IRM was performed at OU1 in 2014 that removed approximately 68,000 tons of impacted material to depths ranging from 15 to 30 feet below ground surface. Prior to remediation, the primary contaminants of concern were BTEX and naphthalene (VOCs), and PAHs (SVOCs). Of the 28 confirmatory samples taken, 25 met the site remedial action SCOs for restricted residential use. The three samples which did not meet the SCOs, and which exceeded only for metals and PAHs, were found at depths greater than 15 feet below ground surface. Groundwater samples collected post-IRM indicated a decrease in concentrations of detected constituents. Prior to Completion of Remediation For OU2 Parcel: Mihata Corporation Properties Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU2 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). a full investigation of these media could not be performed due to the presence of existing buildings. The subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 330 pats per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 840 ppm (0.7 SCO), ethylbenzene as high as 1,200 ppm (1 ppm SCO), and total xylenes as high as 1,600 ppm (0.26 ppm SCO). Naphthalene was detected as high as 1,300 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 13 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1,600 ppm (63 ppm SCO); mercury as high as 2.3 ppm (0.18 ppm SCO); and arsenic as high as 77 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was sampled at two on-site locations during the investigation due to existing buildings, with one location within the holder footprint, and the other at the site boundary. The location within the holder was impacted by SVOCs and lead, while the boundary location had impacts from VOCs and one SVOC. Lead was detected at a concentration of 35 parts per billion (ppb) (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.25 ppb, with a standard of 0.002 ppb. The VOCs found to exceed standards were benzene at 2,200 ppb (1 ppb standard), toluene at 1,200 ppb (5 ppb standard), ethylbenzene at 600 ppb (5 ppb standard), xylene at 2,480 ppb

K - WYTHE AVE. STATION (Continued) **S110487593**

(standard of 5 ppb), isopropyl benzene at 30 ppb (5 ppb standard), naphthalene at 1,200 ppb (guidance value of 10 ppb), n-propylbenzene at 42 ppb (5 ppb standard), styrene at 690 ppb (5 ppb standard), 1,2,4-trimethylbenzene at 600 ppb (5 ppb standard), and 1,3,5-trimethylbenzene at 160 ppb (5 ppb standard). Naphthalene was the SVOC which was found at 1,100 ppb (guidance value of 10 ppb). Groundwater sampled at one offsite location was found to be impacted by VOCs and SVOCs. Soil Vapor- There were three soil vapor samples collected at OU2 during the investigation. The sub-slab vapor samples contained compounds, including BTEX and trimethylbenzenes, which may be associated with gas holder operations and which are common petroleum products. One compound, TCE, was detected at 11 micrograms per cubic meter. This compound is a chlorinated solvent, which is not associated with former gas holder operations. In 2018, several monitoring wells were sampled for PFAS and 1,4-diaxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfanoic acid (PFOS) were reported at concentrations of up to 66 and 15 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. Individual PFAS exceeding the 100 ppt screening level included perfluorohexanoic acid (PFHxA) at a concentration of 272 ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations of up to 679 ppt, which is above the 500 ppt screening level for total PFAS in groundwater. The residual contamination in soil and groundwater is being managed under an Interim Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining in Operable Unit 1. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered with pavement and buildings. Volatile organic compounds in the contaminated soil or contamination groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying structures and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion for any future on-site redevelopment of Operable Unit 2. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

Site Description: Location: The former Wythe Avenue Station is located in the Williamsburg neighborhood of Brooklyn, New York, Kings County. The site occupies nine parcels, and is bounded by North 13th Street to the north, North 12th Street to the south, Berry Street to the east and Wythe Avenue to the west. These nine parcels are identified as Block 2283, Lots 1, 25, 28, 31, 33, 35, 38, 41 and 43, and comprise approximately 2.07 acres. Site Features: The site is comprised of commercial and industrial properties, and site topography is nearly flat. Lot 1 (OU1) contains a newly constructed twenty-one story hotel and retail stores, the remaining eight lots (OU2) comprise several one-story warehouse buildings on the east half of the site which are currently occupied by the Mirtex Trading Corporation. Current Zoning and Land Use: The area is zoned M1-1 and M1-2, which allow for light industrial and commercial uses. The site is surrounded by mixed use parcels, including light industrial, commercial and residential. The nearest residential area is within 100 feet to the southwest. Past Use of the Site: The site was operated as a Manufactured Gas Plant

K - WYTHE AVE. STATION (Continued) **S110487593**

(MGP) holder station by Brooklyn Union Gas Co. from approximately 1903 to 1965. The station operated solely for gas distribution, and no gas production facilities were present at the site. Over the life of facility, manufactured gas, and possibly natural gas, based on the years of operation, was stored at the facility. In 1965 the holders and all associated MGP buildings were dismantled when the property was sold. Subsequent development of the site included two one-story buildings on the western two parcels, used for manufacturing and warehousing, in 1968. The eastern portion of the site was redeveloped with several warehouse buildings between 1985 and 1991. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of a release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) consists of the parcel (Lot 1) owned by Wythe Berry LLC on the western half of the site (approximate size of 1.15 acres). Operable unit 2 (OU2) consists of the remaining eight parcels owned by Mihata Corporation on the eastern half of the site (approximate size of 0.92 acres). Geology and Hydrogeology: The site is underlain by up to 12 feet of urban fill material, then various layers of gravelly sands, silts and clays. Bedrock is approximately 100 feet below the ground surface. Groundwater is encountered at depths of 7 to 10 feet beneath the site, and generally flows to the north in the western portion of the site, and to the east in the eastern portion of the site.

Env Problem: Prior to Completion of Remediation For OU 1: Lot 1 Parcel Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU 1 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). Prior to the IRM, the subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 70 parts per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 550 ppm (0.7 SCO), ethylbenzene as high as 270 ppm (1 ppm SCO), and total xylenes as high as 610 ppm (0.26 ppm SCO). Naphthalene was detected as high as 9,400 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 96 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1400 ppm (63 ppm SCO); mercury as high as 18 ppm (0.18 ppm SCO); and arsenic as high as 40 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was only sampled at one on-site location during the investigation due to existing buildings, and was found to be impacted by SVOCs and lead. Lead was detected at a concentration of 254 ppb (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.08 ppb, with a standard of 0.002 ppb. Groundwater sampled at two offsite locations was found to be impacted by VOCs and SVOCs. Soil Vapor - There were no soil vapor samples collected at OU-1. Post-remediation (OU1 only): An IRM was performed at OU1 in 2014 that removed approximately 68,000 tons of impacted material to depths ranging from 15 to 30 feet below ground surface. Prior to remediation, the primary contaminants of concern

K - WYTHE AVE. STATION (Continued) **S110487593**

were BTEX and naphthalene (VOCs), and PAHs (SVOCs). Of the 28 confirmatory samples taken, 25 met the site remedial action SCOs for restricted residential use. The three samples which did not meet the SCOs, and which exceeded only for metals and PAHs, were found at depths greater than 15 feet below ground surface. Groundwater samples collected post-IRM indicated a decrease in concentrations of detected constituents. Prior to Completion of Remediation For OU2 Parcel: Mihata Corporation Properties Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU2 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). a full investigation of these media could not be performed due to the presence of existing buildings. The subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 330 pats per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 840 ppm (0.7 SCO), ethylbenzene as high as 1,200 ppm (1 ppm SCO), and total xylenes as high as 1,600 ppm (0.26 ppm SCO). Naphthalene was detected as high as 1,300 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 13 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1,600 ppm (63 ppm SCO); mercury as high as 2.3 ppm (0.18 ppm SCO); and arsenic as high as 77 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was sampled at two on-site locations during the investigation due to existing buildings, with one location within the holder footprint, and the other at the site boundary. The location within the holder was impacted by SVOCs and lead, while the boundary location had impacts from VOCs and one SVOC. Lead was detected at a concentration of 35 parts per billion (ppb) (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.25 ppb, with a standard of 0.002 ppb. The VOCs found to exceed standards were benzene at 2,200 ppb (1 ppb standard), toluene at 1,200 ppb (5 ppb standard), ethylbenzene at 600 ppb (5 ppb standard), xylene at 2,480 ppb (standard of 5 ppb), isopropyl benzene at 30 ppb (5 ppb standard), naphthalene at 1,200 ppb (guidance value of 10 ppb), n-propylbenzene at 42 ppb (5 ppb standard), styrene at 690 ppb (5 ppb standard), 1,2,4-trimethylbenzene at 600 ppb (5 ppb standard), and 1,3,5-trimethylbenzene at 160 ppb (5 ppb standard). Naphthalene was the SVOC which was found at 1,100 ppb (guidance value of 10 ppb). Groundwater sampled at one offsite location was found to be impacted by VOCs and SVOCs. Soil Vapor- There were three soil vapor samples collected at OU2 during the investigation. The sub-slab vapor samples contained compounds, including BTEX and trimethylbenzenes, which may be associated with gas holder operations and which are common petroleum products. One compound, TCE, was detected at 11 micrograms per cubic meter. This compound is a chlorinated solvent, which is not associated with former gas holder operations. In 2018, several monitoring wells were sampled for PFAS and 1,4-diaxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfanoic acid (PFOS) were reported at concentrations of up to 66 and 15 parts per trillion (ppt),

K - WYTHE AVE. STATION (Continued) **S110487593**

respectively, exceeding the 10 ppt screening levels for groundwater for each. Individual PFAS exceeding the 100 ppt screening level included perfluorohexanoic acid (PFHxA) at a concentration of 272 ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations of up to 679 ppt, which is above the 500 ppt screening level for total PFAS in groundwater. The residual contamination in soil and groundwater is being managed under an Interim Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining in Operable Unit 1. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered with pavement and buildings. Volatile organic compounds in the contaminated soil or contamination groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying structures and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion for any future on-site redevelopment of Operable Unit 2. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

size of 0.92 acres). Geology and Hydrogeology: The site is underlain by up to 12 feet of urban fill material, then various layers of gravelly sands, silts and clays. Bedrock is approximately 100 feet below the ground surface. Groundwater is encountered at depths of 7 to 10 feet beneath the site, and generally flows to the north in the western portion of the site, and to the east in the eastern portion of the site.

Env Problem: Prior to Completion of Remediation For OU 1: Lot 1 Parcel Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU 1 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). Prior to the IRM, the subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 70 parts per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 550 ppm (0.7 SCO), ethylbenzene as high as 270 ppm (1 ppm SCO), and total xylenes as high as 610 ppm (0.26 ppm SCO). Naphthalene was detected as high as 9,400 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 96 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1400 ppm (63 ppm SCO); mercury as high as 18 ppm (0.18 ppm SCO); and arsenic as high as 40 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was only sampled at one on-site location during the investigation due to existing buildings, and was found to be impacted by SVOCs and lead. Lead was detected at a concentration of 254 ppb (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.08 ppb, with a standard of 0.002 ppb. Groundwater sampled at two offsite locations was found to be impacted by VOCs and SVOCs. Soil Vapor - There were no soil vapor samples collected at OU-1. Post-remediation (OU1 only): An IRM was performed at OU1 in 2014 that removed approximately 68,000 tons of impacted material to depths ranging from 15 to 30 feet below ground surface. Prior to remediation, the primary contaminants of concern were BTEX and naphthalene (VOCs), and PAHs (SVOCs). Of the 28 confirmatory samples taken, 25 met the site remedial action SCOs for restricted residential use. The three samples which did not meet the SCOs, and which exceeded only for metals and PAHs, were found at depths greater than 15 feet below ground surface. Groundwater samples collected post-IRM indicated a decrease in concentrations of detected constituents. Prior to Completion of Remediation For OU2 Parcel: Mihata Corporation Properties Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU2 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). a full investigation of these media could not be performed due to the presence of existing buildings. The subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 330 pats per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 840 ppm (0.7 SCO),

K - WYTHE AVE. STATION (Continued) **S110487593**

ethylbenzene as high as 1,200 ppm (1 ppm SCO), and total xylenes as high as 1,600 ppm (0.26 ppm SCO). Naphthalene was detected as high as 1,300 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 13 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1,600 ppm (63 ppm SCO); mercury as high as 2.3 ppm (0.18 ppm SCO); and arsenic as high as 77 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was sampled at two on-site locations during the investigation due to existing buildings, with one location within the holder footprint, and the other at the site boundary. The location within the holder was impacted by SVOCs and lead, while the boundary location had impacts from VOCs and one SVOC. Lead was detected at a concentration of 35 parts per billion (ppb) (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.25 ppb, with a standard of 0.002 ppb. The VOCs found to exceed standards were benzene at 2,200 ppb (1 ppb standard), toluene at 1,200 ppb (5 ppb standard), ethylbenzene at 600 ppb (5 ppb standard), xylene at 2,480 ppb (standard of 5 ppb), isopropyl benzene at 30 ppb (5 ppb standard), naphthalene at 1,200 ppb (guidance value of 10 ppb), n-propylbenzene at 42 ppb (5 ppb standard), styrene at 690 ppb (5 ppb standard), 1,2,4-trimethylbenzene at 600 ppb (5 ppb standard), and 1,3,5-trimethylbenzene at 160 ppb (5 ppb standard). Naphthalene was the SVOC which was found at 1,100 ppb (guidance value of 10 ppb). Groundwater sampled at one offsite location was found to be impacted by VOCs and SVOCs. Soil Vapor- There were three soil vapor samples collected at OU2 during the investigation. The sub-slab vapor samples contained compounds, including BTEX and trimethylbenzenes, which may be associated with gas holder operations and which are common petroleum products. One compound, TCE, was detected at 11 micrograms per cubic meter. This compound is a chlorinated solvent, which is not associated with former gas holder operations. In 2018, several monitoring wells were sampled for PFAS and 1,4-diaxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfanoic acid (PFOS) were reported at concentrations of up to 66 and 15 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. Individual PFAS exceeding the 100 ppt screening level included perfluorohexanoic acid (PFHxA) at a concentration of 272 ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations of up to 679 ppt, which is above the 500 ppt screening level for total PFAS in groundwater. The residual contamination in soil and groundwater is being managed under an Interim Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining in Operable Unit 1. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered with pavement and buildings. Volatile organic compounds in the contaminated soil or contamination groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying structures and affect the indoor air quality. This process, which is similar to the movement of radon gas from the

K - WYTHE AVE. STATION (Continued) **S110487593**

subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion for any future on-site redevelopment of Operable Unit 2. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

K - WYTHE AVE. STATION (Continued) **S110487593**

Updated By: GHPRATT
Site Code: 378992
Site Description: Location: The former Wythe Avenue Station is located in the Williamsburg neighborhood of Brooklyn, New York, Kings County. The site occupies nine parcels, and is bounded by North 13th Street to the north, North 12th Street to the south, Berry Street to the east and Wythe Avenue to the west. These nine parcels are identified as Block 2283, Lots 1, 25, 28, 31, 33, 35, 38, 41 and 43, and comprise approximately 2.07 acres. Site Features: The site is comprised of commercial and industrial properties, and site topography is nearly flat. Lot 1 (OU1) contains a newly constructed twenty-one story hotel and retail stores, the remaining eight lots (OU2) comprise several one-story warehouse buildings on the east half of the site which are currently occupied by the Mirtex Trading Corporation. Current Zoning and Land Use: The area is zoned M1-1 and M1-2, which allow for light industrial and commercial uses. The site is surrounded by mixed use parcels, including light industrial, commercial and residential. The nearest residential area is within 100 feet to the southwest. Past Use of the Site: The site was operated as a Manufactured Gas Plant (MGP) holder station by Brooklyn Union Gas Co. from approximately 1903 to 1965. The station operated solely for gas distribution, and no gas production facilities were present at the site. Over the life of facility, manufactured gas, and possibly natural gas, based on the years of operation, was stored at the facility. In 1965 the holders and all associated MGP buildings were dismantled when the property was sold. Subsequent development of the site included two one-story buildings on the western two parcels, used for manufacturing and warehousing, in 1968. The eastern portion of the site was redeveloped with several warehouse buildings between 1985 and 1991. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of a release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) consists of the parcel (Lot 1) owned by Wythe Berry LLC on the western half of the site (approximate size of 1.15 acres). Operable unit 2 (OU2) consists of the remaining eight parcels owned by Mihata Corporation on the eastern half of the site (approximate size of 0.92 acres). Geology and Hydrogeology: The site is underlain by up to 12 feet of urban fill material, then various layers of gravelly sands, silts and clays. Bedrock is approximately 100 feet below the ground surface. Groundwater is encountered at depths of 7 to 10 feet beneath the site, and generally flows to the north in the western portion of the site, and to the east in the eastern portion of the site.
Env Problem: Prior to Completion of Remediation For OU 1: Lot 1 Parcel Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU 1 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). Prior to the IRM, the subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 70 parts per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 550 ppm (0.7 SCO), ethylbenzene as high as 270 ppm (1 ppm SCO), and total

K - WYTHE AVE. STATION (Continued) **S110487593**

xylenes as high as 610 ppm (0.26 ppm SCO). Naphthalene was detected as high as 9,400 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 96 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1400 ppm (63 ppm SCO); mercury as high as 18 ppm (0.18 ppm SCO); and arsenic as high as 40 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was only sampled at one on-site location during the investigation due to existing buildings, and was found to be impacted by SVOCs and lead. Lead was detected at a concentration of 254 ppb (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.08 ppb, with a standard of 0.002 ppb. Groundwater sampled at two offsite locations was found to be impacted by VOCs and SVOCs. Soil Vapor - There were no soil vapor samples collected at OU-1. Post-remediation (OU1 only): An IRM was performed at OU1 in 2014 that removed approximately 68,000 tons of impacted material to depths ranging from 15 to 30 feet below ground surface. Prior to remediation, the primary contaminants of concern were BTEX and naphthalene (VOCs), and PAHs (SVOCs). Of the 28 confirmatory samples taken, 25 met the site remedial action SCOs for restricted residential use. The three samples which did not meet the SCOs, and which exceeded only for metals and PAHs, were found at depths greater than 15 feet below ground surface. Groundwater samples collected post-IRM indicated a decrease in concentrations of detected constituents. Prior to Completion of Remediation For OU2 Parcel: Mihata Corporation Properties Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU2 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). a full investigation of these media could not be performed due to the presence of existing buildings. The subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 330 pats per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 840 ppm (0.7 SCO), ethylbenzene as high as 1,200 ppm (1 ppm SCO), and total xylenes as high as 1,600 ppm (0.26 ppm SCO). Naphthalene was detected as high as 1,300 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 13 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1,600 ppm (63 ppm SCO); mercury as high as 2.3 ppm (0.18 ppm SCO); and arsenic as high as 77 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was sampled at two on-site locations during the investigation due to existing buildings, with one location within the holder footprint, and the other at the site boundary. The location within the holder was impacted by SVOCs and lead, while the boundary location had impacts from VOCs and one SVOC. Lead was detected at a concentration of 35 parts per billion (ppb) (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.25 ppb, with a standard of 0.002 ppb. The VOCs found to exceed standards were benzene at 2,200 ppb (1 ppb standard), toluene at 1,200 ppb (5 ppb standard),

K - WYTHE AVE. STATION (Continued) **S110487593**

ethylbenzene at 600 ppb (5 ppb standard), xylene at 2,480 ppb (standard of 5 ppb), isopropyl benzene at 30 ppb (5 ppb standard), naphthalene at 1,200 ppb (guidance value of 10 ppb), n-propylbenzene at 42 ppb (5 ppb standard), styrene at 690 ppb (5 ppb standard), 1,2,4-trimethylbenzene at 600 ppb (5 ppb standard), and 1,3,5-trimethylbenzene at 160 ppb (5 ppb standard). Naphthalene was the SVOC which was found at 1,100 ppb (guidance value of 10 ppb). Groundwater sampled at one offsite location was found to be impacted by VOCs and SVOCs. Soil Vapor- There were three soil vapor samples collected at OU2 during the investigation. The sub-slab vapor samples contained compounds, including BTEX and trimethylbenzenes, which may be associated with gas holder operations and which are common petroleum products. One compound, TCE, was detected at 11 micrograms per cubic meter. This compound is a chlorinated solvent, which is not associated with former gas holder operations. In 2018, several monitoring wells were sampled for PFAS and 1,4-diaxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfanoic acid (PFOS) were reported at concentrations of up to 66 and 15 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. Individual PFAS exceeding the 100 ppt screening level included perfluorohexanoic acid (PFHxA) at a concentration of 272 ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations of up to 679 ppt, which is above the 500 ppt screening level for total PFAS in groundwater. The residual contamination in soil and groundwater is being managed under an Interim Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining in Operable Unit 1. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered with pavement and buildings. Volatile organic compounds in the contaminated soil or contamination groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying structures and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion for any future on-site redevelopment of Operable Unit 2. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

Past Use of the Site: The site was operated as a Manufactured Gas Plant

K - WYTHE AVE. STATION (Continued) **S110487593**

(MGP) holder station by Brooklyn Union Gas Co. from approximately 1903 to 1965. The station operated solely for gas distribution, and no gas production facilities were present at the site. Over the life of facility, manufactured gas, and possibly natural gas, based on the years of operation, was stored at the facility. In 1965 the holders and all associated MGP buildings were dismantled when the property was sold. Subsequent development of the site included two one-story buildings on the western two parcels, used for manufacturing and warehousing, in 1968. The eastern portion of the site was redeveloped with several warehouse buildings between 1985 and 1991. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of a release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) consists of the parcel (Lot 1) owned by Wythe Berry LLC on the western half of the site (approximate size of 1.15 acres). Operable unit 2 (OU2) consists of the remaining eight parcels owned by Mihata Corporation on the eastern half of the site (approximate size of 0.92 acres). Geology and Hydrogeology: The site is underlain by up to 12 feet of urban fill material, then various layers of gravelly sands, silts and clays. Bedrock is approximately 100 feet below the ground surface. Groundwater is encountered at depths of 7 to 10 feet beneath the site, and generally flows to the north in the western portion of the site, and to the east in the eastern portion of the site.

Env Problem: Prior to Completion of Remediation For OU 1: Lot 1 Parcel Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU 1 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). Prior to the IRM, the subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 70 parts per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 550 ppm (0.7 SCO), ethylbenzene as high as 270 ppm (1 ppm SCO), and total xylenes as high as 610 ppm (0.26 ppm SCO). Naphthalene was detected as high as 9,400 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 96 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1400 ppm (63 ppm SCO); mercury as high as 18 ppm (0.18 ppm SCO); and arsenic as high as 40 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was only sampled at one on-site location during the investigation due to existing buildings, and was found to be impacted by SVOCs and lead. Lead was detected at a concentration of 254 ppb (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.08 ppb, with a standard of 0.002 ppb. Groundwater sampled at two offsite locations was found to be impacted by VOCs and SVOCs. Soil Vapor - There were no soil vapor samples collected at OU-1. Post-remediation (OU1 only): An IRM was performed at OU1 in 2014 that removed approximately 68,000 tons of impacted material to depths ranging from 15 to 30 feet below ground surface. Prior to remediation, the primary contaminants of concern

K - WYTHE AVE. STATION (Continued) **S110487593**

were BTEX and naphthalene (VOCs), and PAHs (SVOCs). Of the 28 confirmatory samples taken, 25 met the site remedial action SCOs for restricted residential use. The three samples which did not meet the SCOs, and which exceeded only for metals and PAHs, were found at depths greater than 15 feet below ground surface. Groundwater samples collected post-IRM indicated a decrease in concentrations of detected constituents. Prior to Completion of Remediation For OU2 Parcel: Mihata Corporation Properties Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU2 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). a full investigation of these media could not be performed due to the presence of existing buildings. The subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 330 pats per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 840 ppm (0.7 SCO), ethylbenzene as high as 1,200 ppm (1 ppm SCO), and total xylenes as high as 1,600 ppm (0.26 ppm SCO). Naphthalene was detected as high as 1,300 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 13 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1,600 ppm (63 ppm SCO); mercury as high as 2.3 ppm (0.18 ppm SCO); and arsenic as high as 77 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was sampled at two on-site locations during the investigation due to existing buildings, with one location within the holder footprint, and the other at the site boundary. The location within the holder was impacted by SVOCs and lead, while the boundary location had impacts from VOCs and one SVOC. Lead was detected at a concentration of 35 parts per billion (ppb) (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.25 ppb, with a standard of 0.002 ppb. The VOCs found to exceed standards were benzene at 2,200 ppb (1 ppb standard), toluene at 1,200 ppb (5 ppb standard), ethylbenzene at 600 ppb (5 ppb standard), xylene at 2,480 ppb (standard of 5 ppb), isopropyl benzene at 30 ppb (5 ppb standard), naphthalene at 1,200 ppb (guidance value of 10 ppb), n-propylbenzene at 42 ppb (5 ppb standard), styrene at 690 ppb (5 ppb standard), 1,2,4-trimethylbenzene at 600 ppb (5 ppb standard), and 1,3,5-trimethylbenzene at 160 ppb (5 ppb standard). Naphthalene was the SVOC which was found at 1,100 ppb (guidance value of 10 ppb). Groundwater sampled at one offsite location was found to be impacted by VOCs and SVOCs. Soil Vapor- There were three soil vapor samples collected at OU2 during the investigation. The sub-slab vapor samples contained compounds, including BTEX and trimethylbenzenes, which may be associated with gas holder operations and which are common petroleum products. One compound, TCE, was detected at 11 micrograms per cubic meter. This compound is a chlorinated solvent, which is not associated with former gas holder operations. In 2018, several monitoring wells were sampled for PFAS and 1,4-diaxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfanoic acid (PFOS) were reported at concentrations of up to 66 and 15 parts per trillion (ppt),

K - WYTHE AVE. STATION (Continued) **S110487593**

respectively, exceeding the 10 ppt screening levels for groundwater for each. Individual PFAS exceeding the 100 ppt screening level included perfluorohexanoic acid (PFHxA) at a concentration of 272 ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations of up to 679 ppt, which is above the 500 ppt screening level for total PFAS in groundwater. The residual contamination in soil and groundwater is being managed under an Interim Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining in Operable Unit 1. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered with pavement and buildings. Volatile organic compounds in the contaminated soil or contamination groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying structures and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion for any future on-site redevelopment of Operable Unit 2. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

DEC Memo:	Consultant was hired to do a Phase 2 on this property for City Little e designation. They found small amounts of SVOC and Pesticides in shallow soil borings (2ft depth) 3/5/08 - Raphael Ketani. I looked up the site in the PBS, but it wasn't listed. The block and lot are 2312 and 22. According to ACRIS, the owners are Tadeusz and Krystina Zablocki, 75 Berry Street, Brooklyn, 11211-1917, and Michael Lichtman, 132 Greene Street, New York, 10013. The environmental company is Environmental

VACANT/ COMMERCIAL (Continued) **S109060194**

Building Solutions. The contact is Michael Borello (917) 217-7334. I sent a CSL to the owners.
3/11/08 - Raphael Ketani. Today I received a letter from Joseph Horowitz, PE, 76-06 137 St.,
Flushing, 11367 ((718) 544-5105). The letter stated that a Phase II was currently taking place.
Previously, a Phase I was performed for the site and submitted and approved by NYC DEP. NYC DEP is
involved because the site has an E designation. Mr. and Mrs. Zablocki plan to construct a four
story building. The building will require a foundation which is 10 feet deep. Excavation will be at
least to a depth of 10 feet. Clearance sampling will take place and the remediation work will be
incorporated into the construction work. Mr. Horowitz stated that DEC will get a copy of the Phase
II ESA and the Phase III Work Plan. Mr. Horowitz stated that he, Mr. and Mrs. Zablocki, Michael
Borello, Principal, Environmental Building Solutions, LLC, 295 Madison Avenue, Suite 1826, NY,
10017, and Innocent Taziva, NYC DEP ((718) 595-3585) should all be copied on any correspondence
from DEC. The NYC DEP reference number is 08DEPTECH159K/04DCP003K.
3/12/08 - Raphael Ketani. I left
a message for Mr. Horowitz that the DEC would like the contaminated soil to be removed immediately
and that we would like the end point soil sample analytical results.
Mr. Horowitz called me back.
He said that the site is half an open yard and half a garage. He said he is waiting for the
necessary permits to demolish the garage. Otherwise, they can't move forward. He said that the
owners are as anxious as DEC to move foreward and get rid of the contaminated soil. Groundwater
samples were taken and he is waiting to receive the analytical results. 3/18/08 - Raphael Ketani.
Today I received the Phase I for the site from Mr. Horowitz. I reviewed the document. The entire
document was lightly reproduced as it may have been printed from a copy of a copy of the Phase I
document. The pages in appendices IV and V were too light to read. However, these were mostly maps
and neighboring property descriptions, respectively. I had no other comments regarding the Phase I.
3/24/08 - Raphael Ketani. I received a call today from John Zablocki, one of the owners (646)
361-6839. He said that the engineer he had hired was billing him for all kinds of things. He also
wanted to know if he needed to contact DEC before doing the site excavation for the contaminated
soil. I told him he didn't have to wait for DEC's approval, but he would need to provide DEC with
documentation that he had characterized the soil, and had sent it to the appropriate disposal site.
I added that DEC would also need manifests for the loads of soil. I told him that soil borings
would have to be taken to delineate the extent of the contamination,

VACANT/ COMMERCIAL (Continued) **S109060194**

unless he already knows this.
I told him that DEC had already received some information regarding the level of the contamination.
He asked whether he can take the soil samples himself in order to save money. I told him he could
and I explained the entire process of soil contamination delineation, sending the samples to a
laboratory, submitting a soil sampling plan to be approved by DEC before the work starts, the
analytical methods to be used and other details. In the end of our 45 minute conversation, I
informed him that hiring an environmental professional, particularly a person with a PE might be
the best way to go, even if it is expensive. I told him that this person will know what to do and
the ins and outs of the process. I added that the bank may cut his funding if a PE doesn't oversee
the job. I told him to be careful as regards what he does with his project. He said he plans on
building a 6 family apartment building. I told him that he should be very careful that the work is
done properly. He thanked me for all of the information and the conversation ended. 3/26/08 -
Raphael Ketani. I received the (Draft) Subsurface Soil and Groundwater Investigation report dated
3/13/08 from Environmental Building Solutions, LLC. I reviewed the report. I finished my review of
the report. The soil analyticals showed that there were hits for SVOCS in the soil. These were the
combustion series of analytes in the 0' to 2' sample and the 14' to 16' sample for B3. There were
low level exceedences of TAGM for the 0' to 2' sample. Only a small number of hits were present in
the other samples. The samples were almost entirely non-detect for SVOCs. Almost all of the samples
were also non-detect for VOCs. Most of the hits were in B-2 in the 0' to 2' sample. The groundwater
sample had only some low level SVOC exceedences of TAGM. The boring location map shows that the
drilling sites were widely spaced. I wrote a letter to Mr. Horowitz stating that there should be
more borings. 3/27/08 - Raphael Ketani. I spoke to Mr. Horowitz (718) 544-5105 about the site. He
said that the Zablockis received the DEC letter requesting 3 additional borings and soil samples.
He said that he doesn't want to try to do the borings and get the analytical results for the soil
samples as this will take a lot of time. He said that the City program they are involved with gives
them a tax break for constructing on their property, but only if they have the foundation under
construction before the end of June 2008. He said that what DEC is asking for will take too much
time. He said that all of the soil will be dug up anyway and handled as hazardous material due to
the pesticide hits. I told him that is fine, but DEC still doesn't know what the subsurface

VACANT/ COMMERCIAL (Continued) **S109060194**

conditions are. I told him that the site is 100 feet long and that 3 borings are just not enough to characterize the subsurface. I told him that he doesn't have to go down any further than 15 feet and that the analytical results just need to show the 12 most common VOCs and the 12 most common SVOCs. I told him that there are dozens of environmental and remediation companies and that someone has to have equipment available to do a few borings on short notice. He said that he will call me back later. Mr. Horowitz called a half hour later and asked how many soil samples would be needed. I told him to send off the 3 dirtiest ones. He said nothing is really dirty. I told him that is fine. He asked that he be allowed to order testing via STARS for VOCs and SVOCs. I told him that will be fine. He said that he will talk to the Zablockis and get back to me. Later, Mr. Horowitz sent me an e-mail memorializing the agreement between him, the Zablockis, and DEC. The agreement stated in the e-mail is: borings will take place March 31 or April 1, 3 borings opposite the existing locations will go down to 16', the dirtiest sample will be collected, analyses will be done via STARS methods 8260 and 8270, results will be presented in an Addendum to the Phase II. 4/1/08 - Raphael Ketani. Mr. Horowitz sent me an e-mail containing a DRAFT letter for Mr. Taziva of NYC DEP. He asked me to comment on the parts of the letter mentioning correspondences between him and me. The statements regarding the correspondences appeared accurate. A made a copy of the DRAFT letter and put it in the paperfile. His DRAFT letter also mentions that the 3 additional borings were performed on April 1, 2008 and soil samples were sent to the laboratory for 24 hour turn around. 4/4/08 - Raphael Ketani. Today I received the final Subsurface Soil and Groundwater Investigtion report dated March 13, 2008 from Mr. Horowitz. The report was accompanied by a cover letter to Mr. Taziva of DEP dated 4/2/08. The cover letter states that a vapor barrier will be installed. The report did not include the soil analyses for the 3 additional borings that were requested by DEC. I had no comments regarding the letter, nor the report. 4/8/08 - Raphael Ketani. I received the analytical results for the 3 additional borings that were performed. The respective samples were B-6, B-7, and B-8. All of the results for VOCs and SVOCs were completely non-detect. I spoke to Mr. Horowitz regarding the analytical results. I asked him why the numbering order goes 6, 7, and 8. He said that he was just following the numbering system from the previous reports. He said that no samples were missing. I asked him why the analytical sheets say that the sample type is GRAB when they are supposed to be the soil cores. He said that the

VACANT/ COMMERCIAL (Continued) **S109060194**

samples are from the soil
borings. 4/9/08 - Raphael Ketani. Yesterday, I received the Subsurface Soil Investigation Addendum
dated 4/4/08 from Mr. Horowitz. I reviewed the document. The analytical results for borings B-6,
B-7, and B-8 were the same as the ones I had previously reviewed on 4/8/08. However, borings B-1
and B-3 were in different locations than in the 3/13/08 report. Also, the Addendum depicts boring
B-4 at the location of B-2 and boring B-5 is at the location of B-3. The Addendum puts B-3 at the
location of B-1 of the 3/13/08 report. Additionally, I never received the analyticals for B-4 and
B-5. I tried to contact Mr. Horowitz to discuss this, but could only leave a message. 4/10/08 -
Raphael Ketani. Mr. Borello of Environmental Building Solutions, LLC (646) 290-5925, exr 25 called
me back. He said he was sorry for the confusion. He e-mailed me the three different site plans
showing the different stages and placements of the series of borings and the well. He also e-mailed
me the analytical results for 3 composite samples that were taken to characterize the soil. The
analytical results were mostly non-detect with only a handle of low hits of SVOCs. 4/11/08 -
Raphael Ketani. Mr. Horowitz sent me the entire analytical package from Environmental Testing
Laboratories for the 3 composite samples, along with copies of the Chain of Custody Forms and the 3
different boring location site plans. I reviewed the package and had no comments. Based upon the
analytical results in the March 13, 2008 Phase II, the analytical results in the Addendum to the
Phase II dated April 4, 2008, and the April 10, 2008 soil characterization testing results package,
I am closing the spill case. I sent an NFA letter to Mr. Horowitz, with a c-c to Innocent Taziva of
DEP.

DEC Memo:	05/10/07-Vought-Off hours responder. Vought called Winters and left message to return call to cell phone. Vought called Vijax and spoke to Anthony Rotello and cause of spill was bad gauge. Spill came out of gauge and onto concrete floor. No sewers or drains affected. Rotello confirmed that spill amount less than five gallons. Gauge will be replaced. No spill out of vent pipe. Vought received call from resident (Ms Winter) is satsified with cleanup and confirmed that spill on concrete and no sewers or drains affected. Vought provided contact info in case additional issues arrise. Spill closed by Vought.

DEC Memo:	6/5/23 - Kim - Desk Duty - Yu Associates performed a site

213 NORTH 8TH STREET (Continued) **S130464691**

investigation as this is an OER
E-designated site. The Phase II investigation was performed on 5/15 and 5/16. During the field
investigation, it was noted that soil sampled during boring installation exhibited petroleum odors.
Yu Assoc. collected soil and groundwater samples. Based on their review, soil samples contained
BTEX exceeding residential SCOs and groundwater samples contained BTEX exceeding TOGS standards.
Copy of lab report and, when available, Phase II report were requested via email.
chang@yu-associates.com 06/06/23-Hiralkumar Patel. downloaded Phase I from NYC OER EPIC database.
10:30 AM:- DEC Kim forwarded email from Chengyu Hang including site map and sample results. Chengyu
Hang YU & Associates PH. (201) 873-7543 email: chang@yu-associates.com 06/13/13-Hiralkumar Patel.
alternate address: 211-215 N 8th St no PBS or other spills found. summary of Phase I dated Aug.
2021: - as per historical maps, the subject site consisted of one (1) 3-story residential building,
one (1) 2-story wagon shed building and one (1) 3-story retail store building from 1887-1942.
between 1942 and 1951, there was a 2-story building with a gasoline UST (near N 8th St) and a
3-story retail store building. the 2-story building was maintained from 1951 until now. the 2-story
building was used as a manufacturer from 1951 to 1965 and became a wastepaper recycling facility
between 1965 and 2007, the 3-story retail store building was demolished after 1965 and used as a
parking lot until 1991 and became part of building addition. currently, the site is a
winery/restaurant - site has 'E' designation - nearest surface water body is East River which is
about 0.5 mile away to the west 08/04/23-Hiralkumar Patel. received email from Chengyu (at 3:39 PM
on 08/03/23) including link to RIR and draft RAWP. summary of RIR dated July 2023: - currently, the
site is vacant and contains a partial basement located at the south-east portion of the site -
proposed future use of the site will consist of a six-story mixed use commercial-residential
building with a full cellar - existing building will be demolished prior to redevelopment - the
entire lot will be excavated to the groundwater level, which is approx. 9-10 ft bg for the
construction of the cellar - elevation of property ranges from 15 to 15.9 ft - GPR survey did not
identify any USTs - installed six (6) soil borings (SB-1 through SB-6) were advanced to the
groundwater level, which is approx. 9-10 ft bg - stratigraphy of the site, from surface down,
consists of approx. 5 ft of fill material underlain by 5-10 ft of brown fine silty sand - soil
samples from each boring were collected at surface level (0-2 ft bg) and subsurface level (highest

213 NORTH 8TH STREET (Continued) **S130464691**

PID or 2 ft above groundwater interface) - elevated PID readings were detected in SB-1, SB-2 and
SB-5 with max readings at the groundwater smear zone - strong petroleum odors and higher PID
readings (79.4 to 280.7 ppm with max at 8-9 ft bg) were noted in boring SB-1 - strong petroleum
odors and higher PID readings (94.6 to 238.7 ppm with max at 9-10 ft bg) were noted in boring SB-2
- strong petroleum odors and higher PID readings (62.5 to 176 ppm with max at 9-10 ft bg) were
noted in boring SB-5 - total twelve (12) soil samples were analyzed soil analyticals (in ppb):
----------SB-2---------SB-3--------SB-5 8-10 ft 7-9 ft 7-9 ft
Ethylbenzene----------3,500--------2,700-------8,300
Xylene----------2,600--------5,100------18,000
1,2,4-Trimethylbenzene----------15,000------18,000 - installed three (3) 1-inch diameter
temporary wells (GW-1 through GW-3) with 10 ft of screen - temporary wells were installed by
over-drilling soil borings approx. 4-5 ft below the groundwater table - well GW-1 was installed in
boring SB-1 - well GW-2 was installed in boring SB-6 - well GW-3 was installed east of boring SB-2
- depth to groundwater ranges from 8.77 to 9.74 ft bg - groundwater flow is generally to south-west
- total three groundwater samples were analyzed groundwater analyticals (in ppb):
----------GW-3 Ethylbenzene----------360
Xylene----------320
1,2,4-Trimethylbenzene-------320 - installed five (5) soil-vapor probes to the two ft above
groundwater level interval (appox. 7-9 ft bg) and collected five soil-vapor samples for analysis -
detected 1,1,1-Trichloroethane (540 ug/m3) and TCE (12 ug/m3) in sample SV-1 the draft RAWP
proposes: - excavation of entire footprint of site to the groundwater level for development
purposes - over-excavation in area where petroleum-impacted soil is observed from the excavation
bottom extending up to 3-5 ft below groundwater level - excavation of small portion of property to
the depth of 15 ft bg for elevator pits - removal of any USTs found during excavation - application
of ORC for in-situ bioremediation to treat on-site groundwater contamination - on-site groundwater
monitoring after ORC application - collection and analysis of endpoint samples - construction of
6-inch thick concrete building slab - installation of 46-mil vapor barrier beneath the building
slab and 32-mil vapor barrier outside all sub-grade foundation sidewalls review of available data
indicates presence of petroleum contamination in soil near the groundwater interface and in
groundwater along the upgradient side of the site, which could be result of off-site release. as
such, further groundwater investigation is needed via installation of

213 NORTH 8TH STREET (Continued) **S130464691**

permanent monitoring wells
(including one upgradient of SB-5, one at GW-3, one at SB-3 and at least one downgradient of the
site/grossly contaminated zone) prior to any comment on proposed ORC application/on-site monitoring
(off-site monitoring may also be needed based on delineation data/endpoint sampling results). 11:21
AM:- spoke with Chengyu and asked him to provide property owner's contact info. 11:38 AM:- received
email from Chengyu including property owner's contact info. LC & LH Realty Corp. **property owner**
923 60th Street Brooklyn, NY 11219 Attn: Cheng Kin Chau PH. (917) 642-0899 email:
kincheng668@yahoo.com 1:54 PM:- sent email to Chengyu. informed him that review of available
sampling data indicates presence of petroleum contamination in soil near the groundwater interface
and in groundwater along the upgradient side of the site, but source of such contamination has not
been defined yet. as such, the Department requires further subsurface soil and groundwater
investigation via installation of permanent monitoring wells (including one upgradient of SB-5, one
at GW-3, one at SB-3 and at least one downgradient of the site/grossly contaminated zone) prior to
finalizing a remedial action work plan. asked him to submit an investigation work plan, including
schedule for field work/report submission. email copied to OER Shaminder, Mr. Chau and Sixuan Wang
(swang@yu-associates.com). 10/17/23-Hiralkumar Patel. received email from Chengyu (at 3:31 PM on
09/27/23) including a supplemental investigation work plan. Chengyu didn t propose permanent wells
since the owner will demolish and redevelop the site later. if permanent monitoring wells are
warranted after the supplemental remedial investigation, they will be installed in the basement of
the proposed new building after the construction is completed. the regional groundwater flow
direction is obtained from the adjacent properties investigation reports. summary: - as per the
remedial investigation reports for the adjacent properties (207 N 8th St, 219-233 N 8th St and
212-218 N 9th St), regional groundwater flow direction is towards northwest --------- - five test
borings will be advanced to the groundwater level - depth of groundwater is expected at approx.
9-10 ft bg - boring MW-1/B-1 is proposed at upgradient of previous boring SB-4 - boring MW-2/B-2 is
proposed at previous boring SB-5 - boring MW-3/B-3 is proposed at previous well GW-3 - boring
MW-4/B-4 is proposed at previous boring SB-3 - boring MW-5/B-5 is proposed at downgradient of the
site/grossly contaminated zone - upto two soil samples will be collected from each five test
boring: one sample will be collected at the groundwater smear zone (approx. 8-10 ft bg) and second

213 NORTH 8TH STREET (Continued) **S130464691**

soil sample may be collected from above groundwater level if elevated PID readings and/or visual
and olfactory observations are noted - five 2-inch diameter temporary monitoring wells will be
installed in five test borings - wells will be installed to approx. 5 ft below the water table with
10 ft of screen the work plan needs to be revised as missing collection of soil samples at highest
PID/observation of contamination and more specific schedule for report submission.
10/20/23-Hiralkumar Patel. 1:15 PM:- sent email to Chengyu and asked him to submit a revised work
plan including collection of soil samples at highest PID/observation of contamination and deepest
dry, and more specific schedule for submission of investigation report. email copied to OER
Shaminder, Ms. Wang and Mr. Chau. 10/27/23-Hiralkumar Patel. received email from Chengyu (at 4:15
PM on 10/26/23) including a revised work plan. 11/03/23-Hiralkumar Patel. 9:14 AM:- sent email to
Mr. Chau including approval letter for work plan dated 10/26/23. asked him to submit investigation
report by COB 12/22/2023. email copied to OER Shaminder, Chengyu and Ms. Wang. 12/15/23-Hiralkumar
Patel. received email from Chengyu (at 3:17 PM on 12/14/23) including copy of supplemental
investigation report. 12/21/23-Hiralkumar Patel. 10:59 AM:- received email from Chengyu including
link to a draft RAWP. 01/04/24-Hiralkumar Patel. reviewed previously submitted investigation report
and draft RAWP. summary of supplemental investigation report dated 12/14/23: - geophysical survey
was performed on 11/10/23 - total of five (5) soil borings (B-1 through B-5) were advanced -
borings B-1 to B-4 were installed to 15 ft bg - boring B-5 was installed to 5 ft below basement
slab - soil samples were collected at 2 ft above groundwater (8-10 ft bg) interval and at the
location of the highest PID reading - total of seven (7) soil samples were analyzed - SVOCs
detected in majority of samples, with higher level in samples from boring B-3 - found some
contamination in soil samples from boring B-3 (7,20 ppb Xylene, 72,000 ppb Naphthalene) - five (5)
2-inch diameter temporary monitoring wells (MW-1 to MW-5) were installed with 10 ft of screen and 5
ft of riser - one groundwater sample was collected from each of the temporary well groundwater
analyticals (in ppb):

	MW-2	MW-3	MW-4	MW-5
Benzene	22	72		37
Toluene	9			76
Ethylbenzene	33	500	11	11
Xylene	160	750	28	44

213 NORTH 8TH STREET (Continued) **S130464691**

summary of draft RAWP dated Dec.
2023: - proposed future use of the site will consist of a six-story mixed use
commercial-residential building with a full cellar - retail space, sprinkler room, utility/gas
meter rooms, and storage rooms in the cellar - retail space, residential lobby, an office and a car
elevator on the first floor - 14 parking spaces on second floor - residential units on the
third-sixth floor - existing building will be demolished prior to redevelopment - the entire lot
will be excavated to the groundwater level, which is approx. 9-10 ft bg, for the construction of
the cellar - over excavation will be performed where petroleum-impacted soil is observed from the
excavation bottom extending up to 3-5 ft below groundwater level - petroleum-stained soils in the
northeast portion of the site should be over-excavated to approx. 3-5 ft below groundwater level or
to the extent practical - small portion of the property will be excavated to the depth of 15 ft bg
for elevator pits - removal of all USTs that encounters during construction - confirmatory endpoint
sampling of soil and groundwater should be conducted - in-situ enhanced aerobic bioremediation will
be implemented to treat the on-site groundwater petroleum contamination - ORC will be directly
applied at the excavation bottom where petroleum-impacted soils are observed - on-site groundwater
monitoring after in-situ chemical oxidation will be implemented - total of three
monitoring/injection wells will be constructed at the site - construction of a 6-inch thick
concrete building slab for the entire site - 46-mil vapor barrier will be installed beneath the
slab - 32-mil vapor barrier will be installed outside all sub-grade foundation sidewalls -
dewatering will occur - a 7-month remediation period is anticipated
1:07 PM:- spoke with Chengyu.
informed him about missing geoprobe number in boring logs included in the supplemental
investigation report. asked him to submit revised logs. also informed him about missing
site-specific SCOs in section 4.2 of the draft RAWP. also discussed use of ORC. informed him that
ORC application will be discussed after review of endpoint soil and groundwater sample results.
1:22 PM:- sent email to Chengyu and asked him to submit revised boring logs and signed/dated RAWP.
email copied to OER Shaminder and Mr. Chau. Madeleine Frank NYC OER PH. (212) 442-8342 email:
mfrank@dep.nyc.gov 01/17/24-Hiralkumar Patel. received email from Chengyu (at 4:22 PM on 01/16/24)
including revised boring logs and signed RAWP. RAWP proposes track 2 residential use soil cleanup
objectives, but will use track 4 restricted residential use if track 2 SCO’s can’t be achieved.

213 NORTH 8TH STREET (Continued) **S130464691**

RAWP also proposes ORC application if over-excavation confirmatory endpoint sampling of soil and groundwater still indicates elevated petroleum contamination. the RAWP proposes submission of a remedial action report in seven (7) months from beginning of remedial action (which is not specified in the plan). 01/30/24-Hiralkumar Patel. 1:48 PM:- sent email to Mr. Chau. informed him that based on review of all available information the Department approves the proposed work plan except implementation of bioremedial measures. asked him to submit results of post-excavation samples for review prior to any comments/discussion on the proposed bioremediation. also asked him to submit more specific schedule for field activities and report submission as the work plan proposes submission of a remedial action report within twenty-eight (28) weeks from beginning of remedial action, but it does not specify when the remedial action will start. email copied to OER Shaminder, OER Madeleine, Chengyu and Ms. Wang. 02/07/24-Hiralkumar Patel. 10:57 AM:- received email from Mr. Chau including a revised RAWP with some minor edits required by NYC OER, but no changes in remediation part. 02/15/24-Hiralkumar Patel. 10:39 AM:- sent email to Mr. Chau and Chengyu. informed them that based on review of all available information, the Department agrees with the proposed scope of work except implementation of bioremedial measures. asked them to submit post-excavation endpoint sample results for review prior to any discussion/comment on bioremedial measures. also asked to provide more specific work schedule for field activities and report submission. email copied to OER Shaminder, OER Madeleine and Ms. Wang. 02/16/24-Hiralkumar Patel. 11:25 AM:- received email from Ms. Wang including a re-revised RAWP with more specific remediation schedule. she mentioned that construction will begin in early March and an approx. 4 month remediation period is anticipated. 12/04/24-Hiralkumar Patel. received email from Steven Bai (baixyy@gmail.com, at 10:35 PM on 12/03/24) responding back to OER inquiry on update. Steve mentioned that they are still working on the neighbors agreement and insurance; and are looking for partial demo by the end of this month and start digging beginning of next year. **construction has not begun as of end of Nov. 2024**

Remarks: Prior Commercial property(winery resturaunt). Found petroleum impact in soil and groundwater email: chang@yu-associates.com

Record Updated Date:	12/31/2021
Update By:	RKCORCOR
Site Description:	Location: The site is located in the Williamsburg section of the borough of Brooklyn, NY. The site has approximately 175 feet of frontage along Driggs Avenue and 100 feet of frontage along North 8th Street. Site Features: The site prior to remediation was occupied by a parking lot and an attendant booth. After remediation, the site has been redeveloped with an eight to eleven story building the footprint of which occupies the entire site. Current Zoning and Land Use: The property is currently a vacant parking lot. The site is zoned commercial/industrial/high density residential (M1 2/R6A and R6B).

FORMER STERLING TRANSFORMER CORP. (Continued) **S128906179**

	Allowable uses include light manufacturing, warehouses, wholesalers, and multi story residential buildings. Past use of the Site: Based on a map dated 1855, the property is believed to have been occupied by a manufactured gas plant (MGP). The MGP was demolished by 1887. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by a food warehouse circa 1991. Both buildings were demolished in 2006 and replaced with a parking lot parking lot. Geology and Hydrogeology: Soil at the site is described as historic fill materials to a depth of about 15 feet below the surface followed by native brown fine sand with silt and some clay. Groundwater is present at about 12 feet below ground surface, and flows to the northeast.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soils were petroleum VOCs, Chlorinated VOCs (CVOCs) and naphthalene. Non-aqueous phase liquids (NAPL) were present at the site. On site groundwater was contaminated with SVOCs and CVOCs.Pure solvent was detected in groundwater in the southern portion of the site. CVOCs including vinyl chloride were detected in soil vapor at the site. Remedial actions (excavation and disposal of contaminated soil) have successfully achieved soil cleanup objectives for Unrestricted Residential Use.
Health Problem:	Remedial actions are complete and no exposures are expected to residual contamination as the site has been remediated to unrestricted use.

Update By:	RKCORCOR
Site Description:	The area of concern subject to this work is considered off-site from BCP site C224203 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224203 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The site is located in the Williamsburg section of the borough of Brooklyn, NY. Driggs Avenue bounds the property to the southeast, N 8th Street bounds the property to the southwest, and N 9th Street bounds the property to the north. The site is bound to the west by various mixed-use residential buildings. Site Features: The site consists of multiple tax lots including a paved parking lot and mixed-use residential buildings. Current Zoning and Land Use: The site is currently zoned commercial/industrial/high density residential and general residence (M1-2/R6A and R6B). Allowable uses include light manufacturing, warehouses, wholesalers, and multi-story residential buildings. Past Use of Site: Based on a map dated 1855, the property is believed to have been occupied by a manufactured gas plant (MGP). The MGP was demolished by 1887. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by food warehouse around 1991. Both buildings were demolished in 2006 and replaced with the existing parking lot. Geology and Hydrogeology: Soil at the site is described as historic fill materials to a depth of about 15 feet below the surface followed by native brown fine sand with silt and some clay. Groundwater is present at about 12 feet below ground surface, and flows to the northeast.
Env Problem:	Nature and Extent of Contamination: Based upon the remedial investigation at the BCP site #C224203, the primary contaminants of concern are expected to be naphthalene, vinyl chloride, and cis-1,2-dichloroethene which were found in the BCP site soil, groundwater, and soil vapor. The BCP site soils also contained some semi-volatile organic compounds (SVOCs), such as benzo(a)pyrene, benzo(a) anthracene and benzo(b)fluoranthene, chrysene, dibenz[a,h]anthracene. The off-site investigation has not begun, therefore this section will be updated to reflect the investigation results as data become available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

OER - PETROLEUM CONTAMINATED GROUNDWATER (Continued) **S117394139**

Longitude: Not reported
DEC Memo: 12/30/14-Vought-This spill reassigned from DEC Zhune to Vought as Vought also working on spill 1216805 with NYCOER Chawla and Moore which is two lots away and upgradient from this site. See that spill also for further information. Vought copied following notes from Spill 1216805: 12/19/14-Vought-Sent reply to OER Moore with cc to OER Chawla that Hannah, According to the reports for 1216805 and the block/lot maps the most contaminated groundwater flows from 223 North 8th towards 207 North 8th. I would call in a spill for the following reasons: -Down-gradient VOC concentrations are ten times higher at 207 North 8th suggesting an on-site source.-Prior site use of 207 North 8th as a private garage suggesting petroleum use and possible storage. -Groundwater concentrations at 207 North 8th will require at least quarterly monitoring via installation of sidewalk wells (if the site is to be developed) to ensure a decreasing VOC trend attributable to attenuation. -PCE in soil vapor may require DOH review and possible SSDS (unless this site has been reviewed with Jane O or Bob C during OER/DEC routine meetings). As I manage the almost adjacent site, it would make most sense for me to manage 207 North 8th as well. As such I would much appreciate if the spill caller to the hotline was to mention my name be placed in DEC Remarks. Hope this helps and feel free to forward this email onto the developer/responsible parties. Submission of a Remedial Action Report (RAR) that describes the remedial activities, certifies that the remedial requirements have been achieved, defines the Site boundaries, lists any changes from this RAWP, and describes all ECs and ICs to be implemented at the Site. 12/29/14-Vought-Sent email to OER Moore as to if spill at 207 North 8th was called into Spills Hotline. OER Moore replied that she would return call to Vought to discuss. Vought had teleconference with OER Chawla, Moore and Wong and they noted that 207 would be excavated to below groundwater and Vought noted DEC would require collection of groundwater sample from excavation during development of that site under separate spill number. OER Moore will have spill called in to hotline and note Vought as PM so that Vought could manage both spill sites due to proxmity. Construction and maintenance of an engineered composite cover consisting of a 4 inch thick concrete slab across the southern 70 feet of the Site and a 4 inch thick concrete patio across the northern 30 feet of the Site to prevent human exposure to residual soil/fill remaining under the Site. The entire Site will be capped, there will be no exposed soils, vegetation, or landscaping; 12/30/14-Vought-Sent email to OER Moore with cc to

OER - PETROLEUM CONTAMINATED GROUNDWATER (Continued) **S117394139**

Chawla and Morris that Hannah, The Spill is indeed assigned to me and I look forward to the collection of the groundwater sample post excavation and dewatering. I would much appreciate if you could forward me any pertinent reports NYCOER received so I can review them as well as complete our files. I would also appreciate if you could forward or send the owner/developer contact information (I will hold off on contacting them as you are facilitating our requirements for the collection of samples). Please note as well that after further thought we should also collect soil sidewall endpoint samples (if possible) to ensure complete site characterization as well as to ensure no vapor intrusion from possibly contaminated soil sidewalls. If needed I can formalize this in a letter to the developer. Thanks as always, -Jeff 8/19/16-Vought-Sent letter to OER Moore with cc to OER Chawla that Hannah, We just received a FOIL request for the above site and I see there are no updates since my last notes of 12/30/14 where I noted that Sent email to OER Moore with cc to Chawla and Morris that Hannah, The Spill is indeed assigned to me and I look forward to the collection of the groundwater sample post excavation and dewatering. I would much appreciate if you could forward me any pertinent reports NYCOER received so I can review them as well as complete our files. I would also appreciate if you could forward or send the owner/developer contact information (I will hold off on contacting them as you are facilitating our requirements for the collection of samples). Please note as well that after further thought we should also collect soil sidewall endpoint samples (if possible) to ensure complete site characterization as well as to ensure no vapor intrusion from possibly contaminated soil sidewalls. If needed I can formalize this in a letter to the developer. Thanks as always, -Jeff And my requirements at that time were DEC Requires: 1)Submission of a RAP including collection of bottom groundwater sample and soil sidewalls (if possible) as development of site includes excavation to groundwater as per NYCOER 12/29/14. 2)Submission of reports submitted to NYCOER as per email dated 12/29. 3)Vapor or moisture mitigation into new development. 4)cc to OER Chawla/Moore/Morris and PW Grosser. I have attached the spill notes for your reference as well and would much appreciate any updates you have or resending those updates if already sent. Thanks. OER Moore replied Hi Jeff we re looking into it and will get back to you. Thanks. 8/19/16-Vought-Received email reply from OER Chawla with cc to OER Moore/Glass that Since the spill was called in during investigations back in 2014, development project has been stalled and no work is ongoing. See email from

OER - PETROLEUM CONTAMINATED GROUNDWATER (Continued) **S117394139**

consultant below. Kate Glass is
managing this site for us. RIR and RAWP were finalized in 2014. Kate
will be voiding their NTP.
Give me call if you need any additional info. In below email string
was email from PW Grosser
Almskog to OER Glass dated 2/17/16 that Katherine, I look forward to
working with you on this and
other OER projects in the future. The project redevelopment has been
on hold for the past few years
and no development or excavation activities have taken place since the
remedial investigation and
the Remedial Action Plan were submitted to OER. The property owner is
evaluating proposed
development design plans and is hoping to start construction
activities in 2017 at this site. Once
the redevelopment plans are finalized, I will be in contact with you
to determine if a revised RAWP
or addendum is needed based upon modifications. Please let me know if
you have any additional
questions. Thanks 8/22/16-Vought-Reviewed Remedial Investigation
Report (PW Grosser Jennifer Lewis)
dated May 2014. Vought added report to D2. Report prepared for: North
Eight NY, LLC 900 Grant
Avenue Brooklyn, NY 11211 Remedial Investigation Report (PW
Grosser)-May 2014: The development
project consists of a new six story residential building with a
cellar. The lot size of the
property is 25 feet by 100 feet and the first through six floors of
the building will occupy the
south 25 feet by approximately 55 feet. The first floor will be
underlain by the cellar which will
extend an additional approximate 15 feet north into an open air
areaway and sump pump room. The
remaining 30 feet north of the cellar will remain near sidewalk grade
and will exist as a concrete
paved courtyard. The cellar level will consist of utility rooms, a
laundry room, a boiler room, the
areaway, and an accessory room to a first floor dwelling unit. The
site will be excavated to a
maximum depth of approximately 15 feet below sidewalk level for the
installation of the elevator
pit and step footings. Site E designated with NYCOER. Former oil tank
on site as per NYCDOB permit
in 1992. Scope of work included five soil borings with collection of
eleven soil samples,
installation of three monitoring wells and five soil vapor probes with
three samples collected for
analysis. Water in monitoring wells is 7-11’bg but may be perched.
Groundwater flow to the
northwest and soils are 3-10’of historic fill underlain by sandy clay.
Generally, the soil beneath
the site consists of approximately 3 feet of historic fill material
overlaying a layer of brown to
black sandy clay that extended to a minimum depth of 30 feet. Anomaly
noted during GPR survey in
rear portion of property. Soil analyses showed up to 460ppb
xylene(SB-2 20-23’bg). Groundwater

OER - PETROLEUM CONTAMINATED GROUNDWATER (Continued) **S117394139**

analyses showed up to 1.2ppb benzene(MW1), 31ppb ethylbenzene(MW1), 11ppb xylene(MW2), and 250ppb naphthalene(MW2). Soil vapor analyses show up to: 15ug/m3 PCE(SV002), 19.8ug/m3 benzene(SV001), 144ug/m toluene(SV001), 31.4ug/m3 ethylbenzene(SV001), 113ug/m3 xylene(SV001). PWGC recommends that a Remedial Action Work Plan be prepared and submitted to address the proper handling of on-Site soils and groundwater and the installation of appropriate engineering controls based upon the development plans and the quality of the soil to remain in place following development. In appendix was Phase I from PW Grosser noting performance of GPR survey with detection of anomaly in rear of property. Remedial Action Work Plan Stipulation List (PW Grosser)-10/3/14. Vought added RAWP and Stipulation List to D2. P.W. Grosser Consulting (the consultant) hereby submits a Remedial Action Work Plan (RAWP) Stipulation List for the 207 North 8th Street (the Site) to the New York City Office of Environmental Remediation (OER) on behalf of North Eight NY, LLC. This letter serves as an addendum to the RAWP to stipulate additional content, requirements, and procedures that will be followed during the Site remediation. The contents of this list are added to the RAWP and will supersede the content in the RAWP where there is a conflict in purpose or intent. The Site will be excavated to a maximum depth of approximately 15 feet below sidewalk level for the installation of the elevator pit and step footings beneath the cellar for an approximate 850 cubic yards of off-site soil removal. Groundwater is estimated at approximately 7 to 11 feet below grade and excavation for the cellar will require excavation into the groundwater. RAWP includes CAMP, establishment of restricted residential SCOs. The rear yard area (northern 30 feet of the Site) will be excavated approximately 0.5 feet below sidewalk grade for the installation of the concrete patio. Approximately, 1,000 tons of soil will be excavated and removed from this Site. Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs. Installation of a vapor barrier system beneath the building slab and outside foundation sidewalls below grade. The vapor barrier will consist of a combination of Grace Construction Products Preprufe 300R for horizontal applications and Preprufe 160R for vertical applications. Both vapor barriers are constructed of a high density polyethylene film; Preprufe 300R is 46 mils thick and Preprufe 160R is 32 mils thick. A letter from the manufacturer stating the compatibility of the vapor barrier with observed on-Site contaminants and manufacturer s cut sheets for the vapor barrier are included in Appendix B. A RAR will be

OER - PETROLEUM CONTAMINATED GROUNDWATER (Continued) **S117394139**

submitted to OER following implementation of the remedial action defined in this RAWP. The RAR will document that the remedial work required under this RAWP has been completed and has been performed in compliance with this plan. 8/22/16-Vought-Sent letter approving of RIR and RAWP and Stipulation list pending inclusion of quarterly groundwater sampling, use of Unsrestricted SCOs, and collection of bottom groundwater endpoint sample. Letter added to D2 and sent to North Eighth with cc to OER Chawla and Moore with email that Kris, Please see the Department s attached review letter of the RIR and RAWP and Stipulation list for the above referenced site. An original of the letter is in the mail to North Eighth LLC. Please provide an update on the status of the site. Thanks 9/6/16-Vought-Received hardcopy of DEC requirement letter returned to DEC from US postal service and envelope noted insufficient address and unable to forward . No resending of letter via US mail as Vought in active correspondence with consultant. DEC Requires: 1)Confirmation of RP's mailing address as last DEC letter returned as undeliverable . 1)Update on development plans for site as per the RAWP and RIR 2)Continuation of quarterly sampling of groundwater. 3)Use of Unrestricted SCO's as per CP-51 versus NYCOER using Restricted SCOs 4)Collection of groundwater sample from excavation to examine for possible attenuation after source removal 5)cc to OER Chawla/Moore/Morris and PW Grosser (Kris Almskog) as site E designated 12/19/2017 - Austin - Project transferred from Vought to Lakhani - end 08/08/18 - Lakhani OER Shaminder informed that the new project manager for the site is Alysha Alfieri. No work has occurred on the site. The site has been simply fenced in. 08/05/19 - Lakhani - Spill being transferred to Lin. 4/22/2020-Lin-Reviewed August 2018 groundwater results. No exceedances for VOC in groundwater samples. Groundwater contamination attenuated since samples were last taken in 2014. 11/8/21-Lin-Recieved groundwater sample results. There are three groundwater monitoring wells on site. The most recent groundwater sample results (one round of sampling in 2018 and two rounds of sampling in 2021) came back without exceedances of NYSDEC Ambient water quality standards for VOC. Case closed.

Remarks: historical spill requesting Jeff out of long island be assigned to this spill

Record Added Date:	06/09/2021
Record Updated Date:	04/02/2023
Update By:	HMDUDEK
Site Description:	Location: The 0.67 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the south side of Division Place between Kingsland and Debevoise Avenues. Site Features: The site is mostly covered with one-story buildings, with a storage yard located on the south side along Richardson Street. Current Zoning and Land Use: The site is zoned for manufacturing. The site is used primarily for storage and light manufacturing; however, one two-story residential building is present on Division Place. Numerous commercial, industrial, and residential properties surround the site. Past Use of the Site: Goodman Brothers began operations in 1909 as a re-conditioner and recycler of used steel drums for re-use or disposal. The Department’s initial involvement with the facility was a RCRA inspection conducted in September 1982, as the company was

18 DIVISION PLACE (Continued) **S127990267**

a large quantity generator of hazardous waste above a sole-source aquifer. The company went out of business in June 2002. During the last 20 years of its operation, Goodman Brothers entered into one consent order with the USEPA (1983), and two consent orders with the Department (1987 and 2003), and agreed to pay penalties in the overall amount of $28,000 for numerous violations. Site Geology and Hydrogeology: The site is underlain by a sand/silty sand unit (~15-35' thick), a discontinuous sand/gravel unit within the sand/silty sand unit (~5' thick), a discontinuous clayey silt unit within the sand/silty sand unit (~5' thick), and a sand unit below. Groundwater is approximately 15-20' below grade in the immediate vicinity of the site. Groundwater below the site flows toward the east in the direction of Newtown Creek (~3,600' away).

Env Problem:	Nature and Extent of Contamination: - Groundwater The primary contaminants in groundwater are Volatile Organic Compounds or VOCs and Per/ polyfluoroalkyl substances (PFAS). For example, the chlorinated VOC, cis-1,2 dichloroethene (DCE) was detected up to 61,000 parts per billion or ppb, compared to groundwater standard of 5 ppb. The PFAS compound Perfluorooctanoic acid (PFOA) was detected up to 5,100 parts per trillion or ppt, compared to a groundwater standard of 10 ppt. - Soil The primary contaminants in soil are VOCs and Polychlorinated Biphenyls (PCBs). For example, the chlorinated VOC, tetrachloroethene (PCE) was detected up to 1,200 parts per million or ppm. This exceeds the commercial Soil Cleanup Objective (SCO) of 150 ppm. Total PCBs were detected up on 130 ppm, which exceeds the commercial SCO of 1 ppm. Soil Vapor: Numerous VOCs were detected in soil vapor. For example, DCE was detected up to 5,600,000 micrograms per cubic meter (ug/m3). Numerous Significant Threat: The site poses a significant environmental threat due to ongoing releases of PCE (and its breakdown products), BTEX compounds, and PCBs from source areas into soil groundwater and soil vapor.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

SHWS:

Name:	FORMER GOODMAN BROTHERS STEEL DRUM CO.
Address:	18 DIVISION PLACE
City,State,Zip:	BROOKLYN, NY 11222
Program:	HW
Site Code:	505634
Classification:	Significant threat to the public health or environment - action required.
Region:	2
Acres:	0.670
HW Code:	224211
Record Add:	03/18/2015
Record Upd:	04/14/2025
Updated By:	LAGORTON
Site Description:	Location: The 0.67 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the south side of Division Place between Kingsland and Debevoise Avenues. Site

GOODMAN BROTHERS CO STEEL DRUM DIV (Continued) **1000190383**

Features: The site is mostly covered with one-story buildings, with a storage yard located on the south side along Richardson Street. Current Zoning and Land Use: The site is zoned for manufacturing. The site is currently used for storage and light manufacturing. Numerous commercial, industrial, and residential properties surround the site. Past Use of the Site: Goodman Brothers began operations in 1909 as a re-conditioner and recycler of used steel drums for re-use or disposal. The Department's initial involvement with the facility was a RCRA inspection conducted in September 1982, as the company was a large quantity generator of hazardous waste above a sole-source aquifer. The company went out of business in June 2002. During the last 20 years of its operation, Goodman Brothers entered into one consent order with the USEPA (1983), and two consent orders with the Department (1987 and 2003), and agreed to pay penalties in the overall amount of $28,000 for numerous violations. Site Geology and Hydrogeology: The site is underlain by a sand/silty sand unit (~15-35' thick), a discontinuous sand/gravel unit within the sand/silty sand unit (~5' thick), a discontinuous clayey silt unit within the sand/silty sand unit (~5' thick), and a sand unit below. Groundwater is approximately 15-20' below grade in the immediate vicinity of the site. Groundwater below the site flows toward the east in the direction of Newtown Creek (~3,600' away).

Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminants in groundwater are Volatile Organic Compounds or VOCs and Per/ polyfluoroalkyl substances (PFAS). For example, the chlorinated VOC, cis-1,2 dichloroethene (DCE) was detected up to 61,000 parts per billion or ppb, compared to groundwater standard of 5 ppb. The PFAS compound Perfluorooctanoic acid (PFOA) was detected up to 5,100 parts per trillion or ppt, compared to a groundwater standard of 10 ppt. - Soil The primary contaminants in soil are VOCs and Polychlorinated Biphenyls (PCBs). For example, the chlorinated VOC, tetrachloroethene (PCE) was detected up to 1,200 parts per million or ppm. This exceeds the commercial Soil Cleanup Objective (SCO) of 150 ppm. Total PCBs were detected up on 130 ppm, which exceeds the commercial SCO of 1 ppm. Soil Vapor: Numerous VOCs were detected in soil vapor. For example, DCE was detected up to 5,600,000 micrograms per cubic meter (ug/m3). Numerous Significant Threat: The site poses a significant environmental threat due to ongoing releases of PCE (and its breakdown products), BTEX compounds, and PCBs from source areas into soil groundwater and soil vapor.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion in on-site and off-site structures exists and should be evaluated and may need to be evaluated for off-site structures.

Dump: False

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Toxic Release Inventory System (TRIS) is a publicly available EPA

GOODMAN BROTHERS CO STEEL DRUM DIV (Continued) **1000190383**

database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 9/3/99 - Environmental firm was hired by company which is buying the on site company and leasing the land. Environmental firm did a phase 1 & phase 2 assessment with several wells and borings. Found floating product and contamination. SS told them to delineate the site, submit a profile of what is there now and a proposal of what will be done to clean it up. They asked about DEC going after a former owner, SS said no, DEC holds present owner responsible. Envir. firm will submit

SYLVAN EQUIPMENT (Continued) **S104621824**

such a report soon 2/18/2000
Sangesland called Mr. Pradhan at Malcolm Pirnie (614-888-4953). Left a voice mail to ask whatever
happened to the report DEC asked for in Sept.99 Report should include: 1) Delineate the site 2)
Outline what is on the property now and what will be built 3) Identify how the product will be
remediated. ALSO SEE SPILL # 0003390 4/12/04-Vought-Spill transferred from Sangesland to Rommel as
per Rommel. 1/11/2006 - Haggerty - Malcolm Pirnie did Phase I,II site assessments to determine if
this property was a canidate for development. After discovering free-floating product on
groundwater, the decision was made not to develop this property. As far as I know, no additional
investigation or remediation was done on site. I have made every attempt to locate responsible
party with no luck I am requesting a site visit Alternate addresses 70-72 Wythe Ave 91-101 N 12 St
82 N 13 St 58 Wythe Ave 92 N 13 St I believe this property is located at the intersection of North
13th and Wythe Ave Region 2 rep visited the site, but could not get inside to inspect. Site is
rented to Nations Rent - Oscar Parker salesman - 718-387-4872 Posted sign showed two different
property managers: Segal Realty Group LLC 718-388-9000 M.C. O'Brien Inc. 718-252-9191 Albany review
(above) - jcgrathw 1/29/07 - Austin - Transferred from Albany assignment to Patel in R-2 office for
further work - end 03/09/07-Hiralkumar Patel. left message for Bill Blaker (718-387-4872), tenant
(Nations Rent) at site. 03/14/07-Hiralkumar Patel. spoke with Mr. Blaker. he gave Mr. Prigozen's
number (718-366-7930). spoke with Sage Prigozen. he will ask his father, who is owner of property,
to call. received message from Mr. Prigozen (Cell: 917-750-4112), property owner.
03/16/07-Hiralkumar Patel. spoke with Mr. Prigozen, property owner. currently he is living in
Florida. as per him, they found this contamination during tank removal and has all paperwork in
storage in NY. he will submit these paper once he comes to NY in June 07. Elliot Prigozen 3400 Pen
American Drive Miami, Florida 33133 Ph. (917) 750-4112 (C) Fax (305) 860-6699 email:
elliotp@bobcatzone.com 06/14/07-Hiralkumar Patel. tried cell number for Elliot, but no success.
left message for Elliot's son. 06/15/07-Hiralkumar Patel. left message for Elliot's son.
06/18/07-Hiralkumar Patel. received call from Elliot Prigozen. he searched for records and found
some reports on tank removals. asked him to send copy of those reports. Mr. Prigozen will be back
in city after 10 days and will send copies at that time. PBS #: 2-091030. as per PBS record, site
had following tanks: 1. two 1,500 gal Lube Oil UST, closed and removed in July 2000 2. one 1,500

SYLVAN EQUIPMENT (Continued) **S104621824**

gal gasoline UST, closed and removed in July 2000 3. four 550 gal diesel USTs, closed and removed in Dec. 1998 4. one 1,000 gal diesel AST, closed and removed in Apr. 2002 5. one 550 gal gasoline UST, closed-in-place in June 1989 6. one 550 gal diesel UST, closed-in-place 7. one 1,100 gal gasoline UST, closed-in-place total 11 tanks were on-site. sent letter to Mr. Prigozen requiring Phase I, soil and groundwater delineation. letter emailed to Mr. Prigozen. 07/02/07-Hiralkumar Patel. received message from Mr. Prigozen. left message for Sage Prigozen as Elliot's number was busy. 07/05/07-Hiralkumar Patel. received copy of three reports from Mr. Prigozen. 1. addendum to tank closure report (don't have original tank closure report) for four 550 gal USTs 2. geoprobe investigation report for soil investigation in area of previously removed four 550 gal USTs (four 550 gal USTs were located in parking lot along Kent Avenue) 3. closure report for four 1500 gal tanks, which were located near main entrance (on north side) along north 12th street, and were removed in June 2000. addendum to four 550 gal USTs closure includes a further review of sample analyticals for samples taken after tanks removed in Aug. 1998. during tank removal found heavy SVOC contamination in three endpoint samples out of four samples. geoprobe investigation in area of previously removed 550 gal USTs was done as found heavy SVOC contamination during endpoint analysis. abstract: - report prepared on Oct. 7, 1998 - four borings were installed (one on each side of excavation area of previous 550 gal UST location) - three soil samples from the smear zone at approx. 7 ft bg, were chosen for analysis: S-1 (southeast of excavation), S-3 (northwest of excavation) and S-4 (northeast of excavation) - all three samples were analyzed for SVOCs only (as didn't found VOCs in previous sampling) - few SVOC contamination found in sample S-3 (which is along Kent ave) abstract of tank closure report for 1500 gal tanks: - removed four 1500 gal single wall, concrete-encased USTs. - from regional water table maps, groundwater occurs approx. 15 ft bg and flows in a northwesterly direction - tanks were located approx. 4 ft bg - tanks were in good condition with no corrosion. no visible holes or leaks were noted - sidewall samples were collected at 8 ft and bottom sample was collected at 12 ft bg - groundwater was not encountered at the site during excavation - approx. 79.16 tons of contaminated soil were removed - highest PID observed in west side wall sample (PID: 398.3 ppm) - due to observed staining, odors and documented PID readings, the DEC was notified (spill #: 0003390) - minor contamination found in soil endpoint samples spoke with Mr. Prigozen. explained him that spill was reported

SYLVAN EQUIPMENT (Continued) **S104621824**

as found free product on
groundwater during environmental investigation in 1999. and during tank removal activities, no
groundwater sample was taken. asked him to delineate groundwater contamination. asked him to
install monitoring wells atleast to previous tanks locations (one along kent ave and one along
north 12th street). sent email to Mr. Prigozen with specific requirement of monitoring well
locations. 07/09/07-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he removed
four 550 gal tanks from his site, which were located along Kent Avenuen and based on closure report
addendum, there was no soil contamination. and he believes that groundwater contamination, found in
1999, came from Texaco oil terminal along Kent Avenue. asked Mr. Prigozen to look for investigation
report from Aug. 1999, based on which this case was reported. if monitoring wells, during that
investigation, were installed along kent ave and found contaminated then based on groundwater flow
direction data (if available in report), the department can ask upgradient property to do
investigation, but if no site specific groundwater flow direction or previous monitoring well
location available to the Deparment, then the department requires him to do groundwater delineation
with site-specific groundwater flow direction. Mr. Prigozen will look for report. 07/09/07-
Sangesland received a call from an Environmental consultant in Charlotte, North Carolina. He asked
if the DEC required work to be done by a licenced New York State Prof. Engineer. Sangesland said
no. The only requirement is the lab used for testing must be NYS Licenced and if any material is
removed from the site it must be taken by a licenced hauler. 07/13/07-Hiralkumar Patel. received
limited Phase II report from Mr. Prigozen. abstract: - an affidavit dated 06/13/1989 indicates that
one 550 gal gasoline tank was purged and filled with concrete slurry in the sourthern portion of
the site - two soil borings and nine monitoring wells were installed - highest PID reading found in
boring BK-6 (595 ppm) at 5 to 7 ft bg less than -------- - groundwater sample was not obtained from
boring location BK-6, which was installed closed to sediment trap area less than ---------- -
based on site topography and nearby waterways, it is determined that the nearby groundwater flow
direction is to the northwest - free product was measured in two monitoring wells (MW-10 with 1.5
inch and MW-7 with 0.05 inch of free product) less than
---------- - minor tetracholorethane
was found in (assumed) upgradient groundwater samples (BK-1, BK-2 and BK-3) - MTBE contamination
(236 ppb) found in groundwater samples MW-2 and MW-3 (area near abandoned gasoline tank) - highest

SYLVAN EQUIPMENT (Continued) **S104621824**

contamination found in soil sample at BK-6 (near old sediment trap)
----------Xylene----Benzene BK-6 (1-3 ft)------8,730-----2,025
BK-6 (3-5
ft)------3,320-------327 //during Phase II, borings were installed to
maximum depth of 17.5 ft bg,
but report doesn't mentioned about groundwater depth.//
07/18/07-Hiralkumar Patel. after reviewing
available reports found following: - no groundwater depth information
- free product in wells MW-7
and MW-10 along Kent Avneue, but no groundwater flow direction - MTBE
contamination in groundwater
sample at BK3, which is close to previously abandoned gasoline tank
location - benzene and xylene
contamination in sample at BK-6, which is close to sediment trap. no
groundwater sample taken from
there. spoke with Mr. Prigozen. based on available data, asked Mr.
Prigozen to do following: - soil
and groundwater sampling at previous sampling location BK-6 (as found
Benzene and Xylene in soil
and had highest PID during Phase II investigation) - soil and
groundwater sampling at previous
sampling location BK-3, close to previously abandoned gasoline UST (as
found MTBE in gw) - complete
groundwater delineation (with atleast three permanent monitoring wells
and site specific
groundwater flow direction) in area of previous boring locations MW-7
and MW-10. asked Mr. Prigozen
to check any previous wells exists on site. if not then he needs to
install new wells. based on
available data and reports, asked Mr. Prigozen to disregard
requirement of Phase I investigation,
as mentioned in letter dated June 18, 2007. 07/19/07-Hiralkumar Patel.
sent letter to Mr. Prigozen
requiring soil/groundwater sampling at previous boring locations BK-3
and BK-6 and complete
groundwater delineation in area of previous boring locations BK-7 and
BK-10. letter emailed to Mr.
Prigozen with map (from former phase II report) indicating locations
where the Department requires
further investigation. 09/06/07-Hiralkumar Patel. received email from
Mr. Prigozen. he is
contacting companies for price quote. 09/13/07-Hiralkumar Patel. left
message for Mr. Prigozen.
received call from Mr. Prigozen. he is reviewing quotes from companies
and will fanalize next week.
he will send company's name next week with scheduling and estimated
date for report submission.
09/20/07-Hiralkumar Patel. received email from Mr. Prigozen. he has
hired Hart & Hickman to do the
investigative work. they will be on site in two to three weeks. Theron
Grim Hart & Hickman, PC Ph.
(704) 586-0007 Mr. Prigozen will call once get dates finalized for
investigation work.
09/28/07-Hiralkumar Patel. received email from Mr. Prigozen.
contractor will start work on Oct.
8th, 2007. 10/23/07-Hiralkumar Patel. received call from Mr. Grim. he
just received analytical data

SYLVAN EQUIPMENT (Continued) **S104621824**

from lab and they found contamination and free product in groundwater. Mr. Grim will submit report
within two weeks. asked Mr. Grim to send analytical data, groundwater flow direction and site map
with sampling locations for review. he will send these tomorrow. 10/26/07-Hiralkumar Patel.
received analytical data for few samples and site map. found soil and groundwater contamination in
area of former sediment trap. waiting for full report. 11/06/07-Hiralkumar Patel. spoke with Mat
Ingalls Hart & Hickman, PC. Mr. Grim is no longer working there. Mat is sending report to Mr.
Prigozen to review and approval and once gets approval, he will forward report. Mat Ingalls Ph.
(704) 887-4617 email: mingalls@harthickman.com 11/15/07-Hiralkumar Patel. received report from Mr.
Ingalls. abstract: - installed four soil borings (BK-3A, BK-6A, BK-7A and BK-10A); three soil
samples (BK-3A, BK-7A and BK-10A) were advanced to depth of 5 ft below grade adjacent to existing
wells and boring BK-6A was installed adjacent to the northwest corner of the sediment trap and was
advanced to depth of 12 ft bg (later converted to temporary well) - installed one temporary well
(BK-6A) - found high PID in BK-6A (from 21.3 ppm to 2,350 ppm with max at water table at 7 ft
depth) - sampled recently installed temporary well and two existing wells (BK-3 and BK-7) - depth
to groundwater at the site ranges from approx. 5 ft bg in the northern portion of the site to 10 ft
bg in the southern portion of the site - map indicates shallow groundwater generally flows to the
southwest less than -------- - during static water level measurements, 2.37 ft of free product was
measured in monitoring well BK-10 less than ---------- - directly south of the bayside fuel oil
depot and also upgradient of the subject site is the former Williamburg Manufactured Gas site. soil
analyticals: ----------BK-6A (5-7 ft)
Benzene----------895
Ethylbenzene----------16,300 Isopropylbenzene----------3,180
p-Isopropyltoluene-------10,200
n-Propylbenzene----------5,780 1,2,4-Trimethylbenzene---22,200
Xylene----------2,530
groundwater analyticals: ----------BK-6
Benzene----------2,110
Ethylbenzene----------844 MTBE----------257
Naphthalene----------697
1,2,4-Trimethylbenzene--3,020 Xylene----------247
conclusions: - based on groundwater
elevation data and lack of impacts at the potential source area well BK-7 (previous 550 gal USTs
area), it appears the free product in well BK-10 is likely from an offside source - Bayside fuel
oil depot is located adjacent and upgradient, and site is under Voluntary Cleanup Program (ID #:
V00587-2) less than ---------- - petroleum impacts identified in

SYLVAN EQUIPMENT (Continued) **S104621824**

soil sample collected from BK-6A
are likely associated with four 1500 gal USTs located adjacent to sediment trap - lack of
groundwater impacts in downgradient monitoring well BK-3 indicates impacts from onsite or
upgradient sources have likely not migrated off-site report missing following: - no analysis done
to identify product found in well # 10 - no site specific groundwater flow direction available - no
information about tidal influence on flow direction
11/20/07-Hiralkumar Patel. left message for Mr.
Ingalls to provide missing information. sent email to Mr. Prigozen and Mr. Ingalls with missing
information including detailed scaled site plan with all major suspected sites in neighbourhood.
11/21/07-Hiralkumar Patel. received message from Mr. Ingalls. left message for Mr. Ingalls.
11/26/07-Hiralkumar Patel. received email from Mr. Ingalls proposing fingerprint analysis of oil
from well # 10, 12 hour tidal survey and detailed site map. sent email to Mr. Ingalls asking 24
hours of tidal survey (instead of 12 hours), fingerprint analysis and detailed site map with
surrounding area. 11/28/07-Hiralkumar Patel. received call from Mr. Ingalls. they will do tidal
survey on two day period as access available from 8 am to 6 pm only. will submit report after Dec.
10, 2007. 12/13/07-Hiralkumar Patel. received addendum to Phase II report. abstract: - collected
groundwater elevation data from monitoring wells BK-3, BK-4, BK-7, BK-8, BK-10 and BK-11 less than
---------- - product was found in wells BK-10 and BK-4 less than ---------- - tidal influence
survey indicates that the monitoring well water levels were consistent during the observation
period (9.5 hours) and showed no tidal influence less than --------- - direction of groundwater
flow was determined to be southeast less than ---------- - product observed in BK-10 is highly
weathered middle distillate such as diesel oil or fuel oil less than -------- - floating free
product (approx. 0.46 ft) was observed in BK-4; BK-4 is located near four former 1500 gal USTs -
collected sample from BK-04 and held at lab (not analyzed) - Bayside Oil is located upgradient from
subject site based on following, contractor believes that product in BK-10 is from off-site: -
product thickness (2.67 ft) - degree of weathering and biological degradation - sepearation
distance (approx. 50 ft) and cross gradient location of BK-10 from the former UST basin - confirmed
site groundwater flow direction to the southeast - absence of floating product in BK-7 installed in
the immediate vicinity of former UST basin summary: found free product in two wells: BK-4 and
BK-10. BK-4 is located in area of previous 1500 gal USTs and BK-10 is located close to corner of

SYLVAN EQUIPMENT (Continued) **S104621824**

Kent ave and N. 13th st. oil in BK-4 could be from previously removed tanks on-site, but oil in
BK-10 could be coming from off-site. spoke with Matt. he mentioned that they did not found well
BK-4 during Phase II investigation, but found during recent well survey. found free product in well
and took sample and it is on hold, in lab. asked Matt to analyze sample from BK-4. also asked him
to monitor and remove product from existing wells on-site. discussed with DEC Austin. as owner
suspecting off-site spill that impacting well BK-10 at his property, Austin asked to pump out
product, weekly for a month to see if any more product comes to the site and then based on product
recovery data, may require futher work by site owner. sent email to Matt and Mr. Prigozen requiring
analysis of sample from BK-4 and monitoring and product removal from existing wells on weekly
basis. 12/24/07-Hiralkumar Patel. spoke with DEC Leszek, who is handling project at Bayside Oil. he
confirmed that there was no product found in two monitoring wells (MW-4 & MW-12) located along Kent
ave, near 91 N 12th street site. 01/08/08-Hiralkumar Patel. spoke with Matt. he submitted proposal
for product removal but haven't heard back. spoke with Mr. Prigozen. he hasn't hire anyone to
remove product. asked Mr. Prigozen to remove product from wells on his property and also explained
him to install well upgradient from well # 10, on sidewalk, to prove any off-site migration.
01/15/08-Hiralkumar Patel. spoke with Mr. Prigozen. he has authorized Matt to pump product out.
asked him to schedule upgradient well installation on sidewalk along kent ave. he is waiting for
proposal from Matt. left message for Matt to submit analyticals for sample taken from well # 4.
also asked to submit schedule for product removal and to plan for upgradient (from well # 10) well
installation. 01/17/08-Hiralkumar Patel. received message from Matt. left message for Matt.
received analyticals for sample from well BK-4. during fingerprint analysis, found product from
well BK-4 in range from degraded gasoline or similar material to diesel or fuel oil. well BK-4 is
installed in area of previous 1500 gal USTs. 01/24/08-Hiralkumar Patel. received call from Matt.
they are removing product from BK-4 and BK-10. asked them to continue removing product from these
wells for about a month and then based on remaining product, the department may require
downgradient well from BK-4 and upgradient well from BK-10. Matt will send report.
03/20/08-Hiralkumar Patel. left message for Mr. Ingalls to submit product recovery data. sent email
to Mr. Ingalls and Mr. Prigozen to submit product recovery data by end of 03/28/08.
03/24/08-Hiralkumar Patel. received message from Mr. Ingalls. they

SYLVAN EQUIPMENT (Continued) **S104621824**

finished field work and will
submit report, once get Mr. Prigozen reviews it. 03/27/08-Hiralkumar Patel. received report from
Mr. Ingalls. abstract: - fingerprint result indicate that the product observed in BK-4 is a mix of
low boiling material such as petroleum solvent or degraded gasoline, and a middle distillate such
as diesel fuel or fuel oil that has undergone extensive biological degradation apparent product
thickness (in feet) in BK-4 and BK-10:
----------01/21/08---------02/06/08---------02/14/08----------02/21/
08
BK-04---------0.53----------0.21----------0.29----------0.34
BK-10---------2.55----------0.76----------0.56----------0.91
04/25/08-Hiralkumar Patel.
left message from Mr. INgalls to continue product recovery from both wells until finds clean
groundwater. based on recent product recovery report, product thickness in wells BK-04 and BK-10
has been reduced. but closest well to well BK-10 is BK-07 which is 50 ft away and crossgradient and
next downgradient well from BK-10 is BK-06A which is 250 ft away and has groundwater contaminated.
also closest well to BK-04 is BK-06A which is about 40 ft away and crossgradient and there are no
downgradient well from BK-04. discussed with DEC Austin. as product thickness in both wells
reduced, Austin believes that this could be localized problem. Austin asked for complete horizontal
delineation of groundwater contamination around BK-04, BK-10 and BK-06A. Austin asked to call owner
regarding continuous recovery of product and about further groundwater investigation work. spoke
with Mr. Prigozen. asked him to continue product recovery from both wells. also mentioned to him
regarding further groundwater delineation. Mr. Prigozen still believes that product in both wells
coming from off-site. sent letter to Mr. Prigozen requiring removal of product from existing wells
and further soil/groundwater delineation around wells BK-04 and BK-10 and previous boring location
BK-06A. letter emailed to Mr. Prigozen and Mr. Ingalls.
04/30/08-Hiralkumar Patel. received call
from Mr. Ingalls. they still believes that product in BK-10 is coming from off-site. they are
planning to install well on sidewalk to see any off-site migration.
Mr. Ingalls asked for number of
wells around BK-10 and BK-04. mentioned to Mr. Ingalls that the department requires complete
delineation which may require multiple wells on-site as well as
off-site. asked him to install one
permanent well at previous boring location BK-06 as found contaminated groundwater in previous
investigation and BK-06 is cross gradient from BK-04.
06/04/08-Hiralkumar Patel. left message for
Mr. Ingalls. spoke with Mr. Prigozen. they are currently removing oil from wells and will install

SYLVAN EQUIPMENT (Continued) **S104621824**

required well in two weeks. 07/08/08-Hiralkumar Patel. spoke with Mr. Ingalls. they are removing
oil from wells on weekly basis but haven't heard from owner regarding further well installation.
spoke with Mr. Prigozen. he was out for work and just came back. he will talk to Mr. Ingalls
regarding further well installation and will submit schedule by end of 07/18/08.
08/25/08-Hiralkumar Patel. left message for Mr. Prigozen.
09/19/08-Hiralkumar Patel. spoke with Mr.
Ingalls. he mentioned that he tried few times but no response from Mr. Prigozen. left message for
Mr. Prigozen. 09/22/08-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he was
out of country and will contact Mr. Ingalls. will install wells in early october. Mr. Prigozen will
ask Mr. Ingalls to call with work schedules. 12/01/08-Hiralkumar Patel. left message for Mr.
Ingalls. spoke with Mr. Prigozen. he will call back as was busy. 12/02/08-Hiralkumar Patel.
received message from Mr. Prigozen. left message for Mr. Prigozen. 12/03/08-Hiralkumar Patel.
received call from Mr. Ingalls. they are still waiting for authorization for required work.
received call from Mr. Prigozen. he mentioned that he has gave authorization long time back. asked
Mr. Prigozen to contact Mr. Ingalls to solve this confusion and asked to call back with work
schedule. received call from Mr. Ingalls. he spoke with Mr. Prigozen and Mr. Prigozen asked him to
start work after New Year holiday. mentioned to Mr. Ingalls that required report is overdue since
June 2008 and the department can't approve any more extension. he will contact Mr. Prigozen and
will call back. 12/04/08-Hiralkumar Patel. received call from Mr. Ingalls. he got approval from Mr.
Prigozen for additional work. he spoke with drilling company and can start work from 12/22/08.
approves it and asked Mr. Ingalls to submit proposed well location map alongwith existing well
locations. sent email to Mr. Ingalls to submit proposed well location map, by end of 12/09/08,
including locations of previous borings and wells. email copied to Mr. Prigozen.
12/05/08-Hiralkumar Patel. received email from Ed from Hart & Hickman with proposed well location.
they are proposing to install three wells: one upgradient from BK-10 (along property boundry along
Kent ave), one downgradient from BK-04 (along N. 12th street) and one downgradient from previous
boring BK-06 (across sediment trap which might be route for groundwater contamination.) Edward H.
Stephens Hart & Hickman, PC Ph. (704) 586-0007 (704) 887-4609 Fax (704) 586-0373 email:
EStephens@harthickman.com sent email to Ed and Mr. Prigozen approving proposed well locations.
email copied to Mr. Ingalls. required investigation report submission

SYLVAN EQUIPMENT (Continued) **S104621824**

by the end of Jan. 26, 2009
and weekly submission of well monitoring/product recovery data.
12/09/08-Hiralkumar Patel. received
call from Ed from Hart & Hickman. he asked about location of well
BK-14. he proposed to install
well downgradient from sediment trap instead of at BK-14. mentioned to
Ed that the Department wants
well at (suspect) source location (which is sediment trap) to capture
mostly contaminated material
and based on findings, more wells needs to be installed.
12/15/08-Hiralkumar Patel. spoke with Ed
at Hart & Hickman. they have scheduled well installation on 12/29/08.
01/06/09-Hiralkumar Patel.
received email from Ed. they installed four monitoring wells on
12/30/08 and will submit report
once gets sample analyticals. 02/04/09-Hiralkumar Patel. received
email from Ed with site map
including results of recent groundwater investigation. four more wells
(or borings) were installed.
well/boring BK-12 installed upgradient from BK-10. no contamination
found in BK-12. well/boring
BK-14 installed near previous sediment trap and found contaminated
groundwater. well/boring BK-13
installed on southwest side of BK-14, where no contamination found.
well/boring BK-15 was installed
on northwest of BK-4 and found contaminated groundwater. groundwater
analyticals:
----------BK-14------BK-15 Benzene----------1,060
Ethylbenzene----------468
Xylene----------204 Naphthalene----------738------1,040
02/11/09-Hiralkumar Patel.
received call from Ed. he mentioned that during recent survey, they
found groundwater flowing in
southeast towards northwest portion of the site (near intersection of
Kent ave and N. 13th street)
and groundwater flowing in south direction towards southeast portion
of the site (near intersection
of N. 12th street and Wythe ave). according to recent groundwater flow
direction, BK-13 is
downgradient from BK-14, but cross gradient from BK-4. asked Ed for
off-site investigation,
downgradient from wells BK-15 and BK-4. also asked for weekly
monitoring and recovery of free
product. Ed will speak with Mr. Prigozen and will submit complete
investigation report.
02/12/09-Hiralkumar Patel. received additional Phase II report
(analyticals recorded earlier).
abstract: - four borings were advanced to depth of 15 ft bg - one soil
sample, with highest PID,
from each boring was sent for analysis - groundwater flows to the
southeast in the western portion
and to the south in eastern portion of the site - found 1.78 ft of
free product in BK-10A - strong
odor found during installation of wells BK-12 and BK-13 - high PID
readings were found during
installation of BK-13 (276 ppm at 5 ft) and BK-14 (729 ppm at 6 ft)
conclusions from Ed: - free

SYLVAN EQUIPMENT (Continued) **S104621824**

product was not observed in BK-12 (which is upgradient from BK-10) during the recent assessment, it is not common to observe a delay in free product recharge into newly installed monitoring well. BK-12 should be observed over time to confirm occurence of free product. - based on local groundwater flow direction and the absence of a potential on-site source in the vicinity of the observed free product at BK-10A, H&H believes the observed free product has migrated on-site from the upgradient Bayside Oil Depot. - based upon the result of the receptor survey, soil and groundwater assessment, existing poor groundwater quality in the vicinity of the subject property, and a documented upgradient source of groundwater impacts including free product, soil and groundwater impacts at the site can be most effectively managed through LAND USE RESTRICTIONS AND STANDARD ENGINEERING CONTROLS. 02/20/09-Hiralkumar Patel. spoke with Ed regarding conclusions in submitted report. mentioned to Ed that clean groundwater was found in upgradient well BK-12 which indicates no off-site source. Ed mentioned that they will go back to site to check well again as suspecting that newly installed well could recharge slowly. spoke with Mr. Prigozen. based on results of investigations till date, asked him to start weekly monitoring of all wells, and removal of any product, immediately. also asked him for off-site investigation downgradient from wells BK-4 and BK-15. told him that product must be removed from wells by next week (end of 02/28/09) and weekly there after. 02/23/09-Hiralkumar Patel. spoke with Mr. Prigozen. will do product removal on 02/25/09. alternate addresses: 58 Wythe Ave, 91-101 N 12 St, 70-72 Wythe Ave, 82 N 13 St, 92 N 13 St found two old closed spill reports: 1. 0003390:- consolidated with this spill 2. 0207277:- surface spill reported 02/25/09-Hiralkumar Patel. spoke with Mr. Prigozen. he has hired his mechanic guy to bail out product from wells. he mentioned that he got directions from Ed how to remove product and got some forms for recording. he also mentioned that they have waste oil tank on-site and they will collect product into this on-site tank and will pump out tank once get full. asked Mr. Prigozen to call once he reach to site tomorrow (02/26/09). Mr. Prigozen asked to send STIP at following address: Sylvan Holdings LLC. **property owner** c/o Sage Prigozen **Elliot's son** 58-64A Maurice Avenue Maspeth, NY 11378 Ph. (917) 750-4112 (C) Fax (305) 860-6699 email: sagep@bobcatzone.com 02/26/09-Hiralkumar Patel. received call from Mr. Prigozen. he has hired Tri-State environment for product removal (not local mechanic). will submit report. asked him to remove product weekly. 02/27/09-Hiralkumar Patel. received call from

SYLVAN EQUIPMENT (Continued) **S104621824**

Mr. Prigozen. he is planning
to hire some local investiation team for further investigation. will
call back with company's name
who will do further investigations. sent STIP to Mr. Prigozen (7005
1820 0007 9827 6066). STIP
emailed to Mr. Prigozen. 03/13/09-Hiralkumar Patel. received call from
Paul from Ecosystems. they
have been hired by Mr. Prigozen. will submit work plan for additional
investigation. Paul Ciminello
Ecosystems Strategies Inc. Ph. (845) 452-1658 (O) (914) 475-4208 (C)
Email:
paul@ecosystemsstrategies.com 03/16/09-Hiralkumar Patel. received STIP
delivery confirmation
(letter delivered on 03/11/09). 03/25/09-Hiralkumar Patel. received
email from Ecosystems with work
plan for further investigation. abstact: - will put absorbent pads in
wells BK-4 and BK-10 as an
interim remedial measure; pads will be changed, as needed, on a weekly
basis - will verify
groundwater flow direction - propose to install six to ten borings on
site - borings will be
extended (at a minimum) to the soil/groundwater interface or until
refusal - at least two soil
samples will be collected: one with highest PID and one at groundwater
interface; if no PIDs found
then only one soil sample will be collected at groundwater interface -
convert one to two borings
into a monitoring well - wells will be installed with a ten ft of
screen; mimimum of 2 ft of
screening will extend above water table according to submitted site
plan in proposed work plan,
Ecosystems is planning to install all borings around BK-10, but no
investigation proposed to
delienation soil/groundwater contamination around BK-04. less than
---------- spoke with Mr.
Prigozen. told him that without having signed Stipulation agreement, i
can't approve any work plan.
Mr. Prigozen mentioned that his attorney asked him not to sign STIP as
he might loose right to get
fund from brownfield program. Mr. Prigozen will ask him attorney to
call. Mr. Prigozen has choose
to proceed with proposed plan without having approval from the
department. spoke with Paul at
Ecosystems. they are at the site today and are surveying all wells to
confirm groundwater flow
direction. they have put absorbent pads in wells and recovering free
product. asked Paul about
investigation around BK-04. he is currently concentrating on finding
source for BK-10 and will
eventually include investigation around BK-04. mentioned to him that
the department requires
investigation around BK-04 also and will only approve the work plan if
includes soil/gw
investigation around BK-04 along with investigation around BK-10.
03/26/09-Hiralkumar Patel.
received email from Larry Schnapf, environmental attorney representing
Mr. Prigozen. Larry claims

SYLVAN EQUIPMENT (Continued) **S104621824**

that contamination found in BK-10 is from an upgradient oil depot, so he advised his client not to
sign STIP which result in waiver of righs to seek reimbursement from the spill fund. he mentioned
that his client will sign STIP if oil spill fund waiver paragraph deleted from agreement. Larry
Schnapf email: Lawrence.Schnapf@srz.com 04/01/09-Hiralkumar Patel. spoke with Paul at Ecosystem.
groundwater flow direction found almost in same direction as found earlier. no product found in
well upgradient from BK-10. 04/02/09-Hiralkumar Patel. received email from Paul with report.
abstract: - groundwater flow measurements are broadly consistent with the findings of previous
consultant - groundwater flowing towards the south - review of sanborn maps indicates that the
western portion was associated with oil refining activities predominantly performed on the
adjoining property to the west (towards bayside oil depot) - numerous tanks are shown on the site
between 1887 and 1916 - between 1905 and 1965 a tunnel, that appears to have contained pipes
connecting both sites, extended beneath Kent ave less than ----------
- according to sanborn maps
from 1887 to 1916, western portion of the site (in area of Bk-10) was occupied by an oil refining
company and site had multiple tanks on western portion - adjoining to the southwest was MGP site
from 1887 to 1916 - 1942 sanborn map showing a tunnel beneath kent ave between the subject site and
western property (currently bayside oil depot) spoke with Mr. Schnapf. Mr. Schnapf mentioned that
they are suspecting that old tunnel between two properties (current bayside oil depot and subject
site) might be bringing contamination on his client's property. he is planning for more soil and
groundwater investigation and investigation about a tunnel before signing STIP. discussed with DEC
legal and legal division agreed with this. asked Mr. Schnapf to submit revised work plan for soil
and groundwater investigation around BK-4 and BK-10 and tunnel investigation with time schedule.
Mr. Schnapf will ask Paul to submit revised work plan by 04/06/09. spoke with Paul at Ecosystems.
asked him for revised work plan. also asked him to submit site map with approx. locations of
following: - BK-10, BK-4 - previous tanks on the property (from 1887 to 1916) - adjoining MGP site
- tunnel under kent ave 04/06/09-Hiralkumar Patel. sent email (at 3:30 PM) to Mr. Prigozen to
submit revised work plan by 4 PM today. received revised work plan.
abstract: - absorbent booms
will be used in wells BK-04 and BK-10 as an interim remedial measures - will sample all wells -
proposes to dig minimum of three test pits in area where tunnel was located - test pits will be
extended to a maximum depth of 10 ft bg or until groundwater is

SYLVAN EQUIPMENT (Continued) **S104621824**

reached - if contamination found in
soil during test pit installation, samples will be collected and soil
will be removed for off-site
disposal - total of 8 to 12 soil borings will be extended across the
site with 3 to 5 of these
boring being completed as wells - borings will be extended (at a
minimum) to the soil/groundwater
interface - two soil samples will be collected from each borings: one
at soil/groundwater interface
and one at highest PID - will submit investigation report within 10
weeks of the approval less than
-------- 04/07/09-Hiralkumar Patel. sent work plan approval letter to
Mr. Prigozen. letter emailed
to Mr. Prigozen, Paul and Mr. Schnapf. 04/16/09-Hiralkumar Patel.
received email from Richard
Hooker from Ecosystems. will start investigation work at 8 AM on
04/23/09. 05/06/09-Hiralkumar
Patel. received email from Richard. they completed extension of test
pits at the western property
line and the sampling and laboratory analysis of all existing wells.
will install on- and off-site
monitoring wells and extension of soil boring on-site on 05/13/09.
06/16/09-Hiralkumar Patel. 4:58
PM:- received email from Paul. he just received comments on the draft
report from client and will
incorporate these changes. will submit report tomorrow.
06/19/09-Hiralkumar Patel. 3:21 PM:-
received investigation summary report from Paul. abstract: - one test
pit was installed immediately
southeast of center point of western property line - eleven soil
borings were installed: nine
borings (B-1 through B-9) were installed in the vicinity of BK-4 and
two borings (B-10 and B-11)
were installed in the vicinity of BK-10 - sampling was conducted at
each boring location at five-ft
intervals to a maximum depth of 20 ft bg or until refusl was reached -
test pit documented the
presence of a 10 inch diameter iron pipe in a brick-lined depression -
broken end of pipe was found
approx. 2.5 ft bg and the pipe was found to extend down to approx. 6
ft bg before turning sharply
west beneath Kent Ave - water was encountered in test pit at approx. 4
ft bg and no evidence of
contamination was encountered less than ---------- - field evidence
of contamination was observed
at the groundwater interface at most borings extended in the vicinity
of BK-4 less than
---------- - no field evidence of contamination was encountered in
the vicinity of BK-10 less
than ========= - soil borings B-1, B-9 and B-10 were completed as
temporary monitoring wells MW-1,
MW-2 and MW-3 respectively - screen interval from 2 ft above to 8 ft
below static groundwater level
- free product was noted in monitoring well MW-2 (B-9) and remains in
BK-10 - previously unknown
well (MW-4) was discovered to the northeast of BK-10 - found free
product in BK-10: 4.7 inches of

SYLVAN EQUIPMENT (Continued) **S104621824**

product on 03/25/09 and 4.2 inches of product on 05/13/09 less than ---------- - found 1.5 inch of
free product in MW-2 less than ---------- - borings B-10 and B-11 were installed to the southwest
and southeast of BK-10; soil samples from these borings at the groundwater interface found no
contamination - boring B-10 was converted into well MW-3; sampled MW-3 and previously unknown well
MW-4 (20 ft north of BK-10) and found no contamination - soil samples from borings collected in the
area of BK-4 indicate significant, but uneven soil contamination immediately southeast of the
repair shop; these results confirm the presence of an area of subsurface petroleum contamination
beneath and southeast of the repair shop - petroleum odors found in borings B-1 throgh B-9 - high
PID readings found in borings B-2, B-5, B-6 and B-7 PID readings (in ppm): depth (in

PM:- spoke with Mr. Prigozen.
based on results of further investigation, informed him that the

SYLVAN EQUIPMENT (Continued) **S104621824**

department requires stipulation
agreement signed before reviewing or approving any remediation action work plan. also asked him to
schedule a site visit. he agreed to meet at the site at 10 AM on 07/01/09. 2:03 PM:- received call
from Paul. he spoke with Mr. Prigozen and will meet at 10 AM on 07/01/09. 07/01/09-Hiralkumar
Patel. 10:00 AM:- visited site. met Mr. Prigozen and Paul. repair shop nearby entrance along N.
12th street consists three 275 gal ASTs: two for fresh oil and one for waste oil. waste oil tank is
not registered. asked Mr. Prigozen to register waste oil tank. inpected areas around sediment
trap/repair shop, BK-10, old abandoned tunnel and previosly abandoned gasoline UST. Paul mentioned
that abandoned tunnel extends towards BK-10. Paul will submit RAP by 07/17/09. proposes to excavate
area by repair shop entrance as found heavily impacted soil in boring B7. asked Mr. Prigozen to
excavate all following areas: - around BK-10 (as it could be localized problem) - entire abandoned
tunnel running towards BK-10 (to investigate any more product in tunnel) - in front of repair shop
in area of B-7 - around B-9/MW-2 as found free product in it suggest to remove old abandoned
gasoline UST as found 236 ppb MTBE in well BK-3 nearby tank location. Paul suggest to sample BK-3
again before any excavation in this area. mentioned to Mr. Prigozen that based on gw analytical
results from BK-3, the department doesn't require removal of the tank, but as they will do
excavation in other part of site, it will be easy to use on-site equipments to dug this suspected
area. Mr. Prigozen will discuss with Paul regarding gasoline UST removal. found self-contained
parts cleaning machine with small tank (probably 15-20 gal). no stains/odors found around parts
cleaning machine. found well cap missing for BK-10. asked Paul to replace it. asked Mr. Prigozen to
send his tenant's contact info. 12:46 PM:- received email from Mr. Prigozen with tenant's contact
info. David Williams Director of Real Estate and Construction Sunbelt Rentals 800 Hartford Turnpike
Shrewsbury, MA 01545-4107 Ph. (508) 925-1611 (O) (508) 245-1107 (C) email:
David.williams@sunbeltrentals.com 1:40 PM:- left message for Mr. Williams. 3:51 PM:- sent revised
STIP to Mr. Prigozen. asked him to submit signed STIP by end of 07/13/09. 07/06/09-Hiralkumar
Patel. 1:45 PM:- received message from Mr. Williams. 07/24/09-Hiralkumar Patel. 10:41 AM:- received
work plan from Ecosystems. proposes to monitoring/recover product from wells, excavate contaminated
soils from areas of B-7 and BK-10. 07/27/09-Hiralkumar Patel. 10:40 AM:- spoke with Paul about work
schedule. today he will send cost estimates to Mr. Prigozen and expect to start work by Aug. 3,

SYLVAN EQUIPMENT (Continued) **S104621824**

2009. asked him to send confirmed work schedule. 10:43 AM:- sent email to Mr. Prigozen approving
proposed plan and asked to submit work schedule. email copied to Paul. 08/06/09-Hiralkumar Patel.
11:53 AM:- left message for Paul about work schedule. 12:18 PM:- received message from Paul. he met
property owner and tenant yesterday to coordinate excavation and planning to start work on
08/14/09. will send email with confirmed schedule. 08/12/09-Hiralkumar Patel. 10:39 AM:- received
email from Paul. they will start soil excavation on 08/21/09 and expect to finish by 08/22/09. 2:10
PM:- sent email to Paul. asked him to call me once excavation starts as planning to visit site
during endpoint sample collection. 08/21/09-Hiralkumar Patel. 8:48 AM:- spoke with Richard
(845-803-2709) at Ecosystems. they have started excavation in area of BK-10. found contaminated
sand, construction debris and clay layer. thick clay layer found right below water table. 11:20
AM:- received call from Richard. while digging area around BK-10, well was destroyed and found
brick structure in ground and heavily contaminated soil. 2:00 PM:- visited site. area around BK-10
was excavated and patially backfilled after collecting endpoint samples. found water in excavation,
but no product. Richrd mentioned that brick walls found on both side of BK-10 running parallel to
N. 13th Street. Richard believes that this channel in ground around BK-10 was holding some product
which was appearing in BK-10. crew was excavating area around B-7 (in front of garage entrance) at
the time of site visit. found sticky black material from excavation with strange odors. Richard
believes that this black material could be source of heavy contamination in B-7. will excavate to
depth of 8 ft where contamination found during soil investigation. crew was also working inside
garage where B-2 was installed and product found in MW-2. will collect appropriate endpoint
samples. left site around 3 PM. 3:47 PM:- received call from Mr. Prigozen. while working inside
garage around MW-2, they found abandoned tank in ground. will investigate more. 08/22/09-Hiralkumar
Patel. 9:25 AM:- received call from Mr. Prigozen. they are planning to remove tank.
08/24/09-Hiralkumar Patel. 8:09 AM:- received call from Mr. Prigozen. he mentioned that tank
removal is not possible as tank is located closed to foundation wall. it is about 1,500 gal tank.
as per Mr. Prigozen, tank was full of product when discovered. asked him to pump out tank, clean it
and then collect soil samples through bottom and sides of the tank to confirm no contamination
around tank. 08/25/09-Hiralkumar Patel. 10:58 AM:- spoke with Mr. Prigozen. they pumped out at
least 3,000 gal of product from tank. currently cleaning tank.

SYLVAN EQUIPMENT (Continued) **S104621824**

09/23/09-Hiralkumar Patel. 2:22 PM:-
received call from Mr. Williams from Sunbelt Rentals inquiring about waste oil tank registration.
2:26 PM:- sent email to Mr. Williams with PBS registration form and instruction.
09/28/09-Hiralkumar Patel. 2:54 PM:- left message for Paul inquiring about cleanup report.
10/30/09-Hiralkumar Patel. 2:25 PM:- received tank closure and cleanup report from Ecosystems.
abstract: - found shallow (18 inches) dark-stained soil immediately beneath the asphalt during
excavation around BK-10 - beneath the stained material, found construction debris to 7 ft bg around
BK-10; no evidence of contamination - immediately beneath well BK-10, a brick lined channel was
encountered at 10 ft bg; expanding northwest-southeast for approx. 15 ft, the channel contained
grossly contaminated sandy soil and debris - excavation in area immediately southeast of the
machine shop found no field evidence of contamination until groundwater was encountered at approx.
7 ft bg and in shallow soils at the far southeastern corner of the excavation where an area of
heavy, bituminous material was encountered at between 2 and 3 ft bg - found 3,000 gal previously
unknown UST in area of MW-2 inside shop - collected four soil samples through sidewall and two soil
samples through bottom of 3,000 gal tank - collected total of six endpoint soil samples (four
sidewalls and two bottoms) from each excavations at BK-10 as well as outside of repair shop -
collected groundwater samples from wells BK-4, BK-13, BK-14, BK-15 and MW-1 - found little SVOC
contamination in endpoint soil samples, but no VOC contamination - found VOC contamination in
groundwater sample from BK-13 (but as per report dated 03/04/10, sampling data for BK-13 and BK-14
were switched in the subject report and contamination was actually found in BK-14) - proposes
quarterly monitoring for a year based on groundwater result from BK-13 VOC result:
----------BK-14 Benzene----------570
Toluene----------86
Ethylbenzene----------530 Xylene----------239
1,2,4-Trimethylbenzene-----1,400
Naphthalene----------430 MTBE----------87
11/02/09-Hiralkumar Patel.
reviewed all previous soil and groundwater data and found: - according to Limited Phase II
Environmental Site Assessment, dated Aug. 16, 1999, no contamination found in soil sample in BK-4
at 7-9 ft - found free product in well BK-4, BK-10 and well MW-2 (inside repair shop) - found soil
contamination at the entrance of repair shop - contaminated soil removed from area around BK-10 and
at the entrance of repair shop - found old 3,000 gal tank inside repair shop nearby MW-2 -

SYLVAN EQUIPMENT (Continued) **S104621824**

collected soil samples through walls and bottom of 3,000 gal UST and found no contamination -
installed two wells BK-13 and MW-1 downgradient from BK-4 - no free product ever observed in BK-13
and MW-1 - no free product or groundwater contamination observed in BK-4 during sampling in Oct.
2009 - found soil and groundwater contamination in area around sediment trap (BK-6 and BK-6A) -
found high PID in BK-6A throughout boring (from 21.3 ppm to 2,350 ppm with max at water table at 7
ft depth) - no excavation conducted in area of sediment trap spoke with Richard about excavation
around sediment trap and BK-6/BK-6A area. Richard mentioned that as found clean sidewall sample
from excavation in front of repair shop area, they didn't excavated area around sediment trap.
11/03/09-Hiralkumar Patel. 9:35 AM:- spoke with Mr. Prigozen and informed him that the department
requires removal of contaminated soil from area of BK-6/BK-6A (as there was soil contamination
above water table and high PID readings during installation of boring BK-6A). also mentioned that
the Department suggest to excavate area around BK-4, while excavating area around BK-6A, as found
free product earlier. Mr. Prigozen requested copy of site map and he will discuss with Ecosystem.
9:52 AM:- spoke with Richard about location of 3,000 gal tank and MW-2 inside repair shop. Richard
mentioned that MW-2 was about 6 ft from tank's north end and there was drain between tank and MW-2.
they removed contamination from drain and MW-2 areas. MW-2 was destroyed during excavation work.
10:32 AM:- sent email to Mr. Prigozen with copy of site maps with sample analyticals and asked Mr.
Prigozen to remove contaminated soil from area of sediment trap. email copied to Paul.
11/20/09-Hiralkumar Patel. 3:02 PM:- spoke with Mr. Prigozen regarding excavation in sediment trap.
he spoke with Paul and waiting for his response. will call back.
11/24/09-Hiralkumar Patel. 10:39
AM:- received email from Richard. they are discussing with Mr. Prigozen and will call back by next
week. 12/04/09-Hiralkumar Patel. 2:43 PM:- left message for Mr. Prigozen. 2:47 PM:- spoke with
Richard. they are currently discussing and will call back by end of 12/07/09. 3:45 PM:- received
call from Mr. Prigozen. he spoke with Richard and will call back once gets answer from Ecosystem
next week. 12/09/09-Hiralkumar Patel. received email from Ecosystem (at 5:20 PM on 12/08/09)
including response to soil excavation requirement in area of BK-6/BK-4 (response was recalled
immediately). Ecosystem proposed for quarterly groundwater sampling instead of soil excavation in
area between BK-6 and BK-4 based on endpoint samples from recent excavation and groundwater sample
results in Oct. 2009 2:15 PM:- spoke with Mr. Prigozen. based on level

SYLVAN EQUIPMENT (Continued) **S104621824**

of soil contamination and
depth of water table, suggested Mr. Prigozen to excavate area around sediment trap and BK-4 to
remove probably last spot of contamination. Mr. Prigozen mentioned that he would like to do
excavation, if any, in his presence. he is out of NY during winter and will be back in summar. he
requested to postpone soil excavation, if any, till summer. based on spill history and soil/gw
sample results, approved Mr. Prigozen's request to postpone any soil excavation till summer, but
required monthly monitoring and quarterly sampling from existing wells. 2:31 PM:- spoke with
Richard at Ecosystem regarding their response which was recalled. Richard mentioned that there is
some change in it and will send revised one. Richard requested to hold requirement of gw monitoring
and sampling until they submit revised response. 12/15/09-Hiralkumar Patel. 11:38 AM:- spoke with
Richard regarding response to soil excavation in area of BK-6/BK-4. Richard mentioned that owner's
attorney is currently reviewing it and will submit soon.
12/21/09-Hiralkumar Patel. 2:02 PM:- spoke
with Richard and asked to send document by end of tomorrow.
12/22/09-Hiralkumar Patel. received
email from Richard (at 4:29 PM on 12/21/09) including response regarding excavation in area of
BK-6/BK-4. Ecosystem recommends at least three quarterly rounds of groundwater sampling from
existing wells and continued monitoring of the booms in BK-4 prior to decision regarding
implementation of any additional remediation. 12/23/09-Hiralkumar Patel. 1:37 PM:- left message for
Mr. Prigozen and informed him that the department is agreed with recommendations for three rounds
of quarterly sampling. asked him to provide dates for first round of sampling. 1:39 PM:- spoke with
Richard. informed him that the department agreed with their recommendation of quarterly groundwater
sampling. asked Richard to send dates for first round of sampling. 1:53 PM:- sent email to Mr.
Prigozen and asked to submit first quarterly groundwater sampling report by the end of 02/12/10.
email copied to Richard and Paul. 2:54 PM:- received call from Mr. Prigozen. he received email and
will ask Paul to collect groundwater samples in Jan. 2010.
03/04/10-Hiralkumar Patel. 12:02 PM:-
received first quarterly groundwater sampling report. collected groundwater samples from wells
MW-1, BK-4, BK-13, BK-14 and BK-15 on 02/01/10. groundwater samples were analyzed for VOCs (via
8260) only. no free product observed in well BK-4. found VOC contamination in groundwater sample
from BK-14 and very minor contamination in other wells. but as per report from Oct. 2009, no
contamination found in BK-14, but contamination was found in BK-13. Paul mentioned that sample

SYLVAN EQUIPMENT (Continued) **S104621824**

results for BK-13 and BK-14 were switched in report dated 10/30/09. groundwater analyticals:
----------BK-14 Benzene----------469
Toluene----------89
Ethylbenzene----------485 Xylene----------201
1,2,4-Trimethylbenzene-----1,290
Naphthalene----------266 MTBE----------61
06/22/10-Hiralkumar Patel.
received quarterly groundwater sampling report from Ecosystems. on 06/08/10, they sampled wells
MW-1, BK-4, BK-13, BK-14 and BK-15. found contamination in groundwater sample from well BK-14: the
well in previous sediment trap area. found only MTBE (71 ppb) in well BK-4. will sample wells again
in Sep. 2010. groundwater analyticals:
----------BK-14
Benzene----------600 Toluene----------92
Ethylbenzene----------470
Xylene----------196 1,2,4-Trimethylbenzene-------930
Naphthalene----------250
MTBE----------64 11:56 AM:- spoke with Mr. Prigozen. informed him that groundwater
is contaminated near sediment trap area and if they continue groundwater monitoring and are
planning for no excavation, then this case may be transferred to remediation group for long-term
remediation. Mr. Prigozen will discuss with Ecosystems and will call back by 07/10/10.
07/28/10-Hiralkumar Patel. 11:08 AM:- received email from Mr. Prigozen. he mentioned that they will
excavate area around BK-6/BK-4 in August, 2010. Ecosystem will send work schedule.
08/04/10-Hiralkumar Patel. 9:01 AM:- received email from Richard. they have scheduled a soil
excavation around sediment trap on 08/12/10. work will start at 9 AM.
09/13/10-Hiralkumar Patel.
11:51 AM:- sent email to Paul inquiring updates. email copied to Mr. Prigozen. 11:53 AM:- received
email from Paul. he will submit report by end of Sep., 2010.
10/26/10-Hiralkumar Patel. 1:56 PM:-
received supplemental remediation report from Ecosystems. the submitted report doesn't include info
about depth of endpoint sidewall samples and sample analyticals were compared with Part 375 instead
of TAGM 4046. 10/27/10-Hiralkumar Patel. 10:22 AM:- spoke with Richard at Ecosystems regarding
excavation dimension and endpoint sampling depths. Richard mentioned that final excavation was
approx. 50 ft by 30 ft to 15 ft depth. they collected endpoint sidewall samples at groundwater
interface (at 7 ft depth) and bottom soil sample was collected at 15 ft depth. as per Richard,
groundwater was seeping into excavation at very low rate, so groundwater was not present in
exavation for sampling. asked Richard to submit revised report including info about sidewall
sampling depth and sample results comparison with TAGM 4046 instead of

SYLVAN EQUIPMENT (Continued) **S104621824**

Part 375. 10:31 AM:- left
message for Mr. Prigozen. informed him that based on results of endpoint samples, the department
requires further investigation/remediation. 10:40 AM:- sent email to Richard asking to submit
revised report. email copied to Mr. Prigozen. 11:38 AM:- received call from Mr. Prigozen. he
mentioned that he doesn't remeber discussing about excavation around BK-4 and based on groundwater
sampling results, he does not want to dug in area of BK-4. informed Mr. Prigozen that based on
quarterly groundwater sampling results from BK-4, the department does not require excavation, but
based on endpoint sample results from recent excavation, the department requires further
investigation/remediation. 11/30/10-Hiralkumar Patel. 9:32 AM:- spoke with Rich. he will submit
revised report. they are proposing for groundwater monitoring at this time and based on monitoring
results, may propose additional investigation in former sediment trap area. 12/02/10-Hiralkumar
Patel. 2:13 PM:- received revised report from Ecosystems. - excavated area around former sediment
trap and well BK-14 - no field evidence of contamination until groundwater was encountered at
approx. 7 ft bg and in shallow soils at the far southeastern corner of the excavation where an area
of heavy, bituminous material was encountered at between 2 and 3 ft bg - during excavation,
petroleum odors and PID readings between 300 and 600 were recorded - five endpoint samples (four
sidewalls and one bottom) were collected from excavation - sampled groundwater in wells BK-4,
BK-13, BK-15 and MW-1 - petroleum contaminated soils remain at depths greater than 15 ft below the
former sediment trap and below static water level - found heavy contamination in bottom endpoint
soil sample - very minor VOC contamination found in groundwater samples (max 43 ppb MTBE in BK-4)
----------bottom 15 ft bg
Benzene----------3,400
Toluene----------2,900
Ethylbenzene----------31,000
Xylene----------5,400
1,2,4-Trimethylbenzene---------210,000
Naphthalene----------29,000
Isopropylbenzene----------19,000
n-Butylbenzene----------33,000
n-Propylbenzene----------37,000 due to heavy soil
contamination in endpoint bottom sample and heavy contamination in groundwater sample from well
BK-14, which was installed in the vicinity of the sediment trap, the department requires further
complete delineation of soil and groundwater investigation including installation of one well at
the location of endpoint bottom sample with deeper screen.
12/07/10-Hiralkumar Patel. discussed

SYLVAN EQUIPMENT (Continued) **S104621824**

with DEC Austin regarding soil contamination below water table. he asked to contact MGP project
manager in Albany as MGP site was in neighbourhood. 11:10 AM:- spoke with DEC William Ottaway in
Albany regarding MGP site. Bill mentioned that Douglas MacNeal is the project manager for MGP site
(V-00732) on Kent ave. Bill mentioned that MGP waste contains very high SVOCs and may have some
VOCs. reviewed recent report. no SVOCs found in any endpoint sample. 1:38 PM:- sent letter to Mr.
Prigozen requiring additional soil and groundwater investigation in former sediment trap area.
letter emailed to Mr. Prigozen and Paul. 12/20/10-Hiralkumar Patel. 2:22 PM:- received message from
Paul from Ecosystems. 12/21/10-Hiralkumar Patel. 2:31 PM:- left message for Paul.
12/29/10-Hiralkumar Patel. 1:35 PM:- received email from Rich. a well at the former sediment trap
will be installed on 01/06/11. 01/04/11-Hiralkumar Patel. 3:21 PM:- spoke with Rich. they will
start well installation work around 8 AM. he also mentioned that a new drain structure has been
installed in the previous sediment trap area. so they have to relocate the new well. Rich will
decide well location once visit the site. 01/06/11-Hiralkumar Patel. 10:01 AM:- received call from
Rich. they installed boring in area close to former sediment trap. boring was installed to 19 ft
depth where they found refusal. during boring, found 160 ppm on PID at groundwater interface
(groundwater at 7 ft depth) and 75 ppm from 10-15 ft depth. there was no recovery in 15-20 ft
range. the boring was installed in previously excavated area to 15 ft depth. so highest PID was
found at groundwater interface in backfill material. a well will be installed in boring with 15 ft
of screen. as high soil contamination found at 15 ft depth in endpoint sample from excavation and
as no recovery in 15-20 ft depth, asked Rich to install another boring in area. 11:15 AM:- visited
site. Rich installed another boring to 20 ft depth and collected soil from 15 to 20 ft depth only.
minor odor noticed in clayey material from 15 to 20 ft depth. asked Rich to collect two soil
samples: one at 15-16 and one at 19-20 ft depth. Rich will sample all existing wells, around former
sediment trap area, next week. 02/17/11-Hiralkumar Patel. 1:13 PM:- received supplemental
investigation report from Rich. abstract: - two soil borings (2B-1 and 2B-2) installed in former
sediment trap area - collected two soil samples from each boring: at 7 and 15 ft from 2B-1 and at
15 and 20 ft at 2B-2 - installed 2 inch well (BK-14(R)) at boring 2B-1 with 10 ft of screen (from 5
to 15 ft bg) - sampled water from wells BK-4, BK-13, BK-14(R) and BK-15 - no contamination found in
any soil sample (not even in sample at 15 ft bg in 2B-1 which was

SYLVAN EQUIPMENT (Continued) **S104621824**

collected in same area as
endpoint bottom sample after excavation around former sediment trap) - very minor contamination
found in water samples except sample from BK-14(R) groundwater analyticals:
----------BK-14(R) Benzene----------190 Ethylbenzene----------280 Xylene----------120 1,2,4-Trimethylbenzene------1,300 Naphthalene----------210 - recommended sampling of wells
MW-1, BK-4, BK-13, BK-14(R) and BK-15 after three months
03/17/11-Hiralkumar Patel. discussed with
DEC Austin. based on consistent data in well BK-14, Austin asked for remediation. 3:16 PM:- sent
letter to Mr. Prigozen requiring submission of a RAP for remediation of contamination in and around
the area of the former sediment trap. letter emailed to Mr. Prigozen, Paul and Rich.
05/20/11-Hiralkumar Patel. 10:40 AM:- received call from Paul. he mentioned that as groundwater
contamination found in only by former sediment trap area, he propose to monitor groundwater for
some time before any active remediation. he will send work plan by 06/03/11. 07/20/11-Hiralkumar
Patel. 1:46 PM:- received quarterly groundwater sampling report from Ecosystem. on 04/28/11,
groundwater samples were collected from wells MW-1, BK-4, BK-13, BK-14R and BK-15 and analyzed for
VOCs only. next round of quarterly sampling is schedule for the end of July 2011. found
contamination in samples from BK-14R. groundwater analyticals:
----------BK-14(R)
Benzene----------44 Ethylbenzene----------150
Xylene----------182 1,2,4-Trimethylbenzene--------380
Naphthalene----------240 Paul mentioned that results of groundwater samples support the
conclusion that significant natural attenuation of contamination is taking place and he requested
to close the case (but quarterly sampling is scheduled for end of July, 2011). need a revised
report as confusing info in the report. 08/03/11-Hiralkumar Patel. 11:43 AM:- left message for
Paul. 12:32 PM:- sent email to Paul requiring to submit revised report. informed him that the
Department requires minimum of two years of groundwater monitoring before considering case closure.
asked him to submit revised report and results of groundwater samples that must have been taken in
july 2011. email copied to Mr. Prigozen, Larry Schnapf (attorney) and Richard. 08/05/11-Hiralkumar
Patel. 2:14 PM:- received call from Richard. he mentioned that as first round of groundwater
samples taken in 2009, two years of monitoring is over and thats why they requested closure.
informed him that the Department requires two years of groundwater monitoring after the replacement
of well in the former sediment trap area. 02/08/12-Hiralkumar Patel. 3:42 PM:- spoke with Mr.

SYLVAN EQUIPMENT (Continued) **S104621824**

Prigozen. he mentioned that groundwater samples were taken last month. asked him to submit report by the end of 02/17/12. 3:45 PM:- sent email to Mr. Prigozen and asked to submit report by 02/17/12. email copied to Paul. 02/10/12-Hiralkumar Patel. received email from Paul (at 5:55 PM on 02/08/12). he will submit report by 02/21/12. 02/21/12-Hiralkumar Patel. 11:22 AM:- received quarterly groundwater monitoring report from Ecosystems. abstract: - wells MW-1, BK-4, BK-13, BK-14R and BK-15 were sampled on 02/01/12 - found very minor contamination in groundwater samples (max 41 ppb 1,2,4-Trimethylbenzene in BK-14R) 04/02/12-Hiralkumar Patel. after reviewing available information, case closed based on results of soil endpoint samples and groundwater samples. 3:35 PM:- sent spill closure letter to Mr. Prigozen. letter emailed to Mr. Prigozen and Paul. 12/05/14-Hiralkumar Patel. received call from Charles Sosik from EBC. he mentioned that soil contamination was noted during collection of waste characterization samples as part of proposed redevelopment of the site by the new owner. he inquired about either reopening the subject spill or reporting a new one. informed him that the case was closed based on available sample results and work summary and it will only be reopened if previously unknown environmental conditions found at the site which requires further work. asked him to provide sample results once available. he mentioned that the entire site will be dug down to 20-25 ft along with dewatering. 3:11 PM:- received email from Mr. Sosik including above discussion.

Remarks: HISTORICAL SPILL-FLOATING PRODUCT ON GROUND WATER-SPILL WILL CONTINUE TO BE INVESTIGATED.

Record Updated Date:	10/16/2024
Update By:	HMDUDEK
Site Description:	**The Brownfield Cleanup Agreement was terminated in April 2024. Refer to State Superfund Site 224211: Former Goodman Brothers Steel Drum Co. Site Location: The site is located at 291 Richardson Street, Brooklyn, New York. The site a rectangular-shaped parcel with an estimated area of 0.08 acres. The site is within the boundary of the Former Goodman Brothers Steel Drum site (Site No. 224211) to the north and west. Residential properties border the site to the east and Richardson Street is present to the south. Site Features: The site is improved with a 1-story commercial building with no basement. The building is approximately 2,375 square feet and is currently unoccupied. Current Zoning and Land Use: The site and surrounding area is zoned as M1-1, which permits industrial and manufacturing uses. The surrounding parcels are currently used for a combination of residential, commercial and industrial purposes. Past Use of the Site: Goodman Brothers began operations in 1909 as a re-conditioner

291 RICHARDSON STREET (Continued) **S125298836**

	and recycler of used steel drums for re-use or disposal. The Department's initial involvement with the facility was a RCRA inspection conducted in September 1982, as the company was a large quantity generator of hazardous waste above a sole-source aquifer. The company went out of business in June 2002. Site Geology and Hydrogeology: Based on limited investigation of the adjacent Goodman Brothers site, the site is underlain by a sand/silty sand unit (~15-35' thick), a discontinuous sand/gravel unit within the sand/silty sand unit (~5' thick), a discontinuous clayey silt unit within the sand/silty sand unit (~5' thick), and a sand unit below. Groundwater is approximately 15-20' below grade in the immediate vicinity of the site. Groundwater below the site flows toward the east in the direction of Newtown Creek (~3,600' away).
Env Problem:	A limited Phase II Site Assessment was conducted prior to applying to the Brownfield Cleanup Program. Based on this investigation, the following contamination was encountered: Soil: Several volatile organic compounds (VOCs) were detected above unrestricted Soil Cleanup Objectives (SCOs). For example, Tetrachloroethene was detected up to 94 parts per million or ppm compared to an unrestricted SCO of 1.3ppm. Several semi-volatile organic compounds (SVOCs) were detected above unrestricted SCOs. For example, 1,2-dichlorobenzene was detected up 4.1ppm compared to an unrestricted SCO of 1.1ppm. Several metals were detected above unrestricted SCOs. For example, mercury was detected up to 2.9ppm compared to an unrestricted SCO of 0.18ppm.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Site Description: Site Location: The proposed site is located at 9 North 15th Street in Kings County, and is identified as Block 2614, Lot 16 on the New York City Tax Map. Site Features: The site is a 0.145-acre lot including one-story warehouse building. Current Zoning and Land Use: The site is zoned M102 (manufacturing district) and is currently unoccupied. The site was used by Linaire Sheet Metal Corp. between 1994 to 2021. The surrounding parcels are currently used for a combination of light manufacturing, commercial uses, and parking. Past Uses: The existing building was constructed in early 1930 s. Previous industrial uses include manufacturing, a construction company, a garage, and a sheet metal facility. From 1976 to 1995, the site was listed as a RCRA generator (EPA ID no. NYD001486885) of corrosive wastes, chromium, and electroplating treatment sludges. The facility operated as V E 2 Plating and as Presto Electro Plating Corp. Historically the electroplating operations extended onto the adjacent BCP site, 12 Franklin Street (C224286). Site Geology and Hydrogeology: The depth to groundwater is approximately five to nine feet below grade, based on groundwater elevations at sites in the surrounding area. Groundwater flows to the west/southwest through the site toward Bushwick Inlet but may be tidally influenced.

Env Problem: Soil, groundwater, soil vapor, and indoor air samples were collected at the site under an investigation overseen by NYC Office of Environmental Remediation between February and April of 2022. Nineteen soil borings were installed. Elevated levels of tetrachloroethene (PCE) and trichloroethene (TCE) were detected, with maximum concentrations of 100 parts per million (ppm) and 400 ppm respectively compared to their respective protection of groundwater soil cleanup objectives (POGSCOs) of 1.3 ppm and 0.47 ppm. Several semi-volatile organic compounds (SVOCs) and metals were detected above their respective unrestricted use SCOs (UUSCOs). One emerging contaminant, perfluorooctanesufonic acid (PFOS) (max. 9.6 ppb), was found above its protection of groundwater guidance value. Six permanent monitoring wells and three temporary monitoring wells were

9 N. 15TH STREET SITE (Continued) **S130462534**

	installed at the site. Groundwater flows west/southwest towards Bushwick Inlet, which is located approximately 250 feet from the site. Chlorinated Volatile Organic Compounds (CVOCs) were detected at concentrations exceeding ambient water quality standards including PCE (max. 570 parts per billion, or ppb), TCE (max. 65 ppb), cis-1,2-dichloroethene (max. 60 ppb), and vinyl chloride (max 55 ppb). Multiple PFAS compounds were also detected at concentrations exceeding guidance values. Two temporary soil vapor points were installed with co-located indoor air (IA) and sub-slab soil vapor (SV) samples taken at each location. Chlorinated VOCs were detected in both soil vapor and indoor air, including PCE (max. 32,000 micrograms per cubic meter, or ?g/m3 in soil vapor, max. 2.9 ?g/m3 in indoor air), TCE (max. 190,000 ?g/m3 SV, max. 4.2 ?g/m3 IA), cis-1,2-dichloroethene, or DCE (max. 1500 ?g/m3 SV, max. 0.1 ?g/m3 IA), and vinyl chloride (9.0 ?g/m3 SV, max. 0.1 ?g/m3 IA). According to NYSDOH decision matrices, the concentrations of PCE, TCE, and cis-1,2-DCE require mitigation.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Update By:	AMSERVIS
Site Description:	Site Location: 9 North 15th Street, Brooklyn, NY (The Site) is located in the Greenpoint neighborhood of Brooklyn, New York. The Site is identified as Block 2614, Lot 16 and 6,300 square feet (approximately 0.14 acres) in area. The Site is bounded by a 1-story warehouse building to the south (15 North 15th Street), a one-story vacant commercial building to the north (12 Franklin Street, NYSDEC BCP Site No. C224286), a 2-story manufacturing and warehouse building (30 Gem Street) to the east, and a NYCDEP Maintenance Facility with a parking lot and filling station (22 North 15th Street) to the west. Site Features: The Site is currently improved with an approximately 6,950 square-feet one-story industrial warehouse building that was constructed in 1931 and is classified as F5 for Factory and Industrial Buildings Light Manufacturing. The warehouse contains an office space, utility room, and storage room. There is no cellar. The property is bound by concrete sidewalks along the eastern and western sides of the building along Gem Street and North 15th Street. Current Zoning and Land Use: The Site is improved with a 1-story unoccupied warehouse. The Site is located in an M1-2 zoning district in the Greenpoint neighborhood of Brooklyn, New York. The warehouse is unoccupied and has not been occupied since 2021. The following surrounding land uses were observed during the Phase I ESA Site inspection: North: 12 Franklin Street, a 1-story commercial warehouse building (NYSDEC Site No. C224286) South: 15 North 15th Street, a 1-story warehouse building; East: 30 Gem Street, a 2-story manufacturing and warehouse building, occupied by Acme Smoked Fish; West: 22 North 15th Street, a 2-story building with a parking lot containing a filling station, used a s a NYCDEP Brooklyn Maintenance facility. The proposed construction will be as-of-right and will be consistent with applicable zoning regulations. Past Use of the Site: According to historical topographic maps provided by EDR, the Site was undeveloped since at least until 1931. By 1931 a structure that similar to the structure that exists today appears to have been constructed. According to Sanborn fire insurance maps, the Site was a garage from 1942 until circa at least 1965, when the property was identified as a manufacturing facility. V E 2 Plating and Preto Electro Plating Corp., an industrial plating company, occupied the Site and the northern adjoining property between 1976 to 1992. From 1992 to 1994, the Site was owned by Frank M. DeBono and was operating as a construction company. Between 1994-2021, the Site was occupied by Linaire Sheet Metal Corp., a sheet metal manufacturing company. Since 2021 the Site has not been occupied and there are no current tenants. The current owner of the Site is Haplin Realty Corp. The

9 N. 15TH STREET SITE (Continued) **S130462534**

surrounding vicinity has been developed in an urban area since at least 1887. Historically, the Site vicinity has been occupied by mixed-use light manufacturing operations, commercial stores, and parking facilities. The northern adjoining property (12 Franklin Street) was developed by 1905 and has been occupied by industrial facilities, including the electroplating companies also occupying the Site between 1976 to 1994, and is currently occupied with a commercial building. 12 Franklin Street is currently listed as NYSDEC BCP Site number C224286. The southern adjoining property was developed by 1940 and was occupied by a garage. The property was used for metal parts storage by circa 1950 and has maintained mixed-use industrial and commercial operations. The eastern adjoining property was developed by 1942 as a private garage and was later occupied by food shipping operations from at least 1965. The property has maintained commercial use through the current day. The southwestern adjoining property was developed by 1916 and has maintained various uses including an auto repair shop, drum painting and storage, a service station, and current use as a maintenance and parking facility with a filling station. Site Geology and Hydrogeology: Based on the US Department of Agriculture Soil Conservation Services Web Soil Survey, overburden at the Site consists of Urban Land, tidal marsh substratum, with 0 to 3 percent slopes (UmA), fill. Based on the 1994 US Geological Service (USGS) publication, Bedrock and Engineering Geologic Map of New York County and Parts of Kings and Queens counties, New York, and Parts of Bergen and Hudson Counties, New Jersey (Baskerville 1994), and the USGS online GIS database, bedrock near the Site is categorized as an unconsolidated sequence of glacial and alluvial deposits from the Quaternary era, Hartland formation. This bedrock consists of mostly gray and gray-weathering, fine-grained quartz-feldspar kyanite granulite with minor biotite and garnet. Based on the 2023 USGS publication, Bedrock Surface Elevation and Overburden Thickness Maps of the Five Boroughs, New York City (DeMott, et al. 2023), we anticipate bedrock to be encountered at a depth between 100 to 150 feet below ground surface (bgs). Based on the NYC OpenData online GIS database and previous investigations performed at the Site, the estimated depth to groundwater is between approximately five (5) to nine (9) feet bgs. Based on local topography and surface water flow patterns, the inferred direction of groundwater flow is west-southwest toward the Bushwick Inlet and East River. We subsequently refer to upgradient and downgradient properties in this Phase I ESA Report based on the inferred westerly-southwesterly direction of groundwater flow. However, the localized direction of groundwater flow near the Site might vary because of underground utilities, tidal influence, subsurface preferential pathways, variations in weather, or heterogeneous geological and/or anthropogenic conditions. According to the Remedial Investigation Report (RIR) dated May 2022, by Laurel Environmental Geosciences, DPC (Laurel) the depth the groundwater at the Site is nine feet bgs and is assumed to flow in a westerly direction.

Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 4/12/04-Vouight-Spill transferred from Sullivan to Rommel as per Rommel. Contacted present owner. Manny Shurka (212) 832-9100. He has no info on followup tank test. He bought site in 1997. All tanks closed in 1999. If tanks were operated for two years after tank test failure, then tanks can be assumed to have been OK in 1997. Tanks were not suction dispensers. They used submersible pumps. So, depending on where the tank test failure leak was, there could have been a release. Check with Manny if he did an environmental assessment when he bought the property or if Getty did one when they sold the property. 8/17/12 Spill re-assigned to T. Demeo as per RSE. bf 10/09/14-Hiralkumar Patel. reviewed available documents for DEC DeMeo. alternate address: 190 McGuiness Blvd. PBS #s: 2-146994, 2-610594 PBS # 2-146994 for 176 McGuiness Blvd. as per PBS record, site has/had following tanks: - twelve (12) 550 gal gasoline USTs, closed-in-place in Feb. 1999 - one (1) 4,000 gal gasoline UST,

BROOKLYN FILLING STATION (Continued) **U003200532**

closed-in-place in Feb. 1999 - two (2) 4,000 gal gasoline UST, in-service, installed in Feb. 1999 - one (1) 4,000 gal diesel UST, in-service, installed in Feb. 1999 PBS #: 2-610594 for 190 McGuiness Blvd. as per PBS record, the site has on 250 gal waste oil AST on legs, installed in Apr. 2007. other spill # 0204172 was reported on 07/22/2002 due to gasoline odors during delivery to the station. case closed. found tank test report dated 06/25/1997 on PBC edoc. as per the document, twelve (12) 550 gal gasoline tanks and one (1) 4,000 gal diesel tanks were fount tight. there is no document available to confirm source of tank test failure in 1991 (subject spill) and any petroleum release associated with it. Helf Enterprises LLC. **property owner** 10/27/14 TJD File review - determinations are based upon research into historical case file by Patel. Current owner took possession of propert 1997, followed by the closure of (12) UST's in 1999 and a (4K) UST's also closed in place in 1999. In February 1999 a total of (2) new 4K UST's were installed on site and remain in operation. All (12) 550's and (1) 4K gasoline UST's passed a tighntess test in 1997 - no record of repair or remedial action in file. Passing tank tightness reports for all tanks performed in 1997 have been uploaded to DECDOCS. Due to the lack of available history at this property and the fact the tighness test failure was reported in excess of 20 years ago, the suspect tanks were abandonned in place in 1999, the site has new owner's and no additional information is currently available - no further action is required at this time - spill is administratively closed.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 7/31/2002 SITE VISIT ON 7/22 REVEALED NO ODORS NOTICEABLE, YET THE CHILD OF THE CALLER STATED THAT IT IS REAL SMELLY WHEN THE GAS STATION RECEIVES ITS DELIVERIES EARLY IN THE AM. rEFERRED THIS TO DAVE WHEELER IN THE MOBILE AIR UNIT
Remarks:	lee trucking & dana trucking from new jersey coming in the evening between 6-7:00. when they fuel up the tanks the odors are unbarable. this has been going on for 3-4 years now. his kids are getting sick & coughing. he also had to throw away his work uniform which smelled form the oil. callers neighbor at 169 mesrow av also wanted to make a complaint but doesn't speak english well.

DEC Memo:	TTF Ltr sent to: Alberts Plating Works Inc. 32 Beadel St Brooklyn, NY 11222 Attn: Super/Facility Manager 1/12/06. J.Krimgold reviewd the letter-report dated January 9, 2006 and submitted by Middleton Environmental, Inc (631-321-4349). The report stats that the tank (UST) failed the test due to the leak in the ullage and that three soil samples taken beneath the tank do not show contaminant concentration above NYSDEC TAGM levels. It also suggests that the spill case can be closed once documentation for UST closure submitted to the Department. This report was not approved by the Department due to the lack of the following information: Soil samples location (lateral and vertical). Soil sampling at the fill port and along the fill line. Boring logs. Scaled site map. 1/25/06. J.Krimgold reviewed a letter report dated January 25, 2006 and submitted by PTC,Ltd. According to the report, the perforations of the tank shell was found at the top of the tank. Samples were taken through the tank bottom and did not show contaminant above TAGM levels. NFA letter.
Remarks:	ABOVE LIQUID LEAK.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEPT CONSUMER AFFAIRS (Continued) **S109413505**

area. No evidence of spill outside the building. 9/5/03. J. Krimgold @ the site. During tanker-truck tank calibration, due to a human error, it was overfilled. According to the DCA manager about 20-30 gallons of diesel was spilled. Spill was contained by the spedee-dry on the paved area of the parking lot. JK ordered to pick up contaminated debris and powerwash pavement in front of the calibration area. No catch basins or sewers were affected by this release. NFA.

Remarks: sewer system also affected - caller states a tank was overfilled yesterday and crews from business have improperly cleaned it up they have bagged up residual product and dump it into dumpster

DEC Memo:	Leroy Green New York City Department of Consumer Affairs 245 Meserole Avenue Brooklyn, N.Y. 11222 email: LGreen@dca.nyc.gov While doing tank upgrade work, Oil water separator lines was found to be ruptured. Product was observed in surrounding soils which are being dugout. jofatd@liro.com CSL Sent to Leroy Green at DCA. 12/2/19-Lin-Recieved spill report. Spill was due to damaged piping to oil water separator. Pipe was removed and replaced. Contaminated soil was excavated. Endpoint samples came back clean. Stained pea gravel was found during tank area excavation as part of a tank upgrade project at the facility. Tank 001 and 002 were found to be intact. The stained pea gravel was suspected to be from piping associated with those tanks. The tanks and piping were both removed and replaced. Approximately 41.35 tons of impacted gravel were removed. Contaminated gravels were found 8.5' to 13' bgs. Groundwater was found at 12' bgs where one groundwater sample was collected. One soil sample was collect at the bottom of excavation at 13' bgs. Both groundwater and soil sample came back clean. No side wall sides could be taken due to steel sheeting being installed on the east, south, and north walls within the excavation to protect the building foundation. The west wall was comprised of the adjacent recyclable water UST concrete vault wall. Case closed.

DEC Memo:	12/15/08 - Raphael Ketani. The spill was called in by John Browne of the NYC Dept. of Consumer Affairs Enforcement Section (718) 349-0465. A scully nozzle had come apart and there was a 4 gal. spill of #2 oil to a concrete floor at 245 Meserole Avenue, Brklyn. A cleanup crew from Reliable Fuel (718) 845-0500 was enroute. 12/16/08 - Raphael Ketani. I tried to contact Reliable Fuel, but could only leave a message. Richard Santoro of Reliable Fuel called to say that the Dept. of Weights and Measures was conducting a 100 gal. fuel transfer for a pump. The ring came off the hose at the end and the spill occurred. Speed Dri was put down and the spill was cleaned up. The pump is back in business. Mr. Browne called me back and said that he kept his truck on site until the cleanup was completed. Based upon the small size of the spill and the quick cleanup, I am closing the spill case.
Remarks:	A scully nozzle came apart causing oil to spill onto the concrete floor. Spill is contained and clean up crew is enroute by Reliable fuel. (Note: See http://www.scully.com/ss_pproduct.html for what a scully nozzle is, and how it works - R. Austin)

Site Description: Location: The 0.51 acre site is located at 313-315 Kingsland Avenue in the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. Site Features: The site

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

is completely covered by multiple buildings of varying construction and height. Numerous other commercial and industrial properties are located to the north, east, and west of the site. A large residential area is located immediately south of the site, and extends south along both Kingsland Avenue and Monitor Street. A large sewage treatment plant is located approximately 1/2 mile north of the site. Current Zoning/Use(s): The site is zoned for both residential and light manufacturing. The site is partially occupied, and is utilized for a variety of purposes (residential, warehousing, etc.). Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the mid-1960's. The Meeker Avenue Plume Trackdown Site Characterization in the area of this site was conducted in several phases, and was completed in the Summer of 2009. Operable Units: The site was divided up into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU-01) consists of the on-site source area which includes the sidewalk adjacent to 315 Kingsland Avenue. All remaining off-site contamination will be investigated and remediated separately as Operable Unit 2 (OU-02). 300 Kingsland Avenue is suspected to be part of the former Spic and Span operation and will be addressed as part of OU-02.. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-10' thick), a stratified sand unit with some to no fines (over 120' thick), a discontinuous glacial till unit within the sand unit (0.5-50' thick), a discontinuous clayey silt unit within the sand unit (0.5-25' thick), and the Raritan Formation (approximately 138.5' below ground surface). Groundwater is approximately 11-25' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 1,300' northeast of the site.

Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 39,000 ppb, and in deep groundwater at concentrations up to 170,000 ppb, exceeding the Part 703.5 class GA standard of 5 ppb. PCE DNAPL has also been found on-site at concentrations up to 1,000,000 ppm (100%) in deep monitoring wells. Trichloroethene (up to 5,000 ppb), cis-1,2-dichloroethene (up to 14,000 ppb), and vinyl chloride (up to 3,200 ppb) have also been found in shallow groundwater at concentrations above their respective Part 703.5 class GA standards (5 ppb each). - Soil PCE has been found in soil up to 290,000 ppm, well above the soil cleanup objective for unrestricted use (1.3 ppm). -Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 8,200,000 ug/m^3, and in indoor air up to 170 ug/m^3. Concentrations of TCE in soil vapor have been found up to 32,000 ug/m^3, and in indoor air up to 12 ug/m^3. Significant Threat: The site poses a significant threat to public health and the environment.

Health Problem: Exposure to site-related contamination in drinking water and soil is

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

DEC Memo:	6/9/2014: During investigation work being conducted at a State Superfund site (Former Spic and Span Cleaners, DEC Site ID No. 224129), a UST was discovered beneath the southern portion of a vacant warehouse during pre-clearing activities. DEC PM (Harrington) directed the standby consultant (URS Corporation) to call in a spill for this site. Soils surrounding the tank have been found to contain visual and olfactory evidence of petroleum contamination. (Harrington) 6/9/2014: H. Patel (DEC - Region 2) received spill from dispatch. Patel contacted D. Harrington (DEC PM - Central Office) to discuss the case, and subsequently assigned it to him. 6/16/2014: URS personel have uncovered a portion of the UST located inside the property (vacant warehouse located at 315 Kingsland Avenue/260 Norman Avenue). Tank appears to be oriented long-way north to south, and is approximately 10’ in length. Tank was approximately 14 below grade. Through a hole in the top of the tank, it was observed to be single-walled steel approximately 1/4 thick, and approximately 4’ in diameter. There appears to be ~6 of an unidentified liquid at the bottom of the tank. Contents smelled like a mixture of weathered petroleum and solvents such as paint thinner or wood stripper. (Harrington) 6/17/2014: URS personnel collected a product sample from the UST and submitted it to the lab. Product will be analyzed for VOCs, SVOCs, PCBs, RCRA characteristics, viscosity, surface tension, and specific gravity. (Harrington) 11/21/2014: PM requested URS to generate report detailing the findings of investigation surrounding the UST inside the building. Report will include sampling results from soil and product samples, and a tank removal estimate. (Harrington) 12/26/2014: PM sent an e-mail to URS Corporation commenting on the

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

draft UST data summary report
for the work done inside the vacant building at 315 Kingsland Avenue. Numerous changes need to be
made before the report can be finalized. (Harrington) 1/24/2015: PM sent an e-mail to URS
Corporation approving the revised UST data summary report on 1/9/15. This report was distributed to
interested parties (including Community Board 1 and Greenpoint branch of Brooklyn Public Library)
on 1/21/15. (Harrington) 3/30/2015: PM sent an e-mail to URS Corp. requesting budget estimate for
IRM regarding DNAPL recovery and oversight work related to the removal of the UST inside the
building (which will be handled separately under response call-out with Island Pump and Tank).
(Harrington) 5/18/2015: The Department sent a WA Issuance/Notice to Proceed letter to URS
Corporation for the development of the Schedule 2.11 budget package regarding the IRM work
assignment. This package is due to the Department in mid-June. (Harrington) 7/21/2015: DEC sent the
WA Approval Letter to URS Corporation for the initiation of this IRM work assignment. IRM covers
both UST removal and DNAPL recovery at the site. Call-out for tank removal to be completed by PM
shortly. (Harrington) 7/31/2015: DEC PM issues call-out 124051 to Island Pump and Tank (IPT) for
the completion of UST removal within the abandoned warehouse building at 315 Kingsland Avenue/260
Norman Avenue. Site visit with IPT and URS to be completed week of August 17th. (Harrington)
8/19/2015: DEC PM conducted kick-off meeting with URS and IPT personnel regarding the UST removal
from the site building. IPT to confirm the permits needed before initiating work. URS will be
providing scope for structural support of roof to IPT shortly. (Harrington) 9/21/2015: IPT
mobilizes to the site to complete tank pull. Wall pockets are cut into the south, east, and west
walls for placement of structural steel to support the building roof. Bobcat, mini-excavator,
scissor lift, and steel brought to the site. (Harrington) 9/22/2015: IPT places the structural
steel beams (W12x30) in place (one east-west beam supported by east and west wall pockets, and two
north-south beams supported by southern wall pockets and east-west beam). Roof made placement
difficult as there is a 5 sag in the middle, as well as numerous sprinkler lines (one of which was
cut and capped). (Harrington) 9/23/2015: IPT welds the steel beams together, and seals up the wall
pockets with brick and mortar mix. The scissor lift is removed from the site. UST top is exposed at
the southern end. There appears to be ~11 of liquid in the tank. It smells like a mix of gasoline
and paint stripper. Vent and fill lines are noted heading east from the tank toward the sidewalk.

FORMER SPIC AND SPAN CLEANERS AND DYERS INC. (Continued) **S109416408**

Tank appears to be at an angle descending to the north. (Harrington) 9/24/2015: IPT vacuum truck removes 225 gallons of a Class 3 flammable liquid (ID Number 1993). Tank is removed from the ground and cleaned. There were a lot of holes in the tank bottom; leaks were minimized by clay soils beneath tank. Stained soils evident beneath tank. Soil samples collected by URS. IPT over-excavated the area and stockpiled contaminated soil for shipment off-site. (Harrington) 9/25/2015: IPT completed soil excavations in the UST area to the extent feasible given conditions. URS collected confirmatory samples. MJ Engineering and Land Surveying completed an updated survey of the building interior, UST location, sample locations, and excavation boundaries. (Harrington) 9/28/2015: IPT completes backfill of excavation with clean fill, then finishes by saw-cutting the rough edges in the floor and capping the backfill with a 6 layer of concrete (with wire mesh) to match the surrounding floor. IPT demobilizes from the site. (Harrington) 12/28/2015: IPT has submitted paperwork regarding their efforts to remove the UST at the property. This paperwork was approved in an e-mail to IPT. Reporting on the overall effort will be received from URS in late January-early February 2016. (Harrington) 3/4/2016: URS submitted the UST closure report. Confirmatory soil sampling indicates all contaminated soil has been removed from the site. Spill closed. (Harrington)

Remarks: Unknown UST (4'x10') discovered during test borings and contaminated soil found. DEC Dave Harrington out of Albany Ofc is aware and project manager. Cleanup is pending. Tank still in the ground.

Site Code:	503484
Site Description:	Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site is bounded by Wythe Avenue to the east, N 13th Street to the north, Kent Avenue to the west, and N 12th Street to the south. Site Features: The site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts include light industrial uses although offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned major oil

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

storage facility (MOSF); however, both of these sites are slated for redevelopment as parks. Past Use(s) of the Site: Beginning in roughly 1867, the site was part of a large, multi-block petroleum refinery known as the Pratt works. Sanborn fire insurance maps dated 1887 and 1916 show numerous storage tanks related to the Pratt Works, and to paint manufacturing facilities. Subsequent land uses include manufacturing, lumber storage, and a scrap metal yard. Most recently, the property was used for storage and maintenance of heavy construction equipment. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in association with underground storage tank (UST) removals. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: Regional maps show bedrock as an igneous intrusive known as the Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River.

Env Problem: Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Both the VOCs and SVOCs appear to be derived from former petroleum tank locations. Soil Vapor: TCE (ND-16.2 ug/m3) PCE (ND-245 ug/m3) and TCA (ND-284 ug/m3) were detected in soil vapor samples collected from the site. These COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs,

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

	SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 503484
Site Description: Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

is bounded by Wythe Avenue to the east, N 13th Street to the north, Kent Avenue to the west, and N 12th Street to the south. Site Features: The site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts include light industrial uses although offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned major oil storage facility (MOSF); however, both of these sites are slated for redevelopment as parks. Past Use(s) of the Site: Beginning in roughly 1867, the site was part of a large, multi-block petroleum refinery known as the Pratt works. Sanborn fire insurance maps dated 1887 and 1916 show numerous storage tanks related to the Pratt Works, and to paint manufacturing facilities. Subsequent land uses include manufacturing, lumber storage, and a scrap metal yard. Most recently, the property was used for storage and maintenance of heavy construction equipment. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in association with underground storage tank (UST) removals. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: Regional maps show bedrock as an igneous intrusive known as the Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River.

Env Problem: Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene,

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Both the VOCs and SVOCs appear to be derived from former petroleum tank locations. Soil Vapor: TCE (ND-16.2 ug/m3) PCE (ND-245 ug/m3) and TCA (ND-284 ug/m3) were detected in soil vapor samples collected from the site. These COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with residual contamination remaining at the site.

Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River.

Env Problem:

Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Both the VOCs and SVOCs appear to be derived from former petroleum tank locations. Soil Vapor: TCE (ND-16.2 ug/m3) PCE (ND-245 ug/m3) and TCA (ND-284 ug/m3) were detected in soil vapor samples collected from the site. These COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs,

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

	SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Location: The Williamsburg Works Manufactured Gas Plant (MGP) site is located in a commercial/industrial area in the Williamsburg section of Brooklyn, New York. The site is approximately six acres in size and is composed of four parcels of land located on the east bank of the East River between North 11th and North 12th Streets on the west and east sides of Kent Avenue. Site features: Site features include a vacant asphalt paved lot and the foundation slab for the recently demolished document storage warehouse on the west side of Kent Avenue and a two -story commercial building on the east side of Kent Avenue. Current zoning and land use: The land uses in the area surrounding the MGP site are currently a mix of industrial, commercial, residential, and parkland uses. The privately-owned document storage warehouse was in active use until it was destroyed in a fire on January 31, 2015 and subsequently demolished. The former building's slab remains and is surrounded by a lockable chain link fence. The

K - WILLIAMSBURG WORKS (Continued) **S109209078**

	vacant lot at 50 Kent Ave. is owned by the NYC Department of Parks and Recreation and used as an outdoor music venue, flea market and skate park and surrounded by a chain link fence. The two-story commercial building on the east side of Kent Avenue is privately owned and in active use. The nearest residential properties are located to the east and south approximately 1 block from the site. Past use of the site: A manufactured gas plant operated on the site from circa 1850 until approximately 1930. Following the decommissioning of the MGP, the lot was occupied by a NYC Department of Sanitation Garage that was demolished around 2000. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till, and lenticular clay more than 100 feet in thickness. The groundwater table is approximately 5 feet below ground surface. Groundwater flows to the west, toward the East River.
Env Problem:	The Remedial Investigation of the site has not been fully completed, since large portions of the site are occupied by buildings. However, the work that has been completed has identified significant coal tar contamination in the subsurface. Soils beneath the vacant lot at 50 Kent Avenue are heavily impacted. Design work is currently under way for an excavation IRM on this parcel during the 2015 field season, and tar collection wells have been completed around the perimeter of this property. Tar removal from these wells is taking place on a continuing basis. Tar contamination has moved off site to the north but does not appear to have reached the shoreline in that area. A large portion of the former plant footprint lies beneath the former document storage warehouse. Test borings around the perimeter of this building confirm the presence of MGP tars in the area, and off site migration of this tar has taken place, leading to contamination of sediments beneath adjacent areas of the East River.
Health Problem:	The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.
