DEC Memo:	07/14/17 - Lakhani Spoke to PWG Jennifer who informed that the site is an OER VCP site. The site is going to be redeveloped. During waste characterization, PWG installed fifteen (15) borings. Soils from one (1) of the borings was returned contaminated by petroleum. PWG previously completed a groundwater investigation which revealed no contamination to the groundwater. OER PM is Sarah Pong. Jennifer will be sending data. 07/17/17 - Lakhani OER Shaminder sent the following email: Hi Pratik Nathan and Jeff: During waste characterization sampling at above address, an anomaly and oil like material was encountered at around 4 feet and above spill was called in and assigned to you. Approved Remedy (before Spill called in) components are listed below. This Site is in New York City Voluntary Cleanup Program. Redevelopment requires excavation to depths of 10 feet below grade. RIR and RAWP was prepared on this Site. Remedy was discussed with Mr. Bob Cozzy in January. A copy of briefing is attached here. You can access the RIR and RAWP at our website through the link below: to get these documents. Please note that Pre-construction meeting is being held today and remediation will begin soon. Please let us know if you have any additional requirements for Spill remediation. Approved Remedy (before Spill called in) includes: 1. Excavation and removal of soil/fill exceeding Track 4 Site-Specific SCOs. 2. For development purposes, the entire site, excluding the existing partial basement and the narrow concrete walkway at the rear of the building, will be excavated to a depth of 10 feet below grade. A 5 foot by 5 foot hot-spot excavation will be conducted around the existing basement pit. The concrete walkway will be excavated to a depth of 2 feet below grade. Additional excavation will be required for footings, including within the existing basement. 3. Excavation and removal of soils within the hotspot basement pit. If the pit integrity was compromised and grossly contaminated material is observed beneath it; additional hot-spot excavation may be required to meet

IN THE SOIL - OER (Continued) **S121100522**

Track 4 Site-Specific SCOs. 4.
Installation of a vapor barrier system below the concrete slab of the building as well as around
foundation walls of the proposed building. 5. Construction and maintenance of an engineered
composite cover consisting of a minimum 18-inch thick concrete building slab. If you need any other
info, please call my project manager Sarah Pong at 212?442?8342 or call me. Thanks, Shaminder RIR
(PWGC, 01/2017) - Currently, the ground level floor is being cleared out and was most recently
utilized in the manufacturing of umbrellas. The upper level floors are currently utilized as loft
apartments. The proposed future use of the Site will consist of the renovation of the existing
buildings and the construction of additional floors on both buildings to create one 7-story
mixed-use commercial and residential building. The cellar level will consist of a stacking car park
system, storage, a gym, a children s recreation room, and the lower floors of eight duplex
apartments. The existing partial basement on Lot 14 will be enlarged to encompass the entire
footprint of both buildings on Lots 13 and 14. The final depth of the entire basement will be
approximately 10 feet below grade; therefore, excavation in the existing basement will be limited
to approximately 2 feet for new footings and excavation beneath the rest of the building will be
between 10 to 12 feet for the basement and footings. The water table is expected at approximately
20 feet below grade surface (bgs) [between 21’ and 26’bg]. Historic usage of the Site included
metal manufacturing, finishing and utilization as an oil and grease warehouse including the use of
solvents. This usage reportedly included the presence of a solvent vault. The Site contained a
vault in the basement with a 3,000 gallon #2 fuel oil aboveground storage tank. The vault was
inaccessible. A 550 gallon AST reportedly observed during HTEC s walkthrough was not observed in
PWGC s walkthrough. No soil sample exceedances. No groundwater exceedances except in GW001 where
PCE 17 ug/L. There were many VOC soil vapor exceedances. Maximum concentrations of PCE and TCE were
29.8 ug/m3 and 1.12 ug/m3 respectively. RAWP (PWGC, 06/2017) - Work plan includes the following:
(1) Excavation and removal of soil/fill exceeding Track 4 Site-Specific SCOs. For development
purposes, the entire site, excluding the existing partial basement and the narrow concrete walkway
at the rear of the building, will be excavated to a depth of 10 feet below grade. A 5 foot by 5
foot hot-spot excavation will be conducted around the existing basement pit. The concrete walkway
will be excavated to a depth of 2 feet below grade. Additional excavation will be required for

IN THE SOIL - OER (Continued) **S121100522**

footings, including within the existing basement. Approximately 2,500 cubic yards of soil will be
removed from the Site and properly disposed of at an appropriately licensed or permitted facility,
(2) Excavation and removal of soils within the hotspot basement pit. If the pit integrity was
compromised and grossly contaminated material is observed beneath it; additional hotspot excavation
may be required to meet Track 4 Site-Specific SCOs, (3) Removal of all underground storage tanks
encountered during soil/fill removal actions, (4) Installation of a vapor barrier system below the
concrete slab of the building as well as around foundation walls of the proposed building, (5)
Construction and maintenance of an engineered composite cover consisting of a minimum 18-inch thick
concrete building slab underlain by native material or a suitable sub-base material (to avoid
damage to the vapor barrier) to prevent human exposure to residual soil/fill remaining under the
Site. DEC Vought responded to OER Shaminder's email: Shaminder, I took a look at the attached site
briefing and groundwater at the site is 21-26 bg and has up to 17ppb PCE suggesting that there is
indeed a soil contamination pathway down to the water and hence soil contamination, albeit possible
minimal contamination, under the proposed concrete slab with vapor barrier. Also as the site will
only be excavated to 10 there may be potential for SVI. As such I will defer to Nathan via this
email as to whether an SSDS is warranted. I have also attached PBS registration for the site
showing an in-service 3000-galllon #2 fuel oil AST that has not been closed, has no tank testing
data, and will need resubmission reflecting the AST closure associated with redevelopment. It is
also possible that any buried lines with associated with this AST may have resulted in petroleum
contamination. Pratik will review the EPC reports as well and may have additional requirements. You
noted that the pre-construction meeting is today and remediation will begin soon. Please keep in
mind for that with approximately 70 cases and an active schedule, Pratik needs as much time as
possible to review the reports in EPIC and I have a feeling Nathan will concur with this sentiment
on timeliness. So future sites, please give as us much time as possible to review and respond.
Regardless, thank though for your email and seeking our feedback. Nathan, Do you think the vapor
mitigation efforts are sufficient or do we need an SSDS installed? NYSDOH Nathan responded: I
quickly reviewed the Decision Document (DD) and briefing document. My concern with this as Jeff
brought up is that SVI could be a concern at this location, I haven t yet had a chance to review
the RIR. However, the DD states that a portion of the cellar level

IN THE SOIL - OER (Continued) **S121100522**

will be used for a gym and child
recreation room, this is an SVI exposure concern. The DOH does not concur that installation of
vapor barrier alone is adequate to mitigate vapor intrusion. My recommendation at this point is to
have an SSDS installed in those areas that will contain the gym and child recreation room, or
verify that the AMV air handling system is creating a positive pressure in those areas to mitigate
the potential for vapor intrusion to occur. This will need to be verified thru pressure
differential testing and seasonal air sampling to make sure SVI is not occurring. ***THE NYSDOH
DOES NOT CONCUR THAT INSTALLATION OF VAPOR BARRIER ALONE IS ADEQUATE TO MITIGATE VAPOR INTRUSION.
NYSDOH RECOMMENDS TO HAVE AN SSDS INSTALLED IN THOSE AREAS THAT WILL CONTAIN THE GYM AND CHILDREN'S
RECREATION ROOM, OR VERFIY THAT THE AMV AIR HANDLING SYSTEM IS CREATING A POSITIVE PRESSURE IN
THOSE AREAS TO MITIGATE THE POTENTIAL FOR VAPOR INTRUSION TO OCCUR.***
OER PM is Sarah Pong.
07/21/17 - Lakhani Conference call with OER Sarah Pong, OER Shaminder, and NYSDOH Nathan Walz to
discuss potential vapor issues at the site along with further delineation of soil and groundwater
contamination. OER reports that the 300 gallon AST and 550 gallon AST are located in the
northwestern portion of Lot 14. OER also believes that the historic solvent tank is in the vicinity
of the ASTs, however an exact location is unknown. Groundwater at the site was not measured,
however a regional groundwater flow direction was measured and there are no wells downgradient from
the ASTs and solvent tank. Therefore, the DEC and NYSDOH proposes two (2) sampling locations for
all three (3) phases north of SP-3/GP-3. Both of these sampling locations would be located
downgradient of the two ASTs: one (1) of these two (2) locations would be located on the sidewalk.
Furthermore, the DEC requires endpoint sampling beneath the two (2) ASTs as they are planned to
closed. Pit 1 is the presumed location of the solvent tank as the soils indicated elevated
concentrations of metals. Therefore, the Pit 1 area is referred to as a hotspot. There is soil
vapor concern as the initial soil vapor sampling completed was not done during normal occupancy of
the building. Therefore, NYSDOH has required a follow-up SVI study due to the gym and children's
rec room. NYSDOH required an SSDS to be installed beneath the gym and rec room. However, OER
reported that the developer was reluctant to do so. RAWP will be revised with the submission of a
stipulation letter. OER Shaminder reports that a subway line runs beneath the sidewalk and one (1)
of the sampling locations is not possible. Waste characterization data, which was used to report

IN THE SOIL - OER (Continued) **S121100522**

the spill, indicates petroleum compound exceedances in SB-6: 1,2,4-trimethylbenzene 10000 ppb(SB-6, 8'-12'bg), naphthalene 13000 ppb(SB-6, 8'-12'bg). Conference call with PWGC Jennifer Lewis, OER, and NYSDOH regarding additional sampling. Two (2) sampling locations are not feasible as the subway runs beneath the sidewalk. Therefore, one (1) sampling location 10' north of SP-3 will completed. At this location, a well will be installed, soil vapor will be sampled and the highest PID soil sample will be analyzed. NYSDOH also requires another soil vapor sample to be collected at SV003, the location of the gym and rec room. 08/02/17 - Lakhani PWGC Janelle Cooley, Field Hydrogeologist, clarified that WC003 (8-12) is a composite sample from all those soil borings in the WC003 area on the figure. SB-6 (8-12) is just a sample of the soil from SB-6 (8-12). They both share the same discrete VOC sample grab which was taken from SB-6 (8-12). 09/15/17 - Lakhani PWG Jennifer emailed informing that well installation and sampling work will take place once the pile work is completed in a few weeks. A site plan with sample location and a scope of work will be submitted to the DEC beforehand. 10/04/17 - Lakhani PWGC Jennifer Lewis emailed the site plan with proposed sample locations. The scope of work includes: - Conduct soil borings via Geoprobe approx. 20' north of SP-3 boring - terminate at groundwater table (estimated at 21'-26' below sidewalk level - Collected one (1) soil sample from the 2' intercal above the water table and collect one (1) soil sample from the 2' interval exhibiting the highest PID reading or evidence of petroleum impact (if applicable). Samples to be analyzed for VOC and SVOCs, CP-51 - Convert soil boring into a 2 diameter monitoring well with a 10' screen that will be installed 5' into the groundwater table. Gauge the well for LNAPL. If LNAPL is present, try to sample it for fingerprint analysis. If not, sample the water for VOCs full list - Install two (2) sub-slab vapor probes, 2 hour regulators, sample for VOCs TO-15 10/12/17 - Lakhani PWGC Jennifer Lewis informed that work will be conducted on 10/20/17. 10/19/17 - Lakhani PWGC Jennifer Lewis emailed to inform that the work has been postponed. She will inform DEC of the new date. 12/01/17 - Lakhani PWGC Lewis confirmed that work will resume on 12/13/17. 12/14/17 - Lakhani PWGC Jennifer emailed to inform that the well installation will be conducted on Friday, 12/22/17. 01/31/18 - Lakhani On 01/17/18, PWGC made an addendum to the RAWP, proposing to replace the proposed vapor barrier system with an EPro system. The underslab protection will be provided by E.Proformance, a three (3) layer barrier that is constructed of an 18 mil thick E.Base 205 membrane, a 60 mil thick E.Spray layer, and an 18 mil thick

IN THE SOIL - OER (Continued) **S121100522**

E.Shield 205 membrane. Spec for the
EPro system revealed that a limitation of the EPro vapor barrier is
that a sub-slab vapor
collection, passive or active, is suggested in addition to
E.Proformance for site impacted with
contamination. DEC Lakhani could not approve the EPro without
sufficient proof that the SSDS is not
needed. NYSDOH Nathan Walz concurs with the DEC. As per NYSDOH,
neither of the individual
components of the composite system alone meet the requirements of a
vapor barrier. Nathan
recommends that the area within the basement that will have the
children's play area and gym have
SSDS piping and pressure monitoring/sampling ports installed. SVI
testing after the building is
completed and the heating system is running can be used to determine
whether the system needs to be
made active. DEC concurs with NYSDOH's recommendation. PWGC Jennifer
Lewis responded with the
following message: We are going to revise the RAWP Addendum. Instead
of the ESpray system on the
foundation walls, the EProformance will be the only barrier used, both
beneath the slab and on the
foundation walls. Regarding the SSDS installation, since the concern
is related to the children s
recreation room which no longer exists, we propose to install a
passive SSDS beneath the
residential areas of the basement that could be used for long-term
usage as opposed to short-term
usage rooms like maintenance rooms or the trash room or the parking
garage area which will have its
own ventilation system. Please see the attached marked up plan with
the proposed horizontal piping
location. I have also attached copies of the revised cellar and first
floor plans the most notable
change is that the parking garage area footprint has increased to
include a portion of the western
half of the building. If the proposed coverage area is ok with
everyone, we will begin preparing
the SSDS design and include it in the revised RAWP addendum letter
which I would be looking to get
to you by next week. The SSDS will have a contingency to be converted
to active, if necessary,
which will be determined by sub-slab and indoor air sampling after
construction of the cellar is
substantively completed. The gym is still in place and the SSDS will
cover it. 02/14/18 - Lakhani
PWGC Jennifer Lewis submitted the revised RAWP Addendum with the SSDS
design. The SSDS will consist
of two legs of 4 inch diameter slotted HDPE corrugated piping
installed horizontally in a minimum
12 inch deep trench of gravel beneath the southwestern section of the
building. The area
encompassing the residential units will be completed with a 6 inch
layer of gravel beneath the
concrete slab to increase permeability of the area. The slotted piping
will be connected to a 4

IN THE SOIL - OER (Continued) **S121100522**

inch diameter solid ductile pipe which will be routed towards the western wall of the building
towards a utility chase. The piping will then be connected to a vertical 4 inch solid cast iron
pipe that will penetrate the concrete slab and extend up to above the roofline. The vertical pipe
will be completed with a 6 inch diameter turbine ventilator and will be installed a minimum of 10
feet from windows, doors, air intakes, louvers, vents, or other building openings on the subject
property or neighboring properties. Two vapor monitoring points will be installed within the vented
zone to a depth of 6 inches below the concrete slab and will be constructed of 1 inch diameter
schedule 40 slotted PVC well screen. The vapor monitoring points will also be used for collecting
sub?slab vapor samples. To determine if the SSDS should be converted to an active system, sub?slab
and indoor air sampling will be completed. Sub?slab samples will be collected from the two vapor
monitoring points and two indoor air samples will be collected adjacent to the sub?slab monitoring
points. NYSDOH Nathan Walz finds the RAWP and SSDS design plans acceptable. 03/13/18 - Lakhani PWGC
Jennifer Lewis informed that a 3000 gallons fuel oil tank was uncovered last week in the vicinity
of the spill. Jennifer claims that it apparently does look like it's a fairly old tank. The tank
will be pumped out and removed on 03/14/18. 05/07/18 - Lakhani PWGC Jennifer Lewis submitted the
updated PBS form following removal of the 3000 gallon fuel oil UST. A hard copy will be mailed to
Region 2 DEC. 10/24/18 - Lakhani PWG Jennifer Lewis emailed: A second tank was found. This tank is
approximately 120 gallons and was located on the far west side of the property. Please see the
attached site plan and pictures. It looks like the tank may have been previously abandoned and was
approximately half filled with water. There was a slight petroleum odor from inside the tank. The
tank was resting on a 3 inch piece of concrete with a thin layer of soil sandwiched between the
tank and concrete. There were no indications of a release from the tank. A sample of the sandwiched
soil was collected and, while moving the tank out of the way for excavation, some of the water
spilled on exposed soils, so a sample of that soil was collected, as well. Due to the potential for
the tank to have been a waste oil tank, the sample beneath it is being analyzed for VOCs CP-51,
SVOCs CP-51, and RCRA metals. The sample from the spilled water is just being sampled for VOCs and
SVOCs, CP-51. I ll share the results when they come in next week. The tank and the soil with the
spilled water (~2 cubic yards) have been isolated and placed on poly sheeting. 08/05/19 - Lakhani -
Spill being transferred to Lin. 09/13/23-Lin-No petroleum related

IN THE SOIL - OER (Continued) **S121100522**

compounds exceedances were found
in the soil or groundwater. The entire site was excavated down to 12' bgs. A hotspot for heavy
metal (mercury, copper, and lead) was excavated down to 6' bgs. Two (2) USTs were discovered during
excavation. One 3,000 gallon fuel oil UST and one 120 gallon waste oil tank. Contaminated soil was
excavated down to 12' bgs and the waste oil tank was excavated down to 4' bgs. Three (3) endpoint
samples were collected from the UST locations. The endpoint samples came back clean. Eleven (11)
endpoint samples were collected across the site and came back clean. A passive SSDS, vapor barrier,
and a composite cover were installed as engineering controls for the site. Case closed.

Remarks: Spill in the soil. Unknown amount. Samples came back from a boaring.

Site Description: Location: The Brooklyn North 1 Garage site is approximately 1-acre in the Greenpoint section of Brooklyn. The site is bounded to the west by the East River, to the east by Kent Avenue, to the south by 11th Street, and to the north by 12th Street. Site Features: The site is relatively flat and includes one occupied building surrounded by a paved parking lot and storage yard. The on-site building is a vehicle maintenance facility. Current Zoning and Land Use: The site is currently active and zoned for commercial use. The surrounding parcels are currently used for commercial and warehousing uses. The nearest residential area is approximately 0.25 miles east. Past Use of the Site: The Brooklyn Union Gas Company (BUG) operated a Manufactured Gas Plant (MGP) on the property from 1850 to the 1930's. The MGP was dismantled prior to 1941, and the site was subsequently sold. A warehouse/industrial building was constructed by 1951 and was occupied by the Ferro-Co. Corp. for sheet metal product manufacturing. By 1965, the building was occupied by Commercial Corrugated Container Corp. By 1978, the property was occupied, and currently is, by New York City Department of Sanitation as a maintenance garage. Site Geology and Hydrogeology: The site is underlain by artificial fill and glacial deposits. The glacial till beneath the site is of variable texture (clay, silty clay, boulder-clay) and typically poorly sorted. The glacial till deposits

BROOKLYN NORTH 1 GARAGE (Continued) **U003074882**

	are stated to be approximately 100 feet thick. Based upon the surrounding topography, the anticipated depth to groundwater is approximately 10 feet below ground surface (bgs) and the anticipated groundwater flow direction is northwest, towards the East River.
Env Problem:	Nature and Extent of Contamination: Soil - Several Volatile Organic Compounds (VOCs) were detected above their respective TAGM 4046 values including maximum concentrations of trichloroethylene at 130 parts per million (ppm), naphthalene at 1,800 ppm, toluene at 150 ppm, xylene at 270 ppm, and trichloroethene at 130 ppm. Metals were detected throughout the site, including maximum concentrations of chromium at 39.3 ppm, lead at 1,420 ppm, barium at 1,860 ppm, and mercury at 1.28 ppm. Groundwater - Several VOCs were detected across the site including maximum concentrations of benzene at 19,000 parts per billion (ppb), ethyl benzene at 3,600 ppb, naphthalene at 12,000 ppb, toluene at 13,000 ppb, and xylenes at 6,600 ppb. For metals, only lead was detected at a maximum concentration of 2,610 ppb. The remediation of this site was completed under site #224055.

Name:	BQE/ANSBACHER COLOR & DYE FACTORY
Address:	MEEKER AVENUE
City,State,Zip:	BROOKLYN, NY
Program:	HW
Site Code:	55913
Classification:	Does not present a significant threat to the public health or the environment - action may be deferred.
Region:	2
Acres:	0.600
HW Code:	224016
Record Add:	11/18/1999
Record Upd:	06/23/2025
Updated By:	AAOBLIGA
Site Description:	Site Description The former BQE/Ansbacher Color & Dye Factory Site is located in the Williamsburg section of Brooklyn. The former footprint of the Ansbacher Color & Dye Factory was bounded by Havemeyer Street to the northwest, North 6th Street to the southwest, Macri Triangle Park to the southeast, and North 8th Street to the northeast. The former factory was identified to cover Block 2331 Lots 9 & 20, Block 2323 Lot 45, portions of I-278 (BQE/Meeker Avenue) and parts of Macri Triangle Park. The former Arsonate of Lead Building, which is the Site where hazardous waste was documented to have been disposed, was located in the area of the current BQE right-of-way/Meeker Avenue. Site Features: The Site is a paved roadway right-of- way. Current Zoning and Land Use: Since the site does not have a block and lot number, there is no zoning designation. The Site is currently occupied by the BQE right of way (elevated highway)/Meeker Avenue below. Past Use of the Site: The site was previously occupied by the Arsenate of Lead Building, which was a portion of the Ansbacher Color & Dye Factory. The facility manufactured paints and pigments for commercial and industrial use. In the early 1950s, the former Arsenate of Lead building was torn down to make room for the construction of the BQE. It is believed that during this construction, waste material and debris from the former Ansbacher

BQE/ANSBACHER COLOR & DYE FACTORY (Continued) **S106780917**

plant may have been used as fill material in the BQE project area (the site). Site Geology and Hydrogeology: The site is underlain by fine to medium sands with limited quantities of coarse sand, gravel, and silt throughout the site at varying intervals. Groundwater is approximately 9.5-12.5 feet below grade. Flow direction in shallow groundwater is toward the west southwest, while deeper groundwater appears to flow towards the east. This may be due to the presence of the L train subway tunnel underneath North 7th Street.

Env Problem: Nature and Extent of Contamination Soil: Sampling was completed in multiple stages from 1988 to 2016. A Phase II type investigation was conducted by the NYSDOT in 1988. The investigation found hazardous levels of arsenic and lead in the soil within the footprint of the BQE right of way/Meeker Ave. In the early 1990s, NYSDOT completed soil removal within portions of the project's right of way. The remaining contaminated soil is encapsulated beneath the asphalt and concrete of the BQE/Meeker Avenue. During the 1999 PSA, the NYSDEC investigated site to characterize the residual contamination. The primary contaminants of concern in soil that were detected in the soil were arsenic, lead, and mercury. Arsenic was found at concentrations up to 7,500 ppm, above the commercial use soil cleanup objective, or CUSCO (16 ppm). This soil failed for EP Toxicity (48 mg/l vs 5.0 mg/l criteria), indicating the soil was hazardous. Lead was found at concentrations up to 10,600 ppm, above the commercial use soil cleanup objective (CUSCO) of 1,000 ppm. This soil failed for EP Toxicity (20.3 mg/l, 5.0 mg/l criteria), indicating the soil was hazardous. Mercury was also found at 294 ppm, above the cleanup objective for commercial use (2.8 ppm). These results are documented in the PSA Report dated March 2000. Groundwater: The 1988 NYSDOT Phase II groundwater investigation found elevated levels of arsenic, lead and cyanide in the groundwater within the footprint of the BQE. During the 1999 PSA, groundwater within and down-gradient of the Site was investigated for the presence of the contaminants of concern. During the 1999 PSA, arsenic was found at concentrations up to 15,500 parts per billion (ppb), which exceeds the ambient water quality standard (AWQS) of 25 ppb, lead at concentrations up to 431 ppb (AWQS of 25 ppb), and mercury at concentrations up to 62.6 ppb (AWQS of 0.70 ppb). However, these concentrations dropped significantly only a short distance downgradient from the site. The groundwater on the site and in the vicinity is not used as a drinking water source and the site is paved with asphalt and concrete. Significant Threat- The site does not constitute a significant threat to public health or the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. Portions of the former factory have been redeveloped into commercial and/or residential buildings.

Health Problem: The site has been investigated. Based on the available data, the site does not pose a significant threat to public health.

DEC Memo:	1/10/14: Mahat DEC made an attempt to contact Mr. Doug Harm (Brinkerhoff Environmetal @ 732.223.2225 : 732.674.4064) inquiring more information about the site. A voice message was left to Mr. Harm to call back DEC for more information. 8/18/2014: Another voice message was left to Mr. Doug Harm inquring more information about the nature of the spill. 9/17/14: Mahat DEC Mahat received a call from Mr. Shawn Harrison from Brinkerhoff Environmental mentioning that a closure report is ready and will be submitted to the Department. DEC is waiting for a closure report. 6/6/16: Mahat t/c : DEC Mahat contacted Mr. Shawn Harrison inquiring about the closure report on the spill case. He mentioned that the report has been all completed and will be submitted to the Department promptly. 6/9/16: Mahat t/c : DEC Mahat talked to Mr. Shawn

COMMERCIAL LOT (Continued) **S116156582**

and he mentioned that the
Closure Report in under internal review. It will be submitted to the Department as soon as
possible. 10/6/2016: Rashad Spill will be reassigned to DEC Omar from DEC Mahat. 10/11/2016: Rashad
502 Metropolitan Avenue does not have an alternate address. No additional spills or PBS
registrations found for site. No documents found in D2. Emailed Sean Harrison about status of
closure report. 10/13/2016: Rashad Sean replied on 10/12 and will check the status of report.
11/1/2016: Rashad Received report from Sean Harrison, it has been uploaded to D2. Review of UST
closure report is as follows: During excavation activities on 2/6/14, three fuel oil USTs were
encountered. The site is currently being redeveloped and is E-Designated. Impacted soils and strong
petroleum odors were identified in the northwest corner of the site, adjacent to the intersection
of Rodney Street and Metropolitan Avenue. Brinkerhoff collected five soil samples to delineate the
extent of the petroleum impacted soil. The northern most UST was filled with liquid consisting of a
water-sludge mixture, the two southernmost USTs were filled in with concrete. The tank was pumped,
cleaned and removed, the other 2 USTs were also removed. A total of 280 tons of soil was excavated
and properly disposed of. On 9/29/14 additional impacted soil was identified within the location of
the former USTs. On 10/6/14 the material was excavated, and one sample was taken, almost 25 tons of
soil was removed. The site is currently being redeveloped as a 14 story mixed use building (hotel
rooms and residential apartments). Additionally the site development consists of underground
parking and underground and ground floor retail space. In conclusion, Brinkerhoff is requesting
spill closure. Review of 2/4/14 sample data: Minor SVOC exceedances in SB-2 (5.5-6ft). VOC
exceedances in SB-4 (5.5-6ft): Xylene-2.8ppm, Toluene-.96ppm, benzene-.18ppm Review of 2/28/14
sample data (similar locations to SB): Minor SVOC exceedances in PE-2 (10-10.5ft). Minor SVOC
exceedances in PE-3 (10-10.5ft) Review of 10/6/14 sample S-9 taken at the base of the excavation at
12 ftbgs yielded no exceedances in VOCs or SVOCs. Review of 1/6/15 sample EP-7 taken as Endpoint
bottom sample at 15 ftbgs yielded no exceedances in VOCs and SVOCs. Area of concern SB-4 which
recorded the highest VOC values was further excavated as reflected by sample S-9 and EP-7 which
were in the same area. Spill will be closed as final sampling shows no elevations of VOCs or SVOCs
after excavation activities. In addition USTs have been removed and decommissioned. Closure letter
will be prepared and sent to owner as per tax records: 475 Keap Street, LLC 512 7th Ave Ny, NY

COMMERCIAL LOT (Continued) **S116156582**

10018 Letter will also be emailed to Sean Harrison of Brinkerhoff.
Closure letter uploaded to D2.
Spill closed

BROWNFIELDS:

Name:	210 GREENPOINT AVENUE REDEVELOPMENT
Address:	210 GREENPOINT AVENUE
City,State,Zip:	BROOKLYN, NY 11222
Program:	BCP
Site Code:	628709
Acres:	0.306
HW Code:	C224348
SWIS:	2401
Town:	New York City
Record Added Date:	11/23/2021
Record Updated Date:	01/02/2025
Update By:	AMSERVIS
Site Description:	Site Location: The Site s address is 210 Greenpoint Avenue, Brooklyn, NY 11222. The Site is located in Kings County, New York and is identified as Block 2576 Lot 7. The Site is located in a mixed-use residential and commercial section of the Greenpoint neighborhood of Brooklyn, NY on the south side of Greenpoint Avenue between McGuinness Boulevard and Eckford Street. The Site is located approximately 0.5 miles west of Newtown Creek. The Site is bounded by Greenpoint Avenue followed by mixed-use commercial and residential buildings to the north, McGuinness Boulevard followed by a commercial building, Key Foods Grocery Store , to the east, a mixed-use commercial and residential building to the south, and a residential apartment building to the west. The Site is 13,339.69 square feet (0.306 acres) in size. Site Features: The Site previously was improved with two one-story buildings; one of which was utilized for

HESS#32516 (Continued) **1000263799**

storage, and the other as a retail building/office space. The buildings did not include cellar levels. There were five 4,000-gallon gasoline/ethanol gasoline USTs and two 550-gallon tanks removed from the Site. Construction for the new development is ongoing and, when completed, the site will be improved with a nine-story mixed-use commercial/residential, mixed-income building with one full cellar level. Current Zoning and Land Use: The Site was occupied by an active retail petroleum station and is zoned R7-A and R6-B for residential use with a commercial C2-4 overlay. The surrounding properties are currently used for commercial and residential purposes. The nearest residential buildings are directly adjoining to the south and west of the Site. The proposed development of this property is consistent with the current zoning. As a result of the CEQR process, Block 2576 Lot 7 was assigned an environmental E-Designation (E-287) 209-231 McGuinness Boulevard Rezoning Action, for hazardous materials, noise (window wall attenuation & alternate means of ventilation), and air (HVAC fuel limited to natural gas & exhaust stack location limitations) resulting from a CEQR effective 10 December 2012 (CEQR 10DCP024K). Satisfaction of the E-Designation requirements is subject to review and approval by the NYCOER to obtain a NTP or NNO prior to obtaining building permits. Past Land Use: The Site was developed in the late 1800s and was occupied by commercial, residential, and vacant properties until the early 1940s, from the early 1940s to the late 1970s the Site operated as several auto-related facilities, from the late 1970s through the present the Site has operated as a gasoline filling station. Site Geology and Hydrogeology: The stratigraphy of the Site, from the surface down, consisted primarily of urban fill extending to approximately 5.5 ft bgs (terminus of each soil boring). Groundwater was recorded at approximately 4.2 to 9 ft bgs. Groundwater flow is assumed to flow toward the northeast. The site has since been remediated to Track 1 with excavation depths extending 7 ft bgs sitewide and up to 12 - 33 ft bgs at localized excavation areas.

Env Problem:

Post-Remediation Remediation at the site is complete. Remedial actions have successfully achieved Track 1 Unrestricted Use soil cleanup objectives. Prior to Completion of Remediation Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs (primarily PAHs), and metals. Soil: Exceedances of the Unrestricted Use Soil Cleanup Objectives (UUSCOs) and in some cases Protection of Groundwater Soil Cleanup Objective (PGWSCOs) were primarily found in the historic fill layer which extends from 9 - 13 ft. across the site. In general, the highest concentrations were detected in the upper 10 ft. of site soils. However, elevated concentrations of VOCs and metals did extend into deeper soils (28 - 30 ft.) at SB-1 in the western portion of the site. VOCs detected at levels exceeding UUSCOs and PGWSCOs include: acetone up to 0.09 mg/kg (UUSCO of 0.05 mg/kg), benzene up to 1.4 mg/kg (UUSCO and PGWSCO of 0.6 mg/kg), ethylbenzene up to 74 mg/kg (UUSCO of 1 mg/kg, PGWSCO of 5.5 mg/kg, and RRSCO of 41 mg/kg), isopropyl benzene up to 16 mg/kg (PGWSCO of 2.3 mg/kg), naphthalene up to 69 mg/kg (PGWSCO of 13 mg/kg), n-butylbenzene up to 13 mg/kg (PGWSCO of 12 mg/kg), n-propyl benzene up to 40 mg/kg (PGWSCO of 3.7 mg/kg), toluene up to 12 mg/kg (PGWSCO of 1.5 mg/kg),

HESS#32516 (Continued) **1000263799**

1,3,5-trimethylbenzene up to 140 mg/kg (PGWSCO of 3.3 mg/kg), 1,2,4-trimethylbenze up to 340 mg/kg (PGWSCO of 13 mg/kg), and xylenes up to 320 mg/kg (PGWSCO of 1.2 mg/kg). SVOCs detected at levels exceeding UUSCOs and PGWSCOs from 0 - 10 ft. bgs. include: benzo(a)anthracene up to 7.5 mg/kg (PGWSCO of 3 mg/kg), benzo(a)pyrene up to 6.2 mg/kg (PGWSCO 1.1 mg/kg), benzo(b)fluoranthene up to 6.3 mg/kg (PGWSCO of 1.1 mg/kg), benzo(k)fluoranthene up to 1.6 mg/kg (PGWSCO of 1.1 mg/kg), chrysene up to 5.8 mg/kg (PGWSCO of 0.4 mg/kg), dibenzo(a,h)anthracene up to 0.76 mg/kg (UUSCO of 0.33 mg/kg), indeno(1,2,3-cd)pyrene up to 3.8 mg/kg (PGWSCO of 3.2 mg/kg), and naphthalene up to 21 mg/kg (PGWSCO of 13 mg/kg). Metals detected at levels exceeding UUSCOs include: arsenic at a concentration of 13.2 mg/kg (UUSCO of 13 mg/kg), copper up to 77.2 mg/kg (UUSCO of 50 mg/kg), lead up to 590 mg/kg (UUSCO of 63 mg/kg), mercury up to 2.67 mg/kg (UUSCO of 0.18 mg/kg), zinc up to 1,230 mg/kg (UUSCO of 109 mg/kg). The PFAS compounds perfluorooctanoic acid (PFOA) was detected in soil at concentrations above the respective unrestricted use guidance value of 0.66 parts per billion (ppb) at a concentration of 0.695 ppb. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: VOCs detected above Class GA Ambient Water Quality Standards (AWQS) include: benzene up to 240 parts per billion (ppb) with an AWQS value of 1 ppb, ethylbenzene up to 5,100 ppb, isopropyl benzene up to 320 ppb, naphthalene up to 660 ppb, n-propyl benzene in one sample at 540 ppb, o-xylene up to 6,800 ppb, p/m-xylene up to 18,000 ppb, sec-butylbenzene up to 11 ppb, tert-butylbenzene up to 6.3 ppb, toluene up to 9,100 ppb, 1.2.4-Tetramethylbenzene in one sample at 140 ppb, 1,2,4-Trimethylbenzene up to 3,3300 ppb, and 1,3,5-Trimethylbenzene in one sample at 790 ppb, all with an AWQS value of 5 ppb. SVOCs detected above AWQS include: acenaphthene with one sample at 110 ppb (AWQS of 20 ppb), naphthalene up to 470 ppb (AWQS of 10 ppb), benzo(a)anthracene up to 0.27 benzo(a)anthracene, benzo(a)pyrene up to 0.13 benzo(a)pyrene, benzo(b)fluoranthene up to 0.19 ppb benzo(k)fluoranthene up to 0.06 ppb, chrysene up to 0.15 ppb, and indeno(1,2,3-c,d)pyrene up to 0.09 ppb, all with an AWQS of 0.002 ppb. Excluding naturally occurring minerals, no metals were detected above their respective AWQS. No pesticides or PCBs were detected above their AWQS either. For PFAS compounds, PFOA and PFOS were reported at concentrations up to 92.2 parts per trillion (ppt) and 55 ppt respectively, exceeding the Maximum Contaminant Levels (MCLs)(drinking water standard) of 10 ppt each in groundwater. The compound 1,4- dioxane was not detected above the MCL of 1 ppb. There are no public water supply wells within a half a mile and there is a municipal prohibition for use of groundwater at the site. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: The total cumulative maximum concentrations for benzene, toluene, ethylbenzene, and xylenes (BTEX) compounds was 190.7 micrograms per cubic meter (ug/m3). Multiple VOCs were detected in soil vapor samples collected throughout the site. The most elevated concentrations detected were collected from SG-1 near the former USTs on the west side of the site. This includes: n-hexane, benzene, cyclohexane, 2,2,4-trimethylpentane, and heptane which were detected with maximum concentrations of 356,000 ug/m3, 45,400 ug/m3, 328,000 ug/m3, 2,120,000 ug/m3, and 107,000 ug/m3 respectively. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem: Remedial actions are complete, the site was cleaned up to meet

HESS#32516 (Continued) **1000263799**

	unrestricted use, and all known exposure pathways were addressed by the remedy for the site.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 12/23/05- Andersen - Reviewed quarterly report dated 11/7/05. Eight MW sampled on September 23, 2005. Max BTEX 729ppb (MW5), max MTBE 352ppb (MW3). SVE system shut down May 5, 2005 due because low influent vapors. RAP required for remaining contamination. 12/29/05: RAP required letter sent. RAP due 2/9/06. 1/26/06: 1/25/06 meeting with Quantum, NYSDEC, and ET. A sensitive receptor survey and soil vapor survey will be performed, and then site closure will be considered. A kiosk vapor abatement system is in place. 2/2/06: Reviewed the fourth 2005 quarterly report. Max BTEX 497 ppb (MW5), max MTBE 351 ppb (MW6). A sensitive receptor survey will be prepared. 6/30/06: Meeting on 6/28/06 with Hess, Quantum, NYSDEC, EnviroTrac and GSC. Will submit request for closure. Sub slab vapor sampling conducted. 7/25/06: Received the results of sub-slab sampling and a sensitive receptor survey. Two sub slab samples were collected from beneath the kiosk on site. MTBE and BTEX were not detected

HESS#32516 (Continued) **1000263799**

above method detection limits. The sensitive receptor survey revealed that residential houses with
basements are located within 1,000 ft of the site. Closure was requested. 10/6/06: Emailed Dawn
Coughlin to followup on quarterly report. Received email from Ed Russo: the site was sampled on
August 15, 2006. Results indicated concentrations that we feel warrant closure, especially due to
the positive results of the soil-gas sampling and sensitive receptor survey. The report was just
finalized yesterday, so you should be receiving it by the middle of next week. 11/1/06: Received
closure request. Max benzene 158ppb in MW3, MTBE 338 in MW3. Continued groundwater sampling
required. 1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. 1/23/07: Received update report.
Wells samples on 11/8/06. Max BTEX 63 (MW3), max MTBE 222 (MW6). 4/20/07: Reviewed update report.
Max BTEX 12.3 ppb (MW1). As reportedin the sensitive receptor survey, soil vapor sampling showed
soil gas MTBE and BTEX concentrations ND. ND concentrations in downgradient wells. NFA issued.

Remarks: SOIL FOUND IN TANK PULL - SOIL BEING STODE PILED.

Environmental Interest/Information System:

The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Updated By:	AMSERVIS
Site Description:	Site Location: The Site s address is 210 Greenpoint Avenue, Brooklyn, NY 11222. The Site is located in Kings County, New York and is identified as Block 2576 Lot 7. The Site is located in a mixed-use residential and commercial section of the Greenpoint neighborhood of Brooklyn, NY on the south side of Greenpoint Avenue between McGuinness Boulevard and Eckford Street. The Site is located approximately 0.5 miles west of Newtown Creek. The Site is bounded by Greenpoint Avenue followed by mixed-use commercial and residential buildings to the north, McGuinness Boulevard followed by a commercial building, Key Foods Grocery Store , to the east, a mixed-use commercial and residential building to the south, and a residential apartment building to the west. The Site is 13,339.69 square feet (0.306 acres) in size. Site Features: The Site previously was improved with two one-story buildings; one of which was utilized for storage, and the other as a retail building/office space. The buildings did not include cellar levels. There were five 4,000-gallon gasoline/ethanol gasoline USTs and two 550-gallon tanks removed from the Site. Construction for the new development is ongoing and, when completed, the site will be improved with a nine-story mixed-use commercial/residential, mixed-income building with one full cellar level. Current Zoning and Land Use: The Site was occupied by an active retail petroleum station and is zoned R7-A and R6-B for residential use with a commercial C2-4 overlay. The surrounding properties are currently used for commercial and residential purposes. The nearest residential buildings are directly adjoining to the south and west of the Site. The proposed development of this property is consistent with the current zoning. As a result of the CEQR process, Block 2576 Lot 7 was assigned an environmental E-Designation (E-287) 209-231 McGuinness Boulevard Rezoning Action, for hazardous materials, noise (window wall attenuation & alternate means of ventilation), and air (HVAC fuel limited to natural gas & exhaust stack location limitations) resulting from a CEQR effective 10 December 2012 (CEQR 10DCP024K). Satisfaction of the E-Designation requirements is subject to review and approval by the NYCOER to obtain a NTP or NNO prior to obtaining building permits. Past Land Use: The Site was developed in the late 1800s and was occupied by commercial, residential, and vacant properties until the early 1940s, from the early 1940s to the late 1970s the Site operated as several auto-related facilities, from the late 1970s through the present the Site has operated as a gasoline filling station. Site Geology and Hydrogeology: The stratigraphy of the Site, from the surface down, consisted primarily of urban fill extending to approximately 5.5 ft bgs (terminus of each soil boring). Groundwater was recorded at approximately 4.2 to 9 ft bgs. Groundwater flow is assumed to flow toward the northeast. The site has since been remediated to Track 1 with excavation depths extending 7 ft bgs sitewide and up to 12 - 33 ft bgs at localized excavation areas.
Summary:	Remedial actions are complete, the site was cleaned up to meet

HESS#32516 (Continued) **1000263799**

unrestricted use, and all known exposure pathways were addressed by the remedy for the site.

Summary: Post-Remediation Remediation at the site is complete. Remedial actions have successfully achieved Track 1 Unrestricted Use soil cleanup objectives. Prior to Completion of Remediation Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs (primarily PAHs), and metals. Soil: Exceedances of the Unrestricted Use Soil Cleanup Objectives (UUSCOs) and in some cases Protection of Groundwater Soil Cleanup Objective (PGWSCOs) were primarily found in the historic fill layer which extends from 9 - 13 ft. across the site. In general, the highest concentrations were detected in the upper 10 ft. of site soils. However, elevated concentrations of VOCs and metals did extend into deeper soils (28 - 30 ft.) at SB-1 in the western portion of the site. VOCs detected at levels exceeding UUSCOs and PGWSCOs include: acetone up to 0.09 mg/kg (UUSCO of 0.05 mg/kg), benzene up to 1.4 mg/kg (UUSCO and PGWSCO of 0.6 mg/kg), ethylbenzene up to 74 mg/kg (UUSCO of 1 mg/kg, PGWSCO of 5.5 mg/kg, and RRSCO of 41 mg/kg), isopropyl benzene up to 16 mg/kg (PGWSCO of 2.3 mg/kg), naphthalene up to 69 mg/kg (PGWSCO of 13 mg/kg), n-butylbenzene up to 13 mg/kg (PGWSCO of 12 mg/kg), n-propyl benzene up to 40 mg/kg (PGWSCO of 3.7 mg/kg), toluene up to 12 mg/kg (PGWSCO of 1.5 mg/kg), 1,3,5-trimethylbenzene up to 140 mg/kg (PGWSCO of 3.3 mg/kg), 1,2,4-trimethylbenze up to 340 mg/kg (PGWSCO of 13 mg/kg), and xylenes up to 320 mg/kg (PGWSCO of 1.2 mg/kg). SVOCs detected at levels exceeding UUSCOs and PGWSCOs from 0 - 10 ft. bgs. include: benzo(a)anthracene up to 7.5 mg/kg (PGWSCO of 3 mg/kg), benzo(a)pyrene up to 6.2 mg/kg (PGWSCO 1.1 mg/kg), benzo(b)fluoranthene up to 6.3 mg/kg (PGWSCO of 1.1 mg/kg), benzo(k)fluoranthene up to 1.6 mg/kg (PGWSCO of 1.1 mg/kg), chrysene up to 5.8 mg/kg (PGWSCO of 0.4 mg/kg), dibenzo(a,h)anthracene up to 0.76 mg/kg (UUSCO of 0.33 mg/kg), indeno(1,2,3-cd)pyrene up to 3.8 mg/kg (PGWSCO of 3.2 mg/kg), and naphthalene up to 21 mg/kg (PGWSCO of 13 mg/kg). Metals detected at levels exceeding UUSCOs include: arsenic at a concentration of 13.2 mg/kg (UUSCO of 13 mg/kg), copper up to 77.2 mg/kg (UUSCO of 50 mg/kg), lead up to 590 mg/kg (UUSCO of 63 mg/kg), mercury up to 2.67 mg/kg (UUSCO of 0.18 mg/kg), zinc up to 1,230 mg/kg (UUSCO of 109 mg/kg). The PFAS compounds perfluorooctanoic acid (PFOA) was detected in soil at concentrations above the respective unrestricted use guidance value of 0.66 parts per billion (ppb) at a concentration of 0.695 ppb. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: VOCs detected above Class GA Ambient Water Quality Standards (AWQS) include: benzene up to 240 parts per billion (ppb) with an AWQS value of 1 ppb, ethylbenzene up to 5,100 ppb, isopropyl benzene up to 320 ppb, naphthalene up to 660 ppb, n-propyl benzene in one sample at 540 ppb, o-xylene up to 6,800 ppb, p/m-xylene up to 18,000 ppb, sec-butylbenzene up to 11 ppb, tert-butylbenzene up to 6.3 ppb, toluene up to 9,100 ppb, 1.2.4-Tetramethylbenzene in one sample at 140 ppb, 1,2,4-Trimethylbenzene up to 3,3300 ppb, and 1,3,5-Trimethylbenzene in one sample at 790 ppb, all with an AWQS value of 5 ppb. SVOCs detected above AWQS include: acenaphthene with

HESS#32516 (Continued) **1000263799**

one sample at 110 ppb (AWQS of 20 ppb), naphthalene up to 470 ppb (AWQS of 10 ppb), benzo(a)anthracene up to 0.27 benzo(a)anthracene, benzo(a)pyrene up to 0.13 benzo(a)pyrene, benzo(b)fluoranthene up to 0.19 ppb benzo(k)fluoranthene up to 0.06 ppb, chrysene up to 0.15 ppb, and indeno(1,2,3-c,d)pyrene up to 0.09 ppb, all with an AWQS of 0.002 ppb. Excluding naturally occurring minerals, no metals were detected above their respective AWQS. No pesticides or PCBs were detected above their AWQS either. For PFAS compounds, PFOA and PFOS were reported at concentrations up to 92.2 parts per trillion (ppt) and 55 ppt respectively, exceeding the Maximum Contaminant Levels (MCLs)(drinking water standard) of 10 ppt each in groundwater. The compound 1,4- dioxane was not detected above the MCL of 1 ppb. There are no public water supply wells within a half a mile and there is a municipal prohibition for use of groundwater at the site. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: The total cumulative maximum concentrations for benzene, toluene, ethylbenzene, and xylenes (BTEX) compounds was 190.7 micrograms per cubic meter (ug/m3). Multiple VOCs were detected in soil vapor samples collected throughout the site. The most elevated concentrations detected were collected from SG-1 near the former USTs on the west side of the site. This includes: n-hexane, benzene, cyclohexane, 2,2,4-trimethylpentane, and heptane which were detected with maximum concentrations of 356,000 ug/m3, 45,400 ug/m3, 328,000 ug/m3, 2,120,000 ug/m3, and 107,000 ug/m3 respectively. Data does not indicate any off-site impacts in soil vapor related to this site.

Water Type: perfluorooctanoic acid

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

Record Upd: 06/06/2022
Updated By: KATHOMPS
Site Description: Location: The Williamsburg-Pratt Refinery site is located in a commercial/industrial area in the Williamsburg section of Brooklyn. The site comprises a single real estate parcel, Block 2277 Lot 1, at 26 N 12th St. It is approximately 7 acres in size and is located between Kent Ave. and the East River and between N 12th St. and Bushwick Inlet. Site Features: The site formerly included above ground petroleum bulk storage tanks, a 3 story office building, a one story cinder block garage, a fuel dispenser island, and a large asphalt paved area. All above ground structures, buildings and storage tanks, were dismantled and removed during the summer of 2019. Current Zoning and Land Use: Currently the site is vacant covered by concrete slabs and asphalt. The Block and Lot are zoned commercial and future use is anticipated as parkland. The land use in the surrounding area is currently a mix of industrial, commercial, residential, and parkland use. The nearest residential property is located approximately 2 blocks to the south. Past Use of the Site: A petroleum refinery operated on the site from circa 1870 into the early 1900s. Subsequently, the property was utilized as a major petroleum bulk storage facility until the early 2000s. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till and lenticular clay more than 100 feet in thickness. The fluvial marsh silty clay to clay is encountered from approximately 5 to 25 feet below ground surface across the site. The groundwater table is approximately 6 feet below ground surface. Groundwater flows to the north northwest, toward Bushwick Inlet and the East River.
Env Problem: Soil sediment and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, and the emerging contaminants per and polyfluorinated substances (PFAS) and 1,4 dioxane. Based on investigations conducted, the primary contaminants of concern include VOCs and SVOCs, and total metals in soil and groundwater. PFAS was found in groundwater samples. Nature and Extent Soil: Sampling results indicated that VOCs, SVOCs, pesticides, PCBs, metals and mercury were detected above the applicable restricted residential use soil cleanup objectives (RRSCOs) or protection of groundwater soi cleanup objectives (PGWSCOs) in soil samples. VOCs: Petroleum VOCs consisting of benzene, toluene, ethylbenzene, total xylenes (collectively BTEX), isopropylbenzene, n propylbenzene, 1, 3, 5 trimethylbenzene, 1, 2, 4 trimethylbenzene, sec butylbenzene, 4 isopropyltoluene, and naphthalene were detected in many samples site wide. The soil boring logs indicate that the petroleum contamination extends from the surface to a depth of approximately 30 ft below ground surface (bgs). Petroleum VOC detections and concentrations increased with depth, a majority of them occurring in the area of the former bulk storage tanks. The highest number of samples containing petroleum VOCs occurred at the water table interface. The highest concentrations occurred at or below the water table (1 to 6 feet bgs) to approximately 25 30 ft below grade. Some samples containing BTEX were found at greater depths, which were associated with coal tar, as noted below. 1,2,4 Trimethylbenzene, naphthalene and BTEX (benzene, toluene, ethylbenzene and xylenes) were found most often and had the highest concentrations exceeding RRSCOs and PGWSOCs. 1,2,4 Trimethylbenzene concentrations ranged from 4.4 to 790 parts per

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

million (ppm), exceeding the PGWSCO of 3.6 ppm. Naphthalene concentrations ranged from 17 to 2,500 ppm, exceeding the PGWSCO of 12 ppm. Benzene concentrations ranged from 0.7 to 19 ppm, exceeding the PGWSCO of 0.7 ppm; toluene concentrations ranged from 0.88 to 59 ppm, exceeding the PGWSCO of 0.7 ppm; ethylbenzene concentrations ranged from 1 to 120 ppm, exceeding the PGWSCO of 1 ppm; total xylenes concentrations ranged from 0.28 to 460 ppm, exceeding the PGWSCO of 0.26 ppm. The petroleum contamination is more prevalent along the southern boundary along 12th Street and around the former bulk storage tanks. This suggests that the site has been impacted by the former petroleum storage and fueling operations. SVOCs: SVOCs, primarily polycyclic aromatic hydrocarbons (PAHs), were detected in a majority of the soil borings site wide, primarily within the shallow soil samples associated with the historic fill (5 to 10 ft below grade), although some occurred at greater depths and were associated with coal tar. PAHs, specifically benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3 c,d)pyrene, accounted for the highest percentage of SVOC samples exceeding RRSCOs or PGWSCOs, as applicable. Concentrations of benzo(a)anthracene (1.1 ppm to 230 ppm) and benzo(a)pyrene (1.1 to 76 ppm) found on site significantly exceed their RRSCO of 1 ppm. Concentrations of benzo(b)fluoranthene (1.1 ppm to 75 ppm) and chrysene (1.1 to 160 ppm) found on site exceed their RRSCO of 3.9 ppm. Concentrations of dibenz(a,h)anthracene (0.36 ppm to 11 ppm) found on site exceed the RRSCO of 0.33 ppm. Concentrations of indeno(1,2,3 c,d)pyrene (0.53 ppm to 34 ppm) found on site exceed the RRSCO of 0.5 ppm. The highest SVOC sample concentrations were phenanthrene, fluorene, fluoranthene, and naphthalene and found within the historic fill. Concentrations of phenanthrene (120 to 3,600 ppm), fluorene (120 to 1,500 ppm), naphthalene (200 to 2,500 ppm) and fluoranthene (160 to 1,600 ppm) found on site significantly exceed their RRSCO of 100 ppm. Coal Tar: The PAH and VOC (BTEX, noted above) analytical results indicate that coal tar was encountered in two borings from 20 to 50 feet, bgs. Coal tar was also identified in the field based upon photoionization detector(PID) readings, olfactory observations, and visual identification. The location of these borings is generally in the southeast and central portion of the site. Metals: Metals consisting of arsenic, barium, cadmium, total chromium, iron, cobalt, copper, lead, mercury, nickel, selenium and zinc were detected above RRSCOs. Metals exceeding the RRSCOs are found primarily within the shallow soils (5 to 10 feet, bgs) site wide within the historic fill. Arsenic, lead, and mercury accounted for the highest percentage of metal exceedances of RRSCOs. Concentrations of arsenic (16.3 to 1,110 ppm) found on the site exceed the RRSCO of 16 ppm. Concentrations of lead (448 to 12,100 ppm) found onsite exceed the RRSCO of 400 ppm. Concentrations of mercury (0.856 to 8.43 ppm) found onsite exceed the RRSCO of 0.81 ppm. While many of the metal values were within the range of their typical background concentrations for urban fill, some were well above these values are likely attributable to the petroleum and coal tar releases previously identified. PCBs and Pesticides: PCBs were detected at 8.9 ppm in one shallow soil boring exceeding the RRSCO of 1 ppm. Pesticides were detected in samples, although no pesticides were detected above RRSCOs. Site-related VOC, SVOC, pesticides and metals were found in Bushwick Inlet and/or East River sediments adjacent to the site. Coal tar DNAPL was observed in one sample in the East River. Petroleum LNAPL, sheen and odors were observed in

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

three samples in the East River and four samples collected in the Bushwick Inlet. This suggests that site contamination has likely migrated off-site into the Bushwick Inlet. Groundwater: Sampling results indicated that VOCs, SVOCs, and metals were detected above the 6NYCRR Part 703 Ambient Water Quality Standards and Guidance Values (AWQSGVs) in groundwater. VOCs: VOCs, including 1,2,4 trimethylbenzene, 1, 3, 5 trimethylbenzene, benzene, chlorobenzene, isopropylbenzene, naphthalene, n propylbenzene, sec butylbenzene, MTBE, and total xylenes were detected at concentrations exceeding AWQSGVs The following VOCs were the highest: naphthalene at 2,100 part per billion (ppb) which exceeds the AWQSGV of 10 ppb; benzene at 160 ppb which exceeds the AWQSGV of 1 ppb; 1,2,4 trimethylbenzene at 260 which exceeds the AWQSGV of 5 ppb; total xylenes at 1,140 ppb which exceeds the AWQSGV of 5 ppb. SVOCs: SVOCs, including acenaphthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3 c,d)pyrene, and phenol were detected at concentrations exceeding NYSDEC AWQSGVs. The following are the maximum concentrations of SVOC found on site in groundwater: acenaphthene at 52 ppb, which exceeds the AWQSGV of 20 ppb; benzo(a)pyrene at 4 ppb, which exceeds the AWQSGV (non detect); benzo(b)fluoranthene at 3 ppb, benzo(k)fluoranthene at 2 ppb, chrysene at 5 ppb and indeno(1,2,3 c,d)pyrene at 2 ppb, which exceed their AWQSGV of 0.002 ppb; and phenol at 2 ppb which exceeds the AWQSGV of 1 ppb. 1,4-Dioxane was not detected above the laboratory reporting limit in any groundwater sample. The elevated concentration of VOCs is likely a reflection of the petroleum contamination as most exceedances occurred in the former petroleum storage and fueling operations. The SVOC contamination is in part the result of the historic fill as most exceedances occurred in the western half of the site. SVOC contamination was also found in borings with observed coal tar in the southeast area of the site along 12th street, suggesting some SVOC groundwater contamination could be attributed to the MGP. Metals: The metals arsenic, barium, beryllium, cadmium, chromium, copper, iron, magnesium, lead, manganese, and sodium were detected at concentrations exceeding AWQSGVs in unfiltered samples. Filtered samples show only iron, magnesium, and sodium exceeding AWQSGVs, which is likely from compounds associated with the East River, which have a hydrogeological connection to groundwater at the Site. The source of the other metals in the unfiltered samples is likely due to the presence of suspended sediments in the sample. PCBs and Pesticides: PCBs and pesticides were not detected above the laboratory reporting limit in any groundwater sample. PFAS Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 160 parts per trillion (ppt) and 17 ppt, respectively, exceeding the Maximum Contaminant Level (MCL, drinking water standard) of 10 ppt in groundwater. The maximum concentration of total PFAS in one sample was 706 ppt. The source of these compounds is thought to be from the on site fire suppression system as the compounds were found in samples taken in the immediate vicinity of the foam house. Non Aqueous Phase Liquid-NAPL NAPL was found in both soil and groundwater samples sitewide. Both LNAPL and DNAPL were found in soil borings below the water table and in groundwater wells. Most groundwater observations were non measurable sheens or blebs. However, some had measurable LNAPL,up to 1.5 feet thick. Sediment: Site-related VOC, SVOC, and metals were found in Bushwick Inlet and/or East River sediments adjacent to the site. Coal

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

tar and petroleum was observed in one sample in the East River. Petroleum sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick Inlet. contamination has migrated off-site. The VOC most often detected in samples and with the highest concentrations was 1,2,4-Trimethylbenzene, concentrations of which ranged from 0.1 to 10 ppm. The SVOC most often detected in samples and with the highest concentrations was Naphthalene, concentrations of which ranged from 3 to 48 ppm. The source of these VOC and SVOC compounds are associated with the site. Unfiltered metals samples show compounds associated with the East River. The source of the other metals in the unfiltered samples is likely due to the presence of suspended sediments in the sample. Sediment gathered show observed coal tar and petroleum contamination in the East River and Bushwick Inlet sediment. Coal tar DNAPL was observed in one sample in the East River adjacent to the site. Petroleum LNAPL, sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick inlet. Based on sediment data below and the tidal influence, contaminated groundwater and LNAPL/DNAPL appear to have migrated off-site into the adjacent waterway.

Health Problem: The site is completely fenced, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Sampling indicates soil vapor intrusion is a potential concern for off-site buildings, however this may be attributable to contamination from an off-site source.

Site Description: Location: The Pratt Refinery site is located in a commercial/industrial area in the Williamsburg section of Brooklyn. The site comprises a single real estate parcel, Block 2277 Lot 1, at 26 N 12th St. It is approximately 7.3-acres in size and is located between Kent Avenue and the East River and between N 12th St. and Bushwick Inlet. Site Features: The site formerly included above ground petroleum bulk storage tanks, a 3-story office building, a one-story cinder block garage, a fuel dispenser island, and a large asphalt paved area. All above ground structures, buildings and storage tanks, were dismantled and removed during the summer of 2019. Current Zoning and Land Use: Currently the site is vacant and covered by concrete slabs and asphalt. The Block and Lot are zoned commercial and future use is anticipated as parkland. The land use in the surrounding area is currently a mix of industrial, commercial, residential, and parkland use. The nearest residential property is located approximately 2 blocks to the south. Past Use of the Site: A petroleum refinery operated on the site from circa 1870 into the early 1900s. Subsequently, the property was utilized as a major petroleum bulk storage facility until the early 2000s. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till and lenticular clay more than 100 feet in thickness. The fluvial marsh silty clay to clay is encountered from approximately 5 to 25 feet below ground surface across the site. The groundwater table is approximately 6 feet below ground surface. Groundwater flows to the north northwest, toward Bushwick Inlet and the East River.

Env Problem: Soil and groundwater samples were analyzed for volatile organic

FORMER BAYSIDE FUEL OIL DEPOT CORPORATION - N 12TH ST (Continued) **S117564948**

compounds (VOCs), semi volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, and the emerging contaminants per and polyfluorinated substances (PFAS) and 1,4 dioxane. Based on investigations conducted, the primary contaminants of concern include VOCs and SVOCs, and metals in soil and groundwater. Both Light Non-Aqueous Phase Liquid (LNAPL) and Dense Non-Aqueous Phase Liquid (DNAPL) were encountered in soil borings below the water table and in groundwater wells.

Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
Registry ID: 110004334872

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

CITISTORAGE (Continued) **S132119376**

Site Description:	Location: The CitiStorage site is a 4-acre site located in an urban area of NYC. Site Features: The site is generally flat with a gentle west-northwesterly slope toward the East River. A three-story warehouse occupies most of the site. A Paved parking lot is present on the river side of the warehouse. Current Zoning and Land Use: The site (Block 2294, Lots 1 & 5) is currently inactive and zoned for commercial use. The site and its immediate surrounding areas are zoned Low Performance Manufacturing (M3) by the New York City Department of Planning. Surrounding parcels are currently used for a combination of commercial, light industrial, and parklands. The site is bordered by a NYC park to the south; vacant land known as the former Williamsburg manufactured gas plant (MGP), NYSDEC site number 224055, to the north; various light commercial and hotel operations to the east; and the East River to the west. The nearest residential area is 0.3 miles to the east. Past Use of the Site: Former uses of the site included an oil storage facility operated by the Standard Oil Company Pratt from 1916 to 1954. The site was also occupied by a cooperage, a garage, and a machine shop. The Brooklyn Eastern District Terminal occupied the property from 1942 to 1996 and included several flour storage facilities and their associated structures, chemical storage, and rail lines. The property is currently occupied by the CitiStorage warehouse which was constructed on this lot in the late 1990s. Site Geology and Hydrogeology: Adjacent subsurface investigation show 10-20 feet of historic fill thickening from East to West. Underlain by interbedded silt and sand on the Eastern part of the site and clay and silt on the Western part of the site.
Env Problem:	Sample results from a 2006 Site Investigation Report showed soil and groundwater contaminate concentrations exceeded NYS cleanup objectives for petroleum-related volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). A site characterization and investigation is required to determine the presence and nature and extent of contamination at this potential site. The site is located adjacent to parklands, and the anticipated future use of the site is also parkland.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DEC Memo:	12/02/08-Zhune visited the site. The Metropolitan Avenue Subway Station has a police precinct. I spoke to Hannay from Transit Brooklyn Task Force he said early in the morning there was a very

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

strong gasoline smell. We noticed gasoline smell for almost a year when the gas station fill up the
tanks with gasoline but today it has been the worst. Passengers were complaining. they called 911.
By the time that I got there the smell was gone. On 433 Union Ave, Brooklyn NY there is a Getty
gasoline station. The station have 3 USTs, one regular, one diesel and one premium. USTs were
installed in 1982. One AST installed in 2004. Tanks are steel tanks. In the top sump of premium a
leak of apporximately 25 gallons of gasoline was found. In the top sump of diesel there are diesel
and in the top sump of regular there are a mixture of gasoline and water. The sensors in the sumps
were not place touching the bottom of the sump. The fuel alarm did not went off becouse the sensors
were placed incorrectly. The last time the tanks were tested was on 03/11/08 they passed the test.
the lines are doubled walled lines. Dispenser 1-2 probably are leaking. The gravel in the sumps are
wet and there is petroleum smell. Benjamin Leonen (718)999-2460 from FFD (Bulk Fuel Safety) shut
the station down. DEC Requires 1) Tanks tightness test and lines test 2) Copies of 10 Days
Reconcilation Report 3) Copies of Corrosion Protection test and stage I and II test. 12/04/09-
Zhune. Received the Tank and line test results performed by Certified Tank CTT Testing. The results
showed that the three tanks (Diesel, Premium and Regular) and the three lines passed the test.
01/26/09-Zhune. Received the stage I and II test results and passed test. 02/10/09- Zhune called
Frank Cifuentes (718)999-2516 (DCI) Deputy Chief Inspector of the Bulk Fuel Safety. He said the
station was closed on 12/02/09 by Benjamin Leonen. On 12/08/09 Frank witnessed the precision test
tanks and passed. The station open to service on 12/10/09.
02/10/09-Vought-Called and spoke to NYCT
Varley as per DEC Austin and no further monitoring of station being performed and no complaints
received to date since original spill. Phase II received by DEC. DEC Zhune will review and discuss
with DEC Austin for transfer to Petroleum Remediation Unit due to presence of free product and
necessity of long term remediation. PHASE II Report. A Total of 4 soil boring (B1-B4) were
performed during the Subsurface investigation. The location of Groundwater water correspond to the
same location of the soil boring. samples were collected by installing temporary wells. SOIL. No
VOCs were detected in any of the four shallow soil samples B1(0-2ft), B2(0-2ft), B3(0-2fl)and
B4(0-2ft)at concentrations above TAGM guidance levels. Elevated concentrations of Ethyl-benzene,
Toluene, o-Xylene, p&m-xylene, 1,2,4 trimethyl-benzene in the deep soil samples Bi(8-10ft),
B2(10-12ft)and B3(10-12ft). No VOCs were detected at B4(10-12ft) at

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

concentrations aboveTAGM
guidance levels. SVOCs above the guidance levels were detected in B1(0-2ft), B2(0-2ft),
B3(8-10ft)and B4(0-2ft). The elevated compounds include Benzo(a)anthracene, Benzo(b)fluoranthene,
Benzo(a)pyrene, Benzo(K)fluorenthene, Chrysene and Dibenzo(a,h)anthracene. Metals. Zinc, cooper and
cadmiun were detected at elevated concentrations. Zinc in each soil sqmples excep B2(10-12ft) and
B4(10-12ft). Cooper in B2(0-2ft) andB3(8-10ft) and Calcium in B2(10-12ft). GROUNDWATER. Benzene,
Toluene, Ethyl-benzene and p&M Xylene were detected at concentrations above NYSDEC GQSs in B1 and
B4. Free floating product was recovered from B2 and B3. No SVOCs were detewcted at concentrations
above NYSDEC CQSs. Only B1-B4 was analyzed for SVOCs PCB-1254 was detected at a concentration of
12.2 ug/L in B2. Metals. Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Magnesium,
Nickel, Sodium, and Selenium were detected above their respective NYSDEC GQSs. 02/20/09- Zhune. As
per Randy Austin this case has been tranferred to Mark TIbbe for long term remediation. 02/24/2009:
This spill case was transferred to A. Doronova. - AD 04/09/2009: Received a pdf copies of Orders on
Consent: one signed by responsible party and second signed by consultant, who was fined due to
falure to report the spill. DL copies to eDocs. AD 04/23/2009: Received an email from V. Brevdo. He
forwarded me a copy of the investigation work plan, which was requested in the CAP of the signed
Order on Consent. Reviewed the work plan. AD 04/27/2009: Called and spoke with Charles Sosik of EBC
(consultant). Requested to re-submit the work plan. Revised WP should state all spill cases
associated with this property (spill 0809794 is missing) and references to the consent order and
the corrective action plan. They did not performed any weekly gauging and recovery visits required
under Paragraph 1 of the CAP because there are not any permanent monitoring wells at the site.
Discussed locations of the proposed permanent GW monitoring wells. Asked why EBC did not propose to
install permanent wells in the vicinity of soil borings B-2 and B-3 (product sheen was detected in
these temporary wells in December 2008). According to Mr. Sosic, the redevelopmet plan includes
excavation to 12' bgs for a hotel construction with a full basement, so they proposed wells only
along the site borders to monitor off-site migration of the contamination. The revised WP will be
submitted till the end of this week. AD 04/30/2009: Called and spoke with Mr. Sosic regarding
submission of the revised WP. According to the information obtained from him today, the start date
of a re-development project is unknown. Told him that due to the postponement of the project, two

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

additional permanent monitoring wells should be installed in the vicinity of the temporary wells
B-2 and B-3, or two of the proposed wells should be relocated. Mr. Sosic requested to put all this
requirements in writing. Prepared an e-mail for Mr. Sosic. Discussed the site with J. Kolleeny.
Later received an e-mail from Mr. Sosic saying: Ainyra, Attached is the revised RIWP reflecting the
changes you requested earlier in the week (add subway spill number and consent order info in
introduction section) as well as those requested earlier today (move the locations of 2 MWs). Hard
copy is going out today as well. I do not have the PBS inspection report, but as I mentioned you
should be able to obtain that from Veronica. Call with questions. Charles B. Sosik, P.G. Principal
EBC Will review. AD 05/04/2009: Reveiwed the revised work plan. It proposes additional subsurface
investigation at the site, including advancing and sampling of seven soil borings and eight
temporary groundwater sampling points, and installation of six permanent groundwater monitoring
wells. The diameter of the proposed permanent wells planned to be - 1 inch. Groundwater samples
will be analyzed for VOCs. The work plan's Figure 4 (proposed monitoring well locations) indicates
only 5 wells of proposed 6. Figure 3 has two different versions in the same plan and Figure 2 is
abcent. A remedial investigation report summarizing all findings with conclusions and
recommendations will be prepared and submitted to DEC. Called and spoke with Mr. Sosik of EBC.
requested to correct figures and resubmit the work plan. Later received an e-mail from him saying:
Revised as discussed. Corrected spill number on Page 1 and correct Figure 3 and 4 shown. In
reviewing again I eliminated the monitoring well within the service bay due to the potential for
spills. A well was added near the sign as discussed and the text changed from 6 wells to 5. If OK
we will send out new hard copy. Charles B. Sosik, P.G. Principal EBC Figures were corrected. But
now EBC proposes 5 monitoring wells instead of 6 previously proposed due to spill potential for
wells in the vivinity of the service bay. AD 05/05/2009: Discussed the work plan with J. Kolleeny
of DEC. Issued and sent an approval letter with some modifications to Mr. Mohan Dhillon (site
owner) and copies to J. Kolleeny-DEC and C. Sosic (EBC), DL e-copy to eDocs. Investigation report
is due August 6, 2009. AD 05/26/2009: Received an e-mail from C. Sosik of EBC saying: Ainura, We
are attempting to schedule the drilling for tomorrow. Let me know if you have any problems with
this. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph:
631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

csosik2@optonline.net Spoke with him. Scheduled
the site visit. AD 05/27/2009: Received a phone call from Mr. Sosik. He said that fieldwork was
canceled due some scheduling issues, and promised to inform me on a new date for investigation
work. AD 06/11/2009: Did not receive any notifications from Mr. Sosik. Sent him an e-mail saying:
Hi Charles, Do you already have a new schedule for drilling at the site? I did not hear from you
since you canceled May 27th field work. Please notify me in advance. Thank you. Ainura Doronova AD
06/12/2009: Received an e-mail from C. Sosik of EBC: We expect to reschedule for late next week.
I'll let you know Monday. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants
Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 AD 06/17/2009: Spoke with C. Sosik regarding
fieldwork schedule. He told me that it scheduled for week of June 28. AD 07/2009: The site visit
was canceled again. AD 07/14/2009: Received an e-mail from C. Sosik of EBC: Ainura, The attorney is
asking for an extension on the field work till September due to issues with the insurance company.
Please let me know if this is acceptable. Thank you. Charles B. Sosik, P.G. AD 07/15/2009: Spoke
with Mr. Sosik, told him that deadline extension can be approved by the Department in accordance
with the CAP of the Concent Order. Requested to submit an official letter request for extension. AD
07/17/2009: Received the letter. DL to eDocs. Will review. AD 07/21/2009: Reviewed the letter. EBC
asks for 45-day deadline extention. Discussed it with J. Kolleeny of DEC. AD 07/22/2009: Sent a
letter with 30-day deadline extension approval. CC to J. Kolleeny of DER and J. Urda of DEC. DL to
eDocs. The Investigation report submission is due September 4, 2009. AD 08/19/2009: Received an
e-mail C. Sosik of EBC which stated that EBC will start site investigation tomorrow. Will visit the
site. AD 08/20/2009: Visited the site. Met at the site with C. Sosik. EBC was subcontracted to
perform soil boring and wells installation. The highest PID reading at MW-1 boring location was
1300 ppm (13'), at SB-6 PID was 15 ppm (8'-12') and at SB-5 it was 650 ppm (12'-13'). Observed soil
and groundwater sampling. There was some gasoline odor noted during installation of MW-1 and SB-5.
The investigation summary report will be submitted. Later in the day received an e-mail from C.
Sosik saying: Ainura, All sampling completed. Product was encountered in MW-3. Not measurable but a
heavy black film on water in the bailer. Not enough for a sample, but will try again next week
after it settles. Could not get the boring at b7 due to rejection and proximity to lines and tanks.
Pea gravel encountered. I'm in the office tomorrow. Call to discuss. AD 08/26/2009: Called and

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

spoke with C. Sosik. He said that they will return to the site later this week to survey the wells and to collect free product sample if feasible. A soil and GW contamination was also encountered in the vicinity of well MW-1. AD 09/04/2009: Received an e-mail from Mr. SosiK saying: Ainura, The RI Report is attached. A hard copy will follow early next week. Let me know if you have any questions or if additional hard copies are needed. Thanks and enjoy the weekend. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net DL the report to eDocs. AD 09/14/2009: Received a hard copy of the report. Will review. AD 10/20/2009: Reviewed the report. AD 11/02/2009: Called and spoke with C. Sosik of EBC. Asked him to check all wells for free product and to sample permanent monitoring wells. RAP should be submitted with current GW data no later than December 1, 2009. AD 12/08/2009: Called and spoke with Mr. Sosik of EBC regarding RAP submission. He is out of town. He will be back tommorow. AD 12/19/2009: Received an e-mail from Mr. Sosik saying: Ainura, See attached Remedial Plan for the project. We need to coordinate with the NYC Office of Environmental remediation in order to obtain building permits as the site also has an E-designation. I will be sending hardcopies of the RAP and attachments to you and NYCOER on Monday. Call me with questions or to discuss. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 DL to eDosc. Will review. AD 01/25/2010: Reviewed the RAP. It states that the site will be re-developed through the construction of a new 6-story, 53-room hotel. The hotel will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth of 12’ bsg. The RAP proposes removal of 3 USTs, excavation of contaminated soil, and application of chemical oxidant into the excavation pit. As a preventine measure, a vapor barrier will be installed beneath the foundation slab of the cellar and sub-cellar areas of the building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 5 on-site wells. AD 02/02/2010: Called and spoke with C. Sosik of EBC regarding the RAP. Asked if one additional well can be installed at the site. Also clarified statement regarding installation of new tanks at the property. A revised RAP will be submitted shortly. AD 02/08/2010: Received an e-mail from Mr. Sosik: Ainura, see revised RAP, attached. We added 1 monitoring well, and changed section 3.1.4 as discussed. We also added section 2.5 to discuss dewatering options and modified section 3.1.5 to discuss a waterproofing membrane for the cellar level

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

and a vapor barrier for the sub-cellar level. Building permits, demolition and construction, must be obtained before work can start and MTA must also approve the plans. To obtain building permits we will need a NTP from NYCOER. We have submitted the RAP to OER and their issuance of an NTP is contingent upon written approval of the RAP from DEC. Call to discuss or if you have any other questions. Thanks. Charles B. Sosik, P.G. Dl the revised RAP to eDocs. Will review. AD 02/11/2010: Reviewed the revised plan. Discussed it with J. Kolleeny. Will send an approval letter with a comment. AD 02/17/2010: Issued and sent a RAP approval letter with a comment that: if post-remediation groundwater monitoring results do not indicate significant improvement of groundwater quality at the site, then additional remedial actions may be required by DEC. DL to eDocs. AD 04/2010: Spoke with Mr. Sosik regarding the RAP implementations. He said that they are waiting for OER. Asked him to send me an e-mail: Ainura, the NYCOER project contact is listed below. We sent him your approval letter on February 17. We cannot obtain building permits to remove the tanks without a Notice to Proceed from OER. I do not know what the hold up is. Andrew M. D'Amico Jr. Project Manager Office of Environmental Remediation Mayor's Office of Operations 253 Broadway, 14th Floor New York, NY 10007 Tel: (212) 341-2135 Fax: (212) 788-2941 Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net AD 07/27/2010: Called and spoke with C. Sosik of EBC. He told me that they were required to make some changes in the RAP by OER. A revised RAP will be submitted to us as well. Asked him to send me a summary e-mail regarding this matter. AD 10/06/2010: Received an e-mail from Mr. Sosik: Ainura, see revised redline version which incorporates changes requested by NYCOER. Let me know if DEC has any problems with the changes. We intend to re-submit the hard copy with the rest of the OER required submittals (full size architectural plans, letter from waterproofing manufacturer, letter from project architect etc.) by Friday. We will send a hardcopy of the revised plan to you as well. Thanks. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net 10/12/2010: Reviewed the revised version. And as it states in the e-mail, no particular changes were made to the RAP itself, which was approved by DEC in February 2010. It states that the site will be re-developed through the construction of a new 5-story, 52-room hotel (instead of 6-story hotel in previous RAP). The hotel

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth
of 13' bsg (instead of 12'). The RAP proposes removal of 3 USTs, excavation of contaminated soil,
and application of chemical oxidant into the excavation pit. As a preventine measure, a waterproof
membrane will be installed beneath the foundation slab of the cellar and sub-cellar areas of the
building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 6 wells. The
proposed sampling interval of 30 feet for end-point soil samples is questionable. AD 10/14/2010:
Called and spoke with Mr. Sosik regarding the soil sampling interval concerns and some typo on page
10 in the work plan. It was agreed that number and locations for soil samples will be decided after
excavation will be completed, based on the site conditions (shorings, shape of final excavation, GW
in the pit and such). A revised pdf copy of the RAP with corrected page 10 was submitted by e-mail.
Discussed the RAP with J. Kolleeny. Later issued an approval letter. DL pdf copy of the letter to
eDocs. AD 08/23/2011: Called and spoke with C. Sosik regarding site status update info. He will
send an e-mail with this info shortly. AD 08/25/2011: Received an e-mail from C. Sosik saying:
Ainura, As an update on progress at the site: I met with the developers about 2 weeks ago and they
indicated that the MTA had finally approved the plans. I believe the project can now go back to DOB
and they should be able to obtain approved plans. We will be meeting with the developer, architect
and general contractor within the next couple of weeks to plan the work sequence and logistics. I
ll let you know when the have DOB approvals and when we have a firm schedule. Charles B. Sosik,
P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870
Cell: 631.357.4927 csosik@ebcincny.com AD 12/22/2011: Sent an e-mail to C. Sosik requesting site
status update. AD 12/29/2011: Did not receive any response. AD 01/17/2012: Sent an e-mail to Mr.
Sosik requesting site status update. AD 01/18/2012: Received an e-mail from Mr. Sosik stating that
they just cut utility service to the building and expect to begin demolition next week. Tanks
removal will follow. AD 03/12/2012: Sent an e-mail to Mr. Sosik with a request for site status
update. AD Later in the day received the following response: Ainura, I have been notified that the
UST removal is starting on this project. We will have someone on-site today to observe. The plan is
to remove the tanks, backfill and demo the building and infrastructure first,.close out the demo
permit and then install shoring and begin excavation of impacted soil as part of the building
foundation. We will send you an udate on the short term schedule after

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

we have a chance to confer
with the tank removal contractor. Charles B. Sosik, P.G. Principal EB C Environmental Business
Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870 Cell: 631.357.4927 csosik@ebcincny.com
04/17/2012: Called and spoke with Mr. Sosik. He said that the tanks were removed, and they are
planning to remove a concrete pad underneath the former tanks to collect soil samples. Soil samples
will be also collected after removal of dispensers and fill lines. Mr. Sosik will keep me informed.
AD 06/12/2012: Sent an e-mail to Mr. Sosic with a request for site status update. Later received
the following response from Mr. Sosic: Ainura, They expect to start excavation this week. I will
get an update from the contractor and get back to you. Charles B. Sosik, P.G. AD 11/14/2012: Called
and left a message to Mr. Sosik. AD 01/14/2013: Called and spoke with C. Sosik regarding site
status update reports. He informed that excavation started at the site about a month ago. The site
has E designation, so they send also reports to MOER. The project manager in OER for this site is
Breanna Gribble. Mr. Sosik will sent update reports to DEC. Requested him to inform me about soil
sampling date. Later in the day received a daily reports from Kevin Brusee of EBC. The reports
states that on December 19, 2012 EBC began excavation of the top 5 feet of the soil from the
northern tip of the lot. On December 21, 2012 limited soil disturbing activities were conducted to
grade the site to allow access of the pile auger rig to the bottom of the 5ft deep excavation. On
December 27, 2012 a total of 5 truck loads of soil were excavated and transported to CEC. For the
next 2 weeks, EBC planned that the auger pile machine will be installing piles within the open
excavation. No soil disturbing activities will be performed while the piles are being installed.
According to EBC, significantly contaminated petroleum contaminated soil has not yet been
encountered, so odor has not been an issue and the soil is very wet right now, resulting in no
on-site dust. AD 02/14/2013: Sent an e-mail to Mr. Sosik with a request for remediation status
update. later in the day received the following e-mail from Kevin Brussee: Ainura, I had previously
sent you copies of all of the Daily Status Reports for 447 Union. No work has been performed at the
Site since those reports. Over the last few weeks, no excavation work has been performed at the
Site. Work has been limited to installation of a few steel piles and follow up load tests on the
piles. Excavation is expected to begin again possibly next week or the following week. I'll be sure
to CC you on any future daily status reports. Kevin Brussee Project Manager AD 04/18/2013: Received

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

the following e-mail from : Attached is the daily status report for 447 Union Avenue for Wednesday, 4/17/2013. Soil was excavated from the west side of the site down to approximately 16 feet. Eight (8) truck loads of non hazardous soil were sent to Clean Earth of Carteret. No additional soil excavation is planned until early next week and planned activities include installation of footings on the west and north sides of the site. Thanks, Chawinie Miller DL the daily report to the folder. AD 05/16/2013: Received the following e-mail from EBC: Attached is the daily status report for 447 Union Avenue for Wednesday, 5/16/2013. Four (4) truck loads of petroleum contaminated soil were sent to Clean Earth of Carteret in NJ. Additional soil transport planned for 5/17. Thanks, Chawinie Miller Project Manager / Industrial Hygienist EBC DL the report to the folder. AD 10/07/2013: Sent an e-mail to Mr. Sosik with a request for site status update info. Later in the day received the following response from Mr. Sosik: Ainura, 447 Union was completed and the building is under construction. We will send a completion report shortly. 150-17 Cross Island: 1st injection performed and we are planning a second application. Charles B. Sosik, P.G. Principal EB C RAR is due. AD 11/12/2013: Did not received the report. Called and spoke with C. Sosik. Requested to submit the summary report ASAP. The report submission is due 12/01/2013. AD 12/13/2013: Called and spoke with C. Sosik of EBC. He told me that they are waiting for the cement capping around the building to be finished, to include info on in in the report, as per OER's request. The report will be finished and submitted around end of December 2013. AD 02/11/2014: Called and left a message to C. Sosik regarding report submission. AD 03/04/2014: Called and spoke with C. Sosik. Required to submit the remediation summary report ASAP. Later in the day received a link to DL the report. Will review. AD 03/06/2014: The file submitted by EBC is more than 100 Mb. The size of the report should be changed and the report should be re-submitted to DEC. AD 03/26/2014: Reviewed the remedial action report. It states that dispensers, two 3,000 gallon underground gasoline tanks, one 3,000 gallon underground diesel tank and associated piping were removed off-site from April 11, 2012, to April 17, 2012. The product/gasoline was pumped out by the service station owner prior to the UST removal, leaving only tank sludge within the tanks. The tank sludge within the three tanks was thoroughly removed using a wiper blade and containerized in 55-gallon USDOT drums and transported by Aarco Environmental to CleanWater located at 1329 Richmond Terrace, Staten Island, NY. The steel tanks were then transported to a local metal recycling facility for

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

proper disposal. On April 18, 2013, EBC inspected the soil immediately below the former location of the tanks for evidence of contamination. No olfactory of PID evidence of contamination was observed. No USTs excavation endpoint samples were collected following removal of the three underground storage tanks since the area below and around the tanks was planned to be excavated for construction of the new building's cellar. Remedial excavation: From December 19, 2012, to May 29, 2013, contaminated soil was excavated and live loaded into trucks for transport to Clean Earth of Carteret. The total number of tons of non-hazardous soil excavated and transported to Clean Earth of Carteret was 2,819.56. Construction of the hotel building's cellar level required excavation to a depth of approximately 12 feet below grade for the entire footprint of the building. Soil sampling: In accordance with the RAP, EBC collected 8 endpoint soil samples from across the Site from the final excavation needed for the new building's basement. Endpoint soil samples were collected at the approximate rate of one endpoint sample per 900 ft2 of excavation base as excavation within each section was completed. Soil data: Gasoline related VOCs were detected above Unrestricted Use SCOs in endpoint soil samples EP3 through EP8. The highest concentrations were reported in EP3, EP5 and EP8. Only methyl ethyl ketone (1,200 ppb) and o-xylene (440 ppb) were detected above Unrestricted Use SCOs in EP4, m&pxylenes(330 ppb) in EP6, and 1,2,4-trimethylbenzene (3,600 ppb), acetone (150 ppb), and m&pxylenes(260 ppb) in EP7. Based on the elevated results reported in soil samples EP3, EP5 and EP8, additional excavation of approximately 1 foot was conducted within the collection area of each of the three samples. Following the additional excavation, EBC collected endpoint samples EP3A, EP5A and EP8A. The laboratory results of the follow-up endpoint soil samples showed significant decreases in gasoline related VOCs in the area of endpoint soil sample EP5/EP5A. Significant reductions were not observed in the area of endpoint soil samples EP3/EP3A and EP8/EP8A. GW sampling: On June 28, 2013, EBC collected one groundwater grab sample from groundwater that had accumulated within the open excavation pit. Gasoline related VOCs were detected within the groundwater sample at concentrations above GQS, including 1,2,4-trimethylbenzene (34 ppb), 1,3,5-trimethylbenzene (8.5 ppb), benzene (16 ppb), ethylbenzene (43 ppb), isopropylbenzene (13 ppb), m&p-xylenes (49 ppb), naphthalene (25 ppb), npropylbenzene (32 ppb), o-xylene (16 ppb), and toluene (15 ppb). However, these concentrations are lower than the VOC concentrations originally

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

reported during the 2009 Remedial Investigation, which indicates the contaminated soil removed as
part of redevelopment was effective in addressing on-site petroleum contamination. Chemical
oxidation: Prior to pouring the concrete cellar slab, EBC applied sodium persulfate and FeEDTA
powder directly into the open excavation to reduce VOC concentrations in groundwater and to treat
any residual VOCs in soil below the building slab. The chemical oxidant was added at a ratio of 9
lbs of FeEDTA powder to each 55 lb bag of sodium persulfate for a total of 550 lbs of sodium
persulfate. The activated sodium persulfate powder was thoroughly mixed and worked into the
subsurface soil and groundwater utilizing an excavator bucket. Waterproofing Membrane: Since the
building's cellar level was installed below the static groundwater level, a waterproofing system
was required beneath the cellar slab and behind the foundation walls. The waterproofing membrane
was installed by Sunny Builders Corp. An EBC field inspector was on-Site during various stages of
the installation of the waterproofing membrane beneath the cellar slab and behind the foundation
walls. The water proofing membrane installed behind the foundation walls consisted of the Bituthene
3000 self-adhesive polyethylene waterproof membrane manufactured by Grace Construction Products.
The waterproofing membrane installed below the concrete slab consisted of Preprufe 300R. Site
Capping: The entire Site has been capped with concrete. This includes an 8 thick concrete cellar
slab beneath the entire building, and a 4 inch thick concrete slab in grade-level open spaces. A
work plan for monitoring wells installation is due. AD 04/04/2014: called and spoke with C. Sosik
of EBC. Required to re-submit the report. AD 04/09/2014: Sent an e-mail to Mr. Sosik with a
remainder to submit the RIR and with a request to submit in a timely manner a work plan for
installation of monitoring wells for post-remediation GW monitoring. AD 04/17/2014: Received the
following e-mail from K. Brussee: Ainura, As you requested, the following is attached. 1) Figure 4
2) GW Monitoring Plan Kevin Brussee Senior Project Manager EB C Environmental Business Consultants
Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review.
AD 04/20/2014: Reviewed the GW monitoring work plan. It proposes installation of four 1 GW
monitoring wells and quarterly GW sampling. Previously, DEC approved RAP proposed 6 monitoring
wells for GW sampling program. It looks like number of the sampling wells was reduced due to the
changes to the footprint of the constructed building. The diamert of the proposed wells is
questionable. Will discuss work plan with J. Kolleeny. AD 04/22/2014:

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

Discussed the work plan with
J. Kolleeny. Called and spoke with C. Sosik regarding diameter of the proposed wells. According to
Mr. Sosik installation of 1 size wells is common for their company and that they do not install 2
wells. AD 04/23/2014: Approved the work plan. Sent the letter. AD 09/23/2014: Sent an e-mail to
Kevin Brussee with a request to submit the summary report. AD 10/20/2014: Called and spoke with K.
Brussee regarding report submission. He said that they were not able to install wells due to the
scaffolding at the site till the beginning of October. The wells were installed approximately two
weeks ago and the GW samples are in the lab. Report will be submitted in a few weeks. Requested to
send me a summary e-mail. AD 01/14/2015: Called and spoke with Kevin of EBC. He said that EBC was
able to install two out of four proposed wells. One well was dry and another well was not installed
due to the obsticles. EBC sampled GW from two installed wells and in a process of a report
preparation. Requested to submit the report. Decision regarding further actions at the site will be
based on the GW results. AD 06/30/2015: Called and spoke with Kevin Brussee regarding report
submission. He said that it was postponed due to some issues with his client. The newly installed
wells were sampled. He will submit the report in two weeks. AD 07/18/2015: Received the following
e-mail from K. Brussee: Ainura, Sorry for the lengthy delay. As previously discussed, I ve attached
a brief groundwater sampling report requesting closure of NYSDEC Spill No. 0809794. Please review
and let me know if you have any questions. Thanks, Kevin Brussee Senior Project Manager EB C
Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749
Kbrussee@ebcincny.com Will review. AD 08/07/2015: Reviewed the groundwater well installation and
sampling report. The report states that groundwater quality monitoring was proposed from four
monitoring wells in the Post- Remedial Groundwater Monitoring Plan (EBC, April 2014). However, one
monitoring well proposed on the east side of the new hotel building could not be installed due to
the subway and utility connections. The other three monitoring wells (MW-6, MW-7, and MW-8) were
installed on the west side of the building within the Keap Street sidewalk on Thursday, October 9,
2014. All three monitoring wells were installed at a depth of 25 feet and were constructed of 1
inch diameter PVC consisting of 15 feet of screen and 10 feet of riser. On October 17, 2014
groundwater samples was collected from monitoring MW-7 and MW-8 utilizing disposable polyethylene
tubing and a peristaltic pump with disposable peristaltic pump tubing. A groundwater sample could

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

not be collected from MW-6 because this monitoring well was dry. Lab data: The laboratory results were compared to New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). No VOCs were detected in MW-7, which is located off the northwest corner of the building. Low concentrations of VOCs were detected in MW-8, which is located immediately west of the former tank pad. VOCs detected include 1,2,4-trimethylbenzene (1.5 ppb), 1,3,5-trimethylbenzene (0.45 ppb), benzene (1.1 ppb), ethylbenzene (1.4 ppb), m&p-xylenes (1.8 ppb), MTBE (0.77 ppb), naphthalene (0.48 ppb), and n-propylbenzene (0.42 ppb). Conclusions and Recommendations: As previously stated in the Closure Report (EBC, January 2014), excavation of petroleum contaminated soil from below the groundwater interface was conducted in the former tank/spill area. During excavation, a groundwater sample was collected from the groundwater within the open excavation. Relatively low concentrations of gasoline related VOCs were detected in the groundwater grab sample. To treat residual soil/groundwater, a chemical oxidant was applied into the open excavation and exposed groundwater prior to backfilling. The two monitoring wells (MW-7 and MW-8) installed down gradient of the source were sampled in October of 2014. Little or no VOCs were detected in either groundwater sample. Therefore, based on the remedial activities performed at the site and post-remediation groundwater sampling results, EBC recommends closure of NYSDEC Spill No. 08-11706. Will discuss the closure request with J. Kolleeny of DEC. AD 08/18/2015: Discussed the closure request with J. Kolleeny of DEC. Based on the remedial activities performed at the site such as: - Removal of USTs and associated piping; - Excavation and removal of approximately 2,819.56 tons of soil; - Application of chemical oxidant into the open excavation pit; - Cleanfill with crushed stone, imported to the site from a NYSDEC Active Registered Construction and Demolition Processing Facilities for use as backfill below the slab. - Installation of a water proofing membrane consisting of a Bituthene 3000 and Preprufe 300R - Capping the entire site with a concrete slab, and taking into consideration the latest post-remediation groundwater sampling results, which indicate very low or non-detect TVOC concentrations, DEC decided to approve the spill closure request for this site. Case closed. Letter was issued to Verru Dhillon of Union Hotel Park, LLC. AD

Remarks: CALLER STATES THAT THERE IS LEAKING FUEL TANKS THAT ARE LEAKING TO THE SUBWAY LINE. SUBWAY HAS NOT BEEN SHUT DOWN AT THIS TIME. FDNY IS ON SCENE.

DEC Memo:	12/02/08-Zhune visited the site. The Metropolitan Avenue Subway Station has a police precinct. I spoke to Hannay from Transit Brooklyn Task Force he said early in the morning there was a very strong gasoline smell. We noticed gasoline smell for almost a year when the gas station fill up the tanks with gasoline but today it has been the worst. Passengers were complaining. they called 911. By the time that I got there the smell was gone. On 433 Union Ave,

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

Brooklyn NY there is a Getty
gasoline station. The station have 3 USTs, one regular, one diesel and one premium. USTs were
installed in 1982. One AST installed in 2004. Tanks are steel tanks. In the top sump of premium a
leak of apporximately 25 gallons of gasoline was found. In the top sump of diesel there are diesel
and in the top sump of regular there are a mixture of gasoline and water. The sensors in the sumps
were not place touching the bottom of the sump. The fuel alarm did not went off becouse the sensors
were placed incorrectly. The last time the tanks were tested was on 03/11/08 they passed the test.
the lines are doubled walled lines. Dispenser 1-2 probably are leaking. The gravel in the sumps are
wet and there is petroleum smell. Benjamin Leonen (718)999-2460 from FFD (Bulk Fuel Safety) shut
the station down. DEC Requires 1) Tanks tightness test and lines test 2) Copies of 10 Days
Reconcilation Report 3) Copies of Corrosion Protection test and stage I and II test. 12/04/09-
Zhune. Received the Tank and line test results performed by Certified Tank CTT Testing. The results
showed that the three tanks (Diesel, Premium and Regular) and the three lines passed the test.
01/26/09-Zhune. Received the stage I and II test results and passed test. 02/10/09- Zhune called
Frank Cifuentes (718)999-2516 (DCI) Deputy Chief Inspector of the Bulk Fuel Safety. He said the
station was closed on 12/02/09 by Benjamin Leonen. On 12/08/09 Frank witnessed the precision test
tanks and passed. The station open to service on 12/10/09.
02/10/09-Vought-Called and spoke to NYCT
Varley as per DEC Austin and no further monitoring of station being performed and no complaints
received to date since original spill. Phase II received by DEC. DEC Zhune will review and discuss
with DEC Austin for transfer to Petroleum Remediation Unit due to presence of free product and
necessity of long term remediation. PHASE II Report. A Total of 4 soil boring (B1-B4) were
performed during the Subsurface investigation. The location of Groundwater water correspond to the
same location of the soil boring. samples were collected by installing temporary wells. SOIL. No
VOCs were detected in any of the four shallow soil samples B1(0-2ft), B2(0-2ft), B3(0-2fl)and
B4(0-2ft)at concentrations above TAGM guidance levels. Elevated concentrations of Ethyl-benzene,
Toluene, o-Xylene, p&m-xylene, 1,2,4 trimethyl-benzene in the deep soil samples Bi(8-10ft),
B2(10-12ft)and B3(10-12ft). No VOCs were detected at B4(10-12ft) at concentrations aboveTAGM
guidance levels. SVOCs above the guidance levels were detected in B1(0-2ft), B2(0-2ft),
B3(8-10ft)and B4(0-2ft). The elevated compounds include Benzo(a)anthracene, Benzo(b)fluoranthene,

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

Benzo(a)pyrene, Benzo(K)fluorenthene, Chrysene and Dibenzo(a,h)anthracene. Metals. Zinc, cooper and cadmiun were detected at elevated concentrations. Zinc in each soil sqmples excep B2(10-12ft) and B4(10-12ft). Cooper in B2(0-2ft) andB3(8-10ft) and Calcium in B2(10-12ft). GROUNDWATER. Benzene, Toluene, Ethyl-benzene and p&M Xylene were detected at concentrations above NYSDEC GQSs in B1 and B4. Free floating product was recovered from B2 and B3. No SVOCs were detewcted at concentrations above NYSDEC CQSs. Only B1-B4 was analyzed for SVOCs PCB-1254 was detected at a concentration of 12.2 ug/L in B2. Metals. Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Magnesium, Nickel, Sodium, and Selenium were detected above their respective NYSDEC GQSs. 02/20/09- Zhune. As per Randy Austin this case has been tranferred to Mark TIbbe for long term remediation. 02/24/2009: This spill case was transferred to A. Doronova. - AD 04/09/2009: Received a pdf copies of Orders on Consent: one signed by responsible party and second signed by consultant, who was fined due to falure to report the spill. DL copies to eDocs. AD 04/23/2009: Received an email from V. Brevdo. He forwarded me a copy of the investigation work plan, which was requested in the CAP of the signed Order on Consent. Reviewed the work plan. AD 04/27/2009: Called and spoke with Charles Sosik of EBC (consultant). Requested to re-submit the work plan. Revised WP should state all spill cases associated with this property (spill 0809794 is missing) and references to the consent order and the corrective action plan. They did not performed any weekly gauging and recovery visits required under Paragraph 1 of the CAP because there are not any permanent monitoring wells at the site. Discussed locations of the proposed permanent GW monitoring wells. Asked why EBC did not propose to install permanent wells in the vicinity of soil borings B-2 and B-3 (product sheen was detected in these temporary wells in December 2008). According to Mr. Sosic, the redevelopmet plan includes excavation to 12’ bgs for a hotel construction with a full basement, so they proposed wells only along the site borders to monitor off-site migration of the contamination. The revised WP will be submitted till the end of this week. AD 04/30/2009: Called and spoke with Mr. Sosic regarding submission of the revised WP. According to the information obtained from him today, the start date of a re-development project is unknown. Told him that due to the postponement of the project, two additional permanent monitoring wells should be installed in the vicinity of the temporary wells B-2 and B-3, or two of the proposed wells should be relocated. Mr. Sosic requested to put all this requirements in writing. Prepared an e-mail for Mr. Sosic. Discussed

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

the site with J. Kolleeny.
Later received an e-mail from Mr. Sosic saying: Ainyra, Attached is the revised RIWP reflecting the changes you requested earlier in the week (add subway spill number and consent order info in introduction section) as well as those requested earlier today (move the locations of 2 MWs). Hard copy is going out today as well. I do not have the PBS inspection report, but as I mentioned you should be able to obtain that from Veronica. Call with questions. Charles B. Sosik, P.G. Principal
EBC Will review. AD 05/04/2009: Reveiwed the revised work plan. It proposes additional subsurface investigation at the site, including advancing and sampling of seven soil borings and eight temporary groundwater sampling points, and installation of six permanent groundwater monitoring wells. The diameter of the proposed permanent wells planned to be - 1 inch. Groundwater samples will be analyzed for VOCs. The work plan's Figure 4 (proposed monitoring well locations) indicates only 5 wells of proposed 6. Figure 3 has two different versions in the same plan and Figure 2 is abcent. A remedial investigation report summarizing all findings with conclusions and recommendations will be prepared and submitted to DEC. Called and spoke with Mr. Sosik of EBC.
requested to correct figures and resubmit the work plan. Later received an e-mail from him saying:
Revised as discussed. Corrected spill number on Page 1 and correct Figure 3 and 4 shown. In reviewing again I eliminated the monitoring well within the service bay due to the potential for spills. A well was added near the sign as discussed and the text changed from 6 wells to 5. If OK we will send out new hard copy. Charles B. Sosik, P.G. Principal EBC Figures were corrected. But now EBC proposes 5 monitoring wells instead of 6 previously proposed due to spill potential for wells in the vivinity of the service bay. AD 05/05/2009: Discussed the work plan with J. Kolleeny of DEC. Issued and sent an approval letter with some modifications to Mr. Mohan Dhillon (site owner) and copies to J. Kolleeny-DEC and C. Sosic (EBC), DL e-copy to eDocs. Investigation report is due August 6, 2009. AD 05/26/2009: Received an e-mail from C. Sosik of EBC saying: Ainura, We are attempting to schedule the drilling for tomorrow. Let me know if you have any problems with this. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net Spoke with him. Scheduled the site visit. AD 05/27/2009: Received a phone call from Mr. Sosik. He said that fieldwork was canceled due some scheduling issues, and promised to inform me on a new date for investigation

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

work. AD 06/11/2009: Did not receive any notifications from Mr. Sosik. Sent him an e-mail saying:
Hi Charles, Do you already have a new schedule for drilling at the site? I did not hear from you
since you canceled May 27th field work. Please notify me in advance. Thank you. Ainura Doronova AD
06/12/2009: Received an e-mail from C. Sosik of EBC: We expect to reschedule for late next week.
I'll let you know Monday. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants
Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 AD 06/17/2009: Spoke with C. Sosik regarding
fieldwork schedule. He told me that it scheduled for week of June 28. AD 07/2009: The site visit
was canceled again. AD 07/14/2009: Received an e-mail from C. Sosik of EBC: Ainura, The attorney is
asking for an extension on the field work till September due to issues with the insurance company.
Please let me know if this is acceptable. Thank you. Charles B. Sosik, P.G. AD 07/15/2009: Spoke
with Mr. Sosik, told him that deadline extension can be approved by the Department in accordance
with the CAP of the Concent Order. Requested to submit an official letter request for extension. AD
07/17/2009: Received the letter. DL to eDocs. Will review. AD 07/21/2009: Reviewed the letter. EBC
asks for 45-day deadline extention. Discussed it with J. Kolleeny of DEC. AD 07/22/2009: Sent a
letter with 30-day deadline extension approval. CC to J. Kolleeny of DER and J. Urda of DEC. DL to
eDocs. The Investigation report submission is due September 4, 2009. AD 08/19/2009: Received an
e-mail C. Sosik of EBC which stated that EBC will start site investigation tomorrow. Will visit the
site. AD 08/20/2009: Visited the site. Met at the site with C. Sosik. EBC was subcontracted to
perform soil boring and wells installation. The highest PID reading at MW-1 boring location was
1300 ppm (13'), at SB-6 PID was 15 ppm (8'-12') and at SB-5 it was 650 ppm (12'-13'). Observed soil
and groundwater sampling. There was some gasoline odor noted during installation of MW-1 and SB-5.
The investigation summary report will be submitted. Later in the day received an e-mail from C.
Sosik saying: Ainura, All sampling completed. Product was encountered in MW-3. Not measurable but a
heavy black film on water in the bailer. Not enough for a sample, but will try again next week
after it settles. Could not get the boring at b7 due to rejection and proximity to lines and tanks.
Pea gravel encountered. I'm in the office tomorrow. Call to discuss. AD 08/26/2009: Called and
spoke with C. Sosik. He said that they will return to the site later this week to survey the wells
and to collect free product sample if feasible. A soil and GW contamination was also encountered in
the vicinity of well MW-1. AD 09/04/2009: Received an e-mail from Mr.

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

SosiK saying: Ainura, The RI Report is attached. A hard copy will follow early next week. Let me know if you have any questions or if additional hard copies are needed. Thanks and enjoy the weekend. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net DL the report to eDocs. AD 09/14/2009: Received a hard copy of the report. Will review. AD 10/20/2009: Reviewed the report. AD 11/02/2009: Called and spoke with C. Sosik of EBC. Asked him to check all wells for free product and to sample permanent monitoring wells. RAP should be submitted with current GW data no later than December 1, 2009. AD 12/08/2009: Called and spoke with Mr. Sosik of EBC regarding RAP submission. He is out of town. He will be back tommorow. AD 12/19/2009: Received an e-mail from Mr. Sosik saying: Ainura, See attached Remedial Plan for the project. We need to coordinate with the NYC Office of Environmental remediation in order to obtain building permits as the site also has an E-designation. I will be sending hardcopies of the RAP and attachments to you and NYCOER on Monday. Call me with questions or to discuss. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 DL to eDosc. Will review. AD 01/25/2010: Reviewed the RAP. It states that the site will be re-developed through the construction of a new 6-story, 53-room hotel. The hotel will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth of 12' bsg. The RAP proposes removal of 3 USTs, excavation of contaminated soil, and application of chemical oxidant into the excavation pit. As a preventine measure, a vapor barrier will be installed beneath the foundation slab of the cellar and sub-cellar areas of the building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 5 on-site wells. AD 02/02/2010: Called and spoke with C. Sosik of EBC regarding the RAP. Asked if one additional well can be installed at the site. Also clarified statement regarding installation of new tanks at the property. A revised RAP will be submitted shortly. AD 02/08/2010: Received an e-mail from Mr. Sosik: Ainura, see revised RAP, attached. We added 1 monitoring well, and changed section 3.1.4 as discussed. We also added section 2.5 to discuss dewatering options and modified section 3.1.5 to discuss a waterproofing membrane for the cellar level and a vapor barrier for the sub-cellar level. Building permits, demolition and construction, must be obtained before work can start and MTA must also approve the plans. To obtain building permits we will need a NTP from

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

NYCOER. We have submitted the RAP to OER and their issuance of an NTP is contingent upon written
approval of the RAP from DEC. Call to discuss or if you have any other questions. Thanks. Charles
B. Sosik, P.G. Dl the revised RAP to eDocs. Will review. AD
02/11/2010: Reviewed the revised plan.
Discussed it with J. Kolleeny. Will send an approval letter with a comment. AD 02/17/2010: Issued
and sent a RAP approval letter with a comment that: if
post-remediation groundwater monitoring
results do not indicate significant improvement of groundwater quality at the site, then additional
remedial actions may be required by DEC. DL to eDocs. AD 04/2010: Spoke with Mr. Sosik regarding
the RAP implementations. He said that they are waiting for OER. Asked him to send me an e-mail:
Ainura, the NYCOER project contact is listed below. We sent him your approval letter on February
17. We cannot obtain building permits to remove the tanks without a Notice to Proceed from OER. I
do not know what the hold up is. Andrew M. D'Amico Jr. Project Manager Office of Environmental
Remediation Mayor's Office of Operations 253 Broadway, 14th Floor New York, NY 10007 Tel: (212)
341-2135 Fax: (212) 788-2941 Charles B. Sosik, P.G. Principal EB C Environmental Business
Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net AD
07/27/2010: Called and spoke with C. Sosik of EBC. He told me that they were required to make some
changes in the RAP by OER. A revised RAP will be submitted to us as well. Asked him to send me a
summary e-mail regarding this matter. AD 10/06/2010: Received an e-mail from Mr. Sosik: Ainura, see
revised redline version which incorporates changes requested by NYCOER. Let me know if DEC has any
problems with the changes. We intend to re-submit the hard copy with the rest of the OER required
submittals (full size architectural plans, letter from waterproofing manufacturer, letter from
project architect etc.) by Friday. We will send a hardcopy of the revised plan to you as well.
Thanks. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000
Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net 10/12/2010: Reviewed the revised
version. And as it states in the e-mail, no particular changes were made to the RAP itself, which
was approved by DEC in February 2010. It states that the site will be re-developed through the
construction of a new 5-story, 52-room hotel (instead of 6-story hotel in previous RAP). The hotel
will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth
of 13' bsg (instead of 12'). The RAP proposes removal of 3 USTs, excavation of contaminated soil,
and application of chemical oxidant into the excavation pit. As a

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

preventine measure, a waterproof
membrane will be installed beneath the foundation slab of the cellar and sub-cellar areas of the
building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 6 wells. The
proposed sampling interval of 30 feet for end-point soil samples is questionable. AD 10/14/2010:
Called and spoke with Mr. Sosik regarding the soil sampling interval concerns and some typo on page
10 in the work plan. It was agreed that number and locations for soil samples will be decided after
excavation will be completed, based on the site conditions (shorings, shape of final excavation, GW
in the pit and such). A revised pdf copy of the RAP with corrected page 10 was submitted by e-mail.
Discussed the RAP with J. Kolleeny. Later issued an approval letter. DL pdf copy of the letter to
eDocs. AD 08/23/2011: Called and spoke with C. Sosik regarding site status update info. He will
send an e-mail with this info shortly. AD 08/25/2011: Received an e-mail from C. Sosik saying:
Ainura, As an update on progress at the site: I met with the developers about 2 weeks ago and they
indicated that the MTA had finally approved the plans. I believe the project can now go back to DOB
and they should be able to obtain approved plans. We will be meeting with the developer, architect
and general contractor within the next couple of weeks to plan the work sequence and logistics. I
ll let you know when the have DOB approvals and when we have a firm schedule. Charles B. Sosik,
P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870
Cell: 631.357.4927 csosik@ebcincny.com AD 12/22/2011: Sent an e-mail to C. Sosik requesting site
status update. AD 12/29/2011: Did not receive any response. AD 01/17/2012: Sent an e-mail to Mr.
Sosik requesting site status update. AD 01/18/2012: Received an e-mail from Mr. Sosik stating that
they just cut utility service to the building and expect to begin demolition next week. Tanks
removal will follow. AD 03/12/2012: Sent an e-mail to Mr. Sosik with a request for site status
update. AD Later in the day received the following response: Ainura, I have been notified that the
UST removal is starting on this project. We will have someone on-site today to observe. The plan is
to remove the tanks, backfill and demo the building and infrastructure first,.close out the demo
permit and then install shoring and begin excavation of impacted soil as part of the building
foundation. We will send you an udate on the short term schedule after we have a chance to confer
with the tank removal contractor. Charles B. Sosik, P.G. Principal EB C Environmental Business
Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870 Cell: 631.357.4927 csosik@ebcincny.com

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

04/17/2012: Called and spoke with Mr. Sosik. He said that the tanks were removed, and they are
planning to remove a concrete pad underneath the former tanks to collect soil samples. Soil samples
will be also collected after removal of dispensers and fill lines. Mr. Sosik will keep me informed.
AD 06/12/2012: Sent an e-mail to Mr. Sosic with a request for site status update. Later received
the following response from Mr. Sosic: Ainura, They expect to start excavation this week. I will
get an update from the contractor and get back to you. Charles B. Sosik, P.G. AD 11/14/2012: Called
and left a message to Mr. Sosik. AD 01/14/2013: Called and spoke with C. Sosik regarding site
status update reports. He informed that excavation started at the site about a month ago. The site
has E designation, so they send also reports to MOER. The project manager in OER for this site is
Breanna Gribble. Mr. Sosik will sent update reports to DEC. Requested him to inform me about soil
sampling date. Later in the day received a daily reports from Kevin Brusee of EBC. The reports
states that on December 19, 2012 EBC began excavation of the top 5 feet of the soil from the
northern tip of the lot. On December 21, 2012 limited soil disturbing activities were conducted to
grade the site to allow access of the pile auger rig to the bottom of the 5ft deep excavation. On
December 27, 2012 a total of 5 truck loads of soil were excavated and transported to CEC. For the
next 2 weeks, EBC planned that the auger pile machine will be installing piles within the open
excavation. No soil disturbing activities will be performed while the piles are being installed.
According to EBC, significantly contaminated petroleum contaminated soil has not yet been
encountered, so odor has not been an issue and the soil is very wet right now, resulting in no
on-site dust. AD 02/14/2013: Sent an e-mail to Mr. Sosik with a request for remediation status
update. later in the day received the following e-mail from Kevin Brussee: Ainura, I had previously
sent you copies of all of the Daily Status Reports for 447 Union. No work has been performed at the
Site since those reports. Over the last few weeks, no excavation work has been performed at the
Site. Work has been limited to installation of a few steel piles and follow up load tests on the
piles. Excavation is expected to begin again possibly next week or the following week. I'll be sure
to CC you on any future daily status reports. Kevin Brussee Project Manager AD 04/18/2013: Received
the following e-mail from : Attached is the daily status report for 447 Union Avenue for Wednesday,
4/17/2013. Soil was excavated from the west side of the site down to approximately 16 feet. Eight
(8) truck loads of non hazardous soil were sent to Clean Earth of

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

Carteret. No additional soil
excavation is planned until early next week and planned activities include installation of footings
on the west and north sides of the site. Thanks, Chawinie Miller DL the daily report to the folder.
AD 05/16/2013: Received the following e-mail from EBC: Attached is the daily status report for 447
Union Avenue for Wednesday, 5/16/2013. Four (4) truck loads of petroleum contaminated soil were
sent to Clean Earth of Carteret in NJ. Additional soil transport planned for 5/17. Thanks, Chawinie
Miller Project Manager / Industrial Hygienist EBC DL the report to the folder. AD 10/07/2013: Sent
an e-mail to Mr. Sosik with a request for site status update info. Later in the day received the
following response from Mr. Sosik: Ainura, 447 Union was completed and the building is under
construction. We will send a completion report shortly. 150-17 Cross Island: 1st injection
performed and we are planning a second application. Charles B. Sosik, P.G. Principal EB C RAR is
due. AD 11/12/2013: Did not received the report. Called and spoke with C. Sosik. Requested to
submit the summary report ASAP. The report submission is due 12/01/2013. AD 12/13/2013: Called and
spoke with C. Sosik of EBC. He told me that they are waiting for the cement capping around the
building to be finished, to include info on in in the report, as per OER's request. The report will
be finished and submitted around end of December 2013. AD 02/11/2014: Called and left a message to
C. Sosik regarding report submission. AD 03/04/2014: Called and spoke with C. Sosik. Required to
submit the remediation summary report ASAP. Later in the day received a link to DL the report. Will
review. AD 03/06/2014: The file submitted by EBC is more than 100 Mb. The size of the report should
be changed and the report should be re-submitted to DEC. AD 03/26/2014: Reviewed the remedial
action report. It states that dispensers, two 3,000 gallon underground gasoline tanks, one 3,000
gallon underground diesel tank and associated piping were removed off-site from April 11, 2012, to
April 17, 2012. The product/gasoline was pumped out by the service station owner prior to the UST
removal, leaving only tank sludge within the tanks. The tank sludge within the three tanks was
thoroughly removed using a wiper blade and containerized in 55-gallon USDOT drums and transported
by Aarco Environmental to CleanWater located at 1329 Richmond Terrace, Staten Island, NY. The steel
tanks were then transported to a local metal recycling facility for proper disposal. On April 18,
2013, EBC inspected the soil immediately below the former location of the tanks for evidence of
contamination. No olfactory of PID evidence of contamination was observed. No USTs excavation

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

endpoint samples were collected following removal of the three underground storage tanks since the area below and around the tanks was planned to be excavated for construction of the new building's cellar. Remedial excavation: From December 19, 2012, to May 29, 2013, contaminated soil was excavated and live loaded into trucks for transport to Clean Earth of Carteret. The total number of tons of non-hazardous soil excavated and transported to Clean Earth of Carteret was 2,819.56. Construction of the hotel building's cellar level required excavation to a depth of approximately 12 feet below grade for the entire footprint of the building. Soil sampling: In accordance with the RAP, EBC collected 8 endpoint soil samples from across the Site from the final excavation needed for the new building's basement. Endpoint soil samples were collected at the approximate rate of one endpoint sample per 900 ft2 of excavation base as excavation within each section was completed. Soil data: Gasoline related VOCs were detected above Unrestricted Use SCOs in endpoint soil samples EP3 through EP8. The highest concentrations were reported in EP3, EP5 and EP8. Only methyl ethyl ketone (1,200 ppb) and o-xylene (440 ppb) were detected above Unrestricted Use SCOs in EP4, m&pxylenes(330 ppb) in EP6, and 1,2,4-trimethylbenzene (3,600 ppb), acetone (150 ppb), and m&pxylenes(260 ppb) in EP7. Based on the elevated results reported in soil samples EP3, EP5 and EP8, additional excavation of approximately 1 foot was conducted within the collection area of each of the three samples. Following the additional excavation, EBC collected endpoint samples EP3A, EP5A and EP8A. The laboratory results of the follow-up endpoint soil samples showed significant decreases in gasoline related VOCs in the area of endpoint soil sample EP5/EP5A. Significant reductions were not observed in the area of endpoint soil samples EP3/EP3A and EP8/EP8A. GW sampling: On June 28, 2013, EBC collected one groundwater grab sample from groundwater that had accumulated within the open excavation pit. Gasoline related VOCs were detected within the groundwater sample at concentrations above GQS, including 1,2,4-trimethylbenzene (34 ppb), 1,3,5-trimethylbenzene (8.5 ppb), benzene (16 ppb), ethylbenzene (43 ppb), isopropylbenzene (13 ppb), m&p-xylenes (49 ppb), naphthalene (25 ppb), npropylbenzene (32 ppb), o-xylene (16 ppb), and toluene (15 ppb). However, these concentrations are lower than the VOC concentrations originally reported during the 2009 Remedial Investigation, which indicates the contaminated soil removed as part of redevelopment was effective in addressing on-site petroleum contamination. Chemical oxidation: Prior to pouring the concrete cellar slab, EBC applied

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

sodium persulfate and FeEDTA
powder directly into the open excavation to reduce VOC concentrations in groundwater and to treat
any residual VOCs in soil below the building slab. The chemical oxidant was added at a ratio of 9
lbs of FeEDTA powder to each 55 lb bag of sodium persulfate for a total of 550 lbs of sodium
persulfate. The activated sodium persulfate powder was thoroughly mixed and worked into the
subsurface soil and groundwater utilizing an excavator bucket. Waterproofing Membrane: Since the
building's cellar level was installed below the static groundwater level, a waterproofing system
was required beneath the cellar slab and behind the foundation walls. The waterproofing membrane
was installed by Sunny Builders Corp. An EBC field inspector was on-Site during various stages of
the installation of the waterproofing membrane beneath the cellar slab and behind the foundation
walls. The water proofing membrane installed behind the foundation walls consisted of the Bituthene
3000 self-adhesive polyethylene waterproof membrane manufactured by Grace Construction Products.
The waterproofing membrane installed below the concrete slab consisted of Preprufe 300R. Site
Capping: The entire Site has been capped with concrete. This includes an 8 thick concrete cellar
slab beneath the entire building, and a 4 inch thick concrete slab in grade-level open spaces. A
work plan for monitoring wells installation is due. AD 04/04/2014: called and spoke with C. Sosik
of EBC. Required to re-submit the report. AD 04/09/2014: Sent an e-mail to Mr. Sosik with a
remainder to submit the RIR and with a request to submit in a timely manner a work plan for
installation of monitoring wells for post-remediation GW monitoring. AD 04/17/2014: Received the
following e-mail from K. Brussee: Ainura, As you requested, the following is attached. 1) Figure 4
2) GW Monitoring Plan Kevin Brussee Senior Project Manager EB C Environmental Business Consultants
Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review.
AD 04/20/2014: Reviewed the GW monitoring work plan. It proposes installation of four 1 GW
monitoring wells and quarterly GW sampling. Previously, DEC approved RAP proposed 6 monitoring
wells for GW sampling program. It looks like number of the sampling wells was reduced due to the
changes to the footprint of the constructed building. The diamert of the proposed wells is
questionable. Will discuss work plan with J. Kolleeny. AD 04/22/2014: Discussed the work plan with
J. Kolleeny. Called and spoke with C. Sosik regarding diameter of the proposed wells. According to
Mr. Sosik installation of 1 size wells is common for their company and that they do not install 2

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

wells. AD 04/23/2014: Approved the work plan. Sent the letter. AD 09/23/2014: Sent an e-mail to Kevin Brussee with a request to submit the summary report. AD 10/20/2014: Called and spoke with K. Brussee regarding report submission. He said that they were not able to install wells due to the scaffolding at the site till the beginning of October. The wells were installed approximately two weeks ago and the GW samples are in the lab. Report will be submitted in a few weeks. Requested to send me a summary e-mail. AD 01/14/2015: Called and spoke with Kevin of EBC. He said that EBC was able to install two out of four proposed wells. One well was dry and another well was not installed due to the obsticles. EBC sampled GW from two installed wells and in a process of a report preparation. Requested to submit the report. Decision regarding further actions at the site will be based on the GW results. AD 06/30/2015: Called and spoke with Kevin Brussee regarding report submission. He said that it was postponed due to some issues with his client. The newly installed wells were sampled. He will submit the report in two weeks. AD 07/18/2015: Received the following e-mail from K. Brussee: Ainura, Sorry for the lengthy delay. As previously discussed, I ve attached a brief groundwater sampling report requesting closure of NYSDEC Spill No. 0809794. Please review and let me know if you have any questions. Thanks, Kevin Brussee Senior Project Manager EB C Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review. AD 08/07/2015: Reviewed the groundwater well installation and sampling report. The report states that groundwater quality monitoring was proposed from four monitoring wells in the Post- Remedial Groundwater Monitoring Plan (EBC, April 2014). However, one monitoring well proposed on the east side of the new hotel building could not be installed due to the subway and utility connections. The other three monitoring wells (MW-6, MW-7, and MW-8) were installed on the west side of the building within the Keap Street sidewalk on Thursday, October 9, 2014. All three monitoring wells were installed at a depth of 25 feet and were constructed of 1 inch diameter PVC consisting of 15 feet of screen and 10 feet of riser. On October 17, 2014 groundwater samples was collected from monitoring MW-7 and MW-8 utilizing disposable polyethylene tubing and a peristaltic pump with disposable peristaltic pump tubing. A groundwater sample could not be collected from MW-6 because this monitoring well was dry. Lab data: The laboratory results were compared to New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). No VOCs were detected in MW-7, which is located off the northwest corner

447 UNION AVENUE - DOB JOB NO. NB - 320136349 (Continued) **S109374210**

of the building. Low
concentrations of VOCs were detected in MW-8, which is located immediately west of the former tank
pad. VOCs detected include 1,2,4-trimethylbenzene (1.5 ppb), 1,3,5-trimethylbenzene (0.45 ppb),
benzene (1.1 ppb), ethylbenzene (1.4 ppb), m&p-xylenes (1.8 ppb), MTBE (0.77 ppb), naphthalene
(0.48 ppb), and n-propylbenzene (0.42 ppb). Conclusions and Recommendations: As previously stated
in the Closure Report (EBC, January 2014), excavation of petroleum contaminated soil from below the
groundwater interface was conducted in the former tank/spill area. During excavation, a groundwater
sample was collected from the groundwater within the open excavation. Relatively low concentrations
of gasoline related VOCs were detected in the groundwater grab sample. To treat residual
soil/groundwater, a chemical oxidant was applied into the open excavation and exposed groundwater
prior to backfilling. The two monitoring wells (MW-7 and MW-8) installed down gradient of the
source were sampled in October of 2014. Little or no VOCs were detected in either groundwater
sample. Therefore, based on the remedial activities performed at the site and post-remediation
groundwater sampling results, EBC recommends closure of NYSDEC Spill No. 08-11706. Will discuss the
closure request with J. Kolleeny of DEC. AD 08/18/2015: Discussed the closure request with J.
Kolleeny of DEC. Based on the remedial activities performed at the site such as: - Removal of USTs
and associated piping; - Excavation and removal of approximately 2,819.56 tons of soil; -
Application of chemical oxidant into the open excavation pit; - Cleanfill with crushed stone,
imported to the site from a NYSDEC Active Registered Construction and Demolition Processing
Facilities for use as backfill below the slab. - Installation of a water proofing membrane
consisting of a Bituthene 3000 and Preprufe 300R - Capping the entire site with a concrete slab,
and taking into consideration the latest post-remediation groundwater sampling results, which
indicate very low or non-detect TVOC concentrations, DEC decided to approve the spill closure
request for this site. Case closed. Letter was issued to Verru Dhillon of Union Hotel Park, LLC. AD

Remarks: CALLER STATES THAT THERE IS LEAKING FUEL TANKS THAT ARE LEAKING TO THE SUBWAY LINE. SUBWAY HAS NOT BEEN SHUT DOWN AT THIS TIME. FDNY IS ON SCENE.

Record Upd:	02/25/2025
Updated By:	LAGORTON

Site Description: Location: The 1.01 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the east side of Vandervoort Avenue between Anthony and Lombardy Streets. Site Features: The site is completely covered by one (1) two-story and three (3) one-story brick buildings. The site is surrounded by other commercial and industrial properties. Sergeant William Dougherty Playground is located immediately north of the site across Anthony Street, and the eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located one block to the north. A small residential area is located one block south of the site. Current Zoning/Use(s): The site is zoned for manufacturing. The site is currently used as a granite warehouse and showroom at 95 Lombardy Street, and a paper distribution office and a kitchen cabinet warehouse/showroom at 46 Anthony Street. Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was utilized as a metal fabricator and painting facility from the 1930's to the late 2000's, and a Department database which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing). Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a

95 LOMBARDY ST./ACME ARCH. PRODS., INC. (Continued) **U003652054**

sand/silty sand unit (~100' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site.

Env Problem:	Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is trichloroethene (TCE). TCE has been found on-site in shallow groundwater at concentrations up to 66,000 ppb, and in deep groundwater at concentrations up to 70,000 parts per billion or ppb, exceeding Part 703.5 class GA standards (5 ppb). Concentrations of tetrachloroethene (up to 8,000 ppb) and 1,2-dichloroethene (3,200 ppb) have also been found above their respective Part 703.5 class GA standards (5 ppb each). - Soil TCE was detected in soil at 2.3 parts per million or ppm in one sample (exceeding the unrestricted Soil Cleanup Objective). - Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 3,100 ug/m^3. Concentrations of TCE in soil vapor have been found up to 4,500 ug/m^3, and in indoor air up to 13 ug/m^3. Significant Threat: The site poses a significant environmental threat due to ongoing releases of TCE from source areas into soil and groundwater.
Health Problem:	Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

Updated By:	LAGORTON
Site Description:	Location The 1.08-acre site is located in the Greenpoint/East Williamsburg industrial section of Brooklyn, NY. The site is located on the southwest corner of the intersection of Vandervoort Avenue and Richardson Street. Please refer to Figures 1 2. Site Features The site is completely covered by a one-story brick building. Numerous other commercial and industrial properties are located to the north, south, and west of the site. The Greenpoint Little League fields and a National Grid energy facility are east of the site across Vandervoort Avenue. A small residential area is located 1-2 blocks north of the site. An eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located 4 blocks to the north. Current Zoning and Land Use The site is zoned for (M1) manufacturing. Per NYC Planning, M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. The site is currently used for sheet metal fabrication and offices. Past Use of the Site The Department began a Site Characterization in this area in2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, Site ID No. 224121). This property was identified as a potential source of contamination based on its past use. Klink Cosmo Cleaners operated as a commercial dry cleaner from the 1950's to the mid 1990's. During that time, hazardous waste (spent halogenated solvents) was generated under EPA ID no. NYD000824334. Site Geology and Hydrogeology The site is underlain by urban fill unit (0.5-8 feet thick), a sand unit (approximately 100 feet thick) with varying textural features, and the Raritan (clay) Formation approximately 110 feet below ground surface (bgs). Groundwater is present approximately 35 feet bgs and flows north to northeast toward Newtown Creek.
Env Problem:	Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern include VOCs and metals. Nature and Extent of Contamination: Soil The VOC source area was identified in the northeast corner of the current building at depths from 1 - 35 feet below ground surface (bgs). Tetrachloroethylene (PCE) was detected in soils on-site at concentrations up to 273 parts per million or ppm, exceeding the soil cleanup objective (SCO) for commercial use (150 ppm) and for the protection of groundwater (1.3 ppm). Trichloroethene (TCE) was

FORMER KLINK COSMO CLEANERS (Continued) **S109416412**

detected in two on-site samples which slightly exceed the protection of groundwater SCO (0.47 ppm). PCE contaminated soil exceeding the protection of groundwater SCO extends off-site approximately ten feet to the north and east below the adjacent sidewalks of Vandervoort Avenue and Richardson Street. Metals contamination associated with urban fill was detected in shallow soil on-site. For example, lead was detected up to 2,680 ppm (exceeding the commercial SCO of 1,000 ppm) and arsenic up to 38.7 ppm (exceeding the commercial SCO of 16 ppm). The data does not indicate any off-site metal impacts in soil related to this site. Groundwater Based on the investigations conducted to date, the primary contaminants of concern detected in groundwater include PCE and trichloroethene (TCE). PCE has been found in shallow groundwater at concentrations up to 46,000 parts per billion or ppb (exceeding the groundwater standard of 5 ppb). PCE has also been found in deep groundwater (atop the Raritan clay) up to 4,500 ppb. TCE, a daughter product of PCE, was detected up to 2,100 ppb (exceeding the groundwater standard of 5 ppb). The groundwater plume extends north and east from the site to at least Lombardy street where it becomes co-mingled with contamination originating from other sites. Soil Vapor PCE has been found in soil vapor beneath the site at concentrations up to 2,090,000 micrograms per cubic meter, or ug/m^3. TCE has been found at concentrations up to 7,380 ug/m^3. Soil vapor intrusion sampling has been completed at twenty off-site structures. Actions described in Section 6.2 were needed to address potential exposure at twelve structures.

Health Problem:	Direct contact with contaminants in the soil is unlikely because the site is covered by a building. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sub?slab depressurization systems (SSDSs) have been installed in twelve off?site residential buildings to prevent the indoor air quality from being affected by the contamination in soil vapor in the area. SSDSs remain available to homeowners in the vicinity of the site who previously rejected the State s offer for a system. The on-site building does not have an SSDS; however, the potential for soil vapor intrusion is being addressed by the soil vapor extraction/air sparge system which is being constructed and will be operated on-site.

Program:	HW
Site Code:	617384
Classification:	N
Region:	2
Acres:	0.230
HW Code:	224323
Record Add:	03/24/2021
Record Upd:	05/27/2025
Updated By:	SXDEYETT

Site Description: Location: The property is a 0.23 acre property located on the east side of Apollo Street between Nassau Avenue and Norman Avenue. The site is surrounded by commercial and manufacturing properties. Site Features: Prior to remediation, a one-story commercial building is present on the property. The site was redeveloped with a four story commercial building. Current Zoning and Land Use: The site is zoned M1-2 (commercial and light manufacturing). Past Use of the Site: A Phase I Environmental Site Assessment identified previous on-site commercial/industrial uses including an adhesives manufacturer. Site Geology and Hydrogeology: On-site borings revealed urban fill in the

83 APOLLO STREET OER (Continued) **S117742296**

upper 5ft underlain primarily by fine sand with stratified layers of silt and gravel into groundwater at approximately 30ft below grade. Groundwater flow is the area in controlled by large-scale dewatering from the ExxonMobil Greenpoint Petroleum Remediation Project (NYSDEC Site No. S224150).

Env Problem: Nature and extent of contamination prior to remediation: Soil Volatile organic compounds (VOCs), Semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals and Per- and polyfluoroalkyl substances (PFAS) contamination were detected in soil. For example, the VOC - benzene was detected up to 29 parts per million or ppm (compared to the restricted-residential Soil Cleanup Objective [SCO] of 4.6 ppm), the SVOC - benzo(a)anthracene was detected up to 6.6 ppm (compared to the restricted-residential SCO of 1 ppm), the metal lead was detected at 2,020 ppm (compared at the restricted-residential SCO of 400 ppm, total PCBs was detected at 4.2 ppm (compared to the restricted-residential SCO of 1 ppm, and the PFAS Perfluorooctanesulfonic Acid (PFOS) was detected up to 1.19 parts per billion or ppb (compared to a unrestricted SCO of 0.88 ppb). Groundwater Elevated petroleum concentrations were encountered in groundwater. For example, benzene was detected at 2,700 parts per billion or ppb (compared to the groundwater standard of 1 ppb). Dissolved-phase petroleum contamination is related to NYSDEC Site No. S224150: ExxonMobil Greenpoint Petroleum Remediation Project. Soil Vapor Elevated chlorinated solvent concentrations were encountered in soil vapor. For example, trichloroethene (TCE) was detected up to 31,300 micrograms per cubic meter. Remediation completed under NYC OER, Project #21CVCP045K, in May 2024.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DEC Memo: 9/30/2021 - Feng - Desk Duty in office. Spoke to Craig Purta of CP Engineering. It is a construction site. They did investigation and collected soil vapor and soil samples. Some of the parameters were elevated. No BCP program was applied. They did the geotechnical soil borings today and found odorous soil. Then they stop to go further. The odorous soil location matches the location where they found contamination during the previous investigation. They believe the contamination is from off site. The site near the Green Point site. And adjacent to the site is the New York Fuel Oil at 94 Hausman Street. They will submit the RIR and RAWP. 6/12/25-Lin- Location: The property is a 0.23 acre property located on the east side of Apollo Street between Nassau Avenue and Norman Avenue. The site is surrounded by commercial and manufacturing properties. Site Features: Prior to remediation, a one-story commercial building is present on the property. The site was redeveloped with a four story commercial building. Current Zoning and Land Use: The site is zoned M1-2 (commercial and light manufacturing). Past Use of the Site: A Phase I Environmental Site Assessment identified previous on-site commercial/industrial uses including an adhesives manufacturer. Site Geology and Hydrogeology: On-site borings revealed urban fill in the upper 5ft underlain primarily by fine sand with stratified layers of silt and gravel into groundwater at approximately 30ft below grade. Groundwater flow is the area in controlled by large-scale dewatering from the ExxonMobil Greenpoint Petroleum Remediation Project (NYSDEC Site No. S224150). Nature and extent of contamination prior to remediation: Soil Volatile organic compounds (VOCs), Semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals and Per- and polyfluoroalkyl substances (PFAS) contamination were detected in soil. For example, the VOC - benzene was detected up to 29 parts per million or ppm (compared to the restricted-residential Soil Cleanup Objective [SCO] of 4.6 ppm), the SVOC - benzo(a)anthracene was detected up to 6.6 ppm (compared to the restricted-residential SCO of 1 ppm), the metal lead was detected at 2,020 ppm (compared at the restricted-residential SCO of 400 ppm, total PCBs was detected at 4.2 ppm (compared to the restricted-residential SCO of 1 ppm, and the PFAS Perfluorooctanesulfonic Acid (PFOS) was detected up to 1.19 parts per billion or ppb (compared to a unrestricted SCO of 0.88 ppb). Groundwater Elevated petroleum concentrations were encountered in groundwater. For example, benzene was detected at 2,700 parts per billion or ppb (compared to

83 APOLLO STREET OER (Continued) **S117742296**

the groundwater standard of 1
ppb). Dissolved-phase petroleum contamination is related to NYSDEC
Site No. S224150: ExxonMobil
Greenpoint Petroleum Remediation Project. Soil Vapor Elevated
chlorinated solvent concentrations
were encountered in soil vapor. For example, trichloroethene (TCE) was
detected up to 31,300
micrograms per cubic meter. Remediation completed under NYC OER,
Project #21CVCP045K, in May 2024.
The groundwater and soil vapor contamination is due to off-site
impacts from the ExxonMobil
Greenpoint Spill and will be remediated under NYSDEC Site No. S224150.
The following excavations
were performed: about 2 to 4 feet bgs (el 33.5 to 31.5) to accommodate
the slab-on-grade
foundation, about 5 to 8.5 feet bgs (el 30.5 to 27) to accommodate
site-wide foundation elements
and an elevator pit, and about 9 to 12 feet bgs (el 26.5 to 23.5) to
accommodate foundation
elements in the northwestern part of the site. A total of about
2,339.42 tons of soil/fill was
excavated and removed from the property. Endpoint soil samples came
back clean. No USTs were found
during excavation. Constructed an composite cover system that spans
the entire site footprint-
consists of a 6 thick reinforced concrete slab underlain by an 8 thick
layer of 0.75 virgin stone.
A 20 mil vapor barrier was installed below the slab on grade. An
active SSDS was installed under
the slab on grade foundation. The composite cover and active SSDS will
prevent any vapor intrusion
into the new building. Case closed. Briefed to Rick Lin and assigned
the spill to him. Craig Purta
CP Engineering 917-952-8216 Craig@CPEngineeringPC.com

Remarks: uncovered old oil. cleanup pending.

Name: FORMER ACME STEEL PARTITION CO.
Address: 513 PORTER AVENUE
City,State,Zip: BROOKLYN, NY 11222
Program: HW
Site Code: 494893
Classification: C
Region: 2
Acres: 0.920
HW Code: 224192
Record Add: 05/14/2014
Record Upd: 04/14/2025
Updated By: LAGORTON
Site Description: Location: The site is located at 513 Porter Avenue in the Greenpoint section of the Borough of Brooklyn. It is bounded by Cherry Street to the north, Porter Avenue to the east, and Anthony Street to the south. Site Features: The site was once occupied by 5 contiguous, 1-story masonry construction buildings with an area of 39,000 sq. ft. (181.95 ft. x 200 ft.) constructed in 1950 (now demolished). The eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located immediately north of the site. A small residential area is located two blocks south of the site. Current Zoning and Land Use: The site is located in a manufacturing area. The site was used as a staging area for equipment and materials as part of the Kosciuszko Bridge replacement project and now functions as a public access park (Sergeant William Dougherty Park). Past Use of the Site: The site was operated by the ACME Steel Partition Company until 2007 when operations at the property ceased. The property was acquired via eminent domain by the NYSDOT as part of the Kosciuszko Bridge replacement project. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick) with discontinuous glacial till units, and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site.
Env Problem: Prior to remediation, the primary contaminants were related to historic urban fill and the property's former history as a metal fabricator. Soil - Tetrachloroethene or PCE was detected in on-site soils at concentrations up to 2.2 parts per million or ppm, exceeding the soil cleanup objective for unrestricted use (1.3 ppm). Lead was detected up to 6,400 ppm, exceeding the soil cleanup objective for unrestricted use (63 ppm). Lead-hazardous soils were also identified on-site. Groundwater - PCE was detected up to 70 parts per billion or ppb, compared to a groundwater standard of 5 ppb. Lead was detected up to 254 ppb, compared to a groundwater standard of 25 ppb. Soil Vapor - PCE has been found in soil vapor at concentrations up to 11,000 micrograms per cubic meter (ug/m3). Post-remediation: Remediation at the site is complete. Residual contamination will be

FORMER ACME STEEL PARTITION CO. (Continued) **S118950564**

managed through the use of engineering and institutional controls.
Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual contamination at the site.

The site was used as a staging area for equipment and materials as part of the Kosciuszko Bridge replacement project and now functions as a public access park (Sergeant William Dougherty Park). Past Use of the Site: The site was operated by the ACME Steel Partition Company until 2007 when operations at the property ceased. The property was acquired via eminent domain by the NYSDOT as part of the Kosciuszko Bridge replacement project. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick) with discontinuous glacial till units, and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site.

Env Problem:	Prior to remediation, the primary contaminants were related to historic urban fill and the property's former history as a metal fabricator. Soil - Tetrachloroethene or PCE was detected in on-site soils at concentrations up to 2.2 parts per million or ppm, exceeding the soil cleanup objective for unrestricted use (1.3 ppm). Lead was detected up to 6,400 ppm, exceeding the soil cleanup objective for unrestricted use (63 ppm). Lead-hazardous soils were also identified on-site. Groundwater - PCE was detected up to 70 parts per billion or ppb, compared to a groundwater standard of 5 ppb. Lead was detected up to 254 ppb, compared to a groundwater standard of 25 ppb. Soil Vapor - PCE has been found in soil vapor at concentrations up to 11,000 micrograms per cubic meter (ug/m3). Post-remediation: Remediation at the site is complete. Residual contamination will be managed through the use of engineering and institutional controls.
Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual contamination at the site.

Site Description: Location: The site is located at 513 Porter Avenue in the Greenpoint section of the Borough of Brooklyn. It is bounded by Cherry Street to the north, Porter Avenue to the east, and Anthony Street to the south. Site Features: The site was once occupied by 5 contiguous, 1-story masonry construction buildings with an area of 39,000 sq. ft. (181.95 ft. x 200 ft.) constructed in 1950 (now demolished). The eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located immediately north of the site. A small residential area is located two blocks south of the site. Current Zoning and Land Use: The site is located in a manufacturing area. The site was used as a staging area for equipment and materials as part of the Kosciuszko Bridge replacement project and now functions as a public access park (Sergeant William Dougherty Park). Past Use of the Site: The site was operated by the ACME Steel Partition Company until 2007 when operations at the property ceased. MIXED USE SITE (Continued) **S121119942**

Longitude: Not reported
DEC Memo: 10/25/17 TJD Spill assigned to Rick Lin as per Vought. 10/26/17- Lin - Received emails from Vought with reports. No alternate address or PBS registration found. Review reports with Vought: Remedial Investigation Report (Langan October 2017 Draft) prepared for RedSky Capital, 3 Hope Street, Brooklyn, NY 11211. The Site is 5,000-square feet and is bounded by North 4 Street followed by Public School 017, which consists of a five-story public use building and open air playground, to the north, a four-story mixed use residential/commercial building to the south, a two-story manufacturing building to the east, and Driggs Avenue followed by an open-air parking lot to the west. Currently, the Site is an asphalt-paved lot used for storage of stone slab building materials and is enclosed by a perimeter fence along the property boundary. The proposed future use of the Site will consist of a six-story mixed-use commercial and residential building, with a single below-grade cellar level. The building s below-grade cellar will be used for storage (including residential tenant storage), pet grooming, and building mechanical equipment rooms. Parking proposed for second floor. Excavation will be performed as part of construction of the cellar to a depth of approximately 15.5-feet below sidewalk grade across the entire Site footprint; an elevator pit in the south-central portion of the lot will be excavated to approximately 19.5-feet below sidewalk grade. Work performed under remedial investigation: Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.). Installed five soil borings across the entire project Site, and collected 10 soil samples for chemical analysis from the soil borings to evaluate soil quality. Installed three temporary groundwater monitoring wells throughout the Site to establish groundwater flow and collected three groundwater samples for chemical analysis to evaluate groundwater quality. Installed three soil vapor probes around Site perimeter and collected three samples for chemical analysis. Environmental findings: Elevation of the property ranges from 24 to 26-feet with respect to the North American Vertical Datum of 1988 (NAVD 88). Depth to groundwater ranges from 18.5- to 21-feet below existing site grade at the Site. Groundwater flow is inferred to be from southeast to northwest beneath the Site. The stratigraphy of the site, from the surface down, consists of approximately 5.5- to 10-feet of historic fill material underlain by native sands with varying amounts of gravel and silt. The bottom of the sand unit and bedrock was not encountered during the RI. Data (Soil) 1,2,4-trimethylbenzene 16,000 ppb

A Remedial Action Work Plan to address the hazardous material portion of the E-Designation will be provided within one week of the submittal of this Remedial Investigation Report. DEC possibly requires: 1) Air Monitoring due to adjacent playground/school 2) Submission of Transaction Screen Environmental Site Assessment Report prepared by LCS Inc for M&T bank on behalf of RedSky Capital dated June 2015 as per the RIR. 3) Hotspot excavation, if found, as groundwater is contaminated and no vertical pathway has been found to date in soil sample. 4) Soil vapor mitigation after discussion with NYSDOH Walz due to up to 250 ug/m^3 TCE 5) Question on presence of underground gasoline tanks due to consultant review of transaction Screen Environmental Site Assessment Report
11/1/2017- Lin/Vought- Lin and Vought had the conference call with

MIXED USE SITE (Continued) **S121119942**

Walz from NYSDOH and
Samantha/Shaminder from OER. Per Shaminder, the consultant estimated that only 22'' between the
foundation and the water table, so there might not be enough room to install a SSDS (subslab
depressurization system). Installation of a vapor barrier. PID during excavation and hot spot
excavation. Remedial action plan with community air monitoring plan will come in this week. Nathan
suggested a permanent air monitoring set up in the direction of the school. 8/23/21-Lin-Depth to
groundwater is at 18.5' to 21'. The groundwater flow direction is to the northwest toward east
river. Two (2) 275 gallon and one (1) 550 gallon USTs were removed. Since the tanks were found near
the site boundary, three (3) sidewall soil samples toward the site boundary were taken. All three
(3) soil samples came back clean. Soil on site was excavated to a depth of 15' to 16' bgs. A
hotpsot identified during the RI was excavated down to 20' bgs. Five (5) endpoint bottom samples
were taken across the site and two of the samples were taken in the hotspot area. All five (5)
endpoint soil samples came back clean. Dissolved contamination in the groundwater is expected to
attenuate over time as no contaminated soil remains on site. An engineering composite and vapor
barrier system were installed. An active SSDS was installed. Case closed.

Remarks: cleanup pending - would like to have assigned to Ricky Linn

DEC Memo:	Phase 2 - soil samples have contamination in it - Owner wants to move this to brownfields. 7/23/07 - Raphael Ketani. I have heard nothing in a long time regarding this site as to whether it is part of the voluntary cleanup program (VCP). So I talked to Jocelyn Shapiro, EG I of unit A of DER Region 2, as she is involved in some VCP projects. She said it wasn't her site and directed me to Jane O'Connell or the unit head, Dan Walsh, EG III. I spoke to Mr. Walsh. He said that there was a pre-application meeting in January 2007, but nothing else happened. I looked for the site in the DER database and found nothing. Therefore, I am going to start the process of investigating this site as a spill location and I will send out a CSL. The block and lot are: 02353 and 0013. The main address is 291 Metropolitan Avenue. The alternate addresses are: 146 Roebling Street and 206 to 212 North 4th Street. The site has two PBS records, #2-145726 and #2-455083. #2-145726 is a closed case with the name as Arvy Service Station Inc./Getty. Six 550 gas tanks are listed as administratively closed on 4/1/95. #2-455083 is active with the name G&A Auto Repair. One 250 waste oil tank is in service with the other six gas tanks listed as closed in place. There are two owners: C&H Holding Corp., 1394 Third Avenue, NY, 10021; 291 Metropolitan Avenue, LLC, 861 Manhattan Avenue, Suite 14, Brooklyn, NY, 11222. I sent out the CSLs to both owners. 7/26/07 - Raphael Ketani. Eva Krocka of Minnow Associates (291 Metropolitan Avenue, LLC) called to say that the site is part of the brownfield program. I told her that the DEC doesn't have anything confirming this and that their site does not appear in the DEC Remediation database. She said that Advanced Site Restoration Co. (212) 809-1110 was remediating the site and was supposed to take care of everything. She said that DEC was sent reports. I told her that we have nothing in our files regarding the site. She said she will get back to me. A new search of the Remediation database revealed that 291 Metropolitan Avenue has made an application to be part of the BCP. The case number is C224124. The case manager is Sondra Martinkat of DER Region 2 Unit A. I spoke to her and she said

G&A AUTO REPAIR (Continued) **S108294903**

that the site is not yet approved for the BCP, but she expected them to be so very soon. She said that she was willing to accept the spill case. I spoke to Randall Austin, Chief of the Spills Unit, and he told me to change the case manager to Ms. Martinkat. I changed the case manager to her name. 8/5/09: BCP termination letter sent by OGC (D. Tuohy) - see eDocs. Management of site reverts back to Region 2 spills. Transferred to R. Ketani. (JHO) 8/6/09 - Raphael Ketani. I was assigned the spill case yesterday. So I talked to the former case manager, Brian (York) Wong from Unit A of Region 2 DER. He said that he was waiting for the project to be accepted into the BCP, but this never happened as the corporation fell apart. He said that no cleanup or development has taken place regarding the case since 2007. I made an unannounced site visit and took several pictures (see E-docs). The site consists of a service station. There is an old, small, three story walk up apartment building to the west of the service station. The service station has a sign that displays G&A Auto Diagnostic Center (718) 486-3700. The apartment building is the other property that the corporation had owned. I met a person who worked at the service station. He said that a waste oil UST and the gas USTs were closed in place with cement. He showed me the many cement filled boring locations that are on site. He said that there were no problems. I asked him who he was, but he just said that he was someone who works here. However, he did say that C&H owned the site. After this I left. 8/7/09 - Raphael Ketani. I tried to contact Chris Tomasello of ASR (212) 809-1110 regarding the site and its ownership, but could only leave a message. I reviewed the October 2006 ISR. The elevation of the site is at 23' above mean sea level. Groundwater was encountered at a depth of 17' to 20' below grade. However, Section 9 of the ISR states that groundwater is 9' to 10' below grade. Groundwater flow direction is unknown. There is a school directly across the street to the northeast. Soil contamination that exceeds TAGM was present at SB-5 at 10' to 16.' Groundwater contamination with high exceedences was found at SB-2 and SB-3. There is also a page with case manager notes that refer to wells marked AOC and TW, but there are no diagrams depicting these wells in the case file. 8/10/09 - Raphael Ketani. Mr. Tomasello returned my call. He talked about the site. He mentioned that the partnership broke up and the property was sold about a year ago. The former owner was Robert Vigorito of C&H Holding Corp., 1394 Third Avenue, NY, 10021. Mr. Tomasello has had no contact with the former or present owners since then. I looked up the property ownership on

G&A AUTO REPAIR (Continued) **S108294903**

Property Shark and on ACRIS. The property was sold on 9/6/09 or 9/15/09, respectively. The new owner is: 291 Metropolitan Avenue, LLC, 861 Manhattan Avenue, Suite 14, Brooklyn, NY, 11222. I wrote a revised CSL for the sole owner, 291 Metropolitan Avenue, LLC, and sent it out with a green return card. 9/10/09 - Raphael Ketani. The deadline for a response to the CSL was today and there has been no response from the owners of the site. I have not received the green return card, either. I will wait until 9/17/09 before sending a more strongly worded letter to the owners. 9/14/09 - Raphael Ketani. The CSL came back unopened and marked Unclaimed/Unable to Forward on the envelope. I checked PBS record #2-455083 for any contact information. The record showed the name Ismael Cisneros, Jr. (718) 384-4141. I spoke to Mr. Cisneros. He said that the owner had moved to Manhattan. I asked him who the owner was. He didn't want to say. However, he said that if I sent a letter directly to the service station, then he will forward it to the owners. I told him that I will do this. I resent the CSL to G&A Auto Repair, 291 Metropolitan Avenue, Brklyn, 11211 by regular mail and by green return card. However, according to the property database ACRIS, 291 Metropolitan Avenue LLC at 861 Manhattan Avenue is still listed as the owner. 9/21/09 - Raphael Ketani. I received the green return receipt card signed by Mendes. 10/29/09 - Raphael Ketani. The owners of the site failed to respond to the CSL by the deadline of October 14, 2009. So I drafted a strongly worded letter stating that the DEC will take legal action if the investigation plan is not received by November 13, 2009. The draft letter was submitted to Randall Austin, Chief of the Spills Unit, for his approval. 11/2/09 - Raphael Ketani. I spoke to Mr. Austin about the case and the letter that I wanted to send. He said that I should submit a Case Initiation Package. 11/3/09 - Raphael Ketani. I put together the Case Initiation Package and submitted it to Mr. Austin for his signature. Mr. Austin signed the CIP and it was hand delivered to the legal department. 4/26/10 - Raphael Ketani. John Urda, Assistant Regional Attorney for Region 2 of DEC, sent Jerrietta Hollinger, a principal of 291 Metropolitan LLC, a STIP agreement today by e-mail. Her address is: Jerrietta R. Hollinger, Esq. Ganz & Hollinger 1394 Third Avenue New York, New York 10075 Ms. Hollinger responded back by e-mail that she will submit the document to her members and get back to Mr. Urda in a week. 5/13/10 - Raphael Ketani. Ms. Hollinger sent the following e-mail to Mr. Urda: I expect to review the Stip with Mr. Cisneros next Tues. I am out of office tomorrow and Monday and will contact you by middle of next week. 5/20/10 - Raphael Ketani. Ms.

G&A AUTO REPAIR (Continued) **S108294903**

Hollinger requested a change
in the STIP package CAP that was sent to her by Mr. Urda. She wanted
the deadline for submission of
the Remedial Investigation Work Plan changed from 15 days to 30 days
(paragraph one). Mr. Urda
agreed to the change and sent her a STIP with a CAP wherein the owners
have 30 days to submit the
RIWP (see E-docs). 5/24/10 - Raphael Ketani. The owners of the site
signed the STIP. 5/25/10 -
Raphael Ketani. The Region 2 director signed the STIP and, thus, it
was fully executed and in
effect (see E-docs). 7/14/10 - Raphael Ketani. To date, the owners of
the site have not submitted
the RIWP. The deadline was July9 25, 2010. I drafted a letter to Ms.
Hollinger for the review of
John Urda of the Office of General Counsel. Mr. Urda reviewed the
letter and it was sent out today.
7/15/10 - Raphael Ketani. Ms. Hollinger called me today. She said that
P.W. Grosser (the consulting
company) is supposed to get back the groundwater analytical data for
the site. They will send the
DEC a report soon. 7/27/10 - Raphael Ketani. Ms. Hollinger called
today. She said that Mr. Wenskus
of P.W. Grosser is working on the analytical report for DEC and should
submit it in the very near
future. The report will state that the soil is alright, but that the
groundwater is contaminated. I
told Ms. Hollinger that, at the very least, the groundwater
contamination needs to be delineated.
8/3/10 - Raphael Ketani. I reviewed the July 30, 2010 P.W. Grosser
Phase II ESA report. The scope
of the work was based on P.W. Grosser's 6/21/10 proposal and Advanced
Site Restoration's October
2006 ISR. The tanks have fuel oil, waste oil, and gasoline. In October
2006, the site was operated
only as a car repair shop. Groundwater is at about 18' to 20' below
grade and flows
north-northwest. ASR found contamination in soil borings at SB-1, 3,
5, and 6. There were also
elevated levels of arsenic, cadmium and lead at SB-1. There was
elevated groundwater contamination
at SB-2 and SB-3. There had been no subsequent investigations or
remedial efforts since ASR's 2006
investigation. P.W. Grosser did a Phase II in July 2010. The locations
of SB-1, 3, 5, and 6 were
utilized for this investigation. P.W. Grosser took soil samples to 20'
below grade. Groundwater was
sampled from SB-1 to SB-3. The soil results for VOCs and SVOCs were
below TAGM RSCOs. Arsenic,
cadmium, and lead were below the RSCOs. However, mercury was above its
respective RSCO. The
groundwater results from SB-6 (downgradient) were completely
non-detect. However, there was 22 ppb
of naphthalene at SB-3 and 392 ppb of naphthalene at SB-2, with
several other low exceedences. MTBE
was 421 ppb at SB-1 and 1370 ppb at SB-3. SB-2 had 112,000 ppb of MTBE
and 6 other VOC exceedences

G&A AUTO REPAIR (Continued) **S108294903**

above 1,000 ppb. P.W. Grosser recommends removing the tanks and quarterly monitoring. I sent an e-mail to Mr. Wenskus (631) 589-6353 with the following questions and comments: 1) why wasn't a boring done in the vicinity of the fuel oil tank to the northwest? 2) is the fuel oil tank a UST or an AST? 3) was staining observed in the vicinity of the fuel oil tank? 4) why wasn't a boring conducted directly to the northwest of the gasoline tanks? 5) why weren't borings conducted next to the waste oil tank? The DEC concurs with the removal of the gas and oil tanks. Groundwater should be collected from SB-2 in order to reduce the MTBE concentration at this location. 8/6/10 - Raphael Ketani. Mr. Wenskus responded back by e-mail today: 1) Due to the presence of debris in the area, PWGC was unable to access the immediate vicinity of the fuel oil tank. During the inspection, PWGC did not see evidence of an AST in the area of the fuel oil tank as identified on the figure. Additionally, PWGC utilized the figure that was provided in the 2006 ASR Phase II for approximate locations of borings and other site conditions. 2) This is unknown at this time; however, according to the ASR report, the fuel oil tank is a UST. As stated above, there was no evidence of an AST in that vicinity. PWGC will contact the property owner to confirm the presence of the fuel oil tank. 3) No staining was observed in the area where the fuel oil tank is reportedly located. 4) As stated above, Mr. Cisneros wanted to confirm the findings of the 2006 Phase II and requested that only the impacted borings from that Phase II be re-sampled. 5) The exact location of the Waste oil UST was unknown and PWGC placed the boring SB-1 in the vicinity of the former boring. The location of SB-1 in the PWGC site plan; however, is incorrect. In addition, the tank locations on our site plan are approximate, based upon the ASR Phase II site plan. The site plan will be corrected to show the correct location of boring SB-1. I responded back and stated that the DEC still wants a boring performed to the northwest of the gas USTs, next to the waste oil tank, and next to the fuel oil UST to the northwest. Also, P.W. Grosser must submit a site plan which is to scale and which shows the actual location of all appertenances, tanks and pump islands. Mr. Wenskus replied back that the borings will be performed. 8/12/10 - Raphael Ketani. Mr. Wenskus sent me an e-mail that he informed the owners about DEC's request for additional investigative work. However, he has not heard back from them. 8/18/10 - Raphael Ketani. Mr. Wenskus sent me an e-mail that the drilling for the three additional borings will take place on 8/24/10. 9/27/10 - Raphael Ketani. I received the Supplemental Phase II Environmental Site Assessment report dated

G&A AUTO REPAIR (Continued) **S108294903**

9/22/10 from P.W. Grosser. I began
my review. 9/28/10 - Raphael Ketani. I finished my review of the Supp. Phase II. There was no soil
contamination above TAGM standards. However, groundwater was found to be impacted. LNAPL was found
near the waste oil tank and oil based liquids in the tank. Concentrations of total VOCs were
detected up to 128,988 ppb in the immediate vicinity of the gas USTs. SB-2 was the most
contaminated groundwater location. SB-3 had elevated groundwater contamination. P.W. Grosser
recommends the following: proper closure of the gas and waste oil USTs removal and disposal of all
impacted soil injection of oxidants to breakdown the contamination collection of end point samples
installation of groundwater wells removal of LNAPL quarterly groundwater monitoring I sent an
e-mail to Mr. Wenskus asking him to proceed with the remediation as soon as possible. 11/19/10 -
Raphael Ketani. Mr. Wenskus sent the November 2010 Remedial Action Plan by e-mail. I reviewed the
plan and it formalized and expanded the remediation plan that was initially described in the
Supplemental Phase II. The RAP looked fine, but they weren't planning to install a monitoring well
downgradient of the waste oil UST. So I let Mr. Wenskus know that the DEC wanted a well installed
in this location and to submit a revised site map showing this well. Mr. Wenskus responded back
that a well will be installed downgradient of the waste oil UST. 2/25/11 - Raphael Ketani. I spoke
to Mr. Wenskus (631) 589-6353 and asked him about progress on the site. He said that the owners had
received P.W. Grosser's proposal. They told him that they needed to secure funding for the project.
However, that was back a couple of months ago. Mr. Wenskus hasn't heard anything since. I asked Mr.
Wenskus to contact the owners anyway and to try and find out what is happening. Ms. Hollinger sent
me an e-mail asking whether there was any type of funding that could be obtained for doing the
additional work. I wrote that there wasn't and to commence the work immediately. 3/2/11 - Raphael
Ketani. Today I received the January 27, 2011 investigation and remediation work proposal and cost
estimate from Mr. Wenskus at P. W. Grosser. I reviewed the proposal and it seemed to cover the work
that the DEC had asked to be performed. I spoke to Mr. Wenskus (631) 589-6353 and told him that the
DEC found the proposal to be acceptable. I asked him whether he had heard from Ms. Hollinger. He
said that he hadn't. I told him to call her and to let her know that the DEC is concerned that no
progress is being made. He said that he will. 3/3/11 - Raphael Ketani. Mr. Wenskus sent Ms.
Hollinger an e-mail (with me as a c-c) stating that the DEC had the approved work plan. He also

G&A AUTO REPAIR (Continued) **S108294903**

wrote in the e-mail that P.W. Grosser was ready to go to work on the site as soon as a retainer is submitted. 3/7/11 - Raphael Ketani. Mr. Wenskus said that he hasn't received approval yet to start the work. 4/5/11 - Raphael Ketani. I received an e-mail today from Mr. Wenskus as a c-c. In the e-mail, Mr. Wenskus stated that he hasn't heard from Ismael Cisneros, Jr. in two weeks. In response, I sent an e-mail to Mr. Urda of DEC Region 2 stating that it appears as if work at the site has come to a standstill for this spill. 4/22/11 - Raphael Ketani. Mr. Wenskus sent an e-mail to M I Mechanical requesting a startup date for the work at the site. Ms. Hollinger responded back by e-mail that Mr. Cisneros was out of town, but would be back next week. Once he is back, Ms. Hollinger wrote, Mr. Cisneros will set up a starting date. 4/27/11 - Raphael Ketani. I sent an e-mail to Ms. Hollinger asking whether Mr. Cisneros had returned and whether a starting date had been picked. 5/17/11 - Raphael Ketani. Mr. Wenskus sent me an e-mail that the work will re-start during either later June or early July 2011. 6/6/11 - Raphael Ketani. Mr. Wenskus sent me an e-mail that work will resume at the site on July 18. 7/7/11 - Raphael Ketani. Mr. Wenskus (631) 589-6353 sent me an e-mail that work will start on July 18. He expects the work to take 2 weeks. 7/14/11 - Raphael Ketani. Jerry Hickson of G. Construction Enterprises (631) 206-3700 ext 100 called. His company will be pulling 7 tanks on either tuesday or wednesday. They will remove 3 gas tanks, 3 diesel tanks, and 1 waste oil tank. 7/20/11 - Raphael Ketani. I received the following e-mail today from Mr. Wenskus: The implementation of the approved RAP began today. The site activities today included the following: Expose the seven onsite 550-gallon tanks to determine their current condition, Assess the tanks to determine their contents (each contained oily water) Pump the tanks out approximately 2,200 gallons removed Each tank, with the exception of the waste oil tank was encased in concrete. No tanks were removed from the ground today; excavation of the tanks will continue tomorrow. 7/22/11 - Raphael Ketani. Mr. Wenskus (631) 589-6353 called me in a conference call with Jen Lewis of P.W. Grosser. He said that the 7 USTs had been removed. There was a concrete slab beneath them. The tanks were all in good shape. However, there were signs of a little associated pipe leaking. The contractor had excavated 15 feet down to remove the contaminated soil, but there still was contamination and he hadn't reached the water table, which is at 18 feet below grade. Mr. Wenskus and Ms. Lewis were asking whether the digging could stop as the contractor would have to get a larger machine, and this would take time, and as he

G&A AUTO REPAIR (Continued) **S108294903**

would also have to get special permits for digging deeper. Mr. Wenskus added that the contractor had dug pretty close to the building and the sidewalk and they didn't want to jeopardize their integrity. I told Mr. Wenskus that the contractor could either install shoring to hold up the sides of the hole or backfill and do treatment solution injections where there still is contamination deep down and under the sidewalk. Mr. Wenskus opted to backfill and treat. I asked him whether the contractor could dig out more contamination laterally. Ms. Lewis said that he could. I told Mr. Wenskus and Ms. Lewis to do all of the calculations necessary, including permeability, to determine what it will take to effectively treat the remaining contamination. They said that they will. Later, Mr. Wenskus (631) 589-6353 called me back. He said that he talked to his supervisor about the treatment solution injections proposed for the contaminated dry soil. They agreed that the solutions would work initially, but that they would stop as soon as they would dry out and, therefore, wouldn't be very effective. Mr. Wenskus will have the contractor get a larger excavator and dig deeper. I asked him about the contamination under the sidewalk. I added that this couldn't be left in place. He said that he wasn't sure where the contamination will end. I told him to keep field screening with a PID meter and to eventually take end points to determine whether they needed to excavate further. He said that he will. 9/12/11 - Raphael Ketani. I tried to contact Mr. Wenskus (631) 589-6353, but I could only leave a message regarding progress at the site. 9/13/11 - Raphael Ketani. Mr. Wenskus called me back. He said that the work at the site has stopped as P.W. Grosser isn't getting paid. The owners, 291 Metropolitan LLC, want to save some money with the remediation project and want to put in fewer wells and do less soil removal. He said that 80 tons have already been removed, as best as he can guess (he doesn't have the disposal manifests). A large covered soil pile is sitting at the site. Mr. Wenskus said he told them that the DEC had approved the work plan and so any changes were not likely to be accepted. After this, the conversation ended. 9/15/11 - Raphael Ketani. I reviewed the November 2010 RAP for the work schedule. While the tanks (item 1) had been removed, the soil excavation was not completed by the allotted time as more soil needed to be removed than had been previously estimated. I sent Mr. Wenskus an e-mail requesting a revised work schedule. 10/13/11 - Raphael Ketani. I contacted Mr. Wenskus (631) 589-6353. He said that 291 Metropolitan LLC still hasn't paid P.W. Grosser for the rest of the work. So nothing is happening.

G&A AUTO REPAIR (Continued) **S108294903**

Mr. Wenskus said that he had spoken with Ms. Hollinger about a couple of weeks ago, but she gave no indication that payments would be forthcoming. He said that he will try contacting her today. As no work had been taking place for over a month, I drafted a letter to 291 Metropolitan, LLC stating that they were in violation of the STIP and the environmental law. The letter was sent to Mr. Urda and approved. I sent it out today with an October 28 deadline for re-starting the work, or else legal action will be taken. 10/20/11 - Raphael Ketani. Ms. Hollinger (212) 517-5500 called regarding the soil excavation and planned well installation. She said that P.W. Grosser dug out a lot more dirt than had been planned and that this has become very expensive. She asked what could be done about this and whether the number of planned groundwater monitoring wells could be reduced in order to save money. I told her that contaminated soil has to be dug out to the extent practical and that if they have to remove the sidewalks to do it, then that's what is necessary. I added that P.W. Grosser should be screening the soil with a PID meter as they go so that they can see whether there is more contaminated soil to remove. Then, once they have very low PID hits or no hits, they can take end point samples and have them analyzed to be sure that they have removed all of the soil with elevated contamination. Ms. Hollinger asked whether one or two wells could be cut out from the plan. I told her that the DEC didn't ask for more wells than were necessary in order to monitor the groundwater contamination. I added that if contaminated soil is left in place and the groundwater starts circulating through it, then the groundwater will carry weathered gasoline and vapors downgradient to the school behind the service station. I said that, so far, there are no vapors in the school, but this can still happen if contaminated soil is left. I mentioned that there are kids in the school. She said that she was just concerned about how much soil was removed because it was truck loads and truck loads. I told her that P.W. Grosser was removing what was necessary and that this is good. Ms. Hollinger said that she will talk to Mr. Wenskus and discuss the issue. Then she will get back to me. Later, Ms. Hollinger sent me the following e-mail: After we spoke, I had a telephone call with Rocky. He said he was in the middle of finishing another project but would review the test results and call you next week to see if it is possible to amend the plan to be more economical and to make certain contamination is cleared. The necessary wells will then be installed. As mentioned the work done to date cost more than twice the estimated amount. Soil Safe carted away 447.2 tons of soil. 10/26/11 - Raphael Ketani. Mr. Wenskus

G&A AUTO REPAIR (Continued) **S108294903**

(631) 589-6353 called with a progress update. He said that, right now, work still has not resumed. He said that he had spoken to Ms. Hollinger about the site and the soil contamination that still exists. He said that the concentrations of the individual analytes is in the hundreds of thousands of parts per billion for the soil in the sidewall of the pit that is next to the sidewalk. I told him that this soil, the soil under the sidewalk and possibly the soil under the street must come out. Mr. Wenskus said that the additional remediation will be performed as in the approved RAP. He mentioned possibly collecting the contaminated groundwater. I told him that it would probably be cheaper to dig out the contaminated soil and get rid of the contamination once and for all. Then he wont have to worry about groundwater contamination. I also told Mr. Wenskus that I will let Mr. Urda know about the impass with Ms. Hollinger. 10/27/11 - Raphael Ketani. I made an unannounced site visit today. I took 3 pictures. I could see a gravel area where the gasoline USTs used to be and a sandy soil area where the waste oil UST used to be. There was no other changes to the site conditions. So I left the site. 10/28/11 - Raphael Ketani. A Case Initiation package was signed by Hassan Hussein, Supervisor of the RCRA-Remediation Unit, and sent to the Office of General Counsel. 11/29/11 - Raphael Ketani. Ms. Hollinger (212) 517-5500 sent me an e-mail that the well installations will take place soon. I responded back that the excavation also needed to resume. 12/27/11 - Raphael Ketani. Nick Pressly of Pressly & Associates Inc. (607) 264-9521/cell (607) 435-9589 called. He said that he has been retained by Ms. Hollinger to continue the work at the site. We discussed the present site status and what still needed to be done. Mr. Pressly said that the DEC will receive a work plan by January 9, 2012. 1/18/12 - Raphael Ketani. Mr. Pressly sent me the 1/9/12 work plan by e-mail. The plan called for the installation of 6 soil borings and the construction of 4 monitoring wells. Some of the wells would be constructed in such a manner as to allow their use for SVE or air sparging. I found the locations of two of the proposed wells to be unacceptable as they are not downgradient of the former gasoline UST locations and the waste oil tank location. Also, if some wells are used for SVE or air sparging, then they can't be used for groundwater monitoring. So more wells are needed. They also did not mention continuing the excavation both deeper and under the sidewalk. Lastly, they did not mention sending the DEC the manifests for the soil that has been excavated, nor product collection or quarterly groundwater sampling and reporting. I sent an e-mail

G&A AUTO REPAIR (Continued) **S108294903**

to Mr. Pressly indicating the disapproval and the need for including the above comments in a new work plan. Mr. Pressly sent me the manifests for the soil that had already been removed. I spoke to Mr. Pressly (607) 264-9521/cell (607) 435-9589 about the above comments. There is a 1 inch well next to the waste oil tank. He believes that there is a lot of oil on the water table. Due to the waste oil, air sparging will not be possible. The waste oil will be addressed in a separate plan. Mr. Pressly will add two additional wells due to the presence of the LNAPL. The other well positions can be adjusted to be downgradient. SVE wells will be installed near the sidewalk in an upgradient position. Borings will be done right up against the sidewalk. Wells for just monitoring during SVE or air sparging will be installed. He will resubmit the work plan next week. Also, he expects to start the work by January 30, 2012. I told him that will be fine. 1/25/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 sent me the 1/20/12 Revised Subsurface Investigation Work Plan for installing SVE wells, AS wells and monitoring wells. I reviewed the work plan. 1/30/12 - Raphael Ketani. I finished my review of the 1/20/12 work plan. There was one proposed monitoring well far upgradient of the waste oil UST and no well directly downgradient of the waste oil UST. I determined that they should install wells at positions that are a short distance downgradient of the waste oil UST and the former tank field. I also stated that there should be separate monitoring wells at P.W. Grosser's SB-7 boring, which had NAPL, and at P.W. Grosser's SB-3, which had contaminated groundwater. I added that groundwater extraction should take place at SB-3 and product collection should take place at SB-7 before AS or SVE takes place. Lastly, I asked for the details of the proposed AS and SVE systems: soil permeability, air flow or vacuum calculations, material specs and the design layouts.I sent a letter disapproving the work plan and including the above comments. The due date for the revised work plan was set at February 29. Mr. Pressly sent me a revised map/plan for the locations of the proposed monitoring wells. I responded back that the well for the waste oil UST should be more upgradient than sidegradient. I asked him to fix this and then the plan would be fine. Also, he will hold off installing the SVE and AS wells for now. 2/1/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 sent me an e-mail containing the second revision of the Revised Subsurface Investigation Work Plan. Four instead of five wells were proposed, but the locations were as requested in DEC's 1/30/12 letter. However, there was no mention of extracting contaminated groundwater

G&A AUTO REPAIR (Continued) **S108294903**

at SB-2 and product at SB-7. I responded back and let him know about the deficiencies. Mr. Pressly wrote back that, presently there were no wells at SB-3 and SB-7, these were only former soil boring locations. However, a well will be installed at the former location of SB-3. He asked that installing a well at SB-7 for product collection be put on hold for now so that the work plan can be approved and work can proceed. I responded back that the DEC was approving the 2/1/12 work plan and to proceed with the investigation. Mr. Pressly wrote that the work is tentatively scheduled to start on February 8. 2/3/12 - Raphael Ketani. Mr. Pressly sent me an e-mail that the drilling will definitely start on February 6. 2/6/12 - Raphael Ketani. Mr. Pressly called today. He said that he was at the site, but that there was a problem. He stated that the downgradient well for the waste oil UST would be right against the wall of the building. So it can't be drilled right there. He suggested moving the well's locations to where the A in LNAPL (for SB-7) is on revision 4 of the map which is attached to the 2/1/12 work plan. This would still put the well in a downgradient position. I told him this would be fine. 2/8/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 called today with an update. First, he stated that P.W. Grosser's boring SB-7 was found to be much closer to the waste oil UST than was drawn on the map. He put in a new well mid-way between the building and the UST about 3 feet from SB-7. However, no oil was found, only a sheen. Mr. Pressly believes that the oil that was found at SB-7 was very localized and that maybe P.W. Grosser hit the edge of the tank pit that was holding the free oil. Once the pit was nicked, the oil flowed to the location of SB-7. I told Mr. Pressly this was possible. He responded by saying that he will re-drill SB-7 and put in a 2 inch recovery well. Also, there was no odor of gasoline at SB-7 and that it looks like there are 2 plumes. One for the gasoline that is flowing due north, and another plume that is flowing more northwest. A boring was done through the sidewalk. It was found to be a gasoline contamination hot spot. So an extra sparge well was installed in the center of the former UST field. A well was put in at SB-3, but no odors of gasoline were found. Another well by the building had gasoline odors. A well couldn't be put in far downgradient inside the building as the geoprobe wouldn't fit. The soil profile is from 6 to 8 feet of silt and clay, then glacial till, and finally at 19 feet below grade there is gravelly brown sand. Groundwater is at about 22 feet below grade. 2/9/12 - Raphael Ketani. Mr. Pressly called me today. He said that they had overdrilled SB-7 and found a

G&A AUTO REPAIR (Continued) **S108294903**

black slime on their augers when they pulled them up. He believes that the slime is sludge from the waste oil tank. Next, they moved the rig over to where the waste oil tank used to be and drilled another hole. However, they didn't find oil, but hit a cavernous spot many feet down. When the equipment was pulled out, he could see pieces of metal in the cavern. Another hole was drilled and they hit gasoline contaminated groundwater. Mr. Pressly said that it smelled like weathered gasoline. 3/9/12 - Raphael Ketani. I spoke to Mr. Pressly (607) 264-9521 today. He said that he found 1500 to 2000 ppb of MTBE in the perimeter wells. He recommended to the client to have more wells put in. Two sparge wells have been installed. He also recommended to the client to have the site capped very soon. The other wells don't have MTBE, but do have BTEX. Groundwater appears to go northwest. An upgradient well was installed, but the MTBE is about 1500 ppb. However, the southeast part of the property is full of concrete urban fill. The waste oil tank is above the fill. They broke tools trying to drill in the southeast part of the property. 3/14/12 - Raphael Ketani. I received the 3/8/12 Subsurface Investigation Report from Pressly & Associates. I began my review. 3/16/12 - Raphael Ketani. I finished reviewing the SIR. The investigation work took place from 2/6/12 to 2/13/12. Monitoring wells MW-1 to MW-3, SVE-1 and HVE-1 were constructed of 2 inch PVC. MW-4 was constructed of 1 inch PVC. Refusal was hit at 3 locations to the southeast of MW-3. There was native soil at MW-1 to MW-3 and at SVE-1 down to 18 feet bgs. The soil consisted of fine to medium sand with silt and clay. Urban fill was encountered at MW-4 and HVE-1 to 15 feet bgs. Below 15 feet, there was native sand. Groundwater was encountered at 18 feet bgs (elevation 80' to 83'). SB-7 had a 1 inch PVC riser with oil sludge at the bottom. HVE-1 was installed within the footprint of the waste oil UST excavation patch. Waste oil was not detected within the former waste oil tank area (MW-4 and HVE-1). A 3 inch band of oily soil was observed at 19 feet bgs. MW-2 had 113 ppm of total VOC vapors at the 15 to 20 foot interval. SVE-1 had from 173 ppm to 332 ppm of total VOC vapors from 5 to 20 feet below grade. The soil sample from SVE-1 had the highest total VOCs at 112910 ppb. Groundwater total VOC concentrations varied from a low of 927 ppb at MW-1 to a high of 21,169 ppb at SVE-1. NAPL was not seen on the water table at any location. A subsurface release was not detected in the soil and the groundwater within the former waste oil UST area. The elevated VOC concentrations at SVE-1 correspond to the former location of a fill line. The higher concentrations at SVE-1 and lower concentrations at MW-2 suggest that the source is

G&A AUTO REPAIR (Continued) **S108294903**

upgradient near the sidewalk.
The MTBE concentrations suggest that it has migrated beyond SVE-1 and MW-2. The sludge at SB-7 is
considered to be an anomalie by Mr. Pressly. In the report, it is recommended that another
monitoring well be installed to the northwest in order to monitor the MTBE. The pavement should be
replaced at the location of the excavation in order to prevent groundwater mounding and
infiltration. Additional wells should be installed for the SVE/AS system for recovering the MTBE.
Lastly, the SVE/AS system should be installed to remove the VOCs. A letter was drafted for the
review of Hassan Hussein, EE 3 and head of the Hazardous Materials Unit. The letter was addressed
to Mr. Pressly and approved the SIR and the recommendations. However, the DEC requested that soil
samples be taken upgradient of SVE-1 in order to fully delineate the extent of the contamination. A
deadline of April 20 was set for starting the work. 3/22/12 - Raphael Ketani. The letter was
approved by Mr. Hussein and was sent out today to Mr. Pressly and to Ms. Hollinger. 4/25/12 -
Raphael Ketani. Mr. Pressly (607) 264-9521 left me a message today. He said that he needed more
time to contract a drilling company and mobilize to start the work that was requested in the
3/22/12 letter. I gave him until 5/25/12 to start the work. 5/9/12 - Raphael Ketani. Mr. Pressly
sent me an e-mail. He stated that the additional monitoring wells will be installed on May 29 and
the piping and other parts of the SVE/AS system will be installed during the same week. 6/19/12 -
Raphael Ketani. Mr. Pressly sent me an e-mail stating that the new monitoring wells and the SVE/AS
system had been installed. A report containing the system results will be forthcoming in the near
future. 8/7/12 - Raphael Ketani. I reviewed the Pressly & Associates 7/23/12 Supplemental
Subsurface Investigation Report. The supplemental investigation took place during 6/5/12 to
6/14/12. MW-5 was installed to the north and downgradient. MW-6 was installed to the southeast of
SVE-1 through the sidewalk that runs parallel to Metropolitan Avenue. The SVE system consists of 3
SVE wells (SVE-1 to SVE-3) and 5 AS wells (AS-1 to AS-5). The SVE wells averaged 60 scfm, 40 psi
with a ROI of 20 feet. The AS wells averaged 4 scfm, 4 psi with a ROI of 10 feet. Total VOCs at
MW-5 were 13.1 ppb. Total VOCs at MW-6 were 22,530 ppb. The system was started on 7/20/12. The AS
operating pressure was 3 psi with a flow rate of 4 scfm. The SVE well head vacuum was 45 inches of
water and a total flow rate of 120 scfm. A grab air sample was taken with a summa canister and the
results will be available in two weeks. Pressly & Associates recommends collecting system PID, flow

G&A AUTO REPAIR (Continued) **S108294903**

and pressure data from individual SVE/AS wells on a quarterly basis and the collection of well head
vacuum readings from on site wells to evaluate the effective ROI of the system and the collecting
of SVE off gas samples on a quarterly basis. Quarterly reporting will be made to the DEC for the
system. I found the SSIR to be acceptable and drafted an approval letter for the review of Mr.
Hussein. The requirement that confirmatory soil samples be taken once remediation by the SVE/AS is
deemed complete was added to the letter. A deadline of October 31, 2012 was set for the submission
of the first quarterly SVE/AS system report. The letter was approved and was sent out. 8/16/12 -
Raphael Ketani. Jay Stockwell of Blue Zs Realestate, LLC (212) 965-0298 called. He said that he was
a real estate developer and he was interested in buying the property. He said that the present
owners are trying to sell it again. He said that he was interested in putting up an apartment
building with stores in the first floor. He asked how long it would take for the SVE/AS system to
remediate the site. I told him that they started the system during July 2012. So it has not been
running long. I told him that my best estimate for how long it will take to clean up the site is
one year. However, every site is different and there is a lot of contamination under the sidewalk
and the street. Mr. Stockwell said that this was what he had expected. With that, the conversation
ended. 11/9/12 - Raphael Ketani. I tried to contact Mr. Pressly (607) 264-9521 by e-mail regarding
the first quarterly SVE/AS remediation report was due on 10/31/12, but the e-mails bounced back. I
then left a message on his voice mail. I tried contacting Mr. Pressly at his cell phone (607)
435-9589, but I could only leave a message. Next, I tried to contact Ms. Hollinger (212) 517-5500,
but, again, I could only leave a message. Later, Ms. Hollinger called me back. She said that she
thought the September 2012 quarterly report had been submitted. She said that he was paid for the
report. She will try calling him later to see what happened to the report. 11/12/12 - Raphael
Ketani. Ms. Hollinger sent me an e-mail stating that Mr. Pressly was sending me the report.
11/26/12 - Raphael Ketani. I received the 11/26/12 SVE/AS OM&M Status Report. I reviewed the
report. An exhaust sample was collected on 7/19/12. There were 8 VOC hits in the sample. Another
exhaust sample was collected on 9/22/12. There was only 1 hit of 41 ug/m3 of methylene chloride.
The next site visit will be on December 4, 2012. I had no comments and approved the report.
11/28/12 - Raphael Ketani. Ms. Hollinger sent a letter to John Urda, Region 2 Assistant Regional
Attorney, stating that the ownership of the property had been

G&A AUTO REPAIR (Continued) **S108294903**

transferred to 291 Metropolitan
Realty, LLC. Also, Mr. Pressly sent me an e-mail stating that he was still balancing the SVE/AS
system. 12/4/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 called today. He
said that he was going to meet with the attorney for the new owner, Joel Grunfeld, 277 Classon
Avenue, Brooklyn, 11238, (917) 470-3650, jig@sygrealties.com. He will try to explain to him that
the SVE/AS process has to continue and that the DEC wants the site cleaned up. Regarding the SVE
and AS system. There is an SVE well and a monitoring well next to the sidewalk hotspot. The radius
of influence of each SVE well is assumed to be 20 ft. The radius of inlfuence for each AS well is
assumed to be 15 to 20 ft. However, a pilot test was never done to find out the real radius of
influence. The estimated radius was taken from information regarding a sandy soil. I told Mr.
Pressly to keep the DEC informed regarding what transpires at his meeting and whether he will be
retained. I added that Ms. Hollinger should be told that her client is still responsible for the
contamination. Mr. Pressly said that he told her this. 12/5/12 - Raphael Ketani. Mr. Pressly
called. He met with Mr. Grunfeld. Mr. Grunfeld said that he wanted to remediate the site as quickly
as possible so that he can build a new building there. Mr. Pressly brought up the idea of solution
injection to treat the contamination. He also explained that whether solution injection is used or
excavation, the additional remedial actions may cost from $50,000 to $100,000. Mr. Grunfeld was
concerned about the range of pricing, but he told Mr. Pressly that he wanted things to move
forward. Mr. Pressly explained to me that he will send a work plan for installing a well in the
sidewalk and a well in the road in order to find out what the concentrations of the contaminants
are at these locations. He added that the SVE and AS functioning will be modified in order to try
and remove more of the contaminants. 12/7/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell
(607) 435-9589 called. He said that the owner wants to build his building quickly and has contacted
the NYC OER in order to move the process along for the remediation of the site. Mr. Pressly stated
that the drilling contractor is hesitant to drill in the street due to logistical reasons and would
prefere to install wells in the adjacent sidewalk and across the street in the distant sidewalk.
Mr. Pressly added that he would like to install additional wells in the sidewalk in order to
laterally delineate the contamination. After this, he would install SVE/AS wells in the edge of the
sidewalk where it meets the road which have a 20 foot radius of influence (the road is 40 feet

G&A AUTO REPAIR (Continued) **S108294903**

wide) in order to remove any contamination under the road. I told him that this sounded fine. He said that he will talk to the owner about this and put together a work plan. 12/27/12 - Raphael Ketani. Shaminder Chawla of the NYC OER (212) 442-3007/ shaminderc@dep.nyc.gov/100 Gold Street, 2nd Floor, New York, NY 10038 sent me the following e-mail: 291 Metropolitan Avenue property has a new developer/owner who has approached us to enter NYC Voluntary Cleanup program. Previous owner has a stip agreement and an approved RAP (with multiple SVE points)from you. Their development/ remedy has changed and includes excavation of entire property to at least 10 to 12 feet depths. OER is sending them back to field to conduct additional soil, soil vapor and groundwater investigation. OER informed them that they need to approach you and get spill approvals exclusively from DEC. We will accept your approved RAP and add additional requirement that we need to issue Notice to Proceed. I forwarded this information to Mr. Pressly and he responded with the e-mail below: Hi Rafiel, The last time I emailed Joel Gruenfeld was about a week ago and he said he was going to get back to me regarding a proposal I sent about 2 -3 weeks ago to investigate the road and the sidewalk. For this I had proposed 5 soil borings with 3 to be completed as MWs to get lateral and southern extent. I had also advised him to get OER involved sooner than later. I have not heard back from him. since. I also gave him options to clean the on-site groundwater problem quicker using chemical oxidation with direct push (20 points) to facilitate building construction. In addition, I had proposed SVE AS system as possible remedy for sidewalk/ road to be incorporated into any new building construction. NYC VCP may be good to make this an engineering/institutional control? The building design was recommended to include a special XP equipment room for this purpose in the basement. I'll give him a call and let you know what I find out. Best, Nik 12/28/12 - Raphael Ketani. Charles Sosik, PG, Environmental Business Consultants (631) 504-6000, ext 112/csosik@ebcincny.com called me today. 1/2/2013 - Raphael Ketani. I spoke to Mr. Sosik today about the remediation of the site. He said that he has been in contact with the NYC OER and they told him to talk to me about what should be done. We discussed the site history and what Mr. Pressly's company had been doing regarding SVE and AS. Mr. Sosik said that he went to the site to see what the present conditions were and found that the SVE air blower and other equipment was missing. Mr. Sosik also asked for the P.W. Grosser 9/22/10 Supplemental Phase II and the Pressly and Associates 3/8/13 Subsurface Investigation Report. I sent him the

G&A AUTO REPAIR (Continued) **S108294903**

reports. Later, he sent me
the EBC 12/28/12 Phase II Work Plan. I reviewed the work plan. Four soil borings will be installed:
B1 to B4. Soil samples will be taken from 0 to 2 feet below grade and from 10 to 12 feet below
grade. The soil and groundwater samples will be tested via methods 8260, 8270, 8082 for PCBs, 8081
for pesticides and methods 6010 and 7471 for metals. Temporary well MW-6 will be installed at
boring B4. Wells MW-1 to MW-3 and MW-6 will be sampled for groundwater. Soil vapor testing will be
performed at 4 locations at 12 feet below grade. Subslab, soil gas and indoor air sampling will
take place for VOCs. I drafted a letter approving the work plan with comments. First, soil sampling
should take place at the most contaminated horizon. If no contamination is found at the boring
location, then a sample should be taken just above the water table. Soil borings must also be
performed at the locations of the Pressly & Associates wells SVE-1 (extremely high total VOCs) and
MW-6 (high total VOCs) and to the south of MW-6 to confirm the contaminant concentrations. All
results should be compared to the CP-51 standards for soil and the TOGS 1.1.1 standards for
groundwater. Additionally, TCLP method 1311 must be used to test for lead and the results must be
compared to the limits in Part 371.3(e). A revised work plan must be submitted by January 31, 2012.
The letter was sent to Mr. Hussein for his review. 1/3/13 - Raphael Ketani. Mr. Hussein approved
the letter and it was sent out. According to deed dated 11/27/12 shown in ACRIS, the new owner for
291 Metropolitan Avenue, Brooklyn, 11211 (block and lot 2353/13) is 291 Metropolitan Realty, LLC,
199 Lee Avenue, Ste 693, Brklyn, 11211. Another company is also at this address, 64 St. James
Realty, LLC. Later, Mr. Sosik sent me an e-mail stating that the boring work will start on 1/4/13.
Later, Mr. Sosik sent me a revised Phase II Work Plan dated 1/3/13 which was also a Scope of Work.
This work plan incorporated the comments from the DEC 1/3/13 letter. Otherwise, it was the same
work plan. However, more comments were generated. These were that the Department still wanted a
boring in the street south of MW-6. Also, subslab soil vapor sampling must take place at three (3)
locations along the west wall of the garage and at two (2) locations along the east wall of the
garage. The extra boring location and the extra soil vapor sampling locations were indicated on two
attachments to the DEC work plan approval letter. Lastly, all seven wells must be sampled during
the same sampling event and well redevelopment should take place if necessary for the older wells.
The letter was submitted to Mr. Hussein for his review. 1/14/13 - Raphael Ketani. Mr. Hussein

G&A AUTO REPAIR (Continued) **S108294903**

approved the letter and it was sent out with an attachment indicating where the Department wanted a boring in the street and additional soil vapor samples within the garage footprint. Later, Mr. Sosik sent me the following e-mail: The work plan was approved with conditions on 1/3/13. We accepted those conditions and returned the revised plan as requested the same day. The work has already been completed. Eight soil gas samples is a lot of samples for a property this size. Also we cannot access the 3 western locations you are requesting. As you know the bulk of the contamination is in front of the building in the former tank area. There is no difference between conditions beneath the garage and those outside of the building as all are taken at the basement level depth. The four samples provide good coverage across the site and will be representative of conditions. The highest concentrations will be in the SG2 location and will represent a worst case condition. Subsequent to this, I called Mr. Sosik (631) 504-6000, ext 112. We discussed the soil vapor sampling. He said that the issue was that he could not get a piece of equipment into the garage, due to its low clearance, that can bore down 12 feet to take soil gas samples. I told Mr. Sosik that he didn't need to go down 12 feet. That the Department simply wanted more information regarding what the vapors may be in the shallow subsurface. Mr. Sosik responded that he could have holes drilled by hand and then have samples taken. I told him this would be fine. He said he will do this, but that he thought there were too many vapor sampling locations for a site this size. I told him that, from my professional experience, the number of sampling locations were alright. Mr. Sosik agreed to do the work. 2/6/13 - Raphael Ketani. I spoke to Mr. Sosik today. He said that the vapor sampling took place, but the street boring hasn't been done. A permit is needed to perform this boring. 3/8/13 - Raphael Ketani. I received 3 documents for the site from Shaminder Chawla of the NYC Office of Environmental Remediation. These documents included a pdf containing Tables 2 to 11, which consisted of soil, groundwater and vapor data. The second pdf contained boring logs for borings B1 to B5. The last pdf contained 6 maps with soil, groundwater and soil gas data. I looked at all of the information. The data tables showed that there were significant soil exceedences at borings B1, B2 and B5 for VOCs and SVOCs when compared to the CP-51 standards. Some metals, such as lead and mercury also had significant exceedences in samples from the shallow subsurface, but the results were for total metals, not TCLP analysis. So it was not clear whether these results were a concern. Groundwater exceedences of the TOGS 1.1.1 standards were

G&A AUTO REPAIR (Continued) **S108294903**

present in samples from MW-2 and
MW-6. Mr. Chawla wrote that the site will be excavated down to 11 feet below grade. However, this
doesn't address the contamination under Metropolitan Avenue to the south of MW-6. 3/12/13 - Raphael
Ketani. A conference call took place between Mr. Chawla, Hannah Moore (engineer) and myself. We
discussed the site and the environmental issues present. It was mentioned that excavation will take
place down to 11 or 12 feet below grade. This will remove all of the shallow contamination.
However, there is contamination at the water table which is 18 to 20 feet down. Ms. Moore and Mr.
Chawla stated that this will be addressed by the injection of treatment solutions at depth. I told
them that the most contaminated areas are B1, B2, B5, MW-2 and MW-6. They said that these areas
will be targeted. I also stated that more investigation needed to take place south of MW-6 to see
how much contamination is under the street. I asked that a treatment and investigation work plan be
submitted by Mr. Sosik. They said the DEC will receive the work plan. 3/18/13 - Raphael Ketani. I
reviewed the February 2013 Remedial Investigation Report that was submitted by Environmental
Business Consultants. It was a compilation of the reports that had been submitted by the previous
consultants and also contained many Sanborn maps. The only new information was the soil vapor and
sub-slab vapor data. BTEX was found at a maximum of 21.29 ug/m3 in the soil vapor. The sub-slab
vapor reached a maximum of 31.07 ug/m3. PCE concentrations at all 4 soil vapor sites and in the 3
sub-slab vapor sites varied from 4.13 ug/m3 to 37.8 ug/m3. TCE was present in 1 of the 4 soil vapor
locations at 0.537 ug/m3 and in 1 of the 3 sub-slab vapor locations at 4.89 ug/m3. According to the
report, the results were below NYS DOH monitoring levels for the soil vapor guidance matrix. Next,
I reviewed the February 2013 Remedial Action Work Plan. They will do community air monitoring,
remove all tanks, remove soil and fill exceeding the restricted residential standards, sample and
have analyzed all excavated material, collect and analyze the end point samples, install a vapor
barrier, generally excavate to 12 feet below grade - though they will excavate deeper in the UST
and pump island areas, if necessary, inject chemical oxidants to reduce groundwater contamination.
The health and safety plan was included in the document. A Remedial Action Report will be submitted
by the EBC. I found both the Remedial Investigation Report and the Remedial Action Work Plan to be
acceptable. However, I noted in the letter that they must compare all of the soil analytical
results to the unrestricted residential standards in CP-51 and the groundwater results to TOGS

G&A AUTO REPAIR (Continued) **S108294903**

1.1.1. Also, all contaminated soil which is found at 12 feet below grade which exceeds the unrestricted standards will have to be removed. 3/19/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 4/11/13 - Raphael Ketani. I received and reviewed the EBC 4/11/13 additional 3 borings report. The borings were conducted in the vicinity of MW-6. They were designated as B6 to B8. B6 was just to the west of MW-6. B7 was about 17 feet west of B6. B8 was about 13 feet east of MW-6. Sampling was continuous from grade to 20 feet bgs. The sample with the highest PID detection in the respective boring and the sample at the bottom of each boring were retained and sent to the lab for analysis. The total VOCs ranged from 432 ppb in the 18 to 20 foot sample from B7 to 113,100 ppb in the 18 to 20 foot sample from B6. B6 had the most contamination in the 18 to 20 foot sample with the highest analyte concentration as 32,000 ppb of total xylenes. B7 had the most contamination in the 3 to 5 foot sample with the highest analyte concentration as 4160 ppb total xylenes. B8 had the most contamination in the 13 to 15 foot sample with the highest analyte concentration as 8400 ppb of ethylbenzene. The SVOC results were mostly non-detect with many low benzo series hits in the 3 to 5 foot sample from B7. However, naphthalene hits were present in the 18 to 20 foot sample from B6 and in both samples from B8. I drafted a letter approving the report and stating that the Department required the remediation of the contamination at the locations of B6 to B8 and MW-6. The letter was submitted to Mr. Hussein for his approval. 4/17/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out with a due date of May 24, 2013 for the submission of the work plan for remediating the contamination under the sidewalk and the street. 4/24/13 - Raphael Ketani. Mr. Sosik submitted an addendum to the 3/2/13 RAWP dated April 24, 2013. The only change from the previous RAWP was that treatment solution injections will take place in the vicinity of MW-6 in order to remediate the soil contamination at this location. I approved the addendum and responded via e-mail, but I strongly warned Mr. Sosik that he and 291 Metropolitan Realty were responsible for obtaining all of the necessary permits to conduct the injections and must consult with Con Edison, the NYC DEP, the NYC DOT and other concerned parties regarding the work he intends to perform. I also warned him that confirmatory soil samples and groundwater samples will need to be taken in each treatment area and that if the results are still well above the CP-51 standards and the TOGS 1.1.1 standards, then solution injections will have to be done again. I told him to make sure that

G&A AUTO REPAIR (Continued) **S108294903**

the solutions travel to the
contamination under the road. 6/14/13 - Raphael Ketani. I called Mr. Sosik (631) 504-6000, ext 112
regarding progress at the site. He said that the service station building will be demolished next
week. This will be followed by the site excavation the following week. 8/12/13 - Raphael Ketani. I
called Mr. Sosik today to find out what progress had been made at the site. He said that the
building had been demolished and test pits had been performed to characterize the waste. The soil
results indicated that they could dispose of the material at either Clean Earth of Soil Safe.
However, the excavation contractor has not made contact with Mr. Sosik in some time. The permits
are in place and NYC OER has given the go ahead to do the work and to construct the building. I
told Mr. Sosik that the permits have expiration dates. So he should get ahold of the contractor and
start the work before they expire. Mr. Sosik said that he knows this and he will call the
contractor and find out what the hold up is regarding doing the excavation. Mr. Sosik said that he
will send an e-mail when he has a definite start date. I told him that will be fine. 8/27/13 -
Raphael Ketani. A meeting took place today at the office of the NYC OER. In attendance were Mr.
Grunfeld, Mr. Sosik, and Dan Walsh, Mr. Chawla and Ms. Moore (212) 442-6372 of the NYC OER, and
myself. The meeting was held in order to iron out some of the details of the work that will take
place and associated matters. The topics discussed included: excavating the site down to 12 feet
below grade, treating all of the hot spots (both within the building footprint and under the
Metropolitan Avenue sidewalk) with solution injections, monitoring truck traffic and dust,
monitoring odors and noise during the excavating and construction, the submission of a work plan
for the excavating and solution injections to the DEC for approval and sending progress updates to
OER and DEC. Mr. Grunfeld stated that digging should start tomorrow and continue for two to three
months. An estimated 3,000 cu. yds. of soil will be removed. The soil will go to Soil Safe in
Carteret, NJ and Prospect Park, NJ. Soil Safe will supply all of the trucks. Manifests will be
received by EBC for each load of soil. A vapor barrier, VB20, will be installed as part of the
building construction. Mr. Sosik stated that there will be 8 injection points. I mentioned that
confirmatory soil samples and groundwater samples will need to be taken 1 month after each
injection round. Mr. Sosik said that this will be done. One of Mr. Grunfeld's assistants mentioned
that the floor of the excavation will remain as open dirt until the soil treatment is finished.

G&A AUTO REPAIR (Continued) **S108294903**

After this, a concrete slab will be poured. I mentioned that removing as much of the soil contamination was important because VOCs can get washed down into the groundwater by the rain, make there way under the school which is downgradient and result in vapors coming up into the school. Mr. Grunfeld said that they will make sure that the soil is treated. He also stated that the school will be notified about the excavation plan. I asked whether the community board had been notified about the impending work. Mr. Chawla said that they had been. One of Mr. Grunfeld's assistants stated that the dirt trucks will enter and leave the site from Metropolitan Avenue, not the street next to the school. Work will start at 7:30AM and end at 3:30PM. I suggested that both dust and noise monitoring take place during the excavating in particular. I also added that the soil results must meet the unrestricted residential standards and the groundwater must meet the TOGS 1.1.1 standards for the case to be closed. Everyone agreed that they understood what was to take place and the meeting adjourned. 10/18/13 - Raphael Ketani. I spoke to Kevin Brussee and Mr. Sosik (631) 504-6000, ext 112 by phone regarding progress at the site. They mentioned that the construction crew had been working at the site for only 6 full days. They had to do some site preparation work before conducting the excavating. The excavating is taking place starting at the rear of the property and they will work towards the front. Right now, they are digging just to make the pit for the building. They will dig to remove the contamination later. The crew is putting in the footings, but only in the back. Progress reports are being sent to the NYC OER and will be sent to the DEC. I received 9 Daily Status Report documents for the period from 9/11/13 to 10/15/13. They indicated that the contaminated soil was being sent to Soil Safe in New Jersey and that the clean soil was being sent to the Malanka Landfill in New Jersey. Pictures of the clean soil showed red brown glacial till with a few boulders and cobbles and a good percentage of fines. The north half of the site had been excavated by 10/15/13. A vapor barrier was installed under the footings. Concrete buttoning up had been done in the northwest corner where the neighboring building was still standing. Other pictures showed rebar form work taking place in the northeast corner by 10/15/13. I had no comments about the reports. Later, Mr. Brussee sent me the following documents: Soil Safe 8/28/13 approval letter for receiving excavated soil from 0 to 6 feet below grade Fill Material Certification Letter dated 9/3/13 for the Malanka Landfill for soil originating from greater than 6 feet below grade Test Pit location map with the 7/16/13 soil

G&A AUTO REPAIR (Continued) **S108294903**

analytical report I reviewed the documents, but had no comments. 10/28/13 - Raphael Ketani. Mr. Brussee sent me some pictures of a previously unknown UST that was uncovered under the southeast corner of the property. He explained in the e-mail that: One 275-gallon UST was encountered at 291 Metropolitan Avenue today. I will prepare an updated PBS application once excavation is completed just in case we find another one later. Although there were some rust holes in the tank, it does not appear as though the tank leaked. The tank is still full and no contaminated soil below the tank was observed. A tank removal company will be retained to cut and clean the tank, and I'll be sure they issue a NYCFD tank removal affidavit. I responded back by e-mail that a site map from ASR dated 8/6/09 shows the existence of a waste oil UST at the same location. I added that people need to look at the old maps and see where other features may be in order to avoid tearing them open and creating a spill.
10/29/13 - Raphael Ketani. I reviewed the October 28, 2013 Daily Status Report. Seventeen truck loads of contaminated soil were sent to Soil Safe. Excavation in the southeast corner of the site went down from 0' to 6' below grade. The foundation wall was installed in the northern part of the site. Troy Cutter came and removed the 275 gal. tank after it had been cleaned out. Picture 4 of the report shows a worker shoveling out thick sludge from the tank. The tank appears to have been filled completely with sludge. The air monitoring results were within ambient air limits. I approved the report. However, I sent an e-mail to EBC stating that the DEC wanted confirmation that the area where the UST had been emptied was clean. Later, Mr. Brussee sent me 3 photos showing the handling of the tank and the work area after the tank was emptied and removed. The floor in the area looked clean. 11/4/13 - Raphael Ketani. Mr. Brussee sent me copies of the tank removal paperwork. 12/2/13 - Raphael Ketani. I spoke to Mr. Brussee (631) 504-6000 regarding progress at the site. He said that they had basically dug down 12 feet below grade throughout the site. However, there is one corner with gray soil. He added that they want to remove this area of gray soil and then bring in a geoprobe to put in the injection wells. The construction crew may be putting in footings now. Otherwise, nothing else significant is happening. 12/18/13 - Raphael Ketani. I had a phone conversation with Mr. Sosik (631) 504-6000, ext 112. He said that the contractor is presently removing the contaminated soil in the excavation pit. Also, a drilling rig was lowered into the pit in order to drill holes for treatment solution injection. I told Mr. Sosik

G&A AUTO REPAIR (Continued) **S108294903**

that the contractor should follow the soil contamination in order to remove as much contamination as possible. 2/12/14 - Raphael Ketani. I tried to contact Mr. Sosik regarding progress at the site, but I could only send an e-mail. 2/24/14 - Raphael Ketani. I made an unannounced site visit today to see the physical status of the site. I took a few pictures. A large pit had been excavated. The building was being constructed. The steel frame had been partially completed. Workers were pouring concrete and doing masonry work. The sidewalk did not appear to have been dug up in order to remove the contamination at the location of MW-6 and borings B-6 to B-8. In fact, the plywood wall along the sidewalk obscured the location of MW-6 and B-6 to B-8. There were viewing portals in the plywood walls, but there was nothing else to see except the construction that was taking place. So, I left the site. 2/26/14 - Raphael Ketani. I spoke to Mr. Sosik (631) 504-6000, ext 112 today regarding the submission of the remediation report. He told me that the remediation hadn't been completed yet and that is why DEC didn't get the report. He added that the contaminated soil was dug out from under the sidewalk. End point samples were taken about 2 months ago in the excavation pit. The injection points were installed, but the solution injections have not taken place yet. He wasn't sure why. Mr. Sosik will send the NYC OER Interim report. However, he was not sure when this report will be completed as he has to follow a very specific format and there is a lot of information to include in the report. 5/20/14 - Raphael Ketani. As progress reports have not been submitted. I sent Mr. Sosik (631) 504-6000, ext 112 an e-mail requesting the NYC OER Interim Report. 5/21/14 - Raphael Ketani. Mr. Sosik responded by e-mail stating that there will not be an Interim Report. A Final Report to OER will be submitted. Mr. Sosik added that it will take several weeks to put the report together. 6/23/14 - Raphael Ketani. As I hadn't received the Final Report from Mr. Sosik (631) 504-6000, ext 112/(631) 357-4927, I left a voice message on both of his phones requesting this report. 8/25/14 - Raphael Ketani. Since my last voice message to Mr. Sosik, we had discussed the submission of a final report for the site. He had told me weeks ago that the NYC OER had a rigid format that must be followed regarding report submission and what each report must contain. So, he couldn't submit the final report at the time. However, he had told me that he would send it eventually. As the report still hasn't been received, I sent him [(631) 504-6000, ext 112/csosik@ebcincny.com] an e-mail requesting it. 11/25/14 - Raphael Ketani. As Mr. Sosik hasn't sent the final report, I sent him another e-mail requesting the

G&A AUTO REPAIR (Continued) **S108294903**

report. 11/26/14 - Raphael Ketani.
Mr. Sosik responded by e-mail today that the site is on his list of projects to finish. He added
that there were endpoints taken from the sidewalk and injections performed. 3/10/15 - Raphael
Ketani. I sent an email to Mr. Sosik (631) 504-6000, ext 112/(631) 357-4927 /csosik@ebcincny.com
requesting the closure report. 6/26/15 - Raphael Ketani. As there has been no response from Mr.
Sosik in some time, I sent an email to Ms. Hollinger (jrhollinger@juno.com) stating that the
Department was owed the closure report as part of the requirements of the Stipulation Agreement in
order to close the spill case. Ms. Hollinger responded back that she was waiting to hear from the
R.P.'s attorney. 6/29/15 - Raphael Ketani. I made an unannounced site visit today. The building had
been completely constructed. It appeared that they had finished construction just recently as the
planting areas between the sidewalks and the street were still just areas of dirt. I saw some
construction workers standing outside the front of the building (which faces the school). They were
not going into the building and the building itself was locked and dark. I took a picture of the
building and the sidewalk along Metropolitan Avenue which still had access ports for 3 wells. After
this, I left the site. 9/16/15 - Raphael Ketani. The excavation within the footprint of the new
building was deep enough (about 20 feet) to remove the great majority of the soil contamination and
almost all of the groundwater contamination. The only soil contamination which remained was in the
area of the former remote fill port, which was under the utilities and could not be removed easily
or treated. Given the present condition of the site, I determined that the spill had effectively
been remediated and that the residual contamination was not a threat to the public or the
environment. Therefore, I closed the spill case effective today.

Remarks: not yet cleaned

Updated By: LAGORTON
Site Description: Location: The 1.21 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the east side of Porter Avenue between Anthony and Lombardy Streets. Site Features: The site consists of one 1-story brick building, three 1-story metal sheds, two truck parking areas and a bus parking lot. The site is surrounded by other commercial and industrial properties. A large National Grid energy facility is located one block south of the site across Lombardy Street. Sergeant William Dougherty Playground is located one block northwest of the site across Anthony Street, and the elevated Brooklyn-Queens Expressway (I-278) is located one block to the north. A small residential area is located one block southwest of the site. Current Zoning/Use(s): The site is zoned for manufacturing. The site is currently used as a marble and granite distribution warehouse and and a City-Wide truck maintenance shop at 498 Porter Avenue. Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was utilized as a brass foundry from the 1960's to 1993, and a Department database which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing). This investigation was conducted in several phases, and was completed in the Summer of 2009. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~110' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~130-135' below ground surface). Groundwater is approximately 45-55' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,000' northeast of the site.
Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been detected up to 1,800 parts per billion or ppb (compared to a groundwater standard of 5 ppb). - Soil PCE has been found in on-site soils at concentrations up to 220 parts per million or ppm (compared to a commercial use soil cleanup objective of 150 ppm). - Soil Vapor Concentrations of PCE have been found up to 19,000 ug/m^3. Concentrations of TCE have been found up to 1,300 ug/m^3.
Health Problem: Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

SHWS:
Name: FORMER CLEANERS SALES & EQUIPMENT CORP
Address: 135 KENT AVENUE
City,State,Zip: BROOKLYN, NY 11249
Program: HW
Site Code: 480999
Classification: N
Region: 2
Acres: 0.270
HW Code: 224177
Record Add: 04/19/2013
Record Upd: 10/30/2013
Updated By: BXANDERS
Site Description: Location: The site is located in an urban area at 135 Kent Avenue in the Borough of Brooklyn, Kings County, NY. The site is bordered to the north by North 6th Street, to the west by Kent Avenue, to the south by a vacant 2-story warehouse (see BCP site no. C224159), and to the east by a three story building which appears to consist of a garage on the first floor with residential above. Single and multi-family residential is located across North 6th St. and newly-constructed multi-story residential towers are located across Kent Avenue. Site Features: The Site currently consists of a 11,000 sq. ft. (0.27 acre) 2 story brick building with commercial units on the first floor and residential units on second floor. Current Zoning/Use(s): The site is currently zoned M1-2 (manufacturing) with an R6A (residential) overlay. The site is located within the Greenpoint-Williamsburg Rezoning District, and is surrounded by mixed commercial and residential uses. The Site has a NYC Restrictive Declaration (similar to E-Designation) for Hazardous Materials (E-138) and Air Quality (E-227). Past Site Use(s): The Site was previously occupied by a warehouse which operated as a commercial dry cleaner supplies distribution facility (Cleaners Sales & Equipment Corp.). This facility operated from about 1958 to 2002. Cleaners Sales & Equipment Corp. has a USEPA ID no. NYR000113480 for hazardous waste generation (tetrachloroethylene, or PCE). Furthermore, the site is a registered Chemical Bulk Storage Facility (CBS No. 2-000353 for a 5,000 gallon aboveground PCE storage tank) and Petroleum Bulk Storage facility (PBS No. 2-608579 for a 3,000 gallon closed-in-place underground storage tank. Site Geology and Hydrogeology: Soil borings installed on a neighboring property identified fill materials consisting of medium-grained sand with some gravel and brick fragments to a depth of approximately 8 feet below grade. Beneath the surface fill layer is sand and gravel to a depth of at least 28 feet below grade. Groundwater is present at a depth of approximately 12 feet below grade. Groundwater flows generally to the west-southwest towards the East River, which is located approximately 550 feet west of the site. Borings done in the sidewalk on N 6th St showed sand to 28 feet followed by a clay layer and then silty sand at 35 feet. Groundwater was at 17 feet below ground surface. This site has been accepted into the Brownfield Cleanup Program and, therefore, investigation and remediation will occur under that program. The site Index is C224177.
Env Problem: Nature and Extent of Contamination: Recent sampling was conducted as

CLEANER SALES & EQUIPMENT CORP. (Continued) **S103942699**

	part of the Remedial Investigation for the adjacent BCP site. Soil vapor samples were collected from immediately in front of the loading dock for the former cleaner supply facility, which identified PCE at a concentration of 25,300,000ug/m3, and TCE 10,400 g/m3 and cis-1,2-DCE at 7,060 ug/m3. Significant Threat: Based upon the soil vapor sampling results there is a potential for inhalation of the site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures. The NYSDOH made an evaluation of significant threat for this site. The site was accepted in the Brownfield Cleanup Program (BCP) and the Index # is C224177.
Health Problem:	Volatile organic compounds related to the site in the groundwater may move into soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

DEC Memo:	6/3/15: Mahat t/c: DEC Mahat left a voice message to Rebecca Tummon @ 212.464.8689 to call back with more information about the spill and its progress. 6/9/15: Mahat DEC Mahat received a call from Rebecca Tummon providing more information about the spill case. The site is a e-designated site. Excavation has been perforemed and end point samples will be taken. A complete report with manifest, lanboratory analysis, conclusion , and recomendation will be submitted to DEC for closure review. DEC is waiting for a report. 8/21/15:Mahat t/c: DEC Mahat left a voice message Steve @ grant engineering to call back with more information on the site. 10/1/15: Mahat DEC Mahat left a phone message with Emily @ Grant for a call back from the case manager. DEC Mahat received a call back from Steve and he will provide a closure report as soon as he can. 10/1/15: Mahat e/c: DEC

OER SITE- 13CVCP155K (Continued) **S117973783**

Mahat received an email update: Email : Hi Santosh Good speaking with you earlier. I am writing this email so you have my contact information. We are working on the Spill Closure memo as discussed over the phone. Thanks, Stephen Morse, PE 139 Fulton Street - Suite 907 - New York, NY 10038 Office - 212.464.8689 Mobile - 917.273.8236 www.GRANTpllc.com DEC is waiting for a spill closure report. 12/08/15: Mahat DEC Mahat left a voice message to Mr. Morse to call back with more information. 10/6/2016: Rashad Spill will be reassigned to DEC Omar from DEC Mahat. 10/11/2016: Rashad 50 Greenpoint Ave has an alternate address of 50-54 Greenpoint Ave. No additional spills found. PBS# 2-612463 found for site, there are 5 550 gallon gasoline USTs removed in 2015 and 1 550 gallon waste oil UST removed in 2015. No documents found in D2. 11/4/2016: Rashad As per PBS 80 West Street may also be alternate address. Brief review of RIR and RAWP found on OER Repository is as follows: The site is currently undeveloped vacant and uncapped, the lot is currently being used for container storage. The site will be redeveloped with a 6 story apartment building. It will include a full cellar which will be used for parking, storage, and utility rooms. The site will be excavated to a depth of 10.5 feet below grade, elevator pits will extend to 15 ftbgs. A Phase 1 conducted by Hydrotech identified the site as a gas station and repair facility from 1942-1965. Depth to groundwater ranges from 9-10 feet, groundwater flows northeast to southwest. Soil samples detected PCE at 1700ppb and various SVOCs, no VOCs were found above standards. TCE was detected in groundwater at a max of 13ppb, and several SVOCs were also detected. Soil vapor samples recorded a max concentration of PCE-983ug/m3, it was also detected in all 5 samples. TCE was also detected in all 5 samples, with the max being 865-ug/m3. VOCs were also found in soil vapor samples. Brief Review of RAWP is as follows: Site is in NYCVCP program and the remedial plan consists of collecting 5 endpoint samples, installation of an SSDS, a waterproof vapor barrier, and an engineered composite layer. I emailed Stephen Morse to obtain closure report/memo with regards to the tanks and samples found. Email: smorse@grantpllc.com. 11/8/2016: Rashad Received email from Emily of Grant with closure documentation. Closure report, analytical results, and manifests have been uploaded to D2. Review of closure report is as follows: This site is registered NYCVCP and E-designated site. Excavation at the site in grid A1 was ongoing when the first fuel tank was found and punctured by the excavator releasing an estimated 5-15 gallons of fuel into the soil. Excavation of the soil was stopped and three additional tanks were

OER SITE- 13CVCP155K (Continued) **S117973783**

found that day. On June 1, 2015
AB Environmental was on site to drain the contents from the 4 550
gallon USTs. AB removed a total
of 1310 gallons of petroleum contaminated water from the tanks. On
June 2, 2015 one additional fuel
tank was found during excavation in grid A1. AB also drained and
removed the 5th tank. End point
samples were advanced on June 9, 2015. The samples taken from grid A1
within the excavated area
beneath the spill. Nine end point samples were taken from grid A1.
Soil sample SC-1: ND VOCs,
exceedances in SVOCs SC-2 - SC-5 VOCs, SVOCs ND EPC1-1 - EPC1-4 VOCs,
SVOCs ND. Spill will be
closed based on the following; site is a NYCOER VCP site as well as
E-Designated, the new
development will have an SSDS as well as vapor barrier and engineered
composite layer. The
petroleum spill associated with the 5 discovered tanks has been
remediated as per end point samples
in submitted closure report and the tanks have been registered with
the Department, see
PBS#2-612463. Closure letter prepared and mailed to property owner as
well as emailed to Stephen
Morse. Letter uploaded to D2.

Remarks: 550 gal ust/found 4 tanks during excavation/clean up underway

Control Code:	18
Control Type:	ENG
Date Record Added:	10/03/2013
Date Rec Updated:	04/25/2024
Updated By:	WYZHENG
Site Description:	Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.
Env Problem:	Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the

149 KENT AVENUE (Continued) **S117742197**

movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Date Record Added:	10/03/2013
Date Rec Updated:	04/25/2024
Updated By:	WYZHENG
Site Description:	Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.
Env Problem:	Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the

149 KENT AVENUE (Continued) **S117742197**

movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Control Code: J
Control Type: INST
Dt record added: 10/03/2013
Dt rec updated: 04/25/2024
Updated By: WYZHENG
Site Code: 463657
Site Description: Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.
Env Problem: Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic

149 KENT AVENUE (Continued) **S117742197**

compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.
Env Problem: Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual

149 KENT AVENUE (Continued) **S117742197**

	contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Site Code: 463657
Site Description: Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.
Env Problem: Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products

The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

149 KENT AVENUE (Continued) **S117742197**

Env Problem:	Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Site Code: 463657
Site Description: Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with

149 KENT AVENUE (Continued) **S117742197**

	trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.
Env Problem:	Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaiton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Updated By: GWBURKE
Site Description: Empire State Varnish Company, Inc. is located at 38 Varick Street, Brooklyn, NY. The Property is situated along the east side of Varick Street approximately 200 feet from the corner of Bridgewater Street in the Greenpoint section of Brooklyn. The irregular shaped Property also fronts on Bridgewater Street. The Property is zoned M3-1 and consists of an approx. 30,000 sq. ft. lot improved with several small buildings utilized for the production of varnish and paint. Empire has been producing paint and varnish on-site since the 1930's. The production process involves heating and mixing natural or synthetic resins with a vegetable oil. This mixture is then cooled and blended with a volatile solvent in large kettles. The oils primarily used by Empire are soybean and linseed oils. The volatile solvent commonly used by Empire is mineral spirits. The mineral spirits were stored on-site in underground storage tanks until the early 1980's. The facility currently uses only aboveground tanks or 55-gallon drums to store raw materials or finished product on-site. A consent order was completed to close the site under RCRA. Since this site is located across from Exxon site (Greenpoint), Exxon showed interest in acquiring this property to extract the free product in groundwater migrating from their site. RCRA agreed to transfer the Empire site to DER to close the site under the remediation program. Consent order has been amended to transfer the responsibility to DER. Empire has submitted a closure plan and ROUX Associates has submitted a report with the details of their investigation. Closure activities begun in August 2007. All the undergound and above ground tanks were removed along with the drums, containers, cehmical equipments and other misc. items and disposed off-site. The soils excavated during the removal of USTs were sampled and properly disposed. The closure activites were completed in December 2007. The final closure report was submitted in February and was approved. The No Further Action letter was sent to the owner on February 29, 2008.
Env Problem: Other than physical hazards at the site there are no significant environemntal hazards from this site. The groundwater at the site is contaminated but the contamination was contributed from the Exxon Mobil (Greenpoint) spill. Recent investigation results indicate the presence of free product in groundwater at the site. Closure activities begun in August 2007. All the undergound and above ground tanks were removed along with the drums, containers, chemical equipments and other misc. items and disposed off-site. The soils excavated during the removal of USTs were sampled and properly disposed. The closure activites were completed in December 2007. The final closure report was submitted in February and was approved. The No Further Action letter was sent to the owner on February 29, 2008. Now the ownership of the property is transferred to Exxon. The consultant for Exxon is installing extraction wells to remove the free product in the groundwater.

Region: 2
Acres: 3.500
HW Code: 224135
Record Add: 06/25/2009
Record Upd: 04/14/2025
Updated By: LAGORTON
Site Description: Location: The site is located at 460 Kingsland Avenue in the Greenpoint section of Brooklyn, New York (Figure 1). 460 Kingsland Avenue is located within a commercial/industrial area and is bordered by Newtown Creek to the east (which has served as an industrial water way for nearly 140 years), Kingsland Avenue to the west, Greenpoint Avenue (John Jay Byrne) Bridge to the north, and OU-4 to the south. To the east, Newtown Creek has been designated a Federal Superfund Site and is under the jurisdiction of the United States Environmental Protection Agency (USEPA). Site Features: The property is composed of an approximate 3.55-acre parcel, identified as Block 2612 Lot 20 on the Brooklyn tax map. Land surface elevations are approximately 7 feet above mean sea level (AMSL) within the southeastern portion of and gradually rise to approximately 11 feet (AMSL) within the northwestern portion of the site. Currently, the site contains two abutting one-story buildings. Current Zoning and Land Use: The property is zoned M3-1 for heavy manufacturing and industrial use. Exterior areas are paved and used for parking and storage. The site is subleased to numerous third parties for parking, storage, and for use as office space. Past Use of the Site: Historical maps indicate the site and surrounding areas were undeveloped marshlands until the late 1800s when the land was filled for industrial development. The northern portion of the site was operated by the Columbus Distilling Company and the Chris Cunningham Boiler Works from approximately 1892 to 1919. The southern portion of the site was operated by ExxonMobil s predecessors as part of a petroleum refinery operation from approximately 1892 to 1920. By approximately 1920, refinery operations had expanded to include the entirety of 460 Kingsland Avenue. The refinery operations within the site continued until 1966. Under ExxonMobil s former operations, 460 Kingsland Avenue also served as a petroleum bulk storage yard. An oil water separator (OWS)

460 KINGSLAND AVENUE (Continued) **U003074537**

was located along southern site boundary. Based on a review of historic aerial photographs, the OWS appears to have been filled sometime between 1961 and 1966. In 1967, ExxonMobil s predecessors sold the property to a freight company and a trucking terminal was built, which currently remains on-site. On or about August 29, 1981, a former site owner reported that the bulkhead had collapsed into Newtown Creek, along with considerable amounts of fill/soil, asphalt parking lot and concrete curb stop. The bulkhead collapse was repaired with fill and a new steel sheet pile bulkhead was installed along the property. As documented in the Updated PCB Source Evaluation Report (September 7, 2012), PCB contamination in this area appears to be attributable to PCB-laden fill materials associated with the bulkhead reconstruction. Site Geology and Hydrogeology: The stratigraphic units underlying the site form three distinct hydrogeologic units; the shallow aquifer, the shallow confining unit, and, the regional aquifer. The shallow aquifer is primarily comprised of the saturated fill materials deposited above the historical creek and marsh sediments. The depth to groundwater in the shallow aquifer varies from approximately 1.5 to 8.5 feet below land surface (ft/bls) within the site and the saturated thickness of the shallow aquifer within the site is typically less than 10 feet. The shallow confining unit is made up of deposits from the historical creek and marsh sediments. Historically, marsh land and open water covered the entirety of 460 Kingsland Avenue. The shallow confining unit ranges in thickness from approximately 5 to 20 feet across the site. The shallow confining unit has very low groundwater movement rates such that, it isolates the shallow aquifer from the underlying regional aquifer. This causes confined or semi-confined conditions within the regional aquifer. The geology of the shallow confining unit is identified as a clay or peat material with varying levels of silt.
The regional aquifer is found throughout the site below the shallow aquifer and shallow confining unit. It is made up of fine to medium grained sands, with varying amounts of silt and coarser materials and was found to be at least 10 to 15 feet in thickness. Groundwater movement is consistent in the regional aquifer compared to the shallow aquifer, due to the sand and silty sand material that comprise this layer.

Env Problem: Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present. Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL ALSO SEE LATER, CLOSED SPILL REPORT NO. 9403747. 10/10/95: This is additional information about material spilled from the translation of the old spill file: HEAVY FUEL OIL. 03/29/04 Related to Mobil Greenpoint spill Transferred from Miller to Rommel. 10/12/04 Received call from John Harrison, EcolSciences, Rockaway, NJ, 973-366-9500, representing potential buyer. Plans to FOIA the file. Rommel 3/4/05 - Mr. Arthur Max, a consultant representing the current owner called to inquire about what it takes to close out the case. His Number is 201-867-6777. Transfer it to Alex Zhitomirsky. - KST 3/31/2005 According to Arthur Max Yellow Freight pulled some tanks in 1994. They found and removed most of the soil contamination. DEC asked to remove more contamination around the perimeter. Woodward Clyde stated that due to the Mobil spill and high background contamination there is no point in removing more soil. Weintraub real estate company was hired by Yellow Freight. Alex Zhitomirsky requested on March 4, 2005, that the responsible party should submit documentation supporting their case to NYSDEC. AZ 9/26/2005 Conversation with Arthur Max. They want to buy this property and inquired what should be done in order to close this spill. I responded that site assessment should be performed. Gw wells installed at the property and along the perimetr of the property in order to compare background contamination with the site contamination. AZ 1/17/2006 I left a message for Arthur Max. Investigation/delineation is pending. AZ 1/18/2006 I contacted Arthur Max (Weintraub, Casey - Realtors 201-876-6777). He informed me that they sold this property in November 2005 to Sagres, LLC 2 Galasso Place, Maspeth, NY 11378 718-456-1800(?)(they are in the same building as Galasso Trucking). I contacted Frank Galasso (partner) at 718-456-1800. He said that I should talk to Phil Galasso (partner)516-965-7766. He will ask him to contact me ASAP. AZ 4/3/2006 I contacted Phil Galasso (Reveal New Sag LLC.)516-965-7766. He will file for FOIL and have his consultant contact me. AZ 6/13/2006 I left a message for John Urda (DEC Legal)requesting his assistance with this

460 KINGSLAND AVENUE (Continued) **U003074537**

case. AZ 6/14/2006 Jon Kolleeny recommended to refer this case to J. Urda. J. Urda recommended to send RP a short form STIP. J. Kolleeny supported this recommendation. A short form STIP was sent to Phil Galasso, Sagres LLC, 2 Galasso Place, Maspeth, NY 11378 AZ 6/27/2006 Received a message from Steve Russo (212-421-2150). Left a message for Steve Russo. AZ 6/27/2006 Conversation with Steve Russo, attorney for the owner (Reveal New Sag). He works for Sive Paget company(212-421-2150). They will send me report for review. I will get back to them when I review the report. AZ 6/28/2006 The report does not contain a map showing the locations of the old excavated tanks (15 USTs). No borings were installed near the old tank field. Fingerprint analyses were not attached. AZ 7/27/2006 Left a message for Steve Russo (Sive, Paget & Riesel). AZ 8/2/2006 Conversation with Steve Russo (212-421-2150). I conveyed to him that the report lacks essential information:borings/wells were not installed near the old tank field; there is no map showing the old excavated tanks (15 USTs), fingerprint analyses were not attached to the report. DEC requested new borings/wells installation, mointoring of the new wells and fingerprint analyses of the free phase. He will get back to me with a plan of actin in a week. AZ 8/10/06 I sent e-mail to Steven Russo Sive, Paget & Riesel, P.C. at 460 Park Avenue New York, New York 10022(212) 421-2150 confirming the additional items that should be submitted to DEC: 1. A sampling plan providing for the installation of groundwater wells and collection of soil samples proximate to the area where the former Yellow Freight USTs were excavated 2. Reflect the former UST location on the map or maps accompanying the supplemental sampling plan 3. Provide results of historic and new fingerprint analysis of petroleum, if any, collected from the newly installed monitoring wells or, if no free product is collected from the wells, from soil samples. AZ 1/31/2007 I contacted Steven Russo @ (212) 421-2150 (Sive, Paget & Riesel). Exxon Mobil is preparing an extensive sampling plan for this site which will be submitted within a month. He will send me fingerprint analyses and a map with tank locations. He will forward a sampling plan as soon as it will be available. AZ 2/6/2007 Received historical and current fingerprint analyses from Steve Russo. He stated that we are hoping to finalize access issues with Exxon Mobil in the next week so that a work plan to more fully investigate the site can be submitted shortly. AZ 4/13/2007 Received e-mail from Ed Hampston (DER Albany). He received proposed investigation plan (part of investigations associated with the former Mobil Refinery/Terminal from Exxon) and forwarded it to Reg. 2. E.

460 KINGSLAND AVENUE (Continued) **U003074537**

Hampston will likely to request
some of their borings go beyond the first impermeable layer they encounter (or nest wells) to see
if there is deeper contamination. I reviewed the Exxon proposals and discussed the work plan with
Ed. I suggested increasing the number of wells (they initially suggested 3 wells), advancing wells
at the locations of the former Yellow Freight tanks, advancing wells near the Exxon plume
boundaries, performing fingerprint analyses on all samples, compiling detailed groundwater and soil
plume maps. AZ 11/1/2007 Reviewed Investigation Report by Roux Associates dated August 2, 2007 and
received on August 21, 2007. Nine soil borings and three new shallow aquifer wells wells and three
new regional aquifer monitoring wells were completed. SVOC and metals were detected at
concentrations greater than the NYSDEC Restricted Commercial Use Criteria in the shallow subsurface
beneath the property. with the highest concentrations present in the vicinity of SB-4, SB-7, SB-9.
PCBs were also detected at three soil borings with the highest concentrations observed at SB-6.
Although petroleum staining was observed throughout the shallow subsurface, only globules of free
product were observed at two locations that were associated historic petroleum storage operations.
There were no observed visual impacts within the regional aquifer. VOC and SVOCs are present in
groundwater above the NYSDEC AWQSGV within the shallow aquifer. PCB were detected in one location
within the sallow aquifer at monitoring well KNW-4. Within the regional aquifer, only minor
concentrations of petroleum and chlorinated compounds were observed in gw above the guidance level.
According to the report, data indicated that the free product plume present within the regional
aquifer beneath the Exxon Mobil Brooklyn Terminal to the south of the property does not extend to
the north beneath the property. AZ 12-27-2007 Letters to Phil Galasso and Exxon Mobil were sent out
by DEC (Ed Hampston - Central Office). The DEC letters required further investigation and
remediation of the site. AZ 1-9-2008 Meeting with Philip Galasso (Revael New Sag), John Urda, Ed
Hapston, Alan Michaels (by phone NYSDEC), Michael Bogin (Steve, Paget), Dan Buget. AZ 8-12-2008 The
owner is proceeding with the sale of the property. The existing building will be demolished for a
clean fill recycling operation. As part of the demo, they intend to dig out around the building
footprint, and want to know if this will be enough to close the UST spill. I recommended taking the
end point samples. Also, a work plan containing a site map with UST locations, hot spots (based on
the previous investigations), the excavation area and proposed sampling locations should be

460 KINGSLAND AVENUE (Continued) **U003074537**

submitted to DEC. I conveyed my suggestions to John Urda and Ed Hampston. AZ 10-27-2008 I have
received an e-mail from Ed Hampston who forwarded a request for spill closure by Leggette,
Brashears @ Graham. I e-mailed my response to John Urda and Ed Hampstead. AZ 10-29-2008 Conference
call with John Urda and Michael Bogin. DEC requested that New Sag investigate and remediate area in
front of the building at the locations of the former USTs (diesel, waste oil and heating oil
tanks). According to September 19, 1994 closure report, waste oil tank had 3 holes and soil in the
USTs area exhibited VOC exceedances. Also, VOC concentrations in the former USTs area exceeded the
background concentrations. DEC (Mike Mulqueen 2-27-1995) requested further investigation and
remediation. AZ 1-8-2008 A conference call with Central office was held (V.Brevdo, J. Urda, Ed
Hampston, Alan Michaels, Joseph White). The site was discussed. Central Office will work with Exxon
Mobil to address PCB contamination. AZ 2/4/2009 A meeting was held among Alex Zhitomirsky, John
Urda, Vadim Brevdo, Allan Michaels, Ed Hampston of DEC and Phil Galasso and Michael Bogin
representing Mr. Galasso. Phil Galasso and Michael Bogin presented information that appears to
support their conviction that PCB contamination and remaining petroleum contamination plums are
part of a greater Exxon Mobil plume (Greenpoint plume) and, therefore, should be
investigated/remediated by Exxon Mobil. It was decided that Albany (Ed Hempston and Allan Michaels)
will call a meeting with Exxon Mobil so the other party can present their case. If information
presented by 460 Kingsland owners is confirmed then this spill number will be closed and referred
to a main spill number of Greenpoint (Exxon Mobil)spill for further investigation/remediation. AZ
3-27-2009 After consultation with V. Brevdo, J. Urda and Ed Hampston this spill number is closed.
According to Ed Hampston, all further activities for this site will be tracked under spill #8800244
(this is the spill Central Ofiice has PIN attached). Ed Hampston intends to create a P site for 460
Kingsland. AZ

Site Description: Location: The approximately 1/2 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the northeast corner of the intersection of Lombardy Street and Varick

CHLORAL GROUP (Continued) **S102637940**

Avenue. Site Features: The site is completely covered by two (2) masonry block buildings. Current Zoning and Land Use(s): The site is zoned for manufacturing. The site is currently utilized as a warehouse. Numerous commercial and industrial properties are located to the north, east, and west of the site. A National Grid energy facility is located south of the site across Lombardy Street. The Brooklyn-Queens Expressway (I-278) is located 1 block north of the site. A residential area is located 2 blocks southwest of the site. Newtown Creek is located 4 blocks east of the site. Past Use(s) of the Site: The Department began a Site Characterization in this area during the Summer of 2011 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular area was specifically targeted for investigation based on its previous use as a lacquer storage facility in the 1930s, as a soap manufacturer from the early 1950s to 1989, and on data collected by the Department during investigations conducted at an adjacent site between 2007-2009 (ACME Steel - Brass Foundry) which indicated the presence of an additional source area along Varick Avenue between Anthony and Lombardy Streets. Site Geology and Hydrogeology: The site is underlain by a sand unit (~110' thick) with a discontinuous clayey silt/silty sand unit within the sand unit, and the Raritan formation. Groundwater is present at a depth of approximately 45-50' below ground surface in the vicinity of the site. Groundwater flows north towards Newtown Creek, which lies approximately 1,600' northeast of the site.

Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 8,400 ppb, and in deep groundwater up to 20,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. - Soil PCE has been found in soil up to 23,000 ppm @ 1-1.5' below grade adjacent to a site-related cesspool, which is well above the soil cleanup objective for unrestricted use (1.3 ppm). Significant Threat: The site poses a significant environmental threat due to the ongoing release of PCE from source areas into soil and groundwater and a significant threat to public health due to the concentrations of PCE detected in groundwater and soil, in conjunction with the proximity of occupied structures.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur in on-site structures should be evaluated. In addition, off-site sampling indicates soil vapor intrusion is a concern for off-site buildings.

Site Description: Site Location: The Equity Works Manufactured Gas Plant (MGP) site is located in an urban area in the Greenpoint section of Brooklyn, Kings County. The site is composed of three parcels of land including 222, 252 and 254 Maspeth Ave, totaling approximately two acres in size. The site is approximately two blocks from the English Kill, a tributary of Newtown Creek. Site Features: The site is occupied by a large C&D recycling facility that operates on one parcel, secure bus parking on one parcel and storage of construction and materials for C&D containers on one parcel. Each parcel is surrounded by a 20 foot high perimeter wall. Current Land Use: The site is zoned industrial/commercial. The current land use in the vicinity includes industrial, manufacturing, transportation, utility and vacant land. The 222 and 254 parcels are currently operated by Cooper Tank as a C&D sorting facility and temporary storage of new waste handling containers. The 252 parcel operates as a bus parking and maintenance area. The nearest residential property is located approximately 1000 feet to the south.The Greenpoint Energy Center, containing the larger Greenpoint former MGP, is located across Maspeth Avenue to the north. Past Use of the Site: The MGP operated from at least 1907 until 1933 according to Sanborn Fire Insurance Maps. The 1951 Sanborn shows the site is vacant with the exception of two small buildings near the southern edge of the former MGP. Based on Sanborn maps, the Site was used for storage (pipe and valves) for the period of 1965 to 1981 and appears to have been vacant during the period of 1986 to 1988. The Site has been used as a solid waste transfer facility from 1989 to the present. Operable Units: The site includes 1 Operable Unit. Transitioned from V00699 and C224050. A Remedial Investigation began in 2009 and is ongoing. Two IRMs consisting of shallow soil removal and disposal and a long-term coal tar recovery program have been conducted. Site Geology and Hydrogeology: The site is underlain by historic fill, glacial outwash sands, and silty clay. The groundwater table is approximately 5 to 10 feet below ground surface. Groundwater flow is generally toward the English Kill, to the east.

Env Problem: Nature and Extent of Contamination: The RI began in late 2009 and field work was completed in August 2015. The site is the confirmed location of a historic manufactured gas plant (MGP). Coal tar as a dense non-aqueous phase liquid (DNAPL) source material is present on the site. The coal tar is mobile, and a coal tar recovery system was installed in September 2015 as part of an Interim Remedial Measure

K - EQUITY WORKS (Continued) **S108667325**

(IRM). The coal tar recovery system consists of 21 wells, which produce approximately 150 gallons of coal tar per month. Remedial Investigation (RI) results indicate that tar has migrated onto adjacent properties. The current owner/operator of the site, Cooper Tank had utilized an on-site well to provide water for dust suppression until the RI showed coal tar in the well. National Grid has arranged to provide city water, so that use of the well is now discontinued. Coal tar constituents from MGP sites contain; Benzene, Toluene, Ethylbenzene and Xylenes (BTEX), Polycyclic Aromatic Hydrocarbons (PAHs), and cyanide. The presence of DNAPL represents a significant threat to the environment. The site is 1 .5 blocks away from the English Kill, a tributary of Newtown Creek, and several public and private buildings. The RI results indicate that coal tar has migrated a limited distance in the subsurface but has not migrated to the English Kill. The BTEX components may also contribute to soil vapor issues.

Health Problem:	Persons who dig below the ground surface may come into contact with contaminants in subsurface soil and groundwater. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in one on-site structure and measures have been taken to prevent contaminated soil vapor from entering the structure. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

MGP:

Site ID:	224050
Name:	K - EQUITY WORKS
Address:	MASPETH AND VANDERVORT AVES.
City,State,Zip:	BROOKLYN, NY 11211-
Region:	2
Class:	This classification is assigned to a site at which: 1.The disposal of hazardous waste has been confirmed and the presence of such hazardous waste or its components or breakdown products represents a significant threat to public health or the environment: or 2. Hazardous waste disposal has not been confirmed, but the site has been listed on the Federal National Priorities List (NPL).
Swis Code:	2401
Town:	New York City
Disp Start:	Not reported
Disp Term:	Not reported
Acres:	2
Fuse:	Industrial
Description:	Site Location: The Equity Works Manufactured Gas Plant (MGP) site is located in an urban area in the Greenpoint section of Brooklyn, Kings County. The site is composed of three parcels of land including 222, 252 and 254 Maspeth Ave, totaling approximately two acres in size. The site is approximately two blocks from the English Kill, a tributary of Newtown Creek. Site Features: The site is occupied by a large C&D recycling facility that operates on one parcel, secure bus parking on one parcel and storage of construction and materials for C&D containers on one parcel. Each parcel is surrounded by a 20 foot high perimeter wall. Current Land Use: The site is zoned industrial/commercial. The current land use in the vicinity includes industrial, manufacturing, transportation, utility and vacant land. The 222 and 254 parcels are currently operated by Cooper Tank as a C&D sorting facility and temporary storage of new waste handling containers. The 252 parcel operates as a bus parking and maintenance area. The nearest residential property is located approximately 1000 feet to the south.The Greenpoint Energy Center, containing the larger Greenpoint former MGP, is located across Maspeth Avenue to the north. Past Use of the Site: The MGP operated from at least 1907 until 1933 according to Sanborn Fire Insurance Maps. The 1951 Sanborn shows the site is vacant with the exception of two small buildings near the southern edge of the former MGP. Based on Sanborn maps, the Site was used for storage (pipe and valves) for the period of 1965 to 1981 and appears to have been vacant during the period of 1986 to 1988. The Site has been used as a solid waste transfer facility from 1989 to the present. Operable Units: The site includes 1 Operable Unit. Transitioned from V00699 and C224050. A Remedial Investigation began in 2009 and is ongoing. Two IRMs consisting of shallow soil removal

K - EQUITY WORKS (Continued) **S108667325**

and disposal and a long-term coal tar recovery program have been conducted. Site Geology and Hydrogeology: The site is underlain by historic fill, glacial outwash sands, and silty clay. The groundwater table is approximately 5 to 10 feet below ground surface. Groundwater flow is generally toward the English Kill, to the east.

Assess Env: Nature and Extent of Contamination: The RI began in late 2009 and field work was completed in August 2015. The site is the confirmed location of a historic manufactured gas plant (MGP). Coal tar as a dense non-aqueous phase liquid (DNAPL) source material is present on the site. The coal tar is mobile, and a coal tar recovery system was installed in September 2015 as part of an Interim Remedial Measure (IRM). The coal tar recovery system consists of 21 wells, which produce approximately 150 gallons of coal tar per month. Remedial Investigation (RI) results indicate that tar has migrated onto adjacent properties. The current owner/operator of the site, Cooper Tank had utilized an on-site well to provide water for dust suppression until the RI showed coal tar in the well. National Grid has arranged to provide city water, so that use of the well is now discontinued. Coal tar constituents from MGP sites contain; Benzene, Toluene, Ethylbenzene and Xylenes (BTEX), Polycyclic Aromatic Hydrocarbons (PAHs), and cyanide. The presence of DNAPL represents a significant threat to the environment. The site is 1 .5 blocks away from the English Kill, a tributary of Newtown Creek, and several public and private buildings. The RI results indicate that coal tar has migrated a limited distance in the subsurface but has not migrated to the English Kill. The BTEX components may also contribute to soil vapor issues.

Assess Doh: Persons who dig below the ground surface may come into contact with contaminants in subsurface soil and groundwater. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in one on-site structure and measures have been taken to prevent contaminated soil vapor from entering the structure. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Updated By:	AABARRAZ
Site Description:	Location: The site is located on the north side of Grand Street, between Bushwick Avenue and Olive Street, in the East Williamsburg section of Brooklyn. The site is approximately 0.19 acres in size, at an elevation of 39 feet above sea level. The neighborhood includes multi-use units with first floor retail use and residential units. Progress High School (K474) is located directly across Grand Street from the site. Site Features: The site was developed with a one-story commercial building with a partial basement. The original building took up the entire parcel. When the building was converted to a

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

laundromat, the front quarter (ten feet) of the building was removed and a parking lot put in its place. The above-ground portion of the building was razed in June 2014, leaving the slab. Current Zoning/Use: The property was used for commercial purposes but an apartment building is being constructed after site cleanup. The site is zoned R-7A residential with a C2-4 commercial overlay. The intended use of the site is restricted-residential. Historic Use: The site was an undeveloped portion of a larger residential property from at least 1888 through 1907. By 1928 the site was developed with a garage, later occupied by a motor freight company. Sanborn maps of the original building identify a buried gas tank located toward the front part of the building. By 1977 the building was occupied by a warehouse and non-specific commercial uses, with tenants including a sanitation company and a coffee distributor. Some time around 2009 the building was converted to its final use as a laundromat/dry cleaner drop-off and retail store. Site Geology and Hydrogeology: Subsurface soils at the site consisted of a silty non-native fill with bricks, wood, and rubble to a depth of up to 6 feet below grade. Below that is native material consisting of brown silty sand. Groundwater is present under water table conditions at a depth of approximately 30 feet below the surface and flows southwest, possibly under the influence of dewatering activities associated with the subway line along Bushwick Avenue.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in various media were as follows: Soil: Soil samples were collected from 12-14 feet below grade at nine borings, and additional deeper samples, up to a maximum depth of 27 feet, were collected from three of the borings. Based on the investigations, soil beneath the site in the vicinity of the historic underground storage tank identified on Sanborn maps was contaminated with petroleum-related VOCs, mostly above the unrestricted use soil cleanup objectives (UUSCOs) but below the restricted-residential SCOs. Contaminated soil in that area is assumed to be present from a depth of at least 15 feet down to the water table at approximately 30 feet below ground. Historic fill (soil mixed with bricks, concrete, and rubble) was found beneath the building slab at one boring location to a depth of six feet, although samples were not collected for analysis. The investigation identified petroleum-related VOCs at concentrations above UUSCOs in soil samples obtained from borings around the reported underground gasoline storage tank. The VOCs driving the remedy were 1,2,4-trimethylbenzene (maximum concentration 56 parts per million [ppm]) and mixed xylenes (maximum concentration 115 ppm). There were no SVOCs or pesticides/PCBs detected above UUSCOs. Manganese was found above the UUSCOs in one sample. Contaminated soil related to the site does not extend off-site. Groundwater: Based on the investigations, groundwater across much of the site was contaminated above standards with petroleum-related VOCs, although no significant groundwater contamination extended off-site. Contaminated groundwater was present both to the northeast and southwest of the contaminated soil, perhaps as a result of dewatering operations at the nearby subway line and station, which may have reversed the natural (to the northeast) groundwater flow gradient. Groundwater samples had concentrations of petroleum-related VOCs above the drinking water standards. These VOCs were the same as those found in the soil samples. 1,2,4-trimethylbenzene (maximum concentration 490 parts per billion [ppb]; drinking water standard 5 ppb) and mixed xylenes (maximum

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

	concentration 2,190 ppb; drinking water standard 5 ppb) were found. A few SVOCs were detected in the low part per trillion range in the samples. Soil Vapor: Multiple VOCs, including petroleum-related compounds, were detected in the soil vapor samples at low concentrations across the site with totals ranging from 226.9 micrograms per cubic meter (ug/m3) to 1,960.6 ug/m3. The highest concentrations of petroleum-related compounds were detected in the southeast corner of the property. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil (below a depth of 15 feet in the vicinity of the underground storage tanks) and groundwater is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description:	Location: The site is located on the north side of Grand Street, between Bushwick Avenue and Olive Street, in the East Williamsburg section of Brooklyn. The site is approximately 0.19 acres in size, at an elevation of 39 feet above sea level. The neighborhood includes multi-use units with first floor retail use and residential units. Progress High School (K474) is located directly across Grand Street from the site. Site Features: The site was developed with a one-story

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

commercial building with a partial basement. The original building took up the entire parcel. When the building was converted to a laundromat, the front quarter (ten feet) of the building was removed and a parking lot put in its place. The above-ground portion of the building was razed in June 2014, leaving the slab. Current Zoning/Use: The property was used for commercial purposes but an apartment building is being constructed after site cleanup. The site is zoned R-7A residential with a C2-4 commercial overlay. The intended use of the site is restricted-residential. Historic Use: The site was an undeveloped portion of a larger residential property from at least 1888 through 1907. By 1928 the site was developed with a garage, later occupied by a motor freight company. Sanborn maps of the original building identify a buried gas tank located toward the front part of the building. By 1977 the building was occupied by a warehouse and non-specific commercial uses, with tenants including a sanitation company and a coffee distributor. Some time around 2009 the building was converted to its final use as a laundromat/dry cleaner drop-off and retail store. Site Geology and Hydrogeology: Subsurface soils at the site consisted of a silty non-native fill with bricks, wood, and rubble to a depth of up to 6 feet below grade. Below that is native material consisting of brown silty sand. Groundwater is present under water table conditions at a depth of approximately 30 feet below the surface and flows southwest, possibly under the influence of dewatering activities associated with the subway line along Bushwick Avenue.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in various media were as follows: Soil: Soil samples were collected from 12-14 feet below grade at nine borings, and additional deeper samples, up to a maximum depth of 27 feet, were collected from three of the borings. Based on the investigations, soil beneath the site in the vicinity of the historic underground storage tank identified on Sanborn maps was contaminated with petroleum-related VOCs, mostly above the unrestricted use soil cleanup objectives (UUSCOs) but below the restricted-residential SCOs. Contaminated soil in that area is assumed to be present from a depth of at least 15 feet down to the water table at approximately 30 feet below ground. Historic fill (soil mixed with bricks, concrete, and rubble) was found beneath the building slab at one boring location to a depth of six feet, although samples were not collected for analysis. The investigation identified petroleum-related VOCs at concentrations above UUSCOs in soil samples obtained from borings around the reported underground gasoline storage tank. The VOCs driving the remedy were 1,2,4-trimethylbenzene (maximum concentration 56 parts per million [ppm]) and mixed xylenes (maximum concentration 115 ppm). There were no SVOCs or pesticides/PCBs detected above UUSCOs. Manganese was found above the UUSCOs in one sample. Contaminated soil related to the site does not extend off-site. Groundwater: Based on the investigations, groundwater across much of the site was contaminated above standards with petroleum-related VOCs, although no significant groundwater contamination extended off-site. Contaminated groundwater was present both to the northeast and southwest of the contaminated soil, perhaps as a result of dewatering operations at the nearby subway line and station, which may have reversed the natural (to the northeast) groundwater flow gradient. Groundwater samples had concentrations of petroleum-related VOCs above the drinking water standards. These VOCs were the same as those found in the soil samples.

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

	1,2,4-trimethylbenzene (maximum concentration 490 parts per billion [ppb]; drinking water standard 5 ppb) and mixed xylenes (maximum concentration 2,190 ppb; drinking water standard 5 ppb) were found. A few SVOCs were detected in the low part per trillion range in the samples. Soil Vapor: Multiple VOCs, including petroleum-related compounds, were detected in the soil vapor samples at low concentrations across the site with totals ranging from 226.9 micrograms per cubic meter (ug/m3) to 1,960.6 ug/m3. The highest concentrations of petroleum-related compounds were detected in the southeast corner of the property. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil (below a depth of 15 feet in the vicinity of the underground storage tanks) and groundwater is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

The site is approximately 0.19 acres in size, at an elevation of 39 feet above sea level. The neighborhood includes multi-use units with first floor retail use and residential units. Progress High School (K474) is located directly across Grand Street from the site. Site Features: The site was developed with a one-story commercial building with a partial basement. The original building took up the entire parcel. When the building was converted to a laundromat, the front quarter (ten feet) of the building was removed and a parking lot put in its place. The above-ground portion of the building was razed in June 2014, leaving the slab. Current Zoning/Use: The property was used for commercial purposes but an apartment building is being constructed after site cleanup. The site is zoned R-7A residential with a C2-4 commercial overlay. The intended use of the site is restricted-residential. Historic Use: The site was an undeveloped portion of a larger residential property from at least 1888 through 1907. By 1928 the site was developed with a garage, later occupied by a motor freight company. Sanborn maps of the original building identify a buried gas tank located toward the front part of the building. By 1977 the building was occupied by a warehouse and non-specific commercial uses, with tenants including a sanitation company and a coffee distributor. Some time around 2009 the building was converted to its final use as a laundromat/dry cleaner drop-off and retail store. Site Geology and Hydrogeology: Subsurface soils at the site consisted of a silty non-native fill with bricks, wood, and rubble to a depth of up to 6 feet below grade. Below that is native material consisting of brown silty sand. Groundwater is present under water table conditions at a depth of approximately 30 feet below the surface and flows southwest, possibly under the influence of dewatering activities associated with the subway line along Bushwick Avenue.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in various media were as follows: Soil: Soil samples were collected from 12-14 feet below grade at nine borings, and additional deeper samples, up to a maximum depth of 27 feet, were collected from three of the borings. Based on the investigations, soil beneath the site in the vicinity of the historic underground storage tank identified on Sanborn maps was contaminated with petroleum-related VOCs, mostly above the unrestricted use soil cleanup objectives (UUSCOs) but below the restricted-residential SCOs. Contaminated soil in that area is assumed to be present from a depth of at least 15 feet down to the water table at approximately 30 feet below ground. Historic fill (soil mixed with bricks, concrete, and rubble) was found beneath the building slab at one boring location to a depth of six feet, although samples were not collected for analysis. The investigation identified petroleum-related VOCs at concentrations above UUSCOs in soil samples obtained from borings around the reported underground gasoline storage tank. The VOCs driving the remedy were 1,2,4-trimethylbenzene (maximum concentration 56 parts per million [ppm]) and mixed xylenes (maximum concentration 115 ppm). There were no SVOCs or pesticides/PCBs detected above UUSCOs. Manganese was found above the UUSCOs in one sample. Contaminated soil related to the site does not

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

extend off-site. Groundwater: Based on the investigations, groundwater across much of the site was contaminated above standards with petroleum-related VOCs, although no significant groundwater contamination extended off-site. Contaminated groundwater was present both to the northeast and southwest of the contaminated soil, perhaps as a result of dewatering operations at the nearby subway line and station, which may have reversed the natural (to the northeast) groundwater flow gradient. Groundwater samples had concentrations of petroleum-related VOCs above the drinking water standards. These VOCs were the same as those found in the soil samples. 1,2,4-trimethylbenzene (maximum concentration 490 parts per billion [ppb]; drinking water standard 5 ppb) and mixed xylenes (maximum concentration 2,190 ppb; drinking water standard 5 ppb) were found. A few SVOCs were detected in the low part per trillion range in the samples. Soil Vapor: Multiple VOCs, including petroleum-related compounds, were detected in the soil vapor samples at low concentrations across the site with totals ranging from 226.9 micrograms per cubic meter (ug/m3) to 1,960.6 ug/m3. The highest concentrations of petroleum-related compounds were detected in the southeast corner of the property. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil (below a depth of 15 feet in the vicinity of the underground storage tanks) and groundwater is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 485965
Site Description: Location: The site is located on the north side of Grand Street, between Bushwick Avenue and Olive Street, in the East Williamsburg section of Brooklyn. The site is approximately 0.19 acres in size, at an elevation of 39 feet above sea level. The neighborhood includes multi-use units with first floor retail use and residential units. Progress High School (K474) is located directly across Grand Street from the site. Site Features: The site was developed with a one-story commercial building with a partial basement. The original building took up the entire parcel. When the building was converted to a laundromat, the front quarter (ten feet) of the building was removed and a parking lot put in its place. The above-ground portion of the building was razed in June 2014, leaving the slab. Current Zoning/Use: The property was used for commercial purposes but an apartment building is being constructed after site cleanup. The site is zoned R-7A residential with a C2-4 commercial overlay. The intended use of the site is restricted-residential. Historic Use: The site was an undeveloped portion of a larger residential property from at least 1888 through 1907. By 1928 the site was developed with a garage, later occupied by a motor freight company. Sanborn maps of the original building identify a buried gas tank located toward the front part of the building. By 1977 the building was occupied by a warehouse and non-specific commercial uses, with tenants including a sanitation company and a coffee distributor. Some time around 2009 the building was converted to its final use as a laundromat/dry cleaner drop-off and retail store. Site Geology and Hydrogeology: Subsurface soils at the site consisted of a silty non-native fill with bricks, wood, and rubble to a depth of up to 6 feet below grade. Below that is native material consisting of brown silty sand. Groundwater is present under water table conditions at a depth of approximately 30 feet below the surface and flows southwest, possibly under the influence of dewatering activities associated with the subway line along Bushwick Avenue.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in various media were as follows: Soil: Soil samples were collected from 12-14 feet below grade at nine borings, and additional deeper samples, up to a maximum depth of 27 feet, were collected from three of the borings. Based on the investigations, soil beneath the site in the vicinity of the historic underground storage tank identified on Sanborn maps was contaminated with petroleum-related VOCs, mostly above the unrestricted use soil cleanup objectives (UUSCOs) but below the restricted-residential SCOs. Contaminated soil in that area is assumed to be present from a depth of at least 15 feet down to the water table at approximately 30 feet below ground. Historic fill (soil mixed with bricks, concrete, and rubble) was found beneath the building slab at one boring location to a depth of six feet, although samples were not collected for analysis. The investigation identified petroleum-related VOCs at concentrations above UUSCOs in soil samples obtained from borings around the reported underground gasoline storage tank. The VOCs driving the remedy were 1,2,4-trimethylbenzene (maximum concentration 56 parts per million [ppm]) and mixed xylenes

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

(maximum concentration 115 ppm). There were no SVOCs or pesticides/PCBs detected above UUSCOs. Manganese was found above the UUSCOs in one sample. Contaminated soil related to the site does not extend off-site. Groundwater: Based on the investigations, groundwater across much of the site was contaminated above standards with petroleum-related VOCs, although no significant groundwater contamination extended off-site. Contaminated groundwater was present both to the northeast and southwest of the contaminated soil, perhaps as a result of dewatering operations at the nearby subway line and station, which may have reversed the natural (to the northeast) groundwater flow gradient. Groundwater samples had concentrations of petroleum-related VOCs above the drinking water standards. These VOCs were the same as those found in the soil samples. 1,2,4-trimethylbenzene (maximum concentration 490 parts per billion [ppb]; drinking water standard 5 ppb) and mixed xylenes (maximum concentration 2,190 ppb; drinking water standard 5 ppb) were found. A few SVOCs were detected in the low part per trillion range in the samples. Soil Vapor: Multiple VOCs, including petroleum-related compounds, were detected in the soil vapor samples at low concentrations across the site with totals ranging from 226.9 micrograms per cubic meter (ug/m3) to 1,960.6 ug/m3. The highest concentrations of petroleum-related compounds were detected in the southeast corner of the property. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil (below a depth of 15 feet in the vicinity of the underground storage tanks) and groundwater is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Geology and Hydrogeology: Subsurface soils at the site consisted of a silty non-native fill with bricks, wood, and rubble to a depth of up to 6 feet below grade. Below that is native material consisting of brown silty sand. Groundwater is present under water table conditions at a depth of approximately 30 feet below the surface and flows southwest, possibly under the influence of dewatering activities associated with the subway line along Bushwick Avenue.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in various media were as follows: Soil: Soil samples were collected from 12-14 feet below grade at nine borings, and additional deeper samples, up to a maximum depth of 27 feet, were collected from three of the borings. Based on the investigations, soil beneath the site in the vicinity of the historic underground storage tank identified on Sanborn maps was contaminated with petroleum-related VOCs, mostly above the unrestricted use soil cleanup objectives (UUSCOs) but below the restricted-residential SCOs. Contaminated soil in that area is

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

assumed to be present from a depth of at least 15 feet down to the water table at approximately 30 feet below ground. Historic fill (soil mixed with bricks, concrete, and rubble) was found beneath the building slab at one boring location to a depth of six feet, although samples were not collected for analysis. The investigation identified petroleum-related VOCs at concentrations above UUSCOs in soil samples obtained from borings around the reported underground gasoline storage tank. The VOCs driving the remedy were 1,2,4-trimethylbenzene (maximum concentration 56 parts per million [ppm]) and mixed xylenes (maximum concentration 115 ppm). There were no SVOCs or pesticides/PCBs detected above UUSCOs. Manganese was found above the UUSCOs in one sample. Contaminated soil related to the site does not extend off-site. Groundwater: Based on the investigations, groundwater across much of the site was contaminated above standards with petroleum-related VOCs, although no significant groundwater contamination extended off-site. Contaminated groundwater was present both to the northeast and southwest of the contaminated soil, perhaps as a result of dewatering operations at the nearby subway line and station, which may have reversed the natural (to the northeast) groundwater flow gradient. Groundwater samples had concentrations of petroleum-related VOCs above the drinking water standards. These VOCs were the same as those found in the soil samples. 1,2,4-trimethylbenzene (maximum concentration 490 parts per billion [ppb]; drinking water standard 5 ppb) and mixed xylenes (maximum concentration 2,190 ppb; drinking water standard 5 ppb) were found. A few SVOCs were detected in the low part per trillion range in the samples. Soil Vapor: Multiple VOCs, including petroleum-related compounds, were detected in the soil vapor samples at low concentrations across the site with totals ranging from 226.9 micrograms per cubic meter (ug/m3) to 1,960.6 ug/m3. The highest concentrations of petroleum-related compounds were detected in the southeast corner of the property. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil (below a depth of 15 feet in the vicinity of the underground storage tanks) and groundwater is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Address:	845 GRAND STREET
City,State,Zip:	BROOKLYN, NY 11211
Program:	BCP
Site Code:	485965
Acres:	0.193
HW Code:	C224181
SWIS:	2401
Town:	New York City
Record Added Date:	08/19/2013
Record Updated Date:	10/11/2018
Update By:	MJKOMORO
Site Description:	Location: The site is located on the north side of Grand Street, between Bushwick Avenue and Olive Street, in the East Williamsburg section of Brooklyn. The site is approximately 0.19 acres in size, at an elevation of 39 feet above sea level. The neighborhood includes multi-use units with first floor retail use and residential units. Progress High School (K474) is located directly across Grand Street from the site. Site Features: The site was developed with a one-story commercial building with a partial basement. The original building took up the entire parcel. When the building was converted to a laundromat, the front quarter (ten feet) of the building was removed and a parking lot put in its place. The above-ground portion of the building was razed in June 2014, leaving the slab. Current Zoning/Use: The property was used for commercial purposes but an apartment building is being constructed after site cleanup. The site is zoned R-7A residential with a C2-4 commercial overlay. The intended use of the site is restricted-residential. Historic Use: The site was an undeveloped portion of a larger residential property from at least 1888 through 1907. By 1928 the site was developed with a garage, later occupied by a motor freight company. Sanborn maps of the original building identify a buried gas tank located toward the front part of the building. By 1977 the building was occupied by a warehouse and non-specific commercial uses, with tenants including a sanitation company and a coffee distributor. Some time around 2009 the building was converted to its final use as a laundromat/dry cleaner drop-off and retail store. Site Geology and Hydrogeology: Subsurface soils at the site consisted of a silty non-native fill with bricks, wood, and rubble to a depth of up to 6 feet below grade. Below that is native material consisting of brown silty sand. Groundwater is present under water table conditions at a depth of approximately 30 feet below the surface and flows southwest, possibly under the influence of dewatering activities associated with the subway line along Bushwick Avenue.
Env Problem:	Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in various media were as follows: Soil: Soil samples were collected from 12-14 feet below grade at nine borings, and additional deeper samples, up to a maximum depth of 27 feet, were collected from three of the borings. Based on the investigations, soil beneath the site in

the vicinity of the historic underground storage tank identified on Sanborn maps was contaminated with petroleum-related VOCs, mostly above the unrestricted use soil cleanup objectives (UUSCOs) but below the restricted-residential SCOs. Contaminated soil in that area is assumed to be present from a depth of at least 15 feet down to the water table at approximately 30 feet below ground. Historic fill (soil mixed with bricks, concrete, and rubble) was found beneath the building slab at one boring location to a depth of six feet, although samples were not collected for analysis. The investigation identified petroleum-related VOCs at concentrations above UUSCOs in soil samples obtained from borings around the reported underground gasoline storage tank. The VOCs driving the remedy were 1,2,4-trimethylbenzene (maximum concentration 56 parts per million [ppm]) and mixed xylenes (maximum concentration 115 ppm). There were no SVOCs or pesticides/PCBs detected above UUSCOs. Manganese was found above the UUSCOs in one sample. Contaminated soil related to the site does not extend off-site. Groundwater: Based on the investigations, groundwater across much of the site was contaminated above standards with petroleum-related VOCs, although no significant groundwater contamination extended off-site. Contaminated groundwater was present both to the northeast and southwest of the contaminated soil, perhaps as a result of dewatering operations at the nearby subway line and station, which may have reversed the natural (to the northeast) groundwater flow gradient. Groundwater samples had concentrations of petroleum-related VOCs above the drinking water standards. These VOCs were the same as those found in the soil samples. 1,2,4-trimethylbenzene (maximum concentration 490 parts per billion [ppb]; drinking water standard 5 ppb) and mixed xylenes (maximum concentration 2,190 ppb; drinking water standard 5 ppb) were found. A few SVOCs were detected in the low part per trillion range in the samples. Soil Vapor: Multiple VOCs, including petroleum-related compounds, were detected in the soil vapor samples at low concentrations across the site with totals ranging from 226.9 micrograms per cubic meter (ug/m3) to 1,960.6 ug/m3. The highest concentrations of petroleum-related compounds were detected in the southeast corner of the property. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil (below a depth of 15 feet in the vicinity of the underground storage tanks) and groundwater is being managed under a Site Management Plan.

Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

DEC Memo:	Vacant lot, previously used as laundromat and auto repair shop.Gasoline compound in soil samples detected. Phase I and Phase II report will be sent to Kumar Patel.(sr) 06/24/13-Hiralkumar Patel. alternate address: none no PBS or other spill record found. 10:13 AM:- spoke with Charles. he mentioned that current owner baught this property recently and did Phase I and limited Phase II investigation. Charles mentioned that gasoline tank found on old sanborn maps and site was auto repair shop in past. sometime in past, front part of onsite building

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

was demolished to create
parking lot. recently the site was used as laundromat and dry cleaning drop-off. currently, site is
vacant. asked Charles to submit available environmental reports for review. also asked to provide
property owner's contact information. Charles mentioned that property owner is planning to meet DEC
Jane to discuss enrollment in BCP. 06/26/13-Hiralkumar Patel. 1:34 PM:- left message for Charles
and asked to submit environmental reports/data. 07/03/13-Hiralkumar Patel. 11:06 AM:- left message
for Charles. Charles Sosik EBC Ph. (631) 504-6000 (O) (631) 357-4927 (C) email: csosik@ebcincny.com
07/08/13-Hiralkumar Patel. 10:51 AM:- received email from Charles including summary of Phase I,
Phase II boring logs, sample results and site map. Charles mentioned that property owner had
meeting with DEC Jane (and central office) last week and will submit BCP application. email did not
included complete Phase I or Phase II reports. two borings were installed near suspected gasoline
UST, to a depth of 15 ft bg. in both borings, 10 ppm recorded on PID in 10 to 15 ft interval only.
no odors or PID readings noted above 10 ft depth. found VOC compounds in soil samples. soil
analyticals: ----------B1----------B2 10-13 ft
13-15 ft
Ethylbenzene----------230----------1,300
Xylene----------690----------6,900
1,2,4-Trimethylbenzene--1,400----------5,500
1,3,5-Trimethylbenzene----450----------1,400
Naphthalene----------290----------1,200 07/11/13-Hiralkumar Patel. 12:30 PM:- spoke with
Charles. asked him to submit complete Phase I report. asked him about Phase II report. he mentioned
that borings were installed around tank to find any contamination or not. they received sample
results and discussed with DEC Jane and DEC Cozzy regarding enrollment into BCP. they haven't
prepared any Phase II report. asked Charles to submit written investigation report with all
details. currently, they are preparing BCP application. informed Charles that the department may
require further delineation before even BCP application reviewed. 12:43 PM:- received Phase I
report from Charles. abstract: - block #: 2922 / lot #: 47 - site was an undeveloped portion of a
larger residential property from at least 1888 through 1907. by 1928, the site was developed with a
garage, later occupied by a motor freight company. by 1977, the building was occupied by a
warehouse and non-specific commercial uses, with tenants including a sanitation company and a
coffee distributor. circa 2009, the building was converted to its current use as a laundromat, dry
cleaning drop off facility, and a retail store - one gasoline tank on sanborn maps for the years

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

1933 through 1967 - gasoline tank presumed to be an UST located at the south-central portion of the
building ---------- - E designation (E-232) for hazmat and noise ---------- - depth to
groundwater at the site is approx. 37 ft bg ---------- - based on regional groundwater contour
maps, groundwater flow is expected to be east-southeast toward English Kills ---------- -
property is currently developed with a one-story commercial building with a partial basement -
building is divided into two commercial/retail units: western unit is occupied by Grand Central
Laundromat, a retail laundromat and dry cleaner; eastern unit is currently vacant, but was most
recently occupied by Interstate Laundry Parts and Equipment - small asphalt-paved parking lot area
is located in front of the building along Grand St - parking lot was formerly covered by the site
building, until site renovations conducted circa 2009 reduced the building footprint to create
customer parking - majority of the building basement extends beneath the far western section of the
parking lot - building heated and supplied hot water by natural gas-fired equipment --------- -
properties across Grand street to the south have been developed with the existing school,
identified as the Northeast Brooklyn High School and reportedly constructed between 1975 and 1980
---------- - no evidence of ASTs or USTs (e.g., vent or fill lines) was observed on the
property - no exterior storm drains were identified on the property and no interior floor drains
were observed at the time of inspection - potential buyer: Joel Braver of Express Builders JB, Inc.
---------- 2:20 PM:- sent email to Charles. asked him to submit detailed report of recent Phase
II investigation and contact information of property owner/buyer. 07/23/13-Hiralkumar Patel. 12:42
PM:- spoke with Charles. asked him to submit property owner's information. regarding Phase II,
Charles mentioned that Phase II report will be preapred after further investigation required under
BCP, if application approved. 08/13/13-Hiralkumar Patel. discussed with DEC Jane regarding BCP
application. she mentioned that property owner has to conduct required investigation/remediation,
even BCP application is rejected. spoke with Charles from Jane's office. Charles submitted BCP
application today including investigation work plan. asked Charles to submit property owner's
contact information. 2:45 PM:- received email from Charles including property owner's information.
845 Grand Development LLC. **property owner** 11 Hayes Avenue, Suite 201 Monroe, NY 10950 Attn.:
Yidal Hirsch 09/10/13-Hiralkumar Patel. discussed with DEC Jane. a BCP application (C224181) has
been received and currently it is under review. she mentioned that it

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

will take couple of months
(probably end of Dec. 2013) prior to having a signed agreement, if accepted by the department and
property owner. sent email to Larry Alden, BCP project manager in Albany. reviewed RIWP submitted
in BCP application. abstract: - redevelopment plans for the site include demolishing the existing
commercial building and replacing it with a new multi-family residential apartment building with a
full basement level - based upon results of previous investigations, subsurface soils at the site
consist of a silty non-native fill with bricks, wood and other rubble to approx. 5 to 15 ft bg. a
native fine brown silty-sand is present immediately below the fill material - based upon regional
groundwater contour maps, and measurements made at adjacent properties, the depth to groundwater
beneath the site is approx. 35 ft bg and flows west-northwest toward the East River - according to
USGS topographic map, the elevation of the property is 39 ft above the National Geodetic Vertical
Datum - propose to conduct geophysical survey of the southern portion of the property in the
vicinity of the former US -propose to install total nine soil borings (four around former UST and
five in other parts of the site), four groundwater wells and six soil-gas probes - four borings
(SB6 through SB9) will be installed in vicinity of former UST. these borings will continue to the
extent of contamination (based on visual or olfactory) or to the water table interface, whichever
comes last. if contamination is not present above the water, borings will be advanced to a minimum
depth of 5 ft below water table interface - five borings (SB1 through SB5) will be installed to the
extent of contamination or to a depth of 15 ft bg, whichever comes last - from borings SB6 through
SB9, soil samples will be collected as: one sample at grounwater interface, one from 12 to 14 ft
interval and one from highest indication of contamination (if present). samples will be analyzed
for VOCs and SVOCs only - one soil sample will be collected from boring SB1 through SB5 for SVOCs,
metals, pesticides and PCBs. these samples will be collected from just below the planned excavation
level of 12 ft bg - four (4) 1-inch monitoring wells will be installed to a depth of 7 ft below
water table, with 10 ft of screen - groundwater samples will be analyzed for VOCs, SVOCs,
pesticides, PCBs and metals - soil vapor samples will be taken from 6 soil-gas locations, and
analyzed via method TO-15 - soil-gas implants at each location will be set at the proposed basement
level of the new building which is approx. 12 ft bg the proposed RIWP needs to be revised for
following reason, if site is not accepted in BCP and requires work under spills: - the plan

FORMER BENNETT TRUCKING CORP. (Continued) **S113818149**

proposes not to analyze samples from SB1 through SB5 for VOCs. the department requires all soil and
groundwater samples analyzed for VOCs and SVOCs 09/19/13-Hiralkumar Patel. 11:47 AM:- spoke with
DEC Larry. he mentioned that more data is needed to make determination of the eligibility of the
application. DEC Cozzy sent letter to property owner and asked to conduct proposed Phase II.
reviewed letter. 12:44 PM:- spoke with Larry. informed him that all soil and groundwater samples
should be analyzed for VOCs and SVOCs. Larry stated that as site was only drop-off facility for dry
cleaning business, there is no need for full list analyses. Larry will inform property owner to
analyze all samples for VOCs also. 11/26/13-Hiralkumar Patel. 5:56 PM:- sent email to Larry
inquiring update. 11/27/13-Hiralkumar Patel. 9:21 AM:- received email from Larry. he mentioned that
water sample was collected beneath the area of the former UST, which shows BTEX. Larry mentioned
that the site was accepted into the BCP on 11/18/13.
12/06/13-Hiralkumar Patel. 10:14 AM:- spoke
with DEC Larry. as site has been accepted in BCP, case assigned to Larry. **little 'E' designation
for Hazmat/Noise.*** ---------- 8/26/14 - Larry Alden RI work completed at this site and
draft RI report and RAWP have been submitted for review. Draft RAWP calls for excavation of soil in
vicinity of UST to 15 feet below grade, installation of an SVE system, and treatment of residual
groundwater contamination via injection of chemical oxidants and oxygen release compounds.
12/28/2015 - L. Alden. Two 550-gallon underground gasoline tanks were removed as part of the BCP
remediation. Contaminated soil in the vicinity of the tanks was removed to a depth of 15 feet below
the initial ground surface. No VOCs, SVOCs, pesticides, PCBs or metals were detected above
Unrestricted Use SCOs within any of the sidewall or bottom soil samples. However, several gasoline
related VOCs were detected at low concentrations below unrestricted SCOs. Although endpoint samples
were below the unrestricted SCO, an SVE system was installed to treat the unsaturated soil from 15
feet to the water table since initial sampling showed this zone beneath the tanks was impacted by
gasoline-related VOCs. The groundwater was treated with sodium persulfate injections. Groundwater
is currently being monitored under the Site Management Plan. Specifics of the remediation are
included in the Final Engineering Report.

Remarks: contamination based on lab results/clean up pending

Site Description: Location: The site is located at 871 Grand Street in the Williamsburg section of Brooklyn, NY. The site is comprised of a single tax parcel, Section 3, Block 2922, lot 41 and occupies 0.057 acres. Site Features: The lot is currently developed with a six-story building which occupies the entire lot. The building was constructed in 2015 as part of this Brownfield cleanup. Current Zoning and Land Uses: The site is currently occupied by an apartment building six stories high. The previous building was commercial, but has been demolished. The intended use of the site is residential. The site is zoned R7A. These districts typically produce high-lot coverage, seven- and eight-story apartment buildings, blending with existing buildings in many established neighborhoods. The neighborhood is currently a mix of commercial and residential land uses. Progress High School is across Grand Street from the site. Past Use of the Site: Historical records show the subject site as being developed prior to 1887 with a two-story wheelwright located at the street front, and detached one-story shed located in the rear yard. By 1907, the two- story building was converted for use by a horseshoer, which included two horse stables in the rear yard. In the 1930's through the 1950's, the subject site building was used for paper storage and tile storage. The building was then used in the 1960's and 1970's by a metal products manufacturer, Scientific Fire Prevention Inc., until it was demolished in 1981. The subject site lot was then redeveloped in 1981 with the one-story concrete block commercial building that currently remains at the site. Site Geology and Hydrogeology: Groundwater at the site is present at a depth of approximately 35 feet below grade. Groundwater flows to the southwest. Subsurface soils at the site consist of a silty non-native fill with bricks, wood and other rubble

SCIENTIFIC FIRE PREVENTION OFF SITE FORMER (Continued) **1016455578**

	to approximately 2 feet below grade. A native fine brown silty-sand is present immediately below the fill material to a depth of approximately 15 feet below grade.
Env Problem:	Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and perchlorethylene (PCE) in soil. The solvent contaminated soil was excavated and disposed off-site. Historic fill was also removed from the site. Remedial actions have successfully achieved soil cleanup objectives for residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan Significant Threat: The site no longer presents a significant threat to human health since the source areas have been removed.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Location: The site is located at 871 Grand Street in the Williamsburg section of Brooklyn, NY. The site is comprised of a single tax parcel, Section 3, Block 2922, lot 41 and occupies 0.057 acres. Site Features: The lot is currently developed with a six-story building which occupies the entire lot. The building was constructed in 2015

SCIENTIFIC FIRE PREVENTION OFF SITE FORMER (Continued) **1016455578**

as part of this Brownfield cleanup. Current Zoning and Land Uses: The site is currently occupied by an apartment building six stories high. The previous building was commercial, but has been demolished. The intended use of the site is residential. The site is zoned R7A. These districts typically produce high-lot coverage, seven- and eight-story apartment buildings, blending with existing buildings in many established neighborhoods. The neighborhood is currently a mix of commercial and residential land uses. Progress High School is across Grand Street from the site. Past Use of the Site: Historical records show the subject site as being developed prior to 1887 with a two-story wheelwright located at the street front, and detached one-story shed located in the rear yard. By 1907, the two- story building was converted for use by a horseshoer, which included two horse stables in the rear yard. In the 1930's through the 1950's, the subject site building was used for paper storage and tile storage. The building was then used in the 1960's and 1970's by a metal products manufacturer, Scientific Fire Prevention Inc., until it was demolished in 1981. The subject site lot was then redeveloped in 1981 with the one-story concrete block commercial building that currently remains at the site. Site Geology and Hydrogeology: Groundwater at the site is present at a depth of approximately 35 feet below grade. Groundwater flows to the southwest. Subsurface soils at the site consist of a silty non-native fill with bricks, wood and other rubble to approximately 2 feet below grade. A native fine brown silty-sand is present immediately below the fill material to a depth of approximately 15 feet below grade.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and perchlorethylene (PCE) in soil. The solvent contaminated soil was excavated and disposed off-site. Historic fill was also removed from the site. Remedial actions have successfully achieved soil cleanup objectives for residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan Significant Threat: The site no longer presents a significant threat to human health since the source areas have been removed.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Location: The site is located at 871 Grand Street in the Williamsburg section of Brooklyn, NY. The site is comprised of a single tax

SCIENTIFIC FIRE PREVENTION OFF SITE FORMER (Continued) **1016455578**

parcel, Section 3, Block 2922, lot 41 and occupies 0.057 acres. Site Features: The lot is currently developed with a six-story building which occupies the entire lot. The building was constructed in 2015 as part of this Brownfield cleanup. Current Zoning and Land Uses: The site is currently occupied by an apartment building six stories high. The previous building was commercial, but has been demolished. The intended use of the site is residential. The site is zoned R7A. These districts typically produce high-lot coverage, seven- and eight-story apartment buildings, blending with existing buildings in many established neighborhoods. The neighborhood is currently a mix of commercial and residential land uses. Progress High School is across Grand Street from the site. Past Use of the Site: Historical records show the subject site as being developed prior to 1887 with a two-story wheelwright located at the street front, and detached one-story shed located in the rear yard. By 1907, the two- story building was converted for use by a horseshoer, which included two horse stables in the rear yard. In the 1930's through the 1950's, the subject site building was used for paper storage and tile storage. The building was then used in the 1960's and 1970's by a metal products manufacturer, Scientific Fire Prevention Inc., until it was demolished in 1981. The subject site lot was then redeveloped in 1981 with the one-story concrete block commercial building that currently remains at the site. Site Geology and Hydrogeology: Groundwater at the site is present at a depth of approximately 35 feet below grade. Groundwater flows to the southwest. Subsurface soils at the site consist of a silty non-native fill with bricks, wood and other rubble to approximately 2 feet below grade. A native fine brown silty-sand is present immediately below the fill material to a depth of approximately 15 feet below grade.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and perchlorethylene (PCE) in soil. The solvent contaminated soil was excavated and disposed off-site. Historic fill was also removed from the site. Remedial actions have successfully achieved soil cleanup objectives for residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan Significant Threat: The site no longer presents a significant threat to human health since the source areas have been removed.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL SEE SPILL NUMBER 8908532. 4/12/04-Vought-Spill transferred from Sullivan to Rommel as per Rommel. 2/2/07 - Haggerty - Alphonse Milo (718-388-7575) brought the property shortly after the tank test failures and is still owner today. He states he is will be building a parking lot on the subject property and all soil will be excavated for the foundation. I instructed Mr. Milo to contact the DEC as soon as possible because there is a good chance contamination is present. Spill to remain open 10/4/07 - Haggerty - received Phase II subsurface Investigation report from Al Milo. Phase II completed to satisfy the bank requirement. Report states that all soil samples and groundwater samples are below standards. MW's in the area surrounding the former tank field. No groundwater contamination was detected. PM stated that all tanks must be properly closed out in PBS wether tanks are registered or previously unknown and this spill will remain open until this is resolved. 07/21/08 - Haggerty: Spoke with Mrs. Milo. She stated that the PBS issue has been resovled. I checked the PBS records to confirm. PBS# 2-478075. Spill closed
Remarks: THREE 550 GALLON TANKS FAIL HORNER-EZY CHEK - LR = -0.11982 GPH. NO DECISION ON ACTION TO BE TAKEN. .

Updated By: JHOCONNE

Site Description: Location: The 2825 square foot site is located at 134 Metropolitan Avenue in the Borough of Brooklyn, Kings County, NY in an urban area. The site is bounded by Metropolitan Avenue to the north, a movie theater to the east, North 1st Street to the south, and a commercial/residential building to the west. Site Features: The Site is approximately 2,825 square-feet and is currently occupied by a two-story commercial building with partial basement (30% of site) and a partial sub-basement. Current Zoning and Land Use: The site is currently zoned as M1-2 (manufacturing) with an R6A (residential) overlay. The on-site building was most recently occupied by a bar/nightclub which closed in 2016. Past Use of the Site: Historic uses at the Site include wire works (prior to 1887), a machine shop (1887-1905), and manufacturing (1951). The current owner plans to add 3 additional floors on the building for residential use. Site Geology and Hydrogeology: According to maps and reports published by the United States Geological Survey (USGS), the Property is situated at approximately 36 feet above mean sea level and is underlain by glaciofluvial deposits of Upper Cretaceous and/or Quaternary age consisting of sand, silt, clay gravel, cobbles and boulders. These deposits rest unconformably on crystalline bedrock of early Paleozoic and/or Precambrian age. Soil borings were completed during the investigation to depths ranging from approximately 20 to 39 feet below land surface. Depth to water readings collected during this investigation indicate shallow groundwater beneath the Site ranges from 19.83 feet below grade at GW-5 to 38.97 feet below grade at GW-1. Based upon regional maps published by the USGS shallow groundwater flow appears to be moving in a westerly direction.

Env Problem: Nature and Extent of Contamination: This site was referred to the Department from the NYC Office of Environmental Remediation (OER). A soil vapor intrusion investigation was undertaken on the site under the direction of OER as a result of an environmental e designation on the site. Historic uses at the site include wire works (prior to 1887), a machine shop (1887-1905), and unspecified manufacturing (1951). The site is currently occupied by a two-story commercial building with partial basement and a partial sub-basement. Based on the soil vapor investigation conducted under OER, the chlorinated solvents tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE) and 1,2 dichloroethene (DCE) were detected at maximum concentrations of PCE at 223,000 micrograms per cubic meter (ug/m3), TCE at 203 ug/m3, and DCE at 114 ug/m3. Subsequently, a site characterization (SC) was conducted under a NYSDEC consent order. Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides and per and polyfluoroalkyl substances (PFAS). Soil vapor was sampled for VOCs. During the SC, the soil vapor concentrations identified in the initial OER investigation were not duplicated. Soil During the site characterization investigation, No PID readings exceeded zero parts per million (ppm) in any of the screened soil samples and no VOCs were detected at concentrations above their respective restricted residential soil cleanup objectives (RRSCOs) and protection of groundwater soil cleanup objectives (PGWSCOs) in soil samples collected at the site. SVOCs were detected at concentrations exceeding the RRSCOs in shallow soil at the site. SVOCs include benzo(a)anthracene (max of 11 ppm; RRSCO is 1 ppm), benzo(a)pyrene (max of 8.7 ppm; RRSCO is 1 ppm), benzo(b)fluoranthene (max of 11

LOT 16,TAXBLOCK 2364 (Continued) **S108076312**

ppm; RRSCO is 1 ppm), dibenzo(a,h)anthracene (max of 1.3 ppm; RRSCO is 0.33 ppm), and Indeno(1,2,3-cd)pyrene (max of 5.5 ppm; RRSCO is 0.5 ppm). Metals were detected above their respective RRSCOs including mercury (max of 1.87 ppm; RRSCO is 0.81 ppm), and lead (max of 475 ppm; RRSCO is 400 ppm). 1,4-dioxane was not detected in any soil samples. PFOA and PFOS were not found at concentrations exceeding either the restricted-residential use or the protection of groundwater guidance values. Data does not indicate any off-site impacts in soil related to this site. Groundwater Chlorinated - VOCs were found in groundwater on the south of the site one off-site well. VOCs exceeding their respective ambient water quality standards (AWQS) include trichloroethene (max 97 parts per billion (ppb); AWQS is 5 ppb), and cis-1,2-Dichloroethene (max 43 ppb; AWQS is 5 ppb). SVOCs detected in groundwater above the AWQS include benzo(a)anthracene at a maximum concentration of 0.12 (AWQS is 0.002 ppb), benzo(a)pyrene at a maximum concentration of 0.11 (AWQS is non-detect), benzo(b)fluoranthene at a maximum concentration of 0.13 (AWQS is 0.002 ppb), benzo(k)fluoranthene at a maximum concentration of 0.04 (AWQS is 0.002 ppb) and chrysene at a maximum concentration of 0.1 (AWQS is 0.002 ppb). In groundwater, lead was detected at a maximum concentration of 45.92 ppb compared to 25 ppb and mercury was at 2.03 ppb compared to 0.7 ppb. Only naturally occurring dissolved metals (manganese, sodium, magnesium) were detected at concentrations exceeding AWQS. PFOS was detected at a maximum concentration of 7.72 parts per trillion (ppt) compared to the Maximum Contaminant Level of 10 ppt, and PFOA at a maximum concentration of 62 ppt (MCL 10 ppt). No Pesticides, PCBs and 1,4 -dioxane were identified above ambient water quality standards in any groundwater samples. Data does not indicate any off-site impacts in groundwater related to this site.
Sub-slab soil Vapor and Indoor Air Low-levels of VOCs were detected in on-site sub slab soil vapor. The maximum concentration of tetrachloroethylene (PCE) and trichloroethylene (TCE) were detected in sub slab soil vapor samples at 6.39 micrograms per cubic meter (ug/m3), and 1.2 ug/m3, respectively. PCE was detected in the indoor air at a maximum concentration of 0.346 ug/m3. No TCE were detected in the indoor air. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem: People will not come into contact with contaminated soil or groundwater unless they dig below the ground surface. People are not drinking the groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant and environmental sampling indicates that the potential for exposure to site contaminants due to soil vapor intrusion is not a concern on-site or off-site

Record Add: 11/18/1999
Record Upd: 12/16/2003
Updated By: kstang
Site Description: The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.

DEC Memo:	Sangesland found no historical spills or PBS on site. Property Shark says legal address is: 194-200 Franklin St, Brooklyn, NY 11222 Contaminated Soil Letter sent to: Property Owner Int'l Stripping & Dye Company 200 Franklin St Brooklyn, NY 11222 8/10/2005 Sangesland spoke with Carolyn Cadalaso of Advanced Cleanup Technology. She asked what work was needed. She was told a letter went out to the building owner (she will try to get a copy through the owner). Advanced Cleanup Tech completed a Phase 2 report on the site. Sangesland asked her to review the DEC letter, prepare a work plan to resolve the contamination and then submit a package to Mr. Koon Tang. 10/31/05 - Carla Sullivan wrote in her email: ...The three gasoline USTs, filled with concrete, were removed. The tanks were found tight, and the concrete vault and surrounding soils were found

LOT 1,TAXBLOCK 2532 (Continued) **S106970369**

free of contamination and set
at 7 feet below grade.The contamination is below 8' bgs. Apparently, the tanks were installed in a
dirty hole . All work is being conducted within the confines of the building, and due to structural
concerns, not all of the contaminated soil can be removed. The depth of the contamination is in the
GW at ~15' bgs, GW will be treated with 2,000 pounds of ORC. - KST 10/31/05 - send Carla Sullivan
an email asking for RI Report and a RAP for the contaminated soil and GW. - KST 11/01/05: This
spill case transferred from K. Tang to J. Kolleeny. Reviewed ACT Phase II report which indicated
closed gasoline tanks impacted soil and groundwater; reviewed 10/14/05 work plan letter from Laurel
Env'tal stating that closed tanks will be removed and ORC applied to groundwater. Spoke with Carla
Sullivan and Scott Yanuck of Laurel - working inside existing site building, they removed
concrete-filled tanks and encountered substantial contaminated soil starting at 8 feet below grade.
Contaminated soil will be removed to extent possible without endangering building, end-point soil
samples will be collected, ORC will be applied to water table, and 2 wells will be installed inside
building. JK of DEC sent email to Ms. Sullivan (cc'ed Yanuck) requesting that wells be gauged to
determine water table elevations & GW flow direction, and sampled, and that a summary report be
prepared and submitted with soil and groundwater data and recommendations for further
investigation/remediation as necessary. - J. Kolleeny 12/22/05: Received remediation report
summarizing remedial activities at site (tank removal, soil excavation, application of ORC), and
requesting spill closure, via email on 12/21/05. Entered report into eDocs on 12/22/05. Report will
be reviewed. - J. Kolleeny 01/06/06: In response to email from Scott Yanuck of Laurel Env'tal
inquiring about status of my report review, I sent him an email on 1/4/06 with preliminary review
observations, stating: I looked quickly at the report, and usually in a case like this, with some
residual soil contamination and a downgradient well with 1,800 ppb of benzene and 3,570 ppb total
BTEX, we would require follow-up groundwater monitoring to evaluate effectiveness of ORC that was
applied, and request installation of an off-site well to delineate leading edge of the plume. I
understand and appreciate that Laurel did a lot of source removal work and applied a lot of ORC,
but I want to see that plume is stable (not migrating), with groundwater contaminant levels
decreasing, before I can close out spill. As of 1/6/06, have not received any response from S.
Yanuck. - J. Kolleeny 01/24/06: Received email from S. Yanuck of Laurel Env'tal on 1/23/06 asking

LOT 1,TAXBLOCK 2532 (Continued) **S106970369**

if DEC has made a decision on Remedial Corrective Action Report and request for spill closure, and stating that if spill is to remain open, they will collect another round of GW samples from existing wells, but they would strongly prefer not to install off-site well. I sent email reply on 1/24/06 saying that K. Tang agreed spill cannot be closed yet, and reiterating need for an off-site well to delineate leading edge of plume. Sent letter on 1/24/06 to Mr. Jan Chmielewski of 200 Franklin LLC, with copy to S. Yanuck, requesting installation of off-site well across Franklin Street to the west, plus at least 2 rounds of groundwater monitoring; asked that a work plan be submitted. - J. Kolleeny 02/03/06: Received email from S. Yanuck of Laurel Env'tal stating that off-site well would be installed on Monday Feb.6th, with attached copy of sidewalk permit and site plan showing proposed well location. I emailed back that proposed well location looked good, and stated that soil should be screened with PID during installation, and at least one soil sample collected, probably at groundwater interface. Scott did not respond. - J. Kolleeny 02/24/06: Sent email to Scott Yanuck of Laurel Env'tal asking if off-site well was installed as planned, and if he has any data, including field observations, PID readings, etc., to report. - J. Kolleeny 02/27/06: S. Yanuck of Laurel sent email late on 2/24/06 (at 8:19 pm) saying well was installed, no PID reading or odor in soil, very low VOCs in GW; he will forward over a letter report early next week. - JK 2/28/06: Received letter report from S. Yanuck, via email, with groundwater sampling results for new off-site well MW-4 and 3 existing wells. Data show contaminant levels stayed much the same in on-site wells MW-3 (total BTEX just under 4 ppm) and MW-1 (total BTEX about 1 ppm), and low exceedances for benzene (9 ppb) and MTBE (27 ppb) in off-site well MW-4. Laurel argues that plume is stable and has not migrated; they request spill closure. Changed spill priority status to P2, since site is in monitoring phase. - J. Kolleeny 03/06/06: Received email from S. Yanuck asking if I'd made a decision regarding request for spill closure. I sent email response saying that spill cannot be closed yet and noting that my letter of January 24, 2006 required at least two quarterly rounds of groundwater monitoring to establish that remedial actions were effective (i.e., resulting in decreasing trend of dissolved contamination) and that plume is stable and not migrating. I pointed out that the Feb. 6th groundwater results show contamination on-site has not decreased, and low levels of benzene and MTBE in well MW-4 suggest edge of plume extends off-site. Said I would send out a response letter in next day or so. - J. Kolleeny 03/07/06:

LOT 1,TAXBLOCK 2532 (Continued) **S106970369**

Sent letter to Jan
Chmielewski of 200 Franklin LLC (the RP), with cc to Scott Yanuck of Laurel, responding to latest
groundwater report, stating that spill cannot be closed at this time, requesting water levels
measurements to determine up-to-date groundwater flow direction, and another round of GW sampling
within 3 months. - J. Kolleeny 03/13/06: Received email from Scott Yanuck of Laurel Envt'l with
attached letter stating that they have surveyed the new well MW-4 top of casing, taken depth to
water measurements from all four wells and determined up-to-date groundwater flow direction, and
attached the updated groundwater flow map as requested in my 3/7/06 letter, and they will schedule
another quarterly groundwater sampling event. - J. Kolleeny 03/14/06: Sent email to Scott Yanuck
saying new groundwater flow map is ok, but doesn't show water table contours as requested. He sent
email reply that he will work on drawing in inferred contour lines, but that there is not enough
data for Surfer (a program that takes water elevation data to generate water table contour maps) to
work with. - J. Kolleeny 05/26/06: Received electronic copy of May '06 Groundwater Monitoring
Report via email from Scott Yanuck of Laurel Env'tal. - JK 06/02/06: Received hard copy of May '06
groundwater monitoring report. Will review. - JK 06/14/06: Reviewed report, groundwater contaminant
levels in wells MW-1 and MW-3 have declined substantially, but significant contamination remains.
Issued letter to RP (and copied Scott Yanuck) asking for another round of quarterly sampling, plus
a sensitive receptor survey, indoor air monitoring and soil gas sampling from beneath earthen floor
of site building. - JK 08/14/06: Received work plan for groundwater monitoring and sensitive
receptor survey (soil gas and indoor air sampling) dated Aug. 4, 2006 from Scott Yanuck, Laurel
Envt'l (in eDocs). Plan involves round of groundwater sampling, and sampling soil gas at two
locations 2 feet below earthen floor, plus indoor and outdoor (for background) air samples. I sent
email okaying plan on 8/14/06. - J. Kolleeny 10/05/06: Received email on 9/26/06 from Scott Yanuck
of Laurel Envt'l with report attached summarizing round of groundwater sampling, indoor/outdoor air
sampling, and soil vapor sampling at the site in August 2006. After preliminary review of report, I
sent email to Scott on 10/3/06 noting that the groundwater results only provide data for BTEX +
MTBE, whereas earlier sampling rounds were analyzed for full range of gasoline-related VOCs. Scott
sent email reply that he would ask the lab to re-evaluate data from the GC runs, if possible. I
replied that was fine, and that if they can provide data for all VOCs, I'd like Scott to revise

LOT 1,TAXBLOCK 2532 (Continued) **S106970369**

data table to include line for total VOCs, in addition to total BTEX. Also asked for revised figure
showing two soil vapor sampling locations, and for clarification of soil vapor sample nomenclature,
since samples are named SV North and SG-4. - J. Kolleeny 10/06/06: Received email from Scott Yanuck
late on 10/5/06 with revised report, including groundwater results for all gasoline VOCs (revised
Table I), fig. 3 showing soil gas sampling locations, and revised Table II with soil gas samples
labelled SV North and SV South. Table I still lacks line for total VOCs, which I requested on two
occasions. Report is in eDocs. - J. Kolleeny 10/20/06: Issued reply letter (in eDocs) to Laurel
Environmental report dated 9/26/06. My letter notes that indoor air sampling and sub-slab soil gas
sampling suggest no serious impact to indoor air from the spill, but also states that the spill
cannot be closed at this time, due to rebound of contamination in well MW-1 and change in
groundwater flow direction, which suggests plume is not adequately delineated to the south. I
stated that contaminant levels in MW-1 warrant additional monitoring and possibly additional
remediation, and I requested installation of an additional monitoring well immediately south of
former tank location (i.e., inside building), or if that isn't feasible, in sidewalk along India
Street south of site building. - J. Kolleeny 11/03/06: Received email from Scott Yanuck of Laurel
Envt'l with work plan dated Oct. 31, 2006 for installation of requested additional well and
possible replacement of damaged well MW-1 (in eDocs). Work plan also discussed 3 possible
approaches for additional remediation, but says a final choice will be made after well installation
and latest groundwater data. I sent email approving plan with modifications: 1. Proposed well MW-5
should be installed as close as possible to location of end-point soil sample EP-S. During well
installation, soil should be screened with a PID; a sample from interval with highest PID reading
and a sample from just above water table should be submitted for laboratory analysis of
gasoline-related VOCs. 2. After installation of new well(s), groundwater samples should be
collected from all existing wells and analyzed for gasoline-related VOCs (i.e., not simply for BTEX
compounds). DEC will refrain from commenting on three remedial strategies mentioned in work plan
until one of these strategies is formally proposed, based on results of upcoming round of
groundwater sampling. - J. Kolleeny 02/09/07: Reviewed Laurel Envt'l report dated Jan. 30, 2007
with proposed additional remedial activities, plus revised text and figs submitted on Feb. 6 and 9,
2007 (in eDocs). Report presents results of additional borings and

LOT 1,TAXBLOCK 2532 (Continued) **S106970369**

wells installed at site in Nov.
2006, with soil and groundwater data showing significant residual soil contamination in two areas
and increases in groundwater contaminant levels in wells MW-1 & MW-3 (significant GW contam. also
in new wells MW-5 & MW-6, minor contam. in MW-8 & MW-10). Laurel proposes additional soil
excavation in two areas, plus installation of 4 injection wells to
apply ozone to groundwater, to
oxidize hydrocarbons and increase dissolved O2 to stimulate biorem. I sent letter approving plan to
RP Jan Chmielewski by mail and to Scott Yanuck of Laurel by email, on 2/9/07. - J. Kolleeny
02/28/07: Visited site with Ainura Doronova (new employee in training) to observe excavation of
contaminated soil as proposed in additional remedial activities plan. Arrived at 11:00 A.M., they
were digging with backhoe inside the building, and fairly strong odors were evident; workers were
wearing half-face respirators with cartridges. Met with Scott Yanuck of Laurel Envt'l and Jan
Chmielewski, owner. They had dug down about 7-8 feet and intended to go to 13-14 feet, where they
expect water table to be. Stockpile of removed contaminated soil had PID readings of 300-400 ppm.
Took 2 photos (in eDocs image folder). - J. Kolleeny 03/02/07:
Received email on 3/1/07 from Scott
Yanuck regarding on-going remediation work: We stayed late yesterday and finished the excavation
and endpoint sampling - samples were taken from all four sidewalls at a depth of 10' - 12'; PID
readings were all well below 50 parts per million on these samples. Got bottom as clean as
possible, but never hit groundwater even down to 14.5', which was the extent of reach on the
extendahoe backhoe. We will be installing the injection and monitoring wells tomorrow. - J.
Kolleeny 05/24/07: Received email on 5/23/07 from Scott Yanuck of Laurel Env'tal with attached
Report On Additional Remedial Activities, dated 5/22/07 (in eDocs). Report summarizes excavation of
an additional 182 tons of contaminated soil performed in February-March '07, with end-point soil
sample results showing almost no petroleum-related compounds detected, and no TAGM 4046
exceedances. Also summarizes installation of 8 1-inch ozone injection wells, with ozone injection
beginning on March 22, 2007. Report states that quarterly GW monitoring commenced on May 18, 2007.
Scott's email states that GW results will be available next week. I sent email reply stating:
Thanks for report. Please include north arrow on site plans for future reports. Also, would it be
possible to sample more of 1-inch ozone injection wells during future GW sampling events? It makes
me uneasy when wells with contamination are destroyed and replacement wells are installed some

LOT 1,TAXBLOCK 2532 (Continued) **S106970369**

distance away from original well - if sampling of new wells shows much lower contaminant levels, I'm not sure if results are truly representative, or if some quirk of subsurface geology has resulted in new well missing GW contamination. Could wells IP-6, IP-5 and IP-1 be added to list of wells being sampled for next event? If sample results suggest that they are redundant of other wells being sampled, they could be dropped from list for subsequent sampling events. - J. Kolleeny 05/25/07: Received email reply from Scott Yanuck late on 5/24/07: Will make sure north arrow is added on future reports. I don't think that it will be a problem to add additional wells for sampling in the next round....I am hopeful that we can close after next round if everything looks OK. - J. Kolleeny 06/13/07: Received Groundwater and Ozone Injection System Monitoring report by Laurel Environmental, dated June 11, 2007 (in eDocs). Report states that ozone injection system began operating on 3/22/07, and that weekly or bi-weekly sites visits are conducted to confirm that ozone is reaching groundwater, rather than air above injection wells. Report also presents results of 5/18/07 groundwater sampling event, along with past GW data. Results show significant decreases in contaminant levels: MW-1 went from 10,000 ug/L total VOCs on 11/6/06 to 392 ppb total VOCs on 5/18/07 (benzene went from 3,500 ppb to 150 ppb), MW-3 went from 1,410 ug/L total VOCs on 11/6/06 (280 ppb benzene) to 734 ppb total VOCs on 5/18/07 (benzene 120 ppb), MW-8 went from 57 ppb total VOCs to 0 ppb. Report states that another quarterly sampling event will be performed. No DEC response required. I noticed mistake in Table 1 - GW data, incorrect sampling dates for well MW-8; emailed to Scott Yanuck of Laurel, who sent corrected table (in eDocs). - J. Kolleeny 08/07/2007: This spill case was transferred to A. Doronova. -AD 08/25/2007: Received Groundwater and Ozone Injection System Monitoring Report submitted by Laurel Env. dated August 22, 2007. The report states: The ozone system has been running nearly continuously since begining of the operation on March 22, 2007. The injection of ozone was rotated between the eight injection points, with four points receiving ozone at one time. During weekly monitoring of levels of DO, dissolved ozone, ozone headspace and ambient ozone, elevated levels of DO and dissolved ozone were detected at each site visit. On August 1, 2007 a round of GW samples was collected from the three on-site and two off-site wells. The results of groundwater sampling indicated that total concentration of VOCs in each monitoring wells were below 1,000 ppb. The labdata show increasing of total VOCs in MW-1 from 392 ppb (05/2007) to 444 ppb (08/2007); decrease of total VOCs in MW-3

LOT 1,TAXBLOCK 2532 (Continued) **S106970369**

from 734 ppb to 357 ppb and
same ND level for wells - MW-2 and MW-8. Injection points were sampled for the first time and
showed following concentrations of total VOCs: O ppb for IP-1; 144 ppb for IP-2 and 251 ppb for
IP-3. The GW flow direction was to the west during reported round of surveying. Based on the
results of this monitoring round Laurel Env. states that GW quality continuing to improve with time
at the site and requests to close this spill case. AD 09/06/2007: Received an email from S. Yanuck.
He proposed to install one temporary monitoring well across the Franklin Street to investigate if
there is any off-site plume migration. Sent an email with well installation approval and saying
that, if no any petroleum contamination will be detected in a newly installed well, case closure
request might be approved. AD 09/24/2007: Received an email and e-copy of a letter report from S.
Yanuck of LEA regarding installation of one temporary well across Franklin Street. A groundwater
sample was collected for VOCs. The report states that no VOCs were detected in the collected
sample. Based on the result of this sampling event and on the data of previous monitoring rounds
LEA requests a closure of this spill case. AD 09/24/2007: Issued a NFA letter addressed to Simon
Whitley of Complete Management Services (site owner) cc: to J. Kolleeny; S. Yanuck and file. This
decision was made based on submitted analytical data and remedial actions performed at the site. In
addition, this site is listed as E restricted by NYCDEP, so future mitigation work such as: -
removal of any additional contaminated soil found during pre-construction excavation at the site; -
installation of vapor barrier beneath new slab; - installation of sub-slab depressurisation system;
will be required at the site by the NYCDEP in conjunction with the construction of the proposed
building. AD

Program:	HW
Site Code:	439622
Classification:	N
Region:	2
Acres:	1.200
HW Code:	224144
Record Add:	09/08/2010
Record Upd:	10/31/2013
Updated By:	MJKOMORO

Site Description: Location: The Site is located across multiple addresses in the Greenpoint section of Brooklyn, NY. The addresses for the Site include 257, 259, 263, & 269 Freeman Street and 230, 238, 242 Eagle Street. 269 Freeman Street is also known as 105 Provost Street. The Newtown Creek Water Pollution Control Plant (WPCP) is located directly east of the Site. Site Features: The original Site encompassed five separate buildings and three yards that occupy seven separate lots. The buildings are no more than 2 stories in height. The entire Site is approximately 1.2 acres in size. There are manufacturing buildings to the north, south and west of the Site. Current Zoning/Uses: The area (and properties) is zoned M3-1 which includes heavy manufacturing and industrial uses along with certain commercial uses. Properties on the site are currently used for the manufacturing of air conditioning duct work, a distribution center for paint and varnish, parking, and staging of various contracting equipment. - 263-269 Freeman and 242 Eagle Street are currently used for the manufacturing of air conditioning duct work and accessories - 238 Eagle street is currently used for the distribution of paint and varnish. - The Yard portion east of 238 Eagle Street is currently an unused dirt yard. Historical Uses: In the early 1900?s the site was used as a cooperage for wooden barrel and cask production. From approximately 1942 to 1982, the property was occupied by Reliable Machine Company that had numerous paint spraying locations on the property. In 1982, Ney Smelting and Refining Company took ownership

FORMER NEY SMELTING AND REFINING COMPANY (Continued) **S113916765**

of the property in 1982 and renovated the buildings and used the property for smelting of lead, tin and zinc. Smelting operations ceased in 2003. Site Geology and Hydrogeology: Shallow boring logs indicate the Site overlies historic fill. The soil type below the fill is not known. Depth to groundwater is approximately 10 feet below grade and may be tidally influenced due to the close proximity to the Newtown Creek. Groundwater flow may also be affected by the adjacent Newtown Creek WPCP. Groundwater flow direction is estimated to be to the northeast Miscellaneous: There are no PBS, CBS records for the multiple addresses of the Site.

Env Problem:	The site is covered with multiple buildings and parking facilities. One small area of the site contains a dirt construction yard that is largely underlain by a concrete slab. The shallow subsurface soil is comprised of historic fill that contains building debris such as brick and concrete, ash, and soil. This material contains elevated concentrations of inorganics that are generally below allowable concentrations at industrial sites. SVOCs are also present in the soil at the site but also do not exceed standards for industrial areas. No VOCs were detected at levels that cause concern. Data from TCLP analyses were all below hazardous waste thresholds. Groundwater is sporadically impacted by PCE and breakdown products. There is no continuous plume of impacted groundwater as would be observed if a source of PCE was present.

Record Add: 11/02/2006
Record Upd: 02/20/2025
Updated By: LAGORTON
Site Description: Location: The site is a large parcel located along Newtown Creek at 287 Maspeth Avenue in Brooklyn,NY in Kings County. It is bounded by Newtown Creek to the east, Maspeth Ave. to the south, Vandevoort Ave. to the west, and Lombardy St. to the north. This is a large property at 117 acres. Site Features: The site is currently known as the Greenpoint Energy Center and houses a major liquefied natural gas storage facility and compressor station, an operations center for KeySpan's distribution and service units, and a warehouse facility. Current zoning and land uses: Surrounding land uses are mixed industrial, residential, and commercial. The nearest residential land use is located adjacent to the northwest corner of the site. Past use of the site: A large manufactured gas plant (MGP) and byproduct coking operation operated on the site from 1928 until 1952. Coal tar has been found in subsurface soils, but the full extent of contamination has not yet been established. The surrounding neighborhood has also been subject to a large petroleum spill, apparently unrelated to the MGP. A Voluntary Cleanup Agreement (VCA) (site No. V00631) was entered into in 2005. An Interim Remedial Measure (IRM) was performed in 2006 to remove impacted soil in the northeast corner of the property to allow for upgrades to the Liquid Natural Gas (LNG) facility. The VCA was replaced by a Multi-Site Consent Order in 2007, modified in 2008. A site-wide remedial investigation (RI) is being conducted at the site. Additional data collection is being completed to better refine the delineation of the nature and extent of contamination. Site Geology/hydrogeology: The site is underlain by fill and heterogeneous glacial deposits that include outwash sands with till and lenticular silt deposits. Bedrock is approximately 200 feet below the ground surface. Groundwater flows northeasterly, toward the Newtown Creek.
Env Problem: A remedial investigation (RI) of the site is being performed in a phased approach based on geography and the proximity to adjacent or nearby water bodies. Phases 1 and 2 of the RI were located on the eastern and southern boundaries of the site, respectively, and were implemented between October 2011 and March 2016. Phase 3 encompassed the remainder of the site and was implemented between April 2016 and July 2019. Additional data collection is being completed to refine the delineation of the extent of contamination. Throughout the course of site investigations, soil, groundwater, and sediment samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals and cyanide. In addition, soils were analyzed for pesticides, herbicides, hexavalent chromium and total organic carbon while groundwater was analyzed for per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Sediment analysis also included pesticides, herbicides, ammonia, hexavalent chromium, dioxins and furans, total petroleum hydrocarbons (TPH), diesel range organics (DRO), black carbon, pH, sulfide, total nitrogen, total organic carbon, total phosphorus, normal alkanes and isoprenoid hydrocarbons. Soil vapor and indoor air have been analyzed for VOCs and naphthalene. Nature and Extent of Contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic

GREENPOINT ENERGY FACILITY (Continued) **S104787368**

hydrocarbons (PAHs) are also associated with MGP coal tar. Areas of potentially NAPL-saturated soil were generally isolated to the southern portion of the Loading Platform Area and in the vicinity of Holder 1 along Maspeth Avenue. Three wells have accumulated recoverable coal tar; two in the loading platform area and one along Maspeth Avenue. No visual observations of potentially NAPL-saturated soil have been identified in the borings advanced within the site interior and no measurable NAPL has been visually observed in any of the wells installed within the interior. Soil: Soil concentrations above the Industrial Use Soil Cleanup Objectives (IUSCOs) primarily included PAHs. In the shallow zone, PAH exceedances of the IUSCOs were identified throughout the site; PAH concentrations generally decreased with depth and were largely identified in areas with noted physical impacts, particularly the Loading Platform Area where PAH exceedances of IUSCOs continued into the deep zone. The maximum concentration of total PAHs was observed near the Loading Dock Area at a concentration of 67,350 mg/kg in a sample collected from three to four feet below grade (ft bg). Concentrations of BTEX above the IUSCOs were identified in a limited number (total of three) samples sitewide. The maximum total BTEX concentration detected was 2,137.4 mg/kg from a sample collected from 15-16 ft bg along the Maspeth Alignment. Detections of metals in soil were mostly limited to the shallow zone. Detections in the intermediate or deep zones were limited to sporadic and relatively low detections of arsenic. Detections of cyanide were few and relatively low in concentration. The cyanide detections were generally limited to the site interior and were confined to the shallow soil zone. The maximum cyanide concentration detected was 29.4 mg/kg from three to four ft bg in the area of the former purifiers. There have been no detections of pesticides or herbicides above the IUSCOs. There were no PCB detections in soil above IUSCOs. Groundwater: Groundwater exceedances of standards and guidance values primarily included total BTEX, PAHs, chlorinated volatile organic compounds (CVOCs) and metals; cyanide and PCBs were detected in exceedance less frequently. The areas of elevated BTEX and PAH concentrations were primarily located near the southern Loading Platform Area in the vicinity of the identified soil impacts and along the southern property boundary along Maspeth Avenue. Elevated CVOC concentrations were generally found along the northern and western site perimeters and can be attributed to off-site sources. Total BTEX in groundwater ranged from non-detect (ND) to 455,100 parts per billion (ppb). Total PAHs in groundwater ranged from ND to 12,459 ppb. Numerous metals were detected above their corresponding standards, including arsenic, iron, lead, magnesium, manganese, and sodium, likely associated with regional conditions rather than historical site operations. Total cyanide concentrations in groundwater ranged from ND to 1,060 ppb. PCB exceedances were limited to three of the 148 groundwater samples analyzed, with a maximum total concentration of 1.54 ppb. Groundwater results were non-detect for 1,4-dioxane. While perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were occasionally detected in groundwater above guidance values, total PFAS concentrations were not detected in any well above guidance values. The maximum PFOS concentration detected was 57.9 parts per trillion (ppt) while the maximum PFOA concentration was 97.5 ppt and maximum total PFAS concentration was 256.17 ppt. These PFAS concentrations are not indicative of a source area and concentrations are likely associated with off-site sources. Soil

GREENPOINT ENERGY FACILITY (Continued) **S104787368**

	Vapor: Sub-slab vapor and indoor air samples were collected during 2018 and 2019. Results varied across the site from no further action (nine buildings) to identifying sources and resampling (two buildings) to mitigation recommendations (three buildings).
Health Problem:	Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of fish and shellfish from Newtown Creek is restricted based on fish advisories for the East River, which apply to Newtown Creek as a tributary.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. Per Bart Polozzitti of Keyspan(516-545-5511), major renovations have occurred at the site. The tank may have been removed, he will forward relevant information when gathered. 01/02/07-Zhune got an e-mail from Bart Polozzitti requesting additional time to get the information. He said hopefully he will get it by 02/17/07. Bart Polozzitti cell # 646-2350403 01/09/07 Bart sent the information a tightness test report from Tanknology Corp. and a letter is included. The letter state the following: The subject underground storage tank (361A)located at 287 Maspeth Ave. Brooklyn, New York was tightness tested unsuccessfully on january 7, 1993. The other three fuel thanks on the same facility (Nos. 363, 364 &365) were tested tight on the same day. After repairing the vent connections causing the ullage leak above the level of product, the tank was retested on January 25, 1993 and passed. There was no release at any time to the surrounding environment. Spill Closed

Site Description:	The Greenpoint Energy Center is located in the Greenpoint section of Brooklyn, New York. The surrounding area is dominated by industrial and commercial uses with a limited residential area northwest of the the site.
Env Problem:	The site is impacted by MGP residuals. Coal tar is present at the site. KeySpan has proposed to remediate the most accessible contamination and leave the remaining contamination in place. The proposed remedy is under review by the department.
Health Problem:	Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of fish and shellfish from Newtown Creek is restricted based on fish advisories for the East River, which apply to Newtown Creek as a tributary.

DEC Memo:	8/18/05-Vought-Called Ed and NYFD and NYPD left scene. FDNY put sand around pooled oil. NO responsible parties seen. FDNY diked oil. Pool is near gutter and spill originated from the middle of the street. Pooled oil is 3'x3'. FDNY contact is Captain Horton (Ladder 146) and Captain Villendahl (Engine 206). No sewers or drains affected and DEP was contacted. Vought called Sanitation Operations and they were previously called and are on their way. Spill closed by Vought.
Remarks:	YOU CAN SEE THE TRAIL OF MOTOR OIL ON THE ROADWAY. CLEAN UP IS NOT IN PROCESS. NOT THEIR RESPOSIBILY. ED CELL #917-731-8543.

DEC Memo:	05/23/17-Hiralkumar Patel. 1:17 PM:- spoke with Brittany. they are removing two USTs: one 4,000 gal gasoline and one 1,000 gal diesel UST. during removal of diesel tank, crew noted some odors and upto 100 ppm on PID in soil. the tanks were located on concrete pad at 9 ft bg. crew has removed concrete pad and noted groundwater at bottom of excavation at approx. 10 ft bg. no sheen or product noted on groundwater. D&B will remove tank piping and dispenser islands and will collect endpoint soil and groundwater samples. two new tanks will be installed at the same location. Brittany Gaddy D&B Engineering and Architects, P.C. Ph. (516) 364-9890 Ext. 3439 email: bgaddy@db-eng.com National Grid **site operator** 175 East Old Country Road Hicksville, NY 11801 Attn.: Michael Lauro Environmental Engineering Ph. (516) 545-2562 email: michael.lauro@nationalgrid.com 1:39 PM:- sent letter to Mr. Lauro requiring submission of spill cleanup report by the end of 06/30/17. letter emailed to Mr. Lauro and Brittany. case assigned to DEC Zhune. 8/1/17-Brittany email-As discussed, attached to this email is analytical data, tables and an end point sample location map for NYSDEC review for Spill No. 1701762. Below is a detailed summary of the work that is taking place during the removal and installation of two USTs at the National Grid Greenpoint Energy Center, located at 287 Maspeth Avenue in Brooklyn. National Grid is in the process of removing a 4,000-gallon gasoline UST and a 1,000-gallon diesel UST. Upon removal of the USTs, the

GREENPOINT ENERGY FACILITY (Continued) **S104787368**

Contractor will install 27
concrete filled piles, pour a bottom slab and install two new
10,000-gallon USTs in the same
location. Existing piping will be removed after the new tanks are in
place and the excavation
backfilled. End point samples will also be collected for piping
excavation as requested by DEC. On
May 23, 2017 during excavation related to existing tank removal, some
soils were identified that
appeared to be impacted due to elevated PID readings and a diesel
odor. D&B notified the NYSDEC of
a historical petroleum release at the site and a spill case initiated.
Soil with elevated PID
readings was segregated. Upon removal of the USTs, 14 end point
samples were collected and analyzed
for the tank excavation. Please see attached for a site plan of the
existing fueling station that
has been marked with approximate end point sample locations. Table 1,
which provides a summary of
the removed tanks is attached for reference. Table 2, which provides a
summary of PID Readings is
also attached for reference. Analytical data related to the endpoint
sampling indicates that all
VOCs were non detect with the exception of sample GBN which has one
exceedance. For sample GBN,
benzene was detected at a concentration of 250 ug/kg which exceeds for
unrestricted use. This
concentration of benzene does not exceed for restricted industrial
use. There were several SVOC
exceedances for unrestricted and restricted use; however, the Site is
known to contain historic
fill. Soil borings taken from the area near the USTs show historic
fill present up to 12-17 feet
below grade. Additionally, the National Grid Greenpoint Energy Center
is a former MGP site and is
adjoined by Newtown Creek, a designated Superfund site to the east. As
the DEC has requested that
the tank closure report include piping excavation endpoint samples,
the report cannot be finalized
until the new tank installation is complete. However, due to the
results of the endpoint sampling
below the old USTs, we are requesting NYSDEC review/approval of
analytical data provided to close
Spill No. 1701762 at this time. A groundwater sample was collected
from the base of the former UST
excavation. The groundwater sample indicate one VOC (1500 ug/lt
Naphathalene)and multiple SVOCs
exceedance their repective NYSDEC GWGS. Following the product piping,
vent piping and dispensers
island removal, five (5) soil sample were collected from those
respective areas. All VOC
conccentrations were determined to be below their respective SCO’s
limits. However, the two (2)
samples analyzed via EPA Methos 8270, sample 2 and sample 4, exhibited
concentrations of several
SVOCs above their respective SCOs. On July 30, 2018 I received an
email from John Miller and I

GREENPOINT ENERGY FACILITY (Continued) **S104787368**

spoke with him. The email stated that My name is John Miller and I am the NYSDEC project manager
for Greenpoint MGP Site (224052). I was informed recently that National Grid is hoping to close out
a spill at the site. My understanding is that any contamination that remains related to the spill
would be address under the MPG program. I only just to heard of this issue last week, but after
speaking with Grid it sounds like reasonable approach. I wanted to confirm with you whether you
agree or not. Do you have any issues or concern?. Based on John Miller's email that any
contamination that remains related to the spill would be addressed under the MPG program # 224052
this spill is closed. Spill closed.

Remarks: clean up is pending soil tested positive for materials pbs 2-306398

GREENPOINT ENERGY FACILITY (Continued) **S104787368**

Acres: 117
Fuse: Industrial
Description: Location: The site is a large parcel located along Newtown Creek at 287 Maspeth Avenue in Brooklyn,NY in Kings County. It is bounded by Newtown Creek to the east, Maspeth Ave. to the south, Vandevoort Ave. to the west, and Lombardy St. to the north. This is a large property at 117 acres. Site Features: The site is currently known as the Greenpoint Energy Center and houses a major liquefied natural gas storage facility and compressor station, an operations center for KeySpan's distribution and service units, and a warehouse facility. Current zoning and land uses: Surrounding land uses are mixed industrial, residential, and commercial. The nearest residential land use is located adjacent to the northwest corner of the site. Past use of the site: A large manufactured gas plant (MGP) and byproduct coking operation operated on the site from 1928 until 1952. Coal tar has been found in subsurface soils, but the full extent of contamination has not yet been established. The surrounding neighborhood has also been subject to a large petroleum spill, apparently unrelated to the MGP. A Voluntary Cleanup Agreement (VCA) (site No. V00631) was entered into in 2005. An Interim Remedial Measure (IRM) was performed in 2006 to remove impacted soil in the northeast corner of the property to allow for upgrades to the Liquid Natural Gas (LNG) facility. The VCA was replaced by a Multi-Site Consent Order in 2007, modified in 2008. A site-wide remedial investigation (RI) is being conducted at the site. Additional data collection is being completed to better refine the delineation of the nature and extent of contamination. Site Geology/hydrogeology: The site is underlain by fill and heterogeneous glacial deposits that include outwash sands with till and lenticular silt deposits. Bedrock is approximately 200 feet below the ground surface. Groundwater flows northeasterly, toward the Newtown Creek.
Assess Env: A remedial investigation (RI) of the site is being performed in a phased approach based on geography and the proximity to adjacent or nearby water bodies. Phases 1 and 2 of the RI were located on the eastern and southern boundaries of the site, respectively, and were implemented between October 2011 and March 2016. Phase 3 encompassed the remainder of the site and was implemented between April 2016 and July 2019. Additional data collection is being completed to refine the delineation of the extent of contamination. Throughout the course of site investigations, soil, groundwater, and sediment samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals and cyanide. In addition, soils were analyzed for pesticides, herbicides, hexavalent chromium and total organic carbon while groundwater was analyzed for per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Sediment analysis also included pesticides, herbicides, ammonia, hexavalent chromium, dioxins and furans, total petroleum hydrocarbons (TPH), diesel range organics (DRO), black carbon, pH, sulfide, total nitrogen, total organic carbon, total phosphorus, normal alkanes and isoprenoid hydrocarbons. Soil vapor and indoor air have been analyzed for VOCs and naphthalene. Nature and Extent of Contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Areas of

GREENPOINT ENERGY FACILITY (Continued) **S104787368**

potentially NAPL-saturated soil were generally isolated to the southern portion of the Loading Platform Area and in the vicinity of Holder 1 along Maspeth Avenue. Three wells have accumulated recoverable coal tar; two in the loading platform area and one along Maspeth Avenue. No visual observations of potentially NAPL-saturated soil have been identified in the borings advanced within the site interior and no measurable NAPL has been visually observed in any of the wells installed within the interior. Soil: Soil concentrations above the Industrial Use Soil Cleanup Objectives (IUSCOs) primarily included PAHs. In the shallow zone, PAH exceedances of the IUSCOs were identified throughout the site; PAH concentrations generally decreased with depth and were largely identified in areas with noted physical impacts, particularly the Loading Platform Area where PAH exceedances of IUSCOs continued into the deep zone. The maximum concentration of total PAHs was observed near the Loading Dock Area at a concentration of 67,350 mg/kg in a sample collected from three to four feet below grade (ft bg). Concentrations of BTEX above the IUSCOs were identified in a limited number (total of three) samples sitewide. The maximum total BTEX concentration detected was 2,137.4 mg/kg from a sample collected from 15-16 ft bg along the Maspeth Alignment. Detections of metals in soil were mostly limited to the shallow zone. Detections in the intermediate or deep zones were limited to sporadic and relatively low detections of arsenic. Detections of cyanide were few and relatively low in concentration. The cyanide detections were generally limited to the site interior and were confined to the shallow soil zone. The maximum cyanide concentration detected was 29.4 mg/kg from three to four ft bg in the area of the former purifiers. There have been no detections of pesticides or herbicides above the IUSCOs. There were no PCB detections in soil above IUSCOs. Groundwater: Groundwater exceedances of standards and guidance values primarily included total BTEX, PAHs, chlorinated volatile organic compounds (CVOCs) and metals; cyanide and PCBs were detected in exceedance less frequently. The areas of elevated BTEX and PAH concentrations were primarily located near the southern Loading Platform Area in the vicinity of the identified soil impacts and along the southern property boundary along Maspeth Avenue. Elevated CVOC concentrations were generally found along the northern and western site perimeters and can be attributed to off-site sources. Total BTEX in groundwater ranged from non-detect (ND) to 455,100 parts per billion (ppb). Total PAHs in groundwater ranged from ND to 12,459 ppb. Numerous metals were detected above their corresponding standards, including arsenic, iron, lead, magnesium, manganese, and sodium, likely associated with regional conditions rather than historical site operations. Total cyanide concentrations in groundwater ranged from ND to 1,060 ppb. PCB exceedances were limited to three of the 148 groundwater samples analyzed, with a maximum total concentration of 1.54 ppb. Groundwater results were non-detect for 1,4-dioxane. While perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were occasionally detected in groundwater above guidance values, total PFAS concentrations were not detected in any well above guidance values. The maximum PFOS concentration detected was 57.9 parts per trillion (ppt) while the maximum PFOA concentration was 97.5 ppt and maximum total PFAS concentration was 256.17 ppt. These PFAS concentrations are not indicative of a source area and concentrations are likely associated with off-site sources. Soil Vapor: Sub-slab vapor and indoor air samples were collected during

GREENPOINT ENERGY FACILITY (Continued) **S104787368**

	2018 and 2019. Results varied across the site from no further action (nine buildings) to identifying sources and resampling (two buildings) to mitigation recommendations (three buildings).
Assess Doh:	Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of fish and shellfish from Newtown Creek is restricted based on fish advisories for the East River, which apply to Newtown Creek as a tributary.

Site Description: This site has been accepted into the Brownfield Cleanup Program - Site Code C224154. Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing until 2010. The site has a RCRA Closure Work Plan which started to be performed in 2011 and continues in 2014. Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the past ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. In 1999 RGJ contractor closed in place 14 USTs used to store VOCs. RGJ reported soil contamination around the USTs. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001, after Con Edison, the owner of the adjacent property discovered Volatile Organic Compounds (VOCs) under their parking lot and sued Fyn Paint Co. The investigation at the site revealed soil and groundwater highly contaminated with VOCs. After multiple phase investigation in January 2007, an IRM/pump and treatment of the groundwater was installed and operated. The RAWP was approved in 2009, and an excavation of the contaminated soil around six of the USTs constituting the source of VOCs was completed in 2010. Additional remedial design for a dual phase extraction system (DPES) was approved. In June 2014, the DPES was operating at the site. In November 2011, RCRA Closure field work started under EPA supervision and it continued through 2014. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of a layer of antropogenic fill material (0-12 feet and the rest to 75 feet of medium and course sand, gravel

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Env Problem: See also Site No. V00380. Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP)was approved for off site (OU-2)contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed in May- June 2014. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated and the remedial action will be completed under the State Superfund Program. In March 2015, the site was accepted in the Brownfield Cleanup Program (BCP) with the index # C224154.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Updated By:	HMDUDEK
Site Description:	Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.
Env Problem:	Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Updated By:	HMDUDEK
Site Description:	Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.
Env Problem:	Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

HW Code:	C224154
Control Code:	34
Control Type:	INST
Dt record added:	03/24/2015
Dt rec updated:	02/07/2024
Updated By:	HMDUDEK
Site Code:	502562
Site Description:	Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.
Env Problem:	Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene,

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Code:	502562
Site Description:	Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.
Env Problem:	Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbenzene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Updated By: HMDUDEK
Site Code: 502562
Site Description: Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.
Env Problem: Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbenzene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Code: 502562
Site Description: Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.
Env Problem: Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Code: 56974
Site Description: Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.
Env Problem: Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP)was approved for off site (OU-2)contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated. In March 2015, a new owner applied and the site was accepted into the Brownfield Cleanup Program under site no. C224154.

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

C224154.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Site Code: 56974
Site Description: Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Env Problem: Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP)was approved for off site (OU-2)contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated. In March 2015, a new owner applied and the site was accepted into the Brownfield Cleanup Program under site no. C224154.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Address:	230 KENT AVENUE
City,State,Zip:	BROOKLYN, NY 11249
Program:	BCP
Site Code:	502562
Acres:	0.125
HW Code:	C224154
SWIS:	2401
Town:	New York City
Record Added Date:	12/04/2014
Record Updated Date:	04/14/2025
Update By:	LAGORTON
Site Description:	Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State s Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary.
Env Problem:	Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone,

FYN PAINT AND LACQUER CO., INC. (Continued) **S108524789**

ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbezene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries.

Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

DEC Memo: DEC Piper left message for Patrick at EBC. Spill to be assigned to LIN. 7/23/18-Lin-OER Project. Isabel Mcgray. Spoke to Patrick from ECB. Samples taken at site are clean. Spill closure report is not needed. Will review RAR for spill closure. Plan to submit RAR is mid September of this year. 11/1/18-Lin- Received closure request from NYCOER with the following information from the RAR. 1. Mobilized site security and equipment (April 2018); 2. Performed a Community Air Monitoring Program (CAMP) for particulates and volatile organic carbon compounds. CAMP monitoring was performed from April 11, 2018, to April 30, 2018. There were no CAMP exceedances; 3. Spill #1800735 called in on April 20, 2018 during excavation activities 4. Established Track 4 Site Specific Use Soil Cleanup Objectives (SCOs). 5. Excavation of the fill material began on April 13, 2018 and was completed on April 30, 2018. For new development, the Site was excavated to a depth of 3.5 feet below cellar grade (9.5 feet below sidewalk grade) for structural support grade beams within the existing cellar area, 4 feet below sidewalk grade for footings for the first floor which occupies the remaining 21.33 ft of the building, and 4 feet below sidewalk grade for the rear yard. A total of 741.19 tons of soil and fill was removed during this remedial action. 6. excavated 715.69 tons of nonhazardous historic fill material and petroleum contaminated soil and transported to Pure Soil Technologies located in Farmingdale, NJ 07727; 7. Collected and analyzed three post-excavation endpoint soil samples (EP1, EP2, Hotspot Bottom) and one duplicate sample to determine the performance of the remedy with respect to attainment of SCOs. Track 4 Site specific Use SCOs were achieved; 8. Submitted daily reports during construction oversight activities. Daily status reports were submitted from April 11, 2018, to August 17, 2018; 9. Installed a vapor barrier system beneath the building slab and behind foundation walls. 10. Constructed an engineered composite cover consisting of concrete slab under building and 2 foot clean soil cap in rear yard; 11. Submitted a Site Management Plan (SMP) for long-term management of residual soil, including plans for maintenance, inspection and certification of the performance of Engineering Controls and Institutional Controls. and 12. The property will continue to be registered with an E-Designation by the NYC Department of Buildings. Out of the 6 soil samples taken, only one sample had a VOC exceedance for acetone for USCO. The rest were below standard. There were several SVOC exceedance above RSCO in the sample taken in the rear year. Overall results were consistent with urban fill material in NYC. No

BASEMENT (Continued) **S121985241**

exceedance in GW sample. GW is located at 10' bgs which is below the depth of excavation.
Therefore, no GW was encountered during construction. Soil vapor results indicated low levels of
petroleum related and low levels of chlorinated VOC. Engineering controls and institutional
controls are put in place to prevent any vapor intrusion from migrating to the living area. EBC
project manager: Patrick Recio Precio@ebcincny.com

Remarks: found during excavation, clean up is pending sample results

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

Name: QUANTA RESOURCES
Address: 37-80 REVIEW AVENUE
City,State,Zip: LONG ISLAND CITY, NY 10111
Program: HW
Site Code: 58532
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 1.696
HW Code: 241005
Record Add: 11/18/1999
Record Upd: 09/25/2024
Updated By: SMQUANDT
Site Description: Location: The Quanta Resources Site is an approximately 2 acre parcel located at 37-80 Review Avenue. The site is bounded on the northeast by Review Avenue and on the southwest by the Southern Line of the Long Island Rail Road (LIRR). On the northwest it is bounded by an alley (Preston Street) that runs from Review Avenue to the LIRR tracks. On the southeast it is bounded by the property currently owned by Phoenix Beverages (an imported beer distributor). Farther to the northeast, across Review Avenue, is Calvary Cemetery. Farther to the northwest, across the alley, is the North Capasso property, also referred to as Review Avenue Development I (RADI). Farther to the southwest, across the LIRR tracks, is the South Capasso property. Newtown Creek lies beyond the South Capasso property farther to the southeast approximately 450 feet from the site. Fencing bounds the property on all sides. Current Zoning and Land Use: The site is located within a highly industrialized area of Long Island City, Queens, New York. Zoning in this area is designated as heavy manufacturing. Site Features: The site has been inactive since being abandoned in November 1981. Tanks and several buildings remain on site. Past Uses of the Site: The Quanta Resources property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. A Consent Order was signed with numerous PRPs in May 2002 for the undertaking of investigation and remediation activities. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents, PCBs, heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. The Site was accepted into BCP. The BCA agreement was executed on 12/2/05 (see C241005). A PRAP was issued in June 2006. A PRAP Public Meeting was held on June 28, 2006 and the ROD was signed 2/9/07 requiring a $15,560,000 remedy which includes an LNAPL recovery system. Remedial Design is underway. A number of potential

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

	LNAPL source areas existed on the Quanta Resources Site throughout its operational history, however, the primary suspected source area is the tank farm area located in the northeastern portion of the site. A New York City emergency remedial action removed approximately 640,000 gallons of waste oil from the property. Some of the waste oil contained tetrachloroethene, methyl chloride, 1,1,1-trichloroethane and trichloroethene. Sludge, waste oil, and diesel fuel, all contaminated with PCBs, were also removed from badly deteriorated leaking tanks and drums. As part of NYSDEC's Phase II Investigation, three on-site groundwater monitoring wells were installed. During installation it was discovered that there was a seven foot layer of oil (also known as Light Non-Aqueous Phase Liquid - LNAPL) lying above the groundwater table. An LNAPL recovery system was installed at the site in 2016. This system continues to operate and is effective in remediating the site. See Site Code C241005 and C241089 for post ROD updates.
Env Problem:	The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents,heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. ROD signed 2/07. Site has transitioned into the Brownfield program. Site is now tracked as Review Avenue Development II - Site # C241089
Health Problem:	Waste oil previously stored on-site has caused widespread contamination of groundwater and soils. Approximately 500,000 gallons of contaminated waste oil remains at the site, floating on the water table. The aquifer of concern is not used as a source for drinking water. Groundwater wells in this area of Queens are used only for commercial and industrial purposes. A fence surrounds the site restricting access and minimizing the potential for direct contact exposures to on-site contaminates. The potential exists for the floating oil plume to migrate into the nearby Newtown Creek which empties into the East River. Further investigation is required.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Waste Description: Nitrobenzene

Waste Code: D038
Waste Description: Pyridine

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichloroethylene

Waste Code: D042
Waste Description: 2,4,6-Trichlorophenol

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F010
Waste Description: Quenching Bath Residues From Oil Baths From Metal Heat Treating Operations In Which Cyanides Are Used In The Process.

Waste Code: F011
Waste Description: Spent Cyanide Solutions From Slat Bath Pot Cleaning From Metal Heat Treating Operations.

Waste Code: F012
Waste Description: Quenching Wastewater Treatment Sludges From Metal Heat Treating Operations In Which Cyanides Are Used In The Process.

Waste Code: F019
Waste Description: Wastewater Treatment Sludges From The Chemical Conversion Coating Of Aluminum, Except From Zirconium Phosphating In Aluminum Can Washing When Such Phosphating Is An Exclusive Conversion Coating Process.

Waste Code: P001
Waste Description: 2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

Waste Code: P002
Waste Description: 1-Acetyl-2-Thiourea (Or) Acetamide, N-(Aminothioxomethyl)-

Waste Code: P003
Waste Description: 2-Propenal (Or) Acrolein

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code:	P004
Waste Description:	1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-Hexa-Chloro-1,4,4a,5,8,8a,-Hexahydro-, (1alpha, 4alpha, 4abeta, 5alpha, 8alpha, 8abeta)- (Or) Aldrin
Waste Code:	P005
Waste Description:	2-Propen-1-Ol (Or) Allyl Alcohol
Waste Code:	P006
Waste Description:	Aluminum Phosphide (R,T)
Waste Code:	P007
Waste Description:	3(2h)-Isoxazolone, 5-(Aminomethyl)- (Or) 5-(Aminomethyl)-3-Isoxazolol
Waste Code:	P008
Waste Description:	4-Aminopyridine (Or) 4-Pyridinamine
Waste Code:	P009
Waste Description:	Ammonium Picrate (R) (Or) Phenol, 2,4,6-Trinitro-, Ammonium Salt (R)
Waste Code:	P010
Waste Description:	Arsenic Acid H3aso4
Waste Code:	P011
Waste Description:	Arsenic Oxide As2o5 (Or) Arsenic Pentoxide
Waste Code:	P012
Waste Description:	Arsenic Oxide As2o3 (Or) Arsenic Trioxide
Waste Code:	P013
Waste Description:	Barium Cyanide
Waste Code:	P014
Waste Description:	Benzenethiol (Or) Thiophenol
Waste Code:	P015
Waste Description:	Beryllium
Waste Code:	P016
Waste Description:	Dichloromethyl Ether (Or) Methane, Oxybis[Chloro-
Waste Code:	P017
Waste Description:	2-Propanone, 1-Bromo- (Or) Bromoacetone
Waste Code:	P018
Waste Description:	Brucine (Or) Strychnidin-10-One, 2,3-Dimethoxy-
Waste Code:	P020
Waste Description:	Dinoseb (Or) Phenol, 2-(1-Methylpropyl)-4,6-Dinitro-
Waste Code:	P021
Waste Description:	Calcium Cyanide (Or) Calcium Cyanide Ca(Cn)2
Waste Code:	P022
Waste Description:	Carbon Disulfide
Waste Code:	P023

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Description: Acetaldehyde, Chloro- (Or) Chloroacetaldehyde

Waste Code: P024
Waste Description: Benzenamine, 4-Chloro- (Or) P-Chloraniline

Waste Code: P026
Waste Description: 1-(O-Chlorophenyl)Thiourea (Or) Thiourea, (2-Chlorophenyl)-

Waste Code: P027
Waste Description: 3-Chloropropionitrile (Or) Propanenitrile, 3-Chloro-

Waste Code: P029
Waste Description: Copper Cyanide (Or) Copper Cyanide Cu(Cn)

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: P031
Waste Description: Cyanogen (Or) Ethanedinitrile

Waste Code: P033
Waste Description: Cyanogen Chloride (Or) Cyanogen Chloride (Cn)Cl

Waste Code: P034
Waste Description: 2-Cyclohexyl-4,6-Dinitrophenol (Or) Phenol, 2-Cyclohexyl-4,6-Dinitro-

Waste Code: P036
Waste Description: Arsonous Dichloride, Phenyl- (Or) Dichlorophenylarsine

Waste Code: P037
Waste Description: 2,7:3,6-Dimethanonaphth[2,3-B]Oxirene, 3,4,5,6,9,9-Hexachloro-1a,2,2a,3,6,6a,7,7a-Octahydro-, (1aalpha, 2beta, 2aalpha, 3beta, 6beta, 6aalpha, 7beta, 7aalpha)- (Or) Dieldrin

Waste Code: P038
Waste Description: Arsine, Diethyl- (Or) Diethylarsine

Waste Code: P039
Waste Description: Disulfoton (Or) Phosphorodithioic Acid, O,O-Diethyl S-[2-(Ethylthio)Ethyl] Ester

Waste Code: P040
Waste Description: O,O-Diethyl O-Pyrazinyl Phosphorothioate (Or) Phosphorothioic Acid, O,O-Diethyl O-Pyrazinyl Ester

Waste Code: P041
Waste Description: Diethyl-P-Nitrophenyl Phosphate (Or) Phosphoric Acid, Diethyl 4-Nitrophenyl Ester

Waste Code: P042
Waste Description: 1,2-Benzenediol, 4-[1-Hydroxy-2-(Methylamino)Ethyl]-, (R)- (Or) Epinephrine

Waste Code: P043
Waste Description: Diisopropylfluorophosphate (Dfp) (Or) Phosphorofluoridic Acid, Bis(1-Methylethyl) Ester

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: P044
Waste Description: Dimethoate (Or) Phosphorodithioic Acid, O,O-Dimethyl S-[2-(Methylamino)-2-Oxoethyl] Ester

Waste Code: P045
Waste Description: 2-Butanone, 3,3-Dimethyl-1-(Methylthio)-, O-[Methylamino)Carbonyl] Oxime (Or) Thiofanox

Waste Code: P046
Waste Description: Alpha,Alpha-Dimethylphenethylamine (Or) Benzeneethanamine, Alpha, Alpha-Dimethyl-

Waste Code: P047
Waste Description: 4,6-Dinitro-O-Cresol, & Salts (Or) Phenol, 2-Methyl-4,6-Dinitro-, & Salts

Waste Code: P048
Waste Description: 2,4-Dinitrophenol (Or) Phenol, 2,4-Dinitro-

Waste Code: P049
Waste Description: Dithiobiuret (Or) Thioimidodicarbonic Diamide [(H2n)C(S)]2nh

Waste Code: P050
Waste Description: 6,9-Methano-2,4,3-Benzodioxathiepin,6,7,8,9,10,10-Hexachloro-1,5,5a,6, 9,9a-Hexahydro-,3-Oxide (Or) Endosulfan

Waste Code: P051
Waste Description: 2,7:3,6-Dimethanonaphth[2,3-B]Oxirene, 3,4,5,6,9,9-Hexachloro-1a,2,2a,3,6,6a,7,7a-Octahydro-, (1aalpha, 2beta, 2abeta, 3alpha, 6alpha, 6abeta, 7beta, 7aalpha)- & Metabolites (Or) Endrin (Or) Endrin, & Metabolites

Waste Code: P054
Waste Description: Aziridine (Or) Ethyleneimine

Waste Code: P056
Waste Description: Fluorine

Waste Code: P057
Waste Description: Acetamide, 2-Fluoro- (Or) Fluoroacetamide

Waste Code: P058
Waste Description: Acetic Acid, Fluoro-, Sodium Salt (Or) Fluoroacetic Acid, Sodium Salt

Waste Code: P059
Waste Description: 4,7-Methano-1h-Indene, 1,4,5,6,7,8,8-Heptachloro-3a,4,7,7a-Tetrahydro- (Or) Heptachlor

Waste Code: P060
Waste Description: 1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-Hexa-Chloro-1,4,4a,5,8,8a,-Hexahydro-, (1alpha, 4alpha, 4abeta, 5beta, 8beta, 8abeta)- (Or) Isodrin

Waste Code: P062
Waste Description: Hexaethyl Tetraphosphate (Or) Tetraphosphoric Acid, Hexaethyl Ester

Waste Code: P063

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Description: Hydrocyanic Acid (Or) Hydrogen Cyanide

Waste Code: P064
Waste Description: Methane, Isocyanato- (Or) Methyl Isocyanate

Waste Code: P065
Waste Description: Fulminic Acid, Mercury(2+) Salt (R,T) (Or) Mercury Fulminate (R,T)

Waste Code: P066
Waste Description: Ethanimidothioic Acid, N-[[(Methylamino)Carbonyl]Oxy]-, Methyl Ester (Or) Methomyl

Waste Code: P067
Waste Description: 1,2-Propylenimine (Or) Aziridine, 2-Methyl-

Waste Code: P068
Waste Description: Hydrazine, Methyl- (Or) Methyl Hydrazine

Waste Code: P069
Waste Description: 2-Methyllactonitrile (Or) Propanenitrile, 2-Hydroxy-2-Methyl-

Waste Code: P070
Waste Description: Aldicarb (Or) Propanal, 2-Methyl-2-(Methylthio)-, O-[(Methylamino)Carbonyl]Oxime

Waste Code: P071
Waste Description: Methyl Parathion (Or) Phosphorothioic Acid, O,O,-Dimethyl O-(4-Nitrophenyl) Ester

Waste Code: P072
Waste Description: Alpha-Naphthylthiourea (Or) Thiourea, 1-Naphthalenyl-

Waste Code: P073
Waste Description: Nickel Carbonyl (Or) Nickel Carbonyl Ni(Co)4, (T-4)-

Waste Code: P074
Waste Description: Nickel Cyanide (Or) Nickel Cyanide Ni(Cn)2

Waste Code: P075
Waste Description: Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts

Waste Code: P076
Waste Description: Nitric Oxide (Or) Nitrogen Oxide No

Waste Code: P077
Waste Description: Benzenamine, 4-Nitro- (Or) P-Nitroaniline

Waste Code: P078
Waste Description: Nitrogen Dioxide (Or) Nitrogen Oxide No2

Waste Code: P081
Waste Description: 1,2,3-Propanetriol, Trinitrate (R) (Or) Nitroglycerine (R)

Waste Code: P082
Waste Description: Methanimine, N-Methyl-N-Nitroso- (Or) N-Nitrosodimethylamine

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code: P084
Waste Description: N-Nitrosomethylvinylamine (Or) Vinylamine, N-Methyl-N-Nitroso-

Waste Code: P085
Waste Description: Diphosphoramide, Octamethyl- (Or) Octamethylpyrophosphoramide

Waste Code: P087
Waste Description: Osmium Oxide Oso4, (T-4)- (Or) Osmium Tetroxide

Waste Code: P088
Waste Description: 7-Oxabicyclo[2.2.1]Heptane-2,3-Dicarboxylic Acid (Or) Endothall

Waste Code: P089
Waste Description: Parathion (Or) Phosphorothioic Acid, O,O-Diethyl-O-(4-Nitrophenyl) Ester

Waste Code: P092
Waste Description: Mercury, (Acetato-O)Phenyl- (Or) Phenylmercury Acetate

Waste Code: P093
Waste Description: Phenylthiourea (Or) Thiourea, Phenyl-

Waste Code: P094
Waste Description: Phorate (Or) Phosphorodithioic Acid, O,O-Diethyl S-[(Ethylthio)Methyl] Ester

Waste Code: P095
Waste Description: Carbonic Dichloride (Or) Phosgene

Waste Code: P096
Waste Description: Hydrogen Phosphide (Or) Phosphine

Waste Code: P097
Waste Description: Famphur (Or) Phosphorothioic Acid O-[4-[(Dimethylamino)Sulfonyl]Phenyl] O,O-Dimethyl Ester

Waste Code: P098
Waste Description: Potassium Cyanide (Or) Potassium Cyanide K(Cn)

Waste Code: P099
Waste Description: Argentate (1-), Bis(Cyano-C)-, Potassium (Or) Potassium Silver Cyanide

Waste Code: P101
Waste Description: Ethyl Cyanide (Or) Propanenitrile

Waste Code: P102
Waste Description: 2-Propyn-1-Ol (Or) Propargyl Alcohol

Waste Code: P103
Waste Description: Selenourea

Waste Code: P104
Waste Description: Silver Cyanide (Or) Silver Cyanide Ag(Cn)

Waste Code: P105
Waste Description: Sodium Azide

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Code:	P106
Waste Description:	Sodium Cyanide (Or) Sodium Cyanide Na(Cn)
Waste Code:	P107
Waste Description:	Strontium Sulfide Srs
Waste Code:	P108
Waste Description:	Strychnidin-10-One, & Salts (Or) Strychnine, & Salts
Waste Code:	P109
Waste Description:	Tetraethyldithiopyrophosphate (Or) Thiodiphosphoric Acid, Tetraethyl Ester
Waste Code:	P110
Waste Description:	Plumbane, Tetraethyl- (Or) Tetraethyl Lead
Waste Code:	P111
Waste Description:	Diphosphoric Acid, Tetraethyl Ester (Or) Tetraethyl Pyrophosphate
Waste Code:	P112
Waste Description:	Methane, Tetranitro- (R) (Or) Tetranitromethane (R)
Waste Code:	P113
Waste Description:	Thallic Oxide (Or) Thallium Oxide Tl2o3
Waste Code:	P114
Waste Description:	Selenious Acid, Dithallium (1+) Salt (Or) Thallium(I) Selenite
Waste Code:	P115
Waste Description:	Sulfuric Acid, Dithallium (1+) Salt (Or) Thallium(I) Sulfate
Waste Code:	P116
Waste Description:	Hydrazinecarbothioamide (Or) Thiosemicarbazide
Waste Code:	P118
Waste Description:	Methanethiol, Trichloro- (Or) Trichloromethanethiol
Waste Code:	P119
Waste Description:	Ammonium Vanadate (Or) Vanadic Acid, Ammonium Salt
Waste Code:	P120
Waste Description:	Vanadium Oxide V2o5 (Or) Vanadium Pentoxide
Waste Code:	P121
Waste Description:	Zinc Cyanide (Or) Zinc Cyanide Zn(Cn)2
Waste Code:	P122
Waste Description:	Zinc Phosphide Zn3p2, When Present At Concentrations Greater Than 10% (R,T)
Waste Code:	P123
Waste Description:	Toxaphene
Waste Code:	U001
Waste Description:	Acetaldehyde (I) (Or) Ethanal (I)
Waste Code:	U002

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Description:	2-Propanone (I) (Or) Acetone (I)
Waste Code:	U012
Waste Description:	Aniline (I,T) (Or) Benzenamine (I,T)
Waste Code:	U014
Waste Description:	Auramine (Or) Benzenamine, 4,4'-Carbonimidoylbis[N,N-Dimethyl-
Waste Code:	U015
Waste Description:	Azaserine (Or) L-Serine, Diazoacetate (Ester)
Waste Code:	U016
Waste Description:	Benz[C]Acridine
Waste Code:	U017
Waste Description:	Benzal Chloride (Or) Benzene, (Dichloromethyl)-
Waste Code:	U018
Waste Description:	Benz[A]Anthracene
Waste Code:	U019
Waste Description:	Benzene (I,T)
Waste Code:	U020
Waste Description:	Benzenesulfonic Acid Chloride (C,R) (Or) Benzenesulfonyl Chloride (C,R)
Waste Code:	U021
Waste Description:	[1,1'-Biphenyl]-4,4'-Diamine (Or) Benzidine
Waste Code:	U022
Waste Description:	Benzo[A]Pyrene
Waste Code:	U023
Waste Description:	Benzene, (Trichloromethyl)- (Or) Benzotrichloride (C,R,T)
Waste Code:	U024
Waste Description:	Dichloromethoxy Ethane (Or) Ethane, 1,1'-[Methylenebis(Oxy)]Bis[2-Chloro-
Waste Code:	U025
Waste Description:	Dichloroethyl Ether (Or) Ethane, 1,1'-Oxybis[2-Chloro-
Waste Code:	U026
Waste Description:	Chlornaphazin (Or) Naphthalenamine, N,N'-Bis(2-Chloroethyl)-
Waste Code:	U027
Waste Description:	Dichloroisopropyl Ether (Or) Propane, 2,2'-Oxybis[2-Chloro-
Waste Code:	U028
Waste Description:	1,2-Benzenedicarboxylic Acid, Bis(2-Ethylhexyl) Ester (Or) Diethylhexyl Phthalate
Waste Code:	U029
Waste Description:	Methane, Bromo- (Or) Methyl Bromide
Waste Code:	U030

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Description:	4-Bromophenyl Phenyl Ether (Or) Benzene, 1-Bromo-4-Phenoxy-
Waste Code:	U031
Waste Description:	1-Butanol (I) (Or) N-Butyl Alcohol (I)
Waste Code:	U032
Waste Description:	Calcium Chromate (Or) Chromic Acid H2cro4, Calcium Salt
Waste Code:	U033
Waste Description:	Carbon Oxyfluoride (R,T) (Or) Carbonic Difluoride
Waste Code:	U034
Waste Description:	Acetaldehyde, Trichloro- (Or) Chloral
Waste Code:	U035
Waste Description:	Benzenebutanoic Acid, 4-[Bis(2-Chloroethyl)Amino]- (Or) Chlorambucil
Waste Code:	U036
Waste Description:	4,7-Methano-1h-Indene, 1,2,4,5,6,7,8,8-Octachloro-2,3,3a,4,7,7a-Hexahydro- (Or) Chlordane, Alpha & Gamma Isomers
Waste Code:	U037
Waste Description:	Benzene, Chloro- (Or) Chlorobenzene
Waste Code:	U038
Waste Description:	Benzeneacetic Acid, 4-Chloro-Alpha-(4-Chlorophenyl)-Alpha-Hydroxy-, Ethyl Ester (Or) Chlorobenzilate
Waste Code:	U039
Waste Description:	P-Chloro-M-Cresol (Or) Phenol, 4-Chloro-3-Methyl-
Waste Code:	U041
Waste Description:	Epichlorohydrin (Or) Oxirane, (Chloromethyl)-
Waste Code:	U042
Waste Description:	2-Chloroethyl Vinyl Ether (Or) Ethene, (2-Chloroethoxy)-
Waste Code:	U043
Waste Description:	Ethene, Chloro- (Or) Vinyl Chloride
Waste Code:	U044
Waste Description:	Chloroform (Or) Methane, Trichloro-
Waste Code:	U045
Waste Description:	Methane, Chloro- (I,T) (Or) Methyl Chloride (I,T)
Waste Code:	U046
Waste Description:	Chloromethyl Methyl Ether (Or) Methane, Chloromethoxy-
Waste Code:	U047
Waste Description:	Beta-Chloronaphthalene (Or) Naphthalene, 2-Chloro-
Waste Code:	U048
Waste Description:	O-Chlorophenol (Or) Phenol, 2-Chloro-
Waste Code:	U049

RADIAC RESEARCH CORP (Continued) **1000245435**

Waste Description: 4-Chloro-O-Toluidine, Hydrochloride (Or) Benzenamine, 4-Chloro-2-Methyl-, Hydrochloride

Waste Code: U050
Waste Description: Chrysene

Waste Code: U051
Waste Description: Creosote

Waste Code: U052
Waste Description: Cresol (Cresylic Acid) (Or) Phenol, Methyl-

Waste Code: U053
Waste Description: 2-Butenal (Or) Crotonaldehyde

Waste Code: U055
Waste Description: Benzene, (1-Methylethyl)- (I) (Or) Cumene (I)

Waste Code: U056
Waste Description: Benzene, Hexahydro- (I) (Or) Cyclohexane (I)

Waste Code: U057
Waste Description: Cyclohexanone (I)

Waste Code: U058
Waste Description: 2h-1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide

Waste Code: U059
Waste Description: 5,12-Naphthacenedione, 8-Acetyl-10-[(3-Amino-2,3,6-Trideoxy)-Alpha-L-Lyxo-Hexopyranosyl)Oxy]-7,8,9,10-Tetrahydro-6,8,11-Trihydroxy-1-Methoxy-, (8s-Cis)- (Or) Daunomycin

Waste Code: U060
Waste Description: Benzene, 1,1'-(2,2-Dichloroethylidene)Bis[4-Chloro- (Or) Ddd

Waste Code: U061
Waste Description: Benzene, 1,1'-(2,2,2-Trichloroethylidene)Bis[4-Chloro- (Or) Ddt

Waste Code: U062
Waste Description: Carbamothioic Acid, Bis(1-Methylethyl)-, S-(2,3-Dichloro-2-Propenyl) Ester (Or) Diallate

Waste Code: U063
Waste Description: Dibenz[A,H]Anthracene

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/29/2025

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

MGP: Manufactured Gas Plants Listing
From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Longitude (West):	73.948688 - 73° 56' 55.28''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	588790.7
UTM Y (Meters):	4508204.5
Elevation:	16 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

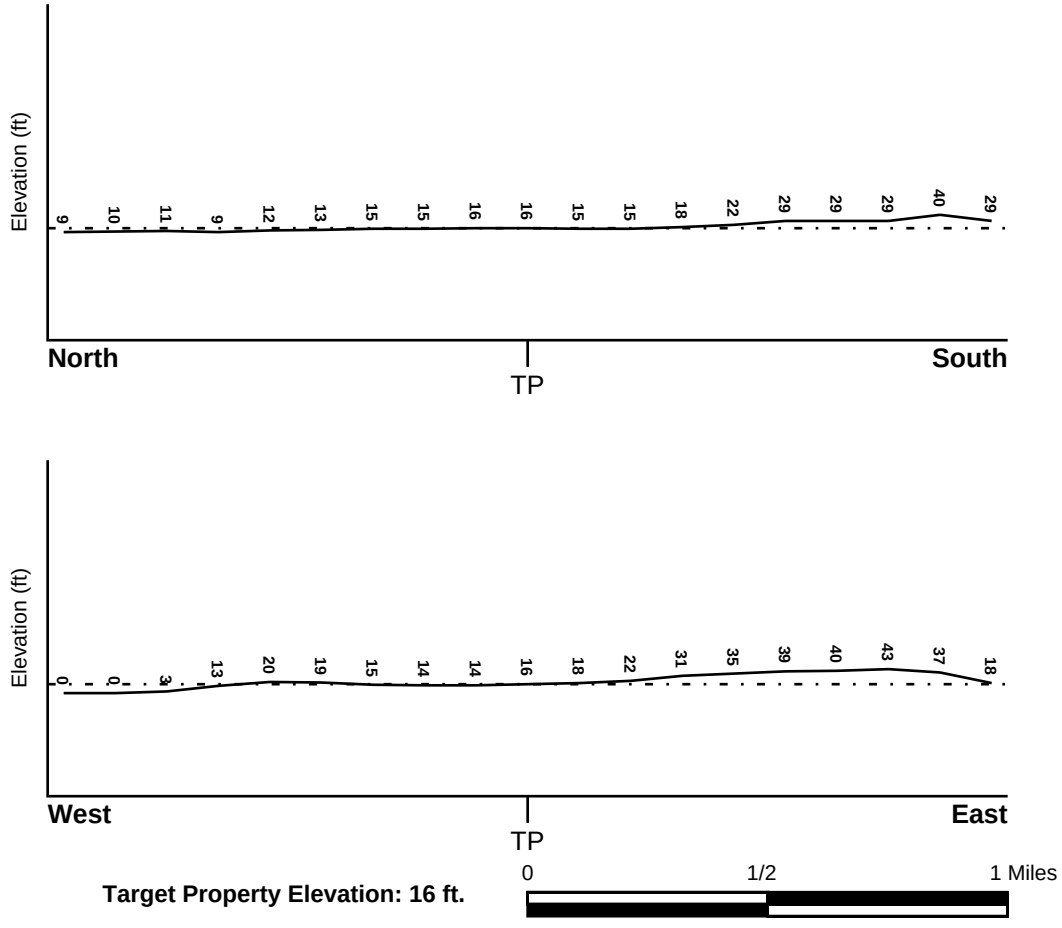
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 16 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970202F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970206F	FEMA FIRM Flood data

3604970208F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Kings County, New York
Survey Area Data: Version 16, Aug 28, 2025

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 1, 2023—Sep 1, 2023

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 11/21/2025 at 9:21 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.
