EXECUTIVE SUMMARY

Brussee Environmental Corporation (BEC) prepared this Phase I Environmental Site Assessment (ESA) for the industrial property located on the eastern side of Leonard Street, between Driggs Avenue to the north, and Engert Avenue to the south, in the Greenpoint section of the Borough of Brooklyn, New York City, Kings County, New York (hereinafter the "subject property"). The subject property is identified by the street address of 488 Leonard Street, and as Borough 3 – Block 2698 – Lot No. 7 on the New York City (NYC) tax maps.

The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions. Recognized environmental conditions are defied as (1) the presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the property under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-21 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and BEC's proposal for services.

BEC was able to establish a history for the property dating back to 1887. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directories, and historic topographic maps, as well as personal interviews, the subject property was undeveloped land from at least 1887. By 1905, the majority of the property was developed with a 2-story woodworking shop with a basement, with northern portions developed with a 1-story wood shed. By the mid-1910s, the 2-story building was occupied by the National Show Case Co. with a 1-story lumber shed located on the northern portion of the property. The buildings were demolished and the property shown as undeveloped land by the early-1940s. By 1950, northern portions were developed with a 1-story auto repair shop (northeast) and three small garages/outbuildings (northwest) with the remainder of the property identified as a parking lot. The repair shop and garages are not depicted on the 1965 Sanborn map. In 1969, the property was redeveloped with the existing 1-story industrial warehouse building. City directories indicate the building was utilized by commercial tenants from 1985 through the early- 2020s. There are no listings prior to 1985.

The property is currently developed with a 1-story industrial warehouse building, with no basement. The building occupies the entire parcel footprint, fronts west toward Leonard Street, and has a reported area of

10,000 SF. The property is occupied by Kam Kuo Wine, a beverage distributor, who utilizes the building for office space, product storage, and vehicle (truck) parking. The building is comprised of office space, storage rooms, restrooms, and warehouse space and is accessible via two vehicle entrances, including one depressed loading dock facing Leonard Street. Sidewalks are west of the property along Leonard Street.

Based on the results of the site inspection, records review and interviews, it was determined that there was one REC identified for the subject property. RECs are those conditions, which could adversely affect the environmental integrity of the property. No controlled recognized environmental conditions (CRECs) or historical recognized environmental conditions (HRECs) were identified. The identified REC is summarized below:

- Information obtained from various historic sources revealed that the subject property and surrounding properties have historically been utilized for commercial/industrial purposes, including woodworking operations, machine shops, metal finishing, lacquer spraying, electroplating, iron and metal works, cleaning and dyeing operations, service stations, auto repair shops, garages, and other various industrial/manufacturing operations. In addition, the two eastern adjacent properties (55 and 65 Eckford Street) were identified on the NYS Inactive Hazardous Waste Sites (SHWS), Brownfield Cleanup Program (BCP), and multiple other regulatory databases. Historic operations at these facilities resulted in significant impacts to soil, soil vapor and groundwater. Although the 65 Eckford Street property was remediated under the BCP, the extent of off-site impacts attributable to this facility is unknown. Given the regional groundwater flow direction (west-northwest), their proximity to the subject property and, the documented presence of soil, soil vapor and groundwater impacts, there is a potential for contamination from these properties and/or other nearby facilities to have migrated beneath the subject property. As such, the historic use of the subject property and adjacent properties is considered a REC.

Based upon the above findings and conclusions, BEC recommends following:

- A subsurface investigation should be performed to evaluate potential impacts related to the historic use of the subject property and/or surrounding properties. At a minimum, the investigation should include the installation of soil borings with the collection of representative samples for laboratory analysis to document subsurface conditions and determine the nature and extent of contamination (if present). Potential soil vapor intrusion conditions should also be evaluated. Since the subject property also has an E-Designation for hazardous materials there is an option to conduct a due diligence Phase II or a more extensive investigation to satisfy the E-Designation requirements in conjunction with the re-development of the site.

In addition to the aforementioned REC, BEC identified several environmental concerns (ASTM Non-Scope issues/Business Environmental Risks [BERs]) for the subject property. The environmental concerns/BERs and BEC's recommendations are summarized as follows:

- The subject property was listed on the E-Designation database as having E- HazMat restriction (E-138), which was determined during the Greenpoint-Williamsburg Rezoning completed by the City in May 2005 (CEQR 04DCP003K). The E-designation requires the issuance of a Notice to Proceed by the New York City Office of Environmental Remediation (NYCOER) before the property can be redeveloped. The presence of the E-Designation is considered a BER.
- Fluorescent light ballasts were observed throughout the building, which based on the age of the building, may contain polychlorinated biphenyls (PCBs). BEC recommends that a PCB survey be performed prior to demolition and/or renovation activities. Any PCB-containing equipment affected by the development of the site must be properly managed during demolition and/or renovation activities. In addition, while the disposal of non-leaking PCB ballasts is not currently regulated by the United States Environmental Protection Agency (USEPA), BEC recommends that the PCB ballasts be packaged in a lined, steel drum containing an absorbent material and disposed of as PCB-waste to reduce the potential for environmental contamination and potential liability for cleanup of any environmental release of PCBs from the ballasts.
- Information obtained from multiple historic sources revealed that the subject property was formerly developed with several structures, including a woodworking facility, lumber shed, a showcase manufacturer, and an auto repair shop and several garages which were demolished between 1924 and 1965. As such, there is a potential for fill materials to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition. As no information regarding the nature or source of the fill material was available for review, there is a potential for contaminated and/or structurally unsuitable fill material to be present on the subject property. The potential presence of fill material is considered a BER.

  Experience with similar projects shows that typical urban fill material (impacted or clean) that are not excavated to support construction/redevelopment activities can remain on-site, as such we do not foresee an issue related to undisturbed urban fill. However, all urban fill material that is disturbed during any construction/redevelopment project may require sampling for proper disposal and handling.
- Suspect asbestos-containing sheetrock/plaster was observed throughout the office portions of the building. The suspect asbestos-containing materials (ACMs) were generally in good condition at the

time of the site inspection. Exposed pipes were either uninsulated or were insulated with fiberglass. In addition, due to the age of the building, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos.

If activities in the buildings (i.e., renovation or demolition) will disturb any suspect asbestos material, then BEC recommends that an asbestos survey be performed to determine if ACMs are present prior to the proposed work. If ACMs are present, then a New York City (NYC) and new York State (NYS)-licensed contractor must be retained to remove the asbestos in accordance with federal, NYS and NYC regulations.

1.0 INTRODUCTION

1.1 Purpose

This document is a Phase I Environmental Site Assessment (ESA) prepared to determine recognized environmental conditions (RECs) and/or potential environmental concerns (PECs) in connection with the industrial property located on the eastern side of Leonard Street, between Driggs Avenue to the north, and Engert Avenue to the south, in the Greenpoint section of the Borough of Brooklyn, New York City, Kings County, New York (hereinafter the "subject property"). The subject property is identified by the street address of 488 Leonard Street, and as Borough 3 – Block 2698 – Lot No. 7 on the New York City (NYC) tax maps (Figures 1 through 4). Representative site photographs are included in Appendix A.

1.2 Detailed Scope of Services

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions and American Society of Testing and Materials (ASTM) Practice E1527-21, inclusive of the United States Environmental Protection Agency (USEPA) "all appropriate inquiry" requirement published in the Federal Register on November 1, 2005. The USEPA "all appropriate inquiry" requirement establishes specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

The purpose of ASTM Practice E1527-21 is to define good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of CERCLA and petroleum products. As such, the practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability; that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in 42 U.S.C. §9601 (35)(B).

As stated in ASTM Practice E1527-21, the purpose of the Phase I ESA is to identify, to the extent feasible pursuant to the process established by ASTM Practice E1527-21, *"recognized environmental conditions in connection with the subject commercial parcel."*

The term *recognized environmental conditions*, as defined by ASTM Practice E1527-21 means *"...the (1) the presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the property under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*

"The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be de minimis are not recognized environmental conditions. A material threat is a physically observable or obvious threat which is reasonably likely to lead to a release that is threatening and might result in impact to human health and the environment."

This Phase I Environmental Site Assessment, as required by ASTM Practice E1527-21, specifically consists of the following four components:

1. Records Review;
    a. Physical settings document review;
    b. Regulatory database records search;
    c. Local municipal agency records search; and
    d. Historic use records search.
2. Site Reconnaissance;
3. Interviews with Past and Present Owners and Occupants; and
4. Evaluation and Reporting.

As stated in Practice E1527-21, there may be environmental issues or conditions at the property, which may be requested by the user to be addressed as part of the Phase I ESA, which are not covered within the scope of ASTM Practice E1527-21. The issues are referred to as non-scope considerations. The following is a list of non-scope considerations, which may be addressed, in a limited capacity within this Phase I Environmental Site Assessment:

- Radon;
- Lead-Based Paint;
- Asbestos-Containing Materials;
- Wetlands; and
- Mold and Water Damage.

1.3 Significant Assumptions

In preparation of the Phase I Environmental Site Assessment, it is assumed that information provided within the Environmental Database, regulatory agency records, municipal agency records, as well as information obtained from the user is accurate.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the subject property. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the subject property, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report;
2. The data reported, and the findings, observations, and conclusions expressed are limited by the scope of work and defined in ASTM Practice E1527-21. Any deviations from this scope are defined below. Furthermore, the scope of work was defined and developed pursuant to the request of the Client;
2. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by Brussee Environmental Corporation (BEC);
3. BEC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report will not be construed to offer legal opinion or representations as to the requirements of, or compliance with, environmental laws, rules, or regulations, or policies of federal, state, or local government agencies. BEC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document;
4. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the subject property and should not be interpreted as

such. An evaluation of subsurface soil and groundwater conditions was not performed as part of this investigation. As at any site, the actual condition of the groundwater and sub-surface soil cannot be determined without further investigation;

5. This report is based, in part, on information supplied to BEC by third-party sources. While efforts have been made to substantiate this third-party information, BEC cannot attest to the completeness or accuracy of information provided by others; and
6. The Phase I ESA practice does not include any testing or sampling of materials (e.g., soil, water, air, building materials).
7. The site inspection conducted as part of this ESA was limited to exterior portions of the subject property and areas accessible/visible from the public right-of-way adjoining the subject property. Therefore, BEC makes no representations regarding the building interiors.

1.5 User Reliance

This report was prepared in December 2025 by BEC at the request of Mr. Ari Benyakov, representing 488 Leonard Street Holdings LLC, for use by 488 Leonard Street Holdings LLC, their legal and consulting representatives and other agents authorized to act on their behalf, in conjunction with the acquisition, lease, or financing of the subject property. BEC assumes no liability for the use of this report by any person or entity other than those for which it was prepared.

2.0 SITE DESCRIPTION

2.1 Property and Address Location

The subject property consists of a single tax parcel located on the eastern side of Leonard Street, between Driggs Avenue to the north, and Engert Avenue to the south, in the Greenpoint section of the Borough of Brooklyn, New York City, Kings County, New York. The subject property is identified by the street address of 488 Leonard Street (Figures 1 through 4).

2.1.1 Tax Map Number

The subject property is designated as Borough 3 – Block 2698 – Lot No. 7 on the NYC tax maps.

2.1.2 Acreage and Building Size

According to New York City Tax Maps, the subject property consists of a single, 0.234-acre (10,200 square foot) tax parcel. The property is currently developed with a 1-story industrial warehouse building with no basement. The building occupies the entire parcel footprint, fronts west toward Leonard Street, and has a reported area of 10,000 square feet (SF). Sidewalks are west of the property along Leonard Street.

2.1.3 Ownership

According to information maintained by the New York City Department of Finance, the current property owners are identified as 488 Leonard Street, LLC.

2.1.4 Zoning

According to the City of New York Zoning Maps, the subject property is located within a mixed manufacturing and residential use (M1-2/R6A) zoning district. Additionally, the subject property is located within the Greenpoint-Williamsburg Special Use District (MX-8) (Figures 5A and 5B).

2.2 Current Occupancy and Property Use

The property is currently developed with the aforementioned 1-story industrial building with no basement. The property is occupied by Kam Kuo Wine, a beverage distributor, who utilizes the building for office space, product storage, and vehicle (truck) parking. The building is comprised of office space, storage rooms, restrooms, and warehouse space and is accessible via two vehicle entrances, including one depressed loading dock, which lead from Leonard Street. Sidewalks are west of the property along Leonard Street.

3.0 USER PROVIDED INFORMATION

3.1 Title Records

As of the date of this report the Client did not engage BEC to perform a Chain of Title review nor was a Chain of Title provided for review.

3.2 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws. The user has not made BEC aware of any environmental liens against the subject property and has not requested that BEC perform an environmental lien search for the subject property.

3.3 Specialized Knowledge

The user has not made BEC aware of any specialized knowledge regarding the chemicals or processes formerly in use at the subject or surrounding properties.

3.4 Commonly Known or Reasonably Ascertainable Information

The user has not made BEC aware of any commonly known or reasonably ascertainable information regarding the past uses of the Subject property, specific chemicals in use at the Subject property or any spills, chemical releases, or environmental cleanups at the subject property.

3.5 Valuation Reduction for Environmental Issues

The user has not made BEC aware of any valuation reduction regarding the sale price of the property.

3.6 Reason for Performing Phase I ESA

The Phase I ESA was performed to identify recognized environmental conditions at the subject property as part of the due diligence to support the lease, acquisition or financing of the property by 488 Leonard Street Holdings LLC.

4.0 SITE GEOLOGY AND HYDROGEOLOGY

4.1 Topography and Site Characteristics

4.1.1 Elevation

The topography of the site and surrounding area was reviewed from the United States Geological Survey (USGS) 7.5-minute series topographic map for the Brooklyn, NY Quadrangle (Figure 4). The elevation of the subject property is approximately 16 feet above mean sea level (amsl). The subject property is relatively flat with the general topographic gradient sloping downward to the west.

4.1.2 Surface Water Bodies

There are no surface water bodies on or adjacent to the subject property. The nearest surface water is Bushwick Inlet, located approximately one-half mile to the northwest.

4.1.3 Soils

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining, and distributing soil survey information for privately owned lands in the United States. Soil maps, based on the State Soil Geographic (STATSGO) Database, are compiled by generalizing more detailed Soil Survey Geographic (SSURGO) database maps.

According to the STATSGO data, the soil component in the vicinity of the subject property is identified as Urban Land and is described as having a variable surface texture. The STATSGO database states that additional subordinate soil types may be present in the general vicinity of the subject property. These soil types are described as mainly loamy sand and silt loam. Deeper soil types consist of very gravelly, loamy sand, unweathered bedrock and stratified sandy loam.

Additional information regarding the soil classification is also included in on Page A-4 of the Environmental Data Resources, Inc. (EDR) database report (Appendix D).

4.2 Groundwater Characteristics

4.2.1 Depth to the Water and Groundwater Flow Direction

Estimated groundwater levels and flow directions may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or de-watering operations. Generally, groundwater flow typically mimics surface topography and will also tend to flow towards nearby bodies of water. Information contained in the EDR database report, the USGS Water-Table and Potentiometric-Surface Altitudes in the

Upper Glacial, Magothy and Lloyd Aquifers Beneath Long Island, March-April 2013 (Figure 6), the USGS web site and topographic map were used to estimate groundwater depth and flow direction.

Based upon a surface elevation of 16 feet amsl, the depth to groundwater in the vicinity of the subject property is approximately 15 feet below grade surface (bgs). Groundwater is expected to flow to the west-northwest, consistent with the regional trend.

A review of USGS well data indicates that the nearest USGS monitoring well (K 3260.1) with available water level data is located approximately one-third mile east-northeast of the subject property. The well has an unspecified grade elevation and is completed in the Upper Glacial aquifer at a depth of 23 feet below grade. A total of 80 groundwater measurements were collected from this well between April 1980 and September 2000. These data indicate the depth to groundwater fluctuated between 8.94 and 13.47 feet amsl.

4.3 Geology

According to the USGS Ground Water Atlas of the United States, New York region (1995) and the USGS Hydrogeologic Framework of Long Island, New York, the site is situated within the Coastal Plain physiographic province. The Coastal Plain physiographic province is characterized by layers of Cretaceous age sediments (primarily clay, sand, and gravel) overlying igneous and metamorphic rocks that crop out in Connecticut. The surface of these rocks slope to the southeast, and the overlying Coastal Plain sediments slope and thicken in the same direction. Quaternary glacial deposits (primarily outwash sand and gravel) cover the Coastal Plain sediments on Long Island to depths of as much as 600 feet. In the area of the subject property, bedrock is present at a depth of approximately 100 feet below grade and is overlain by the Upper Glacial Aquifer, with the Raritan Confining Unit, Lloyd Aquifer, and Magothy Aquifer absent from the geologic sequence. In addition, the site is located near the northern limits of the Gardiners Clay. As such, this unit may also be present beneath the site, between bedrock and the Upper Glacial Aquifer.

5.0 SITE HISTORY

5.1 Municipal Records Review

As the subject property is located in the Borough of Brooklyn, New York City, Kings County, on-line records searches were conducted or Freedom of Information Act (FOIA) requests were sent to the following agencies: New York City Department of Finance, New York City Registrar, New York City Department of Buildings, the New York City Fire Department, the New York City Department of Environmental Protection (NYCDEP), the New York City Department of Health (NYCDOH), and the New York State Department of Environmental Conservation (NYSDEC) requesting available regulatory information regarding the subject property. Regulatory agencies usually take six to eight weeks to process FOIA requests. Responses/ information received to date are included in Appendix B. Any additional responses will be reviewed and forwarded upon receipt. As of the date of this report, the following information has been received:

New York City Department of Finance

The following is a summary of pertinent information obtained:

Tax Lot:	Borough 3 – Block 2698 – Lot No. 7
Address:	488 Leonard Street
Owner:	488 Leonard Street LLC
Lot Size:	101 by 99 feet – rectangular
Building Class:	E9 – Miscellaneous warehouse
Zoning:	Special Mixed-Use District (MX-8) manufacturing and residential (M1-2/R6A)

New York City Department Buildings

Computerized Property Profile Overviews (PPOs) available from the New York City Department of Buildings (NYCDOB) Building Information System (BIS) website were reviewed for information regarding the subject property. Pertinent information regarding the subject property is summarized below:

According to the PPO, no Actions, DOB violations, Environmental Control Board (ECB) violations, Jobs/Filings or ARA/LAA jobs are listed for this parcel.

Two Complaints are listed for this parcel. The Complaints, dated between October 2007 and October 2018, are related to related to an unpermitted crane and construction causing adjacent structures to shake. Both of the Complaints are closed/resolved.

New York City Fire Department

Freedom of Information Law (FOIL) application FOIL applications were forwarded to the New York City Fire Department (FDNY) on November 21, 2025. Responses from the FDNY are pending.

New York City Department of Health

A FOIL application was forwarded to the New York City Department of Health (NYCDOH) on November 21, 2025. A response from this agency is pending.

New York City Department of Environmental Protection

A FOIL application was forwarded to the New York City Department of Environmental Protection (NYCDEP) on November 21, 2025. A response from this agency is pending.

5.2 Historical Resources Review

5.2.1 Sanborn Fire Insurance Map Review

EDR conducted a search of available Sanborn Fire Insurance Maps for the subject property and immediate surrounding area. Fire Insurance Maps were provided for the years 1887, 1905, 1916, 1942, 1951, 1965, 1978, 1979, 1980, 1981, 1982, 1983, 1986, 1987, 1988, 1989, 1991, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006. and 2007 (Appendix C). BEC's review of the Sanborn Maps is provided on the following table:

Date	Comments
1887	**Subject Property:** Undeveloped land. **Surrounding Properties:** Undeveloped land is to the north, with Van Cott Avenue (currently Driggs Avenue) beyond. Leonard Street is to the west, followed by undeveloped land, with Orchard Street beyond. Undeveloped land, followed by a hair plastering manufacturer, with Van Pelt Avenue (currently Engert Avenue) beyond. Undeveloped land is to the east, followed by Eckford Street, with additional undeveloped land beyond.
1905	**Subject Property:** Southern and central portions are developed with a 2-story industrial building, with a basement, identified as a woodworking shop. Northern portions are developed with a 1-story lumber shed. The buildings appear associated with the Meisel Danowitz & Co. planning & molding factory to the east. **Surrounding Properties:** A 3-story building occupied by F. Duvinage Engineers & Contractors is to the north, followed by multiple 4-story retail buildings, with Driggs Avenue beyond. Leonard Street is to the west, followed by undeveloped land with Manhattan Avenue and a NYC park beyond. A wagon manufacturer/residence, several stables and a wagon shed are adjacent to the south, followed by undeveloped land and a lumber shed, with Engert Avenue beyond. Additional portions of the Meisel Danowitz & Co. planning & molding factory are to the east, followed by Eckford Street, with residences beyond.

1916	**Subject Property:** Developed generally consistent with the 1905 map depiction, except that the 2-story building is now identified as the National Showcase Co. A small addition has also been construed at the northeastern corner of the building. A lumber shed occupies the northern portions of the site. **Surrounding Properties:** A 2-story iron works and several small outbuildings are to the north, followed by a small stable, with retail stores and Driggs Avenue beyond. Leonard Street is to the west, followed by undeveloped land, with Manhattan Avenue and a park/playground beyond. A movie theater and taxi company are further to the northwest. A 3-story building occupied by a blacksmith and apartments is to the south, followed by a 1-story garage, with undeveloped land and a junk shed beyond. The former factory buildings to the northeast are occupied by a machine shop and a garage, with the buildings to the southeast identified as vacant and dilapidated. Eckford Street is further to the east with residences beyond.
1942	**Subject Property:** Undeveloped land. **Surrounding Properties:** A dyeing & cleaning facility is adjacent to the north, including a gasoline tank immediately adjacent to the northwestern corner of the subject property. A small garage is further to the north, followed by retail and mixed-use (retail/residential) buildings with Driggs Avenue beyond. Leonard Street is to the west, followed by a service station, with garages and/or service stations to the northwest and southwest. A residence and a paper bag warehouse are to the south, followed by a service station with a repair shop and carwash, with Engert Avenue beyond. Eckford Garage and a wool rag sorting and bailing operation are to the east, followed by Eckford Street.
1951-1965	**Subject Property:** Northern portions are developed with four small 1-story structures identified as an auto repair shop (east) and garages. The remainder of the property is identified as a parking lot. The buildings are not depicted on the 1965 map. **Surrounding Properties:** A dyeing & cleaning facility is adjacent to the north, including a gasoline tank immediately adjacent to the northwestern corner of the subject property. A small garage is further to the north, followed by retail and mixed-use (retail/residential) buildings with Driggs Avenue beyond. Leonard Street is to the west, followed by furniture assembly and finishing operation (former service station), with garages/repair shops and/or service stations to the northwest and southwest. A 3-story wastepaper facility and a paper bag warehouse are to the south, followed by a service station with a repair shop and carwash, with Engert Avenue beyond. A wood box manufacturer, lacquer spraying operations, and an electroplating shop are to the east, followed by Eckford Street. The 1965 map depicts the northern adjacent property as a carpet dyeing and cleaning operation. In addition, the eastern adjacent buildings are occupied by a metal finishing operation, an electroplating shop, and a lacquer spraying operation.
1977-1991	**Subject Property:** Developed with a 1-story warehouse structure (constructed in 1969). The building occupies the entire parcel footprint and is consistent with the existing building. **Surrounding Properties:** A 2-story warehouse is to the north, followed by multiple 4-sory retail and residential buildings, with Driggs Avenue beyond. Leonard Street is to the west, followed a furniture assembly and finishing operation and a non-specific manufacturing use. Service stations are further to the northwest and southwest. A fire damaged building and undeveloped lor are to the south, followed by service station/auto rental facility, with Engert Avenue beyond. Properties to the east are shown generally consistent with their 1965 map depictions. The fire damaged building to the south is demolished by 1979. The service station to the northwest is identified as a garage and repair shop beginning on the 1986 map.
1993-2007	**Subject Property:** Developed consistent with the 1991 map depiction. **Surrounding Properties:** Also shown generally consistent with their 1991 map depictions, except that the eastern adjacent properties are now shown as a non-specific manufacturing use, with an auto repair shop further to the east-northeast. In addition, the service station to the south is now identified as an auto repair shop. This property is shown as demolished beginning on the 2004 map. Properties to the east (south) are shown as undeveloped beginning oi=n the 2005 map with the use of the remaining eastern (north) adjacent building (former manufacturing facility) not specified. The existing apartments have been constructed to the south (north side of Engert Street) beginning on the 2006 map.

5.2.2 Historic Aerial Photograph Review

EDR conducted a search and provided copies of available historical aerial photographs showing the subject and surrounding properties. Aerial photographs were provided for the years 1924, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1991, 1994, 2006, 2011, 2015, 2019, and 2022 (Appendix C). However, given that the historical use of the site was established through a review of a Sanborn Maps, city directories and topographic maps, BEC determined that the historical use of the site has been properly assessed, and, therefore, the historic aerials were only briefly reviewed for evidence of significant differences and to fill in time gaps (if any).

The photographs do not show any evidence of historic water bodies, significant re-grading, mining, or historic dumping activities, which would indicate a potential environmental risk to the property. In addition, due to the long term, dense urban use of the subject property and surrounding areas, the aerial photographs did not provide significant details regarding potential environmental concerns at the site or surrounding properties.

5.2.3 Historic Topographic Map Review

BEC reviewed the 2023 Brooklyn, NY USGS topographic quadrangle map, as well as available historic topographic quadrangle maps provided by EDR. BEC's review of the topographic maps is provided on the following table:

Date	Comments
1897-1900	**Subject Property:** Shaded black, indicating that the site is developed with one or more structures, consistent with the woodworking and lumber buildings depicted on the 1905 Sanborn map (see Section 5.2.1). **Surrounding Properties:** Dense development (black shading) is to the north, followed by Driggs Avenue. Leonard Street is to the west, followed by dense development, with Manhattan Avenue and McCarren Park beyond. Dense development is to the south, followed by the intersection of Engert Street and Manhattan Avenue. Propertied to the southeast (north side of Engert Avenue) are undeveloped. Undeveloped land is to the east. Eckford Street is not depicted. Dense development is further to the east, with Graham Avenue beyond.
1947	**Subject Property:** Shown as primarily undeveloped (unshaded) land. Northern portions are shaded black, indicating that they are developed with one or more structures, consistent with the garages and auto repair shop depicted on the 1950 Sanborn map. **Surrounding Properties:** Dense development (black shading) is to the north, followed by Driggs Avenue, with additional dense development beyond. Leonard Street is to the west, followed by dense development, with Manhattan Avenue and McCarren Park beyond. Dense development is to the south, followed by the intersection of Engert Street and Manhattan Avenue Dense development is to the east, followed by Eckford Street, with dense development beyond.

1956-1995	**Subject Property:** Shaded pink to indicate dense, urban development, with no improvements depicted. **Surrounding Properties:** Shaded pink to indicate dense, urban development, with no improvements depicted, except for a school (JHS 126) further to the south. Leonard Street is to the west, followed by dense development, with Manhattan Avenue and McCarren Park beyond. The McCarren Park pool is further to the southwest. Driggs Avenue is further to the north, Engert Avenue is further to the south and Eckford Street is further to the east.
2013-2023	**Subject and Surrounding Properties:** The 2013 through 2023 maps do not depict any buildings or other structures. Surrounding roads are visible, consistent with their current configuration. McCarren Park is further to the west, with the McCarren Park pool further to the southwest and a school further to the south beyond Manhattan Avenue.

BEC's historic topographic map review did not reveal evidence of recognized environmental conditions in connection with the site or adjoining properties.

5.2.4 Historical City Directory Search

EDR conducted a search and provided copies of available historical city directory listings for the subject and adjacent properties. The historical city directory listings (Appendix D) were reviewed, to identify information regarding past uses of the subject and surrounding properties to determine if historical usage represented a REC to the subject property. The listings for the subject property are summarized in the following table:

Date	Comments
1928-1980	**Subject Property:** "Address not Listed in Research Source"
1985	**Subject Property:** Innovative Premiums (488)
1992	**Subject Property:** Innovative Premiums, Mayflower Industries, Inc., and Style Specialties (488)
1995	**Subject Property:** Innovative Premiums and Kam Kuo Wine Co., Inc. (488)
1997	**Subject Property:** Kam Kuo Wine Co., Inc. (488)
2000	**Subject Property:** Innovative Premiums and Kam Kuo Wine Co., Inc. (488)
2005	**Subject Property:** Cash for Cars and Kam Kuo Wine Co., Inc. (488)
2010	**Subject Property:** Cash for Cars (488)
2014	**Subject Property:** Cash for Cars and Kam Kuo Wine Co., Inc. (488)
2017	**Subject Property:** Cash for Cars and Kam Kuo Wine Co., Inc. (488)
2020	**Subject Property:** "Address not Listed in Research Source"
2022	**Subject Property:** Kam Kuo Wine Co., Inc. (488)

Note: Addresses shown in ( ) are on Leonard Street unless noted otherwise.

BEC notes that the subject property and nearby properties were identified as predominantly commercial/retail and residential uses with some light industrial use, since 1920, including construction companies, manufacturing operations, lacquer spraying operations, warehouses, auto repair shops, service stations, cleaning and dyeing operations, iron and metal works, electroplating shops, machine shops, and woodworking shops. BEC notes that several of the adjacent/surrounding properties were listed on various regulatory

databases indicating hazardous waste generation, petroleum storage, petroleum releases, and documented subsurface impacts including two adjacent NY BROWNFIELDS and one adjacent SHWS site. These listings are further discussed in Sections 6.1 through 6.4 where the eastern adjacent properties were determined to represent a REC.

5.2.5 Previous Environmental Site Assessments

No previous ESAs or information regarding previous environmental investigations/reports for the subject property were provided to BEC for review by the property owner or their representatives.

5.2.6 Environmental Liens or Activity and Use Limitations

A search was conducted for Activity and Use Limitations (AULs) associated with the subject property, more specifically Institutional Controls (ICs) and/or Engineering Controls (ECs), which have been placed upon the property as a result of environmental issues identified at the property. In the City of New York, information on such AULs is maintained by the City of New York Department of City Planning (NYCDCP) and is commonly depicted on zoning maps with an "E" designation, as well as maintained within Chain of Title Records. For a site to be designated with an "E" restriction, several criteria must be met. First, a property must be included within a designated re-zoning area, then the property must be identified as a "Potential" or "Projected" re-development property, and finally, the site must be listed on one or more environmental regulatory databases as listed in the ASTM standard, be adjacent to such a site, and/or have historical usage associated with hazardous materials with the potential to impact human health and/or the environment should a release have occurred. Sites with an "E" designation require additional investigation and/or remediation be performed in order to determine if the historical use of a property, typically manufacturing or chemical usage, have impacted the site. No change of use or development requiring a building permit will be issued for an "E" designated site without approval from the New York City Office of Environmental Remediation (NYCOER).

The search for environmental liens and AULs also included a review of information available from the New York City Department of Finance, New York City DOB, the EDR database report, City of New York Environmental Quality Review Requirement Declarations, City of New York Zoning maps, and the NYCDCP and NYCOER websites.

The City of New York Environmental Quality Review (CEQR) Requirement Declarations and City of New York Zoning maps and website, as well as the EDR database report, indicate that the subject property has an E-HazMat, restriction (E-138), which was determined during the Greenpoint-Williamsburg Rezoning completed by the City in May 2005 (CEQR 04DCP003K). The Hazardous Materials designation indicates

that there is a potential for soil and groundwater beneath the subject property to be impacted by historic operations at the subject property or adjacent properties. As such, the property requires an environmental investigation and review by the NYCOER to determine if the current and/or historic use of a property has impacted the subsurface and if additional investigation/remediation is warranted.

The HazMat E-designation requires the issuance of a Notice to Proceed by the NYC Office of Environmental Remediation (OER) before the property can be redeveloped. The presence of the E-Designation is considered a Business Environmental Risk (BER).

5.3 Summary of Site History

BEC was able to establish a history for the property dating back to 1887. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directories, and historic topographic maps, as well as personal interviews, the subject property was undeveloped land from at least 1887. By 1905, the majority of the property was developed with a 2-story woodworking shop with a basement, with northern portions developed with a 1-story wood shed. By the mid-1910s, the 2-story building was occupied by the National Show Case Co. with a 1-story lumber shed located on the northern portion of the property. The buildings were demolished and the property shown as undeveloped land by the early-1940s. By 1950, northern portions were developed with a 1-story auto repair shop (northeast) and three small garages/outbuildings (northwest) with the remainder of the property identified as a parking lot. The repair shop and garages are not depicted on the 1965 Sanborn map. In 1969, the property was redeveloped with the existing 1-story industrial warehouse building. City directories indicate the building was utilized by commercial tenants from 1985 through the early- 2020s. There are no listings prior to 1985.

The property is currently developed with a 1-story industrial warehouse building, with no basement. The building occupies the entire parcel footprint, fronts west toward Leonard Street, and has a reported area of 10,000 SF. The property is occupied by Kam Kuo Wine, a beverage distributor, who utilizes the building for office space, product storage, and vehicle (truck) parking. The building is comprised of office space, storage rooms, restrooms, and warehouse space and is accessible via two vehicle entrances, including one depressed loading dock, which lead from Leonard Street. Sidewalks are west of the property along Leonard Street.

6.0 REGULATORY AGENCY DATABASE SEARCH

EDR was retained to provide a computerized database search of the project area within an ASTM-standard radius of the subject property. A list of the databases searched, and the search radius is shown on the summary table below. BEC reviewed the database output to determine if the property appears on any of the regulatory agency lists.

6.1 Federal Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
National Priorities List Sites, including Proposed and Delisted Sites	NPL	1.0 mile	No	2 NPL 0 Proposed 0 Delisted
Superfund Enterprise Management System (SEMS) and SEMS Archive Sites	SEMS and SEMS-ARCHIVE	0.5 mile	No	1 SEMS 2 SEMS-ARCHIVE
Corrective Action Reports	CORRACTS	1.0 mile	No	2
Federal Facility Site Information	FFSI	1.0 mile	No	0
Resource Conservation and Recovery Act - Treatment, Storage and Disposal Facilities	RCRA-TSD	0.5 mile	No	0
Resource Conservation and Recovery Act – Active and Former Hazardous Waste Generators	RCRA LQG/SQG/VSQG/ NonGen	Site & Adjoining	No	1 LQG 0 SQG 1 VSQG 5 NonGen
Land Use Control Information System	LUCIS	0.5 mile	No	0
Engineering Control Sites	USEC	Site	No	NA
Institutional Control Sites	USIC	Site	No	NA
Emergency Response Notification System	ERNS	Site	No	NA
Federal Brownfields Sites	US Brownfields	0.5 mile	No	0

In addition to the federal databases included on the table above, over 30 additional federal databases were searched to determine if the subject and/or surrounding properties were listed. The subject property was not listed on the additional federal databases included in the EDR search report and no adjacent or surrounding listings were identified with the potential to represent an environmental concern to the subject property.

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the site:

Federal National Priorities List (NPL): Two NPL listings were identified within one mile of the subject property. These listings are summarized as follows:

- Meeker Avenue Plume, Meeker Avenue, approximately 1,780 feet east-northeast, and hydraulically cross- to downgradient of the subject property. The Meeker Avenue Plume represents an area of chlorinated solvent impacts to soil, groundwater and soil gas from multiple suspected sources. Multiple investigations have been completed since 2007, with additional investigation on-going. This site was added to the NPL in 2022. Based upon a review of information available in the database report and obtained from the USEPA website, the subject property is located within the footprint of the Meeker Avenue Plume Site. As such, there is a significant risk that groundwater and soil vapor beneath the subject property have been impacted. There is also a significant risk for soil vapor intrusion related to the Meeker Avenue site to have impacted indoor air quality within the subject building. As such, the Meeker Avenue Plume site is considered a REC. The Meeker Avenue Plume site is also listed on the federal SEMS, ROD, PRP, and PFAS NPL databases.
- Newtown Creek Superfund, South End of Ivy Hill Road, approximately 4,020 feet northeast, and hydraulically crossgradient of the subject property. Historic use of the creek and adjacent properties as an industrial shipping waterway and various industrial uses have resulted in surface water and bottom sediments been impacted, primarily by petroleum constituents. The site was added to the NPL in 2010 and subsequently divided into four Operable Units. Investigation activities are on-going, with an Interim Remedial Plan for OU-4 issued in January 2025, which includes dredging of impacted sediment from the bottom of the creek. Based on this information, its distance in a dense urban area, the presumed hydraulic gradient, it is unlikely that the Newtown Creek represents a significant environmental concern to the subject property. The Newtown Creek site is also listed on the federal SEMS, RCRA-SQG, USEC, ROD, PRP, and MANIFEST databases.

Superfund Enterprise Management System (SEMS): The SEMS database (formerly known as CERCLIS) is a compilation of known or suspected hazardous waste sites. SEMS contains properties that are proposed to or included on the NPL list. In addition, those properties that are in the screening and assessment for possible inclusion on the NPL are listed on the SEMS database.

One SEMS listing, Meeker Avenue Plume, Meeker Avenue, was identified within a one-half mile radius of the subject property. This site was detailed previously in the NPL section, where it was determined unlikely to present a significant environmental concern to the subject property.

Superfund Enterprise Management System Archive (SEMS Archive): SEMS Archive (formally known as CERCLIS-NFRAP) listings are for properties removed from the SEMS list following an initial investigation because either no contamination was found or contamination was not serious enough to warrant Superfund Action or NPL consideration. Three SEMS Archive listings were identified within a one-half mile radius of the subject property. These listings are summarized as follows:

- William Harvey Corp., approximately 1,460 ft east-northeast and hydraulically cross-gradient of the subject property. The USEPA completed a preliminary Assessment and inspection of this facility in September 1987 and the site was subsequently archived.
- City Barrel & Drum Co., Inc., 421 Meeker Avenue, approximately 1,110 ft south-southeast and hydraulically cross-gradient of the subject property. The USEPA completed a preliminary Assessment and inspection of this facility in September 1987 and the site was subsequently archived. The City Barrel & Drum site is also listed on the RCRA-NonGen databases.
- City Metal Smelting, 61 N. 13th Street, approximately 2,530 feet west-northwest and hydraulically cross- to downgradient of the subject property. The USEPA completed a removal assessment for this site in November 1991 and the site was subsequently archived. The City Metal facility also listed on the Lead Smelters database.

Based on the information in the database report, their distance and the presumed hydraulic gradient, it is unlikely that these facilities represent a significant environmental concern to the subject property.

Federal RCRA CORRACTS: CORRACTS identify hazardous waste handlers with RCRA corrective action activity. Two CORRACTS facilities (Review Avenue Development, 37-80 Review Avenue and Radiac Research Corp, 33 S. 1st Street) were identified within a one-mile radius of the subject property. Given that both of these facilities are located over one-half mile and are hydraulically downgradient,/separated from the subject property by Newtown Creek, it is unlikely that these facilities represent a significant environmental risk to the subject property.

Federal Resource Conservation and Recovery Act (RCRA): This database includes selective information on facilities which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Two of the listed RCRA sites are located adjacent to the subject property, and they are summarized below:

- Former Carter Spray Finishing Corp. (ID No. NYD001547397), 65 Eckford Street, adjacent to the east, and hydraulically upgradient of the subject property. This facility has operated as a RCRA-VSQ to LQG since at least August 1980. This facility was cross referenced on the MANIFEST database and identified as generating halogenated and nonhalogenated solvent, lead and chromium wastes. No violations were identified for this facility. The Carter Spray Finishing Site is also listed on the FTTS, Hist FTTS, US AIRS, NY BROWNFIELDS, CBS, NYSPILLS, NYCOER and MANIFEST databases. As detailed in the NY BROWNFIELDS database section below, this property is considered a REC to the subject property due to its close proximity and the potential for documented contamination to have migrated beneath the subject property, impacting soil vapor and/or groundwater quality.
- Berkman Brotherss, Inc. (ID No. NYD001236017), Eckford Street, adjacent to the east, and hydraulically upgradient of the subject property. This facility has operated as a RCRA-VSQ to LQG since at least July 1980. This facility was cross referenced on the MANIFEST database and identified as generating reactive, arsenic, zinc, nonhalogenated solvent, cyanide, and electroplating wastes. One closed/resolved violation was identified for this facility. The Berkman Brothers Site is also listed on the SHWS, NY BROWNFIELDS, CBS, AST, MANIFEST, and NYSPILLS databases. As detailed in the NY BROWNFIELDS database section below, this property is considered a REC to the subject property due to its close proximity and the potential for documented contamination to have migrated beneath the subject property, impacting soil vapor and/or groundwater quality.

In addition, five RCRA-NonGen listings (Con Edison, 65 Eckford Street; HT Jewelry Manufacturing Co., 477 Leonard Street; Con Edison, 501 Leonard Street; Lvstig Brothers, Inc., 501 Leonard Street; and Con Edison SB14297, 501 Leonard Street) were identified for an adjacent property. A NonGen facility is a former registered/regulated generator which does not presently generate hazardous waste. Information provided within the EDR report indicates that there are no open/active violations for this facility. Therefore, it is unlikely that this facility represents a significant environmental concern to the subject property.

6.2 State Databases

Listing Name or Database Searched	Abbreviat0ion	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
Inactive Hazardous Waste Disposal Sites, including De-listed Sites	SHWS	1.0 mile	No	33SHWS 0 Delisted SHWS
Vapor Intrusion Legacy Site List	VAPOR	1.0 mile	No	0

Hazardous Substance Waste Disposal Site	HSWDS	0.5 mile	No	1
Solid Waste Facilities/Landfill Sites	SWF/LF	0.5 mile	No	3
Registered Recycling Facility List	SWRCY	0.5 mile	No	0
Registered Waste Tire Storage Facility List	SWTIRE	0.5 mile	No	0
Leaking Underground Storage Tanks	LTANKS	0.5 mile	No	25 LTANKS
Petroleum Bulk Storage - Underground and Aboveground Storage Tank Databases	PBS UST/AST	Site & Adjoining	No	2 UST 3 AST 0 TANKS
Chemical Bulk Storage - Underground and Aboveground Storage Tank Databases	CBS UST/AST	0.25 mile	No	2
Major Oil Storage Facility - Underground and Aboveground Storage Tank Databases	MOSF UST/AST	Site & Adjoining	No	0
Registry of Engineering Controls	NYEC	Site	No	NA
Registry of Institutional Controls	NYEC	Site	No	NA
Voluntary Cleanup Agreements	VCP	0.5 mile	No	53
State Brownfields Site List	Brownfields	0.5 mile	No	21
E-Designation Site List	E-Des	0.125 mile	**Yes**	25
NYCOER Sites List	NYCOER	1.0 mile	No	280
Per- and Polyfluoroalkyl Substances	NY PFAS	0.25 mile	No	0
Spills Information Database	NYSPILLS	0.125 mile	No	18
Registered Drycleaning Facilities	DRYCLEANERS	0.25 mile	No	2

**BEC notes that according to ASTM E 1527-21, Section 8.1.2.1, the search distance may be reduced at the discretion of the environmental professional. The potential to impact the site, including BEC's decision to reduce the search distances, was based on several factors including, but not limited to regulatory status by applicable agencies, medium impacted, distance from the site, historical use of the site and surrounding properties, estimated direction of groundwater flow, soil/geologic factors, urban setting, and other factors. In this case, there were no databases with reduced search distances.*

The subject property is identified on the E-Designation database. This listing is summarized as follows:

<u>*NYC E-Designated Sites(E-DES):*</u> The subject property was listed on the E-Designation database as having n E-HazMat restriction (E-138), which was determined during the Greenpoint-Williamsburg Rezoning completed by the City in May 2005 (CEQR 04DCP003K). The E-designation requires the issuance of a Notice to Proceed by the NYCOER before the property can be redeveloped. The presence of the E-Designation is considered a BER (see Section 5.2.6).

In addition to the New York State (NYS) databases included on the table above, over, ten additional NYS databases were searched to determine if the subject and/or surrounding properties were listed. The subject property was not listed on the additional State databases included in the EDR search report and no adjacent or surrounding listings were identified with the potential to represent an environmental concern to the subject property.

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

State Inactive Hazardous Waste Sites (SHWS): SHWS records are New York State's equivalent to the CERCLIS. These properties may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. These records come from the New York State Department of Environmental Conservation (NYSDEC). One SHWS listing was identified within a one-eighth mile radius of the subject property, and it is summarized as follows:

- Berkman Brothers (ID No. 224168), 55 Eckford Street, adjacent to the east and hydraulically upgradient of the subject property. This site was historically occupied by a woodworking facility, a wool and rag sorting and bailing operation and an electroplating and lacquer spraying shop. The former buildings were demolished circa 2005. Re-development began after 2009, with a stop work order issued in 2016. The site was entered into the Brownfield program in 2017, subsequently withdrawn and re-entered into the program by another entity in 2024. The site is developed with an uncompleted 6-story building (steel frame only) with a partial basement. The northern adjacent property (65 Eckford Street) was remediated under the Brownfield program (completed in 2023). An investigation completed at the site revealed the presence of fill materials to depths up to 17 feet below grade and groundwater flowing to the northeast, with localized variations. Soil/fill material contained elevated concentrations of metals and SVOCs. Groundwater and soil vapor impacts were also identified. The site is currently classified "N" indicating that no further action is currently warranted, as the site is being addressed under the BCP. NYSDEC approval of the Remedial Action Workplan is pending (expected in November/December 2025). Although groundwater reportedly flows to the northeast, given the reported variations in flow, its proximity to the subject property and the documented presence of soil, soil vapor and groundwater impacts, there is a potential for contamination from this property to have migrated beneath the subject property. As such, the former Berkman Brothers site is considered a REC.

Thirty-two additional SWHS listings were identified between one-eighth and one-mile from the subject property; however, based upon their distances in a dense urban area, the presumed hydraulic gradient, and/or that the site and surrounding area is supplied potable water from a municipal source, it is unlikely that these facilities represent a significant environmental risk to the subject property.

Hazardous Substance Waste Disposal Sites (HSWDS): The Hazardous Substance Waste Disposal Sites (HSWDS) list includes any known or suspected hazardous substance waste disposal sites. Also included are sites de-listed from the Registry of Inactive Hazardous Waste Disposal Sites list and non-Registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared.

One HSWDS site was identified within a one-half mile radius of the subject property. This listing is summarized as follows:

- City Barrel, 421 Meeker Street, approximately 1,110 ft south-southeast and hydraulically cross-gradient of the subject property. This facility was detailed previously in the SEMS ARCHIVE section, where it was determined unlikely to represent a significant environmental concern to the subject property.

Solid Waste Facilities/ Landfill Sites (SWF/LF): This database is an inventory of solid waste disposal facilities or landfills in New York State. Three SWF/LF listings (National Paper Stock, 136 N. 10th Street; Corzo Contracting Co., 190 Banker Street; and Lostritto & Calandri, 1-23 Meserole Avenue) were identified within a one-half mile radius of the subject property. However, each of these facilities is identified as inactive and/or are located over one-quarter mile west-southwest or west-northwest and hydraulically cross-to downgradient of the subject property. As such, these facilities are unlikely to represent a significant environmental concern to the subject property.

Leaking Underground Storage Tanks (LTANKS): Twenty-five LTANKS listings were identified within a one-half mile radius of the subject property. Twenty-four of the 25 LTANKS sites listed in the database were issued letters of no further action by the NYSDEC, and there is no reported evidence in the database search which suggests that these sites are a significant environmental concern to the subject property. Two of the listed closed LTANKS sites are located adjacent to the subject property, and are summarized as follows:

- Spill No. 12-06982 – Brumar Sheet Metal, 498 Leonard Street, adjacent to the north and hydraulically cross+gradient of the subject property. This spill, which occurred on October 16, 2012, is related to a release from a fuel oil UST. This spill was remediated in conjunction with Spill No. 12-05075. The spill was closed by the NYSDEC on April 9, 2015.

- Spill No. 02-12132 – Brumar Sheet Metal, 498 Leonard Street, adjacent to the north and hydraulically crossgradient of the subject property. This spill, which occurred on March 10, 2003, is related to a 5,000-gallon fuel oil UST failing a tightness test. Fill and vent piping associated with the tank was reportedly replaced and the Ust passed a re-test. The spill was closed by the NYSDEC on September 26, 2006.

A review of the information provided regarding the one remaining active LTANKS listing (550 Humboldt Street), including the nature of the release, its distance and/or presumed hydraulic gradient, indicates that this spill is unlikely to represent an environmental concern to the subject property.

Petroleum Bulk Storage – Tank Facility Listings (TANKS) and Underground and Aboveground Storage Tank Databases (PBS-UST/AST): Fifteen PBS-UST and 23 PBS-AST sites are listed in the database report. The inclusion on the PBS-UST/AST list means that a site has one or more registered underground/aboveground storage tank(s), regulated under regulated under 6 NYCRR Part 612 (NYSDEC Petroleum Bulk Storage) and/or the New York City Fire Department (FDNY). This database does not indicate leaks, spills, or other violations.

Two of the listed PBS-UST sites and three of the listed PBS-AST sites are located adjacent to the subject property. These listings are summarized as follows:

- Brumar Sheet Metal (PBS ID No. 2-608752, 498 Leonard Street, adjacent to the north and hydraulically crossgradient of the subject property. This site is listed on the PBS-UST database as having twelve closed/removed tanks. The tanks ranged from 500 to 5,000-gallons in capacity, contained containing No. 2 fuel oil and were removed in 2015. This property is cross-referenced on the LTANKS or NYSPILLS databases related to three closed spill incidents. The spills are detailed in the LTANKS and NYSPILLS sections where they are determined unlikely to represent a significant environmental concern to the subject property.
- 494 Manhattan (PBS ID No. 2-613330), 494 Manhattan Avenue, adjacent to the west, across Leonard Street, and hydraulically downgradient of the subject property. This site is listed on the PBS-UST database as having six closed/removed tanks. The tanks ranged from 275 to 1,500-gallons in capacity, contained containing No. 2 fuel oil and were removed in 2021. This property was not cross-referenced on the LTANKS or NYSPILLS databases, as such it is unlikely to represent a significant environmental concern to the subject property.

- Berkman Brothers (PBS ID No. 2-000058), Eckford Street, adjacent to the east and hydraulically upgradient of the subject property. This site is listed on the CBS-AST database as having one 500-gallon plastic AST, installed in 1985 and closed in 1998. No additional details are provided. This property is cross-referenced on the NYSPILLS database related to one closed spill incident. The spill closed spill is unlikely to represent a significant environmental concern to the subject property. However, as detailed in the SHWS and NY BROWNFIELDS database sections, the Berkman Brothers facility represents REC to the subject property.
- 44 Eckford Street (PBS ID No. 2-268666), 55 Eckford Street, adjacent to the east and hydraulically upgradient of the subject property. This site is listed on the PBS-AST database as having one 2,500-gallon steel AST containing No. 2 fuel oil, installed in 1976 and removed in 2005. This property was not cross-referenced on the LTANKS or NYSPILLS databases, as such it is unlikely to represent a significant environmental concern to the subject property.
- Carter Spray Finishing (PBS ID No. 2-000005), 65 Eckford Street, adjacent to the east and hydraulically upgradient of the subject property. This site is listed on the CBS-AST database as having two closed/removed 275-gallon steel ASTs, installed in 1968 and closed/removed in 1998. No additional details are provided. This property was cross-referenced on the NYSPILLS databases related to three closed spill incidents. The spill closed spills are unlikely to represent a significant environmental concern to the subject property. However, as detailed in the NY BROWNFIELDS database section, the former Carter Spray Finishing facility represents REC to the subject property.

State Chemical Bulk Storage Sites (CBS): The inclusion of a facility on the CBS list means that a site has one or more registered storage tanks, regulated under 6NYCRR Part 595 - 599 (NYSDEC Chemical Bulk Storage) and has a total storage capacity equal to or greater than 185 gallons. This database does not indicate leaks, spills, or other violations. Two CBS facilities (Berkman Brothers, Eckford Street and Carter Spray Finishing, 65 Eckford Street) were identified within a one-quarter mile radius of the subject property. The Berkman facility was identified as having one closed/removed AST and the Carter Spray Finishing site was identified as having two closed/removed ASTs. These former tanks are unlikely to represent a significant environmental concern. However, as detailed in the SHWS and NY BROWNFIELDS database section, the Berkman Brothers and former Carter Spray Finishing facilities represent RECs to the subject property.

Voluntary Cleanup Program (VCP) Sites: VCP sites are those facilities where the property owner has to investigate and remediate the site. New York's VCP is a cooperative program for lenders, developers, and prospective purchasers to investigate and/or remediate contaminated sites and return them to productive use. Under the VCP, a volunteer performs remedial activities pursuant to one or more NYSDEC approved work

plans and agrees to remediate the site to a level that is protective of public health and the environment for the present or intended use of the property. Investigation and remediation are conducted under oversight of the NYSDEC, and the New York State Department of Health (NYSDOH) and the volunteer pays the State's oversight costs. When the volunteer completes work, a release from liability from the Department is provided with standard reservations.

Seven VCP sites were identified within a one-eighth mile radius of the subject property. Each of these seven sites were successfully remediated and issued Notices of Satisfaction/Completion by NYCOER. As such, they are unlikely to represent a significant environmental concern to the subject property.

Forty-six additional VCP listings were identified between a one-eighth and one-half mile radius of the subject property. Based on the information in the database report, as well as that available from the NYCOER website, their distance, the presumed hydraulic gradient, and/or that the subject property and surrounding area is supplied potable water from a municipal source it is unlikely that these facilities represent a significant environmental concern to the subject property.

New York State Brownfields Sites (BROWNFIELDS): In New York State, a Brownfields site is any real property in the State, whose redevelopment or reuse may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant, except those properties which are listed as Class 1 or 2 in the Registry of Inactive Hazardous Waste Disposal Sites (Class 2 sites owned by a Volunteer are eligible until July, 1, 2005); sites on the USEPA NPL; hazardous waste treatment, storage, or disposal facilities (TSDFs) permitted under ECL §27-0901 ("interim status" facilities are eligible); sites subject to a cleanup order or Stipulation under Article 12 of the Navigation Law (oil spill prevention, control, and compensation) or under Title 10 of ECL Article 17 (control of the bulk storage of petroleum); or sites subject to any on-going state or federal enforcement actions regarding solid/hazardous waste or petroleum.

Twenty-one BROWNFIELDS sites were identified within a one-half mile radius of the subject property, three of which are located adjacent to the east and are summarized as follows:

- Berkman Brothers/55 Eckford Street LLC (ID No. C224168), 55 Eckford Street, adjacent to the east and hydraulically upgradient of the subject property. This site was Detailed previously in the SHWS sites section where it was determined to represent a REC due to the potential for documented contamination from this property to have migrated beneath the subject property and impacted soil, soil vapor, and/or groundwater quality.

- Carter Spray Finishing Co., Inc. (ID No. C224218/C224218A), 65 Eckford Street (On-site and Off-Site), adjacent to the east and hydraulically upgradient of the subject property. This site was historically occupied by a woodworking facility, a machine shop, a wood box manufacturer, and a metal finishing operation. The former metals finishing operation also maintained several aboveground tanks containing chlorinated solvents. The former buildings were demolished in 2015. Investigations completed at the site revealed the presence of fill materials to depths up to 15 feet below grade. The regional groundwater flow is to the west-northwest toward the subject property. Soil/fill material contained elevated concentrations of metals and SVOCs. Petroleum and chlorinated solvent impacts to groundwater and soil vapor impacts were also identified. The site was remediated and redeveloped under the BCP, including the excavation of soils to depths between 25 and 30 ft below grade. A secant wall was installed around the site perimeter and dewatering was conducted during excavation to address groundwater impacts. Soil vapor impacts were addressed through soil excavation and the installation of a vapor barrier/waterproofing membrane. NYSDEC is currently investigating the extent of off-site impacts. Although the on-site portions of this facility have been remediated, the extent of off-site impacts is unknown. As such, given the regional groundwater flow direction, its proximity to the subject property and the documented presence of historic soil, soil vapor and groundwater impacts, there is a potential for contamination from this property to have migrated beneath the subject property. As such, the former Carter Spray Finishing site is considered a REC.

The remaining 18 NY BROWNFIELD sites were either successfully remediated and issued Certificates or Completion by NYSDEC, and/or are located hydraulically cross- to downgradient of the subject property. As such, it is unlikely that these facilities represent a significant environmental concern to the subject property.

Sixteen additional BROWNFIELDS listings were identified between one-eighth and one-half mile from the subject property. Based upon their distances in a dense urban area, the presumed hydraulic gradient, and/or that the site and surrounding area is supplied potable water from a municipal source, it is unlikely that these facilities represent a significant environmental concern to the subject property.

NYCDCP Environmental Designation Sites (E-DES): Environmental "E" designation sites are those sites identified by the NYC Department of City Planning (DCP), which need to be evaluated to address potential issues related to hazardous materials, air quality and/or noise. This designation is typically associated with areas NYC has designated for re-development and/or re-zoning, and ensure that sampling and remediation (if warranted) or other measures implemented at the property if demolition, excavation and construction are proposed to be conducted.

Three types of E-DES listings (HazMat, Air and Noise) exist, although a property can be assigned multiple designations based on known or potential risks to redevelopment. However, only those with a HazMat designation are considered to present a concern based on their historic use/development (i.e., service station, dry cleaner, manufacturing facility, etc.). The HazMat designation indicates that projected and potential development of these sites requires an environmental assessment and review by the NYC Office of Environmental Remediation (NYCOER) to determine if the current and/or historic use of a property has impacted the subsurface and if additional investigation/remediation is warranted.

Twenty-five E-DES listings were identified within a one-eighth mile of the subject property, three of which are adjacent to the subject property. This designation does not indicate the presence of contamination, nor does it indicate the presence/potential presence of offsite impacts. Therefore, there is no information in the database to indicate that these sites represent a significant environmental concern to the subject property.

NYC Office of Environmental Remediation Sites (NYCOER): This database is a listing of those properties remediated under the oversight of the NYC Office of Environmental Remediation (OER) as part of either the E-Designation program or NYC VCP. The database includes sites that have been completed or are in-progress. Ten NYCOER sites were identified within a one-eighth radius of the subject property. Remediation has been completed at each of these 10 properties, and they are unlikely to a significant environmental concern to the subject property.

Two hundred seventy additional NYCOER listings were identified between one-eighth mile and one-mile from the subject property; however, based upon their distances in a dense urban area, the presumed hydraulic gradient, and/or that the subject property and surrounding area is supplied potable water from a municipal source, these facilities are unlikely to represent a significant environmental concern to the subject property.

Registered Drycleaning Facilities (DRYCLEANERS): Two DRYCLEANERS site (TNN/HTN French Cleaners, 258 Driggs Avenue ad Clean Green LLC, 155 Nassau Avenue) were listed within a one-quarter mile radius of the subject property. The TNN/HTN French Cleaners facility was cross-referenced on the RCRA database as a current hazardous waste generator with no violations. Clean Green is identified as a drop shop, which indicates that dry cleaning is performed off-premises. Based on the information listed in the database report, their distances, the absence of violations, and the presumed hydraulic gradient, it is unlikely that the listed DRYCLEANERS sites represent a significant environmental concern to the subject property.

New York Spills Information Database (NYSPILLS): Eighteen NYSPILLS listings were identified within a one-eighth mile radius of the subject property. Each of the 18 NYSPILLS sites listed in the database were issued letters of no further action by the NYSDEC, and there is no reported evidence in the database search which suggests that these sites are a significant environmental concern to the subject property. Five of the listed closed NYSPILLS is located adjacent to the subject property, and they are summarized as follows:

- Spill No. 12-05075 – Brumar Sheet Metal, 498 Leonard Street, adjacent to the north and hydraulically crossgradient of the subject property. This spill, which occurred on August 20, 2012, is related to the discovery of petroleum contamination leaking from a 5,000-gallon fuel oil UST. Petroleum impacts extend to 30 feet below grade. This spill was remediated under the oversight of NYCOER and NYSDEC. The spill was closed by the NYSDEC on April 9, 2015.
- Spill No. 92-14462 – Berkman Brothers, Eckford Street, adjacent to the east and hydraulically upgradient of the subject property. This spill, which occurred on March 26, 1993, is related to the release of an unspecified quantity of No. 6 fuel oil. The spill was reportedly remediated by the fuel delivery company; however, no details are provided. The spill was closed by the NYSDEC on March 31, 1993.
- Spill No. 14-11729 – Phase 2, 65 Eckford Street, adjacent to the east and hydraulically upgradient of the subject property. This spill, which occurred on March 16, 2015, is related to the discovery of impacted soil during a site investigation. Possibly the source of free product on adjacent 75 Eckford Street property. This property was remediated under the BCP with sitewide excavation to 20-25 feet below grade. The spill was closed by the NYSDEC on August 22, 2024.
- Spill No. 15-01158 – Ground, 65 Eckford Street, adjacent to the east and hydraulically upgradient of the subject property. This spill, which occurred on May 1, 2015, is related to the discovery of impacted soil during a site investigation. This spill is a duplicate of Spill No. 14-11729 and was closed by the NYSDEC on May 4, 2015.
- Spill No. 22-09840 – Carter Spray Finishing, 65 Eckford Street, adjacent to the east and hydraulically upgradient of the subject property. This spill, which occurred on March 11, 2023, is related to a citizen's complaint regarding odors originating at this property. The site was being remediated under the BCP. The spill was closed by the NYSDEC on March 14, 2023.

6.3 Tribal Records and EDR Proprietary Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
Indian Reservations	IRESERVE	1.0 mile	No	0
Indian Reservation - Leaking Underground Storage Tanks	ILTANKS	0.5 mile	No	0
Indian Reservation - Registered Underground Storage Tanks	IUST	0.25 mile	No	0
Indian Reservation – Voluntary Cleanup Program Sites	IVCP	0.5 mile	No	0
Indian Reservation – Open Dump Inventory Sites	IODI	0.25 mile	No	0
Manufactured Gas Plants	MGP/NY MGP	1.0 mile	No	3/4
Historic Cleaners	HISTCL	Site & Adjoining	No	0
Historic Auto Stations	HISTAS	Site & Adjoining	No	0

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

Manufactured Gas Plants (MGPs): Four Manufactured Gas Plant (MGP) sites Equity Works, Maspeth and Vandervort Avenues; Wythe Avenue Station, Wythe Avenue, Berry Street, K-Greenpoint, 287 Maspeth Avenue; and the K-Williamsburg Works, Kent Avenue and 12th Streets) are listed in the database report. MGPs were industrial facilities at which gas was produced from coal, oil and other feedstocks. The gas was stored, and then piped to the surrounding area, where it was used for lighting, cooking, and heating homes and businesses. The first MGPs were constructed in the early 1800s, prior to the Civil War. Most were closed during the early-to-middle 1900s, and the last one ceased operation in 1972. The production of manufactured gas created wastes including coal tar and purifier waste (lime or wood chips treated with iron oxides and used to remove cyanide and sulfur from the manufactured gas). These materials were often disposed of on the site resulting in soil and groundwater contamination. Given that each of the listed MGP facilities is over one-quarter mile and/or hydraulically crossgradient/downgradient with respect to groundwater flow, it is unlikely that these facilities represent a significant environmental concern to the subject property.

6.4 Orphan Site Summary

The database report also includes 14 “orphan” sites, which are those properties where due to poor or inadequate address information the location of the property cannot be determined sufficiently for it to be

included on the radius map. However, sites with similar street names or zip codes are summarized in the database report as these sites may present environmental risks to the subject property. BEC reviewed additional information available from EDR regarding these sites, as well as available USEPA and NYS data and maps to determine if the orphan site presents a significant environmental risk to the subject property. The listed Orphan sites do not appear to represent an environmental concern to the subject property.

7.0 SITE RECONNAISSANCE

7.1 Site Inspection

BEC representative, Keith Butler, inspected the subject property on November 26, 2025, accompanied by Mr. Fred Rufrano of Kalmon Dolgin Affiliates, Inc., the property owner's representative. Mr. Rufrano provided a brief site history and other general site information.

7.2 Methodology and Limiting Conditions

Site reconnaissance included a visual inspection of the building interior, exterior areas, building systems (HVAC, plumbing, electrical, etc.), the sidewalk areas immediately adjoining the property, and the exteriors of adjacent properties. No limiting conditions were encountered during the survey.

7.3 Site Description

The subject property consists of a single tax parcel located on the eastern side of Leonard Street, between Driggs Avenue to the north, and Engert Avenue to the south, in the Greenpoint section of the Borough of Brooklyn, New York City, Kings County, New York). The subject property is identified by the street address of 488 Leonard Street, and as Borough 3 - Block 2698 - Lot 7 on the NYC tax maps (Figures 1 through 4).

The property is currently developed with a 1-story industrial warehouse building, with no basement. The building occupies the entire parcel footprint, fronts west toward Leonard Street, and has a reported area of 10,000 SF. The building is comprised of office space, storage rooms, restrooms, and warehouse space and is accessible via two vehicle entrances, including one depressed loading dock from Leonard Street. Pedestrian entrances are also along Leonard Street. The property is occupied by Kam Kuo Wine, a beverage distributor, who utilizes the building for office space, product storage, and vehicle (truck) parking. Site perimeters are bound by the subject and/or adjacent buildings, with sidewalks to the west along Leonard Street.

7.4 Utilities

Based upon information provided to BEC and/or obtained during the site inspection, the following is a table of utilities supplied to the subject property and the names of the suppliers:

Utility	Provider
Domestic Water	New York City Department of Environmental Protection (NYCDEP)
Sanitary Sewer	NYCDEP
Storm Sewer	NYCDEP
Electricity	Con Edison
Natural Gas	National Grid

7.5 Surrounding Land Use

The subject property is located in a densely developed, mixed-use urban area of Brooklyn, known as Greenpoint. The following surrounding land uses were observed during the Phase I ESA site inspection:

North: A 4-story residential building (498 Leonard Street), followed by two additional 4-story residential buildings, with a 1-story garage and four 4-story mixed-use buildings beyond.

South: A surface parking lot (482 Leonard Street), followed by multiple 4-story residential buildings, with Engert Street beyond.

East: A 6-story mixed-use building (65 Eckford Street) and a building under construction (55 Eckford Street, followed by Eckford Street, with multi-family residences beyond.

West: Leonard Street, followed by an 8-story residential building, with Manhattan Avenue and McCarren Park beyond.

7.6 Interviews

Mr. Fred Rufrano of Kalmon Dolgin Affiliates, Inc., the property owner's representative, provided site access and was present during the site inspection. In addition, Mr. Rufrano provided a brief site history and general site information. Pertinent statements made by Mr. Rufrano are included throughout this report.

7.7 Summary of Environmental Site Features

7.7.1 Chemical Use and Storage

Minor quantities of paints and typical household cleaning and maintenance chemicals were observed within storage/janitorial areas within the building. The identified materials are stored in retail-size containers and their storage is consistent with normal building cleaning/maintenance activities and business operations. No evidence of spills or leaks was observed near the chemical storage areas. The on-site storage of these materials is not considered a REC.

7.7.2 Hazardous and Non-Hazardous Waste Storage and Disposal

No evidence that regulated hazardous materials and/or hazardous wastes are generated, treated, stored, or disposed of at the subject property was observed on the date of the survey. In addition, the regulatory records review and interviews did not reveal evidence of any activities involving the production of hazardous waste at the subject property.

Solid wastes and recyclables generated by the site occupants are stored in a small trash dumpster, situated on pavement south of the site building. These wastes are hauled by Mr. T Carting, a private carter for offsite disposal. No evidence of staining or liquid waste was observed around the dumpster. No RECs, associated

with solid waste generation, storage, and disposal were identified on the subject property during the reconnaissance or through personnel interviews.

7.7.3 Underground and Aboveground Storage Tanks

The building is heated and supplied with hot water by natural gas-fired equipment. A gas meter was present on the western interior wall of the building, with a gas-fired boiler and water heater located in a small utility room adjacent to the office area and several ceiling-mounted heaters within the warehouse space. No evidence of underground storage tanks (i.e., vent or fill pipes) were observed on the property at the time of the site inspection. The EDR database report did not identify any registered petroleum or chemical ASTs or USTs for the subject property, and there are no known spills/releases attributed to the subject property. Further, no USTs were identified on historic Sanborn map nor was there any indication of a fuel oil UST identified in NYCDOB records.

Additional information may be available in files maintained by the FDNY, NYCDEP and/or NYCOER, however, no responses to BEC's FOIL requests have been received to date. Any information received from these agencies will be reviewed upon receipt and pertinent information forwarded to the client.

7.7.4 Sanitary and Stormwater Disposal

The subject property is serviced by the NYC municipal sewer system. Storm drains and floor drains that discharge directly to subsurface soils pose a potential environmental concern because they provide a pathway for impacts to the subsurface and are classified as Class V injection wells under the USEPA's Underground Injection Control (UIC) program. These structures are required to be properly closed or permitted to stay open.

No storm drains were observed on the property at the time of the site inspection. Stormwater from the subject property flows overland to the curbside drains along the adjacent roadways or infiltrates to the ground in unpaved areas. Curbside drains reportedly discharge to the NYC municipal sewer system. No floor drains were observed within the building at the time of the site inspection. Site personnel stated that they were unaware of any floor drains within the building.

7.7.5 Polychlorinated Biphenyls

Polychlorinated biphenyls (PCBs) were used until 1978 and are a group of compounds formed by the chlorination of biphenyl. PCBs have extremely high physical and chemical stabilities which led to their being used in many applications, including heat transfer fluids, hydraulic fluids, and dielectrics. PCBs are often found in transformers, capacitors, and hydraulic systems.

Electrical equipment containing PCBs are still in use and can pose a serious health hazard if fluids come in direct contact with humans, soil, or groundwater. Fires involving electrical equipment containing PCBs can cause the material to be dispersed over a large area and potentially expose many people to a health risk. Because of the health hazard associated with PCBs, they are regulated under the Toxic Substances Control Act (TSCA).

Fluorescent light ballasts were observed throughout the building, which based on the age of the building, may contain PCBs. The disposal of leaking PCB ballasts is subject to federal regulations. No evidence of leakage associated with observed light ballasts was apparent as viewed from ground level. Based on the age of the structure and the potential for the fluorescent light ballasts to contain PCBs, the light ballasts are considered an environmental concern for the subject property. No electrical transformers, hydraulic automotive lifts, elevators, or other equipment suspected to contain PCBs were identified on the property at the time of the site inspection.

7.7.6 Debris, Dumping and Surficial Staining

No evidence of chemical spills, stains or odors was observed on the property at the time of the site inspection. In addition, based on inspection observations and the review of historical and regulatory records, no evidence of landfills and/or direct burial activities was identified on or proximate to the subject property. However, as the subject property was formerly developed with multiple structures including a woodworking facility, lumber shed, a showcase manufacturer, an auto repair shop and several garages which were demolished between 1924 and 1965, there is a potential for fill material to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition). As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill material to be present on the subject property. The potential presence of fill materials is considered a BER.

7.7.7 Stressed Vegetation

No stressed vegetation was present at the time of inspection.

7.7.8 Other Environmental Concerns

BEC also inspected the subject properties for evidence

of the following potential environmental concerns:

OTHER AREAS OF CONCERN		
Area of Concern	**Not Observed**	**Observed**
Chemical/Petroleum Odors	X	
Pools of Liquid	X	
Stains or Corrosion	X	
Unidentified Containers	X	
Pits, Ponds, or Lagoons	X	
Monitoring or Other Wells	X	
Stained Soil or Pavement	X	
Air Quality	X	
Stressed Vegetation	X	

8.0 NON-SCOPE CONSIDERATIONS

8.1 Radon

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate, and pitchblende. The USEPA's Map of Radon Zones for New York State, September 1993, indicates that the Brooklyn area is not a radon risk area. The EDR report provides information from the New York State Department of Health (NYSDOH) radon survey which indicates that 51 radon tests have been conducted in Kings County. Test results indicate average radon concentrations of 0.75 pCi/L (first floor level) and 1.37 pCi/L (basements). Data indicate that approximately two percent of basements tested showed results in excess of the 4.0 pCi/L USEPA action level.

Additional data (November 2025) obtained from the NYSDOH indicates that 528 basement radon tests have been conducted in Kings County, with average radon basement concentration of 2.07 pCi/L. Based on these data, radon is not likely to represent an environmental concern for the subject property.

8.2 Lead-Based Paint

In 1978, the U.S. Product Safety Commission issued a ban on paints or surface coatings that contain greater than 0.06 percent lead. A visual inspection of painted surfaces conducted during the site inspection revealed that interior paint within the office portions of the building was in good to fair condition, with small areas of chipping or peeling. Paint within the warehouse areas were in poor condition with widespread chipping, peeling, well-worn, or missing paint. The building exterior walls were finished with painted brick and unpainted brick and concrete block. Exterior painted were generally in good condition. The lead content of the paints is unknown; however, due to the age of the building, the presence of lead-based paint (LBP) is possible. Since the site improvements are used for commercial/industrial purposes (currently vacant/ unoccupied), LBP is not considered an environmental concern. In addition, the building is not subject to LBP testing and other requirements specified in NYC Local Law No. 1 for 2004. The disposal of lead paint waste resulting from renovation or demolition activities may be subject to federal and State regulations.

8.3 Asbestos-Containing Materials

Asbestos is the name given to a group of fibrous silicate minerals, typically those of the serpentine group. The tensile strength, flexibility, and non-flammability of asbestos have led to many uses including structural materials, brake linings, insulation, and pipe manufacture. Asbestos is of concern as an air pollutant because when inhaled it may cause asbestosis, mesothelioma, and bronchogenic carcinoma. In 1989, the USEPA announced regulations that would phase out most uses of asbestos by 1996.

As part of the site inspection, a visual survey was conducted of accessible areas for the presence of suspect asbestos-containing materials (ACMs). Suspect asbestos-containing sheetrock/plaster was observed throughout the office portions of the building. The suspect ACMs were generally in good condition at the time of the site inspection. Exposed pipes were either uninsulated or were insulated with fiberglass. In addition, due to the age of the building, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos. No sampling of suspect ACMs was conducted in coordination with this Phase I ESA.

Thermal insulation, surfacing materials, and vinyl/asphalt floor materials installed before 1981 are presumed to contain asbestos. The Occupational Safety and Health Administration (OSHA) asbestos standards (effective October 1995) require owners of commercial or industrial buildings (constructed before 1981) to identify potential asbestos hazards, keep records about potential asbestos hazards, post signs to warn of asbestos hazards, and communicate information about the hazards.

8.4 Wetlands

A review of the NYSDEC Freshwater Wetland Map, Brooklyn, NY Quadrangle, indicates that there are no NYS freshwater wetlands located within a one-mile radius of the subject property.

Tidal wetlands line much of the saltwater shore, bays, inlets, canals, and estuaries of Long Island and New York City, and Westchester County. The tidal wetlands regulations apply anywhere tidal inundation occurs on a daily, monthly, or intermittent basis, including but not exclusively within the salt wedge. Vegetation in intertidal areas beyond the range of the salt wedge is classified as coastal fresh marsh. In accordance with the New York State Tidal Wetlands Land Use Regulations (6 NYCRR Part 661), sixteen wetland categories are defined in the regulations. Coastal and tidal freshwater wetlands categories are identified by the presence of a tide and the types of vegetation present. The categories of wetlands and the restrictions placed on activities in and around them are defined in detail in 6 NYCRR Part 661.

BEC also reviewed NYSDEC Tidal Wetlands Maps available online. The tidal wetlands map (No. 586-508) showing the subject and surrounding properties indicates that Bushwick Inlet, located approximately one-half mile northwest of the subject property, is classified as a Littoral Zone (LZ) tidal wetland. LZ wetlands are defined as the tidal wetland zone that includes all lands under tidal waters which are not included in any other category. There shall be no LZ under waters deeper than six feet at mean low water.

Potential federal wetlands were identified from the U.S. Fish and Wildlife Service (FWS) Wetlands Mapper software, which indicates that the nearest potential federal wetlands are located approximately one-half mile

northwest of the subject property and associated with Bushwick Inlet. These wetlands are classified as E1UBL wetlands, which are defined as subtidal estuarine water bodies with unconsolidated bottoms, which are permanently flooded. Additional information obtained from the FWS website is included in Appendix E.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) were reviewed to determine if the subject properties are located within the 100-year or 500-year flood zones. The FIRMs showing the property (No. 3604970202F) indicates that entire property is located outside the 100-year and 500-year flood zones. This indicates that there is a minimal risk of flooding at the subject property.

8.5 Mold and Water Damage

Concern about indoor exposure to mold has been increasing as the public becomes aware that exposure to mold can cause a variety of health effects and symptoms, including allergic reactions. Molds can be found almost anywhere; they can grow on virtually any organic substance, as long as moisture and oxygen are present. There are molds that can grow on wood, paper, carpet, foods, sheetrock, plaster, and insulation. When excessive moisture accumulates in buildings or on building materials, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed.

As part of this assessment, a visual inspection was conducted for the presence of water damage and odors, indicative of the potential for mold growth. No visual or olfactory evidence of mold was identified at the subject property during the site inspection.

8.6 Vapor Encroachment

As part of this assessment, BEC evaluated the potential for vapor encroachment into onsite structures following the general methodology outlined in ASTM E-2600-10 utilizing professional judgment. The Tier 1 screening assessment was employed to determine if a potential vapor encroachment condition (VEC) exists at the site. The site, adjoining properties and hydraulically upgradient properties were assessed for known or suspected contaminated facilities within approximate minimum search distances. A Tier 1 screening assessment generally consists of the following: a search distance test to identify if there are any known or suspected contaminated sites within the area of concern (AOC); a chemicals of concern (COC) test to determine if chemicals of concern exist at the known or suspected contaminated facilities and a plume test to determine whether or not COC in the contaminated plume may be within the critical distance (or AOC). The critical distance is defined as the linear distance in any direction from the nearest edge of the plume to the site. If the critical distance from the site to the nearest edge of a petroleum hydrocarbon plume is within 528 feet (1/10-mile) or within 1,760 feet (1/3-mile) for non-petroleum COC (e.g., trichloroethylene, perchloroethylene, etc.), then it is assumed that COC are within the AOC and a potential VEC exists, and additional screening

may be necessary. The critical distance and AOC may be modified using professional judgment based on hydraulic gradient direction and contaminant plume width.

The decision to recommend additional screening, even if a potential VEC is determined by distance, is based on other criteria including existing and planned use of the property, type of structures potentially impacted, physical setting, hydraulic gradient, depth to groundwater, soil characteristics, activities in the surrounding area and the presence of natural or manmade conduits. Based on an evaluation of this collective criteria, the potential for a VEC from current and surrounding land use activities is considered moderate to high due to the long-term industrial use of the eastern adjacent properties and their listing on various regulatory agency databases with documented subsurface impacts, including woodworking, metal plating, lacquer spraying, petroleum and chemical bulk storage, and other industrial/manufacturing operations. The potential soil vapor intrusion risk is considered a REC and should be evaluated as part of a Phase II investigation. BEC notes that soil vapor sampling is a required part of the NYCOER E-Designation HazMat investigation program.

9.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I ESA has been prepared in conformance with the scope and limitations of ASTM Practice E1527-21 (inclusive of the USEPA all appropriate inquiry requirements) for the industrial property located on the eastern side of Leonard Street, between Driggs Avenue to the north, and Engert Avenue to the south, in the Greenpoint section of the Borough of Brooklyn, New York City, Kings County, New York. The subject property is identified by the street address of 488 Leonard Street, and as Borough 3 – Block 2698 – Lot No. 7 on the NYC tax maps. Any exceptions to, or deletions from, this practice are described in the section of the report entitled Limitations and Exceptions.

Based on the results of the site inspection, records review and interviews, it was determined that there was one REC identified for the subject property. RECs are those conditions, which could adversely affect the environmental integrity of the property. No controlled recognized environmental conditions (CRECs) or historical recognized environmental conditions (HRECs) were identified. The identified REC is summarized below:

- Information obtained from various historic sources revealed that the subject property and surrounding properties have historically been utilized for commercial/industrial purposes, including woodworking operations, machine shops, metal finishing, lacquer spraying, electroplating, iron and metal works, cleaning and dyeing operations, service stations, auto repair shops, garages, and other various industrial/manufacturing operations. In addition, the two eastern adjacent properties (55 and 65 Eckford Street) were identified on the NYS SHWS, BCP, and multiple other regulatory databases. Historic operations at these facilities resulted in significant impacts to soil, soil vapor and groundwater. Although the 65 Eckford Street property was remediated under the Brownfield Cleanup Program (BCP), the extent of off-site impacts attributable to this facility is unknown. Given the regional groundwater flow direction (west-northwest), their proximity to the subject property and, the documented presence of soil, soil vapor and groundwater impacts, there is a potential for contamination from these properties and/or other nearby facilities to have migrated beneath the subject property. As such, the historic use of the subject and adjacent properties is considered a REC.

Based upon the above findings and conclusions, BEC recommends following:

- A subsurface investigation should be performed to evaluate potential impacts related to the historic use of the subject and/or surrounding properties. At a minimum, the investigation should include the installation of soil borings with the collection of representative samples for laboratory analysis to document subsurface conditions and determine the nature and extent of contamination (if present).

Potential soil vapor intrusion conditions should also be evaluated. Since the subject property also has an E-Designation for hazardous materials there is an option to conduct a due diligence Phase II or a more extensive investigation to satisfy the E-Designation requirements in conjunction with the re-development of the site.

In addition to the aforementioned RECs, BEC identified several environmental concerns (ASTM Non-Scope issues/Business Environmental Risks [BERs]) for the subject property. The environmental concerns/BERs and BEC's recommendations are summarized as follows:

- The subject property was listed on the E-Designation database as having E- HazMat restriction (E-138), which was determined during the Greenpoint-Williamsburg Rezoning completed by the City in May 2005 (CEQR 04DCP003K). The E-designation requires the issuance of a Notice to Proceed by the NYCOER before the property can be redeveloped. The presence of the E-Designation is considered a BER.
- Fluorescent light ballasts were observed throughout the building, which based on the age of the building, may contain PCBs. BEC recommends that a PCB survey be performed prior to demolition and/or renovation activities. Any PCB-containing equipment affected by the development of the site must be properly managed during demolition and/or renovation activities. In addition, while the disposal of non-leaking PCB ballasts is not currently regulated by the USEPA, BEC recommends that the PCB ballasts be packaged in a lined, steel drum containing an absorbent material and disposed of as PCB-waste to reduce the potential for environmental contamination and potential liability for cleanup of any environmental release of PCBs from the ballasts.
- Information obtained from multiple historic sources revealed that the subject property was formerly developed with several structures, including a woodworking facility, lumber shed, a showcase manufacturer, an auto repair shop and several garages, which were demolished between 1924 and 1965. As such, there is a potential for fill materials to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition. As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on the subject property. The potential presence of fill material is considered a BER.

  Experience with similar projects shows that typical urban fill material (impacted or clean) that are not excavated to support construction/redevelopment activities can remain on-site, as such we do not foresee an issue related to undisturbed urban fill. However, all urban fill material that is disturbed

during any construction/redevelopment project may require sampling for proper disposal and handling.

- Suspect asbestos-containing sheetrock/plaster was observed throughout the office portions of the building. The suspect ACMs were generally in good condition at the time of the site inspection. Exposed pipes were either uninsulated or were insulated with fiberglass. In addition, due to the age of the building, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos.

  If activities in the buildings (i.e., renovation or demolition) will disturb any suspect asbestos material, then BEC recommends that an asbestos survey be performed to determine if ACMs are present prior to the proposed work. If ACMs are present, then a NYC and NYS-licensed contractor must be retained to remove the asbestos in accordance with federal, NYS and NYC regulations.

10.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions, ASTM Practice E1527-21, inclusive of the USEPA "All Appropriate Inquiry" requirement published in the Federal Register on November 1, 2005. The USEPA "All Appropriate Inquiry" requirement establishes specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under CERCLA.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 part of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the site referenced above. BEC has developed and performed the "All Appropriate Inquiries" in conformance with the standards and practices set forth in 40 CFR Part 312.

Section 11.0 contains the data gaps and deficiencies of the research data encountered during BEC's preparation of this report.

QUALIFICATIONS OF

ENVIRONMENTAL PROFESSIONAL

Keith W. Butler, Associate Senior Project Manager

PROFILE

Mr. Butler has extensive project management experience with respect to environmental due diligence and subsurface investigations. He is responsible for the preparation of project proposals, Phase I and II Environmental Site Assessments, Work Plans, Health and Safety Plans, Quality Assurance Project Plans, and investigation reports. Additionally, Mr. Butler has conducted and managed numerous Phase I and II ESAs. In these roles, Mr. Butler is responsible for applying the various state and local regulations, which govern environmental compliance and determine the need for additional investigation and/or remediation.

SELECTED PROJECTS

Madison National Bank, Various Sites, New York

Mr. Butler served as the Project Manager and principal contact for Madison National Bank. He was responsible for the preparation of Transaction Screen and Phase I/II Environmental Site Assessments (ESAs) at various sites throughout the New York metropolitan area, as required by the bank to satisfy client mortgage or construction loan requests.

Jewish Home & Hospital, Manhattan, NY

Most recently, Mr. Butler completed a Phase I ESA at their Bronx campus to obtain US. Housing and Urban Development (HUD) funding for a future construction project. Mr. Butler was also responsible for implementing a Remedial Action Work (RAW) Plan at the Bronx facility as required by the NYSDEC under a Voluntary Cleanup Agreement. The RAW included the preparation of contract documents, excavation of over 2,000 tons petroleum contaminated soils, installation of a Soil Vapor Extraction (SVE) system remedial oversight, and sampling.

Pulte Homes of New York, Patchogue, NY

Mr. Butler served as the Project Manager for the re-development of this six-acre site and was responsible for field oversight and coordination between remediation contractors and various regulatory agencies. Initial phases of the project included the completion of Phase I and II ESAs. Subsequent remediation consisted of UST removal, excavation of petroleum-impacted soils, closure of three NYSDEC spill numbers, removal of contaminated UIC sediment/sludge, the closure of commercial and residential UIC structures and the excavation of arsenic and metals contaminated soil. The project was conducted under approved Remedial Work and Soil Management Plans with oversight from the State, County and Village agencies.

Town of Islip, Blydenburgh Road Landfill, Hauppauge, NY

Mr. Butler served as the Project Manager for the groundwater and leachate monitoring program at the Blydenburgh Road Landfill - Cleanfills 1 and 2 and Leachate Impoundment Area. Mr. Butler was the principal contact for the Town's Resource Recovery Agency. He prepared the quarterly and annual monitoring reports, oversaw sampling efforts, and coordinated with the Town's analytical laboratory and data validation contractors. Mr. Butler was also responsible for preparing quarterly well condition reports and leachate quality reports for compliance with the Town's Suffolk County Discharge Certification Permit.

Ogden Aviation, Various Sites, JFK International Airport, Jamaica, New York

Mr. Butler served as the project manager for the rehabilitation of the satellite fuel farm recovery well system. Recovery wells at the fuel farm had become clogged with iron deposits and bacteria limiting product recovery efforts. Mr. Butler developed and supervised chemical cleaning and redevelopment of recovery wells under the approval of the NYSDEC. The chemical treatment has resulted in significant increases in product recovery volumes.

Brookhaven National Laboratory, Upton, NY

Mr. Butler has worked on a number of remediation system and monitoring well installation projects at BNL. His duties included oversight of installations, system pump tests, performance evaluations, and well development. He also provided oversight of soil borings, temporary well construction, soil and water sampling, and air monitoring for groundwater screening survey of two operable units in hazardous and radioactive waste storage areas. Mr. Butler also provided oversight for groundwater monitoring, well construction, well abandonment, and methane-monitoring wells for landfill closure.

metroPCS, Various Sites, New York

Mr. Butler served as the Project Manager for metroPCS' Long Island region telecommunications site acquisition and expansion program. Mr. Butler was responsible for the preparation of Phase I ESAs, the conduct of Phase II ESAs, including asbestos, lead paint and soil sampling, and coordination of National Environmental Policy Act (NEPA) reports and planning studies at various locations proposed for construction of new cellular telephone facilities. Reports and associated communications were transmitted electronically through metroPCS' data management system.

Dormitory Authority - State of New York, Harlem Hospital Center Modernization Project - Hazardous and Universal Waste Survey, Harlem Hospital, New York, NY

Mr. Butler served as the field team leader for conducting hazardous and universal waste surveys in multiple buildings affiliated with Harlem Hospital Center. The survey included the identification of hazardous and universal waste materials including chemicals, paints, fluorescent bulbs, high intensity discharge bulbs/fixtures, battery operated equipment, above and underground petroleum storage tank identification, PCB containing light ballasts and electrical equipment.

The hospital is comprised of a number of buildings, many that were abandoned and slated for demolition.

SVE Monitoring at Newark International Airport, Elizabeth, NJ
A routine leak detection test indicated that two 10,000-gallon underground storage tanks, which were used to store unleaded gasoline, had failed tightness tests. Follow-up investigation revealed that the product had impacted the subsurface environment. In response to this, a soil vapor extraction system was installed to reduce the residual concentrations of petroleum constituents in soil and groundwater and to minimize vapor migration into subsurface utility vaults. Mr. Butler was responsible for implementing the Remedial Action Work Plan, developed for the site by Ogden and the State of New Jersey. Activities conducted under the RAW include quarterly groundwater monitoring, air sampling, vacuum pressure monitoring, system maintenance and reporting.

Federal Express Site, Newark International Airport, Elizabeth, NJ
Mr. Butler worked with Ogden Aviation and the State of New Jersey to address outstanding environmental issues at the site related to a spill of jet fuel, which occurred during a construction accident. Mr. Butler performed a site assessment, which included groundwater monitoring, product gauging, and groundwater flow modeling. After reviewing these data, Mr. Butler determined that fill material at the site was contributing to soil and groundwater contamination and has petitioned the State for partial site closure. Mr. Butler is continuing to address the remaining area of concern through product recovery and continued monitoring.

Northrop Grumman, Various Sites
Mr. Butler conducted three Phase I ESAs and a Phase II investigation for the presence of PCBs in soil. He also inspected and supervised the removal of underground storage tanks, asbestos abatement projects, and sanitary system closures related to the facility decommissioning. Mr. Butler also conducted groundwater investigations and provided oversight during soil sampling, drilling and soil remediation activities.

New York City Department of Environmental Protection, Various Sites
Mr. Butler served as an Environmental Scientist for hazard investigation at seven sewage pump stations. Mr. Butler addressed a wide range of environmental concerns including asbestos, lead based paints, PCB oil, light ballasts, and other hazardous building materials. He conducted field investigations, sampling, and prepared Hazardous Materials Survey Reports for use during preparation of plans and specifications for proposed pump station construction projects.

Fresh Kills Landfill, Staten Island, New York
Mr. Butler participated in the field operations during pump and yield tests conducted on Cells 1 and 9. The tests were performed to determine the hydraulic properties of the landfill's refuse. He collected groundwater and leachate measurements in recovery wells and in adjacent observation wells under pumping and non-pumping conditions.

Telephone Number

Note: Please make sure you complete this form and attach all required documents. Enclose a check or money order made payable to the **NYC Fire Department and a stamped self-addressed envelope (with postage).** Mail checks or money orders directly to the address and unit listed above. **DO NOT MAIL CASH**.

SECTION B — REQUEST VIOLATION REPORT FEE $10.00 / PER REPORT

Please print the required information below.

~~488~~	Leonard Street	Brooklyn
House No	Street Name	Borough

☑ **EXISTING- ALL NOTICES OF VIOLATION AND VIOLATION ORDERS ISSUED BY THE FIRE PREVENTION**

☐ **EXISTING- ALL SUMMONSES**

Note: This search is limited to outstanding Summonses, Notices of Violation and Violation Orders (VOs) that are reported to be related to a specific address. With respect to VOs this search is limited to VOs issued on January 1, 2008 or thereafter. This search does not contain information on VOs issued by fire companies, unless they were forwarded to the Bureau of Fire Prevention. A requested report will only list the violation numbers. After you have received the Report, you can obtain a copy of any record available for an additional fee of $0.25 (cents) / per page by filling out the copy of violation request form.

Note: Requests will be responded to within 10 business days.

Request a Record

Please make your request specific so you receive the fastest service. After you submit a FOIL request you will receive a confirmation number so you can track the status of the response. The agency will notify you about how much time is required to respond to your request.

Category (required)

Selecting a category helps clarify which agency will receive the request by listing agencies grouped by categories.

Environment

Agency (required)

Select the agency that will handle your request.

Department of Environmental Protection (DEP)

Request Title (required)

Phase I ESA

79 characters remaining

Note: The agency, category, and title of your request will be visible to the public. Do not enter personal information here.

Ex: Queens Blvd Roadwork Permit.

Request Description (required)

All documents regarding the environmental condition and/or the historic use of the property at 488 Leonard Street, Brooklyn, NY 11222 (Block 2698, Lot No. 7). These documents are being requested in conjunction with the preparation of a Phase I Environmental Site Assessment (ESA).

4719 characters remaining

Note: The request details you write here will not be visible to the public. However, the agency may post a description of the records provided.

Ex: Roadwork permits for work done in on Queens Blvd. between 40th and 45th streets, Borough of Queens, in September and October 2017.

BRUSSEE
Environmental Corp. 797 North Country Road, Rocky Point, New York 11778

November 21, 2025

Records Access Officer
New York City Department of Health
42-09 28th Street, 14th Floor CN 31
Long Island City, New York 10013

Re: Freedom of Information Request
488 Leonard Street
Block 2698, Lot No. 7
Brooklyn, New York 11222

Dear Sir or Madam:

Our firm has been retained to prepare an Environmental Assessment for the above-referenced properties. We are respectfully requesting information regarding any flammable storage permits, chemical or petroleum storage, spills, registered above or underground storage tanks, air discharge permits, investigations of environmental concern (e.g., asbestos, lead paint), etc. for the facility. We agree with the department's decision to omit any health or personal identification in the records provided.

If you require additional information to respond to this request or if there are costs associated with same, please, do not hesitate to contact me. Thank you for your cooperation.

Sincerely,

Brussee Environmental Corp,

Keith Butler
Associate Senior Project Manager

residential construction is allowed as-of-right with larger developments allowed by special permit, while residential conversion of industrial buildings is prohibited. The Special Franklin Street and Northside (M/R) Mixed Use districts permit enlargement of underbuilt residential buildings pursuant to R6 regulations. However, such enlargements have not occurred within the proposed action area in recent years, and are therefore not considered likely to occur in the no-action condition.

As described in Chapter 1, "Project Description," absent the proposed action, it is projected that some new housing units would be constructed, converted, or reactivated on some of the 76 projected development sites by the Analysis year of 2013, including several variances that have been approved for new residential units in areas where zoning does not currently permit new residential uses. In addition, some residential development was identified on some of the potential development sites in the No-Action condition.

Small retail stores are permitted as-of-right in M1 and M3 districts, and within the M/R portion of the Special Northside Mixed Use District. In all zoning districts currently mapped in the proposed action area, buildings designed for non-residential use may be converted to retail use as-of-right provided they have not been vacant for more than two years. As discussed in Chapter 1, "Project Description," absent the proposed action, it is estimated that some commercial space would be created in new residential buildings and in industrial buildings that convert to commercial use in the No-Action condition.

The future conditions without the proposed action could involve building construction, additions and conversions. Construction of new buildings for as-of-right uses under the current zoning may occur without proper regulatory oversight such that environmental conditions on these sites are not properly addressed. Without enforcement of environmental regulations, residual contamination could be encountered by construction workers or the general public without their knowledge. Similarly, construction and demolition material or impacted soil may be improperly disposed. The existing conditions typically observed at these sites include petroleum based contamination (i.e., petroleum bulk storage tanks and spills) and non-petroleum based contamination (i.e., metals from iron works, volatile organics from paint factories, PCBs from transformers, etc.). Each of these contaminants have associated human health concerns that vary based on the specific contaminant. If the materials impacted by these contaminants are not properly handled either on-site, in transit, or at a disposal facility, there could be some effect to those who come in contact with the materials by inhalation, ingestion or dermal contact.

Hazardous Materials

D. THE FUTURE WITH THE PROPOSED ACTION (WITH-ACTION)

The hazardous materials assessment presented herein has identified that each of the projected and potential development sites has some associated concern regarding environmental conditions. As a result, the proposed zoning map actions include (E) designations for all projected and potential development sites, with the exception of Site 211, which is proposed to be mapped as a park and acquired by the City.

Site 211 had a history that included use as an oil refinery and later bulk petroleum storage, a manufactured gas plant and a rail yard. Testing on this site has confirmed the presence of contaminants consistent with the cited historic use of the site. The northern portion of the site (Block 2277, Lot 1) is currently under a Voluntary Cleanup Agreement with the State. Under Scenario B, the Volunteer,

TransGas, would perform a cleanup to the satisfaction of the State for this site. Because TransGas is not the party responsible for the contamination, their cleanup would be limited to the boundaries of the site (Block 2277, Lot 1).

The portion of Site 211 that was the Williamsburg Gas Works (Block 2287, Lots 1, 16, and 30) is contaminated with chemicals consistent with the use of the site as a manufactured gas plant. The responsibility for remediation of this site has been determined by the New York State Department of Environmental Conservation to be Keyspan Energy. An agreement between the State and Keyspan for the remediation of this site is currently being negotiated. Under Scenario A, the obligation of Keyspan Energy to remediate the site would be included in the acquisition proceeding, either as a deduct of the remediation cost from market value or consideration of the park development schedule with the remediation schedule agreed to between Keyspan and the State. This later option would have Keyspan accelerate their remediation of the site to meet the park development schedule.

Testing results show that the historic site activities had little to no impact on the southern portion of Site 211 (Block 2294, Lots 1 and 5, and Block 2301, Lots 1, 50, 60 and 70).

Under Scenario A, the City has three options: 1) remediate the site at the City's direction and negotiate the purchase of the property considering the remediation costs that were undertaken, 2) purchase the site and enter the Environmental Restoration Program under the Brownfield Cleanup Program for 90% funding by the State of New York considering the proposed end use, or 3) have the property owner remediate the site before the City takes ownership.

Table 11-3 provides an (E) designation summary for each of the 339 sites that were investigated as part of this work scope. As previously stated, the (E) designation is based on whether the projected and potential development sites may have been adversely affected by current or historical uses at, adjacent to, or within 400 feet of the sites. In determining whether a site is (E) designated, site conditions and history was given the first consideration, followed by the adjacent site use or history, and finally the sites within the 400 foot radius. If a site was (E) designated based on existing or historic conditions, the determination did not continue to adjacent sites or sites within 400 feet. Similarly, if a site was (E) designated based on adjacent site conditions, the determination did not extend to the 400 foot radius. Only when the site or adjacent site conditions or history did not indicate a cause for (E) designation did the determination extend to the 400 foot radius.

A site may have more than one condition that would lead to an (E) designation. However, once conditions were identified that resulted in an (E) designation, no further investigation was conducted. Table 11-3 provides information that was identified for the (E) designation. The (E) designation cause that is listed in the table is not necessarily the most significant concern for the site, but merely an identified condition leading to the designation.

Sites that were (E) designated based on either adjacent site conditions or conditions at sites within 400 feet may or may not have an on-site condition that would have led to the (E) designation. An on-site condition that would lead to an (E) designation may be identified following further review.

The results of this investigation show that 267 sites (out of 339, not including Site 211), or 78.7%, were (E) designated based on a condition identified at the site. Adjacent site conditions resulted in an (E) designation for 53 sites (15.6%). Conditions at a property within 400 feet of a site resulted in 19 sites (5.6%) being (E) designated. There are no sites in this investigation that did not result in an (E) designation. In summary, (E) designations are required on all 339 projected an potential development sites in the proposed action area.

By placing (E) designations on sites where there is a known or suspect environmental concern, the potential for an adverse impact to human health and the environment resulting from the proposed action would be reduced. The (E) designation provides the impetus to identify and address environmental conditions so that significant adverse impacts during site development would be reduced. The New York City Department of Environmental Protection would provide the regulatory oversight of the environmental investigation and remediation during this process. Building permits are not issued by the Department of Buildings without prior DEP approval of the investigation and/or remediation pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements).

The (E) designation would require that the fee owner of such a site conduct a testing and sampling protocol and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit. The (E) designation also includes a mandatory construction-related health and safety plan which must be approved by NYCDEP.

For an (E) designated site, the following tasks must be undertaken by the fee owners of the sites that are restricted under this designation:

Task 1 - The applicant must submit to the NYCDEP Office of Environmental Planning and Assessment (OEPA), for review and approval, a soil and groundwater testing protocol including a description of methods and a site map with all sampling locations clearly and precisely represented.

No sampling program should begin until written approval of a protocol is received from DEP. The number and location of sample sites should be selected to adequately characterize the site, the specific source of suspected contamination (i.e., petroleum based contamination and non-petroleum based contamination) and the remainder of the site's condition. The characterization should be complete enough to determine what remediation strategy (if any) is necessary after review of sampling data. Guidelines and criteria for selecting sampling locations and collecting samples will be provided by DEP upon request.

Task 2 - A written report with findings and a summary of the data must be submitted to DEP after completion of the testing phase and laboratory analysis for review and approval. After receiving such tests results, a determination will be made by DEP if the results indicate that remediation is necessary.

If DEP determines that no remediation is necessary, written notice shall be given by DEP.

If remediation is indicated from the test results, a proposed remediation plan must be submitted to DEP for review and approval. The applicant must complete such remediation as determined necessary by DEP. The applicant should then provide proper documentation that the work has been satisfactorily completed.

A DEP-approved construction-related health and safety plan would be implemented during excavation and construction activities to protect workers and the community from potentially significant adverse impacts associated with contaminated soil and/or groundwater. This Plan would be submitted to NYCDEP for review and approval prior to implementation.

TABLE 11-3
(E)-Designation Site Summary Table
Greenpoint-Williamsburg Rezoning, CEQR # 04DCP003K

Site	Block(s)	Lot(s)	Site Area (sq. feet)	Site Type	Basis for (E)-Designation	
					Source	Comments Regarding (E)-Designation Cause
1	2472	410	106,036	Potential	On Site	SQG, tank in service, closed tank, closed spills
2	2472	425	123,206	Potential	On Site	LQG with violations, tank and leaking tank
3	2494, 2502, 2472, 2520, 2510	1, 1, 2, 57, 1	963,253	Projected	On Site	Open spill on Site, former lithograph manufacturing, auto repair
3.1	2472, 2494	32, 6	137,311	Potential	On Site	Sludge tank on site.
3.2	2472	100	266,579	Potential	On Site	Former Towing and Auto Repair
4	2482	1, 4, 6	5,265	Potential	On Site	Historic filling station at Lot 1, junk storage at Lot 4
5	2482	7, 8	7,008	Potential	On Site	Historic iron works, closed spill on Site
6	2482	53	9,270	Potential	On Site	Historic iron works, glazing and metal products
7	2482	21	24,200	Potential	On Site	Former transit car repair shop
8	2482	39, 26	38,300	Potential	On Site	Historic transit car barn, tank at lot 26
9	2483	61, 62	5,000	Potential	On Site	Historic paint shop, tank at lot 62
10	2483	11,12	5,000	Potential	Adjacent	Tank at adjacent Site 9 lot 62
11	2483	14, 15	7,500	Potential	On Site	Machine Shop at lot 15
12	2483	20, 19, 17	10,000	Potential	On Site	Metal Works at lot 17
13	2483	60, 59	5,000	Potential	On Site	Auto repair, historic iron works at lot 50
14	2483	48	5,000	Potential	On Site	Suspect tank, historic plastic product manufacturing
15	2483	25	10,000	Potential	On Site	Historic truck repair and gasoline tank
16	2483	45	7,500	Potential	Adjacent	unknown mfg, suspect tank at adjacent Site 14
17	2487	17, 20, 18, 21, 72, 10, 12	63,500	Potential	On Site	Historic iron works, film manufacturing, tank at lot 12
18	2503	1	57,775	Potential	On Site	Historic laundry service, closed tanks
19	2511	1	23,250	Projected	On Site	Historic Fur Dressing, above ground tank
20	2511	12, 14, 11	10,000	Potential	Adjacent	Suspect tank at adjacent Site 19
21	2511	31	5,000	Potential	On Site	SQG with 9 violations
22	2512	60	15,936	Projected	On Site	Former metal products manufacturing/processing
23	2512	52, 54	7,500	Potential	On Site	Suspect tank at lot 52
24	2520	1	57,475	Potential	On Site	Site occupied by Lithographs Mfg. Co., tank
25	2521	1	6,000	Potential	On Site	Cement product manufacturing on site
26	2521	6, 5, 7	5,500	Projected	Adjacent	Lithographs Manufacturing at adjacent Site 24
27	2521	11, 12, 13	7,500	Potential	On Site	Auto repair, suspect tank at lot 13
28	2521	32	5,625	Potential	Within 400 ft	Tank at Site 29
29	2521	19	2,500	Projected	On Site	Tank on Site
30	2522	10	5,000	Projected	Within 400 ft	Tank at Site 29, Historic Iron & Steel east of lot
31	2522	16, 18	16,575	Potential	On Site	Historic iron works on Site
32	2522	24	20,536	Projected	On Site	PBS UST on site, historic iron and steel company
33	2522	31	17,217	Projected	On Site	Two historic gasoline tanks on Site
34	2530	55, 56, 1	112,956	Potential	On Site	Historic iron works, paper manufacturing, SQG, tank
35	2531	1, 2, 3	7,500	Potential	On Site	Tank at lot 3
36	2531	110, 10, 9	5,625	Potential	Adjacent	Tank at adjacent Site 37 lot 12
37	2531	12	5,000	Potential	On Site	Tank on site
38	2531	36, 35	5,000	Potential	Adjacent	Tank at adjacent Site 37 lot 12
39	2531	20	6,262	Projected	Within 400 ft	Machine shop at Site 40
40	2532	1	9,500	Potential	On Site	Machine shop, historic auto repair with gas tanks
41	2538	1	108,843	Potential	On Site	Historic shipping waterfront
42	2539	1, 8	17,300	Potential	On Site	Historic and suspect tanks at lots 1 and 8
43	2539	29, 27	7,491	Projected	On Site	Tank at lot 27
44	2543	1	102,390	Potential	On Site	Taxi Garage and SQG with violations, TRIS
45	2549	1	19,984	Projected	On Site	PBS AST on site, historic brass foundry
46	2549	10	9,120	Potential	On Site	Historic lead pencil manufacturing on Site
47	2549	14	10,050	Potential	On Site	Packaging manufacturer on site
48	2549	25	4,750	Potential	Adjacent	Tanks at adjacent Sites 54 and 55
49	2549	28	9,950	Potential	On Site	PBS AST, leaking tanks, spill # 9908120
50	2549	36	10,100	Potential	On Site	Historic pencil manufacturing with paint mixing

88	2719	13, 16, 14	10,000	Potential	On Site	Historic paint mfg, motor freight station, open spill
89	2719	32, 31	8,625	Potential	Adjacent	Open spill at adjacent Site 88
90	2720	9, 10, 12	6,405	Potential	Within 400 ft	Open spill at Site 88
91	2720	41, 19	8,350	Potential	Within 400 ft	Filling station at Site 96
92	2720	44, 43, 46, 45	8,900	Potential	On Site	Suspect tank at Lot 46
93	2724	1, 33, 34, 37, 30, 31	19,920	Potential	On Site	Listed as CERC-NFRAP, SQG, tank at lot 1
94	2724	10, 12, 7	9,800	Potential	On Site	Automotive Repair at Lot 7
95	2724	18	8,800	Potential	Within 400 ft	Automotive Repair at Site 94 lot 7
96	2727	47, 1	23,181	Potential	On Site	Filling station at lot 1, spill, SQG, PBS
97	2289	14	36,000	Potential	On Site	Historic NY Quinine & Chemical on Site
98	2290	5	12,860	Projected	On Site	Solid Waste, feather processing on site
99	2290	10	2,500	Potential	On Site	Suspect tank on site
100	2291	1	10,000	Projected	On Site	Former Reicholds Chemical Inc. ~1942-~1996
101	2291	17	20,000	Potential	On Site	Former paint manufacturing on site ~1996-~1951
102	2292	33, 29	12,500	Projected	On Site	Historic auto body building, auto repair at lot 33
103	2292	12, 11	10,000	Potential	On Site	Historic metal reducing at Lot 12
104	2721	8	5,000	Potential	On Site	Historic scrap metal activities on Site

TABLE 11-3 (continued)
(E)-Designation Site Summary Table
Greenpoint-Williamsburg Rezoning, CEQR # 04DCP003K

Site	Block(s)	Lot(s)	Site Area (sq. feet)	Site Type	Basis for (E)-Designation	
					Source	Comments Regarding (E)-Designation Cause
105	2721	11	69,000	Projected	On Site	PBS UST, open spill #9801444
106	2722	36, 34	7,500	Potential	On Site	Auto repair, suspect tank at lot 34
107	2722	8	5,000	Potential	On Site	Paint storage, historic electric motor repair on lot
108	2722	10	7,500	Projected	On Site	Historic scrap iron yard on Site
109	2722	16, 13, 15	12,500	Potential	On Site	Machine shop at Lot 13, historic foundry at Lot 16
110	2722	19	5,000	Projected	On Site	Historic filling station on Site
111	2722	21	10,000	Projected	On Site	5 closed and removed PBS USTs and SQG
112	2722	25	5,000	Potential	On Site	gasoline tanks historically on Site
113	2723	1	10,000	Potential	On Site	Furniture manufacturing, historic acid tanks on site
114	2723	7, 5	15,000	Potential	On Site	Suspect clothing manufacturing at Lot 7
115	2723	30, 29	5,000	Potential	Within 400 ft	Auto wrecking at adjacent lot 33
116	2723	33, 36	5,458	Potential	Adjacent	PBS AST at adjacent Site 117 lot 38
117	2723	38, 37	17,500	Potential	On Site	PBS AST at lot 38
118	2296	14	45,000	Potential	On Site	Tank, historic iron works on site
119	2297	5	29,450	Projected	On Site	PBS AST and open spill #9514404
120	2297	1	5,000	Potential	On Site	LQG, PBS UST, Spill #9902614
121	2298	31	5,000	Potential	Within 400 ft	Suspect tank at Site 123
122	2298	29	10,000	Potential	Adjacent	Suspect tank at adjacent Site 123
123	2298	13	10,000	Potential	On Site	Metal works, suspect tank on site
124	2298	21	10,000	Potential	On Site	Historic auto repair, gasoline tank, suspect tank
125	2299	1	20,000	Projected	Adjacent	Auto repair at adjacent Site 102
126	2299	9	38,000	Potential	On Site	Historic chemical warehouse
127	2299	21	18,000	Potential	On Site	3 CBS ASTs on site
128	2300	1, 5	7,500	Potential	On Site	Historic motor freight station, PBS AST at lot 5
129	2300	26, 20	23,775	Potential	On Site	Auto Repair at lot 20, historic coal company at Lot 26
130	2731	1	27,500	Projected	On Site	55 gallon drums on site
131	2731	45, 47, 44	10,000	Potential	On Site	Historic auto repair, machine shop, SQG at lot 44
132	2731	38, 41	6,225	Potential	On Site	Tank at lot 41
133	2731	36, 35	5,000	Potential	Adjacent	Tank at 33 Frost Street
134	2732	33	5,000	Potential	Adjacent	Suspect tank at adjacent Site 155 lot 11
135	2732	5	6,900	Potential	On Site	PBS UST, leaking tank on Site
136	2732	27, 30	15,000	Potential	On Site	Former dry cleaning at Lot 27
137	2733	6, 10, 7	10,323	Potential	On Site	Gasoline station, tanks at lot 7, closed spill
138	2734	5, 11, 3, 4, 7	17,855	Potential	On Site	Historic skin dressing at Lot 4, auto body at lot 11
139	2734	13	1,821	Potential	Adjacent	Auto body at adjacent Site 139 lot 11
140	2734	35, 38	8,070	Potential	On Site	Historic fur finishing, junk storage at Lot 35
141	2304	36, 37	5,000	Potential	Adjacent	Regulated transfer station at adjacent Site 142
142	2304	14, 10, 13, 12	10,000	Potential	On Site	Regulated transfer station at lot 10
143	2304	15	7,500	Projected	Adjacent	Regulated transfer station at adjacent Site 142
144	2305	17, 15, 16	7,500	Potential	On Site	Historic metal cap stamping, chemical company
145	2305	18	35,000	Projected	On Site	Historic glass works on Site.
146	2306	30, 15, 1, 28, 11, 27	50,002	Potential	On Site	Historic auto repair, motor freight station, SQG
147	2306	9	5,000	Potential	On Site	Historic auto repair on Site
148	2306	18	10,950	Projected	On Site	Suspect tank, historic paint factory on site
149	2307	33, 38, 31, 36	22,450	Projected	On Site	Historic varnish manufacturing, machine shop
150	2307	1	30,000	Potential	On Site	Suspect tank, historic chemical shop, iron works
151	2307	16, 14, 19	15,125	Potential	On Site	Historic metal scrap at Lot 14, auto painting
152	2307	25, 27	14,750	Potential	On Site	Historic metal works at Lot 27
153	2736	48, 9, 1	35,073	Potential	On Site	Historic iron works, SQG at lot 1
154	2736	20, 23	9,997	Potential	On Site	Historic motor freight station, auto repair shop
155	2737	10, 11	5,800	Potential	On Site	Historic auto repair at Lot 10, filling station at Lot 11
156	2738	3, 5	8,600	Potential	On Site	Auto body shop, auto painting at lot 5
157	2738	10	5,462	Potential	Adjacent	Auto body shop at adjacent Site 156 lot 5
158	2738	13, 15	7,500	Potential	On Site	Suspect tank at lot 13, historic auto repair, gas tank
159	2738	24, 21	7,500	Potential	On Site	Tank at lot 21

TABLE 11-3 (continued)
(E)-Designation Site Summary Table
Greenpoint-Williamsburg Rezoning, CEQR # 04DCP003K

Site	Block(s)	Lot(s)	Site Area (sq. feet)	Site Type	Basis for (E)-Designation	
					Source	Comments Regarding (E)-Designation Cause
160	2309	5, 13	19,500	Projected	On Site	Historic coal yard and tank at lot 5
160.1	2309	1	18,000	Projected	On Site	Historic metal product manufacturer on Site
161	2309	17	25,000	Projected	On Site	Suspect tank, historic chemical warehouse on Site
162	2310	10, 9, 11	5,001	Potential	Within 400 ft	Suspect tank at Site 161
163	2312	22, 23	20,000	Projected	On Site	Historic transformer company and tank at lot 23
164	2313	1	7,800	Potential	On Site	Furniture manufacturing on Site
165	2313	7, 5	14,838	Potential	On Site	Historic lead and color company, suspect tank
166	2313	22, 13, 11	22,500	Potential	On Site	Auto junk yard at Lot 11, suspect tank at lot 13
167	2313	15	3,000	Potential	On Site	Tank on site
168	2313	23, 24, 26	7,500	Potential	On Site	Iron works at lot 26, historic gas tank at Lot 24
169	2313	29, 28, 27	7,531	Potential	On Site	Historic white lead and color works at Lot 29
170	2314	1	17,500	Potential	On Site	Tank, historic filling station on Site
171	2314	5	20,000	Projected	On Site	Tank on site, closed in place
172	2315	14	15,550	Potential	On Site	Historic mirror manufacturing on Site
173	2315	21	9,375	Potential	On Site	Historic junk yard on Site
174	2741	8, 3, 7	15,000	Potential	On Site	Auto repair, junk yard, suspect tank at lot 3, spills
175	2741	47	9,360	Potential	Adjacent	Suspect tank at adjacent Site 174 lot 3
176	2741	13	6,543	Potential	On Site	Two 55 gallon drums on site (contents unknown)
177	2741	15	5,000	Potential	Adjacent	Filling station at adjacent Site 177
178	2741	19	6,050	Potential	On Site	Filling station, tanks, closed spill
179	2742	4, 2, 5, 9	15,576	Potential	On Site	Historic motor freight station, suspect gas tank
180	2742	15	5,000	Potential	On Site	Historic furniture manufacturing on Site
181	2742	20, 17	12,500	Potential	On Site	Iron works at lot 17
182	2742	35	5,000	Potential	Adjacent	Suspect tank at adjacent Site 179 lot 2
183	2746	41, 42, 40	7,500	Potential	On Site	Fuel truck garage, tank at lot 42
184	2742	39	11,500	Potential	Adjacent	Tank at adjacent Site 183 lot 42
185	2317	7, 36, 3, 8, 5, 1, 6	20,722	Projected	On Site	Historic auto repair, gas tank, coal yard on Site
186	2317	13, 12	5,000	Potential	Adjacent	Suspect tank at adjacent Site 161
187	2317	17, 16	5,000	Potential	On Site	Painters equipment storage, drums on site
188	2317	18	10,000	Potential	Adjacent	Tanks at adjacent Site 201 lot 11 and 12
189	2319	31	19,740	Potential	On Site	Closed spill, FINDS, FTTS
190	2320	15	7,500	Projected	On Site	Open spill and PBS AST on site
191	2321	38, 36, 37	7,294	Projected	Within 400 ft	Open spill and suspect tank at Site 190
192	2321	14, 13	5,000	Potential	Within 400 ft	Multiple tanks at Blocks 2313 and 2314
193	2321	18	13,100	Projected	On Site	Historic machine shop on Site
194	2321	25	1,200	Projected	Adjacent	Suspect tank at adjacent Site 195
195	2322	1	12,500	Potential	On Site	Suspect tank on site
196	2322	6	12,500	Potential	Adjacent	Tank at adjacent Site 197, SQG at Site 197
197	2322	28, 10, 11, 30	32,567	Potential	On Site	paint spraying, tank at lot 10, SQG at lot 28, FINDS
198	2323	10, 9	15,983	Potential	On Site	Historic auto repair, tank at lot 10
199	2324, 2332	1, 1	294,100	Projected	On Site	Historic rail yard, tow yard, SQG, FINDS
200	2325	5, 103, 4	8,500	Potential	Adjacent	SQG and Tow yard at adjacent Site 199
201	2325	12, 11	7,500	Potential	On Site	Historic motor freight station, tanks
202	2325	26, 24, 25	7,500	Potential	On Site	gas tank at Lot 26, 55 gallon drums on lot 25
203	2325	27, 28, 29	7,500	Projected	Adjacent	55 gallon drums at adjacent Site 202 lot 25
204	2325	31, 32	5,000	Potential	Adjacent	Tanks at adjacent Site 201
205	2326	33, 32, 34, 35	9,700	Potential	Adjacent	Suspect tank at adjacent Site 206 lot 18
206	2326	19, 17, 18	18,333	Potential	On Site	Historic auto repair, suspect tank at lot 18
207	2327	2	10,495	Projected	On Site	Suspect tank on site
208	2327	4, 5	11,300	Projected	On Site	Former filling station, PBS UST
209	2327	18, 16, 17	6,900	Potential	On Site	Historic motor freight station at Lot 17
210	2327	34, 31, 19	1,233,485	Potential	On Site	PBS UST, spill # 8909928 at lot 19, CERCLIS

TABLE 11-3 (continued)
(E)-Designation Site Summary Table
Greenpoint-Williamsburg Rezoning, CEQR # 04DCP003K

Site	Block(s)	Lot(s)	Site Area (sq. feet)	Site Type	Basis for (E)-Designation	
					Source	Comments Regarding (E)-Designation Cause
211	2277, 2287, 2294, 2301, 2590	See Notes on last page	1,233,485	Projected	Not (E) - Designated	Site currently undergoing investigation, VCP, spills, coal gas
212	2331	7, 8	5,000	Potential	On Site	55 gallon drums stored at lot 8
213	2331	42	10,000	Potential	Adjacent	Star Soap and candle manufacturing adjacent to lot
214	2333	1	40,000	Potential	On Site	Suspect tank on site, historic railroad yard
215	2334	40, 50, 45, 1, 28, 3, 30	45,000	Projected	On Site	Historic rail yard, PBS UST on lot 40
216	2334	23, 22	10,036	Potential	Adjacent	PBS UST at adjacent Site 215 lot 40
217	2335	10, 6, 12	10,000	Potential	On Site	historic gas tank at Lot 10
218	2335	14, 13, 15	20,000	Projected	On Site	Historic auto repair with gas tank at Lot 13
219	2337	20	6,990	Potential	On Site	Tank, historic printing/auto repair on site
220	2338	1	1,582	Projected	Adjacent	Dry Cleaners adjacent to west
221	2339	7	7,920	Potential	On Site	Printing company on site
222	2340	1	214,329	Potential	On Site	C&D Recycling, SWF/LF, PBS, Spills, SQG
223	2341	9	54,850	Potential	On Site	Suspect carpet manufacturing
224	2342	1	47,600	Projected	On Site	SQG, FINDS on Site
225	2342	16	7,500	Potential	On Site	Auto repair on site
226	2342	23, 26	8,608	Potential	On Site	Historic motor freight station at Lot 23
227	2343	5	5,000	Projected	On Site	auto repair, 2 PBS USTs and open spill # 9706521
228	2343	18, 19	5,000	Potential	On Site	Historic machine shop, junk yard at Lot 18
229	2344	5	13,750	Potential	On Site	Furniture Manufacturing on site
230	2344	26	7,550	Projected	On Site	SQG, closed UST
231	2344	25	15,250	Potential	On Site	SQG, historic iron works on Site
232	2344	16	5,792	Potential	On Site	Suspect tank, historic foundry on Site
233	2346	30	11,325	Potential	On Site	Metal works on Site
234	2346	26	5,944	Potential	On Site	Tank, historic motor freight station on site
235	2349	1, 21, 15, 18	72,700	Projected	On Site	Historic freight yard, regulated transfer station, spill
236	2350	1	27,389	Projected	On Site	Historic printing operations on Site
237	2350	2	9,000	Potential	On Site	Historic printing operations on Site
238	2350	4	27,000	Potential	On Site	SQG, FINDS
239	2350	24	9,000	Potential	On Site	PBS UST, historic foundry on site
240	2350	26	27,511	Projected	On Site	Open spill on site
241	2351	40, 1	25,632	Potential	On Site	PBS UST closed in place
242	2351	28	15,753	Potential	On Site	PBS UST, FINDS
243	2352	20	7,500	Potential	On Site	Historic printing operations on Site
244	2353	6, 8	5,000	Potential	On Site	Two 55 gallon drums were observed at Lots 6 and 8
245	2353	26, 13, 28	11,807	Potential	On Site	Gasoline station, tanks at lot 13, closed tanks
246	2357	4, 1	22,975	Potential	Adjacent	Regulated transfer station at adjacent Site 235
247	2357	25	10,000	Potential	On Site	Suspect tank, historic paper product manufacturing
248	2357	18, 20, 22, 21, 24	13,694	Potential	On Site	Historic tank at Lot 24, suspect tank at lot 22
249	2358	1, 38	6,180	Potential	Adjacent	Suspect tank at adjacent Site 247
250	2358	4, 36	10,513	Potential	On Site	Historic metal products manufacturing, gas tank
251	2358	29, 6, 31	20,446	Potential	On Site	Historic tank at Lot 31, tank at Lot 29, closed spills
252	2358	11, 15, 14	9,819	Potential	Adjacent	Iron works at adjacent Site 254 lot 25
253	2358	22	5,550	Potential	Adjacent	Iron works at adjacent Site 254 lot 25
254	2358	25, 27, 24, 28	9,859	Potential	On Site	Iron works at lot 25
255	2363	3, 2	12,607	Potential	On Site	CBS UST and PBS AST, SQG, SSTS, TRIS
256	2363	38, 36	9,428	Potential	On Site	Possible tanks at lot 36 and 38
257	2363	9, 28	30,897	Potential	On Site	Historic junk yard, iron foundry at Lot 9
258	2363	26, 20	6,700	Potential	On Site	Auto repair, PBS AST at lot 26
259	2364	17	11,250	Potential	On Site	Tank at lot 17, AST at lot 16, closed spills
260	2366	1	7,950	Potential	Adjacent	Suspect tank at adjacent Site 261
261	2366	32	13,867	Potential	On Site	Suspect/historic tank on site

TABLE 11-3 (continued)
(E)-Designation Site Summary Table
Greenpoint-Williamsburg Rezoning, CEQR # 04DCP003K

Site	Block(s)	Lot(s)	Site Area (sq. feet)	Site Type	Basis for (E)-Designation	
					Source	Comments Regarding (E)-Designation Cause
262	2366	16, 21	8,633	Potential	On Site	Historic auto repair, tank, historic steel yard
263	2367	7	7,200	Potential	Adjacent	Tank at adjacent Site 262 lot 16
264	2367	15	6,400	Potential	On Site	Printing operations on Site
265	2367	27, 28	8,474	Potential	On Site	Automotive repair, historic battery service
266	2368	1	31,765	Potential	On Site	Tank and SQG on site
267	2368	19, 18, 21, 22	8,787	Potential	On Site	Automotive repair and AST on site
268	2368	28, 27, 26	5,073	Potential	Adjacent	Automotive repair and AST at adjacent Site 267
269	2368	31, 32, 34, 33	7,763	Potential	On Site	55 and 500 gallon plastic drums/tanks on site
270	2369	6, 4, 7	8,029	Potential	Adjacent	PBS AST, SQG, and spill at adjacent Site 275
271	2369	14	10,300	Potential	On Site	Historic oil can reclamation on Site
272	2369	19	17,604	Potential	On Site	Auto repair, 5 PBS USTs on site, closed spills
273	2369	27	5,800	Potential	On Site	Auto repair, SQG, FINDS on Site
274	2369	38, 37	6,302	Potential	Adjacent	PBS AST, SQG, and spill at adjacent Site 275
275	2369	40	20,313	Potential	On Site	PBS AST, SQG, spill # 0008211, HMRIS, FINDS
276	2371	3, 10, 5, 1	37,658	Potential	On Site	Steel product manufacturing, closed PBS UST
277	2371	33	8,575	Potential	On Site	Suspect tank, historic auto wrecking on site
278	2371	40, 42	16,135	Potential	On Site	Historic fur dyeing, suspect tank on lot 40
279	2371	48	5,050	Potential	On Site	Historic machine shop on Site
280	2372	1	5,750	Potential	On Site	Suspect tank, historic leather making on site
281	2372	5	10,184	Potential	On Site	Filling Station, 4 PBS USTs, closed spill
282	2372	9	5,282	Potential	On Site	Filling Station, 4 PBS USTs
283	2374	1	15,698	Potential	On Site	Historic machine shop, garage with gasoline tanks
284	2374	7	14,150	Potential	On Site	Former substation, open spill, closed spill
285	2374	27, 31, 28	11,462	Potential	On Site	Historic motor freight station with gas tanks
286	2375	1	5,000	Potential	Adjacent	Tank at adjacent Site 308
287	2375	5	7,500	Potential	On Site	Boiler repair shop on site
288	2375	10	5,060	Potential	On Site	Historic wire manufacturing on Site

335	2446	78	4,200	Projected	Within 400 ft	Suspect tank at Site 334

Notes:

For Sites with multiple blocks, the lot numbers correspond with the listed blocks, respectively.

Site 211 consists of Block 2277 Lot 1, Block 2287 Lots 1, 16, and 30, Block 2294 Lots 1 and 5, Block 2301 Lots 1, 50, 60, 70, and Block 2590 Lots 25 and 100.

The source for the (E)-Designation is either on-site, an adjacent lot, or within 400 feet of the site.

A list of acronyms and abbreviations is provided on Table 11-1.

The (E) designation cause that is listed in the table is not necessarily the most significant concern for the Site, but merely an identified condition leading to the designation.

Sites that were (E) designated based on either adjacent site conditions or conditions at sites within 400 feet may or may not have an on-site condition that would have led to the (E) designation. An on-site condition that would lead to an (E) designation may be identified following further review.

concentrations were predicted at Site 3A (553 spaces). The values are the highest predicted concentrations for any time period analyzed. These maximum predicted CO levels are below the applicable CO standards, and therefore, no significant adverse impacts from the proposed action's parking facilities are expected.

Stationary Sources

HVAC Sources

An analysis of HVAC source emissions was conducted. A screening analysis for individual sites and a cumulative analysis was conducted, to ensure there were no significant impacts from projected and potential development sites.

HVAC Source Screening

The screening analysis was performed to determine whether impacts from projected development sites could potentially impact other projected development sites or existing buildings. The analysis was performed assuming both natural gas and No. 2 fuel oil as the HVAC systems' fuel types. A total of 55 development sites were analyzed using the screening methodology.

The majority of the development sites were determined to pass the HVAC screening analysis using No. 2 fuel oil (i.e., the minimum distance from the source to the receptor is greater than the minimum distance specified in the *CEQR Technical Manual* HVAC screening figure). Four of the sites did not meet the minimum distance specified in *CEQR Technical Manual* using No. 2 fuel oil. A more refined analysis using natural gas was performed. In three of these cases, the use of natural gas did not meet the screening criteria either. At these sites, if minimum distances are increased from the most conservative distance (building line to building line) no significant adverse impacts are predicted.

Air Quality

Therefore, to preclude the potential for significant adverse air quality impacts on other projected developments from the HVAC emissions, an (E) designation would be incorporated into the rezoning proposal for each of the affected sites. The text of the (E) designations is as follows:

Block 2565, Lot 1 (Projected Development, Site 60)
Any new residential and/or commercial development on the above-referenced property must use natural gas as the type of fuel for HVAC systems.

Block 2570, Lot 36 (Projected Development, Site 56c)
Any new residential and/or commercial development on the above-referenced property must ensure that the heating, ventilating and air conditioning stack(s) is located at least 78 feet from the lot line facing West Street and parallel with Oak Street, to avoid any potential significant air quality impacts.

Block 2721, Lot 11 (Projected Development, Site 105)
Any new residential and/or commercial development on the above-referenced property must ensure that the heating, ventilating and air conditioning stack(s) is located at least 100 feet from the lot line facing Richardson Street and parallel with Union Avenue, to avoid any potential significant air quality impacts.

Block 2332, Lot 1 (Projected Development, Site 199b)
Any new residential and/or commercial development on the above-referenced property must ensure that the heating, ventilating and air conditioning stack(s) is located at least 100 feet from the lot line facing Kent Avenue and parallel with North 6th Street, to avoid any potential significant air quality impacts.

Cumulative Impacts from HVAC Sources

Thirteen HVAC site clusters (HVAC sources in close proximity with similar stack heights) were identified and a quantitative analysis was performed to determine their potential impact. The total floor area of the individual sites was summarized and a single representative stack was placed in the approximate geographic center of the cluster (see Figure 18-2). The thirteen clusters consisted of the following projected and potential development sites:

- Potential Development Sites 1 and 2 – comprising a total floor area of 557,058 square feet with a stack height at 150 feet;
- Projected Development Site 3, and Potential Development Sites 3.1 and 3.2 – comprising a total floor area of 4,093,235 square feet with a stack height of 350 feet;
- Potential Development Sites 34, 41 and 44 – comprising a total floor area of 1,394,013 square feet with a stack height of 250 feet;
- Projected Development Site 56 and Potential Development Site 62 – comprising a total floor area of 3,335,237 square feet with a stack height of 350 feet;
- Projected Development Site 199 and Potential Development Site 222 – comprising a total floor area of 1,594,965 square feet with a stack height of 350 feet;
- Projected Development Sites 57 and 60 and Potential Development Sites 58, 59 and 61 – comprising a total floor area of 480,366 square feet with a stack height of 70 feet;
- Potential Development Sites 4, 5, 7, 8 and 17 – comprising a total floor area of 405,000 square feet with a stack height of 70 feet;
- Projected Development Sites 125, 130, 148 and 149 and Potential Development Sites 126, 127, 128, 129, 146, 147, 150, 151, 152 and 153 – comprising a total floor area of 862,142 square feet with a stack height of 70 feet;
- Projected Development Site 235 and Potential Development Sites 214, 223, 246, 247, 248, 255, 256, 257, 258, 292 and 293 – comprising a total floor area of 871,647 square feet with a stack height of 70 feet;
- Projected Development Site 98 and Potential Development Sites 97, 99, 118 and 120 – comprising a total floor area of 342,680 square feet with a stack height of 70 feet;
- Projected Development Site 218 and Potential Development Site 189, 209 and 210 – comprising a total floor area of 167,971 square feet with a stack height of 50 feet;
- Potential Development Sites 280, 287, 288, 307 and 309 – comprising a total floor area of 120,854 square feet with a stack height of 55 feet; and
- Potential Development Sites 74, 75, 76, 77, 84, 85, 86, 87, 88 and 89 – comprising a total floor area of 291,654 square feet with a stack height of 70 feet.

The results of the analysis, presented in Table 18-17, determined that maximum impacts from clusters, when added to background concentrations, were substantially below ambient air quality standards.

Air Toxics Analysis From Industrial Sources

As discussed above, a study was conducted to identify manufacturing and industrial uses within 400 feet of the projected and potential developments. NYCDEP-BEC, NYSDEC, and EPA permit records were used to identify existing sources of industrial emissions. A total of 96 permitted facilities (consisting of

threshold (which includes chromic acid) as allowable, as long as best available control technology (BACT) is in place. Therefore, the impacts of chromic acid at these development sites are not considered significant.

To preclude the potential for significant adverse industrial source air quality impacts an (E) designation for air quality will be incorporated into the rezoning proposal. The text of the (E) designation is as follows:

Block 2344, Lot 26:

- If the dioctyl phthalate and formaldehyde emissions affecting this property continue, any new residential and/or commercial development, enlargement, or change of use on the above-referenced property must either: have inoperable windows and may not include air intakes; or, must incorporate alternative design features and technologies approved by NYCDEP.

Block 2556, Lots 55, 57 and 58:

- If the dioctyl phthalate emissions affecting this property continue, any new residential and/or commercial development, enlargement, or change of use on the above-referenced property must either: have inoperable windows and may not include air intakes; or, must incorporate alternative design features and technologies approved by NYCDEP.

Block 2557, Lot 7:

- If the particulate matter and dioctyl phthalate emissions affecting this property continue, any new residential and/or commercial development, enlargement, or change of use on the above-referenced property must either: have inoperable windows and may not include air intakes; or, must incorporate alternative design features and technologies approved by NYCDEP.

Block 2571, Lot 18:

- If the dioctyl phthalate emissions affecting this property continue, any new residential and/or commercial development, enlargement, or change of use on the above-referenced property must either: have inoperable windows and may not include air intakes; or, must incorporate alternative design features and technologies approved by NYCDEP.

Block 2644, Lot 43:

- If the dioctyl phthalate emissions affecting this property continue, any new residential and/or commercial development, enlargement, or change of use on the above-referenced property must either: have inoperable windows and may not include air intakes; or, must incorporate alternative design features and technologies approved by NYCDEP.

Block 2714, Lot 33:

- If the dioctyl phthalate and formaldehyde emissions affecting this property continue, any new residential and/or commercial development, enlargement, or change of use on the above-referenced property must either: have inoperable windows and may not include air intakes; or, must incorporate alternative design features and technologies approved by NYCDEP.

Block 2714, Lot 13:

- If the formaldehyde emissions affecting this property continue, any new residential and/or commercial development, enlargement, or change of use on the above-referenced property must either: have inoperable windows and may not include air intakes; or, must incorporate alternative design features and technologies approved by NYCDEP.

Block 2723, Lots 29 and 30; Block 2723, Lots 33 and 36:

- If the particulate matter emissions affecting these properties continue, any new residential and/or commercial development, enlargement, or change of use on the above-referenced properties must either: have inoperable windows and may not include air intakes; or, must incorporate alternative design features and technologies approved by NYCDEP.

Block 2736, Lots 20 and 23:

- If the dioctyl phthalate emissions affecting this property continue, any new residential and/or commercial development, enlargement, or change of use on the above-referenced property must either: have inoperable windows and may not include air intakes; or, must incorporate alternative design features and technologies approved by NYCDEP.

The procedures to be followed for satisfaction of the (E) designation shall require that the fee owner(s) of the lot which is restricted by this (E) designation demonstrate that the requirements of the (E) designation have been satisfied or that the restrictions of the (E) designation are no longer necessary due to a change in conditions. To demonstrate that the requirements of the (E) designation are no longer necessary due to a change in conditions, the fee owner(s) of the lot restricted by the (E) designation will be required to prepare a written report to be submitted to NYCDEP indicating that the impact identified for the lot would no longer occur. Examples of the types of changes in conditions which would no longer necessitate the (E) designation would be that the emissions at the source, or exposure pathways to the affected lot, have been eliminated or reduced to below impact levels. Upon request, NYCDEP will provide guidelines and criteria for performing the technical analyses to be used to demonstrate that the requirements of the (E) designation are no longer necessary. If it is determined by the NYCDEP that the requirements of the (E) designation have been satisfied or are no longer necessary, the NYCDEP shall issue a Notice of Satisfaction for the lot. The procedures set forth in Section 11-15 of the Zoning Resolution with respect to the satisfaction of requirements and removal of (E) designation shall apply.

Table 18-19 presents the maximum impacts at the projected and potential development sites. The table also lists the SGC and AGC for each toxic air pollutant.

Cumulative impacts were also determined for combined effects of different toxic air pollutants. Table 18-20 presents the results of the assessment of cumulative carcinogenic and non-carcinogenic effects on the proposed action. For non-carcinogenic compounds, EPA's Hazard Index Approach resulted in a calculated value of 0.43. This value is below the significance threshold of 1.0 established by USEPA. For carcinogenic compounds, the maximum total estimated cancer risk is 9.84 per million.

The maximum hazard index and total cancer risk were determined by a refined modeling approach using the ISC3 model for each pollutant identified as a possible or likely carcinogen. Concentrations at each receptor were averaged over the five meteorological years for which impacts were modeled (1998-2002). While the maximum cancer risk is above the level considered by USEPA to be significant (1 per million), several things must be kept in mind: 1) the concentrations are compared against EPA unit risk factors and NYSDEC AGCs, each of which was developed by these agencies based on a factor of safety above which health effects may potentially occur; 2) the exceedance of a 1 per million threshold occurs at few receptor locations, (i.e., at modeled locations at potential development sites 66, 67, 68, 88, and 231; and 3) the health risk analysis is based upon a lifetime exposure at the predicted concentrations at a single location, which is a very conservative approach. Therefore, based upon the cumulative air toxics analysis, the proposed action would not result in a significant cancer risk.

The procedures used to estimate maximum potential impacts from industrial sources showed that their operations would not result in any predicted violations of the NAAQS or any exceedances of the

TABLE 19-11 (continued)
Minimum Building Attenuation to Comply With CEQR Requirements at Each Receptor Site

To achieve 30/35 dBA of building attenuation, double glazed windows with good sealing properties would be used as well as alternate means of ventilation such as well sealed through-the-wall air conditioning or central air conditioning. In addition, mechanical equipment such as heating, ventilation, and air conditioning (HVAC) and elevator motors would utilize sufficient noise reduction devices to comply with applicable noise regulations and standards.

Noise

There are two levels of required noise attenuation depending upon the ambient noise levels. One level of attenuation is 30 dBA and the higher level of attenuation is 35 dBA. The text for the (E) Designation for sites requiring 30 dBA of attenuation would be as follows:

> **"In order to ensure an acceptable interior noise environment, future residential/ commercial uses must provide a closed window condition with a minimum of 30 dBA window/wall attenuation on all façades in order to maintain an interior noise level of 45 dBA. In order to maintain a closed-window condition, an alternate means of ventilation must also be provided. Alternate means of ventilation includes, but is not limited to central air conditioning or air conditioning sleeves containing air conditioners or HUD approved fans."**

The projected and potential development sites where the 30 dBA level of noise attenuation would be required are presented in Table 19-12. As shown in the table, there are 38 sites where this would apply, 10 of which are projected development sites and 28 of which are potential development sites.

	2404	1	New Construction	R6	30

For sites requiring 35 dBA of noise attenuation, the following (E) designation noise text would apply (as shown in Table 19-13, there are 7 sites requiring 35 dBA of noise attenuation, 1 of which is a projected development site and 6 of which are potential development sites.):

> **"In order to ensure an acceptable interior noise environment, future residential/ commercial uses must provide a closed window condition with a minimum of 35 dBA window/wall attenuation on all facades in order to maintain an interior noise level of 45 dBA. In order to maintain a closed-window condition, an alternate means of ventilation must also be provided. Alternate means of ventilation includes, but is not limited to central air conditioning or air conditioning sleeves containing air conditioners or HUD approved fans."**

In sum, with the attenuation measures specified above, the proposed rezoning would not result in any significant adverse noise impacts, and would meet CEQR guidelines.

TABLE 19-13
Projected and Potential Development Sites for (E) Designation: 35 dBA Attenuation

Site Number	Block	Tax Lot	Development Type	Proposed Zoning	Minimum Required Building Attenuation
Projected Sites					
199	2324	1	New Construction	R6/R8	35
	2332	1	New Construction	R6/R8	35
Potential Sites					
222	2340	1	New Construction	R6/R8	35
233	2346	30	New Construction	R6	35
234	2346	26	New Construction	R6	35
304	2382	28	Reactivation	R6	35
317	2416	8	New Construction	R6	35
318	2416	27	New Construction	R6	35

F. THE FUTURE WITH THE PROPOSED ACTION (SCENARIO B)

Assessment of Impacts with the Proposed TransGas Energy Project (Scenario B)

Under Scenario B of the proposed action, the TransGas power plant is assumed to be developed. Under this scenario, the proposed plant site (the Bayside Fuel Oil site) would be excluded from the proposed park, resulting in a smaller park. The TransGas plant would then be built between North 12th Street and North 15th Street, south of Bushwick Inlet. The resultant noise levels of this scenario were evaluated, based on an environmental noise assessment conducted for the proposed TransGas power plant, TransGas Energy Facility, Brooklyn NY Application for a Certificate of Environmental Compatibility and Public Need pursuant to Article X of the New York State Public Service Law December 2002.

The noise study for the TransGas plant projected overall noise levels produced by the various plant components, including the turbine units, air inlets, gas compressors, Heat Recovery Steam Generators (HRSGs), exhaust fans, air-cooled condensers, transformers, assuming a number of significant noise attenuation features. Among them are air inlet silencers, lower noise transformers, acoustically treated louvers, and noise barriers for the transformers. In addition, directivity effects for noise from exhaust stacks as well as attenuation factors under varying atmospheric conditions are proposed. Using computer modeling techniques, the overall noise levels at the receptors were projected in the TransGas environmental analysis in terms of an $L_{eq(1)}$ noise level. With these noise attenuation features, the TransGas Analysis of the proposed plant did not disclose any adverse impacts on ambient noise. For example, predicted L_{dn} levels were not expected to change at modeled receptors at Kent Avenue at both North 9th Street and North 13th Street.

That study concluded that noise due to the operation of the plant alone would produce an $L_{eq(1)}$ of 35 dBA at the nearest sensitive receptor, which would be the site of the proposed park at the Kent Avenue and North 9th Street location. The study also concluded that the total increase in noise levels (i.e., traffic plus operational noise at TransGas) at the proposed park would be less than 0.1 dBA, which is less than barely perceptible and is not a significant change in noise levels. Similarly, noise due to operation of the plant would generate noise levels of 45 dBA at the northeastern property line of the proposed park, at locations

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by KB Environmental Assessment were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by KB Environmental Assessment were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 401 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 9 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
488 LEONARD STREET 488 LEONARD STREET BROOKLYN, NY 11222	NY E DESIGNATION NY NYC LAND USE	N/A

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System
US INST CONTROLS ---------- Institutional Controls Sites List

Federal ERNS list

ERNS ---------- Emergency Response Notification System

Lists of state and tribal leaking storage tanks

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land
NY HIST LTANKS ---------- Listing of Leaking Storage Tanks

Lists of state and tribal registered storage tanks

FEMA UST ---------- Underground Storage Tank Listing

NY CBS UST ---- Chemical Bulk Storage Database
NY MOSF UST ---- Major Oil Storage Facilities Database
NY MOSF AST ---- Major Oil Storage Facilities Database
INDIAN UST ---- Underground Storage Tanks on Indian Land

State and tribal institutional control / engineering control registries

NY RES DECL ---- Restrictive Declarations Listing

Lists of state and tribal voluntary cleanup sites

INDIAN VCP ---- Voluntary Cleanup Priority Listing

Lists of state and tribal brownfield sites

NY ERP ---- Environmental Restoration Program Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS ---- A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

NY SWRCY ---- Registered Recycling Facility List
NY SWTIRE ---- Registered Waste Tire Storage & Facility List
INDIAN ODI ---- Report on the Status of Open Dumps on Indian Lands
DEBRIS REGION 9 ---- Torres Martinez Reservation Illegal Dump Site Locations
ODI ---- Open Dump Inventory
IHS OPEN DUMPS ---- Open Dumps on Indian Land

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL ---- Delisted National Clandestine Laboratory Register
NY DEL SHWS ---- Delisted Registry Sites
US CDL ---- National Clandestine Laboratory Register

Local Lists of Registered Storage Tanks

NY HIST UST ---- Historical Petroleum Bulk Storage Database
NY HIST AST ---- Historical Petroleum Bulk Storage Database

Local Land Records

NY LIENS ---- Spill Liens Information

Records of Emergency Release Reports

HMIRS ---- Hazardous Materials Information Reporting System
NY Hist Spills ---- SPILLS Database
NY SPILLS 90 ---- SPILLS 90 data from FirstSearch

NY RGA LF Recovered Government Archive Solid Waste Facilities List

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 09/29/2025 has revealed that there are 2 NPL sites within approximately 1 mile of the target property.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 09/29/2025 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/29/2025 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/02/2025 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/04/2025 has revealed that there are 33 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 06/04/2025 has revealed that there are 3 NY SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/03/2025 has revealed that there are 25 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 15 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY CBS AST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 08/03/2025 has revealed that there are 18 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/02/2025 has revealed that there are 93 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 06/23/2025 has revealed that there are 3 PFAS ECHO sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 12 UST FINDER sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 10 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 06/02/2025 has revealed that there are 63 E MANIFEST sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CITY BARREL	421 MEEKER STREET	SSE 1/8 - 1/4 (0.211 mi.)	U281	808

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 12/31/2019 has revealed that there are 120 NY MANIFEST sites within approximately 0.25 miles of the target property.

NY MGP: From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

A review of the NY MGP list, as provided by EDR, and dated 08/27/2025 has revealed that there are 4 NY MGP sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
EQUITY WORKS	MASPETH AND VANDERVO	ESE 1/2 - 1 (0.788 mi.)	DD656	2342

Lower Elevation	Address	Direction / Distance	Map ID	Page
WYTHE AVE. (BERRY ST	WYTHE AVE., BERRY ST	W 1/4 - 1/2 (0.421 mi.)	AY468	1477
GREENPOINT	287 MASPETH AVENUE	ESE 1/2 - 1 (0.907 mi.)	DS713	2587

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
GANY BROTHERS AUTO I	285-295 DRIGGS AVE	NW 0 - 1/8 (0.027 mi.)	A37	191

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist

DEC Memo:	01/27/2006 Kuldeep received the Fax from Brumer, but again information not adequate and need more follow up. 01/23/2006 Kuldeep sent a letterfor more information. 01/09/2006 Kuldeep Gupta- Facility Faxed on -01/06/2006 copy of consent Order. Region 2 Nick Lombardo on 01/09/2006 Faxed Report of 5000 gallon Tank Test report of 01/05/2004. 01/06/06 Kuldeep Gupta talked to Ms. Jill Huey and she

BRUMAR SHEET METAL INC (Continued) **S108076226**

need a letter in writing what document we need. She wanted to fax it at 1-718-486-6862. DEC Faxed the letter as requested. Kuldeep discussed with Philip Lodico Senior Attorney DEC and found Consent order signed on 03/24/2003 for not this spill. Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE Does not appear on PBS database. Called Jill Huey. She stated that she received a Consent Order to bring the facility in compliance with state laws. The tank is 5000 gallons. 3/11/2003 ars. DEC Sigona sent TTF notice on March 14, 2003. 9/11/06 This case was transfered from Albany to Region 2. Zhune spoke to Jill Huey (ph: 718-9052) She doesn't want phone calls. She wants every thing by writing. 9/11/06 A TTF letter was sending to : Jill Huey 498 Leonard Street Brooklyn, NY 11222 09/18/06 Ms. Huey sent a package of documents the passing tank test from 2003 was missing. 09/19/06 I sent a letter requesting her the tank test results from 2003. 09/22/03 Ms. Huey sent a package of 8 pages including the passing tank test results from 2003, letters stated the fallowing: The system test passed. After the system test failed in October due to a vent bad line, we decided to replace all pipes just to be sure we would pass. Also we would like to convey to your department that no contamination was detected in our system. What was the cause of the tank test failure on March 3, 2003? Water in tank issue. Piping needed to be replaced was replaced and systems test passed as a result of replacement. 09/27/06 This case was closed for V. Zhune in accordance with J. Vought.

Remarks: RECCOMEND CLEAN TANK DISCONNECT PIPING AND RETEST

DEC Memo:	Sangesland spoke to Ezgy (As-Gee). (See eDocs for Phase 2 Report) She said the property is a 2 story industrial building being sold to a developer who will tear it down for a new residential building. City has placed an e-designation on the property because it's changing from industrial to residential. Problem is associated with leaking from a 5,000 gal buried oil tank. Hydro Tech was hired by the potential buyer and found contamination. Hydro Tech will continue to work on the site and come up with a plan to solve the spill problems and close them out. 6/12/13-Vought-Received call from and spoke to OER Chawla (212-442-3007) and the groundwater is 12-13'bg and proposed full excavation to the water table as part of redevelopment however contamination extends down to 30'bg. They are willing to do additional remedial action but would not like to excavate into groundwater and developer needs to decide by today or he will walk away. Three

BRUMAR SHEET METAL INC (Continued) **S108076226**

other developers walked away
from site (was previously HydroTech). Former use of site is a plating site. Site was discussed with
DEC Cozzy as per Chawla and Cozzy noted that it did not qualify for State BCP and Cozzy did talk to
Demeo re site as per OER Chawla. Vought spoke to DEC Demeo and this spill transferred from Demeo to
Patel for followup. 06/12/13-Hiralkumar Patel. little 'E' desgination for Hazmat ----------
alternate address: 498-502 Leonard Street PBS #: 2-608752. as per PBS record, the site has oe 5,000
gal #2 oil UST, in-service, installed in Jan. 1929. tank system was tested on 01/20/2010. other
spills: 0212132, 1206982 spill # 0212132 was reported on 03/10/2003 due to tank test failure. tank
system failed test due to bad vent line. lines were changed and system passed. no contamination
found. case closed. spill # 1206982 was reported on 10/16/2012 due to tank test failure of 5,000
gal #2 oil UST. case is still open. 2:02 PM:- left message for Mr. Chawla at NYC OER. asked him to
submit available reports. 2:39 PM:- received email from William Wong from NYC OER including link to
reports. William H. Wong Ph. (212) 341-0659 Fax (212) 788-1482 email: WiWong@dep.nyc.gov reviewed
available information:

12/13/2012: DEC Demeo sent letter
requiring documents regarding tank test failure. 4) 02/12/2013: Phase
I Environmental Site
Assessment: - proposed plan is to demolish the existing structure and
construct a multi-story
residential building that includes a 65 ft by 74 ft basement - the
building was purchased in 1979
and turned into a steel manufacturing company, but this is not
indicated on the map
---------- 5) 06/24/2013: Remedial Investigation Report: - Phase
II conducted by Hydrotech in
Oct. 2012 identified the presence of elevated SVOCs, metals and
pesticides in surficial soil
samples collected from the depth of 0-2 ft bg and elevated VOCs,
SVOCs, metals and pesticides in
soil samples collected from 10-12 ft bg - in Oct. 2012, Hydrotech
installed 13 wells on the site
and adjacent sidewalk. groundwater table elevations were measured
between 14.77 and 15.71 ft
---------- - stratigraphy of the site from surface down consists of
a layer of historic fill
material from approx. 0 to 12 ft bg, sand, gravel and silty with heavy
petroleum impacts from 12-16
ft bg, visible petroleum staining from 16-30 ft bg in the area of the
UST and an impacted layer of
highly compressible organic peat, clay and silt from 16-28 ft bg and
highly compressible layer of
clay/silt at approx. 28-34 ft bg - schools within 0.2 miles to the
south ---------- - in Feb.
2013, GRANT installed five soil borings (SB-01 to SB-05) surrounding
the UST in the southwest
portion of the site and only visual inspection of the borings were
performed (no samples were
collected) ---------- - in Apr. 2013, GRANT installed seven soil
borings (SB-06 to SB-12) across

BRUMAR SHEET METAL INC (Continued) **S108076226**

the entire site and collected 19 soil samples; 7 of 19 soil samples were analyzed for finger
printing - borings SB-01 through SB-12 exhibited visual evidence of a petroleum discoloration layer
from approx. 4 to 30 ft bg and free product observed from approx. 10 to 12 ft bg - free product
noted on between 12 and 24 ft bg in borings SB-02, SB-03, SB-04 and SB-05, these borings were
located around the UST ---------- - elevated PID readings were observed ranging from 455 ppm to
895 ppm in borings SB-7 through SB-12 - in Apr. 2013, GRANT installed 3 temporary wells (TWP-01 to
TWP-03) towards the northwestern, northeastern and southeastern portions of the site, respectively
- temporary wells were installed to a depth of 20 ft bg, with 10 ft of screen (means there were no
screen above water table) ---------- - in Apr. 2013, GRANT installed 3 soil vapor probes (SVP-01
to SVP-03) and collected 3 samples - depth to groundwater was present at approx. 10 ft bg
---------- - groundwater flow direction is generally from the south towards the north
---------- - found mostly sec/n/tert-Butylbenzene in soil samples - high metals found in samples

BRUMAR SHEET METAL INC (Continued) **S108076226**

submit a RAWP which discuss
about installation of wells. asked him to submit property owner's
contact info, missing appendices
of Feb. 2013 Phase I and investigation report for work done by
HydroTech in Oct. 2013. discussed
with DEC Jane regarding metal/PCBs in soil/groundwater samples. she
and DEC Cozzy have discussed
data with Mr. Chawla and NYC OER will manage remediation of metal/PCB
contamination. 11:20 AM:-
spoke with Mr. Fung, property owner. he mentioned that they are
planning to build a four (4) story
apartment building with one-level basement. the basement floor will be
at 7.5 ft bg. they will
excavate site to 10 ft bg for foundation work. currently, there is a
vacant one-story warehouse at
the site. scheduled a site inspection at 10:30 AM on 12/09/13. East
Star Realty LLC. **property
owner** 1740 East 27th Street Brooklyn, NY 11229 Attn.: Tin See Fung
PH. (917) 662-3803 email:
jacktinfung@gmail.com 12/09/13-Hiralkumar Patel. 10:20 AM:- visited
site. met Mr. Fung. found
multiple wells on-site. the tank is located under the floor, in area
of one of the rolling door.
found fill port and vent pipe at the foundation wall. suggested Mr.
Fung to pump out the tank and
seal the fill port to prevent any misdelivery and possible spill from
tank. asked Mr. Fung to gauge
all the wells and implement IRM, if product exists in well. he will
contact his environmental
contractor. found RAWP on NYC OER website. abstract of RAWP: -
proposed plan to demolish the
existing structure and construct a multi-story residential building
that is expected to include a
65 ft by 74 ft cellar - the proposed building is planned to
constructed starting from the property
line along the length of Leonard St and extending east - depth to
groundwater was present at
approx. 10 ft bg - HydroTech installed thirteen (13) monitoring wells
- wells were surveyed and
groundwater table elevations were measured between 14.77 and 15.71 ft
- groundwater flow direction
is generally from the south towards the north - soil excavation below
the water table is
anticipated for the area surrounding the UST in the southwest portion
of the site - will collect
endpoint samples - will install a vapor barrier and an active SSDS
beneath the proposed building
11:13 AM:- spoke with Stephen Morse at Grant Engineering. inquired him
about spill remediation work
plan, that he mentioned as attachement F in RAWP for NYC OER. Steve
mentioned that such work plan
is not ready yet. discussed about well gauging and implementation of
IRM. Steve will talk to Mr.
Fung and try to conduct well gauging prior to meeting with NYC OER on
12/13/13. Stephen Morse Grant
Engineering Ph. (212) 464-8689 email: smorse@grantpllc.com 11:25 AM:-
left message for Mr. Chawla.

BRUMAR SHEET METAL INC (Continued) **S108076226**

12/10/13-Hiralkumar Patel. 11:40 AM:- left message for Steve inquiring about well gauging, prior to upcoming meeting on 12/13/13. 12/17/13-Hiralkumar Patel. 1:17 PM:- left message for Steve. 1:18 PM:- left message for Mr. Chawla. 12/20/13-Hiralkumar Patel. 10:01 AM:- spoke with Steve. they met with NYC OER on 12/13/13 and discussed remedial action plan. Steve mentioned that owner has not hired his firm to gauge wells and remove any product in well(s). 10:05 AM:- spoke with Mr. Fung. informed him that the Department requires gauging of all existing wells and immediate removal of any product in well(s). he will talk to Steve. 1:04 PM:- received call from Andrew from Grant Engineering inquiring about what work needs to be done. informed him that the Department requires well gauging and removal of any free product from wells, until permanent remediation system is installed. informed him that well gauging must be done by end of 12/27/13. also recommended removing oil from the UST. Andrew Rizk Grant Engineering Ph. (212) 464-8689 Ext. 2 email: arizk@grantpllc.com 01/08/14-Hiralkumar Patel. 10:01 AM:- received call from Andrew. they gauged 12 out of 13 wells installed for the subject project. one well was installed across the site which is inside construction zone and was not accessible for gauging. out of 12 wells, free phase product found in 3 wells. about 4 inch product found in one of the well and less than 1 inch product found in remaining two wells. Andrew will submit memo, once he gets previous well survey data from record. Andrew confirmed that the on-site tank was also pumped out last week. informed Andrew that the department requires implementation of interim remedial measures until permanent remedial system in in operation. 01/09/14-Hiralkumar Patel. received email from Andrew (at 6:59 PM on 01/08/14) including well gauging data. total of 13 wells (MW-1 through MW-13) were installed previously by Hydrotech. well MW-7 is located on west sidewalk of Leonard St, across from the site. well MW-7 was inaccessible due to the presence of green construction fence directly over top of the well. out of 12 remaining wells, product found in three wells (MW-1, MW-2 and MW-8) between 2 and 4 inches. 01/13/14-Hiralkumar Patel. 12:49 PM:- left message for Mr. Fung. 12:50 PM:- left message for Mr. Chawla. 01/27/14-Hiralkumar Patel. 11:12 AM:- received email from Mr. Chawla including owner's letter and OER briefing. property owner Mr. Fung stated that the entire site will be excavated down to 13 ft bg (into groundwater table). Mr. Chawla included copy of ORC application plan. 4:09 PM:- sent email to Mr. Chawla and informed him that the Department has not received any ORC treatment work plan and such plan is not approved prior to reviewing tank

BRUMAR SHEET METAL INC (Continued) **S108076226**

removal report with endpoint sample
results. email copied to Mr. Wong at OER. 01/28/14-Hiralkumar Patel. 9:12 AM:- left message for Mr.
Chawla. 9:41 AM:- received call from Mr. Chawla and Mr. Wong from NYC OER. Mr. Chawla mentioned
that they received a revised RAWP and ready to issue Notice to Proceed letter. he wanted to know
any requirements from DEC, prior to sending letter to property owner. revised RAWP will be
forwarded for review. 12:29 PM:- received email from Mr. Chawla including link to RAWP Stipulation
List. abstract of RAWP Stipulation List to NYC OER: - entire site will be excavated to 13 ft bg,
with additional excavation in locations where further pockets of contamination is observed -
collection and analysis of 22 endpoint samples from the bottom of excavation will be collected - a
minimum of 20-millimeter vapor barrier will be installed beneath te structure's slab and along
foundation wall - dewatering will be performed - excavation of the impacted soil will be performed
following the removal of existing tanks abstract of site-specific groundwater treatment and
monitoring plan dated 01/21/14: - remaining product from 5,000 gal tank was pumped from the tank on
12/27/13 - proposes to mitigate the contamination in three stages: 1) the existing site will be
remediated via purging of product from the existing wells on a monthly basis, 2) site will be
excavated to approx. 13 ft bg, or deeper in locations where contamination is present and the open
excavation will be treated with chemical application, and 3) monitoring wells and contingency
injection wells will be installed in the cellar level of the proposed development to allow for
future chemical injections, if necessary - prior to construction, the assessment of groundwater
quality will include the collection of groundwater samples from the existing wells
01/29/14-Hiralkumar Patel. 12:46 PM:- sent letter to Mr. Fung requiring bi-weekly monitoring of
wells, product removal from impacted wells and monthly submission of well monitoring reports.
informed him that the department only approves tank removal work (as listed in appendix 1 of RAWP
Stipulation List submitted to NYC OER) and required submission of tank removal report. also
informed him that the department may require additional investigation, after reviewing the tank
removal report, prior to any comment on in-situ remediation, if needed. letter emailed to Mr. Fung,
Mr. Chawla, Mr. Wong, Steve and Andrew. 12:53 PM:- spoke with Mr. Fung and informed him about
letter sent in email. he will discuss with Grant Engineering.
02/20/14-Hiralkumar Patel. 1:06 PM:-
received email from Andrew. he mentioned that while drilling borings for geotechnical

BRUMAR SHEET METAL INC (Continued) **S108076226**

investigation, a second UST was found, directly east of the existing 5,000 gal UST. unknown UST had
about an inch of product. he confirmed that product from 5,000 gal tank was pumped out on 12/27/13.
they pumped out product from impacted wells (MW1, MW2 and MW) on 02/07/14. 03/04/14-Hiralkumar
Patel. 1:32 PM:- received email from Andrew including interim remedial measure letter report.
between 1 and 6 inches of product noted in three wells (MW-1, MW-2 and MW-8). 04/09/14-Hiralkumar
Patel. received email from Steve (at 5:39 PM on 04/08/14) including interim remedial measure letter
report. wells were monitored on 03/07/14 and 03/21/14. between 2.5 and 6.6 inches of product noted
in three wells (MW-1, MW-2 and MW-8). 04/18/14-Hiralkumar Patel. received email from Steve (at 8:09
PM on 04/17/14). he mentioned that bi-weekly groundwater gauging, monitoring and reporting will not
be conducted this week due to the building currently undergoing asbestos abatement activities. he
also mentioned that the existing building will be immediately demolished once the abatement work is
completed. Steve mentioned that well gauging will resume, if demolition does not occur.
04/28/14-Hiralkumar Patel. 3:33 PM:- sent email to Steve inquiring updates. 04/29/14-Hiralkumar
Patel. 10:15 AM:- received email from Steve. he mentioned that currently, the building is under a
stop work order and full vacate order. the owner and asbestos abatement contractor are taking steps
to address this. 08/19/14-Hiralkumar Patel. 11:58 AM:- received message from Ray Kahn from ESPL.
08/22/14-Hiralkumar Patel. 2:39 PM:- spoke with Mr. Kahn. ESPL has been hired for required work at
the site and they are ready to start soil excavation. asked Mr. Kahn to provide work schedule for
site work. he will send email. 11/14/14-Hiralkumar Patel. 10:16 AM:- left message for Mr. Kahn.
11/18/14-Hiralkumar Patel. 12:04 PM:- received call from Mr. Kahn. he mentioned that site
excavation has not begun yet as owner has planned to change design of new building. Mr. Kahn will
talk to property owner about required well gauging/product removal. 12/17/14-Hiralkumar Patel. 1:21
PM:- spoke with Mr. Kahn. he mentioned that property owner has met with NYC OER and planning to
start excavation on 01/05/15. he mentioned that well monitoring/gauging/product removal has not
been conducted yet since Feb. 2014. 1:22 PM:- left message for Mr. Wong at NYC OER. 1:44 PM:- spoke
with Shaminder Chawla at NYC OER and informed him about property owner's failure to comply with the
well monitoring/report submission requirements as per the letter dated 01/29/14. informed him that
the case may be referred for legal enforcement. Mr. Chawla has no objection to DEC's enforcement.
01/07/15-Hiralkumar Patel. 11:52 AM:- spoke with Mr. Kahn. after

BRUMAR SHEET METAL INC (Continued) **S108076226**

discussion on 12/17/14, ESPL
installed a test pit next to the UST. the test pit was dug down to 9
ft bg, where groundwater was
found. free phase product was noted on groundwater and product
recovered using absorbent pads.
asked Mr. Kahn to submit letter summarizing test pit work and
monitoring data. Mr. Kahn mentioned
about chemical treatment of contamination. informed him that the
department does not approve
chemical treatment at this time and requires submission of endpoint
soil and groundwater samnple
results prior to finalizing a remedial method. 01/21/15-Hiralkumar
Patel. 9:08 AM:- received email
from Mr. Kahn including test pit letter report. three test pits were
excavate on 12/19/14 to a
depth of 11 ft bg (2 ft below groundwater) and 8 ft wide. product
found on water in test pit #1
which is located east of the tank farm. product is being collected
using absorbent pads. on
01/12/15, a stop work order was issued by NYC DOB. interim cleanup
will continue by capturing the
product using adsorption pads and pump-out methods until the actual
tank removal and spill clean-up
can be conducted. 9:11 AM:- sent email to Mr. Kahn and asked him to
submit a scaled site map with
existing well, tank and test pit locations. email copied to Mr.
Chawla. 01/23/15-Hiralkumar Patel.
received email from Mr. Kahn (at 8:16 PM on 01/22/15) including site
map. he also mentioned that
the stop work order was removed and the shoring conctractor is driving
the beams into the ground in
the west and north side of the site. 01/28/15-Hiralkumar Patel.
received email from Mr. Kahn (at
2:54 PM on 01/25/15) including test pit/UST plan and shoring plan. he
mentioned that two USTs were
exposed on 01/23/15 to prepare the site location plan. both tanks were
found containing water.
01/29/15-Hiralkumar Patel. 9:58 AM:- received call from Mr. Kahn.
today they pumped out and removed
two tanks. excavation was about 9 ft bg and groundwater was not found
in the excavation. due to
structural safety of the adjoining building, they have to backfill the
excavation. Mr. Kahn
mentioned that contaminated soils will be removed once underpinning
for adjoining building is done
(possibly within two weeks depends on weather). 02/05/15-Hiralkumar
Patel. 2:14 PM:- received email
from Mr. Chawla. William Wong of OER visited site and noted petroleum
odors while tank piping being
removed. 02/06/15-Hiralkumar Patel. 10:30 AM:- visited site. met with
on-site supervisor. crew was
underpining adjacent building in area where the USTs were located. no
petroleum odors noted in work
zone. 02/11/15-Hiralkumar Patel. 1:32 PM:- received message from Mr.
Kahn. 02/12/15-Hiralkumar
Patel. 10:03 AM:- received call from Mr. Kahn. during underpining
operation, crew found set of ten

BRUMAR SHEET METAL INC (Continued) **S108076226**

(10) 1,000 gal tanks in rear portion of the site. Mr. Kahn spoke with neighbours and reviewed
sanborn maps. maps shows location of ten tanks. Mr. Kahn has collected liquid samples from these
ten tanks. asked him to send site map with these tank location, sanborn map and tank removal plan.
also asked him to submit results of liquid samples from the tank, once available.
03/03/15-Hiralkumar Patel. 10:38 AM:- received email from Mr. Kahn including link to UST removal
report. abstract: - previously known USTs # 1 & 2 were removed on 01/29/15 - during underpinning of
the adjacent structure, two additional tanks (UST # 3 & 4 - size: 5.5 ft dia x 7 ft long) were
discovered approx. 3 ft bg on 02/09/15, which were removed - during further work, an additional
eight (8) USTs were identified (UST # 5, 6, 7, 8, 9, 10, 11 & 12) on 02/11/15; these tanks were
buried vertically approx. 2.5 ft bg - USTs # 5-12 were identified on 1942-1965 Sanborn Maps - USTs
5-12 were encased in concrete - based on site history and shape of tanks # 5-12 and interior
structure, it was concluded that the tanks could have been used for mixing operation which is
consistent with the site history of a carpet dying operation during 1940’s and 1960’s - dimensions
of tanks # 5-12 varied: 5 ft dia x 6 ft long (1,000 gal) & 5 ft dia x 4 ft long (500 gal) -
additional soil excavation will continue Mr. Kahn included copy of PBS application form (signed on
02/11/15) to register previously unknown tanks, but no records found in PBS record.
03/31/15-Hiralkumar Patel. 9:06 AM:- received call from Mr. Kahn. he mentioned that soil from
almost entire footprint of the site has been removed to a depth of approx. 11 ft bg. they removed
about 3,028 tons of soil. currently, the site excavation is filled with groundwater. the north and
south sidewall of the excavations are concrete underpining under adjacent buildings and there is a
shoring along the west sidewall to pretect the sidewalk. asked Mr. Kahn to collect endpoint soil
samples from east sidewall, water sample from excavation pool and groundwater samples from
monitoring wells on sidewalk. asked him to analyze all samples for full list VOCs/SVOCs. informed
Mr. Kahn that the department does not approve application of any chemical prior to reviewing
soil/groundwater samples. he mentioned that the new foundation will be at around 9.5 ft bg.
04/01/15-Hiralkumar Patel. 8:45 AM:- went to site for inspection, but site was closed. looked
through opening in construction fence. the entire excavation was filled with water. no petroleum
sheen or odors were observed. 04/09/15-Hiralkumar Patel. 10:55 PM:- received email from Mr. Kahn
including status report. abstract: - composite soil sample was

BRUMAR SHEET METAL INC (Continued) **S108076226**

collected from east sidewall -
groundwater samples were collected from excavation pool and wells MW-5 and MW-6 - no contamination
found in any sample based on available documents/information, no further work is needed and case is
closed. 3:01 PM:- spoke with Mr. Chawla at NYC OER and informed him about case closure. Mr. Chawla
confirmed that a moisture/vapor barrier will be installed underneath the new building. 3:19 PM:-
sent spill closure letter to Mr. Fung. letter emailed to Mr. Fung, Mr. Chawla and Mr. Kahn. **also
refer to spill #: 1206982.**

Remarks: tank is in place, soil samples confirm contamination

BROWNFIELDS:

Name:	55 ECKFORD ST LLC
Address:	55 ECKFORD STREET
City,State,Zip:	BROOKLYN, NY 11222
Program:	BCP
Site Code:	554414
Acres:	0.238
HW Code:	C224168
SWIS:	2401
Town:	New York City
Record Added Date:	07/03/2017
Record Updated Date:	06/03/2025
Update By:	RKCORCOR
Site Description:	Location: The site is located in the Greenpoint neighborhood of Brooklyn, New York. The site is identified as Block 2698, Lot 32 and 10,376 square feet (0.238 acres) in area. The site is bound to the north by a site under residential development (65 Eckford Street, BCP Site No. C224218), to the east by Eckford Street followed by five connected 2-story residential buildings (54-62 Eckford St), to the south by a 3-story residential building (67 Engert Ave) and four connected 3-story residential buildings (57-63 Engert Ave), and to the west by a 1-story warehouse building (488 Leonard St) and a parking garage. Site Features: The partially developed site is occupied by a 6-story unfinished steel frame construction with concrete foundations. A partial basement is located beneath the southern portion of the unfinished construction, which is covered

55 ECKFORD ST LLC (Continued) **S121488681**

with bare soil and concrete footings. A partially constructed elevator pit is located in the northern portion of the unfinished basement. Overhead scaffolding is seen along the sidewalk at the entrance of the site. The rest of the property is covered with overgrown bushes. Current Zoning and Land Use: The site is currently inactive and located in the Greenpoint-Williamsburg Special Mixed-Use District (MX-8) of Brooklyn, New York in an area zoned for residential (R6A, R6B), light manufacturing (M1-2). The proposed construction (multi-unit residential building) will be as-of-right and will be consistent with applicable zoning regulations. Past Use of the Site: Records from 1887 show the site as four abutting vacant undeveloped lots. By 1905, the site is shown as being part of Meisel Danowitz & Co. woodworking operation and contained four 1- to 2-story buildings identified as moulding shed , planning & moulding lumber racks , kiln house , and an office. By 1916, the structures remain but were identified as vacant and dilapidated ; by 1942 identified as wool & rags sorting and baling ; and from 1951 until 1992 identified as electric plating, storage, lacquer spraying . Between 1993 and 2004, the structures remain but the use was unknown. NYC Department of Finance (DOF) records show the site was owned by the Berkman Family since at least 1971. By 2003, the Berkman Family sold the property to Blue Diamond Development, LLC. In August 2005, the NYC Department of Buildings (DOB) issued a demolition permit, and buildings were later demolished. By 2009, the property was sold to 55 Eckford Street Brooklyn LLC / Madison Realty Capital L.P. Between 2009 and 2015, construction permits were issued by NYCDOB for the site redevelopment into residential apartments. By 2016, a stop work order has been issued for the site, and construction has been paused since then. The site was entered into the BCP under Site No. C224168 in 2017, with the Applicant, TCJ Construction, deemed a Volunteer, then subsequently withdrawn from the program. The site is currently owned by 55 Eckford St LLC (since April 2024) and was reentered into the BCP in November 2024. At this time the site contains a 6-story steel structure for an unfinished building and the property is surrounded by a construction fence. Records from as early as 1887 show the surrounding areas to the north, west and east of the site as subdivided vacant interspersed with 2- to 3-story dwellings. The property to the south of the site is shown with several 1-to 2-story story buildings labeled as Plastering Hair Manufacturing Co. . By early 1900s until the mid-2000s, the surrounding vicinity saw denser development with multiple 2 to 3-story dwellings and several manufacturing and commercial facilities (e.g., cooperage, lumber yards, moving pictures, cab company, garage, printing, furniture manufacturing, etc.). By late 2000s, the manufacturing properties were redeveloped into multi-story residential apartments. By July 16, 2015, the property that abuts the site to the north (Former Carter Spray Finishing Corp. at 65 Eckford Street), was entered into the BCP under Site No. C224218 with documented contamination in soil related to historical operations and fuel storage in underground tanks. In summary, the past occupants (65 Eckford St) operations of woodworking and electroplating, storage and lacquer spraying were possible sources of contamination. Remediation at the 65 Eckford St site was completed in 2023, achieving Unrestricted Soil Cleanup Objectives, groundwater meeting NYS standards and extensive soils excavation addressing previous soil vapor contamination. The certificate of completion, issued for 65 Eckford St in December 2023, allows for unrestricted use. Site Geology and Hydrogeology: Based on review of

55 ECKFORD ST LLC (Continued) **S121488681**

the 1776-7 Original High and Low Grounds, Salt Marsh and Shorelines in the City of Brooklyn Map, the site lies within the edge of the shoreline of where an original salt marsh land was located (i.e., the current McCarren Park). Typically, in this area, fill used to raise grades is underlain by clayey silts and silty sands. Based on Bedrock Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey, dated 1990, the bedrock near the site consists of interbedded units of gray thinly laminated muscovite-biotite-quartz schist, and white to pinkish with light green weathering gneiss. Bedrock is anticipated to be encountered over 100 feet below grade (ft bg). Based on the remedial investigation (RI) performed at the site, groundwater is encountered at 10.5-12-14 ft bg and groundwater flow is to the northeast. However, the localized direction of groundwater flow near the site might vary because of underground utilities, subsurface preferential pathways, variations in weather or heterogeneous geological, tidal influence, and/or anthropogenic conditions. The RI confirmed the subsurface geology consists of fill material (containing bricks, concrete, etc.) to depths of 12 to 17 ft bg, followed by a clayey silt layer with interbedded peat stratum that extended to depths ranging from approximately 12 to 25 ft bg and a fibrous/fine grained peat w/ clayey silt from 11 to 33 ft bg, which is underlain by sands, which appear to be native material.

Env Problem:

A Remedial Investigation (RI) was completed at the site in 2024-2025, which included the installation of 10 soil borings (sampling of soils up to a depth of 30 ft bg); installation and sampling of 6 groundwater monitoring wells and installation and sampling of 8 soil vapor points. Nature and Extent of Contamination: Soils: Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, herbicides, 1,4-dioxane and Per- and Polyfluoroalkyl Substances (PFAS). Several metals (arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc) were detected in soil samples at levels above Unrestricted Use Soil Cleanup Objectives (UUSCOs) and/or Protection of Groundwater SCOs (PGWSCOs) in the majority of samples throughout the site. The SVOCs (benzo(a)pyrene, benzo(a)pyrene, etc.) were detected above UUSCOs in several locations. Several metals and some SVOCs were present at levels exceeding Restricted-Residential SCOs (RRSCOs). VOCs (other than common lab contaminants acetone and methylene chloride), PFAS, pesticides / herbicides, and 1,4-dioxane were non-detect or did not exceed UUSCOs. One pesticide (Dieldrin) exceeded UUSCO, but was less than RRSCOs in one sample. Soils contaminated with metals exist side-wide and extend to depths of 26-30 ft bg, with several areas of SVOC contaminated soils that extend to varying depths of up to 26 ft bg. Groundwater: Groundwater samples were analyzed for VOCs, SVOCs, PCBs, metals, pesticides, herbicides, 1,4-dioxane and PFAS compounds. One VOC, tert-butylbenzene, was detected in one groundwater sample at a concentration of 7.25 parts per billion (ppb), above the NYS Ambient Water Quality Standard (AWQS) of 5 ppb. Five SVOCs were detected above their AWQSs (0.002 ppb for all) in one groundwater sample: benzo(a)anthracene at 0.09 ppb, benzo(a)pyrene and benzo(b)fluoranthene at 0.007 ppb, chrysene at 0.09 ppb and benzo(k)fluoranthene at 0.06 ppb. Two SVOCs, benzo(a)anthracene (0.10 ppb) and chrysene (0.09), exceeded their AWQSs of 0.002 ppb (for both) in one other groundwater sample. Six metals were detected in groundwater samples above AWQSs: Arsenic up to 763 ppb (AWQS 25 ppb)

55 ECKFORD ST LLC (Continued) **S121488681**

	in all six samples; lead at 27.7 ppb (AWQS 25 ppb) in one sample; antimony at 5.87 ppb (AWQS 3 ppb) in one sample; and iron, manganese and sodium. However, iron, manganese and sodium are naturally occurring in area-wide groundwater and are not indicative of contamination. Perfluorooctanoic acid (PFOA) was detected in all six groundwater monitoring wells at values ranging from 15.6 parts per trillion (ppt) up to 48.8 ppt. Perfluorooctanesulfonic acid (PFOS) was detected in four monitoring wells from 2.38 ppt up to 8.85 ppt. The AWQS for PFOA is 6.7 ppt and for PFOS is 2.7 ppt. Both compounds exceed, however, groundwater in this area is not used as drinking water. Perfluorobutanoic Acid (PFBA), Perfluorodecanoic acid (PFDA), Perfluoroheptanoic acid (PFHpA), Perfluorohexanesulfonic acid (PFHxS), Perfluorohexanoic acid (PFHxA), Perfluoro-n-butanoic acid (PFBA) and Perfluorononanoic acid (PFNA) were detected up to 7.57, 2.23, 17.8, 5.8, 19.7, 16.1 and 2.7 ppt at the site, respectively. The sitewide presence of PFAS indicates an area-wide groundwater condition that is not specifically site-related. 1,4-dioxane was not detected above its AWQS of 0.35 ppb. Soil Vapor: Soil vapor samples were analyzed for VOCs. The following contaminants were found: Chlorinated solvent VOCs, including trichloroethylene (TCE) in in all eight samples ranging from 8.2 to 680 ug/m3, tetrachloroethylene (PCE) in two samples up to 120 ug/m3 and cis-1,2-dichloroethylene in three samples up to 86 ug/m3. Two petroleum-related VOCs were found in one sample: n-Heptane at 1,300 ug/m3 and n-hexane at 970 ug/m3.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	3-2-16 - obligado - Desk duty - I spoke to Jennifer Lewis. She said this was part of a limited Phase II. A previous PHase 2 was already performed at the site for OER. They gauged 2 wells and they found free product in one well at 0.09 ft. Another well had a sheen. They suspect the product to be gasoline but are not sure yet. They collected a sample of the product and may send it to a lab for laboratory analysis. She said the neighboring property has an open spill #1411729 - 65 Eckford Street. She will send me an email regarding the product they found today and also the prior phase II. 3-3-16 - obligado - I received the Phase II from Jennifer. This spill is assigned to Kumar Patel. 03/03/16-Hiralkumar Patel. alternate address: none site has little E designation for 'hazmat' (# 14EHAZ403K). ---------- NYC VCP #: 15CVCP034K ---------- no other spills found. PBS #: 2-607449. as per the PBS record, the site has one (1) 250 gal waste oil AST in contact with soil, in-service, installed in Jan. 2002. PBS registration expired on 02/25/2007. 03/07/16-Hiralkumar Patel. found remedial investigation report and remedial action work plan on NYCOER database. RIR included copy of former Phase I and Phase II conducted in 2013 by MIB Environmental Consulting. abstract of Phase I by MID Env. Consulting dated 08/06/2013: - report does not include historical use of the property - site has two (2) 275 gal waste oil tanks under stairway to mezzanine - hydrocarbon stains on concrete slabs - south parcel at #65 (possibly 65 Eckford St) was a metal plating shop for about 30 years ---------- abstract of Phase II dated 07/25/2013: - four soil borings (S1, S2, S4 and S6) were drilled - one soil sample was collected from each boring at 10 ft depth - groundwater sample was collected from boring S1 and S6, at 11.5-12 ft depth ---------- - report is missing lab report abstract of RIR dated Mar. 2014: - block #: 2698 / lot #: 25 - elevation of the property ranges from 15 to 20

VACANT - PHASE II (Continued) **S118636463**

ft - depth to groundwater
ranges from 11.5 to 12.5 ft bg - groundwater flow is generally from northwest to the East River -
currently, the site is used for an auto repair shop and contains a one-story building, built to the
property lines - the existing one story building will be partially demolished and a four story
building with a penthouse and cellar is to be constructed - proposed future use of the site will
consist of four-story residential building, with the first floor used for retail, a cellar used for
mechanical and storage and a rear yard - cellar will be approx. 10 ft bg and will be used to house
the building's utilities and storage space - excavation is not anticipated to go below the water
table, since the water table is approx. 12 ft bg ---------- -
based on the available sanborn
maps dated from 1887 to 2007, the site was developed after to 1887 for use as sash storage in 1905.
from at least 1942 to 1951, the site was a poultry market. the site was developed as a welding and
auto repair from 1965 to present (more details provided in report dated 07/08/16; listed below)
-------- - a GPR survey was conducted on 03/05/14 which identified anomalies in the area near the
front bathroom and office ---------- - installed five (5) soil borings (SB-1 through SB-5) to a
maximum depth of 18-19 ft bg and collected ten soil samples - found high PID readings and petroleum
odors in almost all five borings - petroleum odors were detected from 8-16 ft in SB-1; 12-16 ft in
SB-2; and 8-12 ft in SB-3, SB-4 and SB-5 - discrete grab soil samples from 0-2 ft and 16-18 ft were
collected - no petroleum VOCs were detected in shallow soil samples - method detection limits for
petroleum VOCs were much higher than cleanup standard for soil samples from deeper zone except for
boring SB-5 ---------- - found TCE in soil samples (620 ppb in 0-2 ft sample from SB-2 and
1,800 ppb in 0-2 ft sample from SB-5) ---------- - installed two (2) 1-inch diameter
groundwater monitoring wells (MW-1 and MW-2) in soil borings SB-1 and SB-2, with 10 ft of screen -
collected two groundwater samples for analysis - no contamination noted in groundwater samples -
installed three soil-vapor probes (SVP-1 through SVP-3) to a depth of 18 ft bg and collected three
soil-vapor samples (at 0-2 ft from SVP-1, at 0-4 ft from SVP-2 and at 8-12 ft from SVP-3), one
indoor air sample and one ambient sample for analysis - found chlorinated solvent contamination
(TCE: 66 ug/m3 and PCE: 92.2 ug/m3) in sample from SVP-1 (0-2 ft depth) as per RAWP dated Sep.
2014, a minimum 20 mil thick vapor barrier will be installed beneath the building slab and outside
foundation walls below grade. an active SSDS will also be installed.

VACANT - PHASE II (Continued) **S118636463**

03/08/16-Hiralkumar Patel. 1:39 PM:- spoke with Jennifer at PW Grosser. she mentioned that Canton K
& J LLC. has recently purchased the property and is modifying the redevelopment plans. as required
by OER, PW Grosser conducted further groundwater investigation via installation of two additional
monitoring wells MW-3 and MW-4. Jennifer believes that contamination was not noted in soil phase
during installation of monitoring wells. they collected groundwater samples for metal analysis as
required by OER. during investigation, 0.09 ft of product noted in well MW-4. product sample was
collected for fingerprint analysis. groundwater sample from MW-4 was collected for VOC analysis
also. informed Jennifer that based on review of all available information, the department requires
resampling of all four monitoring wells at the site for VOCs (full list) and SVOCs; and survey of
existing wells to define site-specific groundwater flow direction. Jennifer will submit results of
recent sampling and schedule for well survey and re-sampling, by end of this week. PW Grosser will
submit revised redevelopment plans and addendum to RAWP. informed Jennifer that the Department may
require a Phase I investigation, as available Phase I report (dated Aug. 2013) is not complete.
Canton K & J LLC. 900 Grand Street Brooklyn, NY 11211 Attn.: Howard Ng PH. (917) 628-3318 email:
howard.ng@gmail.com Jennifer Lewis P.W. Grosser Consulting PH. (631) 589-6353 Fax (631) 589-8705
email: jenniferl@pwgrosser.com 03/25/16-Hiralkumar Patel. 3:24 PM:- sent email to Jennifer
inquiring updates. 04/12/16-Hiralkumar Patel. 10:04 AM:- left message for Jennifer.
04/18/16-Hiralkumar Patel. received email from Jennifer (at 5:23 PM on 04/15/16). she spoke with
OER and waiting for copy of the RIR for 65 Eckford Street.
06/10/16-Hiralkumar Patel. 12:48 PM:-
left message for Jennifer. 12:54 PM:- sent email to Jennifer inquiring about additional
investigation report. email copied to OER Shaminder. found Mr. Ng's email address on DOB permit.
12:57 PM:- forwarded former email to Jennifer, to Mr. Ng. 1:44 PM:- received email from Jennifer.
she is gathering some additional information regarding the neighboring properties and has FOILed
OER for their files related to 498 Leonard St as this site appeared to be another likely source of
the LNAPL that has migrated onto the subject site. she requested copies of documents that DEC has
related to 498 Leonard St. 1:53 PM:- received call from Jennifer. she mentioned that they got
results of additional investigation required by OER and result of fingerprint analysis. asked her
to submit these results immediately. she mentioned that due to possibilities of off-site source for
LNAPL found in well at the site, they are looking for more information

VACANT - PHASE II (Continued) **S118636463**

on neighboring properties.
as such they have not re-sampled existing wells or defined
site-specific groundwater flow direction
as discussed on 03/08/16. informed Jennifer that the Department
requires well survey/re-sampling
prior to commenting on possibilities of off-site source. asked her to
submit schedule for well
survey/re-sampling by 06/14/16. also asked her to submit FOIL request
for any documents related to
neighboring properties. 2:09 PM:- sent email to Jennifer and asked her
to immediately submit
results of additional investigation conducted at the site. also asked
her to submit schedule for
well survey/re-sampling by the end of 06/14/16. email copied to Mr. Ng
and OER Shaminder.
06/14/16-Hiralkumar Patel. 9:43 AM:- received email from Jennifer. she
mentioned that they went to
the site yesterday to collect groundwater samples from all accessible
wells and surveyed the wells.
06/22/16-Hiralkumar Patel. received email from Jennifer (at 4:55 PM on
06/21/16). she mentioned
that they have not received SVOC results yet. 06/28/16-Hiralkumar
Patel. 11:33 AM:- spoke with
Jennifer. they are still waiting for SVOC results for sampling
conducted on 06/14/16. she will
follow-up with the lab. Jennifer mentioned that during well survey,
they found 0.02 ft difference
on water table between on-site wells. as such, they will use water
table data from neighbouring
sites to define regional groundwater flow direction. informed Jennifer
that available sampling
results and well survey data should be submitted by tomorrow and SVOC
data can be submitted later,
once available. 07/11/16-Hiralkumar Patel. received email from
Jennifer (at 4:56 PM on 07/08/16)
including spill closure request report. she mentioned that based upon
the investigation work that
was conducted on-site, the evidence points to the LNAPL being from
off-site source, likely the
spill at neighbouring property at 65 Eckford St. abstract of spill
closure request report: -
construction of cellar has been removed from the renovation plans
--------- - on 02/25/16, two
monitoring wells (MW-3 and MW-4) were installed within the existing
building - contractor returned
on 03/02/16 for well gauging and sampling. during the well gauging, an
unidentified LNAPL was
identified in MW-4 - product sample was collected for lab analysis
which indicated that the LNAPL
is an unresolved complex mixture (UCM) similar to a mineral spirits,
paint thinner, or Stoddard
solvent type of product. also present was a lesser UCM that was
extremely weathered; therefore, a
quantitative identification could not be determined ---------- -
after collecting product
sample from MW-4, the well was purged and groundwater sample was
collected from MW-3 and MW-4 - all

VACANT - PHASE II (Continued) **S118636463**

four wells were surveyed and resampled in June 2016 - during well gauging in June, a thin layer of
LNAPL was identified in MW-4 - after purging wells, groundwater samples were collected from all
four wells for full list VOCs and SVOCs - groundwater flow direction was inconclusive due to the
small size of the property and the relatively flat gradient across the site. based upon regional
groundwater flow direction and the groundwater flow direction indicated on neighbouring sites, the
presumed groundwater flow direction at the site is towards the north or northwest ----------
- as per Sanborn maps, subject site was undeveloped in 1887, used as sash storage in 1905, an
unknown use with a gasoline tank in 1916, a poultry market from at least 1942 through 1951, welding
from at least 1965 through 1991, and an auto repair shop from at least 1993 to when it ceased
operations around 2013 report included summary of record review for neighbouring site at 65 Eckford
St: - site 65 Eckford St was most recently known as Carter Spray Finishing Corp. - site 65 Eckford
St was a conditionally exempt small quantity generator that generated wastes such as spent
halogenated solvents used in degreasing (waste code F001) and spent non-halogenated solvents (waste
codes F003 and F005) - there were two (2) 275 gal ASTs containing TCE at site 65 Eckford St which
were removed/closed in place in 1998 - air emissions in excess of 9,000 pounds per year of
1,1,1-trichloroethane related to the activities conducted under Carter Spray Finishing Corp. -
according to sanborn maps, site 65 Eckford St was undeveloped in 1887, identified as
Meisel-Danowitz Company (a manufacturer of millwork and hardwood trim) in 1905, Eckford Garage from
at least 1916 to 1942 which contained a gasoline tank near the northern property boundary, wood box
manufacturing and lacquer spraying in 1951, and a metal finishing company (Carter Spray Finishing
Corp.) from at least 1965 through 1989 - as per certificate of occupancy from 1963 and 1973
indicate that a paint spraying booth for metals were present at 65 Eckford St based on following,
PW Grosser recommends closure of the subject spill case: - site 75 Eckford St is located
hydraulically down-gradient of site 65 Eckford St - there is no known historic use of mineral
spirits, paint thinner, or Stoddard solvent at 75 Eckford St - there is a long historic usage
related to lacquering and painting at 65 Eckford St - subject property will continue redevelopment
activities, including proper soil management practices and the installation of a SSDS under the
oversight of NYC OER reviewed remediation database and found an active BCP case for site 65 Eckford
St (#: C224218). 07/12/16-Hiralkumar Patel. 10:57 AM:- sent email to

VACANT - PHASE II (Continued) **S118636463**

Jennifer and asked her to
submit missing boring/well logs for MW3 and MW4. email copied to Mr. Ng and OER Shaminder. 1:07
PM:- spoke with DEC Conor Shea, BCP case manager. informed him about possible off-site impact from
site 65 Eckford St. 1:38 PM:- received boring logs and well construction log from Jennifer. total
borehole depth during installation of MW-3 and MW-4 was 18.5 ft. soil was screened from 0 to 10 ft
bg in both boreholes where no odors or PID readings were noted, and as such soil samples were not
collected. after that, wells were installed with direct push method. wells were installed with 10
ft of screen from 8 to 18 ft bg. summary: - during remedial investigation (report dated Mar. 2014),
five soil borings (SB-1 through SB-5) were installed - borings SB-1 and SB-2 were installed to a
depth of 16 ft bg - borings SB-3, SB-4 and SB-5 were installed to a depth of 12 ft bg - petroleum
odors with higher PID readings (112 to 1,180 ppm) were detected in 8-12 ft interval (and below if
borings installed to deeper zone) in soil borings SB-1 through SB-4 - two soil samples were
collected from all five borings: one from shallow zone (0-2 ft bg) and one from deeper zone (8-12
ft bg) - no petroleum VOCs noted in soil samples from shallow zone - TCE found in shallow samples
from two borings: SB-2 (620 ppb) and SB-5 (1,800 ppb) - petroleum VOCs were non-detect in deeper
soil samples, but reporting limits were much higher than cleanup standards for soil samples from
SB-1 through SB-4 - chlorinated solvent contamination noted in soil-vapor samples (TCE: 1.34 to 66
ug/m3; PCE: 1.08 to 92.2 ug/m3) - two wells (MW-1 and MW-2) were installed in borings SB-1 and SB-2
- two additional wells (MW-3 and MW-4) were installed during further investigation conducted in
Feb. 2015 - in June 2016, all four wells on the property were surveyed and groundwater was found
between 11.45 and 13.95 ft bg based on available information, petroleum odors/PID readings were
detected at/near/below water table and LNAPL noted in upgradient well (MW-4) on the property.
discussed case with DEC Jane regarding TCE contamination in shallow soil. as site has
e-designation, she is going to discuss with OER on how to handle remediation of TCE impacted
material. she requested site maps with sample analyticals. 2:54 PM:- sent email to DEC Jane
including site maps with sample analyticals. email copied to DEC Austin. 08/01/16-Hiralkumar Patel.
12:09 PM:- received message from Jennifer. discussed with DEC Jane. after discussing with DEC Cozzy
and OER Shaminder, based on available information, DEC Jane asked to transfer case to her name
after sending P-site memo. 3:14 PM:- spoke with Jennifer and asked her to contact DEC Jane.

VACANT - PHASE II (Continued) **S118636463**

09/20/16-Hiralkumar Patel. sent p-site memo to DEC Jane. 10/14/16-Hiralkumar Patel. after discussing with DEC Jane, case assigned to her. 6/7/19: Site was remediated under oversight of NYCOER's Voluntary Cleanup Program (site no. 15CVCP034K). Site development includes the construction of a 4-story mixed-use residential and commercial building with commercial space, two apartments, and two parking spaces. There is no basement and no open space. Remedy included: 1) Excavation: soil was removed to a depth of 4 feet from grade beneath the full area of the new building, 4 to 5 feet in the AOC-1 and AOC-3 hotspots, and to a depth of 12 feet in the AOC-2 hotspot. A total of 483.4 tons of soil/fill was excavated and removed from the property. 2) Collected and analyzed 14 end-point samples (6 in AOC-1, 3 in AOC-2, 4 in AOC-3 and I in general area) to determine attainment of SCOs. Additional excavation was required in two hotspot areas to achieve Track 4 SCOs. All end point sample results were below the Site Specific Track 4 SCOs. 3) Engineering Controls: a. Installed a Vapor Barrier System; b. Constructed an engineered Composite Cover System consisting of 8 to 14 inches of concrete slab c. Installed and are operating an active Sub-Slab Depressurization System (SSDS) consisting of one horizontal branch installed beneath the centerline of the building, running east to west 5) Institutional Controls: a. Deed Restrictions are placed on property. b. E Designation for future permits c Site Management Plan Based on the remediation completed, the spill is closed. (JHO)

Remarks: contamination found during testing

Site Description:	Location: The site is located at 65 Eckford Street in the Greenpoint section of Brooklyn, NY. The site is 10,200-square feet (0.23 acres) in size and is identified as Block 2698, Lot 26 on the New York City tax map. The site is bound to the north by a four-story residential building; to the east by Eckford Street followed by residential apartment buildings; to the south by a vacant, partially constructed building (enrolled in the NYSDEC BCP Program as Site Number C224168); and to the west by a four-story residential building and a one-story industrial building. Site Features: The site is an irregular-shaped parcel that is currently under development for use as a 5-story

FORMER CARTER SPRAY FINISHING CORP. (Continued) **S117936657**

residential building. Current Zoning: The land is currently located within a MX-8 Special Mixed-Use District (MX) and zoned as M1-2/R6A for medium-density apartment house districts, which allows for residential use. Past Use of the Site: The Site was developed in 1905 and improved with several one-story manufacturing buildings occupied by the Meisel Danowitz & Co. woodworking operation. The Site was redeveloped by 1916 with a one to two-story building and had been utilized by several industrial operations including a machine shop, wood box manufacturing facility, automobile parking garage, and metal finishing facility. Records indicate that former metals finishing facility utilized two 275-gallon aboveground storage tanks (ASTs) that contained trichloroethene (TCE) and were located in the northeast portion of the Site. The Site was occupied by the Carter Spray Finishing Corporation from 1960 to 2008 which used the building for metal finishing and spraying. The building was razed in 2015. Site Geology and Hydrogeology: The site was initially excavated to a depth of 6 feet below sidewalk grade. Stratigraphy, from the current ground surface down, consists of urban fill generally consisting of brown to dark brown, medium to fine silty sand with varying amounts of loose gravel, asphalt, brick, cinders, and plastic was observed from current grade to depths extending approximately 10 to 15 feet below sidewalk grade. The urban fill layer is underlain by a potential native layer consisting of gray to dark gray medium to fine silty sand with varying amounts of coarse sand and clay to depths extending approximately 16 to 17 feet below sidewalk grade. Following this native layer is an organic/peat layer observed up to the terminus depth of each soil boring, ranging from 20 to 21 feet below sidewalk grade. According to the United States Geographical Survey (USGS) topographic map for the area (Brooklyn Quadrangle), the elevation of the property is about 14 feet above mean sea level. The area topography gradually slopes downward to the north and west. Groundwater is present beneath the Site at a depth of 12 to 13 feet below sidewalk grade. Regional groundwater flow is to the west-northwest.

Env Problem:

Post Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site were metals (arsenic, lead and mercury) and semi-volatile organic compounds (SVOCs)- primarily poly-aromatic hydrocarbons (PAHs) - present site-wide in historic fill material and deeper soil. Also, petroleum-related VOCs and chlorinated VOCs (CVOCs) in groundwater and CVOCs in soil vapor samples. During remediation, site-wide soils were excavated to depths ranging from 25 to 30 ft below sidewalk grade (ft bsg) and approximately 18,000 tons of soil/fill were transported offsite for disposal. No further soil remediation was required as no soil contamination remains at the site - all soils beneath the final excavation depths met Unrestricted Use soil cleanup objectives (UUSCOs) across the property. In addition, groundwater dewatering activities during excavation, as well as the installation of a secant pile wall along the entire site perimeter have addressed groundwater contamination with no VOC exceedances in site groundwater detected at the completion of remedial activities. In addition, the removal of all contaminated soils to depth has addressed onsite soil vapor. Additionally, a vapor/waterproofing barrier was installed around and beneath the newly constructed building foundation. The site allowed future uses include unrestricted, residential, restricted residential, commercial or industrial. Prior to Remediation: A Remedial Investigation (RI) and Supplemental RI were

FORMER CARTER SPRAY FINISHING CORP. (Continued) **S117936657**

completed at the site in 2016 and 2022, respectively. Nature and Extent of Contamination: Soils: Soil samples were analyzed for VOCs, SVOCs, metals, PCBs, pesticides, and the emerging contaminants 1,4-dioxane and Per- and Polyfluoroalkyl Substances (PFAS). Numerous metals, SVOCs and VOCs were detected in soil samples at levels above UUSCOs in the majority of samples throughout the site. Several metals and SVOCs were present at levels exceeding restricted residential SCOs (RRSCOs). Contamination sitewide ranged from the surface to approximately 20-feet below grade. No VOC detections exceeded RRSCOs. Metals detected above RRSCOs: arsenic was detected at up to 40.2 parts per million (ppm), exceeding its RRSCO of 16 ppm; lead at up to 2,790 ppm (RRSCO 700 ppm), mercury at up to 73.1 ppm (RRSCO 0.81 ppm), barium at up to 818 ppm (RRSCO 400 ppm) and copper at up to 938 ppm (RRSCO 270 ppm). SVOCs exceeding RRSCOs: benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenzo(a,h)anthracene, indeno(1,2,3-c,d)pyrene. The maximum SVOC detection was chrysene at 6.6 ppm, exceeding its RRSCO of 3.9. In 2018, a 550-gallon underground storage tank (UST) located in the southeast corner of the site was removed and disposed of offsite. Previous sampling in the area of this tank did not indicate evidence of a release. Groundwater: Groundwater samples were analyzed for VOCs, SVOCs, PCBs, metals, pesticides, 1,4-dioxane and PFAS compounds. Fourteen VOCs were detected in groundwater samples at concentrations at or above the NYS AWQS. Ten petroleum VOCs were detected at or above AWQS: 2-isopropyltoluene at up to 88 ppb (AWQS 5 ppb); isopropylbenzene at up to 100 ppb (AWQS 5 ppb); n-Propylbenzene at up to 130 ppb (AWQS 5 ppb); sec-Butylbenzene (at up to 36 ppb (AWQS 5 ppb)); tert-Butylbenzene at up to 10 ppb (AWQS 5 ppb); 1,2,4,5-Tetramethylbenzene at up to 41 ppb (AWQS 5 ppb); n-Butylbenzene at up to 97 ppb (AWQS 5 ppb); 1,2,4-Trimethylbenzene at up to 31 ppb (AWQS 5 ppb); benzene at 1 ppb (AWQS 1 ppb) and p/m-xylene at 10 ppb (AWQS 5 ppb). Four CVOCs detected at or above AWQS: cis-1,2-dichloroethene at 69 ppb (AWQS 5 ppb); chloroethane at up to 130 ppb (AWQS 5 ppb); trichloroethene at up to 6.2 ppb (AWQS 5 ppb); and vinyl chloride at 51 ppb (AWQS 2 ppb). Four metals were detected in groundwater samples above AWQS: Arsenic at 79.9 ppb (AWQS 25 ppb) in one sample. Iron, manganese and sodium exceeded AWQS in the majority of groundwater samples however, these metals are naturally occurring in areawide groundwater and are not indicative of contamination. Perfluorooctanoic acid (PFOA) was detected in all five groundwater monitoring wells at values ranging from 27 parts per trillion (ppt) up to 110 ppt. Perfluorooctanesulfonic acid (PFOS) was detected in groundwater up to 4.01 ppt at the site. The NYS AWQ Guidance value for PFOA is 6.7 ppt and for PFOS is 2.7 ppt. Both compounds exceed, however, groundwater in this area is not used as drinking water. Perfluoropentanoic Acid (PFPeA), Perfluorobutanoic Acid (PFBA), and Perfluorohexanoic acid (PFHxA) were detected up to 14.4 ppt, 10.2 ppt, and 11.6 ppt at the site, respectively. The maximum total PFAS compound detection in any monitoring well at the site was 113 ppt. The sitewide presence of PFAS indicates an area-wide groundwater condition that is not specifically site-related. 1,4-dioxane was detected in two monitoring wells at a maximum concentration of 2.78 ppb, exceeding the NYS AWQ Guidance Value of 0.35 ppb. Soil Vapor: Soil vapor samples were analyzed for VOCs. The following contaminants were found: CVOCs and petroleum-related VOCs were detected in all soil vapor samples throughout the site. The highest CVOC detections were all at one

FORMER CARTER SPRAY FINISHING CORP. (Continued) **S117936657**

	sample location, SV-05: Trichloroethene (TCE) was detected at up to 9,670 micrograms per cubic meter (ug/m3). Cis-1,2-dichloroethene was detected at up to 2,750 ug/m3, tetrachloroethene (PCE) and vinyl chloride were detected at up to 171 ug/m3 and 177 ug/m3, respectively.
	Not reported
Health Problem:	Remedial actions are complete, the site was cleaned up to meet unrestricted use, and all known exposure pathways were addressed by the remedy for the site.

DEC Memo:	3-16-2015 DEC Piper spoke with Charles Sosik. - Work being done for potential purchaser. limited phase 2, two borings, were done inside. Several VOC above standards but no other signs of related compounds. Buyer has backed out of deal. Assigned to DEC Zhune for followup. Data will be uploaded into DEC DOCS when available. 05/04/15-Hiralkumar Patel. another spill reported (# 1501158) by Kevin Brussee from EBC. alternate address: 65-73 Eckford Street no PBS record found. site has hazmat environmental restriction. ---------- 65 Eckford Realty LLC. **property owner** 1:12 PM:- spoke with Kevin at EBC. asked him to submit investigation

PHASE 2 (Continued) **S117851197**

results for the site (there may be two investigations). 07/12/16-Hiralkumar Patel. after discussing with DEC Vought, case transferred from DEC Zhune to DEC Patel as part of ongoing investigation at neighbouring site at 75 Eckford Street (spill #: 1511507). during investigation at site 75 Eckford Street, LNAPL was detected in monitoring well (MW04) located in southwest portion of the site. result of product sample indicated that the LNAPL is an unresolved complex mixture similar to mineral spirits, paint thinner, or Stoddard solvent type of product. groundwater flow direction at site 75 Eckford St was inconclusive due to the small size of the property and the relatively flat gradient across the site. based upon regional groundwater flow direction and the groundwater flow direction indicated on the neighbouring sites, the presumed groundwater flow direction at site 75 Eckford St is towards the north or northwest. based on following, consultant for site 75 Eckford St claimed site 65 Eckford St as source for LNAPL on their property: - site 75 Eckford St is located hydraulically downgradient of site 65 Eckford St - there is no known historic use of mineral spirits, paint thinner, or Stoddard solvent at site 75 Eckford St - there is a long, documented historic usage related to lacquering and painting at site 65 Eckford St - site 65 Eckford St has a known petroleum impacted area adjacent to the area where the well MW04 located on site 75 Eckford St - dissolved groundwater VOC contaminants at site 65 Eckford St are similar to groundwater contaminants observed at site 75 Eckford St, except at higher concentrations searched remediation database and noted that the subject site is accepted in brownfield cleanup program (#: C224218). 9:55 AM:- left message for DEC Conor Shea, BCP case manager. 1:07 PM:- spoke with DEC Conor regarding open spill case on BCP site. he asked to transfer case to his name. case transferred to DEC Conor. 5/28/21 - reassigned to Caroline Jalanti. Related to site no. C224218 Carter Spray Finishing. (JHO) 8/2024 - In 2023, under BCP (C224218) site soils were excavated to 20 - 25 ft sitewide and confirmatory excavation samples showed met Unrestricted Use SCOs; groundwater collected was non-detect for VOCs. Site is receiving a COC for Unrestricted Use.

Remarks: Caller received phase 2 results showing unknown petroleum. Clean up is pending.

BROWNFIELDS:

Name:	FORMER CARTER SPRAY FINISHING CORP. - OFF-SITE
Address:	65 ECKFORD STREET
City,State,Zip:	BROOKLYN, NY 11222
Program:	BCP
Site Code:	619056
Acres:	Not reported
HW Code:	C224218A
SWIS:	2401
Town:	New York City
Record Added Date:	05/13/2021
Record Updated Date:	03/20/2025
Update By:	RKCORCOR
Site Description:	The area of concern subject to this work is considered off-site from BCP site C224218 (Former Carter Spray Finishing Corp.) and reflects the investigation and possible remediation of contamination that may

CARTER SPRAY FINISHING CORP FORMERLY (Continued) **1000400665**

have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224218 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The offsite investigation is located adjacent to 65 Eckford Street in the Greenpoint section of Brooklyn, NY. Site Features: The site consists of offsite areas/properties adjacent to 65 Eckford. Site Geology and Hydrogeology: The regional geologic setting consists of bedrock overlain by layers of unconsolidated sediments (generally sand, gravel and silty clays) deposited by glacial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low-lying areas. Based on Remedial Investigation (RI) work completed at 65 Eckford, soil at that site consists of historic fill material that extends to 13 feet below grade in some areas, underlain by grey silty clay. According to the United States Geographical Survey (USGS) topographic map for the area (Brooklyn Quadrangle), the elevation of the offsite area is about 16-18 feet above mean sea level. The area topography gradually slopes downward to the north and west. Groundwater in the area is present at a depth of 11 to 12 feet below grade. Regional groundwater flow is to the northwest.

Env Problem: Off-site environmental conditions are unknown at this time. We are currently investigating the areas off-site to determine extent of impact, if any, to the off-site area. The associated site, 65 Eckford St property, has been remediated under the Brownfield Cleanup Program to Unrestricted Use. Remediation activities included the excavation and offsite disposal of foil and fill material that exceeded Unrestricted Use Soil Cleanup objectives (SCOs) to depths ranging from 35 to 30 feet below sidewalk grade. 17,281 tons of soil/fill were removed to achieve unrestricted use cleanup. Contaminated groundwater was removed and treated during dewatering for construction. Approximately 193,000 gallons of construction water, including groundwater, was treated. Confirmatory soil and groundwater samples were collected to evaluate the effectiveness of the remedy and all samples met unrestricted use SCOs and ambient water quality standards and guidance values (AWQSGVs). Prior to remediation, contaminants of concern at the 65 Eckford St property included volatile organic compounds (VOCs) - petroleum-related and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals in site soils, as well as VOCs (petroleum-related and chlorinated solvents) and SVOCs in site groundwater. Data did not indicate any off-site impacts in groundwater related to this site. Soil vapor at the site was impacted with VOCs (petroleum-related and chlorinated solvents).

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER Citizen gave a contact telephone number that was on a sign at the site: 718-641-1098. Sangesland called this number and spoke to a woman who said she was the managing agent for the site. She was given the DEC Hotline number and told to call in and to provide all of the contact info for the property owner and environmental company who is on line to do the work. 5/19/2004 Sangesland received a call from Bazel Sagos of Riverkeepers (845-424-4149 ext.230) He asked for a status update on the site and wanted to know what work was going to be required by the property developer to clean the site. 5/20/04 - Sawyer - Responded to the site on 5/19 and met Mr. John Sindone who works for the owner. We walked all over the excavation and did not find any indication of contamination. I looked at the phase one and II for the site done by Don Carlo Environmental and checked with PTC who had pumped out water from in the excavation. PTC said they remove 800 gallons of 95% water from the pit on the 5/17, the rest was soil and an oil sheen. 6/09/04 - Sawyer - Received copies of the Phase I & II as well as the tank closure report for the above property. There is no indication of finally removing elevated levels of semi volatiles that came back high with from pseudo endpoint samples. I called up Danny from Don Carlo and I am having him get me 1) Clean end point Samples, 2) Information on disposal of dirt from site, and 3) Groundwater samples to make sure of water quality there. 7/11/05. J.Krimgold reviewed the Subsurface Remediation Report submitted by Don Carlo Environmental Services, Inc on June 2, 2005. According to the report remediation of this site has been completed. Post excavation end-point samples bellow TAGM levels. NFA letter.

Remarks: LOT & BLOCK IS 2698 & 1: DIGGING AT THIS SITE AND CALLER STATES, THAT DARK, OILY SMELLING, THICK SUBSATNCE IS THERE AND IS CONCERNED, CLOSE TO A PARK:

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	12/2/23 - Sekhon Notifier complaining about natural gas indoor odor smell. National Grid & FDNY was on site and found no vapors/ any meter reading. No petroleum product involved. Case discussed with DEC Austin & closed.
Remarks:	Concentrated gas indoor odor smell. Heat went out on Tuesday 11/28. Landlord was in the basement working on the issue into 11/29. National Grid came out and weren't getting a reading but observed gas smell. FDNY came to scene and didn't get any meter reading. Caller still observing toxic smell.

Contact Name:	GAVIN NAVARRO
Latitude:	40.7223320
Longitude:	-73.9500530
DEC Memo:	10/4/12-Vought-Primary off hours responder. Vought called and spoke to NYCDEP Hazmat Gavin Navarro(Ph:646-584-4173) who was onsite and he noted approximately 30-gallons of #2 fuel oil had spilled in the boiler room of the four story residential apartment building. Navarro noted that the soil was seeping into the concrete floor and that he was unsucessful in contacting an owner to perform the cleanup. NYCDEP Navarro also noted that their were vapors present as well in some of the apartments. Contact information for owner as per Navarro was: Mr. Momsen Zandieh ASHK Associates, LLC Ph:(718)279-0300 Ph:(516)537-6307 Vought called and spoke to Zandieh and he noted that he was not owner but was rather only their to relay messages to the owner. Vought noted immediate requirement for cleanup as well as possible fines and penalties associated with Navigation Law and required immediate return call from owner. Zandieh informed Vought he would relay the information to the owner. Vought called DEC Piper (secondary off-hours responder) and as DEC Piper responded to a very large separate spill during many nights of past week, Vought performed site visit. When Vought arrived onsite, NYCDEP Navarro and NYCDEP Jeremy Heller (Ph:718-230-7310 Fax:718-595-4690) as well as FDNY also on-scene and had placed speedy dry over remaining spill in basement. Due to placement of speedy dry, vapor abated in apartments however Vought noted bathtub ring of oil approximately 2 height of petroleum staining in boiler room and boiler room floor was approximately 2.5 inches below floor of adjacent basement room that housed sump pit. Absence of free product and relative minimal amount of speedy dry suggested that oil had seeped into concrete floor (possible cracks between floor and base of wall and condition of concrete could not be completely inspected due to speedy dry on

(Continued) **S112227113**

floor). Vought noted owner as per
NYC Tax Assessor is: Andrew Brudz Grace Brudz 714 Humboldt Street
Brooklyn, NY 11222
10/4/12-Vought-Prepared letter requiring delineation of possible and
soil groundwater contamination
via: 1)Soil excavation and collection of confirmation samples OR
2)Installation of Soil
borings/wells and 3)PID survey with a cc to DEP Hazmat Heller. Vought
added letter to e-docs.
Vought called Zandieh for update and spoke to new part owner of site:
ASHK Associates, LLC P.O. Box
322 Little Neck, NY 11362 Fax:(718)224-9695 mohsen@arashrealestate.com
Vought informed him of above
requirements and informed him call back was needed ASAP with contactor
information. Vought sent out
letter via US Mail and faxed letter to ASHK Associates.
1/23/12-Vought-Received call from and spoke
to Arash who was inquired about status of spill. Soil was excavated
via Alliance (Rene Lewis
Cell:917-569-8323 Fax:347-350-7551) sent endpoint samples to
laboratory. Arash will fax in soil
endpoint analyticals and site plan. No further vapor complaints
received to date (past six months),
excavation was backfilled with concrete and as such no further
concerns with respect to vapors.
Vought received a nine page fax from Arash at Arash Real Estate
(Ph:718-279-0300 Fax:718-224-9695)
including a report from Alliance Mechanical. Report noted cause of
spill was new suction line
installed, old not capped, oil drained from tank after oil delivery by
Metro . Scope of work
performed in October 2012 included: cleanup and removal of debris from
floor, legal disposal of 24
bags of contaminated debris, core drill hole at floor of points of
heavies staining, power wash
floor, collect soil samples from core points, no odor or soil
discoloration was detected in field
screening , floor has been resealed and old line capped and new line
has been hard piped in. Report
request spill closure. Three soil sample analyticals from Analytical
Chemists also included and
show no Part 375 Unrestricted SCO exceedences. Spill closed by Vought
and Spill Closure Letter sent
to owner and added to e-docs.

Remarks: Apartment complex has heating oil spill in the basement. Unable to contact buildling owner. DEP requesting call back from Spills.

DEC Memo:	100 eckert street. During a regular delivery to 100 eckert, the owner of 101 eckert asked the driver for a delivery to his house. That homeowner actually used Consumers oil and screwed up the various oil company names. Homeowner said he had a 550 gal tank (it was really a 275gal) At 240gal the tank overfilled. 3gal came out on cement driveway, 2 gal on solid sealed cement floor in basement. All cleaned within 1 hour.
Remarks:	STORAGE TANK OVERFILL DUE TO WRONG DELIEVRY AND IS ALL CLEANED UP

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Date Record Added:	11/13/2019
Date Rec Updated:	11/21/2023
Updated By:	WBBENNET
Site Description:	Location: The site is located at 12 Eckford Street in an urban area in the Greenpoint neighborhood of Brooklyn, New York. The approximately 21,630-square foot site is bounded by a former commercial building currently being used as a construction office for the site and residential buildings to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest. Site Features: An eight story residential building including at-grade parking and a lobby on the ground floor and apartments above. An open air dog run is located in the northwestern portion of the lot. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). This zoning is consistent with the use of the site. The surrounding area is developed primarily with residential and commercial properties. Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1 and have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Geology and Hydrogeology: The stratigraphy of the site from the surface down consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the historic fill is a native sand, gravel, and

NEW 470 PROJECT (Continued) **S118950508**

	silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations. Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concerns were lead in soil and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1 and have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Geology and Hydrogeology: The stratigraphy of the site from the surface down consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the historic fill is a native sand, gravel, and silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations. Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concerns were lead in soil and VOCs in soil

Site Description:	Location: The site is located at 12 Eckford Street in an urban area in the Greenpoint neighborhood of Brooklyn, New York. The approximately 21,630-square foot site is bounded by a former commercial building currently being used as a construction office for the site and residential buildings to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest. Site Features: An eight story residential building including at-grade parking and a lobby on the ground floor and apartments above. An open air dog run is located in the northwestern portion of the lot. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). This zoning is consistent with the use of the site. The surrounding area is developed primarily with residential and commercial properties. Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1 and have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Geology and Hydrogeology: The stratigraphy of the site from the surface down consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the historic fill is a native sand, gravel, and silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations. Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concerns were lead in soil and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination

Site Description: Location: The site is located at 12 Eckford Street in an urban area in the Greenpoint neighborhood of Brooklyn, New York. The approximately 21,630-square foot site is bounded by a former

NEW 470 PROJECT (Continued) **S118950508**

commercial building currently being used as a construction office for the site and residential buildings to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest. Site Features: An eight story residential building including at-grade parking and a lobby on the ground floor and apartments above. An open air dog run is located in the northwestern portion of the lot. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses). This zoning is consistent with the use of the site. The surrounding area is developed primarily with residential and commercial properties. Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1 and have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Geology and Hydrogeology: The stratigraphy of the site from the surface down consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the historic fill is a native sand, gravel, and silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations. Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site.

Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concerns were lead in soil and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

BROWNFIELDS:

Name:	NEW 470 PROJECT - OFF-SITE
Address:	12 ECKFORD STREET
City,State,Zip:	BROOKLYN, NY 11222
Program:	BCP
Site Code:	566609
Acres:	Not reported
HW Code:	C224242A
SWIS:	2401
Town:	New York City
Record Added Date:	02/08/2018
Record Updated Date:	07/17/2024
Update By:	WBBENNET
Site Description:	The area of concern subject to this work is considered off-site from BCP site C224242 and reflects the investigation and possible remediation of contamination that may have migrated from that site. Please see below and C224242 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The site is located at 12 Eckford Street in an urban area in the Greenpoint neighborhood of Brooklyn, New York. The approximately 21,630-square foot site is bounded by a former commercial building currently being used as a construction office for the site and residential buildings to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest. Site Features: An eight story

NEW 470 PROJECT - OFF-SITE (Continued) **S121933800**

residential building including at-grade parking and a lobby on the ground floor and apartments above. An open air dog run is located in the northwestern portion of the lot. Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses) and is currently vacant. This zoning is consistent with the proposed use of the site. The surrounding area is developed primarily with residential and commercial properties. Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1 and have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as barrels, boxes, and automobile . Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled to be: garage . Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991. Site Geology and Hydrogeology: The stratigraphy of the site from the surface down consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the historic fill is a native sand, gravel, and silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations. Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site.

Env Problem: The site is currently being investigated under the state Superfund program for soil vapor intrusion impacts emanating from the New 470 Project Brownfield Cleanup Program (BCP) site (C224242).

Health Problem: People who enter the site could contact contaminants in the soil by walking on the site, digging, or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the soil vapor may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not currently represent a concern. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in the event the site is re-occupied. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in off-site structures.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters,

CON EDISON (Continued) **1019901794**

storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	8/23/07 - Raphael Ketani. I called up Sean Donohue of the NYC DEP (718) 595-5000. I asked him about the circumstances regarding the spill. He said that Helen Espinosa (917) 577-6080 had called him saying that there was spilled diesel fuel in her backyard. She told him that it spilled onto the property of the neighboring car wash. However, he didn't have any information regarding how much had spilled. I visited the site shortly after talking to Mr. Donohue. A person at the car wash (which fronts on McGinnis Boulevard and exits on Engert Avenue) showed me the spilled oil on the car wash property. I saw an elongated stain of about 2 feet wide by 6 feet long. I could smell oil. She showed me where the oil had come from. This was the backyard of 105 Engert Avenue where a used car dealership stored its cars. I could see several drums through the

GREEN POINT CAR WASH, INC. (Continued) **S108763941**

chain link fence. The car
dealership was CDM Auto Sales, Inc., 109 Engert Avenue, Brooklyn, NY, (718) 683-7277. I called up
the owner of the dealership, Charles DeMarino. He said that the drums aren't on his property. He
said they are soap and other material for the car wash. I told him they were in his backyard. He
said that he rented the backyard, but not all the way back. He said that the yard with the cars
that are all the way back and the drums are part of the property owned by the same person who owns
the apartment building and the property the car wash in on. I knocked on the door of the apartment
on the first floor which has access to the backyard. The woman let me through her kitchen and to
the backyard. I saw that the drums contained car wash liquids. There was a strong odor of diesel
fuel and there was a half full white drum containing some kind of liquid. The ground area around
the drums was wet and odoress. I took a number of pictures of the backyard, the staining and the
drums. I looked up the owner of the property for the apartment building and the car wash. This is
block and lot 2701 and 53. According to NYC Property Tax, 105 and 107 Engert Avenue are owned by
the same party, Green Point Real Estate Corp., 86 Monitor Street, Brooklyn, 11222-4751. The car
wash is Autoclean Carwash, Inc., and is at 103 Engert Avenue, (718)782-5592. However, this address
is only a street address/mailing address. It does not appear in the property databases. So it's
probably really part of 105 Engert. I called up the phone number and Young Yu answered (aka Boung
Young). He said that he is the owner of the Green Poin Car Wash at 103 Engert Avenue. I told him
that 3 drums of material are sitting in the backyard and that they are the property of the car wash
as they have the names of car wash liquids on them. He said they are not his and he disavowed any
ownership of them strongly. 8/24/07 - Raphael Ketani. I sent a CSL to both Green Point Real Estate
and the Green Point Car Wash. 8/27/07 - Raphael Ketani. Emory, a worker at the car wash, called to
say that the staining on the car wash property has been cleaned up. She said that the drums are
owned by a Polish gentleman who speaks very little english. She said she explained to this person
that the drums have to be removed by a licensed hauler. He told her he will get them cleaned up. I
told her I needed receipts that the oil has been cleaned up. Walter, the owner of the drums, called
me up to say that the remediation company is coming at 12 noon to pick up the drums and clean the
area. I told him to send me a copy of the receipt for the work that is done. He said he will mail
me a copy. 8/29/07 - Raphael Ketani. Walter called today to say that the drums were picked up

GREEN POINT CAR WASH, INC. (Continued) **S108763941**

yesterday and the area was cleaned up. He said that DEC should be getting the paperwork very soon.
9/17/07 - Raphael Ketani. On 9/13/07 I received a cover letter with manifest from Feliks & Son
Storage Tank Co. for the cleanup of the oil spill. The cover letter stated that 7 gals. of oil had
spilled and that four drums of spent absorbent were disposed of. Based upon the cover letter and
manifest from Feliks and the small size and very small areal extent of the spill, I am closing the
spill case. 10/15/07 - Raphael Ketani. Today I received a letter from Helen Spinosa stating that
the owner of the drums is the tenant in apartment 4R(C?), Walter Markowski. She also stated that he
was the owner of the drums and he proceeded to have them removed.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE SEE ALSO 93-15136. CORRODED FILL LINE AT 610 MANHATTAN AVENUE (MR. SIMONE) LEAKED INTO THE BASEMENT OF 606 MANHATTAN

SPILL NUMBER 9813210 (Continued) **S104648512**

AVENUE (CRUZ RESIDENCE). DEC CONTRACTOR PATCHES AND SEALED WALL AT 606, REPLACE FILL LINE AT 610
AND EXCAVATED AS MUCH CONTAMINATION AS POSSIBLE. NO FURTHER EXCAVATION OR BORINGS/WELLS COULD BE
PERFORMED DUE TO UTILITIES (SUBWAY AND SEWER). NYCT INSPECTED SUBWAY AND DID NOT FIND ANY SEEPAGES.

Remarks: broken oil line is causing material to seep through basement walls at apartment dwelling of mr cruz located at 606 manhattan ave. Unk if any water is involved.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Air Quality System (AQS) contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	12/22/2004 - Sangesland - 4,000 gal gasoline tank - PBS # 2-069140 1/14/2005 TTF letter sent to: United Ambulette 2428 East 18th St, Brooklyn, NY 11222 2/22/05 Reassigned from Rommel to Foley. Spoke to Bob Arcaro, American. He will be submitting documentation and passing test results. No release to environment. 2/28/05 Received passing tightness test results for system. Bob Arcaro to submit affidavit. 3/7/05 Received affidavit. Between 1/31/05 and 2/11/05, American Resource Technology excavated part of the tank system, isolated the tank and piping and the retested. All components tested tight but the condition of the cathodic protection isolating union on the stage 1 was worn and could have compromised the integrity of the line. There was no evidence of contamination in the excavation but the isolating unions were replaced on the stage 1 line, the suction line, the fill line and vent line as a preventative measure. On 2/15/05, a tightness test of the tank system was performed with the piping still exposed and was witnessed by FDNY who had witnessed the tightness test

UNITED AMBULETTE (Continued) **S106737607**

failure on 12/17/04. The system tested tight.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 3/14/2001 - Store front building with 3-4 apartments above. 2-275 gallon #2 oil tanks in the basement service the building. Scaggs & Walsh Oil Company made a delivery (no sign of overfill) Later that day the bottom of one of the tanks (looks like corrosion) gave way and approx 100 gallons went to the basement floor and a drywell floor drain. NYFD on scene emptied most of the 275 gallon tank into overpack drums. Scaggs & Walsh arrived on the scene and pumped out whatever remained. Scaggs & Walsh's insurance would not cover the loss because the tank is the

DELI (Continued) **S104953397**

property of the building owner
and the tank failed due to corrosion. Scaggs & Walsh hired Milro Associates after a verbal
discussion with the building owner (Robert Bak 718-628-9700) that the cost of the clean up was the
responsibility of the building owner. 3/16/2001 - Sangesland called Milro to find the cleanup
status. Paul (at Milro) said between 3/14 and 3/15 a 5'x8' section of the floor was opened up and
dug down 2' and 2 cubic yards of contaminated soil was removed. Milro is not working today (3/16)
because Scaggs & Walsh is installing new oil tanks. Milro will return on Monday 3/19 to continue
excavation. 3/20/2001 Paul at Milro says the excavation is approx 5' x 10' x 3' deep. Because of
access problems they can't really excavate any more and he'll probably spend one more day on site.
Paul said he would PID the samples first and if they don't look bad, he'll back fill before the
soil samples come back from the lab. 4/5/2001 End point sample from excavation was tested for: TCLP
Volatiles 8021/STARS (All results were Non-Detect) TCLP Polynuc, Arom. Hydrocarbons (BN) 8270 -
Non-Detect Spill closed 4/5/2001

Remarks: spill in inside deli's basement fd on the scene

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	001
Tank Id:	15327
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None

ST. STANISLAUS KOSTKA RC CHURCH (Continued) **U003389147**

G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
I04 - Overfill - Product Level Gauge (A/G)

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1960
Capacity Gallons:	5000
Tightness Test Method:	-
Date Test:	Not reported

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	03/10/17-Hiralkumar Patel. alternate address: none no PBS or other spills found. Gus H. Adamopoulos **property owner** Ph. (347) 203-6634 email: ches6634@yahoo.com site has E designation for hazmat. ---------- 10:16 AM:- spoke with Mr. Adamopoulos, property owner. he mentioned that site currently have one (1) one-story vacant building with partial 5 ft by 5 ft cellar. he is planning to demolish the existing building and redevelop the site into four story building with slab on-grade. he mentioned that EBC Env. conducted some soil investigation and found contamination. 10:26 AM:- left message for Chawinie Reilly at EBC. Chawinie Reilly EBC PH. (631) 504-6000 ext. 123 (631) 827-5007 (C) Fax (631) 924-2870 email: creilly@ebcincny.com 11:02 AM:- sent email to Chawinie and asked her to submit copy of investigation report(s) for review. email copied to Mr. Adamopoulos. 11:07 AM:- received email from Chawinie. she mentioned that RIR should be ready by next week. she mentioned that Alysha Alfieri is project manager at NYC OER. Alysha Alfieri NYC OER PH. (212) 676-0459 email: aalfieri@dep.nyc.gov case #: 17TMP0446K,

OER- COMMERCIAL BUILDING - PHASE II (Continued) **S120701153**

17EHAZ183K downloaded Phase I
report, Phase II work plan and Investigation Health & Safety Plan from NYC OER database. abstract
of Phase I report (possible date: Jan. 2017 based on site visit on 01/19/17): - site identified as
177 Bayard St and as block 2720, lot # 41 - site is currently developed with a single-story masonry
building designated as an industrial/manufacturing building - the first floor is utilized as
warehouse space with a small office to the left upon entrance - as per Sanborn maps and aerial
photographs, the site was undeveloped prior to 1916 and originally developed sometime between 1916
and 1942 - existing building has been in its current configuration since at least 1942 - historical
site use: 1) sign company (National Sing Hanging Co.) in 1928; 2) fuel oil company (Super Coal &
Oil, Super Oil Sales Corp. and Super Oil & Burner Service Inc.) from 1949 to at least 1965; 3)
Frank b De Angelis from 1949 to 1965; 4) chemical company (Starco Chemical Inc.) from 1992 to at
least 2005; 5) Consep Group Inc. in 2008; 6) chemical company (Snow White Chemical) from 2013 to
present day - one floor drain was located and is connected to sewer system - building contained
multiple pellets of various cleaning chemicals (soap, dish cleaner, deodorant etc.) used at
restaurants - one (1) 275 gal AST in vault in basement - basement floor is concrete with staining
near the oil line and filter - two fill ports were located outside of building by basement
entrance: one fill port was closed and cut; another active with vent pipe located by basement
entrance abstract of Phase II Work Plan dated Feb. 2017: - development project consists of a
4-story residential use building with a partial cellar and a concrete capped rear yard - cellar and
slab of the existing one-story industrial/manufacturing building will remain - the rear 30 ft of
the slab will be removed to create at-grade rear court yard - three additional levels will be
constructed above - minimal excavation for support columns will extend to at least 3 ft bg - water
table is expected at approx. 12 ft bg - geophysical survey will be performed - floor drain will be
investigated - four test borings will be installed - minimum of two soil samples (one from 0-2 ft
bg and another from 8-10 ft bg) will be collected from soil borings; a third soil sample may be
collected from each or several test boring(s) if: 1) elevated PID readings and/or visual and
olfactory observations are noted during borehole advancement; and/or 2) field observations identify
an upper fill layer underlain by native material - three (3) 1-inch temporary groundwater
monitoring wells will be installed - three (3) soil-vapor implants will be set at a depth of

OER- COMMERCIAL BUILDING - PHASE II (Continued) **S120701153**

approx. 4 ft bg - product sample will be collected, if found, for fingerprint analysis
03/23/17-Hiralkumar Patel. while searching OER EPIC database, found RIR dated Mar. 2017. as per
EPIC record, the report was uploaded on 03/17/17, but no notification was received from the system
indicating new document on database. 03/24/17-Hiralkumar Patel.
abstract of RIR dated Mar. 2017: -
development project consists of redeveloping the lot with a 4-story residential apartment building
with a partial cellar - cellar and slab of the existing one-story industrial/manufacturing building
will remain - the rear 30 ft of the slab will be removed to create at grade rear yard and three
additional levels will be constructed above - the first floor will consist of main lobby, sprinkler
/ water room, electric room, hot water heaters and a residential apartment - the second, third and
fourth floors will consist of residential apartments - redevelopment plans require minimal
excavation for support columns that will extend to at least 3 ft bg - rear yard is planned for the
site and will be approx. 30 x 20.5 ft and will be capped with concrete - water table is below 15 ft
bg and will therefore not be encountered during excavation - elevation of the site is approx. 20 ft
above mean sea level - depth to bedrock at the site is greater than 100 ft - during geophysical
survey, one subsurface anomaly was identified which would indicate the presence of an UST located
beneath the concrete slab in the southeast portion of the site, 10 ft from the roll up gate -
installed four (4) soil borings (SB1 through SB4) to a depth of 10 ft bg, except boring SB1 which
was installed to depth of 20 ft bg - total of eleven soil samples were collected: four samples from
boring SB1, two each from borings SB2 through SB4, and one duplicate sample - samples were
collected from 0-2 ft interval and 8-10 ft interval in all four borings; two additional samples
were collected from 14-16 ft and 18-20 ft depth in boring SB1 - less than 5 ppm recorded on PID in
all four boring, except at 14-16 ft depth in SB1 where 900 ppm recorded ---------- - strong
petroleum odors were noted in SB1 and slight petroleum odors were noted in SB2 - slight chemical
odors were noted at 0-5 ft depth in SB4 (soil-vapor probe SV3 was installed near SB4) ---------- -
stratigraphy of the site from the surface down consists of historic fill material to depths as
great as 1.5 ft underlain by native brown silty sand --------- - found contamination in soil sample
from 14-16 ft at SB1 - installed three (3) temporary 1-inch groundwater monitoring wells (MW1
through MW3) to a depth of 20 ft bg, with 10 ft of screen - wells were installed at boring
locations SB1, SB3 and SB4 - total of four groundwater samples were

OER- COMMERCIAL BUILDING - PHASE II (Continued) **S120701153**

taken: one each from three
wells and one duplicate sample - average depth of groundwater is 15.53 ft and the range in depth
15.41 to 15.69 ft ---------- - groundwater flow is generally west (two wells MW2 and MW3 are
at same level and only 0.03 ft of difference in water level between three wells --- this may not be
sufficient to define groundwater flow direction)
---------- - no free product was
observed within the two monitoring wells (what about third well??)
---------- - installed three (3)
soil gas implants (SV1 through SV3) to a depth of 4 ft bg - collected three soil-gas samples soil
analyticals (ppb): ----------SB1 14-16 ft
Benzene----------570*
Toluene----------640 Ethylbenzene----------150,000
Xylene----------740,000
1,2,4-Trimethylbenzene---330,000 1,3,5-Trimethylbenzene----99,000
Naphthalene----------46,000
MTBE----------1,100* PCE----------1,300*
TCE----------570* * - higher MDL groundwater
analyticals (ppb):
----------MW1------MW2------MW3
Benzene----------75-------50
Toluene----------13
Ethylbenzene----------900-------21
Xylene----------3,640------124
1,2,4-Trimethylbenzene-------520------120
1,3,5-Trimethylbenzene-------140------200
Naphthalene----------120------200
MTBE----------47-------26------120 soil-gas
analyticals (ug/m3):
----------SV1--------SV2-------SV3
Benzene----------24,000----------1---------4
Toluene----------2,530---------20--------24
Ethylbenzene----------35,000---------19--------23
Xylene----------70,900--------122-------141
1,2,4-Trimethylbenzene---------391---------28--------27
1,3,5-Trimethylbenzene---------360*---------9--------10
MTBE----------360*
TCE----------90*---------1---------7
PCE----------90*--------49---------8
Hexane----------916,000----------2-----4,330
Cyclohexane----------192,000----------3-------588 * - higher MDL as per available data, heavy
contamination is noted in soil and groundwater samples from boring/well SB1/MW1, which was
installed within 10 ft from a suspected UST anomaly noted during geophysical survey. also soil
contamination in SB1 was noted near the water table. heavy impacts were noted in soil-gas sample
from SV1, which was installed within 15 ft from the suspected anomaly location. the report needs to
be revised for following missing/incorrect info: - As per section 4.2, subparagraph Water Level
Measurement: No free product was observed within the two monitoring wells. as per the report, there

OER- COMMERCIAL BUILDING - PHASE II (Continued) **S120701153**

are total of three monitoring wells installed at the site. was there any product in the third well? if yes, what product and how much? - as per soil boring log for SB1, two monitoring wells (MW1 and MW2) were installed at boring location SB1. but as per the site map, well MW2 was installed at boring location SB3. 2:24 PM:- spoke with NYSDOH Nathan and informed him about detection of high levels of hexane and cyclohexane in soil-gas samples. Nathan stated that this would require further investigation and soil-vapor remediation. he requested copies of available reports. 2:56 PM:- sent email to OER Alysha. asked her to submit a revised report including missing/correct information. informed her that available reports will be reviewed by NYSDOH due to findings of VOCs in soil-gas samples. email copied to OER Shaminder. 3:16 PM:- sent email to Alysha. informed her that as per boring logs, borings SB3 and SB4 were installed to a depth of 10 ft bg, but wells at these boring locations (MW2 and MW3) were installed to a depth of 20 ft bg. asked Alysha to submit details about well installation process and results of soil screening from 10 to 20 ft depth during installation of these wells. email copied to OER Shaminder. 3:45 PM:- sent email to DOH Nathan including Phase I (only text part and site figure) and RIR for review and comments on soil-vapor investigation/remediation. 03/27/17-Hiralkumar Patel. received email from DOH Nathan (at 4:10 Pm on 03/24/17). he mentioned that a vapor mitigation plan is warranted and needs to be reviewed prior to making a determination whether further sampling is completed. 03/29/17-Hiralkumar Patel. 12:48 PM:- left message for OER Alysha. 12:53 PM:- sent email to OER Alysha and asked her to submit revised RIR and delineation work plan for review. also informed her about comment from NYSDOH on vapor mitigation plan. email copied to OER Shaminder. 1:05 PM:- received email from Alysha. she has sent both OER and DEC's comments on the RIR and has requested RAWP scoping call later this week. she will inform property owner regarding required delineation work plan. 04/17/17-Hiralkumar Patel. 2:35 PM:- received email from Alysha including revised boring logs. as per boring logs, borings SB3 and SB4 were installed to a depth of 20 ft bg, but soil was not screened from 10 to 20 ft depth. Alysha also mentioned that a revised RIR has been uploaded on EPIC. revised report confirmed no product in all three wells. 04/20/17-Hiralkumar Patel. 2:09 PM:- sent email to Alysha. informed her that based on review of the report, the Department requires further delineation of contamination noted at the site, via installation of soil boring/monitoring wells on- and off-site. asked her to submit a delineation work plan for review and approval. informed her

OER- COMMERCIAL BUILDING - PHASE II (Continued) **S120701153**

that the Department also
requires a vapor mitigation plan to address soil-vapor contamination noted at the site. email
copied to OER Shaminder. 04/24/17-Hiralkumar Patel. 11:05 AM:- received message from OER Shaminder.
he proposes to install soil borings around the previous boring SB1, approx. 10 ft away, to
delineate soil contamination. due to building on each side the property and property being only 20
ft wide, Shaminder proposes to install monitoring well on sidewalk in front of building and another
well between existing wells MW-1 and MW-2. 12:31 PM:- left message for OER Shaminder.
04/27/17-Hiralkumar Patel. 2:43 PM:- received email from Chawinie including map with proposed
boring/well locations. she mentioned that excavation to 14-16 ft bg will not be possible due to
structural issues and planned limited excavation for redevelopment of the building. she is
proposing four additional soil/groundwater samples in the vicinity of the anomaly. she also
mentioned that the underground structure will be closed in place and an active SSDS and vapor
barrier will be installed. 05/01/17-Hiralkumar Patel. 2:53 PM:- spoke with Chawinie. inquired her
about investigation of the anomaly. due to findings of soil/groundwater/soil-vapor contamination
near the anomaly, suggested her to investigate the anomaly as it might be possible source for
contamination. prior to additional soil borings/wells, asked her to sample existing wells for
additional groundwater data. 3:35 PM:- sent email to Chawinie. asked her to sample groundwater from
existing wells prior to finalizing next step. 3:41 PM:- received email from Chawinie. she mentioned
that the wells that were on site were temporary and have been removed. they need to re-install
wells to conduct the additional round of ground water samples. 05/03/17-Hiralkumar Patel. 11:02
AM:- spoke with Chawinie. she mentioned that as the site is still occupied, they have only
installed temporary well points. instead of installing additional borings/wells, strongly suggested
Chawinie to investigate the anomaly which could be the source of contamination. she will reply back
after discussing with property owner. 06/20/17-Hiralkumar Patel. 2:49 PM:- sent email to Chawinie
inquiring update. 06/21/17-Hiralkumar Patel. 3:11 PM:- received email from Chawinie. she spoke with
the client and is trying to arrange the sampling to confirm the anomaly is the source of the
release. this could be done in conjunction with closing out the tanks on site and the client is
just waiting for the current tenant to vacate the property (July). she will work to schedule the
sampling immediately after. 09/18/17-Hiralkumar Patel. received email from Chawinie (at 12:46 PM on

OER- COMMERCIAL BUILDING - PHASE II (Continued) **S120701153**

08/24/17) stating that tenants have vacated the site.
09/19/17-Hiralkumar Patel. 11:14 AM:- spoke
with Chawinie and inquired her about current status. she mentioned that after sending email on
08/24/17, she left message at duty-desk line, but no response was received from DEC. so, she spoke
with OER Shaminder and received approval for tank closure in-place. EBC removed one AST from
basement. the 550 gal UST was cleaned out and closed-in-place after collecting one soil sample
through tank's bottom. soil sample was collected on 09/14/17. asked Chawinie to provide information
about tank's size, depth of tank's invert, sampling depth and PID readings. informed her that the
department requires complete delineation of contamination prior to finalizing remedial action plan.
2:04 PM:- received email from Chawinie. she mentioned that the removal of the AST and closing the
UST in place was completed on 9/13 and 9/14. one 275-gallon AST (# 2 Fuel Oil) was removed from the
site. one sample was collected from under the AST. one 550 gallon UST (gasoline) was closed in
place. one sample was collected from under the UST at a depth of 6.5 feet. the PID reading for this
sample was 11.5 ppm and no visible staining was noted. no holes were noted in the base of the UST.
samples were analyzed VOCs (CP51 list) and SVOCs (CP51 list).
09/26/17-Hiralkumar Patel. 9:03 AM:-
received email from Chawinie including results of soil samples collected from AST and UST location.
no contamination noted in soil samples. 10/03/17-Hiralkumar Patel. received email from Chawinie (at
3:43 PM on 10/01/17) inquiring about need for additional soil and groundwater sampling.
10/04/17-Hiralkumar Patel. 12:49 PM:- sent email to OER Shaminder. informed him that based on
review of all available information, the Department requires complete delineation of contamination
via installation of minimum of three permanent monitoring wells in southern portion of the site
where petroleum contamination was noted in soil, groundwater and soil-vapor samples during previous
investigation. asked him to submit an investigation work plan including a map with proposed well
locations. email copied to OER Alysha. 1:04 PM:- received email from OER Shaminder. OER has asked
for contamination delineation around SB-1 and installation of three wells: one on sidewalk and two
within the property. 1:09 PM:- spoke with OER Shaminder. informed him that based on lot size and
available sample results, the Department recommends installation of one well at/near former
boring/well location SB-1/MW-1 and two wells on sidewalk (one on each corner of the site).
Shaminder will ask RP to submit a work plan including modified proposed well locations.
10/10/17-Hiralkumar Patel. received email from OER Shaminder (at 2:57

OER- COMMERCIAL BUILDING - PHASE II (Continued) **S120701153**

PM on 10/06/17) including a
site map with three proposed well locations. map also includes six
existing off-site well.
10/11/17-Hiralkumar Patel. based on well locations, searched NYCDOB
record for property 179 Bayard
Street. as per DOB record, a permit application was filed on 09/28/16
for 'CONSTRUCTION OF UTILITY
TRENCH EXTERIOR OF BUILDING AND IN SIDEWALK TO ALLOW INSTALLATION OF
HDPE AND PVC PIPING TO CONNECT
EXISTING SOIL AND GROUNDWATER REMEDIATION WELLS DOWNGRADIENT FROM A
GAS STATION OIL RELEASE TO A
COMMON LOCATION FOR SUBSURFACE REMEDIATION.' searched spills database
and noted open remediation
spill case at 550 Humboldt Street (spill #: 9007766). site status
update reports for spill #:
9007766 show presence of petroleum contamination in multiple
monitoring wells around block # 2720
(well MW-28 is closest to site 177 Bayard St). 12:24 PM:- spoke with
DEC Mike Haggerty (project
manager for spill #: 9007766) and informed him about detection of
petroleum contamination in soil
(near groundwater table), groundwater and soil-vapor phase at 177
Bayard St. based on review of
available data (results of subsurface investigation and soil samples
from underneath the tanks at
site 177), Mike concurs that contamination noted at site 177 has
originated from the former
ExxonMobil site. Mike suggested to close the subject spill case with
note that subsurface
remediation will occur under spill # 9007766. 12:32 PM:- spoke with
OER Shaminder and informed him
about discussion with DEC Haggerty. due to presence of contamination
in soil-vapor phase, OER
requires installation of a vapor barrier and an active SSDS. asked
Shaminder to submit a report for
soil sampling conducted underneath the tanks and a vapor mitigation
plan. 12/04/17-Hiralkumar
Patel. 11:54 AM:- received email from OER Shaminder including result
summary data tables for
sampling conducted in Oct. 2017. he mentioned that soil data indicates
elevated VOCs and SVOCs at
13 to 16 ft depths. he also mentioned that consultant is proposing to
leave these contaminated
soils in place covered with concrete slab and manage by active SSDS.
2:42 PM:- received email from
DOH Nathan who is concerned about impact to surrounding residential
properties if contamination
remains in place. 12/05/17-Hiralkumar Patel. 11:56 AM:- received email
from DOH Nathan including
following comments on proposed RAWP: - remedial alternative 2 would be
better if the entire
footprint of the building would be excavated to 4 ft bg. it would also
allow the SSDS to be more
effective since there would be a uniform gas permeable layers across
the entire footprint - the
pressure differential/soil vapor sampling ports should not be
installed into the perforated

OER- COMMERCIAL BUILDING - PHASE II (Continued) **S120701153**

horizontal piping legs of the SSDS. they should be installed in the gas permeable layer in location
that are not directly adjacent to the SSDS legs 1:29 PM:- received email from OER Shaminder. he is
also not comfortable leaving high levels of VOCs and SVOCs at 13 ft depths. OER has indicated to
consultant that the hotspot areas needs to be excavated to groundwater depths and need to revise
RAWP. 12/14/17-Hiralkumar Patel. downloaded RAWP (dated Dec. 2017) and RAWP Stipulation List (dated
11/30/17) from OER database. summary of RAWP: - on 10/30/17, total of nine (9) soil borings (1A,
1B, 1C, 1D, 2A, 2C, 2D, 3A and 3C) were installed to delineate contamination noted in boring SB1 -
soil sample was also collected from Cellar at 12 ft depth, but RAWP does not include any details
about sample collection method or depth of sample below cellar floor ---------- - all nine
borings were installed to a depth of 20 ft bg - high PID readings (upto 1,500 ppm) and petroleum
odors were noted in all borings, except 2D and 3A (max. 49 ppm), in 10-15 ft interval - high PID
readings (387 ppm) and petroleum odors were noted above and below 10-15 ft interval in boring 2C
soil analyticals (in ppb):

higher MDL RAWP proposes: -
excavation and removal of soil/fill for installation of additional footings and SSDS. an approx. 5
ft wide excavation will occur around the perimeter of the interior of building excavated to a depth
of approx. 4 ft bg to add structural support for the building. a 1 ft

OER- COMMERCIAL BUILDING - PHASE II (Continued) **S120701153**

wide by 1 ft deep trench will
be place approx. 35 ft from the southern property line going across
the building to form a loop for
the SSDS piping - collection and analysis of endpoint samples -
construction of an engineered
composite cover consisting of the existing 4 inch thick concrete slab,
a six-inch thick concrete
slab in the area being excavation, two ft clean soil can or 6-in
concrete slab in the rear yard
area - installation of a vapor barrier system consisting of an epoxy
resin OVER the building
existing and new slab of the first floor and over the existing cellar
floor and sidewalls -
installation of an active SSDS consisting of one venting pipe loop
installed within porous granular
material, beneath the basement foundation - pressure testing of SSDS
after installation - hotspot
removal and endpoint sample collection as per RIR report, groundwater
was noted at around 15 ft bg
in monitoring wells. as per logs for borings installed on 10/30/17,
saturated soil was encountered
below 15 ft depth. ---------- RAWP proposes removal of hotspot but
does not discuss specific areas.
RAWP also includes results of soil sample collected at 12 ft bg in
cellar, but it does not include
any details about sample collection method (boring or test pit) or
depth of sample below cellar
floor. 1:37 PM:- spoke with OER Shaminder. informed him that the
department strongly recommends
removal of contaminated soil to reduce potential vapor impact to
future occupants of the site.
Shaminder will schedule a conference call including NYSDOH, NYCOER,
NYSDEC, property owner and
consultant. discussed with DEC Austin regarding removal of
contaminated soil near the groundwater
interface. as property owner is not planning for any excavation as
part of site's redevelopment and
based on findings of no contamination in soil from surface to approx.
10-12 ft bg and known impact
from off-site source, the Department believes that removal of
contaminated soil at the site may not
be practical. 3:16 PM:- forwarded Shaminder's email to DEC Haggerty.
12/15/17-Hiralkumar Patel.
10:35 AM:- discussed with OER Shaminder, OER Alysha and DOH Nathan.
informed them that based on
review of all available information (soil contamination under at least
10 ft of clean soil, narrow
site preventing deep excavation and known impact from off-site
source), the Department does not
recommend removal of contaminated soil but strongly recommends 1)
removal of existing concrete pad
and excavation to proposed 4 ft depth throughout site, 2) installation
of an active SSDS, and 3)
installation of vapor barrier beneath the entire slab of new building
(instead of epoxy paint on
top of existing concrete pad). DOH/OER agreed with these
recommendations. OER will contact property

OER- COMMERCIAL BUILDING - PHASE II (Continued) **S120701153**

owner regarding this and will schedule a conference call for further discussion. 10:43 AM:- left
message for DEC Haggerty and informed him about discussion with OER/DOH. 12/19/17-Hiralkumar Patel.
10:30 AM:- teleconferenced with OER Shaminder/Alysha, DOH Nathan, Chawinie/Amy (EBC) and property
owner. based on review of available information, property owner agreed with soil excavation to 4 ft
bg throughout site and installation of vapor barrier/active SSDS beneath the building slab. EBC
will submit a revised RAWP. 01/30/18-Hiralkumar Patel. 1:44 PM:- sent email to Chawinie inquiring
update on revised RAWP. 1:56 PM:- received email from Chawinie. she mentioned that they made
changes to the RAWP and OER approved it and now she is working on getting the PE certification for
the RAWP. 1:57 PM:- sent email to Chawinie and asked her to submit final signed copy.
01/31/18-Hiralkumar Patel. 12:20 PM:- received email from Chawinie. she mentioned that consultant
for 550 Humbolt St requested access to collect soil samples from the subject site.
02/22/18-Hiralkumar Patel. 12:34 PM:- sent email to Chawinie inquiring update on revised RAWP.
12:39 PM:- received email from Chawinie. she mentioned that PE has not certified the report yet; it
should be done shortly. they are confirming the vapor barrier specifications for the cellar area.
03/20/18-Hiralkumar Patel. 8:04 AM:- sent email to Chawinie inquiring update on revised RAWP.
03/22/18-Hiralkumar Patel. 3:48 PM:- received email from Chawinie. she is setting up a conference
call with OER and the PE; as PE has some additional questions before he certifies the RAP.
04/09/18-Hiralkumar Patel. received email from Chawinie (at 3:34 PM on 04/05/18) including link to
RAWP. 05/04/18-Hiralkumar Patel. 3:12 PM:- sent email to Chawinie requesting resubmission of RAWP,
as link expired. 05/07/18-Hiralkumar Patel. 1:28 PM:- received email from EBC including link to
RAWP. RAWP proposes following: - excavation and removal of soil/fill within the building footprint
around the existing cellar to 4 ft bg - rear 30 ft of the site will be excavated to 2 ft -
collection and analysis of four endpoint samples - installation of a vapor barrier system
consisting of 60 mil 'spray-applied' vapor barrier over the existing cellar floor and existing
cellar sidewalls, and a 20 mil polyethylene barrier under the building slab ---------- -
installation of active SSDS consisting of one venting pipe loop installed within porous granular
material beneath the basement foundation (as per redevelopment plans, building will be on-slab with
partial cellar) -------- (SSDS site plan shows SSDS beneath portion of building where slab
on-grade, but no venting pipes beneath existing cellar floor)

OER- COMMERCIAL BUILDING - PHASE II (Continued) **S120701153**

05/09/18-Hiralkumar Patel. 8:13 AM:- sent email to DOH Nathan including RAWP for review and comment/approval. email copied to OER Shaminder and OER Alysha. 06/06/18-Hiralkumar Patel. 10:48 AM:- sent email to DOH Nathan inquiring about comment/approval on RAWP. 11:34 AM:- received email from DOH Nathan. he mentioned that based on discussions with DEC and DEP, they have no further comments on this project and find the remedy protective of public health. 06/15/18-Hiralkumar Patel. 1:11 PM:- received call from DEC Haggerty and DEC Salley Dewes. Mike mentioned that ExxonMobil's consultant conducted an additional investigation at the site and collected samples for fingerprint analysis. based on results of additional investigation, it was confirmed that source of petroleum contaminated soil and groundwater beneath the site is a gas station at 550 Humboldt Street (spill # 9007766). Mike is in contact with ExxonMobil regarding installation of a remediation system at/outside the site. Mike agreed to manage the subject spill case. 06/18/18-Hiralkumar Patel. as agreed during discussion last week, case transferred to DEC Haggerty. 8:03 AM:- sent email to OER Shaminder. informed him that the subject spill case will be managed by DEC Haggerty (remediation project manager for spill at 550 Humboldt St). also informed him that the department agrees with the proposed RAWP, but DEC Haggerty likes to have a conference call with OER prior to issuance of RWAP approval letter. email copied to DEC Haggerty, DEC Dewes and DEC Austin. **E designation** As per discussion and communication between Vadim Brevdo and Mike Haggerty, spill case manager reassigned from Mike Haggerty to MD Hoque effective June 30, 2022. (MDH) 2/7/2024-M. Hoque: A 4th quarter 2023 monitoring report received on 2/2/2024. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells MW-15A, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 were sampled on December 8, 2023. LNAPL was detected thickness of 0.01 foot in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 32 ug/L well MW-34, ethylbenzene ranging from ND to 140 ug/L in well MW-22, and xylenes from ND to 93 ug/L in well MW-34. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. The existing SVE system is comprised of three monitoring wells in MW-15B, MW-21, and MW-22. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 5/9/2024-M. Hoque: A 1st quarter 2024 monitoring report received on

OER- COMMERCIAL BUILDING - PHASE II (Continued) **S120701153**

5/8/2024. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells (MW-15A, , MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2) were sampled on March 26, 2024. LNAPL was detected thickness of 0.04 foot in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 1.5 ug/L in well MW-18, ethylbenzene ranging from ND to 230 ug/L in well MW-22, and xylenes from ND to 140 ug/L in well MW-22. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. The existing SVE system is comprised of three monitoring wells in MW-15B, MW-21, and MW-22. After multiple correspondences with the NYC DOB NOW plan examiner, the remediation system permit application was approved and the PAA plans were obtained on February 2, 2024. Electrical upgrades required to run the remediation system equipment (single phase to 3-phase) were completed from March 28, 2024 to March 29, 2024. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH) 11/12/2024-M. Hoque: On 11/5/2024, DEC received a 3rd quarter 2024 monitoring report. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged and wells MW-15A, MW-17, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 were sampled during this quarter. A trace amount of LNAPL was detected in well MW-17 during this quarter. Groundwater sampling showed benzene ranging from non-detect (ND) to 1.8 ug/L in well MW-33, ethylbenzene ranging from ND to 110 ug/L in well MW-22, and xylenes from ND to 56 ug/L in well MW-33. Five soil vapor monitoring points (RSV-1 through RSV-5) were installed on the Bayard Street and McGuinness Boulevard sidewalks on October 1 and October 2, 2024. These monitoring points were installed approximately one to two feet off the building structures on Bayard Street and McGuinness Boulevard at two to three feet below land surface (ft bls) to closely represent the sub-slab conditions within the adjacent businesses. Three of the monitoring points (RSV-2 through RSV-4) were installed directly adjacent to wells (MW-15B, MW-21, and MW-22) where elevated concentrations in soil vapor have been observed in the past. The other two monitoring points (RSV-1 and RSV-5) were installed to the north and south of the MW-15B, MW-21, and MW-22 area on the McGuiness and Bayard Street sidewalks, respectively. the soil vapor monitoring points were sampled 24 hours after installation on October 3, 2024. Low concentrations of

OER- COMMERCIAL BUILDING - PHASE II (Continued) **S120701153**

petroleum-related VOCs were detected throughout the soil vapor samples. The Third Quarter 2024 IRM event was completed September 17, 2024. The GAC drum used during the July 30, 2024, and September 17, 2024. The construction contractor, United Industries & Construction Corp., is currently prepared to pull the NYC DOB permit to continue AS/SVE system installation. However, upon review of the soil vapor sampling results and the groundwater sampling results from the Third Quarter 2024 sampling event, the basis for the system installation was re-evaluated by Roux/ExxonMobil. The BTEX and MTBE groundwater concentrations within the proposed system treatment area have been consistently decreasing up to an order of magnitude below the highest concentrations. no immediate human health or safety issues have been identified and ExxonMobil proposes revising the treatment remedy to monitored natural attenuation (MNA) to address the residual petroleum contamination. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH)
2/19/2025-M. Hoque: On 2/7/2025, DEC received a 4th quarter 2024 site monitoring report. Monitoring wells MW-14A, MW-15A, MW-15B, MW-16A, MW-17, MW-18, MW-19, MW-20, MW-21, MW-22, MW-28, MW-30, MW-31, MW-32, MW-33, MW-34, MW-35, and SVE-2 were gauged during this. LNAPL was detected raging from 0.03 foot to 0.09 foot in well MW-15B. A trace amount of LNAPL was observed in well MW-17. Due to the trace amount of LNAPL detected within MW-15B and MW-17, no LNAPL was recovered during the reporting period. Wells MW-15A, MW-17, MW-18, MW-19, MW-21, MW-22, MW-28, MW-33, MW-34, MW-35, and SVE-2 were sampled for VOCs analysis. Benzene was detected ranging from non-detect (ND) to 3.5 ug/L in well MW-33, 11 ug/L in well MW-33; xylenes was detected 130 ug/L in MW-33); and MTBE of 450 ug/L in MW-21. As part of the IRM activities, seven monitoring wells (MW-15B, MW-17, MW-18, MW-19, MW-21, MW-22, and MW-28) were gauged. SVE activities were performed to address residual contamination in the vadose zone and increase LNAPL degradation. Following completion of the First Quarter of 2025 events, the quarterly IRM events will be discontinued, and the quarterly groundwater sampling will be altered to an MNA strategy to address the residual contamination. Roux will continue quarterly well gauging, product recovery, with reporting to DEC. (MDH)

Remarks: unknown amount spilled to concrete. unknown clean up status.

DEC Memo:	DEC Piper left message for Danny at Don Carlo. Site is in NYC BCP and OER is involved. Assigned to DEC Zhune. 1/14/16-Vought-This spill transferred from DEC Zhune to DEC Omar as per DEC Demeo. 1/15/2016: Rashad 173 Bayard Street does not have an alternate address. No spill or PBS registration found for site. No documents found in D2. 5/16/2016: Rashad Received email from Shaminder (forwarded from Kumar): Development Update: End point samples after the tank removal were

OER - WAREHOUSE (Continued) **S117852202**

collected and this portion of the site was excavated down to 12 feet and EBC collected additional RAWP end points in this area. Tank end point sample results are attached. We are waiting on final report. In the mean time see attached end point results. They might have already be provided to you previously. Chawinie Reilly creilly@ebcincny.com at EBC is managing this project. Attached was analytical results from end points, they were uploaded to D2, and all results are ND. 5/17/2016: Rashad Replied to Shaminder: Thank you for the soil data. I look forward to receiving the report. Thank you. 11/28/2016: Rashad Emailed Shaminder asking about completed report. Chawinie of EBC replied saying that project is coming to an end and report should be submitted within a couple of months. 1/13/2017 Austin This spill report is being transferred from Rashad Omar to Pratik Lakhani end. 2/7/17-Vought-Copied on email from OER Chawla to DEC Omar that Rashad: We are reviewing the final report for the above spill. Draft report can be downloaded from the link below. Development on this site is complete. Post excavation sample results are attached. We are looking to close this spill. Let us know if you need additional info. Thanks, . Vought sent reply to OER Chawla that Shaminder, This spill is now being managed by Pratik Lakhani who is out this week taking his 40 Hour Hazwoper training. He will be in on Monday and will put the report in his que for review, Thanks. 02/13/17 - Lakhani Remedial Action Report (EBC - Ariel Czemerinski, 01/2017) - The redevelopment consists of two (2) new 4-story residential buildings with full cellars. The new buildings cover 70% of the lot. The Site is equipped with a 30 x 40 rear yard. A 112 x 16 deck was installed in the rear yard of each building. No residential units are located on in the cellar. Cellars are equipped with storage for units on the 1st floor, sprinkler rooms, and electrical rooms. Soil was excavated to a depth of approx. 12’bg for the first 80’ of the property to construct the foundation and footings for the new buildings. The slab of the new building is installed at a depth of approx. 12’bg which required excavation to approx. 12’ for footings and installation of the SSDS. A total of approx. 1787.25 tons of non-hazardous fill material was excavated for construction of the new building. 171 Bayard Street included a 1-story building occupied by a coal & oil company, wood workshop, syrup manufacturer/distributor, tech company, iron works, contracting company, window/door manufacturer, and most recently an art studio. At 173 Bayard the 1-story building was occupied by a refrigerator manufacturer. In 1958 the NYCFD approved a permit for a gasoline storage tank. Site inspection revealed the

OER - WAREHOUSE (Continued) **S117852202**

potential presence of a UST(s).
Depth to groundwater ranges from 9.35' to 12.85' at the Site. Groundwater flow is generally to
northeast. Five (5) soil borings were installed across the entire project Site, and collected ten
(10) soil samples and one duplicate soil sample. Installed two (2) groundwater wells throughout the
Site and used one existing monitoring well to establish groundwater flow and collected six (6)
groundwater samples and one duplicate groundwater sample. Installed one (1) sub-slab soil vapor
probes and four (4) soil vapor probes around Site perimeter and collected five (5) samples. Soil
samples are as such: 1,2,4 - trimethylbenzene 5000 ppb(B4,11'-13'bg). Groundwater samples were as
such: MTBE 30 ug/L(GW1), MTBE 14 ug/L(MW1), MTBE 14 ug/L(duplicate). Soil vapor results are as
such: PCE 773 ug/m3(SG-1), PCE 218 ug/m3(SG-3), PCE 104 ug/m3(SG-4), PCE 50.1 ug/m3(SG-2), PCE 74.6
ug/m3(SG-5), TCE 7.63 ug/m3(SG-4), benzene 32900 ug/m3(SG-1), ethylbenzene 4860 ug/m3(SG-1),
m,p-xylene 9760 ug/m3(SG-1), o-xylene 3580 ug/m3(SG-1), toluene 65900 ug/m3(SG-1), o-xylene 3.95
ug/m3(SG-3), o-xylene 4.99 ug/m3(SG-4), m,p-xylene 7.85 ug/m3(SG-3), m,p-xylene 10.5 ug/m3(SG-4),
ethylbenzene 3.78 ug/m3(SG-3), ethylbenzene 5.47 ug/m3(SG-4), 1,3,5-trimethylbenzene 2.36
ug/m3(SG-2), 1,3,5-trimethylbenzene 2.65 ug/m3(SG-3), 1,3,5-trimethylbenzene 3.59 ug/m3(SG-4),
1,2,4-trimethylbenzene 6.39 ug/m3(SG-2), 1,2,4-trimethylbenzene 6.63 ug/m3(SG-3),
1,2,4-trimethylbenzene 5.55 ug/m3(SG-4). one (1) 1080 gallon UST was removed from the Site.
Installed and operating an active SSDS, installed beneath the cellar slab. Exhaust is located a
min. of 10' from the window and ventilation inlets. Installed a vapor barrier system behind all
foundation walls and the new 4 concrete slab beneath the cellar slab of the building. SSDS to be
inspected monthly by superintendent and inspected annually by Qualified Environmental Professional.
Sent RAR to NYSDOH Nathan Walz to determine whether there are any concerns with the active SSDS.
Nathan responded I reviewed the RAR, it appears that they SSDS is performing as designed based on
the pressure differential readings that were provided. If OER is receiving and reviewing the annual
reports I don t see a need to be copied on them. I have no comments on the SMP for the site. The
following email was sent to OER Chawla: I have reviewed the RAR and everything seems fine. The
spill is closed. Please let the property owner and the QEP know to include the DEC on the
inspection and monitoring reports for the SSD system. As per DEC Vought, spill is closed. Spill
closure with residual soil contamination letter was sent to owner.
04/28/17 - Lakhani FactSheet

OER - WAREHOUSE (Continued) **S117852202**

uploaded to OER EPIC stating that OER has determined that the cleanup requirements to address
contamination at the site have been met.
Remarks: tank removal - found product in soil - clean up pending

Update By:	AMSERVIS
Site Description:	Location: The site is located in the Williamsburg neighborhood of Brooklyn, NY and is comprised of a single tax lot totaling 8,800 square feet (0.20 acres). The site is irregular shaped and is bounded on the north by Bayard Street and on the east by Graham Avenue. The west and south sides of the property are bordered by residential buildings. Site Features: The redevelopment currently underway consists of the construction of a new 6 story mixed use (commercial/residential) building with a cellar that will cover the entirety of the Site. Current Zoning and Land Use: The site is currently zoned M1-2/R6A (manufacturing with residential overlay). Surrounding land use to the west along Bayard Street are one- and two-family residential buildings. The adjacent properties to the south along Graham Avenue consist of three-story residential multi-family walk-up buildings and a three-story mixed residential and commercial building. To the north of the site, across Bayard Street, there are multiple residential one- and two-family buildings and two three-story mixed residential and commercial buildings. To the east of the property, across Graham Avenue, are several residential multi-family walk-up buildings and a single-story garage structure. Past Use of the Site: The site has been developed since at least 1887, with multiple dwellings fronting Bayard Street and multiple mixed-use storefronts along Graham Avenue. The site was identified with a manufacturing use on Sanborn maps from 1965 through 2007. The site was redeveloped between 1965 and 1978 with the recently demolished one-story building. A certificate of occupancy from NYC Buildings Department indicated the on-site manufacturing building completed construction in April 1972. The recently demolished building was last occupied by a floor manufacturing company which used/stored wood stains, varnishes, paint, paint thinners, floor sealants, and floor oil. Site Geography and Geology: Subsurface soils at the site consist of historic fill materials to a depth of approximately 6 feet below grade, followed by native silty-sand and clay. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the site is approximately 20 feet above mean sea level. The topography within the immediate area slopes gradually from east to west. Groundwater occurs beneath the site at a depth of approximately 7.5-9.5 feet below grade. Based on groundwater flow maps, the flow direction is generally toward the southeast.
Env Problem:	Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz[a,h]anthracene, ideno(1,2,3-cd)pyrene, barium, lead, mercury, arsenic, chromium, DDT, DDD, DDT, chlordane, and xylene (mixed) in soil, and methyl-tert-butyl ether (MTBE) in groundwater. Remedial actions have successfully achieved soil cleanup objectives for unrestricted residential use. No residual contamination remains on-site.
Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Tank Info:

Tank Number:	001
Tank Id:	22557
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
E00 - Piping Secondary Containment - None
J02 - Dispenser - Suction Dispenser
K99 - Spill Prevention - Other
C03 - Pipe Location - Aboveground/Underground Combination
B00 - Tank External Protection - None
F00 - Pipe External Protection - None

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1964
Capacity Gallons:	2000

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	DEC Piper dispatched DEC Lin OH secondary to scene. 11/19/19-Lin-Oil line was broken apart in the boiler room causing oil to spill onto the concrete floor of the boiler room. Puddles of oil are

CON EDISON (Continued) **S118259442**

visible on the concrete floor. According to Petro tech, they turned off the sump pump when they arrived. A bucket by the sump pump is half filled with oil. Milro responded and put down pads and degreased the area. Temp tanks and one scrubber was put in. Cleanup is not complete.
12/17/19-Inspected site. Odor was noted in the basement and contaminated soil run around the edge of the basement where the spill occurred. Oil was observed on the puddle of water at the corner of the basement. 2/10/20-Lin-Milro installed air equipment for residual odor. Milro removed oil impacted impacted concrete and soil. Milro hand excavated oil impacted soil to the footings and to the bottom of groundwater. Milro recovered oil impacted water by absorbent and VAC truck. Performed site visit a week after the groundwater was pumped out. Free product was not observed on the groundwater. Milro pumped out the groundwater once more and backfilled the excavation. Case closed.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	WASTE
Tank Id:	230118
Material Code:	0022
Common Name of Substance:	Waste Oil/Used Oil

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
L00 - Piping Leak Detection - None
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
F00 - Pipe External Protection - None
B00 - Tank External Protection - None
K00 - Spill Prevention - None
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	03/01/2001
Capacity Gallons:	275
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	12/23/2010
Register:	True
Modified By:	MJGRIFFI
Last Modified:	05/09/2022
Material Name:	waste oil/used oil
