Re: Data Validation Reports
River Place 2 Project
November 2005-February 2006 Soil Sampling Events

Dear Ms. Cam-Spanos:

The data validation summaries and data usability summary reports (DUSRs) are attached to this letter for the River Place 2 project, November 2005-February 2006 soil sampling events. The data were mostly acceptable for STL Connecticut, Job Numbers 211280, 211578, 211919, 211990, and 212066, with issues that are identified in the validation summaries. There were data in data packs 211578 and 212066 that were flagged as unusable (R). The reason for rejecting the data are outlined in the associated DUSRs and QA/QC reviews. The data is rejected based solely on the validation guidance criteria. The rejected data may be determined to be acceptable to the user based on additional information that is not contained in the data validation criteria.

I have included a list of data validation qualifiers and acronyms to assist you in interpreting the reports. If you have any questions concerning this report, please contact us at (518) 348-6995. Thank you for the opportunity to assist Langan Engineering and Environmental Services, Inc.

Sincerely,
Alpha Geoscience

Donald C. Anné
Senior Chemist

Data Validation Qualifiers Used in the QA/QC Reviews for USEPA Region II

- U = Not detected. The associated number indicates the approximate sample concentration necessary to be detected significantly greater than the level of the highest associated blank.
- R = Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.
- N = Tentative identification. Analyte is considered present. Special methods may be needed to confirm its presence or absence during future sampling efforts.
- J = Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.
- UJ = Not detected, quantitation limit may be inaccurate or imprecise.

Note: These qualifiers are used for data validation purposes. The data validation qualifiers may differ from the qualifiers that the laboratory assigns to the data. Refer to the laboratory analytical report for the definitions of the laboratory qualifiers.

Data Validation Acronyms

AA	Atomic absorption, flame technique
BHC	Hexachlorocyclohexane
BFB	Bromofluorobenzene
CCB	Continuing calibration blank
CCC	Calibration check compound
CCV	Continuing calibration verification
CN	Cyanide
CRDL	Contract required detection limit
CRQL	Contract required quantitation limit
CVAA	Atomic adsorption, cold vapor technique
DCAA	2,4-Dichlophenylacetic acid
DCB	Decachlorobiphenyl
DFTPP	Decafluorotriphenyl phosphine
ECD	Electron capture detector
FAA	Atomic absorption, furnace technique
FID	Flame ionization detector
FNP	1-Fluoronaphthalene
GC	Gas chromatography
GC/MS	Gas chromatography/mass spectrometry
GPC	Gel permeation chromatography
ICB	Initial calibration blank
ICP	Inductively coupled plasma-atomic emission spectrometer
ICV	Initial calibration verification
IDL	Instrument detection limit
IS	Internal standard
LCS	Laboratory control sample
LCS/LCSD	Laboratory control sample/laboratory control sample duplicate
MSA	Method of standard additions
MS/MSD	Matrix spike/matrix spike duplicate
PID	Photo ionization detector
PCB	Polychlorinated biphenyl
PCDD	Polychlorinated dibenzodioxins
PCDF	Polychlorinated dibenzofurans
QA	Quality assurance
QC	Quality control
RF	Response factor
RPD	Relative percent difference
RRF	Relative response factor
RRF(number)	Relative response factor at concentration of the number following
RT	Retention time
RRT	Relative retention time
SDG	Sample delivery group
SPCC	System performance check compound
TCX	Tetrachloro-m-xylene
%D	Percent difference
%R	Percent recovery
%RSD	Percent relative standard deviation

**Data Usability Summary Report
for STL Connecticut, Job No. 211280**

**10 Soil Samples, 1 Duplicate,
1 Field Blank, and 1 Trip Blank
Collected November 4, 2005**

Prepared by: Donald Anné
March 30, 2006

The data packages contain the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data packs contained the results of volatile, semi-volatile, PCB, TAL metal and cyanide analyses for 10 soil samples, 1 duplicate, and 1 field blank, and only volatile analyses for 1 trip blank.

The overall performances of the analyses are acceptable. STL Connecticut did fulfill the requirements of the analytical methods.

The majority of the data are acceptable with some issues that are identified in the accompanying data validation reviews. The following data were flagged:

- The positive results for methylene chloride were flagged as "not detected" (U) in samples TRIP BLANK and FIELD BLANK (FB)-110405 because the concentrations of methylene chloride in the samples were less than ten times the level in the associated method blank.
- There were semi-volatile results for some compounds in the following samples that were quantitated using data that were extrapolated beyond the highest calibration standard and flagged "A" by the laboratory. Results for these compounds marked "A" in the undiluted samples were qualified as estimates (J):

EP-3D(-13)	EP-3G(-13)	EP-4D(-13)
EP-4F(-13)	EP-4G(-13)	DUPLICATE-1-110405
- The "not detected" results for antimony and selenium were flagged as estimates (J) in all 10 soil samples and the duplicate because the percent recoveries for these metals were below control limits, but were not less than 10% in soil spike sample EP-4H(-13)S.

- Positive results for chromium and potassium were flagged as estimates (J) in all 10 soil samples and the duplicate because the percent recoveries for these metals were above control limits in soil spike sample EP-4H(-13)S.
- Positive results for arsenic were flagged as estimates (J) in all 10 soil samples and the duplicate because the relative percent difference for arsenic was above the allowable maximum in soil duplicate sample EP-4H(-13)D.
- The “not detected” results for thallium were flagged as estimates (J) in all 10 soil samples and the duplicate because the percent recovery for thallium was below laboratory limits for the CRDL standard.
- All results for cyanide were flagged as estimates (J) in all 10 soil samples and the duplicate because the percent recovery for cyanide was below control limits, but was not less than 10% in soil spike sample EP-4H(-13)S.

All data are considered usable, with estimated (J) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

**QA/QC Review of Volatiles Data
for STL Connecticut, Job No. 211280**

**10 Soil Samples, 1 Duplicate,
1 Field Blank, and 1 Trip Blank
Collected November 4, 2005**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were analyzed within NYSDEC holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The SPCCs and CCCs were within control limits for method 8260B.

The average RRFs for target compounds were above the allowable minimum (0.050), as required.

The %RSD for bromomethane (34.7%) was above the allowable maximum (30%) for A3UX8A on 10-26-05. The %RSD for acetone (31.0%) was above the allowable maximum (30%) for A3UX11 on 11-02-05. Positive results for these two compounds should be considered estimates (J) in associated samples.

Continuing Calibration: The SPCCs and CCCs were within control limits for method 8260B.

The RRF50s for target compounds were above the allowable minimum (0.050), as required.

The %Ds for bromomethane (47.3%) and chloroethane (34.1%) were above the allowable maximum (25%) on 11-14-05 (UX81232.D). The %Ds for bromomethane (38.4%), chloroethane (28.3%), and 2-butanone (25.9%) were above the allowable maximum (25%) on 11-15-05 (UX81262.D). The %D for bromomethane (33.2%) was above the allowable maximum (25%) on 11-16-05 (UX81292.D). The %D for acetone (53.2%) was above the allowable maximum (25%) on 11-15-05 (145240.D). The %D for acetone (50.1%) was above the allowable maximum (25%) on 11-17-05 (145302.D). Positive results for these compounds should be considered estimates (J) in associated samples.

Blanks: Method blank, 5317065, contained a trace of methylene chloride (1.1 ug/L). Results for methylene chloride that are less than ten times the method blank level should be reported as not detected in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogates for the following samples were beyond quantitation limits. No action is taken on surrogates diluted beyond quantitation limits.

EP-3D(-13) EP-3H(-13) EP-4D(-13) EP-4G(-13) DUPLICATE-1-110405

Matrix Spike/Matrix Spike Duplicate: The relative percent differences (RPDs) were below the allowable maximums and the percent recoveries (%Rs) were within control limits for Lab MS/MSD batches 5317065 and 5320200.

The RPDs were below the allowable maximums, but two of ten %Rs were below control limits for MS/MSD sample EP-4H(-13). No action is taken on MS/MSD data alone to qualify or reject an entire set of samples.

Laboratory Control Sample: The relative percent differences were below the allowable maximums and the percent recoveries were within QC limits for the following LCS/LCSD batch numbers.

5317065	5318211	5319494	5320196	5320200
5321185	5322308			

Field Duplicate: The relative percent differences for detected compounds were below the allowable maximum (35%) for field duplicate pair EP-3D(-13) and DUPLICATE-1-110405, as required (attached table).

Compound ID: Checked compounds were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Volatiles

Calculations for Field Duplicate Relative Percent Difference (RPD) SDG No. 211280

S1= ep-3d(-13)

S2= duplicate-1-110405

<u>Analyte</u>	<u>S1</u>	<u>S2</u>	<u>RPD (%)</u>
benzene	16000	19000	17%
ethylbenzene	5800	5000	15%
xylene	5700	5200	9%

Bold results are below the RLs.

ND - Compound was reported as not detected.

NC - Not Calculated, both results must be above the RL for valid %RPDs to be calculated.

**QA/QC Review of Semi-Volatiles Data
for STL Connecticut, Job No. No. 211280**

**10 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected November 4, 2005**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were extracted and analyzed within NYSDEC holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The SPCCs and CCCs were within control limits for method 8270C.

The average RRFs for target compounds were above the allowable minimum (0.050), as required.

The %RSD for hexachlorocyclopentadiene (34.4%) was above the allowable maximum (30%) for MSP on 11-15-05. The %RSD for hexachlorocyclopentadiene (31.8%) was above the allowable maximum (30%) for MSZ on 11-17-05. Positive results for hexachlorocyclopentadiene should be considered estimates (J) in associated samples.

Continuing Calibration: The SPCCs and CCCs were within control limits for method 8270C.

The RRF40s for target compounds were above the allowable minimum (0.050), as required.

The %D for benzyl alcohol (28.1%) was above the allowable maximum (25%) on 11-17-05 (P9083). The %RSD for 4-methylphenol (27.1%) was above the allowable maximum (25%) on 11-18-05 (P9111). Positive results for these two compounds should be considered estimates (J) in associated samples.

Blanks: The analyses of method and field blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogates for sample EP-3G(-13)DL were diluted beyond detection limits. No action is taken on surrogates diluted beyond detection limits.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences were below the allowable maximums and the percent recoveries were within control limits for MS/MSD sample EP-4H(-13).

Laboratory Control Sample: The percent recoveries (%Rs) for target compounds were within QC limits for LCS 57235-002.

The %R for 2,4-dinitrophenol was above QC limits for LCS 57768-002. Positive results for 2,4-dinitrophenol should be considered estimates (J) in associated samples.

Field Duplicate: The relative percent difference for detected compounds were below the allowable maximum (35%) for field duplicate pair EP-3D(-13) and DUPLICATE-1-110405, as required (attached table).

Compound ID: Checked compounds were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

There were semi-volatile results for the following samples that were quantitated by extrapolating data above the highest calibration standard and marked 'A' by the laboratory. The samples were diluted by the laboratory and re-analyzed; therefore, the results for compounds that are flagged as 'A' in the undiluted samples should be considered estimates (J) and the use of the diluted results for those compounds is recommended. It is recommended that the undiluted results be used for all other compounds.

**QA/QC Review of PCB Aroclor Data for
STL Connecticut, STL Job No. 211280**

**10 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected November 4, 2005**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were extracted and analyzed within EPA SW-846 holding times.

Blanks: The analyses of the instrument, method, and field blanks reported target aroclors as not detected.

Surrogate Recovery: One of two surrogate recoveries for sample EP-3G(-13) was above advisory limits. Positive results for sample EP-3G(-13) should be considered estimates (J).

Matrix Spike/Matrix Spike Duplicate: The relative percent differences were below the allowable maximums and percent recoveries were within QC limits for MS/MSD sample EP-4H(-13).

Laboratory Control Sample: The percent recoveries were within QC limits for LCSs 57719-003 and 57919-002.

Field Duplicates: The analyses of field duplicates EP-3D(-13) and DUPLICATE-1-110405 reported target aroclors as not detected; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Initial Calibration: The %RSDs for target aroclors were below the allowable maximum (20%) for primary and confirmation columns, as required.

Continuing Calibration: The average %Ds for target aroclors were below the allowable maximum (15%) for both columns, as required.

Pesticide Analytical Sequence: The retention times for TCX and DCB were within control limits for both columns.

Pesticide Identification Summary for Single Component Analytes: Checked surrogates were within GC quantitation limits. The analyses of samples in this data pack reported target aroclors as not detected.

**QA/QC Review of TAL Metals Data
for STL Connecticut, Job No. 211280**

**10 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected November 4, 2005**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were analyzed within the EPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for TAL metals were within control limits (80-120% for Hg, 90-110% for all other metals).

CRDL Standard: The percent recoveries (%Rs) for target metals were within laboratory QC limits (50-150%) for aqueous CRDL standard.

The %R for thallium was below laboratory QC limits (50-150%) for the soil CRDL. Results for thallium that are less than two times the reporting limit should be considered estimates (J) in soil samples.

Blanks: The analyses for initial and continuing calibration, method, and field blanks reported TAL metals as below the CRDLs, as required.

ICP Interference Check Sample: The percent recoveries (%Rs) for TAL metals were within control limits (80-120%) for the soil check sample.

The %R for thallium was below control limits (80-120%) for the aqueous check sample. Results for thallium should be considered estimates (J) in applicable aqueous samples.

Spike Sample Recovery: The percent recoveries (%Rs) for TAL metals were within control limits for the aqueous spike sample 211283-8S.

The %Rs for antimony (11%) and selenium (63%) were below control limits (75-125%), but were not less than 10% for soil spike sample EP-4H(-13)S. The %Rs for beryllium (133%), chromium (132%), potassium (129%), and thallium (156%) were above control limits (75-125%) for soil spike sample EP-4H(-13)S.

All results for antimony and selenium, and positive results for beryllium, chromium, potassium, and thallium should be considered estimates (J) in soil samples.

Laboratory Duplicates: The relative percent differences (RPDs) for applicable metals were below the allowable maximum (20%) for aqueous duplicate sample 211283-8D, as required.

The RPD for arsenic (144.9%) was above the allowable maximum (35%) for soil duplicate sample EP-4H(-13)D. Positive results for arsenic should be considered estimates (J) in soil samples.

Field Duplicates: The relative percent differences for applicable metals were below the allowable maximum (35%) for field duplicate pair EP-3D(-13) and DUPLICATE-1-110405, as required (attached table).

Laboratory Control Sample: The percent recoveries for target metals were within QC limits for soil and aqueous LCSs.

ICP Serial Dilution: The %Ds for applicable target metals were below the allowable maximum (10%) for serial dilution sample EP-4H(-13)L, as required.

Instrument Detection Limits: The IDLs were at or below CRDLs, as required.

Percent Solids: The percent solids for soil samples were greater than 50%, as required.

**Data Usability Summary Report
for STL Connecticut, Job No. 211578**

**5 Soil Samples, 1 Duplicate,
1 Field Blank, and 1 Trip Blank
Collected December 7, 2005**

Prepared by: Donald Anné
March 30, 2006

The data packages contain the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data packs contained the results of volatile, semi-volatile, PCB, TAL metal and cyanide analyses for 5 soil samples, 1 duplicate, and 1 field blank, and only volatile analyses for 1 trip blank.

The overall performances of the analyses are acceptable. STL Connecticut did fulfill the requirements of the analytical methods.

The majority of the data are acceptable with some issues that are identified in the accompanying data validation reviews. The following data were flagged:

- The positive results for acetone were flagged as “not detected” (U) in all 5 soil samples and the duplicate because the concentrations of acetone in the samples were not significantly greater (more than ten times) than the level in the associated trip, field, and/or method blanks.
- The positive results for methylene chloride were flagged as “not detected” (U) in all 5 soil samples except for sample EP-2H(-13), duplicate, field blank, and trip blank because the concentrations of methylene chloride in the samples were not significantly greater (more than ten times) than the level in the associated blanks.
- The “not detected” result for carbon tetrachloride was flagged as estimated (J) in sample EP-2H(-13) because the percent recovery for carbon tetrachloride was below QC limits for LCS 58979-002.
- The “not detected” results for carbon disulfide were flagged as estimates (J) in samples FIELD BLANK(FB)-120705 and TRIP BLANK because the percent recovery for carbon disulfide was below QC limits for LCS 58869-002.

- The “not detected” results for styrene were flagged as unusable, rejected (R) in the following samples because the response factors for styrene were below the allowable minimum in the associated initial and continuing calibrations.
EP-2D(-13) EP-2E(-13) EP-2F(-13) EP-2G(-13) DUPLICATE 2-120705
- There were semi-volatile results for some compounds in samples EP-2E(-13) and EP-2G(-13) that were quantitated using data that were extrapolated beyond the highest calibration standard and flagged “A” by the laboratory. Results for these compounds marked “A” in the undiluted samples were qualified as estimates (J).
- The “not detected” semi-volatile results for 4-chloroaniline were flagged as estimates (J) in all 5 soil samples and the duplicate because the percent recovery for 4-chloroaniline was below QC limits for LCS 58770-002.
- The “not detected” results for antimony and thallium were flagged as estimates (J) in all 5 soil samples and the duplicate because the percent recoveries for these metals were below control limits, but were not less than 10% in soil spike sample EP-2H(-13)S.
- The “not detected” result for potassium was flagged as estimates (J) in sample FIELD BLANK(FB)-120705 because the percent recovery for potassium was below QC limits in the aqueous LCS.
- Positive results for calcium were flagged as estimates (J) in samples EP-2D(-13) and DUPLICATE 2-120705 because the relative percent difference for calcium was above the allowable maximum in field duplicate pair EP-2D(-13) and DUPLICATE 2-120705.
- All results for cyanide were flagged as estimates (J) in the 5 soil samples and the duplicate because the percent recovery for cyanide was below control limits, but was not less than 10% in soil spike sample EP-2H(-13)S.
- The “not detected” results for thallium by GFAA were flagged as estimates (J) in all 5 soil samples and the duplicate because the percent recovery for thallium by GFAA was below control limits, but was not less than 10% in soil spike sample EP-2H(-13)S.

All data that are not flagged rejected (R) are considered usable, with estimated (J) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

**QA/QC Review of Volatiles Data
for STL Connecticut, Job No. 211578**

**5 Soil Samples, 1 Duplicate,
1 Field Blank, and 1 Trip Blank
Collected December 7, 2005**

Prepared by: Donald Anné
March 30, 2006

Holding Times: Samples were analyzed within NYSDEC holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The SPCCs and CCCs were within control limits for method 8260B.

The average RRF for styrene (0.032) was below the allowable minimum (0.050) for MSL on 12-12-05. Positive results for styrene should be considered estimates (J) and negative results unusable (R) in associated samples.

The %RSD for methylene chloride (55.2%) was above the allowable maximum (30%) for MSW on 12-12-05. Positive results for methylene chloride should be considered estimates (J) in associated samples.

Continuing Calibration: The SPCCs and CCCs were within control limits for method 8260B.

The RRF50 for styrene (0.037) was below the allowable minimum (0.050) on 12-16-05 (L6080). Positive results for styrene should be considered estimates (J) and negative results unusable (R) in associated samples.

The %Ds for carbon tetrachloride (28.3%) and 2-hexanone (29.3%) were above the allowable maximum (25%) on 12-16-06 (N3024). The %Ds for chloroethane (29.2%) were above the allowable maximum (25%) on 12-13-05 (W4059). Positive results for these three compounds should be considered estimates (J) in associated samples.

Blanks: Method blank, 59042-001, contained acetone (365.166 ug/kg) and methylene chloride (488.832 ug/kg). Method blank, 58979-001, contained a trace of acetone (5.600 ug/kg). Method blank, 58869-001, contained a trace of methylene chloride (3.770 ug/L). Field blank, FB-120705, contained traces of acetone (6.6 ug/L) and 2-butanone (3.8 ug/L). Trip blank, TRIP BLANK, contained traces of acetone (6.6 ug/L) and 2-butanone (3.8 ug/L).

Results for methylene chloride, acetone, and 2-butanone that are less than ten times the highest blank level should be reported as not detected in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for environmental samples.

Matrix Spike/Matrix Spike Duplicate: One of thirty-four relative percent differences was above the allowable maximum and 12 of 68 %Rs (percent recoveries) were outside control limits for MS/MSD sample EP-2H(-13). No action is taken on MS/MSD data alone to qualify or reject an entire set of samples.

Laboratory Control Sample: The percent recoveries (%Rs) were within QC limits for LCS 59042-002.

The %Rs for carbon tetrachloride were below QC limits for LCS 58979-002. All results for carbon tetrachloride should be considered estimates (J) in associated soil samples.

The %R for carbon disulfide was below QC limits for LCS 58869-002. All results for carbon disulfide should be considered estimates (J) in associated aqueous samples.

Field Duplicate: The relative percent differences for applicable detected compounds were below the allowable maximum (35%) for field duplicate pair EP-2D(-13) and DUPLICATE 2-120705, as required (attached table).

Compound ID: Checked compounds were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Volatiles

Calculations for Field Duplicate Relative Percent Difference (RPD)

**QA/QC Review of Semi-Volatiles Data
for STL Connecticut, Job No. No. 211578**

**5 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected December 7, 2005**

Prepared by: Donald Anné
March 30, 2006

Holding Times: Samples were extracted and analyzed within NYSDEC holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The SPCCs and CCCs were within control limits for method 8270C.

The average RRFs for target compounds were above the allowable minimum (0.050), as required.

The %RSD for hexachlorocyclopentadiene (41.7%) was above the allowable maximum (30%) for MSU on 12-11-05. The %RSD for hexachlorocyclopentadiene (32.8%) was above the allowable maximum (30%) for MSU on 12-13-05. Positive results for hexachlorocyclopentadiene should be considered estimates (J) in associated samples.

Continuing Calibration: The SPCCs and CCCs were within control limits for method 8270C.

The RRF40s for target compounds were above the allowable minimum (0.050), as required.

The %D for hexachlorocyclopentadiene (38.6%) was above the allowable maximum (25%) on 12-12-05 (U2511). Positive results for hexachlorocyclopentadiene should be considered estimates (J) in associated samples.

Blanks: The analyses of method and field blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for environmental samples.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences were below the allowable maximums and the percent recoveries were within control limits for MS/MSD sample EP-2H(-13).

Laboratory Control Sample: The percent recoveries (%Rs) for target compounds were within QC limits for LCS 58850-002.

The %R for 4-chloroaniline was below QC limits for LCS 58770-002. All results for 4-chloroaniline should be considered estimates (J) in associated soil samples.

The %Rs for the following compounds were above QC limits for LCS 58770-002. Positive results for these compounds should be considered estimates (J) in associated soil samples.

phenol	1,3-dichlorobenzene	1,2-dichlorobenzene
benzyl alcohol	2-methylphenol	1,2,4-trichlorobenzene
4-nitrophenol	hexachlorobutadiene	

Field Duplicate: The analyses of field duplicates EP-2D(-13) and DUPLICATE 2-120705 reported target compounds as either not detected or below the reporting limit; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Compound ID: Checked compounds were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

There were semi-volatile results for samples EP-2E(-13) and EP-2G(-13) that were quantitated by extrapolating data above the highest calibration standard and marked 'A' by the laboratory. The samples were diluted by the laboratory and re-analyzed; therefore, the results for compounds that are flagged as 'A' in the undiluted samples should be considered estimates (J) and the use of the diluted results for those compounds is recommended. It is recommended that the undiluted results be used for all other compounds.

**QA/QC Review of TAL Metals Data
for STL Connecticut, Job No. 211578**

**5 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected December 7, 2005**

Prepared by: Donald Anné
March 30, 2006

Holding Times: Samples were analyzed within the EPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for TAL metals were within control limits (80-120% for Hg, 90-110% for all other metals).

CRDL Standard: The percent recoveries (%Rs) for target metals were within laboratory QC limits (50-150%) for CRDL standards.

Blanks: The analyses for initial and continuing calibration, method, and field blanks reported TAL metals as below the CRDLs, as required.

ICP Interference Check Sample: The percent recoveries (%Rs) for TAL metals were within control limits (80-120%) for the soil check sample.

The %R for thallium was below control limits (80-120%) for the aqueous check sample. Results for thallium should be considered estimates (J) in applicable aqueous samples.

Spike Sample Recovery: The percent recovery (%R) for potassium (74%) was below control limits for the aqueous spike sample 211579-1S. All results for potassium should be considered estimates (J) in aqueous samples.

The %Rs for antimony (15%) and thallium (62%) were below control limits (75-125%) for soil spike sample EP-2H(-13)S. All results for antimony and thallium should be considered estimates (J) in soil samples.

Laboratory Duplicates: The relative percent differences for applicable metals were below the allowable maximum (20% for aqueous, 35% for soil) for aqueous duplicate sample 211579-1D and soil duplicate sample EP-2H(-13)D, as required.

Field Duplicates: The relative percent difference for calcium (44%) was above the allowable maximum (35%) for field duplicate pair EP-2D(-13) and DUPLICATE 2-120705 (attached table). The results for calcium should be considered estimates (J) in samples EP-2D(-13) and DUPLICATE 2-120705.

Laboratory Control Sample: The percent recoveries (%Rs) for target metals were within QC limits for soil LCS.

The %R for potassium (78%) was below QC limits for the aqueous LCS. All results for potassium should be considered estimates (J) in aqueous samples.

ICP Serial Dilution: The %Ds for applicable target metals were below the allowable maximum (10%) for serial dilution sample EP-2H(-13)L, as required.

Instrument Detection Limits: The IDLs were at or below CRDLs, as required.

Percent Solids: The percent solids for soil samples were greater than 50%, as required.

**Data Usability Summary Report
for STL Connecticut, Job No. 211919**

**5 Soil Samples, 1 Duplicate,
1 Field Blank, and 1 Trip Blank
Collected January 20, 2006**

Prepared by: Donald Anné
March 30, 2006

The data packages contain the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data packs contained the results of volatile, semi-volatile, PCB, TAL metal and cyanide analyses for 5 soil samples, 1 duplicate, and 1 field blank, and only volatile analyses for 1 trip blank.

The overall performances of the analyses are acceptable. STL Connecticut did fulfill the requirements of the analytical methods.

The majority of the data are acceptable with some issues that are identified in the accompanying data validation reviews. The following data were flagged:

- All positive results for acetone were flagged as “not detected” (U) in the soil samples and the duplicate because the concentrations of acetone in the samples were not significantly greater (more than ten times) than the level in the associated field blank.
- The positive results for methylene chloride were flagged as “not detected” (U) in the samples EP-1E(-13) and EP-1G(-13) because the concentrations of methylene chloride in the samples were not significantly greater (more than ten times) than the level in the associated blank.
- The “not detected” results for dibromochloromethane were flagged as estimates (J) in the following samples because the percent recoveries for these two compounds were below QC limits for LCS 60521-002.

EP-1D(-13)	EP-1E(-13)	EP-1F(-13)	EP-1G(-13)
- Positive results for xylenes were flagged as estimates (J) in samples EP-1D(-13) and DUPLICATE3-012006 because the relative percent difference for xylenes was above the allowable maximum in field duplicate pair EP-1D(-13) and DUPLICATE3-012006.

- There was a semi-volatile result for naphthalene in sample EP-1H(-13) that was quantitated using data that were extrapolated beyond the highest calibration standard and flagged "A" by the laboratory. Results for naphthalene marked "A" in the undiluted sample was qualified as estimated (J).
- All results for antimony, cadmium, mercury, selenium, and thallium were flagged as estimates (J) in all 5 soil samples and the duplicate because the percent recoveries for these metals were below control limits, but were not less than 10% in soil spike sample EP-1H(-13)S.
- Positive results for arsenic, calcium, and zinc were flagged as estimates (J) in all 5 soil samples and the duplicate because the percent recoveries for these metals were above control limits in soil spike sample EP-1H(-13)S.
- All results for sodium were flagged as estimates (J) in all 5 soil samples and the duplicate because the percent recovery for sodium was below control limits in soil LCS.
- The "not detected" results for silver were flagged as estimates (J) in all 5 soil samples because the percent recovery for silver was below control limits for the associated continuing calibration standard.
- Positive results for the following metals were flagged as estimates (J) in all 5 soil samples and the duplicate because the relative percent differences for these metals were above the allowable maximum in duplicate sample EP-1H(-13)D.

aluminum	barium	chromium	cobalt	copper	iron	lead
magnesium	nickel	potassium	vanadium			
- Positive results for manganese were flagged as estimates (J) in samples EP-1D(-13) and DUPLICATE3-012006 because the relative percent difference for manganese was above the allowable maximum in field duplicate pair EP-1D(-13) and DUPLICATE3-012006.
- The positive result for barium was flagged as estimated (J) in the field blank, FIELD BLANK(FB)-012006 because the relative percent difference for barium was above the allowable maximum in aqueous duplicate sample 211946-1D.
- All results for cyanide were flagged as estimates (J) in all 5 soil samples and the duplicate because the percent recovery for cyanide was below control limits, but was not less than 10% in soil spike sample EP-1H(-13)S.

All data are considered usable, with estimated (J) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

**QA/QC Review of Volatiles Data
for STL Connecticut, Job No. 211919**

**5 Soil Samples, 1 Duplicate,
1 Field Blank, and 1 Trip Blank
Collected January 20, 2006**

Prepared by: Donald Anné
March 30, 2006

Holding Times: Samples were analyzed within NYSDEC holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The SPCCs and CCCs were within control limits for method 8260B.

The average RRFs for target compounds were above the allowable minimum (0.050) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The SPCCs and CCCs were within control limits for method 8260B.

The RRF50s for target compounds were above the allowable minimum (0.050), as required.

The %D for carbon tetrachloride (33.3%) was above the allowable maximum (25%) on 01-24-06 (L6829). The %Ds for acetone (32.0%) and dibromochloromethane (34.5%) were above the allowable maximum (25%) on 01-23-06 (N3702). The %Ds for acetone (28.3%), 2-butanone (40.0%), 4-methyl-2-pentanone (34.0%), and 2-hexanone (44.6%) were above the allowable maximum (25%) on 01-24-06 (N3737). Positive results for these compounds should be considered estimates (J) in associated samples.

Blanks: Method blank, 60574-001, contained a trace of methylene chloride (54.651 ug/kg). Method blank, 60741-001, contained a trace of methylene chloride (61.762 ug/kg). Method blank, 60521-001, contained a trace of methylene chloride (3.031 ug/kg). Field blank, FB-012006, contained traces of acetone (6.9 ug/L) and methylene chloride (0.76 ug/L). Trip blank, TRIP BLANK, contained traces of acetone (6.0 ug/L) and methylene chloride (0.80 ug/L). Results for methylene chloride and acetone that are less than ten times the highest blank level should be reported as not detected in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for environmental samples.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences were below the allowable maximums and the percent recoveries were within control limits for MS/MSD sample EP-1H(-13).

Laboratory Control Sample: The percent recoveries (%Rs) were within QC limits for LCSs 60572-002, 60574-002, 60741-002, and 60508-002.

The %Rs for carbon tetrachloride and 1,2-dichloroethane were above QC limits for LCS 60573-002. Positive results for carbon tetrachloride and 1,2-dichloroethane should be considered estimates (J) in associated aqueous samples.

The %R for dibromochloromethane was below QC limits for LCS 60521-002. Results for dibromochloromethane should be considered estimates (J) in associated soil samples.

Field Duplicate: The relative percent difference for xylenes (50%) was above the allowable maximum (35%) for field duplicate pair EP-1D(-13) and DUPLICATE3-012006 (attached table). The results for xylenes should be considered estimates (J) in samples EP-1D(-13) and DUPLICATE3-012006.

Compound ID: Checked compounds were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

**QA/QC Review of TAL Metals Data
for STL Connecticut, Job No. 211919**

**5 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected January 20, 2006**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were analyzed within the EPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recovery (%R) for silver (87%) was below control limits (90-110%) on 01-24-06@1657. All results for silver should be considered estimates (J) in associated samples.

The %Rs for calcium (111%), chromium (111%), cobalt(123%), and zinc (114%) were above control limits (90-110%) on 01-24-06@1810. Positive results for these metals should be considered estimates (J) in associated samples.

CRDL Standard: The percent recovery for target metals were within laboratory QC limits (50-150%) for CRDL standards.

Blanks: The analyses for initial and continuing calibration and field blanks reported TAL metals as below the CRDLs, as required.

The aqueous method blank contained manganese (29.2 ug/L) above the CRDL. No action was taken because the field blank reported manganese as not detected.

ICP Interference Check Sample: The percent recoveries (%Rs) for TAL metals were within control limits (80-120%) for the soil check sample.

The %R for thallium was below control limits (80-120%) for the aqueous check sample. Results for thallium should be considered estimates (J) in applicable aqueous samples.

Spike Sample Recovery: The percent recoveries (%Rs) for arsenic (160%) and lead (127%) were above control limits for aqueous spike sample 211946-1S. Positive results for arsenic and lead should be considered estimates (J) in aqueous samples.

The %Rs for antimony (13%), cadmium (73%), mercury (73%), selenium (69%), and thallium (56%) were below control limits (75-125%) for soil spike sample EP-1H(-13)S. The %Rs for arsenic (133%), calcium (187%), and zinc (126%) were above control limits (75-125%) for soil spike sample EP-1H(-13)S. All results for antimony, cadmium, mercury, selenium, and thallium should be considered estimates (J) in soil samples. Positive results for arsenic, calcium, and zinc should be considered estimates (J) in soil samples.

Laboratory Duplicates: The relative percent differences(RPDs) for barium (44.9%) and iron (154.0%) were above the allowable maximum (35% for soil) for aqueous duplicate sample 211946-1D. Positive results for these metals should be considered estimates (J) in aqueous samples.

The RPDs for fourteen metals (attached table) were above the allowable maximum (35% for soil) for soil duplicate sample EP-1H(-13)D. Positive results for these metals should be considered estimates (J) in soil samples.

Field Duplicates: The relative percent differences for calcium (36%), copper (36%), manganese(43%), potassium (40%), sodium (52%), and vanadium (38%) were above the allowable maximum (35%) for field duplicate pair EP-1D(-13) and DUPLICATE3-012006 (attached table). The results for these metals should be considered estimates (J) in samples EP-1D(-13) and DUPLICATE3-012006.

Laboratory Control Sample: The percent recoveries (%Rs) for TAL metals were within QC limits (80-120%) for the aqueous LCS.

The %R for sodium (78%) was below QC limits (80-120%) for the soil LCS. All results for sodium should be considered estimates (J) in soil samples.

ICP Serial Dilution: The %Ds for applicable target metals were below the allowable maximum (10%) for serial dilution sample EP-1H(-13)L, as required.

Instrument Detection Limits: The IDLs were at or below CRDLs, as required.

Percent Solids: The percent solids for soil samples were greater than 50%, as required.

**QA/QC Review of Thallium by GFAA Data
for STL Connecticut, Job No. 211919**

**5 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected January 20, 2006**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were analyzed within the EPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for thallium were within control limits (80-120% for Hg, 90-110% for all other metals, 85-115% for cyanide).

CRDL Standard: The percent recovery for thallium was within laboratory QC limits (50-150%) for CRDL standards.

Blanks: The analyses for initial and continuing calibration, method, and field blanks reported thallium as below the CRDLs, as required.

Spike Sample Recovery: The percent recovery for thallium was within control limits for spike samples EP-1H(-13)S.

Laboratory Duplicates: The relative percent difference for thallium was below the allowable maximum (35%) for duplicate sample EP-1H(-13)D, as required.

Field Duplicates: The analyses of field duplicates EP-1D(-13) and DUPLICATE3-012006 reported thallium as not detected; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Laboratory Control Sample: The recoveries for thallium were within QC limits for soil LCSs.

Percent Solids: The percent solids for soil samples were greater than 50%, as required.

**Data Usability Summary Report
for STL Connecticut, Job No. 211990**

**7 Soil Samples, 1 Duplicate,
1 Field Blank, and 1 Trip Blank
Collected January 26, 2006**

Prepared by: Donald Anné
March 30, 2006

The data packages contain the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data packs contained the results of volatile, semi-volatile, PCB, TAL metal and cyanide analyses for 7 soil samples, 1 duplicate, and 1 field blank, and only volatile analyses for 1 trip blank.

The overall performances of the analyses are acceptable. STL Connecticut did fulfill the requirements of the analytical methods.

The majority of the data are acceptable with some issues that are identified in the accompanying data validation reviews. The following data were flagged:

- The positive results for acetone were flagged as “not detected” (U) in all 7 soil samples and the duplicate because the concentrations of acetone in the samples were not significantly greater (more than ten times) than the level in the associated method blank.
- The positive results for methylene chloride were flagged as “not detected” (U) in the following samples because the concentrations of methylene chloride in the samples were not significantly greater (more than ten times) than the level in the associated trip blank.

EP-1A(-9)	EP-1B(-13)	EP-2B(-13)
EP-2C(-13)	EP3B(-13)	DUPLICATE 4-012606
- The “not detected” results for tetrachloroethene and styrene were flagged as estimates (J) in the following samples because the percent recoveries for these two compounds were below QC limits for LCS 60795-002.

EP-1A(-9)	EP-1B(-13)	EP-1C(-13)	EP-2B(-13)
EP-3B(-13)	EP3C(-13)	DUPLICATE 4-012606	

- There were semi-volatile results for some compounds in samples EP-1A(-9) and EP-1B(-13) that were quantitated using data that were extrapolated beyond the highest calibration standard and flagged "A" by the laboratory. Results for these compounds marked "A" in the undiluted samples were qualified as estimates (J).
- The positive result for bis(2-ethylhexyl)phthalate was flagged as "not detected" (U) in sample FIELD BLANK(FB)-012606 because the concentrations of bis(2-ethylhexyl)phthalate in the sample was not significantly greater (more than ten times) than the level in the associated method blank.
- The "not detected" results for antimony were flagged as estimates (J) in all 7 soil samples and the duplicate because the percent recovery for antimony was below control limits, but was not less than 10% in soil spike sample EP-1A(-9)S.
- Positive results for chromium, lead, sodium, and vanadium were flagged as estimates (J) in all 7 soil samples and the duplicate because the percent recoveries for these metals were above control limits in soil spike sample EP-1A(-9)S.
- Positive results for calcium were flagged as estimates (J) in samples EP-3B(-13) and DUPLICATE 4-012606 because the relative percent difference for calcium was above the allowable maximum in field duplicate pair EP-3B(-13) and DUPLICATE 4-012606.
- All results for cyanide were flagged as estimates (J) in all 7 soil samples and the duplicate because the percent recovery for cyanide was below control limits, but was not less than 10% in soil spike sample EP-1A(-9)S.

All data are considered usable, with estimated (J) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

**QA/QC Review of Volatiles Data
for STL Connecticut, Job No. 211990**

**7 Soil Samples, 1 Duplicate,
1 Field Blank, and 1 Trip Blank
Collected January 26, 2006**

Prepared by: Donald Anné
March 30, 2006

Holding Times: Samples were analyzed within NYSDEC holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The SPCCs and CCCs were within control limits for method 8260B.

The average RRFs for target compounds were above the allowable minimum (0.050), as required.

The %RSDs for acetone (30.1%) and methylene chloride (48.3%) were above the allowable maximum (30%) for MSY on 11-23-05. Positive results for these two compounds should be considered estimates (J) in associated samples.

Continuing Calibration: The SPCCs and CCCs were within control limits for method 8260B.

The RRF50s for target compounds were above the allowable minimum (0.050), as required.

The %D for acetone (38.3%) was above the allowable maximum (25%) on 01-30-06 (N3840). The %Ds for acetone (30.0%), 2-butanone (27.8%), 4-methyl-2-pentanone (28.5%), and 2-hexanone (38.0%) were above the allowable maximum (25%) on 02-01-06 (N3899). The %Ds for bromomethane (43.5%) and methylene chloride (31.9%) were above the allowable maximum (25%) on 02-03-06 (Y2265). Positive results for these compounds should be considered estimates (J) in associated samples.

Blanks: The trip blank contained an unacceptable level of acetone, 1300 ug/L. No action was taken because all samples with detectable acetone were flagged as not detected since the level in the sample was not significantly greater than the associated method blank.

Method blank, 60795-001, contained a trace of acetone (7.914 ug/kg). Method blank, 60994-001, contained traces of acetone (4.979 ug/kg) and toluene (0.919 ug/kg). Field blank, FB-012606, contained traces of acetone (3.1 ug/L), methylene chloride (0.56 ug/L), and 2-butanone (5.7 ug/L). Trip blank, TRIP BLANK, contained traces of methylene chloride (3.3 ug/L), 2-butanone (8.1 ug/L), and 4-methyl-2-pentanone (1.9 ug/L). Positive results for methylene chloride, acetone, and 2-butanone that are less than ten times the highest blank level (after accounting for sample size, moisture content and dilutions) should be reported as not detected in associated samples. Positive results for 4-methyl-2-pentanone and toluene that are less than five times the highest blank level should be reported as not detected in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for environmental samples.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences were below the allowable maximums and the percent recoveries were within control limits for MS/MSD sample EP-1A(-9).

Laboratory Control Sample: The percent recoveries (%Rs) were within QC limits for LCSs 60994-002 and 61101-002.

The %Rs for tetrachloroethene and styrene were below QC limits for LCS 60795-002. Results for tetrachloroethene and styrene should be considered estimates (J) in associated soil samples.

Field Duplicate: The relative percent differences for detected compounds were below the allowable maximum (35%) for field duplicate pair EP-3B(-13) and DUPLICATE 4-012606, as required (attached table).

Compound ID: Checked compounds were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Volatiles

Calculations for Field Duplicate Relative Percent Difference (RPD)

Water Supply

**QA/QC Review of Semi-Volatiles Data
for STL Connecticut, Job No. No. 211990**

**7 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected January 26, 2006**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were extracted and analyzed within NYSDEC holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The SPCCs and CCCs were within control limits for method 8270C.

The average RRFs for target compounds were above the allowable minimum (0.050) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The SPCCs and CCCs were within control limits for method 8270C.

The RRF40s for target compounds were above the allowable minimum (0.050), as required.

The %D for 2,4-dinitrophenol (45.0%) was above the allowable maximum (25%) on 01-31-06 (P9369). Positive results for 2,4-dinitrophenol should be considered estimates (J) in associated samples.

Blanks: Method blank, 60898-001, contained a trace of bis(2-ethylhexyl)phthalate (1.98 ug/L). Results for bis(2-ethylhexyl)phthalate that are less than ten times the method blank level should be reported as not detected in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: One of three base/neutral surrogate recoveries for sample FIELD BLANK (FB)-012606 was above control limits. No action is taken on one surrogate per fraction outside control limits, provided no recovery is less than 10%.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences were below the allowable maximums and the percent recoveries were within control limits for MS/MSD sample EP-1A(-9).

Laboratory Control Sample: The percent recoveries (%Rs) for several compounds were above QC limits for aqueous LCS 60898-002. No action is taken because the field blank reported these compounds as not detected..

The %R for 2,4-dinitrophenol was above QC limits for LCS 60903-002. Positive results for 2,4-dinitrophenol should be considered estimates (J) in associated soil samples.

Field Duplicate: The analyses of field duplicates EP-3B(-13) and DUPLICATE 4-012606 reported target compounds as either not detected or below the reporting limit; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Compound ID: Checked compounds were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

There were semi-volatile results for samples EP-1A(-9) and EP-1B(-13) that were quantitated by extrapolating data above the highest calibration standard and marked 'A' by the laboratory. The samples were diluted by the laboratory and re-analyzed; therefore, the results for compounds that are flagged as 'A' in the undiluted samples should be considered estimates (J) and the use of the diluted results for those compounds is recommended. It is recommended that the undiluted results be used for all other compounds.

**QA/QC Review of PCB Aroclor Data for
STL Connecticut, STL Job No. 211990**

**5 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected January 26, 2006**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were extracted and analyzed within EPA SW-846 holding times.

Blanks: The analyses of the instrument, method, and field blanks reported target aroclors as not detected.

Surrogate Recovery: Two of two surrogate recoveries for sample EP-1B(-13) were above advisory limits. Positive results for sample EP-1B(-13) should be considered estimates (J).

Matrix Spike/Matrix Spike Duplicate: The relative percent differences were below the allowable maximums and percent recoveries were within QC limits for MS/MSD sample EP-1H(-13). (Note the associated MS/MSD data is from job number 211919)

Laboratory Control Sample: The percent recoveries were within QC limits for LCSs 60953-003 and 61225-002.

Field Duplicates: The analyses of field duplicates EP-3B(-13) and DUPLICATE 4-012606 reported target aroclors as not detected; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Initial Calibration: The %RSDs for target aroclors were below the allowable maximum (20%) for primary and confirmation columns, as required.

Continuing Calibration: The average %Ds for target aroclors were below the allowable maximum (15%) for both columns, as required.

Pesticide Analytical Sequence: The retention times for TCX and DCB were within control limits for both columns.

Pesticide Identification Summary for Single Component Analytes: Checked surrogates were within GC quantitation limits. The analyses of samples in this data pack reported target aroclors as not detected.

**QA/QC Review of TAL Metals Data
for STL Connecticut, Job No. 211990**

**7 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected January 26, 2006**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were analyzed within the EPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for TAL metals were within control limits (80-120% for Hg, 90-110% for all other metals).

CRDL Standard: The percent recoveries for target metals were within laboratory QC limits (50-150%) for the aqueous CRDL standard.

The %R for lead was above laboratory QC limits (50-150%) for the soil CRDL standard. Positive results for lead that are less than two times the reporting limit should be considered estimates (J) in soil samples.

Blanks: The analyses for initial and continuing calibration and field blanks reported TAL metals as below the CRDLs, as required.

The aqueous method blank contained manganese (29.2 ug/L) above the CRDL. No action was taken because the field blank reported manganese as not detected.

ICP Interference Check Sample: The percent recoveries (%Rs) for TAL metals were within control limits (80-120%) for the soil check sample.

The %R for thallium was below control limits (80-120%) for the aqueous check sample. Results for thallium should be considered estimates (J) in applicable aqueous samples.

Spike Sample Recovery: The percent recoveries (%Rs) for TAL metals were within control limits for the aqueous spike sample 211982-1S.

The %R for antimony (22%) was below control limits (75-125%) for soil spike sample EP-1A(-9)S. The %Rs for beryllium (133%), chromium (146%), lead (143%), sodium (126%), and vanadium (133%) were above control limits (75-125%) for soil spike sample EP-1A(-9)S.

All results for antimony, and positive results for beryllium, chromium, lead, sodium, and vanadium should be considered estimates (J) in soil samples.

Laboratory Duplicates: The relative percent differences (RPDs) for applicable metals were below the allowable maximum (20% for aqueous, 35% for soil) for aqueous duplicate sample 211982-1D and soil duplicate sample EP-1A(-9)D, as required.

Field Duplicates: The relative percent difference for calcium (46%) was above the allowable maximum (35%) for field duplicate pair EP-3B(-13) and DUPLICATE 4-012606 (attached table). The results for calcium should be considered estimates (J) in samples EP-3B(-13) and DUPLICATE 4-012606.

Laboratory Control Sample: The percent recoveries for target metals were within QC limits for soil and aqueous LCSs.

ICP Serial Dilution: The %Ds for applicable target metals were below the allowable maximum (10%) for serial dilution sample EP-1A(-9)L, as required.

Instrument Detection Limits: The IDLs were at or below CRDLs, as required.

Percent Solids: The percent solids for soil samples were greater than 50%, as required.

**Data Usability Summary Report
for STL Connecticut, Job No. 212066**

**5 Soil Samples, 1 Duplicate,
1 Field Blank, and 1 Trip Blank
Collected February 3, 2006**

**Prepared by: Donald Anné
March 30, 2006**

The data packages contain the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data packs contained the results of volatile, semi-volatile, PCB, TAL metal and cyanide analyses for 5 soil samples, 1 duplicate, and 1 field blank, and only volatile analyses for 1 trip blank.

The overall performances of the analyses are acceptable. STL Connecticut did fulfill the requirements of the analytical methods.

The majority of the data are acceptable with some issues that are identified in the accompanying data validation reviews. The following data were flagged:

- The positive results for methylene chloride were flagged as “not detected” (U) in all 5 soil samples and the duplicate because the concentrations of methylene chloride in the samples were not significantly greater (more than ten times) than the level in the associated method blanks.
- The positive results for acetone were flagged as “not detected” (U) in all five soil samples and the duplicate because the concentrations of acetone in the samples were not significantly greater (more than ten times) than the level in the associated field blank.
- The positive result for 2-butanone was flagged as “not detected” (U) in the following sample EP-4A(-8) because the concentrations of 2-butanone in the samples were not significantly greater (more than ten times) than the level in the associated field blank.
- The “not detected” results for tetrachloroethene were flagged as estimates (J) in samples EP-2A(-9)DL and DUPLICATE 5-020306DL because the percent recovery for tetrachloroethene was below QC limits for LCS 61571-002.

- All results for volatiles were flagged as estimates (J) in samples EP-2A(-9) and DUPLICATE 5-020306 because one of four surrogate recoveries was below control limits for these two samples.
- There were volatile results for some compounds in samples EP-2A(-9) and DUPLICATE 5-020306 that were quantitated using data that were extrapolated beyond the highest calibration standard and flagged "A" by the laboratory. Results for these compounds marked "A" in the undiluted samples were qualified as estimates (J).
- There were semi-volatile results for some compounds in samples EP-2A(-9) and DUPLICATE 5-020306 that were quantitated using data that were extrapolated beyond the highest calibration standard and flagged "A" by the laboratory. Results for these compounds marked "A" in the undiluted samples were qualified as estimates (J).
- Positive results for naphthalene were flagged as estimates (J) in samples EP-2A(-9) and DUPLICATE 5-020306 because the relative percent differences for naphthalene were above the allowable maximum in field duplicate pair EP-2A(-9) and DUPLICATE 5-020306.
- The results for several semi-volatile compounds were flagged as estimates (J) in samples EP-2A(-9) and DUPLICATE 5-020306 because these compounds were above the reporting limit in sample EP-2A(-9), but reported as either below the reporting limit or not detected in DUPLICATE 5-020306 .
- The "not detected" results for thallium were flagged as estimates (J) in all 5 soil samples and the duplicate because the percent recovery for thallium was below control limits, but was not less than 10% in soil spike sample EP-4B(-13)S.
- The "not detected" results for antimony were flagged as unusable (R) in all 5 soil samples and the duplicate because the percent recovery for antimony was below control limits and was less than 10% in soil spike sample EP-4B(-13)S.
- Positive results for calcium were flagged as estimates (J) in all 5 soil samples and the duplicate because the relative percent difference for calcium was above the allowable maximum in soil duplicate sample EP-4B(-13)D.
- Positive results for barium, copper, lead, manganese, and zinc were flagged as estimates (J) in samples EP-2A(-9) and DUPLICATE 5-020306 because the relative percent differences for these metals were above the allowable maximum in field duplicate pair EP-2A(-9) and DUPLICATE 5-020306.

- The positive result for potassium was flagged as estimated (J) in sample FIELD BLANK(FB)-020306 because the percent recovery for potassium was below QC limits in the aqueous LCS.
- The positive result for cyanide was flagged as estimated (J) in sample EP-2A(-9) because the percent recovery for cyanide was below control limits and was less than 10% in soil spike sample EP-4B(-13)S.
- The “not detected” results for cyanide were flagged as unusable (R) in the following samples because the percent recovery for cyanide was below control limits and was less than 10% in soil spike sample EP-4B(-13)S.
EP-4B(-13) EP-4C(-13) EP-3A(-8.5) EP-4A(-8) DUPLICATE 5-020306

All data that are not flagged rejected (R) are considered usable, with estimated (J) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

**QA/QC Review of Volatiles Data
for STL Connecticut, Job No. 212066**

**5 Soil Samples, 1 Duplicate,
1 Field Blank, and 1 Trip Blank
Collected February 3, 2006**

Prepared by: Donald Anné
March 30, 2006

Holding Times: Samples were analyzed within NYSDEC holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The SPCCs and CCCs were within control limits for method 8260B.

The average RRFs for target compounds were above the allowable minimum (0.050), as required.

The %RSD for methylene chloride (48.3%) was above the allowable maximum (30%) for MSY on 11-23-05. Positive results for methylene chloride should be considered estimates (J) in associated samples.

Continuing Calibration: The SPCCs and CCCs were within control limits for method 8260B.

The RRF50s for target compounds were above the allowable minimum (0.050), as required.

The %D for bromomethane (49.7%) was above the allowable maximum (25%) on 02-14-06 (L7574). The %D for acetone (26.7%) was above the allowable maximum (25%) on 02-13-06 (N4180). The %D for methylene chloride (31.3%) were above the allowable maximum (25%) on 02-03-06 (Y2265). Positive results for these compounds should be considered estimates (J) in associated samples.

Blanks: Method blank, 61571-001, contained a trace of methylene chloride (44.373 ug/kg). Method blank, 61551-001, contained a trace of methylene chloride (8.733 ug/kg). Field blank, FB-020306, contained traces of acetone (7.4 ug/L), methylene chloride (1.7 ug/L), and 2-butanone (7.0 ug/L). Trip blank, TRIP BLANK, contained traces of acetone (1.7 ug/L) and methylene chloride (0.92 ug/L). Results for methylene chloride, acetone, and 2-butanone that are less than ten times the highest blank level should be reported as not detected (U) in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: One of four surrogate recoveries for samples EP-2A(-9) and DUPLICATE 5-020306 was below control limits, but was not less than 10%. All results for samples EP-2A(-9) and DUPLICATE 5-020306 should be considered estimates (J).

Matrix Spike/Matrix Spike Duplicate: Six of thirty-four relative percent differences were above the allowable maximums and 9 of 68 %Rs (percent recoveries) were outside control limits for MS/MSD sample EP-4B(-13). No action is taken on MS/MSD data alone to qualify or reject an entire set of samples.

Laboratory Control Sample: The percent recoveries (%Rs) were within QC limits for aqueous LCS 61541-002.

The %R for acetone was above QC limits for soil LCS 61551-002. The %R for tetrachloroethene was below QC limits for soil LCS 61571-002. Positive results for acetone and all results for tetrachloroethene should be considered estimates (J) in associated soil samples.

Field Duplicate: The relative percent differences (RPDs) for applicable detected compounds were below the allowable maximum (35%) for field duplicate pair EP-2A(-9)DL and DUPLICATE 5-020306DL, as required (attached table).

The RPD for xylenes (43%) was above the allowable maximum (35%) for field duplicate pair EP-2A(-9) and DUPLICATE 5-020306 (attached table). Results for xylenes in samples EP-2A(-9) and DUPLICATE 5-020306 should be considered estimates (J).

Compound ID: Checked compounds were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

There were volatile results for samples EP-2A(-9) and DUPLICATE 5-020306 that were quantitated by extrapolating data above the highest calibration standard and marked 'A' by the laboratory. The samples were diluted by the laboratory and re-analyzed; therefore, the results for compounds that are flagged as 'A' in the undiluted samples should be considered estimates (J) and the use of the diluted results for those compounds is recommended. It is recommended that the undiluted results be used for all other compounds.

Volatiles

Calculations for Field Duplicate Relative Percent Difference (RPD)

SDG No. 212066

S1= ep-2a(-9)

S2= duplicate 5-020306

<u>Analyte</u>	<u>S1</u>	<u>S2</u>	<u>RPD (%)</u>
carbon disulfide	3.7	3	NC
acetone	35	33	NC
methylene chloride	14	11	NC
benzene	790	670	16%
toluene	170	140	19%
xylene	1700	1100	43%

Bold results are below the RLs.

ND - Compound was reported as not detected.

NC - Not Calculated, both results must be above the RL for valid %RPDs to be calculated.

**QA/QC Review of Semi-Volatiles Data
for STL Connecticut, Job No. No. 212066**

**5 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected February 3, 2006**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were extracted and analyzed within NYSDEC holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The SPCCs and CCCs were within control limits for method 8270C.

The average RRFs for target compounds were above the allowable minimum (0.050) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The SPCCs and CCCs were within control limits for method 8270C.

The RRF40s for target compounds were above the allowable minimum (0.050) and the %Ds were below the allowable maximum (25%), as required.

Blanks: The analyses of method and field blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: One of three base/neutral surrogate recoveries for sample FIELD BLANK (FB)-020306 was above control limits. No action is taken on one surrogate per fraction outside control limits, provided no recovery is less than 10%.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences were below the allowable maximums and the percent recoveries were within control limits for MS/MSD sample EP-4B(-13).

Laboratory Control Sample: The percent recoveries (%Rs) for target compounds were within QC limits for aqueous LCS 61316-002.

The %R for 2,4-dinitrophenol was above QC limits for LCS 60903-002. Positive results for 2,4-dinitrophenol should be considered estimates (J) in associated soil samples.

Field Duplicate: The relative percent differences for naphthalene were above the allowable maximum (35%) for field duplicate pair EP-2A(-9) and DUPLICATE 5-020306 (attached tables). Results for naphthalene should be considered estimates (J) in samples EP-2A(-9) and DUPLICATE 5-020306.

There were several compounds for sample EP-2A(-9) that were above the reporting limits, but were reported as not detected or below the reporting limits in field duplicate DUPLICATE 5-020306 (attached tables). Results for these compounds should be considered estimates (J) in samples EP-2A(-9) and DUPLICATE 5-020306.

Compound ID: Checked compounds were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

There were semi-volatile results for samples EP-2A(-9) and DUPLICATE 5-020306 that were quantitated by extrapolating data above the highest calibration standard and marked 'A' by the laboratory. The samples were diluted by the laboratory and re-analyzed; therefore, the results for compounds that are flagged as 'A' in the undiluted samples should be considered estimates (J) and the use of the diluted results for those compounds is recommended. It is recommended that the undiluted results be used for all other compounds.

**QA/QC Review of PCB Aroclor Data for
STL Connecticut, STL Job No. 212066**

**5 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected February 3, 2006**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were extracted and analyzed within EPA SW-846 holding times.

Blanks: The analyses of the instrument, method, and field blanks reported target aroclors as not detected.

Surrogate Recovery: One of two surrogate recoveries for sample EP-2A(-9) was above advisory limits. Positive results for sample EP-2A(-9) should be considered estimates (J).

Matrix Spike/Matrix Spike Duplicate: The relative percent differences were below the allowable maximums and percent recoveries were within QC limits for MS/MSD sample EP-2B(-13).

Laboratory Control Sample: The percent recoveries were within QC limits for LCSs 61308-003 and 61532-003.

Field Duplicates: The analyses of field duplicates EP-2A(-9) and DUPLICATE 5-020306 reported target aroclors as not detected; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Initial Calibration: The %RSDs for target aroclors were below the allowable maximum (20%) for primary and confirmation columns, as required.

Continuing Calibration: The average %Ds for target aroclors were below the allowable maximum (15%) for both columns, as required.

Pesticide Analytical Sequence: The retention times for TCX and DCB were within control limits for both columns.

Pesticide Identification Summary for Single Component Analytes: Checked surrogates were within GC quantitation limits. The analyses of samples in this data pack reported target aroclors as not detected.

**QA/QC Review of TAL Metals Data
for STL Connecticut, Job No. 212066**

**5 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected February 3, 2006**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were analyzed within the EPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for TAL metals were within control limits (80-120% for Hg, 90-110% for all other metals).

CRDL Standard: The percent recoveries for target metals were within laboratory QC limits (50-150%) for the CRDL standards.

Blanks: The analyses for initial and continuing calibration, method, and field blanks reported TAL metals as below the CRDLs, as required.

ICP Interference Check Sample: The percent recoveries (%Rs) for TAL metals were within control limits (80-120%) for the soil check sample.

The %R for thallium was below control limits (80-120%) for the aqueous check sample. Results for thallium should be considered estimates (J) in applicable aqueous samples.

Spike Sample Recovery: The percent recovery (%R) for potassium (70%) was below control limits for the aqueous spike sample 212021-4S. All results for potassium should be considered estimates (J) in aqueous samples.

The %R for antimony (5%) was below control limits (75-125%) and was less than 10% for soil spike sample EP-4B(-13)S. The %R for thallium (37%) was below control limits (75-125%), but was not less than 10% for soil spike sample EP-4B(-13)S. All results for thallium and positive results for antimony should be considered estimates (J) in soil samples. Negative results for antimony should be considered unusable (R) in soil samples.

Laboratory Duplicates: The relative percent differences (RPDs) for applicable metals were below the allowable maximum (20%) for aqueous duplicate sample 212021-4D, as required.

The RPD for calcium (65%) was above the allowable maximum (35%) for soil duplicate EP-4B(-13)D. Positive results for calcium should be considered estimates (J) in soil samples.

Field Duplicates: The relative percent difference for the following metals were above the allowable maximum (35%) for field duplicate pair EP-2A(-9) and DUPLICATE 5-020306 (attached table). The results for these metals should be considered estimates (J) in samples EP-2A(-9) and DUPLICATE 5-020306.

barium (133%)

calcium (100%)

copper (90%)

lead (171%)

manganese (42%)

zinc (43%)

Laboratory Control Sample: The percent recoveries (%Rs) for target metals were within QC limits for soil LCSs.

The %R for potassium (77%) was below QC limits for the aqueous LCS. All results for potassium should be considered estimates (J) in aqueous samples.

ICP Serial Dilution: The %Ds for applicable target metals were below the allowable maximum (10%) for serial dilution sample EP-4B(-13)L, as required.

Instrument Detection Limits: The IDLs were at or below CRDLs, as required.

Percent Solids: The percent solids for soil samples were greater than 50%, as required.

**QA/QC Review of Thallium by GFAA Data
for STL Connecticut, Job No. 212066**

**5 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected February 3, 2006**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were analyzed within the EPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for thallium were within control limits (80-120% for Hg, 90-110% for all other metals, 85-115% for cyanide).

CRDL Standard: The percent recovery for thallium was within laboratory QC limits (50-150%) for CRDL standards.

Blanks: The analyses for initial and continuing calibration, method, and field blanks reported thallium as below the CRDLs, as required.

Spike Sample Recovery: The percent recovery for thallium was within control limits for spike samples EP-4C(-13)S.

Laboratory Duplicates: The analyses of duplicates EP-4C(-13) and EP-4C(-13)D reported thallium as either not detected or below the reporting limit; therefore, valid relative percent differences could not be calculated. The analysis for the laboratory duplicate was acceptable.

Field Duplicates: The analyses of field duplicates EP-2A(-9) and DUPLICATE 5-020306 reported thallium as not detected; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Laboratory Control Sample: The recoveries for thallium were within QC limits for soil LCSs.

Percent Solids: The percent solids for soil samples were greater than 50%, as required.

**QA/QC Review of Cyanide Data
for STL Connecticut, Job No. 212066**

**5 Soil Samples, 1 Duplicate,
and 1 Field Blank
Collected February 3, 2006**

**Prepared by: Donald Anné
March 30, 2006**

Holding Times: Samples were analyzed within the NYSDEC holding times.

Initial and Continuing Calibration Verification: The percent recoveries for cyanide were within control limits (90-110%).

Blanks: The analyses of the calibration and method blanks reported total cyanide as not detected.

Spike Sample Recovery: The percent recovery for cyanide (0%) was below control limits (75-125%) and less than 10% in soil spike sample EP-4B(-13)S. Positive results for cyanide should be considered estimates (J) and negative results unusable (R) in soil samples.

Laboratory Duplicates: The analyses of EP-1A(-9) and EP-1A(-9)D reported cyanide as not detected; therefore, valid relative percent differences could not be calculated. The analyses for the laboratory duplicate pair were acceptable.

Field Duplicates: Cyanide was reported significantly above the reporting limit in sample EP-2A(-9), but was reported as not detected in DUPLICATE 5-020306. Results for cyanide should be considered estimates (J) in samples EP-2A(-9) and DUPLICATE 5-020306.

Laboratory Control Sample: The percent recoveries for cyanide were within control limits in LCSs.
