OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.: Langan was present to document remediation activities in accordance with the NYSDEC-approved November 2021 Remedial Action Work Plan (RAWP) at the 250 Water Street site (NYSDEC Brownfield Cleanup Program [BCP] Site No C231127). Site Activities <ul style="list-style-type: none"> • ECD used a Bauer RTG RG 27S drill rig to pre-drill one borehole in the southwest part of the site and one borehole in the northern part of the site to loosen the underlying soil in preparation for soil mix column installation. • ECD used a Bauer BG45 drill rig to install one deep soil mix column for the support-of-excavation (SOE) system installation in the northern part of site (along Pearl Street) and to install one deep soil mix column in the southwest part of the site (along Beekman Street). ECD's drill rig advanced a steel rod with two cutter blades at the bottom of the rod, while concurrently injecting grout through the cutting head and spinning and advancing the blades downward to depths of about 110 and 113 feet below grade surface (bgs), respectively. <ul style="list-style-type: none"> ○ No drilling spoils were generated during installation of the soil mix columns. ○ Excess grout was contained within a temporary containment area in the southern part of the site and will be managed as construction and demolition (C&D) debris at a later date. • ECD installed four tiebacks for the SOE system in the northern part of the site (along Pearl Street). • ECD graded soil/fill in an about 40-foot-long by 20-foot-wide area in the north-central part of the site to stabilize the surface for SOE system installation.

SITE OBSERVATION REPORT

- Graded soil/fill was screened for odors, staining, organic vapors, and mercury vapor using a handheld PID and handheld Jerome® J505 mercury vapor analyzer, respectively. Evidence of impacts was not observed.
- ECD graded soil/fill in an about 70-foot-long by 70-foot-wide area in the eastern part of the to stabilize the surface for SOE system installation.
 - Graded soil/fill was screened for odors, staining, organic vapors, and mercury vapor using a handheld PID and handheld Jerome® J505 mercury vapor analyzer, respectively. Evidence of impacts was not observed. Excess soil/fill generated from grading was stockpiled in southeastern part of site pending future off-site disposal.

Material Tracking

- ECD exported four truckloads (about 80 cubic yards [CY]) of non-hazardous soil/fill for off-site disposal at the Harmony Foul Rift (HFR) facility located in Belvidere, NJ.
- No material was imported to site.

*0.75-inch, 1.5-inch, and 2.5-inch virgin stone from the Stone Industries, Inc. facility and 1.5-inch clean bluestone from the Impact Reuse & Recovery Center (IRRC) facility were approved for import of 1,000 cubic yards (CY) and 400 CY, respectively. Assuming a conversion factor of 1.8, each quantity was converted to tons in order to accurately compare with import weight tickets. General fill from the IRRC facility was approved for import of 13,000 CY and a conversion factor of 1.5 is applied.

SITE OBSERVATION REPORT

CAMP Activities

Langan performed air monitoring at the perimeter of the site, at the northern sidewalk of Pearl Street, at the western sidewalk of Beekman Street, at the eastern sidewalk of Peck Slip, and at the southern sidewalk of Water Street at eight total locations for mercury vapor, volatile organic compounds (VOCs), and particulate matter less than 10 microns in diameter (PM10) from about 7:31am to 5:00pm. There were no fifteen-minute average concentrations for mercury vapor, VOCs or PM10 that approached or exceeded the action levels established by the CAMP (1.00 µg/m³, 5.0 ppm, or 0.100 mg/m³, respectively).

Background Concentrations

Prior to implementation of CAMP, instantaneous background concentrations of mercury vapor and VOCs were recorded using a handheld Jerome® J505 mercury vapor analyzer and a handheld PID, respectively.

- Background concentrations of mercury vapor at each CAMP station were recorded at 0.00 µg/m³.
- Background concentrations of VOCs at each CAMP station were recorded at 0.0 ppm.

SITE OBSERVATION REPORT

Ambient Air (Handheld Jerome® J505 and Handheld PID)

- The dedicated mobile monitor (Langan) used a handheld Jerome® J505 mercury vapor analyzer to monitor ambient air conditions at various heights throughout the site. Instantaneous mercury vapor concentrations throughout the site ranged from 0.00 µg/m³ to 0.15 µg/m³, with the exception of periodic instantaneous mercury vapor readings recorded up to a maximum value of 0.75 ug/m³. Mercury vapor readings at perimeter CAMP stations remained at background concentrations throughout the workday and no source of mercury vapor was identified. The periodic mercury vapor readings are suspected to be the result of sediment build-up within the filter of the Jerome® J505 unit. The filter inside of the handheld Jerome® J505 was replaced at the end of the day.
- The dedicated mobile monitor (Langan) used a handheld PID to monitor VOC concentrations throughout the site. Instantaneous VOC concentrations were not detected above background concentrations throughout the workday.

Off-site CAMP Stations

- CAMP station WZ-1 was placed on the western sidewalk of Beekman Street from about 6:23am to 5:35pm.
- CAMP station WZ-2 was placed on the southern sidewalk of Water Street from about 6:46am to 5:40pm.
- CAMP station WZ-3 was placed on the eastern sidewalk of Peck Slip from about 6:32am to 5:33pm.
- CAMP station WZ-4 was placed on the northern sidewalk of Pearl Street from about 6:18am to 5:47pm.

Prior to CAMP Shutdown

Prior to discontinuing CAMP, mercury vapor and VOC concentrations were confirmed to return to background conditions at each perimeter station using the handheld Jerome® J505 mercury vapor analyzer and handheld PID, respectively. Perimeter CAMP stations were discontinued sequentially between 5:00pm and 5:22pm.

- Background concentrations of mercury vapor at each CAMP station were recorded at 0.00 µg/m³.
- Background concentrations of VOCs at each CAMP station were recorded at 0.0 ppm.

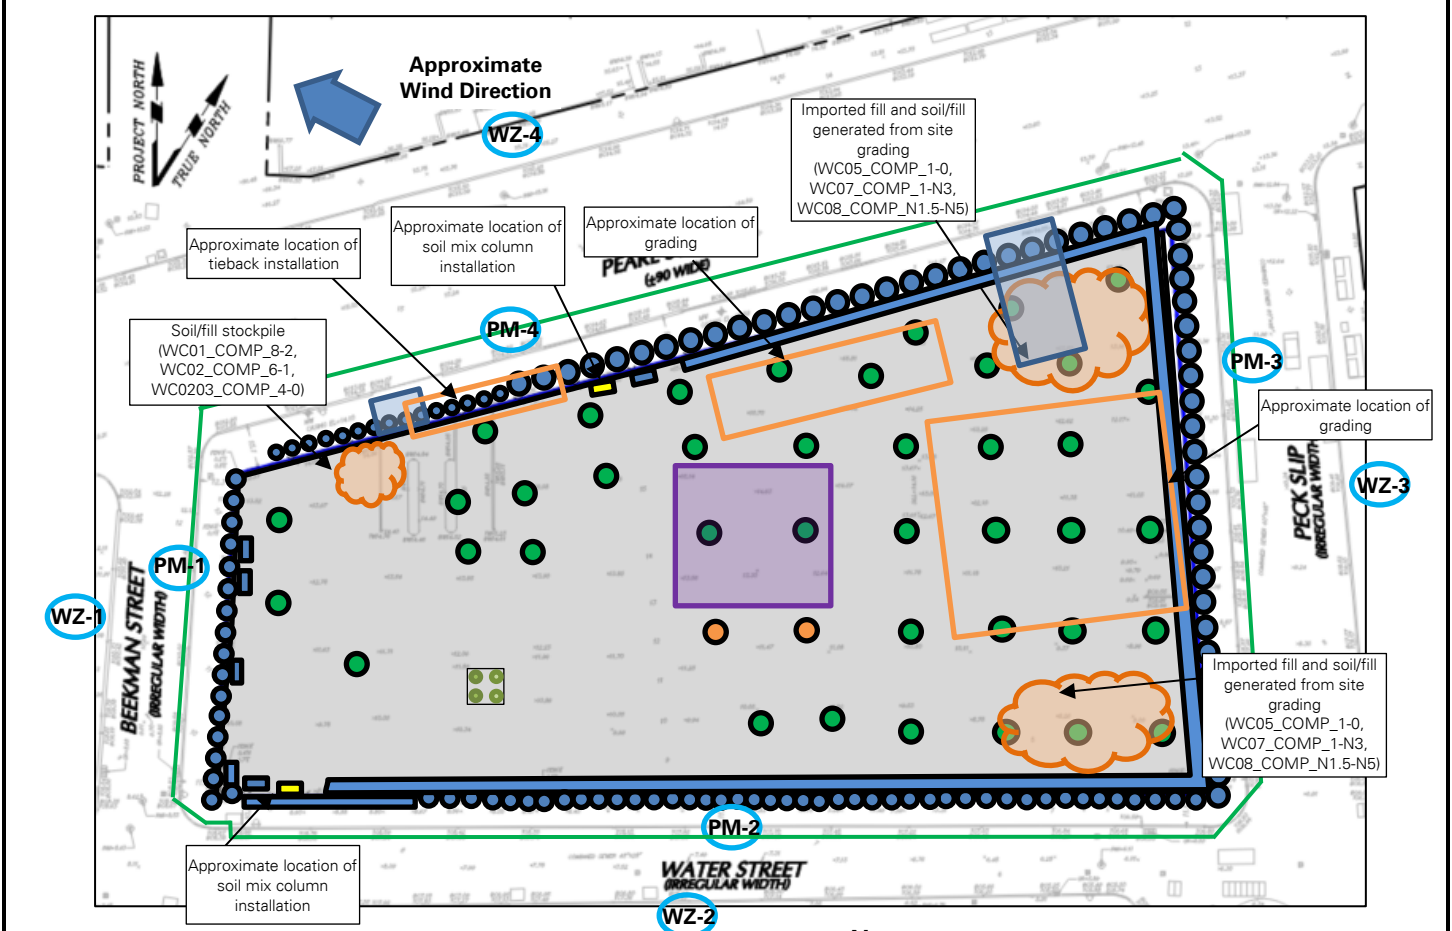

Anticipated Activities

- ECD will continue exporting soil/fill across the site for off-site disposal.
- ECD will continue installing soil mix columns and/or secant piles for SOE system installation along Beekman, Pearl and Water Streets.
- ECD will continue installing tiebacks for the SOE system along Beekman and Pearl Streets.
