CERTIFICATION

I, Michael Burke, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(tt). I have primary direct responsibility for implementation of the Remedial Investigation for the 551 Greenwich Street site (OER Project Number 18TMP0891M/18EHAN326M). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Qualified Environmental Professional

Signature

EXECUTIVE SUMMARY

This Remedial Investigation Report (RIR) for 551 Greenwich Street in New York, New York (the site) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives and selection of a remedy pursuant to RCNY§ 43-1407(f). The site was assigned an E-Designation (E-288) by the New York City Department of City Planning (NYCDCP) as part of the March 20, 2013 Hudson Square Rezoning (City Environmental Quality Review [CEQR] No. 12DCP045M). The E-Designation for hazardous materials requires an environmental assessment of soil, groundwater and soil vapor. The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The approximately 19,940-square-foot site is bound by King Street to the north, a 17-story commercial office building to the east, Charlton Street to the south, and Greenwich Street to the west. The site is identified as Block 598, Lots 42 and 48 on the New York City Manhattan Borough Tax Map and is currently improved with a one-story building built circa 1930 (Lot 42) and an open-air parking lot (Lot 48) surrounded by a chain-link fence. The one-story building contains a partial cellar (about 130 square feet) in the northwestern portion of the lot. According to the May 24, 2018 American Land Title Association (ALTA)/National Society of Professional Surveyors (NSPS) Land Title Survey, prepared by Langan, the site elevation (el) ranges from el 10.77¹ in the southern portion of the site to el 13.88 in the northeastern portion of the site.

Summary of Proposed Redevelopment Plan

The proposed development project is in the early planning stages, but it is anticipated to include a 10-story commercial office building spanning both tax lots, with ground-floor retail and one full cellar level.

Summary of Past Uses and Areas of Concern

According to the January 2009 Phase I Environmental Site Assessment (ESA) Report prepared by AKRF, Inc. (AKRF), historical site use included various commercial, manufacturing and industrial buildings from as early as 1894. Multi-story buildings occupied the northern part of the site from the 1890s until 1968, when they were demolished, and the site was occupied by an open-air parking lot (Lot 48). The southern part of the site was occupied by a one-story parking garage with a partial cellar that was constructed between 1922 and 1951 (Lot 42). Historical uses of the site include a preserves factory, a packing canned goods company, confectioners' supplies, and an express depot. Two 550-gallon gasoline underground storage tanks (UST) were located beneath the parking garage, as indicated on the 1951, 1968, 1980 and

¹ Elevations herein are in feet and referenced to the North American Vertical Datum of 1988 (NAVD88)

1994 Sanborn Fire Insurance Maps. UST documentation was not available in the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database. The surrounding area was developed prior to 1894 and included a paper box factory, coal yard, and an iron storage space across King Street to the north. No records of previous site ownership were available on the Automated City Register Information System (ACRIS).

The identified Areas of Concern (AOC) are described below:

1. On-Site Petroleum Bulk Storage – According to the Sanborn Fire Insurance Maps, the site contained two gasoline USTs from approximately 1951 to 1994. During the Phase I ESA site walk, a potential fill port was observed in the Greenwich Street sidewalk adjacent to the site, and during the remedial investigation, an anomaly indicative of a UST, an associated fill port, and vent pipes were identified in the western portion of Lot 42 adjacent to the Greenwich Street sidewalk
2. Historical Use of the Site – Historical manufacturing/industrial site use included a preserves factory, packing canned goods company, and express depot. In addition, following demolition of on-site buildings, the site was backfilled with fill of an unknown origin. Historic fill in Manhattan typically contains contaminants, particularly metals and semivolatile organic compounds (SVOC) at concentrations exceeding applicable state and/or federal standards.
3. Historical Use of Adjoining Properties – Historical uses of the surrounding properties include residential, commercial, industrial, and automotive uses. A total of 212 spills were reported within a ½-mile radius of the site. These offsite uses could have impacted site soil vapor or groundwater.

Summary of Remedial Investigation Field Work

Langan completed the following scope of work in accordance with the OER-approved Remedial Investigation Work Plan (RIWP), dated June 6, 2017.

1. Conducted a geophysical survey to identify anomalies indicative of USTs and associated piping and clear boring locations from physical and/or subsurface utilities and structures.
2. Advanced 10 soil borings (EB-01 through EB-10) and collected 25 soil samples, including one duplicate sample.
3. Installed four permanent groundwater monitoring wells (MW02, MW03, MW04 and MW06) and collected five groundwater samples, including one duplicate sample.
4. Installed seven soil vapor probes (SV01 through SV07) and collected seven soil vapor samples and one ambient air sample.

Summary of Environmental Findings

1. Current site elevations range from about el 10.77 in the southern portion of the site to el 13.88 in the northeastern portion of the site.
2. The geophysical survey identified electrical, water, sewer and gas utility connections to the site from Greenwich Street. An anomaly indicative of a UST, an associated fill port, and vent pipes were identified in the western portion of Lot 42 adjacent to the Greenwich Street sidewalk. Evidence of former gasoline dispenser islands was observed to the north and south of the anomaly. A second fill port was identified in the southwest portion of Lot 48. Due to the presence of hydraulic lifts associated with parking in the area, access to the ground surface around the fill port was limited. The limited access area is demarcated as a potential UST area in the geophysical survey.
3. The subsurface consisted of historic fill material underlying the surficial concrete and asphalt cover to depths of about 7.5 to 13 feet below grade surface (bgs). A native sand layer consisting of brown fine sand with trace medium sand, clay and silt was observed below the fill layer. Peat and organic clay layers were observed in the eastern and southeastern portion of the site at around 11.5 to 12 feet bgs and 13.5 to 14.5 feet bgs. Gasoline-like odors and photoionization detector (PID) readings up to 3,600 parts per million (ppm) were measured in borings EB-02 (at depths ranging from 9 to 24 feet bgs), EB-03 (16 to 18 feet bgs), EB-05 (10.5 to 17.5 feet bgs), EB-06 (9.5 to 19 feet bgs) and EB-10 (7.5 to 16 feet bgs), located in the central and western portions of the site. Gasoline-like odors were apparent in borings EB-02 (9 to 24 feet bgs), EB-03 (16 to 18 feet bgs), EB-05 (10.5 to 17.5 feet bgs), EB-06 (9.5 to 19 feet bgs) and EB-10 (7.5 to 16 feet bgs).
4. Groundwater was encountered from about 14.97 to 17.36 feet bgs, corresponding to el. -4.4 to el -4.88. Regional groundwater flow is estimated to the west, toward the Hudson River. Based on groundwater measurements collected during the RI, site groundwater generally flows to the west. Headspace PID readings and gasoline-like odors were noted in MW02 (250 ppm), MW03 (21.9 ppm) and MW06 (250 ppm). No sheen was observed on groundwater during groundwater sampling.
5. Soil sample results were compared to the NYSDEC 6NYCRR Part 375 Unrestricted Use (UU) and Commercial Use (CU) Soil Cleanup Objectives (SCO):
 - Three volatile organic compounds (VOC), including 1,2,4-trimethylbenzene, benzene, and total xylenes, were detected at concentrations above the CU SCOs in sample EB02_14-16. In addition, concentrations of eight VOCs, including 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, acetone, benzene, ethylbenzene, n-propylbenzene, toluene and total xylenes, were detected at concentrations above the UU SCOs in at least one sample.

- Five SVOCs, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene, were detected at concentrations above the CU SCO in one or more samples. In addition, concentrations of eleven SVOCs, including 2-methylphenol, 3-methylphenol/4-methylphenol, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, dibenzofuran, indeno(1,2,3-cd)pyrene, and naphthalene, were detected at concentrations above the UU SCOs in one or more samples.
 - Two pesticides, 4,4'-DDE and 4,4'-DDT, were detected at concentrations above the UU SCOs.
 - Polychlorinated biphenyls (PCB) were not detected at concentrations above the UU SCOs in soil samples.
 - Five metals, including barium, lead, mercury, nickel, and zinc exceeded the UU SCOs. Barium and lead were also detected at concentrations above the CU SCOs.
 - The fill material contained concentrations of metals, pesticides, and SVOCs typical of urban fill in Manhattan. The presence of gasoline-related VOCs and SVOCs in soil is likely a result of a gasoline spill associated with the potential USTs in the southwest portion of the site. In response to the observed subsurface conditions, the NYSDEC was contacted on May 1, 2018 and Spill Number 1801068 was assigned.
6. Groundwater sample analytical results were compared to the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGV) for Class GA water:
- Ten VOCs, including 1,2,4,5-tetramethylbenzene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benzene, ethylbenzene, naphthalene, n-propylbenzene, o-xylene, p/m-xylene, and toluene were detected at concentrations above the Class GA SGVs.
 - Seven SVOCs, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, naphthalene, and phenol, were detected at concentrations above the Class GA SGVs.
 - Two pesticides, aldrin and dieldrin, were detected at concentrations above the Class GA SGVs.
 - Total PCBs were detected at a concentration above the Class GA SGV.
 - Four metals, including iron, magnesium, manganese, and sodium, were detected in groundwater samples at dissolved concentrations above the Class GA SGVs. These metals are representative of regional groundwater quality.

7. Soil vapor sample results were compared to ambient air sample results and were evaluated based on the New York State Department of Health (NYSDOH) decision matrices:

- Total VOC concentrations in soil vapor samples ranged from 290.01 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) to 56,650 $\mu\text{g}/\text{m}^3$, and were up to three orders of magnitude higher than total VOC concentrations in the outdoor ambient air sample (32.471 $\mu\text{g}/\text{m}^3$).
- Benzene, toluene, ethylbenzene, and xylene (BTEX) concentrations in soil vapor samples ranged from 84.05 $\mu\text{g}/\text{m}^3$ to 7,748 $\mu\text{g}/\text{m}^3$, and up to three orders of magnitude higher than BTEX in the outdoor ambient air sample (7.47 $\mu\text{g}/\text{m}^3$).
- The NYSDOH decision matrices establish threshold concentrations for carbon tetrachloride, 1,1-dichloroethene, cis-1,2-dichloroethene, trichloroethene (TCE), methylene chloride, tetrachloroethene (PCE), 1,1,1-trichloroethane (1,1,1-TCA), and vinyl chloride. Of the eight compounds evaluated for the NYSDOH decision matrices, only PCE was detected in soil vapor samples. In the absence of indoor air samples, the PCE concentrations in soil vapor indicate a suggested action of "no further action".

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Langan Engineering, Environmental, Surveying, Landscape Architecture, and Geology D.P.C. (Langan) was retained by Trinity Real Estate to complete a remedial investigation (RI) at 551 Greenwich Street in the Hudson Square neighborhood of Manhattan, New York. The site was assigned an E-Designation (E-288) for hazardous materials (Hazmat), air quality, and noise by the New York City Department of City Planning (NYCDPC) following the March 20, 2013 Hudson Square Rezoning (City Environmental Quality Review [CEQR] No. 12DCP045M). The E-Designation requires environmental assessments of soil, groundwater, and soil vapor and coordination with the New York City Mayor's Office of Environmental Remediation (OER) to obtain a Notice to Proceed (NTP) or a Notice of No Objection (NNO) prior to obtaining building permits. Commercial use is proposed for the property.

Langan prepared and submitted a Remedial Investigation Work Plan (RIWP) that was approved by OER on April 6, 2018. The RIWP was implemented between April 23 and May 2, 2018. This Remedial Investigation Report (RIR) summarizes the nature and extent of contamination identified during the investigation and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The approximately 19,940-square-foot site is bound by King Street to the north, a 17-story commercial office building to the east, Charlton Street to the south, and Greenwich Street to the west. The site is identified as Block 598, Lots 42 and 48 on the New York City Manhattan Borough Tax Map and is improved with a one-story building built circa 1930 (Lot 42) and an open-air parking lot (Lot 48) surrounded by a chain-link fence. The one-story building contains a partial cellar (about 130 square feet) in the northwestern portion of the lot. According to the May 24, 2018 American Land Title Association (ALTA)/National Society of Professional Surveyors (NSPS) Land Title Survey, prepared by Langan, the site elevation (el) ranges from el 10.77¹ in the southern portion of the site to el 13.88 in the northeastern portion of the site. A site location map is included as Figure 1, and a site plan with lot boundaries is included as Figure 2.

¹ Elevations herein are in feet and referenced to the North American Vertical Datum of 1988 (NAVD88)

1.2 Proposed Redevelopment Plans

The proposed development project is in the early planning stages, but it is anticipated to include a 10-story commercial office building spanning both tax lots, with ground-floor retail and one full cellar level. Proposed redevelopment plans are included as Appendix A.

1.3 Description of Surrounding Property

The site is located in an urban area characterized by multi-story mixed-use, industrial, commercial, and retail buildings. The following table summarizes the adjacent and surrounding properties.

Direction	Adjacent Land Use	Surrounding Properties
North	King Street followed by a multi-story commercial building with a ground floor parking garage	Multi-story residential, commercial, industrial, retail buildings and automotive uses.
South	Charlton Street followed by a multi-story residential and retail building, followed by an active construction site	
East	Commercial and office properties followed by Hudson Street	
West	Greenwich Street followed by a UPS facility	

A map showing the surrounding land uses and the locations of the nearest sensitive receptors is included as Figure 3.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

According to the January 2009 Phase I Environmental Site Assessment (ESA) Report prepared by AKRF, Inc. (AKRF), historical site use included various commercial, manufacturing and industrial buildings from as early as 1894. Multi-story buildings occupied the site from the 1890s until 1968, when they were demolished and the site was occupied by an open-air parking lot (Lot 42) and a one-story parking garage (Lot 48). Historical uses of the site include a preserves factory, a packing canned goods company, confectioners' supplies, and an express depot. Two 550-gallon gasoline underground storage tanks (UST) were located beneath the parking garage, as indicated on the 1951, 1968, 1980 and 1994 Sanborn Fire Insurance Maps. UST documentation was not available in the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database. The surrounding area was developed prior to 1894 and included a paper box factory, coal yard, and an iron storage space across King Street to the north. No records of previous site ownership were available on the Automated City Register Information System (ACRIS).

2.2 Previous Investigations

The following previous environmental report was reviewed and considered in the preparation of this work plan:

January 2009 Phase I ESA, prepared by AKRF

The Phase I ESA identified the following recognized environmental conditions (REC):

- The site was historically used for industrial and commercial uses, including a preserves factory, packing canned goods company, confectioners supplies, and express depot. According to Sanborn Fire Insurance Maps, the current structure was built between 1951 and 1968.
- A potential fill port was observed along the Greenwich Street sidewalk. Additionally, two 550-gallon gasoline USTs were located beneath the parking garage, as indicated on the 1951, 1980, and 1994 Sanborn Fire Insurance Maps. UST documentation was not available in the NYSDEC PBS database.
- The existing building on Lot 42 was constructed prior to 1978 and may contain polychlorinated biphenyl (PCB) and/or mercury-containing lighting fixtures, asbestos-containing materials (ACM), and/or lead based paint (LBP). Hydraulic lifts used for car storage in the active parking lot in the northern portion of the site may use PCB-containing hydraulic fluids.
- Historical uses of the surrounding properties include residential, commercial, industrial, and automotive uses. A total of 212 spills were reported within a ½-mile radius of the

site. The off-site release of petroleum, chemicals, and/or hazardous substances may have adversely impacted groundwater and/or soil vapor on the site.

The Phase I ESA is included in Appendix B.

2.3 Site Inspection

Paul McMahon of Langan performed a site inspection on February 26, 2018, prior to implementing the RIR, and determined that the site was generally unchanged since the January 2009 Phase I ESA.

2.4 Areas of Concern

Areas of Concern (AOC) include:

4. On-Site Petroleum Bulk Storage – According to the Sanborn Fire Insurance Maps, the site contained two gasoline USTs from approximately 1951 to 1994. During the Phase I ESA site walk, a potential fill port was observed in the Greenwich Street sidewalk adjacent to the site.
5. Historical Use of the Site – Historical manufacturing/industrial site use included a preserves factory, packing canned goods company, and express depot. In addition, following demolition of on-site buildings, the site was backfilled with fill of an unknown origin. Historic fill in Manhattan typically contains contaminants, particularly metals and semivolatile organic compounds (SVOC) at concentrations exceeding applicable state and/or federal standards.
6. Historical Use of Adjoining Properties – Historical uses of the surrounding properties include residential, commercial, industrial, and automotive uses. A total of 212 spills were reported within a ½-mile radius of the site. These offsite uses could have impacted site soil vapor or groundwater.

A map showing areas of concern is presented in Figure 4.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Professional (QEP) responsible for preparation of this RIR is Michael Burke, PG, CHMM, of Langan.

3.2 Health and Safety

Work described in this RIR was performed in compliance with the April 2018 Health and Safety Plan (HASP) and applicable laws and regulations, including site and Occupational Safety and Health Association (OSHA) worker safety and Hazardous Waste Operations and Emergency Response (HAZWOPER) requirements.

3.3 Materials Management

Material encountered during the RI was managed in accordance with applicable laws and regulations. Clean soil cuttings were backfilled into the boreholes from which they were recovered. Grossly contaminated soil was encountered in several borings. Impacted soil cuttings were containerized in one Department of Transportation (DOT)/United Nations (UN)-approved 55-gallon drum. Purged groundwater was containerized in one DOT/UN-approved 55-gallon drum. The drums remain on site, pending completion of the ongoing geotechnical investigation. After the geotechnical investigation is completed, the drums will be disposed of off-site.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

The RI was performed by Langan between April 23 and May 2, 2018 to satisfy the E-Designation for Hazardous Materials (E-288) assigned following the 2013 City Environmental Quality Review (CEQR #12DCP045M).

The following scope of work was completed in accordance with the OER-approved RIWP:

1. Geophysical survey conducted to identify anomalies indicative of USTs and associated piping and clear boring locations from physical and/or subsurface utilities and structures.
2. Ten soil borings (EB-01 through EB-10) were advanced and 25 soil samples, including one duplicate sample, were collected.
3. Four permanent groundwater monitoring wells (MW02, MW03, MW04, and MW06) were installed and five groundwater samples, including one duplicate sample, were collected.
4. Seven soil vapor probes (SV01 through SV07) were installed and seven soil vapor samples and one outdoor ambient air sample were collected.

Sample locations are shown on Figure 5. A photo documentation log displaying the RI activities is provided in Appendix C. Details of the field activities are discussed in Sections 4.1 through 4.3.

4.1 Geophysical Survey

On April 20, 2018, prior to intrusive field activities, Nova Geophysical Engineering (Nova) conducted a geophysical survey using GPR and electromagnetic detection equipment to document potential subsurface utilities, USTs, and subsurface anomalies at proposed investigation locations. Boring locations were screened for obstructions and utilities prior to drilling activities. The geophysical survey identified electrical, water, sewer and gas utilities entering the site from Greenwich Street. An approximately 450-square-foot anomaly indicative of a UST, an associated fill port, and vent pipes were identified in the western portion of Lot 42 adjacent to the Greenwich Street sidewalk. Evidence of former gasoline dispenser islands was observed to the north and south of the anomaly. A second fill port was identified in the southwestern portion of Lot 48 and is demarcated as a potential UST in the geophysical survey report. Due to the presence of hydraulic lifts associated with parking, access near the fill port was limited. The results of the geophysical survey report are provided in Appendix D.

4.2 Borings, Monitoring Wells, and Soil Vapor Points

4.2.1 Soil Investigation

Aarco was retained to provide drilling services for the subsurface investigation conducted between April 23 and May 2, 2018. Langan personnel were on-site to observe drilling, screen soil samples, and collect environmental samples for laboratory analysis. Ten soil borings (EB-01

through EB-10) were advanced with a Geoprobe 7822 DT track-mounted direct push sampler to depths ranging from about 16 to 28 feet below grade surface (bgs) as described below.

- EB-02 was advanced to 28 feet bgs.
- EB-03, EB-05 and EB-06 were advanced to 24 feet bgs.
- EB-01 and EB-04 were advanced to 20 feet bgs.
- EB-07 through EB-10 were advanced to 16 feet bgs.

Soil samples were collected into 4-foot-long, dedicated acetate liners. Geoprobe samplers were decontaminated with an Alconox solution and rinsed with deionized water between boring locations. Langan personnel classified soil samples for type, grain size, texture, moisture content, visual and olfactory indications of a chemical or petroleum release (e.g., staining and odors), and performed instrumental screening for the presence of volatile organic vapors using a photoionization detector (PID) equipped with a 10.6 electron volt (eV) lamp. Following sample collection, the borings were backfilled with clean soil cuttings or clean sand and the ground surface was restored with either a concrete cap or asphalt patch. Boring logs were prepared by a Langan field geologist and are attached in Appendix E. Soil boring locations are shown on Figure 5.

4.2.2 Groundwater Investigation

Four permanent groundwater monitoring wells, MW02, MW03, MW04, and MW06, were installed within soil boring locations EB-02, EB-03, EB-04 and EB-06, respectively. Monitoring well screens were installed to straddle the observed water table, which was encountered between about 15 and 17 feet bgs. The monitoring wells were constructed with 2-inch-diameter, schedule-40 polyvinyl chloride (PVC) casing with 10 feet of 0.02-inch-slotted screen and solid riser casing to the surface. The annulus of the borehole was backfilled to about 2 feet above the screened interval using FilPro No. 2 filter sand, followed by a one foot hydrated bentonite seal, and No. 2 sand to surface grade. The wells were finished with an expanding well plug and flush-mount steel manhole cover. After installation, the wells were developed using a submersible pump to remove sediments and prevent the well screen from being blocked with fines. A minimum of 3 well volumes were purged using a submersible pump. Groundwater monitoring well construction logs are provided in Appendix F, and monitoring well locations are shown on Figure 5.

Prior to groundwater sampling, a synoptic round of groundwater depth readings were collected. A groundwater elevation summary, based off of monitoring well survey data, is included in Table 3. A groundwater elevation contour map is provided as Figure 6.

4.2.3 Soil Vapor Investigation

Seven soil vapor points, SV01 through SV07, were installed to a depth of about 12 feet bgs. Due to water intrusion into vapor sampling tubes, SV01, SV03, and SV05 were removed and re-installed to a depth of 6 feet bgs. The soil vapor investigation was conducted in general accordance with the 2006 New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York. Soil vapor sample locations are shown on Figure 5.

Each soil vapor sample location included a 2-inch-long, polyethylene vapor implant installed at the base of the borehole. The implants were fitted with polyethylene tubing extending to the surface. A sand filter pack was installed around the implant to a depth of about 1 to 2 feet bgs. The remainder of the annulus was filled to grade surface with a hydrated bentonite seal to prevent ambient air infiltration.

The seal integrity was verified before and after sample collection using a shroud and helium detector. Prior to sample collection, a minimum of three probe assembly volumes of air were purged using a MultiRAE gas monitor calibrated for a flow rate of 0.2 liters per minute (L/min). Following purging, the soil gas samples were drawn through the polyethylene implant and tubing into laboratory supplied Summa® canisters under vacuum pressure. The Summa® canisters were equipped with flow regulators calibrated for a two-hour sampling period. One outdoor ambient air sample, AA01_042518, was collected on April 25, 2018 in conjunction with soil vapor samples for comparison purposes. Soil vapor sample construction and sampling logs are located in Appendix G.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for AOCs and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. Soil, groundwater and soil vapor were sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. Sampling was performed in accordance with the approved RIWP. Soil, groundwater, and soil vapor samples were collected to determine the nature and extent of environmental impacts and the potential impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for selection of a final remedy. A sample collection summary, including chemical analyses, dates of collection, and sample depths, are reported in Table 1. Construction summaries for soil borings, monitoring wells and soil vapor points are reported in Table 2.

4.3.1 Soil Sample Collection and Chemical Analysis

Twenty-five soil samples, including one duplicate sample, were collected and submitted for

laboratory analysis during the RI. Two discrete (grab) soil samples were collected from borings EB-01 through EB-09: one sample was collected from the shallow subsurface (0 to 4 feet bgs), and a second sample was collected from the groundwater interface. Boring EB-10 was added to investigate the area east of the suspected gasoline USTs, and one sample was collected at the groundwater interface. To vertically delineate petroleum impacts, additional samples were collected at the termination depths of borings EB-02 (26 to 28 feet bgs), EB-03 (23 to 24 feet bgs), EB-05 (22 to 24 feet bgs), and EB-06 (22 to 24 feet bgs). Soil samples were analyzed for NYSDEC Part 375 and Target Compound List (TCL) VOCs, SVOCs, pesticides, metals, and PCBs.

Samples submitted for VOC analysis were collected directly from the acetate sleeve via laboratory supplied Terra Core® soil samplers. The remaining sample volume was homogenized and placed in pre-cleaned, laboratory-supplied glassware and placed in a laboratory-supplied cooler packed with ice (to maintain a temperature of 4°C). The coolers were picked up at the end of each sampling event by a laboratory courier and were transported under standard chain-of-custody protocol to Alpha Analytical, Inc. (Alpha), a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory in Westborough, Massachusetts.

4.3.2 Groundwater Sample Collection and Chemical Analysis

Five groundwater samples, including one duplicate sample, were collected and submitted for laboratory analysis during the RI. The samples were collected from each of the four groundwater monitoring wells, MW02, MW03, MW04 and MW06, installed during the RI. A blind duplicate sample was collected from MW02. Groundwater samples were collected in accordance with United States Environmental Protection Agency (USEPA) Region 2 – *Low Stress Groundwater Sampling Protocol*. Before sample collection, static water level was measured to the nearest 0.01 foot with a Solinst interface probe. The well effluent was pumped through a Horiba U-52 flow-through cell to monitor for hydrogen ion concentration (pH), oxidation/reduction potential (ORP), conductivity, temperature, dissolved oxygen (DO), and turbidity. Groundwater was purged until the water level and monitored parameters stabilized. The turbidity did not reach the target of <5 Nephelometric Turbidity Units (NTU) during sampling of the monitoring wells.

Groundwater samples were collected directly from the discharge line into laboratory-supplied glassware with appropriate preservatives, and transported under standard chain-of-custody protocol to Alpha. Groundwater samples were analyzed for NYSDEC Part 375 and TCL VOCs, SVOCs, and pesticides, PCBs, and Part 375 and Target Analyte List (TAL) dissolved metals.

4.3.3 Soil Vapor Sample Collection and Chemical Analysis

Seven soil vapor samples and one outdoor ambient air sample were collected and submitted for laboratory analysis during the RI. Soil vapor samples were collected over three sampling events; SV02, SV03 and SV05 through SV07 were collected on April 25, 2018; SV04 was

collected on April 26, 2018; and SV01 was collected on May 2, 2018. The samples were collected into 6-liter Summa canisters on April 25, 2018 and 2.7-liter canisters on April 26, 2018 and May 2, 2018. One outdoor ambient air sample was collected on April 25, 2018. Samples were collected from dedicated polyethylene vapor implants and tubing at each location. The Summa canisters were labeled, placed in shipping containers, and delivered to Alpha Analytical under standard chain-of-custody protocol for analysis of VOCs via USEPA Method TO-15.

4.3.4 QA/QC Sample Collection and Chemical Analysis

Two field blank samples, two trip blank samples, one duplicate soil sample, and one duplicate groundwater sample were collected and submitted to Alpha for quality assurance/quality control (QA/QC) purposes. The field blanks, which consist of laboratory-supplied deionized water poured over a nitrile glove (field blank soil sample) or pumped through a decontaminated monsoon pump (field blank groundwater sample) into sample containers, determine the effectiveness of pre-cleaning procedures for the soil and groundwater sampling equipment. The field blanks were analyzed for Part 375/TCL VOCs, SVOCs, and pesticides, PCBs, and Part 375/TAL metals. The trip blanks, which consist of about 80 milliliters (mL) of acidic water prepared by the laboratory and sent with the sample containers, were analyzed for Part 375/TCL VOCs.

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Ilkay Cam-Spanos
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and were Alpha Analytical, Inc. of Westborough, MA
Chemical Analytical Methods	<p>Soil analytical methods:</p> <ul style="list-style-type: none">• Metals by EPA Method 6010 and 7471(rev. 2007);• VOCs by EPA Method 8260C (rev. 2006);• SVOCs by EPA Method 8270D (rev. 2007);• Pesticides by EPA Method 8081B (rev. 2000);• PCBs by EPA Method 8082A (rev. 2000); <p>Groundwater analytical methods:</p> <ul style="list-style-type: none">• Dissolved Metals by EPA Method 6010 and 7471 (rev. 2007);• VOCs by EPA Method 8260C (rev. 2006);• SVOCs by EPA Method 8270D (rev. 2007);• Pesticides by EPA Method 8081B (rev. 2000);• PCBs by EPA Method 8082A (rev. 2000); <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none">• VOCs by EPA Method TO-15.

4.4 Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 4, 5, and 6, respectively. QA/QC sample results are summarized in Table 7. Laboratory data deliverables for all samples evaluated in this RIR are provided in Appendix H.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological Conditions

A review of the historical "Sanitary & Topographical Map of the City and Island of New York" (Viele, 1865) shows the site was on a meadow within the original shoreline of Manhattan. The USGS "Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and parts of Bergen and Hudson counties, New Jersey" (Baskerville 1994) indicate that bedrock underlying the site consists of Manhattan Schist. More specifically this formation is described as gray sillimanite-muscovite-tourmaline schist.

According to the May 24, 2018 ALTA/NSPS Land Title Survey prepared by Langan, the site elevation ranges from el 10.77 in the southern portion of the site to el 13.88 in the northeast portion of the site. According to Langan's May 2018 geotechnical investigation, bedrock was encountered between about 105 and 118 feet bgs, corresponding to el -93 to -106, respectively.

Stratigraphy

The generalized stratigraphy underlying the site is composed of a surficial layer of concrete and asphalt overlying fill material followed by natural sand deposits and bedrock. The following site geologic descriptions are based on findings from environmental and geotechnical investigations completed for the site.

Fill material was observed immediately below the existing surface to depths ranging from about 7.5 to 13 feet bgs. The fill layer was shallowest in the southern portion of the site and deepest in the northern portion of the site. Fill material generally consists of light to dark brown and grey, medium sand with trace fine sand, fine gravel, silt, and varying amounts of coal, brick and concrete fragments. Slag and/or fly ash were observed within the fill layer in borings EB-04, EB-06, and EB-08 located in the northwestern portion of the site. A native sand layer consisting of brown fine sand with trace medium sand, clay and silt was observed below the fill layer throughout the site. Peat and organic clay layers were observed in the eastern and southeastern portion of the site in borings EB-01 (11.5 to 12 feet bgs) and EB-03 (13.5 to 14.5 feet bgs). During Langan's May 2018 geotechnical investigation, bedrock was encountered between about 105 and 118 feet bgs, corresponding to el -93 to -106, respectively.

Staining and/or a gasoline-like odor and PID readings above background were apparent during the investigation, and the findings are summarized below:

- Staining and a gasoline-like odor were apparent in boring EB-05 at about 11 to 12 feet bgs.
- A gasoline-like odor was encountered in borings EB-02 (9 to 24 feet bgs), EB-03 (16 to 18 feet bgs), EB-05 (10.5 to 17.5 feet bgs), EB-06 (9.5 to 19 feet bgs) and EB-10 (7.5 to 16 feet bgs)..

- PID readings above background were measured in borings EB-02 (maximum [max.] of 3,600 parts per million (ppm) at 16.5 feet bgs), EB-03 (max. of 21.3 ppm at 17 feet bgs), EB-05 (max. of 590 ppm at 11.5 feet bgs), EB-06 (max. of 1550 ppm at 14.5 feet bgs), and EB-10 (max. of 3,500 ppm at 12 feet bgs).

In response to the observed subsurface conditions, the NYSDEC was contacted on May 1, 2018, and Spill No. 1801068 was assigned.

Hydrogeology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetative cover, subsurface structures (e.g., subways), and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of historical fill and variability in local geology and groundwater sources or sinks.

During groundwater sampling on May 2, 2018, groundwater depth ranged from about 14.97 to 17.36 feet bgs, corresponding to el -4.4 to -4.88. Regional groundwater is inferred to flow west toward the Hudson River, following the influence of local topography. Based on groundwater measurements collected during the RI, site groundwater flows to the west. Groundwater elevations measured during sampling and gauging events are recorded in Table 3, and a groundwater elevation contour map is included in Figure 6.

5.2 Soil Chemistry

Twenty-five grab soil samples, including one duplicate sample, were collected and submitted for laboratory analysis. Soil samples were analyzed for VOCs, SVOCs, metals, PCBs, and pesticides, and results were compared to the 6NYCRR Part 375 Unrestricted Use (UU) and Commercial Use (CU) Soil Cleanup Objectives (SCO).

VOCs – Concentrations of eight VOCs exceeded the UU and/or CU SCOs in one or more samples, as summarized below (SCOs presented in parentheses):

- 1,2,4-trimethylbenzene: maximum (max.) concentration of 290 milligrams per kilogram (mg/kg) in EB-02_14-16 (UU SCO of 3.6 mg/kg; CU SCO of 190 mg/kg)
- 1,3,5-trimethylbenzene: max. concentration of 100 mg/kg in EB-02_14-16 (UU SCO of 8.4 mg/kg; CU SCO of 190 mg/kg)
- acetone: 0.072 mg/kg in EB-07_1-2 (UU SCO of 0.05 mg/kg; CU SCO of 500 mg/kg)

- benzene: max. concentration of 49 mg/kg in EB-02_14-16 (UU SCO of 0.06 mg/kg; CU SCO of 44 mg/kg)
- ethylbenzene: max. concentration of 95 mg/kg in EB-02_14-16 (UU SCO of 1 mg/kg; CU SCO of 390 mg/kg)
- n-propylbenzene: max. concentration of 33 mg/kg in EB-02_14-16 (UU SCO of 3.9 mg/kg; CU SCO of 500 mg/kg)
- toluene: max. concentration of 220 mg/kg in EB-02_14-16 (UU SCO of 0.7 mg/kg; CU SCO of 500 mg/kg)
- total xylenes: max. concentration of 700 mg/kg in EB-02_14-16 (UU SCO of 0.26 mg/kg; CU SCO of 500 mg/kg)

SVOCs – Concentrations of eleven SVOCs exceeded the UU and/or CU SCOs in one or more samples, as summarized below (SCOs presented in parentheses):

- 2-methylphenol: max. concentration of 13 mg/kg in EB-02_14-16 (UU SCO of 0.33 mg/kg; CU SCO of 500 mg/kg)
- 3-methylphenol/4-methylphenol: 0.52 mg/kg in EB-09_3-4 (UU SCO of 0.33 mg/kg; CU SCO of 500 mg/kg)
- benzo(a)anthracene: max. concentration of 35 mg/kg in EB-09_3-4 (UU SCO of 1 mg/kg; CU SCO of 5.6 mg/kg)
- benzo(a)pyrene: max. concentration of 32 mg/kg in EB-09_3-4 (UU SCO of 1 mg/kg; CU SCO of 1 mg/kg)
- benzo(b)fluoranthene: max. concentration of 38 mg/kg in EB-09_3-4 (UU SCO of 1 mg/kg; CU SCO of 5.6 mg/kg)
- benzo(k)fluoranthene: max concentration of 11 mg/kg in EB-09_3-4 (UU SCO of 0.8 mg/kg; CU SCO of 56 mg/kg)
- chrysene: max. concentration of 28 mg/kg in EB-09_3-4 (UU SCO of 1 mg/kg; CU SCO of 56 mg/kg)
- dibenzo(a,h)anthracene: max. concentration of 4.2 mg/kg in EB-09_3-4 (UU SCO of 0.33 mg/kg; CU SCO of 0.56 mg/kg)
- dibenzofuran: 7.8 mg/kg in EB-09_3-4 (UU SCO 7 mg/kg; CU SCO 350 mg/kg)
- indeno(1,2,3-cd)pyrene: max. concentration of 19 mg/kg in EB-09_3-4 (UU SCO of 0.5 mg/kg; CU SCO of 5.6 mg/kg)
- Naphthalene: 15 mg/kg in EB-02_14-16 (UU SCO of 12 mg/kg; CU SCO of 500 mg/kg)

Pesticides – Concentrations of two pesticides exceeded the UU SCOs in one or more samples, as summarized below (SCOs presented in parentheses):

- 4,4'-DDE: 0.00898 mg/kg in EB-09_3-4 (UU SCO of 0.0033 mg/kg)
- 4,4'-DDT: 0.00448 mg/kg in EB-07_1-2 to 0.0154 mg/kg in EB-09_3-4 (UU SCO of 0.0033 mg/kg)

PCBs – PCBs were not detected at concentrations above the UU or CU SCOs.

Metals – Concentrations of five metals exceeded the UU and/or CU SCOs in one or more samples, as summarized below (SCOs presented in parentheses):

- barium: max. concentration of 1,040 mg/kg in EB-08_0-2 (UU SCO 350 mg/kg; CU SCO of 400 mg/kg)
- lead: max. concentration of 4,680 mg/kg in EB-08_0-2 (UU SCO of 63 mg/kg; CU SCO of 1,000 mg/kg)
- mercury: max. concentration of 1.39 mg/kg in EB-08_0-2 (UU SCO of 0.18 mg/kg; CU SCO of 2.8 mg/kg)
- nickel: 57.7 mg/kg in EB-07_1-2 (UU SCO of 30 mg/kg; CU SCO of 310 mg/kg)
- zinc: max. concentration of 672 mg/kg in EB-08_0-2 (UU SCO of 109 mg/kg; CU SCO of 10,000 mg/kg)

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill on the site. A summary of soil sample analytical results is included in Table 4. QA/QC sample results are presented in Table 7. Laboratory reports are included as Appendix H. Figure 7 shows the location and posts the values for soil samples that exceed the 6NYCRR Part 375 UU and CU SCOs.

5.3 Groundwater Chemistry

Five groundwater samples, including one duplicate sample, were collected during the RI and were analyzed for VOCs, SVOCs, pesticides, PCBs, and dissolved metals. Groundwater sample analytical results were compared to the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGV) for Class GA water. TOGS Class GA AWQSGVs are presented in parentheses:

VOCs

The following VOCs were detected at concentrations above the corresponding TOGS Class GA SGVs:

- 1,2,4,5-tetramethylbenzene: 54 micrograms per liter (µg/L) in MW06 (5 µg/L)
- 1,2,4-trimethylbenzene: 740 µg/L in MW06 and 1,200 µg/L in MW02 and its duplicate sample (5 µg/L)

- 1,3,5-trimethylbenzene: 210 µg/L in MW06 to 390 µg/L in the duplicate sample from MW02 (5 µg/L)
- benzene: 4,400 µg/L in MW06 to 13,000 µg/L in the duplicate sample from MW02 (1 µg/L)
- ethylbenzene: 480 µg/L in MW06 and 1,400 µg/L in MW02 and its duplicate sample (5 µg/L)
- naphthalene: 380 µg/L in MW06 to 550 µg/L in the duplicate sample from MW02 (10 µg/L)
- n-propylbenzene: 60 µg/L in MW06 and 120 µg/L in MW02 (10 µg/L)
- o-xylene: 550 µg/L in MW06 to 3,600 µg/L in the duplicate sample from MW02 (10 µg/L)
- p/m-xylene: 1,300 µg/L in MW06 to 7,100 µg/L in the duplicate sample from MW02 (5 µg/L)
- toluene: 850 µg/L in MW06 to 16,000 µg/L in the duplicate sample from MW02 (5 µg/L)

SVOCs

The following SVOCs were detected at concentrations above the corresponding Class GA SGVs:

- benzo(a)anthracene: 0.11 µg/L in MW04 (0.002 µg/L)
- benzo(a)pyrene: 0.09 µg/L in MW04 (Non-detect)
- benzo(b)fluoranthene: 0.14 µg/L in MW04 (0.002 µg/L)
- benzo(k)fluoranthene: 0.06 µg/L in MW04 (0.002 µg/L)
- chrysene: 0.11 µg/L in MW04 (0.002 µg/L)
- naphthalene: 140 µg/L in MW06 to 310 µg/L in MW02 (10 µg/L)
- phenol: 16 µg/L in the duplicate sample from MW02 to 58 µg/L in MW06 (1 µg/L)

Pesticides

The following pesticides were detected at concentrations above the corresponding Class GA SGVs:

- aldrin: 0.005 µg/L in the duplicate sample from MW02 and 0.008 µg/L in MW02 (Non-detect)
- dieldrin: 0.01 µg/L to 0.013 µg/L in the duplicate sample from MW02 and MW02, respectively (0.004 µg/L)

PCBs

Total PCBs were detected at concentrations above the Class GA SGVs, as summarized below:

- Total PCBs: 0.139 µg/L in MW02 to 0.21 µg/L in the duplicate sample from MW02 (0.09 µg/L)

Dissolved Metals

The following dissolved metals were detected in all monitoring wells at concentrations above the corresponding Class GA SGVs:

- iron: max. concentration of 11,200 µg/L in MW06 (300 µg/L)
- magnesium: max. concentration of 124,000 µg/L in the duplicate sample from MW02 (35,000 µg/L)
- manganese: max. concentration of 3,616 µg/L in the duplicate sample from MW02 (300 µg/L)
- sodium: max. concentration of 308,000 µg/L in the duplicate sample from MW02 (20,000 µg/L)

A summary of groundwater analytical results is presented in Table 5. Groundwater sample locations and results detected above SGVs are presented in Figure 8.

5.4 Soil Vapor Chemistry

Seven soil vapor samples and one outdoor ambient air sample were collected over three sampling events. There are no standards or guidance values in New York State for VOCs in soil vapor. Soil vapor analytical results were compared to the ambient air samples for reference. Concentrations of total VOCs for each sample are as follows:

Outdoor Ambient Air 4/25/2018: 32.471 micrograms per cubic meter (µg/m³)

- SV01_050218: 548.229 µg/m³
- SV02_042518: 312.84 µg/m³
- SV03_042518: 555.32 µg/m³
- SV04_042618: 2,157.01 µg/m³
- SV05_042518: 1,556.2 µg/m³
- SV06_042518: 56,650 µg/m³
- SV07_042518: 290.01 µg/m³

Total benzene, toluene, ethylbenzene, and xylenes (BTEX) concentrations in soil vapor samples ranged from 84.05 µg/m³ in sample SV01 to 7,748 µg/m³ in sample SV06.

In addition, one of the seven VOCs that can be evaluated using the Decision Matrices in NYSDOH's Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006) was detected in soil vapor: tetrachloroethene (PCE) was detected at a maximum concentration of 8.41 $\mu\text{g}/\text{m}^3$ at location SV01. In the absence of indoor air samples, the results for PCE in soil vapor samples indicate "no further action" per the Soil Vapor/ Indoor Air Matrix.

A summary of detected soil vapor and ambient air analytical results are presented in Table 6. Soil vapor sample locations and detected VOCs are presented in Figure 9.

6.0 CONCLUSIONS

The RI was implemented between April 23 and May 2, 2018 to characterize the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives and selection of a remedy that is protective of human health and the environment consistent with the proposed use of the site. Based on the RI field observations and analytical results, the following conclusions and recommendations are provided:

1. Current site elevations range from about el 10.77 in the southern portion of the site to el 13.88 in the northeastern portion of the site.
2. The geophysical survey identified electrical, water, sewer and gas utilities entering the site from Greenwich Street. An anomaly indicative of a UST, an associated fill port, and vent pipes were identified in the western portion of Lot 42 adjacent to the Greenwich Street sidewalk. Evidence of former gasoline dispenser islands was observed to the north and south of the anomaly. A second fill port was identified in the southwest portion of Lot 48. Due to the presence of hydraulic lifts associated with parking in the potential UST area demarcated in the geophysical survey, access near the vicinity of the fill port was limited.
3. The subsurface consisted of fill material underlying the surficial concrete and asphalt cover to depths of about 7.5 to 13 feet bgs. A native sand layer consisting of brown fine sand with trace medium sand, clay and silt was observed below the fill layer. Peat and organic clay layers were observed in the eastern and southeastern portion of the site in borings EB-01 (11.5 to 12 feet bgs) and EB-03 (13.5 to 14.5 feet bgs). Gasoline-like odors and PID readings up to 3,600 ppm were measured in borings located in the central and western portions of the site.
4. Groundwater was encountered from 14.96 to 17.36 feet bgs, corresponding to -4.40 to el -4.88. Regional groundwater flow is estimated to the west, toward the Hudson River. Based on groundwater measurements collected during the RI, site groundwater generally flows to the west. Headspace PID readings above background and gasoline-like odors were apparent in MW02 (250 ppm), MW03 (21.9 ppm) and MW06 (250 ppm). No sheen was observed on groundwater during groundwater sampling.
5. Soil sample results were compared to the NYSDEC 6NYCRR Part 375 UU and CU SCOs):
 - Three VOCs, including 1,2,4-trimethylbenzene, benzene, and total xylenes, were detected at concentrations above the CU SCOs in sample EB02_14-16. In addition, concentrations of eight VOCs, including 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, acetone, benzene, ethylbenzene, n-propylbenzene, toluene and total xylenes, were detected at concentrations above the UU SCOs in one or more sample.

- Five SVOCs, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene, were detected at concentrations above the CU SCOs in one or more samples. In addition, concentrations of eleven SVOCs, including 2-methylphenol, 3-methylphenol/4-methylphenol, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, dibenzofuran, indeno(1,2,3-cd)pyrene, and naphthalene, were detected at concentrations above the UU SCOs in one or more samples.
 - Two pesticides, 4,4'-DDE and 4,4'-DDT, were detected at concentrations above the UU SCOs.
 - PCBs were not detected at concentrations above the UU SCOs.
 - Five metals, including barium, lead, mercury, nickel, and zinc exceeded the UU SCOs. Barium and lead were also detected at concentrations above the CU SCOs.
 - The fill material contained concentrations of metals, pesticides, and SVOCs typical of urban fill in Manhattan. The presence of gasoline-related VOCs and SVOCs in soil is likely a result of a historic gasoline spill in the southwest portion of the site. In response to the observed subsurface conditions, the NYSDEC was contacted on May 1, 2018 and Spill Number 1801068 was assigned.
6. Groundwater sample analytical results were compared to the TOGS Class GA SGVs:
- Ten VOCs, including 1,2,4,5-tetramethylbenzene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benzene, ethylbenzene, naphthalene, n-propylbenzene, o-xylene, p/m-xylene, and toluene were detected at concentrations above the Class GA SGVs.
 - Seven SVOCs, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, naphthalene, and phenol, were detected at concentrations above the Class GA SGVs.
 - Two pesticides, aldrin and dieldrin, were detected at concentrations above the Class GA SGVs.
 - Total PCBs were detected at a concentration above the Class GA SGV.
 - Four metals, including iron, magnesium, manganese, and sodium, were detected in groundwater samples at dissolved concentrations above the Class GA SGVs. These metals are representative of regional groundwater quality.
7. Soil Vapor samples results were compared to ambient air sample results and were evaluated based on the NYSDOH decision matrices:

- Total VOC concentrations in soil vapor samples ranged from 290.01 $\mu\text{g}/\text{m}^3$ to 56,650 $\mu\text{g}/\text{m}^3$, and were up to three orders of magnitude higher than total VOC concentrations in the outdoor ambient air sample (32.471 $\mu\text{g}/\text{m}^3$).
- BTEX concentrations in soil vapor samples ranged from 84.05 $\mu\text{g}/\text{m}^3$ to 7,748 $\mu\text{g}/\text{m}^3$, and up to three orders of magnitude higher than BTEX in the outdoor ambient air sample (7.47 $\mu\text{g}/\text{m}^3$).
- The NYSDOH decision matrices establish threshold concentrations for carbon tetrachloride, 1,1-dichloroethene, cis-1,2-dichloroethene, TCE, methylene chloride, PCE, 1,1,1-TCA, and vinyl chloride. Of the eight compounds evaluated for the NYSDOH decision matrices, only PCE was detected in soil vapor samples. In the absence of indoor air samples, the PCE concentrations in soil vapor indicate a suggested action of "no further action".

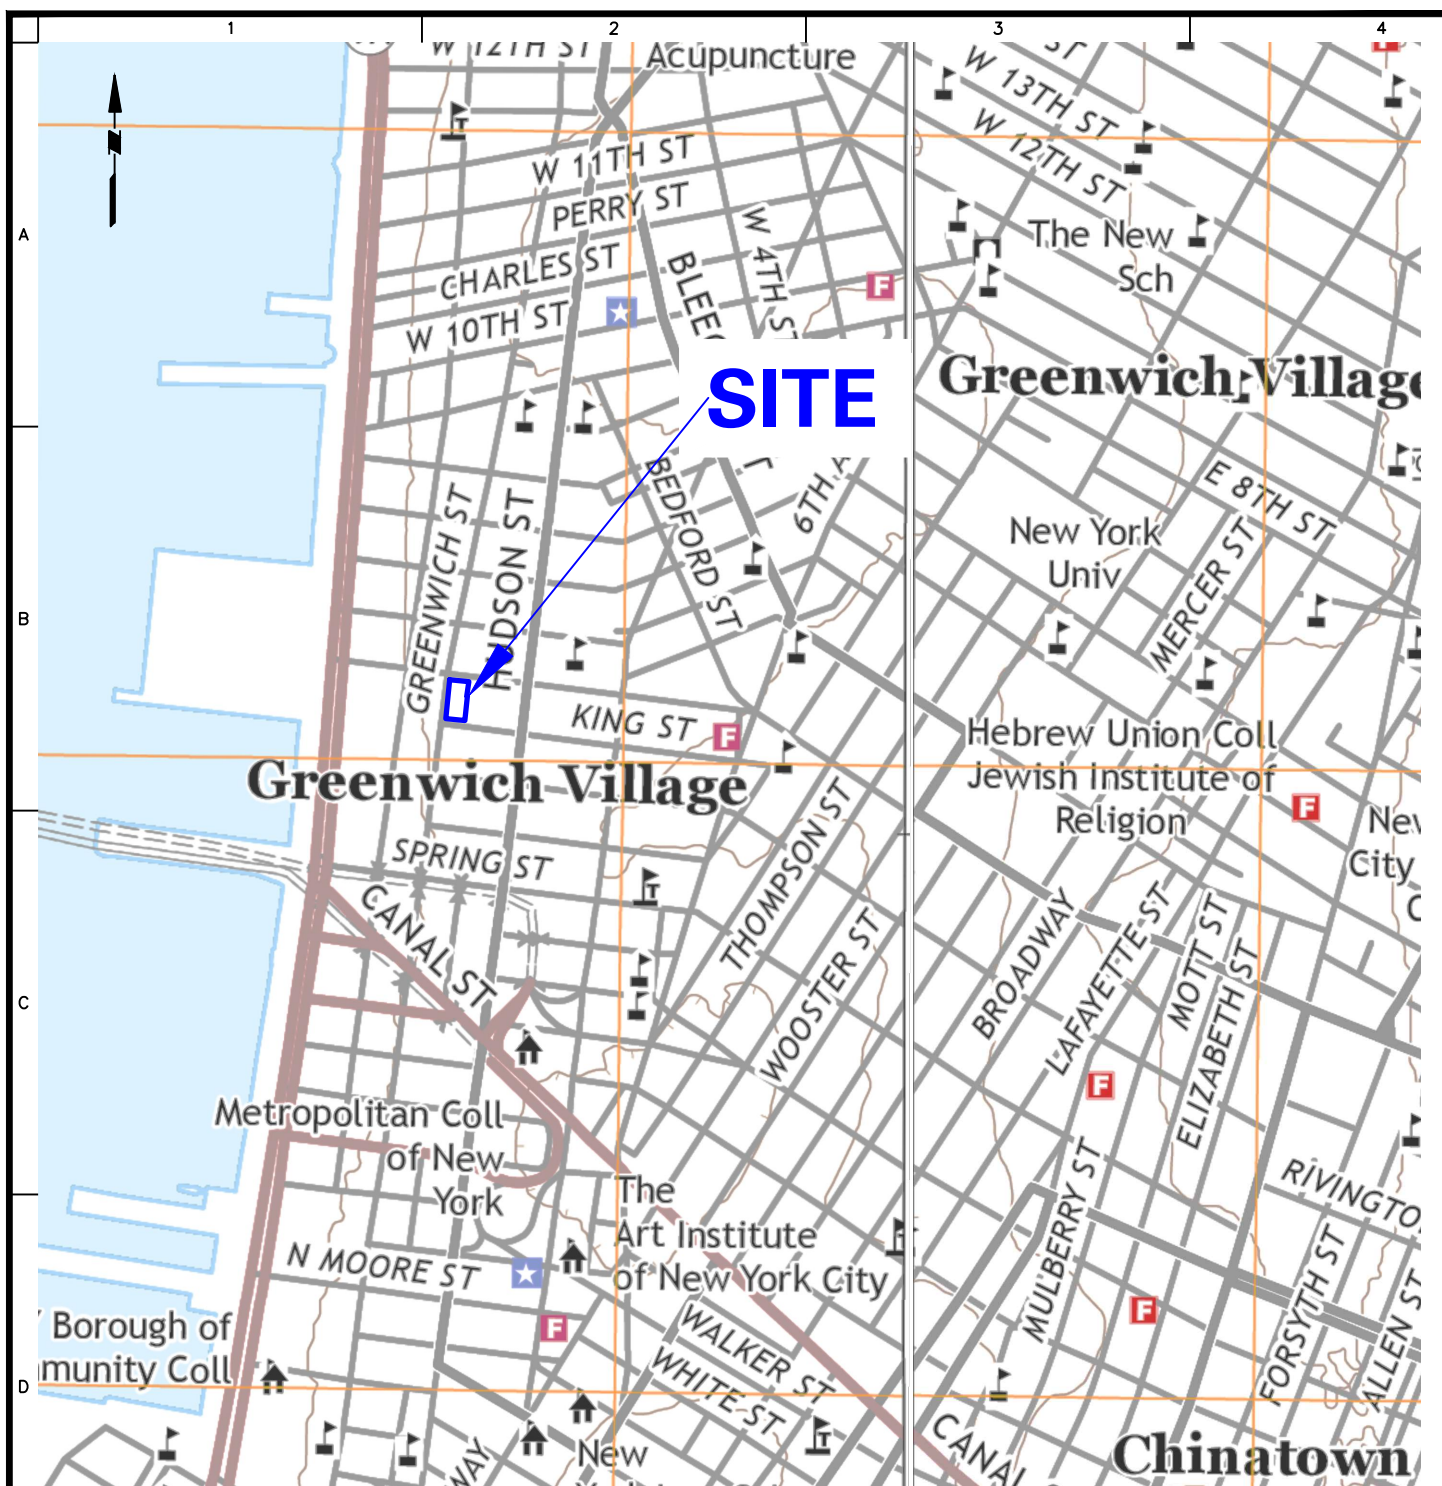

6.1 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not anticipated for the site.

6.2 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

8	AA01_042518	NA	NA	N/A	4/25/2018	

Notes:

1. Soil samples collected for VOC analysis were collected using Terra Core Sampler kits.
2. TO-15 = Compendium Method TO-15 used to determine toxic organic compounds in soil vapor and ambient air samples.
3. Part 375 = Title 6 of the official compilation of New York Codes, Rules and Regulations (NYCRR) Part 375
4. VOCs = Volatile organic compounds
5. SVOCs = Semivolatile organic compounds
6. PCBs = Polychlorinated Biphenyls
7. TCL = Target Compound List
8. TAL = Target Analyte List
9. QA/QC = Quality assurance/quality control
10. bgs = below grade surface
11. Grade surface elevations are referenced to the North American Vertical Datum of 1988, and are approximated.
12. Soil vapor points were installed to the anticipated future cellar grade, between 10 and 12 feet bgs. Excessive moisture was encountered in points SV01, SV03, and SV05, so the points were re-installed to a depth of 6 feet bgs.

Notes:

1. NA = Not Applicable
2. PVC = Polyvinyl Chloride
3. bgs = below grade surface
4. Grade surface elevations are referenced to the North American Vertical Datum of 1988 (NAVD88), and are approximated.
5. Sample locations were installed with a Geoprobe ® 7822 DT direct-push drill rig.

Table 3
Groundwater Elevation Summary
Remedial Investigation Report
551 Greenwich Street
New York, New York
Langan Project No. 190043701

Date Gauged	Well Location	Well Diameter (in.)	Screened Interval (feet bTOC)	Approximate Elevation of TOC (feet NAVD88)	Depth to Groundwater (feet bTOC)	Groundwater Elevation (feet NAVD88)
5/2/2018	MW02	2	12.52 to 22.52	10.56	15.24	-4.68
5/2/2018	MW03	2	10.10 to 20.10	10.57	14.97	-4.4
5/2/2018	MW04	2	10.02 to 20.02	12.48	17.36	-4.88
5/2/2018	MW06	2	11.59 to 21.59	10.97	15.82	-4.85

Notes:

1. Depth to groundwater was measured in feet below the top of well casing (bTOC).
2. Grade surface elevations are referenced to the North American Vertical Datum of 1988 (NAVD88).

Notes:

- Soil sample analytical results are compared to the Title 6 NYCRR Part 375 Unrestricted Use and Commercial Use Soil Clean Objectives (SCOs).
- Results above NYSDEC Part 375 Unrestricted Use SCOs are bolded
- Results above NYSDEC Part 375 Commercial Use SCOs are shaded and bolded.
- Reporting Limits (RL) exceeding the NYSDEC Part 375 Unrestricted Use and Restricted Use Restricted-Residential SCOs are italicized.
- DUP01_042418 is a duplicate sample of EB-06_13-15
- mg/kg = milligrams per kilogram
- VOC = Volatile organic compound
- SVOC - Semivolatile organic compound
- PCBs = Polychlorinated biphenyls
- ~ = Criterion does not exist
- bgs = below grade surface

Qualifiers:

- U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.
- J = The analyte was detected above the Method Detection Limit (MDL), but below the Reporting Limit (RL); therefore, the result is an estimated concentration.
- P = The RPD between the results for the two columns exceeds the method-specified criteria.
- I = The lower value for the two columns has been reported due to obvious interference.
- E = Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Notes:
1. Soil sample analytical results are compared to the Title 6 NYCRR Part 375 Unrestricted Use and Commercial Use Soil Clean Objectives (SCOs).
2. Results above NYSDEC Part 375 Unrestricted Use SCOs are bolded
3. Results above NYSDEC Part 375 Commercial Use SCOs are shaded and bolded.
4. Reporting Limits (RL) exceeding the NYSDEC Part 375 Unrestricted Use and Restricted Use Restricted-Residential SCOs are italicized.
5. DUP01_042418 is a duplicate sample of EB-06_13-15
6. mg/kg = milligrams per kilogram
7. VOC = Volatile organic compound
8. SVOC = Semivolatile organic compound
9. PCBs = Polychlorinated biphenyls
10. ~ = Criterion does not exist
11. bgs = below grade surface

Qualifiers:
U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.
J = The analyte was detected above the Method Detection Limit (MDL), but below the Reporting Limit (RL); therefore, the result is an estimated
P = The RPD between the results for the two columns exceeds the method-specified criteria.
I = The lower value for the two columns has been reported due to obvious interference.
E = Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Notes:

1. Soil sample analytical results are compared to the Title 6 NYCRR Part 375 Unrestricted Use and Commercial Use Soil Clean Objectives (SCOs).
2. Results above NYSDEC Part 375 Unrestricted Use SCOs are bolded
3. Results above NYSDEC Part 375 Commercial Use SCOs are shaded and bolded.
4. Reporting Limits (RL) exceeding the NYSDEC Part 375 Unrestricted Use and Restricted Use Restricted-Residential SCOs are italicized.
5. DUP01_042418 is a duplicate sample of EB-06_13-15
6. mg/kg = milligrams per kilogram
7. VOC = Volatile organic compound
8. SVOC = Semivolatile organic compound
9. PCBs = Polychlorinated biphenyls
10. ~ = Criterion does not exist
11. bgs = below grade surface

Qualifiers:

- U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.
- J = The analyte was detected above the Method Detection Limit (MDL), but below the Reporting Limit (RL); therefore, the result is an estimated concentration.
- P = The RPD between the results for the two columns exceeds the method-specified criteria.
- I = The lower value for the two columns has been reported due to obvious interference.
- E = Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Notes:

- Soil sample analytical results are compared to the Title 6 NYCRR Part 375 Unrestricted Use and Commercial Use Soil Clean Objectives (SCOs).
- Results above NYSDEC Part 375 Unrestricted Use SCOs are bolded.
- Results above NYSDEC Part 375 Commercial Use SCOs are shaded and bolded.
- Reporting Limits (RL) exceeding the NYSDEC Part 375 Unrestricted Use and Restricted Use Restricted-Residential SCOs are italicized.
- DUP01_042418 is a duplicate sample of EB-06_13-15
- mg/kg = milligrams per kilogram
- VOC = Volatile organic compound
- SVOC = Semivolatile organic compound
- PCBs = Polychlorinated biphenyls
- ~ = Criterion does not exist
- bgs = below grade surface

Qualifiers:

- U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.
- J = The analyte was detected above the Method Detection Limit (MDL), but below the Reporting Limit (RL); therefore, the result is an estimated
- P = The RPD between the results for the two columns exceeds the method-specified criteria.
- I = The lower value for the two columns has been reported due to obvious interference.
- E = Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Notes:
1. Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA - Drinking Water.
2. Concentrations detected above NYSDEC TOGS SGVs are highlighted and bold.
3. Reporting limits (RL) exceeding the NYSDEC TOGS AWQS GV criteria are italicized.
4. DUP01_050218 is a duplicate of parent sample MW02_050218.
5. µg/l = micrograms per liter
6. ~ = Criterion does not exist
7. ND = Not Detected
8. VOC = Volatile Organic Compound
9. SVOC = Semivolatile Organic Compound
10. PCB = Polychlorinated Biphenyl

Qualifiers:
J = Analyte detected at or above the method detection limit (MDL) but below the reporting limit (RL); therefore data is estimated.
U = Analyte was analyzed for, but was not detected at a level greater than or equal to the RL.

JANUARY 2009

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by Trinity Real Estate to perform a Phase I Environmental Site Assessment of 551-561 Greenwich Street in Manhattan (Block 598, Lots 42 and 48). The property consisted of a single-story parking garage and surface parking lot with lifts. Commercial and office properties were located adjacent to the east, across King Street to the north, and across Charlton Street to the south. A United Parcel Service (UPS) facility was located across Greenwich Street to the west.

The objective of this assessment was to identify any potential environmental concerns associated with the site resulting from past or current site usage or use of neighboring properties. This Phase I Environmental Site Assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in conformance with the scope and limitations of ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, this practice are described in Sections 9.0, 10.0 and 11.0 of this report. This assessment revealed the following issues, including Recognized Environmental Conditions, in connection with the property:

- Historical land use maps and the regulatory database search indicated that the project site had a history of industrial and commercial use. Historical on-site usages included a Preserves Factory, Packing Canned Goods Company, Confectioners' Supplies, and Express Depot. The private garage at the study site was constructed between 1951 and 1968.
- A potential fuel oil fill cap was observed in the sidewalk adjacent to the west of the building along Greenwich Street. According to historical Sanborn maps and local records, two 550-gallon gasoline underground storage tanks (USTs) were located beneath the parking garage. Documentation regarding closure of these tanks was not available.
- Based on the age of the structure, roofing and building materials may contain asbestos. Suspect asbestos-containing materials (ACMs) were noted throughout the site building which included joint compound, caulking, plaster, drywall, and pipe insulation. Additional suspect ACMs may be present behind walls, on building roofs or in other hidden locations.
- Since the on-site building was constructed prior to 1978, lead-based paint may be present. Painted surfaces observed in the structure were noted to be in good condition.
- The on-site building was illuminated by fluorescent lighting. Based on the age of the building, suspect PCB- and mercury-containing fluorescent lights, switches, and other electrical equipment, may be present. No leaks or stains were noted around lighting fixtures and switches.
- The regulatory databases, historical land-use atlases, and visual site inspection indicated that the surrounding neighborhood has over a 100-year history of residential, commercial and industrial development. Two hundred and twelve spills were reported within a ½-mile radius of the subject site. Active and closed status spills, petroleum storage tanks, and hazardous waste generators were identified within 400 feet of the subject property. The off-site use of petroleum, chemicals and/or hazardous substances has the potential to have affected local groundwater quality.

Based on the results of this assessment, the following recommendations are noted:

- Prior to any redevelopment of the property, a subsurface (Phase II) investigation including a geophysical survey to locate potential USTs and the collection of soil and groundwater samples should be conducted to determine whether past on- or off-site operations have affected the property.
- If any USTs are discovered during the Phase II investigation or subsequently, they should be removed in accordance with applicable federal, state and local requirements (including spill reporting) along

with any associated petroleum-contaminated soil or groundwater. Soil (including fill materials) intended for off-site disposal should be tested in accordance with the requirements of the intended receiving facility. Transportation of material leaving the site for off-site disposal must be in accordance with federal, state and local requirements including licensing of haulers and trucks, placarding, truck routes, manifesting, etc.

- Prior to any renovation or demolition activities with the potential to disturb suspect ACMs, an asbestos survey should be conducted. If these materials prove to contain asbestos, they should be properly removed and disposed of in accordance with all city, state and federal requirements.
- Renovation or demolition activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62 – Lead Exposure in Construction).
- Unless there is labeling or test data which indicates that the on-site fluorescent light fixtures are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by Trinity Real Estate to perform an Environmental Site Assessment of a two-story brick and concrete commercial structure located at parking garage at 551-661 Greenwich Street in Manhattan (Block 598, Lots 42 and 48), as seen in Figure 1. The study site consisted of a single-story parking garage and surface parking lot with lifts. Commercial and office properties were located adjacent to the east, across King Street to the north, and across Charlton Street to the south. A United Parcel Service (UPS) facility was located across Greenwich Street to the west. An aerial of current site conditions is provided as Figure 2.

The scope of services for this assessment included the following:

- Visual observations of the project site and surrounding properties were conducted to identify potential sources or indications of chemical contamination. The potential sources of contamination included, but were not limited to, underground storage tanks (USTs), aboveground storage tanks (ASTs), objects that could contain polychlorinated biphenyls (PCBs), and areas where hazardous materials were used, stored, treated, generated and/or disposed. Indications of chemical contamination include stained surfaces and chemical odors.

In addition, readily-observable portions of the properties immediately adjacent to the project site were viewed from public rights-of-way to identify or determine the likelihood of any of the aforementioned potential sources of contamination being present.

- Published geological and groundwater information was obtained from available sources to determine the possibility of contamination from off-site sources.
- A visual inspection of the property was conducted to identify and evaluate the condition of any suspect asbestos-containing materials (ACMs) on-site. No samples of suspect materials were collected for analysis as part of this assessment.
- The structure/property was evaluated for the potential presence of lead-based paint, and the condition of painted surfaces was assessed. No samples were collected for analysis as part of this assessment.
- A review of radon concentrations in New York County (Manhattan) was conducted to determine whether radon levels in the general area comply with United States Environmental Protection Agency (USEPA) guidelines.
- Historical land use atlases for the site and adjacent properties were reviewed to evaluate previous land use.
- The following federal regulatory databases were reviewed to determine the regulatory status of the site, adjacent properties, and properties within a predetermined study area; National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); and the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.
- The following state regulatory databases were reviewed to determine the regulatory status of the site, adjacent properties, and properties within a predetermined study area; the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive

Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); and Air Discharge Facilities (ADF).

- A review of available local Fire Department and Buildings Department records was conducted to obtain any information pertinent to the assessment of the environmental condition of the subject property.

2.0 PHYSICAL SITE DESCRIPTION

Visual inspection of the site and adjacent areas was performed on November 14, 2008 by Keri Anselmo of AKRF. Mr. John Shea, the property manager, accompanied AKRF personnel through the site and answered pertinent questions. At the time of the inspection, the weather was cloudy and approximately 50 °F, the visibility moderate, and the premises adequately illuminated. Some of the floors of the structure were illuminated by natural and/or artificial light; non-illuminated areas were accessed by flashlight. The site was inspected for the presence of stained surfaces and soils, stressed vegetation, storage tanks, drums, leaking pipes, transformers, suspect asbestos-containing materials, suspect lead-containing paint, and any other evidence of hazardous material usage and storage on-site. Photographs documenting the site inspection are included in Appendix A.

2.1 General Site Conditions

The project site included a single-story brick and concrete building with wood beams and concrete support columns. At the time of the site inspection, the building was used as a parking garage with car lifts. A small loft area was located in the northwest corner of the building that was occupied by a bathroom. Floor drains were observed throughout the building. According to Mr. Shea, the floor drains were connected to the municipal sewer. Staining was observed on the concrete floor of the garage. A surface parking lot with car lifts was adjacent to the north of the building. A small structure occupied by the parking attendants was observed in the parking lot portion of the site. No staining was observed on the asphalt-paved parking lot.

A potential fuel oil fill cap was observed in the sidewalk adjacent to the west side of the building along Greenwich Street. Additional information regarding potential tanks is discussed in Section 6.2.

2.2 Topography and Hydrogeology

The surface topography is relatively level. Based on reports compiled by the U.S. Geological Survey (Jersey City, NY-NJ Quadrangle), the property lies at an elevation of approximately 18 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level).

Unconsolidated surficial soil beneath the study site likely consists of fill material of unknown origin above native sand and gravel. Manhattan schist bedrock is likely located approximately 70 to 90 feet below grade. Groundwater flow is likely toward the Hudson River, approximately 500 feet west of the site. In addition, groundwater flow at the site can be affected by any past filling activities, bedrock geology, subsurface openings, and other factors beyond the scope of this study. Groundwater in Manhattan is not used as a source of potable water or irrigation.

2.3 Storage Tanks

No evidence, such as concrete foundations, containment walls, pedestals, or steel support structures, was observed during the site visit to indicate that aboveground storage tanks (ASTs) were located on-site either at the time of the inspection or in the past.

A potential fuel oil fill cap was observed in the sidewalk adjacent to the west side of the building along Greenwich Street. According to historical Sanborn maps and New York City Fire Department, two 550-gallon underground gasoline storage tanks (USTs) were located beneath the building at the study site. Documentation regarding the closure of these historical tanks was not available. Mr. Shea was unaware of any current or historical on-site petroleum tanks. Additional information regarding on-site and off-site tanks is discussed in Section 6.2.

2.4 Polychlorinated Biphenyls (PCBs)

Prior to 1979, polychlorinated biphenyls (PCBs) were widely used for their cooling properties in electrical equipment such as transformers, capacitors, switches and voltage regulators. Fluorescent lights and equipment in electrical panels in the subject building may include PCB-containing parts. Fluorescent lighting fixtures were utilized throughout the building. No leaks and/or spills associated with the lighting fixtures were noted.

Unless there is labeling or test data which indicates that the above equipment does not contain PCBs, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.

2.5 Lead-Based Paint

The use of lead-based paint in commercial structures was severely restricted by the Consumer Products Safety Commission in 1977. Since the building on the project site was constructed prior to 1977, lead-based paint may be present. Lead-based paint is potentially hazardous when in a deteriorating condition (i.e. chipped, broken, crumbling, pulverized); lead is potentially harmful to humans, particularly children, if ingested, inhaled or otherwise absorbed. Painted surfaces of the project site buildings were in generally good condition. Any demolition or renovation activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—Lead Exposure in Construction).

2.6 Utilities

Consolidated Edison (Con Ed) provided electricity service to the project site and surrounding area. The study site was connected to New York City municipal water and sewer systems.

2.7 Waste Management and Chemical Handling

General refuse was collected into garbage receptacles throughout the subject buildings and hauled on a weekly basis by private haulers. No stored chemicals or cleaning fluids were observed during the site visit.

2.8 Radon

Radon is a colorless, odorless gas produced by the radioactive decay of certain elements. The most common sources of radon are igneous and metamorphic rocks containing uranium (such as pitchblende), granite, shale, or phosphate, as well as soils or sediments derived from these parent materials. Radon may also be found in soils contaminated with certain industrial wastes (such as uranium or phosphate mine tailings) or in earth-derived building products which include industrial wastes that contain phosphate slag. In areas where the potential for radon accumulation is high, special ventilation systems may offset potential health hazards.

According to data compiled by the Bureau of Radiation Protection, a division of the New York State Department of Health, the average cellar radon concentration in Manhattan is 2.0 picocuries/liter. The US EPA recommended action level is 4.0 picocuries/liter.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos, a known human carcinogen, is a generic name assigned to a group of naturally occurring minerals exhibiting high tensile strength and possessing excellent fire resistance and insulating properties. These minerals include chrysotile, amosite, crocidolite, actinolite, tremolite and anthophyllite. Asbestos is commonly found as a component of building materials including: Thermal System Insulation (TSI), spray-applied fireproofing, spray- or trowel-applied surfacing materials, vinyl asbestos floor tiles and sheeting, plaster, sheetrock, ceiling tiles, fire door fill, roofing materials, thermal gaskets, mastics, and a range of other products.

Building materials containing greater than one percent asbestos are considered to be Asbestos-Containing Materials (ACMs). ACMs are classified as friable or non-friable. Friable ACMs are those which can be crumbled, pulverized, or reduced to powder when dry by hand or other mechanical pressure. Friable ACMs, such as thermal system insulation and spray-applied fireproofing, are generally associated with a higher risk of releasing potentially hazardous fibers than non-friable ACMs, such as vinyl floor tiles and built-up roofing materials.

Based on the age of the structure, roofing and building materials may contain asbestos. Suspect asbestos-containing materials (ACMs) were noted throughout the site building which included joint compound, caulking, plaster, drywall, pipe elbows and insulation and roofing materials in good condition. No damaged friable suspect ACMs were noted in readily accessible areas. Additional suspect ACMs may be present above behind walls, on building roofs or in other hidden locations.

Sampling and analysis of all suspect ACMs should be performed prior to any disturbance. The ACMs should be removed by a licensed asbestos abatement contractor prior to building demolition or renovation.

4.0 ADJACENT LAND USE

The project site consisted of a single-story parking garage and parking lot with lifts. Commercial and office properties were present to the west, across King Street to the north, and across Charlton Street to the south. A UPS facility was located across Greenwich Street to the east. The remaining surrounding properties comprised mainly commercial and industrial buildings.

5.0 USER PROVIDED INFORMATION

5.1 Title Records

No information supplied by user.

5.2 Environmental Liens or Activity and use limitations

The User was not aware of any Environmental Liens or Activity and use limitations (AULs) for the project site.

5.3 Specialized knowledge

The User had no specialized knowledge of recognized or potential recognized environmental conditions in connection with the project site.

5.4 Commonly known or recently ascertainable information

No such information was provided.

5.5 Valuation Reduction for Environmental Issues

The User was unaware of any valuation reduction due to environmental issues.

5.6 Owner, property manager, and occupant information

The client is the property manager of the project site.

5.7 Reason for performing Phase I

The Phase I is being conducted as part of due diligence for the potential redevelopment of the property.

6.0 SITE HISTORY AND RECORDS REVIEW

6.1 Prior Ownership and Usage**6.1.1 Historical Land Use maps**

Historical insurance maps were reviewed for indications of industrial usage or other evidence suggesting the use or disposal of hazardous materials on or adjacent to the subject property. Specifically, Sanborn Fire Insurance Maps from 1894, 1905, 1922, 1951, 1968, 1980, 1994, and 2007 were reviewed.

1894

The northern portion of the study site was occupied by “Preserve Factory”. Six five-story dwellings occupied the remainder of the study site. A paper box factory, coal yard, an iron storage space, and dwellings were depicted across King Street to the north. Dwellings were depicted across Charlton Street to the south and east-adjacent to the study site.

1905

The northern portion of the study site was occupied by “Packing Canned Fruits, Jellies and Company”. Two vertical and two horizontal steam boilers were shown directly adjacent to the east of study site. The remainder of the site and surrounding properties appeared similar to the 1894 map.

1922

The northern portion of the study site was occupied by “Confectioners’ Supplies”. The coal yard previously across King Street to the north was replaced by a box packing facility. The remainder of the site and surrounding properties remained relatively unchanged from the 1905 map.

1951

The northern portion of the study site was occupied by “Express Depot”. The dwellings on the southern portion of the study site were replaced by a private garage with buried 550-gallon gasoline tanks. The steam boilers previously adjacent to the north of the site no longer existed.

An eighteen-story office building occupied by Standard and Poor was located east-adjacent of the study site on the remainder of the study block. A parking area, private garage, “Mundy Motor Lines”, and residential dwellings were depicted across King Street to the north. Across Charlton Street to the south remained mostly commercial with several dwellings.

1968

The private garage at the study site was extended north to occupy the former “Express Depot”. Two gasoline tanks were depicted within the private garage along the western side of the building. No structures remained on the northern portion of the study site, which was noted as a parking lot.

A private garage with a gasoline tank was located across Charlton Street to the south. A loading area and parking lot covered the complete block across King Street to the north. The remainder surrounding properties remained relatively unchanged from the 1951 map.

1980

No structures remained on the block across King Street to the north, which was noted to be parking. No other significant changes in site use or the surrounding properties were observed from the 1968 map.

1994

The entire block across King Street to the north was noted to be office space. No other significant changes in site use or the surrounding properties were observed from the 1980 map.

2007

The gasoline tanks were no longer depicted at the study site. No other significant changes were noted in site use for the study site or the surrounding properties from the 1994 map.

To summarize, the Sanborn maps indicated that the study site was developed with factories and residential dwellings as early as 1894. The private garage at the study site was constructed between 1951 and 1968, and two 550-gallon gasoline tanks were noted at the study site between 1968 and 1994. Residential and commercial buildings have occupied the surrounding properties since 1894.

6.1.2 Historical Aerial Photographs

Complete and thorough coverage was available for the subject property utilizing historical land-use maps. The maps typically include detailed information such as dates of construction, building occupants or a vacant status, and use and/or zoning use of structures on the site and surrounding area. Aerial photographs would, most likely, not provide additional, unique information that is pertinent to the environmental condition of the property. As such, aerial photographs were not reviewed for the project site.

6.1.3 Property Tax Files

The tax parcels comprising the project site were zoned M1-6 (Manufacturing). The building classes were listed as G-2 and G-6 (garage/gas station).

6.1.4 Recorded Land Title Records

Records maintained by the New York City Fire and Buildings Departments were investigated to determine the potential presence of hazardous materials and are discussed under Section 6.2.3.

6.2 Regulatory Review

Toxics Targeting, Inc. of Ithaca, New York, was contracted to obtain information regarding the regulatory status of the property and the surrounding area. This information included records from databases maintained by the USEPA and New York State Department of Environmental Conservation (NYSDEC). AKRF reviewed these records to identify the use, generation, storage, treatment and/or disposal of hazardous material and chemicals, or releases of such materials which may impact the project site. All applicable regulatory databases meet ASTM guidelines requesting utilization of information within 90 days' receipt from the appropriate agency. Copies of the pertinent sections of the Toxics Targeting, Inc. report are included in Appendix C.

6.2.1 Federal

The federal records reviewed included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); and the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

National Priority List (NPL)

The NPL is the USEPA's database of some of the most serious uncontrolled or abandoned hazardous waste sites identified for probable remedial action under the Superfund Program. These sites may constitute an immediate threat to human health and the environment. Due to the amount of public attention focused on NPL sites, they pose a significant risk of stigmatizing surrounding properties and potentially impacting property values.

No NPL sites were identified within a one-mile radius of the project site.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of known or suspected, uncontrolled or abandoned hazardous waste sites which the USEPA has investigated, or plans to investigate, for a release, or threatened release, of hazardous substances pursuant to the Superfund Act of 1980 (CERCLA). Some of these sites may constitute a potential threat to human health and the environment. While it has been determined by the USEPA that some CERCLIS sites require no action, others could pose a real or perceived environmental threat to neighboring properties, thus affecting property values.

Two CERCLIS site were identified within a ½-mile radius of the project site. General Services Administration, located at 201 Varick Street approximately 600 feet

east/northeast of the project site, was listed as a CERCLIS site. No further remedial activity was planned. Based on the information provided in the listing, this site is not expected to have affected the subject site.

New York City Anthrax Sites, located at 31 Downing Street and 2 Prince Street, approximately 1500 feet east/northeast of the project site, was listed as a CERCLIS site. Based on its distance, and on the information provided in the listing, this site is not expected to have affected the subject site.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on reported releases of petroleum and other potentially hazardous substances.

The subject property was not listed as an ERNS site.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported to the USEPA and/or NYSDEC by a variety of industries on their annual estimated releases of certain chemicals to the environment. The TRIS was mandated by Title III of the Superfund Amendments and Reauthorization Act (SARA) of 1986. Available information includes the maximum amount of chemicals stored on-site; the estimated quantity emitted into the air, discharged into bodies of water, injected underground, or released to land; methods used in waste treatment and their efficiency; and data on the transfer of chemicals off-site.

No TRIS sites were identified within a 1/8-mile radius of the subject property.

Permit Compliance System of Toxic Wastewater Discharge (WWD)

This federal- and state-maintained database contains a listing of sites which discharge wastewater containing potentially hazardous chemicals.

No WWD facilities were reported within a 1/8-mile radius of the subject property.

United States Environmental Protection Agency Civil Enforcement Docket

This database is the USEPA's system for tracking civil judiciary cases filed on behalf of the agency by the Department of Justice.

No facilities were listed in the USEPA's Civil Enforcement Docket within a 1/8-mile radius of the subject property.

Air Discharge Facilities Index (ADF)

This listing of sites tracked by the US EPA AIRS Database includes address information on each facility and the source of its associated air emissions.

Sixteen Air Discharge Facilities were identified within a 1/8-mile radius of the project site. The property at 345 Hudson Street, located east-adjacent of the study site was listed seven times in the database. Based on the information provided in the ADF listings, this property and the remainder of the ADF-listed facilities would not be expected to have affected the study site.

6.2.2 State

The state records reviewed included the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); and Air Discharge Facilities (ADF).

New York SPILLS Database

The New York SPILLS database includes a list of releases reported to the NYSDEC, including those attributed to tank test failures and tank failures. The tank test failures list only covers tanks that are below ground, while the tank failures list includes those that are either below or above ground. This database also lists spills that occur during the transportation of chemicals.

No spills were reported for the subject property. Two hundred and twelve (212) spills were reported within a ½-mile radius of the subject site, including fifteen (15) active status spills and one hundred and ninety-seven (197) closed status spills. Twenty-six (26) of these spills are within a ¼-mile radius of the project site. The spills most likely to impact the project site based on proximity, presumed groundwater flow direction and nature of the spills are as follows:

- A UPS facility, located at 522 Greenwich Avenue, across Greenwich Street to the west was listed as a spill due to a tank test failure of four 1,500-gallon gasoline tanks on April 4, 1991. No further information was provided and the site was closed on February 9, 1998. A second release was reported due to a release of an unknown amount of petroleum on August 10, 1992. Contaminated soil was excavated and disposed of, and the listing was closed on March 14, 2003.
- A Department of Environmental Protection (DEP) parking lot located at the intersection of Hudson Street and Clarkson Street, approximately 725 feet north-northeast of the project site reported a release of an unknown quantity of petroleum on January 20, 2005. During excavation, two previously unknown tanks were discovered. No further information was available, and the site remains with active status.
- A Mobil Station, located at 140-52 6th Avenue, approximately 1600 feet southeast of the project site reported a release of unknown quantity of petroleum on October 1, 2002. The implementation of the Remedial Action Plan began on March 28, 2007 and the site remains with active status.

Based on the nature and number of spills reported for properties nearby and in presumed upgradient groundwater flow locations, the reported spills may have affected subsurface conditions at the subject property. Details from all spills are included in Appendix C.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

The NYSDEC's Bureau of Hazardous Waste Facility Compliance regulates hazardous waste from the point of generation to the point of disposal. The identified sites tracked on this list are those which have filed notification forms in accordance with the Resource Conservation and Recovery Act requirements regarding their hazardous waste activity. These sites include treatment, storage and disposal facilities (TSDs); small-quantity and

large-quantity generators; and transporters of hazardous waste regulated under RCRA. The discussion below includes any CORRACTS listings of facilities which are subject to corrective action under RCRA.

No TSD facilities were identified within a 1/8-mile radius of the subject area.

Forty-one RCRA Generators/Transporters were reported within a 1/8-mile radius of the subject site. The east-adjacent property at 345 Hudson Street was listed three times as a generator of hazardous waste, including spent non-halogenated solvents, silver, ignitable hazardous waste, and corrosive hazardous waste from 1992 to 1997. Based on the locations and details of all the RCRA listings, potential discharges from these off-site sources are not likely to have affected subsurface conditions at the study site. Details of all listed RCRA Notifiers are included in Appendix C.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

One CBS facility was identified within a 1/8-mile radius of the project site. A 300-gallon ethylene glycol aboveground storage tank (AST) was listed at the UPS facility located across Greenwich Street to the west. Based on the location and details of this listing, potential discharges are not likely to have affected subsurface conditions at the study site.

Solid Waste Facilities (SWF)

This database includes a listing of landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

No SWF were listed within 1/2-mile of the subject property.

Petroleum Bulk Storage (PBS) Database

The New York State PBS lists commercial facilities with registered petroleum tanks located either above or below ground in excess of 1,100 gallons and less than 400,000 gallons.

The study site was listed in the PBS database. Twenty-seven (27) additional PBS listings were reported within a 1/8-mile radius of the subject property. The on-site and closest off-site properties (within 250 feet radius of the subject site) with listed tanks are summarized in Table 1.

Table 1
Area Petroleum Bulk Storage Facility Data

Reported Location	Capacity (gallons)	Product Stored	Status	Distance/Direction from Project site
Trinity Church Corp 559 Greenwich Street	(2) 550-gallon tank	Gasoline	Unknown	On Site
345 Hudson Street	20,000-gallon AST	#6 Fuel Oil	In-Service	East-adjacent
United Parcel Service 522 Greenwich Street (listed twice)	(4) 1,500-gallon UST	Gasoline	Closed - In Place	230 feet West-southwest
	(8) 1,500-gallon UST	Diesel	Closed - In Place	
	3,000-gallon UST	#2 Fuel Oil	Closed - In Place	
	4,000-gallon UST	Gasoline	In-Service	
	(2) 4,000-gallon UST	Diesel	In-Service	
New York Truck Terminal 325 Spring Street	250-gallon AST	Waste oil	In-Service	230 feet West-southwest
	4,000-gallon UST	#2 Fuel Oil	Closed	
	6,000-gallon UST	Gasoline	Closed	
	12,000-gallon UST	Gasoline	Closed	

Notes: UST = underground storage tank
AST = aboveground storage tank

Releases were listed for the tanks associated with the petroleum storage tanks at the UPS facility at 522 Greenwich Street. Details of the additional PBS facilities located within 1/8 mile of the project site are included in Appendix C.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This database maintains information and aids decision-making regarding the investigation and clean-up of hazardous sites. The Registry's information includes the clean-up status, type of clean-up, types and quantities of contaminants involved, and the assessment of health and environmental concerns.

No State Inactive Hazardous Waste Disposal Sites were reported within a one-mile radius of the subject property.

Major Oil Storage Facilities (MOSF) Database

These facilities may be on-shore facilities or vessels with petroleum storage capacities of 400,000 gallons or more.

No Major Oil Storage Facilities were reported within a 1/8-mile radius of the subject property.

Environmental Restoration Program

These sites (which are generally municipally-owned) are receiving New York State funding, through the Clean Water/Clean Air Bond Act of 1996, to reimburse costs for site investigation and remediation. Some sites in this program have known extensive contamination, whereas others have more limited contamination or have not had sufficient investigation to determine whether or not contamination is present.

No Environmental Restoration Program sites were reported within a 1/2-mile radius of the subject property.

Voluntary Cleanup Program

In contrast to the Environmental Restoration Program, the Voluntary Cleanup Program is a NYSDEC program for investigation and remediation of generally privately-owned sites. It allows volunteers to obtain NYSDEC liability releases following cleanup. New sites are no longer accepted into this program (see the Brownfield Cleanup Program, below) though existing sites may continue to be addressed. Some sites in this program have known extensive contamination, whereas others have more limited contamination or have not had sufficient investigation to determine whether or not contamination is present.

No Voluntary Cleanup Program sites were listed within ½-mile of the subject site.

Brownfield Cleanup Program

In 2003, a New York State law established this successor to the Voluntary Cleanup Program. In addition to liability releases, it established a variety of tax credits for sites remediated through the program. Some sites in this program have known extensive contamination, whereas others have more limited contamination or have not had sufficient investigation to determine whether or not contamination is present.

No Brownfield Cleanup Program (BCP) sites were listed within a ½-mile radius of the project site.

6.2.3 Local

Buildings Department

An electronic search of the New York City Department of Buildings on-line Building Information System (BIS) database was performed. The database typically includes information on current and past Certificates of Occupancy and construction permits, but does not include building plans. Copies of pertinent information are included in Appendix D. BIS records for 551-559 and 561 Greenwich Street indicated Certificates of Occupancy were available for this property in 1932 and 1959. The property was listed as a parking lot and a single-story garage with heating system. Violations were recorded for the structural integrity of the building.

Fire Department

The database search provided by Toxics Targeting, Inc. indicated that according to the New York City Fire Department archived database, two 550-gallon tanks were present at the study site.

7.0 INTERVIEWS

7.1 Interview with owner

Thomas Cancelliere, Director of Property Management & Construction for Trinity Real Estate answered pertinent questions about the project site. Mr. Cancelliere had no knowledge of any tanks or chemical storage at the project site. Mr. Cancelliere had no knowledge of any interior or exterior incidents concerning pools of liquids, odors, staining or corrosion. Mr. Cancelliere had no knowledge of potable wells, irrigation wells, injection wells, dry wells, abandoned wells or any other wells at the project site.

Mr. Cancelliere had no knowledge of the following: 1) any pending, threatened, or past administrative litigation relevant to hazardous substances or petroleum products in, on or from the property; 2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property; and 3) any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

7.2 Interview with site manager

Mr. John Shea, the property manager, accompanied AKRF during the site visit and answered pertinent questions about the site. This information is summarized in Section 2.1.

7.3 Interview with occupants

No on-site occupants were available for interview at the time of the site visit.

7.4 Interview with local government officials

Federal, state and local regulatory databases were consulted for identifying recognized environmental conditions (RECs) on the property due to on-site or off-site conditions. Given that is unlikely that further significant information would be available from local government officials, and given that it is unlikely that such information would materially change the findings of this Phase I assessment, local government officials were not interviewed.

8.0 PREVIOUS STUDIES

No previous reports were available for review at the time of this report.

9.0 LIMITATIONS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-05. The following limitations should be noted:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- Access was not available to the roof or surface areas covered by parked cars.
- A limited visual inspection for asbestos was performed in readily accessible areas only. No samples were collected as part of this assessment.

10.0 DEVIATIONS

The User did not request any deviations from the ASTM Standard.

11.0 DATA GAPS

Section 3.3.20 of ASTM Standard E 1527-05 defines a data gap as the inability to obtain information required by the ASTM Standard despite good faith efforts to obtain applicable data. Data gaps may result from incompleteness in any of the activities required by the by the ASTM Standard. The following data gaps occurred in connection with this report:

Table 2
Data Gaps Identified

Data Gap	Explanation	Relevance of Gap
Project site Area History	The project site area history was not conducted in five-year intervals	This data gap is not likely to alter the conclusions of the report
Interview with former Owner or Operator	AKRF was not able to contact the former site owner or operator.	This data gap is not likely to alter the conclusions of the report
Interview with Owner or Operator of site abutters	AKRF was unable to locate the owners of all the abutting properties	This data gap is not likely to alter the conclusions of the report

12.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I Environmental Site Assessment (ESA) was performed in accordance with customary principles and practices in the environmental consulting industry, and in conformance with the scope and limitations of ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, this practice are described in Section 9.0 of this report.

The objective of this assessment was to identify any potential environmental concerns associated with the site resulting from past or current site usage and usage of neighboring properties. This assessment has revealed the following evidence of Recognized Environmental Conditions in connection with the property:

- Historical land use maps and the regulatory database search indicated that the project site had a history of industrial and commercial use. Historical on-site usages included a Preserves Factory, Packing Canned Goods Company, Confectioners' Supplies, and Express Depot. The private garage at the study site was constructed between 1951 and 1968.
- A potential fuel oil fill cap was observed in the sidewalk adjacent to the west of the building along Greenwich Street. According to historical Sanborn maps and local records, two 550-gallon gasoline underground storage tanks (USTs) were located beneath the parking garage. Documentation regarding closure of these tanks was not available.
- Based on the age of the structure, roofing and building materials may contain asbestos. Suspect asbestos-containing materials (ACMs) were noted throughout the site building which included joint compound, caulking, plaster, drywall, and pipe insulation. Additional suspect ACMs may be present behind walls, on building roofs or in other hidden locations.
- Since the on-site building was constructed prior to 1978, lead-based paint may be present. Painted surfaces observed in the structure were noted to be in good condition.
- The on-site building was illuminated by fluorescent lighting. Based on the age of the building, suspect PCB- and mercury-containing fluorescent lights, switches, and other electrical equipment, may be present. No leaks or stains were noted around lighting fixtures and switches.
- The regulatory databases, historical land-use atlases, and visual site inspection indicated that the surrounding neighborhood has over a 100-year history of residential, commercial and industrial development. Two hundred and twelve spills were reported within a 1/2-mile radius of the subject site. Active and closed status spills, petroleum storage tanks, and hazardous waste generators were identified within 400 feet of the subject property. The off-site use of petroleum, chemicals and/or hazardous substances has the potential to have affected local groundwater quality.

Based on the results of this assessment, the following recommendations are noted:

- Prior to any redevelopment of the property, a subsurface (Phase II) investigation including a geophysical survey to locate potential USTs and the collection of soil and groundwater samples should be conducted to determine whether past on- or off-site operations have affected the property.
- If any USTs are discovered during the Phase II investigation or subsequently, they should be removed in accordance with applicable federal, state and local requirements (including spill reporting) along with any associated petroleum-contaminated soil or groundwater. Soil (including fill materials) intended for off-site disposal should be tested in accordance with the requirements of the intended receiving facility. Transportation of material leaving the site for off-site disposal must be in

accordance with federal, state and local requirements including licensing of haulers and trucks, placarding, truck routes, manifesting, etc.

- Prior to any renovation or demolition activities with the potential to disturb suspect ACMs, an asbestos survey should be conducted. If these materials prove to contain asbestos, they should be properly removed and disposed of in accordance with all city, state and federal requirements.
- Renovation or demolition activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62 – Lead Exposure in Construction).
- Unless there is labeling or test data which indicates that the on-site fluorescent light fixtures are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.

13.0 SIGNATURE PAGE

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312

Keri Anselmo
Environmental Scientist

14.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. It is intended for use as a supplement to the property appraisal, and is only to be used as a guide in determining the possible presence or absence of hazardous materials on the subject property at the time of the inspection. This assessment is based upon the review of readily available records relating to previous use of both the project site and the surrounding area, as well as a visual inspection of the current condition of the property. Environmental characteristics at this site and surrounding sites may be subject to change in the future.

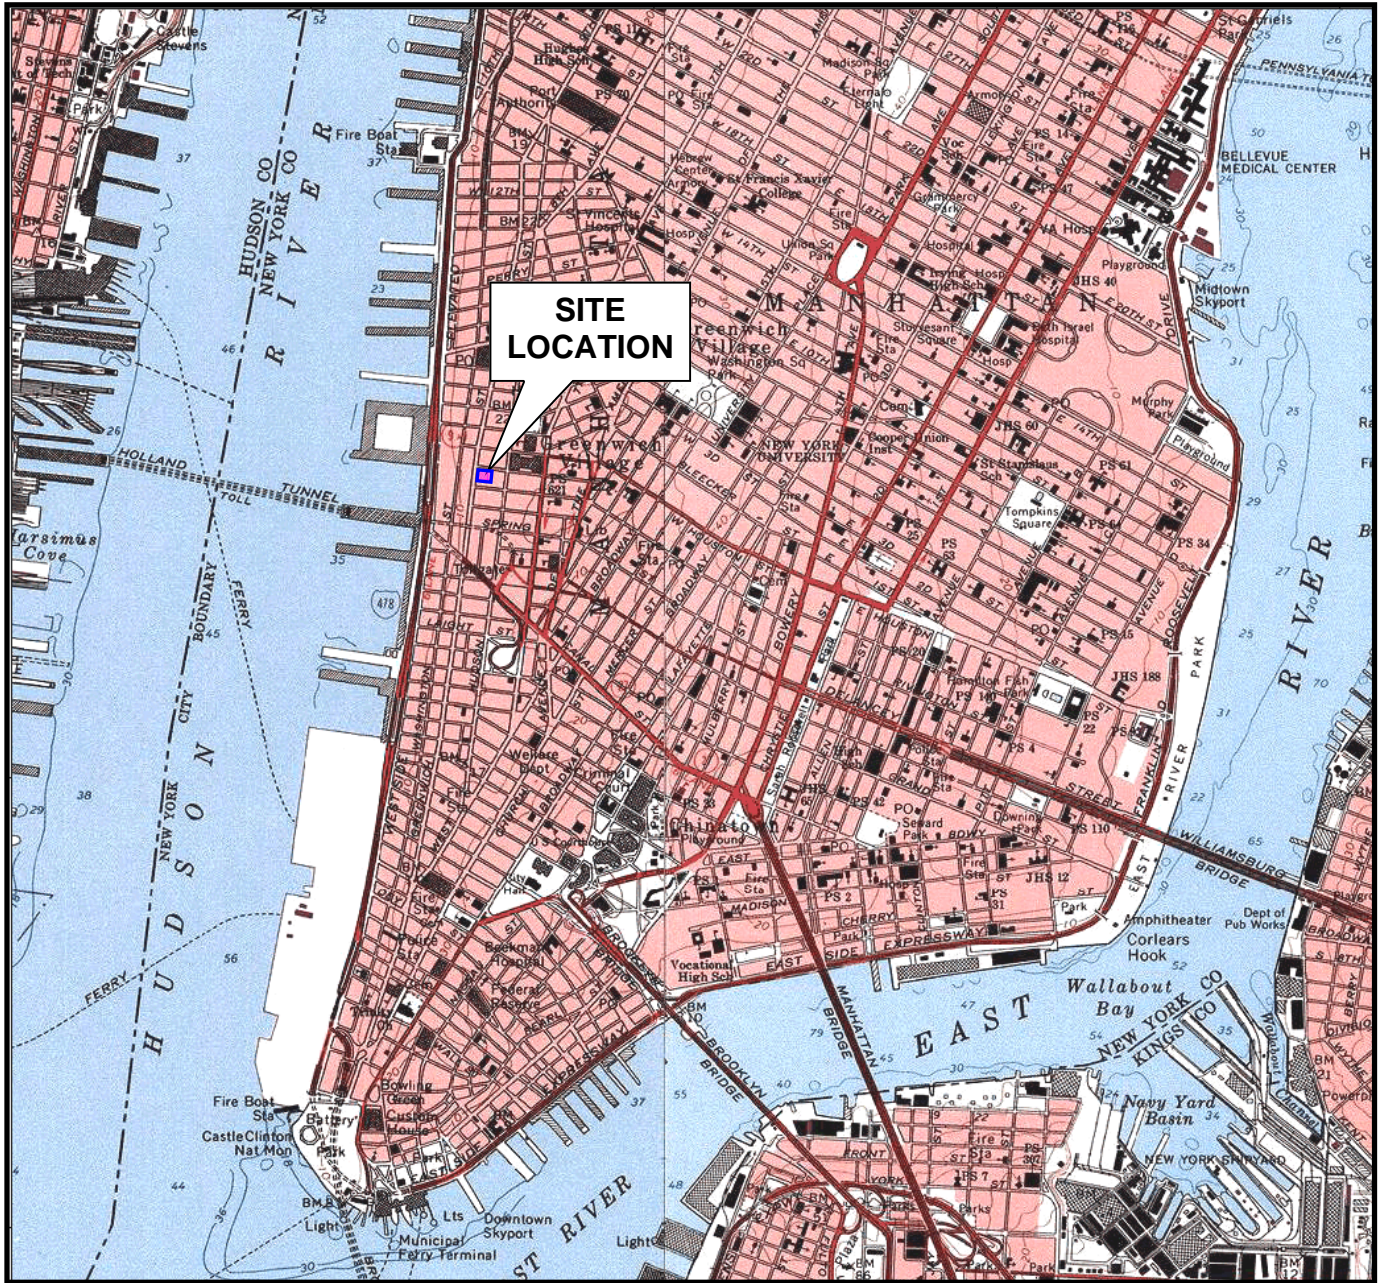

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the site and its surrounding area. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and inspections have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than Trinity Real Estate and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or negligent or willful acts or omissions.

ENVIRONMENTAL DATABASE REPORT

**551-561 GREENWICH STREET
NEW YORK, NY 10013**

NOVEMBER 12, 2008

LIMITED WARRANTY AND DISCLAIMER OF LIABILITY

Who is Covered

This limited warranty is extended by Toxics Targeting, Inc. only to the original purchaser of the accompanying Environmental Report ("Report"). It may not be assigned to any other person.

What is Warranted

Toxics Targeting, Inc. warrants that it uses reasonable care to accurately transcribe the information contained in this Report from the sources from which it is obtained. This limited warranty is in lieu of all other express warranties which might otherwise arise with respect to the Report. No one is authorized to change or add to this limited warranty.

What We Will Do

If during the warranty period there is shown to be a material error in the transcription of the information contained in this Report from the sources from which it was obtained, Toxics Targeting, Inc. shall refund to the original purchaser the full purchase price paid for the Report. The remedy stated above is the exclusive remedy extended to the Purchaser by Toxics Targeting, Inc. for any failure of the Report to conform with this Warranty, or otherwise for breach of this Warranty or any other warranty, whether expressed or implied.

What We Won't Cover

Toxics Targeting, Inc. has not and can not verify the accuracy, correctness or completion of the information contained in this Report. Information is obtained from government agencies, site owners, and other sources, and errors are common in such information. Because Toxics Targeting, Inc. can not control the accuracy of the information contained in this Report, or the uses which may be made of the information, TOXICS TARGETING, INC. DISCLAIMS LIABILITY TO ANYONE FOR ANY EVENTS ARISING OUT OF THE USE OF THE INFORMATION. TOXICS TARGETING, INC. SHALL NOT BE LIABLE FOR ANY DAMAGE CAUSED BY THIS REPORT, WHETHER DIRECT OR INDIRECT, AND WHETHER OR NOT TOXICS TARGETING, INC. HAS BEEN ADVISED OF OR HAS KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES. TOXICS TARGETING, INC. EXPRESSLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

Period of Warranty

The period of warranty coverage is ninety days from the date of purchase of this Report. There shall be no warranty after the period of coverage. ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR USE SHALL HAVE NO GREATER DURATION THAN THE PERIOD OF WARRANTY STATED HERE, AND SHALL TERMINATE AUTOMATICALLY UPON THE EXPIRATION OF SUCH PERIOD. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

PLEASE REFER TO PAGES ONE AND FOUR FOR A DESCRIPTION OF SOME OF THE LIMITATIONS OF THIS ENVIRONMENTAL REPORT.

Introduction

Toxics Targeting has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your *Environmental Report*. It checks for the presence of 25 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.
2. ***Estimates*** the distance and direction between the target address and each identified toxic site.
3. ***Reports*** air and water permit non-compliance and other regulatory violations.
4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.
5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

The Three Sections Of Your Report

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** direction, **c)** proximity to the target address and **d)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. A close-up map illustrates the locations of all identified toxic sites, at the shortest radius search distance used in your report. Finally, a map of tax parcels and a table of selected information about those parcels are included.

The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information and some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

How to Use Your Report

- Check Table One to see the number of identified sites by distance intervals.
- Check Table Two to see identified sites sorted by direction.
- Check Table Three to see identified sites ranked by proximity to the target address.
- Check Table Four to see identified sites sorted by site categories.
- Use Table Five to get info for the subject parcel and every parcel found on the Tax Parcel Map
- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

Toxic Site Databases Analyzed In Your Report

Search Radius

One-Mile

1) **National Priority List for Federal Superfund Cleanup**: a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

Half-Mile

2) **Delisted National Priority List Sites**: a listing of NPL sites that have been removed from the National Priority List.

One-Mile

3) **New York Inactive Hazardous Waste Disposal Site Registry**: a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile

4) **New York Inactive Hazardous Waste Disposal Site Registry Qualifying**: a state listing of sites that qualify for possible inclusion to the NYDEC Inactive Haz. Waste Disposal Site Registry.

One-Mile

5) **RCRA Corrective Action Activity (CORRACTS)**: waste facilities with RCRA corrective action activity reported by the USEPA.

Half-Mile

6) **CERCLIS** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of Non-NFRAP sites that can pose environmental or public health hazards requiring investigation or clean up.

Half-Mile

7) **CERCLIS NFRAP**: a federal listing of CERCLIS sites that have no further remedial action planned.

Half-Mile

8) **New York State Brownfield Cleanup Sites**: a listing of sites that are abandoned, idled or under-used industrial and commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

Half-Mile

9) **New York Solid Waste Facilities Registry**: active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

Half-Mile

10) **New York City 1934 Solid Waste Sites**: a listing of solid waste disposal sites operated by New York City municipal authorities circa 1934.

Half-Mile

11) **New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities**: sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRIS). Also includes the following database:

- **RCRA violations**: waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Half-Mile

12) **Toxic Spills: active and inactive or closed** spills reported to state environmental authorities, including *remediated* and *unremediated* leaking underground storage tanks. This database includes the following categories:

- Tank Failures
- Tank Test Failures
- Unknown Spill Cause or Other Spill Causes
- Miscellaneous Spill Causes

Eighth-Mile

13) **New York State Major Oil Storage Facilities:** sites with more than a 400,000 gallon capacity for storing petroleum products.

Eighth-Mile

14) **New York State Petroleum Bulk Storage Facilities:** sites with more than an 1,100 gallon capacity for storing petroleum products.

Eighth-Mile

15) **New York City Fire Dept Tank Data:** tank data from 1997.

Eighth-Mile

16) **New York and Federal Hazardous Waste Generators and Transporters:** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRA). Also includes the following database:

- **RCRA violations:** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Eighth-Mile

17) **New York Chemical Bulk Storage Facilities:** sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Eighth-Mile

18) **Historic New York City Utility Sites (1890's to 1940's):** power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites.

Half-Mile

19) **New York Hazardous Substance Disposal Site Draft Study:** a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites were not eligible for state clean up funding programs.

Eighth-Mile

20) **Federal Toxic Release Inventory Facilities:** discharges of selected toxic chemicals to air, land, water or treatment facilities.

Eighth-Mile

21) **Federal Air Discharges:** air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Eighth-Mile

22) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Eighth-Mile

23) ***Federal Civil and Administrative Enforcement Docket:*** judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

On-site only
(250 ft)

24) ***New York City Environmental Quality Review (CEQR) – E Designation Sites:*** parcels assigned a special environmental (“E”) designation under the CEQR process. E designation requires specific protocols that must be followed.

Property only

25) ***ERNS: Federal Emergency Response Notification System Spills:*** a listing of federally reported spills.

Limitations Of The Information In Your Report

The information presented in your *Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: **1)** additional information on individual sites may be available, **2)** newly discovered sites are continually reported and **3)** all map locations are approximate. As a result, this report is intended to be the **FIRST STEP** in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

Toxics Targeting tries to ensure that the information in your report is presented accurately and with minimal alteration. The only systematic changes that are made correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Please be aware of some other limitations of the information in your report:

- The map used by *Toxics Targeting* is the same one used by the U. S. Census. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated on the Census map. **FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;**
- **UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 25 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;**
- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in zip code areas within one mile of the target address as well as toxic sites without zip codes reported in the same county. **IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT TOXICS TARGETING AND REFER TO THE SITE ID NUMBER.**
- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. **YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;**
- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.
- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. **YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.**

Section One:

Report Summary

Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code (This information does not appear in the headings for Inactive Hazardous Waste Disposal Sites).
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see ***How Sites are Located***, at the end of this section for more information).

Toxic Site Profiles summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers;
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites
(A complete description of the codes follows the profiles section).

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity:** Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity:** The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity:** The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive toxicity:** May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced)

IRRIT TOX: **Primary Irritant:** The chemical can cause eye or skin irritation

MCL: **Drinking Water Standard - Maximum Contaminant Level** (MCL) listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (* indicates value for total trihalomethanes) for federal MCL's.

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

Reference Source for Drinking Water Standards: New York State Department of Health, Bureau of Toxic Substances Assessment, 2 University Place, Room 240, Albany, NY 12203, 518/458-6373.

U.S. Environmental Protection Agency, Office of Drinking Water, 401 M St SW, Mailstop WH-556, Washington, DC, 20460, 202/260-5700.

Inactive Hazardous Waste Disposal Site Classifications: 1 -- Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or the environment -- immediate action required;

2 -- Significant threat to the public health or environment -- action required;

3 -- Does not Present a significant threat to the environment or public health -- action may be deferred;

4 -- Site properly closed --requires continued management;

5 -- Site properly closed, no evidence of present or potential adverse impact -- no further action required;

2a -- This temporary classification has been assigned to sites where there is inadequate data to assign them to the five classifications specified by law.

D1, 2, 3 -- Delisted Site (1: hazardous waste not found; 2: remediated; 3: consolidated site or site incorrectly listed)

NO NATIONAL PRIORITIES LIST (NPL) SITES IDENTIFIED WITHIN 1 MILE SEARCH RADIUS

HAZARDOUS MATERIAL SPILLS INTRODUCTION

The Hazardous Material Spills in this section are divided into eight spill cause groupings. These include:

Active Spills Section: Spills with incomplete paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 1) Tank Failures
- 2) Tank Test Failures
- 3) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 4) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

Closed Status Spills Section: Spills with completed paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 5) Tank Failures
- 6) Tank Test Failures
- 7) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 8) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

All spills within each spill cause category are presented in order of proximity to the subject site address.

Please note that spills reported within 0.25 mile (or one-eighth mile in New York City) are mapped and profiled.

Between 0.25 mile (or one-eighth mile in New York City) and 0.5 mile, only the following spills are mapped and profiled:

- * Tank Failures;
- * Tank Test Failures;
- * Unknown Spill Cause or Other Spill Cause;
- * Spills greater than 100 units of quantity; and
- * Spills reported in the NYSDEC Fall 1998 MTBE Survey.

A table at the end of each section presents a listing of reported Miscellaneous Spills with less than 100 units located between 0.25 mile (or one-eighth mile in Manhattan) and 0.5 mile. These spills are neither mapped nor profiled.

ACTIVE TANK FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

Caller Remarks:

PRODUCT FOUND IN OBSERVATION WELLS, MOBIL HIRED CONSULTANTS TO CLEAN SPILL.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SARNOWICZ"
 This spill site has been transferred from DEC Sigona to Remedial

Bureau B, on August 4, 2003.

Reassigned from sullivan to sigona on 11/1/00

On August 10, 2000, DEC (Sigona) and NYSDOH (McDonald) performed a site investigation with MTA (Transit Authority) and ExxonMobil (Meola) and Handex representatives to address gasoline seepage and gasoline vapors into subsurface MTA offices at Canal Street and Sixth Avenue Subway Station.

According to Handex June 5, 2000 report, air samples were compared with vapor analysis from Monitoring well No. 3. There has been a presence of free product in MW No. 3 in recent months 1999-2000.

ExxonMobil agreed to install a vapor treatment system and perform remediation of seepage from groundwater into subway tunnel.

DEC Investigator Remarks:

need to trace owner & send TTF letter

8/28/06 ttf letter sent. bf

9/6/06 Spoke to Bernie at NYC Tank. They will clear off concrete from tank and determine why tank failed. Also, received letter from Aaron Adams, ex-owner, explaining that building is no longer his. Deed was signed over to 476 Broome Property, LLC, 41 Madison Avenue, 29th Floor, New York, NY 10010 on 8/24/06 (Acris).

9/7/06 spoke to Mr. haliday of Gindi Group and 476 Broome Property, LLC (212)207-9216. They are having NYC Tank repair and or replace tank within next 5 days. bf

9/12/06 sent ttf letter to new owner's manager: Solly halbi, 600 Madison Avenue, 24th Floor, NYC 10022. faxed letter to NYC Tanks at their request. bf

9/19/06 received fax letter from Gindi Group. Second fax received. Tank needs to be closed with DEC application.

9/22/06 called Solly Halabi (sp?) of Gindi Group. left message for him to call back re: application. bf

4/25/07 Property has been sold as of 9/06. Not able to find a contact phone number for new owner. Sent letter requesting closure application for tank to:
476 Broome Street Property LLC
c/o National Registered Agents
875 Avenue of the Americas, Suite 501
New york, NY 10001

Letter gives them 30 days to submit application. bf

5/25/07 received letter from National Registered Agents stating that 476 Broome Street Property is not represented by them. bf

1/31/08 bf: Found new owner via ACRIS. Letter (ttf) sent to:
476 Broome Property LLC
41 Madison Avenue, 29th Floor
New York, NY 10010

5/19/08 Inspected facility on 5/9/08. Nobody at site. Photos taken . Fill port not colorcoded. Sent NOV to 476 Broome Property LLC at address above. Administrative settlement conference scheduled for 6/10/08 at 2:30 PM. bf

Caller Remarks:

CON ED DID THE DIGGING AND HIT THE OIL LINE ;; CON ED WILL CLEAN UP: 204253.

DEC Investigator Remarks:

spill was caused by ConEd and is being cleaned up by them.

204253. see eDocs.

4/13/07: Spill submitted for closure by Con Ed. Request denied, with comment: "Was repair made to damaged fill line? Was contractor that installed vault working for Con Ed?" (JHO)

5/15/07: spill submitted for closure by Con Ed. Response to above comment was: "Safeway Construction Enterprises was working directly for Con Edison. Safeway repaired the oil fill line. Safeway also conducted the clean up and disposed of the non-haz oily debris." Request for closure denied, with comment: "Following completion of repairs to fill line, a NYSDEC-approved precision test is required to confirm repair was successful. Was testing performed? What test method was used?" (JHO)

12/19/07: e-mail from Con Ed (Brian Bellows) regarding testing of the line:

"As mentioned, there is no access to the tank system for line testing. In addition, approval from the property owner will be needed for work on their tank as mentioned below. Any guidance in resolving this issue would be appreciated."

Attached to Con Ed (Bellows) e-mail was an e-mail from Con Ed's contractor (Robert M. Laga of The Franklin Company Contractors, Inc.), which states:

"Based upon my inspection, there is a buried tank located under the building. The tank has a fill line, vent line, suction and return. The only access to the tank is through a 24"x24" manhole to a round man-way cover, I noticed a few bolts missing in the cover. The cover has no openings on it to access the tank. The size of the tank is questionable.

"Testing the tank through approved methods by the DEC/EPA is not possible because there is no access to the tank. In the event you are required to test the tank, the DEC has allowed in the past, to test the tank through the vent line. This test would only be an indication of weather the tank was tight or non-tight. To perform a complete test, the water intrusion portion of the test must be performed. Water intrusion testing does not have to be completed if it can be demonstrated to the DEC that groundwater is well below the bottom of the tank. This could be determined suing a Geo-probe rig for an additional cost.

"Another option is to have us remove the man-way lid and weld on a 2" or 4" bung. This would allow us to test the tank the conventional method, but would require a few days to prepare and get the tank ready for testing." (JHO)

12/20/07: e-mail to Con Ed (Bellows):

"Please clarify the sequence of events for me. As I understand it, your contractor disconnected the fill line in order to install the vault. The fill line was re-connected but leaked (?) or did the leak happen during the disconnection period? At what point was the fill line re-connected?" (JHO)

12/21/07: e-mail response from Con Ed (Bellows):

"On January 26, 2007, a spill was cleaned up in the area where the contractor had removed an oil fill line when constructing a vault. When the oil company came to make a delivery, the oil leaked into the backfilled excavation. The contractor came back and excavated soil then made the repairs to the oil fill line they removed." (JHO)

12/21/07: E-mail to Con Ed (Bellows):

"Was the initial spill they cleaned up (on Jan 26) a result of the line being disconnected?" (JHO)

12/21/07: e-mail response from Con Ed (Bellows):

"According to the inspector, the final clean up was completed on 1-26-07 at 1500 hrs. Clean up was completed by Safeway construction. The affected 2 yards soil was dug up and replaced with clean soil."

1/16/08: E-mail from Con Ed (Bellows):

"Just a quick follow-up on this spill event, I believe you were checking to see if we would be required to have the entire tank system tested since the tank line could not be isolated. As mentioned previously the tank system would need to be modified for testing. Let me know if anything else is needed at this time or if a tank testing determination is made."

E-mail reply to Con Ed (Bellows):

"I spoke with our PBS staff [Jacob Krimgold], and they said the line has to be tested. I checked the records for this building, and saw that the tank system was tested in 2003 using the Horner EZ3 testing method, and is due for another test in June 2008.

Perhaps that
method can be used again." (JHO)

Map Identification Number 7 **VACANT PROPETRY**

DEC Investigator Remarks:

01/27/06-Hiralkumar Patel. Talked with Zeb at PW. they were doing subsurface investigation of this site, which is E designated in DEP. they investigated both soil and groundwater. but they found high concentration of VOC in groundwater only. now he is waiting to hear from owner for further cleanup. Zeb going to send me the lab results for samples.
FAX for Zeb: (631) 589-6353

Talked with Mr. Peter, who is the representative of the owner. i have emailed to peter and asked him to send me owner's information.

01/30/06-Hiralkumar Patel. Left message for ZEB at PW. Also left message for Mr. Peter.

01/31/06-Hiralkumar Patel. Received email from Peter regarding owner's information and other useful stuff.

Owner of the property

The Estate of Armand Arman
c/o Gold & Gold, PC
850 Third Avenue -- 19th Floor //CURRENT OWNER//
New York, NY 10022
Attn: Robert Gold, Esq.
Phone -- 212-822-2200

My role in this case --

I am an Owner's Representative for the prospective purchaser of the property, coordinating their development efforts. The developer is:

Red Brick Canal, LLC
c/o Red Brick Properties, Inc.
73 Spring Street -- Suite 201 //POTENTIAL BUYER//
New York, NY 10012

Left message for Zeb asked to send site plan and sample results. Talked with Zeb and as per him we will receive the required information late today.

need to send CSL

1/31/06 - Raphael Ketani. I sent a CSL to Robert Gold, David Slavin, Zeb Youngman, and David Yudelson.

2/1/06 - Raphael Ketani. I reviewed the analytical data package dated January 18, 2006 from American Analytical Laboratories that was originally e-mailed to Kumar Patel of the Spills Unit on 1/31/06. SB-5 and SB-6 showed a high mercury concentration and a mercury exceedence, respectively. GW-1 showed many volatile and metal analyte exceedences and GW-2 and GW-3 each had several volatile analyte exceedences. I will send a letter to Mr. Yudelson stating that the soil and water have to be removed and cleaned up, respectively.

3/17/06 - Raphael Ketani. I tried to call Mr. Yudelson regarding the site, but could only leave a voice mail.

4/6/06 - Raphael Ketani. Mr. Yudelson called me back at 2:55PM and said that he has received the work plan and will overnight it to me.

4/7/06 - Raphael Ketani. Today I received the Sub-Surface Investigation Report and the Remedial Action Plan for the site, both dated April 2006. I finished my review of the reports and will send out a letter stating that the DEC finds the reports acceptable. Additionally, the letter will state that they should do repeated rounds of groundwater vacuuming and should sample the water after each round of ORC injection or bioremediation to make sure things are being cleaned up, or at least reduced.

5/24/06 - Raphael Ketani. Case transferred from Ketani to Tang as per authorization by Randall Austin, Spills Program Manager, due to analytical results showing groundwater contamination.

11/03/06 Re-assigned from Tang to Chanda (Chanda)

11/06/06: Kartik Chanda of DEC reviewed documents and reports regarding this spill case. On 11/6/06, Chanda called to Zeb Youngman, project manager, P.W.Grosser Consulting, requiring present site status and updated information. He stated that the last six months they did not perform any work regarding this spill case. The investigation work will be started next April, 2007.

12/21/06: Chanda sent an email to Zeb Youngman (P.W Grosser), requiring that the delineation of groundwater contamination up & down gradient and groundwater flow direction be submitted to the DEC for review by 2/20/07.

4/17/07: Chanda sent a reminder letter to RP (Robert Gold) and his attorney (D. Yudelson) and consultant (Zeb Youngman), requiring that the delineation of groundwater contamination up & down gradient and groundwater flow direction must be submitted to the Department by 5/31/07.

6/1/07: Chanda received a phone call from Zeb Youngman. On 6/4/07, Chanda introduced with ExxonMobil personnel (1) Jerri Hanles (Claim advisor), (2) Frank Messina (Remediation Engineer)and Mr. Brendan Mooney, Kleinfelder Environmental by telephone conference regarding this spill case.

6/6/07: Chanda received an e-mail from Brendan Mooney. He stated that Kleinfelder is working on behalf of ExxonMobil to prepare a work Plan for this spill case. He requested two week extensions to submit Work Plan. On 6/6/07, Chanda approved two week extensions to submit the work plan. Therefore, a work Plan is submitted to the DEC by 6/15/07 for approval.

6/15/07: Chanda received an electronic copy of the off site remedial work plan prepared by Kleinfelder East, Inc. dated June 15, 2007.000

6/26/07: Chanda has reviewed and conditionally approved the work plan on 6/25/07. On 6/26/07, Chanda sent an approval letter to RP (Robert Gold) and attorney (David Yudelson) and consultant (Kleinfelder), requiring that a final investigation report be submitted to DEC for review by 9/25/07.

9/25/07: Chanda received an extension request letter from Brendan Mooney(Kleinfelder). Kleinfelder is requesting a 60 -day extension to submit Supplemental Off-Site Remedial Investigation report. The Department (DEC) approves a 60-day extension.

9/28/07: Chanda sent a 60-day extension approval letter to RP (Robert Gold), attorney (David Yudelson) and consultant (Kleinfelder), requiring that an investigation report must be submitted to DEC by 11/26/07 for review and approval.

12/3/07: Chanda received an extension request letter dated 11/29/07 from Mr. Brendan Mooney, Kleinfelder. He stated that the NYCDOT would not issue the required sidewalk permits due to an NYCDOT holiday embargo period (November 16, 2007 through January 2, 2008).

12/10/07: The Department (NYSDEC) approves a 90-day extension due to an NYCDOT holiday embargo (2007 Holiday Construction Embargo). The deadline extended to the February 28, 2008.

1/4/08: Chanda received a call from Brendan Mooney (Kleinfelder) regarding the schedule of the monitoring well installation at the site. He will send an email notification regarding the monitoring well installation and sampling schedule for the groundwater investigation.

2/25/08: Chanda received a call from PR's consultant regarding the deadline extension to March 30, 2008.

4/3/08: Chanda received a Subsurface Investigation Report(SIR) from Kleinfelder East Inc. dated March 28, 2008.

5/22/08: Chanda has reviewed the SIR (Off-site) and has the following comments:

* Installation of four soil borings completed as monitoring wells MW-1 through MW-4.

*On January 31, 2008, groundwater monitoring wells MW-1 through MW-4 were sampled and analyzed for VOCs and SVOCs.

* The groundwater (GW) analytical results showed elevated levels of volatile organic compounds (VOCs). Total BTEX concentrations ranged from 11 ppb to 3,614 ppb.

5/23/08: Chanda sent a letter to RP (Robert Gold) and his attorney & consultant(Kleinfelder), requiring that the Site Status Update Report should include quarterly groundwater sampling and monitoring analytical results both on-and off site wells. Upon review of the Site Status Update Report, the Department may require an update Remedial Action Plan for this site. The Department requires that the Site Status Update Report be submitted to the Department by 8/8/08 for review and approval.

6/3/08: DEC's letter dated 5/23/08 is bounce back to the sender. Chanda called Mr. Slavan (212-966-7250) to get the current property owner name and address. The current property owner name is:

Ms. Corice Arman
430 Washington Street
New York, NY 10013

6/3/08: Chanda changed the current owner name Ms. Corice Arman instated of Robert Gold and sent DEC's letter dated 5/23/08 to the current owner (Ms. Arman) requiring that the Site Status Update Report (with including quarterly groundwater sampling and monitoring analytical results both on-and off site wells) be submitted to DEC by 8/8/08 for review and approval.

6/23/08: Chanda received a Site Status Update Report dated 6/16/08, prepared by Kleinfelder East, Inc., on behalf of ExxonMobile Oil Corporation for this site.

7/8/08: Chanda has reviewed the Site Status Update Report and has the following information:

* On April 10, 2008, Kleinfelder gauged and sampled four groundwater monitoring wells.

* Liquid-phase hydrocarbons (LPH) were not detected in the monitoring wells gauged.

The Groundwater analytical data are following:

Date:	01/31/08	MW-1	MW-2	MW-3	MW-4
-------	----------	------	------	------	------

BTEX (ug/L)	11	3,614	816	57.3	
-------------	----	-------	-----	------	--

MTBE (ug/L)-----0.87-----10.0-----5.0-----11.1

Date: 4/10/08

BTEX (ug/L)-----1.19-----370-----412-----36

MTBE (ug/L)-----1.1-----2.2-----2.0-----7.2

Analytical data indicates a decrease in dissolved-phase hydrocarbon concentrations between the January and April 2008 sampling events.

7/9/08: Chanda sent a letter to RP's attorney and consultant (Kleinfelder), requiring that the next quarterly report be submitted to DEC by 8/15/08 for review.

7/21/08: Chanda has received a phone call from Mr. Michael Haggerty, Remedial Bureau, Section B, Central Office, Albany. He stated that all ExxonMobil projects have been managed by Central Office. He would like to assign this project.

7/22/08: Chanda consulted with Vadim and Joe (NYSDEC, Region 2) and sent the spill related file to Michel Haggerty, Remedial Bureau, Section B, Central Office, Albany.

Caller Remarks:

Lab results for both addresses showed soil and groundwater contamination. Hydrotech will be doing the remediation at the site.

DEC Investigator Remarks:

05/05/08-Hiralkumar Patel. spoke with Yash Saha at Hydrotech. asked her to submit all available reports for the subject site alongwith property owner's information.

Yash Saha
Hydrotech
PH. (718) 636-0800 (O)
(631) 433-5048 (C)
email: ysaha@hydrotechenvironmental.com

05/06/08-Hiralkumar Patel. received following reports from Yash:

1. Phase I
2. Investigation work plan and health & safety plan
3. subsurface investigation report
4. remedial action plan and construction health and safety plan

abstract of Phase I:

- subject property is defined as 231-239 Hudson Street (Block/lot: 594/99) and 501-503 Canal Street (Block/lot: 594/114-115)
- "E" designation
- vicinity of site consists of residential and commercial buildings
- site 231-239 Hudson street (block/lot: 594/99) was formerly a storage and trucking terminal prior to being converted to one story parking facility
- a fill port noted at the entrance of the garage along Renwick Street and hydraulic parking lift is present at site (block/lot: 594/99) <-----
- block/lot: 594/114 is developed with a five story residential building with a basement
- block/lot: 594/115 is developed with one story garage for car electronic installation
- topography of the subject property slopes gently to the west towards Hudson River <-----
- Sanborn maps dated 1950 through 1996 indicated Lot 99 was developed as an "Express Depot" containing a gasoline tank in the western portion of the lot <-----
- maps from 1950-1996 indicated Lot 115 was developed with one story repair shop <-----
- Hydrotech believes that none of the adjacent properties identified on fire maps should impact upon the environmental quality of the subject property

abstract of subsurface investigation report:

- did GPR survey and installed 15 borings and six wells
- lot 99 is one story parking garage, lot 114 is 5-story residential building with basement which is 6 ft bg with limited access,

lot 115 is one story garage for car electronic installation

- present buildings at the site will be demolished and developed with a 11-story mixed use (residential/retail) building with cellar; cellar will be approx. 12 ft bg. <-----

- GPR survey in lot 99 could not be performed in the vicinity of the hydraulic lifts located in the southern portion of the garage due to protruding mechanical structures <-----

- GPR was performed in remaining portion of lot 99 and found two anomalies; one anomaly was identified in northern portion and it is approx. 7 ft * 5 ft, second anomaly was identified in the southwestern portion and it is approx. 10 ft * 5 ft <-----

- GPR could not be performed in lot 114 due to limited access

- GPR was performed in lot 115 and found nothing

- 11 soil probes installed in lot 99, two soil probes installed in lot 114 and two soil probes in lot 115

- groundwater was encountered at a depth of 16 ft bg <-----

- all soil probes were installed 16 ft bg in lot 99 and lot 115

- due to space restriction in shallow basement in lot 114, soil probes were installed to a depth of 2 ft only

- two soil samples collected from each soil probe; first sample was collected between grade and 2 ft bg and second sample was collected where highest PID reading and/or visual and olfactory evidence of contamination were noted

- if no evidence of contamination was noted, the deepest dry sample or sample from the proposed excavation depth of 10 to 12 ft was obtained

- highest PID was found in boring SP-3 (125.7 ppm at 10-12 ft bg), SP-5 (459 ppm at 8-10 ft bg), SP-6 (892 ppm at 10-12 ft bg), SP-7 (698 ppm at 8-10 ft bg), SP-8 (241 ppm at 12-14 ft bg), SP-9 (1845 ppm at 10-12 ft bg) and SP-11 (256 ppm at 8-10 ft bg)

<-----

- total six permanent 1 inch monitoring wells installed in lot 99, with screen from 10 ft to 20 ft bg (water table at 16 ft bg)

<-----

- found heavy SVOC contamination in shallow samples (from 0-2 ft bg) from borings SP-3, SP-4, SP-5, SP-8, SP-9, SP-11 and SP-15

- found heavy VOC contamination in deep samples (with highest PID or deepest clean) from borings SP-5, SP-6, SP-7, SP-9 and SP-11

- found heavy SVOC contamination in deep samples (with highest PID or deepest clean) from borings SP-5, SP-6 and SP-9

- found heavy mercury and Lead contamination in almost all shallow soil samples

- found VOC contamination in groundwater samples from well MW-5 (installed at boring SP-5) and MW-6 (installed at boring SP-6);

minor MTBE found in well MW-1 (SP-1: 16 ppm) and MW-3 (SP-3: 86 ppb)

soil analyticals for deep samples:

	SP-5	SP-6	SP-7	SP-9	SP-11
	8-10 ft	10-12 ft	8-10 ft	10-12 ft	8-10 ft
Toluene	28,000				
Ethylbenzene	36,000		51,000		7,100
Xylene	48,000	5,000	430,000	6,300	61,000
1,3,5-Trimethylbenzene	46,000		81,000	4,600	36,000
1,2,4-Trimethylbenzene	160,000		590,000	22,000	120,000
Naphthalene	21,000		72,000		32,000

groundwater analyticals:

	MW-5	MW-6
Benzene	440	

Ethylbenzene-----140-----150
Xylene-----571-----660
1,3,5-Trimethylbenzene-----120
1,2,4-Trimethylbenzene-----200-----410
Naphthalene-----100

summary of RAP and H&S plan:

- will excavate contaminated soil and will collect endpoint samples
- vapor barrier and active SSDS will be installed at the site
- vapor barrier system (VBS) has been desinged as two seperate systems; one system is to be incorporated on slab and the other system is specific to the cellar foundation <-----
- 4 inch dia. pipe will installed around the perimeter of the building footprint (not under building) <-----

summary:

- lot 99 had gasoline tank in past
- fill port found along Renwick ave at entrance of garage at lot 99
- hydraulic lifts located on lot 99
- lot 115 is being used as repair shop
- maximum contamination found in soil at depth 8-10 ft bg
- no PID values found in any soil boring at soil/water interface <-----
- RAP proposed to excavate contaminated soil and collection of endpoint samples
- RAP proposed to install vapor barrier and active SSDS
- as per RAP, perforated pipes will be installed around the perimeter of the building footprint and no indication of any installation under building itself

sent email to Yash requiring following:

- clear copy of site map with locations of all previous boring/wells, anomalies found in lot 99, fill port found in entrance of building at lot 99
- clear copy of active SSDS and vapor barrier design and asked for SSDS design with pipes under building also (not only perimeter)
- complete contact info for property owner and project manager at NYC DEP

mentioned to Yash that the Department will forward desing of SSDS to NYS DOH for review and approval.

spoke with Yash. she mentioned that as liner will run under entire slab they are planning to install pipings around perimeter only. explained to Yash that vapor barrier will only prevent vapor coming into building but it will not treat soil by extracting vapors from area under building slab. so asked Yash to design SSDS for entire area of building (including area below slab) and asked to submit for review prior to any approval for proposed RAP.

received information about property owner and DEP project manager.

Contact info for property owner:

Ponte Equities, Inc

Flushing, NY 11373
Ph. (718) 595-6443
email: ZSchreiber@dep.nyc.gov

DEP tracking #: 08DEPTECH234M <-----

sent email to Mr. Ponte to submit design of SSD system that covers entire area underneath the floor of the cellar/slab prior to approval for proposed RAP.

05/13/08-Hiralkumar Patel. received email from Rachel from Hydrotech. she mentioned that portion of property is beneath the water table and it is not possible to install venting system in this area. they proposing for positive pressure inside basement and first floor to prevent any vapor migration inside basement from subsurface.

05/16/08-Hiralkumar Patel. left message for Chris Doroski at NYS DOH regarding SSDS design.

Christopher M. Doroski
Public Health Specialist 2
Bureau of Environmental Exposure Investigation
Ph. (518) 402-7860
email: cmd16@health.state.ny.us

05/19/08-Hiralkumar Patel. received email from Chris from NYS DOH. Chris mentioned that "passive venting is not recommended as can not depend on wind currents for 100% efficiency of system. but in circumstances where the water table prevents the use of an SSDS and where vapor barriers serve a 2 fold purpose to waterproof and ensure vapor intrusion is not an issue, positive pressure is a good addition (vapor barriers are not a stand alone engineering control)." Chris also mentioned that they generally ask for follow up indoor air testing to ensure that these engineering controls are working and require that they are maintained through a site management plan and of course periodically certified to ensure that they are still operating properly. At least 3 events of air testing is require and then re-evaluate after the third to determine if the controls are working properly or if some other measure must be supplemented to prevent vapor intrusion.

05/28/08-Hiralkumar Patel. received vapor barrier system design specification. abstract:

- proposed development plan includes the construction of one 11 story residential/commercial building with a cellar
- cellar will be constructed beneath lot 99
- depth of cellar will be 12 ft bg and cellar bottom will have five ft thick concrete (means cellar slab bottom will be 17 ft bg)
- depth to water beneath the site is 16 ft bg, therefore cellar beneath lot 99 will be placed in groundwater table, therefore a vapor barrier consisting of 46-mil low permeability liner (not SSDS) will be installed beneath the cellar foundation and first floor residential lobby and cellar will be applied under positive pressure by outside air <-----
- liner under cellar extends laterally 2 ft from the outside edge of the foundation footing on all sides and vertically 17 ft to street level <-----
- remaining sections of the building on lots 99, 114 and 115 will be slab-on-grade
- depth of slab on grade will be approx. 3 ft bg
- vapor barrier and active SSD system will be installed under building slab on grade
- 4 inch dia. perforated pipe is installed around the building footprint (not under the building as asked earlier) <-----

vapor barrier design plan includes site plan drawn by Hydrotech which only shows perimeter of building and doesn't show interior details (like elevator shaft, non-load bearing walls and other structures) <-----

sent email to Chris at NYS DOH with copy of vapor barrier system design, for review.

06/03/08-Hiralkumar Patel. left message for Chris at NYS DOH. sent email to Chris with SSDS plan again.

06/05/08-Hiralkumar Patel. received email from Chris mentioning that someone from BTSA is looking at this document and asked to contact Mike Hughes. sent email to Mike Hughes.

06/06/08-Hiralkumar Patel. received email from Mike Hughes. he agreed with proposal to install impermeable exterior membrane under cellar slab with positive pressure inside, but requires at least three round of indoor air sampling. and based on results of indoor air samples, will decide whether need additional system or not. he also mentioned that active SSDS is required under building on grade (proposed plan is confusing as mentioned both active and passive system under same area).

spoke with Yash at Hydrotech. informed her that NYS DOH requires indoor air sampling after membrane installation under cellar slab and active SSDS under slab-on-grade. told her that the department will send work plan approval letter, once gets reviewed by NYS DOH and till then plan will be considered unapproved.

received email from Yash. she mentioned that the vents, that are called passive, are vents for air inflow purpose only, but system will be active.

forward this comment from Yash, to Mike at NYS DOH.

06/10/08-Hiralkumar Patel. sent letter to Mike for review (as requires indoor air sampling).

06/12/08-Hiralkumar Patel. spoke with Mike at NYS DOH. he mentioned that they can't approve or disapprove any vapor barrier/SSDS design. and also mentioned that such designs should be prepared by licensed profession engineer and he is responsible for implication of such design. requires sampling after installation and after reviewing sample analyticals, NYS DOH may require further work to address vapor issues inside the building.

received email from Mike from NYS DOH. he mentioned that they recommends installation of active SSDS and installation of passive vents for outdoor air to sub-slab is inconsistenet with EPA guidance (as it creates short circuit to the system). he also mentioned that design specifications should be approved by a NYS-licensed engineer.

06/16/08-Hiralkumar Patel. spoke with Mike at NYS DOH and asked him about requirement of indoor air sampling. Mike asked for work plan prior to any sampling.

left message for Ms. Saha at Hydrotech to revise proposed vapor barrier/SSDS plan as DOH requires complete active SSD system (not even passive vents as intake).

received call from Ms. Saha. explained her DOH's concern. sent her link for EPA guidance (for SSDS) and asked to submit revised vapor barrier/SSDS plan.

received revised vapor barrier system design specification. they removed installation of passive vents from active SSDS design (as per DOH's comments).

06/17/08-Hiralkumar Patel. sent RAP and vapor barrier design approval letter to Mr. Ponte requiring submission of work plan for indoor air sampling (as NYS DOH requires) and dewatering sampling, if happens. letter emailed to Mr. Ponte, Ms. Saha, Mike Hughes at NYS DOH and to Mr. Schreiber at NYC DEP.

received email from Ms. Saha including letter from Mr. Katz from JFK&M engineers. Mr. Katz submitted positive pressure system specifications.

Yuri Katz, P.E.
Jacob, Feinberg, Katz & Michaeli Consulting Group LLP. (JFK&M engineers)

UNKNOWN PETROLEUM	PETROLEUM	0	GALLONS	0	GALLONS	GROUNDWATER

Caller Remarks:

SOIL SAMPLES WERE TAEKEN AND TEST RESULTS CAME BACK AND THEY WERE ABOVE THE STANDARDS,. THIS SITE IS AN OLD GASOLINE STATION AND MOSTLY GROUNDWATER WAS AFFECTED. HAS NOT BEEN CLEANED UP.

DEC Investigator Remarks:

Sangesland spoke to consultant Muhammad Mahede at Fleming-Lee Shue (212-675-3225)

He says the site was a former gas station and used the address 500 Canal St. It had an old spill number (0408431 - Closed by DeMeo)

Now they found gasoline contaminated soil near the old sidewalk fill lines on Greenwich St and also along Watt St. The consultant is planning to dig this

A CONTAMINATED SOIL LETTER WAS NOT SENT OUT, BECAUSE THE CONSULTANT IS ALREADY MOVING FORWARD WITH A SOIL EXCAVATION IN THE NEXT FEW DAYS.*

A Closure report will be submitted to the DEC for review.

Property owner is:

Fabian Friedland

Greenwich Tiangle LLC

459 Washington St
New York, NY 10013

4/19/05 - assign to Imdadul Islam to handle. KST

5/18/05- Talked to consultant Muhammad Ahmed at 212-675-3225. He mentioned that ISRP will be sent to the Dept. soon.-II.

9/2/05- Reviewed the ISRP report and mailed out a letter today to consultant (Mr. Ahmed of F.L. Shue, Inc)cc'd to Mr. Friedland (RP) and Mr. Maurice Winter (NYCDEP)asking for deatiled investigation to delineate the contamination plume and comprehensive remedial plan by the end of October 2005.

9/10/05-Dr. Muhamed had a meeting with me today to discuss the detail of the required additional investigation. - II

9/13/05- Received today the "work plan" for required additional investigation as discussed and outlined in the meeting. It is found OK.- II

9/15/05- Sent the above Work Plan approval by email. Also, advised to screen soil and sample from the high PID reading locations as the boring for proposed well MW-2 advances. GW sample from the well is to be taken and analyzed as well.- II

11/1/05- Visited the site along with Steve today to witness the installation of three monitoring wells, advancing geoprobes (six) for soil and groundwater sampling. The proposed geoprobe in the sidewalk across the Greenwich St. is cancelled as the sidewalk is made up of granite. Dr. Mohamed told that by next four weeks they will be able to submit the report to the Dept.

12/23/05: This spill case transferred from I. Islam to J. Kolleeny.

Reviewed Remedial Investigation Report/Remedial Action Work Plan submitted in December 2005 by Fleming-Lee Shue, Inc. (FLS). Report summarized an off-site investigation performed on 11/01/05, and presents a remedial action work plan.

The investigation identified two areas of soil contamination near fill ports for former gasoline storage tanks, and groundwater contamination including 0.5 inches of free product in one well. The remedial action plan involves removal of fill port piping and excavation of contaminated soil where feasible, followed by collection of end-point soil samples, pumping of free product from water table, and application of ORC. As an interim remedial measure, monitoring wells with free product or high levels of dissolved-phase contamination will be pumped out during the week prior to soil excavation. Sent letter approving remedial plan, but asking for additional well to be installed near southeast corner of Watts & Greenwich Streets after soil excavation, followed by quarterly groundwater monitoring. - J. Kolleeny

3/2/2006 The spill report was transferred from Jon Kolleeny to Alex Zhitomirsky as per JK/KT e-mail on 3/2/2006. AZ

4/4/2006 I contacted Mohamed Ahmed (FLS)212-675-3225. They found gasoline contamination in gw. Also, free product was found in one old well. Soil and gw are contaminated at the sidewalk in two spots on the site. They observed sheen. They are waiting to start the construction. They will dig out the whole site during construction activities. The site is close to Holland Tunnel. If any free product is observed in the excavation they collect from the excavation. They must first get cleareance from the Port Authority. AZ

6/26/2006 I contacted Mohamed Ahmed. They are going to start IRM on July 5, 2006. They will pump out 2 wells on the sidewalk at

intersection of Watts and Greenwich. They will pump out around 155 gal drum from each well. Then on the 10th or 11th of July they will start removing the fill material down to 7' depth, where the most contamination was found. Then they will remove all contaminated soil up to the gwt level (approximately 11'). They will leave the excavation open for 24 hours to monitor free product accumulation. If any appears it will be pumped out. If no free product is present, ORC will be sprayed on groundwater table. They are building a residential building. They will be putting in place a vapor barrier which was approved by DEP. They will collect end point samples from the sides. Water is at the bottom of the excavation. They have 3 wells on the sidewalk which will be monitored. AZ

7/24/2006 Chris De Carlo (FLS). They started removing a fill layer. They encountered several USTs - 2x550 gal fuel oil, 4x550 gal gasoline and 2x275 waste oil tanks. 1 gasoline tank and one fuel tank were found at the corner of Canal and Watts. 3x550 USTs, one 550 fuel and 2x275 gal waste oil USTs were found at the corner of Greenwich and Canal. Gasoline tanks were encased in concrete but deteriorated. Some water and product we found in the tanks. The other tanks were not encased in concrete and contained some water and product. Seems that these tanks were causing the problem. They are removing these tanks. Excavation will be continued as planned. They will excavated below the water table. AZ

10/19/2006 Left a message for Mohamed Ahmed. Soil excavation will start on October 21, 2006. AZ

9-10-2007 Received Remedial Action Report dated August 14, 2007. Soil was excavated to the water table, approximately 14'-18' below grade. Approximately 2,700 cu yards of contaminated soil was removed from the site. 11 USTs were discovered and removed. ORC was applied to treat in-situ groundwater. Waterproofing membranes were installed under the basement slab. Post-excavation sampling was conducted. One additional monitoring well will be installed and sampling of three existing wells will be performed for a year. I contacted Mohamed Ahmed and requested that a figure with post-excavation sampling locations is modified. Total SVOCs and VOCs concentrations should be added and general gw flow indicated. AZ

9-11-2007 An e-mail was sent to Fleming Lee Shue: "I have reviewed the remedial action report and the revised map for the above site. The proposals contained in the report are approved. Soil samples should be taken and analyzed for VOCs and SVOCs during well installation. All wells should be sampled for VOCs and SVOCs. Actual groundwater flow should be established. A report containing monitoring results should be submitted to NYSDEC."AZ

11/2/2007 Spoke with Mohamed Ahmed(212-675-3225). They will install one well at the corner of Watts Street and Greenwich Street. Also, one well will be re-installed at Watts Street. All wells should installed utilities permitting. AZ

11/5/2007 An e-mail was sent to M. Ahmed: "As per DEC's e-mail dated 9/11/07, DEC approved installation of one monitoring well on a sidewalk at the corner of Watts Street and Greenwich Street. Also, one well should be re-installed on Watts Street. All wells should be installed utilities and structures permitting."AZ

11/19/2007 A "sidewalk letter" was issued upon M. Ahmed and NYC DOT request to expedite wells installation. AZ

5--5-2008 Reviewed First Quarter Monitoring Report dated February 20, 2008. I contacted Mohamed Ahmed and conveyed to him my comments regarding this report. The report stated that naphthalene was the only compound exceeding NYS TOGS while table 3 indicated that other compounds were also exceeded, e.g. MW-3 had 312 ppb of the Total VOCs (exceedances only). The spill number indicated on the report was incorrect. I requested that in future the total VOC and SVOC concentrations are calculated and shown on the plume map. Also, I requested that e-copies of the reports are sent to DEC. The Consultant will make necessary changes. The Consultant recommended the continuance of the groundwater monitoring program. I concurred. AZ

5-23-2008 Groundwater map with sampling results was submitted. AZ

9-3-2008 Reviewed Report submitted by FLS on May 9, 2008. The remedial activities conducted at the site consisted of removing UST fields, piping, fill ports and dispensers;soil excavation and disposal, post excavation soil sampling, soil and gw Bioremediation, and installation of a vapor barrier and waterproof membrane.. Previously (February 2008 report) light petroleum odor was observed in wells MW-1 and MW-3R during sampling. Groundwater analytical results for MW-1 and MW-3R indicated several VOCs exceedances of the NYSDEC Guidances(TOGS). During the latest sampling round(April 2008)several VOCs were detected in MW-3R exceeding TOGS 1.1.1. Ambient Water Quality Standards and Guidance Values (391.6 ppb). It's a slight increase when compared with 1/11/2008 monitoring event (314 ppb). FLS recommended continuing monitoring. AZ

DEP DOING EXCAVATION WORK - GASOLINE ODORS - REQUEST A SPILL PERSON TO SHOW UP.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"

10/10/95: This is additional information about material spilled from the translation of the old spill file: UNK GASOLINE ODORS.

4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel.

Albany assignment: "adebong"

9/7/06 - Austin - Assigned from Albany to Region 2 staff (Ketani) for review and closure - end

10/30/06 - Raphael Ketani. The record was found for the site. DEP was digging and found gasoline odors. Kim Hanna of DEP (718) 595-4681 was the person in charge at the time.

The site is at 148 Barrow Street, Manhattan. Block/lot are 00604/0030. It is presently owned by William Gottlieb Real Estate, 544 Hudson Street, NY, 10014-3233. There is no PBS record. The phone number is: (212) 989-3100. I tried calling Mr. Gottlieb, but could only leave a message.

Two sets of 8260 only analytical results are present. Sample SH-1 (soil) has as much as 26270 ppb of total xylenes - among many other VOC analytes in the thousands of ppb. The liquid sample (SH-2) had no hits.

11/1/06 - Raphael Ketani. I tried calling Mr. Gottlieb again. I again got his secretary or receptionist. She said that he doesn't own 148 Barrow Street, but rather 150 Barrow Street. I told her that he is listed as the owner in the NYC Property Tax records database. She said that he is listed for a lot of properties he doesn't own. She said the site is a vacant lot. I asked her to have him give me a call back anyway if he has any information. She said she will ask him.

I rechecked my investigation of the ownership of the property. I checked Property Shark, the NYC Property Tax database and ACRIS. Each database listed the property with the same block and lot and the same address, 144 to 150 Barrow Street. As the person I talked to confirmed that he owns 150 Barrow Street, I will send a CSL.

11/7/06 - Raphael Ketani. Mr. Gottlieb (212) 989-3100 called me today. He said that the site had the contamination from before his company bought the property. He said that there are no records anywhere for the cleanup of the site. He added that the property has been vacant, without tenants, for the past 10 years. However, a phase 1 investigation was recently done for the site. I asked him for a copy. He said that the phase 2 was about to start. Mr. Gottlieb stated that debris removal work will begin about 11/15/06. The phase 2 investigation company is Hillman Group, LLC. He will send me a letter with the full name, address and phone number of the company.

11/15/06 - Raphael Ketani. I received a letter today from Charles F. Fritsch, Senior Manager, at William Gottlieb Management Co., Inc. It stated the same information as is in my 11/7/06 notes.

6/25/07 - Raphael Ketani. I tried to contact Mr. Gottlieb regarding the site and the phase II report, but could only leave a message.

8/3/07 - Raphael Ketani. I tried to get ahold of Mr. Gottlieb, but could only leave a message.

8/14/07 - Raphael Ketani. I made an unannounced site visit. I took 3 pictures. The site is an old rundown hotel. The building may have been built in the nineteen teens or twenties. The owner has put modern windows in the building. They were dirty and looked

like they had been put in several years ago. A triple space garage is attached to the building. There were numerous old work permits on the inside of the door dating from 2004 to 2007. A Con Ed notice was attached to the door stating that service will be turned off. The door was locked and the entranceway was dark. There was no sign that anyone was inhabiting the building.

I tried to contact Mr. Gottlieb(212) 989-3100, but could only leave a message. The end of my message stated that if DEC doesn't hear anything from him by the end of this week, then the case will be referred to DEC's Legal division.

I received a message from A.J. Lefler of 2+3 Architects. He said he is the architect for Mr. Gottlieb and the 148 Barrow Street site. His number is (718) 387-6587, ext 13.

8/15/07 - Raphael Ketani. I tried to contact Mr. Lefler, but could only leave a message.

Mr. Lefler called me back. He said that the site encompasses 144 and 148 Barrow Street and the old Keller Hotel. He said that his firm is designing a horizontal addition to the 144 Barrow Street part of the site. The spill is in the southeast corner of the 144-148 site. Mr. Lefler added that the remediation will take place with the demolition of the 3 car garage. He said this will happen in 4 to 6 months. Hillman Environmental did the phase II. He said the contact there is David Umbach. I told Mr. Lefler that DEC never received the phase II report. He said he will have Hillman send it quickly.

8/17/07 - Raphael Ketani. Mr. Lefler called to state that DEC will receive the Phase II next week.

9/24/07 - Raphael Ketani. DEC received the Phase I Environmental Site Assessment and the Phase II Limited Investigation on 8/31/07 from 2 Plus 3 Architects, P.C. I reviewed the Phase I and the Phase II.

According to the Phase I:

The site consists of two lots, 1 and 30. Lot 1 is 150 Barrow Street, the old hotel, and lot 30 is 144-148 Barrow Street, the four car garage. The entire site was a coal storage yard up until 1898, when the hotel was built. Lot 30 continued to be a coal storage yard into the early twentieth century. In the 1930s, lot 30 became a car service business, and subsequently many other types of businesses took residence, as indicated by city records. A gasoline UST was installed in the 1950s and remained there until 1983. The old hotel was using oil, but neither the gas tank, nor the oil tank(s) were found during the Phase I that took place in 2006.

According to the Phase II:

Seven borings were attempted in the basement of the hotel. However, due to the thickness of the floor slab, only 1 soil sample was recovered. The analytical data for the sample wasn't listed in the report. No borings were attempted in the southeast quarter of the basement, nor to the southeast of boring B-4, nor in the western quarter of the basement.

GPR was used in the garage, but didn't find any evidence of a gas tank. Eight borings were attempted in the garage and 8 soil samples and 2 groundwater samples were recovered. Groundwater sample BAR-1GW had 35,300 ppb total xylenes, 1360 ppb toluene, 8020 ppb ethylbenzene, and was non-detect for benzene. Groundwater sample BAR-2GW had all non-detects, except for 0.94 ppb benzene. Soil sample BAR-1 in the east garage bay (northeast corner) had 113 ppm total xylenes, 21.2 ppm ethylbenzene, toluene 0.97 ppm, and was non-detect for benzene. Soil sample BAR-2 in the east garage bay (southeast corner) had 200 ppm total xylene, 35.7 ppm toluene, 39 ppm ethylbenzene, and 0.43 ppm benzene. All of the other soil samples were non-detect or well under TAGM. BAR-Fill (a composite of fill soil from all 4 bays) had exceedences only for the benzo series of combustion products and their associated analytes. No borings were done to the west of the bathroom.

9/25/07 - Raphael Ketani. A letter was sent out to Mr Fritsch of the William Gottlieb Management Co., Inc. requesting that more soil borings and wells be installed, and that soil and groundwater samples be taken. The letter also requested that the soil be removed in the vicinities of BAR-1 and BAR-2.

9/26/07 - Raphael Ketani. Mr. Loeffler of 2 Plus 3 Architects called to say that William Gottlieb Management Co., Inc. received the 9/25/07 letter. He said that the Phase I and Phase II were produced by Hillman Group, LLC and that Mr. Fritsch is no longer at William Gottlieb. He said to address all future letters to Mark Caldeira. Mr. Loeffler added that all of the soil removal will take place with the demolition of the garage and that all of the work mentioned in the letter will be done.

10/4/07 - Raphael Ketani. Chris Hirshmann of the Hillman Group (908) 688-7800 called to inquire as to how many wells and borings DEC wanted. I explained the September 24 letter and I told him that one well should be in the sidewalk and that he should submit an investigation plan for DEC's approval. He said will do this.

10/10/07 - Raphael Ketani. I received a well installation proposal from Mr. Hirschmann of the Hillman Group. The proposal was for the delineation of the groundwater contamination under the eastern two garage bays. Three wells are proposed in the eastern two bays. I told Mr. Hirschmann that this was fine for the groundwater investigation. I asked him about the soil borings that were asked for in DEC's 9/25/07 letter. He said he will do those, also.

12/7/07 - Raphael Ketani. I spoke to Mr. Hirshmann. He said that they finished boring and sampling yesterday. He said that the soil samples have been sent to the laboratory for analysis.

1/31/08 - Raphael Ketani. I tried to contact Mr. Hirshmann, but could only leave a message.

2/13/08 - Raphael Ketani. I contacted Mr. Hirshmann and asked him about the sample analytical results. He said that they are part of a report and the report is being reviewed and commented upon by the various involved parties. He said he will send the parties an e-mail stating the DEC wants to see the report right now. I told him that would be fine.

3/21/08 - Raphael Ketani. I spoke to Mr. Hirshmann (908) 688-7800. He said that his client is done reviewing it and that DEC should get the report very soon.

8/18/08 - Raphael Ketani. I tried to contact Mr. Hirshmann, but could only leave a message.

The case is being prepared for transfer due to a case realignment within the unit. Mr. Hirshmann needs to submit the site investigation report to DEC. The case manager should contact Mr. Hirshmann to see where the report is. It's overdue.

8/20/08 - Raphael Ketani. Mr. Hirshmann left me a message that he thought the report had been sent to DEC. He will ask his client what happened to it.

Mr. A. J. Leffler of 2+3 Architects called. He said that he had the investigation report on his desk. It just got buried. He apologized and said that he will Fed Ex it.

OIL SEEPING THROUGH BASEMENT WALL. ATLAS TANK CO TO CLEAN.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "AUSTIN"
 3/11/03 - SAMUEL- File available in active unassigned spill files.

5/10/04 - AUSTIN - TRANSFERRED FROM SULLIVAN TO AUSTIN FOR REASSIGNMENT - END

3/3/05 - Austin - Reassigned to Rahman

04/04/04-SR// Sent a letter.

05/03/05-SR// The lawyer of the property owner requested for the extension of dead line, ending June '05.

09.19.05.SR// RP has retained First Environmental to do the required remedial and investigation work. I received subsurface investigation work plan from First Environmental(John Engdhal, 973-334-0003)which is being reviewed currently.

10.25.05 Sharif- Reviewed the Investigation Work Plan and approved, sent the letter.

12/20/05 Sharif// Case was transferred to Koon Tang for reassignment.

12/29/2005 - Feng - File reviewed by Feng:

1) Oily substance seeping through the basement wall of the Thrinity Church on 7/14/1992, spill # assigned.

2) Consultant claimed that the source was from a 20,000 gallon #6 oil UST abandoned by Atlas Tank Lining Corp on 6/1982.

3) An oil/water separator was installed as a remedy for the reported seepage in 1992 (approved by DEC)

4) On 4/13/2005, P.W. Grosser Consulting, Inc (PWGC) conducted a site inspection. They found some dark staining on the north basement wall and this staining appeared to be the result of past oil seepage through the concrete wall. There was no apparent free product.

5) Oils that accumulate in the oil/water separator are periodically removed. "Product that has seeped through the basement wall in the past would have collected in the trough, flowed to the sump, and would have been removed by the oil/water separator before being discharged to the sewer system."

6) according to the building personnel, the last time oil was removed by the separator was in 2003. so no oil has accumulated in the separator for almost 2 years.

7) On 9/2005, First Environment proposed a Subsurface Investigation Workplan. All subsurface utilities were marked out. 10 soil borings were proposed around the 20,000-gallon UST. No groundwater samples were proposed.

8) DEC approved the SIW on 10/25/2005. So waiting for the Investigation Report.

8/21/2006 - Feng - Called John Engdahl (First Environmental) and left a message for the status of the SI report. Sent Letter to Peter St. John (Trinity Real Estate) requesting the Subsurface Investigation Report. SI Report due 9/22/2006. (RJF)

9/6/2006 - Feng - John Engdahl (First Environmental) called and requested extension for submitting the RI report by 10/22/2006. They planned to hire the contractor to go inside the UST for inspection. Granted the new deadline and reminded him that licensed or FDNY approved contractor should be hired. (RJF)

11/20/2006 - Feng - Subsurface Investigation Report, 10/20/2006, by First Environment. On 5/20/2006 and 5/21/2006, soil borings SB-1 through SB-5 were installed, within 2'-5' of the UST. On 6/16/2006, SB-6 through SB-10 were installed, within 10'-15' of the UST. All the boreholes ends at 16' bg. LNAPL (#6 oil) presents in the SB-1 (9'-14'), SB-2 (10'-14'), SB-3 (8'-14.5'), SB-4 (8'-12'), SB-5 (11'-12.5'), and SB-9 (11'-12.5'). Analyticals exceedance VOCs and SVOCs. SB-1 (11'-12'), 120 ppb Benzene, 1,700 ppb Xylene. SB-2 (10.5'-11.5'), 360 ppb Benzene, 11,000 ppb Xylene. SB-3 (11'-12'), 260 ppb Benzene, 5,100 ppb Xylene. SB-4 (10.5'-12'), 220 ppb Benzene, 820 ppb Xylene. UST assessment was attempted and found the UST was filled with sand and gravel mix.

First Environment has recommended that due to the significant amount of subsurface utilities, the impacted soil was not feasible to be excavated, the tank was not feasible to be removed. And based on the soil sampling analytical results, the UST assessment observations, and the fact that recoverable product has not been collected within the oil and water separator inside the building since 2003, no further activities are warranted at the side.

DEC will require delineation of groundwater contamination. Letter requires groundwater delineation sent to Mr. Peter St. John. DEC requires 3 wells to be installed in the former SB-2, SB-5 and SB-9 area. Report due 2/1/2006. (RJF)

12/14/2006 - Feng - Spoke with John Engdahl (First Environmental). 1) Requested extension at 60 days due to the DOT embargo period which not allow to install any wells sidewalks. 2) Requested site visit to determine the monitoring wells locations because SB-2 has been encountered subsurface utilities and SB-9 was located right in the middle of the street. Scheduled site visit 12/19/2006. (RJF)

1/11/2007 - Feng - Meet with J. Engdahl, M. Butler from First Environment and P. St. John from Trinity Real Estate. The tank was extended from the edge/ the building to the curb of Watt St, so it is difficult to install wells on the street. DEC and First Environment agreed to install 2 permanent wells at the 2 ends of the tank (former SB-1 and SB-5), and 2 temporary wells on the edge of Watt Street (former SB-2 and SB-3 locations). Expect SIR to be submitted in 4/2007. (RJF)

11/21/2007 - Feng - Reviewed the Remedial Investigation Report/Remedial Action Selection Report/Remedial Action Work Plan, dated October 2007, submitted by First Environment. First Environment installed two 2-inch monitoring wells, MW-1 and MW-2 at both ends of the UST. And two 1-inch temporary wells at the boarder of Watts Street north side of the UST. Wells were gauged and product was found (#6 oil). MW-1, 0.5 feet. MW-2, 0.5 feet. TW-1, 0.1 feet. TW-2, 0.2 feet. Groundwater sample was collected from TW-1 for analysis. Minor exceedances were detected.

First Environment proposed monthly VEFR events on MW-1 and MW-2. Each event will be conducted for a total of 4.0 to 8.0 hours. the VEFR evetns would be conducted until an un-measurable of free-phase product is observed (less than 0.01 feet). In the event that a residual amount of product thickness greater than 0.01 feet, application of surfactant solution will be conducted and a detailed work plan will be submitted for approval.

Email to John Engdahl comments on the RAP. 1) determine the ROI of EFR. 2) the possibility of EFR on TW-2. 3) time frame to evaluate the EFR effectiveness. (RJF)

1/28/2008 - Feng - Reviewed the email reply from First Environment. Approved the RAP for monthly VEFR events on MW-1 and MW-2. Remedial Action Progress Report by 9/2008. (RJF)

5/9/2008 - Feng - Message from Matt Butler (First Environment 973-334-0003), EFR event will be conducting this Saturday 5/10/2008.

Spoke with Matt, the first EFR was conducted on April 12, 2008, trace of product was measured right after the EFR, and groundwater was gauged 2 weeks later, the product came back and couldn't exactly measure the thickness due the viscosity. DEC asked for emailing the EFR results to see how effective EFR on #6 oil. (RJF)

6/18/2008 - Email updates from Matt Butler (First Environment). First Environment has completed the 3rd monthly oil recovery event on 6/14/2008. During this event, approximately 98 gallons of liquid was recovered from MW-1 and MW-2. MW-1 produced the majority of product. The exact thickness of prduct in each monitoring well could not be accurately measured due to the inability of the interface probe of differentiate water and oil once it is coated with product. The next event was scheduled for 7/12/2008. (RJF)

10/14/2008 - Email from Matt Butler (Frist Environment). Next EFR event is scheduled for 10/18/2008. And they are preparing the RA progress report. (RJF)

10/16/02 ARAKHAN/od

INVESTIGATION DONE PURSUANT TO PROPERTY TRANSFER. 8 USTs UNKNOWN SIZES, NOT REGISTERED; 2 75-GAL ASTs IN VAULT NOT REGISTERED. ELEVATED LEVELS OF VOCs AROUND USTs; XYLENES AROUND ASTs.

10/16/02 Tipple Mtg set for Oct 29 to discuss Remedial Action Plan, tank registration will be sent in prior to Mtg.

7/24/2003// removing ast's today//ust's to be addressed soon//will PROPERLY REGISTER UST'S FOR REMOVAL AND INFORM DEC PRIOR TO REMOVAL.

9/9/2003 Sangesland spoke with contractor. Tanks are being removed today, a new spill number was called in by a citizen who saw the tanks being pulled (0306088-closed). Sangesland reviewed the PBS status with Jie Zhao who noted that the tanks should be listed at "out of service- removed". The contractor said they would update the PBS records.

2/12/04 Tipple updating/// PBS registration update form arrives//given to NL for review/processing.

5/5/04 transferred from Tipple to Rommel///product is gasoline

06/02/04 transferred to Vought

6/10/04-Vought-Spoke to John Bukoski (FPM 631-737-6200) who sent in proposal for installation of four monitoring wells.

6/15/04-Vought-Received proposal via fax.

6/29/04-Vought-Reviewed proposal from FPM. Property was a gasoline station from 1945 to 1980 and more recently as an auto repair facility. "The building and USTs were recently removed and the site was excavated to approximately 15 feet below grade". Construction of a multi-story residential building is presently underway. Depth to groundwater is approximately 18-20 feet below grade. Proposal for three monitoring wells located adjoining the site and one downgradient well located on the west side of Hudson Street". "An oxygen release material (ORC) was applied to the area of impacted groundwater to promote biodegradation of the remaining petroleum".

7/2/04-Vought-Called Stephanie Davis (FPM) and left message to return call with owners contact info to send out STIPULATION AGREEMENT. Vought sent letter to DOB, NYCDOH, DEP, DOP requesting permit cancellation. Vought spoke to Davis (631-737-6200x228). RAP already approved by DEC Tipple including the installation of a sub foundation venting system and vapor barrier. Davis will send copy of UST Closure Report, RAP and previous groundwater analyticals. Foundation has already been poured along with installation of sub foundation venting system. Owner of site is:

David T. Ennis
Dayton Group, Inc.
515 Madison Avenue
Suite 1201
New York, NY 10022
Ph: 212-421-3366
Fax: 212-421-3535

7/6/04-Vought-Awaiting UST Closure Report, RAP and groundwater analyticals receipt to ensure correct Corrective Action Plan to be included in Stipulation.

7/7/04-Vought-Received copies of RAP dated 10/16/02, PBS registration letter dated 12/19/02, DEC RAP approval letter dated 12/20/02, UST Closure Report dated 3/29/04 and Sub-foundation venting system description dated 7/6/04. Report review:

Remedial Action Plan (FPM)-10/16/02. "Soil and groundwater sampling were performed onsite in June 2002". "Two groundwater samples were obtained in the UST area". "It is planned to redevelop this site with a new building, including a sub-grade area extending to approximately 10 to 11 feet below grade". "Based on this scenario it is proposed to removal all of the tanks and excavate and dispose of all petroleum impacted soil at the site to an approximate depth of at least 10 to 11 feet below grade during site redevelopment." "Following the completion of excavation in each area of the site, end point samples will be collected and analyzed to document the completeness of remediation". "It is anticipated that the limited area of moderately impacted groundwater encountered in the vicinity for the UST area will naturally attenuate". "Therefore no groundwater remediation is proposed at this time". Soil analyticals show 230000ppb ethylbenzene(SB1 16-18'), 700000ppb toluene(SB1 16-18'), 12000000ppb xylene(SB 16-18') and 3600ppb xylene(SB8 7-8'). Groundwater analyticals show 7ppb benzene(SB1), 370ppb ethylbenzene(SB1), 3100ppb toluene(SB1), 590ppb MTBE(SB1), 10ppb benzene(SB6), 110ppb MTBE(SB6) and 47ppb toluene(SB6).

Letter from FPM Davis to DEC Tipple-12/19/02. "Enclosed please find a copy of the completed Petroleum Bulk Storage Application...". "As per our meeting on 12/29/02, we understand that the procedures discussed in the RAP were acceptable with some additions (additional downgradient groundwater sampling, pumping of impacted groundwater from excavation and/or addition of ORC to the completed excavation before backfilling if necessary and installation of a vapor barrier and a passive venting system for the proposed building)." "We are requesting that you issue a short letter approving the RAP with the agreed-upon changes".

Letter from DEC Tipple to FPM Davis-12/20/02. "the DEC hereby approves FPM's recommendations for the remedial activities proposed for this site. The specific work to be performed will include: 1)the removal and proper disposal and documentation of petroleum contaminated soils 2)Downgradient groundwater sampling and remedial activities if NYSDEC deems it necessary 3)endpoint soil samples will be taken proximal to the tank removals as determined by NYSDEC Spots Memo 14 4)engineering controls will be implemented as per the December 2002 correspondence."

Underground Storage Tank Removal, Remedial Activities and Site Assessment (FPM)-3/10/04. "Only nine storage tanks were found to be present at the site during redevelopment". Tanks found were three (275-gallon) waste oil USTs, four (550-gallon) gasoline USTs and two (2000-gallon) gasoline USTs. "Excavation was performed to a depth of approximately 14 feet below grade over the entire site". "...petroleum impacted soils were present in the vicinity of the former AST vault and the gasoline UST area. " "...impacted soils were not observed in the 275-gallon waste oil UST area". A total of 2306.08 tons of soil were excavated and removed from site. Nine endpoint soil samples were collected including (EP1 through EP7 collected from the floor of the excavation at a depth of 14.5' below grade),(SW1 and SW2 were collected from the approximate depth of the former gasoline USTs (7' below grade) through accessible areas of the excavation shoring). Two groundwater samples were obtained downgradient of the former gasoline USTs. Groundwater at depth of 20' below grade. "An ORC was applied to the area of impacted groundwater to promote biodegradation of the remaining petroleum". Engineering controls will include "a high density polyethylene vapor barrier to be installed beneath the basement floor above a passive venting system such that potential vapors that might otherwise infiltrate the newly constructed building can be captured and directed to roof top stack for discharge. Periodic monitoring of this stack will be conducted once the building is completed. The monitoring results will be reported to the NYSDEC and spill closure will be requested if the monitoring results indicate that the remaining impact is negligible or non existent". "FPM does not recommend further groundwater investigation..." Soil analyticals show 1270ppb xylene(EP1), 1337ppb xylene(EP7) and minor PAH exceedences in EP7 and SW2. Groundwater analyticals show 380ppb benzene(GW1), 12000ppb ethylbenzene(GW1), 70000ppb toluene(GW1), 67000ppb xylene(GW1), 4700ppb ethylbenzene(GW2), 68000ppb toluene(GW2), 28400ppb xylene(GW2).

Letter from FPM Davis to DEC Vought-6/6/04. "Please find copies of the following..." including RAP, 12/19/02 letter, 12/20/02 letter and 3/10/04 report.

7/8/04-Vought-Sent out STIPULATION Agreement to Ennis with due date of 8/9/04 including requirement of surrounding area property usage. Vought called Ennis (212-421-3535) and left message.

7/9/04-Vought-Site visit by Vought. John Bukoski on site. Three wells adjacent to site installed. Delineation well across Hudson not possible due to basement under sidewalk. Highest PID reading found in three wells was 67ppm. No free product or sheen on water. Sub-foundation venting pipe in place. Soil sampled will be deepest dry sample and/or sample with highest PID. Additional delineation will be pending upon analysis of groundwater samples from new wells and determination of flow direction.

7/23/04-Vought-Spoke to Ennis and he referred the Stipulation to his attorney. Ennis requested Stipulation extension until groundwater analyticals are received so determination can be made between STIP or BCP.

9/20/04-Vought-Called FPM Davis for update on further action and left message to return call to DEC.

10/8/04-Vought-Reveiwed letter from FPM (Stephanie Davis 631-737-6200)dated 8/2/04 and received on 8/5/04. "...the owner of the above referenced property does not plan to sign the Stipulation ..." The reasons are as follows: 1)"work is proceeding at the property in accordance with the October 16, 2002 Remedial Action Plan". Work has included tank removal, impacted soil removal, ORC application, soil and groundwater sampling, installation of a vapor protection system in new building and well installation 2)reduction in groundwater concentrations. Groundwater results and recommendations for additional delineation "will be transmitted to you shortly" (within "approximately two weeks").

12/16/04-Vought-Reviewed well installation report received on 10/27/04 from FPM and dated 10/25/04. Installation of three monitoring wells. Exit for Holland Tunnel and a New York City Park are located to the south of the site. Multi-story commercial/residential buildings are located to the west north and east of the site. Site was excavated to a depth of 15' below grade. "A vapor barrier was installed beneath the entire concrete pad and a perforated PVC piping system was installed beneath the southern portion of concrete pad to allow any built up vapors to vent to the exterior of the building". With regards to contaminated soil under sidewalk "Although this soil is located on the edge of the property, it was not within the excavation area and was not readily accessible for removal during the excavation process". The site specific groundwater flow direction appears to be west-southwest". "Based on a comparison between the November 2003 and July 2004 groundwater analytical data, total VOC concentrations in the groundwater at the site have significantly decreased". A qualitative exposure assessment has been performed for the facility. FPM recommends the following: instillation of one well north of MW1, south of MW2, groundwater flow direction confirmation, and injection of ORC with semi annual groundwater monitoring. Soil analyticals show: 2800ppb xylene (MW1 15'bg), 91000ppb toluene(MW2 16'bg), 41000ppb ethylbenzene(MW2 16'bg), 226000ppb xylene(MW2 16'bg), 140ppb benzene(MW3 15'bg), 35000ppb (MW3 15'bg), 20000ppb ethylbenzene(MW3 15'bg), 96000ppb xylene(MW3 15'bg). Groundwater analyticals show:160ppb benzene(MW1), 3100ppb toluene(MW1), 3100ppb ethylbenzene(MW1), 21100ppb xylene(MW1), 7700ppb toluene(MW2), 960ppb ethylbenzene(MW2), 5300ppb xylene(MW2), 32ppb toluene(MW3) and 24ppb xylene(MW3). DEC approves installation of additional wells and requires: 1)signing of Stipulation Agreement 2)remediation plan to address both soil and groundwater contamination 3)complete delineation prior to submittal of remedial action plan 4)quarterly groundwater monitoring 5)MTBE to be included in analysis.

11/8/05 - Obligado - Review letter from FPM Group. Offsite well not possible due to subsurface obstructions beneath sidewalk on Hudson and Laight street. ORC injection Design and GW monitoirng plan submitted. 6200 lbs of ORC to be injected into mw1, mw2, and mw4. Planned to inject wells on several occasions. Groundwater monitoring will be semianual in injection wells, quarterly in noninjection wells and will consist of low flow samplng for NA parameters BTEX and MTBE. DEC Requires: 1) Quarterly monitoring of all wells 2)Expanded surrounding area land use map showing utilities 3) STIP is overdue.

2/3/06 - Obligado -Email from Bukowski (FPM) "I will be sending out the groundwater monitoring/ receptor survey report for 48 Laight Street (spill 0207349) early next week. In the report will be revised calculations for injection of ORC into the wells, that is anticipated to be performed in late February or early March."

3/27/06 - Obligado - Received well installion and quarterly sampling report. total VOC concentrations have decreased in monitoring wells MW1 (16700 down to 2202 ppb) and MW2 (61930 ppb down to 11830 ppb). Newly installed wells MW4 and MW5. MW4 had 1861 VOCs and MW5 below guidance values. Based on results adjusted pln to inject 150 lbs of ORC into MW1,MW2,and MW4.

6/30/06 - Obligado - Email from Bukowski, will inject ORC on July 13, 2006.

7/12/06 - Obligado - Email from Bukowski, ORC injection will occur tomorrow.

5/10/07 - Obligado - Email to Bukowki, request monitoring reports.

10/29/07 - Obligado - Called John Bukowski inquiring about monitoring report and site status. He said there is a dewatering construction project across the street. All of their wells are dry due to the lowering of the watertable. They have only have one quarter of post injection monitoring data - 1Q07. I asked him to send a letter report with monitoring results and documenting site activities.

1/11/08 - Obligado - Received update report from FPM Group, dated December 11, 2007. ORC was injected on July 13, 2006 in MW1, MW2, and MW4. 33 lbs of ORC mixed with water and injected into formation. Ground water monitoring on a semiannual basis. Total VOCs in MW1 decreased from 16770 in July 04 to 8180 ug/L in June 07. MW2 VOCs have decreased from 61,930 ug/L in July 04 to 3,489 ug/L in June 07. MW4 VOCs decreased from 1861 ug/L in November 05 to 211 ug/L in June 07. In July 2007, FPM monitored gw elevations and found wells MW1 thorough MW4 to be dry. There is a construction project accros the streeet to the south. This work may be related to the Hollan Tunnel. Dewatering associated with this project may have lowered water tables to below well screens in the FPM site. The sub-slab system was monitored for vapors on March 14, 2007 and a sample was collected from the effluent stack. BTEX and MTBE ND <0.5 ppb in effluent. FPM will continue to monitor sub-slab system effluent.

Caller Remarks:

Caller pulling old tank at taxi station, encountered contaminated soil.

DEC Investigator Remarks:

CALLER IS GOING TO REMOVE ALL CONTAMINATED SOIL.

DEC (Sigona) called Mike Tumulty on 7/28/98. He called back left message on 7/29/98 said they removed a 550 at former taxi storage facility. They will try to remove all of the contaminated soil and take end-point samples and send results to DEC. This is the site of the former set for the TV show Taxi.

DEC (Sigona) would perform field inspection if further excavation and remediation is necessary depending on laboratory results. 7/29/98 2:30 P.M. Developer is nervous because they plan to erect 7 story building at site.

This gasoline spill case has been reassigned from DEC (Sigona) to Rommel on January 7, 2004.

9/28/04 Transferred from Rommel to K Foley.

12/7/05 Transferred from Foley to Andersen.

12/23/05: Reviewed file. A 550 gas tank was removed and surrounding contaminated soil. GW was impacted. Latest monitoring report from H2M is dated 10/20/1999. Report indicates a significant increase in BTEX concentration after ORC was applied. H2M concluded there is an off site source and additional remedial action wasn't planned. Sigona visited the gas station (107 Charles Street/540 Hudson Street) and confirmed that they have un-registered UST's. The other potential source (6th precinct, spill # 92-12918) does not appear to be a significant contributor (see Jon Kolleenys memo). I called Chuck Martello (H2M) and left a message requesting recent monitoring data and informing him I will draft a letter with results of my potential off site source investigation.

1/3/06: Sent an additional delineation letter requiring a MW by 107 Charles Street by 2/28/06, and quarterly reports.

3/20/2006: Called Chuck Martello of H2M and he does not have any recent info about the site and has not spoken to Sligo Realty since 1999. Phone number for Gerald Cunningham of Sligo Realty is not in service. NYSDOS dept of corporations entity info lists Sligo's address as SLIGO REALTY AND SERVICE CORP., 248 W. 60TH ST., NEW YORK, NEW YORK, 10023. Property shark and acris show no title info. Recent building permits show the contact to be Seth Weinstein (212-307-0500 x228). Spoke with Seth Weinstein. He is the current owner/manager of the property, which is a condominium. He requested a fax with information regarding the spill (fax: 212-262-5697).

3/21/06: Faxed Seth Weinstein a letter requiring additional delineation and quarterly reports, a FOIL spill report, and the H2M letter/report dated 10/20/1999.

3/23/06: Received phone call from Gerald Cunningham's attorney: Matt Parisi of Bleakley, Platt and Schmidt, he is going to trial in 1 week and will give me an update on the case afterwards.

Matthew G. Parisi
Bleakley Platt & Schmidt, LLP
One North Lexington Ave.
White Plains, New York 10601
www.bpslaw.com
P: 914-287-6184
F: 914-683-6956
mparisi@bpslaw.com

5/23/06: Spoke to Matthew Parisi. He will contact rp and consultant and get back to me.

6/20/06: Left voice message for Matthew Parisi to followup on overdue delineation and quarterly reporting.

6/21/06: Received phone message from Matt Parisi, he will speak with the consultant and get back to me.

7/26/06: Left voice message with Matt Parisi on status of overdue quarterly report.

8/11/06: Left phone message with Matt Parisi on status of site.

8/21/06: Sent stipulation agreement. Due back 9/18/06.

8/25/06: Spoke with Matt Parisi. A FOIL request will be submitted for 6th precinct spill upgradient.

8/28/06: Received the cc of a FOIL request for 6th precinct spill.

10/6/06: Spoke to Matthew Parisi. I recommended he call Gloria Silva regarding the FOIL request.

10/23/06: Spoke to Matthew Parisi. He will call Gloria Silva and then call me back with an update.

10/27/06: Received email from Matthew Parisi: "Following up on our recent conversations, Gloria Silva is going to send all the documents subject to my FOIL requests to a printer for copying. I will contact you when I receive the copies."

11/13/06: Left voice message with Matthew Parisi to followup on site status. A new deadline for Stip, update report, and delineation should be established.

11/15/06: Received email from Matthew Parisi (mparisi@bpslaw.com): "I finished picking a jury this morning and the trial is starting tomorrow morning. On this matter, we received a disc containing "a portion of the 6th Precinct DEC file." It was my understanding that the rest of the documents were being copied already. However, Ms. Silva called me today and said that they were going to send them to the copy center today. She said that I would get a call about the cost involved from the copy place, who I will tell to copy the entire file. I will let you know when I hear from them and will

expedite the review process as best I can. As far as deadlines, Ms. Silva told me that she was going to copy about 2 to 3 inches worth of files. When I get them I will send them right out to H2M. If Ms. Silva's estimate is correct, I would think that we could have them reviewed within 2-3 weeks of receipt."

11/28/06: File was sent out to be copied by the Department for the FOIL request.

1/2/07: Sent email to Matthew Parisi indicating that a signed stip, update report, and delineation report are due on 2/2/07.

1/3/07: Received call from Matthew Parisi, copies from the FOIL request have not been received yet.

2/15/07: Spoke to Chuck Martello at H2M (973-942-0700 x 230). FOIL documents are under review. Groundwater will be sampled.

5/1/07: Left phone message for Chuck Martello to followup on groundwater sampling.

5/9/07: Left phone message for Chuck Martello to followup on site status.

5/10/07: Emailed Chuck Martello (cmartello@h2m.com) to followup on groundwater sampling.

5/11/07: Received phone message from Chuck Martello. He has not been able to contact the client for this site.

Left voice message for Matt Parisi.

5/17/07: Received email from Matt Parisi : "Earlier today I reached both my client and Chuck Martello from H2M regarding the outstanding issues. I believe that Chuck will be reaching out to you (or may have already). In any event, they are going to address the outstanding issues and get back to you shortly."

Spoke to Chuck Martello. Groundwater sampling planned for next week.

6/4/07: Received phone message from Churck Martello. Contract expected to be signed this week.

6/6/07: Groundwater sampling scheduled for 6/8/07, 10:30 am.

6/8/07: Witnessed groundwater sampling of MW11 and MW13. The site is currently a Rite Aid (ground floor), apartment building (hudson street entrance), and nursing home (charles street entrance).

7/17/07: Spoke to Chuck Martello. Report is in preparation.

7/31/07: Emailed Chuck Martello to followup on submittal date for groundwater sampling report.

8/15/07: Left voice message for Chuck Martello regarding overdue report.

Spoke to Chuck Martello. He is waiting for authorization to release the report from the attorney Matt Parisi.

8/22/07: Reviewed letter report. BTEX 229 ppb (MW12). MTBE 64 ppb (MW12). Sent letter requiring quarterly sampling and reporting.

2/14/08: Received phone call from Chuck Martello of H2M. Wells have been sealed with grout. He is investigating to see who sealed wells (maybe consultant for 6 precinct spill). Wells will need to be reinstalled.

3/10/08: Received phone message from Chuck Martello, URS will replace well on Monday.

3/12/08: Spoke to Chuck Martello (973-942-0700). Well was not installed because scaffolding was present around the building. Well will be installed when scaffolding is removed. Reviewed letter dated 1/22/08 proposing the use of ORC socks in the well when it is reinstalled.

3/18/08: Sent letter approving use of ORC socks in MW12, when it is reinstalled. (Curt Schmidt: cschmidt@h2m.com)

8/6/08 - Carlson: Left phone message for Curt Schmidt (973-942-0700 x2234) - quarterly report is overdue.
Spoke to Curt Schmidt - scaffolding is still in place, well can't be reinstalled until the end of the year. He will send letter.

9/4/08 - Carlson: Received letter from H2M. MW12 can't be reinstalled until scaffolding removal in later 2008.

ACTIVE HAZARDOUS SPILLS - MISC. SPILL CAUSES - EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, AND VANDALISM - IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS.
 All spills mapped and profiled within 1/8 mile. Between 1/8 mile and 1/2 mile search radius, spills reported to be greater than 100 units and spills reported in the NYSDEC Fall 1998 MTBE Survey are mapped and profiled. Spills reported to be less than 100 units are listed in a table at the end of this section.

Please Note: * - Compass directions can vary substantially for sites located very close to the subject property address.

DEC Investigator Remarks:

2/10/2004: This spill case was reassigned from Sigona to Rommel for management. (Sigona)

7/2/2004: Site transferred to D. Harrington (Central Office) for management. (Rommel)

12/2/2004: Sent letter to Exxon Mobil approving RI work plan. Monitoring well installation to occur on the west side of Sullivan Street. Monthly EFR events to begin in mid-January 2005. (Harrington)

10/18/2005: Sent letter to Exxon Mobil approving the supplemental SI report. Closed spill nos. 04-01621, 04-11106, and 04-12443. (Harrington)

6/2/2006: Sent e-mail to Exxon Mobil requesting clarification on the proposed remedial work plan. Specifically requested more info on the chem-ox and ORC injection program. (Harrington)

6/13/2006: Product no longer observed in on-site monitoring wells. EFR events have been discontinued. (Harrington)

8/15/2006: Sent e-mail to Exxon Mobil approving the remedial work plan. Plan calls for chem-ox and ORC injections in source areas throughout the southern portion of the site. (Harrington)

10/26/07 - Tom Gibbons is PM for site. An approved CAP was provided to the DEE attorney and a draft CO was sent to EM on February 13, 2007. DEC received a draft RAP on March 2, 2007 and comments were issued on March 13, 2007. A revised RAP was received on March 14, 2007 and a final approval letter was issued. Implementation of the RAP began on March 28, 2007. The onsite borings and two rounds of ISCO injections were largely completed by mid April. Demolition of the onsite building is complete. Following demo, additional injection wells (both onsite and offsite) and onsite monitoring wells were installed and ISCO injections completed May18, 2007. The post-injection soil data was presented in a Supplemental Remedial Work Plan and recommended a third injection. This work plan was approved August 7 and the work was conducted the week of August 20, 2007. A second round of post-injection soil sampling was completed on September 24, 2007. Waiting on data to determine if a fourth injection is warranted.

THE FOLLOWING ACTIVE SPILLS FOR THIS CATEGORY WERE REPORTED BETWEEN 1/8 MILE AND 1/2 MILE SEARCH RADIUS FROM THE SUBJECT ADDRESS. THESE SPILLS WERE REPORTED TO BE LESS THAN 100 UNITS IN QUANTITY AND CAUSED BY: EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, OR VANDALISM. THESE SPILLS ARE NEITHER MAPPED NOR PROFILED IN THIS REPORT.

THEY WERE UNCOVERING OLD UNDERGROUND TANK (4 TANKS ALL 4000 GALLONS) - WHEN THEY REMOVED THEY ENCOUNTERED SOIL THAT SMELLED OF SOIL - THEY USED A METER THAT MEASURED JUST ABOVE THE REPORTABLE LIMIT - THE SOIL WILL BE REMOVED THIS WEEK

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"
 2/23/2000 DEC received a "Closure Report" from GZA - Stephen Kline 212-594-8140 (fax212-279-8180)

Report outlined removal of 3 - 4,000 gal tanks, soil samples taken, contamination left on site. Discussion of other tanks on site (some in use, some abandoned).

DEC letter to GZA 2/23/2000 requires:

- 1) 3 wells in area of tanks and pumping island - Water samples tested to 8021 & 8270
 - 2) summary of tanks on site, including if they were closed out with water or sand.
 - 3) report with findings and either recommendations for site remediation or justification for "No Action" status due April 14, 2000.000
- 4/4/2000 Stephen Travis P.E. (Yellow Freight) & Frances Schultz (GSA - 973-256-7800) met with Sangesland to discuss this site.
- 4 wells were installed as requested. Some slight trace levels of VOC's found, one MTBE reading of 12 ug/l found in one well.
- Whole area was built on landfill (probably coal ash) back in 1800's thru 1900. Background levels of other contaminants may be

caused by this fill and not from recent contamination.

Yellow Freight is going to submit soil boring results from other spots on the site. If these results show similar contamination, DEC may close it out.

5/2/2000 SANGESLAND SPOKE WITH KATIE BORDENARO (212-675-3004) FROM A LOCAL CITIZENS ORGANIZATION. SHE ASKED ABOUT WHAT WAS HAPPENING ON THE SITE. SHE HAS RECORDS ABOUT MANY TANKS ON THE SITE. SHE IS MAILING A COPY OF HER REPORT TO THE DEC.

5/12/2000 Advanced Cleanup Technologies, Inc (631-293-4992) was hired by a potential purchaser to conduct a Phase I / II review of the site. Several soil borings and wells were installed in Feb, 2000. The resulting report was issued by ACT on April 7, 2000. NYSDEC received a copy of this report directly from ACT on May 5, 2000. Based on the results of this report, a new spill number was called on the site to cover the entire block.

Cross Ref to Spill #0001838

5/12/2000 Sangesland spoke to Steve Travis at Yellow Freight to discuss the results of the ACT Site Assessment. Mr. Travis requested that the two spill numbers be kept separate. Right now, 9909631 relates to an area midblock along Washington St. in the area of the former 3 - 4,000 gal diesel tanks.

Spill #0001838 basically covers the remainder of the city block.

Issues include petroleum contamination and various metals.

HAS BEEN CONTAINED AND TANK WILL BE REMOVED ON WED.;

DEC Investigator Remarks:

Sangesland spoke with Marcus Simmons with AKRF.
Tank was uncovered and pulled. Contaminated soil was found.
CSL letter was sent to:
Marc Boddewyn
Hudson River Park Trust
Pier 40 @ West Houston St - 2nd Fl
New York, NY 10014

7/26/07 Left message w. Axel requesting callback.

8/1/07- DEC Piper recieved report from AKRF. During installation of sewer, a 8k ust was discovered. The tank was removed along with 82 tons of soil. Endpoints revealed SVOC over TAGM. GW samples were collected which indicated slightly elevated levels of VOC's. The GW discharges to the hudson and is 15yds waway. Based on information and remediation to date, this spill is closed. See report on e-docs if warranted.

Caller Remarks:

CREWS ARE ON THE WAY TO CLEAN UP.

DEC Investigator Remarks:

5000 gal #6 fo tank ruptured, the tank room had a large hole broken through it leading into the many rooms of the basement. PTC brought a vac truck and numerous other trucks and people to begin the cleanup. Cleanup continued Saturday and Monday. What was observable on friday eve of the concrete floor appeared to be sound. Tipple also inspected the adjoining neighbors basements which are currently under construction and they had no oil impact at that time.

12/23/04 tipple updating/// most of the oil removed/ powerwashed// the tank room has not been cleaned, numeros proposals from different companies, awaiting company to be awarded contract. Once the tank is removed and the room cleaned, Tipple will

conduct followup inspection.

2/10/04 not yet cleaned, temporary tanks still in place

3/3/05 Tipple and Rahman conducted a site visit.... The majority of the spill has been successfully cleaned, there are a few edges and at the former tank grave that must be re-cleaned.

3/16/05 site visit, followup electronic photos, manifests to follow, cleanup completed, no further action, letter sent.....MT

SCIENTIFIC LABRATORIES 8 SCHOOL STREET WEYMOUTH MASSACHSETTS 02189

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"

1/9/2003-Vought-Spoke with Jim Romeo (201-714-9858) will be starting excavtion of contaminated soil. Soil will be analyzed for VOC and SVOC. Sampling will be four sidewalls and one bottom groundwater sample. Report will be sent to NYSDEC by 2/15/2003.

7/21/2003-Vought-File review by Vought:

Owner of property is Asi Cymbal (212-398-2000x11). New building will consist of residential apartments with underground garage. Property address is also 416-424 Washington Street.

Letter DEP-10/31/2002-Letter from John Wuthenow (DEP Site Assessment Unit-718-595-4416). 259 West street will be demolished prior to building new structure. According to letter several suspect UST's may still exist at the site. Lens of #2 fuel oil free product found in SB-10.

Letter DEP-11/12/02-Letter from Daniel Cole approving of health and safety plan and remedial action workplan.

Corrective Action Report-Environmental Management Services (Jim Romeo-201-714-9858). Report received 2/14/03. Report requests No Further Action. Owner of property is W Squared, LLC 700 Pacific Street Brooklyn, NY 11217. Site underlain by fill material. Groundwater flow to the west or southwest. Groundwater at a depth of 7' below grade. GPR survey performed to determine if abaondoned UST's were present. GPR survey not performed at 416-424 Washington due to presence of debris in the basement. GPR survey also encountered "excessive background noise" Seventeen Geoprobe borings performed on 9/10/2002. Only a sheen found at SB-10. Soil excavation completed on 1/21/03. 21 cubic yards (36.86 tons) of soil were removed from the site and four endpoint soil sidewall samples and one bottom groundwater sample were collected (analyticals provided). Future excavation of new building is planned for 12 below grade. Groundwater infiltration from the north displayed an oil sheen. Soil samples showed PAH exceedances (due to historical fill). Groundwater analyticals up to 470ppb napthalene. PBS and Spill database search indicated no registered tanks at West st or Washington Ave sites. Vought will perform site visit on 7/23 to: 1)confirm northern source of contamination via sidewall inspection and adjacent property investigation 2)inspection of soil for fill characteristics 3)examination of foundation depth and possibility of undiscovered on-site USTs at 259 West and 416-424 Washington Avenue 4)inspection for abandoned fill ports or vent pipes suggesting historical presence of USTs.

7/24/2003-Vought-Site visit by Vought on 7/23. Excavation was not open and nothern source could not be confirmed. Soil exhibited fill characteristics in exposed portions of site (brick, coal, ash). 416-424 Washington Street property excavated to a depth of 5' and parking lot/259 West Street were excavated to a depth of 14' and no UST's or piping were discovered. No abandoned fill port or vents were found due to new sidewalks. Vought inspected adjacent property to the north (67 Vestry) and found no evidence of spills. Secondary containment vault of 3000-gallon #6 fuel oil showed no evidence of spills. Vought required owner of 67 Vestry to tightness test tank (letter sent 7/24). TPH Fingerprinting of groundwater sample by EAI indicated #2 fuel oil despite #6 oil storage to the north. Possible source may be former on-site AST and no definitive soil samples taken from the vadose zone other than PID screening of excavator buckets (soil source may have been missed during excavation). Vought called Jim Romeo (201-951-5198) and informed him of tank tightness test letter. Romeo will send Vought copy of DEP ESA which describes soil borings from 259 West Street. During the discussion with Remeo he indicated that a 275-gallon AST was removed from the first floor of 259 West street (slab on grade construction).

1/6/04-Vought-Spill transferred from Vought to Austin.

1/27/04 - Sawyer - Spill transferred from Austin to Sawyer.

7/22/04 - Sawyer - Talked to Anna of EAI, Inc., who took over for departed Jim Romeo about reviewing corrective action report dated 2/13/03.

9/14/04 - Sawyer - Talked to Anna and she expressed the fact that the building owners were reluctant to do more work without a letter from the Department directing them to do so. I am drafting the letter now.

1/27/04 - Sawyer - Received detailed explanation of the schedule of events that have happened with this spill from James Grond at GCI Environmental Advisory, Inc. He explained that a subsequent water sample taken 5/8/03 indicated that there were no exceedances of groundwater criteria. There is no further action required. Closed.

LAB RESULTS SHOWED ELEVATED LEVELS OF SEMI - VOLATLE CONTAMINATION

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHAO"
Sangesland spoke with Russ Eshman of Impact Environmental.

He said they did some soil testing around buried tanks and came back with some minor hits.

If the levels are just over the limits, it may be OK to close out

A soil testing report is being prepared and will be sent to Jie Zhao.

12/9/03 - Report received by e-mail. One 550 gal tank involved. Boring up to six feet below the basement floor. Minor impact on one of the three boring samples.

12/16/03 - Kevin Kleaka explained that 6 feet below the basement surface material could not be penetrate through. Spill closed.

construction revealed a 550 gallon waste oil tank - cross ref 9805274 anthony Sigona w/ dec

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

The following DEC Investigator Remarks were available prior to 1/1/2002:

DEC (SIGONA) RECEIVED A CLEANUP REPORT from H2M Group dated October 26, 1998. DEC reviewed the results of endpoint soil testing and found that the levels met STARS Memo No. 1 guidance values. This closes the spill associated with the waste oil USTs (see letter to Sligo Realty Co, dated Nov 24, 1998).

However, the spill investigation no. 9805274 associated with the removal of the former gasoline USTs is being cleaned up by a separate cleanup plan from H2M Group, dated September 25th & Oct. 2nd, 1998 were approved in a letter to Sligo Realty, dated Nov. 24, 1998. The cleanup report on the gasoline USTs is due on Jan. 31, 1999.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"

7/21/2005- Reviewed Quaterly Monitoring Report received in June 2005. ORC socks were installed in wells MW-2, 10 and 13R. In February 2005 LiRo conducted additional soil excavations that were requested by DEC. LiRo recommended continued operation and monitoring. The Department concurred. AZ

05/30/07: This spill case transferred to J. Kolleeny. LiRo Engineers undertook remediation of this site under DDC Consent Order. Remedial actions included excavation of contaminated soil from several areas, installation/operation of SVE system, bio-nutrient application, and ORC application. Results of LiRo's February 2006 Sensitive Receptor Survey (in eDocs for related spill 9804683) for site indicate low-level residual GW contamination in two monitoring wells is unlikely to pose a threat to environment or public health. LiRo's remedial actions and well network addressed entire site, all tanks. OK to close spill. - J. Kolleeny

TANK IS AN ABOVE GROUND TANK. TO BE EVALUATED AND RETESTED.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"

5/1/2003-Vought-Spoke with William Conroy (631-423-1240) who is consultant for property. NFA request has been prepared for 0209395 and 0209396 and reports will be sent to NYSDEC. Conroy requesting NFA letter sent to him.

7/24/2003-Vought-Received report from Conroy Environmental Consultants. Tank is a 1500-gallon AST in basement encased in concrete vault. Tightness test indicated leak was in a dry portion of the tank. Petroleum Tank Cleaners was hired and pumped fuel from tank, cleaned tank interior, removed and resealed manhole cover, repaired broken vent line and petrometer connection. Tank passed tightness test once repairs were completed (tightness test results sent to NYSDEC). Spill closed by Vought.

property owner is aware tanks will be uncovered and cleaned then retested

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"

August 16, 2005

As part of the Spills Backlog Reduction, Jason Pelton initially called Roy Rucci with Rucci Oil. Rucci Oil delivers #2 fuel oil to 627 Greenwich property and was listed on the Spill Report Form as a contact person. Rucci referred the property owner to Crown Leak Detection to complete the tank testing. Roy Rucci indicated that the tanks were repaired by Petroleum Tank Services. Rucci Oil continues to deliver oil to this property. Roy provided me with contact information for Ed Armstrong (212-741-2111).

Ed Armstrong is the 627 Greenwich Street property Superintendent.

I followed up with a phone call to Ed Armstrong. Ed Armstrong indicated that a vent line was broken and there was never any petroleum spill. Ed has documentation on the tank tightness testing and the tank repairs and faxed them to me on August 16, 2005. The testing and repair documents were scanned and placed in eDocs on 9/6/05.

Based on the fact that no petroleum spill occurred and that repairs were made to the underground storage tank system, the status of the spill was changed to closed by Jason Pelton on September 6, 2005.

Caller Remarks:

TEST FAILED.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"

PBS #2109851

3/6/2006 Sangesland spoke to building super "Mr. White" at 212-255-4870

He said both the 10,000 gal and 5,000 gal tank were in operation and they now run on #2 fuel oil. He didn't know about any tank failures.

Mr. White suggested I call the building manager: Susan Seckel 212-924-1023

Sangesland left a voice message with Ms. Seckel.

3/6/2006 In 2004 boiler was replaced and the fuel changed from #6 to #2.

At that time the 2 tanks were tested and the 5,000 gal tank failed the test.

The tank was isolated and retested and passed. The line from the tank to the boiler was found to leak. This line was repaired and retested and passed.

Spill closed.

Caller Remarks:

it was a dry portion leak;

DEC Investigator Remarks:

9/25/07 bf: Called Michel de Konkoly Thege 212-477-5316. Left message to return my call. Sent ttf letter to:

Michel de Konkoly

Little Red School House

40 Charlton St.

New York, NY 10014

9/28/07 Received message from Mr. Thege on 9/25/07. They have appointment with contractor to have tank emptied and find source of failure on 10/5/07. He left his number which is same as above. His extension is 319. bf

11/16/07- Piper spoke w. Jason at Langan to perform borings through tank and undersidewalk. The will keep Dept in Loop. The school plans on converting to gas.

3/15/08- DEC Piper met contractors onsite to complete remainder of tank cleaning and sampling. odors were not present in hallways untill adjacent to work area. The school will be closed for the week and sampling will be performed and then the tank will be slurried.

5/29/08- DECPiper- I recieved and reviewed ust and spill closure report. Tank was cleaned and two enpoints were taken through tank bottom. No visible evidence of cont was discovered and laba analytical showed no exceedances. Tank was then slurried. Based on work to date, NFA granted. closed. See e-docs if warranted.

1	2000	Horner EZ Check I or II	0.00	FAIL

Caller Remarks:

TANK TO BE INSPECTED AND RETESTED.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"

7/24/2003-Vought-Conroy Environmental Consultants-631-423-1240 received NFA Request results dated April 30, 2003. Tank repair work included pumping existing fuel from tank, cleaning the tank interior and resealing tank manway. The tank ONLY passed the tightness test after repairs were made (tightness test results provided). Vent and fill line did not pass the test and as a result the fill line was immediately sealed and are scheduled to be replaced. For spill closure NYSDEC requires 1)Site Plan 2)borings or endpoints to investigate possibility of fill pipe impact to subsurface.

1/7/04-Vought-Spill transferred from Vought to Austin.

01/27/04 - Sawyer - Spill transferred from Austin to Sawyer.

11/28/05- DEC Piper sent out another ttf letter in regards to fill and vent line failure to Michele Dekonkoly Thege at 272 6th Ave, NY, NY. Daphne no longer w/ little red school house.

12/28/05- DEC Piper has spoke w/ Steve Russo, rep for Little Red School house. regarding borings. He will look into it.

5/5/06- DEC Piper has left message w/ Steve Russo, rep for Little Red School house. regarding borings, requesting callback and info.

5/11/06- DEC Piper spoke w. Steve. A visit is scheduled for 5/15 at 3:30pm.

5/15/06- DEC Piper responded to site to determine additional work. The 2 x 2 vault to the manway of an UST contained contaminated soil. Once opened the vault emitted vapors. Trap door was sealed with duct tape to prevent vapors intruding into basement classrooms. There is no such evidence that any soil was removed when the fill line was replaced (manifests, analytical, not mentioned in report. DEC instructed LRSH to remediate top of tank and perform borings along fill line. CSL letter sent.

6/6/06- DEC Piper left message for John at Langan requesting callback. Returning his call.

6/30/06- DEC Piper met w/ John Garvis of Langan and Hydrotech technicians. Contaminated Soil was excavated around manway with a shop vac approx, five gallons. Soil was clean under surface oil staining. Top of tank exposed w/ no indication of overfill to subsurface. Some concrete existed. Hydro tech to epoxy seal manway (2 coats) and concrete around manway. Fill and vent were replaced. No oil staining observed on old fill line entering basement. Closed. See e-docs if warranted.

Caller Remarks: NO REMARKS GIVEN FOR THIS SPILL

DEC Investigator Remarks:

10/05/04-Vought-Spoke with Jim Melnick and owner was not sure if he wanted to abandon, remove tank or leave it in place. If tank passes test he will leave it in place for possible future use. ProTest will reseal manhole, plug vent and retest. Vought sent out TTF letter to owner on PBS also requiring submission of updated PBS registration.

10/13/05-Vought-Received both copies of TTF returned to sender as "attempted -not known unable to forward. Addresses on letters were:

Noel Torsi
 114 Waverly Place
 New York, NY 10011

and

Chris Leahy
 159 Prince Street
 New York, NY 10012.

Vought called Leahy for correct address and received address from secretary and sent out new TTF letter to:

Christopher Leahy
636 11th Avenue
New York, NY 10036

10/21/05-Vought-Received message from Chris Leahy that source of failure was broken air release valve that will be replaced and tank will be retested. Report will be submitted to DEC.

05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin.

6/14/06 - Raphael Ketani. I tried to reach Mr. Leahy (lay-hee) at (212) 777-8838, but could only leave a voice message. There are 2 tanks on the property, but I could not find a PBS case. Mr. Melnick of Protest (631) 321-4670 had done the first tank test.

6/15/06 - Raphael Ketani. Mr. Leahy called me back. He said the PBS case is 2-339059. I checked the number and found both a 1500 and 2000 gallon tank listed. I told Mr. Leahy that I needed a revised PBS application, the successful test results for the 2000 gal. tank, a letter describing the removal of the 1500 gal. tank, and a cover letter from Protest stating that there was no oil spill, no impact to drains or the environment. He said he would get me these documents.

7/28/06 - Raphael Ketani. I spoke to Mr. Leahy and asked him for the revised PBS and the cover letter describing the incident, repairs, and that no drains or the environment were impacted. He said that he thought these documents were sent, but he will see to it that they are sent very shortly.

7/31/06 - Raphael Ketani. I received the FAXed 2000 gal. tank test report from Pro Test. The tank passed. However, I have not received the revised PBS. I left a message for Mr. Leddy of Pro Test and Mr. Leahy, the landlord.

Mr. Leahy told me that a 1100 gal. tank was removed by Petroleum Tank Cleaners and that there is only a 2000 gal. on site, NOT a manifolded 2000/2200 gal. system. He said that even the Fire Department had the wrong tank size a while ago. He said the PBS form hasn't come back from the expeditor, yet. He said he will send the revised PBS AND the report regarding the end point samples that were taken in the vicinity of the removed 1000 gal. tank. He said the end point samples were clean.

8/17/06 - Raphael Ketani. I tried to reach Mr. Leahy, but could only leave a message.

8/30/06 - Raphael Ketani. I tried to reach Mr. Leahy, but could only leave a message.

8/31/06 - Raphael Ketani. I received a call from Jessinia of Edgemont Realty (212) 228-6757 - the expeditor. She said that she had an affidavit for the removed tank (1080 gals.) and a check for renewal of the registration of the 2000 gal. tank. She asked who she should send it to. I told her to send it to me and I will walk it over to Nick Lombardo in the PBS Unit. She said she spoke to Mr. Lombardo and she said that he told her just to send the affidavit and the check for the renewal.

I spoke to Mr. Lombardo and he said he recalled the conversation with Jessinia and he showed me a FAXed PBS registration form with the removal of the 1080 gal. tank and renewal of the 2000 gal. tank. He said he is just waiting for the original PBS form, the affidavit and the check.

9/25/06 - Raphael Ketani. I received a call from Jessina inquiring whether the DEC had received all of the paperwork for the

site. I told her I had the cover letter explaining what triggered the spill case. I told her I had to check with Mr. Lombardo of the PBS Unit to see whether he had received all of the necessary paperwork and the check. Mr. Lombardo told me that he must have received everything as Albany DER issued a certificate for the tank registration. I told her that the DEC had received all of the necessary paperwork.

Based upon receipt of the revised PBS registration, the affidavit, the check, and the passing tank test results, I am closing the spill case.

TWO SEPERATE TANKS-TANK ONLY TESTS #1 VISIBLE LEAK,#2 GROSS

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KOLLEENY"

Site was investigated by TRC Env'tal and then by URS, as part of DDC Consent Order. Soil and groundwater contamination was found; URS proposed installing SVE system to address soil and monitoring for groundwater. JK of DEC approved this plan. SVE system started in March 2002. In November 2003, URS advanced 6 confirmation soil borings to evaluate progress. Results showed high residual contamination at shallow depth in boring in sidewalk area near former fill port. URS proposed NFA/spill closure, but DEC asked for limited soil excavation in area of fill port. Then in May 2004, Con Edison encountered strong gasoline odors when excavating in street in front of fill port area; soil samples showed gasoline contamination (see spill 0401426). URS argued that further soil excavation was not practical, but recommended modifying SVE system by adding a 2nd extraction well in sidewalk; DEC approved this. System was modified, and re-started in January 2005 using only the newer SVE well. On-going semi-annual groundwater monitoring continues to show minor VOC exceedances. - JK 6/15/05

Nov.-Dec. 2005: Reviewed System Performance Monitoring Report for August-October 2005. SVE system monitoring data show system appears to have reached asymptotic conditions, so URS will perform a confirmatory soil boring in area near sidewalk fill port where earlier confirmation sampling found high levels of VOCs. Groundwater results from July 2005 showed contaminant levels in the two wells that were sampled, MW-7 and MW-11R, increased to about 500-600 ppb total VOCs, and irregular groundwater flow direction with eastward component in area of MW-7 and MW-4. URS stated that all wells be sampled in first quarter of 2006. - J. Kolleeny

10/19/06: Reviewed URS report Results of Confirmation Soil Sampling 2nd Round and Groundwater Results / Request for Spill Closure, dated Oct. 18, 2006. Results of soil sample from boring SB-12 near sidewalk fill port area and earlier hot confirmation boring SB-6 showed some TAGM 4046 exceedances (total VOCs of 29 ppm), but not nearly as high as SB-6 (total VOCs of 110 ppm).

Exceedances are in shallow fill materials above a low-permeability silty clay layer, with sand & gravel below that; URS speculates that SVE system preferentially pulled vapors through sand/gravel layers, with little effect on top layer of fill materials due to silty clay layer. Groundwater sampling of wells MW-7 and MW-11R during Feb. and July 2006 showed ND for MW-11R and low-level contamination in MW-7 (up to ~30 ppb total VOCs). URS also did Sensitive Receptor Survey suggesting that the residual soil and groundwater contamination were unlikely to impact any receptors, they therefore requested spill closure and NFA. However, they did not sample all monitoring wells as they stated in the 11/18/05 System Performance Monitoring Report for August-October 2005. I sent email to Jane Staten of URS requesting that they sample wells MW-1 through MW-9 during the 4th quarter of 2006. - J. Kolleeny

12/22/06: Reviewed URS's Request for Spill Closure dated Dec. 6, 2006. Report presents results of full round of groundwater sampling, as requested, although no samples were taken from MW-3 because it was inaccessible or MW-11R because it was ND for last two rounds (Feb. and July '06). [MW-3 was clean last 3 times it was sampled, in June 2000, March 2001, and May 2001.] GW samples were collected from MW-1, MW-2, MW-4, MW-6, MW-7, MW-8 & MW-9 on Nov. 27, 2006. Results showed exceedances only in MW-7, with 75 ppb total VOCs. This low-level contamination does not pose a significant threat to the environment or public, and will likely naturally attenuate over time. Residual soil contamination in area of borings SB-6 and SB-12 near sidewalk fill port is located above low-permeability silty clay layer, which will limit its potential to impact GW, which is 24-25 feet below grade. After conferring with supervisor Vadim Brevdo, decided to close spill. - J. Kolleeny

Material Spilled	Material Class	Quantity Spilled	Units	Quantity Recovered	Units	Resource(s) Affected
DIESEL	PETROLEUM	0	GALLONS	0	GALLONS	SOIL

Caller Remarks:

NO EVIDENCE OF TANKS AND FOUND CONTAMINATED SOIL IN COURT YARD AREA

DEC Investigator Remarks:

Sangesland spoke to Eric Telemaque with Emteque Corp. He said the site was a "U" shaped warehouse with a courtyard open on one side. The owner wants to enclose the courtyard and make it part of the building. During digging for this construction, petroleum contaminated soil was found in one specific location. No tanks were found there. A lot of excavation work has already been done (19 ft deep), so a CSL letter may not be needed. Sharif needs to speak with Eric Telemaque to determine what additional work is needed. Probably excavate the area and get clean end point samples.

Property owner is:
Tribeca Associates LLC
321 Greenwich St
NY NY 10013
Mr. Bill Brodsky
212-941-5954

06/09/08-Closure report prepared by EMTEQUE.During excavation petroleum contaminated soil were identified in the rear courtyard. Approx. 600 tons of contaminated soils were removed from the site. One 7,500 gallons AST was noted on site, no UST was

encountered during the excavation. End point samples were taken from nine grid locations.No vocs was found above TAGM limit, svocs(PAHs) were slightly above TAGM at one location, which can be attributed to historic fill material.Pictures,waste disposal manifest are attached.NFA required.(sr)

Caller Remarks:

DURING EXCAVATION THE PAVING CREW AN OLD GAS MAIN WAS MOVED AND

THERE WAS A 1 GAL SPILL OF DRIP WATER (COULD POSS CONTAIN CONTAMINATES) SPILL CONTAINED IN THE EXCAVATION - CON ED# 13315

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"

8/31/00, 4:00 PM: spoke with Gary Windman (Gas Ops) - this is NOT a 3rd party spill. It is a Con Ed gas line, but break was caused by a contractor. Also, Construction Mgmt. is responsible organization for clean up. Material is being treated as hazardous for benzene contamination. No samples were taken for PCBs.

4:10 PM: left message for Greg Rucco (Construction Mgmt) to get details of clean up. (JHO)

9/5/00: spoke with Greg Rucco - 3 drums of soil were removed. Samples were collected from drums and from excavation after soil removal for benzene only. I asked Rucco to contact the Chem Lab - see if they have enough soil sample from drums to run for PCB scan. If not, take wipe sample from pipe for PCBs. After speaking with Chem Lab, he informed me that samples were sent to an outside lab. Chem Lab will send a tech to site to take PCB wipe samples from inside the pipe. (JHO)

9/6/00: benzene sample from excavation lab sequence # 00-08420 <0.00091 ppm. (JHO)

9/12/00: wipe samples from inside gas line non-detect for PCBs - lab sequence # 00-08660. (JHO)

e2mis no. 133-150:

On 8/31/00 at 1422 Construction Management reported a spill of unknown liquid from a 6 in cast iron gas main in an excavation at W.Houston St 30 feet East of West St. Man. The spill was contained to the excavation and did not enter any sewers, waterways or subsurface structures. The spill was caused by Perreni Contractor working for New York State doing paving work. The job was supervised by Construction Management.

1/11/01 J. Mele reports that on 8/31/00 spill was cleaned up from excavation. On 9/5/00 pipe was removed from site and brought back to Con Edison's Yard W 28 St for disposal.

209216

DEC Investigator Remarks:

02/20/08 - See eDocs for Con Ed report detailing cleanup and closure.

12/21/07 - Raphael Ketani. The spill is the result of a misdelivery at 180 Varick Street (see spill number 0710100). The oil sprayed out of the vent pipe and onto the street and into the vault. Some oil from the spill got into the vault, but it is not known how much. PTC and cleanup crews hired by HESS are presently cleaning up the street. I spoke to Tony Buda of Con Ed Emergency Response (212) 580-8383. He said that Clean Harbors was called to clean out the vault and service box. Con Ed's own crew was called to assist in the cleanup.

209216 for Con Ed portion of cleanup. see eDocs

Caller Remarks:

CONTAMINATED SOIL FOUND IN THE COURSE OF A TANK ABANDONMENT

TANKS ARE VAULTED AND ARE NEXT TO VAULTED TANKS STILL IN USE

DEC Investigator Remarks:

05/30/07: This spill case transferred to J. Kolleeny. LiRo Engineers performed remediation of this site under DDC Consent Order. Remedial actions included excavation of contaminated soil from several areas, installation & operation of SVE system, bio-nutrient injections and ORC injections. Results of LiRo's February 2006 Sensitive Receptor Survey (in eDocs for related spill 9804683) indicate that low-level residual GW contamination in two wells is unlikely to pose a hazard to environment or public health. Remedial actions and well network addressed entire site, all tanks, including these hoist oil and motor oil tanks. OK to close spill. - JK

GASOLINE		PETROLEUM	0	GALLONS	0	GALLONS	SOIL, GROUNDWATER	

Caller Remarks:

550 GALLON TANK AND FOUND IMPACTED SOIL AND ODORS WITH HIGH PID READINGS AND EXCAVATING

DEC Investigator Remarks:

Sangesland left a message with Maria Ramirez at GZA saying tank should be pulled and end point samples taken.

9/26/05.

J.Krimgold spoke to David Morris (GZA) a consultant for an RP. The tank was excavated and all contaminated soil was removed. Soil was excavated to the GW depth. They took post-excavation soil and GW samples. Will submit a final report in three weeks.

9/29/2005 CSL sent to:

Vincent Brana

80 Wesley St

South Hackensack, NJ 07606

10/21/05. J.Krimgold spoke to Stephen Kline (GZA) @ 212-594-8140. He stated that remediation has been completed and a final report have been sent to DEC yesterday.

10/25/05. J.Krimgold reviewed the Corrective Action Report submitted by GZA, Inc and dated October 2005. According to the report all contaminated soil was removed from the site and properly disposed of. Post-excavation samples show some SVOCs level marginally exceeds TAGM levels.

11/17/05. J.Krimgold reviewed the final Remedial Action Report submitted by GZA and dated November 11, 2005. According to the report the source of contamination was removed together with impacted soil. Initial GW contamination was reduced to levels below guidance values. NFA.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"
 8/30/00

Met with Peter O'Brien. One ounce of dielectric fluid leaked onto concrete when contractor damaged feeder line. Emergency team is on site to make repairs. No affected sewers. (KMF)

~~~~~

e2mis no. 133112:

2 ounces of distribution dielectric fluid leaked from a damage distribution feeder in excavation. Spill went onto concrete slab. Diaper pad was placed under leak. This is a contractor damage. Spill did not go into soil. Clean up will be treated as 50 ppm to 499 ppm.

LAB.SEQ #00-8360 PCB <1 PPM.

06/05/03@14:40 - As per Joe Fleigner Clean up was completed and repair to feeder made.

ON 15 GALLONS OF WATER. CLEAN UP PENDING.

CON ED# 131483

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
DEC INSPECTOR'S NOTES

CON ED E2MIS REPORT 5-18-00

5gals. of unknown oil mixed with approx 15gals. of water in MH28488. No impact reported. PCB and oil ID samples were taken.

Lab Seq#00-04962; indicates the sample is similar to a light fuel oil.

PCB 3647ppm in MH28488

Cleanup type &gt;500

Solid amount: 3 barrels filled 7am-7pm 5/20

5 barrels filled 7pm-7am 5/20-21

On location total 8 barrels.

Cleanup info: All collected items are being removed by pail at this time. Cleanup to continue inot third shift Sunday morning. 8 barrels on location with sludge removed from manhole.

#### Intermediate Cleanup

1-55gal. drum containing 10 linear feet oil soaked asbestos

Vehicle type 2: Corporate transportation

Liquid amount : 110 gals. oil/water

Liq. vehicle type: Clena harbors tanker

Solid waste was removed to 55 gal. drums.

Removed 10 linear ft. Oil soaked asbestos. Cleanup complete pending PCb grid and wipe analysis.

Walls, floor and ceiling washed and rinsed four times using slix, power washer and tanker.

There is no sump in this structure.

Concrete floor showed signs of slight deterioration a crews scrubbed and power-washed.

Update 4-04-01

Clenaup scheduled for 20:00hrs and chemist scheduled for midnight to resample grid points 34 and#8

001 - sample 4 1260 <1.00

002 - sample 8 none <1.00

All grid samples passed. Manhole is cleaned and tag can be removed.

## Caller Remarks:

ACT INC. SUBMITTED A PHASE I AND PHASE II REPORT WHICH IDENTIFIES PETROLEUM AND METAL CONTAMINATION THRU OUT THE SITE. SEVERAL SOIL BORINGS AND WELLS WERE INSTALLED. SEVERAL SHOWING HIGH CONTAMINATION LEVELS.

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"  
1/12/2001

This spill number is associated with spill #9909631.

The two spill numbers together cover the full city block associated with this site.

This site was a former Yellow Freight trucking facility. It also has a history as: gas station, industrial manufacturing, smelting, overhead rail line, post office and several other uses.

In the 1800's the area was low marsh area which was built up (typical of much of the west side of Manhattan) with fill material (coal ash) and other non native fill material.

Owner of the site is:

Washington Street Associates, LLC (Mr. Gary Koehnken)

address: 352 Park Ave - Suite 702, New York, NY 10010

Attorney for the owner is:

Gail Port with Proskauer Rose LLP (212-969-3243)

address: 1585 Broadway, New York, NY 10036

Environmental Consultant:

Advanced Cleanup Technologies, Inc. (631-293-4992)

address: 117 Verdi Street, Farmingdale, NY 11735

During the course of 2000, a total of 17 buried tanks were found in 5 general locations around the site. Advanced Cleanup Technologies removed the tanks and excavated out any contamination found to the satisfaction of the DEC. In addition, a total of 3 groundwater monitoring wells were installed on the site and found to be clean.

On January 11, 2001 ACT submitted an "Underground Storage Tank and Spill Closure Report" which documents the excavation of the 17 tanks and associated petroleum contamination in the area.

Based on this report, the spill number associated with this site is closed.

Closure letter specifically says:

"the NYSDEC is in receipt of the spill closure report, prepared by Advanced Cleanup Technologies Inc. and dated January 11, 2001, for the referenced site. This information, when combined with the documentation already provided to the NYSDEC to close out spill number 9909631, provide a complete summary of the environmental conditions for the full city block under investigation. The historical petroleum contamination which was on the site has been satisfactorily remediated. Based on this information, no further investigation or response will be required concerning the petroleum contamination at this specific site."

NYSDEC rep - Tom Lang (Hazardous Wastes Department) added this:

"Based on the environmental investigatory information provided to the NYSDEC, there is no evidence of the presence of a consequential amount of hazardous waste on the site."

**Caller Remarks:**

There was an exceedence in the soil sample at the above location. ethylbenzene @ 33 ppm, xylene @ 200 ppm. sample was collected in order to asses soil disposal options.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SAWYER"

7/15/04 - Sawyer - Received Remedial Investigation Report/Workplan from Craig Peterson at Langan Engineering.

10/29/04 - Sawyer - Received revised Remedial Action Work Plan.

12/12/05- DEC Piper spoke w/ Craig Peterson at Langan. "Work has begun". Langan will be sending remedial action report early 2006 (Jan.-Feb.)

4/5/06- DEC Piper left message for Craig requesting callback.

10/3/06- DEC Piper spoke w/ Marshall King of Langan Eng. He is submitting RAR for site.

2/22/07- DEC Piper reviewed report, as per report, slight exceedance of Toluene above RTAGM upgradient of site. Source removal has been completed and a vapor barrier was installed. Closed. See e-docs if warranted.

Caller Remarks:

CALLER WAS DRILLING IN STREET AND FOUND SOIL CONTAMINATION - CALLER REPORTS THERE IS A GAS STATION ACROSS THE STREET FROM WORK SITE

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "VOUGHT"  
 4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel.

12/20/06: This spill is transferred from Mr. Koon Tang to Q.Abidi.  
 Called Ms. Maggy Douglas (Administrator) at (646)388-9530 and left message to call me back regarding information of spill. -QA

12/21/06: Recieved call from Mr. Axel (AKRF Consulting firm) (646)388-9529 he said he will find out the information of spill and he will call me back. -QA

03/05/07: Called Mr. Axel at (646)388-9529 left message to call me back regarding information of spill. -QA

04/03/07: Called AKRF Company at (914)949-7336 talked to Ms. Nancy (Office Manager of White Plains office) she said that someone will call me back regarding spill.  
 Mr. Marcus Simons (AKRF) (646)388-9527 called me back and said he will dig the data and he will call me back regarding the spill.

-QA

04/10/07: Mr. Axel from AKRF called me and said that they don't have any data regarding spill. They notified the spill to DEC. AKRF is caller also about this spill. When they were doing the drilling on the street, they found soil contamination. Caller also reported there is Gas Station across the street. Mr. Axel said he will send a letter to me regarding that. -QA

07/06/07: Mr. Axel from AKRF sent a letter on April 13, 2007. I called Mr. Axel and discussed regarding spill he said that no additional excavation or endpoint sampling have been conducted. -QA

09/14/07: I called Mr. Axel to discuss regarding excavation of the soil, waste Manifest Reports and waste characterization sample report. -QA

10/24/07: Checked with Mr. Axel (AKRF Environmental) there is not any waste manifest report and no waste characterization sample. Only they dug out the soil to put the pipe line. There is gasoline stations around the area that may be the source of soil contamination. No additional excavation or end point sampling have been taken. on the basis of the letter of Mr. Axel Schwendt, AKRF Environmental due to the age of spill AKRF is unable to confirm the exact nature of the drilling activities. By the approval of Jon Kolleeny (Supervisor) I closed this spill. -QA

Caller Remarks:

DURING SOIL BORINGS FOR A SEWER LINE FOUND CONTAMNATED SOIL:

DEC Investigator Remarks:

11/1/04 - JZ (desk duty): Zhao spoke with Mr. Nelson Abramas, MetCalf & Eddy. The company was contracted by NYC DDC with a sewer line project along Greenwich Street. During Geoborings on side walk of 500 Canal Street, contaminated soil was discovered at the interface of soil/water about 12 feet below grade. It appears petroleum oil with strong odor. PID reading is 180 ppm. The lot is currently vacant. According to the database, 500 Canal Street had Gas Service business. Tanks were removed several years ago. No spills were ever reported before, during or after the tank removal. Unknown if site assessment had ever been conducted during tank closure. Further upgradient at 480 Canal Street has a 20,000 gallon #6 oil AG tank currently in service, this does not appear any threatening to subsurface impact. Zhao has requested Metcalf & Eddy or DDC to contact the DEC if samples are analysed. Contamination letter send to the current owner at 500 Canal Street:

Greenwich Triangle Number 1, LLC  
459 Washington Street  
New York, NY 10013

ATT: Mr. Fabian Friedland

2/1/05 TJD

Investigation summary report submitted by Flemming Lee Shue. Property owner @500 Canal Street was notified of their responsibility to conduct an investigation following the discovery of contaminated soil in street IFO address. As a result of DEC's directive the owner retained Flemming Lee Shue to perform the required investigation. A site inspection was performed and a soil gas survey was completed. No readings above background were found, therefore, no samples were collected or analyzed. In addition, Flemming Lee Shue provided endpoint sample analysis from the original tank excavation in 2000. No TAGM exceedances were identified in endpoint samples. No further action required by owner of 500 Canal Street. Spill closed.

Unknown source of contaminated soil in street.

SOIL CONTAMINATION DISCOVERED AT ABOVE LOCATION. SAMPLE OF SOIL

TO BE TAKEN AND CLEANUP IS PENDING RESULTS. CON ED # 132879.

NO CALL BACK REQUESTED.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
 8/16/00

Con Ed monitors (Okwuoha, Foley, O'Connell) responded to a report of contaminated soil found during excavation work by Con Ed along Rte 9A corridor project at West St and Watts St in Manhattan. Con Ed contractor was excavating to install a sewer connection for a new transformer vault when they came across visually contaminated soil. Material was limited in area, and appeared to be aged petroleum. Con Ed has no oil-filled equipment in area. There is a parking lot on one side of the street and a garage on the other side. Only stained soil was found- no free product. Con Ed was instructed to characterize any soils removed as part of their construction project. It appears that all of the contaminated soil was removed.

08/20/00 at 16:06 hrs lab-results 00-07834 aroclor &lt;1.00 ppm in sewer excavation soil loc.n/s watts st &amp; west st.

-----

## DEC Investigator Remarks:

Sangesland has left 2 voice mails with Debbie Brown at GC Environmental.  
Asking for status of the cleanup.

Attorney Carol Buell (attorney for seller). Seller hired GC Environmental to inspect a buried tank that was closed out several years ago.

GC Environmental Says the old buried oil tank in the back yard was closed out properly.

Fill line for this old tank ran from the front of the house (fill port) along the ceiling of the basement and out the back of the house to the former buried tank. There was a problem with this pipe in the backyard that leaked and caused soil contamination. Unknown how deep the contamination is.

11/26/07 Spoke with Debbie Brown and requested her to send DEC a report on the status of this site.(SR)

1/8/08 - Raphael Ketani. Debbie Brown of GC Environmental called inquiring as to which city and state agencies needed to be notified before the investigation begins. She said the tank is 275 gals. I told her that since the building is already residential, then only DEC needed to be notified. She said that GC will start the investigation work tomorrow, but will discuss the work with Mr. Rahman, the DEC case manager.

02/22/08 Closure report from G.C. Environmental, Inc. Pictures of abandoned valve box, restored rear wall,, new stairwell, soil excavation at the rear stairwell, rear stained wall, were provided. G.C Environmental claimed that all contaminated soil originated from the leaking fill line was excavated. End point soil sample indicated low level of vocs/svocs. All fill, vent piping were removed, valve box was abandoned by filling it with concrete. Rear interior wall was cleaned and was painted with epoxy paint. Contaminated soil in the rear stairwell of the building was excavated to a depth of 9 feet below grade. A total of approx. 90 cubic feet of contaminated soil were excavated. In the rear stairwell of the building, fill line was buried under the center step landing between the basement wall and the external wall of the stairwell, fill line was leaking. The fill and vent pipes were hand excavated in the backyard to their end point, discovering an UST abandoned with dirt, oriented north-south. Investigation both visual and olfactory around the tank came back negative. Spill closed.(sr)

Caller Remarks:

CALLER REPORTS THAT CREW IS REMOVING GAS TANKS FROM ABANDONED GAS STATION: THEY ARE CUTTING OLD TANKS IN HALF. ODOR IS IN AIR FROM GASOLINE: RESIDUE FROM TANKS IS BEING SPILLED ON GROUND AREA: THERE WAS AN SMALL EXPLOSION FROM ONE OF THE TANKS: FIRE DEPT. IS IN ROUTE TO SITE

DEC Investigator Remarks:

07/19/06 Rahman-FDNY Engine 10(212.570.4210) responded to the site. I spoke with Lt. Jason Goldsmith of Engine 10, who indicated absence of odor, spill at the site.He informed me there were three tanks at the site and they were investigating the tanks condition. Apparently the tanks were dry.

Caller Remarks:

PIPES ARE STICKING UP OUT OF THE GROUNDS .THIS AN OLD GAS STATION. THERE IS A GAS ODOR SEEPING OUT DUE TO RAIN. UNKOWN IF THERE IS A SPILL. CLEAN UP IS UNKNOWN.

DEC Investigator Remarks:

05/18/06-Vought-Off hours duty responder. Vought called contact on PBS (Kenneth Fishel 212-477-3164) and no answer. Vought called caller who wishes to remain anonymous and as per her, developer bought parking lot and excavation of property has begun. FDNY and NYCDOB onsite previously in response to residential complaints. Vought received paperwork from caller that included Stipulation Agreement from DEC Rui Feng (see spill #0505263). Vought called Shary Laskowitz, attorney for the tenant (212-736-4500). Laskowitz does not have access as agreement current fight with owner and she is not in possession as tenant. Current owner is Atlantic Block and she has no contact information. Tenant is Jordan Parking who does not have access to site. Vought called Kenneth Fishel and he is no longer managing agent for building. DEC requires: 1)updating of PBS registration. Vought called CES Environmental Services (Francis Fonaca 732-500-7465). As per Francis Fronaca and DEP was onsite yesterday and USTs were abandoned in place, USTs discovered during excavation. PBS registration will be sent in once tanks are exposed and tank information can be found. Phone number for owner (Rocco or Jacko Basile 212-965-9300). Vought called Rocco and he agreed to access and said to call him back with any issues.

05/18/06-Vought-Site visit by Vought. Parking lift elevators present on site and also observed was approximate 50'x15' excavation. Slight gasoline odor in bottom of excavation (excavation approximately 3' deep). Piping observed in excavation but undeterminable if piping was from former UST system. No vents, former pump islands or remote fills were found. Entire lot repaved with asphalt. Soil in excavation composed of urban fill (brick, coal, coal ash). No odors were detected at street level. Vought called Rocco Basile and required that excavation be covered with plastic. Vought suggested to DEC Feng that Community Air Monitoring Plan be implemented during excavation to prevent further odor complaints. Vought called DeSarm and left message with results of site visit and to contact DEC Feng with further issues. Spill closed by Vought and referred to open spill #0505263.

Caller Remarks: NO REMARKS GIVEN FOR THIS SPILL

## DEC Investigator Remarks:

08.02.05 SR..Spoke with Rachel Ataman. They came across SVOC's while doing soil probes at that facilities. Will send DEC the report and propety owners info.

8/12/2005 CSL sent to:

Jack Lefkowitz  
Washington HJ, LLC  
1524 52nd Street  
Brooklyn, NY 11219

10.03.05 SR// SVOC's level are pretty high and the site is a historic gas station. I suggested Rachel Ataman to go for further delineation of the ground water and soil in respect to MTBE, Specifically, instalation of one bedrock monitoring well at least is necessary since the site is a historic gas station.

12/20/05-Sharif// Case was transferred from Rahman to Koon Tang for reassignment.

1/3/2005 - Feng - VOCs and SVOCs found in SP-5 are extremely high. DEC Rahman has requested the groundwater samples and monitoring well through the bedrock on 10/3/2005. SIR pending.

Contacted Yasemin Kacar (Hydro Tech Environmental) and she would check the status of the site and call back.

4/13/2006 - Feng - Daniell Dunn from IVI Diligent Service (914-694-9600, fax 914-694-8549) called and requested FOIL because she doesn't have any information on this spill. Received FOIL application and gave to Robert Leung. (RJF)

5/8/2006 - Feng - Call from Francis Fonaca, CES Environmental Services. (office: 732-257-2091, cell: 732-500-7465). CES will perform soil excavation and then collect soil samples. Groundwater samples might be collected via air rotary. Will submit the report after the job is done. (RJF)

5/10/2006 - Feng - Received Site Assessment report from Gary Dent, 1st Bank of Beverly Hills (818-223-8447).

5/11/2006 - Feng - Call from Francis Onega, soil excavation will start tomorrow, 5/12/2006, PID will be utilized and probably more than 10 soil samples will be taken. I told him that before any excavation, all the underground utilities must be marked out. Report will be submitted after the work is done. (RJF)

5/12/2006 - Feng - Call from Ms. Robynice (RP's lawyer) explaining that during the soil removal process, polices came to stop the excavation. She requested Stipulation Agreement.

5/15/2006 - Feng - Emailed a copy of STIP to Francis Onega (CES) as per their request. His technician will come to pick up tomorrow morning and deliver to the RP. (RJF)

5/16/2006 - Feng - Charles Onwudinjo came to pick up the STIP. (RJF)

5/16/2006 - Feng - Shary Laskowitz, attorney for the tenant (212-736-4500) saying that the tenant of the parking lot owns the hydraulic lifts. Both of the property owner and tenant are fighting in court. I explained we won't get involve in this and we might wait for them to settle this case. (RJF)

5/17/2006 - Feng - Refer to Attorney, John Urda and he spoke to Shary Laskowitz. The owner and the tenant are fighting in court right now. Remediation will be on hold until the final disposition from court (might take a couple weeks). (RJF)

05/18/06-Vought-See also spill #0601769 at same location.

5/18/2006 - Feng - Spoke to Francis Onega and require him to stop any further work onsite.

5/19/2006 - Feng - Residential complain about petroleum odor associated with the excavation. DEC Joe Sun called Francis Onega and Rocco Basile required: 1) Stop further excavation, 2) Cover the excavation and the stock pile soil with plastic sheet. 3) Submit Community Air Monitoring Plan immediately. 4) Register the USTs found during excavation with DEC. (RJF)

5/19/2006 - Feng - DEC Koon Tang, Joe Sun and Jun Feng Contacted Alyssa Ziegler of Assemblywoman Deborah Glick Office with updates of the site.

5/22/2006 - Feng - Meeting with Rocco Basile (property owner) and Francis Onega (his consultant). DEC required: 1) dispose the stockpiled soil ASAP. 2) submit workplan included Community Air Monitoring Plan (CAMP).

5/23/2006 - Feng - DEC Koon Tang, Joe Sun and Jun Feng Contacted Alyssa Ziegler of Assemblywoman Deborah Glick Office with updates of the site.

5/25/2006 - Feng - Workplan, dated 5/22/2006 submitted by CES. The entire property will be excavated down to 8'-10'. The USTs will be registered upon discovered. The excavation will be left opened and covered with 6 mil plastic sheet pending the soil samples analyticals. 10 soil endpoint samples will be taken for post-excavation. 4 Groundwater samples will be collected prior excavation.

Community Air Monitoring Plan. The CAMP will be implemented during any work onsite in accordance with the DOH guidance.

Discussed with DEC Joe Sun and Approved CAMP and workplan with some conditions. 1) DEC required complete groundwater delineation before any further excavation, submit site plan of sampling location before any drilling and a report will be submitted for review and approval. 2) After the completion of soil excavation, the excavation will be covered at all time when there is no construction. DEC also recommended drill for groundwater samples after the stockpiled disposed off site because currently the stockpiled soil occupied 1/3 of the property, the lifts occupied 1/3 of the property and the excavation the rest of 1/3. (RJF)

6/8/2006 - Feng - Sent letter of notice of violation and Stipulation Agreement with modified CAP to Rocco Basile. cc to CES. STIP due 6/21/2006. (RJF)

6/19/2006 - Feng - STIP executed by Lou Oliva. (RJF)

6/20/2006 - Feng - Meeting with Rocco Basile and Francis Onaga. Site excavation and stockpiled soil will be removed tomorrow. A fact sheet will be sent from DEC if anyone interested or concerned. Fact sheet copy to Francis Onaga. (RJF)

6/21/2006 - Feng - DEC Jun Feng and Joe Sun visited the site, 10:30am to 11:30am. A backhoe was there, and 6 trucks were loading the soil off site. DEC staff didn't smell any gasoline. Air monitoring conducted every half hour and during work. The PID didn't detect any VOCs at street level nor in the bottom of the excavation (3'-4' bg). The highest level of dust the particulates detector has been detected is 80 mcg/m3. Water is ready to suppress the dust onsite. DEC required daily written briefing about the work onsite to be submitted.

6/22/2006 - Feng - Daily Status Report from CES, dated 6/21/2006. Work hours from 7:30am to 3:30pm. Total of 480 tons (16 load) of contaminated soil was trucked off-site for disposal. The truck was properly covered before leaving the site. An abandoned UST fuel oil (275 gallon) was discovered at the north east corner of the site. The tank was cut open, cleaned and filled with sand upon excavation. The tank is staged onsite for disposal at a scrap metal yard. CAMP has implemented. No detectable or high readings were noted on VOCs or dust. Excavation and soil removal will be continued tomorrow. (RJF)

6/23/2006 - Feng - Daily Status Report from CES, dated 6/22/2006. Work hours from 7:00am to 2:30pm. Total 40 loads (1,000 tons) of contaminated soil was trucked offsite. Two 550-gallon USTs were discovered at the source area. The discovered tanks were encased in concrete. USTs will be removed on 6/23/2006. Again, CAMP implemented and no detectable VOCs, and low dust level detected. An official of the NYCDOB was onsite and had the excavation stopped in order to install shoring at the four corner of the excavation. No further excavation will be done until DOB allow to. (RJF)

10/13/2006 - Feng - Updates. Began October 2006, DEC was informed by the consultant that the NYCDOB's STOP ORDER was lifted and the construction will be resumed. On 10/4/2006, additional groundwater samples were collected from the former tanks area and the sampling result will be submitted in the next Status Report. Concrete slab is extended to the entire site, about 4" thick and it is 6' bg. No excavation will be further advanced. 10-foot

interval of endpoint samples will be taken. Endpoint samples will be collected from 6" to 12" below concrete slab. Further excavation decision will be made based on the soil samples results. (RJF)

Site Investigation/Closure Report, November 2006, submitted by CES Environmental Services. The site investigation including series of soil and groundwater sampling. The site was excavated down to the concrete/brick old foundation. 21 soil borings were advanced and soil samples were taken for SVOCs and VOCs analysis. Minor SVOCs exceedances observed in some borings. 4 groundwater samples taken. No VOCs, except 16 ppb MTBE in W-1. SVOCs exceedances detected in W-3 and W-4.

5/22/2007 - Feng - DEC staff J. Sun and J. Feng visited the site and met with the developer's project manager Mr. S. Cafiso and the construction superintendent Mr. Artie. The excavation was advanced down to 8'-10' bg. A structure engineer from Langang Environmental was onsite. Mr. Artie explained that a 10-mil vapor barrier was installed beneath the basement floor before 4 feet of concrete slab was poured. The concrete had mixed with Krytol Internal Membrane Waterproofing Admixture for Concrete. Mr. Artie also told us that they had resampled soil and groundwater. The foundation wall will be 14 inches thick. DEC required vapor barrier to be installed at the exterior foundation wall before pouring the foundation wall. Soil/gw sampling results, vapor barrier specification and design will be forward to DEC. (RJF)

11/26/2007 - Feng - A copy of the lab report, 10/4/2007, submitted by Basile Danali, LLC. No text report included. A map indicates the boring locations attached. Soil samples were collected at depth of 14'-18' bg. Only some minor SVOCs detected in EB-1. The others are below MDL. (RJF)

11/29/2007 - Feng - Discussed with Joe Sun. It is necessary to have more groundwater data in the vicinity of the former tank area due to the exceedances of SVOCs. Letter to Rocco Basile (Atlantic Walk, LLC) and requiring further delineation of the SVOCs contaminated former tank area and the documentation of vapor barrier/water proof layer installation for the new building. Work plan and the vapor barrier installation document to be submitted by 1/14/2008. (RJF)

4/18/2008 - Feng - Reviewed the whole package of analysis reports, previous reports sent by A-1 Testing Laboratories, Inc. Attached with black and white pictures taken 5/22/2007 installation of the membrane. (RJF)

5/5/2008 - Feng - Letter to Rocco Basile (Atlantic Walk LLC) requiring a soil boring to be installed at the sidewalk of Washington Street. Soil and groundwater samples to be taken. Report due 7/7/2008. (RJF)

5/8/2008 - Feng - Rocco Basile called. The project is taken over by the developer. He will forward the DEC's letter to the developer and let the developer know what needs to be done. (RJF)

6/4/2008 - Feng - Reviewed Limited Subsurface Investigation Report, dated 5/28/2008, prepared by JC Broderick & Associates, Inc. (JCB). On 5/21/2008, JCB advanced one soil boring at the sidewalk of Washington Street using GeoProbe. Soil boring depth 16 feet bg. Groundwater was encountered at 14 feet bg. 2 soil samples (at 10'-12', 12'-14') and 1 groundwater samples were collected. Analyticals did not show any exceedances, all below MDL.

Discussed with Joe Sun, spill could be closed. The onsite soil sampling were done and only show minor SVOCs exceedance detected in some borings. The onsite soil was excavated down to the old foundation/concrete slab and disposed offsite because of the site development. Groundwater was detected with SVOCs exceedances in the former tank area. The recent soil and groundwater samples which were collected in downgradient of the former tank area at the sidewalk of Washington Street sidewalk did not show exceedances, that means no migration off site. A vapor barrier membrane was installed for the new building. Spill closed.

6/9/2008 - NFA issued. (RJF)

ABOUT 10 GALS OF UNKNOWN TYPE OIL IN WATER IN MANHOLE CALLER IS WAITING FOR CLEANUP - WAITING FOR A TANKER - SAMPLES HAVE BEEN TAKEN -

---

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
E2MIS 120207

OCT. 01, 1998 09:25 HRS.

J. BYRNES #62353 OP. SUPV. UNDERGROUND SOUTH REPORTS ON 10/01/98 @ 09:00 HRS HE FOUND APPROX. 10 GALLONS OF AN UNKNOWN OIL MIXED WITH APPROX. 500 GALLONS OF WATER IN M45940 @ N/W/C THOMPSON ST & BROOME ST.

THE SPILL IS CONTAINED AND NO IMPACT TO WATERWAYS OR SEWERS.

A SAMPLE WAS TAKEN AND TAG# 10243 WAS INSTALLED.

THE SPILL WILL BE CLEANED UP BY FIELD CREWS ON LOCATION. NOW AWAITING A TANKER TRUCK FROM ASTORIA YARD.

NO AGENCY'S ON LOCATION AT THIS TIME.

THERE IS NO SUMP PUMP AT THIS LOCATION.

RECORDED BY T. RUSSO #45348 @ MCC #9 DESK.

10/01/98 10:00 HRS L. PRIMEGGIA #81031 C.I.G. NOTIFIED BY T. RUSSO.

If this is a Con Edison manhole it contains electrical cable and splices. Many manholes have a sealed sump in the floor which is used to allow runoff when pumping the structure. A hose is placed in this sump and water on the floor will flow into the sump allowing the floor to be cleaned. If cleaned prior to analysis of the fluid, the structure will be cleaned as >50 PPM and all liquid and waste will be manifested accordingly. The structure will be double washed with a degreaser, i.e. Slix. All cleaning material and PPE will also be treated as >50. If any sludge is found within a manhole it is treated as lead contaminated and manifested accordingly. The spill identification tag will remain secured to the structure until the analysis is completed and if <500 PPM the signage will be removed. If the analysis is >499 PPM, a grid will be prepared for wipe testing the area. Until the analysis of the wipes are proven to be <10ug/100cm<sup>2</sup> all additional waste produced from the structure will be treated as the original analysis.

If this spill occurred in a transformer vault containing a sump pump and there was a possible release, the drainpipe trap will be dismantled to determine if oil was released. Sludge found in a vault, through historical analysis, has been determined not to contain lead.

10/02/98 O.S. (UG) R. Velasquez # 27188 reports clean up complete in MH-45940 NWC Thompson St. & Broome St. on 10/01/98 @ 22:00 hrs.

Treated wastestream as >50 ppm PCB - Pending Lab analysis

Removed 200 gals. Oil/Water to > 50 tankers

Double washed & rinsed structure

Generated 3 drums solid waste - Taken to Chem Waste via Corporate Transportation

EPA ID# NYP004018115

Spill tag #10243 left in place - Pending Lab analysis

Crews: O.S. (UG) R. Velasquez # 27188, J. Byrnes # 62353

P. Mulholland # 18565, A. Smeragliuolo # 16106, W. Molloy # 15876

DEP AGENCY ON LOCATION @ 12:30 hrs with O.S. (UG) J. Byrnes #62353.

DEP Stanley Baldwin requested clean up completion date from J. Byrnes.

J. Byrnes stated to DEP that the clean up will be complete on 10/01/98 .

10/06/98 O.S. (UG) J. Byrnes # 62353 reports Spill Tag #10243

has been removed in MH45940 on 10/06/98 @ 08:30 hrs.

SA 98-10548 <1. ppm PCB - Received 10/05/98

Caller Remarks:

FOUND CONTAMINATED SOIL AT PARKING GARAGE

DEC Investigator Remarks:

07/20/07 I spoke with Eric Telemaque who called in the spill. The subject property is being used for two story parking garage, a diner and a paved parking lot. Two fill port and two vent pipe on the property indicate there were/are tanks at the property. Building is now being demolished as part of building a hotel there. Phase II investigation report will be sent to Jeff Vought.

Property Owner is  
 Brack Capital Services  
 885 3rd Avenue, 27th Floor  
 New York, NY 10022  
 Attn: Julie Requarth  
 Ph. (212) 308-7200  
 Fax (212) 308-1231  
 email: jrequarth@bcreusa.com

07/24/07-Hiralkumar Patel. spoke with Eric. he will send report by tomorrow.

08/27/07-Hiralkumar Patle. spoke with Eric. he just got feedback from owner regarding report and once he get approval, he will forward that report to the department.

08/28/07-Hiralkumar Patel. received call from Tarek Khouri (212-479-5450) from Langan. they were hired by property owner for further work. Mr. Khouri mentioned that previous company also did groundwater testing and Mr. Khouri will send Phase II report with groundwater data by Aug. 31st, 2007.

09/05/07-Hiralkumar Patel. received report from Mr. Khouri. abstract:

- limited Phase II was done by Emteque corporation
- Emteque collected and analyzed eight soil samples, seven samples to a depth of about 8 ft and one sample to a depth of about 12 ft bg
- historical fill material was observed in each boring to a depth of approx. 3-4 ft. fine sands and gravel were observed in soil below 4 ft
- subject property consists of a two story brick building and associated sidewalk territory, and exterior paved parking area and a small dining establishment.
- two improved structures currently on the site. one is used for commercial parking and other is a dining establishment
- samples were collected from the 0 to 8 ft column in borings SB1 to SB7 and from 0 to 12 ft at SB8.
- for the composite samples, the soil from the whole column was mixed in a plastic container before sample selection to identify representative conditions
- found SVOC contamination in all samples
- Hydrotech did groundwater investigation
- three monitoring wells are located within a 1-story building
- depth of water ranges from 10.36 ft in MW-2 to 11.38 ft in MW-1.
- minor VOC contamination found in well MW-1
- SVOC contamination found in groundwater sample from well MW-3 (maximum value: 2-Methylnaphthalene 530 ppb)

recommendations:

- remediation will consist of removal of all impacted soil to about 1 ft above the groundwater table
- dewatering will be conducted for construction purposes and to remove the impacted groundwater to the extent practicable
- groundwater will then either be transported for offsite disposal or treated prior to discharge to sewer system
- will commence remediation activities in late Sep. 2007
- site specific health and safety plan will be submitted to the department
- at end, endpoint samples and groundwater samples will be collected

left message for Eric at Emteque and for Mr. Khouri at Langan to submit phase I report and boring logs for sample taken during phase II.

09/07/07-Hiralkumar Patel. received message from Mr. Khouri. he has sent Phase I report. he spoke with Emteque regarding boring logs, but they never prepared boring logs.

received phase I report. abstract:

- alternate addresses for the site: 23-25 Grand Street, 80-88 6th Ave, 27-31 Grand Street, 11-15 Thompson Street, 74-76 6th Ave
  - site consist of a 1-story car diner (restaurant) with a partial level below grade, a 2-story parking garage with one level below grade and an exterior paved area
  - based upon the sensitivity of the real estate transaction, the basement area of the dinning car could not be inspected
- <-----
- facility is heated with gas
  - 2-story structure has parking on the ground floor including the use of hydraulic lifts and parking on second floor
  - basement level of parking is no longer in use
  - parking business has been in existence since 1998-99

- prior use includes a taxi repair shop <-----
- hydraulic lifts were noted closed-in-place and a floor trench system was noted <-----
- two fuel oil tank vent lines were noted on the east side of the structure, however, USTs could not be found <-----
- concrete encased hydraulic oil tank is assumed to exist inside the structure and served the hydraulic car lift <-----
- site elevation is approx. 8 ft above mean sea level
- groundwater beneath the site is expected to be encountered at 8 ft bg and is anticipated to flow west-southwest toward the Hudson river

spoke with Mr. Khouri. asked him for following:

- excavation down to groundwater, instead of excavating to 1 ft above water table, to cover any contaminated spot
- if there is any contamination below water table, asked to continue excavation until get clean soil or no further excavation possible
- vapor barrier
- inspection of basement of dining car (as not done during phase I)
- scaled site map (as map in phase II is not scaled and clear) including locations of all borings/wells, existing/former tanks (fuel oil/hydraulic fluid), hydraulic lifts (as found during phase I), vent pipe (as found during phase I), trench (as found during phase I), remote fill port etc.

asked Mr. Khouri to submit revised RAP including all above, with health and safety plan.

09/11/07-Hiralkumar Patel. sent letter to Ms. Requarth requiring sampling of dewatering discharge, endpoint samples, vapor barrier and SSDS installation and soil/groundwater delineation at remote fill ports. letter emailed to Ms. Requarth and Mr. Khouri.

09/13/07-Hiralkumar Patel. visited site. nobody at site during visit. found some concrete patches (two patches in front of two story garage along 6th Ave, one asphalt patch in area of car dining along Grand street) in different colors than other sidewalk area (could be location of fill boxes). found two vent pipes and two fill ports on eastern wall of two story parking garage.

09/14/07-Hiralkumar Patel. spoke with Mr. Khouri at Langan. asked him to investigate all patches on sidewalk, that could be fill boxes. also asked Mr. Khouri to seal two fill boxes on eastern wall of two story garage to prevent any misdelivery and asked to investigate inside building for any tank (that could be done during construction activities).

09/28/07-Hiralkumar Patel. received RAP from Mr. Khouri. abstract:

- remediation will consist of mass removal of subsurface soil within the site boundary to about 6 inches to 1 ft above water table
- if highly impacted materials are observed at the bottom of the excavation, will attempt to delineate both vertically and horizontally the extent of the impacted material and excavate to a few ft below the water table
- dewatering will be conducted for construction purposes
- if groundwater is to be discharged to sewer, a treatment system will be designed for treatment of water prior to discharge to sewer system
- endpoint soil and groundwater samples will be collected
- vapor barrier will be installed

- if any endpoint samples found to be impacted, SSDS will be designed and installed
- sub-slab will not be poured until endpoint sample results have been reviewed and accepted by NYSDEC <-----
- all fill ports, storage tanks and pipings will be removed

12/24/07-Hiralkumar Patel. received email from Ms. Wren. they found one UST and will remove it.

Abigail Wren  
Langan Engineering  
PH. (212) 479-5562 (O)  
(347) 454-4529 (C)  
email: awren@Langan.com

03/25/08-Hiralkumar Patel. sent email to Mr. Wren to submit report. received email from Mr. Wren. they will finish excavation in next two days and will collect endpoint samples. will submit report soon.

04/03/08-Hiralkumar Patel. received email from Mr. Wren. they collected endpoint soil and groundwater samples recently. waiting for analyticals. will submit report soon.

04/15/08-Hiralkumar Patel. received report from Mr. Khouri. abstract:

- removed three 275 gal #2 oil USTs and associated pipings
- removed 4100 tons of soil from depths withing 2.5 to 3 ft above the groundwater table
- dewatering, including groundwater treatment using an oil/water separator and discharge to NYC DEP combined sewer
- conducted in-situ waste characterization sampling to classify soil for remedial excavation and off-site disposal; Hydrotech advanced 12 borings to within 6 inches to 1 foot of groundwater table <-----
- fill composed of brick fragments, gravel, sand and silt was observed at depths of 4 ft to 8 ft in the borings; staining, odors or other indications of petroleum impacts were not encountered
- total 16 bottom and 12 sidewall samples were collected from excavation area from depths of 8 to 11 ft bgs
- three temporary wells were installed for construction dewatering purposes
- vapor barrier and active SSDS will be installed
- no contamination found in groundwater samples
- some SVOC compounds found above limit below 8 ft depth and found almost in all samples

04/23/08-Hiralkumar Patel. as SVOC contamination found at depth below 8 ft bg and new building will have vapor barrier and SSDS, based on submitted report, case closed.

sent NFA to Ms. Requarth. letter emailed to Ms. Requarth and Mr. Khouri.

Caller Remarks:

driver found spill..they are cleaning it up at this tiem..they have a mechanic on the way to determine cause and responsibility.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"

4/15/2002 - Sangesland spoke to property manager "Adam" at Margules Properties (212-929-7361). He was working with Ferrantino Fuel to get the spill cleaned up.

4/19/2002 - Mr Tieger (tenant in Apt. #9) called in to say the spill was all cleaned up and Ferrantino did a nice job.

Spill Closed

Caller Remarks:

NO TO 5 QUESTIONS. CLEANUP PENDING CREW AVAILABILITY. CON ED REF# 158181

DEC Investigator Remarks:

158181. Henry Anderson #14143, Cable Dept. reported at 11:16 hrs. that he found at 11:10 hrs. approx. 1 gallon of unknown fluid on top of approx. 49 gallons of water in manhole M45918 located at the north west corner of Grand Street & Thompson Street. The Cable Dept. was at this location removing an Open Main working under Account #42225 when the spill was discovered. The unknown fluid does not appear to be a petroleum-based product. It was found on top of the water in a concrete structure. There are primary and secondary cables in the structure. There was no fire or smoke involved and no sewer or waterway was affected. There were no injuries related to the spill and no weather conditions contributed to the hazards of the spill. There was no private property affected. The source and cause of the spill is unknown. Environmental tag #38846 was installed. There was standing water but no visual water movement. There was no sewer connection, no substantial cracks and a concrete sump could not be verified due to the amount of fluid in the hole. Two liquid samples for PCB and Oil ID were taken by Ed Reilly #12756 of the Cable Dept. on a priority "E" basis from the spill. Chain of Custody #DD13048 was issued. No initial cleanup action taken. Cleanup is pending lab results. Parking Access Info: Parking Anytime - manhole on corner. Logger: R. Pellegrino #38620. CIG Larry Costa #13880 notified at 12:35 hrs. R. Pellegrino #38620  
 Update: Lab Results 04/20/05 @ 21:12 hrs

## Caller Remarks:

while doing work on a cable - the oil spilled out of the end of the cable - sample taken clean up pending lab results

con ed #135242

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

**The following DEC Investigator Remarks were available prior to 1/1/2002:**

E2MIS Notes: 1/26/01: 1 oz of cable oil had leaked from plastic bag placed around cable ends on top of concrete floor. No smoke or fire. No standing water or visual movement. A sewer condition could not be verified. No sewer, waterway or private property affected. No standing water in manhole no visula movement. Sewer connection could not be verified. There is a concrete sump but no sump pump. No visible substantial cracks. No evironmental impact.

Final cleanup pending lab analysis results. Manhole is near a fire hydrant.

1-26-01 19:14hrs.

Environmental Deak checked conduit plate and verified sewer connection.

LSN 01-00846

Aroclor none; PCB 1ppm

Analysis indicated the presence of a substance similar to a degraded lubricating oil.

Cleanup type: <50

Double washed walls and floor with slix.

Spill source: Unsealed primary cbale

Inv. Equip: Primary Cable

Leak Abatement: Sealed all primary cable ends.

Caller Remarks:

FOUND A PETRO ODOR WHILE DIGGING

DEC Investigator Remarks:

08/04/08 I spoke with Mark Atamian of Env.Liability Management @(212)962-4301 x 302.Mark told me the site is a construction site and sub slab was broken and petroleum odor emanating out of the hole.I told them to cover the hole to prevent the odor from spreading.Sample will be taken and more investigation,if needed will have to performed.Site visit may be done soon.(sr)

08/14/08 Inspected the site this morning along with Marc Atamian, of ELM.The site is under construction.The excavated area from where petroleum odor was emanating is still open, there was no sign of petroleum contamination(visual/olfactory) in the hole. End point sample analytical shows residual contamination within acceptable range(no VOC).No sheen observed on water in the hole.Water proofing membrane will be installed below the slab, as per ELM. Spill can be closed.(sr)

## Caller Remarks:

CON ED SPILL 120434 - FOUND PETRO MIXED WITH OIL - IT IS BEING TESTED NOW.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
E2MIS 120434

If this is a Con Edison manhole it contains electrical cable and splices. Many manholes have a sealed sump in the floor which is used to allow runoff when pumping the structure. A hose is place in this sump and water on the floor will flow into the sump allowing the floor to be cleaned. If cleaned prior to analysis of the fluid, the structure will be cleaned as >50 PPM and all liquid and waste will be manifested accordingly. The structure will be double washed with a degreaser, i.e. Slix. All cleaning material and PPE will also be treated as >50. If any sludge is found within a manhole it is treated as lead contaminated and manifested accordingly. The spill identification tag will remain secured to the structure until the analysis is completed and if <500 PPM the signage will be removed. If the analysis is >499 PPM, a grid will be prepared for wipe testing the area. Until the analysis of the wipes are proven to be <10ugs/100cme2 all additional waste produced from the structure will be treated as the original analysis.

If this spill occurred in a transformer vault containing a sump pump and there was a possible release, the drainpipe trap will be dismantled to determine if oil was

released. Sludge found in a vault, through historical analysis, has been determined not to contain lead.

10/09/1998 1925 HRS

GRUBE 11504 OF F.O.D. REPORTS:

FOUND APPROX. 5 GALLONS UNKNOWN OIL MIXED WITH APPROX 500 GALLONS OF WATER IN M49632, F/O 338-42 WEST BROADWAY. SAID SPILL WAS CONTAINED, NO ENTRY TO SEWER OR WATERWAY, NO CONNECTION TO SEWER, AND IT WAS NOT VERIFIED IF THERE WERE CRACKS OR A SUMP IN THE STRUCTURE. A SAMPLE WAS TAKEN AND TAG #17221 WAS PLACED. INCIDENT REPORTED TO J. COSTA #9 DESK. CIG OPERATOR ROMERO NOTIFIED @1941 HRS.

LOGGER JPH 74031

10/12/98 O.S. E. Hulser #39723 reports clean up complete in MH49632

338-42 West Broadway on 10/10/98 @ 21:30 hrs.

Treated Wastestream >50 ppm PCB

Removed 750 gals. Oil/Water to > 50 Tanker

Generated 5 drums solid waste - Taken to Chem Waste via Corporate

Transportation.

Caller Remarks:

ON A VACANT SITE THEY FOUND SOME CONTAMINATION IN THE SOIL THAT MAY BE RELATED TO FUEL OIL - THE MATERIAL WILL BE EXCAVATED - SITE OWNERSHIP CHANGED AND THE NEW OWNER OF THE SITE DECIDED TO REPORT THE SPILL (THAT IS WHAT CAUSED THE DELAY IN REPORTING THE SPILL) - OWNER IS 410 WEST LLC C/O ALEXICO MANAGEMENT GROUP INC. 150 E 58TH ST NEW YORK, NY 10155 - STEWART MARTONE (212)371-8188

---

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "DEMEO"  
DDO Sawyer sent contaminated soil letter 9/22/03.

07/25/2005 1420 hrs: Sent e-mail to site contact, Stuart Marton, Alexico Management Group (212-371-8188, e-mail stuartmarton@alexicogroup.com) requesting information on spill. M.Brand NYSDEC DER Albany.

07/26/2005 1744 hrs: Telephone voicemail message from Joel Landes, Langan Engineering, about site. Langan had submitted closure report to Region 2 (Sawyer) in 2004, he will send in another copy to me for review. M.Brand NYSDEC DER Albany.

07/27/2005 1500 hrs: Telephone conversation with Joel Landes, Langan Engineering (212-479-5404). Site was remediated during construction of new building, Landes will send spill closure report. M.Brand NYSDEC DER Albany.

August 2005: Information submitted by Langan Engineering:

Soil and Groundwater Management Plan, dated October 3, 2003, submitted by Langan to NYSDEC Region 2, proposing soil and groundwater testing and subsequent remedial activities to be performed during site construction work;

Spill Closure Report, NYSDEC Spill #0306591, 165 Charles Street, New York, New York, dated October 2004 prepared by Langan, documenting the removal of petroleum-contaminated soil and water during construction activities (the report also includes Phase I and II Environmental Site Assessment Reports from 2002 and 2003); and,

Letter, dated August 2, 2006, from Langan re-submitting the closure plan, documenting the completion of construction and remedial activities at the site, and requesting closure of the spill.

The information submitted indicates the following activities relating to spill cleanup were conducted at the site from December 2003 to April 2004:

- excavation of soils from the entire site footprint to a depth of 14 to 21 feet below grade to accommodate the construction of a 16-story building and its basement;
- off-site disposal of approximately 2,800 tons of petroleum-contaminated soils;
- collection and disposal of groundwater generated from dewatering operations;
- post-excavation sampling of the excavation bottom to determine the extent of cleanup; and,
- installation of a high density polyethylene(HDPE) water and vapor barrier beneath the building foundation to prevent potential vapor intrusion.

While some residual contamination was noted in the endpoint samples from the excavation, the concentrations are considered to be relatively low and the area is now covered by site buildings and the HDPE barrier. M.Brand NYSDEC DER Albany.

08/17/2006: Spill closed based on review of information submitted by Langan Engineering. No further action letter sent (also faxed to Joel Landes at Langan). M.Brand NYSDEC DER Albany.

AROCOLOR - 1254 PCB - 3.8 UG/L 1

AROCOLOR - 1260 PCB - <1 UG/L 1

WAS UNABLE TO PUT ALL THIS INFO. IN THE EVENT MATERIAL HISTORY SCREEN. IT WOULD NOT TAKE IT WHEN I WENT TO SAVE IT. SO I JUST PUT THE FIRST ONE.

O.S. (UG ) J. Byrnes reports clean up complete in MH 46247 W/BL Canal St. & 6 Ave on 11/24/98 @ 11:00 hrs.

<1 ppm PCB. Used flush truck to clean & rinse structure

Removed 30,600 gals. water to <50 tankers

Generated 1 drum Oil soaked Asbestos (<25 linear feet)

Generated 11 drums PPE. Spill tag #18123 left in place due to water leak in structure-pending revault to seal. Hand scrubbed walls, floor and cable in this structure.

Caller Remarks:

1 GAL OIL ON 200 GALS WATER CONTAINED IN MANHOLE. CON ED REPORTING DUE TO FACT THEY COULD NOT CLEAN UP WITHIN 24 HOUR TURNAROUND.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"  
CON ED E2MIS REPORT 7-10-01

1gal. of unknown oil found on top of 200gals. of water in MH46253. No sewr or waterway affected, no fire in structure. Sump could not be verified. Source/cause of spill unknown. 2 samples taken one for oil ID and one for PCB.

Arrangements have been made to have Mh cleaned @2300hrs. Over 50 tanker Flush truck ordered for the clenaup. The cleanup was set up for the midnight shift due to the location of the manhole and traffic conditions.

LSN 01-07197-001

Aroclor 1242 <1ppm

Aroclor 1254 <1ppm

Aroclor 1248 <1ppm

Aroclor 1260 <1ppm

2027hrs.

Insufficient amount of sample extracted to perform oil identification.

7-11-01 1051hrs.

Cleanup will not be completed by 13:06hrs. the third tanker arrived at approx. 10:30hrs. and they are still pumping out the manhole and will not make the deadline for the 24hr. cleanup. The incident has now been declassified from a 24hr. spill to a "Spill-Unknown Oil" as of 10:55hrs.

1425hrs.

Cleanup completed. Double washed with slix and removed one barrell of PPE, 7600gal. of water/oil mix.

**Caller Remarks:**

3 gal. on 500 gal of water...ref #136547. samples taken clean up pending.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"  
CON ED E2MIS REPORT 4-19-01

Approx. 3gals. of unkown oil on approx. 500gal. water. 2 liquid samples and 2 wipe samples taken.

Conduit plate shows no drain 10-H-4

No oil was recovered from the sample of water, no oil ID is possible. Analysis of the sample from the absorbing pad indicates the presence of an oil similar to a lubricating oil- grease.

4-20-01 19:05hrs.

Cleanup of this MH began with an over 50 tanker at 05:50hrs. 4-20-01. First tanker remoed approx. 3,700gals. of water. Second tanker requested. Lab results came back <50ppm. Second tanker will be an under 50 tanker. UG Sup. reported that second tanker removed approx. 5,000gals. of water.

Water via Grab sample

Total PCB = <1.0ppm

Solid vis Grab sample

Total PCB= 12.9ppm

Solid amount 1 barrel

Vehicle type: supply truck

Liquid amount: 8400gals.

Vehicle type: tanker.

## Caller Remarks:

during excavation soil contamination was discovered - unk where it is from - or what it is

soil will be excavated

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "TIPPLE"  
CONTAMINATED SOILS FOUND DURING EXCAVATION

TANKS WERE FOUND DURING EXCAVATION, THEY WERE REGISTERED, PUMPED CLEAN AND REMOVED BY FENLEY AND NICHOL, END PIONT SAMPLES WERE TAKEN AND TESTED

1/10/01 ESPL ENVIRONMENTAL RAY KAHN IS WORKING ON THE PROJECT.

A FULL ANALYSIS WAS DONE ON THE EXCAVATED SOIL FOR DISPOSAL AT CLEAN EARTH IN PHIALDELPHIA PA. WHERE IT WAS DEEMED NON-HAZARDOUS.

A REPORT IS BEING PREPAIRED FOR SUBMITTAL

5/29/03 TIPPLE CALLED RAY KAHN REQUESTING SUBMITTAL

12/16/04 tippie spoke with Ray Kahn, he will send report.

12/31/04 Tipple reviewed documentation, NFA necessary

Caller Remarks:

10 OUNCES ON 100 GALLONS OF WATER. CON ED# 139132.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"

E2MIS 139132

@04:32 hrs R.Canneer #19887 m/s found 10 oz of unknown oil and 100 gal of water in m46243 while inspection for telgy, and reported to W.Lee #33243 mcc at 04:39 hrs. no fire, no private property affected, no waterway/sewer affected, standing water, no sump pump running, no substantial cracks. cause of spill unknown, no sewer connection, no visual water movement. took two samples one for PCB and one for oil ID.

logger: W.Lee #33243

call cig: @05:10 hrs J.Fox 07887

Update: 08/27/01

Due to traffic conditions clean up crews will not have access to this location ( 2nd lane of traffic) this clean up is declassified. And will be started at midnight tonight

Analysis indicates the presence of a substance similar to a lubricating oil.

Lab Sequence #01-08563-001

Date Approved: 8/27/01 @ 10:53 hrs.

Date Received & Sampled: 8/27/01

PCB Analysis:

Aroclor PCB (in ppm)

1242 < 1.0

1254 33.9

1248 0.0

1260 < 1.0

Total PCB = 34 ppm

Update 08/29/01

As of 05:30 clean up comp. As per M.Baratta #19813 U.G Supv.

He reports MH46243 was power washed twice and used slix.

Also reports tanker took on approx. 750 gallons waste water and oil And also states that two drums of ppe.& debris filled.

Listing of clean up crew is posted in "EVENT INVOLVED PERSON" site.

Caller Remarks:

UNSURE CAUSE WAITED TO FILE TIL TEST RESULTS WERE DONE: CLEAN UP WILL BE STARTING, NO TO 5 QUESTIONS:

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "KOLLEENY"

5/11/04: spoke with Glenn Newell, Con Ed Construction Management. Con Ed was excavating for new electric ducts in front of police station at above location - noted strong gasoline odor in soil. No staining seen. Lab results came back 11,200 ppm TPH for

gasoline. There is a gas tank at the police station. Referred to Kolleeny (DDC monitor) for follow up. (JHO)

Con Ed e2mis report # 153304:

05/11/04 09:27 R. Harris #20059 of const. mgmt. notified the control center that in a excavation f/o 102 Charles St, that due to a strong odor of gasoline in the excavation, the chem lab was called and a sample was taken. For the purposes of this report, we are using 1 gallon of gasoline for the amount of spill since it was never determined. The results of the sample, which was posted today (5/11/04) show 11,200 PPM of gasoline in the soil. The excavation is approx. 30x2 ft. There are gasoline pumps across the street. The excavation is plated and barricaded. The source and cause of the spill is unknown.

This is a 3rd party spill. There was no initial cleanup taken.

This spill was discovered in an excavation in the street behind the 6th police precinct (at the Charles Street entrance to parking lot). URS is operating an SVE system to address soil contamination at the site; the system will be modified to target this area, to the extent feasible. - J. Kolleeny 3/22/05.

See open spill no. 9212918, under which remediation of this site pursuant to DDC consent order is being tracked. - JK 6/15/05

6/15/05: URS installed new vapor extraction well in sidewalk to address fill port area and try to address this area of soil contamination Con Ed encountered in the street. They resumed operating SVE system using this new well in January 2005. This spill is being closed to consolidate with open spill 9212918, under which site remediation pursuant to DDC consent order is being tracked. - JK

Caller Remarks:

WHEN REMOVED TANK AND CONCRETE OIL CONTAMINATION FOUND ON SOIL; NOT YET CLEANED;

DEC Investigator Remarks:

03/08/07-Hiralkumar Patel. left message for Maggi Douglas (646-388-9530) at AKRF (Andrew is on vacation till 03/21).

03/12/07-Hiralkumar Patel. received message from Mircus Simons (646-388-9527) from AKRF. spoke with Mr. Simons. Mr. Simons is handling this in Mr. Rudko's absence. they found contaminated soil after removing tank from site, removed some contamination, but as per Mr. Simons, there is no possibilities to remove all contamination as it is deeper than building foundation. asked Mr. Simons to send scaled site plan with sampling locations and sample analyticals. also asked him to send property owner's contact name and number. Mr. Simons will email these informations.

03/19/07-Hiralkumar Patel. received email from Mr. Simons (MSimons@akrf.com) containing Phase II report, copy of letter from Brookside environment and photographs after tank removal. abstract:

- planned developement of site involves a conversion of former factory into a residential building
- phase-II done in Dec. 2005
- 1000 gal tank enclosed in concrete vault was located in the southwestern portion of basement
- groundwater mostly likely flows in a westerly direction towards the Hudson river
- seven soil borings advanced to groundwater, which was encountered at a depth of approx. 15 ft below street grade, or about five ft below basement floor
- soil sample was not collected at SB-7
- four groundwater sample collected at four soil borings (SB-2, SB-3, SB-5 and SB-7)
- elevated PID readings were recorded in soil samples collected from SB-1, SB-2 and SB-3 at conc. ranging from 35 to 130 ppm
- sheen and petroleum like odors were observed in soil collected from SB-1, SB-2 and SB-3 at depths ranging from 1 to 8 ft bg
- trace level of petroleum related compounds were detected in the groundwater sample from SB-2, next to UST.

- found SVOC contamination in two samples (SB-2 and SB-6)

|                      | SB-2     | SB-6      | limit  |
|----------------------|----------|-----------|--------|
|                      | (2-4 ft) | (9-10 ft) |        |
| 2-Methylnaphthalene  | 52,000   |           | 36,400 |
| Chrysene             | 1,700    | 2,400     | 400    |
| Anthracene           |          | 2,400     | 224    |
| Benzo(a)pyrene       |          | 1,500     | 61     |
| Benzo(b)fluoranthene |          | 2,200     | 1,100  |

- found mercury in sample SB-1 (6-8 ft): 0.386 ppm, SB-6 (9-10 ft): 0.297 ppm

Mr. Simons has also sent copy of letter from Brookside environmental. Brookside has removed 2500 gal tank from site.

spoke with Mr. Simons. he mentioned that when they did phase-II in Dec. 05, tank was at location. and as tank was enclosed in concrete vault, they were not sure about size of tank and reported a 1000 gal tank, but it was actually 2500 gal tank. Mr. Simons also mentioned that after removing tank, Brookside found contaminated soil under tank location, but could not remove everything considering building structure. he is not sure any endpoint samples taken before backfilling excavation. photographs taken after tank removal shows stains on wall and floor.

Mr. Simons doesn't know why AKRF didn't reported this contamination back in Dec. 05 when they originally found during phase-II work. he will ask Mr. Rudko (646-388-9526, ARudko@akrf.com) to call.

left message for Brian Gaudreault (516-377-6300) at Brookside environmental.

spoke with Grant Kletter, property owner. he doesn't know about tank registration or soil testing after tank removal.

25 Wooster Street

no PBS record found.

03/21/07-Hiralkumar Patel. sent letter to Mr. Kletter requiring tank registration, soil/groundwater delineation, soil endpoint samples and vapor barrier installation. letter emailed to Mr. Kletter and Mr. Rudko.

03/22/07-Hiralkumar Patel. received message from Mr. Rudko. spoke with Mr. Rudko. tank was located in basement and was sitting on soil (not concrete) inside concrete vault along foundation wall between two properties. property on other side of wall is also under development. as per Mr. Rudko, soil under tank location is contaminated. asked Mr. Rudko to take some soil/groundwater samples in that property also to confirm any contamination and soil/groundwater sample on downgradient side of tank location (need to find site specific groundwater flow direction). asked Mr. Rudko to submit work plan with site plan including sampling locations.

04/03/07-Hiralkumar Patel. left message for Mr. Rudko to submit work plan for further delineation.

05/07/07-Hiralkumar Patel. spoke with Mr. Kletter. he will contact Mr. Rudko for updates.

06/01/07-Hiralkumar Patel. received call from Brian Dortch from AKRF. explained him that before any remediation approval, the department requires complete soil and groundwater delineation and based on that investigation, submission of remedial action plan. Brian will submit report.

06/21/07-Hiralkumar Patel. received call from Ms. Cam from Langan engineering. she is working at site at 311 W Broadway. site is under construction and during construction project, while digging northern area of site, they found petroleum contaminated soil. currently they have excavated about 9-10 ft bg and Ms. Cam mentioned that they found free product on groundwater, which is 2 more ft below excavation bottom (total 12 ft bg). the northern portion of construction site is along subject site at 325 W Broadway (which has contamination from leaking tank which has been removed).

Ms. Cam mentioned that they have finished foundation work in western part of their site. during excavation they found four 550 gal USTs on-site which used to be a gasoline tanks. these tanks were about 50 ft south of northern wall, where found contamination. Ms. Cam mentioned that construction site is CEQR (City Environmental Quality Review) designated and city DEP is regulating site. they did phase II investigation and found no contamination at that time. city DEP has approved phase II, RAP and health and safety plan. as per Ms. Cam, no oil stain or contamination found around gasoline tank location. tanks were enclosed in concrete vault. area of gasoline tank is still open. tanks were filled with water to the top, during removal and did PID survey below tank pad and found no high PID reading.

Ms. Cam mentioned that they are suspecting building at 325 w broadway as source site. asked Ms. Cam to provide data that shows contamination hasn't generated at their own site.

Langan engineering is planning full soil and groundwater delineation on-site. asked Ms. Cam to take one soil and one groundwater sample, in addition to samples requires for delineation, for fingerprint analysis to identify product in ground. also asked Ms. Cam to keep gasoline tank area open, as if fingerprint analysis finds gasoline in groundwater then the department requires soil/groundwater investigation at gasoline tank location.

asked Ms. Cam to submit copy of all reports available for construction site, which they have submitted to city DEP.

Ilkay Cam  
Langan Engineering

property owner for 311 W Broadway:  
United American Land  
contact: Albert Laboz  
Ph. (212) 431-7500

discussed with DEC Austin. he asked to open new spill case at construction site (311 W Broadway). new spill #: 0750445.

left message for Mr. Rudko requiring updates on soil/groundwater investigation.

06/22/07-Hiralkumar Patel. received message from Brian Dortch (646-388-9538) from AKRF. spoke with Brian. they took some samples from construction site (311 W Broadway site) and waiting for analytical results.

06/29/07-Hiralkumar Patel. spoke with Brian. he got analytical results and will email analytical data and rough site map.

07/24/07-Hiralkumar Patel. received Phase II report from AKRF. abstract:

- collected four soil samples from construction site at 311 W. Broadway at depth of 13 ft below sidewalk grade (site has been excavated to 10 ft below sidewalk grade)
- four borings were advanced inside subject building to groundwater, which was encountered at a depth of approx. 16 ft below street grade or about six ft below basement grade
- no contamination found in any (eight) soil samples or (four) groundwater samples
- recommends in-situ remediation of the fuel oil impacted soil beneath the site by injection of chemical oxidizing reagent as minor oil contamination is close to building foundation wall

from available reports, found that only contamination was at previous boring location SB-2 at depth 2-4 ft which is contained in soil and no contamination found in groundwater. based on available reports, case closed.

NFA sent to Mr. Kletter. letter emailed to Mr. Kletter and Mr. Rudko.

## Caller Remarks:

found contaminated soil at construction site.

## DEC Investigator Remarks:

06/21/07-Hiralkumar Patel. received call from Ms. Cam from Langan engineering. she is working at site at 311 W Broadway. site is under construction and during construction project, while digging northern area of site, they found petroleum contaminated soil. currently they have excavated about 9-10 ft bg and Ms. Cam mentioned that they found free product on groundwater, which is 2 more ft below excavation bottom (total 12 ft bg). the northern portion of construction site is along subject site at 325 W Broadway (which has contamination from leaking tank which has been removed).

Ms. Cam mentioned that they have finished foundation work in western part of their site. during excavation they found four 550 gal USTs on-site which used to be a gasoline tanks. these tanks were about 50 ft south of northern wall, where found contamination. Ms. Cam mentioned that construction site is CEQR (City Environmental Quality Review) designated and city DEP is regulating site. they did phase II investigation and found no contamination at that time. city DEP has approved phase II, RAP and health and safety plan. as per Ms. Cam, no oil stain or contamination found around gasoline tank location. tanks were enclosed in concrete vault. area of gasoline tank is still open. tanks were filled with water to the top, during removal and did PID survey below tank pad and found no high PID reading.

Ms. Cam mentioned that they are suspecting building at 325 w broadway as source site (spill #: 0613123). asked Ms. Cam to provide data that shows contamination hasn't generated at their own site.

Langan engineering is planning full soil and groundwater delineation on-site. asked Ms. Cam to take one soil and one groundwater sample, in addition to samples requires for delineation, for fingerprint analysis to identify product in ground. also asked Ms. Cam to keep gasoline tank area open, as if fingerprint analysis finds gasoline in groundwater then the department requires soil/groundwater investigation at gasoline tank location.

asked Ms. Cam to submit copy of all reports available fot construction site, which they have submitted to city DEP.

Ilkay Cam  
Langan Engineering  
Ph. (212) 479-5410  
email: icam@langan.com

property owner for 311 W Broadway:

Robert Reich  
311 W Broadway LLC.  
430 W Broadway, 3rd Floor  
New York, NY 10012  
Ph. (718) 796-4386  
Fax (212) 274-0500

spoke with Mr. Abbasi at Mr. Reich's office. he is controller working with Mr. Reich.

Shoaib Abbasi, controller  
email: shoaib@unitedaland.com

06/25/07-Hiralkumar Patel. visited site. met Smita from Langan Engineering. observed contaminated soil and sheen on water in excavation pit. Langan has took some soil and water sample for fingerprint analysis. asked Smita to do complete delineation including site specific groundwater direction. also asked not to do any concrete work in area where site had gasoline tanks until they had fingerprint analysis result. gasoline tanks were found more than 70 ft away from this contaminated zone and as per construction supervisor, Robert they didn't had any contaminated soil/groundwater in tanks area.

06/26/07-Hiralkumar Patel. received call from Ms. Cam. she mentiond that they have one test pit in corner, about 60 ft away from contaminated zone and they are dewatering area from this test pit. Ms. Cam asked if they can continue dewatering it. asked Ms. Cam to continue monitor water in sump for any product or sheen. if no product or sheen observed then only they can dewater it into city sewer, but if sheen/product observed then they will collect into container for proper disposal. Ms. Cam also mentioned that they will open two more test pits, one at contaminated zone and one between existing sump and contaminated zone. if water level in these two sumps decrease with dewatering from existing sump, they will stop sump pump to prevent spreading contamination.

received following reports from Ms. Cam:

- Phase I report
- Phase II report
- RAP & Health and Safety Plan
- DEP correspondance

abstract of Phase II report:

- NYCDEP requested Phase II investigation to characterize the fill material
- Langan did four borings and took nine soil samples from these borings
- all four borings were convereted into temp well point and collected four water samples
- collected four soil gas sample, one from each boring
- two soil samples were collected from each borings; one from the shallow material (0-2 ft bg) and one from the soil/groundwater interface (8-11.5 ft bg).
- one additional soil sample was collected from boring SB-4 at a depth of 7 ft due to elevated PID

- found contamination in soil sample from SB-4 at 7 ft depth

-----SB-4 at 7 ft---limit  
Benzene-----1,810-----60  
Xylene-----4,470-----1,200  
Naphthalene-----69,000-----13,000

- SVOC contamination found in soil sample from SB-4 at 7 ft.
- no contamination in soil sample from SB-4 at 9-11 ft
- no contamination found in any groundwater sample (groundwater was found at 11 ft in boring SB-4)

received email from Ms. Cam containing geotechnical boring locations and gasoline tank location maps.

06/27/07-Hiralkumar Patel. received fingerprint analysis report from Ms. Cam. they took one soil and one groundwater sample from area where contamination found and analyzed those sample. found #4 kind of product (not gasoline).

left message for Ms. Cam to continue working in area where they removed gasoline tanks from site (as no gasoline product found in fingerprint analysis). asked Ms. Cam to call back regarding high contamination in previous boring SB-4 at 7 ft (where concrete work has done).

06/28/07-Hiralkumar Patel. received call from Ms. Cam asking for site visit. asked her to submit soil/groundwater delineation report prior to any site visit.

06/29/07-Hiralkumar Patel. spoke with Ms. Cam regarding high contamination that was found at previous soil boring location SB-4 at 7 ft. Ms. Cam mentioned that entire site was/will be excavated to 13-16 ft bg (so contamination at SB-4 on-site has been removed). asked Ms. Cam to do delineation around boring SB-4 on sidewalk along West Broadway to find any source for such high values at SB-4. they will submit disposal manifest at end of project.

07/12/07-Hiralkumar Patel. received analytical data from Ms. Cam, for soil and groundwater samples taken from site. abstract:

- total of 9 soil borings were completed to determine the horizontal and vertical extent of contamination in the northeast portion of the property
- one temporary monitoring well was installed and a groundwater sample was collected
- One groundwater sample was collected from within the 6 ft by 6 ft by 3 ft deep test pit excavated approximately 20 feet from the north property line
- approx. 2600 gallons of water and product were vacuumed from the test pit for offsite disposal
- one groundwater sample was collected from the recharge within the test pit after 2600 gallons were vacuumed and was analyzed for the NYCDEP discharge parameters
- took 12 soil and 2 groundwater samples for analysis
- no contamination found in any samples

received call from Ms. Cam. as part of construction, they will do dewatering of site and collect that water into oil/water separator before discharged into city sewer system. they sampled groundwater for discharge permit and will do frequent sampling to confirm no petroleum discharged into sewer system. Ms. Cam mentioned that closed sample to property line, between subject site

and 325 W. Broadway site, was about 10 ft away to prevent any vibration in soil near foundation wall along 325 W. Broadway site. but during construction, they will do excavation to about three ft away from property line (DOB requirement) and will remove all soil.

based on construction area (leaving only three ft at property line) and analytical data for soil and groundwater samples, approved Ms. Cam's request to resume construction activities in corner where oil sheen was observed on groundwater. asked Ms. Cam to monitor area for any soil or groundwater contamination.

based on available data, case closed.

OCT. 10, 1998 21:23 hrs.

John Thelian #52849 F.O.D. reports on 10/10/98 @ 21:00 hrs he found approx. 25 gallons of an unknown substance in V-8161 @ w/s Wooster st 14' s/o Grand st while applying a ground on fdr.# 22m65. The spill is contained and did not enter the waterways or sewers. There is a sump and the pump was not running. He unplugged the pump at this time. There is a sewer connection via the pump at this location. The substance looks like rust and is not an oil. A sample was taken and tag# 18139 was installed.

There is an oil filled transformer and pilc cable at this location. The cleanup is pending test results and will be cleaned up accordingly.

This report recorded by T.Russo #45348 @ MCC #9 desk.

Oct. 10, 1998 21:57 hrs.

Frank Masseria #76972 C.I.G. notified by T.Russo #45348.

Caller Remarks:

Abandoned drums found on the SE corner. Unknown where the drum came from. No ID numbers are printed on the drums. Would like DEC to pick it up.

DEC Investigator Remarks:

add to next drum run

03/11/08-Vought peromed site visit to confirm that drum was present and indeed confirm that 55-gallon blue steel drum with waste oil and DEP lettering on southeast corner of Charlton and Hudson. Vought informed DEC Rahman of same for drum run.

03/12/2008-Hasan Ahmed-One 55 gallon drum found with oil.Drum was pumped out, Ahmed and Rahman of DEC were present. NYC sanitation was notified to pick up the empty drum.

Caller Remarks:

clean up crew is en route.

DEC Investigator Remarks:

8/23/05-Vought-Site visit by DEC Vought and DEC Ketani as per DEC Austin. Spill of diesel from a 250 gallon AST on roof of site. Spill flushed down drain by NYFD. Clean Harbors onsite (Jime Cardone 732-248-1997). On site DEC met with Ray Pichardo (super 212-929-5075). Roof drain was connected to sewer as per DEP (Keith Williams) who had left site by time of DEC site visit. DEC spoke with senior operations manager (Al Miller 646-739-4953) and spill originated from vent pipe due to malfunction of pump. No leak from UST. Contractor enroute to fix pump. Spill cleaned using adsorbent material and pads. No infiltration from roof to building and no odors were detected after building walkthrough by Miller. DEC also inspected adjacent Hudson river and did not find any sheen or free floating product. Spill closed by Vought.

Caller Remarks:

1 QUART IS SEEPING OUT OF SOME CABLE; NO TO 5 QUESTIONS; CONED # 161180

DEC Investigator Remarks:

05/03/07 - See e-docs for Con Ed report detailing cleanup and closure.

161180. 09/22/05 10:30. W.Kaseman #85961, of Maintenance Services, notified the control center on 09/22/05 at 10:05hrs. to report he found approx. 1 quart of cable oil on the wall and on the duct edge in M36950, which is located on the south side of Houston St 1 box west of Hudson St. W.Kaseman #85961 was at this location to do inspections when he found uncapped paper cable ends that had leaked oil on the wall and duct edge, no oil has leaked on to the floor. There is no water in M36950, the account number he was working under is #89090. W.Kaseman #85961 notified the Emergency Dept. (#9) before calling the Environmental desk. There was no fire or smoke involved and no sewers or waterways were affected. There were no injuries related to this spill and the weather conditions did not contribute to the hazards of this spill. There was no private property affected. The source of the spill is the cable ends and the cause is a leak. A yellow environmental tag numbered #42723, was hung in M36950. There is no water in M36950. W.Kaseman #85961 can not see if there is a sump or a sewer connection, due to large ammounts of dirt in M36950. There are no substantial cracks in M36950. A sample needs to be taken for PCB's, W.Kaseman #85961 can not take the sample due to the fact that Maintenance Service Personnel can not take samples from a dry manhole. There was no initial cleanup action taken. The cleanup is pending samples being taken, repair of the leaking cable end, test results and a crew. Logger : M.Casalta #12684

## Caller Remarks:

UNK PROBLEM WITH TRANSFORMER CAUSED PRODUCT TO LEAK OUT - NO CLEAN UP - SAMPLE TAKEN - CON ED 138748

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"  
E2MIS 138748

8/8/2001 @ 00:50 HRS

This incident was originally reported to me on 8/7 @ 22:30 HRS. The E2MIS application was "down" at this time, so I could not enter it right away. I did contact CIG P. McGuire # 61959 and notified him of the incident on 8/7/2001 @ 22:59 hrs.

On 8/7/01 @ 22:50 J. Giuffre # 09256 of the FOD, while working at 183-187 Varick St. on Feeder 10m11 reported to me that @ 22:30 he discovered an unknown oil in Vault 4222. There was no fire involved and there was no sewer / waterway affected. The amount of oil found was approx (3) gallons and there was no standing

water in the structure.

The source of the spill and the cause of the spill is unknown. The substance was spilled on the concrete Vault floor. No private

private was affected.

There is oil filled Equipment in the structure. A sewer connection cannot be verified because I checked Conduit plate 12-g-4 and V-4222 is not listed. There is a concrete sump and there is a sump pump that is not connected.

(2) liquid samples (PCB and ID) were taken and the Chain of Custody # is BB 05275. No initial cleanup has been taken and Ciuffre referred the incident to the I&A. An Environmental Tag # 32271 was left.

CIG P. McGuire # 61959 was notified @ 22:59 on 8/7/2001

UPDATE 8/8/2001 @ 02:18 HRS

Called ERT for EPA # NYP 004 087 656

Transportation will have an over 50 Tanker on location - 7am on 8/8/2001

Flush crews and I&A crews be notified of cleanup start of 7am

Logger R Pagano # 48703

UPDATE 8/8/01 @ 06:03 HRS

I7A was notified of cleanup @ 7AM. Flush is aware that cleanup will take place at 7AM.

Update 8-8-01 . @ 12:50 T Delagado #56802 reports that when he was sent to drain the oil from V4222 he discovered that the transformer had no oil left in the tank. It is now being considered that the oil was released into either a sewer or a storm drain , neither of which can be verified at this time. CIG SRomero #09880

notified @ 13:09. The classification is also going to be changed on this incident from a 24 hour de minimus to a spill dielectric transformer due to the amount of the

spill and the release

08/09/01 19:04 HRS

Received lab results, lab sequence # 01-08097-001

MATRIX: OIL GRAB

DESCRIPTION: V4222 10M11

LOCATION: F/O 183-87 VARICK ST.

STRUCTURE: VAULT V4222 FEEDER ID: 10M11

Analysis indicates the presence of a substance similar to a dielectric fluid.

R. Bruns # 21106

9/6/01 02:20 hrs Received lab results via fax from H. Schwartz in the chem lab.

It appears that the lab system was down when the results were completed & it was done on the old system. That is why no results were ever posted.

Lab sequence # 01-04497

Aroclor 1260 PCB - 16 PPM

R. Bruns # 21106

Lab Sequence #01-04497

Date Reported: 8/08/01

Date Received: 8/08/01

Date Sampled: 8/07/01

PCB Analysis:

Aroclor PCB (in ppm)

1260 16

R. Pellegrino #38620

9/6/01 05:21 hrs

V. Mirance # 58484 Cable (cleanup) supervisor reports that at 05:15 the cleanup was complete 100%.

All liquid & debris was removed with the flush truck.

The structure was double washed with slix, and rinsed down with the flush truck.

Spill tag # 32271 was removed.

The cleanup crew was: J. Pirrello # 12120, J. Rotondi # 11602, C. Platt # 13218, G. Rofario # 11464

**Map Identification Number 249**      **NYSDEC Name:** **CONSOLIDATED EDISON**      **Facility Id:** **NYP004103214**  
**NYSDEC Address:** MH49096-F/O 545 WASHINGTON ST      MANHATTAN, NY      TT-Id: 740A-0027-017

## MAP LOCATION INFORMATION

Site location mapped by: MANUAL MAPPING (4)

Approximate distance from property: 312 feet to the WSW

## ADDRESS CHANGE INFORMATION

Revised street: IFO 545 WASHINGTON ST

Revised zip code: 10014

US EPA RCRA (Resource Conservation and Recovery Act) information not reported; Site information reported by NYS DEC.

## NYS DEC Manifested Waste Summary:

Waste Codes, Waste Units, and Transaction Types are only shown for the most recently reported year.

NEW YORK, NY

TT-Id: 740A-0026-996

EPA (RCRA) Name:

V1289

EPA (RCRA) Address:

284 W HOUSTON STREET

NEW YORK CITY, NY 10014

## MAP LOCATION INFORMATION

Site location mapped by: PARCEL MAPPING (4)

Approximate distance from property: 431 feet to the NNE

## ADDRESS CHANGE INFORMATION

Revised street: 284 W HOUSTON STREET

Revised zip code: NO CHANGE

US EPA RCRA Type: GENERATOR TYPE NOT GIVEN

Notification date: 0

Land Disposal:

Receives offsite waste:

Incinerator:

Storer:

Treatment facility:

Transporter:

## NYS DEC Manifested Waste Summary:

Waste Codes, Waste Units, and Transaction Types are only shown for the most recently reported year.

## MAP LOCATION INFORMATION

Site location mapped by: MANUAL MAPPING (3)

Approximate distance from property: 625 feet to the ENE

## ADDRESS CHANGE INFORMATION

Revised street: 366 HUDSON ST

Revised zip code: 10014

US EPA RCRA Type: GENERATOR TYPE NOT GIVEN

Land Disposal: Receives offsite waste:

Storer: Treatment facility:

Notification date: 0

Incinerator:

Transporter:

## NYS DEC Manifested Waste Summary:

NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION  
Division of Hazardous Waste Remediation  
Hazardous Substance Waste Disposal Site Study

Inventory Status: Removed from the Hazardous Substance Inventory

Reason site did not qualify for the Inventory:

No evidence of disposal

**SITE INFORMATION**

Site Name: GSA BUILDING SITE  
Site Street: 201 VARICK ST  
Site City: NEW YORK  
Site Zip: 10014  
Region: 2

Site Number:  
Registry: No  
Registry Site ID: Unknown  
RCRA: Unknown  
EPA ID: NY4690311002

US EPA No Further Remedial Action Planned? Unknown

Site Code: 5-office

Description: OTHER - OFFICE

Acres: 0.00  
Completed Investigation? PA/SI  
Is Site Active: Unknown  
Years of Operation: Unknown to Unknown

Quadrangle: Unknown  
HRS Score: Unknown  
HRS Date: Unknown

Site Description:

Office Building was reportedly never used for hazardous substance disposal.

Owner: Federal  
Owner Name: GENERAL SERVICES ADMIN  
Owner Street: 26 FEDERAL PLAZA  
Owner City/ZIP/State: NY, NY  
Owner Telephone: 212-264-8787

Operator: Federal  
Operator Name: SAME  
Operator Street: Unknown  
Operator City/ZIP/State:  
Operator Telephone: Unknown

#### THREAT TO THE ENVIRONMENT OR PUBLIC HEALTH

Threat to the Environment or the Public Health: Unknown

##### Threat Posed by Disposed Hazardous Substance:

APA report was previously done on the site, and it was determined that there was no generation, treatment, storage, or disposal of hazardous wastes on site.

#### HAZARDOUS SUBSTANCES DISPOSED:

VOCs: No      Semi-VOCs: No      PCBs: No      Pesticides: No      Metals: No      Asbestos: No

Hazardous Substances Disposed:

Glutareldehyde 111-30-8 5 gal suspected

SELECTED ANALYTICAL INFORMATION:

Samples Collected:

None

**Hazardous waste codes presented in individual Toxic Information Profiles are defined below.**

- B002 Petroleum oil or other liquid containing 50 ppm or greater of PCBs but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.
- B003 Petroleum oil or other liquid containing 500 ppm or greater of PCBs.
- B007 Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.
- D001 Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.
- D002 Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.
- D003 Solid waste that exhibits the characteristic of reactivity, but is not listed under any other hazardous waste code.
- D004 Arsenic
- D005 Barium
- D006 Cadmium
- D007 Chromium
- D008 Lead
- D009 Mercury
- D010 Selenium
- D011 Silver
- D018 BENZENE
- D035 Methyl ethyl ketone
- D037 Pentrachlorophenol
- D039 Tetrachloroethylene
- D040 Trichlorethylene
- F001 The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents

and spent solvent mixtures. (T)

- F002 The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)
- F003 The following spent non-halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non-halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non-halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)\*
- F005 The following spent non-halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)
- F006 Wastewater treatment sludges from electroplating operations except from the following processes: (1) Sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum. (T)
- P012 Arsenic oxide  $\text{As}_2\text{O}_3$
- P105 Sodium azide
- R001
- U002 Acetone (I)
- U003 Acetonitrile (I,T)
- U044 Chloroform
- U069 Dibutyl phthalate
- U070 o-Dichlorobenzene
- U077 Ethane, 1,2-dichloro-
- U080 Methane, dichloro-

U122 Formaldehyde

U133 Hydrazine (R,T)

U134 Hydrogen fluoride (C,T)

U140 ' 1-Propanol, 2-methyl- (I,T)'

U151 Mercury

U154 Methanol (I)

U159 Methyl ethyl ketone (MEK) (I,T)

U165 Naphthalene

U188 Phenol

U210 Ethene, tetrachloro-

U211 Carbon tetrachloride

U214 Acetic acid, thallium(1+) salt

# How Toxic Site Locations Are Mapped

*Toxics Targeting* maps toxic site locations on a computerized version of the U. S. Census map using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each *Toxic Site Profile*, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12

Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street

Anytown, NY 11797

## MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a computerized version of the U. S. Census map. These site locations are identified "address-matched."

*Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.*

or Map Coordinate

2) Some toxic sites are located using map coordinates provided by site owners/operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxics Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect.

or Manual Mapping

or Site Visit

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

## ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

# Information Source Guide

*Toxics Targeting's Environmental Reports* contain government and other information compiled on 21 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **National Priority List for Federal Superfund Cleanup:** Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. Also includes delisted NPL sites.

ASTM required.\* Fannie Mae required.\*\*

Source: U. S. Environmental Protection Agency.<sup>1</sup>

Data attributes updated from: 5/7/2008.

Data obtained by Toxics Targeting: 5/7/2008.

New Facilities updated through: 5/7/2008.

Data obtained by Toxics Targeting: 5/7/2008.

2) **Inactive Hazardous Waste Disposal Site Registry:** New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. Also included are sites that qualify for possible inclusion on the Registry. These Registry Qualifying sites may or may not be on the Site Registry.

ASTM required.\* Fannie Mae required.\*\*

Data attributes updated through: 9/02/2008.

Data obtained by Toxics Targeting: 9/02/2008.

New Facilities updated to: 9/02/2008.

Data obtained by Toxics Targeting: 9/02/2008.

3) **Corrective Action Activity (CORRACTS):** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).

ASTM required.\* Fannie Mae required.\*\*

Source: U. S. Environmental Protection Agency<sup>1</sup>

Data attributes updated through: 6/25/2008.

Data obtained by Toxics Targeting: 6/27/2008.

New facilities updated through: 6/25/2008.

Data obtained by Toxics Targeting: 6/27/2008.

4) **CERCLIS:** Toxic sites listed in the Federal Comprehensive Environmental Response, Compensation and Liability Information System. No Further Remedial Action Planned (NFRAP) sites are also included.

ASTM required.\* Fannie Mae required.\*\*

Source: U. S. Environmental Protection Agency.<sup>1</sup>

Data attributes updated through: 1/09/2008.

Data obtained by Toxics Targeting: 3/12/2008.

New Facilities updated through: 1/09/2008.

Data obtained by Toxics Targeting: 3/12/2008.

5) **Brownfield Programs:** NYS programs for sites that are abandoned, idled or under-used industrial and/or commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

ASTM required.\*

Source: New York State Department of Environmental Conservation.<sup>2</sup>

Data attributes updated through: 9/02/2008.

Data obtained by Toxics Targeting: 9/02/2008.

New Facilities updated to: 9/02/2008.

Data obtained by Toxics Targeting: 9/02/2008.

(a) Brownfield Cleanup Program (BCP)

(b) Voluntary Cleanup Program (VCP)

(c) Environmental Restoration Program (ERP)

6) **Solid Waste Facilities:** NYS database of solid waste facilities, including, but not limited to, landfills, incinerators, transfer stations, recycling centers.

ASTM required.\* Fannie Mae required.\*\*

Source: New York State Department of Environmental Conservation.<sup>2</sup>

Data updated to: 12/31/2001.

Data obtained by Toxics Targeting: 3/16/2002.

Also includes a listing of solid waste disposal sites operated by New York City municipal authorities circa 1934.

Source: City of New York Department of Sanitation (1984). The Waste Disposal Problem in New York City: A Proposal For Action.

7) **RCRA Hazardous Waste Treatment, Storage or Disposal Facility Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the DEC's Bureau of Hazardous Waste Facility Compliance pursuant to NYS Law and the Resource Conservation and Recovery Act (RCRA).

ASTM required.\* Fannie Mae required.\*\*

Source: New York State Department of Environmental Conservation.<sup>2</sup>

New facilities updated through: 6/25/2008.

New facilities obtained by Toxics Targeting: 6/27/2008.

Manifest transactions data updated to: 6/25/2008.

Manifest transactions data obtained by Toxics Targeting: 6/27/2008.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).

ASTM required.\* Fannie Mae required.\*\*

New facilities updated through: 6/25/2008.

Data attributes updated through: 6/25/2008.

Data obtained by Toxics Targeting: 6/27/2008.

Data obtained by Toxics Targeting: 6/27/2008.

8) **Spills Information Database:** Spills reported to the DEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from Petroleum Bulk Storage Regulations) or 6 NYCRR Section 595.2 (from Chemical Bulk Storage Regulations). The database includes *active* and *closed* spills reported on or before 11/03/2008.

ASTM required.\* Fannie Mae.\*\*

Source: NYS Department of Environmental Conservation.<sup>2</sup>

Spill attribute data through: 11/03/2008

New spills through: 11/03/2008

Spill attribute data obtained by Toxics Targeting: 11/03/2008

New spills data obtained by Toxics Targeting: 11/03/2008

Active spills: paperwork not completed.

Closed spills: paperwork completed.

Both active and closed spills may or may not have been cleaned up (see Date Cleanup Ceased in spill profiles).

9) **Major Oil Storage Facilities:** NYS database of facilities licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Parts 610 and 17 NYCRR Part 30, such as onshore facilities or vessels, with petroleum storage capacities equal to or greater than four hundred thousand gallons.

**Data withheld by the NYSDEC as of 4/1/2002.**

ASTM required.\* Fannie Mae required.\*\*

Source: New York State Department of Environmental Conservation.<sup>2</sup>

New facilities updated through: 1/1/2002.

Tank data updated through: 1/1/2002.

New facilities data obtained by Toxics Targeting: 1/11/2002.

Tank data obtained by Toxics Targeting: 1/11/2002.

10) **Petroleum Bulk Storage Facilities:** Local and State databases of aboveground and underground petroleum storage facilities with a combined storage capacity over 1,100 gallons.

ASTM required.\* Fannie Mae required.\*\*

Source: NYS Department of Environmental Conservation.<sup>2</sup>

All New York Counties except Cortland, Nassau, Rockland, Suffolk, and Westchester:

New facilities updated through: 4/2/2007.

Tank data updated through: 4/2/2007.

Data obtained: 4/5/2007.

Data obtained by Toxics Targeting: 4/5/2007.

#### 11) **RCRA Hazardous Waste Generators and/or Transporters Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the NYS Department of Environmental Conservation's Bureau of Hazardous Waste Facility Compliance pursuant to New York State Law.

ASTM required.\* Fannie Mae required.\*\*

Source: New York State Department of Environmental Conservation.<sup>2</sup>

New facilities updated through: 6/25/2008.

Manifest transactions data updated to: 6/25/2008.

New facilities obtained by Toxics Targeting: 6/27/2008.

Manifest transactions data obtained by Toxics Targeting: 6/27/2008.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).

ASTM required.\* Fannie Mae required.\*\*

Source: U. S. Environmental Protection Agency<sup>1</sup>

New facilities updated through: 6/25/2008.

Data attributes updated through: 6/25/2008.

Data obtained by Toxics Targeting: 6/27/2008.

Data obtained by Toxics Targeting: 6/27/2008.

12) **Chemical Bulk Storage Facilities:** New York State database of facilities compiled pursuant to 6 NYCRR Part 596 that store regulated substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities greater than 185 gallons and /or in underground tanks of any size.

**Data withheld by NYSDEC as of 4/1/2002.**

ASTM required.\* Fannie Mae required.\*\*

Source: New York State Department of Environmental Conservation.<sup>2</sup>

Data updated through: 1/1/2002.

Data obtained by Toxics Targeting: 1/11/2002.

13) **Historic New York City Utility Facilities (1898 to 1950):** An inventory of selected power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports of New York utility companies, including: Sanborn Fire Insurance Maps of NYC (1898-1950); Consolidated Edison Co. Annual Reports (1922-1939); Consolidated Edison Co. Map: "Boroughs of Manhattan and the Bronx Showing Distribution Mains of the New York Edison Co.," (1922); and Consolidated Edison document: "Generating and Annex Stations," (1911).

14) **Hazardous Substance Waste Disposal Site Study**: NYS database of waste disposal sites that may pose threats to public health or the environment, but could not be remediated using monies from the Hazardous Waste Remedial Fund.

Source: New York State Department of Environmental Conservation.<sup>2</sup>

Data updated to: 5/16/2000.

Data obtained by Toxics Targeting: 5/16/2000.

15) **Toxic Release Inventory (TRI)**: Federal database of manufacturing facilities required under Section 313 of the Federal Emergency Planning and Community Right-to-Know Act to report releases to the air, water and land of any specifically listed toxic chemical. See Fannie Mae requirement\*\* below.

Source: U. S. Environmental Protection Agency.<sup>1</sup> / NYS Department of Environmental Conservation<sup>2</sup>

Data updated through: 3/8/2004.

Data obtained by Toxics Targeting: 3/25/2004

16) **Toxic Wastewater Discharges (Permit Compliance System)**: Federal database of discharges of wastewater to surface waters and groundwaters. See Fannie Mae requirement\*\* below. Source: U. S. Environmental Protection Agency.<sup>1</sup>

Data updated through: 6/17/2004.

Data obtained by Toxics Targeting: 7/19/2004.

17) **Air Discharge Facilities**: EPA AIRS database containing address information on each air emission facility and the type of air pollutant emission it is. Compliance information is also provided on each pollutant as well as the facility itself.

See Fannie Mae requirement\*\* below.

Source: U. S. Environmental Protection Agency<sup>1</sup>

Data updated through: 11/24/1999.

Data obtained by Toxics Targeting: 1/6/2000

18) **Civil Enforcement & Administrative Docket**: This database is the U. S. EPA's system for tracking administrative and civil judiciary cases filed on behalf of the agency by the Department of Justice. Fannie Mae required.\*\*

Source: U. S. Environmental Protection Agency.<sup>1</sup>

New Sites through: 10/14/1999.

Data updated through: 10/14/1999.

Data obtained by Toxics Targeting: 11/18/1999.

19) **New York City Environmental Quality Review (CEQR) – E Designation Sites**: These sites are parcels assigned a special environmental ("E") designation under the CEQR process. E designation requires specific protocols that must be followed.

Data updated through: 10/29/2007.

Data obtained by Toxics Targeting: 11/08/2007

20) **New York City Fire Department Tank Data**.

Source: New York City Fire Department.

Data obtained by Toxics Targeting: 2/13/1997

21) **Emergency Response Notification System (ERNS)**: Federal database of spills compiled by the Emergency Response Notification System. On-site searches only.

ASTM required.\* See Fannie Mae requirement\*\* below.

Source: U. S. Environmental Protection Agency.<sup>1</sup>

Data updated through: 1/31/2000.

Data obtained by Toxics Targeting: 2/15/2000

\* American Society of Testing Materials: Standard Practice on Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527-05).

\*\* Fannie Mae's Part X Environmental Hazards Management Procedures specify 1.0 mile searches for "any state or Federal list of hazardous waste sites (e.g. CERCLIS, HWDMS etc.)." Searches for the property and adjacent properties are specified for "chemical manufacturing plants," "obvious high risk neighbors engaging in storing or transporting hazardous waste, chemicals or substances" and "...any documented or visible evidence of dangerous waste handling... (e.g. stressed vegetation, stained soil, open or leaking containers, foul fumes or smells, oily ponds, etc." Searches for property and adjacent properties can include sites up to a quarter mile away (W. Hayward, Director, Multi-Family Business Planning and Control, Fannie Mae, personal communication, 5/94).

Re: Geophysical Engineering Survey (GES) Report  
Commercial Site  
551 Greenwich Street,  
New York, New York 10014

Dear Mr. McMahon,

Nova Geophysical Services (NOVA) is pleased to provide the findings of the geophysical engineering survey (GES) at the above referenced project site: 551 Greenwich Street, New York, New York 10014 (the "Site").

## INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

---

NOVA performed a geophysical engineering survey (GES) consisting of a Ground Penetrating Radar (GPR) and Electromagnetic (EM) survey at the site. The purpose of this survey is to locate and identify utilities, underground storage tanks (USTs), other substructures as well as the clear and mark proposed boring areas on April 20<sup>th</sup>, 2018.

The equipment selected for this investigation was a Sensors and Software Noggin 250 MHz ground penetrating radar (GPR) with a shielded antenna and a Radio Detection RD7100 Electromagnetic utility locator.

A GPR system consists of a radar control unit, control cable, and transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulse into bipolar pulses that are radiated to the surface. The

transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

A typical electromagnetic (EM) utility locating system consists of a transmitter unit and a receiver unit. The receiver unit can be used independently of the transmitter unit in order to detect utility lines with an inherent EM signature (electric utility lines, water lines, etc.). If needed a current at a specific frequency can also be placed on a utility that is being located. This can be done via the transmitter unit by either direct connection or induction via an EM field varying at specific frequency. The receiver unit is then set to the selected frequency and the electromagnetic field created by the current running through the utility can be located allowing the utility to be marked.

## GEOPHYSICAL METHODS

---

The project site was screened using GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface. An EM utility locator was used to help determine the locations of utilities within the survey area.

EM data was collected and interpreted on site and suspected utilities marked as needed. GPR data profiles were collected for the areas of the Site specified by the client and processed as specified below.

## DATA PROCESSING

---

In order to improve the quality of the results and to better identify anomalies NOVA processed the collected data. The processing work flow is briefly described in this section.

### **Step 1.** Import Raw RAMAC data to standard processing format

## GEOPHYSICAL ENGINEERING SURVEY REPORT

[Commercial Site](#)

551 Greenwich Street,  
New York, New York 10014

### Step 2. Remove instrument noise (*dewow*)

### Step 3. Correct for attenuation losses (*energy decay function*)

### Step 4. Remove static from bottom of profile (*time cut*)

### Step 5. Mute horizontal ringing/noise (*subtracting average*)

The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and represents the subsurface anomalies much more accurately.

## PHYSICAL SETTINGS

---

NOVA observed the following physical conditions at the time of the survey.

**Weather:** Sunny

**Temperature:** 30° F

**Surface:** Concrete, Asphalt

**Geophysical Noise Level:** Geophysical noise at the site was very high due to being located in an urban environment, thick concrete slabs, and large metal lifts causing interference with the radar.

## RESULTS

---

The results of the geophysical engineering survey (GES) identified the following at the project site:

- Subsurface utility (electric, water, sewer and gas service) lines were identified entering the property as shown in the survey plan.
- Utility lines relating to the hydraulic car lifts on the site were identified in the subsurface on the property
- The approximate location of the basement is shown in the site survey plan.
- No large geophysical anomaly resembling a UST was identified within the suspected tank area due to an excessive amount of geophysical noise at the time of the survey. This could be due to the tank(s) being filled with concrete or removed. This area was marked during the survey. A fill port, two vent pipes, and two pump islands were also identified and are shown on the survey plan.

## GEOPHYSICAL ENGINEERING SURVEY REPORT

*Commercial Site*

551 Greenwich Street,  
New York, New York 10014

---

- An additional vent pipe was observed along the north side of the project site building. Due to limited access (metal parking lift) with high geophysical noise at the time of the survey, NOVA could not verify the potential anomaly that maybe associated with this vent pipe.
- All detected subsurface anomalies were marked in the onsite mark out.
- All cleared boring locations were marked in the onsite mark out.

If you have any questions, please do not hesitate to contact the undersigned.

Sincerely,

**NOVA Geophysical Services**

Levent Eskicakit, P.G., E.P.

Project Engineer

Bottom of borehole backfilled with #2 sand to 6' to construct SV05. See SV05 construction log for details. Soil cuttings were drummed due to observed impacts. The borehole was backfilled with #2 sand to grade. |

| AARCO advanced MW02 to a completion depth of 22.52 feet below grade surface (ft bgs) with 2-inch diameter pre-packed PVC casing and 2-inch sampling equipment which consisted of 10' of 10 slot (0.010-inch) well screen, and a solid 2" PVC riser. Well screen was installed from approximately 10.00 to 22.52 feet bgs with riser from 10.00 feet bgs to surface. Wells were finished with a flush mounted road box and concrete pad. |           |                                                                                               |                                     |  |                       |

| AARCO advanced MW03 to a completion depth of 20.10 feet below grade surface (ft bgs) with 2-inch diameter pre-packed PVC casing and 2-inch sampling equipment which consisted of 10' of 10 slot (0.010-inch) well screen, and a solid 2" PVC riser. Well screen was installed from approximately 10.10 to 20.10 feet bgs with riser from 10.10 feet bgs to surface. Wells were finished with a flush mounted road box and concrete pad. |           |                                                                                               |                                     |  |                       |

| AARCO advanced MW04 to a completion depth of 20.02 feet below grade surface (ft bgs) with 2-inch diameter pre-packed PVC casing and 2-inch sampling equipment which consisted of 10' of 10 slot (0.010-inch) well screen, and a solid 2" PVC riser. Well screen was installed from approximately 10.02 to 20.02 feet bgs with riser from 10.02 feet bgs to surface. Wells were finished with a flush mounted road box and concrete pad. |                  |                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                 |                   |

| AARCO advanced MW06 to a completion depth of 21.59 feet below grade surface (ft bgs) with 2-inch diameter pre-packed PVC casing and 2-inch sampling equipment which consisted of 10' of 10 slot (0.010-inch) well screen, and a solid 2" PVC riser. Well screen was installed from approximately 11.59 to 21.59 feet bgs with riser from 11.59 feet bgs to surface. Wells were finished with a flush mounted road box and concrete pad. |           |                                                                                               |                                     |  |                       |

**METHOD OF INSTALLATION AND SAMPLING:**

Langan field screened the sample location with a MiniRAE 3000 photoionization detector prior to sampling. Sample consisted of 2.7 L Summa canister fitted with aa 2-hour flow control valve. The flow controller was zeroed and valve opened to initiate the 2-hour sample collection. The sample and flow controller were checked each hour during sampling to ensure proper operation.

**METHOD OF INSTALLATION AND PURGING:**  
AARCO advanced a borehole at the soil boring location to 6 feet bgs to install the soil vapor point.#2 sand was backfilled around and above the point to a depth of 1 feet below grade surface and the remainder of the borehole was sealed with hydrated bentonite powder to grade. A multirae PID set to low was used to purge the soil vapor point and collect an initial PID reading.

## SAMPLE LOCATION SKETCH

## NOTES

SV01 was originally installed to about 10 feet bgs. SV01 had to be re-installed to about 6 feet bgs because excessive moisture had accumulated in the sampling tube. The vapor point was in tact on 5/2/2018 and was re-sampled on 5/2/2018.

| <b>METHOD OF INSTALLATION AND PURGING:</b><br>AARCO advanced a borehole at the soil boring location to 10 feet bgs to install the soil vapor point. #2 sand was backfilled around and above the point to a depth of 1 foot below grade surface and the remainder of the borehole was sealed with hydrated bentonite powder to grade. A multirae PID set to low was used to purge the soil vapor point and collect an initial PID reading. |                                                                                       |

**METHOD OF INSTALLATION AND PURGING:**  
AARCO advanced a borehole at the soil boring location to 6 feet bgs to install the soil vapor point.#2 sand was backfilled around and above the point to a depth of 1 feet below grade surface and the remainder of the borehole was sealed with hydrated bentonite powder to grade. A multirae PID set to low was used to purge the soil vapor point and collect an initial PID reading.

## SAMPLE LOCATION SKETCH

## NOTES

SV03 was originally installed to about 10 feet bgs. SV03 had to be re-installed to about 6 feet bgs because excessive moisture had accumulated in the sampling tube. The vapor point was re-sampled on 4/25/2018.

AARCO advanced a borehole at the soil boring location to 12 feet bgs to install the soil vapor point. #2 sand was backfilled around and above the point to a depth of 2 feet below grade surface and the remainder of the borehole was sealed with hydrated bentonite powder to grade. A multirae PID set to low was used to purge the soil vapor point and collect an initial PID reading.

 ## SAMPLE LOCATION SKETCH

## NOTES

SV05 was originally installed to about 10 feet bgs. SV05 had to be re-installed to about 6 feet bgs because excessive moisture had accumulated in the sampling tube. The vapor point was re-sampled on 4/25/2018.

**METHOD OF INSTALLATION AND PURGING:**  
AARCO advanced a borehole at the soil boring location to 10 feet bgs to install the soil vapor point. #2 sand was backfilled around and above the point to a depth of 1 foot below grade surface and the remainder of the borehole was sealed with hydrated bentonite powder to grade. A multirae PID set to low was used to purge the soil vapor point and collect an initial PID reading.

**Report Date:** 04/30/18

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Sample Receipt

L1814188-11: A sample identified as "TRIP BLANK" was received but not listed on the Chain of Custody. At the client's request, this sample was analyzed.

#### Semivolatile Organics

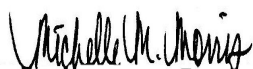

L1814188-04 and -06: The sample has elevated detection limits due to the dilution required by the sample matrix.

#### Total Metals

L1814188-01 through -09: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.
