DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"Question on proper address of this building. Originally called in as 525 W 25th. Later called 543-545 West 25th St.5/22/02 - Sangesland spoke with Mark Robbins of Hydro Tech (631-462-5866) cell # 516-996-5559Property owner Jack Fuchs - Whitehall Business Archives, Inc.40 Worth Street, NY, NY 10013Hydro Tech was pulling a buried 3,000 gal #2 oil tank from a parking lot. 15 ft to nearest neighbor, south end of tank is at the sidewalk line.They discovered 10 large holes in the tank. The pit has product in it. Hydro will vac out the hole and will excavate out contaminated soil to clean endpoints.If all contamination can not be excavated a remediation plan will be prepared and submitted.7/2/2002 - Mark Robbins of Hydro Tech submitted a report which outlines the removal of a UST and the over excavation of the tank pit area. Sidewall endpoint samples were all below TAGM levels for VOC and SVOC's except for a handful of slight exceedences. No bottom soil samples were taken because of the presence of ground water.Hydro Tech recommends the installation of a monitoring well in the north side of the excavation area. The well should be monitored for the presence of separate-phase and dissolved phase product.DEC instructs Hydro Tech to install a monitoring well on the site, develop the well and sample for VOC's and SVOC's. The DEC will require 2 rounds of "Clean" samples taken at least 3 months apart in order to close out. 10/29/2002 - Sangesland reviewed submittal from Hydro Tech Environmental. Water sample taken from monitoring well on site showed no product and sample was clean for everything except a minor hit 1.1 ug/l of Benzene. SVOC all below detect. 4/11/2003 - Sangesland reviewed a submittal from Hydro Tech dated Feb 28, 2003. This report shows the second round of GW sampling. All results were ND, therefore the spill can be closed out.Spill Closed.

**2/26/13 TJD File review. Tank failed tightness test on 9/8/12 - initially reported as a wet leak. Tank was uncovered and corrosion was identified at tank top fittings and associated piping. Repairs were performed and a tank only (isolation test) was performed on 10/2/12 which passed. A complete system tightness test was then performed on 10/11/12, also with passing results. Contractor has provided the following statement in their closure report, "Throughout excavation operations, close inspections indicated neither visual nor olfactory evidence of petroleum contamination, confirming that there was no loss of product into the subsurface." all required closure documentation has been submitted and uploaded to EDOCS. No further action is required at this time.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
Used oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

DEC Memo: Sangesland spoke with Roux Assoc. Tank excavation with some spillage around tanks. (Tanks had been previously abandoned in place). Now tanks are being pulled. Sangesland asked for several end point soil samples taken from tank grave after removal. Test for VOC & SVOC. 3/16/2005 Sangesland reviewed a report from Roux Assoc. dated 3/9/05 On 2/18/05 Roux collected 6 post-ex samples. One per each side & 2 bottom VOC's - All samples contained low levels of VOC's, but they were ALL BELOW RSCO Stds. SVOC's - Some minor "Hits" on PAHs consistant with historical fill levels. Results show some contaminants exceed regulatory standards. Samples taken on removed (waste) soils showed much higher VOC & SVOC levels. Roux conclusion says that the contamination "source" has been removed and the site should be closed out. Based on the soil sampling work performed on the site and the report prepared by Roux Assoc., the NYSDEC agrees with the conclusion and the spill case is closed with: "No Further Action - Does Not Meet Standards"

Remarks: REMOVING TANK, JUST AN ODOR IN THE SOIL: NOT SURE HOW TO MOVE FORWARD WITH PROJECT:

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BROWNFIELDS:

Program: BCP
Site Code: 488150

Site Description: Location: The site is located at the northwest corner of the intersection of West 24th Street and 10th Avenue. The site is approximately 0.13 acres in size. Site Features: The site currently is occupied by a non-operating gasoline service station, including a recently vacated 1-story commercial building last used as a convenience store. The site is bounded by a parking garage and residential building to the north, a car wash and mixed-use commercial building to the south, 10th Avenue followed by 4- and 6-story mixed-use buildings to the east and by a one-story art gallery followed by the Highline Park to the west. Current Zoning and Land Use: The site is currently inactive and used for commercial purposes. The subject property is zoned as M1-5, which allows for commercial and mixed-use buildings. The intended use of the site is for residential and commercial. Past Use of the Site: The site was operated as a small portion of a gas light fixture manufacturing facility that occupied the eastern third of the block in the 1890s. The site then operated as a gasoline filling station from at least 1930 until recent decommissioning in 2013. Since 1988 the site had assigned 8 spill numbers out of which one spill number still remained open. In 1998 twelve 550-gallon gasoline USTs, three 4,000-gallon gasoline USTs, one 275-gallon fuel oil UST, and two fueling pump islands were removed and petroleum-impacted soil was encountered around the USTs. A total of 1,853 tons of impacted soil was removed. Post excavation soil sampling results identified concentrations of volatile organic compounds (VOCs) exceeding NYSDEC Recommended Soil Cleanup Objectives (RSCOs) guidance values. Petroleum impacted groundwater also detected on-site which still remains. Site Geology and Hydrogeology: The geologic conditions at the site consisted mainly of fine to medium grained sands mixed with gravels, boulders, construction debris and interbedded layers of silt down to 25 feet below grade (fbg). The Sites topography is generally flat and the

FORMER GETTY SERVICE STATION (Continued)

S106703285

surface elevation is situated at approximately 43 feet above mean sea level. Groundwater occurs within the unconsolidated soils at depths ranging from approximately 7 to 10 fbg and currently flows to the southwest. Based on historical gauging data, there appears to be an appreciable degree of seasonal variation in the direction of groundwater flow at the site, periodically fluctuating between south, southwest and west.

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern for the site include petroleum hydrocarbon related volatile organic compounds (VOCs) compounds. Soil: Per 1998 lab results for the end point soil samples collected from 10 feet below grade benzene concentration was detected as 44.5 ppm which exceeded the soil cleanup objective (SCO) for unrestricted use (to 0.06 ppm). Other exceedances were ethylbenzene 198 ppm to 1 ppm, xylene 1,990 ppm to 0.26 ppm, toluene 479 ppm to 0.7 ppm and MTBE 124 ppm to 0.93 ppm. Groundwater: Since 2001 twelve (12) monitoring wells installed on and off-site (3 on site and 9 off-site) related to the current open spill. Per August 2012 (latest available) monitoring data highest on-site benzene concentration detected as 32 ppb, ethylbenzene 139 ppb, xylene 80.5 ppb, toluene and MTBE 18.3 ppb. Groundwater standards have been exceeded for all of the above analytes. Site related soil vapor & indoor air samples never been analyzed. Special Resources Impacted/Threatened: The site is located in the urban area and Fish and Wildlife Impact Analysis is not warranted. Significant Threat: Significant Threat determination is not done yet.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

BROWNFIELDS:

Program: BCP
Site Code: 359020
Site Description: Location: The Site is located at 555 West 34th Street, also known as 400 Eleventh Avenue, between 10th and 11th Avenues in Manhattan, New York City, New York County. Site Features: The property is identified as Block 706, Lot 1 in New York City's tax records and consists of a 37,800 square-foot (1.020 acre) rectangular-shaped vacant parcel. The surrounding urban area consists primarily of retail and commercial business. The Amtrak Railroad tunnel (and easement) runs through the northwest corner of the site. Current Zoning/uses: This site was designated as C6-3 on the NYC Zoning Map 8b which is a general central commercial district. This site is also an e-designation requiring NYCDEP approval. In January 2005, this site was rezoned as part of the City-led Hudson Yards District to allow for commercial and residential uses. The NYC MTA constructed a permanent entrance in the middle of this BCP site for the 34th Street Station of the No.7 Subway Extension. Historic Use: From 1890 to 1962, the site was used for commercial, residential, and manufacturing including a wagon house, black smith shop, electrical supplies and a warehouse. In 1973, the most recent business that covered the entire site was a 2-story commercial communications facility including numerous petroleum underground storage tanks (USTs). Six petroleum spills have occurred at this site between 1990 and 2007. Site Geology and Hydrogeology: The site is approximately 25 feet above mean sea level. Groundwater is 17 feet to 32 feet below ground surface. Surface water and groundwater flow is towards the Hudson River which is approximately 1,500 feet to the west of the site. The subsurface soil profile consists of urban fill overlying sand and silt deposits. Bedrock is located between 15 and 25 feet below grade. Between 2007 and 2012, all soil above bedrock was removed and replaced with clean fill. 12/19/12-DEC signed the Certificate of Completion for this site.
Not reported
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminant of concern was low level petroleum (diesel/gasoline) in soil and in shallow groundwater.
Health Problem: No site-related contaminants of concern were identified beyond the boundaries of the site, therefore no exposure pathways exist.

DEC Memo: Spill Case is part of a long term Brownfields project. March 2009: As part of the Site BCP Project, all the on-site soil was removed to bedrock during the fall of 2007. During this process, an unknown UST was discovered and reported as Spill No. 0706755. The UST was decommissioned and properly removed from the site during the soil removal activities and therefore this Spill is closed. J. durnin

DEC Memo: need to contact either jeff bohlen at envirotrack (631-471-1500) or Jerome Kung at verizon (212-338-6754) to determine what work is being done on the site.No letter has been sent yet. 06/21/05-SR// Spoke with jeff Bohlen(516-807-8983). He will forward all necessary documents to DEC.10.07.05 Sharif is currently reviewing the subsurface investigation report submitted by Envirotrac.3/20/06- DEC Piper reviewed tank closure report. As per report and database, there are two historic spills at the property, 9007995 and 9314833. In 1994, two 4K gasoline UST's were removed, and two 3K gasoline UST were installed. Samples collected from the limits of the excavation detected petroleum impacted soils in the vicinity of these USTs. Additionally, 8- 550 gal USTs are located in the basement of the property. These tanks were allegedly closed along w/ the two 4K gal USTs. SVOC's were detected exceeding NYSDEC TCLP guidance values. Spills 9007995 and 9314833 were closed on 8/6/96 after receipt of tank closure reports for the 2 4K USTs and 8- 550 USTs. In June-August 2005, seven (7) MWs were installed on site. Lab analytical revealed VOC's , SVOC's, and metals above TAGM 4046. Note: the groundwater was determined to be slightly to moderately saline.From Jan 6- 11, 2006, Envirotrac removed the two 3K gasoline USTs that were installed in 1994 and constructed of double wall fiberglass. A total of six (6) endpoint samples were collected from the excavation. With the exception of the West sidewall in which 226 ppb of benzene was detected, no other VOC's were detected above TAGM 4046.Additional excavation was performed in the area of the two- 4K UST remote fills and the two- 3K UST remote fills. Analytical results suggest that VOC's were not present above TAGM 4046, however SVOC's were.In addition to the sampling performed in reference to the UST's, soil samples were collected at the base of the Truck Elevator Shaft where it was determined that VOC's and SVOC's were detected above TAGM 4046, due to a bad seal. To minimize any future impact, the seals were replaced and vegetable oil was used in place of pet. based hydraulic oil.As per the report, the property is currently in negotiations to be sold. This party reportedly plans on razing the building and excavating to bedrock. ~45 feet bgs.In the meantime Envirotrac recommends quarterly sampling of the MW network. Referred to K. Tang3/21/06 - reviewed the tank closure report. Soil and GW contamination is minimal, max GW VOCs is ~200 ppb and only one side wall sample is slight above TAGM 4046. Spill closed. - KST

DER Facility ID: 189550
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"4/22/03 SAMUEL- RCVD TANK CLOSURE & SITE ASSESSMENT REPORT.CONTACT PERSON:- HUGH J FREUND 212 705 7000- ATTORNEY FOR THE MARY BOONE GALLERY (R.P)2/9/06- DEC Piper spoke w/ LEE WESTCHOTT at Whitman CO. As per conversation there was free floating product discovered at the property. There is a monitoring well network. It has been recently sampled and Lee will forward a summary status report to the dept. including analytical summaries within the next month. Case referred to Koon Tang.06/08/06: This spill transferred to S.Kraszewski. - SK08/14/06: Received a voicemail from Ira Whitman, concerning the status of the site. He gave no callback number. SK reviewed the Tank Closure Report from Fall 2001. It is evident that high levels of VOCs were detected around the fuel oil UST. Lower exceedances were also found around the gasoline USTs and the Oil/Water separator. No mention if GW was encountered; the site lies next to the Hudson River so GW is probably shallow. No MWs were installed during the investigation. Must know the GW condition above all else at this point. - SK08/15/06: Called Ira Whitman (732-553-4333) after he left a voicemail. He is no longer the consultant involved with this site, in fact he believes that no firm

MARY BOONE GALLERY (Continued)

S104782023

is involved at all. He was involved on a site project adjacent from this one: Dynamic Delivery was the contractor involved with the clean-up. He said this site already received an NFA. I said, based on the report, the GW condition must be established. He said it might be worth-while to review the reports from the neighboring site, which is also downgradient from this one (closer to the Hudson.) He said to contact a John Houshmand, of Clark Construction, who discovered the tanks during renovation work on the property. - SK08/18/06: Left a message for John Houshmand (917-553-4333). - SK08/22/06: John Houshmand called back. He gave me the contact info for Mary Boone, owner of the gallery. Gallery: 212-753-2929, Cell: 917-861-2929. She is not the property owner of the site, she only rents the space. According to John, contractor for the building and several others nearby, after the abatement of the gasoline tanks, fuel oil tank and sump pit the entire area was covered in concrete and established as the Mary Boone Gallery. He also mentioned the adjacent site which supposedly has GW wells and may be useful in characterizing the GW condition for this site. I told John I would look into this other site and get back to him, since he regularly deals with the owner. - SK08/29/06: I discussed the site situation with JK. The site needs a GW investigation, unfortunately there is no access to the interior so the MWs need to be placed on the sidewalk next to the former gasoline USTs and oil/water separator pit. Also, a soil boring next to the gasoline fill port will be needed. I called John Houshmand (917-553-4333) and explained what work would need to be done. I also asked him for the property owner's contact info since it is not on file. He will find out, plus he asked about other consultants to do the work since The Whitman company had a falling out with Mary Boone. I said to convince her that he seems like a reputable company based on the report. Letter was sent out asking for two MWs, a soil boring and sub-slab soilgas sampling. Property owner is a Samuel Weinberg. - SK11/09/06: Reassigned from Stephen Kraszewski to Chanda. (Chanda)01/02/07: Kartik Chnada of DEC sent a letter to Property Owner(Mr.Samuel Weinberg), requiring that an additional investigation of GW and additional monitoring wells at the site. A work plan is mandated by 03/02/07 for approval.01/10/07: Chanda received an e-mail from John Houshmand, Clark Construction Corp.He said that the RP will be retained Long Island Analytical Laboratories(LIAL), Inc. to perform this work. 2/27/07: Chanda received a limited subsurface investigation work plan prepared by LIAL dated on 2/26/07.2/28/07: Chnada reviewed the limited subsurface investigation work plan. on 2/28/07, the Department conditionally approves this work plan. On 2/28/07, Chanda sent a letter to RP(Samuel Weinberg)and his consultant (John Hushmand), Michael Veraldi (LIAL), requiring that an investigation summary report be submitted to DEC for review by April 16, 2007.4/19/07: Chnada received a phone call from Michael Veraldi, LIAL concerning the status of the site. He explained to me the cause of the delay on the investigation work report. 4/23/07: Chanda received a letter from Michael veraldi, LIAL regarding an extension to complete the approved work plan at the site.4/24/07: Chanda sent a time extension approval letter to the RP(Samuel Weingberg) and his consultant (John Hushmand), Michael Veraldi (LIAL). An Investigation Summary Report must be submitted to the Department by May 4, 2007. (Chanda)5/24/07: Chanda called John Hushmand (Clark Construction Corp.)and Micheael Veraldi (LIAL) regarding the investigation Summary Report and present site status. Micheal told me all work has been done and he is waiting for analytical results. The report will be

S104782023

submitted to DEC for review by 5/31/07. 6/6/07: On 6/5/07, Chanda received a Limited sub-surface site investigation report prepared by LIAL dated May 30, 2007.6/8/07:Kartik Chanda of DEC reviewed the imited sub-surface site investigation report regarding this spill. The soil samples, grondwater samples and soil vapor samples showed that results is not exceed our NYSDEC and NYSDOH guideline. Chanda discussed with Joe Sun (NYSDEC) regarding the results of soil, groundwater, and soil vapor samples. Based on the information presented to the Department DEC closed this spill case. 6/11/07: Chanda sent a NFA letter to Samual Weinberg, Weinberg Properties and his consultants (John Houshmand, and Miclael Vrraldi) regarding closed this spill case.

Remarks: while removing tanks contaminated soil found -

If you have any questions please do not hesitate to ask. Best regards, Dave Chan Riteway Tank Maintenance Corp.700 Hicks StreetBrooklyn, NY 11231718-855-7272 phone718-855-7244 faxdavid@petroleumtek.com -----end-----10/1/12 On 9/25/12 received the following e-mail from David Chan of rite-way that also included attachments: site sketch, analytical sample results, closure request letter, and ttt tank only test report.-----start-----Hi Brian, I sent this package back on Sept 27, 2011. I did not follow up with you and thought that you had closed it. I just received another violation from the client dated 8/14/2012 inspection #31107. Please let me know if you need anything else.-----end-----On 9/28/12, received the following e-mail from David Chan which included the same attachments as the 9/25/12 e-mail:-----start-----Hi Brian....-----end-----Tank failed because of hole in vent line. Submitted photos show the vent line with a corrosion hole and no visual contamination. Four samples were taken and were below DER- 10 allowances. A tank system test is required to close the spill case. today, responded to Mr. Chan's e-mail with the following:-----start-----David, The spill case can not be closed until the Department receives a passing tightness test for the whole system. The owner needs to correct the following registration information:1. The product stored is #4 oil not #2 oil.2.The tank overfill prevention is registered as a gauge. A gauge used for overfill prevention is only applicable to aboveground tanks.3. The tank spill prevention is a catch basin. It is registered as none.4. Pipe secondary containment is blank. The information correction application is attached. There is no fee for this application transaction and an original copy must be submitted (fax or e-mail copies will be returned unprocessed).Brian-----end----- bf11/13/12 received the following e-mail from David Chan:Dear Brian, Please find the final tank and system test verifying the integrity of the system for the spill closure. I am following up with the owner with regards to their PBS. Please let me know if you need anything else for the closure. Thank you in advance. Best regards, David Chan Riteway Tank Maintenance Corp.700 Hicks StreetBrooklyn, NY 11231718-855-7272 phone718-855-7244 faxdavid@petroleumtek.com11/27/12 Based on sampling results, case closed. bf

DEC Region: 2
DER Facility ID: 296101
DEC Memo: Sangesland sent contaminated soil letter Curt Schmidt said that Mark Tibbe knows about a major spill site just upgradient from this site. 2/5/03 - TRANSFERRED FROM SAWYER TO ROMMEL 3/1/04 Reassigned from Rommel to K Foley. Spill Remediation Plan received 12/22/03 for removal of four 260gal gas USTs, one 500gal gas UST, and one 500gal no. 2 fuel oil UST. Site under development but once contained three buildings. A former auto service and plastic manufacturing existed on site. Five USTs from NW corner were removed 9/29/03 (four 260gal gas USTs and one 500gal gas UST). Soil excavation was postponed due to safety concerns. Will excavate and direct load for disposal. A minimum of four post-ex samples will be collected at PID hot spots on each sidewall. DTW is 6'bgs and therefore a bottom sample will probably not be feasible. If there is potential for structural damage to the adjacent building, two soil samples will be collected from that sidewall. Two samples will be collected from sidewalls greater than 20' in length. Analysis by VOCs (8021) and SVOCs (8270). Spill #9704542 was previously reported for a fuel oil release from UST. Scaled site map with former tank locations/hot spots and Phase I and II reports. There have been site investigations and proposed remediation plans submitted for 543-547 West 23rd St (spill #8605848). There is documented fuel oil and gasoline contamination of groundwater associated with sites to the east that have encroached upon the site. Mendon Leasing, 527 W 23rd file(#9605688,9808740,9511782, 9513588). 3/22/06 Reassigned from Foley to Tang. (KMF) 4/3/06: Reassigned to Andersen. Three sources of contamination: Fuel oil leak from a UST in northeast corner. Gasoline leak from five USTs in northwest corner. Gasoline groundwater contamination from adjacent Mendon Leasing site. All six tanks were removed by Fleming Lee Shue (FLS). The tank closure report was not received. Spoke with FLS and they will resend a report that was sent to Albany. 4/7/06: Received and reviewed tank closure report. Soil was excavated from three areas of contamination. Residual SVOC contamination from urban fill and VOC contamination from the adjacent spill site is present. The site will be redeveloped with a vapor barrier. NFA letter sent.

Remarks: CALLERS COMPANY PERFORMING EXCAVATIONS ON SITE, AND SOIL SAMPLES ARE SHOWING GASOLINE CONTAMINATION OF THE SOIL AROUND SOME UNDERGROUND TANK SITES ON THE PROPERTY

DEC Memo: SEE ALSO 86-05564, 95-11782, 98-08740, 95-13588.4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel.4/19/04 Reassigned from Rommel to K Foley.5/24/04 Tibbe received voicemail from Curt Schmidt, Fleming Lee Shue (212-675-3225). Replacing AKRF.5/27/04 Added diesel and #2FO to material spilled to address spills #9808740 and 9511782. Spoke to C. Schmidt. Will set up a site meeting next week. 555 W 23th St(spill #0306399), the Tate building, is adjacent to Mendon property which has a system installed on the first floor (no basement). 6/3/04 Set up meeting with A. Fleming for Monday, 6/7. A. Fleming (office 212-675-3225, cell 917-885-1475). 6/7/04 Met with A. Fleming. System located inside Tate has not been in operation. Arnie needs to look into system manufacturer data to see if they can make changes to the system. Wells haven't been sampled since AKRF lost the job. Will arrange to have wells sampled.7/15/04 Received call from C. Schmidt, FLS. Wells will be sampled 7/19-7/20. FLS still looking into making changes to existing system.9/21/04 Spoke with Mohammed Ahmed, Fleming Lee Shue (917-612-6018). He was previously with AKRF. Would like to present all data and propose NFA. He will need to FOIL the file to get AKRF data.10/13/04 Received summary from FLS proposing closure of site.Background:Site is currently a luxury apartment building with art galleries on the ground floor. The site was historically used for freight transportation and warehouse facilities. The Hudson River is approx 0.25mi to the west. Site was mainly used as a truck rental, fueling and maintenance yard. Hertz formerly occupied the site and built a two-story garage in 1963. Hertz installed six 550gal gas USTs in the adjacent parking area located along 24th Street. Hertz also installed a gas distribution system with 4 dispensers. In 1965, Hertz installed four additional 550gal diesel USTs and a separate dispenser. One 7500gal heating oil tank was installed in the SW portion of the building.CMCR, LTD acquired the site from Hertz and also used the site as a truck rental/leasing facility. In 1985, the site was leased to Mendon Leasing Corp. Mendon reported four spills, 9511782(diesel), 9513588(gas), 9605688(gas), 9808740(#2FO). Costco Wholesale purchased the site in 1998 in anticipation of zoning that would allow a retail development at the site and closed the fuel and gas tanks in place. In July 2000, the Related Companies purchased the property and built the current apartment building that covers the site.Tank testing:In July 1990, Mendon was issued an NOV from the FDNY for failing to do the 10yr tightness testing on the six gas tanks.In March 1991, Mendon has all the gas and diesel tanks tested. The gas tanks passed but the diesel tank failed. The diesel tank was repaired and passed retest.In 1993, the heating oil tank was tested and passed.In 1995, the diesel tanks were tested again and failed. The contents were emptied in 5/96 and filled with polyurethane foam.In Feb 1997, the gas tanks were also emptied and filled with water.Previous Investigations:Several invetigations were conducted between 1993 and 2001. ES Engineering did work on behalf of Greyhound Lines. ERM Northeast did work for DEC. AKRF did work for Costco and Related.Soil and GW has been

MENDON LEASING (Continued)

S104275477

impacted by on-site releases of petroleum and possibly also off-site sources. Areas within the parking lot on the north side of the former two-story garage building and inside the building, in the vicinity of the heating oil tank, contained free product in soils and GW. Free product in the former parking lot ranged from 0.08 to 1.63'. Free product found inside the former garage building was as thick as 4'. Dissolved-phase VOCs were also detected in GW as high as 5408ppb. No SVOCs were detected. Soil/GW interface is located at approx 8'bgs, flowing west toward Hudson. GW is not tidal. Bedrock approx 63'bgs, sloping S-SW. Remedial Actions: In Dec 1999, four 550gal diesel USTs and six 550gal gas USTs were removed from beneath the open parking lot. The heating oil tank was removed in Oct 2000. Approx 1000 tons of grossly contaminated soils were excavated and disposed of. The free product appeared on the groundwater surface and removed with absorbant pads. The excavations were left open to monitor for free product. No additional free product was observed and excavations were backfilled. No post-ex sampling was completed. The Department issued a letter on 2/12/01 with comments. A remedial workplan consisting of an in-situ remediation for soil and GW using SVE and bioremediation was presented and approved by the Dept. In March-April 2001, six geoprobes were completed. NMW-1 showed total BTEX in GW at 275400ppb, NWM-2 at 156200ppb, and NMW-4 at 1330ppb. Insufficient GW was recovered from NMW-3 and NMW-5. NMW-6 was non-detect. In October 2000, an SVE pilot was performed. An underslab SVE system was designed and installed to remove residual VOCs and to add atmospheric oxygen to allow bioremediation to occur. Air extracted from below the slab was carbon treated before venting to the roof. A vapor barrier was installed beneath the slab. Operation of the system began August 2002 and operated thru August 2003 for 1615hrs. VOCs, carbon dioxide, oxygen and moisture levels were monitored before the input and at the output of the carbon canisters. System inspection and monitoring were conducted daily for the first two weeks and then weekly inspections were made. At startup, VOCs were measured at 20-50ppm. Concentrations dropped from the initiation in August 2002 thru November 2002 when the system was stopped for seven weeks due to equipment problems. Upon restarting the system in Jan 2003, a rebound was measured with VOCs rising to 60ppm. The system was operated for two weeks with a second 4 week idle period (1/7/03-2/25/03). After this rest period, the rebound did not occur. The system operated for a period of four weeks with a continual decrease of VOC concentration. Equipment failure again shut the system down for five weeks (3/27/03-5/1/03). A slight rebound to several ppm occurred when the system restarted. The system continued to operate thru June 2003 with day-long shutdown for maintenance with no rebounds observed. Levels of VOCs in the extracted air in June 2003 were zero. Between July 2003 and July 2004, the SVE system was out of service due to major damage in the main section of the blower. In August 2004, the SVE blower and motor were downsized to a 10HP regenerative blower capable of 200 scfm at 80 inches of water. VOCs were measured two days after startup which detected levels of VOCs in extracted air between 2 and 5ppm, indicating that no significant VOCs are being extracted from beneath the building. A total of 10 MWs exist on site. Four (MW-3, ERM-4, MW-14, MW-15) are currently located on the sidewalk. The other six (NMW-1 to NMW-6) are inside the Tate building. Max total BTEX detected in MW-14 at 1990ppb (7/16/02). Max MTBE detected in NMW-2 at 410ppb (8/8/03). By the concentrations of MTBE detected in upgradient wells, MW-14 and MW-15, there may be an off-site source. (There are

MENDON LEASING (Continued)

S104275477

two gas stations upgradient at 24th St and 10th Ave.) Concentrations of BTEX have been decreasing in source areas. It appears that removal of grossly contaminated soils and free product at the time of the UST removal in 2001 eliminated the primary source of GW contamination. Groundwater samples to be collected 10/16/04. 11/1/04 Spoke to Mohammed Ahmed, FLS (212-675-3225). Approx 3" of free product(gasoline) was detected in MW-14 (sidegradient of tank field) on 8/17/04. One week later, there was no product detected. Sampled again on 10/14/04, no product detected. He suspects that it is from an off-site source. There is a LukOil Station at 239 10th Avenue (open spills #9810383, 9707190). Oct 2004 monitoring report to be submitted this week. 11/16/04 Received status update (FLS, 11/11/04). GW sampling conducted 10/12-10/13/04. No samples were collected from MW-15 located on the sidewalk of 24th St and NMW-1 located inside the Buia Gallery on 23rd St. MW-15 was backfilled during construction of the Tate Bldg. NMW-1 was inaccessible due to an exhibit. BTEX ranged from ND to 1086ppb(MW-14). MTBE ranged from ND to 130ppb(NMW-2). Off-site sources of contamination may be contributing to site conditions. However, it is not clear that it is not from onsite sources. 12/7/04 Issued letter requiring additional delineation around MW-14 and at former upgradient well location MW-15. Report to be submitted by 3/15/05. 12/20/04 Spoke to M. Ahmed, FLS. Will propose re-installation of upgradient MW-15, one well further upgradient (to confirm possible off-site impacts), and one west of MW-14(sidegradient). 12/29/04 Received proposal from FLS to install three additional MWs. 12/30/04 Issued letter approving workplan. 2/18/05 Received report for the installation of MW-14, 15A and 17. According to the report, there appears to be an off-site source on the northwest portion of property along W24th St. Concentrations of BTEX increased from 1086ppb to 2067ppb in MW-14. Report also states that the LukOil station may be contributing to the MTBE concentrations across the site. 3/15/05 Spoke to Mohammed Ahmed, FLS. Requested two Geoprobes across W 24th St to eliminate the Motor Freight Station and Auto Repair Shop as potential sources. 8/15/05 Spoke to M. Ahmed. A. Fleming spoke to NYSDOH at K. Tang's recommendation. NYSDOH requested subslab and indoor air samples. Results expected next week. FLS proposes to use this data to support closure. Explained that there is still dissolved which remains on the corner of the property. Agreed to wait for results to decide next steps. 11/29/05 Email to A. Fleming and M. Ahmed, FLS, provided comments on the October 17th request for spill closure. Regarding the indoor air and soil gas sampling which was performed, it is unclear if the concentrations detected within the building are due to any background interferences within the building. Directed FLS to conduct a full inventory as directed by the NYSDOH guidance for evaluating soil vapor intrusion. An additional round of indoor air samples must be taken at least 24hrs following the removal of any possible VOC sources. Results will be forwarded to NYSDOH. The Departments will determine further action for vapor mitigation, if required, following review. The groundwater data collected to date has been sporadic with five sampling rounds completed within the last three years. Quarterly groundwater sampling and monthly gauging must be completed and results submitted to the Department. Groundwater direction must be confirmed. The groundwater concentrations at MW-14 were as high as 4340ppb total VOCs in the last sampling round in January and have historically been fluctuating. MW-17, which was recently installed west of MW-14, also had readings of 2777ppb total VOCs. The

Department requires additional wells be installed across W 24th street, north of MW-14 and MW-17, and west of MW-17. A proposal to remediate the contamination in this area will be required. It is expected that the additional delineation, groundwater and indoor air sampling results, with scaled site and contour maps, will be submitted by the beginning of February. 4/20/06 Requested update from M. Ahmed of FLS.6/30/06 DEC lead transferred from K. Foley to J.A. Maisonave. - JAM7/06/06 Requested update from A. Flemming of FLS. Mr. Flemming and I spoke about the history of the site. He still believes the impacts to groundwater at wells MW-14 and MW-17 are from off-site contamination (possibly Lukoil site on 10th Ave and 24th Street). These wells are supposedly up-gradient side of the site. I requested Arnie send me the latest data on the site including groundwater sampling and indoor air sampling data. - JAM7/25/06 Spoke with A. Flemming a number of times. I do not believe a second round of indoor air sampling was conducted, however a vapor barrier is in place. They conducted site-wide groundwater sampling in May 06. Mr. Flemming believes the latest GW results show that off-site sources are contributing to the GW contamination along W24th Street. He will submit a report of the wells that were sampled (not all were sampled because they were inaccessible). I requested that he state his justification for spill closure in the groundwater sampling report.10/16/06 Received a call from Steve Panter of Fleming Lee Shue (212) 675-3225. He said the report is ready and will be submitted this week. - JAM11/14/06 Received the report dated October 20, 2006 via email. The report summarizes all the groundwater analytical data since April 2003. FLS makes the argument that off-site sources are contaminating the sidewalk wells. A summary of all the off-site sources is included as well as a two part technical explanation for the difference between groundwater contamination in the sidewalk MWs and on-site MWs. The first part is a "multivariate analysis," and the second is a comparison between Benzene and MTBE. The report is uploaded into edocs. - JAM11/22/06 Received SVE System Data and Indoor Air Quality Data Summary Report from FLS. Report uploaded to eDocs.01/22/07 Issued a letter to Greg GusheeThe Related Companies, Inc.60 Columbus CircleNew York, NY 10022with the NYSDEC's position on the FLS report. Chris Magee in Central Office reviewed the report and based on the material presented he does not concur with FLS' conclusion that off-site sources are contributing to the contamination found in the sidewalk wells. The letter states that The Related Companies, Inc. is responsible to monitor and remediate the site. Groundwater must be gauged and sampled quarterly and based on the results the NYSDEC will determine if a remedial strategy is necessary. The letter is uploaded into edocs. - JAM8/21/07 Reviewed FLS letter submitted to the DEC on April 13, 2007 in response to DEC comments sent on 1/22/07. FLS believes that contamination found in off-site wells on West 24th Street stems from a different source. I sent the letter to Chris Magee in Central Office for review. - JAM9/06/07 Sent email to Steve Panter at FLS. The email states that, "the data are inconclusive and do not prove that an off-site source is affecting the groundwater in the monitoring wells in the sidewalk... The Department cannot approve spill closure at this time. A round of groundwater samples should be collected from all wells to obtain up-to-date groundwater quality data. Results should be submitted with appropriate recommendations for further monitoring and/or remedial activities if necessary." - JAM1/18/08 Received an email from Jim Harrington in Central Office. Steve Panter from FLS

Remarks: contacted Mr. Harrington stating that they will do another round of sampling but he wants assurance that after the next round of GW sampling the spill case will be closed. Mr. Harrington said he will review the spill case and material forwarded by Mr. Panter. Afterwards, he will contact Region 2 staff for further discussion before responding to Mr. Panter. - JAM9/22/08 Reviewed the Groundwater Sampling Report/Spill Closure Request submitted by Flemming Lee Shue dated May 12, 2008. All on- and off-site monitoring wells were sampled in February 2008. Groundwater monitoring results show no significant change in contaminant levels in any of the on-site or off-site wells. The sidewalk wells continue to show exceedences for VOCs in groundwater (i.e. 748ug/L total VOCs in well MW-14 and 829ug/L total VOCs in MW-16) however, the exposure risk from these contaminants is low. The groundwater monitoring report is uploaded to eDocs. Senior technical staff in Central Office supports closure of this spill without meeting recommended objectives because of the low risk of exposure. This spill case was closed and a NFA letter was issued. NFA uploaded to eDocs. - JAM

CALLER FOUND .7 FEET OF GASOLINE IN A TWO INCH GROUNDWATER MONITORING WELL. LOCATION IS A TRUCK LEASING COMPANY. MARK TIBBE NOTIFIED OF RESULTS. ADDITIONAL MONITORING WELLS TO BE INSTALLED AND SIX TANKS ARE TO BE PULLED.

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"8/2001-Tank closure report prepared by Franklin Company Contractors. 6/29/2001-Franklin implemented bioremediation by mixing 240lbs of ORC with surrounding soils and filling in excavation. 500 gallons of Waste stream technologies W-4 bio-blend mixture also injected.. Site was bakcfilled with 3 to 6 feet of clean fill, 6 inches of crushed stone and an 8-mil polyethylene vapor barrier. Area was then covered with 6 inch reinforced concrete slab. Soil VOC pass TAGM, soil SVOC exceed TAGM but are due to fill composition. Site visit by Jacob Krimgold showed no visual evidence of contamination. Groundwater VOC and SVOC also pass TAGM. 12/13/2001 Spill closed as per Mark Tibbe, Jacob Krimgold and myself (all NYSDEC personnel).
Remarks: SOIL SAMPLE RESULTS FROM REMOVAL OF 3 TANKS AT LOCATION. NO VISABLE SIGNS OF CONTAMINATION.

DEC Memo:

BROOKLYN, NY
001
Not reported
Not reported
Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"01/05/90: (6) MONITORING WELLS INSTALLED,OIL TANKS BEING TESTED BY CONTRACTORS(TRINITY & FENLEY & NICOL), ALL TANKS PUMPED & CLEANED, REPAIRING WATER MAIN.10/10/2003-Vought-Spoke with LaJuana Smith (works for Clinton Housing-212-967-1644) and she is looking to resolve spill). In Nov 1996 DEC required further work from DEC. Ms Smith will call back on Wed for current site status and will possibly submit FOIL request upon her discussion with bank.10/17/2003-Vought-File review by Vought:Community Board 4 Meeting Notice-2/21/90-Meeting held with DEC, NYFD, NYPD, DCA and NYCDEP to discuss current status and plans of site.Fax to DEC from Gaseteria-2/22/90-Pedneault Associates (516-467-8477)-Groundwater analyticals from six monitoring wells and two soil disposal piles (no site plan in file). Groundwater analyticals show 275ppb benzene(W1), 341ppb benzene(W2), 327ppb benzene(W3), 448ppb benzene(W4), 158ppb benzene(W5) and 128ppb benzene(w6). Disposal samples show 1433ppb benzene(east pile) and 188ppb benzene(west pile).Groundwater analyticals-5/21/90-Pedneault Associates-Groundwater analyticals from six monitoring wells (no site plan in file). Groundwater analyticals show 2308ppb benzene(W1), 1091ppb benzene(W2), 680ppb benzene(W3), 385ppb benzene(W4), 736ppb benzene(W5) and 810ppb benzene(w6). Subsurface Investigation-7/90-Environmental Management Services. "In Jan 1990 a subsurface water line broke beneath 10th avenue near the northwest side of the site. Water entered the basement of the adjoining building along with some gasoline." DEC required installation of six monitoring wells on Gaseteria property. Gasoline vapors detected in sewers in building across 10th Avenue. This subsurface investigation consisted of eight soil borings and installation of two additional monitoring wells. Three pump islands serviced by 12 (550-gallon) gasoline USTs and one (2000-gallon) diesel UST. Local topography slopes to the north. Groundwater at depth of 7-9' below grade. Bedrock is 7-11' below grade and slopes downward toward the northwest and southwest corners of site. Groundwater "suspected to flow northward". All wells onsite were set "firmly on bedrock" and "there is not sufficient information available to determine specific groundwater flow". No free product detected in wells. Groundwater appears to flow from 10th Ave towards the USTs. Report recommends groundwater monitoring with possible additional delineation. No soil samples submitted for analysis nor were screened via PID.Letter from DEC to Gaseteria-7/12/90. Letter from DEC (Sigona) to Gaseteria (Oscar Porcelli) requesting subsurface investigation work plan to be apporoved by the DEC to investigate the presence of gasoline vapors. Plan must be received by the DEC by 7/17/90. Odor complaints in January 1990 and again in July 1990. Sigona performed site visit on 7/13/90.Fax to DEC-7/17/90. Letter from Environmental Management Services to DEC (Sigona) proposing: 1)investigation of subsurface utilities as potential pathways 2)determination of groundwater flow direction 3)groundwater monitoring 4)installation of six soil borings along western margin of station and installation of two additional monitoring wells.Letter from DEC to Gaseteria-1/5/95. Letter from DEC (Sigona) to Gaseteria (Angel Chang) requiring "cleanup and removal of discharge". Letter also required immediate steps to abate seepage into basement of 403 W

40th Street. Response from Gaseteria required to DEC by 1/15/95. Letter from Gaseteria to DEC-1/20/95. Letter from Gaseteria (Chang) to DEC (Sigona) stating that Gaseteria will: 1)"divert the flow of surface water away from the south wall of the building" 2)install a SVE system in the basement alongside of the south wall between the concrete floor and the building foundation. Gaseteria does not believe "there is a need to install new groundwater monitoring wells or to further develop existing wells.....since the problem appears to be surface related". Sample analyticals from basement of 480 10th Ave-8/96. Soil analyticals show 20664ppb ethylbenzene(sample 48334), 59164ppb xylene(sample 48334), 11000ppb naphthalene(sample 48334). Letter from DEC to Gaseteria-9/10/96. Letter from DEC(Rommel) to Gaseteria(George Esayan). "DEC in possession of analyticals from Clinton Housing(403 W. 40th Street)". Gaseteria required to sample two of the onsite monitoring wells for 8021/8270/lead. Letter from Clinton Housing Development Company-9/11/96. Letter from Clinton(Joseph Tuana) to DEC(Rommel) with copies of analyticals discussed above. Letter from Carl Sulfaro (attorney for Gaseteria) to DEC (Rommel)-9/20/96. Letter stating that Sulfaro "authorized EMS Environmental Services to take two samples of the onsite monitoring wells". Samples will be taken 9/27/96. Groundwater analyticals-10/10/96. Analyticals from MW5 by EMS showing 42.56ppb methylene chloride, 5549ppb benzene, 107.33ppb toluene, 1024.75ppb ethylbenzene, 393.15ppb xylene and 0ppb MTBE. Letter from Clinton(Kathy Prioleau) to DEC(Rommel)-11/11/96. On 10/27/96 "strong fumes entered basement of 480 10th Ave". NYFD onsite. Letter requests that DEC relay information on "testing done at Gaseteria and UST inspection of Gaseteria". Letter from DEC(Rommel) to Gaseteria(Sulfaro)-11/25/96. Letter stating that requirements of fax dated 9/10/96 were not met because only one well was sampled and 8270/Lead analyses were not performed. Letter requires: 1)submittal of an investigation plan to delineate soil and groundwater contamination 2)source determination 3)installation of three additional monitoring wells 4)installation of an air sampling port on the exhaust line of the venting system and monthly sampling for benzene and THC. Letter states that "action must be taken within 45 days". Letter from DEC(Rommel) to Prioleau(Clinton)-11/26/96. Letter stated that "DEC was never notified" of odor complaints as 11/11/96 letter stated. Also attached to letter was copy of 11/25/96 letter from DEC to Gaseteria. Letter from Gaseteria(Sulfaro) to DEC(Rommel)-1/15/97. Letter stating that Gaseteria "would prefer to perform site investigation, soil removal and/or remediation as needed concurrent with excavation anticipated as part of Federal EPA UST upgrade mandate" and the work is expected to take place in "Spring 1997". Letter from DEC(Rommel) to Gaseteria(Roberto Porcelli)-7/29/98. Letter "serving as final notification of obligations regarding petroleum contamination and vapor incidents". On 6/28/03 petroleum contaminated groundwater infiltrated basement of 480 10th Ave due to heavy rains. This is the "seventh vapor complaint associated with Gaseteria since Jan 1990". Letter states that the "Department is allotting 30 days for Gaseteria to satisfy all requirements in DEC letter dated 11/25/96". Deadline of 8/31/98 given by DEC. Letter from Gaseteria(Seth Friedland) to DEC(Rommel)-8/13/98. Letter stating that "the June 1998 episode was caused by heavy rains and appears to be an isolated event" and that Gaseteria does not agree with Departments conclusions". Letter stated that the station will be taken out of service on 9/15/98, permanently close the USTs and reinstall upgraded

USTs on the northern boundary of the site. Letter from DEC(Rommel) to Gaseteria(Roberto Porcelli)-8/28/98. Letter serving as a "reminder of 8/31/98 deadline". Letter from Gaseteria(Oscar Porcelli) to DEC(Rommel)-8/28/98. Letter stating that new USTs were ordered and that work will start the second week of September. Gaseteria intends to install four monitoring wells to replace those destroyed by station upgrade and will retain Environmental Management services to develop remedial plan. Letter from DEC(Rommel) to Gaseteria(Oscar Porcelli)-8/31/98. Letter confirming phone conversation where an agreement was reached that Gaseteria will comply with following requirements and complete the tank upgrade prior to 9/30/98. Letter also required that a workplan be submitted prior to 9/4/03 which included 1)complete delineation 2)soil and groundwater sampling plan for use during excavation activities 3)sampling of SVE emissions 4)installation of three monitoring wells into bedrock and 5)cleaning and proper disposal of oil in the building floor drains and all associated discharge points. Letter from Camin Cargo Control(Gaseteria's Enviro consultant) to Gaseteria-10/5/98. Letter from Camin(Patricia Badding) stating that a site investigation and report shall be prepared. Investigation with Geoprobe and subsequent installation of monitoring wells scheduled for 10/16/98. Soil samples will also be collected during excavation for new USTs. Venting system emissions will also be sampled. "Cleaning and proper disposal of any oil in the building floor drains and all associated discharge points is the responsibility of Gaseteria". Letter from DEC(Rommel) to Gaseteria(Oscar Porcelli)-10/8/03. Letter acknowledging receipt of Camin 10/5/98 proposal and requiring the following by 10/13/98: 1)Site plan with proposed boring locations 2)discussion of locations 3)discussion of endpoint sampling locations from UST excavation 4)discussion of delineation procedure 5)include MTBE with analyticals 6)collect groundwater samples from Geoprobe locations. Letter from Camin(Badding) to DEC(Rommel)-10/13/03. Submission of 1)site plan with ten boring locations 2)Collection of six endpoint soil samples from UST excavation 3)excavation and disposal of contaminated soil encountered during tank installation 4)Inclusion of MTBE analyticals 5)collection of groundwater samples(if encountered). Investigation Results from Camin(Badding) to DEC(Rommel)-11/6/98. Results of eight soil borings performed. Soil analyticals show 2149ppb MTBE(SB1), 526ppb benzene(SB2), 188ppb benzene(SB4), 212ppb benzene(SB5), 4576ppb MTBE(SB6), 1458ppb benzene(SB7), 29114ppb naphthalene(SB7), 187ppb benzene(SB8). Groundwater analyticals show 1239ppb benzene(SB4), 1975ppb benzene(SB5), 5360ppb benzene(SB6). Subsurface Investigation Report Camin Badding 908-523-0616 10/16/98). Investigation report including results above of eight soil borings performed. "There is approximately 2-4 inches of contaminated soil at the soil/bedrock interface in soil boring locations SB2, SB4, SB5, SB7 and SB8. Bedrock at depths of 6-11.5' below grade". "A sheen was detected on all samples"(groundwater). Venting system was sampled on 12/11/98 via a vacuum canister attachment to vent. Removed dispenser island is the proposed location of new USTs. See analyticals above. Venting analyticals show 264ppm TPH and no other volatiles. Baseline Acquisition Assessment Report-10/10/02 Delta Environmental (Brad Fisher). Purpose was to establish baseline conditions prior to proposed lease and raze and rebuild of site by BP. One soil borings performed in 4/02 to depth of 11.5'. Two borings drilled to 24.5" via air rotary and converted to temporary monitoring wells (MW1 and MW2). Delta recommends 1)gaseteria install permanent monitoring wells to

S100167794

delineate contamination. "It is Delta's understanding that Gaseteria will retain the environmental liability of the subject site until spill closure has been obtained". At time of assessment three USTs on site (two 6000-gallon gasoline USTs and one 6000-gallon diesel UST) and four pump islands with six dispensers. Surrounding area is multiple story apartment buildings. "Groundwater is located within bedrock fractures at depths between approximately 12.5 and 13.5 ft bgs". Former USTS onsite which were CLOSED IN PLACE include two (6000-gallon) gasoline USTs in 1998, one 6000-gallon diesel in 1999, ten 550-gallon gasoline USTs in 1998, one 550-gallon waste oil in 1998 and one 550-gallon fuel oil in 1996. Soil analyticals show 4570ppb xylenes(SB1) and 3970ppb isopropylbenzene(SB1) from depths of 10-11.5'. Groundwater analyticals show 148ppb benzene(MW1), 24800ppb MTBE(MW1) and 30.7ppb benzene(MW2).10/21/2003-Vought-Reviewed site with DEC(Rommel). Sent Stipulation Agreement with the following requirements: 1)Groundwater delineation via installation of bedrock monitoring wells at former boring locations SB1, SB4, SB5, SB6, SB7 2)Monitoring of vapors and groundwater intrusion 480 10th Ave 3)current status of SVE system and submittal of historic and current SVE effluent samples for benzene analysis or collection of indoor air samples from 480 10th Ave. 10/24/2003-Vought-Called LuJuana Smith (212-967-1644) and left message and explained requirements of 10/21/03 letter.10/27/2003-Vought-Received message from Steve Muller will be taking indoor air samples from 480 10th Avenue. Vought returned call to Muller (516-395-5957).10/28/2003-Vought-returned call to Steve Muller to discuss indoor air samples. Left message to return call to DEC. Left message for LuJuana Smith to call DEC. Vought spoke with Muller and okayed PID and stated that SUMA sample as per NYSDOH guidance was not necessary until 1)closure of SVE system or 2)PID indications of petroleum vapors followed by subsequent remediation. Vought also instructed Muller to check sumps. Vought spoke to LuJuana Smith who will be sending in FOIL Request for continuous updates on site. Vought also called Muller and gave him LuJuana's phone (212-967-1644) for access arrangements.11/6/2003-Vought-Spoke with Steve Muller who was onsite. No PID readings and no olfactory evidence of petroleum and no groundwater infiltration into basement and no product in sump. Muller will produce summary letter and send to DEC.11/7/2003-Vought-Received Summary Letter from Applied Geosolutions(Muller). Site visit performed on 11/6/03 and inspection of basement at 480 10th Ave. "AGS observed no olfactory detection of odors or vapors consistent with hydrocarbons related to gasoline". PID readings of 4.8ppm were attributed to moisture in basement. Small amount of standing water present near leaking hose. No signs of product in sump. Vapor abatement system unoperational during site visit. Photos of basement submitted with report show no free product or petroleum impact.11/24/2003-Vought-Received signed STIP from Adam Good(Gaseteria) with revised Corrective Action Plan.11/26/2003-Vought-Spill transferred from Rommel to Vought. Vought received call from LuJuana Smith and she requested update. Vought faxed her copy of 11/7/03 report and letter sent to Gaseteria on 10/21/03. Vought submitted STIP for implementation to DEC Kunkel.12/2/03-Vought-STIP implemented by Kunkel. Copy sent and faxed to Good and Muller.12/17/2003-Vought-See closed spill 0301220 at same location.9/14/04-Vought-New file review by Vought:Letter from Applied Geosolutions (Steven Muller 516-395-5957). "On November 6, 2003 Applied Geosolutions inspected the basement of 480 10th Avenue to

BP AMOCO (Continued)

S100167794

perform vapor monitoring and to identify the presence of groundwater". "During the inspection AGS observed no olfactory detection of odors or vapors consistent with hydrocarbons related to gasoline. The air space was monitored with a portable PID indicating a measurement of 4.8 ppm... This detection is likely the result of low atmospheric pressure followed from periods of rain causing the basement to be damp." The basement floor did not indicate the presence of groundwater...".Line and Dispenser Upgrade Report (Delta Environmental Brad Fisher 914-765-8180). "This Line and Dispenser Report summarizes the results of pump island and product piping upgrade assessment activities conducted by Delta Environmental and Gasoline Installations on behalf of BP Products North America". Work performed included the removing and installing new spill containment boxes beneath each dispenser, removal and replacement of product piping and installation of electronic line leak detection systems. Soil analyticals only show minor TAGM 4046 SVOC exceedences attributable to fill.Subsurface Investigation Workplan (Applied Geosolutions)-July 2004. Bedrock at depth of 10' below grade and groundwater at depth of 12.5-13.5' below grade. Report proposes installation of four wells via air rotary followed by groundwater sampling. Groundwater flow direction not determined as of yet.9/14/04-Vought-Sent letter to Gaseteria approving of Subsurface Investigation Workplan. Vought received message from Lujuanna Smith (212-967-1644) and returned call. Vought spoke to Smith and no indication of vapors was noted. Ms. Smith requested info on the applicability of the BCP program for 480 10th Avenue and Vought replied that was only available if HPD was willing to take responsibility of the spill and that she should call Albany for further information. Vought also suggested that she return the call to DEC on 11/14/04 which is when the workplan results are due to DEC.9/17/04-Vought-Received fax from Applied Geosolutions (Muller). "466 10th Avenue-AGS is currently getting drilling quotes and will complete the Workplan within the 60 day time frame".1/6/05-Vought-Reviewed Subsurface Investigation Summary Report (Applied Geosolutions) dated December 2004 and received on 1/3/05. Location north of USTs not possible due to concrete with rebar. Installation of three monitoring wells. Groundwater from 7-11' bgs and flow to the west. Groundwater analyticals show 48ppb xylene(MW1), 13ppb 1,2,4-trimethylbenzene(MW1), 17ppb 1,3,5-trimethylbenzene(MW1), 26ppb naphthalene(MW1), 1400ppb MTBE(MW1), 23ppb MTBE(MW2), and 20ppb MTBE(MW3). "The existing groundwater monitoring wells should be monitored on a monthly schedule and sampled on a quarterly schedule to document changes in groundwater elevation and contaminate concentration trends in order to develop and appropriate remedial strategy". DEC requires: 1)installation of monitoring wells on West 37th Street north northeast of site and downgradient from abandoned tankfield along 10th Avenue.1/19/05-Vought-Meeting at DEC with ASR Tomasello. Will examine possibility of borings across 10th Avenue (may not be possible due to utilities) and also onsite adjacent to 480 10th Avenue. If onsite boring adjacent to 480 10th Avenue is not possible then boring will be installed on 37th Street.2/17/05-Vought-Spoke to Muller and site visit scheduled for 2/24 at 10am to discuss possible well installation locations.2/24/05-Vought-Site meeting with ASR Tomasello and no borings possible across 10th Avenue. Well will be installed onsite under canopy downgradient of abandoned tankfield. Well will also be installed on West 37th Street north northeast of site.Obligado- SITE

TRANSFERRED FROM VOUGHT TO OBLIGADO 10/12/05 - Spoke with Tomasello ASR, requests to talk about closure for sp0206783. 10/17/05- Obligado - File Review: Final Subsurface Investigation Report, dated June 2005. 4 monitoring wells installed at the site. Wells were installed into Bedrock down to 25 ft bgs. 3 wells installed in December 2004, one additional well installed in March 2005. Groundwater encountered at approximately 7 to 11 feet. No product encountered. Initial gw samples in Dec. 2004 show ND for Benzene in all wells, 1400 ppb MTBE (MW-1), 23 ppb MTBE (MW@), 20 ppb MTBE (MW-3), 48 ppb Xylene (MW-1). March 2005 gw results show 140 ppb benzene (MW1), 2100 ppb MTBE (MW-1), 26 ppb benzene (MW-3), 16 ppb MTBE (MW-3). June 2005 results show 45 ppb benzene (MW-1), 11 ppb Ethylbenene (MW-1), 750 ppb MTBE (MW-1), 52 ppb benzene (MW4), 10 ppb toluene (MW-4), 170 ppb Napthalene (MW4), 55 ppb MTBE (MW4), 193 ppb xylenes (MW-4). 4Q05 Monitoring Report, dated 10/15/05. Ground water analyticals at show 20 ppb benzene (MW-1), 580 ppb MTBE (MW1), 23 ppb MTBE (MW-2), 21 ppb benzene (MW-3), 15 ppb MTBE (MW-3), 16 ppb benzene (MW-4), 52 ppb ethylbenzene (MW-4), 140 ppb MTBE (MW-4). 11/14/05 - Obligado - Site visit with ASR Tomasello. Request to see at least 2 more quarters of monitoring at a minimum. 12/8/05 - Obligado - Will do a sensitive receptor survey. Continue monitoring. Only 2 quarters of data at MW4.3/1/06 - Obligado - PPhone call with Chris/STeve, ask that site be monitored quarterly not monthly. 4/12/06 - Obligado - review 1Q06 monitoring report. BTEX ND to 33 ppb, MTBE ND to 800 ppb. 11/21/06 - Obligado - Reviewed Closure Petition/Sensitive Receptor Survey. Sent email to ASR denying NFA stating the following: "Due to historical vapor issues in the adjacent apartment, and the presence of benzene above guidance levels in ground water, the Department requires laboratory analyzed vapor samples from either the slub slab system (if operational) or indoor air samples to confirm no vapor intrusion. The Department also requires an additional round of ground water monitoring to confirm benzene and MTBE levels are still decreasing. NYSDOH Vapor Intrusion Guidance should be followed when collecting air samples available at http://www.health.state.ny.us/environmental/investigations/soil_gas/svi_guidance/index.html. Please submit the results of the additional investigation by January 21, 2007." 12/1/06 - Obligado - Steve Muller will be onsite today to collect additional data. 5/19/09 - Obligado - Meeting with DEC, ASR, GASeteria. They conducted a groundwater monitoring event and a vapor intrusion investigation in the adjacent residential building. According to report no Vapor intrusion was occurring. Ground water results found low levels of BTEX in GW, max 23 ppb and MTBE is continuing to decrease from 1400 ppb in 2004 to 250 ppb in 1Q09. They will submit a workplan for a confirmatory soil boring investigation by 7/31/09. 11/20/09 - Obligado - Reviewed a revised Investigation Work Plan. The plan proposes to install 3 monitoring wells at the site. 2 wells are proposed in the area of the former abandoned 550 USTs and one is downgradient of the dispenser island. I sent a letter to Gaseteria approving the plan. 3/22/10 - Obligado - Review the 4th quarter 2009 monitoring report. Max BTEX is 8 ug/L. Max MTBE is 140 ug/L. No LNAPI present. 6/14/10 - Obligado - I reviewed the Remedial Investigation Report. 2 Additional soil boring/monitoring wells were installed. 1 soil boring/well location was not completed due to utilities in that area. Soil samples were collected from one of the 2 locations, but the other location had shallow bed rock so no soil sample was collected. No soil impacts were detected at the one location where soil was collected. Ground

Remarks: water results showed 13 ppb total BTEX at newly installed MW5. MW6 had no exceedences of TOGs The existing monitoring wells were sampled as well. MW4 had max MTBE at 150 ppb, and BTEX at 14 ppb, and total VOCs were 174 ppb. MW2 had 15.3 ppb BTEX and 11 ppb MTBE. This site has minimal ground water impacts the 6 wells on the site, and lack of evidence of contaminated source soils. Also a VI investigation was previously performed at the adjacent apartment building and no vapor intrusion was determined to be occurring. After discussion with DEC Tibbe, this spill has been closed.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"12/9/03 TJDReassigned Demeo >>> Rommel.11/23/05- Obligado - Spill transferred from Tang to Obligado11/29/05 - Obligado - From Caller Remarks: "UNDER GROUND PRODUCT LINE WAS FOUND TO BE LEAKING. CONTACT PERSON WAS NOTIFIED OF THIS WITH THE RECOMMENDATION TO EXCAVATE AND REPAIR". No files were found to document repairs or tests. Review PBS records - PBS# 2-285919 listed for site. Site has one 2000 gallon #2 fuel oil AST, two 4000 gallon gasoline USTs, one 550 gallon and two 275 gallon other ASTs. Time Warner Facility Manager Phone # (212) 598-735711/30/05 - Obligado - call Time Warner at number listed above. No answer.12/15/05 - Obligado - called again, no answer. Called Dave Greffinius (consultant for neighboring property) to see if he was able to get any facility information for Time Warner building.12/19/05 - Obligado - voice mail from Greffinius (12/15). Gave contact names and a phone number for Time Warner Facility: Frank Soto, Barry Rosenblume, and Tom Lonst (212) 379-2852 12/20/05 - Obligado - tried calling above listed number, appears to be a wrong number.12/28/05 - Obligado - Site visit. Contact information for manager - Terrence Charlton (212) 598-7358. Called, spoke with secretary, Terrence Charlton on vacation, will call back next Tuesday.1/3/05 - Obligado - Called Terrence Charlton. He does not know anything about spill. He will contact the Operations Manager - Britt Wenzel. Tell him the DEC requires information regarding the tank failure, if repairs were made, if soil/gw was impacted, if tanks were retested.1/4/05 - Obligado - Received phone call from Abbas - engineer from Time Warner. Gave him my contact info with instructions to send/fax any files he had regarding this spill number.1/19/05 - Obligado - Call Abbas Family (718-474-3400) to inquire about documents. Left message. Abbas called back, he will send the information the beginning of next week.3/31/06 - Obligado - Review documents sent by Abbas, received by Department on 1/25/06. Documents installation of new fill box in 1999 and 2002, and passing tightness tests in 2004 and 2005. Documents do not shed any light on spill incident reported by Crompco on 12/15/00. Call Mr. Abbas and he said he will research the file for more information. He requested a spill report. I will email the spill report so he can find pertinent information.5/5/06 - Obligado - Received additional documents. 5/11/06 - Reviewed documents. Corrosion in fill port pipe, caused leak to soil, soil excavated to 2 ft bgs. No mention of endpoint soil sampling. Send letter to Time Warner requiring soil boring

investigation and collection of gw sample from below line where leak occurred. 5/16/06 - Obligado - Delivery confirmation on 5/13/06/6/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Three soil borings advanced. Refusat at SB1. Soil impacts above TAGM at SP-2@10 ft, SP-3@5 ft, and SP-3@10 ft. Greatest contamination at SP3 with 93,000 ppb MTBE and 2,242 ppb benzene. Recommends lateral and vertical extent of impact be delineated including offsite sampling. After delineation a Remedial Action Workplan will be submitted. 6/20/06 - Obligado - Phone conversation with Kristin Dillner 631-586-4900. She will email a workplan for additional delineation. Obligado - received workplan approved with minor changes. Required one soil boring to be moved closer to former remote fill area and collection of 3 ground water samples. One from previous soil boring area above, one from remote fill area, and one inbetween the dispensers. 8/7/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Six soil borings, 3 ground water samples collected from temporary well points. Ground water impacts detected at all 3 gw sampling points. Greatest soil and ground water impacts detected west of dispensers and southwest of UST field (TW1/SB4). GW results in ppb from TW1 show 7327 benzene, 41,697 toluene, 2783 ethylbenzene, ~23500 total xylenes, 321,467 MTBE. 8/21/06 - Obligado - Phone conversation with Kristin Dillner from F&N. Told her that permanent monitoring wells needed to be installed, the plume would need to be delineated, and a RAP submitted. I told her I would send Abbas a Stipulation agreement this week. 8/28/06 - Obligado - Sent STIP to Azzaro. Due date for signature is 9/25/06. CC to Dillner and Abbas Family. 90 days for ISR and 60 days for RAP. 8/31/06 - Obligado - Received delivery confirmation of Stip Agreement. 10/10/06 - Obligado - Signed STIP received by Department on 9/26/06. CAP has been modified and signed by RP. Called Abbas to schedule a meeting to discuss. 11/1/06 - Obligado - Had a meeting with Sal Azarro, Manfred Bohms, Abbas Family. Discussed scope of work. UST excavation will probably take place in May 2007. They can proceed with monitoring well installation in meanwhile. I will send them another CAP with modifications based on discussions. 11/22/06 - Obligado - Email from Abbas with another revised CAP. After review the CAP looked acceptable. I attached it to the STIP and emailed it as a final version back to Abbas requesting signature by 12/2/06. 11/27/06 - Obligado - Signed STIP received by Department. 12/4/06 - Obligado - Stipulation Agreement executed by Oliva 1/17/07 - Obligado - Called Manfred Bohms to discuss the status of project. He said 4 wells were installed, 2 onsite and 2 in the sidewalk. He is trying to gain access to the other sidewalk wells to sample. He will need a 2 week extension and will send an email request. 2/27/07 - Obligado - Received a letter from Abbas Family of Water Gorman engineers. The letter documents ground water results from 4 monitoring wells that were installed. Requests to collect samples from sidewalks in front of adjacent buildings. Upon the sampling and testing of the groundwater from the neighboring premises they will submit investigation report. 3/16/07 - Obligado - Abbas Family asked to get access to wells in sidewalks in front of 521 and 510 w. 21st street to do ground water sampling and gauging. Since this would help to allow a more accurate picture of ground water conditions in the area I sent a letter to Guy Roberts and to the owner of Sorage USA and asked for them to grant access to Time Warner to do the work. 4/17/07 - Obligado - Email from Greffinius from Delta stating

TIME WARNER CABLE (Continued)

U003074535

they would grant access but asked to be copied on analytical results.4/18/07 - Obligado - Spoke with Jessica from Gannette Fleming. She said they will be doing a tidals study on using the wells in the sidewalk and they would not be collecting samples. I forwarded this information to Greffinius. Additioanlly, Jessica said I should expect a report by May 31 and UST excavation in June.5/9/07 - Obligado - Recevied a phone call from Andy Rudko of AKRF, 646-388-9526, who is working for a party looking to purchase the site from Time Warner and had some questions. I didn't give him any details, but that Time Warner signed a Stipulation agreement and I am waiting for an investigation for well installations.5/14/07 - Obligado - Spoke with Abbas Family. He said project has been delayed because the new facility where Time Warner Cable will be moving to in Brooklyn is not ready yet. He will send a letter stating the same. They surveyed all the wells to get a ground water flow map.5/18/07 - Obligado - Received a progress reprot letter. Delays have been incurred at new Time Warner facility in Brooklyn. So Time Warner will vacate the 21st street facility by the end of August. At that time the USTS and piping will be removed. Called Abbas, asking him when I will receive a report of all the investigation activities. He said 3-4 weeks. I told him I needed the report sooner than that. He will talk to Time Warner to expedite the report.7/19/07 - Obligado - Reviewed documents entitled "Investigation Summary Report", dated February 27, 2007, "Update on CAP's Milestone and Monitoring Well Survey Report", dated June 11, 2007, and "Monitoring Well Survey and Tidal Study", dated June 8, 2007. The documents summarize investigation activities performed to delineate soil and ground water contamination. After review of documents sent a letter to Time Warner requiring the following by Nov 1, 2007.1) Quarterly Ground Water Monitoring - Collection of ground water samples for laboratory analysis from monitoring wells GF-MW1 through GF-MW4 and monitoring wells R-MW-1, R-MW-3, and either R-MW2 or R-MW-9. 2) Additional Delineation - Due to the extremely high concentrations of BTEX and MTBE in ground water, the Department requires installation and sampling of 3 additional monitoring wells to delineate the areal extent of the contaminant plume. One monitoring well must be installed in the north sidewalk of 21st street approximately 45 ft west of GFMW-2 to determine the down-gradient extent of plume and the extent to which the plume from Time Warner site is impacting other properties. One monitoring well must be installed north of GFMW-1 to delineate the areal extent of plume in the cross-gradient direction. One monitoring well must be installed northeast of GF-MW-4 to establish up-gradient background ground water conditions. 3) Summary of UST Removal - Documentation of the UST system and contaminated soil removal and endpoint sampling results must be submitted to the Department. 4) Remedial Action Plan - A Remedial Action Plan (RAP) should be submitted to the Department. The RAP must contain a plan to remediate residual soil and ground water contamination subsequent to source removal. The RAP must also include an Operation, Maintenance, and Monitoring Plan. If the property is to be redeveloped for a different use, the RAP must state the future intended use of the site and include a Vapor Intrusion Mitigation Plan.7/19/07 - Obligado - Received call from Abbas Family. He received the letter and he said they would do the work. He asked if they need to do ground water remediation. I told him yes. He said the deadline might be hard to meet but he would let me know later. 10/19/07 - Obligado - PBS Violation hearing with DEC Urda and Falvey, Scott Furman (Time Warner

U003074535

attorney), Tradewinds Contractors, and Abass Family. During removal of USTs Brian Falvey visited the site for a PBS Inspection and found several PBS violations. Tank removal was put on hold due to violations, however they did continue to move some contaminated soil found in area of dispenser product lines. They found 2 additional USTs, that will be properly closed. Prior to any excavation, I will visit the site to inspect. A site visit is tentatively scheduled for Thursday November 1. The 4000 gallon USTs were encased in concrete and according to the attorney the tank vault is clean, but I will inspect. They will also core through the dispenser island concrete vaults. 12/4/07 - Obligado - Met on site with Scott Furman and Paul Woodel. The gasoline USTs have been removed as well as some contaminated soil. Endpoint samples only showed one hit for MTBE on eastern sidewall. Bottom was a concrete slab, but I couldn't see it because when they previously cored through the bottom the gw infiltrated up the whole and filled the bottom of the excavation. According to Scott Furman, at no time during work did they notice any sheen or petroleum smell from the water. And the tanks were in good condition. He said they would excavate a little more on the east to try and get clean side walls, then back fill. They showed me two additional excavations in the back of the building, one for a 550 UST of unknown contents, and the other was a suspected UST location which they didn't find any UST. From the 550 UST they took sidewall samples and only found several PAHs, but it appeared to be levels similar to urban fill. After looking at the data I approved backfilling those 2 excavations. The major contamination is in the area around the dispenser and the vent lines, with elevated MTBE and BTEX, in the southwestern corner of the site and the sidewalk. Moving forward they will 1) excavate a little more on eastern sidewall of tank excavation then backfill, 2) install 2 additional wells to delineate the southwest gw plume area, 2) additional excavation to remove as much contaminated soil as site constraints allow around vents and dispensers 3) propose a plan for gw water treatment they may due treatment at time of excavation since soils and gw will be exposed. Since the new tenant plans to build a hotel in 1 years time, timely remediation is required, so we agreed that chem ox might be the best strategy for ground water. They will submit a memo summarizing our discussions. 12/17/07 - Obligado - Received Memo from Woodell via email, detailing above meeting minutes. The memo proposes excavation and chemical injection with regenox. I sent an email to Paul concurring the planned course of action. 1/8/08 - Obligado - Conference call with Paul Woodel and Mark Furman. They are planning to use regenox as chemical oxidant followed by injection of advanced ORC to enhance bioremediation subsequent to chemical oxidation. They will submit a formal RAP today. 1/11/08 - Obligado - Approved RAP. Sent email with RAP approval letter. 1/15/08 - Obligado - Email from Woodel : "We have begun the tasks described in the work plan. The holes in the north room have been backfilled. Today I was on site to scrape back the east wall of the gasoline UST excavation in the south room. We took it back an additional 2-3 feet and I collected another sidewall sample. This excavation is also being backfilled. We anticipate that the first test pit between the 2 former dispenser islands will be dug on Friday." 1/28/08 - Obligado - Email update from Woodel - "LBG has supervised the excavation of the 2 test pits described in the workplan. Impacted soil and pockets of free-phase product were encountered in the western pit and were removed. The eastern pit contained impacted soil at the water table but there was

no free product and no apparent "source zone" above the water table. Both pits have been extended to their practical limit (interior walls, sewer lines, column footers, etc.). We plan to backfill the level at the water table with stone on Tuesday and apply the chemical-oxidation product Tuesday and Wednesday." 5/14/08 - Obligado - Review UST Closure Report. 2 3000 gallon gasoline USTs, 1 550 gallon 2ASTs, 2 product dispensers, associated piping and 1 oil water separator were removed. Endpoint samples were collected from UST excavations. East wall of gasoline UST excavation had MTBE above TAGM. The waste oil UST excavation indicated residual SVOCs and chromium typical of urban fill throughout the city. Test pits TP1 and TP2 were excavated and 78 tons of contaminated soil was removed and disposed off-site and waste manifests were included. End point sampling from test pits show that gross contamination present at and below the water table. No evidence of the specific source of the contamination was obvious. Contamination above TAGM and limited free-phase product appears to have accumulated around the buried concrete and structural components of the buildings. Test pits were backfilled with gravel and chemical oxidation products were applied to the subsurface to promote remediation. Three treatment sumps were installed with 4" diameter slotted screen set 3 ft into water. 1120 lbs of RegenOx and 150 lbs of ORC were mixed and applied to the gravel backfill on January 31, 2008. On Feb 29, 180 lbs of RegenOx and 75 lbs of ORC were applied. 3 borings and 2 wells were installed at the site. 1st round of sampling will be completed March 10, 2008. Review 1Q08 Monitoring Report - 5 wells were gauged and sampled. Based on most recent results Max contamination at S3 (former GFMW4) with 2570 ug/L BTEX and 33,000 ug/L MTBE. According to the report, the whole building will be torn down in the summer of 2008. When this occurs LBG will supervise additional soil removal. LBG will inform the NYSDEC of future remedial activities. 9/25/08 - Obligado - review 2Q08 report. Elevated concentration still present in wells. Effectiveness of RegenOx not yet apparent. Max MTBE at 48,000 ug/L. According to report building is still scheduled to be demolished. LBG will inform the DEC of any redevelopment or additional remediation 7/7/09 - Obligado - Review 1Q09 Update Report - S3 and GFMW4 have been destroyed, so there is no monitoring wells in the source area. Downgradient well GFW-1 still has significant impacts. S3 and GFMW4 before destroyed had the max concentrations. Send a letter requiring the installation of additional monitoring wells. Require work plan submission within 30 days. 10/29/09 - Obligado - Review Investigation Work Plan, submitted 8/13/09. The workplan proposes 3 additional wells as requested, however, one of the upgradient is over 100 feet away and to far north. This well won't provide meaningful data. Send letter requiring relocation of well to the east of the tanks and also revise soil sampling plan so soil sampling begins above the water table. Also requested that they revise the implementation schedule. 6/7/10 - Obligado - I reviewed the revised Investigation Work Plan. The soil sampling plan was modified and the location of the upgradient well was moved to a more appropriate location. I sent a letter via email for approval of the three wells. 8/12/2010 - Obligado - I reviewed the July 2010 Update Report. The report documented the installation of 3 additional monitoring wells and quarterly sampling. Only one soil sample, MW8, had soil impacts with 980 ug/kg MTBE. Maximum BTEX concentrations were found at MW8 with 4100 BTEX. Maximum MTBE also detected at MW8 with 3400 ug/L. the report recommends continued monitoring. I emailed Paul Woodell at LBG

and requested a BTEX plume map on future reports.10/11/11 - Obligado - I emailed Paul Woodell to inquire about the status of the monitoring. I received a phone call from Sean Groszkowski of LBG ((914) 694-5711) who is now managing the project. He said they are planning to do another chemox event using REgenOx. I asked him to send me a work plan as well as any monitoring reports since July 2010.11/9/11 - Obligado - I reviewed a plan to do additional chemical injections at the site. They plan to do injections via geoprobe. They proposed 10 injection points using Regenox and ORC advanced. I gave approval to proceed with the additional injections. I also had a conference call with Sean Groszkowski (LBG), Scott Furman (time Warner attorney), and repsentatives of a potential purchaser, Arnie Fleming (consultant) and Karen of Kramer LEvin (attorney). We discussed the pending injections and the planned purchase and redevelopment. A purchaser plans to redevelop the property as an office building. They will use and reinforce the existing structure, as well as add several floors. The building will not have basement. They will install a vapor barrier and SSDS. The planned start for the work is 6 to 9 months. I recommended Time Warner to try and treat the soil and ground water as aggressively as possible prior to starting the development. They concurred. The injections are scheduled to begin tomorrow (11/10/11).11/16/11 - Obligado - I spoke with Sean. The injections went well. All the material was accepted. They plan to sample again in December. According to Sean I will receive a report documenting baseline sampling in early December.1/17/12 - Obligado - Meeting with Time Warner, LBG, FLS, DEC, and the site developer. They will continue with current strategy but DEC will require additional remedial actions if not effective.1/19/12 - Obligado - DEC, LBG, Albanese, meet on site to go over injection locations. We discussed potential remedial options for soil under footings. We also discussed installation of a well immediatley down gradient of footers in TP2 to monitor effects of residaul source on gw concentrations. According to LBG, multiple refusals were encountered in downgradient plume area. DEC recommended evaluating alternate injection approaches.1/27/12 - Obligado - I sent a letter to Time Warner ccing all parties in meetings describing DEC requirements: 1) additional well downgradient of footer area 2)evaluate alternate remedies for residual source 3) alternate injection strategy in plume area due to refusals.3/5/12 - Obligado - I received 4th Quarter 2011 report. The report documents baseline sampling on October 28, 2011, 1st chemical injection on November 10 and 11, 2011, fourth quarter sampling on December 27, 2011, and the 2nd chemical injection on December 28 and Jan 3 2012. The report documents a spike in BTEX concentrations following the 1st chemical injection, which may represent release of adsorbed contaminants from the soil. They will continue monitoring. 5/8/12 - Obligado - I emailed Sean Growzkowski to inquire when I would receive 1st Quarter sampling results. He indicated 1 to 2 weeks.7/16/12 - Obligado - I received the 1st Quarter Sampling report. MW10 was installed downgradient of the excavated area. Gross contamination was present in soil. 38000 ug/L BTEX and 53,000 ug/L MTBE found in MW10 groundwater. 42 ppm BTEX and 27 ppm MTBE was found in soil. I sent an email to LBG with a cc to FLS and Albanese requiring a remediation plan within 30 days to indicate whether they plan to continue with chemox or try alternate methods.7/17/12 - Obligado - recieved an email from LBG Sean Groqzkowski including 2nd Quarter 2012 data which showed significant ground water improvement in MW10. BTEX reduced 98%. LBG requesting determination on need for new plan to be delayed

Remarks: until review of 3rd Quarter 2012 data. 7/24/12 - Obligado - sent an email deferring requirement for new plan until review of the 3rd quarter data. 12/17/12 - Obligado - received and reviewed 3rd Quarter results. BTEX concentrations rebounded to over 15,000 ug/L, including 5,400 ug/L benzene. I sent a letter to Time Warner requiring a new RAP within 60 days. 12/24/12 - Obligado - DEC receives notification letter of BCP application from Sive Paget. BCP Site No. C231080. Spill transferred from Obligado to Perez-Maldonado. Property Owner applied to the BCP (Site #C231080) to address environmental issues at the site. Spill administrative closure pending to implementation of a remedial program to address contamination in connection with this spill. (04-29-2013)
UNDER GROUND PRODUCT LINE WAS FOUND TO BE LEAKING. CONTACT PERSON WAS NOTIFIED OF THIS WITH THE RECOMMENDATION TO EXCAVATE AND REPAIR.

BROWNFIELDS:

Program: BCP
Site Code: 475372
Site Description: Location: The proposed Brownfield Cleanup (BCP) site is located at 511 West 21st Street in the County of New York. The property is bound by West 21st Street to the south and West 22nd Street to the north between 10th Avenue and 11th Avenue in Manhattan. The property has frontage on the north side of West 21st Street and the south side of West 22nd Street. Site Features: The site is approximately .45 acres in size, and is improved with a vacant 5-story parking garage building with a 1-story annex in the southwest corner. The property is flat with average elevation approximately 10 feet and the elevated High Line park runs along the eastern property boundary. The site is currently vacant. Current Zoning and Land Use: The area is zoned for manufacturing and commercial use and the City's zoning code for the site is M1-5. Past Use of the Site: The site has been used for manufacturing by a gas meter company and also as a service station. Most recently it has been used by a television cable company for vehicle parking and maintenance, storage and offices. Site Geology and Hydrogeology: The site is underlain by 13 to 17 feet of man-made fill. Native soils beneath the fill layer consist of organic silty clay of estuarine origin as well as sand and silt of glacial origin. The depth-to-bedrock varies from approximately 33 feet below grade at the northern end of the site to 65 feet below grade at the southern

end of the site. The depth-to-groundwater at the site is approximately 6 to 7 feet below sidewalk grade and the local groundwater flow direction is to the southwest. 4/11/13-DEC signed the Brownfield Cleanup Agreement for this site.

Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo: 02/03/06 Feroze talked with Mr. Minick (owner) 212-604-9898. He informed that there was a leak in the tank, they have closed the leak and pumped the oil out. It is above ground tank, floor is made of concrete. An environmental company is working for them. TTF is sent to :Mr. Minick440 west 22nd StreetNew york, NY 10011. 02/10/06 Mr. Minick called and told me that they will close the tank by PTC. He will submit DEC the documents soon.03/02/06 Feroze,: Mr.Minick told me that PTC has taken soil sample. He will submit soil analysis result and tank closer report to DEC soon.It was 275 gallon tank.03/10/06 Feroze received a certificate and soil analysis result. The result shows that VOC and SVOC are within acceptatble limit. They also submitted a manifest for removal of contaminated soil. The spill is closed.

Remarks: ruptured tank in basement:

"ROMMEL" This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. On December 22, 2000, DEC (Sigona) observed the excavation and removal of 4 x 550 gallon USTs. The contents of 3 x 550 gallon USTs was found to contain a mixture of gasoline and water. 1 x 550 gallon UST contained water only. The excavation was being performed by Fenely & Nicol for Public Parking, Inc. The project was also supervised by DEC contractor EAR under PIN project for New York Auto Service which was impacting the Jacob Javits Center. Does not appear to be related to New York Auto Service spill or have an impact on the Javits Center. 2/24/05-Vought-Spoke with Phillip Rizzuto (973-470-25510) who is agent for property owners. Rizzuto asked for status of Tank Closure Report review and Vought required that a copy be sent to DEC for review. Spill transferred from Rommel to Vought. 3/16/05-Vought-Reviewed Tank Closure Report (Fenley & Nicol - Angel Ramirez) dated 1/18/01 and received on 3/2/05. Project was prepared for: Mr. Phil Rizzuto Classic Sanitation Corporation 99 Route 3 Clifton, NJ 07014 Removal and closure of one (275-gallon) fuel oil AST and four (550-gallon) gasoline USTs. Subject site is used as a public parking garage. Three (550-gallon) gasoline USTs were removed from the north-east front of the interior of the building (Tank Area 1) and one (550-gallon) gasoline UST was removed from southwest of Tank Area 1. Depth to groundwater at site estimated to be 20 feet below grade and flow to the west. "Inspector Anthony Sigona of the NYSDEC was present at the time of the excavation to inspect the tanks and excavated area". "The bottom and sidewalls of the excavation consisted of Manhattan Schist and bedrock". "...it was discovered that soil above the tanks exhibited evidence of gasoline contamination". All product lines were removed and disposed. Soil were analyzed for 8260/8270 TCLP as per Sigona. Soil analyticals only showed on minor exceedence of naphthalene at 11ug/L (Guidance value is 10ug/L). No PID readings were detected. Report recommends No Further Action. Spill closed by Vought due to one minor TAGM 4046 Soil Cleanup Objective exceedence.

Remarks:

DURING TANK REMOVAL SOIL CONTAMINATION HAS BEEN DISCOVERED. CONTAMINATION IS ON TOP OF TANKS. AREA TO BE EXCAVATED AND FURTHER SAMPLING/TESTING TO BE DONE. NO CALL BACK REQUESTED. CALLER HAS BEEN IN CONTACT WITH REGION 2 OFFICE.

DEC Memo: ttf ltr sent 1/14/20052/14/2005 Received a letter from Morton Usdan (212-564-2006) saying that he hired a company to work on the tank. If it can be fixed, it will be. If not, it will be abandoned.5/2/2005 Sangesland spoke to Mr. Usdan. He said PTC found a dry leak in the vent line and replaced the line. Tank was retested and passed, no contamination was visible.Sangesland asked Mr. Usdan to submit all of this in writing to DEC.5/5/2005 Sangesland received a letter from Mark Salamack at Petroleum Tank Cleaners.Tank was originally tested and failed by another company. PTC emptied the 1500 gal tank, isolated the lines and the stickline and vent line were found to leak. The gasket was replaced and then the tank was tested alone and passed.All necessary piping was replaced and no contamination was found.Spill Closed

DEC Region: 2
DER Facility ID: 284732
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND" Sent TTF letter to consultant: Maria Ramirez, GZA, 65 Willowbrook Blvd, Wayne, NJ 07470 11/5/2003 Sangesland spoke with Maria Ramirez at GZA. She says the building is converting to natural gas and the 10,000 gal tank will be abandoned in place. Tank is below the basement floor under an electrical utility room. They cleaned out the tank and found holes in the top 1/3 of the tank. They will take borings through the bottom of the tank to determine if the area is contaminated. 12/4/2003 e-mail message from Maria Ramirez said the soil borings through the bottom of the tank would take place around 12/12/03. 12/11/2003 Sangesland reviewed a submittal from Maria Ramirez of GZA dated Nov 19, 2003. This outlined the work discussed above and stated that 4 holes will be drilled through the bottom of the tank and samples will be collected for testing (if possible-it may be in cement). If the samples are clean, the tank will be abandoned in place with foam. 12/22/2003 Sangesland spoke with Fran Schultz of GZA about this site. They made 4 holes in the bottom and sides of this tank and hit cement. Water is entering the tank. To date approx 700 gal of water has entered the tank. They believe the water is from a broken water main. Sangesland asked GZA to test the water for VOC and SVOC. GZA said they would also test for Floride and Clorine to determine if this water is city tap water or groundwater. If the water samples come back clean, then GZA will prepare an arguement that the tank is in a subbasement vault. All records of the building (blueprints) are gone (they were in 7 World Trade Center). There are lots of utilities nearby. The tank is being abandoned in place. GZA will request closure of the spill number. 3/15/2004 Sangesland reviewed a report from Maria Ramirez of GZA. Based on the description of the tank location (below ConEd electrical equipment), the drilling of holes through the bottom and sides of the tank (all into cement), results of water tests on the water that came into the tank after drilling (no petroleum but did have Floride & Chlorine). Based on all of this information, the DEC will allow GZA to go ahead with abandonment of the tank. After proper abandonment is complete, GZA will submit a final report with a request for spill closure. 11/14/05 - Larry Alden - Reviewed file and concur with assessment of Sangesland (3/15/04). Reviewed PBS# 2-606121, which showed that 10,000-gallon tank was closed in-place on 7/8/04. With absence of any contamination, and tank subsequently closed, this spill can be closed.

Remarks: failed a tightness test but could not isolate a specific pipe - test was performed as part of a closure.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KOLLEENY" TYREE REMOVED A 550-GALLON STEEL SINGLE-WALLED EMERGENCY GENERATOR DIESEL TANK. SOIL HAD PETROLEUM ODOR AND SHEEN. CONTAMINATED SOIL WAS OVER-EXCAVATED AND STOCKPILED; POST-EXCAVATION SAMPLES WERE TAKEN. J. KOLLEENY OF DEC SPOKE WITH LAURIE JODICE OF TYREE ON 4/12/01; SHE WILL FORWARD COPY OF CLOSURE REPORT WHEN AVAILABLE. ACCORDING TO LJ, MOST CONTAMINATION WAS REMOVED AND THE SOIL LEFT IN THE PIT WAS RELATIVELY CLEAN. THE TANK LOCATION WAS VERY CLOSE TO WHERE O'BRIEN-KREITZBERG IS INSTALLING AN SVE SYSTEM TO REMEDIATE GASOLINE CONTAMINATION. KOLLEENY WILL FOLLOW UP TO ENSURE THAT RESIDUAL CONTAMINATION FROM THE EMERG. GEN. TANK (IF ANY) IS ADDRESSED, EITHER BY THE SVE SYSTEM OR IN SOME OTHER WAY. This spill is referred to spill # 9512583 and is closed today by II (01/10/05).
Remarks: WHEN TANK WAS REMOVED THERE WAS AN ODOR OF PETROLEUM. [SEE DEC NOTES.]

DEC Memo: Part of a long term recovery operation at the site. See also spill nos. 0702185 and 0702402. 08/16/07: Notified of this spill by Ryan Piper of spill response staff on 8/15/07; sent email to Jane Staten and Harvey Roberts of URS (DDC consultant handling long-term remediation of this site under DDC consent order), with cc to Afsar Samani of DDC, stating: "I've been informed by our Spill Response staff that spills are continuing to occur related to damaged fill line to gasoline UST at Midtown South. Initial spill (0613411) occurred in March '07 when gasoline was found in tank sump and nearby monitoring well. According to URS's system performance reports, Franklin Co. determined that tank's fill line was damaged, and they installed direct fill to tank to bypass damaged line. Do you know if Franklin plugged up old fill port when they installed direct fill? It appears that fuel deliveries continue to be made to old fill line, and product keeps showing up in tank sump and monitoring wells. On May 23rd, spill 0702185 was reported by NYPD because sump was filled with gasoline and Veeder Root alarm was going off. Today, another spill was called in (0705553) because of product in sump. Please take necessary steps to have old fill port blocked so it cannot be used anymore (or repaired so it won't leak) as soon as possible, and please also check out entire tank system to make certain it is damaged fill line that's problem, and that there are no other leaks in system. Please get back to me on this and let me know what actions have been taken to address this situation." Afterwards, spoke again with Ryan Piper, who suggested tank be taken out of service and emptied until problem is solved. Sent email to Afsar Samani of DDC, cc's to Jane Staten & Harvey Roberts of URS: "In light of ongoing problems with gasoline UST at Midtown South Precinct, I strongly suggest that tank be taken out of service and emptied until problem(s) with tank and piping has/have been addressed. If this is not practical because police have no alternative location to fuel their vehicles, then please take whatever steps are necessary to immediately rectify problem(s) with tank system. NYCDDC is conducting remediation at this site using SVE and groundwater extraction & treatment systems, and these ongoing spills of fresh gasoline to subsurface will set back remedial efforts for months, or more likely, years, so it is in DDC's interest to resolve this situation promptly. In addition, these releases are a violation of Environmental Conservation Law, as you are aware, and if they continue to occur, our spill responders may be inclined to call Environmental

Conservation Officers to site to issue summons."On 8/16/07, received email from Afsar Samani of DDC: "Harvey informed me that vac-truck is scheduled to remove product from sump today. Also, NYPD subcontractor is going to be scheduled to repair fill line. URS is looking into this and will make all necessary action to make sure tank and fill port is tight." Then, received email from Jane Staten of URS: "I just spoke with Lt. Pete Polanco for an update on problems with gasoline tank at Midtown South Precinct. According to Lt. Polanco, NYPD tank contractor inspected fuel fill line this morning and found no problems with integrity of line. Therefore, Lt. Polanco believes that product in tank sump was caused by fuel delivery vendor. NYPD are expecting fuel delivery vendor at site this afternoon to discuss problem and also to remove gasoline currently in sump. I will keep you posted." I then sent email to Afsar Samani, with cc's to Jane Staten & Harvey Roberts of URS, Jerry Aliberti of DDC and Lt. Peter Polanco of NYPD: "Thank you for your response. Please be advised that no fuel deliveries should be made to gasoline tank at Midtown South until tank system has been tested to insure integrity of all elements of system. Documentation of tightness test results, and of any repairs made to fill line since problem was discovered in March 2007, must be submitted to NYSDEC before fuel deliveries can resume. This situation is high priority and NYPD should arrange for tightness testing immediately." Then, received phone call from Lt. Polanco of NYPD, who said repairs to damaged fill line were done in June and fill line was tightness tested and passed, and he believes current problem is due to fuel delivery vendor not hooking up vapor recovery line (truck is parked in street long distance from fill port, so there's long length of delivery hose). He said product will be removed from sump and fill line will be tested again. I asked him to submit documentation of repair work and tightness testing, and sent him email with my address. Then, I was cc'd on email from Afsar Samani of DDC to Lt. Polanco of NYPD: "We were informed by following correspondence from NYSDEC that gasoline tank over at Midtown South Police Precinct should not receive any more deliveries until a tightness test has been scheduled. Please let DDC know when you can arrange for your subcontractor to perform a tightness test on this tank. This is very crucial to remedial effort that URS is performing to clean up site on behalf of DDC." - J. Kolleeny08/21/07: Received fax on 8/20/07 from Lt. Polanco of NYPD fuel control unit, with letter from Energy Tank & Environmental Services dated 7/16/07 describing repairs to and pressure testing of fill line to gasoline UST (in eDocs). Sent same-day email response to Lt. Polanco, cc's to Afsar Samani & Jerry Aliberti (DDC), Jane Staten & Harvey Roberts (URS): "Thank you for faxed description of repair work to fill line of gasoline UST at Midtown South and diagram of site, tank and fill port, provided by Energy Tank & Environmental Services, Inc. However, these items do not completely satisfy my request for documentation of tank repairs and testing of fill line, and they raise additional questions. Page that describes repairs and subsequent pressure testing of line is dated 7/16/07. Is that date when repairs were done? I would like to see dated invoice for repair work in addition to this description. Description states that problem was with primary fill line, and that secondary line was intact, which allowed product to go into containment sump and not into ground. However, in March when this problem was first discovered, URS field personnel reported 5 feet of fresh gasoline in groundwater extraction well that had never had gasoline in it before, so somehow product did get into

S105054624

ground. If repairs were done on 7/16/07, why was gasoline again reported in containment sump on top of tank on August 15th (spill number 0705553)? You mentioned that this was caused by delivery person not hooking up vapor recovery line, yet our Petroleum Bulk Storage staff say this would not result in product appearing in sump. I would greatly appreciate it if you could provide additional documentation of repair work, and if NYPD would schedule a tightness test of all lines going into and out of tank, as well as a hydrostatic test of tank's containment sump. I would like to be informed in advance when these tests have been scheduled, so that I can attend." - J. Kolleeny 09/14/07: Visited site 9/10/07 to observe hydrostatic test of tank sump and tightness test of fill line. Mike Suppe of Fenley & Nichol on hand, said sump held water, more or less (slight drip along electric conduit extending from this sump to next sump at end of tank), for over 2 hours. He said no way to test fill line (it's about 2-3 feet long from "remote" fill port) without physically removing it, but he will test entire tank system. In discussions of how product could turn up in sump, I mentioned that Lt. Polanco said it had to do with delivery person not hooking up vapor recovery line. Mike wasn't clear on how that would cause product to appear in sump. I called Lt. Polanco, who said by not hooking up vapor recovery during delivery, excessive back pressure was created, so when delivery hose was disconnected, product would back up and spill into overfill bucket, then drain to sump. Mike Suppe said this isn't possible, since any fuel spilled into spill bucket would drain back into fill line, then into tank (not sump). Mike suggested that temporary fill, which was used while remote fill line was awaiting repair, had not been properly capped once NYPD switched back to using remote fill, and poor threading on top of direct fill extension cylinder and improperly screwed-on cap for this extension, may have resulted in product spilling out capped off temporary fill, again related to back pressure from not hooking up vapor recovery (see photos in eDocs image folder). NYPD now has on-site a long hose to be used for vapor recovery, and reportedly there have not been any more problems with product appearing in sump after deliveries. Spoke with Mike Suppe on 9/11/07, who said tank system passed test. I discussed whole situation with Jane Staten of URS, who forwarded to me email from Harvey Roberts of URS (in eDocs) indicating temporary direct fill was installed by NYPD, not Franklin Co. as stated in URS's system performance reports for site. While this may explain why product was appearing in sump, none of this adequately explains how product escaped into ground and turned up in groundwater extraction wells and monitoring wells (for site cleanup under spill no. 9512583). Mike Suppe indicated if damaged fill line was unknown for a long time, sump could've filled up with gas during deliveries and overtopped inner rim of sump, and from there it could seep into ground. URS will continue to gauge nearby wells for product levels, and see if they continue to decrease. Harvey Roberts email also calls into question when exactly NYPD had repairs done to fill line. I contact Lt. Polanco again and asked for more detailed documentation of repair work, indicating date(s) and nature of work done. He said he would work on getting me that info. - J. Kolleeny09/17/07: Received fax from Lt. Polanco, a revised version of earlier fax with statement by Energy Tank & Environmental Services regarding repair work on fuel fill line. Statement is still dated 7/16/07; it now states that they uncovered line on 7/5/07, reconnected and tested line on 7/6/07, reporting that line held

pressure during backfilling, they then witnessed a fuel delivery on 7/9/07 with no leaks observed, so they re-surfaced area. - J. Kolleeny01/04/08: On 12/19/07, sent email to Jane Staten of URS: "I recently asked you to ask your field personnel to check if gasoline is still showing up in tank-top sump after fuel deliveries at this site. Do you know if they've checked on this?" On 12/26/07, received email reply from Jane: "Our field technician checked tank sumps at Midtown South on 11/29/07. One sump was dry and other contained a little water. There was no evidence of gasoline." Based on no new reports of gasoline appearing in tank top sump, it appears problem(s) that caused this and related spills has (have) been addressed; OK to close spill. - J. Kolleeny

DEC Memo: 05/23/07-Vought-Duty desk officer. Vought spoke to Bob Laga(Fax 718-359-7865) and SVE and three groundwater wells onsite with SpillBusters installed and Franklin geologist performing weekly inspections of well and system. Franklin was contacted by NYPD that sump of UST was full of product and alarm for Veeder Root was going off. Franklin performed site visit and approximately 20-50 gallons of gasoline present in sump. Vacuum truck estimated time of arrival in two hours to recover gasoline. As per Franklin field geologist level of product in sump has remained constant (may indicate no loss to subsurface). No product in groundwater monitoring well immediately adjacent to tank with product in sump. Vought discussed site with DEC Krimgold and tightness test letter prepared by Vought and submitted to DEC Falvey for signature.Letter sent with one month due date to owner on PBS and cc to Franklin:NYCPDBuilding Maintenance Section59-06 Brooklyn Queens ExpresswayQueens, NY 1137705/29/07-Vought-See also new closed spill #0702402 for spill caused by delivery to broken fill despite instructions by Franklin to not deliver until fill was repaired. Vought called Franklin and spoke to Bill. Franklin reiterated requirement for no more deliveries. Klein still seeking bids for work.07/08/08: This spill case transferred from J. Vought to J. Kolleeny. Problems with fill port and fuel deliveries have been rectified, any product released to environment will be addressed by remedial system on-site, as there is ongoing remediation under DDC consent order spill 9512583. This spill is closed, see also remarks for spill 0705553. - J. Kolleeny

DEC Memo: This site is already an active longterm remediation site - Spill #9512583As part of this remediation effort, there are existings monitoring wells on the site that are tested periodically. Today, the geologist found 4 ft of gasoline product floating on the water table in a well that previously had nothing. The manway was checked and found to be full of gasoline as well. This was clearly an overfill from a recent delivery.Franklin and/or URS is working the long term cleanup of the site and has arranged for a vac truck to clear out whatever is possible right now. On a long term basis, the existing remediation system will be used to skim the free product from the water table and remove it from the site.This problem will now be addressed by the contractor through the existing long term spill number on file.

BROWNFIELDS:

Program: BCP
Site Code: 416201

**Actual:
43 ft.**

Site Description: Location: The site is located at 403 West 37th Street and 501-505 9th Avenue in the Borough of Manhattan, New York County. Site Features: Currently, the site is vacant. An entrance roadway to the Lincoln Tunnel beyond the retaining wall shared with the site, is to the west. Current Zoning: The site is currently inactive, and is zoned for commercial use. The surrounding neighborhood is also commercial, with some residential. Historical Uses: A former iron works was identified on the Sanborn maps spanning the years from 1911 to 1930 on the south-west portion of the Site. From approximately 1930 to 1968 the site was home to a plumbing business as well as a painter. Site Geology and Hydrogeology: Groundwater is about 10 to 15 feet below the surface and, because it is diverted by the Lincoln Tunnel's retaining wall, generally flows to the northwest. Soils are mainly historic fill and sand.

Env Problem: Nature and Extent of Contamination: Soil contains elevated SVOCs and metals indicative of historic fill. The depth of the historic fill varies across the site from three to 15 feet deep. SVOCs exceeding Restricted Residential SCGs include benzo-a-anthracene, benzo-a-pyrene, benzo-b-fluoranthene, benzo-k-fluoranthene, chrysene, dibenzo(a,h)anthracene, and Indeno(1,2,3-cd)pyrene. Several were found at levels approaching 50 ppm. Metals exceeding Restricted Residential SCGs include lead (maximum detection 9000 ppm vs Track 2 Restricted Residential Use SCG of 400 ppm) and barium (maximum 615 ppm vs 400 ppm.) Groundwater sampling showed contamination in one well for chlorobenzene (29 ppb) and 1,4-dichlorobenzene (97 ppb.)

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern.

Remarks: removal of twelve (12) 20,000 gal. #2 and #6 fuel oil USTs. The large fuel usage was for a cogen plant which generates electricity for ~3,000 people. After removing tanks and cleaning, went to dual fuel system, reinstalling only six 20,000 gal. #2 fuel oil USTs. Spoke with David Marabello (732-225-7000), CDM project manager during spill. He said that they excavated to the lateral and vertical limits possible, using shoring, without compromising structure of building. Southern portion of excavation encountered bedrock. Sixteen post-excavation samples were collected and evaluated for VOCs and SVOCs. All samples greater than 10 feet bgs. Elevated levels of VOCs and SVOCs were encountered in several samples, however, according to 10/2/98 CDM tank closure report, levels not indicative of gross tank failure, rather indicative of chronic spills over time. While some sporadic elevated levels of petroleum remain, everything that was reasonable to be done, was done. Close spill.
OLD TANK APPEARED TO HAVE FAILED. TANK IS BEING REMOVED, CONTAMINATED SOIL WAS FOUND DURING REMOVAL PROCESS. INVESTIGATION IS UNDERWAY AT THIS TIME.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT. 3/9/04-Vought-File review by Vought:Letter from DEC(O'Dowd) to Getty(Ochoterena)-12/10/97. Letter sent requiring installation of three monitoring wells in response to tank test failure on 12/3/92. Report due to DEC by close of business 1/30/98.Site notes by DEC O'Dowd-meeting held on 11/12/97. Site planned for construction of new residential building.Tank Closure Report (Tyree Organization William Conroy)-April 1998. Reason for tank closure is property divestment. One pump island located adjacent to 10th Avenue. Removal of twelve (550-gallon) gasoline USTs and one (550-gallon) waste oil from 3/23-3/25/98. "Multistory commercial and apartment buildings located across 10th Avenue to the west, church with a school and playground located across West 20th Street to the north of the subject property". Six endpoint samples were collected including five from the gasoline excavation and one composite sample from the waste oil excavation. Soil analytials show 9990ppb toluene(south wall), 10600ppb napthalene(south wall), 10000ppb toulene(west wall), 15900ppb napthalene(west wall), 156ppb MTBE (Bottom). Waste oil soil endpoint shows 427ppb benzo(a)anthracene and 411ppb benzo(b)fluoranthene.Addendum to the Tank Closure Report (Tyree Org)-5/25/98. "The additional work consisted of further excavation of th west wall and the south wall of the gasoline tankfield excavation. The additional excavation resulted in clean(STARS Memo) endpoint soil samples from the two walls." Excavation indicated the presence of a former basement filled with demolition debris. Depth to groundwater estimated at 9" below grade. Two additional soil endpoints were collected for analysis. Soil endpoint analyticals show not TAGM 4046 Soil Cleanup Objective exceedances after second excavation event.Project Summary Report (Tyree Org)-5/25/98."One groundwater

sampling event prior to the destruction of the wells during removal of underground storage tanks." Groundwater analyticals show 173ppb MTBE(W-1), 1200ppb MTBE(W-2) and 1890ppb MTBE(W-3). Groundwater flow direction not determined. Closure Request (Tyree Org)-7/8/99. "The property was sold by Tyree's client to the 20th Street Association, LLC. The owner has excavated the property for construction purposes". "These three wells were destroyed in March 1998 when the gasoline tanks were removed". A total of 305.11 tons of soil were removed from teh tankfield excavation. "The entire lot (approximately 114' x 100') has been excavated to the property lines and to a depth of approximately 15'. Tyree requests closure based on 1)only ethylbenzene in one well at 6.1ppb 2)the levels of MTBE were probably significantly reduced by removal of approximately 9 feet of unsaturated and 6' of saturated soil 3)approximately 8550 tons of soil were removed. Tyree requests no further action. Vought reviewed site with DEC Rommel which resulted in spill closure. ORIGINAL SPILL ASSIGNED TO O'DOWD.

Letter.05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin.6/21/06 - Raphael Ketani. I reached Nathan Epler of Roux Associates (631) 232-2600. He said that he had sent in all of the paperwork some time ago. I told him that DEC had nothing for the case. He said he will get back to me.The 3 550 gal. tanks mentioned in the spill report are not on any PBS record. Mr. Epler and an associate called me back. They said that the tanks had already been removed, along with the liquids they contained and the soil that was found to be contaminated. I asked them for the manifests, pictures, a site plan, clean end point sample results, and a PBS registration form. They said they had all of that and that they will send it to me by the beginning of next week. 7/5/06 - Raphael Ketani. Chris Batista of Roux called to say that he has the manifests, soil analytical results, and soon the signed PBS registration form. He said he will send them very soon. 7/17/06 - Raphael Ketani. I received the closure report today.7/18/06 - Raphael Ketani. I reviewed the closure report and found it to be acceptable. Based upon the analytical results, pictures, manifests, and narrative in the 7/13/06 closure report from Roux Associates, I am closing the spill case.8/17/06 - Raphael Ketani. I received a cover letter from ROUX Associates date 7/14/06. The letter was given to me by Nick Lombardo of the PBS Unit. He said that PBS application was alright and that he received a check with the application. I will have the document E-DOCed.

Site Description:

Location: This site is located adjacent to the Avenue C Loop Road on the south side of East 19th Street between Avenues A and B in the borough of Manhattan in New York City, New York. The site is a 0.3 acre portion of the present-day residential campus of Stuyvesant Town, which extends across 61-acres from First Avenue to Avenue C and from East 14th Street to East 20th Street. The complex includes 35 high-rise buildings, playgrounds, sport courts, and underground parking garages. Site Features: The portion of the Stuyvesant Town campus associated with the East 19th Station site contains portions of a residential high-rise apartment building and a private underground parking garage. The remainder of the Stuyvesant Town apartment complex surrounds the East 17th Street Station Site. Con Edison facilities are located east of Stuyvesant Town between East 18th /East 14th Streets and Avenue C/FDR Drive. These facilities include the East River Generating Station, various substations, an administration building, ball fields, and parking areas. Current Zoning/Use(s): The New York City Planning Commission designates the majority of the property as R7-2: Moderate to High-Density Residential District. Past Use of the Site: The East 19th Street

Station was part of the larger facility called the East 14th Street Works, which was operated by Con Edisons predecessor companies including the Consolidated Gas Company of New York, the New York Steam Company, the Standard Gas Company, and the Manhattan Gas Light Company. The majority of that larger facility was located on the eastern side of Avenue C between East 14th and East 16th Streets. The East 19th Street Station reportedly began operations between 1863 and 1868 as a holder site and operated until approximately 1921. Based on the historic maps of the area, a single gas holder (approximately 500,000 cubic feet capacity) occupied the site. The holder station was replaced by an auto/truck garage and then sold to Improvement Garage, Inc. in 1943. Stuyvesant Town Corporation acquired the land in 1944 for the development of the Stuyvesant Town apartment complex. Site Geology and Hydrogeology: The surface topography of Stuyvesant Town was altered by land filling and ranges from approximately 4 to 22 feet above mean sea level. A dense network of private and public utilities (both active and inactive) are present beneath the site. These utilities are complex and not completely documented. The site geology consists of four units of varying thickness and distribution across the site. Starting at the ground surface these units consist of fill, organic deposits, glacial deposits and bedrock. In general, the fill thickness varies between 20 and 25 ft across the site. The fill most likely reflects man-made disturbances to pre-existing natural soils from historic building construction and eastern expansion of the shoreline. The fill consists of sand, silt, and gravel intermixed with varying amounts of brick, concrete, cinders, and other debris. Beneath the fill layer are organic deposits and then glacial deposits. Bedrock occurs at depths of approximately 60 to 80 ft below ground surface (bgs). There is an unconfined, unconsolidated overburden aquifer is present beneath the site. Groundwater occurs at on-site locations at approximately 8 ft bgs and the flow direction is east-southeast toward the East River. The groundwater is not used as a source of potable water. Based upon investigations conducted to date, the primary contaminant of concern for the site is coal tar. Coal tar contains both volatile and semi-volatile organic compounds. Specific volatile organic compounds (VOCs) of concern are benzene, toluene, ethylbenzene and xylenes (BTEX). Specific semi-volatile organic compounds (SVOCs) of concern are Polycyclic Aromatic Hydrocarbons (PAHs). Concentrations of PAHs found in surface and subsurface soils slightly exceed the soil cleanup objectives (SCOs) for unrestricted use, but are generally consistent with background levels for Manhattan soils. One sample with concentrations exceeding background was found at a depth interval of 5-7 feet below ground surface (bgs) directly adjacent to the E. 19th St. gas holder station. No exceedences of BTEX in surface or subsurface soils were found. Visible MGP-related impacts are found in the subsurface including staining, sheens, and blebs. These impacts are limited to a few locations in the area directly adjacent to the site and did not appear related to any source areas. Coal tar contamination at the site has not caused an impact to the groundwater resource. Concentrations of BTEX and PAHs are in compliance with NYSDEC Ambient Water Quality Standards or Guidance Values in on-site and off-site groundwater wells. The groundwater is not used as a source of potable water. Concentrations of benzene within soil gas samples ranged from 14 to 17.2 ug/m³. Indoor air concentrations of VOCs (including BTEX) potentially associated with MGP residuals are consistent with levels typically found in fuel oil heated homes. When

Health Problem:

comparing soil gas and indoor air samples, it appears that the indoor air more closely resembles the ambient air in chemical constituents and concentrations than it does the subsurface soil gas. The site is currently operating under an Interim Site Management Plan (ISMP). The ISMP details procedures for management of invasive subsurface activities by utility and maintenance workers and their contractors. Direct contact with contaminants from manufacture gas plant activities is unlikely since they are located under pavement, the on-site buildings or soil brought in for cover from an unknown off-site location. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although there are elevated concentrations of potentially site related contaminants in soil vapor, indoor air samples from the on-site buildings indicate that soil vapor intrusion is not occurring.

Updated By: RXSCHICK
Site Description:

Location:The site is located at 27-35 West 24th Street in the Borough of New York, New York. It is located on the northern side of West 24th Street. The site is designated as Block 826, Lot 19.Site Features:The site is a rectangular shaped parcel of land which measures approximately 9,000 square feet and is improved with one 11-story building with a basement. Current Zoning/ Uses: The building on site is used for office space and a restaurant/ bar on the first floor and part of the basement. The site has a zoning code of M1-6, which allows industrial and manufacturing. The current use of the site complies with the zoning code. Historic Uses:A former dry cleaning facility occupied restaurant/ bar space until approximately 1990. The former dry cleaning operations may have contributed to the known contamination found in soil and soil vapor.Site Geology and Hydrogeology:The subsurface lithology was homogenous throughout the site. The subsurface soil was noted to consist of urban fill material and brown coarse grain sand. No site-specific hydrogeological information is available concerning groundwater depth and flor direction. However, based upon data for sites in the surrounding area groundwater is anticipated to be encountered at 30 feet below the surface and is likely to flow in a westerly direction.

FORMER GUARDIAN CLEANERS (Continued)

S113916768

Env Problem: Nature and Extent of Contamination:Chlorinated volatile organic compounds (VOCs) such as tetrachloroethene (PCE), trichloroethene (TCE), and cis1,2-dichloroethene (cis 1,2-DCE) were detected in soil samples in two separate sampling events. TCE and PCE were detected in both sub-slab and indoor air samples during vapor intrusion sampling. No groundwater data is available. The presence of chlorinated VOCs in soil and soil vapor is most likely due to former operation of the dry cleaner, which commonly used chlorinated solvents for dry cleaning purposes.Previous investigations included a Phase I Environmental Assessment, a Phase II Subsurface Investigation, a Supplemental Phase II Investigation- Vapor Intrusion Sampling, as well as a Supplemental Phase II Investigation and Conceptual Design. Soil-A total of nine borings (SP-1 through SP-9) in a radial pattern extending from the sump were installed. Chlorinated VOCs were detected in soil samples collected from 0 to 4 feet. The maximum concentrations were as follows: PCE 5,990 ppm; TCE 94 ppm; and DCE 69 ppm.Soil Vapor-A vapor intrusion investigation was performed and included one indoor air quality sample (IA-01) and four sub-slab samples (SS-01 through SS-04) in the existing building. One ambient background sample (OA-01) was also collected to consider background influence. The sub-slab concentrations were as follows: TCE 760 ug/m3 and PCE 6600 ug/m3. The NYSDOH guidance recommends mitigation based on these elevated detections. Significant Threat: NYSDEC and NYSDOH have not made a decision yet as to whether this site poses a significant threat to environment and human health.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NJ SHWS: Known Contaminated Sites in New Jersey

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

NY ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Local Land Records

LIENS 2: CERCLA Lien Information

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

NJ LIENS: Environmental LIENS

A listing of properties with environmental liens. The listing includes sites from the Site Remediation & Waste Management Program Sites where the Department has placed either a 1st Priority or Regular Spill Fund Lien against. 1st Priority Type Lien - a lien placed against the property where the discharged occurred providing that the owners of the property have some responsibility towards the discharge. First Priority Lien is superior to other types of liens. Non-Priority (Regular) Type Lien - a lien placed against the Responsible Party & their revenues and all real and personal property, other than the real property comprising the location of the discharge.

NY HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NY SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

NY E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Daycare Centers: Day Care Providers
Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided to EDR by the party ordering the search from EDR ("Client") were identified for the years listed below (selected maps only*). The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

0 Feet 75 150 300

1911 Certified Sanborn Map

A horizontal number line representing distance in feet. The line starts at 0 and ends at 300. Major tick marks are at 0, 75, 150, and 300. Brackets are used to indicate segments: a bracket from 0 to 75 is labeled "75 Feet", a bracket from 75 to 150 is labeled "75 Feet", and a bracket from 150 to 300 is labeled "150 Feet".

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

Re: 542-544 W 29th St in Manhattan

Dear Mr. Friedman:

We are in receipt of your Foil request for the above referenced site. The identification Number(s) assigned is: R2-14-696.

If for any reason you need to contact us again please use these numbers. When the programs are done gathering the files/information, this office will contact you.

Please email your future FOILs to Region 2 directly to the following email address:
r2foil@gw.dec.state.ny.us

Please expect our response within **20 business** days from the date of this letter.

If you have any questions @ your FOIL, please call Gloria Silva/ or Cynthia Whiting/FOIL Secretary at 718-484507, or email me providing the above FOIL # at: r2foil@gw.dec.state.ny.us

Sincerely yours,

Fawzy I. Abdelsadek, Ph.D., P.E.
Regional Enforcement Coordinator

Please be advised that in your future submission of FOILs to Region 2, you should include the Spill(s), or PBS(s) number(s) to expedite your request. This will give you more information @ all records that we may have related to your FOIL(s). So that you will submit FOILs, for those that the additional information/records are needed.

NYSDEC public websites that are listed below:

Please be advised that relevant information responsive to your request may be found at the following Department of Environmental Conservation/Remediation's websites:

The Spills Database link is as follows:

<http://www.dec.ny.gov/cfm/xtapps/derexternal/index.cfm?pageid=1>

HWR/Environmental Remediation Website:

<http://www.dec.ny.gov/cfm/xtapps/derexternal/index.cfm?pageid=3>

The PBS Database link is as follows:

<http://www.dec.ny.gov/cfm/xtapps/derexternal/index.cfm?pageid=4>

Also, you can search for Permits issued by NYSDEC by using the Link:

<http://www.dec.ny.gov/cfm/xtapps/envapps/>

If you need assistance on how to search the above websites, please contact me.

Please email your future FOILs to Region 2 directly to the following email address:

r2foil@gw.dec.state.ny.us

If after your search, additional information/records are needed, please include the spill #(s), or PBS #(s), Permit #(s) and exact street address of the site(s) you are requesting information for, and email your request(s) to Region 2. Please note that Region 2 policy is to submit a FOIL request for a maximum of two (2) sites/FOIL. If you didn't provide the results (i.e. spills/PBS #(s)) of your websites search within 10 days, your FOIL will be closed

You may resubmit your FOIL again providing the above requested information.

Thank you for your FOIL request. If you have any questions, please call Gloria Silva/FOIL Secretary at (718) 482-4507, or email me providing the above FOIL # at: r2foil@gw.dec.state.ny.us.

Sincerely yours,

Fawzy I. Abdelsadek, Ph.D., P.E.

Subject: Freedom Of Information Law (FOIL) Request

Dear Sir or Madam:

Please accept this request to review files for the following properties:

| Address | Block | Lot |
|---|-------|-----|
| 542-544 West 29 th Street, New York, New York 10001 | 700 | 57 |

AEI Consultants requests all available information regarding this property (AEI Project Number: 328402), specifically information regarding the following:

- Records of asbestos or lead-based paint surveys
- Records of Aboveground or Underground Storage Tanks (ASTs or USTs)
- Storage and/or generation of hazardous materials
- Records of spills or releases
- Records of historical and/or current septic systems and wells onsite
- Records of groundwater or soil contamination
- Groundwater monitoring data or sampling records
- Records of fill materials
- Records of site remediation
- Building restrictions on the property including Activity and Use Limitations (AULs)
- Environmental liens
- Environmental violations

I would prefer to receive copies via email at bfriedman@aeiconsultants.com or via fax at (201) 332-1880, if possible. Please call me at (201) 332-1844 if you have any questions or require further information. Thank you!

Regards,

Ben Friedman

1.0 INTRODUCTION

On behalf of AvalonBay Communities, Inc. (AvalonBay), Fleming-Lee Shue, Inc. (FLS) is presenting this *Revised Remedial Action Work Plan* (RAWP) to supplement the November 2008 RAWP submitted and subsequently approved by the New York State Department of Environmental Conservation (NYSDEC). This Revised RAWP includes additional parcels, provides updated site information and presents an updated remedy. The Spill Numbers associated with the site are 06-03351, 12-03680, 12-03712, 12-03713, 12-03731 (closed) and 07-00587 (currently open). The site comprises Block 700, Lots 1, 9, and 18 in the borough of Manhattan, New York County, New York (Site). A Site Location Map and a Site Plan are included as Figures 1 and 2, respectively.

The investigations and remedial actions previously conducted at the Site are described in Section 2.3 and include a Remedial Investigation (RI) conducted by FLS in April 2007 in order to satisfy the requirements of an “e” designation placed on the Site by the New York City Department of Environmental Protection, monitoring well installation, underground storage tank (UST) removal, and groundwater and soil studies conducted in 2012 under the oversight of the NYSDEC. As a result of the findings of the groundwater and soil studies conducted in 2012, and changes in the proposed development and resulting remedy, NYSDEC has requested this revised RAWP.

This Revised RAWP summarizes the findings of all previous investigations, describes remedial actions completed to date, and presents the proposed remedial action that will be implemented to address the remaining petroleum contamination in soil and groundwater.

1.1 Site Location and Description

The Site is located on Block 700, Lots 1, 9 and 18, in the borough of Manhattan, New York County, New York. A Site Location Map and a Site Plan are included as Figures 1 and 2, respectively. The Site is currently under construction, as described in Section 2.4. The Site comprises three adjoining lots. The first lot is located on 11th Avenue, between West 28th and West 29th Streets, and the second and third lots are located farther east along the north side of West 28th Street.

1.1.1 Historic Site Usage

All of the structures that were present on the Site were demolished in 2011. One of the former buildings, which was located at the corner of 11th Avenue and West 29th Street, was used as an auto repair center. The other former building, located between two parking lots along West 28th Street, was formerly used for a combination of auto repair and finishing, including painting and detailing. Other historic site operations included a lumber yard, piano factory, motor freight station, and coal yard. The surrounding area has historically been used for a mixture of commercial and manufacturing activities.

2.0 SITE BACKGROUND

2.1 Geology

The Site is mapped on the *40074-G1 Weehawken, NJ-NY* Quadrant 7.5 Minute Topographic Map, published by the United States Geological Survey (Figure 1). Review of the topographic map revealed that the Site is located approximately 10 feet above mean sea level (msl).

New York City geology is characterized by metamorphic bedrock overlain by a thin layer of glacial deposits. The glacial deposits are overlain by native soils and/or urban fill material. The bedrock beneath this area of Manhattan is the Cambrian-Ordovician Hartland Formation. The Hartland Formation is primarily composed of sediments that were metamorphosed during the Taconic and Acadian orogenies roughly 400 to 500 million years ago.

During previous Site investigations, the surface soils were noted to be fill materials including brick, concrete, ash, cinders, wood and gravel in a matrix of silty sand that is typical of urban fill in the New York metropolitan area.

2.2 Hydrogeology

As detailed in the FLS Analytical Forensic & Hydrogeological Investigation dated May 2012 (see Appendix G), groundwater flow is to the west across the Site. During FLS' recent Site investigations, groundwater was encountered at depths of 9 to 11 feet below grade (ft-bg), with an average depth-to-water of approximately 10.25 ft-bg.

During monitoring well gauging performed on lot 1 by FLS from March 2008 through September 2010, the depth-to-water ranged from 7.82 to 9.93 ft-bg. Monthly groundwater contour maps showed that the groundwater flow direction typically ranged from west to south in that portion of the Site.

2.3 Previous Investigations and Remedial Actions

2.3.1 EnviroTrac 2005 Phase I Report

In December 2005, EnviroTrac performed a Phase I Environmental Site Assessment (Phase I ESA) for the Site, included in Appendix A. This report addressed Lots 1, excepting the parking lot along West 28th Street, 9, and 18. According to the Phase I report, the property at 282-296 11th Avenue (on Lot 1) was used as a parking lot with hydraulic lifts to store vehicles. Based on Site observations, including fill ports and vent pipes, EnviroTrac noted there was evidence of the presence of eight registered 550-gallon gasoline USTs in the northwest corner of the parking lot. In addition, the Site representative, Mr. Roy Bernstein of Valeray Real Estate Co., indicated that three unregistered 550-gallon gasoline USTs were present in the southern portion of the parking lot.

(southwestern corner of the Site) under a concrete patch. The property at 298 11th Avenue was occupied by a one-story building used as an auto-repair shop. It contained hydraulic lifts to elevate the vehicles and an AST to store waste oil and parts washer solvent. Properties at 517-527 West 28th Street and 529-545 West 28th Street were occupied by a one-story building and a wooden lean-to type building, utilized for the storage and distribution of construction materials. There were no signs of spillage or leakage observed on the ground in the area of stored material.

The regulatory database reviewed identified a NYSDEC Petroleum Bulk Storage (PBS) ID associated with the parking lot along 11th Avenue. According to the available records, the Site (PBS ID 2-350281) contained eight 550-gallon gasoline USTs from 1956 to 1983. In 1983, the USTs were taken out of operation, emptied, filled with water and the fill ports were capped with concrete. These eight USTs were located on the northern portion of the parking lot (northwest corner of Lot 1). The report does not identify any open spill numbers in the surrounding area.

The auto-repair shop on 11th Avenue, though not listed as a USEPA Small Quantity Generator Facility, generated waste oil and parts washer solvent, which was stored at the northern side of the repair bay area and picked up by a licensed waste company.

2.3.2 EnviroTrac 2006 Phase II Report for portion of Site

EnviroTrac conducted a Phase II ESA, consisting of soil and groundwater sampling, at the parking lot on 11th Avenue in March and June 2006. A copy of the letter report is included in Appendix A.

The results of the Phase II ESA indicated that volatile organic compounds (VOCs) and semivolatile organic compounds (SVOCs), including xylenes, benzo(a)anthracene, benzo(b)fluoranthene and benzo(a)pyrene were detected at concentrations above the NYSDEC Technical and Administrative Guidance Memo (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) in two of the six samples. These two samples were collected from the vicinity of eight abandoned 550-gallon gasoline USTs at depths of 7 - 8 and 8 - 9 ft-bg.

The results also indicated that VOCs and SVOCs were detected at concentrations above NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1. Class GA Groundwater Standards (Class GA Standards) in all three groundwater samples. Two of the three groundwater samples were collected at a depth of 13 to 14 ft-bg, in the vicinity of the eight abandoned 550-gallon gasoline USTs located in the northwestern section of the Site, and one groundwater sample at a depth of 14 ft-bg, in the vicinity of the three unregistered 550-gallon gasoline USTs located in the southwestern corner of the Site. In the samples collected near the eight abandoned USTs in the northwestern corner of the Site, the following petroleum-related compounds were detected at concentrations exceeding the Class GA Standards: benzene, toluene,

ethylbenzene, m,p-xylene, o-xylene, isopropylbenzene, n-propylbenzene, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, sec-butylbenzene, p-isopropyltoluene and naphthalene. In the area of the three USTs located in the southwestern corner of the Site, the only compound detected in exceedance of the Class GA Standards was methyl-tert butyl ether (MTBE). Based on these results, NYSDEC assigned Spill # 06-03351 to the Site. Sample locations and results are included in Appendix A.

Based on the results of EnviroTrac's Phase II ESA, EnviroTrac recommended that the eight abandoned USTs in the northwestern corner of the parking lot be removed along with any associated petroleum-impacted soil and that the three unregistered USTs in the southwestern corner of the parking lot be properly abandoned in-place (removal was not feasible at the time due to the presence of in-use hydraulic car lifts above the USTs) followed by the installation of a permanent monitoring well in this area to monitor groundwater quality. Following these activities, EnviroTrac recommended contacting NYSDEC to recommend spill closure.

2.3.3 FLS April 2007 Remedial Investigation Report

In April 2007, FLS performed a RI for the entire Site. The RI report is included as Appendix B. The RI consisted of the installation of 14 borings and the collection of soil and groundwater samples. Figure 2 shows the soil and groundwater sample locations from the RI. FLS observed petroleum-contaminated soil and groundwater associated with the three unregistered 550-gallon USTs located in the southern section of the parking lot fronting 11th Avenue. Slight to strong petroleum odors were detected at the groundwater table, located approximately 11 ft-bg. In addition, a slight oil sheen was present on a groundwater sample collected in this area. Based on these visual and olfactory observations, FLS reported a spill of unknown petroleum to the NYSDEC on April 16, 2007. Spill # 07-00587 was assigned to this spill.

FLS also observed petroleum-contaminated soil and groundwater in the area of the eight abandoned USTs located in the northwestern corner of the parking lot fronting 11th Avenue. This spill was previously reported by EnviroTrac in June 2006 and assigned Spill # 06-03351 by the NYSDEC, as detailed in Section 2.3.2.

All VOC concentrations in soil were below the NYSDEC TAGM 4046 RSCOs except for acetone and xylenes. Acetone was detected above RSCO in the soil sample collected at the auto-repair shop on Lot 1. This exceedance may be due to field contaminants as it was detected in the field blank associated with this sample. Total xylenes were detected above RSCO in the soil sample collected near the UST area in the northwestern corner of the Site.

VOCs were detected in the groundwater samples collected. Benzene, chloroethane, 1,1-dichloroethane (1,1-DCA), 1,1-dichlorethene (1,1-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), ethylbenzene, toluene, 1,1,1-trichlorethane

(1,1,1-TCA), vinyl chloride, and total xylenes were detected above the Class GA Standards.

SVOCs were also detected in the groundwater samples collected. Bis(2-ethylhexyl) phthalate, naphthalene and phenol were detected above their respective Class GA Standard in the samples collected near the UST area in the northwestern corner portion of the Site.

In October 2007, FLS submitted a monitoring well installation and groundwater monitoring Work Plan (WP) to NYSDEC to address spill numbers 06-03351 and 07-00587. Spill 06-03351 was closed just prior to this submission on September 11, 2007. The WP was subsequently approved in an email dated October 16, 2007.

The groundwater monitoring, implemented by FLS in March 2008, was aimed at determining whether petroleum free product existed in the groundwater on and/or off of the Site. The results of the groundwater monitoring are summarized in Section 2.3.4.

2.3.4 FLS Monitoring Well Installation and Groundwater Monitoring (2008)

The monitoring well installation program consisted of the installation of six soil borings; sampling and analysis of soil samples; installation of permanent monitoring wells (MW-1 through MW-6); elevation survey of all six monitoring wells; collection of one groundwater sample; and periodic monitoring of groundwater for free-phase product until construction and remediation activities commenced. The monitoring wells were installed in March 2008.

The soil and groundwater samples collected were analyzed using Environmental Protection Agency (EPA) Method 8260 for Spills Technology and Remediation Series (STARS)-list VOCs and EPA Method 8270 for STARS-list SVOCs.

2.3.4.1 Soil Analytical Results

The laboratory analytical results did not detect any analytes present at concentrations that exceeded the NYSDEC TAGM 4046 RSCOs.

2.3.4.2 Groundwater Analytical Results

The groundwater elevation data collected on April 11, 2008 confirmed that MW-1 was the most hydraulically upgradient well.

The laboratory analytical results for a groundwater sample collected on April 11, 2008 from MW-1 indicated an exceedance of the Class GA Standard for MTBE, which was detected at a concentration of 18.7 micrograms per liter (µg/L). No other VOCs or SVOCs were detected.

2.3.4.3 Groundwater Monitoring

Periodic monitoring for free-phase product commenced on March 12, 2008 and ceased on September 29, 2010. An oil/water interface probe was utilized to determine if free-phase product was present on the groundwater surface in any of the monitoring wells (MW-1 through MW-6).

Free-phase product was not detected in any monitoring well (MW-1 through MW-6) through the most recent event, conducted in September 2010. The depth-to-groundwater ranged from 7.82 ft-bg in March 2008 to 9.93 ft-bg in August 2008.

2.3.5 UST removals (2011/2012)

Sixteen 550-gallon USTs were known to be present at the site based on previous environmental investigations described above, several test pit investigations conducted in 2007 and 2010, and a geophysical survey conducted in June 2011 (Appendix C). In October 2011, all known USTs were properly decommissioned and removed from the site. Following removal, approximately 1,238 tons of petroleum-contaminated soil was removed from the site. The excavation extents are shown on Figure 2. With exception of xylenes in one bottom sample, no petroleum-related VOCs were detected exceeding the NYSDEC standards in any of the post-excavation endpoint samples. After the collection of post-excavation samples and approval from the NYSDEC, the excavations were backfilled with clean fill. The UST Closure Report was submitted to NYSDEC in December 2011 and is included as Appendix D.

A 17th UST was discovered at the site on February 22, 2012 during construction excavation. The presence of this tank was reported to the NYSDEC spill manager. The tank was drained, properly decommissioned, and removed from the Site on February 28, 2012. (The 17th tank was registered prior to its removal.) Following the removal of the tank, petroleum-contaminated soil was excavated down to 6 feet below grade on the north, east, and west sides of the tank, and to 7 feet beneath the tank, and exported off-site. FLS analyzed preliminary soil samples from areas surrounding the tank. Samples to the south and east of the tank did not exhibit petroleum impacts, but compounds exceeding CP-51 gasoline-contaminated soil criteria were detected in samples to the north, west, and bottom of the tank. Further soil excavation in the area of the UST was not possible at the time of removal due to structural issues concerning the sidewalk. Therefore, soils near the groundwater interface could not be removed and sampled. Excavation resumed in this area on July 5, 2012, after sheeting was installed along the sidewalk, as part of mass excavation associated with the Site redevelopment. The excavation extended down to a depth of approximately 13 feet below grade in all directions except to the south, which was against the property line. A total of 542 tons of petroleum-contaminated soil was removed from the site. Clean post-excavation soil samples were collected on all four sides and beneath the former UST. The UST #17 Closure Report, prepared in August 2012, is included as Appendix E.

2.3.6 Groundwater Investigation (January 2012)

In January 2012, as requested by the NYSDEC, a groundwater investigation was conducted in order to obtain updated groundwater data for the site. To meet this

objective, 7 temporary groundwater monitoring wells were installed and sampled on lots 9 and 18, and two existing off-site monitoring wells in the sidewalk near lot 1 were sampled. Temporary wells were used because construction activities in this portion of the site would have made protection of permanent wells impossible. Highly degraded chlorinated solvents were identified in groundwater on lot 18, and were determined to be likely derived from an adjacent upgradient automotive repair operation with an active solvent spill case with the NYSDEC, or from an adjacent upgradient former metal fabrication operation east of the site along 28th Street. The results also indicated the presence of elevated petroleum hydrocarbons on the north side of lot 9. The groundwater investigation report dated February 16, 2012 is included as Appendix F.

2.3.7 Analytical Forensic & Hydrogeologic Investigation (May 2012)

To further investigate the origin of the contamination on the north side of lot 9, FLS conducted a forensic analysis utilizing all known site data, and collected water-level measurements from wells at the site. The forensic analysis concluded that the groundwater contamination on the north side of lot 9 was likely derived in large part from an offsite source, using multiple lines of evidence and noted that there are several current or former auto-repair shops in buildings adjacent to the northern Site boundary. (Data from the vicinity of the 17th UST was not utilized, in part because the contaminated soils near the groundwater interface had not yet been removed and sampled. Subsequent soil removal in July 2012 showed that these soils had much lower concentrations than found along the northern property line where the January 2012 study found petroleum contamination.) The forensic analysis is included as Appendix G.

2.3.8 Additional Soil and Groundwater Sampling (July-August 2012)

At the request of NYSDEC, FLS installed five additional soil borings completed as permanent monitoring wells, and collected soil and groundwater samples. The borings/wells were installed on lot 9 just north of the excavation for the building basement, which is bordered by steel sheeting on all sides. Soil samples from four of the five borings indicated the presence of several elevated petroleum-related VOCs exceeding NYSDEC standards between 9 and 13 feet below grade, which is the depth range of the soil-water interface at the Site. Groundwater samples from the same locations exhibited elevated concentrations of VOCs exceeding Technical & Operational Guidance Series (TOGS) guidance values including benzene, toluene, ethylbenzene, xylenes, and MTBE. While forensic analysis of the analytical data indicated that offsite sources were likely contributing to contamination in this area, no single point source could be positively identified to account for the levels of contamination present in the new borings/wells in this area of the site. Soil boring and monitoring well locations are shown on Figure 2. Reports from the additional soil and groundwater sampling are included in Appendix H.

2.4 Proposed Development

Avalon West Chelsea will be a new residential community in two connected buildings. The development will be conducted on Lots 1, 9, and 18. Building 1 will be a 32-story tower along 11th Avenue. Building 2 will be a 14-story building on the northern side of West 28th Street, encompassing most of Lots 9 and 18. Rentable retail space will be available on the first floor of the development, along with several first floor apartments at the eastern end of the development. A partial basement will be located in the southern portion of Building 2.

The foundation underneath the basement of Building 2 will extend at least to the groundwater which is present at approximately 9 to 11 ft-bg. The depth of the excavation will be approximately 12 to 15 ft-bg in this area. Areas outside the basement footprint will generally remain unexcavated, other than some shallow excavation required for foundation elements. The following remedial measures are being installed underneath the buildings as required under the November 2008 RAWP submitted to the NYC Department of Environmental Protection to satisfy the E-designation placed on the site:

2.4.1 Vapor Barrier

A vapor barrier is being installed underneath the entire building foundation of both buildings. The Grace Preprufe® 300R water proofing system or equivalent is being installed beneath the basement footprint on the bottom of the concrete slab. Grace Preprufe® 300R is a 46-mil thick high density polyethylene (HDPE) membrane. The Grace Preprufe® 160R water proofing system or equivalent is being installed outside the basement walls. Grace Preprufe® 160R is a 32-mil thick HDPE membrane. For areas of the buildings not containing a basement and not in contact with groundwater, a 20-mil vapor barrier (Grace Florprufe® 120 or equivalent) is being installed. Vapor barrier specifications are included in Appendix I.

2.4.2 Sub-Slab Depressurization System

In all areas of both buildings outside of the basement footprint, a sub-slab depressurization system is being installed in order to remove any vapors that may accumulate underneath the building slab. Appendix I presents a general layout and details of the SSDS being installed at the site.

3.0 PROPOSED REMEDIAL ACTIONS

3.1 Excavation of Petroleum-Contaminated Soil

Any remaining petroleum-contaminated soil encountered within the basement footprint (Figure 2) will be excavated down to the depth of the proposed basement foundation

which, at approximately 12 to 15 ft-bg, is below the groundwater table. Petroleum-contaminated soil will be disposed of off Site in accordance with local, state and federal regulations. Due to structural concerns, soil between adjoining buildings to the north of the Site and the sheeting on the north side of the basement footprint cannot be excavated. This area includes the contaminated zone north of the basement footprint and south of the northern boundary of the Site. The proposed remedy for this area is described in Section 3.2.

3.1.1 Remedial Contingency Procedures

If any additional USTs are discovered at the Site during excavation, the NYSDEC Spill Case Manager will be notified upon discovery. As with all previous USTs discovered at the Site, the tank would be drained of any residual liquid, removed, cleaned, cut into manageable-sized pieces, and disposed of as scrap metal. All residual liquid would be properly disposed of. Any petroleum-contaminated soil surrounding the tank would be excavated to the greatest extent possible based on structural concerns and proximity to site boundaries. Soil endpoint samples would be collected from the UST area per NYSDEC requirements (DER-10).

If the presence of free phase petroleum is discovered during site excavation, work in that area will cease, and a spill report will be made. The NYSDEC Spill Case Manager also will be notified upon discovery. Procedures to investigate and remediate the free phase petroleum product-affected area will be discussed with NYSDEC, and a plan of action will be implemented to address the affected area.

3.2 Chemical Oxidation of Soil and Groundwater

Soil and groundwater will be treated by means of *in situ* chemical oxidation via injection wells at locations comprising most of the soil contaminant mass. This approach will treat soil and groundwater while minimizing impacts to ongoing construction and the buildings abutting the Site along the northern property line. The area under consideration for this treatment lies between the steel sheet pile wall to the south and the northern property line to the north, and between SB-9 on the east and SB-13 on the west (Figure 3). Most of the contamination in this area derives from gasoline, fuel oil, and automotive products.

3.2.1 Background

FLS examined soil and groundwater VOC and SVOC concentrations in the area under consideration for treatment. In the 17 soil samples collected from April 2007 through August 2012, the total VOC concentrations ranged from 0.002 milligrams per kilogram (mg/kg) to 432 mg/kg and averaged approximately 68 mg/kg. The total contaminant mass concentrations, the sum of VOCs and SVOCs, ranged from 0.002 mg/kg to 462 mg/kg and averaged approximately 77 mg/kg. Based on this average, and an assumed soil bulk density of 1,400 kg/m³, FLS estimates that there are approximately 260 to 300 pounds of contaminant within the area proposed for treatment, as estimated from samples collected near

the water table to 14 feet below grade in the following borings: TMW-1, TMW-3, SB-4, SB-13, SB-3, SB-5, SB-1, SB-9, SB-2, and SB-24.

The boring locations with the greatest soil contaminant mass are TMW-1 and TMW-3, which are both on the northern side of the Site abutting the property line and the backs of buildings fronting W. 29th Street. Figure 4 shows the mean contaminant mass concentrations in the various soil borings within the area under consideration for treatment.

As shown on Figure 4, most of the contaminant occurs in a few locations. TMW1 and TMW3 contain most of the contaminant followed by SB4, SB13, SB3, SB5 and SB1. SB13 contains almost no VOCs and has much less potential impact on groundwater quality and receptors. (SB13 consists almost exclusively of the highly insoluble SVOC fraction that has a negligible impact on groundwater or soil vapor. For this reason, treatment prioritizes SB3 over SB13, because SB3 has a higher percentage of VOCs that can adversely affect groundwater and other media. In this manner treatment will be more effective.) The locations with the most contaminant and highest levels of VOCs include TMW1, TMW3, SB4, and SB3. Combined, within an area bordered by SB4 on the east and TMW1 on the west, these locations (along with SB2) have an estimated total contaminant mass of approximately 200 pounds, or slightly less than 80 percent of the total contaminant mass in the area under consideration for treatment.

In groundwater, benzene, toluene, ethylbenzene, and total xylenes (BTEX) concentrations in 13 samples (sampled between January 2012 and August 2012),

ranged from non-detect (ND) to 12,244 µg/L and averaged approximately 2,210 µg/L. The highest BTEX concentration was detected in MW3 followed by MW1, MW4, TMW1, TMW3, MW5, and MW2. (The samples from TMW1 and TMW3 were collected from temporary well points while MW1, MW2, MW3, MW4, and MW5 were sampled from permanent wells. This can make a difference in the results and may bias low the BTEX concentrations in TMW1 and TMW3.) The naphthalene groundwater concentrations ranged from ND to 430 µg/L and averaged 190 µg/L. Total iron in groundwater ranged from ND to 1,350,000 µg/L and averaged 147,179 µg/L. These are elevated levels that must be taken into account for treatment as they affect oxidant dosing and efficacy. Free product has never been observed in any of the wells to date.

Both soil and groundwater results point to the same locations as having the most contaminant. As soils contain much greater total contaminant mass than groundwater and contribute to groundwater contamination, the focus is on treating soil contaminant mass. As a result, more weight has been given to soil contaminant levels than groundwater concentrations to target treatment.

In order to focus on the majority of the contamination and optimize reduction in overall toxicity, treatment will focus on the locations with the most contaminant, namely TMW1, TMW3, SB3, and SB4. These locations encompass a Treatment Area that is approximately 110 feet by 35 feet by 5 feet thick (713 yd³, 545 m³). The treatment interval is from the water table, approximately 9 feet below grade (as of September 2012), to 14 feet below grade. Soils above the water table had no significant contaminant mass. Figure 3 shows the treatment area injection well locations.

3.2.2 Chemical Oxidation Treatment

The proposed treatment consists of *in situ* chemical injection using the RemMetrikSM process. RemMetrikSM employs mass-based estimates of contaminant mass and location in conjunction with injection of treatment amendments using subsurface pressure waves to promote injection deep into the soil pores to promote maximum effectiveness. In this instance, subsurface pressure wave injection will be provided by Wavefront Solutions, Inc.'s SidewinderTM tool or equivalent and Wavefront's PrimawaveTM process. The RemMetrikSM process has been approved for use at four other sites in New York City and New York State.

The first step is to conduct a bench-scale treatability study. This is necessary because of the elevated iron that can potentially affect the oxidant efficacy and to determine the most suitable oxidant. A treatability study will identify potential oxidant failure mechanisms due to reactions with minerals and mineral surfaces and yield information on the stability of the oxidant. It will yield information used in determining oxidant dosing. Currently, it is contemplated that hydrogen peroxide and/or sodium persulfate, possibly with nano or micro iron, will be used as the oxidant, but the results of the treatability test will be used for the final

selection. FLS, on behalf of AvalonBay, will notify NYSDEC about the type and amount of oxidant in a remedial design report.

The oxidant mixture will be injected in a one-time application through four custom-installed injection wells positioned at the target locations (Figure 3). Each well will be constructed of 2-inch-diameter Schedule 80 PVC with 5 feet of well screen. The screen interval will be between approximately 9± and 14± feet below grade so as to promote maximum treatment of the contaminated interval. Field adjustments to this interval may be made so as to maximize treatment, as necessary. The Sidewinder™ tool or equivalent will be attached to the well head and the treatment mixture injected into the well. The injection tool(s) will be moved from well to well to cover the treatment area and in response to monitoring of the subsurface chemistry. Treatment will take place during construction while the soils are still exposed and the foundation unfinished.

Following treatment, the wells will be retrofitted so as to allow future access for treatment and/or monitoring after the building is completed. Additional PVC pipe will be attached to the well heads and run through the slab to a common header in the storage room as shown on Figures 3 and 5. Access from this area to all four injection wells will be available for future use, if necessary.

In addition to the injection wells, five monitoring wells will be installed and/or retrofitted from the existing monitoring wells. These wells will be installed using 10-slot, Schedule 40 PVC with 10 feet of well screen. The screen interval will be from approximately 6 to 16 feet below grade. All monitoring wells will be retrofitted like the injection wells and brought to a common header for future sampling (Figures 3 and 5).

Up to five soil vapor extraction (SVE) wells may be installed in the Treatment Area for soil venting during treatment if hydrogen peroxide is used. The wells will have 5 feet of screen and be screened from approximately 4 feet below grade to approximately 9± feet below grade. A vacuum will be placed on the SVE wells during injection to remove the oxygen generated during treatment and will be connected to a carbon treatment to remove any fugitive VOCs leaving the subsurface.

3.2.3 Cleanup Goal

An appropriate cleanup goal for the focused treatment is to promote appreciable reductions in BTEX concentrations and greatly reduce overall toxicity by reducing the benzene concentrations in the most heavily contaminated areas. Groundwater sampling results demonstrate that contamination from the treatment area is not migrating off site and appears confined to the area east of MW-7, well inside the site boundary. Consequently, the proposed cleanup goal is realistic with respect to the existing groundwater conditions. If there are continuing offsite sources of contamination and impacted groundwater continues to flow onto the Site, the proposed treatment goals may not be able to be achieved.

The proposed treatment should be able to reduce contaminant concentrations to asymptotic levels, although there is no guarantee that TOGS levels will be reached because of the potential migration from off-site sources. Following treatment, monitored natural attenuation (MNA) will address any remaining contamination as much of the contaminant source mass will have been eliminated. It should be noted that injection of oxidants sometimes increases the concentrations of contaminants in groundwater temporarily before they begin to drop as a result of treatment and this behavior should be factored into evaluating the results.

The wells will be monitored during injections to ensure that the oxidant is reaching the target areas and that the treatment conditions are favorable. The wells will be monitored for the following parameters: pH, temperature, dissolved oxygen, oxidation reduction potential, and conductivity.

3.2.4 Sampling and Monitoring

A baseline round of groundwater samples will be collected from the five monitoring wells prior to treatment. The samples will be analyzed for VOCs and naphthalene via Method 8260; sulfate, sulfide, dissolved iron (Iron II), chloride, alkalinity, methane, and carbonate. A post-treatment round of groundwater samples will be collected approximately 6 months after the end of the injection program and quarterly sampling will begin approximately 3 months following post-treatment sampling. Quarterly sampling will continue for four quarters and the data will be evaluated to determine whether remediation is complete or if the results warrant continuing with MNA. If elevated or rebounding concentrations in the wells along the northern property line indicate a continuing offsite source, AvalonBay will request closure of spill #07-00587. The proposed monitoring wells include the following: MW-2, MW-3, MW-8, MW-9, and MW-10 (Figure 3).

4.0 CLOSURE REPORT

Upon the completion of the above-described remedial actions and the post-treatment round of groundwater samples, FLS will submit a Remedial Action Report (RAR) to the NYSDEC. The RAR will include all soil transportation manifests, soil disposal/recycling certificates, details of the chemical oxidation treatment, and laboratory analytical results from post-treatment sampling. In addition, the RAR will include a work plan to sample the groundwater monitoring wells at the Site. The groundwater will be sampled quarterly for at least one year and analyzed for VOCs and for natural attenuation parameters (pH, dissolved oxygen, total and dissolved iron, total and dissolved manganese, and nitrate) to monitor the degree and rate of natural attenuation.

Block 700, Lots 1, 9, & 18
NYSDEC Spill No. 0700587

Dear Mr. Obligado:

This letter is in response to the Department's questions regarding the source(s) of petroleum contamination at the referenced site, as noted in the Department's letter dated April 14, 2012 and in the project meeting on April 16, 2012. In particular, a question arose concerning whether the levels of volatile organic compounds (VOCs) in groundwater samples from two temporary wells, TMW-1, TMW-3, and well point SB-24 originate from the former on-site underground storage tanks (USTs) removed in October 2011 and February 2012, or from a different source(s). These sampling locations lie along the property boundary and abut the backs of the lots fronting W. 29th Street as depicted on Figures 1A and 1B. The on-site USTs were located along the sides of the site adjacent to the sidewalks within the site property boundary along West 28th Street and 11th Avenue. To the best of our knowledge, these USTs contained gasoline and/or fuel oil.¹

A geophysical survey of the site was performed on May 17 - 18, 2011 and provided to the Department under separate cover on April 12, 2012. This survey, together with the many test pits along the north property line, found no evidence of any on-site tanks other than those removed in October 2011 and the one additional tank found near the sidewalk along West 28th Street and removed in February 2012 during construction.

Potential sources of petroleum contamination other than the on-site USTs include suspected, current and former off-site USTs associated with auto repair and other businesses located on

¹ All available evidence indicates that site USTs were used solely for gasoline or fuel oil storage, not auto repair.

the properties north of the site on Block 700. One building at 548 West 29th Street, immediately next to SB-24, has a vent pipe at the rear of the building closest to the site indicating a gasoline tank may be located near the site boundary (Figures 1A & 2A). Photos of the buildings at 522 and 526 W. 29th Street abutting the site show two additional gasoline tank vent pipes indicating that gasoline tanks are currently or were historically present at these locations (Figure 2B). Figure 1A shows the locations of these vent pipes relative to the site.

It should be noted that although the vent pipes are evidence of potential gasoline USTs, these would likely be old USTs, probably installed when the off-site buildings were constructed in the 1930s or earlier. These USTs may have been used initially to contain gasoline only, but as automobiles became more common and gasoline stations proliferated, many small businesses such as these stopped storing gasoline in their own tanks and filled vehicles at nearby gasoline stations. This gave them the opportunity to use the gasoline tanks for storage of other products such as waste solvents. These tanks were then commonly used to contain all manner of automotive waste such as gasoline from gas tanks pulled for auto repairs, waste automotive paint, thinners, and primers before being emptied by waste solvent recoverers. Historic evidence does not indicate that such auto repair operations ever took place on the site.

Fleming Lee Shue, Inc. (FLS) examined groundwater results from the temporary wells and well points sampled by FLS in April 2007 and January 2012 in order to determine the source(s) of the VOCs. The analysis focused on three lines of evidence: (1) relative concentrations of benzene and toluene at different locations, (2) VOC concentrations over time and distance, and (3) an analysis of historical uses of VOCs detected and their location.

This report relies on data from two monitoring wells and 19 temporary wells and well points installed and sampled in March-April 2007 and January 2012 by FLS and the information presented to the Department by FLS in the following earlier reports: *Remedial Investigation Report*, November 2007 and *Groundwater Investigation Report*, February 2012.

In conjunction with this analysis FLS collected water level measurements on April 20, 2012 in order to assess groundwater flow direction. The measurements show groundwater flow runs almost parallel to W. 28th Street through most of the site and flows towards the west (Figure 3). This indicates that the former on-site USTs were located cross-gradient or downgradient of TMW-1, TMW-3, and well point SB-24.

Relative Concentrations of Benzene and Toluene

The relative concentrations of different VOCs, such as benzene and toluene, can uniquely characterize petroleum compounds and differentiate between different sources. For example, Murphy and Morrison, 2002, note that different gasoline suppliers produce different blends of gasoline and that these can be differentiated by comparing the ratios of the different components. Weathering, age, and natural decomposition also alter the composition of fuels in ways that make them distinct from one another.

Examination of the relative concentrations of benzene to toluene shows a marked difference between the groundwater samples collected from TMW-1, TMW-3, and well point SB-24 near the northern edge of the site on Lot 9 and the results from other locations near the former on-site USTs.

Figure 4 shows a scatter plot of benzene versus toluene. It clearly shows that TMW-1, TMW-3, and SB-24 have a profile distinct from all other samples. The results from TMW-1, TMW-3, and SB-24 form a cluster at the top of the chart indicating a much higher concentration of benzene relative to toluene. The sample collected from SB-9, located at the lower right of the scatter plot, also has a distinctly different profile. On the site itself, SB-9 lies closer to the north-adjacent sites than to the former on-site USTs (Figure 1A) and has a unique profile that reflects its proximity to 526 W. 29th street, the building that abuts this sample location, and the uses that took place there. Samples from the other locations against the northern edge of the site each contained markedly different concentrations of benzene and toluene, which suggests they originate from different uses. The different uses likely arise from the various businesses and occupants that utilized the buildings fronting W. 29th Street over time. The benzene-toluene profiles from TMW-1, TMW-3, SB-24, and SB-9 collected along the northern site border all have one thing in common: *they are separate and distinct from the profiles of samples collected near the former on-site USTs.*

Along the same lines, the remaining samples in the scatter plot are at some distance from TMW-1, TMW-3, SB-24, and SB-9 and are much closer to the former on-site USTs (except for SB-3 (TMW-8) and SB-7 (TMW-9), which are at the eastern end of the site, and TMW-4 and TMW-7)². These numerous samples clustered tightly at the lower left all have much different relative benzene and toluene concentrations than the samples from TMW-1, TMW-3, and SB-24 (and SB-9) and, in *all* cases, have toluene or both benzene and toluene concentrations below detection limits. This is in stark contrast to the samples collected along the backs of buildings that front W. 29th Street and depicts a distinctly different profile of benzene relative to toluene in the samples collected near the former USTs. The distinctly different benzene-toluene profiles suggest that the sources of the contaminants detected in the samples at the northern boundary of the site are not from the former on-site USTs. Table 1 lists the benzene and toluene results for the samples in Figure 4.

² The locations of SB-3 (TMW-8), TMW-7, TMW-4, and TMW-9 (SB-7) are not relevant because they are at the far eastern part of the site and/or are non-detect for both benzene and/or toluene in groundwater.

Table 1 – Groundwater Benzene & Toluene Results, ug/L

| Sample | Benzene | Toluene | Fig. 2 Cluster Lower Left |

| SB-24 | 497 | 13.9 | |

VOC Concentrations over Time and Distance

Sixteen soil samples in eight borings were collected in April 2007 at or immediately adjacent to the locations of the former on-site USTs, which comprise the suspected former UST source area (Figure 1B). Table 2 presents the benzene results for these samples in order of ascending concentration:

Table 2 – Benzene in Soils Near USTs

| Sample | Benzene ug/kg | Sample Depth, ft. |
|---------------|--------------------------|------------------------------|
| SB-5 | ND | 0-2 |
| SB-10 | ND | 0-2 |
| SB-16 | ND | 9-11 |
| SB-17 | ND | 9-11 |
| SB-18 | ND | 6-8 |
| SB-20 | ND | 0-2 |
| SB-20 | ND | 4-6 |
| SB-22 | ND | 0-2 |
| SB-22 | ND | 9-11 |
| SB-23 | ND | 0-2 |
| SB-23 | ND | 8-10 |
| SB-5 | 0.1 | 6.5-8.5 |
| SB-16 | 0.89 | 0-2 |
| SB-17 | 1.1 | 0-2 |
| SB-18 | 2.7 | 9-11 |
| SB-10 | 3.4 | 9-11 |

Eleven out of 16 soil sample benzene results (69%) were below detection limits and the remaining sample concentrations ranged from 0.1 ug/kg to 3.4 ug/kg. Among the samples with measurable benzene concentrations, all but SB-10 and a barely detectable level in SB-5 were collected from the former UST near the corner of 11th Avenue and West 29th Street, which is in the extreme downgradient position. This demonstrates that there is very little benzene available in the source area from which to impact other locations. Practically speaking, there is no source of benzene associated with the former USTs. Conversely, benzene measured 292 ug/kg and 2,260 ug/kg in TWM-3 and TMW-1, respectively. Both lie adjacent to the backs of the properties that front W. 29th Street.

Table 3 shows BTEX groundwater results by sample, date, and location. For example, SB-24 abuts the property line on the back of Lot 9 near a suspected off-site UST (Figure 1A) on the adjoining property. SB-24 measured 39.7 ug/L of total xylenes in April 2007. In contrast, the site wells near the former USTs along W. 28th Street, including SB-6, SB-7, SB-20, SB-19, SB-18, SB-14, and SB-10, all reported non-detectable levels of total xylenes in samples collected from these wells in 2007.

Groundwater samples from wells farther away from the former on-site USTs on the northern boundary, SB24, TMW-1, TMW-3, and SB-9, all contained appreciable levels of total xylenes ranging from 39.7 ug/L to 2,070 ug/L. Total xylenes *increased* with *increasing* distance from the former on-site USTs.

Total xylenes also increased with time in these wells. For example, total xylenes measured 39.7 ug/L in SB-24 in 2007. In a nearby sample location, TMW-1, total xylenes measured 2,070 ug/L in 2012--a two order-of-magnitude increase in five years. A similar increase over time occurred in SB-9, where total xylenes measured 271 ug/L in 2007 and in nearby TMW-3, where total xylenes measured 986 ug/L in 2012. This is a more than 3.5-fold increase in total xylene concentration over five years suggesting a continuing release between 2007 and 2012 of substances that were not contained in the on-site USTs removed in 2011 and 2012.

The absence of total xylenes in the groundwater samples collected near the former on-site USTs and the much higher total xylene concentrations in wells farther away from the former USTs indicate a source other than the former on-site USTs. The increase in concentration over time in the wells farther from the USTs also suggests that the former on-site USTs are not the source of contaminants in SB-9, SB-24, TMW-1, and TMW-3. All the locations with detectable or elevated levels of total xylenes have one thing in common: *they are all located at the edge of the site near the backs of the lots that front W. 29th Street*. Several of these properties house auto repair or former auto repair shops, and one location is a former remediation site.³

³ SB-12 has a total xylenes concentration one to three orders of magnitude *lower* than SB-9, SB-24, TMW-1, and TMW-3 and likely represents an isolated, low level petroleum release.

Table 3 – BTEX in Groundwater, ug/L

| Sample | Date | Benzene | Toluene | Ethylbenzene | Total Xylenes | Location |
|---------------|-------------|----------------|----------------|---------------------|----------------------|-----------------|
| MW-2 | 1/12/12 | ND | ND | ND | ND | Lot 1 |

| TMW-8 | 1/12/12 | ND | ND | ND | ND | Lot 18 |
| TMW-9 | 1/12/12 | ND | ND | ND | ND | Lot 18 |

Historical Uses of Detected VOCs

Specific VOCs detected in samples provide further evidence that the VOCs in groundwater originate from different sources. Figure 5 shows a plot of the concentrations of methyl ethyl ketone (MEK) (a.k.a 2-butanone) and chloromethane against the corresponding fraction of samples with the same or lower concentrations (a quantile plot). The graph plots all 21 respective sample results for MEK and chloromethane. It graphs the results in ascending order of concentration and plots the fraction of samples corresponding to a particular concentration or lower. For example, MEK concentrations in 20 out of 21 sample results (>95%) were below detection limits and only one sample (SB-24) had detectable levels of MEK.

Figure 5 demonstrates that MEK and chloromethane are unique to SB-24 as they were detected only in this one sample, which is close to a suspected off-site UST (Figure 1A). MEK is a common solvent used for lacquers, paint removers, and automotive paint. Chloromethane is an older refrigerant. Both would be unexpected in fuels like those that were likely stored in the former on-site USTs. Figure 5 demonstrates that in SB-24, located adjacent to an auto repair shop, there are unique, non-fuel components that were not detected in samples taken near the former on-site gasoline and fuel oil USTs. That these compounds occur only in this sample points to a source other than the on-site USTs. This evidence is further supported by the attached Material Data Safety Sheet (MSDS) for an automotive paint base coat. The MSDS lists MEK as comprising from 7 to 13% of the product. In

addition, the fuel components found in SB-24 that might be attributed mistakenly to the former on-site USTs, ethylbenzene (1-5%) and xylenes (7-13%), are also major components in automotive paint. They comprise from 1-5% and 7-13% of the paint base, respectively.

The VOCs detected in wells along the north edge of the property appear to be related to activities occurring at properties fronting W. 29th Street and abutting the property line in the middle of the block. Samples collected from these wells all have detectable or elevated levels of total xylenes. Several of these properties house current or former auto repair shops, and one location is a former remediation site. At least one on-site groundwater sampling location, SB-24, had sample results with VOCs unique to that location and consistent with auto repair uses. This location is adjacent to the back of a current automotive repair shop with a UST vent pipe indicating a potential off-site UST (548 West 29th Street). Among the sample locations with BTEX levels greater than 3 ug/L, all but one lie along the northern property edge adjacent to the parcels fronting W. 29th street.

Summary & Conclusions

All evidence points to no link between the VOCs identified in TMW-1, TMW-3, and well point SB-24 and the former on-site USTs. The evidence supports the claim that the VOCs in groundwater from these locations originates from an off-site source(s). The factors that lead to this conclusion include the following:

1. The ratio of benzene to toluene is very similar in SB-24, TMW-1, and TMW-3 and dissimilar to the ratio of these VOCs in the samples collected near the former on-site USTs.
2. The absence of detectable benzene in soil samples collected near the former USTs demonstrates that there is no material source of benzene from the former USTs that could impact groundwater in SB-24, TMW-1, and TMW-3.
3. Groundwater flow direction is parallel to W. 28th Street, so the groundwater sample locations with elevated VOCs on the northern site boundary are not in the downgradient flow direction from the former on-site USTs.
4. The groundwater concentrations of total xylenes are elevated in wells near the northern site boundary (SB-9, SB24, TMW-1, and TMW-3), while at the same time the concentration of total xylenes is below detection limits in samples collected near the former USTs.
5. The concentration of total xylenes increased between 2007 and 2012 in wells near the property line but total xylenes were not detected in this period in samples collected near the former USTs.

J - Indicates an estimated value

Groundwater samples were analyzed for Volatile Organic Compounds (VOCs) by Environmental Protection Agency (EPA) method 8260B and Semi-volatile Organic Compounds (SVOCs) by EPA method 8270D.

Groundwater analytical results were compared to the New York State Department of Environmental Conservation (NYSDEC) Division of Water Technical and Operational Guidelines Series (TOGS) 1.1.1. Ambient Water Quality Standards and Guideline Values (AWQS).

Results shown are those above TOGS AWQS.

EMERGENCY OVERVIEW:

Flammable. Keep away from heat, sparks, flames, and other sources of ignition. Do not smoke. Extinguish all flames and pilot lights. Turn off stoves, heaters, electrical motors, and other sources of ignition during use and until all vapors/odors are gone. CAUSES SEVERE EYE IRRITATION. CAUSES PRIMARY SKIN IRRITATION. MAY BE ABSORBED THROUGH THE SKIN. PROLONGED OR REPEATED CONTACT MAY CAUSE AN ALLERGIC SKIN REACTION. VAPOR AND/OR SPRAY MIST MAY BE HARMFUL IF INHALED. MAY CAUSE IRRITATION AND/OR ALLERGIC RESPIRATORY REACTION IN LUNGS. VAPOR IRRITATES EYES, NOSE, AND THROAT. SANDING AND GRINDING DUSTS MAY BE HARMFUL IF INHALED. HARMFUL IF SWALLOWED. DRIED FILM OF THIS PRODUCT MAY BE HARMFUL IF CHEWED OR SWALLOWED.

SECTION 2 - COMPOSITION INFORMATION

The following ingredient(s) marked with an "x" are considered hazardous under applicable U.S. OSHA and/or Canadian WHMIS regulations. If no ingredients are listed, then there are no U.S. OSHA and/or Canadian WHMIS hazardous ingredients in this product.

| Material/ CAS Number | Percent | Hazardous | |
|--|---------|-----------|--|

SECTION 3 - HAZARDS IDENTIFICATION

ACUTE OVEREXPOSURE EFFECTS

EYE CONTACT:

Causes severe eye irritation. Redness, itching, burning sensation and visual disturbances may indicate excessive eye contact.

SKIN CONTACT:

Causes primary skin irritation. Dryness, itching, cracking, burning, redness, and swelling are conditions associated with excessive skin contact.

SKIN ABSORPTION:

May be absorbed through the skin. Prolonged or repeated contact may cause an allergic skin reaction.

INHALATION:

Vapor and/or spray mist may be harmful if inhaled. May cause irritation and/or allergic respiratory reaction in lungs. Vapor irritates eyes, nose, and throat. Sanding and grinding dusts may be harmful if inhaled.

INGESTION:

Harmful if swallowed. Dried film of this product may be harmful if chewed or swallowed.

SIGNS & SYMPTOMS OF OVEREXPOSURE:

Repeated exposure to high vapor concentrations may cause irritation of the respiratory system and permanent brain and nervous system damage. Eye watering, headaches, nausea, dizziness and loss of coordination are indications that solvent levels are too high. Intentional misuse by deliberately concentrating and inhaling the contents can be harmful or fatal. Dryness, itching, cracking, burning, redness, and swelling are conditions associated with excessive skin contact.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE: Not applicable.

CHRONIC OVEREXPOSURE EFFECTS

Avoid long-term and repeated contact.

Repeated exposure to vapors above recommended exposure limits (see Section 8) may cause irritation of the respiratory system and permanent brain and nervous system damage. Intentional misuse by deliberately concentrating and inhaling the contents can be harmful or fatal. This product contains fiberglass. Implantation or intratracheal injection of fiberglass has caused cancer in laboratory animals (IARC 2B). Fiberglass has been associated with non-malignant respiratory diseases in humans. This product contains a material which may be a fibrogenic dust. Long-term exposure to this material in the form of dust may result in accumulation of the material in the lungs and in subsequent lung damage. This product contains cobalt or a cobalt compound which is a possible cancer hazard based on animal data. The risk of cancer depends on the duration and level of exposure. High exposures to xylenes in some animal studies have been reported to cause health effects on the developing embryo and fetus. These effects were often at levels toxic to the mother.

The effects of long-term, low level exposures to this product have not been determined. Safe handling of this material on a long-term basis should emphasize the prevention of all contact with this material to avoid any effects from repetitive acute exposures. See Section 11, of this MSDS for a detailed list of chronic health effects information available on individual ingredients in this product.

SECTION 4 - FIRST AID MEASURES

If ingestion, irritation, any type of overexposure or symptoms of overexposure occur during or persists after use of this product, contact a POISON CONTROL CENTER, EMERGENCY ROOM OR PHYSICIAN immediately; have Material Safety Data Sheet information available.

EYE CONTACT:

Remove contact lens and pour a gentle stream of warm water through the affected eye for at least 15 minutes. If irritation persists, contact a poison control center, emergency room, or physician as further treatment may be necessary.

SKIN CONTACT:

Run a gentle stream of water over the affected area for 15 minutes. A mild soap may be used if available. If any symptoms persist, contact a poison control center, emergency room, or physician as further treatment may be necessary.

INHALATION:

Remove from area to fresh air. If symptomatic, contact a poison control center, emergency room or physician for treatment information.

INGESTION:

Gently wipe or rinse the inside of the mouth with water. Sips of water may be given if person is fully conscious. Never give anything by mouth to an unconscious or convulsing person. Do Not induce vomiting. Contact a poison control center, emergency room or physician right away as further treatment will be necessary.

SECTION 5 - FIRE FIGHTING MEASURES

FLAMMABLE PROPERTIES

FLASHPOINT: 30 Degrees F (-1 Degrees C)

FLASHPOINT TEST METHOD:

Pensky-Martens Closed Cup

UEL: Not Available.

LEL: 1.5

AUTOIGNITION TEMPERATURE:

Not Available.

EXTINGUISHING MEDIA:

Use National Fire Protection Association (NFPA) Class B extinguishers (carbon dioxide, dry chemical, or universal aqueous film forming foam) designed to extinguish NFPA Class IB flammable liquid fires. Water spray may be ineffective. Water spray may be used to cool closed containers to prevent pressure build-up and possible autoignition or explosion when exposed to extreme heat.

PROTECTION OF FIREFIGHTERS:

Fire-fighters should wear self-contained breathing apparatus and full protective clothing.

UNUSUAL FIRE AND EXPLOSION HAZARDS:

Keep this product away from heat, sparks, flame, and other sources of ignition (i.e., pilot lights, electric motors, static electricity). Invisible vapors can travel to a source of ignition and flash back. Do not smoke while using this product. Keep containers tightly closed when not in use. Closed containers may explode when overheated. Do not apply to hot surfaces. Toxic gases may form when this product comes in contact with extreme heat. May produce hazardous decomposition products when exposed to extreme heat. Extreme heat includes, but is not limited to, flame cutting, brazing, and welding.

SECTION 6 - ACCIDENTAL RELEASE MEASURE

STEPS TO BE TAKEN IF MATERIAL IS RELEASED OR SPILLED:

Provide maximum ventilation. Only personnel equipped with proper respiratory, skin, and eye protection should be permitted in the area. Remove all sources of ignition. Take up spilled material with sand, vermiculite, or other noncombustible absorbent material and place in clean, empty containers for disposal. Only the spilled material and the absorbant should be placed in this container.

SECTION 7 - HANDLING AND STORAGE

PRECAUTIONS TO BE TAKEN DURING HANDLING AND STORAGE:

Vapors may collect in low areas. If this material is part of a multiple component system, read the Material Safety Data Sheet(s) for the other component or components before blending as the resulting mixture may have the hazards of all of its parts. Containers should be grounded when pouring. Avoid free fall of liquids in excess of a few inches.

STORAGE:

Do not store above 120 degrees F.(48 degrees C.). Store large quantities in buildings designed and protected for storage of NFPA Class IB flammable liquids.

SECTION 8 - EXPOSURE CONTROLS & PERSONAL PROTECTION

ENGINEERING CONTROLS:

Provide general dilution or local exhaust ventilation in volume and pattern to keep the concentration of ingredients listed in Section 8 below the lowest suggested exposure limits, the LEL below the stated limit, and to remove decomposition products during welding or flame cutting.

PERSONAL PROTECTIVE EQUIPMENT

EYES:

Wear chemical-type splash goggles and full face shield when possibility exists for eye contact due to splashing or spraying liquid, airborne particles, or vapors.

SKIN/GLOVES:

Wear protective clothing to prevent skin contact. Apron and gloves should be constructed of: neoprene rubber. No specific permeation/degradation testing have been done on protective clothing for this product. Recommendations for skin protection are based on infrequent contact with this product. For frequent contact or total immersion, contact a manufacturer of protective clothing for appropriate chemical impervious equipment. Clean contaminated clothing and shoes.

RESPIRATOR:

Overexposure to vapors may be prevented by ensuring proper ventilation controls, vapor exhaust or fresh air entry. A NIOSH- approved air purifying respirator with the appropriate chemical cartridges or a positive-pressure, air-supplied respirator may also reduce exposure. Read the respirator manufacturer's instructions and literature carefully to determine the type of airborne contaminants against which the respirator is effective, its limitations, and how it is to be properly fitted and used. Provide general dilution or local exhaust ventilation in volume and pattern to keep the concentration of ingredients listed in Section 2 below the lowest suggested exposure limits, the LEL below the stated limit, and to remove decomposition products during welding or flame cutting.

GENERAL HYGIENE - ESTABLISHED EXPOSURE LIMITS

If Threshold Limit Values (TLVs) have been established by ACGIH, OSHA, Ontario or PPG, they will be listed below. These limits are intended for use in the practice of industrial hygiene as guidelines or recommendations in the control of potential workplace health hazards. These limits are not a relative index of toxicity and should not be used by anyone without industrial hygiene training.

**SECTION 9 - PHYSICAL & CHEMICAL PROPERTIES
(FORMULA VALUES, NOT SALES SPECIFICATIONS)**

SPECIFIC GRAVITY: .978
PHYSICAL STATE: Liquid
Percent Solids: 22-51
Percent Volatile by Volume: 57-85
pH: Not available.
ODOR THRESHOLD: Not available.

Vapour Pressure: <15 mmHg
ODOR/APPEARANCE: Viscous liquid with an odor characteristic of the solvents listed in Section 2.
VAPOR DENSITY: HEAVIER THAN AIR
Evaporation Rate: <125
BOILING POINT OR RANGE: 172- 417Degrees F
Freezing Point or Range: Not Applicable.
Melting Point or Range(°C): Not Applicable.
Partition coefficient (n-octanol/water): Not Applicable.
WEIGHT PER GALLON: 8.15 (U.S.) / 9.7 (IMPERIAL)

SECTION 10 - STABILITY AND REACTIVITY

STABILITY: This product is normally stable and will not undergo hazardous reactions.
CONDITIONS TO AVOID: None Known.
INCOMPATIBLE MATERIALS: Avoid contact with strong alkalies, strong mineral acids, or strong oxidizing agents.
HAZARDOUS POLYMERIZATION: None Known.
HAZARDOUS DECOMPOSITION PRODUCTS:
- Carbon monoxide - Carbon dioxide - Oxides of nitrogen - Oxides of sulfur - Oxides of aluminum - Oxides of barium - Lower molecular weight polymer fractions

CHRONIC TOXICITY

Ingredient Target Organ/Chronic Effects:

- Bone marrow and blood tissues - Blood - Kidney - Liver - Reproductive - Embryotoxin - Teratogen - Brain - Central nervous system - Lung - None known - Respiratory sensitizer - Carcinogen

Mutagenicity Toxicity:

This has not been tested for this product.

Reproductive Toxicity:

This has not been tested for this product.

SUPPLEMENTAL HEALTH INFORMATION:

| Material/ CAS Number | Percent | Ingredient Specific Animal Data: |
|---|---------|--|
| TITANIUM DIOXIDE 13463-67-7 | 15 - 40 | This product contains titanium dioxide. Animals inhaling massive quantities of titanium dioxide dust in a long-term study developed lung tumors. Studies with humans involved in manufacture of this pigment indicate no increased risk of cancer from exposure. |
| METHYL ETHYL KETONE 78-93-3 | 7 - 13 | This product contains methyl ethyl ketone (MEK). MEK has been shown to cause minor embryotoxic/fetotoxic effects in laboratory animals exposed for prolonged periods at high concentrations via inhalation. The potential for human exposure to high concentrations is expected to be low due to the irritating effects of MEK at low concentrations. |
| N-BUTYL ALCOHOL 71-36-3 | 5 - 10 | This product contains an ingredient which has been shown to cause adverse reproductive effects in animals at doses which are also toxic to the mother. |
| CARBON BLACK 1333-86-4 | 1 - 5 | This product contains carbon black which has been rated an IARC 2B carcinogen due to animal data. |
| ETHYL BENZENE 100-41-4 | 1 - 5 | Ethylbenzene has been reported by NTP to cause cancer in laboratory animals following a chronic (2 year) inhalation exposure. Dose levels of 75, 250 and 750 ppm were used, with evidence of carcinogenicity found in the kidneys of rats and the lung and liver of mice at 750 ppm. The No Observed Effect Level (NOEL) was 75 ppm. The relevance of these findings to humans is uncertain, but appropriate safeguards should be employed to reduce or eliminate inhalation exposure to ethylbenzene. |
| 2-BUTOXYET HYL ACETATE 112-07-2 | 1 - 5 | This product contains an ethylene series glycol ether and/or acetate which has been shown to cause adverse effects on the kidneys, liver, blood and/or blood-forming tissue. Possible cancer hazard. Long-term exposure to an ingredient(s) in this product has produced tumors in laboratory animals. |
| 2-METHOXY- 1-PROPYL ACETATE 70657-70-4 | 0.1-1.0 | Possible reproductive hazard. An ingredient(s) in this product has adversely affected reproductive tissues and fetal development in test animals. |
| 2-ETHYLHEX YL ACRYLATE 103-11-7 | 0.1-1.0 | This product contains 2-ethyl hexyl acrylate which has caused skin cancer in laboratory animals after chronic skin painting studies. |

SECTION 12 - ECOLOGICAL INFORMATION

POTENTIAL ENVIRONMENTAL EFFECTS

Ecotoxicity: No Information Available.

ENVIRONMENTAL FATE

Mobility: No information available.

Biodegradation: No information available.

Bioaccumulation: No Information Available.

PHYSICAL/CHEMICAL

Hydrolysis: No information available.

Photolysis: No information available.

SECTION 13 - DISPOSAL CONSIDERATIONS

Provide maximum ventilation, only personnel equipped with proper respiratory and skin and eye protection should be permitted in the area. Take up spilled material with sawdust, vermiculite, or other absorbent material and place in containers for disposal.

Waste material must be disposed of in accordance with federal, state, provincial and local environmental control regulations. Empty containers should be recycled by an appropriately licensed reconditioner/salvager or disposed of through a permitted waste management facility. Additional disposal information is contained on the Environmental Data Sheet for this product, which can be obtained from your PPG representative.

SECTION 14 - TRANSPORTATION INFORMATION

Proper Shipping Name: NOT AVAILABLE
NOS Technical Name: NOT AVAILABLE

Safe handling of this product requires that all of the information on the MSDS be evaluated for specific work environments and conditions of use.

PREPARED BY: Product Safety Department
REASON FOR REVISION: Section 5 has been updated. Section 9 has been updated.
Updated MSDS format.

This Material Safety Data Sheet has been prepared in accordance with Canada's Workplace Hazardous Materials Information System (WHMIS) and the OSHA Hazard Communication Standard (29 CFR 1910.1200), the supplier notification requirements of SARA Title III, Section 313 and other applicable right-to-know regulations.

Additional environmental information is contained on the Environmental Data Sheet for this product, which can be obtained from your PPG representative.

Material Safety Data Sheet

Date of issue : 16 May 2011

Version : 12

1. Identification of the material and supplier

Names

Product code : 452-VM4205
Product name : VM4205 VIBRANCE STARFIRE

Supplier

Supplier : PPG Industries Australia
Pty Limited (ABN 82 055 500 939)
Locked Bag 888
CLAYTON SOUTH Victoria 3169
Tel: (03) 9263 6000 Fax: (03) 9263 6970

Emergency telephone number : 1800 033111 (24hr)

Uses

Recommended use : Coating. Paint. Painting-related materials.

2. Hazards identification

Statement of hazardous/dangerous nature : HAZARDOUS SUBSTANCE. DANGEROUS GOODS.

Risk phrases : R10- Flammable.
R20/21- Harmful by inhalation and in contact with skin.
R36/38- Irritating to eyes and skin.
R52/53- Harmful to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

Safety phrases : S36/37- Wear suitable protective clothing and gloves.

3. Composition/information on ingredients

| <u>Ingredient name</u> | <u>CAS number</u> | <u>Concentration</u> |
|--|-------------------|----------------------|
| n-Butyl acetate | 123-86-4 | 30 - 60 |
| xylene | 1330-20-7 | 0 - 10 |
| butan-1-ol | 71-36-3 | 0 - 10 |
| 2-methoxy-1-methylethyl acetate | 108-65-6 | 0 - 10 |
| 2-ethoxy-1-methylethyl acetate | 54839-24-6 | 0 - 10 |
| Aluminium powder (stabilized) | 7429-90-5 | 0 - 10 |
| Naphtha (petroleum), hydrotreated heavy | 64742-48-9 | 0 - 10 |
| ethylbenzene | 100-41-4 | 0 - 10 |
| diiron trioxide | 1309-37-1 | 0 - 10 |
| 2-methylpropan-1-ol | 78-83-1 | 0 - 10 |
| Solvent naphtha (petroleum), light arom. | 64742-95-6 | 0 - 10 |
| 1,2,4-trimethylbenzene | 95-63-6 | 0 - 10 |

Other ingredients, determined not to be hazardous according to Safe Work Australia criteria, and not dangerous according to the ADG Code, make up the product concentration to 100%.

4. First-aid measures

Inhalation : Remove to fresh air. Keep person warm and at rest. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel.

Ingestion : If swallowed, seek medical advice immediately and show the container or label. Keep person warm and at rest. Do not induce vomiting.

Skin contact : Remove contaminated clothing and shoes. Wash skin thoroughly with soap and water or use recognised skin cleanser. Do NOT use solvents or thinners.

Eye contact : Check for and remove any contact lenses. Immediately flush eyes with running water for at least 15 minutes, keeping eyelids open. Seek immediate medical attention.

Notes to physician : No specific treatment. Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled.

5 . Fire-fighting measures

Extinguishing media

Suitable : Use dry chemical, CO₂, water spray (fog) or foam.

Not suitable : Do not use water jet.

Hazardous combustion products : Decomposition products may include the following materials:
carbon oxides
metal oxide/oxides

Special exposure hazards : Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool. This material is harmful to aquatic organisms. Fire water contaminated with this material must be contained and prevented from being discharged to any waterway, sewer or drain.

Flammable liquid. In a fire or if heated, a pressure increase will occur and the container may burst, with the risk of a subsequent explosion. Runoff to sewer may create fire or explosion hazard.

Special protective equipment for fire-fighters : Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Hazchem code : 3[Y]

6 . Accidental release measures

Personal precautions : No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilt material. Shut off all ignition sources. No flares, smoking or flames in hazard area. Avoid breathing vapour or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment (see Section 8).

Environmental precautions : Avoid dispersal of spilt material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air). Water polluting material.

Large spill : Stop leak if without risk. Move containers from spill area. Approach the release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see section 13). Use spark-proof tools and explosion-proof equipment. Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilt product. Note: see section 1 for emergency contact information and section 13 for waste disposal.

Small spill : Stop leak if without risk. Move containers from spill area. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Use spark-proof tools and explosion-proof equipment. Dispose of via a licensed waste disposal contractor.

7 . Handling and storage

All users should refer to the product Technical Data Sheet (TDS) before use.

Handling : Put on appropriate personal protective equipment (see Section 8). Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. Do not ingest. Avoid contact with eyes, skin and clothing. Avoid breathing vapour or mist. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Do not enter storage areas and confined spaces unless adequately ventilated. Keep in the original container or an approved alternative made from a compatible material, kept tightly closed when not in use. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical (ventilating, lighting and material handling) equipment. Use non-sparking tools. Take precautionary measures against electrostatic discharges. To avoid fire or explosion, dissipate static electricity during transfer by earthing and bonding containers and equipment before transferring material. Empty containers retain product residue and can be hazardous. Do not reuse container.

7. Handling and storage

Storage : Store in accordance with local regulations. Store in a segregated and approved area. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see section 10) and food and drink. Eliminate all ignition sources. Separate from oxidizing materials. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabelled containers. Use appropriate containment to avoid environmental contamination.

Recommended monitoring procedures

: If this product contains ingredients with exposure limits, personal, workplace atmosphere or biological monitoring may be required to determine the effectiveness of the ventilation or other control measures and/or the necessity to use respiratory protective equipment.

Exposure controls

Engineering measures

: Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits. The engineering controls also need to keep gas, vapour or dust concentrations below any lower explosive limits. Use explosion-proof ventilation equipment.

Hygiene measures

: Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

8 . Exposure controls/personal protection

- Eyes** : Chemical splash goggles.
- Gloves** : For prolonged or repeated handling, use the following type of gloves:
- Recommended: butyl rubber, nitrile rubber, foil, fluor rubber
- Respiratory** : If workers are exposed to concentrations above the exposure limit, they must use appropriate, certified respirators. Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.
- Skin** : Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
- Environmental exposure controls** : Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

References: Eye protectors should conform to AS/NZS 1336 and AS/NZS 1337. Chemical-resistant gloves should conform to AS/NZS 2161.1. Respiratory protection should conform to AS/NZS 1715 and AS/NZS 1716. Occupational footwear should conform to AS/NZS 2210.

9 . Physical and chemical properties

- Physical state** : Liquid.
- Colour** : Not available.
- Odour** : Not available.
- Boiling point** : >37.78°C (>100°F)
- Melting point** : Not available.
- Vapour pressure** : Not available.
- Relative density** : 0.94
- Flash point** : Closed cup: 24°C (75.2°F)
- Flammable limits** : Not available.
- Vapour density** : Not available.
- pH** : Not available.
- Auto-ignition temperature** : Not available.
- Solubility** : Not available.

10 . Stability and reactivity

- Stability** : Stable under recommended storage and handling conditions (see section 7).
- Conditions to avoid** : Avoid all possible sources of ignition (spark or flame). Do not pressurise, cut, weld, braze, solder, drill, grind or expose containers to heat or sources of ignition.
- Materials to avoid** : Reactive or incompatible with the following materials:
oxidizing materials
strong acids
strong alkalis
- Hazardous decomposition products** : Under normal conditions of storage and use, hazardous decomposition products should not be produced.

11 . Toxicological information

Potential acute health effects

- Inhalation** : Harmful by inhalation.
- Ingestion** : Irritating to mouth, throat and stomach.
- Skin contact** : Harmful in contact with skin. Irritating to skin.
- Eye contact** : Irritating to eyes.

Over-exposure signs/symptoms

11 . Toxicological information

Inhalation of vapour/aerosol concentrations above the recommended exposure limits causes headaches, drowsiness and nausea and may lead to unconsciousness or death. Inhalation of high concentrations of vapour may affect the central nervous system.

Target organs

- : Contains material which causes damage to the following organs: brain, central nervous system (CNS), ears, eye, lens or cornea.
- : Contains material which may cause damage to the following organs: blood, kidneys, lungs, the nervous system, liver, mucous membranes, gastrointestinal tract, upper respiratory tract, skin.

12 . Ecological information

- Environmental effects** : Harmful to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

Other ecological information

Biodegradability

Other ecological information

Persistence/degradability

- Conclusion/Summary** : Not available.

| Product/ingredient name | LogP _{ow} | BCF | Potential |
|--------------------------------|--------------------|-----|-----------|
| n-Butyl acetate | 1.82 | - | low |
| butan-1-ol | 0.9 | - | low |
| 2-ethoxy-1-methylethyl acetate | 0.76 | - | low |
| ethylbenzene | 3.1 | - | high |
| 2-methylpropan-1-ol | 0.8 | - | low |
| 1,2,4-trimethylbenzene | 3.8 | - | high |

- Mobility** : Not available.

- Other adverse effects** : No known significant effects or critical hazards.
Do not allow to enter drains or watercourses.

13 . Disposal considerations

- Waste disposal** : The generation of waste should be avoided or minimised wherever possible. Empty containers or liners may retain some product residues. This material and its container must be disposed of in a safe way. Significant quantities of waste product residues should not be disposed of via the foul sewer but processed in a suitable effluent treatment plant. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Avoid dispersal of spilt material and runoff and contact with soil, waterways, drains and sewers.

Disposal should be in accordance with applicable regional, national and local laws and regulations.

Refer to Section 7: HANDLING AND STORAGE and Section 8: EXPOSURE CONTROLS/PERSONAL PROTECTION for additional handling information and protection of employees. Section 6. Accidental release measures

14 . Transport information

Mr. Hiralkumar Patel
New York State Department of Environmental Conservation
Division of Environmental Remediation
47-40 21st Street
Long Island City, New York 11101-5401

Re: **Groundwater Investigation Report**
Avalon West 28th Street Site
282-298 11th Avenue
New York, New York 10001
Spill Nos. 06-03351 and 07-00587

Dear Mr. Patel:

On behalf of AvalonBay Communities, Inc. (AvalonBay), and at the request of the New York State Department of Environmental Conservation (NYSDEC), Fleming-Lee Shue, Inc. (FLS) performed an investigation of current groundwater conditions at Avalon West 28th Street (hereafter the "Site") located at 282-298 11th Avenue, New York, New York. This report provides background information on the Site and details the investigation methods and analytical results.

BACKGROUND

Site Description

The Site is located at 282-298 11th Avenue on Block 700, Lot 1, 9 and 18, in the borough of Manhattan, New York County, New York. A Site Location Map and a Site Plan are included as Figures 1 and 2, respectively. The Site is currently vacant. The Site was formerly used for parking, auto repair and detailing, and storage of construction materials. Lot 1 is located along the majority of 11th Avenue, Lots 9 and 18 are located farther east along West 28th Street. The surrounding area is a mixture of commercial and manufacturing uses.

Objectives

Previous groundwater data collected from the Site in 2007 indicated the presence of chlorinated solvents in groundwater near the upgradient (eastern) end of lot 18 of the Site, and the presence of petroleum compounds in several groundwater samples across the Site. Since 2007, the former gasoline tanks on the site and the associated contaminated soils were removed from the site. A closure report documenting the remedial activities associated with the tank removal has been submitted to the NYSDEC on December 9, 2011. NYSDEC requested that a new round of groundwater samples be collected from the Site to assess the current post-remediation groundwater conditions, since the previous groundwater sampling took place more than four years ago.

INVESTIGATION ACTIVITIES

On January 11-12, 2012, FLS installed seven (7) temporary monitoring wells on lots 9 and 18 using a Geoprobe[®] 6610DT direct push rig. Wells were installed to 20 feet below grade (fbg) with 10 feet of 1" diameter PVC screen and 10 feet of 1" PVC riser. During well installation, four- and five-foot soil cores were extruded using a macro core sampler with an acetate sleeve liner. Soils were screened for evidence of impacts using visual or olfactory means and a photoionization detector (PID).

Two boring/temporary well locations, tMW-1 and tMW-3, exhibited evidence of petroleum impacts in soils from approximately 10 feet below grade extending below the soil-water interface at approximately 12 feet bg. A soil sample was collected from between 10 to 11 feet, the most impacted soil above the water table, in both borings.

Groundwater samples were collected from all temporary wells and both existing permanent monitoring wells (MW-2 and MW-6) via peristaltic pump using EPA low flow sampling procedures. One other permanent monitoring well, MW-5, could not be located and is presumed to have been destroyed. A HORIBA water quality meter was used during well purging in order to monitor pH, temperature, oxidation-reduction potential, dissolved oxygen, turbidity, conductivity, and total dissolved solids. Once three successive sets of stable water quality parameter readings were recorded (separated by at least 5 minutes), the wells were sampled for volatile organic compounds (VOCs).

Following sampling, samples were immediately stored on ice, and transported to Accutest Laboratories, a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP)-approved laboratory in Dayton, New Jersey. Soil and groundwater samples were analyzed by Environmental Protection Agency (EPA) Method 8260 for target compound list (TCL) VOCs.

SAMPLE RESULTS

Groundwater samples from MW-2 and MW-6, the existing monitoring wells at the downgradient and crossgradient boundaries of the site, did not contain any VOCs exceeding NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1, *Ambient Water Quality Standards and Guidance Values* (Class GA Standards). Groundwater samples from tMW-1 and tMW-3, located on the northern portion of lot 9, contained several gasoline-related VOCs exceeding Class GA Standards including benzene, sec-butylbenzene, ethylbenzene, isopropylbenzene, methyl tert-butyl ether (MTBE), toluene, naphthalene, and xylenes. Groundwater collected from wells on lot 18 (tMW-4, tMW-7, tMW-8, tMW-9, and tMW-10) contained varying amounts of chlorinated VOCs, but no gasoline-related VOCs. Chlorinated VOC concentrations were highest in tMW-9, at the southeast corner of the Site. Constituents detected exceeding Class GA Standards included chloroethane, 1,1-dichloroethane (1,1-DCA), 1,1-dichloroethene (1,1-DCE), cis-1,2-dichloroethene (cis-DCE), trans-1,2-dichloroethene (trans-DCE), 1,1,1-trichloroethane (1,1,1-TCA), and vinyl chloride. Some of these constituents were detected in the other wells on lot 18 exceeding Class GA Standards, but at lower concentrations than in tMW-9. Groundwater results exceeding TOGS are shown on Figure 1. All groundwater results are presented in Table 1.

Soil samples from tMW-1(10-11) and tMW-3(10-11) contained several gasoline-related VOCs including benzene, ethylbenzene, toluene, naphthalene, and xylenes exceeding . Soil results are shown in Table 2.

DISCUSSION

Since the groundwater samples from lot 9 contain only gasoline-related VOCs, and those from lot 18 contain only chlorinated VOCs, it is apparent that unrelated sources of groundwater contamination are affecting these separate areas of the Site.

Lot 9

In the case of the northern portion of lot 9, the two groundwater samples and the two soil samples (collected just above the soil-water interface) exhibited petroleum-related contamination. Since soil contamination was only identified below 10 feet, it must be related to the groundwater smear zone, which is soil contamination caused by the rise and fall of a contaminated water table.

Groundwater and deeper soil contamination was also identified in this area during the 2007 Remedial Investigation, and the 2009 test pit characterization, but in both cases appeared to be isolated from other areas of the site containing petroleum contamination related to the presence of gasoline underground storage tanks (USTs). All USTs, along with all visible petroleum contamination associated with them, were removed from the Site, and clean endpoint samples were collected around each tank excavation, as

documented in FLS Tank Closure Report, submitted to NYSDEC in December 2011. Furthermore, no known USTs are located in the area of tMW-1 and tMW-3. Therefore, an off-site spill may be the more likely source of the contamination. Sanborn maps from 1930 through 1995 indicate that auto repair operations were present at 542 and 548 West 29th Street, directly adjacent to the northern portion of lot 9. The 1995 Sanborn map is included as Figure 3, showing these operations. Auto repair operations are a common source of undocumented spills of gasoline and other petroleum products, and therefore should be considered the most likely source of contamination in this area of the Site.

Lot 18

While chlorinated VOCs were identified in all five groundwater samples collected from lot 18 (tMW-4, tMW-7, tMW-8, tMW-9, and tMW-10), the sample from tMW-9, located in the southeast corner of the lot, contained the most constituents and highest concentrations of chlorinated VOCs.

Since no appreciable chlorinated VOCs were identified in site soils during the 2007 RI, and since there is no known history of chlorinated solvent usage on the Site, their presence in the groundwater is likely due to an off-Site source. The property adjacent to the east of the Site at 515 West 28th Street, directly next to the tMW-9 location, was formerly a metal fabricating facility as recently as 1995 according to Sanborn maps (Figure 3). Metal fabrication frequently uses chlorinated solvents to clean and cut metal surfaces, making it a very likely source for the chlorinated solvents in groundwater on lot 18, which is adjacent to and downgradient of this former facility. In addition, Evan Auto, located east and northeast (upgradient) of the Site at 507 West 28th Street, 506 West 29th Street, and 321 10th Avenue, is known to have used and disposed of significant quantities of chlorinated solvents as recently as 2001 according to the New York Manifest database, and is another suspected source of solvents in groundwater in this area. A chlorinated solvent spill was reported from this site in 2007. The spill case manager, Mr. Ryan Piper, was contacted and indicated that a letter requiring delineation of the plume from this spill was sent to the owners approximately 1 month ago requiring the delineation to be completed within 60 days.

The types and concentrations of chlorinated VOCs detected are further indicative of an older offsite source, as demonstrated by relatively higher levels of cis-DCE and vinyl chloride (common degradation products of industrial solvents) when compared to their parent constituents, which may include 1,1,1-TCA (detected at a much lower concentration) and perchloroethene (not detected). Both 1,1,1-TCA and perchloroethene (PCE) were used extensively as industrial solvents in operations such as those located just upgradient of the Site.

Furthermore, when compared to a groundwater sample (SB-7) collected during the 2007 RI in the same location as tMW-9, concentrations of vinyl chloride, cis-DCE, and 1,1,1-TCA have all decreased by approximately 85%, demonstrating that natural degradation of the solvents has been occurring.

CONCLUSIONS AND RECOMMENDATIONS

FLS sampled two existing permanent monitoring wells, installed and sampled seven temporary monitoring wells, and collected two soil samples at the Site.

Based on the analysis of groundwater and soil sample results, FLS concludes the following:

- The gasoline-related VOCs detected in groundwater and soil samples from tMW-1 and tMW-3 are likely derived from an off-site source, most likely related to long-term auto repair operations in the adjacent buildings at 542 and 548 West 29th Street.
- The chlorinated VOCs detected in groundwater samples from tMW-4, tMW-7, tMW-8, tMW-9, and tMW-10 are also likely derived from an off-site source, including a former metal fabricating operation adjacent to the east of the Site, and an auto repair facility known to have disposed of chlorinated solvents and have an open solvent spill case before the NYSDEC to the east and northeast.
- The types and concentrations of chlorinated VOCs detected indicate a historic, non-current off-site source that has largely degraded when compared to data from the 2007 RI.

If you have any questions and concerns regarding this matter, please do not hesitate to contact us at (212) 675-3225.

Sincerely,

A handwritten signature in blue ink, reading "Jesse Mausner".

Jesse Mausner, P.G.
Project Manager

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: Fleming-Lee Shue, Inc.

Job No JA96937

Site: Avalon, 28th Street/11th Avenue, New York City, NY

Report Date 1/30/2012 10:38:21 A

On 01/12/2012, 11 Sample(s), 1 Trip Blank(s) and 1 Field Blank(s) were received at Accutest Laboratories at a temperature of 4 C. Samples were intact and properly preserved, unless noted below. An Accutest Job Number of JA96937 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ

Batch ID: V4B639

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA96937-9MS, JA96937-9MSD were used as the QC samples indicated.

Matrix: AQ

Batch ID: V4B640

- All samples were analyzed within the recommended method holding time.
- Sample(s) JA97076-3MS, JA97076-2DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Matrix Spike Recovery(s) for Chloroethane are outside control limits. Outside in house control limits.
- RPD(s) for Duplicate for Carbon disulfide are outside control limits for sample JA97076-2DUP. RPD acceptable due to low DUP and sample concentrations.
- JA97076-3MS: (pH=7)Sample is not acid preservation per method/client criteria. Sample analyzed within 7 days holding time.
- JA97076-2DUP: (pH=7)Sample is not acid preservation per method/client criteria. Sample analyzed within 7 days holding time.

Matrix: AQ

Batch ID: V4B641

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA96937-6MS, JA96937-6MSD were used as the QC samples indicated.
- Matrix Spike Recovery(s) for cis-1,2-Dichloroethene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

Matrix: AQ

Batch ID: V4B643

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA97323-5DUP, JA97323-4MS were used as the QC samples indicated.
- JA97323-4MS: (pH=7)Sample pH did not satisfy field preservation criteria.
- JA97323-5DUP: (pH=7)Sample is not acid preservation per method/client criteria. Sample analyzed within 7 days holding time.

Matrix: SO

Batch ID: VD7814

- All samples were analyzed within the recommended method holding time.
- Sample(s) JA97350-3MS, JA97350-3MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Matrix: SO

Batch ID: VD7816

Volatiles by GCMS By Method SW846 8260B**Matrix:** SO**Batch ID:** VD7816

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA97208-1MS, JA97208-1MSD were used as the QC samples indicated.

Wet Chemistry By Method SM18 2540G**Matrix:** SO**Batch ID:** GN60794

- The data for SM18 2540G meets quality control requirements.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

REMARKS:

- Custody Seal(s) Present/Absent
Intact/Broken
- Custody Seal Numbers: Present/Absent
- Chain-of-Custody Records: Present/Absent
- Contract Lab Sample Inform. Sheet (CLISIS): Present/Absent
- Airbill: Present/Absent
- Airbill No.: 1682 123
- Sample Tags Listed/Not Listed on Sample Tag Nos. Present/Absent
- Sample Condition: Chain-of-Custody Intact/Broken*/Leaking
- Does Information on custody rec., CLSIS, & sample tags agree: Yes/No*
- Date received at Lab: 1-12-12
- Time Received: 17:20
- Do aqueous VOC vials have headspace? Yes/No*
- Are preserved voc il samples fully immersed in preservative? Yes/No*

Client:

Date / Time Received: 1/12/2012

Project:

No. Coolers: 1

Airbill #'s:

Delivery Method:

Cooler Security

Y or N

Y or N

- | | | | | | |
|---------------------------|-------------------------------------|--------------------------|-----------------------|-------------------------------------|--------------------------|
| 1. Custody Seals Present: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 3. COC Present: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 2. Custody Seals Intact: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 4. Smpl Dates/Time OK | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

Cooler Temperature

Y or N

- | | | |
|------------------------------|-------------------------------------|--------------------------|
| 1. Temp. criteria achieved: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 2. Cooler temp verification: | Bar Therm | |
| 3. Cooler media: | Ice (Bag) | |

Quality Control Preservation

Y or N

N/A

- | | | | |
|---------------------------------|-------------------------------------|--------------------------|--------------------------|
| 1. Trip Blank present / cooler: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| 2. Trip Blank listed on COC: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| 3. Samples preserved properly: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| 4. VOCs headspace free: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

Sample Integrity - Documentation

Y or N

- | | | |
|--|-------------------------------------|--------------------------|
| 1. Sample labels present on bottles: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 2. Container labeling complete: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 3. Sample container label / COC agree: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

Sample Integrity - Condition

Y or N

- | | | |
|----------------------------------|-------------------------------------|--------------------------|
| 1. Sample recvd within HT: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 2. All containers accounted for: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 3. Condition of sample: | Intact | |

Sample Integrity - Instructions

Y or N N/A

- | | | | |
|---|-------------------------------------|-------------------------------------|-------------------------------------|
| 1. Analysis requested is clear: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | |
| 2. Bottles received for unspecified tests | <input type="checkbox"/> | <input checked="" type="checkbox"/> | |
| 3. Sufficient volume recvd for analysis: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | |
| 4. Compositing instructions clear: | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| 5. Filtering instructions clear: | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |

Surrogate Compounds

Recovery Limits

S1 = Dibromofluoromethane

77-120%

S2 = 1,2-Dichloroethane-D4

70-127%

S3 = Toluene-D8

79-120%

S4 = 4-Bromofluorobenzene

76-118%

Volatile Surrogate Recovery Summary

 QLast Update : Mon Jan 16 17:29:21 2012
 Response via : Initial Calibration

| Compound | R.T. | QIon | Response | Conc | Units | Dev(Min) |
|-------------------------------|----------------|------|------------|---------|--------|----------|
| Internal Standards | | | | | | |
| 1) tert butyl alcohol-d9 | 6.765 | 65 | 143221 | 500.00 | ug/L | 0.00 |
| 4) pentafluorobenzene | 8.711 | 168 | 271408 | 50.00 | ug/L | 0.00 |
| 49) 1,4-difluorobenzene | 9.569 | 114 | 396223 | 50.00 | ug/L | 0.00 |
| 81) chlorobenzene-d5 | 12.748 | 117 | 363646 | 50.00 | ug/L | 0.00 |
| 95) 1,4-dichlorobenzene-d4 | 15.290 | 152 | 211343 | 50.00 | ug/L | 0.00 |
| System Monitoring Compounds | | | | | | |
| 42) dibromofluoromethane (s) | 8.800 | 113 | 109857 | 50.63 | ug/L | 0.00 |
| Spiked Amount 50.000 | Range 77 - 120 | | Recovery = | 101.26% | | |
| 43) 1,2-dichloroethane-d4 (s) | 9.187 | 65 | 112348 | 45.37 | ug/L | 0.00 |
| Spiked Amount 50.000 | Range 70 - 127 | | Recovery = | 90.74% | | |
| 73) toluene-d8 (s) | 11.153 | 98 | 405423 | 53.22 | ug/L | 0.00 |
| Spiked Amount 50.000 | Range 79 - 120 | | Recovery = | 106.44% | | |
| 97) 4-bromofluorobenzene (s) | 14.009 | 95 | 160631 | 46.85 | ug/L | 0.00 |
| Spiked Amount 50.000 | Range 76 - 118 | | Recovery = | 93.70% | | |
| Target Compounds | | | | | | |
| | | | | | Qvalue | |
| 2) tertiary butyl alcohol | 6.864 | 59 | 77687 | 257.45 | ug/L | 98 |
| 3) 1,4-dioxane | 10.264 | 88 | 40414 | 1432.76 | ug/L | 95 |
| 5) chlorodifluoromethane | 3.836 | 51 | 87674 | 32.89 | ug/L | 98 |
| 6) dichlorodifluoromethane | 3.815 | 85 | 96026 | 33.86 | ug/L | 98 |
| 7) chloromethane | 4.103 | 50 | 138181 | 43.55 | ug/L | 99 |
| 8) vinyl chloride | 4.333 | 62 | 137191 | 48.73 | ug/L | 100 |
| 9) bromomethane | 4.908 | 94 | 83753 | 58.03 | ug/L | 99 |
| 10) chloroethane | 5.055 | 64 | 72715 | 62.04 | ug/L | 97 |
| 12) trichlorofluoromethane | 5.452 | 101 | 168167 | 51.41 | ug/L | 94 |
| 13) Pentane | 5.484 | 43 | 116112 | 31.13 | ug/L | 98 |
| 14) ethyl ether | 5.771 | 74 | 63175 | 53.02 | ug/L | 96 |
| 15) acrolein | 6.054 | 56 | 254081 | 509.17 | ug/L | 99 |
| 16) 1,1-dichloroethene | 6.169 | 96 | 105346 | 50.95 | ug/L | 90 |
| 17) acetone | 6.242 | 58 | 9695 | 53.32 | ug/L # | 86 |
| 18) allyl chloride | 6.629 | 76 | 71881 | 49.44 | ug/L | 89 |
| 19) acetonitrile | 6.660 | 40 | 108118 | 468.25 | ug/L | 95 |
| 20) iodomethane | 6.436 | 142 | 220038 | 50.60 | ug/L | 98 |
| 21) carbon disulfide | 6.535 | 76 | 340424 | 43.34 | ug/L | 97 |
| 22) methylene chloride | 6.812 | 84 | 126161 | 49.63 | ug/L | 93 |
| 23) methyl acetate | 6.608 | 74 | 19584 | 53.21 | ug/L # | 83 |
| 24) methyl tert butyl ether | 7.042 | 73 | 681042 | 97.81 | ug/L | 98 |
| 25) trans-1,2-dichloroethene | 7.110 | 96 | 113230 | 50.06 | ug/L | 92 |
| 26) di-isopropyl ether | 7.539 | 45 | 367325 | 46.63 | ug/L | 98 |
| 27) 2-butanone | 8.256 | 72 | 13089 | 51.92 | ug/L # | 71 |
| 28) 1,1-dichloroethane | 7.623 | 63 | 211976 | 48.68 | ug/L | 99 |
| 29) chloroprene | 7.696 | 53 | 154218 | 44.41 | ug/L | 96 |
| 30) acrylonitrile | 7.121 | 53 | 199845 | 237.49 | ug/L | 99 |
| 31) vinyl acetate | 7.586 | 86 | 21651 | 63.09 | ug/L | 79 |
| 32) ethyl tert-butyl ether | 7.958 | 59 | 375960 | 50.34 | ug/L | 98 |
| 33) ethyl acetate | 8.240 | 45 | 15194 | 47.47 | ug/L | 92 |
| 34) 2,2-dichloropropane | 8.271 | 77 | 168207 | 47.45 | ug/L | 95 |
| 35) cis-1,2-dichloroethene | 8.282 | 96 | 122886 | 50.82 | ug/L | 94 |

Title : SW-846 Method 8260B
 Last Update : Fri Oct 28 16:20:57 2011
 Response via : Initial Calibration
 DataAcq Meth : MD7671

| Internal Standards | R.T. | QIon | Response | Conc | Units | Dev(Min) |
|----------------------------|-------|------|----------|--------|-------|----------|
| 1) Tert Butyl Alcohol-d9 | 7.50 | 65 | 192540 | 500.00 | ug/L | 0.00 |
| 4) pentafluorobenzene | 9.75 | 168 | 317679 | 50.00 | ug/L | 0.00 |
| 51) 1,4-difluorobenzene | 10.66 | 114 | 504419 | 50.00 | ug/L | 0.00 |
| 83) chlorobenzene-d5 | 13.99 | 117 | 492457 | 50.00 | ug/L | 0.00 |
| 97) 1,4-dichlorobenzene-d4 | 16.58 | 152 | 269380 | 50.00 | ug/L | 0.00 |

System Monitoring Compounds

| | | | | | | |
|-------------------------------|--------|-------|----------|----------|------|--------|
| 44) dibromofluoromethane (s) | 9.77 | 113 | 6052 | 1.75 | ug/L | 0.02 |
| Spiked Amount | 50.000 | Range | 67 - 131 | Recovery | = | 3.50%# |
| 45) 1,2-dichloroethane-d4 (s) | 10.19 | 65 | 6959 | 1.67 | ug/L | 0.02 |
| Spiked Amount | 50.000 | Range | 66 - 130 | Recovery | = | 3.34%# |
| 75) toluene-d8 (s) | 12.39 | 98 | 22446 | 1.67 | ug/L | 0.02 |
| Spiked Amount | 50.000 | Range | 76 - 125 | Recovery | = | 3.34%# |
| 99) 4-bromofluorobenzene (s) | 15.30 | 95 | 11222 | 1.83 | ug/L | 0.03 |
| Spiked Amount | 50.000 | Range | 53 - 142 | Recovery | = | 3.66%# |

Target Compounds

| | | | | | | Qvalue |
|------------------------------|-------|-----|--------|---------|------|--------|
| 2) 1,4-dioxane | 11.39 | 88 | 1406 | 160.34 | ug/L | # 99 |
| 3) tertiary butyl alcohol | 7.64 | 59 | 4349 | 8.69 | ug/L | 65 |
| 6) chlorodifluoromethane | 4.24 | 51 | 7564 | 1.83 | ug/L | 99 |
| 7) dichlorodifluoromethane | 4.23 | 85 | 8165 | 1.73 | ug/L | 92 |
| 8) chloromethane | 4.55 | 50 | 8870 | 1.77 | ug/L | 96 |
| 9) vinyl chloride | 4.80 | 62 | 8541 | 1.75 | ug/L | 91 |
| 10) bromomethane | 5.45 | 94 | 5665 | 1.83 | ug/L | 96 |
| 11) chloroethane | 5.62 | 64 | 5334 | 1.88 | ug/L | 95 |
| 13) trichlorofluoromethane | 6.14 | 101 | 9776 | 1.73 | ug/L | 91 |
| 14) pentane | 6.23 | 43 | 13582 | 1.73 | ug/L | 94 |
| 15) ethyl ether | 6.52 | 74 | 4435 | 1.85 | ug/L | 93 |
| 16) acrolein | 6.66 | 56 | 916330 | 1014.20 | ug/L | 99 |
| 18) 1,1-dichloroethene | 6.93 | 96 | 7092 | 1.88 | ug/L | 97 |
| 19) acetone | 6.91 | 58 | 1687 | 4.16 | ug/L | 94 |
| 20) allyl chloride | 7.41 | 41 | 13102 | 1.64 | ug/L | 95 |
| 21) acetonitrile | 7.27 | 40 | 3697 | 15.53 | ug/L | 93 |
| 23) iodomethane | 7.16 | 142 | 11758 | 1.86 | ug/L | 97 |
| 24) iso-butyl alcohol | 10.01 | 74 | 103 | 5.06 | ug/L | 50 |
| 25) carbon disulfide | 7.32 | 76 | 22656 | 1.86 | ug/L | 99 |
| 26) methylene chloride | 7.56 | 84 | 7968 | 1.83 | ug/L | 98 |
| 27) methyl acetate | 7.42 | 43 | 11094 | 3.26 | ug/L | 73 |
| 28) methyl tert butyl ether | 7.97 | 73 | 23059 | 1.86 | ug/L | 96 |
| 29) trans-1,2-dichloroethene | 7.99 | 96 | 7305 | 1.83 | ug/L | 92 |
| 30) di-isopropyl ether | 8.57 | 45 | 24580 | 1.91 | ug/L | 74 |
| 31) ethyl tert-butyl ether | 9.02 | 59 | 23105 | 1.86 | ug/L | 98 |
| 33) 1,1-dichloroethane | 8.50 | 63 | 12674 | 1.81 | ug/L | 92 |
| 34) chloroprene | 8.65 | 53 | 10601 | 1.83 | ug/L | 97 |
| 35) acrylonitrile | 7.86 | 53 | 13299 | 8.30 | ug/L | 91 |
| 36) vinyl acetate | 8.59 | 86 | 791 | 3.23 | ug/L | # 89 |
| 38) 2,2-dichloropropane | 9.25 | 77 | 11190 | 1.87 | ug/L | 92 |
| 39) cis-1,2-dichloroethene | 9.23 | 96 | 7806 | 1.82 | ug/L | 97 |
| 40) propionitrile | 9.23 | 54 | 10042 | 16.20 | ug/L | 93 |
| 41) bromochloromethane | 9.52 | 128 | 3474 | 1.70 | ug/L | 94 |

MTX = Matrix Designate W for water, S for soil, O for oil. L+ = Library Search. IS = Internal Standard Area. SU = Surrogate.

Sample Amt = Volume (ML) or Weight (g); MOH amt. = volume (ul) extract injected * IF pH > 2, comment on sample result.

All strike outs must be initialed, dated and reason code applied as follows: 1 = reviewer correction error; 2 = transcription error; 3 = computer miscalculation; 4 = analyst's correction error

TECHNICAL MEMORANDUM

Proposed Modifications to Special West Chelsea District Zoning Map and Text Amendments Application at New York City Council (N 050161(A) ZRM)

June 22, 2005

The City Planning Commission (CPC), acting as lead agency, certified the Final Environmental Impact Statement (FEIS) for the Special West Chelsea District Rezoning and High Line Open Space project as complete on May 13, 2005. The FEIS assessed the effects of the proposed action as well alternatives to the proposed action, including Alternative F (the Revised Affordable Housing Alternative).

Subsequent to completion of the FEIS, a Technical Memorandum, dated May 25, 2005, was prepared to assess the potential effects of proposed modifications by the CPC to the Special West Chelsea District Rezoning ULURP No. (N 050161(A) ZRM). The CPC modifications generally related to height, setback and bulk regulations and did not change permitted density or floor area transfer mechanisms. They did not affect the total amount of development analyzed under Alternative F in the FEIS, which consisted of the following: 5,329 total dwelling units (DUs), of which 768 would be low-moderate income affordable housing units; 229,976 sf of retail; 198,726 sf of community facility; and decreases of 812,394 sf of office; 131,100 sf of hotel; 136,802 sf of storage/manufacturing; 228,409 sf of parking/auto; and 4,080 sf of vacant space. Additional changes to lot coverage and existing adult use establishments did not change permitted density or floor area transfers. Development under the CPC modifications occurred on the same 28 projected and 25 potential development sites as under Alternative F. Furthermore, the CPC modifications did not affect the creation and design of the proposed 5.9-acre public open space on the High Line. The May 25, 2005 Technical Memorandum concluded that the CPC modifications would not result in significant adverse environmental impacts not already identified in the FEIS.

On May 25, 2005, the CPC voted to adopt Alternative F, with the proposed modifications assessed in the May 25 technical memorandum.

Pursuant to the City's Uniform Land Use Review Procedure, the New York City Council (the "Council") has now proposed certain additional amendments to the CPC-approved Special West Chelsea District Rezoning. These are described below and their potential for creating significant adverse environmental impacts not already identified in the FEIS is assessed herein.

I. DESCRIPTION OF COUNCIL MODIFICATIONS

Zoning Text Amendments

1. Modifications of permitted maximum height

- Subarea C maximum building height would be reduced from 145 feet to 125 feet.

2. Modifications of density increases

The mechanisms to increase from base to maximum FAR would be modified from the CPC adopted application as follows:

- C6-2 districts: the inclusionary housing bonus (IHB) is eliminated for increasing from base FAR to maximum FAR.
- C6-3 districts: the base FAR would remain at 5.0; this could be increased to 6.25 through High Line Transfer (was 6.65); with High Line Transfer/IHB a maximum FAR of 7.5 would be allowed (no change in maximum FAR).
- C6-4 districts: the base FAR would be reduced from 7.5 to 6.5; FAR could be increased up to 9.5 through the High Line Transfer, same as under the CPC application; FAR could be further increased to 12.0 through the IHB, a change in the mechanism. The IHB would not apply to the C6-4 district in Subarea H, where the maximum FAR would remain 10.0.
- Subarea I: the High Line Improvement Bonus eligible in Subarea I would increase from 1.5 to 2.5 FAR.

These changes are summarized in tabular form below.

| CPC Adopted | C6-2 | C6-3 | C6-4* |
|----------------------------------|-------------|-------------|--------------|
| | FAR | FAR | FAR |
| Base FAR | 5 | 5 | 7.5 |
| Through High Line Transfer | 5.65 | 6.65 | 9.15 |
| Through High Line Transfer / IHB | 6 | 7.5 | 10 |
| Through IHB | | | 12 |
| | | | |
| Council Modifications | | | |
| Base FAR | 5 | 5 | 6.5 |
| Through High Line Transfer | 6 | 6.25 | 9.15 |
| Through High Line Transfer / IHB | | 7.5 | |
| Through IHB | | | 12 |
| | | | |

* Does not apply to C6-4 district in Subarea H

Additional changes to affordable housing provisions would include the following:

- * Permit City, State, and Federal programs in inclusionary program
- * Tiering of inclusionary bonus to higher income levels
- * Affordable housing fund – After 90 percent of the High Line Transfer Corridor floor area is transferred to receiving sites or is otherwise used, as an alternative to the High Line transfer, an increase in floor area would be permitted in exchange for contributions to an Affordable Housing Fund. The contribution amount per square foot would be determined by the City Planning Commission at the time that the fund is established.
- * Inclusionary bonus also applies to conversions.

The proposed Council modifications do not include any zoning map changes.

II. POTENTIAL FOR SIGNIFICANT ADVERSE ENVIRONMENTAL IMPACTS FROM PROPOSED CHANGES TO ALTERNATIVE F

Changes to Reasonable Worst Case Development Scenario due to Council Modifications

There would be no change in the overall amount of net development expected to occur as a consequence of the Council modifications as compared to Alternative F and the CPC approved modifications. Development would occur at the same density on the 28 projected and 25 potential development sites identified for Alternative F and the CPC approved modifications. This includes increases of 5,329 DUs; 229,976 sf of retail; 198,726 sf of community facility; and decreases of 812,394 sf of office; 131,100 sf of hotel; 136,802 sf of storage/manufacturing; 228,409 sf of parking/auto; and 4,080 sf of vacant space.

However, the changes in FAR bonus mechanisms related to affordable housing units are expected to result in a higher number of affordable units. While Alternative F and the CPC approved modifications would generate 768 new affordable dwelling units, the Council modifications would generate 967 new affordable dwelling units. As the overall number of net dwelling units would remain at 5,329, the number of market rate units would be 4,362 as compared to 4,561.

Therefore, while the effects of the Council modifications would be generally similar to those of Alternative F and the CPC approved modifications, technical areas affected by the number of affordable housing units would experience somewhat different effects under the Council modifications. This would include technical areas affected by the size of the action-generated population, as low-moderate income units are expected to have somewhat larger household sizes than market-rate units.

The change in building heights in Subarea C, along Tenth Avenue, would result in changes to Sites 6, 8, and 11. These sites would be developed with 125-foot tall buildings rather than 145-

foot tall buildings anticipated under the CPC approved modifications. The height change would not affect Projected Development Site 9, also located along Tenth Avenue in Subarea C, which is currently occupied by an approximately 125-foot commercial building which would be converted to residential and retail uses under With-Action conditions.

A. Land Use, Zoning, and Public Policy

The proposed modifications would alter height regulations in Subarea C. This would result in somewhat shorter buildings on some development sites than proposed under the CPC Modifications. Sites with the shorter maximum building heights would have the same regulations as originally contained in Alternative F in the FEIS. There would be no changes to the proposed zoning map amendment or to the proposed density regulations analyzed for Alternative F. The land uses expected as a result of these modifications would be the same as expected under Alternative F, except that there would be a greater number of affordable housing units. There would be 967 affordable housing units, 199 more than the 768 affordable housing units anticipated under Alternative F and the CPC modifications. The Council modifications would also result in the creation of a 5.9-acre publicly accessible open space on the High Line.

As the overall amount of projected development with the Council Modifications generally would be the same as Alternative F, although involving a higher number of affordable housing units, the land use, zoning, and public policy effects would be substantially similar. As was the case with Alternative F and the CPC modifications, the proposed Council modifications would have positive effects on land use and would not result in significant adverse impacts to land use, zoning, or public policy.

B. Socioeconomic Conditions

The proposed Council modifications would result in the same general socioeconomic effects as would occur under Alternative F and the CPC modifications. Under the Council modifications, 199 more affordable housing dwelling units would be developed although the overall amount of residential development would be the same, with 5,329 net DUs. The increased number of affordable housing units would result in 172 additional residents, for a net total of 9,572 action-generated residents as compared to 9,400 for Alternative F and the CPC modifications. In addition, the net change in non-residential development would be the same as with Alternative F and the CPC modifications. Therefore, the socioeconomic benefits to businesses generated by the increase in residential development for the Council modifications would be very similar to those generated by Alternative F and the CPC modifications. The effects with respect to direct and indirect displacement effects on residents and businesses, and effects on specific industries would be the same.

As would be the case for Alternative F and the CPC modifications, the proposed Council modifications would have positive effects on socioeconomic conditions and would not result in significant adverse impacts related to socioeconomic conditions.

C. Community Facilities and Services

Although there would be no change in the overall number of net dwelling units, the proposed Council modifications would result in 967 affordable housing units, as compared to 768 for Alternative F and the CPC modifications. As a result, there would be 172 more residents generated, with 9,572 under the Council modifications as compared to 9,400 for Alternative F and the CPC modifications. As there would be more affordable housing units and a larger overall population, the Council modifications have the potential to have greater effects on community facilities and services than those previously identified for Alternative F in the FEIS. These effects are identified and assessed below.

Elementary and Intermediate Schools

Under the Council modifications, there would be 552 additional elementary school students, as compared to 548 for Alternative F. As a result, in Region 3 of CSD 2 the utilization rate for elementary schools would increase over No-Action conditions, from 125 percent with a shortfall of 649 seats, to a utilization rate of 147 percent with a shortfall of 1,201 seats (compared to 147 percent and a deficiency of 1,197 seats with Alternative F). In CSD 2 as a whole, the elementary school utilization rate would increase over No-Action conditions, from 109 percent with a shortfall of 1,334 seats, to a utilization rate of 112 percent and a deficiency of 1,886 seats. As with Alternative F, the Council modifications would result in a greater than 5 percent increase in the deficiency of available elementary schools seats over No-Action conditions (85 percent and 41 percent, respectively) and therefore it would result in a significant adverse impact on public elementary schools in Region 3 and CSD 2 as a whole.

Under the Council Modifications, there would be 116 additional intermediate school students, as compared to 114 for Alternative F. For intermediate schools in Region 3 of CSD 2, the utilization rate would increase over No-Action conditions, from 93 percent with 61 available seats, to a utilization rate of 107 percent with a shortfall of 55 seats (compared to 107 percent and a deficiency of 53 seats with Alternative F). As there is not expected to be a deficit under No-Action conditions, a percentage increase in deficiency cannot be calculated. However, the deficit in seats at intermediate schools in Region 3 under this alternative in 2013 would be relatively small both in absolute terms and as a percentage of total capacity, since it would be only 2 seats more than the Alternative F demand. Therefore, as with Alternative F, the Council modifications would not have a significant adverse impact on intermediate schools in Region 3.

For intermediate schools in CSD 2 as a whole, the utilization rate would increase over No-Action conditions, from 117 percent with a shortfall of 1,164 seats, to a utilization rate of 119 percent with a shortfall of 1,280 seats (compared to 119 percent and a deficiency of 1,278 seats with Alternative F). As with Alternative F, the Council modifications would result in a greater than 5 percent increase in the deficiency of available intermediate school seats over No-Action conditions (10 percent) and therefore it would result in a significant adverse impact on public intermediate schools in CSD 2.

High Schools

With the Council modifications, there would be approximately 179 new high school students within the proposed action area. As a result, there would be a shortfall of 2,104 seats in Manhattan high schools, with utilization at 104 percent of capacity. This represents a 9 percent increase in deficiency of high school seats over the No-Action conditions. This is slightly higher than Alternative F, which would result in a shortfall of 2,100 seats, also with a utilization rate of 104 percent, and a 9 percent increase in deficiency of high school seats over the No-Action conditions. The Council modifications, like Alternative F, result in a greater than 5 percent increase in deficiency in high school seats, potentially indicating a significant impact. However, since students may elect to attend high schools throughout the city, and could be accommodated without constraining overall capacity, no significant adverse impact to high schools in Manhattan is expected to occur as a result of the Council modifications (as is the case for Alternative F).

Libraries

With a net increase of 4,362 market-rate and 967 affordable housing DUs, the Council modifications would generate 9,572 new residents in the Muhlenberg Branch catchment area. Under No-Action conditions, the population in the Muhlenberg Branch catchment area would be 154,420 new residents by year 2013. Under the Council modifications, the population would increase to 163,992. This represents an increase of 6.2 percent residents over the No-Action population. The Council modifications increase would be 0.1 percentage point higher than Alternative F, which would add 9,400 residents, a 6.1 percent increase over the No-Action population.

As discussed in Chapter 4 of the FEIS, if a proposed action would increase the study area population by 5 percent or more over No-Action levels, a significant impact could occur if this increase would impair the delivery of library services. Significant impacts would warrant consideration of mitigation. However, as stated in the *No. 7 Subway Extension - Hudson Yards Rezoning and Development Program FGEIS (November 2004, CEQR No. 03DCP031M)*, the New York Public Library (NYPL) has indicated that projected increases in local library population attributed to the Hudson Yards project (through complete build-out in 2025), the West Chelsea rezoning, and other developments in the area could be accommodated by the library system's existing resources (the Hudson Yards library analysis included the Columbus Branch library at 742 Tenth Avenue, as well as the Muhlenberg Branch). In addition, the proximity of the Jefferson Market Branch Library as well as Midtown Manhattan's Central Libraries, with their extensive resources, to the West Chelsea proposed action area would help to absorb demand on library resources in the proposed action area. Therefore, as with Alternative F analyzed in the FEIS, no significant adverse impact to public libraries is expected to occur as a result of the Council modifications.

Health Care Facilities

With 967 affordable housing units, the Council modifications would generate 2,418 new residents to add to the health care facility demand in the outpatient health care facilities study area. The Council modifications would generate 1,581 visits, a 1.9 percent increase over No-

Action conditions compared to an increase of 1,256 emergency room (ER) visits, representing a 1.5 percent increase for Alternative F over No-Action conditions. As a result, it is expected that the number of ER visits would increase from 84,102 (No-Action conditions) to 86,758 (Council modifications) at study area hospitals. As is the case with Alternative F, because the increase in generated ER visits for this alternative is still less than a 5 percent increase over No-Action conditions and given the availability of many outpatient ambulatory facilities in the study area, no significant adverse impacts on health care services are expected as a result of the Council modifications.

Publicly Funded Day Care

With 967 affordable housing units, the Council modifications would generate 116 children under age 12 eligible for publicly funded day care. As a result, the net unmet demand in the study area would increase from 121 under No-Action conditions to 237 slots, a 49 percent increase in demand as a percentage of capacity over No-Action conditions (compared to a net unmet demand of 213 slots under the proposed action, and a 39 percent increase in demand as a percentage of capacity over No-Action conditions). As is the case with Alternative F, the Council modifications would result in an increase of five percent or more over capacity, and therefore a significant adverse impact to publicly funded day care service in the study area could occur in 2013 as a result.

Police and Fire Services

As noted in Chapter 4 of the FEIS, the NYPD and the FDNY routinely evaluate their resources in response to changes in population, crime levels and other local factors. Similar to Alternative F, the Council modifications would not displace or eliminate any existing NYPD or FDNY facilities and would not result in a significant adverse impact on police and fire protection in the study area.

Conclusion

As describe above, the Council modifications would result in significant adverse impacts to elementary schools in CSD 2 of Region 3 and in Region 3 as a whole, as well as to intermediate schools in Region 3 as a whole, and to publicly funded day care. These impacts would also occur under Alternative F (and the CPC modifications). The Council modifications' impacts would occur at a minimally higher magnitude but could be addressed by the same mitigation measures as identified in the FEIS. As also described above, the proposed Council modifications would not result in any significant adverse impacts to community facilities and services not already identified in the FEIS for Alternative F.

D. Open Space

As discussed above, the Council modifications would generate 9,572 residents, 172 more than Alternative F and the CPC modifications. As there would be larger overall action-generated population, the Council modifications have the potential to have greater effects on open space

than those previously identified for Alternative F in the FEIS. These effects are identified and assessed below.

The Council modifications would generate up to 9,572 new residents, an increase of 172 over the 9,400 residents generated by Alternative F. These modifications would result in the same amount of open space as the proposed action, with 28.81 active acres, 64.11 passive acres, and 92.92 total acres.

With a study area population of 79,071, as compared to 78,899 under Alternative F, and the same amount of open space as Alternative F, the Council modifications would have 1.18 acres per 1,000 residents. This would be a decrease of 0.07 acres per 1,000 residents (6 percent) compared to the No-Action condition. This is the same open space rate as under Alternative F. The active open space ratio for the Council modifications would be 0.36 acres per 1,000 residents, a decrease of 0.05 acres (12 percent) compared to the No-Action condition. Under Alternative F, the active open space ratio was 0.37 acres per 1,000 residents. Under both Alternative F and the Council modifications, the percentage decrease would be approximately 12 percent. The passive open space ratio would be 0.81 acres per 1,000 residents, a decrease of 0.02 acres (3 percent) compared to the No-Action condition. Under Alternative F, the passive open space ratio and the percentage decrease are the same as the Council modifications (0.81 acres per 1,000 residents and a 3 percent decrease, respectively).

Like Alternative F, the Council modifications would not result in significant adverse open space impacts. Although the Council modifications would generate more residents as compared to Alternative F, the open space ratios would be very similar. As with Alternative F, significant adverse open space impacts are not expected because the proposed action would add approximately six acres of new publicly accessible open space on the High Line. Therefore, the proposed modifications would not result in any significant adverse impact to open space resources not already identified in the FEIS for Alternative F.

E. Shadows

The proposed Council modifications would alter height, setback, and other bulk regulations in portions of the proposed action area as compared to the CPC modifications. Specifically, buildings on Projected Development Sites 6, 8, and 11 would be reduced from a maximum height of 145 feet to a maximum height of 125 feet. Consequently, the shadows cast from these development sites as a result of the Council modifications would be shorter as compared to the CPC modifications.

With the Council modifications, the same significant adverse shadow impacts expected under Alternative F would occur. The impacts to the Church of the Guardian Angel and the chapel located on the grounds of the General Theological Seminary are not attributed to buildings on Projected Development Sites 6, 8 and 11. The impacts to these resources are attributed to development sites located to the south and west of the resources. Therefore, no additional shadow impacts would occur with the Council modifications and they would not result in any significant adverse shadows impacts not already identified in the FEIS for Alternative F.

F. Historic Resources

As there would be no change in the number, floor area, and type of construction on the 53 projected and potential development sites as a result of the proposed modifications, there would be no changes to the effects on historic resources as identified for Alternative F in the FEIS. The reduced heights on Sites 6, 8, and 11 and overall increase in the proportion of affordable housing units would not substantively change the effects on historic resources. With the proposed Council modifications, the same significant adverse historic resources impacts as expected for Alternative F would occur. The proposed modifications would not result in any significant adverse impact to historic resources not already identified in the FEIS for Alternative F.

G. Urban Design and Visual Resources

Under the proposed Council modifications, some maximum permitted building heights would be changed from the regulations included in the CPC modifications. In Subarea C permitted heights would decrease from 145 to 125 feet.

The Council modifications would result in the same overall amount of net development, though a higher proportion of affordable housing units would be developed as compared to Alternative F and the CPC modifications. As a result, there would be a higher number action-generated residents and a commensurately higher level of sewage generated. As discussed below, the Council modifications would generate 1.21 million gallons per day (mgd) as compared to 1.19 mgd generated by Alternative F. This change in sewage generation is a negligible increase. As discussed in Chapters 11 and 23 of the FEIS, an assessment of future water quality conditions in 2010 and 2025 was prepared for the *Hudson Yards Final Generic Impact Statement (FEIS)*, to assess the effects of future development in the North River WPCP drainage area, including Hudson Yards related development and West Chelsea development. That analysis concluded that with increased CSO events, CSO volumes, and CSO pollutant loadings, these changes would have no significant adverse impacts on water quality and water quality conditions would continue to meet the standards and uses established, where applicable, for Class I waters. Therefore, like Alternative F, with the Council modifications, it is reasonable to conclude that occasional CSO discharges from outfalls serving the West Chelsea area and from effluent flows from the North River Water Pollution Control Plant (NRWPCP), even if discharging a higher concentration of sewage than under current conditions, would not result in significant adverse impacts to water quality in the Hudson River. Based on the amount of development anticipated under the Council modifications, as compared to Hudson Yards, even with the potential additional CSO events that may occur under future conditions, it would be reasonable to conclude that potential effects on water quality would be small and would not result in significant adverse impacts to water quality or wildlife in the Hudson River.

As was the case for Alternative F analyzed in the FEIS, the proposed Council modifications would have significant and positive changes on urban design and visual resources and would not result in significant adverse impacts to urban design and visual resources.

H. Neighborhood Character

The proposed Council modifications generally would have the same effects on the elements that contribute to neighborhood character as Alternative F and the CPC modifications. The proposed Council modifications would not result in any significant adverse impacts not already identified in the FEIS for Alternative F on land use, urban design/visual resources, historic resources, socioeconomic conditions, traffic, and noise.

As was the case for Alternative F analyzed in the FEIS, the proposed Council modifications would not result in significant adverse impacts to neighborhood character and would result in an overall improvement to neighborhood character.

I. Hazardous Materials

The proposed Council modifications would involve the same 53 projected and potential development sites and the same incremental development as under Alternative F analyzed in the FEIS (and under the CPC modifications). With the Council modifications, (E) designations for hazardous materials would be mapped on the same tax lots as identified for Alternative F in the FEIS (refer to Table 1). Therefore, as was the case for Alternative F, the proposed modifications would not result in significant adverse impacts to hazardous materials.

J. Natural Resources

The Council modifications would result in development on the same 53 projected and potential development sites that would be affected by Alternative F and the CPC modifications. As Alternative F would not result in significant adverse impacts to natural resources due to site-specific effects, the Council modifications also would not result in significant adverse impacts on natural resources.

The Council modifications would result in the same overall amount of net development, though a higher proportion of affordable housing units would be developed as compared to Alternative F and the CPC modifications. As a result, there would be a higher number action-generated residents and a commensurately higher level of sewage generated. As discussed below, the Council modifications would generate 1.21 million gallons per day (mgd) as compared to 1.19 mgd generated by Alternative F. This change in sewage generation is a negligible increase. As discussed in Chapters 11 and 23 of the FEIS, an assessment of future water quality conditions in 2010 and 2025 was prepared for the *Hudson Yards Final Generic Impact Statement (FEIS)*, to assess the effects of future development in the North River WPCP drainage area, including Hudson Yards related development and West Chelsea development. That analysis concluded that with increased CSO events, CSO volumes, and CSO pollutant loadings, these changes would have no significant adverse impacts on water quality and water quality conditions would continue to meet the standards and uses established, where applicable, for Class I waters.

Therefore, like the proposed action and Alternative F, for the Council modifications it is reasonable to conclude that occasional CSO discharges from outfalls serving the West Chelsea area and from effluent flows from the North River Water Pollution Control Plant (NRWPCP), even if discharging a higher concentration of sewage than under current conditions, would not result in significant adverse impacts to water quality in the Hudson River. Based on the amount of development anticipated under the Council modifications, as compared to Hudson Yards, even with the potential additional CSO events that may occur under future conditions, it would be reasonable to conclude that potential effects on water quality would be small and would not result in significant adverse impacts to water quality or wildlife in the Hudson River.

As with Alternative F and the CPC modifications, the proposed Council modifications would not result in any significant adverse natural resources impacts.

K. Waterfront Revitalization Program

The Council modifications, like Alternative F, are compatible with the City's Local Waterfront Revitalization Program (LWRP). The changes to building heights and affordable housing FAR bonus mechanisms contained in the proposed Council modifications would not alter the conclusion presented in the May 25 Technical Memorandum.

As was the case for Alternative F analyzed in the FEIS, the proposed Council modifications would encourage appropriate land uses and open space amenities within the coastal zone and would be consistent with the 10 LWRP policies

L. Infrastructure

The Council modifications would result in a somewhat higher demand on the City's water supply and wastewater management systems compared to Alternative F; however, as under Alternative F and the CPC modifications, significant adverse impacts to infrastructure are not anticipated. With respect to stormwater management, the Council modifications are not expected to result in significant adverse impacts. Under both Alternative F and the Council modifications, the potential for CSO events would continue, given the increased sewage flows from projected development. However, these discharges are not likely to result in flooding in the basements of buildings, nor, as discussed above under "Natural Resources," are they likely to affect water quality and wildlife in the Hudson River.

With 172 more residents generated by the Council modifications as compared to Alternative F and the CPC modifications (9,572 compared to 9,400), there is a slightly greater demand placed on the City's water supply and wastewater management systems, as discussed below.

Water Supply

Under the Council modifications, total water usage on the projected development sites would be approximately 2,064,064 gpd (2.06 mgd), resulting in a net increase of approximately 1.62 mgd

over No-Action levels. This compares to a total water usage of 2.05 mgd and a net increase of 1.60 for Alternative F as analyzed in the FEIS. The Council modifications' incremental demand would represent an increase of 0.13 percent of the City's current water demand of 1.2 billion gpd (1,200 mgd). As with the 0.13 incremental increase associated with Alternative F, this relatively small incremental demand is not large enough to significantly impact the ability of the City's water system to deliver water. As such, the Council modifications, like Alternative F, would not result in significant adverse impacts upon the City's water supply nor would it affect local water pressure.

Wastewater Management

Under the Council modifications, sanitary sewage flows generated by the projected developments would be approximately 1.21 mgd (compared to 1.19 for Alternative F), an incremental increase of approximately 0.97 mgd over No-Action levels (compared to 0.95 mgd for the proposed action). This increment represents about 0.74 percent of the existing average wastewater flows at the North River WPCP and 0.57 percent of the its SPDES permitted flows (as compared to the proposed action's 0.72 percent and 0.56 percent, respectively). With North River WPCP operating substantially below capacity, the increase in sanitary sewage resulting from this alternative, as with the proposed action, is not anticipated to adversely impact WPCP operations nor cause it to exceed its design capacity or SPDES permit flow limit. As such, neither this alternative nor the proposed action would result in significant adverse impacts upon the City's sanitary sewage and wastewater management system.

M. Solid Waste and Sanitation Services

With 172 more residents generated by the Council modifications as compared to Alternative F and the CPC modifications (9,572 compared to 9,400), there is a potential for greater solid waste and sanitation services effects to occur. (As the non-residential development generated by the Council modifications would be exactly the same as Alternative F, the non-municipal solid waste generation would be the same and further assessment is not warranted.)

Under the Council modifications, it is estimated that the 28 projected development sites would generate approximately 163,605 pounds of municipal solid waste per week (81.8 tons), a net increase of 160,671 pounds per week (80.3 tons) over No-Action conditions. This would be somewhat higher than Alternative F, which would generate a net increase of 157,747 pounds of municipal solid waste per week (78.9 tons).

According to the *CEQR Technical Manual*, the typical DSNY collection truck for residential refuse carries approximately 12.5 tons of waste material. Therefore, like Alternative F, the Council modifications would generate solid waste equivalent to approximately 1 truck load per day (assuming a seven-day week), which is not expected to overburden the DSNY's solid waste handling services. Accordingly, as with Alternative F, the Council modifications would not result in significant adverse impacts to municipal solid waste services.

N. Energy

The proposed Council modifications would not affect density. Therefore, energy demand would be the same as under Alternative F (energy demand is calculated by residential square footage rather than the number of residents). As was the case for Alternative F analyzed in the FEIS, the proposed modifications would not result in significant adverse energy impacts.

O. Traffic and Parking

The proposed Council modifications would not affect density and result in new or different amounts of floor area on any development site. Therefore, the net vehicle trips and parking demand generated under the modifications would be the same as under Alternative F. Furthermore, there would be no change to traffic patterns or circulation. Therefore, the proposed modifications would not result in any significant adverse impacts to traffic and parking not already identified in the FEIS for Alternative F.

P. Transit and Pedestrians

The proposed Council modifications would not affect density, and therefore would not change the net subway, bus, and pedestrian trips generated by Alternative F. Therefore, the proposed modifications would not result in any significant adverse transit and pedestrian impacts not already identified in the FEIS for Alternative F.

Q. Air Quality

Mobile Sources

As noted above, the proposed Council modifications would not affect the density and projected floor area on any identified development sites, and therefore would not change the net vehicle trips generated by Alternative F. The effects on air quality from mobile sources would not be affected by the Council modifications. Therefore, they would not result in any significant adverse mobile source air quality impacts not already identified in the FEIS for Alternative F.

Stationary Sources

HVAC Source Impact Analysis:

Like Alternative F and the CPC modifications, the proposed Council modifications would entail (E) designations for stationary source air quality and therefore would not result in significant adverse air quality impacts.

Table 2 presents the results of the HVAC source impact analysis and is provided at the end of this memorandum. As shown in Table 2, with the proposed Council modifications, Projected

Development Site 5 would no longer require an (E) designation for emissions associated with HVAC systems. Provided below is a list of all properties which would receive (E) designations for air quality under the proposed modifications.

- Requires a minimum offset distance for the stack locations for either natural gas or No. 2 fuel oil, as specified in Table 2 --- (columns two and three):
Block 701; Lot 1 (Site 1)
Block 699; Lot 5 (Site 4)
Block 699; Lot 30*, 31*, 32*, 33, 37* (Site 6)
Block 698; Lot 1 (Site 7)
Block 696; Lot 58 (Site 10)
Block 692; Lot 57 (Site 14)
Block 691; Lots 43, 50 (Site 17)
Block 691, Lots 25, 27, 29, 33, 35, 37 (Site 18)
Block 690; Lot 29 (Site 20)
Block 715; Lots 1*, 2, 3, 60, 63, 64, 65 (Site 22)
Block 715; Lots 5,7 (Site 23)
Block 714; Lots 14,16 (Site 25)
Block 701; Lots 59,62,68,70 (Site 26)
Block 701; Lots 24,28 (Site 29)
Block 700; Lots 53,54,55,56,57,59,60,61 (Site 30)
Block 700; Lots 48,49 (Site 31)
Block 700; Lots 42,44,45,47 (Site 32)
Block 700; Lot 9 (Site 33)
Block 699; Lots 14,49 (Site 38)
Block 696; Lot 65 (Site 40)
Block 691; Lots 15,19,22,24 (Site 43)
Block 690; Lots 42,46 (Site 44)
Block 715; Lots 50,59 (Site 45)
Block 695; Lots 1,3,4 (Site 47)
Block 695; Lots 67, 68, 69, 70 (Site 52)
Block 694, Lot 47 (Site 53)
- Requires the exclusive use of natural gas (or a minimum offset distance for the stack location(s) if No. 2 fuel oil is used), as specified in Table 2 --- (columns four and five):
Block 701, Lots 30,33, 35*, 37,42,43 (Site 2)
Block 698, Lots 32,35,37, 40,41 (Site 8)
Block 697, Lots 27,31 (Site 9)
Block 6901, Lots 12,20,54 (Site 19)
Block 690; Lots 1,63 (Site 36)
Block 695, Lots 7, 12, 57 (Site 48)

Lots containing existing residential buildings, expected to remain under With-Action conditions, would not be mapped with an (E) designation for air quality. These properties are indicated with an asterisk (*).

The results of the analysis conducted for the Council modifications are provided in Table 2 below. Like Alternative F, the Council modifications would cause no violations of applicable air quality standards (i.e., maximum predicted total concentrations of each pollutant, including background, of NO_x, SO₂, and PM₁₀ are less than the corresponding NAAQS).

Cumulative Impacts from HVAC Sources:

The following four clusters were evaluated to determine the potential impact from the combined effects of the HVAC emissions from development sites on other nearby development sites.

Cluster #1: projected development sites 6, 8 – comprising a total floor area of 273,167 square feet with a stack height of 128 feet;

Cluster #2: projected development sites 12, 13, and 16 – comprising a total floor area of 356,688 square feet with a stack height of 253 feet.

Cluster #3: projected and potential development sites 22, 23, and 45– comprising a total floor area of 428,109 square feet with a stack height of 138 feet.

Cluster #4: potential development sites 46, 47, and 52 – comprising a total floor area 455,386 of square feet with a stack height of 253 feet.

The results of the analysis indicate that the potential air quality impacts of combined emissions from these HVAC clusters, using either No. 2 fuel oil or natural gas, would not be significant (i.e., would not cause a violation of an NAAQS).

Potential Impacts on Existing Land Uses

Like the results for Alternative F presented in the FEIS, the Council modifications would not cause significant adverse impacts to nearby sensitive land uses.

All buildings considered under the proposed Council modifications are either taller than existing land uses in the immediate vicinity of the rezoning area boundary or the change in building heights proposed under the Council modifications would not alter the conclusions (with respect to existing sensitive land uses) contained in the FEIS for Alternative F or the May 25, 2005 technical memorandum. As such, emissions from the heating systems of the projected or potential development sites would not impact existing residential buildings (i.e., would not cause a violation of an NAAQS).

Impacts of Existing Emission Source on Projected and Potential Development Sites

Like the results for Alternative F presented in the FEIS, with the Council modifications no significant adverse impacts are expected to any of the development sites from existing land uses.

The potentially significant combustion sources identified in the FEIS would not affect any projected or potential development sites identified under the Council modifications. The heights of the buildings that were identified as being potentially affected by existing emission sources either did not change or the height relationships between the projected and potential developments and existing land uses that were considered in the FEIS would not change.

Air Toxics Analysis:

Like Alternative F, under the Council modifications air toxic emissions from existing industrial or manufacturing sources in the study area would not result in significant adverse air quality impacts to any projected or potential development site. The manufacturing and industrial facilities identified in the FEIS for the proposed action would potentially affect the same development sites under Alternative F and the Council modifications.

R. Noise

With the proposed modifications, the same amount of development would occur at the same density on the 53 projected and potential development sites, as analyzed for Alternative F in the FEIS. With the proposed modifications, (E) designations for noise window wall attenuation would be mapped on the same tax lots as identified for Alternative F in the FEIS (refer to Tables 3 and 4). Therefore, as was the case for Alternative F, the proposed modifications would not result in significant adverse noise impacts.

S. Construction Impacts

The proposed Council modifications would result in the same development density on the 53 projected and potential development sites as analyzed for Alternative F in the FEIS. Apart from some changes in building height, setback, and related bulk regulations that would affect building envelopes, the constructions effects with the proposed modifications would be the same as for Alternative F analyzed in the FEIS. As these changes would not significantly change the nature of site construction, the Council modifications would not result in any significant adverse construction impacts not already identified in the FEIS for Alternative F.

T. Public Health

As with Alternative F analyzed in the FEIS, the proposed Council modifications would not result in significant adverse public health impacts, as they would not significantly impact the various technical areas that comprise public health, namely, air quality, hazardous materials, solid waste management, and noise. With the Council modifications, the hazardous materials testing and remediation requirements, air quality measures, and noise attenuation required by the proposed (E) designations would be implemented.

U. Mitigation

As the proposed Council modifications would result in the same significant adverse impacts identified under Alternative F, the same mitigation measures for community facility, traffic and transit impacts identified in the FEIS for Alternative F would apply to the proposed modifications.

V. Unavoidable Adverse Impacts

The proposed Council modifications would result in the same unavoidable adverse impacts identified in the FEIS for Alternative F with respect to shadows and historic resources.

(*) Lots indicated with an asterisk (*) are not expected to be redeveloped under the proposed action, as they contain existing residential buildings. Therefore, they would not be mapped with an (E) Designation. These lots would transfer air rights to adjacent lots within the development site. Note: as action-induced development is not expected on Site 14, the lots comprising this site would not receive hazardous materials (E) designations.

TABLE 2 – RESULTS OF HVAC SOURCE IMPACT ANALYSIS WITH PROPOSED COUNCIL MODIFICATIONS

Notes:

1 Some sites are immediately adjacent to each other and the analysis could not be further refined without additional design data; therefore the minimum distance for which the source would pass the CEQR screening procedures was provided for these sites using CEQR monographs. The following (E) designation would be placed on these development sites: Any new development on the property must locate the HVAC stack no closer to the edge of roof than the distance indicated.

2 Building is taller than nearby buildings; no analysis is required.

3 For sites that failed the CEQR screening procedures, a detailed ISC3 modeling analysis was performed.

4 The following (E) designation would be placed on these development sites: Any new development on the property must either locate the HVAC stack no closer to the edge of roof (on the highest tier) as indicated or use natural gas as the type of fuel for the HVAC systems.

‡As explained in the memorandum to the project file dated 6/21/05, corrected (E) designation requirements, where applicable, have been provided above in Table 2.

** The affect of additional trucks at the Morgan Annex was taken into consideration. Window / wall attenuation requirements were increased by 5 dBA along the assigned routes of Morgan Annex truck traffic.

*** These lots are not expected to be redeveloped under the proposed action, as they contain existing residential buildings.

Note: as action-induced development is not expected on Site 14, the lots comprising this site would not receive noise attenuation (E) designations.

* Mixed-use development on Potential Development Sites 46 through 53 requires 35 dBA window-wall attenuation, as per the EAS for the *Chelsea Rezoning (CEQR No. 99DCP030M)*. In order to ensure that the 35 dBA noise attenuation is provided once the mixed-use zoning district is eliminated, the Max L₁₀ (77.5 dBA) recorded in the above referenced EAS is used for these potential development sites.

** The affect of additional trucks at the Morgan Annex was taken into consideration. Window / wall attenuation requirements were increased by 5 dBA along the assigned routes of Morgan Annex truck traffic.

*** These lots are not expected to be redeveloped under the proposed action, as they contain existing residential buildings.

APPENDIX F

QUALIFICATIONS

Ben Friedman – Project Manager

M.A. – Environmental Management, Montclair State University

B.A. – Geography, Rutgers University

AHERA Certified Asbestos Inspector

Mr. Friedman currently provides project management for AEI specializing in due diligence to ensure ASTM compliance and satisfaction of client requirements for Phase I Environmental Site Assessments, Transaction Screens, and Limited Site Assessments.

Project experience for Mr. Friedman includes:

- Phase I Environmental Site Assessments
- Historical Records Reviews
- Regulatory Database Reviews
- File and Database Reviews

Mr. Friedman recently completed his M.A. in Environmental Management from Montclair State University. The Masters program included in-depth studies of waste, water, and air quality management as well as innovating techniques in environmental remediation.

Jennifer Keahey – Client Manager

B.S. – Microbiology, Texas A&M University

TDSHS Licensed Asbestos Inspector #603097

OSHA 40-hour Hazardous Waste Worker Training

Ms. Keahey has over five years of experience in the environmental services industry during which time she has performed, managed, and reviewed Phase I Environmental Site Assessments, Environmental Transaction Screens, and other environmental assessments. Her project experience includes numerous complicated and environmentally high-risk facilities, including gasoline stations, dry cleaning facilities, and industrial sites.

Project experience for Ms. Keahey includes:

- Phase I Environmental Site Assessments and Environmental Transaction Screens in conformance with ASTM, Freddie Mac, Fannie Mae, HUD, and customized client scopes.
- Mold and moisture intrusion surveys, including commercial and multi-tenant residential properties, and long-term air quality monitoring projects.
- Asbestos, lead-based paint, and radon surveys.

Ms. Keahey provides project management and technical expertise to ensure ASTM compliance and satisfaction of client requirements for unique environmental issues.
