EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by City National Bank to conduct a Phase I Environmental Site Assessment (ESA), in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 542 West 29th Street in the City of New York, New York County, New York. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report.

PROPERTY DESCRIPTION

The subject property, which consists of a seafood wholesale facility, is located on the south side of West 29th Street in a mixed commercial and residential area of New York, New York. The property totals approximately 0.11 acres (4,937 square feet) and is improved with a two-story building totaling approximately 7,000 square feet, and constructed slab-on-grade. The subject property is currently occupied by Gotham Seafood Corporation. On-site operations include seafood wholesale and associated office-based administrative operations. The building encompasses the full subject property; therefore no other improvements were noted.

According to historical sources, the current subject property building was constructed in 1945 for use as an auto repair facility, without the second story and southern portion where the present-day coolers are located. The mezzanine was constructed in 1983 and legalized as the second story in 1994. The building was utilized as an auto repair facility through 1994. In 1995, the property was purchased by Gotham Seafood Corporation and utilized as a seafood wholesaler. In 2000, the walk-in coolers were constructed over the then-existing backyard. Prior to the construction of the building, the property was unimproved, utilized as a lumber storage yard from 1909 to 1944. From at least 1890 to 1909, the property was developed with two three-story buildings abutting West 29th Street and one two-story building and one four-story building set back along the southern edge of the property, none of which are identified in historical sources, however based on the sizes of the buildings, they appear to be residential and/or retail. Historical use prior to 1890 was not reasonably ascertainable.

The subject property was identified in the regulatory database as a New York (NY) Environmental (E) Designation site, and is further discussed in Section 5.1.

The immediately surrounding properties consist of the following:

| Direction from Site | Address-Tenant/Use |
|---------------------|--|
| North | West 29 th Street, followed by Manhattan Mini Storage (541 West 29 th Street) |
| South | Avalon West Chelsea and AVA High Line apartments under construction (525 West 28 th Street) |
| East | Martos Gallery (540 West 29 th Street) |
| West | Cynthia Broan Gallery (546 West 29 th Street) |

The adjacent site to the north (identified as 302 11th Avenue, Taxblock 701, Lot 1) was identified in the regulatory database as a NY E Designation site. The adjacent site to the south (identified as Avalon West Chelsea at 282 11th Avenue and 525 West 28th Street) was identified in the regulatory database as a NY Spills, Manifest, and Resource Conservation and Recovery Act Non Generator/No Longer Regulated (RCRA-NonGen/NLR) site. The adjacent site to the

east (identified as 540 West 29th Street, Taxblock 700, Lot 56) was identified in the regulatory database as a NY E Designation and EDR Historical Auto Station site. The adjacent site to the west (identified as 546 West 29th Street, Taxblock 700, Lot 59) was identified in the regulatory database as a NY E Designation and EDR Historical Auto Station site. Please refer to Section 5.1.

Based upon subsurface investigations performed at the southern adjacent site discussed in the regulatory database, the direction of groundwater flow beneath the subject property is inferred to be to the west and present at an estimated depth of 10 feet below ground surface (bgs).

FINDINGS

Recognized Environmental Conditions (RECs) are defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. AEI's assessment has revealed the following RECs associated with the subject property or nearby properties:

- According to the regulatory database and prior reports provided by the New York State Department of Environmental Conservation (NYSDEC), subsurface contamination was reported in 2007 during the redevelopment of the Avalon West Chelsea apartment building on the southern adjacent property. Many of the buildings which were demolished for the redevelopment were auto repair facilities and commercial parking lots/garages. Elevated levels of petroleum contaminants, as well as highly degraded chlorinated contaminants were found in soil and groundwater. The chlorinated solvents were found mostly on the far eastern side of the site and determined to be likely derived from an upgradient automotive repair operations or from an upgradient former metal fabrication operation east of the site along 28th Street. Since there were many auto repair facilities in the vicinity, the sources of the petroleum contamination were not directly identified. The regulatory database indicates that John McGuire, the subject property owner, was interviewed during the investigation of this site. Mr. McGuire indicated that no oil was stored on the subject property since at least 1995 when he purchased it. No further investigation into the subject property as being a source was indicated. The properties located at 524 and 548 29th Street, both auto repair facilities, were suspected sources, however investigations into those facilities were inconclusive. A test pit was performed in February 2012 directly south of the subject property in which soil with strong petroleum odors which were noticeable from approximately 100 feet away was encountered. A test pit performed directly south of 548 West 29th Street found no evidence of contamination in the vadose zone, but strong gasoline odors in the saturated zone, indicating that the source was off-site and migrated via groundwater from the north. Subsurface sampling was performed in January 2012 which included obtaining groundwater and soil samples from temporary monitoring wells approximately 10 feet west of the subject property boundary (tMW-1) and approximately 30 feet southeast of the subject property boundary (tMW-3). Petroleum contaminants were found to be highly exceeding the NYSDEC standards in both soil and groundwater. Additionally, the chlorinated contaminant, Cis-1,2-Dichloroethene was found in the tMW-1 groundwater sample slightly exceeding the NYSDEC standard. The petroleum contamination in these temporary monitoring wells was expected to be migrating from the general vicinity of the subject property to the north. Remediation via in situ chemical oxidation was conducted at the southern adjacent site in May 2013. Following treatment,

soil samples were collected and all samples met the soil cleanup objectives; however groundwater impacts above the targeted guidelines still remained. As of January 16, 2014, at least two more quarters of groundwater monitoring was requested, and the spill case remains open. Based on the petroleum-contaminated soils and saturated zone which were found near the subject property and believed to be migrating from an off-site source to the north, it can be inferred that contamination exists at the subject property. As the subject property operated as an auto repair facility from 1945 until 1994 (approximately 50 years and partially during a time period pre-dating hazardous material regulatory reporting requirements), AEI cannot rule out the possibility that historical on-site operations contributed to the subsurface contamination. In addition, based on the likely petroleum contaminants and possible chlorinated contaminants in the subsurface, there is an additional risk potentially presented by vapor intrusion. This represents a recognized environmental condition and warrants further investigation.

- A facility listed as "Closed-Lack of Recent Info" at 524 West 29th Street was identified in the regulatory database as a NY LTANKS and NY Spills site. This site is located approximately 260 feet southeast (hydrologically cross to up-gradient) of the subject property. According to the regulatory database, a release was reported at this site on October 20, 2003 due to petroleum-contaminated soil and groundwater encountered when one 4,000-gallon and one 550-gallon gasoline USTs were removed. Depth to groundwater was encountered at 8-9 feet bgs and flowing northwest. Elevated levels of benzene, xylene, MTBE, and toluene were found in soil and groundwater samples. Air Sparge/Soil Vapor Extraction (AS/SVE) remediation techniques were performed. In November 2011, sampling was conducted and the maximum volatile organic compounds (VOCs) was 117.3 µg/L with several compounds slightly above the standards, the greatest being naphthalene at a concentration of 36 µg/L, above the standard of 10 µg/L. The AS/SVE system was turned on and ran for four weeks. Air samples were collected after the four weeks and all targeted VOCs were non-detected. Groundwater contamination had been greatly reduced and the AS/SVE system reached asymptotic recovery rates. Additional remediation was not warranted or feasible. The spill case was closed on March 12, 2012. Based on the facility's close proximity to the subject property, residual contamination allowed to remain in the subsurface and the groundwater flow direction, it is AEI's opinion that a VEC cannot be ruled out. Based on the location of this site in relation to the Avalon West Chelsea site discussed above, it is likely that groundwater contamination at this site is commingled with and/or possibly contributing to the groundwater contamination found at the Avalon West Chelsea site.

Controlled Recognized Environmental Conditions (CRECs) are defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. AEI's assessment has revealed the following CRECs associated with the subject property or nearby properties:

- No on-site CRECs were identified during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory

authority, without subjecting the property to any required controls. AEI's assessment has revealed the following HRECs associated with the subject property or nearby properties:

- No on-site HRECs were identified during the course of this assessment.

Environmental Issues include environmental concerns identified by AEI that warrant discussion, but do not qualify as recognized environmental conditions, as defined by the ASTM Standard Practice E1527-13. These can include, but are not limited to risks which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of the subject property. AEI's investigation has revealed the following environmental issues associated with the subject property or nearby properties:

- The subject property, identified as E-Number E-142 is listed in the regulatory database as E-designation in association with Air Quality (HVAC fuel limited to natural gas), Noise (window and wall attenuation and alternate ventilation), and Hazardous Materials (Underground Gasoline Storage Tanks Testing Protocol). The subject property and most of its vicinity were issued these E-designations in the *Proposed Modifications to Special West Chelsea District Zoning Map and Text Amendments Application at New York City Council (N 050161(A) ZRM)*, dated June 22, 2005. An E-designation provides notice of the presence of an environmental requirement pertaining to potential hazardous materials contamination, high ambient noise levels or air emission concerns on a particular tax lot. E-designations are administered by the New York City Office of Environmental Remediation (OER). E-designations, governed by Section 11-15 (Environmental Requirements) of the Zoning Resolution, are established in connection with a change in zoning or an action pursuant to a provision of the Zoning Resolution that would allow additional development to occur on property, or would permit uses not currently allowed. According to the OER an E-designation can occur because the property was used as or is in close proximity to a gas station or some other underground fuel oil tank; is located in or contiguous to a manufacturing district; has a history of manufacturing uses; is located next to a building with a history of manufacturing uses; is located on a heavily trafficked street or highway; is located next to a railroad; has some other environmental condition on the property or nearby that is a cause for concern. An E-designation is not a notice of a building violation and does not definitively indicate that an underground tank or contamination exists at the property. The E-designation would ensure that testing and any necessary remediation would occur prior to or during the development of such sites, assuring the City that potential adverse impacts in connection with the development of properties within areas proposed for rezoning would be addressed at the time that the sites were developed. If any contaminants are identified then a remedial action plan and health and safety plan must be prepared prior to building development and the issuance of building permits. These designations must be addressed prior to the issuance of building permits and then prior to the issuance of the certificate of occupancy. The HVAC Source Impact Analysis for the subject property indicates that the minimum offset distance from the edge of the roof for the stack location for No. 2 fuel oil is 55 feet and for natural gas is 38 feet. The Noise designation for the subject property requires a 35 decibel (dBA) attenuation and the Build Max L₁₀ (noise level in dBA exceeded 10 percent of the observation time) to be 73.9 dBA. Based on this information, no further action is warranted under the E-designation if no changes are planned to the subject property. In the event of renovations or redevelopment which would require soil disturbance or excavation, subsurface sampling would be required to satisfy the Hazardous Materials E-designation.

Non-ASTM Considerations may include the presence of environmental conditions such as asbestos containing materials, lead-based paint, radon, mold, lead in drinking water, etc. which can affect the liabilities and financial obligations of the client, the health & safety of site occupants, and the value and marketability of the subject property. AEI's assessment has revealed the following Non-ASTM considerations associated with the subject property or nearby properties:

- Due to the age of the subject property building, there is a potential that asbestos-containing materials (ACMs) are present. All observed suspect ACMs were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. In the event that building renovation or demolition activities are planned, an asbestos survey adhering to Asbestos Hazard Emergency Response Act (AHERA) sampling protocol should be performed prior to demolition or renovation activities that may disturb suspect ACMs.
- Due to the age of the subject property building, there is a potential that lead-based paint (LBP) is present. All observed painted surfaces were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Local regulations may apply to lead-based paint in association with building demolition/renovations and worker/occupant protection. Actual material samples would need to be collected or an XRF survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing *any amount* of lead may be subject to certain requirements of the Occupational Safety and Health Administration (OSHA) lead standard contained in 29 CFR 1910.1025 and 1926.62.

CONCLUSIONS, OPINIONS AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment for the property located at 542 West 29th Street in the City of New York, New York County, New York, in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312). Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment has revealed no evidence of RECs or CRECs in connection with the property except for those previously identified in the *Findings* section.

AEI recommends a Phase II Subsurface Investigation to determine if subsurface contamination and/or a vapor-phase issue beneath the subject property is present based on the subsurface contamination detected at the southern adjacent property and the nearby property at 524 West 29th Street.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment (ESA) performed in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 542 West 29th Street in the City of New York, New York County, New York (Figure 1: Site Location Map, Figure 2: Site Map, and Appendix A: Property Photographs).

1.1 SCOPE OF WORK

The purpose of the Phase I Environmental Site Assessment is to assist the client in identifying potential environmental liabilities associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property, as well as regulatory non-compliance that may have occurred at the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

The goal of AEI Consultants in conducting the Phase I Environmental Site Assessment was to identify the presence or likely presence of any hazardous substances or petroleum products on the property that may indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum product into the soil, groundwater, or surface water of the property.

1.2 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI Consultants in this report. AEI Consultants relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI Consultants has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites are assumed based on contours depicted on the United States Geological Survey topographic maps. AEI Consultants assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.3 LIMITATIONS

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI Consultants makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: asbestos-containing materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, vapor intrusion, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed in Section 7.2. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

- 1) 42 U.S.C § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
- 2) Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
- 3) 42 U.S.C. 9601(40) and 42 U.S.C. 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted

procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

1.4 LIMITING CONDITIONS/DEVIATIONS

The performance of this Phase I Environmental Site Assessment was limited by the following conditions:

- The User did not complete the ASTM User questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this investigation.
- On March 14, 2014, AEI contacted the New York State Department of Health (NYSDOH), Fire Department of New York (FDNY), and the New York State Department of Environmental Conservation (NYSDEC). However, as of this writing, no response has been received from these agencies. Upon receiving pertinent information in connection with the subject property, AEI will immediately issue an addendum to this report if items of environmental concern are identified.

1.5 DATA GAPS AND DATA FAILURE

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required, despite good faith efforts to gather such information.

Data failure is one type of data gap. According to ASTM E1527-13 "data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met". Pursuant to ASTM Standards, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier.

The following data gaps were identified during the course of this assessment:

| | | | | |
|--|--|-----|----|---|
| Data Gap: | Historical use dating back to the property's first development was not ascertainable | | | |
| Does this data gap affect the EP's ability to identify RECs? | | Yes | No | X |
| Rationale | The earliest historical source reviewed was a Sanborn map dated 1890 which depicts the subject property as being developed with two three-story buildings abutting West 29 th Street and one two-story building and one four-story building set back along the southern edge of the property, none of which are identified with specific use. Based on the sizes of the buildings, they appear to be residential and/or retail. Thus, it can be assumed that prior to 1890, the property was likely used for similar purposes, if not undeveloped. Therefore, this data gap is not expected to alter the findings of this assessment. | | | |
| Information/ sources consulted | Sanborn Maps, Aerial Photographs, City Directories, Building Records | | | |

1.6 RELIANCE

All reports, both verbal and written, are for the benefit of City National Bank, their client, and their client's assigns and lender. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms & Conditions executed by City National Bank on March 11, 2014. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

The subject property, which consists of a seafood wholesale facility, is located on the south side of West 29th Street in a mixed commercial and residential area of New York, New York. The property totals approximately 0.11 acres (4,937 square feet) and is improved with a two-story building totaling approximately 7,000 square feet, and constructed slab-on-grade. The subject property is currently occupied by Gotham Seafood Corporation. On-site operations include seafood wholesale and associated office-based administrative operations. The building encompasses the full subject property; therefore no other improvements were noted.

The subject property was identified in the regulatory database as a New York (NY) Environmental (E) Designation site, and is further discussed in Section 5.1.

The Assessor's Parcel Number (APN) for the subject property is Block 700, Lot 57. According to Mr. John McGuire, subject property owner, heating and cooling systems on the subject property are fueled by natural gas and electricity provided by Consolidated Edison (ConEd), and potable water and sewage disposal are provided by the City of New York.

Refer to Figure 1: Site Location Map, Figure 2: Site Map, and Appendix A: Property Photographs for site location.

2.2 SITE AND VICINITY CHARACTERISTICS

The subject property is located in a mixed commercial and residential area of New York. The immediately surrounding properties consist of the following:

| Direction from Site | Address-Tenant/Use |
|---------------------|--|
| North | West 29 th Street, followed by Manhattan Mini Storage (541 West 29 th Street) |
| South | Avalon West Chelsea and AVA High Line apartments under construction (525 West 28 th Street) |
| East | Martos Gallery (540 West 29 th Street) |
| West | Cynthia Broan Gallery (546 West 29 th Street) |

The adjacent site to the north (identified as 302 11th Avenue, Taxblock 701, Lot 1) was identified in the regulatory database as a NY E Designation site. The adjacent site to the south (identified as Avalon West Chelsea at 282 11th Avenue and 525 West 28th Street) was identified in the regulatory database as a NY Spills, Manifest, and Resource Conservation and Recovery Act Non Generator/No Longer Regulated (RCRA-NonGen/NLR) site. The adjacent site to the east (identified as 540 West 29th Street, Taxblock 700, Lot 56) was identified in the regulatory database as a NY E Designation and EDR Historical Auto Station site. The adjacent site to the west (identified as 546 West 29th Street, Taxblock 700, Lot 59) was identified in the regulatory database as a NY E Designation and EDR Historical Auto Station site. Please refer to Section 5.1.

2.3 PHYSICAL SETTING

Geology: According to information obtained from the US Geological Survey (USGS), the area surrounding the subject property is underlain by metamorphic deposits of the Manhattan Formation, dating from the Ordovician age.

Based on a review of the United States Department of Agriculture (USDA) Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as the Urban Land Series. Based on a subsurface investigation performed at the southern adjacent site, most of the soil at the site consists of urban fill material, extending to depths ranging from 4 to 16 feet bgs consisting of mixtures of brick, concrete, ash, cinders, wood, and gravel in a matrix of silty sand.

|--|---|
| USGS Topographic Map: | Weehawken, New Jersey Quadrangle (1995) |
| Nearest surface water to subject property : | Hudson River/0.25 miles to the west |
| Gradient Direction/Source: | West / Subsurface investigations at southern adjacent site |
| Estimated Depth to Groundwater/Source: | 10 feet bgs / Subsurface investigations at southern adjacent site |

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

3.1 HISTORICAL SUMMARY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historic city directories, Sanborn fire insurance maps and agency records is as follows:

| Date Range | Subject Property Description/Use | Source(s) |
|--------------|---|--|
| 1890-1909 | Developed with two three-story buildings abutting West 29 th Street and one two-story building and one four-story building set back along the southern edge of the property, none of which are identified. Based on the sizes of the buildings, they appear to be residential and/or retail. | Sanborn Maps, Building Records |
| 1909-1944 | Unimproved, utilized as lumber storage | Sanborn Maps, Aerials, Building Records |
| 1945-1982 | Developed with the present-day building without the second story, utilized as an auto repair shop and office by Alpine Auto Repair & Machine Shop and Michielini Frank Repairs | Sanborn Maps, Aerials, Building Records, City Directories |
| 1983-1995 | Further developed with the mezzanine, continued use as an auto repair shop by Sander WM Co. Inc. Auto Parts and Audio Car | Sanborn Maps, Aerials, Building Records, City Directories |
| 1995-2000 | Occupied by Gotham Seafood, utilized for seafood storage and distribution. Mezzanine legalized as second story. | Sanborn Maps, Aerials, Building Records, City Directories |
| 2000-present | Further developed with the southern portion where the present-day coolers are located | Sanborn Maps, Aerials, Building Records, City Directories, Interview |

According to historical sources, the current subject property building was constructed in 1945 for use as an auto repair facility, without the second story and southern portion where the present-day coolers are located. The mezzanine was constructed in 1983 and legalized as the second story in 1994. The building was utilized as an auto repair facility through 1994. In 1995, the property was purchased by Gotham Seafood Corporation and utilized as a seafood wholesaler. In 2000, the walk-in coolers were constructed over the then-existing backyard. Prior to the construction of the building, the property was unimproved, utilized as a lumber storage yard from 1909 to 1944. From at least 1890 to 1909, the property was developed with two three-story buildings abutting West 29th Street and one two-story building and one four-story building set back along the southern edge of the property, none of which are identified in historical sources, however based on the sizes of the buildings, they appear to be residential and/or retail. Historical use prior to 1890 was not reasonably ascertainable.

Based on a review of historical sources, the following historical addresses were associated with the subject property: 544 West 29th Street. These addresses were also researched as part of this assessment.

As discussed above, auto repair operations were performed on the subject property from 1945 until 1994. No indication of the presence of fuel or oil storage tanks was found during the site reconnaissance or during the review of historical sources. However, as further discussed in Section 5.1, petroleum hydrocarbon and VOC contamination has been detected in groundwater at the south adjacent property, which appears to have originated in part from an unknown source to the north. As the subject property operated as an auto repair facility from 1945 until 1994 (approximately 50 years and partially during a time period pre-dating hazardous material regulatory reporting requirements), AEI cannot rule out the possibility that historical on-site operations contributed to the subsurface contamination.

If available, copies of historical sources are provided in the report appendices.

3.2 AERIAL PHOTOGRAPH REVIEW

AEI Consultants reviewed aerial photographs of the subject property and surrounding area. Aerial photographs were reviewed for the following years:

| Date(s) | Scale | Subject Property Description | Surrounding Area Descriptions |
|------------------------------------|---------|---|---|
| 1924 | Digital | Appears unimproved | North: West 29 th Street, followed by a commercial building South: Developed with two commercial and/or residential buildings East: Developed with a commercial and/or residential building West: Developed with a commercial and/or residential building |
| 1951, 1953*, 1954* | Digital | Appears developed with the present-day building without approximately one-third of the southern portion | North: No significant changes South: The western portion appears unimproved East: No significant changes West: No significant changes |
| 1966*, 1980*, 1987*, 1996 | Digital | No significant changes | North: No significant changes South: The eastern portion has been redeveloped with a commercial building East: No significant changes West: No significant changes |
| 2006, 2010 | Digital | The southern portion has been added, the building appears at it does presently | North: No significant changes South: No significant changes East: No significant changes West: No significant changes |
| 2012 | Digital | No significant changes | North: No significant changes South: The large present-day apartment building appears to be in the beginning stages of development East: No significant changes West: No significant changes |

*Due to copyright restrictions, these aerial photographs could not be included in the appendices

3.3 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of Environmental Data Resources' collection of Sanborn Fire Insurance maps.

Sanborn maps were available and reviewed for the years 1890, 1899, 1911, 1930, 1950, 1976, 1979, 1980, 1982, 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004, and 2005.

| Date(s) | Subject Property Description | Surrounding Area Descriptions |
|---------|--|---|
| 1890 | Developed with two three-story buildings abutting West 29 th Street and one two-story building and one four-story building set back along the southern edge of the property, none of which are identified. Based on the sizes of the buildings, they appear to be residential and/or retail. Addresses include 542-544 West 29 th Street | <p>North: West 29th Street, followed by multiple four-story buildings likely to be residential</p> <p>South: Developed with a facility identified as a factory with the rest of the labeling cut off</p> <p>East: Developed with a five-story unidentified building</p> <p>West: Developed with a single-story garage in the north and a two-story unidentified building in the south</p> |
| 1899 | No significant changes | <p>North: No significant changes</p> <p>South: No significant changes</p> <p>East: No significant changes</p> <p>West: The building appears to have been removed</p> |
| 1911 | The property appears unimproved with a wood pile in the southern portion | <p>North: The eastern portion has been redeveloped with a three-story garage and store house with a 550-gallon gasoline tank depicted in the northeast corner</p> <p>South: Appears mostly unimproved, however some of the property is cut off by the map</p> <p>East: The building is identified as a dwelling</p> <p>West: Redeveloped with a two-story dwelling</p> |
| 1930 | Unimproved, identified as a lumber yard | <p>North: The building has been further developed to its present-day size, occupied by W & J Sloane Warehouse, utilized as a warehouse, garage, and carpet cleaning, with the gas tank still shown</p> <p>South: Redeveloped with the H. Hencken Coal Yard, utilized as coal pockets and lumber storage</p> <p>East: Appears to have been redeveloped with a three-story retail and residential building</p> <p>West: The dwelling has been further developed to the south and now used as a garage</p> |
| 1950 | Redeveloped with what appears to be the present-day two-story building without approximately one-third of the southern portion, identified as a private garage | <p>North: No significant changes</p> <p>South: No significant changes</p> <p>East: No significant changes</p> <p>West: The building is identified as a coppersmith</p> |

| | | |
|---|---|---|
| 1976, 1979, 1980, 1982, 1985, 1987 | No significant changes | North: No significant changes South: Developed with a building identified as a motor freight station East: No significant changes West: The building is identified as a motor freight station in 1976 and as commercial thereafter |
| 1988, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004, 2005 | The building is identified as auto repair | North: No significant changes South: No significant changes East: No significant changes West: No significant changes |

According to a review of historic Sanborn maps, the northern adjacent property was equipped with a 550-gallon gas tank in the northeast corner of the building from 1911 to 2005. This property was not listed in the regulatory database associated with this tank, nor was any release reported. Based on the lack of a reported release and the inferred direction of groundwater flow, this tank is not expected to represent a significant environmental concern.

3.4 CITY DIRECTORIES

A search of historic city directories was conducted for the subject property by Environmental Data Resources. Directories were available and reviewed for the years 1920, 1923, 1927, 1931, 1934, 1938, 1942, 1947, 1950, 1956, 1958, 1963, 1968, 1973, 1978, 1983, 1988, 1993, 1996, 1998, 2000, 2006, 2008, and 2013. The following table summarizes the results of the city directory search.

City Directory Search Results

| Date(s) | Occupant Listed |
|-----------|---|
| 1947-1978 | Alpine Auto Repair & Machine Shop Michielini Frank Repairs |
| 1988 | Audio Car (544 West 29 th Street) |
| 1988-1993 | Sander WM Co Inc Auto Parts |
| 1998-2013 | Gotham Seafood Corporation |

According to a review of historic city directories, the subject property was first listed in 1947 as Alpine Auto Repair & Machine Shop and Michielini Frank Repairs, until 1978. From 1988 to 1993, the property was occupied by Sander WM Co. Inc. Auto Parts, and was also occupied by Audio Car in 1988. From 1998 to the present, the subject property has been occupied by Gotham Seafood Corporation.

Environmental concerns associated with the historical use of the property are discussed in Section 3.1.

3.5 HISTORICAL TOPOGRAPHIC MAPS

In accordance with our approved scope of services, historical topographic maps were not reviewed as part of this assessment.

3.6 CHAIN OF TITLE

In accordance with our approved scope of services, a Chain of Title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

4.1 REGULATORY AGENCIES

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to Activity and Use Limitations (AULs), defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1.1 HEALTH DEPARTMENT

On March 14, 2014, AEI contacted the New York State Department of Health (NYSDOH) for information on the subject property and nearby sites of concern. Files at this agency may contain information regarding hazardous materials storage, as well as information regarding unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area.

However, as of this writing, no response has been received from the NYSDOH. Upon receiving pertinent information in connection with the subject property, AEI will immediately issue an addendum to this report if items of environmental concern are identified.

4.1.2 FIRE DEPARTMENT

On March 14, 2014, AEI contacted the Fire Department of New York (FDNY) for information on the subject property to identify any evidence of previous or current hazardous material usage.

However, as of this writing, no response has been received from the FDNY. Upon receiving pertinent information in connection with the subject property, AEI will immediately issue an addendum to this report if items of environmental concern are identified.

4.1.3 BUILDING DEPARTMENT

On March 14, 2014, AEI visited the New York City Department of Buildings (NYCDOB) website for information on the subject property in order to identify historical tenants and property use. Please refer to the following table for a listing of permits reviewed:

Building Permits Reviewed

| Year(s) | Owner/Applicant | Description of Permit/Building Use |
|---------|--------------------------------------|---|
| 1905 | Unknown | Alteration |
| 1909 | Unknown | Demolition permit |
| 1944 | Unknown | New building |
| 1945 | 542-544 West 29 th Street | Certificate of Occupancy – single-story auto repair shop and office |
| 1967 | Unknown | New building |
| 1980 | Unknown | Alteration |
| 1994 | 542-544 West 29 th Street | Certificate of Occupancy – auto repair shop and storage on first floor, accessory office on mezzanine |
| 1994 | Rudolf Hamar | Permit to legalize mezzanine constructed in 1982- |

| Year(s) | Owner/Applicant | Description of Permit/Building Use |
|---------|--------------------------------------|---|
| | | 1983 |
| 1995 | John McGuire | Permit to remove interior partitions and install prefabricated refrigerated boxes, change from auto repair shop to food storage use |
| 1996 | 542-544 West 29 th Street | Certificate of Occupancy – food products on first floor, accessory office on mezzanine |
| 1998 | John McGuire | Permit for one-story extension to existing food products plant |
| 2012 | John McGuire | Replace roof-mounted air conditioning unit |

No information indicating current or prior use or storage of hazardous materials, or the existence of AULs was on file for the subject property with the NYCDOB.

4.1.4 PLANNING DEPARTMENT

On March 14, 2014, AEI visited the New York City Department of City Planning (NYCDP) website for information on the subject property in order to identify AULs associated with the subject property.

No information indicating the existence of AULs was on file for the subject property with the NYCDP.

4.1.5 COUNTY ASSESSOR OFFICE

On March 14, 2014, AEI visited the New York City Department of Finance, Office of the City Register, Automated City Register Information System (ACRIS) website for information on the subject property in order to determine the earliest recorded date of development and use.

According to the ACRIS website, the assessor's parcel number of the subject property is Block 700, Lot 57. The earliest information listed on ACRIS is a deed transfer from Frank Michielini to WM. Sander Realty Assoc. in 1982. A subsequent deed transfer is listed in 1995 between WM. Sander Realty Assoc. and Sean-Sakie Holdings, Ltd. No uses of the property are identified on ACRIS. The current tax map for the subject property is included in Appendix D.

4.1.6 DEPARTMENT OF OIL AND GAS

Department of Oil and Gas (DOG) maps concerning the subject property and nearby properties were reviewed. DOG maps contain information regarding oil and gas development.

According to the New York State Department of Environmental Conservation (NYSDEC) Minerals Map, there are no oil or gas wells within 500 feet of the subject property. No environmental concerns were noted during the DOG map review.

4.1.7 OTHER AGENCIES SEARCHED

On March 14, 2014, AEI contacted the New York State Department of Environmental Conservation (NYSDEC) for information regarding hazardous materials storage, as well as information regarding unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area.

However, as of this writing, no response has been received from the NYSDEC. Upon receiving pertinent information in connection with the subject property, AEI will immediately issue an addendum to this report if items of environmental concern are identified.

AEI also requested information from the NYSDEC regarding the subsurface investigations and remediation efforts being performed at the southern adjacent property, Avalon West Chelsea.

The NYSDEC provided AEI with reports titled *Analytical Forensic & Hydrogeological Investigation* dated May 15, 2012 and *Groundwater Investigation Report* dated February 16, 2012, both by Fleming Lee Shue. The reports discuss the latest subsurface sampling which included obtaining soil and groundwater samples on January 12, 2012 from temporary monitoring wells located directly south of 546 West 29th Street (tMW-1, located approximately 10 feet west of the subject property boundary) and directly south of 538 West 29th Street (tMW-3, located approximately 30 feet southeast of the subject property boundary). The soil samples were collected between 10 and 11 feet below grade, which was inferred to be the most impacted soil above the water table. The soil contaminants which exceeded the New York Technical and Administrative Guidance Memorandum (NY TAGM) Allowable Soil Concentrations are listed in the table below:

| Contaminant | NYSDEC Standards | tMW-1 | tMW-3 |
|------------------------|------------------|--------|-------|
| Benzene | 60 | 2260 | 292 |
| Ethylbenzene | 1000 | 38200 | 17100 |
| Naphthalene | 12000 | 29300 | 11900 |
| n-Propylbenzene | 3900 | 16800 | 8540 |
| 1,2,4-Trimethylbenzene | 3600 | 117000 | 55100 |
| 1,3,5-Trimethylbenzene | 8400 | 34800 | 17000 |
| M,p-Xylene | 260 | 162000 | 65900 |
| o-Xylene | 260 | 533 | 21300 |
| Xylene (total) | 260 | 163000 | 87200 |

All units are in milligrams per kilogram (mg/kg)

Groundwater contaminant concentrations which exceeded the NYSDEC Class GA Ambient Water Quality Standards and Guidance Values are listed in the table below:

| Contaminant | NYSDEC Standards | tMW-1 | tMW-3 |
|-------------------------|------------------|-------|-------|
| Benzene | 1 | 490 | 492 |
| Sec-Butylbenzene | 5 | 6.4 | 8.1 |
| Cis-1,2-Dichloroethene | 5 | 5.4 | ND |
| Ethylbenzene | 5 | 524 | 538 |
| Isopropylbenzene | 5 | 30.9 | 58.7 |
| Methyl Tert Butyl Ether | 10 | 15.1 | 16.2 |
| Naphthalene | 10 | 219 | 167 |
| Toluene | 5 | 25.9 | 30.8 |
| Xylene (total) | 5 | 2070 | 986 |

All units are in micrograms per liter (µg/L)

The report indicates that based on the ratios of contaminant levels detected along the south side of the properties on West 29th Street to the levels detected in other parts of the southern adjacent property, the contaminant sources are likely to be from facilities on West 29th Street or otherwise north of the site. Based on the high levels of contaminants detected in close proximity to the subject property, it is likely that subsurface contamination also exists at the subject property and represents a recognized environmental condition. Further information regarding this site is included in Section 5.1.

The NYSDEC also provided a *Revised Remedial Action Work Plan* by Fleming Lee Shue, dated September 2012 which summarizes all of the environmental investigations performed at this site beginning in 2005 and the remedial work which has been performed consisting of in situ chemical oxidation. The reports provided by the NYSDEC are included in the appendices.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted Environmental Data Resources (EDR) to conduct a search of federal, state, tribal, and local databases containing known and suspected sites of environmental contamination. The number of listed sites identified within the approximate minimum search distance (AMSD) from the Federal and State environmental records database listings specified in ASTM Standard E 1527-13 are summarized in the following table. A copy of the regulatory database report is included in Appendix B of this report.

The subject property was identified in the databases reviewed.

The subject property was identified on the following databases: NY E Designation. See Section 5.1 for additional discussion.

In determining if a site is a potential environmental concern to the subject property in the records summary table below, AEI has applied the following criteria to classify the site(s) as low concern: 1) the site(s) only hold an operating permit (which does not imply a release), 2) the site(s) have been granted "No Further Action" by the appropriate regulatory agency, and/or 3) based upon AEI's review, the distance and/or topographic position relative to the subject property reduce the level of risk associated with the site(s).

5.1 RECORDS SUMMARY

| Database | Search Distance (Miles) | Subject Property Listed | Total Number of Listings | Recognized Environmental Condition or Environmental Issue (Yes/No) |
|---------------------------------------|-------------------------|-------------------------|--------------------------|--|
| NPL | 1 | No | 1 | No, based on relative distance from the subject property and hydrologic gradient |
| DELISTED NPL | 0.5 | No | 0 | |
| CERCLIS | 0.5 | No | 1 | No, based on relative distance from the subject property and hydrologic gradient |
| CERCLIS NFRAP | 0.5 | No | 1 | No, based on relative distance from the subject property and regulatory status |
| RCRA CORRACTS | 1 | No | 0 | |
| RCRA-TSD | 0.5 | No | 0 | |
| RCRA LG-GEN, SM-GEN, CESQGs, VGN, NLR | TP/ADJ | No | 1 | The adjacent property is discussed below |
| US ENG CONTROLS | TP | No | 0 | |
| US INST CONTROLS | TP | No | 0 | |
| ERNS | TP | No | 0 | |

| Database | Search Distance (Miles) | Subject Property Listed | Total Number of Listings | Recognized Environmental Condition or Environmental Issue (Yes/No) |
|---------------------------------------|-------------------------|-------------------------|--------------------------|---|
| STATE/TRIBAL HWS / SPILLS | 1 | No | 59 | Three Spills sites are further discussed below, the remaining sites are not a concern based on relative distance from the subject property, regulatory status and/or hydrologic gradient |
| STATE/TRIBAL SWLF | 0.5 | No | 2 | No, based on relative distance from the subject property |
| STATE/TRIBAL REGISTERED STORAGE TANKS | TP/ADJ | No | 0 | |
| STATE/TRIBAL LUST | 0.5 | No | 78 | One LUST site is further discussed below, the remaining sites are not a concern based on relative distance from the subject property, regulatory status and/or hydrologic gradient |
| STATE/TRIBAL ENG-INST CONTROLS | TP | No | 0 | |
| STATE/TRIBAL VCP | 0.5 | No | 1 | No, based on relative distance from the subject property |
| STATE/TRIBAL BROWNFIELD | 0.5 | No | 6 | No, based on relative distance from the subject property |
| ORPHAN | N/A | No | 20 | None of the identified orphan sites are located in the immediate vicinity (500-feet) of the subject property, and therefore, these sites are not expected to represent a significant environmental concern. |
| NON-ASTM DATABASES | TP/ADJ | Yes | 7 | The subject property and adjacent properties are further discussed below |

Site Name: Lot 57, Taxblock 700

Database(s): NY E Designation

Address: 542 West 29th Street

Distance: Subject Property

Direction: Subject Property

Comments:

An E-designation provides notice of the presence of an environmental requirement pertaining to potential hazardous materials contamination, high ambient noise levels or air emission concerns on a particular tax lot. E-designations are administered by the New York City Office of Environmental Remediation (OER). E-designations, governed by Section 11-15 (Environmental Requirements) of the

Zoning Resolution, are established in connection with a change in zoning or an action pursuant to a provision of the Zoning Resolution that would allow additional development to occur on property, or would permit uses not currently allowed. According to the OER an E-designation can occur because the property was used as or is in close proximity to a gas station or some other underground fuel oil tank; is located in or contiguous to a manufacturing district; has a history of manufacturing uses; is located next to a building with a history of manufacturing uses; is located on a heavily trafficked street or highway; is located next to a railroad; has some other environmental condition on the property or nearby that is a cause for concern. An E-designation is not a notice of a building violation and does not definitively indicate that an underground tank or contamination exists at the property. The E-designation would ensure that testing and any necessary remediation would occur prior to or during the development of such sites, assuring the City that potential adverse impacts in connection with the development of properties within areas proposed for rezoning would be addressed at the time that the sites were developed. If any contaminants are identified then a remedial action plan and health and safety plan must be prepared prior to building development and the issuance of building permits. These designations must be addressed prior to the issuance of building permits and then prior to the issuance of the certificate of occupancy. It should be noted that the E-designations do not apply if the application includes minor alteration type work that does not require soil disturbance/excavation, change/installation of windows or façade, stack location, boilers, fuel type, HVAC, or change of use/occupancy or egress.

The subject property, identified as E-Number E-142 is listed in the regulatory database as E-designation in association with Air Quality (HVAC fuel limited to natural gas), Noise (window and wall attenuation and alternate ventilation), and Hazardous Materials (Underground Gasoline Storage Tanks Testing Protocol). The subject property and most of its vicinity were issued these E-designations in the *Proposed Modifications to Special West Chelsea District Zoning Map and Test Amendments Application at New York City Council (N 050161(A) ZRM)*, dated June 22, 2005. The subject property is included in Site 30. The HVAC Source Impact Analysis for Site 30 indicates that the minimum offset distance from the edge of the roof for the stack location for No. 2 fuel oil is 55 feet and for natural gas is 38 feet. The Noise designation for Site 30 requires a 35 decibel (dBA) attenuation and the Build Max L₁₀ (noise level in dBA exceeded 10 percent of the observation time) to be 73.9 dBA.

Based on this information, no further action is warranted if no changes are planned to the subject property. In the event of renovations or redevelopment which would require soil disturbance or excavation, subsurface sampling would be required to satisfy the Hazardous Materials E-designation.

Site Name: Lot 1, Taxblock 701
Database(s): NY E Designation
Address: 302 11th Avenue
Distance: Adjacent
Direction: North (cross-gradient)

Comments: This site is listed as an E-designation site in association with the same designations as the subject property. Based on the information discussed in the subject property summary above, it is not expected to represent a significant environmental concern.

Site Name: Lot 56, Taxblock 700
Database(s): NY E Designation, EDR US Hist Auto Stat
Address: 540 West 29th Street
Distance: Adjacent
Direction: East (up-gradient)

Comments: EDR Historical Auto Stations is a list of potential former gas station/ filling station/ service station sites, based on selected national collections of business directories. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/ filling station/ service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

- According to the regulatory database, this site was listed as Starr Auto Repair Shop from 1999 to 2001 and Braunfield Auto Towing 24 Hour from 2010 to 2012. This site was not listed for any spills or releases. Based on this information, this site is not expected to represent a significant environmental concern and a regulatory file review for this site was not deemed necessary.

This site is also listed as an E-designation site in association with the same designations as the subject property. Based on the information discussed in the subject property summary above, it is not expected to represent a significant environmental concern.

Site Name: Lot 59, Taxblock 700

Database(s): NY E Designation, EDR US Hist Auto Stat

Address: 546 West 29th Street

Distance: Adjacent

Direction: West (down-gradient)

Comments: According to the regulatory database, this site was listed as El Hav Taxi Repair Incorporated from 1999 to 2000 and Avi Taxi Repair Inc. from 2005 to 2006. This site was not listed for any spills or releases. Based on this information, this site is not expected to represent a significant environmental concern and a regulatory file review for this site was not deemed necessary.

This site is also listed as an E-designation site in association with the same designations as the subject property. Based on the information discussed in the subject property summary above, it is not expected to represent a significant environmental concern.

Site Name: Avalon West Chelsea

Database(s): NY Spills, Manifest, RCRA-NonGen/NLR

Address: 282 11th Avenue; 525 West 28th Street

Distance: Adjacent

Direction: South (cross-gradient)

Comments: Spills is a listing of sites at which chemical and petroleum spill incidents that may have impacted waters of the state occurred and were reported to the NYSDEC.

- According to the regulatory database, a release was reported at this site on April 16, 2007 during the initial environmental investigations for the redevelopment of this large area as a residential apartment building. Many of the buildings which were demolished for the redevelopment were auto repair facilities and commercial parking lots/garages. A total of 17 underground storage tanks were removed from this area. Groundwater was determined to be located approximately 10 feet below ground surface (bgs) and flowing west. Elevated levels of gasoline contaminants xylene, ethylbenzene, trimethylbenzene, 4-trimethylbenzene, naphthalene, and MTBE were found in groundwater. Additionally, 1-trichloroethane, 1-dichloroethane, 2-dichloroethane, and vinyl chloride were found in groundwater mostly on the far eastern side of the site. These highly degraded chlorinated solvents were determined to be likely derived from an upgradient automotive repair operations or from an upgradient former metal fabrication operation east of the site along 28th Street. Since there were many auto repair facilities in the vicinity, the sources of contamination were not directly identified. The regulatory database indicates that John McGuire, the subject property owner, was interviewed during the investigation of this site. Mr. McGuire indicated that no oil was stored on the subject property since at least 1995 when he purchased it. No further investigation into the subject property as being a source was indicated. The properties

located at 524 and 548 29th Street, both auto repair facilities, were suspected sources, however investigations into those facilities were inconclusive. A test pit was performed in February 2012 directly south of the subject property in which soil with strong petroleum odors was encountered. They continued excavating until 8 feet and very strong odors forced them to stop test pitting due to lack of air respirators and backfill. Odors were noticeable from approximately 100 feet away. A test pit performed directly south of 548 West 29th Street found no evidence of contamination in the vadose zone, but strong gasoline odors in the saturated zone, indicating that the source was off-site and migrated via groundwater from the north. Remediation via in situ chemical oxidation began on May 9, 2013 and was completed on May 16, 2013. In total, 35,432 gallons of oxidant mixture was injected through five injection wells. Following treatment, soil samples were collected and all samples met the soil cleanup objectives. Following treatment, groundwater impacts above the targeted guidelines still remained. As of January 16, 2014, at least two more quarters of groundwater monitoring was requested. The spill case remains open. Based on the petroleum-contaminated soils and saturated zone which were found near the subject property and believed to be migrating from an off-site source, this represents a recognized environmental condition. As the subject property operated as an auto repair facility from 1945 until 1994 (approximately 50 years and partially during a time period pre-dating hazardous material regulatory reporting requirements), AEI cannot rule out the possibility that historical on-site operations contributed to the subsurface contamination. In addition, based on the likely petroleum contaminants and possible chlorinated contaminants in the subsurface, there is an additional risk potentially presented by vapor intrusion.

Comments: Manifest lists and tracks hazardous waste from the generator through transporters to a TSD facility.

- According to the regulatory database, hazardous wastes were transported from this property in dump trucks multiple times in 2012. Based on this information, the hazardous waste was likely contaminated soil which was excavated during the redevelopment of the site. The contaminated soil is further discussed in the spills summary above. No violations were listed in association with these manifests. Documentation of proper storage, transfer, and disposal of hazardous materials is not considered to represent a significant environmental concern.

RCRA Program identifies and tracks hazardous waste from the point of generation to the point of disposal. Non-GEN, or non-generators, are facilities that do not presently generate hazardous waste. NLR, or No Longer Regulated, are facilities that do not presently generate hazardous waste and are not currently regulated.

- According to the regulatory database, this site was identified as a non-generator on September 27, 2012. This site was formerly listed as a Large Quantity Generator on March 6, 2012. No violations were reported in association with these listings, which are also expected to be associated with the removal of contaminated soil. Based on the lack of violations reported, this listing is not expected to represent a significant environmental concern.

Site Name: Midtown Service Center

Database(s): NY Spills

Address: 548 West 29th Street

Distance: ~40 feet

Direction: West (down-gradient)

Comments: Spills is a listing of sites at which chemical and petroleum spill incidents that may have impacted waters of the state occurred and were reported to the NYSDEC.

- According to the regulatory database, a release was reported at this site on May 18, 2012 during the investigation of the Avalon West spill discussed above. One 275-gallon waste oil aboveground storage tank (AST) was observed in this facility with an inch of oil-stained sand at the base. The tank was emptied and the sand removed on a regular basis by a contractor. An abandoned tank

manhole was also observed, however it was determined to actually be a manhole for a former piston lift. Since there was found to be no underground storage tanks, this facility was no longer considered to be a source for gasoline contamination in soil and groundwater associated with the Avalon West spill. The case was closed on June 27, 2012. Although this site is not expected to represent a specific concern to the subject property, as discussed above, the contamination at the south adjacent property which appears to be from an unknown source represents a recognized environmental condition and a likely vapor encroachment condition.

Site Name: Closed-Lackof Recent Info

Database(s): NY LTANKS, NY Spills

Address: 524 West 29th Street

Distance: ~260 feet

Direction: Southeast (up-to-cross gradient)

Comments: According to the regulatory database, a release was reported at this site on October 20, 2003 due to petroleum-contaminated soil and groundwater encountered when one 4,000-gallon and one 550-gallon gasoline USTs were removed. Depth to groundwater was encountered at 8-9 feet bgs and flowing northwest. Elevated levels of benzene, xylene, MTBE, and toluene were found in soil and groundwater samples. Air Sparge/Soil Vapor Extraction (AS/SVE) remediation techniques were performed. In November 2011, sampling was conducted and the maximum volatile organic compounds (VOCs) was 117.3 µg/L with several compounds slightly above the standards, the greatest being naphthalene at a concentration of 36 µg/L, above the standard of 10 µg/L. The AS/SVE system was turned on and ran for four weeks. Air samples were collected after the four weeks and all targeted VOCs were non-detected. Groundwater contamination had been greatly reduced and the AS/SVE system reached asymptotic recovery rates. Additional remediation was not warranted or feasible. The spill case was closed on March 12, 2012. Based on the facility's close proximity to the subject property, residual contamination allowed to remain in the subsurface and the groundwater flow direction, it is AEI's opinion that a VEC cannot be ruled out.

5.2 VAPOR ENCROACHMENT

A Tier 1 Vapor Encroachment Screen (VES) pursuant to ASTM E2600-10 was performed as part of this assessment to determine whether a potential *vapor encroachment condition* (VEC) exists at the subject property. The VES included the review of reasonably ascertainable information for the subject and nearby properties. During the course of this assessment, the following sites were identified as a potential source of volatile COCs/Petroleum hydrocarbons.

| Site Name/Address | Distance from Subject Property | Hydrologic Direction Relative to Subject Property | VEC Exists | VEC Likely Exists | VEC Cannot be Ruled Out |
|--|--------------------------------|---|------------|-------------------|-------------------------|
| Avalon West Chelsea / 282 11 th Avenue; 525 West 28 th Street | Adjacent | Cross | | Yes | |
| Closed-Lackof Recent Info / 524 West 29 th Street | Approximately 260 feet | Up | | | Yes |

Potential VECs from the aforementioned sites were discussed in Section 5.1.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this investigation in order to obtain information indicating RECs in connection with the subject property.

6.1.1 INTERVIEW WITH OWNER

The subject property owner and president of Gotham Seafood, Mr. John McGuire, was contacted in person on March 18, 2014. Mr. McGuire has been associated with the subject property for approximately 20 years. Mr. McGuire indicated that he purchased the property in 1995 for use for the Gotham Seafood operations. Prior to 1995, Mr. McGuire indicated that the property was utilized to repair mechanical equipment in taxi cabs. In 1995, the balcony was added and floor drains connecting to an underground grease trap were installed to separate seafood waste which collects in the drains. The grease trap is routinely cleaned by Roto Rooter. Mr. McGuire indicated that the southern portion of the building where the coolers are located was added in 2000 over the then-existing backyard. Mr. McGuire was asked if he was aware of any of the following:

| | | | |
|---|-----|---|----|
| Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property. | Yes | X | No |
| Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property. | Yes | X | No |
| Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products. | Yes | X | No |
| Any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality. | Yes | X | No |

6.1.2 INTERVIEW WITH KEY SITE MANAGER

Mr. McGuire also serves as the key site manager.

6.1.3 PAST OWNERS, OPERATORS AND OCCUPANTS

In an attempt to interview past owners, operators and occupants regarding historical on-site operations, AEI requested the contact information for these entities from the subject property owner, Mr. McGuire. Mr. McGuire was unable to provide the contact information for the past owners, operators and occupants. Other methods of researching the contact information for past owners, operators and occupants performed by AEI included reviewing historical agency records and online research. None of these additional research methods provided AEI contact information for past owners, operators and occupants. Consequently, interviews with these entities regarding historical on site operations were not reasonably ascertainable which constitutes a data gap.

6.1.4 INTERVIEW WITH OTHERS

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

6.2 USER PROVIDED INFORMATION

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and EPA's AAI Rule, certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the environmental professional. The responsibility for qualifying for Landowner Liability Protections (LLPs) by conducting the inquiries ultimately rests with the User, and providing the information to the environmental professional would be prudent if such information is available.

The User did not complete the ASTM User questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

6.3 PREVIOUS REPORTS AND OTHER PROVIDED DOCUMENTATION

No prior reports or relevant documentation in association with the subject property were made available to AEI during the course of this assessment.

7.0 SITE INSPECTION AND RECONNAISSANCE

On March 18, 2014, a site reconnaissance of the subject property and adjacent properties was conducted by Mr. Ben Friedman of AEI in order to obtain information indicating the likelihood of RECs at the subject property and adjacent properties as specified in ASTM Standard Practice E1527-13 §8.4.2, 8.4.3 and 8.4.4. During the on-site reconnaissance, AEI was accompanied by Mr. John McGuire, subject property owner and president of Gotham Seafood. During the on-site reconnaissance, AEI was granted full access to the subject property.

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

| Yes | No | Observation |
|-----|----|--|
| X | | Hazardous Substances and/or Petroleum Products in Connection with Property Use |
| | X | Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs) |
| | X | Hazardous Substance and Petroleum Product Containers and Unidentified Containers not in Connection with Property Use |
| | X | Unidentified Substance Containers |
| | X | Electrical or Mechanical Equipment Likely to Contain Fluids |
| | X | Interior Stains or Corrosion |
| | X | Strong, Pungent or Noxious Odors |
| | X | Pools of Liquid |
| X | | Drains, Sumps and Clarifiers |
| | X | Pits, Ponds and Lagoons |
| | X | Stained Soil or Pavement |
| | X | Stressed Vegetation |
| | X | Solid Waste Disposal or Evidence of Fill Materials |
| | X | Waste Water Discharges |
| | X | Wells |
| | X | Septic Systems |
| | X | Other |

The subject property is currently occupied by Gotham Seafood. On-site operations include seafood wholesale and office-based administrative operations. The above identified observed items are further discussed below.

HAZARDOUS SUBSTANCES AND/OR PETROLEUM PRODUCTS IN CONNECTION WITH PROPERTY USE

Household maintenance supplies such as paints and cleaning supplies are stored in the rear storage area of the second floor. All chemicals were packaged in consumer quantities, and no evidence of staining or material mishandling was observed. Material Safety Data Sheets (MSDSs) for these chemicals are stored in the office area. Based on the nature of these materials, the presence of cleaning and maintenance supplies at the subject property is not expected to represent a significant environmental concern.

DRAINS, SUMPS AND CLARIFIERS

Multiple floor drains were observed in the seafood handling area of the subject property. No hazardous substances or petroleum products were noted in the vicinity of the drains. According to Mr. McGuire, all of the drains lead into a grease trap before discharging into the municipal sewer. The grease trap is utilized to separate seafood waste (such as scales and bones) which enters the drain during the washing process. The grease trap is reportedly routinely cleaned by Roto Rooter. Based on the nature of material entering the drains and the grease trap, the presence of the drains and grease trap is not expected to represent a significant environmental concern.

7.2 NON-ASTM SERVICES

7.2.1 ASBESTOS-CONTAINING BUILDING MATERIALS

OSHA

For buildings constructed prior to 1981, the Code of Federal Regulations (29 CFR 1926.1101 and 29 CFR 1910.1001) define presumed asbestos-containing material (PACM) as 1. Thermal System Insulation (TSI), e.g., boiler insulation, pipe lagging, fireproofing; and 2. Surfacing Materials, e.g., acoustical ceilings. Building owners/employers are responsible for locating the presence and quantity of PACM. Building Owners/employers can rebut installed material as PACM by either having an inspection in accordance with Asbestos Hazard Emergency Response Act (AHERA) (40 CFR Part 763, Subpart E) or hiring an accredited inspector to take bulk samples of the suspect material.

Typical materials not covered by the presumptive rule include but are not limited to: floor tiles and adhesives, wallboard systems, siding and roofing. Building materials such as wallboard systems may contain asbestos but unless a building owner/employer has specific knowledge or should have known through the exercise of due diligence that these other materials contain asbestos, the standard does not compel the building owner to sample these materials.

NESHAP

The applicability of the EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP, 40 CFR Chapter 61, Subpart M) apply to the owner or operator of a facility where an inspection for the presence of asbestos-containing materials (ACM), including Category I (asbestos containing packings, gaskets, resilient floor coverings and asphalt roofing products), and Category II (all remaining types of non-friable asbestos containing material not included in Category I that when dry, cannot be crumbled, pulverized or reduced to powder by hand pressure), non-friable ACM must occur prior to the commencement of demolition or renovation activities. NESHAP defines ACM as any material or product that contains *greater than* 1% asbestos. It should be noted that the NESHAP regulation applies to all facilities regardless of construction date, including: 1. Any institutional, commercial, public, industrial, or residential structure, installation, or building; 2. Any ship; and 3. Any active or inactive waste disposal site. This requirement is typically enforced by the EPA or by local air pollution control/air quality management districts.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Due to the age of the subject property building, there is a potential that ACMs are present. The condition and friability of the identified suspect ACMs is noted in the following table:

Suspect Asbestos Containing Materials (ACMs)

| Material | Location | Friable | Condition |
|---------------------|------------------------------|---------|-----------|
| Drywall Systems | Throughout Building Interior | Yes | Good |
| Boiler Insulation | Boiler on Second Floor | Yes | Good |
| Vinyl Floor Tile | Second Floor Offices | No | Good |
| Bathroom Floor Tile | Second Floor Bathroom | No | Good |
| Textured Ceiling | Second Floor | No | Good |
| Roofing Systems | Roof | No | Good |

All observed suspect ACMs were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. In the event that building renovation or demolition activities are planned, an asbestos survey adhering to AHERA sampling protocol should be performed prior to demolition or renovation activities that may disturb suspect ACMs.

7.2.2 LEAD-BASED PAINT

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has $\geq 1 \text{ mg/cm}^2$ (5,000 $\mu\text{g/g}$ or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm^2 to 2.0 mg/cm^2 . Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X", defines a LBP hazard is "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact lead-based paint on most walls and ceilings would not be considered a "hazard", although the paint should be maintained and its condition and monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on lead-based paint and lead-based paint hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, federally owned or subsidized housing are affected by this rule.

Lead-containing paint (LCP) is defined as any paint with any detectable amount of lead present in it. It is important to note that LCP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LCP is subject to abrading, sanding, torching and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state or local regulations in regards to lead-containing paints.

In buildings constructed after 1978, it is unlikely that LBP is present. Structures built prior to 1978 and especially prior to the 1960's should be expected to contain LBP.

Due to the age of the subject property building, there is a potential that LBP is present. All observed painted surfaces were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Local regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. Actual material samples would need to be collected or an XRF survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing *any amount* of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

7.2.3 RADON

Radon is a naturally-occurring, odorless, invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action limit of 4.0 picoCuries per Liter (pCi/L). It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the US EPA, the radon zone level for the area is Zone 3, which has a predicted average indoor screening level below 2 pCi/L, below the action level of 4.0 pCi/L set forth by the EPA.

7.2.4 DRINKING WATER SOURCES AND LEAD IN DRINKING WATER

The New York City Department of Environmental Protection (NYCDEP) supplies potable water to the subject property. The most recent water quality report states that lead levels in the areas water supply were non-detect and therefore are well within standards established by the USEPA.

7.2.5 MOLD/INDOOR AIR QUALITY ISSUES

Molds are simple, microscopic organisms, which can often be seen in the form of discoloration, frequently green, gray, white, brown or black. When excessive moisture or water accumulates indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or is not addressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting often play host to such growth. Mold spores primarily cause health problems through the inhalation of mold spores or the toxins they emit when they are present in large numbers. This can occur primarily when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

AEI observed interior areas of the subject property building in order to identify the significant presence of mold. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to mold appears to be warranted at this time.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Additional areas of mold not observed as part of this limited assessment, possibly in pipe chases, heating, ventilation and air conditioning (HVAC) systems and behind enclosed walls and ceilings, may be present on the subject property.

7.3 ADJACENT PROPERTY RECONNAISSANCE FINDINGS

| Yes | No | Observation |
|-----|----|--|
| | X | Hazardous Substances and/or Petroleum Products in Connection with Property Use |
| | X | Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs) |
| | X | Hazardous Substance and Petroleum Product Containers and Unidentified Containers not in Connection with Property Use |
| | X | Unidentified Substance Containers |
| | X | Electrical or Mechanical Equipment Likely to Contain Fluids |
| | X | Strong, Pungent or Noxious Odors |
| | X | Pools of Liquid |
| | X | Drains, Sumps and Clarifiers |
| | X | Pits, Ponds and Lagoons |
| | X | Stained Soil or Pavement |
| | X | Stressed Vegetation |
| | X | Solid Waste Disposal or Evidence of Fill Materials |
| | X | Waste Water Discharges |
| | X | Wells |
| | X | Septic Systems |
| | X | Other |

None of the above listed items were observed during the site inspection.

8.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

By signing this report, the senior author declares that, to the best of his or her professional knowledge and belief, he or she meets the definition of *Environmental Professional* as defined in §312.10 of 40 CFR Part 312.

The senior author has the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. The senior author has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

| <i>HUDSON RIVER PCBS</i> | <i>NO STREET APPLICABLE</i> | <i>WNW 1/4 - 1/2 (0.315 mi.)</i> | <i>0</i> | <i>12</i> |

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

| AVENUE WORLD SCHOOL THE | 259 10TH AVE | S 1/8 - 1/4 (0.180 mi.) | AH279 | 980 |

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 14 RCRA-CESQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 12/17/2013 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

| <u>Equal/Higher Elevation</u> | <u>Address</u> | <u>Direction / Distance</u> | <u>Map ID</u> | <u>Page</u> |
|-------------------------------|-----------------------------|----------------------------------|---------------|-------------|
| HUDSON RIVER PCBS | NO STREET APPLICABLE | WNW 1/4 - 1/2 (0.315 mi.) | 0 | 12 |

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 12/17/2013 has revealed that

EXECUTIVE SUMMARY

there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/13/2013 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 12/12/2013 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/19/2013 has revealed that there are 78 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, and dated 12/30/2013 has revealed that there are 27 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

NY HIST UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY HIST UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 12 NY HIST UST sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/19/2013 has revealed that there are 58 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/10/2013 has revealed that there are 32 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 6 EDR MGP sites within approximately 1 mile of the target property.

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 55 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there is 1 EDR US Hist Cleaners site within approximately 0.25 miles of the target property.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non- cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam.

HUDSON RIVER PCBS (Continued)

1000384273

Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB- contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in- place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA ?121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future

land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

Environmental Interest/Information System

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated

Map ID

HUDSON RIVER PCBS (Continued)

1000384273

Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Tank Id: 238875
Material Code: 0022
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

D00 - Pipe Type - No Piping
J00 - Dispenser - None
L00 - Piping Leak Detection - None
A03 - Tank Internal Protection - Fiberglass Liner (FRP)
F00 - Pipe External Protection - None
G05 - Tank Secondary Containment - Synthetic Liner
K01 - Spill Prevention - Catch Basin
C01 - Pipe Location - Aboveground
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
B04 - Tank External Protection - Fiberglass
I00 - Overfill - None

Tank Location: 1
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/1992
Capacity Gallons: 270
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: BVCAMPBE

DEC Memo: 5/18/12 : Obligado - See also Open Spill Number 0700587. DER Staff inspected this site after reviewing a Hydrogeologic and Forensic Report submitted by Fleming Lee Shue for Spill No. 0700587 282 11th Avenue. The report identifies a gasoline UST vent at 548 West 29th Street repair garage. The report concludes contamination in the soil and ground water on the north border of 282 11th Avenue is coming from off-site sources. Upon arriving at the site, I asked the mechanic there if they had any oil tanks. He showed me an oil tank in the back of the station. The 275 gallon waste oil tank had no lable and had secondary containment had about an inch of oil stained sand. There was evindence of multiple spills on the concrete as well as a fresh spill from a transmission removal. I spoke to the mechanic, who says the waste oil company comes once a month to empty the wate oil tank. During that process they lift up the tank and clean the oil soaked sand from the secondary containment. I pointed out the poor housekeeping issues to the manager, Zoar (718-869-4550, who showed up shortly after. They applied speedy dry sand to the spill areas. I also noticed an abandoned tank manhole. This tank coincides with the location of a 550 gallon gasoline UST from historical sanborn maps and the vent location on the roof. The manager did not know anything about the tank. Due to apparent PBS issues with waste oil tank and abandoned tank, I contacted Moses Ajuko to perform a PBS inspection of the facility. Moses issued PBS violations. Due to poor housekeeping, stained concrete indicating historical spills, and abandoned gasoline tank it is a possible source. Additional investigation will be necessary. The facility owner is:548 HIGH LINE LLCONE PENN PLAZA, SUITE 3406NEW YORK, NY 10019Contact: MR. RABA H. ABRAMOV5/25/12 - Obligado - Sent letter to owner requiring closure or removal of abandoned gasoline UST and a site assessment within 30 days of receipt of letter. Cetrified mail receipt #7005 0390 0005 8448 24326/1/12 - Obligado - From USPS website:Track & ConfirmYou entered: 700503900005844824326/25/12 - Obligado - Item returned undelivered.6/27/12 - Obligado - The owner of this site came to the DEC for a PBS settlement conference. Mr. Abramov provided photodocumentation of the manhole which was identified as a potential aboandoned gasoline UST. He had opened it up and it was not a UST, but rather a manhole for a former piston lift. Since there is no

Remarks: gasoline UST this site is no longer considered a source for gasoline contamination in soil and groundwater behind the repair shop at 282 11th Ave, Spill Number 0700587. After discussion with DEC Hussein and Ketani, this spill is closed.
Petroleum contamination in soil and groundwater behind property. During DEC inspection, DEC Staff found an abandoned gasoline UST, poor housekeeping, and petroleum spills on the concrete in repair shop.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT "10/20/03. Contaminated soil letter sent to Walter Seelig (High Ridge Enterpr.). Also see spill # 9008960. YK.11/21/03 RommelMet Brian McCabe, senior geologist, on site. Soil samples collected from 8 to 16 feet below grade were contaminated. Groundwater (15 to 18 feet) was also sampled during the investigation and were impacted by BTEX and MTBE.They will excavate what soil they can and install a minimum of three monitoring wells (one outside by remote fills).Spill 9008960 reported TTF of 4000 gallon gas UST 11/14/1990STIPULATION SIGNED RD 2/18/04. 3/18/04-Vought-Spoke with Rob Ferguson (631-586-4900). Subsurface Investigation report sent to DEC on 2/3/2004. Ferguson will send small CAP upon receiving subsurface investigation report review. Ferguson requires review of subsurface investigation as per STIP. Vought requested that another copy of the Subsurface investigation be sent to DEC. 4/1/04-Vought-Spoke with Tom Melia (F&N) and he requested that he be point of contact. Spill transferred from Rommel to Vought.4/6/04-Vought-File review by Vought:Contaminated soil letter sent form DEC Krimgold to High Ridge Enterprises.Site meeting minutes (Fenley & Nicol Brian McCabe)-11/25/03. Site meetin on 11/24/03. In attendance were DEC Rommel, F&N McCabe, F&N Melia and F&N Hole. "The results of the sampling indicated that the contamination is located in the northern portion of the building. The effected area extended from the north end od the 4000 gallon tank excavation to the front of the building, approximately thirty five feet and from the center for the 550-gallon tank excavation west to the side of the building, approximately twenty feet." DEC recommended additional soil excavation without compromising structural intergrity and required 1)installation of one well inside the building after backfilling completed 2)installation of two wells on sidewalk at the location of the former remote fills and twenty feet west of the bay door. Letter from Fenley & Nicol(Thomas Melia) to DEC(Rommel)-12/18/03. "The new owner of the building indicated that his intended use for the building is as an art gallery". During building remodeling excavation was performed and tanks were discovered under floor. Two gasoline USTs (one 4000-gallon and one 550-gallon) were removed and were in

S104275619

separate locations fifteen to twenty feet apart. "Upon removal of the bottom slab the soil encountered was saturated with liquid phase hydrocarbon". Depth to water expected to be 18' below grade. F&N proposes delineation of soil and groundwater contamination, installation of wells and additional soil excavation. See also Spill #9008960 reported in 1990 for tank test failure and administratively closed on 3/4/03. Letter from DEC Rommel-12/4/03. Letter approving installation of wells on the sidewalk on the south side of West 29th Street between 10th and 11th Avenues and requesting expediting of sidewalk permits. Letter from F&N(Melia) to DEC Rommel-12/18/03. "At this time we are continuing our efforts to delineate the extent of the contamination...". Three monitoring wells installed (one inside and two outside building). "At this time the owner of the property feels that it would be too far costly to excavate the contaminated soil without jeopardizing the structural integrity of the building, and would prefer that we install an air sparge/soil vapor extraction (As/SVE) system to remediate the hydrocarbon impact". Please indicate your approval below. No approval indicated by DEC Rommel. Stipulation Agreement-1/15/04. Stip with deadline of 2/13/04 sent to: Walter Seeling High Ridge Enterprises, Inc. P.O. Box 2542 York, Pa. 17405. Subsurface Investigation Report (F&N-Melia 631-586-4900x190) -3/19/04. Investigation consisted of six soil borings, six temporary groundwater monitoring points and three monitoring wells. "The central and eastern units are currently vacant and undergoing renovations for use as an art gallery". Depth to groundwater is 8-9' and flows northwest. Soil analyticals show 35ppb benzene(SP-1 at 12'), 882ppb benzene(SP-2 at 12'), 14ppb (SP-3 at 12'), 4900ppb benzene(SP-4 at 12'), 817ppb benzene(SP-5 at 12'). Groundwater analyticals show 2.5 ppb benzene(TW-1), 1459ppb benzene(TW-2), 45ppb benzene(YW-3), 2109ppb benzene(TW-4), 254ppb benzene(TW-5), 11ppb benzene(TW-6), 1200ppb benzene(FN-1), 206ppb benzene(FN-2), 4.2ppb benzene(FN-3). Report recommends Air Sparge/Soil Vapor extraction system. NYSDEC requires: 1) signing of Stipulation before any further correspondence 2) presence or absence of free product and interim remedial recovery if present 3) surrounding area site plan including property usage 4) additional wells east of FN-2 and well north of FN-2 to calculate required radius of influence for system design. 4/6/04-Vought called F&N(Melia) to repeat Stipulation requirement and left message to return call to DEC. 4/7/04-Vought-Received faxed copy of STIP already implemented by DEC Kunkel on 2/18/04 (Copy of original not in file). 4/8/04-Vought-Sent letter to High Ridge requiring well installation north of FN2 and east of FN2, submission of monitoring well data and surrounding property sketch. 4/16/04-Vought-Wells will be installed next week (tentatively). Wells for pilot test will also be installed. Mailing address is: High Ridge Enterprises P.O. Box 2542 York, Pa. 17405. 4/18/04-Vought-Received message from David Oloke (F&N-631-586-4900x144) that he is new project manager for site. Vought called David and two additional wells installed (one north of FN2 and one east of FN2). All onsite wells were sampled. No free product in new wells. Four vapor wells installed and air sparge well will be installed. DEC will receive pilot test report by 7/15/04. 6/23/04-Vought-Spoke with David and initial results faxed on 6/9/04. .5" of free product in well in 1" vapor well sent for fingerprinting. EFR not effective. DEC requires recovery of free product and submission of pilot test. 9/2/04-Vought-File review by Vought: Groundwater results (F&N)-6/23/04. Groundwater analyticals show

1.2ppb benzene(FN5), 1.8ppb benzene(FN4), 14ppb benzene(FN3), 26ppb xylene(FN3), 474ppb benzene(FN2), 621ppb MTBE(FN2), 8ppb toluene(FN2), 2065ppb benzene(FN1), 47170ppb MTBE(FN1), 4106ppb toluene(FN1) and 2761ppb xylene(FN1).Addendum to the direction beneath the site was found to be toward the north." Property uSubsurface Investigation Report (F&N)-7/14/04. On 5/7/04 two additional monitoring wells were installed. "On June 4, 2004 the AS/SVE pilot tests were conducted". One inch of floating product was detected in P2. "The results of the AS pilot test indicated that the introduction of air pressure into the formation below the contaminant zone is a viable remediation technique". Report recommends commencement of an interim remedial measure to recover product from P-2 via weekly EFR. Report also recommends installation of another well to replace P2. Vought called David from F&N to approve of workplan. Well installation will be included with final remedial action plan. Vought sent letter approving of proposed workplan (installation of well at P2 and IRM) and included requirement of determination of groundwater flow direction and surrounding property sketch.9/3/04-Vought-Received fax from Oloke (F&N). "The groundwater flow sage of downgradient sites to the north are a parking garage and an art studio. Vought called Oloke and approved workplan as per 9/2/04 letter. Vought called Oloke and he will begin drafting RAP for submission to DEC.9/29/04-Vought-Spoke to David F&N and he will be sending RAP in overnight.10/1/04-Vought-Reviewed RAP received by DEC on 10/30/04. "Site is currently occupied by a masonary block structure which is subdivided into three sections. An art gallery occupies the western unit. The central and eastern units are currently vacant and are undergoing renovations for use as an art gallery. RAP proposes weekly recovery of free product from FN2 via a peristaltic pump until well is converted to a 2" product recovery well designated at FN6. Two additional wells will be installed in the interior of the building. Monthly groundwater monitoring and quarterly sampling. Five air sparge and four SVE wells will be installed in the interior of the building. Remedial system will be installed on the roof of the building. Daily monitoring for the first week, weekly monitoring for the first month, monthly maintenance visits and effluent sampling, quarterly effluent sampling and groundwater sampling. Vought sent letter approving of RAP.10/28/04-Vought-Spoke to David(F&N) and FN1 must be reinstalled due to it was a bent well. Wells will be installed during the next few days.9/27/05 - SPILL TRANSFERRED FROM VOUGHT TO OBLIGADO11/9/05 - Obligado - Review System SStartup Report. AS/SVE system consists of 5 HP compressor and 3.5 hp blower and 5 air sparge wells and four soil vapor extraction wells. Effluent air stack results show 31.4 ug/m3 for benzene. Operation and maintenance schedule proposes monthly SVE effluentmonitoring and Quarterly Status Reports. System started in May 2005. Due to noise generation, the system only runs from 9pm to 6am.Quarterly Status Report - Groundwater analyticals show 4.7 ppb benzene (FN3), 50.1 ppb MTBE (FN2), 78.3 ppb MTBE SVE5, 1.7 ppb MTBE SVE3. Benzene effluent show 46.74 ug/m3. 5/15/06 - Obligado - Called David Oloke. Asked that he send recent Quarterly Status Reports.5/22/06 - Obligado - 2Q06 Quarterly Status Report, submitted by Fenley Nicol, Inc. Ground water analyticals show 9 ppb benzene 35 ppb MTBE in FN3 and and 3.7 ppb benzene in FN4. Benzene effluent below STIP limits. There is duplicated data on Table 2 Air Sampling Results, probably a cut and paste error, call Dave Oloke, he said he will look into it to send a new table with the electronic copy.

Report recommends continuing system operation.6/23/06 - Obligado - Called David Oloke. Asked for the corrected Table. He said he will email it to me.10/23/06 - Obligado - Called David Oloke. Left message requesting most recent quarterly status report. David Oloke call me back and said he would send the report shortly and he would correct the typo on Table 2.1/30/07 - Obligado - Review 3Q06 monitoring report. Typo in 2Q06 table has been fixed in cumulative table. AS/SVE system online and working at 100% maximum capacity. Air samples collected monthly. Benzene in gw exceeds standard at 4 ppb. in 2 wells. All effluent below STIP guidance. Benzene detected in VES/AS effluent at 4.86 ug/m3 in 6/06. Recommends continued operation of the system.Review 4Q06 monitoring report - AS/SVE system operating at 100% capacity 9 hours per day. All effluent samples below STIP guidance. BTEX effluent at 361.71 ug/m3 during 10/27/06 Report recommends continued operation of system. GW results show minor exceedences of Benzene - max concentration at 8 ppb in FN3. However gw monitoring does not include FN1 where highest contamination was found. 9/13/07 - Obligado - Review 1Q07 monitoring report. According to the report, the AS/SVE syste is running at 100% capacity. System is still pulling vapors, at a flow rate of 50 cfm and a concentration in March 07 of 111.30 ug/m3 BTEX. Benzene (12.8 ug/m3) was below the STIP limit. Recommends continued operation of AS/SVE system. 10/26/07 - Obligado - Review 2Q07/3Q07 monitoring report. Benzene detected during quarterly monitoring at MW3 adn MW4 slightly above standards. Analytical results of air stream were below the max benzene STIP Limit. Recommends continued operation of the AS/SVE System.9/3/08 - Obligado - Review 1Q08 monitoring report. AS/SVE running for 9 hours a day at 100% capacity. Effluent collected monthly. Benzene detected slightly above standards in MW2,3,4,and5. System effluent ND for BTEX. 6/3/09 - Obligado - REview 1Q09 monitoring report. Requests to shut down system for a 1 year post remedial monitoring period to determine if system was effective and monitor for rebound. Sent a letter to Seeling cc to David Oloke approving system shut down temporarily but requiring sampling of monitoring wells MW1, MW6, adn MW7 beneath the building as required by approved RAWP. Required 90 days to submit an update report on system shutdown and additional sampling. 12/3/09 - Obligad - Met with David Oloke on site. The AS/SVE system was down as proposed. According to David they were unable to collect ground water samples from the three sampling points. According to David the water he collected was too silty. He recommended doing an exposure assessment to close the spill number or to install the well in an alternate location in the building entrance. I told him I would review the spill file to determine if that location was acceptable. 12/22/09 - Sent email to Mr. Oloke - The Department has determined that the proposed location is cross-gradient and outside the of the source area, and would not provide the necessary data to confirm the site remediation was successful. As such, the Department reiterates its requirement in the June 2, 2009 letter, to sample the 3 monitoring wells FN1, FN6, and FN7 (as originally proposed in the approved RAWP) and submit a Monitoring Report within 90 days of this notice. If sufficient ground water can not be obtained from these sampling points (after exhausting all available well sampling and well development techniques), than a Remedial Investigation Work Plan (RIWP) to install a new monitoring well in the gallery in between FN1, FN6, and FN7 must be submitted within 90 days of this notice. The RIWP should contain an implementation schedule.10/9/10 - Obligado - Email from

S104275619

David Oloke "I would like to inform you that we're scheduled to be onsite to install one groundwater monitoring well on the sidewalk directionally towards the source area beneath the building in order to determine the current groundwater quality beneath the site. We scheduled for Monday 25 through Wednesday 27. " 1/14/11 - Obligado - Email from David Oloke "We are set to go back to High Ridge, 524 West 29th Street in Manhattan on Monday 1/17/11 to install the groundwater monitoring well for spill inactivation. The client is making plans to be onsite as well". 1/19/11 - Obligado Email from David Oloke "We core drilled through the foundation wall and could not get the well rods to the desired depth due to refusal. So we back to square one. Our client spoke with the tenant again yesterday to see if he will allow us access into the building." 4/1/11 - Obligado - I sent email to David Oloke related to potential alternative methods for obtaining ground water samples at the site since the diagonal well method was not successful, such as snaking new tubing into the existing system wells, and high vacuum extraction to obtain ground water samples from the sparge wells. I asked Mr. Oloke to look into these options, as well as any other methods and report back the findings to the DEC. 3/12/12 - Obligado - I reviewed a Site Status Report. They collected samples from MW1, MW6, and MW7 under the gallery slab using the vacuum extraction technique. Samples were collected in June and November of 2011. During the most recent sampling event in November, the maximum VOCs was 117.3 ug/L in MW-7. MW1 had 63.42 ug/L total VOCs, and MW6 had 59.75 ug/L VOCs. Several compounds were slightly above standards. The greatest exceedence was 36 ug/L naphthalene in MW7, which is above the standard of 10 ug/L. In November they turned on the AS/SVE system and allowed it to run for four weeks. At the end of the four weeks, air samples were collected and all the targeted VOCs were ND. Based on the above, they requested closure. Ground water contamination has been greatly reduced. The AS/SVE system reached asymptotic recovery rates. Additional remediation is not warranted nor feasible. After discussion with DEC Hussein and Ketani, this spill is closed. A spill closure letter has been sent to Walter Seeling, cc to David Oloke.

Remarks: caller was hired to remove a few tanks from the site - x-ref spill # 9008960 - they encountered contaminated soil - they are stockpiling soil now

Tank Info:

Tank Number: 001
Tank Id: 61070
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

F00 - Pipe External Protection - None
I04 - Overfill - Product Level Gauge (A/G)
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
J02 - Dispenser - Suction Dispenser
C01 - Pipe Location - Aboveground
H00 - Tank Leak Detection - None
G00 - Tank Secondary Containment - None
I05 - Overfill - Vent Whistle
B05 - Tank External Protection - Jacketed

Tank Location: 1
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Administratively Closed
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 3000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 07/30/2001

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "MULQUEEN" LOCATION IS ON WEST SIDE OF MANHATTAN, IN A MIXED COMMERCIAL/ INDUSTRIAL AREA. IN JULY, 1998 EMG PREPARED A SITE ASSESSMENT. SOIL SAMPLES INDICATED RESIDUAL BTEX WITH HIGHEST BEING IN THE SOURCE AREA, DECREASING DOWN GRADIENT. ONE WATER SAMPLE HAD DETECTED ETHYLEBENZENE AND XYLENES AT 130 & 250 RESPECTIVELY. IT IS EXPECTED THAT NATURAL ATTENUATION WILL CONTINUE, NO FURTHER ACTION REQUIRED.

Remarks: CALLER BUYING PROPERTY, SITE ASSESSMENT FOUND IMPACTED SOILS IN FORMER UST LOCATION. GROUNDWATER SAMPLING DID NOT INDICATE ANY IMPACT. Not reported

DEC Memo: 09/23/13-Hiralkumar Patel.alternate address: 526-532 W 28th Street, 525-531 W 27th Streetno PBS or other spills found.10:50 AM:- spoke with Kevin. the site going to be redeveloped with at least 7 story mixed use building with full basement. Kevin mentioned that the existing structure will be demolished and the entie site will be excavated to a depth of 15 ft bg. during Phase I, they noted a 20,000 gal #4 oil tank which was abandoned in-place in late 1940s. during site inspection, they noted covered corner in basement and the tank might be in there. last week, during phase II investigation, they noted contaminated soil in area near the suspected tank location. Kevin mentioned that groundwater underneath the site fluctuates between 9 and 14 ft bg. bedrock found at 21 ft bt.NYC OER is also overseeing the investigation, under e designation.asked Kevin to submit previous environmental reports and property owner/developer's contact information. Kevin mentioned that Phase II report will be submitted by the end of 10/18/13.Kevin McGrathChazen CompaniesPh.

(518) 266-7370email: kmcgrath@chazencompanies.com12:15 PM:- received email from Kevin including proper owner's contact information.WC 28 Realty LLC.c/o Centaur Properties LLC.580 5th Avenue, 32nd FloorNew York, NY 10036Attn.: Larry GreenbergPh. (212) 308-4443 (O) (917) 656-9321 (C)Fax (212) 308-8630email: larry@centaurproperties.comKevin mentinoed that based on visual observations, there appears to be a very old petroleum spill along the west side of the property extending from 9-11 feet below grade at the north end to 9-14 feet below grade at the south end. the soils are stained grey, have a faint odor, and register 10-100 ppm on the PID (north to south). water table was at 11 feet below grade at beginning of the investigation and at about 9.5 feet below grade at the end (very heavy rains for two consecutive days).the Remedial Action, which has already been discussed with OER, will consist of the removal of all soils to at least 14 feet below grade to prepare the site for new construction. extensive dewatering of the excavation with pretreatment and disposal to the sewer will be required during construction and should mitigate any residual groundwater impacts.Kevin also submitted Phase I and work plan for Phase II.abstract of Phase I:- propety was constructed as two individual buildings in the late 1800s to 1916- site was originally built and occupied by E.R. Merrill Spring Company, a manufacturer of automobile sprtngs/parts and parts for Sherman Tanks- historical site uses included a truck terminal garage, warehouse and foundary, warehouse for storage and construction of theatrical props and scenery and was reportedly used as a studio for filming- from 1998 to 2002 the building was used by the current owner as a warehouse for a packaging supply company- between 2002 and 2003, the owner renovated the structure for use as two night clubs**e designation** e designation on property - boring location had layer of 100ppm - cleanup pending

DEC Region: 2
DER Facility ID: 75604
DEC Memo: According to the NYSDEC records, on August 5, 1998, the on-site 2,000gallon UST failed a tank tightness test and was issued Spill #98-05607. After review of information received from the client, it has been determined that after the UST failed tank tightness testing, the UST was cleaned, sandblasted, and relined with an epoxy lining, and the associated piping was replaced in September 1998. On July 10, 2003, the 2,000 gallon UST failed a tank tightness test and was issued Spill #03-03799. It appears that soil borings were performed to determine the extent of the UST leak/spill. Upon reviewing data received from the NYSDEC Spills Database, the NYSDEC notes section determined the soils were "slightly above" TAGM guidelines due to levels consistent with "old coal ash fill materials" and was granted "closure" status on September 2, 2003. The UST was emptied and taken out of service, and an 1,080 gallon steel registered AST was installed in a small cellar area near the north bay door area. On September 28, 2005, EnviroTrac contacted the NYSDEC regarding Spill #98-05607 to determine what is needed to "close" the Spill. It was determined that since Spill #98-05607 was prior to Spill #03-03799 which is "closed", and was the same tank and area, it should be "closed" as well.

Remarks: TANK TO BE EVACUATED, CLEANED, AND LINES TO BE TESTED.

Tank Info:

Tank Number: 1
Tank Id: 60814
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

K00 - Spill Prevention - None
L00 - Piping Leak Detection - None
B01 - Tank External Protection - Painted/Asphalt Coating
F00 - Pipe External Protection - None
G00 - Tank Secondary Containment - None
I05 - Overfill - Vent Whistle
C01 - Pipe Location - Aboveground
H00 - Tank Leak Detection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
J02 - Dispenser - Suction Dispenser

Tank Location: 3
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 09/15/1982
Capacity Gallons: 4000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: MSBAPTIS
Last Modified: 05/09/2011
Material Name: #2 Fuel Oil (On-Site Consumption)

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D005
Waste name: BARIUM

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D035
Waste name: METHYL ETHYL KETONE

S108636696

212-330-7505)Mr. Peter J. Filiberto327 10th Ave Corp.45-54 61st StreetWoodside, NY 11377tanks will be pulled.6/7/08- DEC Piper psoke w. Ray Kahn, They have found 6 ust's filled w. water. They are pumping them out today and will begin removal. endpoints will be collected.10/1/07- DECP iper reived call from Ray Espo. The excavation has been open for some time now and is not covered. There is gross soil contaminaiton that is being washed down. Investigaiton.work needed letter sent to Mr. Peter J. Filiberto327 10th Ave Corp.10/9/07- DEC Piper revied subsurface investigation of adjacent property, open spill 0700172. A high rise is going to be built on four lots which includes 321-325 10th Ave. Soil borings revealed no VOC's in soil though BTEX constituents and MtBE were found in GW. Some constituents were under TAGM and some were over, particularly MTBE at 471 ppb at 321 10th ave most downgradient well. The suspect source of the dissolved contaminants are the adjacent gasoline station at 327 10th ave.(This spill site)*****
*****10/22/07- DEC Piper spoke with David Lent of IVI Env. They are putting together a work plan. The site will be redeveloped with a high rise. Excavation of the entire site will be part of the project. IVI will conduct a subsurface investigation to delineate the soils and gw.
DURING A PHASE TWO, FOUND CONTAMIANATED SOIL

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 5/12/2006 Sangesland spoke with Joe Ostrowski at PTC about this site. He said the tank is in a tank room and began to leak. The owner hired PTC to ONLY vac out the tank. Joe says approx. 25-30 gal of #6 oil remains under the tank along with oil soaked debris. Unknown who is doing the cleanup. Property Shark says the building has several alternate addresses: a/k/a 548-552 West 28th St & 547-553 West 27th St. NO PBS records found for any of these addresses.... Probably in PBS Violation Property Shark Owner: Mariners Gate, LLC 548 West 28th St, NY, NY 11101. Property manager- Jim Pastreich, Pinetree Group 212-279-5600. Sangesland spoke to Mr. Pastreich's secretary. He'll call back. 5/12/06- DEC Piper responded to site. Oil soaked debris remains under tank. Tank was emptied and cleaned yesterday. Seam in tank was cracked. DEC Piper instructed Jim of Pinetree to contract cleanup co. ECO Kurt Bush responded to site and issued ticket for unregistered tank. PTC issued proposal. PTC to cleanup on Monday and investigate presence of oil b/w tank and vault. 5/16/06- DEC Piper spoke w/ PTC. As per conversation, there is oil between the tank and the vault. A hole drilled through the vault revealed product. Piper issued CSL. 5/19/06- DEC Piper spoke w/ Jim. As per conversation, soil contamination removed. Repairs will be made to tank and retested. Jim did not mention contaminated material b/w tank and vault as PTC described to DEC earlier. Jim will contract out another contractor as PTC services were not rendered/ nor wanted. Piper faxed list of contractors to Jim. This work needs to be completed. 10/4/06- DEC Piper left message for Jim P to call back w/ update and documentation. Piper searched PBS and the tank is now registered. 4/27/07- DEC Piper has not received any info on cleanup or repairs. Additionally, the PBS reg is expired. Referred to PBS for inspection. 9/24/07- DEC Piper received disposal manifests from work performed in 9/ 2006. Soil samples were recently collected. No VOC's over TAGM though there are a few SVOC's over. The tank has been repaired. PBS violations exist and has been referred to legal. This spill is closed. See edocs if warranted.

Remarks: TANK IS LEAKING AND STILL INVESTIGATING CAUSE: IN PROCESS OF CLEANING AND IS IN A ENCLOSED TANK ROOM

DEC Memo: This is a citizen's call about an existing ongoing spill case managed by Ryan Piper. Sangesland called the citizen and told him the case is already being managed by the DEC.
Remarks: Caller says people are pulling old oil tanks from the ground without permits at 327 10th Ave. Would like DEC to call. (Caller says that he cannot see any actual spillage)

DEC Memo: 2/10/2004: This spill case was reassigned from Sigona to Rommel for management. (Sigona)10/7/2004: Project management transferred to D. Harrington in Central Office. (Rommel)10/7/2004: Sent letter to Exxon Mobil approving the site characterization work plan. (Harrington)6/6/2005: Sent Exxon Mobil a letter approving the SI report and the supplemental SI work plan. Additional monitoring wells will be installed along West 30th Street. Quarterly sampling will be conducted for 1 year, then a remedial plan will be developed if necessary. (Harrington)9/8/2005: Spill no. 05-06979 was assigned due free product being observed in MW-1. Nature of the product was

1000553497

unknown at the time spill was called in. (Harrington)10/4/2005: Sent e-mail to Exxon Mobil approving the revised supplemental SI work plan, which changed the location of the proposed monitoring wells along the south side of West 30th Street due to utility clearance issues. (Harrington)2/1/2006: Approved the supplemental SI report. Station is currently scheduled for divestment in the first half of 2006. Exxon Mobil to submit documentation regarding decommissioning activities when they occur. RAP will be developed after receipt and review of decommission report and the analytical results of 4 additional rounds of quarterly groundwater sampling. (Harrington)3/8/07 - DEC lead changed from Dave Harrington to Mike Haggerty7/3/07 - Haggerty - approved Groundwater Characterization Work Plan dated 6/28/07. MW-1 along West 30th Street has had intermittent product over the past year. Kleinfelder didn't believe product to be petroleum based. Running parallel to the sidewalk are Oil-o-Static Electric lines. These underground lines are insulated by a di-electric. Kleinfelder believed PCB's could be the unknown product in the well. I was on-site July 26, 2007 when they sampled to see for myself. No free product. Analyticals proved no PCB's are present, only petroleum compounds detected.7/26/07 - I was on-site while they sampled to see for myself. No free product. Analyticals eventually proved no PCB's are present, only petroleum compounds detected.1/3/08 - Haggerty - spoke with Shan Zuidema from Kleinfelder concerning future remediation plans. EFR events were conducted monthly starting in September. Effectiveness will be determined after the January EFR event. Additional remedial strategies will be proposed. Also, groundwater isn't fully delineated. The placement of additional downgradient MWs is difficult due to the presence of underground utilities in the adjacent sidewalks. 6/2/08 - Haggerty - approved Remedial Investigation Work Plan dated May 20, 2008. Additional wells will be installed in the northern portion of the site to track down free product and get a sample for analysis. Kleinfelder proposed eliminating EFR events. Approved discontinuation of EFR events because BTEX dissolved concentrations low. EFRs originally intended to collect LPH but had limited success. Instead, LPH absorbent socks will be installed. 10/1/08 - Haggerty: Ethanol detected at 717ppb on groundwater. spill 08-07364 called in11/20/08 - Haggerty: spill 08-07364 closed. Ethanol ND in groundwater. Not a new release.Due to the presence of sensitive utilities in the sidewalk of West 30th Street and the transit yard/depot across West 30th Street, the Department will not require further delineation at this time. The Department reserves the right to require further delineation on West 30th Street.12/9/08 - Haggerty: Product found in 1 of the newly installed wells. PM re-initiated quarterly EFR events4/1/09 - Haggerty: PM reduced reporting schedule to Bi-annual, still sampling quarterly9/09 - Haggerty: 4 additional wells installed. 0.4ft of product encountered in 1 of the newly installed wells. PM re-instated quarterly EFR events.April '10Absorbent LPH Socks will be installed in MW-1 and MW-5. PM approved RegenOx injection pilot test in AprilMay '10Installation of injection points scheduled for the 2nd week of JuneJune 2010 - Pilot test completed 6/6 and 6/10. Results will be reported in subsequent QMR'sNovember 2010 - EM has handed the project over to Liberty Petroleum Realty LLC. See 11/18/10 letter from Liberty.February 2011 - Feasibility Report under reviewMarch 2011 - Waiting for new data to determine effectiveness of ChemOx injection April 2011: reviewed Quarterly Report. Gw conditions have returned to pre-injection conditions. RegenOx appears to have had

little to no effect after 3 rounds of quarterly sampling. Spoke with Jerome Oertling from Arcadis (new consultant), they are developing a new remedial plan, possibly a stronger oxidant or excavation or both. I sent email requiring a RAP/CAP be submitted July 2011: RAP/CAP submitted August 2011: Revised RAP/CAP under review per my comments on the original RAP/CAP Sept 2011 - approved Revised RAP/CAP November 2011 - Bolla has yet to sign the CO January 2012 - RAP/ CAP approved. Need CO to implement February 2012 - CO executed, injections can now proceed May 2012 - waiting on preliminary results August 2012 - Additional VTE events have been conducted to remove the product in MW-8 December 2012 - Arcadis still removing residual product using dual-phase extraction events. Injections will begin after the product has been removed May 2013 - 0.5ft of product in MW-8 remains after multiple attempts/ technologies to remove it, but heard the property is to be sold to someone purchasing much of the block. We have a Consent Order will the current owner, Liberty Petroleum (owned by Capital Petroleum) so OGC will need to be contacted if the property is sold.

site, they need to excavate some soil to expose top of the some installed piles. After finishing excavation, found oil (similar to diesel or #2 fuel oil) coming out from ground. Observed free product and sheen on water collected inside excavation. Also found water in some piles (which are hollow round pipe) at about 25 ft bg and found sheen on water in pile. Heavy odors in the area. Spoke with consultant Environmental waste management associates. He mentioned that spill was reported earlier (spill : 0613440) and DEC Ryan Piper is a project manager. He also mentioned that they removed diesel USTs from the site. Site has "e" designation. Mark gave copy of DEP approval letter to proceed, dated Dec. 17, 2007 (forwarded to DEC Piper). Mark Trashaj L&M Builder LLC. 1865 Palmer Ave, Suite 107 Larchmont, NY 10538 Ph. DEC Memo: 10/02/08-Hiralkumar Patel. spoke with dispatcher 258 at FDNY. he mentioned that large quantity of diesel spilled in open excavation at construction site.10/02/08 - Raphael Ketani. Earlier cases are associated with this site and are listed under the Spills managers Ryan Piper and Hiralkumar Patel. They are 0613440-tank failure (active case), 0801913-discovered fuel tanks, 0806482-found oil in ground. The site is block and lot 699 and 9. The owner is 537 West 27 Street Owners, LLC, c/o RD Management, LLC, 810 7th Avenue, 28th Floor, NY, 10019. The site main address is 537 West 27 Street, but alternative addresses are 537-545 W. 27 Street and 538-546 W. 28 Street. The site had a one story garage/service station from old pictures in Property Shark.The site has an E-designation and the DEP contacts are Terrell Estes (718) 595-4473 and Maurice Winter (718) 595-4514. PBS case #2-610856 lists 6 closed 550 gallon tanks. Two had diesel fuel and the rest had #2 oil. The owner is listed as 537 W. 27 Street Owners, LLC. I visited the site today. I met Leeron Tagger, Environmental Technician from Environmental Waste Management Associates (973) 560-1400/FAX (973) 560-0400. He said that the FDNY was here and left. He said that they showed up because a neighbor had complained about strong odors in the air in their ventilation system. He said that 3 tanks were discovered at the site, two in the center and one in the southeast corner. He said that all three had a hole or two and had leaked oil. Mr. Tagger said that the two tanks that were in the middle of the property were discovered with oil in them. I noticed that they had dug out the site to about 7 feet below grade. I asked him how much more soil was going to be dug out. The construction foreman said that they will dig out to about 12 feet below grade, but groundwater is 10 feet below grade. I asked the foreman where bedrock was. He said it varied between 20 feet to 40 feet below the site. Mr. Tagger stated that they will conduct site dewatering and collect the contaminated water and filter it for the oil and other contaminants. I smelled a strong odor of diesel fuel. I asked him whether contaminated soil had been removed. He said that some had been removed and that he has a manifest for the soil. I asked him whether end-point samples were taken. He said that they had. I told him that I smelled strong diesel odors and that much more soil will need to be removed. He said that it will. I told him that EWMA will need to submit a report with a sit map showing the locations where the tanks were and where the oil contaminated soil is, manifests for the soil removed, and end point sample results. He said that a report is being prepared for the site right now. I asked him whether the tanks had been registered with DEC. He said that he thought they had been, and that two checks had been sent to DEC, but that I should talk to the project manager, Rob Edgar at (973)

CONSTRUCTION SITE (Continued)

S109372079

560-1400, ext 159. I took 3 pictures of the site and left. Later, I tried to call Mr. Edgar regarding the need to remove more soil because the odors were strong and because there had been odor complaints from a neighbor. I could only leave a message. However, I did state that the matter was urgent and that EWMA had to institute an odor management/abatement program immediately and to call me back as soon as possible. Mr. Edgar called me back. He said that they already took out 55 truck loads of soil. He said that he has someone on site who is monitoring for fugitive dust and odors. He said that Mr. Tagger walks around with a PID meter and checks the vapor concentrations. He said that, so far, they have not been over the limits. I told Mr. Edgar that it's not just a matter of how high the vapor concentrations are, but also whether the odors are a nuisance. I told him that the vapors got into the ventilation system of a neighbor and there were complaints to DEC. He said that he was aware of this and that there's oil in the soil, so there are odors. He said that's the situation at the site. I told him that not only does he have to get the construction company to remove soil quickly, but that he has to come up with a method of controlling and abating the odors. He suggested covering the affected areas with plastic. I told him that plastic may not be the best method. I told him that I will talk to my supervisor, Randall Austin, Chief of the Spills Unit. Mr. Austin recommended that they use odor suppressing foam to control the vapors and that they come up with an odor management plan. However, he said that plastic can be used as a temporary measure. I called Mr. Edgar and told him that the plastic sheeting can be used as a temporary measure, but that foam should be put down to control the odors while they dig. He said that the construction company doesn't like using the foam. I told him that he will have to come up with some plan to take care of the odors and that the odor control has to begin immediately. He said that EWMA always complies with all environmental regulations and laws. I told him that his company will have to get control of the odors fast and abate this problem, otherwise there could be more complaints and more problems. With that the conversation ended. 10/3/08 - Raphael Ketani. I made an unannounced site visit today at about 2:11PM. I met Mr. Tagger of EWMA and Mark Trashaj of L&M Builders, LLC - foreman for the development company (914) 833-3000. I saw that no digging was taking place, but the crew was laying plastic sheeting over the site where the oil had spilled (see photos in E-docs). The odors at the site were slight, except where the backhoe was sitting. My PID meter registered up to 2100 ppb of vapors at one foot above the soil with a slight breeze blowing. I showed Mr. Tagger and Mr. Trashaj that my PID meter was detecting up to 2100 ppb of total vapors. They said that the soil which comprises the platform for the excavator is contaminated with oil. I asked them when this soil will be removed and when the rest of the soil will be carted away. Mr. Trashaj said that they can't remove any more soil or else the steel sheet pilings will fall into the site. He said that the next step will be to install holdfasts for the steel pilings over the next two weeks. I told him that the contaminated soil has to be moved. He said that they will keep the contaminated areas covered with plastic at all times and if any gets ripped, then they will replace the damaged plastic. I told him that the contaminated soil which comprises the platform has to be removed next week. He said that this will be done as it doesn't affect the stability of the steel sheet pilings. Mr. Tagger assured me that when they dig, there are many trucks lined up

to take loads of soil. He said that they will work hard to remove the rest of the soil after the holdfasts are installed and that they will maintain the plastic covering. After this, I left, but I told them that I will be back next week. 10/8/08 - Raphael Ketani. I spoke to the case manager for the site, Ryan Piper of DEC Region 2 Spills. I debriefed him on what when on at the site the two times I visited it and about the odor complaint. I told him about the installation of the plastic sheeting and that Randall Austin, Chief of the unit, had approved its use temporarily. I told Mr. Piper about the oil contaminated soil that was being used as a platform for the excavator and that no digging will take place over the next two weeks as tie backs need to be installed all around. I mentioned that I had informed Mr. Tagger, Mr. Trashaj, and Mr. Edgar that the contaminated platform soil had to go immediately. Mr. Piper told me to close out this case and refer it back to the active one, #0613440. Therefore, I am closing out this case today and referring it back to the initial spill case that is still active with Mr. Piper.

Remarks: Unknown spill at a construction site. Caller had no further info.

DEC Memo: Sangesland spoke with Carol Owings of Key Environmental. She said the site is an industrial building that had several buried tanks removed. There is contaminated soil on the site that can not be removed, so the area will be treated in place. Key Environmental will work on a plan to submit to the DEC for review. Sangesland wrote a CSL letter and listed Ryan Piper as the contact for the site. CSL sent to one of the owners: William Cirillo, 33 Tiers St, Apt F, Bronx, NY 10464-31-07- EWMA- new contractor. will contact me. 2/6/08- DEC Piper reviewed RAWP addendum and approves. 05/20/08- Hiralkumar Patel. another spill reported (Spill #: 0801913) as found more tanks from site. during excavation, found three approx. 1000 gal size tanks, in middle of property. one tank was found empty and has been removed from ground. multiple holes noted on that tank. another two tanks sitting next to each other and has product in it. contractor will remove tank properly and will take endpoint samples. 09/10/08- Hiralkumar Patel. another spill reported (spill #: 0806482) as found oil coming out from ground in excavated area. 11/14/11- DEC Piper spoke with consultant. Report has been generated and will be sent shortly. 12/20/11- DEC Piper reviewed UST

S108467893

closure report. 5 permanent mw's installed. The wells were set to a depth of 25 feet b.s.g. and constructed with 10 feet of screen and 15 feet of riser. however groundwater is at 7.5- 8 feet bgs. On February 13, 2008 a representative of EWMA sampled MW-1 through MW-5 and MW-27 for VO+10, BN+15 and lead. Sample MW-1 was obtained from MW-1 (located downgradient of the former UST location and along 27th Street) and revealed concentrations of benzene at 471 ppb and in excess of the TOGS 1 ppb standard; and concentrations of toluene at 76.4 and in excess of the TOGS 5 ppb standard; and concentrations of ethylbenzene at 333 ppb and in excess of the TOGS 5 ppb standard; and concentrations of total xylenes at 357 ppb and in excess of the TOGS 5 ppb standard; and concentrations of naphthalene at 99 ppb and in excess of the TOGS 10 ppb standard; Sample MW-27 was obtained from MW-27 (located along 27th Street) and revealed concentrations of benzene at 13 ppb and in excess of the TOGS 1 ppb standard; and concentrations of total xylenes at 11 ppb and in excess of the TOGS 5 ppb standard; Sample MW-2 was obtained from MW-2 (located along 27th Street) and revealed concentrations of benzene at 196 ppb and in excess of the TOGS 1 ppb standard; and concentrations of toluene at 27.7 and in excess of the TOGS 5 ppb standard; and concentrations of ethylbenzene at 243 ppb and in excess of the TOGS 5 ppb standard; and concentrations of total xylenes at 578 ppb and in excess of the TOGS 5 ppb standard. The soil excavated that exhibited fill material type characteristics was transported by truck and delivered to Total Recycling Corporation (TRC) of Allentown, Pennsylvania. The excavated soils, including the soil that exhibited evidence of petroleum impacts from the former USTs were also transported to Total Recycling Corporation (TRC) of Allentown, Pennsylvania. Approximately 3,556 cubic yards of soil was excavated from the Property. In September 2008, and following the initial four foot soil removal additional soil was removed from the site. The additional soil was removed because the original design of the building was changed to include a basement which required the additional removal of soil. Specifically, from September 29th 2008 through February 30th, 2009, representatives of Impact and EWMA coordinated the direct soil load out an additional 22 feet of soil from the Property. This phase of the excavation was coordinated during the installation of steel sheeting, tie backs and foundation piles following the initial excavation of soil to four (4) feet b.s.g. The soil excavated that exhibited fill material type characteristics was transported by truck and delivered to Total Recycling Corporation (TRC) of Allentown, Pennsylvania. The excavated soils, including the soil that exhibited evidence of petroleum impacts from the former USTs were also transported to Total Recycling Corporation (TRC) of Allentown, Pennsylvania. Approximately 19,556 cubic yards of soil was excavated from the Property. On May 20, 2008, during the Property redevelopment and the initial upper layer soil removal, three (3) additional unknown underground storage tanks (USTs) were encountered within the footprint and beneath the concrete floor of the former building. One (1) 1,000-gallon fuel oil and two (2) 550-gallon fuel oil USTs were observed during soil removal. The USTs were relocated in the footprint of the former building. Prior to the UST removal, Mr. Hiralkumar Patel of the (NYSDEC) visited the site, inspected the USTs, and approved the removal of the USTs. Mr. Patel requested that the USTs be properly removed, which included the pumping of liquids, cutting, cleaning and disposing of their contents. Soil samples were also requested by Mr. Patel in accordance with NYSDEC UST regulations and local and state guidelines. W.R. Grace

S108467893

Preprufe 300R/160R membrane was installed as a barrier between sub-grade soils and exterior surfaces of basement slab areas, and between vertical soil retention systems and exterior surfaces of sub-surface wall areas. These membranes are manufactured in accordance with ASTM Standards, demonstrate an ASTM E154 permeance of 0.010 Perms, and are comprised of multilayered composite high density polyethylene (HDPE) sheets. The 300R membrane has a thickness of 40 mils and the 160R membrane has a thickness of 32 mils. Ambient air venting systems are installed beneath the basement slab areas and the slab on grade areas. The basement sub-slab venting system consists of a 12-inch thick bed of 1/2-inch crushed stone beneath the slab, an embedded air inlet header with ambient air inlets at one end of the building, and an embedded vent header with venting outlets at the other end of the building. The slab-on-grade sub-slab venting system consists of a 6-inch thick bed of 1/2-inch crushed stone beneath the slab with a 6-mil polyethylene vapor barrier and a layer of geotextile fabric between the slab and the stone, an embedded air inlet header with ambient air inlets at one end of the building, and an embedded vent header with venting outlets at the other end of the building. The venting systems will be active, with radon fans and back draft dampers installed in the vent outlet piping at one end of the building at locations that can be inspected, monitored and maintained. The ambient air inlets will receive air from about two feet above ground surface at one end of the building, and the venting outlets will vent air from about twenty feet above ground surface at the other end of the building. The inlet and outlet locations can be inspected and monitored as needed. Together, the barriers and venting systems will provide two layers of vapor intrusion control and will provide a conservative and maintainable vapor intrusion control system that will be an integral component of the planned building. During the week of September 3, 2010, Zebra Environmental Corp. of Lynbrook, New York installed five (5) permanent 2-inch monitoring wells at the property under the direct supervision of a EWMA representative. The intent was to re-install the replacement wells in or near the previous locations. Ground water was generally encountered between 10.0 and 12.0 feet b.s.g. Soil cuttings during installation activities were screened using a PID and split spoon samples were collected every five feet. EWMA did not note visual signs of contamination during the installation of the wells and no elevated PID readings were recorded. The monitoring wells were constructed using two-inch diameter, 0.020-inch machine slot Schedule 40 PVC well screen intersecting ground water at the time of the well installation. Solid two inch diameter Schedule 40 PVC completed the upper portion of the well. The connection between the riser and well screen was flush-joint threading with no adhesive required. The wells were filter packed with clean, No. 2 sand from the bottom of the borehole to approximately two feet above the top of the screen. The remaining annular space around the upper portion of each well was grouted using Benseal and cement. The monitoring wells were completed as flush mount wells with concrete pads. On September 20, 2010 a representative of EWMA sampled MW-1R, MW-27R, MW-2R, MW-3R, and MW-5R for VO+10, BN+15 and lead. The results of the ground water sampling event revealed volatile organic compounds above the NYSDEC TOGS 1.1.1 Groundwater Standards/Criteria in the groundwater samples of four (4) monitoring wells, MW-1R, MW-27R, MW-2R, and MW-3R. EWMA notes that the results of the sampling event did not detect any exceedences in monitoring well MW-5R, which is located along West 28th Street.

Laboratory analysis revealed the following: Sample MW-1R was obtained from MW-R1 (located downgradient of the former UST location and along 27th Street) and revealed concentrations of benzene at 9.88 ppb and in excess of the TOGS 1 ppb standard; and concentrations of ethylbenzene at 83.9 ppb and in excess of the TOGS 5 ppb standard; and concentrations of total xylenes at 352 ppb and in excess of the TOGS 5 ppb standard; and concentrations of naphthalene at 16.1 ppb and in excess of the TOGS 10 ppb standard; Sample MW-27R was obtained from MW-27R (located along 27th Street) and revealed concentrations of benzene at 5.11 ppb and in excess of the TOGS 1 ppb standard; and concentrations of ethylbenzene at 54.3 ppb and in excess of the TOGS 5 ppb standard; and concentrations of total xylenes at 227 ppb and in excess of the TOGS 5 ppb standard; Sample MW-2R was obtained from MW-2R (located along 27th Street) and revealed concentrations of benzene at 3.29 ppb and in excess of the TOGS 1 ppb standard; and concentrations of ethylbenzene at 39.9 ppb and in excess of the TOGS 5 ppb standard; and concentrations of total xylenes at 173 ppb and in excess of the TOGS 5 ppb standard; and concentrations of naphthalene at 11.8 ppb and in excess of the TOGS 10 ppb standard; Sample MW-3R was obtained from MW-3R (located along 28th Street) and revealed concentrations of benzene at 13.4 ppb and in excess of the TOGS 1 ppb standard; and concentrations of total xylenes at 10.1 ppb and in excess of the TOGS 5 ppb standard; EWMA notes that the results of the September 20, 2010 sampling event did not detect any exceedences in monitoring well MW-5R, which is located along West 28th Street. On October 26, 2010 a representative of EWMA sampled MW-1R, MW-27R, MW-2R, MW-3R, and MW-5R for VO+10 and BN+15. The results of the ground water sampling event revealed volatile organic compounds above the NYSDEC TOGS 1.1.1 Groundwater Standards/Criteria in the groundwater samples of four (4) monitoring wells, MW-1R, MW-27R, MW-2R, and MW-3R. EWMA notes that the results of the sampling event did not detect any exceedences in monitoring well MW-5R, which is located along West 28th Street. Ground water flow is relatively flat throughout the Property however, topographic grade is to the southwesterly direction. Laboratory analysis revealed the following: Sample MW-1R was obtained from MW-R1 (located downgradient of the former UST location and along 27th Street) and revealed concentrations of benzene at 4.99 ppb and in excess of the TOGS 1 ppb standard; and concentrations of ethylbenzene at 186 ppb and in excess of the TOGS 5 ppb standard; and concentrations of total xylenes at 808 ppb and in excess of the TOGS 5 ppb standard; Sample MW-27R was obtained from MW-27R (located along 27th Street) and revealed concentrations of benzene at 3.62 ppb and in excess of the TOGS 1 ppb standard; and concentrations of ethylbenzene at 35.2 ppb and in excess of the TOGS 5 ppb standard; and concentrations of total xylenes at 156 ppb and in excess of the TOGS 5 ppb standard; Sample MW-2R was obtained from MW-2R (located along 27th Street) and revealed concentrations of benzene at 3.60 ppb and in excess of the TOGS 1 ppb standard; and concentrations of ethylbenzene at 19.3 ppb and in excess of the TOGS 5 ppb standard; and concentrations of total xylenes at 85.8 ppb and in excess of the TOGS 5 ppb standard; Sample MW-3R was obtained from MW-3R (located along 28th Street) and revealed concentrations of benzene at 4.33 ppb and in excess of the TOGS 1 ppb standard; and concentrations of total xylenes at 8.66 ppb and in excess of the TOGS 5 ppb standard; EWMA notes that the results of the October 26, 2010 sampling event did not detect any exceedences in monitoring well MW-5R, which is topographically

upgradient and located along West 28th Street. Two rounds of groundwater sample results from the wells indicate that the dissolved groundwater contamination at the Property has been significantly reduced. However, groundwater contaminants continue to be present at low levels that exceed the GWQS in the perimeter groundwater monitoring wells. Based on the presence of concentrations of contaminants above the GWQS in the upgradient wells, ground water contamination may be migrating on site from offsite source(s). Due to the removal of site soils down to 25 feet and the water table, there are no source soils remaining at the site. Therefore, natural attenuation for the remaining residual ground water contaminants is proposed. EWMA recommend no further investigation and closure for NYSDEC Spill Case No. 0613440. The NYCDEP reviewed the Closure Report and the Property was provided with a Notice of Satisfaction. Based on work to date, this spill is closed. see edocs if warranted.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 7/14/06 - Raphael Ketani. The contaminated soil was found on 6/27. I tried calling Jeff Bohlen of Envirotrac (631) 471-1500, but could only leave a message. 7/18/06 - Raphael Ketani. I could only leave a voice message. 7/19/06 - Raphael Ketani. Jeff of Envirotrak called to say that they are preparing the phase I and II report for DEC. There is a tank field with 8 USTs and another with 3 USTs. There is soil and groundwater contamination. They are negotiating with the owner to remove the tanks. However, one set of tanks can't be removed and will be abandoned in place as it is under the lift that brings the cars to the upper floors of the garage. 8/7/06 - Raphael Ketani. Today, I received the July 21, 2006 Phase II Environmental Site Assessment Report from Envirotrak (631) 471-1500. Soil samples with exceedences of the TAGM are GP-1 (SVOCs only), and GP-2 (total xylenes). Groundwater samples with TAGM exceedences are GP-4 (many VOCs), GP-5 (many VOCs), and GW-1 (only MTBE). They recommend removing the 8 USTs, the soil, and the groundwater. The report didn't have a site map showing where the borings were done. They, also, don't mention whether they checked the areas of the remote fills or the pump islands for contamination. They need to do borings and sampling in these areas. They need to revise their PBS record if they remove or abandon in place the tanks. As the phase II investigation found gasoline contamination of groundwater, I am transferring the case to Koon Tang. 8/21/06 - Mr. Jeff Bohlen from Envirotra, 613-471-1500. They will tell the RP that DEC requires full delineation of contaminated soil and GW. The source of the spill has not been characterized. He mentioned that the tanks are still in the ground, abandoned with water/oil mixture in them. Don't know if there is contaminated soil around the tank or pipings acting as a source to contaminate the GW. Told Envirotra to send in a RI report so I can prioritize the spill. - KST 10/18/06 - (KST) reviewed the Phase 2 and provided the following comments to Envirotrak. Comments on the Phase 2 Report: 1) The write-up should provide more detailed discussion on the results. Need to know the depth of each soil sample, depth to groundwater, some discussion of the site geology. Are the USTs actively used? If not, what happened to the dispensers and fill port? 2) Data gap at the fuel dispensers and along the fill port and fill lines of the USTs. Should have taken soil and groundwater samples along these possible release points. 3) Detection limits (DL) should have been reported on the data summary table. Without the DL, DEC can not tell if the non-detected (ND) is below the regulatory guidance numbers or the lab instrument was masked to see the contamination. Looks like many of the soil samples could have VOCs over the TAGM numbers based on the lab reported DL. 4) Need boring logs describing the lithology as well as visible/olfactory observation. Based on the data in the report, the level of contamination is low and your recommendation of USTs removal and

DEC Memo: DEC Piper reviewed the tank closure report. 11 550 tanks were removed in total along with all cont soil. Endpoints showed low level VOCs and SVOCs. Site is being redeveloped and will have a vapro barrier as the basement will be set in GW. Historically gw showed low level CVOCs from adjacent site though none in sopil and soil vapor. Based on work to date, no further action is warranted. A CVOC plume trackdown investigation is being conducted at the adjacent site and surrounding area. See edoc for report.
Remarks: during excavation tank w/ water found, c/u pending

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIBBE"11/12/10 - spill re-assigned from Tibbe to Joe O'Connell2/7/2012 - changed Lead DEC from Joe O'Connell to JFeng. Toni Watts is the NYCT case manager. Her phone is (646) 252-5939. Her e-mail is Toni.Watts@nyct.com.2/28/13 - Raphael Ketani. The February 2013 NYCT monthly progress meeting took place today. As part of this meeting, Ms. Watts discussed the 28th Street and 11th Avenue spill. She stated that she tried to research this spill in the NYCT records, but could not find any documentation. So it is unclear where the contamination was found that generated the spill reporting.Later, I searched the UIS database and the paper files in storage downstairs, but I could not find any records.I tried to contact the person who had called in the spill back in 2003, Richard Wetherbee, but the phone number was not in service.3/27/13 - Raphael Ketani. I investigated whether there had been any spills near the site in the past. I discovered that a Con Ed storage yard at 281 11th Avenue had over 24 spills. These were mostly hydraulic fluid spills. All of the cases had been closed. There is also another spill site, Avalon West Chelsea LLC at 282 11th Avenue. This was some type of taxi or other vehicle service station. It is still an active case and the site is being developed. The responsible parties are remediating the site.The spill that caused the contaminated soil could have come from either of these two sites. However, the exact location of the soil boring is still unknown. As such, I am closing this spill case as there is active environmental monitoring taking place at the Avalon site. So there is oversight coverage. The closure will be effective today. |
| Remarks: | Soil contamination discovered during boaring at above location. |

Contact Phone: (212) 675-3225
DEC Memo: 04/17/07-Vought-Off hours responder. Vought called Carroll (212-675-3225 fax 212-675-3224) and soil boring was being performed for E designation. Unsure of tank size. DEP contact is Mohammed Ahmed (212-675-3225). Site is going to be mixed commercial and residential. Spill will be remediated via excavation for building. Proposed development will include 400sq ft below grade parking spaces. No soil sample analyticals but strong gasoline odors and free phase product in soil. Sheen on groundwater in one boring. Groundwater depth at 11'. Dewatering will most likely take place and DEP sewer permit will be required. Report will submitted within two months. Buildings are still onsite. Carroll will call back Vought with current and former owner of USTs. Upon reception of owner information Vought will send out soil contamination letter with below requirements. DEC requires: 1)copies of everything 2)regular intermittent sampling of groundwater 3)moisture barrier or vapor barrier description 3)delineation soil and groundwater 4)updating of PBS registration to show that tanks are temporarily out of service 5)cc and call to DEP Ahmed.8/3/07 - Austin - Transferred from Vought to Patel for further review and action - end08/27/07-Hiralkumar Patel. visited site. site lot is divided into two different area. site area along 11th ave is occupied by parking

S108636200

required), the department can't comment on possible remediation at site. asked her to submit groundwater delineation report by Jan. 15, 2008. Jessica Tofi **current tenant's attorney** Law office of Borah Goldstein PH. (212) 965-2614 (O) (646) 436-5996 (C) email: jtofi@borahgoldstein.com 12/19/07-Hiralkumar Patel. sent email to Ms. Tofi with copy of Phase I, Phase II and remedial investigation report. left message for Collista Nazaire at NYC DEP. asked her to provide project manager's information in DEP who is handling this "e" designated site. Collista Nazaire PH. (718) 595-4401 Fax (718) 595-4479 email: cnazaire@dep.nyc.gov received call from Ms. Nazaire. she mentioned that DEP hasn't received any application for redevelopment, so not working on-site. sent email to Gary Heath with all available reports and copy of all correspondence, for their record, with information of all involved parties. 01/17/08-Hiralkumar Patel. spoke with Mr. Ahmed. currently owner and tenant are in court fighting for access. once access agreement get signed, Mr. Ahmed will apply for sidewalk permit and will submit work schedule. 02/08/08-Hiralkumar Patel. left message for Mr. Ahmed. received call from Mr. Ahmed. owner and tenant just reached an agreement and will sign agreement by end of Feb. 2008. Mr. Ahmed will do well installation after that in Mar. 2008. 03/06/08-Hiralkumar Patel. received message from Mr. Ahmed. they installed six monitoring wells at site. will do monitoring for free product. sent email to Mr. Ahmed. asked him for groundwater samples also along with soil samples during well installation. also asked for product sample, if found free product in any well. received call from Mr. Ahmed. he mentioned that as per their proposed work plan, they had only planned to monitor wells for any free product and not planned to collect any water samples. will monitor wells until site remediation begins during proposed site development. after reviewing work plan, spoke with Mr. Ahmed. asked him to take one groundwater sample from each of upgradient well in two sets (one set in corner of 11th ave & W 28th st and second set in corner of 11th ave & W 29th st). Mr. Ahmed mentioned that after defining groundwater flow direction, will take water samples from upgradient wells. 03/31/08-Hiralkumar Patel. received well installation and gauging report. abstract:- six monitoring wells installed- soil sample with highest PID or just above water table were collected during each well installation- wells were installed to depths of between 16 to 18 ft bgs and were constructed with ten ft of 2 inch dia. PVC screen- during well installation, 10 ppm PID were observed in soil samples collected at 7 to 9 ft bgs- petroleum odors observed in soil samples collected at 7 to 9 ft bg- no free- phase product observed on groundwater surface in any well- will continue to monitor wells monthly for the presence and possible volume of free-phase product- will do well survey to define groundwater flow direction and based on flow direction, will collect groundwater sample from most upgradient well 04/23/08-Hiralkumar Patel. sent email to Mr. Ahmed requiring submission of schedule for well survey and groundwater sampling from upgradient wells. 05/14/08-Hiralkumar Patel. received monitoring well gauging/sampling report. during well gauging, found groundwater flowing into west direction. based on groundwater flow direction, they collected sample from one upgradient well MW-1 and found MTBE contamination (187 ppb) in groundwater. no sample collected from well MW-6 which is upgradient from second set of wells located in corner of 11th ave and W 29th street. during previous study, highest contamination was found in boring SB-20 which is located near tank

S108636200

field in corner of 11th ave and W 28th street and recent upgradient groundwater sample from that end showed little contamination. will gauge wells for any free product. based on submitted report, the department will wait for complete remediation that will occur during site redevelopment. 06/11/08-Hiralkumar Patel. received monitoring well gauging report. wells MW-1 through MW-6 were gauged on 05/12/08. no product found in any wells. 06/20/08-Hiralkumar Patel. received monitoring well gauging report. wells MW-1 through MW-6 were gauged on 06/12/08. no product found in any wells. 07/30/08-Hiralkumar Patel. received well gauging report for July 08. no free product measured in any wells. 09/11/08-Hiralkumar Patel. received well gauging report for Aug 08. no free product measured in any wells. spoke with Mr. Bernstein, property owner. he mentioned that tenants has left the site. and Avalon Bay is in process of redevelopment. left message for Mr. Javits at Avalon Bay, new leasee. 09/12/08-Hiralkumar Patel. received message from Mr. Javits. spoke with Mr. Javits. Mr. Javits mentioned that all tenants have left the site and they have applied for permit for demolition of existing building. they are expecting to demolish all building in Jan./Feb. 2009 and from spring 2009 they will start excavation of the site. asked Mr. Javits to submit updates monthly. 11/20/08-Hiralkumar Patel. received remedial action work plan from Fleming lee shue. abstract:- petroleum contaminated soil will be excavated down to the depth of the proposed building foundation which, at approx. 12 to 15 ft bg, is below the groundwater table- post excavation soil samples will be collected- vapor barrier will be installed beneath the foundation and along the below-grade portion of the foundation walls- building sub-grade will be below the groundwater table, consequently, waterproofing will be necessary and a sub-slab depressurizing system is infeasible- petroleum-contaminated groundwater will be treated by using the ORC- will submit remedial action report and along with it will include a work plan to sample the groundwater monitoring wells; groundwater will be sampled quarterly for two years and analyzed for VOCs (no SVOCs) and for natural attenuation parameters spoke with Mr. Ahmed at Fleming lee-shue regarding ORC application and dewatering. Mr. Ahmed mentioned that during excavation for foundation, they will excavate below water table and will dewater the area. will collect contaminated water and treat on-site under dewatering permit from DEP (not received yet). once they reach to bottom of proposed excavation, then will apply ORC (dry or slurry) on soil and will install vapor barrier. asked Mr. Ahmed to submit dewatering plan. Dan Cole **DEP case manager for e-designation**NYC DEP Ph. (718) 595-4536 email: dcole@dep.nyc.gov 11/21/08-Hiralkumar Patel. received email from Fleming lee shue with copy of Nov. 2008 well monitoring well gauging report. no free product found in any wells. 12/22/08-Hiralkumar Patel. received monitoring well gauging report for Dec. 2008. no free product found in any wells during gauging on 12/19/08. 02/13/09-Hiralkumar Patel. received monitoring well gauging report for Feb. 2009. no free product found in any wells. 02/24/09-Hiralkumar Patel. spoke with Mr. Ahmed. he mentioned that due to financial problem, owner is planning to start project by end of 2009. Mr. Ahmed requested to decrease frequency of well gauging. based on earlier gauging reports, approved his request and asked him to gauge wells quarterly. spoke with Mr. Javits at Avalon Bay. informed him about quarterly monitoring. Mr. Javits asked to contact Ms. Loeb who is development manager at Avalon Bay. Rachael Loeb Development Manager Avalon Bay Communities, Inc. 275 7th Avenue,

S108636200

investigation. he mentioned that there is a partial basement in the building and contaminated soil in the basement area will be removed. but there will be no excavation in other areas where contamination found.3:55 PM:- spoke with Mr. Baranello at Avalonbay. Mr. Baranello is the construction manager at Avalonbay. informed him that based on results of test-pit investigation, the department requires further investigation/remediation at the site. he asked to send letter. Andrew Baranello **construction manager**AvalonBay Communities, Inc.275 7th Avenue, 25th FloorNew York, NY 10001Ph. (212) 309-1611email: andrew_baranello@avalonbay.com12/21/11-Hiralkumar Patel.1:27 PM:- left message for Jesse.2:15 PM:- sent email to Jesse and asked him to submit following information/document:- whether shoring removed- # of previously installed wells still at the site- scaled map including existing monitoring wells on property, excavation area with endpoint sample locations (as included in USTs closure report), test-pit sample locations, area of proposed basement excavation and its depth and location of soil borings installed in sep. 20072:42 PM:- received email from Jesse. he mentioned that shoring was removed shortly after tanks were pulled. he believes that two monitoring wells remain in the sidewalk of 11th Ave and possibly one more on the northern end of the site along 29th street. he will send scaled site map soon.12/30/11-Hiralkumar Patel.1:24 PM:- received email from Jesse including a scaled site map.01/03/12-Hiralkumar Patel.2:03 PM:- sent letter to Mr. Bernstein and Mr. Baranello requiring soil/GW delineation at location where contamination found during test pit investigation and quarterly groundwater monitoring/sampling for minimum of one year. asked to submit investigation/first quarterly gw monitoring report by 02/29/12. letter emailed to Mr. Bernstein, Mr. Baranello and Jesse.3:30 PM:- received email from Jesse requesting meeting to discuss the requirements.3:35 PM:- spoke with Jesse. he mentioned that based on investigation done in 2007, soil delineation has been completed. informed him that in 2007, Fleming Lee Shue installed boring SB-11 to SB-24 and groundwater contamination was found in SB-24 which is in area between test pits TP-18 and TP-19, but there are no borings in area of TP-20 or TP-21. also, as composite soil samples were collected from a test pit, soil profile and exact location of contamination is not available. informed him that the Department is looking for vertical and horizontal profile of the contamination. informed him that an investigation will be required by upgradient properties, if contamination is coming from off-site.Jesse mentioned that a temporary well should be installed as the wells will be destroyed during construction. informed him that the department may require additional rounds of groundwater sampling, so if they can install temporary wells with proper screen depth which allows survey and resampling, the department may agree with that.Jesse will talk to their client and call back.while reviewing the scaled site map with all boring/well locations, that Jesse sent on 12/30/11, found that soil borings/well points SB-1 through SB-10 were installed on lot 9 and 18 during 2007 investigation.3:57 PM:- spoke with Jesse again and asked him to submit complete data for investigation done on lot 9 and 18.4:22 PM:- sent email to Jesse and asked him to submit results of all environmental investigations done at the site (including all lots). email copied to Mr. Bernstein and Mr. Baranello.4:24 PM:- received email from Jesse including copy of Remedial Investigation Report which includes details about borings SB-1 through SB-10. abstract:- the site will be developed with two connected buildings: building 1 will be a 27-story tower along 11th

chlorinated compounds found in groundwater samples. DEC Jane will send email to DEC Cozzy.discussed with DEC Austin. after reviewing data, Austin asked for resampling of groundwater in the area where petroleum and chlorinated solvent contamination found.3:51 PM:- spoke with Jesse and informed him that the department requires groundwater investigation in Lot 18 also due to chlorinated solvent contamination. Jesse mentioned that there will be an active SSDS and vapor barrier at the site. he will talk to his supervisor and will call back.4:13 PM:- received call from Arnie Fleming and Jesse. Mr. Fleming mentioned that chlorinated solvent contamination has been found on other sites in neighbourhood, as they worked on multiple

S108636200

projects in area. Mr. Fleming suspects Evan Auto Inc. (located at 319 10th Ave, Manhattan) as the source of chlorinated solvent contamination. Mr. Fleming mentioned that construction at the site will start in approximately two weeks so permanent wells are not possible. Mr. Fleming proposed groundwater investigation via geoprobes. discussed with DEC Austin. he agreed with the proposal of groundwater sampling via geoprobes. 4:42 PM:- spoke with Jesse and Mr. Fleming and informed them that temporary well points are fine for required groundwater investigation along the northern and eastern property line (and also inside the property, if needed) where petroleum/chlorinated contamination was found. Jesse will send a site map with proposed geoprobe locations. 01/05/12-Hiralkumar Patel. 1:31 PM:- due to findings of chlorinated solvent contamination, sent email to DEC Jane with site history and a site map (including sampling results). email copied to DEC Austin and DEC Vought. 3:30 PM:- visited sites on Block 700. also reviewed available tax map, NYC DOB records, DEC PBS and Spills databases and found following:- there are total of 26 lots (1, 9, 18, 27, 29, 30, 31, 32, 34, 36, 38, 40, 42, 44, 45, 47, 48, 49, 53, 54, 55, 56, 57, 59, 60 and 61) on Block 700- Lots 1, 9 and 18 will be developed by Avalon Bay- total of 15 lots (27, 42, 44, 45, 47, 48, 49, 53, 54, 55, 56, 57, 59, 60 and 61) have common boundaries with the lots that will be developed by Avalon Bay- total of seven open/close spill numbers found on Block 700: 9811167 for Lot 27, 0700172 for Lots 32/34, 0701228/0702824 for Lot 36 and 9008960/0307633/0408382 for Lots 48/49- total of four PBS records found on Block 700: 2-350281 for Lots 1/9/18 (sixteen 550 gal USTs removed), 2-611326 for Lot 32 (three 275 gal waste oil ASTs in-service), 2-089559 for Lots 48/49 (one 4,000 gal gasoline UST removed in Oct. 2003, one 2,000 gal #2 oil UST closed-in-place in Feb. 2001, one 500 gal gasoline UST removed in Oct. 2003) and 2-611575 for Lot 60 (270 gal waste oil AST in-service) during subsurface investigation on Avalon Bay property in 2007, petroleum contamination was found in soil (at the groundwater interface in smear zone) and groundwater samples in the northeastern corner of Lot 1 and along northern line of western half of Lot 9. this contamination is southwest of the possible source at 524 W 29th Street (Lots 48/49) (spill #: 0307633, DEC Manager: Andre Obligado). Lots 48 and 49 are owned by same company. both lots are leased by Sean Kelly Gallary. spoke with Sean Kelly (212-239-1181) at Sean Kelly Gallary. he mentioned that after leasing both lots, they divided lot 49 in two sections and then sub-leased the eastern section of Lot 49 and entire lot 48 to Peter Blum Gallary. Mr. Kelly mentioned that the former gasoline tanks and associated excavation area was located under the eastern section of Lot 49. spoke with David Blum (212-244-6055) at Peter Blum Gallary. David mentioned that there are some monitoring wells installed on the property, but those wells are covered under the floor. there is an active remediation system on-site. during visit, found three monitoring wells on sidewalk, in front of Lots 48/49 (one to the west of entrance to Sean Kelly Gallary, one at the junction of two galleries and one at the eastern end of Peter Blum Gallary). Victor At West 29, LLC. **owner of Lots 48/49** c/o Victor Homes 3349 Highway 138, Building C Wall, NJ 07719 during subsurface investigation on Avalon Bay property in 2007, chlorinated solvent contamination was found in groundwater samples collected from Lot 9 (eastern half) and Lot 18. while searching for possible source, found an open spill number (0700172, DEC Manager: Ryan Piper) for Lot 32 which is occupied by Evan Auto Inc. the spill

S108636200

#: 0700172 was reported on 04/05/2007 as contaminated soil and groundwater was found on four lots (27, 32, 34 and 38) during subsurface investigation as part of proposed redevelopment. during this investigation, heavy PCE contamination (40,100 ppb) was found in soil from 0-2 ft bg. also, chlorinated solvent contamination found in groundwater samples. according to the site investigation report dated 12/27/2007:- Lot 27 (507-515 W 28th Street) is developed with a one-story (no basement) nightclub identified as Mystic- Lot 32 (319-321 10th Ave) is developed with a one-story (with basement) auto repair shop known as Evan Auto. basement used for storage- Lot 34 (323-325 10th Ave) is developed as a surface parking lot and is adjacent to the auto repair shop- Lot 38 (504-506 W 29th Street) is part of the auto repair shop and is located beneath the High Line (former elevated railroad tracks) Kadima Tenth Avenue SPE LLC. **owner of Lot 27**Maestro West Chelsea SPE LLC. **owner of Lots 32, 34 & 38**319 10th Avenue New York, NY 10001 Attn.: Abraham Heby Ph. (212) 265-3088 (917) 597-5371 01/06/12-Hiralkumar Patel. 2:20 PM:- received email from Jesse including a map with location of three proposed temporary well points: one in the northeastern corner of Lot 18, one in southeastern corner of Lot 9 and one in northwestern corner of Lot 9. Jesse mentioned that they will screen soils from these locations and sample groundwater from six temporary well points and three permanent wells on-site. samples will be analysed for VOCs only. based on historical data, need another five temporary well points: one in the area of SB-12/TP-26, one in the area of SB-24, one closer to TP-21 along norther property line (right under the Lot 49), one in the area of TP-23 and one in the area of SB-7. also need to move one well point in the area of TP-20. 2:30 PM:- spoke with Jesse. informed him that based on findings of petroleum and chlorinated solvent contamination in 2007, the Department requires additional temporary wells. 2:36 PM:- sent email to Jesse including a map with changes in proposed temporary well point locations. 3:14 PM:- received call from Jesse. as the area around SB-12/TP-26 will be excavated down to 12-13 ft bg as part of basement, Jesse asked to eliminate well point in that area. informed Jesse that if the Department receives written confirmation (email) from developer that basement area will be excavated down to 13 ft bg, then no need for well point in the area of SB-12/TP-26. Jesse also asked to remove one well point along the norther property line. informed him that the five well points along northern line is necessary to confirm the previous petroleum/chlorinated solvent data. also asked him to sample soil with high PID/odors/staining. he will talk to developer and will call back. informed him that all samples must be analyzed via 8260 full list. 3:42 PM:- sent email to DEC Jane including a site map with results of soil and groundwater samples from Evan Auto Inc. site. email copied to DEC Austin, DEC Vought and DEC Piper. 01/10/12-Hiralkumar Patel. 3:12 PM:- received email from Jesse including a work plan with proposed well locations. he proposed to install seven temporary well points on lot 9 and 18. groundwater samples from temporary well points and permmanent wells on 11th ave sidewalk will be analyzed for target compound list. well points will be installed tomorrow. 01/11/12-Hiralkumar Patel. 10:41 AM:- sent email to Jesse. informed him that analysis must include chlorinated compounds. also informed him that soil must be analyzed if shows any PID/odors/stains etc. email copied to Mr. Baranello, Jon Vogel (jon_vogel@AvalonBay.Com) and Marjorie Nesbitt (menesbitt@eightpointsam.com). 01/13/12-Hiralkumar Patel. 10:55 AM:-

subject site and Evan Auto.12:41 PM:- sent email to DEC Austin requesting case transfer.03/13/12-Hiralkumar Patel.3:57 PM:- received email from DEC Austin approving case transfer.03/16/12-Hiralkumar Patel. case assigned to DEC Hussein.*-*** "e" designation at site**4/2/12 - Obligado - Spill transferred to Obligado from Patel.4/3/12 - Obligado - I reviewed the ground water investigation report. According to the report, petroleum contamination on north portion of Block 9 and solventcontamination on Lot 18 is coming from off-site. However, no ground water contour map showing ground water flow direction was provided. I sent a letter disapproving of report and requiring a hydrogeologic investigation to confirm ground water flow direction and a geophysical investigaiton to investigate source of contamination on north side of lot 9. I also required a new RAWP to address new contamination found on Lot 9 and Lot 18. (previous RAWP only covered Lot 1) I sent a Stipulation Agreement and CAP to the following to be signed and returned by April 24, 2012:Property owner:East Side 11th and 8th LLC, c/o Marjorie E. Nesbitt445 Park Avenue10th FloorNew York, New York 10022 and developer:Mr. Marty PiazzolaAvalon West Chelsea275 Seventh Avenue, 25th FloorNew York, NY 10001Stips sent via certified mail, certified receipt #s7010 0290 0000 9758 2612 and 7010 0290 0000 9758 25854/16/12 - Obligado - DEC met with Avalon Bay, FLS, and AKRF. 4/17/12 - Obligado - Sent a meeting summary email to all parties:"This email summarizes our discussions in yesterday's meeting:Participants:DEC: Andre Obligado, Hassan HusseinAvalon Bay - Steven Spiro, Jon VogelFleming Lee Shue - Arnie Fleming, Jesse Mausner AKRF - Mark Godick - Avalon Bay is holding a 99 year lease on the property. AKRF is the on-site consultant responsible for field oversight. Fleming Lee Shue provides general environmental consulting.- The Development plans were discussed. Development is progressing quite rapidly. Steel sheeting is being installed to depth of 15 to 20 ft to excavate for a basement on the south portion of the site. Depth of the basement floor will be about 12 feet. Contamination found in vicinity of test pit 26 will be removed during basement excavation. Excavation will require some dewatering and groundwater treatment. A water proofing barrier will be installed under basement. All other areas will have an SSDS system and vapor barrier. - DEC McCabe in Albany is the manager of the up-gradient chlorinated p-site. In my discussions with Mr. McCabe, the source has not been confirmed yet.- The Department is in receipt of the geophysical survey, so this item from the April 4th letter is no longer required by the Department.- Since there were multiple potential on-site sources (17 USTs removed), no off-site source has been positively identified, and ground water flow direction has not been confirmed, the Department at the present time considers Avalon to be responsible for the clean-up of north side of Lot 9.- A hydrogeologic investigation will be performed to confirm the groundwater flow direction. FLS/AKRF will gauge and survey one of the existing off-site monitoring wells along 29th ave and add it to the existing 2 wells to determine groundwater flow direction. FLS/AKRF may install one monitoring well on-site to aid in the hydrogeologic investigation. FLS/AKRF will proceed quickly due to the installation of the hydraulic sheeting which may influence the groundwater flow determination. FLS will inspect adjacent properties to north to try to identify evidence of potential sources such as vent pipes.- Potential remedies for contamination of the gasoline impacted soil and groundwater along the north side of Lot 9 were discussed. Due to structural concerns in this area, and short time frame before slab

AVALON WEST (Continued)

S108636200

construction, chemical oxidation was determined to be the most promising remedy. FLS suggested pulsed injection to aid in oxidant dispersion due to tight river sediments. - Avalon is considering proceeding remediation of north side of Lot 9 regardless of source determination. If it is determined the source is off-site, Avalon would seek reimbursement from the Spill Fund. If source is determined to be off-site and Avalon chooses not to remediate this area, then the Department will consider a state-funded cleanup in this portion of the site. - The Department will hold off on the requirement to sign the Stipulation Agreement while the hydrogeologic investigation proceeds. - DEC will schedule a site visit in near future."4/24/12 - obligated - I emailed Jesse Mausner to inquire about the gw investigation. Response from Jesse "Hi Andre - We have a letter report prepared that is being reviewed by the client. We hope to send it over within the next day or two." 5/8/12 - Obligated - I emailed Jesse Mausner to inquire about gw flow investigation. Still has not been submitted. 5/11/12 - Obligated - I received Hydrogeologic and forensic report. 5/14/12 - Obligated - The report includes a ground water contour map showing flow to the west/northwest. The report claims 282 11th avenue is not the source of contamination on the north side of Lot 9. They provided a forensic analysis using BTEX ratios and comparing the BTEX compounds in the source areas to those found on Lot 9. The report points to auto repair operations on 29th street as possible sources as well as the former remediation site at 524 W. 29th st. The report claims the Site didn't have historic auto repair operations. 5/14/12 - Obligated - I emailed Steve Panter and requested historical sanborn maps of the block, which he provided. 5/15/12 - Obligated - I called Steve Panter of FLS and pointed out to him that the site did in fact have multiple auto repair operations. He revised the report and resubmitted it. Obligated - I emailed Steve requesting boring logs for TMW1, TMW3, TMW4, SB24 and SB9 in Lot 9 to see if there was any impact identified above the water table which could indicate an on-site source in the north side of Lot 9/18. I also asked for a revised contour map because the elevations in the table included in the map did not correspond with the elevations in the contour map. Jesse Mausner emailed me a new contour map. He explained the actual contour map was correct but the elevations in the table were not correct. The revised table had the correct elevations. I 5/18/12 - Obligated - I went to the site to look for potential off-site sources. I went to 548 W. 29th Street and asked the mechanic there if they had any oil tanks. He showed me an oil tank in the back of the station. The 275 gallon waste oil tank had no label and had secondary containment had about an inch of oil stained sand. There was evidence of multiple spills on the concrete as well as a fresh spill from a transmission removal. I spoke to the mechanic, who says the waste oil company comes once a month to empty the waste oil tank. During that process they lift up the tank and clean the oil soaked sand from the secondary containment. I pointed out the poor housekeeping issues to the manager, Zoar (718-869-4550, who showed up shortly after. They applied speedy dry sand to the spill areas. I also noticed manhole which may be an abandoned tank. This manhole coincides with the location of a 550 gallon gasoline UST from historical sanborn maps. The manhole also is in the vicinity of the vent pipe on the roof. The manager did not know anything about the manhole. Due to apparent PBS issues with waste oil tank and possible abandoned tank, I contacted Moses Ajuko to perform a PBS inspection of the facility. PBS #2-611575, owner: Raba H. Abramov

(212) 596 3673. Moses issued PBS violations. It is not clear whether this site is a source for contamination on 282 11th ave. Due to poor housekeeping, stained concrete indicating historical spills, and abandoned gasoline tank it is a possible source. Additional investigation will be necessary. While waiting for Moses to arrive, I spoke to the owner of 542 west 29th Street, which is also listed as an auto repair facility on 1994 sanborn. The site is now a fish packing warehouse. According to the property owner, John McGuire (212)-268-9169, they purchased the site in 1995. They don't have any oil storage since 1995 and he states there are no tanks on the site. He said prior to the purchase a site assessemnt was performed. I asked if I could get a copy of that assessment and he said the bank probably has it. I will follow up. He provided his contact information (212)-268-9169. I then when to visit the 282 11th avenue construction site. At the site I met Jeff of AKRF who is the on-site environmental consultant. We performed a site walk through. Development is in progress. Steel sheeting has been installed around the basement area of the future building. Concrete pile caps have been installed on east side of site. Jeff mentioned that a test pit was performed on 2/24/12 north of the sheeting and south of 542 West 29th street building. According to Jeff, contaminated soil with strong odors encountered at approximately 4 ft bgs. They continued excavating until 8 feet and very strong odors forced them to stop test pitting due to lack of air respirators and backfill. Jeff said odors were noticable from approximately 100 feet away. I asked him if they reached the water table during the test pit. He replied that they did not. I asked if they could open a shallow test pit in that area for me. He checked with site foreman. There was equipment in the vicinity of the test pit location that would need to be moved. We agreed to post pone until MOnday.5/21/12 - Obligado - I received a call from FLS. Due to thunderstorms, test pitting postponed.5/24/12 - Obligado - I went to the site for test pit. 2 test pits were dug behind the 548 west 29th street garage. In both test pits, no PID readings or visual evidence of petroleum contamination in the vadose zone. Strong gasoline odors were present in the saturated zone. This supports FLS assertion that contamination in the north portion of the site is from an off-site source and migrated to the site via ground water. I reviewed the ground water monitoring data for the 282 11th avenue site. No quarterly sampling was performed, only gauging. MW5 was installed but never sampled. I sent an email to Jesse Please perform another round of ground water sampling and collect a ground water sample from all existing monitoring wells including any newly installed wells for the hydrogeologic investigation and submit the results within 30 days. He responded back that they sampled MW6 and MW2 in January and they were ND for all compounds. He requested only to sample existing MW5 and newly installed MW7. I concurred. 6/26/12 - Obligado - I received an email from Jimit Shah at DEP OER. : "As discussed earlier today, spill-like conditions were encountered at the above referenced site (staining, elevated PID hits, petroleum-like odor, etc) on March 2nd and March 13th 2012 within the south-central portion of the site (within the TP-21 and TP-36 regions: see the attached site map). These conditions are attributed by one of the project's two environmental consultant (Fleming-Lee Shue-"FLS") to a 550 gallon UST encountered within the vicinity on February 22, 2012, and removed from the site on February 28, 2012. When clarification was requested from FLS as to whether or not a spill number was called in after the UST and surrounding

petroleum-impacted soils were discovered, OER was informed that DEC was made aware of the situation, and that a new number was not called in as this finding is linked to current spill number(s) on-site (06-03351 and 07-00587)."I responded that I was not aware of the spill like conditions associated with this tank. I requested the daily reports from OER. Jimit provided the daily reports.I sent an email to Jesse Mausner of FLS inquiring if they collected endpoint samples from the 2/28/12 tank removal and inquired as to the tank contents. Jesse responded they did collect endpoint samples and provided the analytical reports, which showed exceedences of CP51 soil clean-up levels in 3 of 5 soil samples. The UST bottom sample 7ft was the most contaminated with 7 exceednces of CP-51 in ug/kg: ethylbenzene: 19200isopropylbenzene : 4680n-propylbenzene: 131001,2,4-trimethylbenzene: 87,100 1,3,5 trimethylbenzene: 21,300m,p - xylene: 50,100o-xylene: 6890He also provided a tank removal affidavit which said the tank was filled with water and gas. I requested a site map with UST and sample locations, the AKRF field notes, and photographs as soon as possible. Jesse provided the site map and said they would provide additional information shortly.6/28/12 - I sent a letter to Avalon Chelsea West cc to Fleming Lee Shue which can be summarized as follows 1) The presence of contaminated soil under UST #17 on Lot 9 signified a discharge from that tank and should have been reported to the DEC within 2 hours as per NYCRR Part 613.8. 2) This data should have been included and considered in the forensic analysis submitted 5/15/12 which investigate potential sources of the contamination found on north side of that lot. The Department rejects the Forensic Report as it was based on incomplete data. 3) The leaking UST on Lot 9 is the probable source for the contamination on norht side of Lot 9. A RAWP for the remediation of this area must be submitted prior to foundation slab construction. 4) A Stipulation Agreement is attached to the letter which must be signed by 7/6/12 or case would be referred for enforcement. 5) The Stip includes a CAP which requires submission of a RAWP within 30 days to remediate the entire site. Letter sent via email.7/12/12 - Obligado - DER Staff met with the developer and consultants. The developer agreed to do a soil boring investigation to confirm whether on-site tanks are source of the petroleum contamination on the north side of the property. Fleming Lee Shue plans to submit a RAWP for chemical oxidation injection system beneath building on the north side of the property. The developer submitted geotechnical reports which they say support their claim that excavation in not feasible. DER Staff forwarded the reports to technical support staff in Central Office. DER stated no objection to continued construction on condition that contaminated area north of the sheeting is accessible for additional investigation and remediation.7/17/12, - Obligado - DER Staff was involved in a conference call between OER, Fleming Lee Shue (FLS), and AKRF. FLS and AKRF will provide daily reports to the DEC and OER on site activities. DEC informed FLS that the Department is only to be notified of spill in case of discovery of new source such as a tank, leaking drum, etc. In the call, AKRF notified DEC that a crushed drum was discovered during excavation which contained about 5 gallons of oil. DEC requested identification of product. 7/27/12 - Obligado - Excavation for the building basement is on-going at the site. Slab construction on the east and north portions of the site is on-going. Central Office Technical staff reviewed a Geotechnical Report submitted by Muesler Rutledge regarding feasibility of excavation

north of the sheeting adjacent to buildings. CO technical staff agreed with the conclusions in the report, that excavation north of the sheeting was not recommended. A letter report documenting soil sampling north of the basement sheeting was submitted by FLS to the Department. 8/22/12 - Obligation - DER Staff reviewed the results of soil and ground water investigation along the sheeting line outside the proposed area of excavation which revealed benzene concentrations in ground water in excess of 6000 ug/L down gradient of the former USTs. The investigation confirms the on-site USTs are a source of the petroleum contamination in ground water. DER sent another Stipulation Agreement to the RP for signature within 15 days with the requirement to submit a Remedial Action Plan to remediate the entire site. 9/17/12 - Obligation - DER Staff received a fully executed Stipulation Agreement. According to the Corrective Action Plan, the due date for an amended RAP is 9/24/12. 10/5/12 - Obligation - DER Staff completed its review of a Revised Remedial Action Work Plan. DER staff disapproved of the plan and sent a comment letter to Avalon Bay with the requirement to submit a revised plan within 15 days. 10/15/12 - Obligation - DER Staff met with the RP and their consultants to discuss the Department concerns. Based on the discussions, Avalon will submit a revised RAWP. 11/5/12 - Obligation - DER approved a RAP for chemical oxidation. 1/30/13 - Obligation - DER Staff met contractors and consultants on-site to inspect the progress of remediation. The foundation slab on the south portion of the site is nearly complete. The midrise building is under construction and at the 4th story. We did a walk through of the remediation area. The consultants showed me the injection and monitoring wells that were installed. They are having difficulties due to congestion with all the construction. They need to reinstall wells that were destroyed and install one more well in a location that was not accessible. They anticipate injection in February. 9/12/13 - Obligation - Update from Steve Panter - "As you know, we completed the chemical treatment on May 16 and were waiting until the oxidant fully reacted. Recent monitoring (no sampling, groundwater parameters only) has shown that the oxidation reaction is complete. Consequently, we plan to complete the post-treatment soil and groundwater sampling in the next one to three weeks. MW-7 and MW-3 were destroyed due to construction. We plan to sample groundwater and use one of the injection wells (IW-3 or IW-5) in lieu of MW-3. MW-7 and MW-3 will be re-installed (MW-3 if possible) and sampled during quarterly groundwater sampling. Please contact me if you have any questions or comments." 10/11/13 - Obligation - Update from Steve Panter: "We are planning to collect the post-treatment groundwater samples next Tuesday and Wednesday of next week. On Thursday and Friday, we plan to re-install the two monitoring wells damaged during construction, MW-3 and MW-7. We will also collect the post-treatment soil samples at that time (in the two soil ports) and seal the three injection wells with leaders that extend to the bike room. We plan to re-install both wells with flush-mount casings. Re-installation of MW-7 requires a smaller rig that can fit between the corridor walls that now frame that location. This limits the drill rig's power, and means we may have difficulty getting to the desired depth. We will attempt a 1-inch-diameter well in this location with a 10-ft pre-pack well screen to increase the chance of getting to depth. If not successful, we may have to install a 1-inch-diameter well with no sand pack. The attached photo shows the location of MW-7 as it appears now. MW-7 will go near the cart in the back of the photo. Bear in mind the schedule is subject to change

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"Con Ed e2mis #146784:1/17/2003 @ 11:40At 11:15 Reiter # 27277 of I&A reported to me that while doing switch repairs he discovered in V-853 approx 5 gallons of dielectric fluid in the structure as the result of a Bottom Leak. He was working on Feeder 13M53. The location is at 628 W.28 st & 11 Av. No fire/smoke was involved, no injuries, weather did not contribute, No private property was affected. No substantial cracks observed, no sump verified, no sewer connection as per Conduit plate # 22-C-3. There is Dielectric filled equipment in the structure. The source of the spil is the Tranformer and the cause is a Bottom leak. Environmental tag # 18352 was hung. Two samples for PCB and ID will be taken and courier called for pickup. Chain of Custody # BB 04312 will be used for this incident. Baloneys and absorbent pads placed around the Transformer and contained the spill. The Feeder is being requested taken out of service OOE / 2 to schedule cleanup. Equipment is a Westinghouse year 1961 with Serial # 2200389 with a capacity of 290 gallons and 13 PPM as per "Cindy". It is a Class v-4 and 500 KVa.1/17/2003 @ 12:27 hrsI spoke to Shift Manager M Barry in the Manhattan Control Center and he informed me

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "RODRIGUEZ"E2MIS 151323On 12/1/03 at 17:25 W. Zuk # 85848 of W. 28 st transportation reports a spill of gasoline.He states that at 17:15 1 qt. of gasoline spilled from the back of a contractors vehicle (Transclean) onto the ground. This was near a 3' square drain that previously had a baricaides (a board with rubber seal that was provided by Transclean) around it. However about 8 oz has leaked past & into the drain.Additional diapers were put down around the drain. The spill has stopped at this time. He also says that in this 3' drain there is about 60 gallons of water.Wilson Renalds of Clean Harbors will have a truck & crew to drain & clean the liquid that is still in the drain. They should be on location at 8 pm.There was no fire or smoke involved. No private property was affected. No injuries were related to the spill. Weather conditions do not contribute to the hazard of the spill.Update 12/12/03Cleanup completed by Clean Harbors on 12/01/03 @ 2230.
Remarks: 8 oz of gasoline leaked from a box truck into the sewer but it is now contained and no more is leaking out.

DEC Memo: 1/23/07 - Raphael Ketani. I spoke to Robin Wilson at (212) 967-2212. She said that the spill happened when one of the workers disconnected a hose from a machine. She said that it was all cleaned up. Based upon my conversation with Ms. Wilson and the successful cleanup of the small amount of oil spilled, I am closing the spill case.
Remarks: SPILL WAS ON SOIL AND ASPHALT, SPILL AMOUNT ROUGHLY 1 QUART:

DEC Memo:

letter to be sent Last update by JBMCCULL on 12/20/05 - transferred back to R-23/5/08 - Austin - Assigned to Ketani for further investigation - end4/21/08 - Raphael Ketani. The spill occurred on 5/11/89. The UST was filled with water and the top of the tank and the cement were seeping oil. The tank holds #6 oil. Richard Breslow, 559 W. 45 Street, NY (212) 265-4023 was on the original spill report as the spiller. There is no file for the case. I checked Property Shark, NYC Property Tax listings, and ACRIS and found the owners as: 27th Street Property, LLC, c/o Centaur Properties, LLC, 35 E. 21 Street, 3rd Floor, NY, 10010; and Gaiety Investments, Ltd., c/o Hartman & Craven, LLP, 488 Madison Avenue, NY, 10022. The PBS registration is for 536 W. 27 Street. The number is #2-476560. It shows a 5000 gal. tank that was closed, but used to contain #6 oil. I sent CSLs to both 27th Street Property and Gaiety Investments, Ltd.

4/23/08 - Raphael Ketani. Joe Graceson of Centaur Properties (212) 308-4443 called and left his phone number in a voice mail message. I made contact with Mr. Graceson. He said that Centaur is the sole owner. He said that the building uses gas only. The building was bought from Gaiety a little while ago. Centaur has had little cooperation from Gaiety in obtaining old records. He asked for any records that DEC has. I told him we have nothing. He asked what the next step would be if he can't find any information regarding the cleanup. I told him that Centaur will have to hire an environmental company to do an investigation and cleanup. I told him that DEC will need to receive the investigation plan, the site investigation report, the remediation plan, and the remediation report. He said he understood. With that, the conversation ended. 4/28/08 - Raphael Ketani. Steve O'Connell of Hartman & Craven (212) 836-4933 called. He said he represents Gaiety. He said that his company was involved when Gaiety first purchased the property and when they recently sold it. He said that Gaiety has no involvement with the site. 5/28/08 - Raphael Ketani. Mohammed Ahmed of Fleming Lei Shue called and said that he can't find any records or plans showing where the fuel tank used to be. He asked whether DEC had any records. I told him "No." He said he will try to put together an investigation plan. He said that he thinks he has a general idea of where the tank used to be. I told him that it may "boil down" to just doing some geoprobing all over the basement. He said that may be what will happen. 5/29/08 - Raphael Ketani. Mr. Ahmed called. He said that he found a 1 page document from the NYFD stating that the tank was removed. I told him to send the document to me. I also told him that this doesn't preclude doing a soil investigation. He said he understood and that he will send a proposal for the work to be done. I received the Fire Department document by FAX from Mr. Ahmed. 6/3/08 - Raphael Ketani. Today I received the site investigation plan dated 5/29/08 via e-mail from Mr. Ahmed. I reviewed the plan, found it acceptable and e-mail Mr. Ahmed to go ahead with the work. 8/15/08 - Raphael Ketani. In preparation for case transfer, I am annotating the database as regards what needs to be done at the site to resolve the alleged or known environmental contamination. Followup is needed to see whether Fleming Lei Shue conducted the investigation and to get a copy of the report. Mr. Ahmed (212) 675-3225 called me. He said that the report is complete. He said he will send it, but only a little contamination was found on the concrete slab that used to support the tank. He said the groundwater has a little benzene, but this is not from the tank as it had #6 oil. He said the benzene levels are in the single digits to about 19 ppb. 09/02/08-HRAHMED-Returned Mohamed of Flemming Lee Sue call and left a message to call back. 09/03/08-HRAHMED-Mohamed sent me Limited Site Assessment Report with end point sample analyticles. As per the report, "New York City Fire Department (FDNY) recordshave indicated that the UST has been removed from the Site". 09/24/08-HRAHMED-Met with Mohamed of Flemming Lee Sue. No visual sign of affected drain or pit, no odor noticed. The opening of the basement is small. The base floor is a concrete finished basement. It used to be a club. this case is closed.

Remarks: BURIED UNDERGROUND TANK FILLED WITH WATER BUT SURFACE SOIL AROUND TANKTOP & CEMENT IS SEEPING WITH OIL, OIL WAS SAMPLED.

DEC Memo: 1/18/06 - Performed site inspection. Difficulty finding the building as it is currently 261 11th Avenue (inclusive 271). Building sup't Ali provided access to the basement. He was employed by this building management and recalled the spill. He knows the spill amount is a gross overestimation. Noted 2 large aboveground petroleum storage

DEC Memo: 03/15/07-Vought-File review by Vought:Letter from American Environmental Solutions (AES)- Brain Pendergast (ph:631-475-0020 fax:631-475-0025) to DEC Falvey-12/19/06: "Atlantic Development Group, LLC has retained Brinkerhoff Environmental Services, Inc. as the environmental consultant and American Environmental Solutions, Inc. (AES) as the remediation supervisor...". In 9/06, AES removed one (4000-gallon) diesel UST and three (4000-gallon) gasoline USTs from the site. "The tanks were encased in concrete and there was no evidence of a petroleum release". "A small amount of contaminated soil was located in the area east of the former pump island". Approximately 20 tons of soil was excavated in 11/06. Revised PBS application being submitted by AES. Five PBS violations found by DEC Falvey during inspection.Remedial Action Report (Brinkerhoff Environmental-732-223-2225). Site was formerly occupied by a gasoline station and auto repair facility. In 9/06 AES collected endpoint samples from waste oil UST excavation and "endpoint sampling was not conducted in the gasoline and diesel UST excavation since the USTs had been encased in concrete. No evidence of discharge was observed in the field in either the gasoline/diesel UST excavation or in the waste oil excavation". In 11/06 Brinkerhoff directed excavation of soil in the area of the dispenser island and the former sample location that reported VOCs. Report proposes No Further Action. Nine soil boring performed in 6/06. "PID readings, petroleum staining and petroleum odors were encountered in Soil Boring SB-4 and SB-9". Soil analyticals from boring show both samples were DILUTED: 260ppb benzene(SB9 3'bg),11100ppb xylene (SB9 3'bg), 7000ppb 1,2,4-trimethylbenzene(SB9 3'bg), 26000ppb 1,3,5-trimethylbenzene(SB9 3'bg), 370ppb MTBE(SB9 3'bg). SITE IS E DESIGNATED. Four endpoint samples collected from excavation of soils at SB9 show no TAGM 4046 Required Soil Cleanup Objective exceedences. SVOC exceedences attributed to urban fill material. Endpoint samples from excavation of SB9 collected at least ten feet away from initial soil boring

location. Samples collected from 11'bg at SB9 show VOCs below TAGM. Tank Closure Report (American Environmental Solutions-January 2007. "The site is currently being redeveloped for future use as a hotel." Five USTs were removed from 9/06-11/06 including one (1000-gallon) waste oil UST, three (4000-gallon) gasoline USTs and one (4000-gallon) diesel. "All lines and piping associated with the tanks located on the site were removed". Thirty tons of soil was disposed from site. Soil was excavated from the area just east of the pump island. AES collected five endpoint soil samples from waste oil excavation in 9/06 and Brinkerhoff collected soil samples in 11/06. No endpoint samples collected from gasoline and diesel USTs "because they were entirely cased in concrete" and "there were no holes in any of these tanks and no evidence of a petroleum discharge was observed". Report recommends no further action. Waste oil samples show no TAGM exceedences except for PAHs attributed to fill material. Endpoint soil samples collected from pump island excavations show no TAGM 4046 Soil Quality Objective exceedences except for PAHs attributable to fill material. 3/20/07-Vought-See also closed spill numbers: 8605682, 9410208, 9410209 and 8302630 (Open pin #). Vought spoke to DEC Krimgold who is preparing Consent Order for PBS violations and requested to add remedial requirements. Conference call with DEC Urda, AG Nyoff and AG Riggi showed that approximately 354K still owed to AG for past cleanup costs. Due to same ownership (Citigas) prior costs may be included in Consent Order. Vought submitted CAP for below requirements to DEC Urda. Riggi and Nyhoff also approved submission of Final ISR and closure of spill as any new funds spent by the DEC need a new PIN number since settlement already reached with old responsible party. Vought called Snyder, summarized consent order and left message to return call. DEC requires: 1) collection of water sample at SB9 due to shallow groundwater table and historical video for spill #8302630 showing bailer from monitoring well adjacent to pump islands with free product 2) expected depth of foundation 2) vapor barrier/SSDS 3/26/07-Vought-Received call from Matt Snyder (212-318-1650x253 cell 914-522-0759) and returned call and spoke to Snyder. Contact at Brinkerhoff that Urda is using is Doug Harm. Vought referred Snyder to Doug Harm at Brinkerhoff. DEC sent Consent Order to Doug Harm. 04/04/07-Vought-Received message from Doug Harm (732-223-2225) regarding site and returned call and left message to return call. 4/5/07-Vought-Received call from and spoke to Harm who received CAP for Consent Order. Brinkerhoff will collect groundwater samples on 4/10 and report will be submitted to DEC. Workplan submitted to DEP for their additional requirements and DEP will not approve plan until they receive plan for building. Building will not occur until Consent Order obligations are completed. ISR will be submitted to DEC. RAP may not be submitted for 90-120 days as owner not decided on how to develop property as of yet. 4/6/7-Vought-Vought called Harm who proposed 60 days for ISR and 180 days for submission of RAP as owner still undecided on development plans. Harm assured DEC Vought that development will not take place as permits cannot currently be obtained from DEP due to outstanding E designation requirements. Vought approved of proposed changes to CAP and submitted to DEC Urda. Harm also sent in letter with request as per Vought. 4/13/07-Vought-Reviewed Corrective Action Plan Extension Request dated 4/5/07 submitted by Brinkerhoff (Harm). Groundwater sampling scheduled to be conducted on 4/10/07. "An extension for submittal of the RAP of 180 days is requested". See above entry for 4/5/07 as 120 day extension for RAP is acceptable by

S108058323

Department. Vought sent email to DEP Naizaire requesting information on DEP project manager.06/04/07-Vought-Received email from DEC Nazaire that DEP project manager is Tracy Goldman (718-595-6443) and left message to return call.06/26/07-Vought-Received call from and spoke to Suman Khanna (718-349-0555) who put in foil request and he received detailed PDF report and was not aware of prior Attorney General action. 10/23/09-Vought-Received message from Harm (732-223-2225) on 9/28 that property being developed with residential apartments and that vapor barrier and SSD installed. Vought spoke to Harm and 3000 tons of soil was removed and post excavation samples were collected. Excavation occurred to water table. No sidewalk wells remain. DEC will receive closure and excavation report within the next couple of weeks (by 12/1/09). Vought called and spoke to NYSOAG John Nyhoff and informed him of property development.8/6/10 - Raphael Ketani. I took over the case from Jeff Vought of Spills who transferred to Unit A, Superfund Sites and Brownfields, within DER.On 7/11/06, oil contaminated soil was discovered during a site investigation. The site was a former gas station. The address is 303 10th Avenue in Manhattan. The consultant was Doug Harm of Brinkerhoff Environmental (732-223-2225). The site is located at 303-309 10th Avenue, Manhattan. The block and lot are 699 and 33. According to ACRIS, the deed shows that 303 10th Avenue Hospitality, LLC is still the owner of the property. Their address is 20 West 46th Street, 2nd Floor, NY, 10036. There are two PBS registrations. The earlier one, #2-601361, shows four 4,000 gal. USTs with gasoline and diesel fuel. They were installed on 9/1/98 and removed on 2/1/77. The second registration is #2-604322. There is one 250 gal. lube oil UST.I left a message for Mr. Harm (732) 223-2225 requesting the closure report for the site along with the groundwater results. Also, I spoke Mr. Vought regarding the site. He said that they were putting in the foundation for a building when he had the case.8/9/10 - Raphael Ketani. Mr. Harm called me back. He said that the last step in the investigation would be to install a monitoring well in front of the building. However, for a long time, there had been scaffolding in place which prevented any well installations. The scaffolding has finally come down and Brinkerhoff will install the well. The groundwater analytical results will be sent to the DEC in about 60 days. 10/26/10 - Raphael Ketani. Today I received the 10/5/10 Closure Report from Brinkerhoff Environmental Services, Inc. I began my review of the report.10/27/10 - Raphael Ketani. I finished my review of the Closure Report. According to the information contained in the report, almost all of the soil within the footprint of the former gas station was removed down to 13 feet from 5/27/08 to 3/17/09. Eight (8) soil end point samples were taken from 8/27/08 to 3/19/09 and indicated that there was no BTEX contamination and generally low concentrations of SVOCs. The only SVOCs that exceeded the TAGM standards were the benzo series and their associated combustion products. Given that only these analytes exceeded the TAGM standards, the soil results resemble those for historical fill. Groundwater samples were taken on 9/25/07, and 2/11/08 from wells MW-1 to MW-3. After 2/11/08, the wells were destroyed due to the foundation construction for the new apartment building. The results for MW-1 were in the thousands of parts per billion for samples that were taken during both rounds. The other two wells had non-detect or very low analytical results during the second round. A groundwater sample was taken on 03/19/09 from a test pit and the results indicated that the tested VOCs were non-detect, except for slightly elevated results

for MTBE and TBA. A later well, MW-4, was installed on 8/12/10 downgradient to the former location of MW-1 after the construction was finished in order to check the groundwater analyte concentrations. The analytical results for the sample that was collected on 8/26/10 were almost entirely non-detect. According to the Closure Report, a sub-slab vapor barrier and a passive vapor ventilation system were installed. Based upon the information in the 10/5/10 Closure Report, I have determined that the petroleum contamination has been remediated. Also, as a vapor barrier and passive ventilation system were installed, I have determined that there is no threat to the public or the environment. Therefore, I am closing the spill case effective today.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 09/25/95: PIN-4169 - ASSIGNED TO CHRIS FOR TRACKING PURPOSES.10/6/03
See also PIN 4169, spill #s 8605682, 8606807, 9410208, 9410209.1/8/04
Reassigned from Tomasello to K Foley.06/20/06: Re-assigned from Foley
to Yau. (Yau)06/22/06: Prepared and sent an old spill letter to
property owner through certified mail. A site investigation report
(SIR) is expected to be due on 07/22/06. (Yau)06/27/06: Owner called
to inquire about the spill. Stated that he brought the property
recently (around 2002) and had no idea where is the spill was. Told
him that DEC will look into it and call him back with the exact
location of the spill. (Yau)08/02/06: Owner called to request an
update to the site. Told him that a review is underway. Found that
DEC had a PIN job for this site. Unsure whether the cleanup is
complete. If the cleanup is incomplete, the owner might have to re-do
the cleanup. Will call owner back as soon as review is completed.
(Yau)10/16/06 Reassign from Yau to Chanda
(Chanda)12/12/06-Vought-Spill reassigned from DEC Chanda to DEC
Vought.03/20/07-Vought-File review by Vought:See also open spill
#0603967 at same location. Videotape-unknown date (circa 19884)-tape
showing well being bailed with free product thickness of
1".Registered CSL Letter sent by DEC Yau to Tenth Gas Inc (address as
per Property Shark).FOIL request from Brinkerhoff-8/18/06.Vought
called AG Bechard for status of PIN case. PIN case assigned to AG
John Nyhoff. Vought called Nyhoff and left message to return
call.3/20/07-Vought-See also closed spill numbers: 8605682, 9410208,
9410209 and 8302630(Open pin #). Vought spoke to DEC Krimgold who is
preparing Consent Order for PBS violations and requested to add
remedial requirements. Conference call with DEC Urda, AG Nyoff and AG
Riggi showed that approximately 354K still owed to AG for past
cleanup costs. Due to same ownership (Citigas) prior costs may be
included in Consent Order. Vought submitted CAP for below
requirements to DEC Urda. Riggi and Nyhoff also approved submission
of Final ISR and closure of spill as any new funds spent by the DEC
need a new PIN number since settlement already reached with old
responsible party. Vought called Snyder, summarized consent order and
left message to return call. 03/21/07-Vought-Left message for AG
Nyhoff to call Vought with status of PIN. Vought and DEC Urda spoke
with AG Nyoff and as per Nyoff default judgement was made against
former owner of property resulting in lean of approximately 354K.
3/26/07-Vought-Received ISR from Nyoff. Vought left message for Nyoff
to return call with which party was found responsible (Alex Goffman
or Westside Tripple Auto Repair).4/23/07-Final ISR submitted to DEC
Austin for review and spill closed by Vought.

BROWNFIELDS:

Program: BCP
Site Code: 477443

Actual:
15 ft.

Site Description: Location: The BCP site is located at 505 - 507 West 28th Street in New York City, New York County and has an area of approximately 0.51 acres. It is between 10th and 11th Avenues and is bounded to the north by West 28th Street and the south by West 27th Street. Commercial structures are adjacent to the east and west boundaries. Site Features: The site is currently vacant of operating businesses. Until recently, it included a large trailer body, sheds, and storage areas. Presently, there are no structures. The majority of the site surface is covered by a non-uniform, uneven concrete surface with the remainder having patches of asphalt paving and open soil cover with no vegetation. Current Zoning and Land Use: The site is zoned commercial (C6-3) and is located in a commercial and residential area of the West Chelsea section of the Borough of Manhattan. Past Use of the Site: The site has been occupied by several residential structures, laundry cleaning, metal works, manufacturing, motor freight storage, automobile repair and a scrap yard. Site Geology and Hydrogeology: Subsurface material present below the site includes historic fill from prior developments that may have been used to

stabilize soil or to elevate the existing ground. The fill includes concrete, brick, cinders, and other construction debris mixed, silt, sand and gravel and is generally present from 1-10 feet below ground. Below the fill the shallow subsurface soil at the site consists of sands and silts, glacial till intermixed with lean clay. Depth to bedrock ranges from 15 to 25 feet below grade. The surface geology of Manhattan generally includes very thin layers of unconsolidated glacial deposits underlain by bedrock. Groundwater at the site is encountered at approximately 8 to 11 feet below ground surface. Regional groundwater flow direction is westerly toward the Hudson River which is approximately 1,500 feet west of the site.

Env Problem: Soil: Recent investigations found no evidence of significant VOC contamination. Trimethylbenzenes and xylenes were present in one of the 21 soil samples at concentrations above their unrestricted use SCOs, but well below residential use SCOs. PAHs were observed in about half of the samples at concentrations indicative of historic fill. Metals are also present in soil at concentrations typical of historic fill and urban background. However, mercury concentrations ranged from non-detect to 69.6 parts per million (ppm). The unrestricted use SCO for mercury is 0.18 ppm; restricted residential is 0.81 ppm. Groundwater: Cis-1,2-dichloroethene (DCE) was found in groundwater samples from two wells near the north-west corner of the site at concentrations up to 260 ppb. DCE has been documented in up-gradient groundwater and is not due to an on-site source. Soil Vapor: The presence of chlorinated VOCs in soil vapor and groundwater presents the possibility of vapor intrusion to future on-site buildings. The maximum concentrations of tetrachloroethene (PCE) and trichloroethene (TCE) were detected along the west boundary at the respective concentrations of 308 micrograms per cubic meter (ug/m3) and 828 ug/m3. Four USTs were reported to be present on the site. Two USTs were exhumed in August 2013 and disposed of off-site. The presence of the other two tanks has yet to be confirmed.

Health Problem: The site is fenced and covered by concrete, people will not come into contact with site related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains its water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site related contaminants due to soil vapor intrusion does not represent a concern for the site in its current condition.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMO"9/27/04 - AUSTIN - SPOKE WITH JOEL LANDES,LANGAN ENGINEERING (212-479-5404) WHO HAD CALLED THE RD'S OFFICE ON THIS MATTER TODAY. HE SAID THEY WERE DOING SOME PHASE 2 WORK WHEN THEY MADE THEIR DISCOVERY. WANTED TO KNOW WHO THE PROJECT MGR. WOULD BE FROM DEC. GAVE HIM TIM'S NUMBER - REPORTED BACK TO RD'S OFFICE ON RESULTS OF CALLBACK - END9/28/04 TJDReceived a call from Joel Landes from Langan Engineering regarding contamination identified during a Phase 2 investigation which is being performed at the site prior to the construction of a new sports arena over the existing rail yards. Contaminated soils and separte phase petroleum were found in a boring adjacent to track 14. Langan/LIRR have requested a night meeting on site with DEC to perform a walk-thru. Tentatively scheduled for 9/30/04. Lew Wunderlick from LIRR was contacted in an effort to obtain additional information, he will be reviewing site plans in an effort to identify any possible sources of contamination.3/23/05 - Austin - Transferred from DeMeo to Tibbe - end04/06/06: Contamination discovered in a large void in a boring under tracks in the LIRR yard. Becuase of the fact that trains were using these tracks, the void could not be left unfilled. The void and boring were filled with grout. Soil and groundwater analysis from surrounding borings show minimal to nonexistant contamination. NFA signed by K. S. Tang.

Remarks: DOING SOIL BORINGS AT TRAC K 14: AND HAD HIGH PID READINGS: AND SOMETHING ALSO FLOATING: WILL SEND SAMPLE TO LAB

Tank Info:

Tank Number: 001
Tank Id: 64378
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

B01 - Tank External Protection - Painted/Asphalt Coating
F00 - Pipe External Protection - None
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
J02 - Dispenser - Suction Dispenser
L09 - Piping Leak Detection - Exempt Suction Piping
I05 - Overfill - Vent Whistle
G03 - Tank Secondary Containment - Vault (w/o access)
K00 - Spill Prevention - None

Tank Location: 3
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 09/01/2002
Capacity Gallons: 14000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DER Facility ID: 232628
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHAO/DO"12/19/02 - AUSTIN, DDO - TTF LETTER SENT1/11/06- DEC Piper spoke w/ Eugene Degan, (PRev. Owner Rep 845.294.7509) regarding tank test. He could not be sure though he thinks the tanks are still empty. He will look into this. Piper then contacted new owner Dov Hertz, Extell Group. 212.712.0633. He knows nothing and will have previous owner get info. Galden Frankel performed Phase I and II on property. Left message at GF requesting call back.1/18/06- DEC Piper spoke w/ property manager, Rob Scharf 212.712.6111. Stewart Dean Co. -212.695.3180. He will fax info. DEC Piper to review and inform Rob of additional work if warranted.2/6/06- DEC Piper spoke w/ Rob S. I explained to him that he was still in violation of PBS code. I have received analytical suggesting that there was no release at the site. The tank test results indicated a dry ullage leak. The tank is empty and still needs to be removed or closed iin place. As per Rob, he will be sending in the new appplication this week. I instructed him to include a line item that that due to the razing of the building, that they will remove the tank when the activities have been completed. Afterwards, he will need to update the PBS records to insicate that the tank has been removed. Upon review of a limited phase II investigation of the site performed by Galden Frankel, of the six soil samples taken from various locations throughout the site, no elevated constituents were detected. However, three GW samples were collected. The results indicate 1,040 ppb of MtBE and slightly elevated levels of PERC and its byproducts. 5/15/06- DEC Piper. Referred to Remediation.5/31/06 - reviewed file: MTBE was detected without other VOCs usually present in a petroleum release. The MTBE is likely the leading edge of an off-site impact. Low level of CVOCs are also detected. These CVOCs are only detected in GW with no soil contamination or other sources on site. Spill is closed, no NFA issued since no remediation was ever conducted at site. - KST
Remarks: they are going to abandoned the tank

Tank Number: 023-FBI002
Tank Id: 242242
Material Code: 0013
Common Name of Substance: Lube Oil

Equipment Records:

H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
F00 - Pipe External Protection - None
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
E00 - Piping Secondary Containment - None
G00 - Tank Secondary Containment - None
J00 - Dispenser - None
K00 - Spill Prevention - None
B03 - Tank External Protection - Original Impressed Current
A00 - Tank Internal Protection - None
D02 - Pipe Type - Galvanized Steel
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring

Tank Location: 2
Tank Type: Galvanized Steel Alloy
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/1996
Capacity Gallons: 500
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True

Material Name: Diesel

Tank Number: 021-V001
Tank Id: 242240
Material Code: 0022
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None
K00 - Spill Prevention - None
E00 - Piping Secondary Containment - None
B01 - Tank External Protection - Painted/Asphalt Coating
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
J01 - Dispenser - Pressurized Dispenser
D03 - Pipe Type - Stainless Steel Alloy
I02 - Overfill - High Level Alarm

Tank Location: 3
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/2000
Capacity Gallons: 275
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: CGFREEDM

Contact Phone: (973) 896-6185
DEC Memo: 08/28/11-Hiralkumar Patel.9:45 PM:- visited site. met Todd from Recovery. inspected boiler room. found water and oil in boiler room. Todd mentioned that they could not inspect the entire boiler room as water in rear of the boiler room is deeper and water level was rising. spoke with Mario, building super. he mentioned that there are no drains in the boiler room floor and only one sump pit in entire boiler room. sump pit has four pumps inside it. they had 3,000 gal vacuum truck which can not hold all the water/oil in the boiler room. also, they were not sure about condition in rear of the boiler room. absorbent pads were on water.as water level was rising, Todd was worried about impact to electric panels which is about 10" higher than water level in boiler room. Todd requested to turn on sump pumps to throw water only from bottom into city sewer system. he mentioned that by lowering water level, oil may impact the wall and other structure, but that can be cleaned easily with power wash at later time. but he was worried about impacting electric panels and other part of basement as water level was rising.after discussing with DEC Austin, approved Todd's request to turn on sump pumps so they can lower the water level in boiler room. after they remove most of the water (only), they will remove remaining water/oil into vacuum truck. asked Todd to secure sump area with absorbent pads and booms to prevent any oil get into city sewer system. also asked him to turn off pumps frequently to check boiler room for any unusual thing. asked Todd to call with update. Mario mentioned that the entire tank system is turned off.Mario Onichimiuk **building super**Ph. (917)

817-1927 Todd Hassold Recovery Environmental Services, Inc. PH. (973) 940-3144 (O) (973) 896-6185 (C) Fax (973) 940-3146 email: thassold@recoveryrsvs.com 08/29/11-Hiralkumar Patel. 9:45 AM:- visited site. cleanup crew was still on-site removing oil. two sump pumps were still working. currently, contractor is skimming off oil from top of water. after water level dropped, super inspected the rear end of the boiler room and found two buckets were knocked down during flooding and caused spill. inspected tank room which is in garage area. site has two 20,000 gal #6 oil ASTs. no spill inside the tank room. boiler room is right underneath the tank room location. as per super, no leak noticed from any fuel piping. asked Mario to call back for re-inspection, once basement is dry. 5:09 PM:- received call from Tom from Recovery. he mentioned that during cleanup, they found oil/water separator in back of the boiler room. he requested a site inspection. 08/30/11-Hiralkumar Patel. 11:00 AM:- visited site. met Tom from Recovery. inspected boiler room. Tom mentioned that sump pumps were turned off yesterday night and when they left, area around sump was clean. but they found more oil this morning. during cleanup last night, they found oil/water separator in boiler room. inspected oil/water separator. found oil on top of oil/water separator, but no indication of any oil overflowed the separator. two pipes enter into oil/water separator. one pipe goes to a loading dock above the boiler room (contractor will find out where this pipe comes from) and second pipe goes into a tunnel located at the west end of the boiler room. there is an hatch boiler room ceiling in area where the oil/water separator inlet pipe crosses to loading dock. tunnel is located along the boiler room ceiling in west end of the boiler room. this tunnel runs east-west and then north-south. this tunnel structure is completely within building footprint and underneath the loading dock area. found oil leak from the northern most end of the tunnel. currently active tanks are located right above the northern end of the tunnel and currently active supply/return lines running aboveground in tunnel. no sign of leak found from currently active lines. found two sumps in the tunnel: first along the western wall of the north-south portion of the tunnel and another along the southern wall of the east-west portion of the tunnel. found a pipe coming out of the western wall of the tunnel in the area south of sump in north-south section. Tom closed the valve on this pipe and water flow into the separator was dropped. as purpose of this inlet pipe was unknown, asked Tom to leave valve open. Mario mentioned that there were three 20,000 gal #6 oil USTs abandoned-in-place behind the western wall of the tunnel (north-south section). found oil seepage from the northern wall of the east-west section of the tunnel. as sump pumps in tunnel are connected to the oil/water separator, it looks like whatever oil seeped into the tunnel was thrown into oil/water separator. as there was no oil recovery from the separator, oil followed the water discharge pipe into the main sump. informed Mario that main sump pumps must not be used until the cleanup is completed as water coming into sump may be contaminated (dissolved phase). all water from basement must be disposed off as contaminated material. as per Mario, the former 20,000 gal tanks were under the loading dock platform. Mario gave copy of tank abandonment documents. as per the documents:- Don Carlo Environmental abandoned three (3) 20,000 gal USTs on 07/10/2001. tanks were abandoned using foam and lines were discontinued and closed- Malbro Inc. abandoned three (3) 20,000 gal USTs in Aug. and Sep. of 2005. tanks and all associated piping were filled with lightweight cellular concrete slurry mixture during

601 WEST 26TH STREET (Continued)

S104275653

inspection, found a 3,000 gal diesel AST for emergency generator. Mario mentioned that emergency generator is located on first floor. during inspection, found a coned vault in boiler room containing high voltage lines. this coned vault is located on other side of boiler room, opposite of the main sump in the boiler room. met with Sandy Hahn, property manager. informed her that leak in the boiler room, could be left over spilled material inside the concrete vault (if any) around the former 20,000 gal USTs. due to heavy rain over the weekend (harricane Irene), water may have entered around the abandoned tanks and pushed oil into the tunnel which end up into main sump via oil/water separator. asked her to submit a scaled site map with old/current tanks, piping, tunnel, sumps (in passage as well as boiler room) and oil/water separator. asked her to find out purpose of the pipe that comes out from the old UST area. also asked her to investigate in the old tank area. RXR SL Owner LLC. **property owner** c/o RXR Realty 601 West 26th Street, Suite 1260 New York, NY 10001 Attn.: Sandra Hahn **property manager** Director of Operations PH. (212) 400-2440 (212) 924-3880 (917) 574-4085 (C) Fax (212) 727-3752 email: shahn@rxrrealty.com alternate addresses: 601-649 West 26th Street, 600-650 West 27th Street, 245-259 11th Ave, 198-218 12th Ave PBS #: 2-600389, 2-604877, 2-607987, 2-611131 as per PBS #: 2-600389 (which is expired), site has/had following tanks:- three 20,000 gal ASTs in vault with access and currently active- three 20,000 gal #6 oil ASTs in vault with access and closed-in-place as per PBS #: 2-604877 (which is expired), site has one 10,000 gal diesel AST on legs. diesel tank installed in Apr. 2000. as per PBS #: 2-607987, site has one 275 gal waste oil AST on legs. as per PBS #: 2-611131, site has one 10,000 gal diesel AST in contact with impervious barrier. tank was installed in Jan. 2000. other spills #: 9100519, 9106840, 9304676, 9412158, 0311818, 0406966, 0407003, 0911011 spill #: 9100519 was reported on 04/12/1991 as 150 gal #6 oil spilled onto basement floor. oil spilled as water entered into tank through fill line. case closed. spill #: 9106840 was reported on 09/25/1991 as #6 oil spilled into tank room. case closed. spill #: 9304676 was reported on 07/14/1993 as 2,500 gal #6 oil spilled into tank and boiler room. case closed after investigation/remediation. spill #: 9412158 was reported on 12/12/1994 as 15 gal gasoline spilled onto road pavement. case closed. spill #: 0311818 was reported on 01/21/2004 as 4,000 gal #4 oil spill. spill was reported by anonymous caller. spill was closed and merged with spill #: 9304676. spill #: 0406966 was reported on 09/23/2004 by NYC Transit. they found petroleum odors and contaminated soil in boring installed in front of 601 W 26th street. this boring was installed as part of 7 line extension project. case closed and merged with spill #: 0311818. spill #: 0407003 was reported on 09/24/2004 by NYC Transit. they found petroleum odors and contaminated soil in boring installed in front of 601 W 26th street. this boring was installed as part of 7 line extension project. case closed and merged with spill #: 0311818. spill #: 0911011 was reported on 01/12/2010 due to dielectric fluid spilled in vault (probably vault in boiler room). case closed. found files on e-docs for spill #: 9304676, 0406966 and 0407003. review of documents under spill #: 9304676-*****1) 03/19/2002: Summary of Preliminary Findings:- John Raguso (from Emteque) met with Romeo Santos, president of Don Carlo Environmental- according to Mr. Santos, he was contracted to decommission three of the six tanks and convert two of

S104275653

the three remaining active tanks to #2 oil to fuel on-site generator- as per Mr. Santos, he pumped out and cleaned all six tanks, then filled three of the tanks with foam and lined the three remaining active tanks with epoxy- one of the remaining three active tanks (tank #6 on map) was refilled with #6 oil, after passed tightness test- two remaining active tanks (tank #1 and tank #2 on map) were in process of being converted to #2 oil to be used by on-site generators- Emteque advanced nine soil borings (SB-1 through SB-9) in the vicinity of the west side tank group- west side tanks are partially submerged in groundwater- approx. 3 inches of fuel oil was floating on top of the groundwater table in the vicinity of the west side tanks (near SB-3 and SB-4) and approx. 0.5 inches oil found on water approx. 75 ft downgradient from tank field (in SB-5)- due to product on water, no samples were submitted for analysis- during site survey, Emteque found at least two large ASTs in a truck loading bay at the southwest corner of the building and possible a third large tank in the Williams Communications unit (area north of west side tanks)- no fuel oil appeared to be leaching from any of the three masonry walls surrounding the eastern tank field2) 06/11/2002: Phase II Petroleum Contaminant Investigation:- advanced total of thirteen (13) soil borings- found refusal in eight (8) of the borings which were abandoned- the remaining five (5) borings (MW-1 through MW-5) were installed to 7 ft bg and converted to 2 inch monitoring wells- soil sample was collected at 6 ft bg from boring MW-1 due to the presence of mild, but noticeable, noxious odor- minor VOC contamination found in soil sample from MW-1 which was installed in southwest corner of the building- found sheen in wells MW-1 and MW-2 and 0.25 inch product in well MW-3- no product or sheen observed in wells MW-4 and MW-5- monitoring wells were sampled in two events: first event was conducted within one week of development and second event was conducted approx. two weeks after development- water samples from first round were analyzed for VOCs and SVOCs via 8260 and 8270, respectively- water sample from second round were analyzed for TPH via 8015B- minor VOC contamination found in groundwater sample from MW-1, MW-2 and MW-3 (maximum 86 ppb of Benzene in MW-2)- product sample collected from MW-3 for fingerprint and was identified as hydraulic oil <----- based upon field observations and analyticals results, two somewhat commingled contaminant plumes are present: free phase product on water which appear to be mixture of weathered #4 and #6 oil and a dissolved plume of a lighter hydrocarbon, which appears to be gasoline or a weathered kerosene3) 04/23/2003: Final Phase II Environmental Site Assessment:- during inspection by NYSDEC project manager in Dec. 2002, found oil seepage through the tunnel wall adjacent to the eastern tank field- in Dec. 2002, Emteque was informed that the building's boiler was being inundated with oil/water coming from the house tank (tank # 6), which is located in the eastern tank field- Don Carlo Environmental performed a tightness test on the tank and tank found leaking- this investigation was performed to delineation contamination around eastern tank field and to complete delineation of contamination (by installing more monitoring wells) found around the western tank field- Emteque installed three (3) 4-inch monitoring well through the sidewalk equally spaced around the northeast corner of the intersection of 12th Ave and 26th street- three wells (MW-6, MW-7 and MW-8) were installed to a depth of 14 ft bg with 10 ft of screen- wells were set approx. 7 ft into the water table- no evidence of fuel oil contamination was identified in wells- soil samples collected at

09/08/11.12:58 PM:- spoke with Eric at Emteque regarding missing initial spill closure report. Eric will check file and submit report, if available. Eric mentioned that they did Phase I report for Chase bank (lender) in 2010. Eric TelemaqueEmtequePH. (212) 631-9000email: eric@emteque.com 9/2/11-Vought-Received call from and spoke to Todd Hassold (Recovery Environmental Ph:973-896-6185) who noted that he had urgent issue on hand in that he was recovering approximately 25,000-gallons of oil/water mixture a day from the oil/water separator (source of water was seepage from adjacent Hudson River) and source of oil still undetermined. Hassold noted the liquid is mostly water with minor petroleum sheen. Hassold noted also that he was in the process of submitting a NYCDEP Discharge Permit Application to dispose of the water from the oil/water separator. Hassold noted that Clean Harbors was closed (disposal facility) and that he did not have the storage capacity for the 25,000-gallons per day over the weekend and such was requesting an emergency permit to discharge to the sewer. Vought spoke to DEC Elburn who noted that due to Hurricane (causing of flooding) that DEC had an emergency permit requirement exemption and as such no permit was needed for DEC. DEC Elburn noted however that NYCDEP also needed to be contacted (NYCDEP Leslie Lipton Ph:718-595-4730). Hassold called Lipton and as per Hassold, Lipton did not respond but Hassold was told by another DEP employee to call 311. Vought suggested that Hassold send an email with a description of the issue to DEC Vought as soon as possible so that he may forward email to DEC Patel, Elburn and DEP Lipton. Vought received email from Thomas Domke (VP Operations Recovery Environmental) confirming phone conversation but not including any details of issue. Vought sent reply email with cc to DEC Patel, Elburn and DEC Lipton that a full description is needed and that Vought on vacation for next two weeks and as such all parties should be copied on full description. Vought and all parties received full description and Vought reviewed description with DEC Water Unit Elburn and sent reply email that DEC had no objections to discharge to sewers as long as NYCDEP requirements were met also.09/07/11-Hiralkumar Patel.10:41 AM:- received call from Todd. he mentioned that NYC DEP approved water discharge to city sewer. now the entire boiler room is dry.10:50 AM:- received call from Mr. Borello. he mentioned that no dissolved contamination found in water sample collected from boiler room last week. asked him to submit result for review. he also mentioned that they are waiting for result of water sample that was collected to get DEP permit to discharge water from oil/water separator into city sewer system. currently, they are planning to drill some holes in tunnel walls for further investigation. Mr. Borello will submit scaled site map today.12:21 PM:- received message from Eric. he did not found spill closure report prepared probably in Oct. 2005.09/08/11-Hiralkumar Patel.10:22 AM:- received email from Mr. Borello including site map (including oil tanks on property), design of oil/water separator system and groundwater sample result. no dissolved contamination found in water sample. as per the submitted site map, the entire site has total of fifteen (15) tanks: - one 5,000 gal tank at the end of garage ramp (from W 27th street), owned by property owner- two 20,000 gal tanks (currently in-service #6 oil tanks) in loading dock area, owned by property owner- one 10,000 gal tank in loading dock area, owned by Broadview- one 3,000 gal tank (diesel tank) in loading dock ramp, owned by Level III- four 275 gal tanks on 3rd floor, owned by property owner- four 275 gal tanks on 4th floor, owned by Broadview-

two 250 gal tanks on 6th floor, owned by Level III reviewed PBS record again. PBS #: 2-600389 - three 20,000 gal in-service #6 oil ASTs in vault with access and three 20,000 gal closed-in-place #6 oil ASTs in vault with access. this PBS registration has expired in July 2006. as per PBS record, tanks owned by previous property owner. as per available information, the remaining three tanks were also closed-in-place in 2005. this PBS registration needs to be renewed/updated/closed with correct information (tanks closed/new property owner). PBS #: 2-604877 - one 10,000 gal diesel AST on legs/saddles. as per PBS record, tank owned by Wiltel Communications Group, Inc. this registration has expired in Dec. 2010. this registration needs to be renewed. PBS #: 2-607987 - one 275 gal waste oil AST on legs/saddles. as per PBS record, tank owned by Verizon. registration currently active. PBS #: 2-611131 - one 10,000 gal diesel AST in contact with impervious barrier. tank was installed in Jan. 2000. as per PBS record, tank owned by Level III Communications LLC. registration currently active. this registration may need to be updated because as per Mr. Borello, Level III owns a 3,000 gal diesel AST (which is located in loading dock ramp). 2:27 PM:- spoke with Timothy Kimball at Level III Communications. he confirmed that Level III owns 10,000 gal diesel tank which is located in loading dock area and a generator is located next to the tank. he mentioned that they don't own 3,000 gal diesel tank. he also confirmed that they don't have any day tanks on 6th floor. during conversation, he mentioned that Level 3 Communication acquired Wiltel Communications Group in 2007-2008. informed him that the tank registration under Wiltel Communication (for 10,000 gal diesel tank) has not been closed out properly. asked him to close the PBS registration that is under Wiltel Communications's name. Timothy Kimball Level 3 Communications LLC. (also owns Wiltel Communications Group) Ph. (720) 888-4744 email: timothy.kimball@level3.com 2:51 PM:- left message Gregory Myka (315-432-8486) at Verizon to confirm that Verizon only owns one 275 gal waste oil tank at the site. 3:05 PM:- left message for Mr. Borello and informed him that tanks' information provided on map is not accurate. 4:36 PM:- received message from Mr. Myka from Verizon. he confirmed that they have only one 275 gal waste oil tank at the site. they don't have any other tanks. 4:42 PM:- received message from Mr. Borello. he mentioned that he got tank's information from chief engineer. but they will do site survey and talk to each tenant to find out exact number of tanks and its owners. 09/09/11-Hiralkumar Patel. 9:18 AM:- visited site. inspected boiler room. no oil or sheen found on water in entire boiler room. boiler room walls/floor and other oil impacted structures were cleaned. found clean water going into main sump from oil/water separator. frac tank was on W 27th street, but wasn't connected to main sump. 9:27 AM:- spoke with Mr. Borello. informed him that there are multiple PBS records for the subject site. he requested copy of PBS records. 3:49 PM:- sent email to Mr. Borello including PBS records. asked him to submit all on-site tank's information (location, size, owner etc.) by the end of 09/16/11. informed him that PBS registrations must be updated/renewed immediately. email copied to Ms. Hahn. 09/14/11-Hiralkumar Patel. 10:43 AM:- spoke with Todd. he mentioned that insurance company requested an estimate for investigation. Todd is preparing the estimate and will submit to insurance company. 09/19/11-Hiralkumar Patel. received PBS application package in FedEx. as per submitted application, site has following tanks:- two 20,000 gal #6 oil ASTs in loading dock area; tank owned by property owner- one 5,000 gal #2 oil AST in

basement (at end of garage ramp from W 27th street); tank owned by property owner- one 250 gal #2 oil AST in generator room on 3rd floor; tank being used to start up the generator; tank owned by property owner- one 250 gal #2 oil AST on 3rd floor along 12th Ave side by Verizon; tank being used to start up the generator; tank owed by property owner- two 250 gal ASTs on 3rd floor along 11th ave side; both tanks are closed-in-place; tanks owned by property owner- one 10,000 gal diesel tank in loading dock; tank owned by Broad View Network- one 250 gal #2 oil tank under the generator in central office on 4th floor; tank owned by Broad View Network- one 250 gal #2 oil tank closed-in-place in central office on 4th floor; tank owned by Broad View Network- one 250 gal #2 oil tank under the generator in data center on 4th floor; tank owned by Broad View Network- one 250 gal #2 oil tank closed-in-place in data center on 4th floor; tank owned by Broad View Network- one 10,000 gal diesel tank in loading dock (PBS #: 2-611131); tank owned by Level 3 Communication- one 247 gal waste oil tank in basement (PBS #: 2-607987); tank owned by Verizon- one 1,000 gal waste oil tank in basement; tank owned by FBI- one 500 gal oil tank on 2nd floor; tank owned by FBIthere is no information about 3,000 gal AST observed in loading dock area.09/20/11-Hiralkumar Patel.12:18 PM:- received message from Mr. Borello.4:29 PM:- spoke with Mr. Borello. he mentioned that they drilled some holes in both side tank vaults and found oil pouring out from holes. as such they will break larger access to these vaults for further inspection/cleanup. he will send pics that he collected today. he will also schedule a site inspection, once larger holes made in wall.4:31 PM:- receive email from Mr. Borello including a pic and a video showing oil pouring out of vault.09/23/11-Hiralkumar Patel.1:18 PM:- received call from Todd. he mentioned that they drilled small holes in both vaults and found product coming out from eastern vault only. only water came out through holes in western vault. based on that observations, they made 18 inches by 24 inches hole in western wall of the eastern vault (vault towards the boiler room). found free product in the vault. Todd mentioned that the hole is about 2 ft above the product level in vault, so they are not concerned about overflow through this hole. as there is heavy rain for today and tomorrow, asked Todd to secure the hole to prevent any spill in boiler room, if water level rise in vault. scheduled a site inspection at 3:30 PM on 09/26/11.1:55 PM:- spoke with Mr. Borello. informed him about possibilty of oil overflow from hole in eastern vault due to heavy rain. Mr. Borello has already spoken with building management/super and they will inspect area frequently. if any spill noticed, they will call contractor for cleanup.also informed Mr. Borello about no information on PBS application about 3,000 gal tank observed in loading dock area. Mr. Borello will confirm that and will submit revised PBS application.09/26/11-Hiralkumar Patel.3:30 PM:- visited site. inspected hole made in eastern tank vault area. found free product and water in hole. the area behind the wall was filled with construction debris and filled with large concrete/stone pieces. met Ms. Hahn, Todd, Tom and Mike. informed them that the department requires delineation of soil/groundwater contamination on north and east side of eastern tank vault. no investigation needed on west and south of the eastern tank vault (as it is in tunnel area). Tom mentioned that they only found some water from holes mades in western tank vault area. asked Mike to prepare a scaled site map for area around tank vaults. asked Ms. Hahn to submit an investigation work plan for delineation.during meeting, Mike confirmed that the 3,000

S104275653

gal diesel AST observed in loading dock area is owned by Broad View Network and there is no 10,000 gal tank owned by Broad View Network. Mike will submit revised PBS application to DEC Nick. forwarded previously received (incorrect) PBS application (which includes a check) to DEC Nick. asked him not to process application as a new updated PBS application will be submitted. 10/12/11-Hiralkumar Patel. received email from Ms. Hahn (at 11:39 AM on 09/30/11) including copy of revised PBS application and letter describing tank owners. PBS application was sent to PBS unit. as per revised tank owner letter, Broad View Network owns 3,000 gal diesel tank in loading dock and not the 10,000 gal diesel tank as mentioned in earlier PBS application submitted on 09/19/11. all other tank info is the same. 10/26/11-Hiralkumar Patel. 4:18 PM:- received email from Joe Horowitz (Horow137@aol.com) including copy of letter from DEP with conditional authorization for water discharge. 11/02/11-Hiralkumar Patel. 3:21 PM:- received email from Mike including a draft work plan for review. he proposed to install nine soil borings which will be converted to monitoring wells. these borings/wells are proposed around two sets of abandoned USTs. draft work plan doesn't include a work schedule. also need a site map with structures in basement (tunnel, sumps in tunnel, main sump in boiler room, oil/water separator and boring/well locations). 11/14/11-Hiralkumar Patel. 9:45 AM:- spoke with Mike. informed him that the draft work plan looks fine except it is missing two things: work schedule and a site map with structures in cellar (tunnel, sumps in tunnel etc.). he will submit final work plan. 02/03/12-Hiralkumar Patel. 4:31 PM:- left message for Mike. 4:32 PM:- sent email to Mike, Ms. Hahn and Todd inquiring update. 5:08 PM:- received email from Mike. they are in process of obtaining bids from drilling companies and will start work once contractor is selected. he mentioned that oil/water separator is working fine and no additional oil observed in basement. 02/07/12-Hiralkumar Patel. 2:13 PM:- sent email to Mike and asked him about schedule for contractor selection. also asked him about the amount of oil recovered since the oil/water separator turned on. email copied to Ms. Hahn. 02/21/12-Hiralkumar Patel. 11:15 AM:- received email from Mike. they are in final stage of hiring drilling contractor and will schedule work shortly. till now, they recovered less than 55 gal of oil. 07/24/12-Hiralkumar Patel. 2:27 PM:- received email from Mike. they have installed numerous borings and wells at the site. they are having some logistical problems in few areas and requested a site visit. 07/26/12-Hiralkumar Patel. 3:42 PM:- left message for Mike. asked him to submit status report for work done till now, prior to any site visit. 3:47 PM:- sent email to Mike and asked to submit status report for work done till now. informed him that site visit can be done only after completing review of the additional information. email copied to Ms. Hahn. 07/27/12-Hiralkumar Patel. 9:51 AM:- received email from Mike including site map and field notes. as per field notes, four wells installed at the site: two wells (Point A and Point B) on the west side and two wells (Point G and Point H) on the east side of the former tank field. fuel oil smell noted during installation of wells Point A and Point B. Mike mentioned that a third well could not be installed on east side (in the FBI space) due to refusal. he also mentioned that driller is hesitant to drill in the boiler room due to possible flooding. 11:28 AM:- spoke with Mike. he mentioned that installation of four wells was completed on 07/23/12. dark soil and petroleum odors were noted during installation of wells Point A and Point B on the west side of

S104275653

the tank field. no sign of contamination observed in wells on east side (Point G and Point H) in FBI parking space. he does not know about any product on water as wells are not developed yet. asked him to develop the four wells, define site-specific groundwater flow direction and collect groundwater samples for VOC/SVOC analysis. informed him that wells should not be installed in basement boiler room due to possible flooding issues. asked him to submit detailed boring/well logs for review. 11:47 AM:- sent email to Mike and asked to submit boring/well logs, results of groundwater samples and site-specific groundwater flow direction by the end of 08/20/12. email copied to Ms. Hahn. 09/07/12-Hiralkumar Patel. 11:53 AM:- received email from Mike including soil boring logs and soil/gw data. received boring logs for borings Point A, Point B, Point G and Point H. Point A and Point B were installed in RXR Parking Garage and fuel oil smell noted in both borings at 10 ft depth. wells were installed to 25-30 ft depth in Point A and Point B. borings Point G and Point H were installed in FBI parking space. in Point G, bedrock encountered at 16 ft depth. found PID readings in Point A and Point B, but PID unit is not included in logs. as per lab report, four soil samples collected. one soil sample from 10 ft depth from each of four borings. no VOC contamination found in soil samples, but some SVOC compounds were detected (below cleanup standard) in soil samples. as per lab report, four groundwater samples collected from borings. no contamination found in groundwater samples. the site map does not show location of Point H. needs revised boring logs (with PID unit) and site map (with boring locations). 10/03/12-Hiralkumar Patel. 2:28 PM:- sent email to Mike. asked him to submit revised boring logs and site map. also asked him about amount of product removed till date using on-site recovery system. email copied to Ms. Hahn. 11/26/12-Hiralkumar Patel. went to site for inspection to see impact after hurricane Sandy. met with Mario. he mentioned that the entire basement was full of water, but no more oil observed on water. the oil/water separator, as part of the on-going cleanup, was emptied out right before storm. as boilers were damaged during storm, they have temporary boilers on street. they are also in process of converting to #2 oil. 01/15/13-Hiralkumar Patel. received message from Mike (at 1:11 PM on 01/14/13). he mentioned that he is waiting for response for data he submitted on 09/07/12. 11:33 AM:- sent email to Mike and informed him that the department responded on 10/03/12 and asked for revised boring logs and product recovery data, which has not received yet. 11:37 AM:- received email from Mike including copy of email that he sent on 10/09/12. email included revised boring logs and site map. 12:14 PM:- received email from Mike. they recovered less than 55 gal oil since oil/water separator installed. reviewed available boring logs, site map and sample results. borings A, B, G and H were installed to a depth of 25-30 ft bg (except boring G which was installed at 16 ft bg). maximum PID reading of 2 ppm was recorded at 10 ft in boring B which is located southwest of the former tank rooms. soil and groundwater samples were collected from these four borings. no contamination found in soil or groundwater samples. 12:23 PM:- spoke with Mike. asked him to submit depth of borings/wells and former tank room reference to single point. 3:14 PM:- received email from Mike. he mentioned that points G and H inside the FBI space were to a depth of 15 ft and would be below the 6 USTs that were closed in place. he also mentioned that points A and B were advanced to a depth of 20 ft but from street grade and are not below the USTs. 01/30/13-Hiralkumar Patel. discussed with DEC Austin. based on

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"05/18/2001Reassigned from Tomasello to Demeo3/25/2004 Reassigned from Demeo to Sangesland2/28/2005 Sangesland received a note from John Raguso stating that Emteque was going to begin it's remediation process at the site. The contractor will mobilize and then clean and close the remaining tanks onsite. Once the permits have been finalized, the contractor will then begin the major construction phase of the project to break ground, put in the required shoring and conduct the required remediation/soil removal activities.Contact: John Raguso 631-271-66227/7/05 Excavation has begun on the western tank field. When all soil is removed down to the water table (10-13 ft) the pit will be kept open and a vac truck will be on site for several days to vac out any petroleum floating on the water table. The site has several structural issues with surrounding buildings and a "Security wall"Several end points will be taken, but we already know that this whole area was "coal ash fill" from the late 1800's. We will expect to see SVOC's, but we do NOT want to see any VOC's. They will dig down to the water table, so that is as much soil removal as can be done. This work (on western tank field) should be finished by 7/15/05.Then similar work will be done on the eastern tank fieldJohn Raguso cell #646-529-65313/13/2006 Sangesland completed the review of a "Spill Closure Petition Report" prepared by Emteque Corp. (John Raguso - 631-774-9519)The report provides a history of the site including details of the 6 USTs on site. 3 were closed out several years ago and the other 3 were closed out in 2005 during this closure process. In addition, large soil excavations were made in the areas around these 6 tanks (3 eastern tanks & 3 western tanks) Due to structural issues, all of the contaminated soil could not be removed, but an overwhelming majority (over 95% according to Emteque) of the contaminated soil was removed. The end point sampling conducted in Oct 2005, show VOC and SVOC below TAGM and the GW samples were very good, with only some minor "hits".The one item of some concern was Benzene. All 5 GW samples taken were above TAGM for benzene.The TAGM GW limit is 0.7ppb and the levels in all 5 GW samples ranged from 8.2ppb up to 43ppb.3/30/2006 Sangesland confirmed with John Raguso at Emteque that another round of GW samples will be taken in April '06. If these numbers show a decline, the case may be closed due to natural attenuation. 5/22/2006 Sangesland reviewed a submittal from John Raguso of Emteque. As requested by the DEC, another round of groundwater samples were taken at the site. These samples showed the expected drop in contamination levels. While there are still some slight exceedences of the GW standards, the NYSDEC believes these levels will attenuate naturally over time. Based on the high commercial usage level of the area and the history of "train yards, gas stations and historical fill" the site is OK to close out as is with "no further action" Closure letter was sent to 601 West Associates c/o John Raguso with specific requirement to properly close out all monitoring wells on the site.

Remarks:

GAGE LINE BROKE ? CONTAINED IN BOILER RM. AND TANK ROOM - PETROL TANK CLEANER IS SUCKING UP OIL NOW. SENT TO DEP.

Hazardous Waste Summary:

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D009

Waste name: MERCURY

Waste code: F001

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSLEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT

Waste name:

F005
THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code:
Waste name:

D001
IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:
Waste name:

F002
THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code:
Waste name:

F003
THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Rommel, Attached please find the Subsurface Investigation Report for the above-referenced site. The hard copy of the report was sent to you today. If you have any questions, please feel free to call Anthony Dellaria at (631) 420-5095. Thank you. greater than greater than greater than Jennifer Rommel 05/13/04 03:43PM greater than greater than greater than DEC approves the work proposed in the Subsurface Investigation Report dated 5/13/04. At the end of the three months of HIT events, please submit an evaluation of the need for a permanent recovery system. 5/17/04 Received summary, 4 mw installed. Total 8 wells. Product in MW1 and MW4 - quarterly bailing recommended. Rommel 10/14/04 Reassigned from Rommel to Sun. 10/31/04 File Update by Sun: - On 11/22/04, Sun sent a letter to Richard Saut of Penske requiring complete delineation of soil and groundwater contaminations, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of 12/10/04 for signing the Stipulation Agreement. The Stipulation Agreement was signed by Penske on 12/10/04 and implemented by the Department on 12/27/04. - On 12/21/04, Sun sent a letter to Richard Saut of Penske informing him that the Department has approved the Remedial Action Plan (RAP)/HypeAir Work Plan prepared by his Consultant, Groundwater & Environmental Service (GES) for the subject site; specifically two in-situ chemical oxidation events at the site via "HypeAir" air and Hydrogen peroxide injection system. The Department requires that due to the proximity of existing utility corridors, temperature, pH, pressure, oxidation-reduction potential (ORP), conductivity and dissolved oxygen (DO) shall be monitored on all the monitoring wells. Any potential accumulation of vapors during the injection activities shall be avoided. (Sun) 02/21/06: Sun received 4th Quarter 2005 Site Status Update Report. Review of this report is pending. (Sun) 02/27/06: The Department approves the GES's request for two (2) additional injection events to be completed in April and May 2006; specifically two in-situ chemical oxidation (Chem-Ox) events at the above referenced site utilizing a hydrogen peroxide, ozone, and persulfate injection system (HypeAir). (Sun) 07/23/07-Sun: On 07/23/07 the Department approves the GES's request for performing enhanced product recovery through the injection of surfactant into MW-5. The Department also approves a series of high intensity targeted (HIT) remediation events using high vacuum extraction at monitoring wells MW-3, MW-4, and MW-5 to reduce residual hydrocarbons impacts on-site for 8-hour events for approximately four (4) months. (Sun) 08/09/07-Sun: On 7/18/07 Joe Sun of DEC was informed by Kevin Heaphy of Parson Brinckerhoff America (PB) that the MTA will be using this site (Lot 60) and the adjacent Fed Ex lot for a mockup pit to build the initial shaft for Tunnel boring machine to be used for the No. 7 subway extension project. In general, the site is slated to be used as a staging area for the project. A meeting was held on 8/9/07 to discuss project among all the key parties, including DEC, MTA, NYCT, Developer, Parson Brinckerhoff (PB), Penske, property owner (Michael Silvermintz) and Penske's consultant, GES. The meeting concluded that PB will first review the GES's investigation and remediation reports and then will discuss with GES and MTA project team to assess if other viable remedial action plans (RAP) can be implemented to expedite the cleanup process. Any new proposed RAP will be submitted to DEC for review and approval. (Sun) 08/23/07-Sun: Sun received 2nd Quarter 2007 Site Status Update Report. Based on laboratory analytical results, a 64% reduction of dissolved benzene, toluene, ethylbenzene, and total xylenes (BTEX) concentrations has been observed

on and off-site since initiating hydrogen peroxide and ozone injections at the site. (Sun) 08/30/07: Sun received the following email from Heather Cloud of GES "Joe, Penske and GES submitted all historical documents to Kevin Heaphy for his review. He reviewed the documents and we had a follow up call with him and the MTA this past Monday (8/27). During the call, Kevin brought up a suggestion of relocating the wells off-site or installing remote access points in the sidewalk. As discussed at the NYSDEC meeting, we told Kevin that that locating the wells offsite was not an option, and installing remote access points in the sidewalk could not be sufficient for our liquid level measurements and groundwater sampling activities. Additionally, there is a high pressure gas main in the sidewalk, so we would not be able to drill safely in this area. They did not have any additional suggestions or ideas beyond relocating the wells. (Sun) Since they did not have any additional suggestions, it was decided that GES is going to proceed with our approved work plan. We are actually scheduled to conduct our surfactant injection on September 5 and the high vacuum extraction events on the 6th and 7th. Once we get the data back from the first event, we will evaluate the effectiveness and move forward from there." (Sun) 11/19/07-Sun: Sun received the following email from Heather Cloud of GES, "Hi Joe, We conducted the Surfactant Injection at MW-5 on September 5, 2007 followed by a high vacuum extraction event on September 7, 2007 to remove and recover residual product at MW-5. Since conducting the injection event, we have not seen any product at MW-5. Groundwater data at MW-5 prior to the injection (July 3, 2007) was 489 ppb BTEX (144 ppb benzene). Following the injection (October 12, 2007), groundwater data at MW-5 was 87 ppb BTEX (66 ppb benzene). Since the injection event, we have conducted 2 high vacuum extraction events on MW-3 and MW-4. These events were completed in September and October. Between the 2 high vacuum extraction events, we have recovered 5 pounds of mass and 1,300 gallons of water. We were at the site today and are at the site tomorrow to complete our 3rd high vacuum extraction event on MW-3, MW-4, and MW-5. The 3rd QTR Site Status Update Report is currently being reviewed by the client, so you should have it shortly." (Sun) 02/15/08-Sun: DEC received the following email from Andrew Cullen of Penske, "All, After much review, we have come to the conclusion that we will make an attempt to meet the requirements of the contractor and complete the necessary remediation work required by the NY DEC on two Saturday's per month. However, I need all the parties to understand that our agreement specifically states we need 2 to 3 days per month to perform the necessary remediation. Limiting us to only two days per month may cause the remedial efforts to go past our original estimates. Moreover, MTA also agreed to reimburse Penske for "any premium costs associated with work that must be scheduled outside of normal working hours (i.e. Monday to Friday 8:00am to 5:00pm)". If at any time we find the contractor is not cooperating, our remedial efforts will require more than 2 days per month, or any invoices for premium costs or damage by the contractor are not paid in accordance with our agreement, we will alert the appropriate parties. I do not anticipate this happening, but given the events that have lead us to this point, I feel compelled to remind everyone of the terms and conditions of our agreement." (Sun) 03/04/08-Sun: Sun sent the following email to all the parties involved, "Penske may have to conduct remedial efforts more often than 2-3 days a month if project demands. The required frequency and nature of remedial efforts will depend on results of

on-going remediation to be received in future. If current extraction method does not produce acceptable (to the NYSDEC) results, DEC reserves its rights to require Penske to undertake more aggressive remedial efforts. NYSDEC is not a party to any of the agreements between Penske and MTA, and reserves all rights under the existing Laws and Regulations." (Sun) 03/25/08-Sun: Sun received the 4th Quarter 2007 Site Status Update Report. (Sun)07/03/08-Sun: Sun received from Heather Cloud of GES on the current site status:We are currently conducting quarterly groundwater monitoring and sampling. Our next groundwater sampling event is scheduled for this month.- Based upon the recent groundwater data, we are not seeing a reduction in the BTEX concentrations. See attached groundwater analytical tables. Therefore, the high vacuum extraction events don't appear to be overly effective at this time. We are currently evaluating alternate options to address the dissolved phase impacts. We are looking at potentially injecting sodium percarbonate or other potential oxidizers. The total BTEX concentrations are primarily comprised of benzene. We have seen great success in reducing benzene levels with sodium percarbonate at other sites. Also, this type of technology is not intrusive at all.With the MTA project going on, we are limited with the technologies that we can go with. - The 1st QTR QMR is currently being reviewed by Penske. You should have this report within the next week or so. (Sun) 8/4/08 - Carlson: Case reassigned to Carlson. Reviewed 1st Quarterly 2008 report. Wells sampled on 1/3/08. Maximum BTEX concentration 5,425 ppb (MW3), maximum MTBE concentration 64 ppb (MW3). Report notes that VEFR is not effective. Sent letter requiring submission of a new RAP and additional delineation by 9/12/08. 9/11/08 - Carlson: Approved extension to 11/14/08 for submission of a new RAP. Scheduled site visit for 9/25/08 to discuss potential locations for an additional delineation well.9/30/08 - Carlson: Performed site visit on 9/25/08. Met with Heather Cloud of GES, Richard Saut of Penske, Charles Stives of Liro Engineering, as well as representatives from MTA and NYCT. Five monitoring/remediation wells have be destroyed during recent activities. A location was identified for the installation of an additional monitoring well. RAP due 11/14/08.10/6/08 - Carlson: Reviewed update report dated 9/23/08. Wells sampled on 4/26/08. Maximum BTEX concentration 3,537 ppb (MW3). They are pilot testing sodium percarbonate.3/20/09 - Carlson: Reviewed Site Status Report dated 2/25/09. Delineation well discussed during 9/30/08 site visit was not installed. Destroyed wells were not replaced. Sodium percarbonate solution was injected into MW-1, MW-2, and MW-4 on 9/20/08. Wells were sampled on 10/25/08. Decreased concentrations were found in MW1 and MW2, but BTEX increased in MW4. Spoke to Heather Cloud at GES. She will submit workplan.Received Remediation and Delineation Work Plan dated 2/10/09. 4/16/09 - Carlson: Meeting held with Penske. Mark requested the addition of another boring.4/23/09 - Carlson: Meeting held MTA. Access to most of the site not possible for 1 year because the TBM is in operation. Access to the sidewalk can be arranged. MTA will submit a construction timeline.5/4/09 - Carlson: Received phone message from Sal McCabe - construction timeline will be submitted.5/7/09: Received update report. Received email from Christopher Ward - mw5 has been located and will be abandoned (under future muck bin).5/15/09 - Carlson: Received email. MW5 will be abandoned tomorrow.7/1/09 - Carlson: Received cc of penske access request to sample wells on 7/25/2/09 - Carlson: Paul matthews of mta responded - requested sampling be

delayed for one month. 7/2/09 - Carlson: I replied saying one month delay is ok. Construction timeline was not submitted as requested at the last meeting. 7/6/09 - Carlson: Received cc of penske access request to sample wells on 8/22/09.9/18/09 - Carlson: Left voice message for Chris Ward to followup on case status.11/5/09 - Carlson: Received cc of letter requesting access from MTA to sampling wells. Left voice message for Chris Ward to see if they were given access - need to get phone number for MTA contact Paul Matthews.11/10/09 - Carlson: GES received access from MTA to sample wells.2/12/2010: Received cc of letter from GES to MTA - access requested to sample wells on 2/20/2010. Spoke to Chris Ward. Update report will be submitted.5/26/2010 - Carlson: Received cc of access request by GES to MTA to sample wells on 6/12/2010.6/25/2010 - Carlson: Received cc of access request by GES to MTA to sample wells on 6/12/2010. Left message for MTA Philip McGrade to followup on status of construction.6/29/10 - Carlson: Spoke to Paul Matthews at MTA (212-616-4462). TBM is still in operation 5 days/wk 24hr/day. No construction on weekends when GES samples wells. Remedial work on Saturdays would be very difficult due to access on site. Project completion scheduled for 2013.7/27/2010 - Carlson: Meeting held with Penske on 7/27. NYSDEC to organize meeting with MTA to discuss access/remedial plan.8/24/2010 - Carlson: Meeting held with MTA and Penske on 8/24. Penske to reinstall wells on a weekend. Wells to be covered with roadplates. Contractor will remove roadplates prior to remedial activity at the site. Penske/MTA/NYSDEC to perform site visit to confirm locations of new wells.9/22/2010 - Carlson: Site meeting held to discuss well installation locations and procedures. GES will prepared updated site plan.3-11-11. - Breen: Consultant, GES, sent in Site Status Update Report on CD today. Heather Cloud is Operations Manager. Sarken Dressler is the Staff Hydrogeologist. Report for 9610811 is on the same CD. 6/6/12 - Carlson: Reviewed Site Status Update Report dated 4/30/12. Wells sampled on 2/25/12. Wells destroyed in 2008 were not replaced. Max BTEX only 588 in MW-4. Max MTBE only 3 ppb in MW-8. Called MTA Philip McGrade at number in file. Voice mail indicated this is not his number anymore. Left message at this number for help getting status of MTA 7-line extension project at this site. 6/8/12 - Carlson: Left message for Phil McGrade (646 252 8315) to follow up on 7 train extension project.7/11/12 - Carlson: See new spill 1201147 at site - MTA found a diesel/#2 fuel oil in tank shaft location. Tank was removed. 9/14/12 - Carlson: Reviewed 2nd quarter 2012 update report. Existing wells show low concentrations. Destroyed wells were never replaced. Continue to followup on status of 1201147. Need to contact MTA to get status of MTA project. 11/19/12 - Carlson: Spoke to Paul Matthews at MTA - he isn't involved in project anymore. New contact is Steve Asquith 646-252-8326. Left message for Steve Asquith. 11/26/12 - Carlson: Spoke to Steve Asquith (917-217-4765). He is arranging access with Penske/GES. Send him my email address, he will cc me on correspondence with penske/GES; 11/27/12 - Carlson: Emailed Steve Asquith (sasquith@mtacc.info) - please cc me on correspondence with Penske/GES as discussed during yesterdays phone conversation.12/11/12 - Carlson: Site meeting with Healthier Cloud (GES) and Dave Mariani (Skanska). Well locations were marked out. Wells will be installed in january.9/17/2013 - Carlson: Received FOIL request from Michael Silvermintz (michaelsilvermintz@gmail.com, 646-831-1443). Forwarded to DEC Silva for processing.9/23/13 - Carlson: Received phone call from Steve Cambruschini - new owner will purchase this property and

Remarks: redevelop. They intend to sign a new stip. They plan on excavating impacted soil. He will email me for a FOIL request of file. Need to get contact info of new owner to send new stip. 10/10/13: received phone call from Christopher McMahon requesting FOIL review. Sent email to email Gloria Silva for FOIL review. Also, I requested he send me contact info for new owner so I can send new stipulation agreement. 10/28/2013 - Carlson: Reviewed 3rd Quarter 2013 Site Status Report. Monitoring wells gauged and sampled on 9/28/2013. Sheen (0.04ft) in MW-3R. Maximum BTEX concentration 1,410 ppb (MW-3R). 10/29/2013 - Carlson: Issued new Stipulation Agreement to 293 Tenth Ave. Corp, c/o Michael Silvermintz. Signed Stip due by 11/12/2013. RAWP due 30 days after effective date of the Stipulation.
CALLER RESPONDED TO ABOVE LOCATION TO REMOVE FUEL TANKS. UPON REMOVAL SOME SOIL CONTAMINATION DISCOVERED. TANKS REMOVED AND SOIL EXCAVATION IN PROGRESS. NO CALL BACK REQUESTED.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008

Waste name: LEAD

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Container Type: DM - Metal drums, barrels
Handling Method: B Incineration, heat recovery, burning.
Specific Gravity: 100
Waste Code: Not reported
Quantity: 01980
Units: K - Kilograms (2.2 pounds)
Number of Containers: 012
Container Type: DM - Metal drums, barrels
Handling Method: L Landfill.
Specific Gravity: 100
Year: 95

Document ID: NYB5814549
Manifest Status: Completed copy

DEC Memo: Spoke with Michael at STV INC. The site is an abandoned, former wire house. There is a 10,000 gallon #6 oil UST on premises. Soil borings performed around the tank showed contamination. The site is "E" designated. A summary report will be sent to DEC after the investigation is completed. The site is proposed to be converted to a private school. Future School authority: Avenues Worlds School Attn: Raymond Bordwell 115 1st Avenue #2 Floor New York, NY 10003 (646) 225-6284 12/09/11 Email from Brian Connolly on 12/07/11 wrote: "As a part of the remediation process, STV directed the first in a series of product recovery from three (3) on-site wells today (12/7/2011). Brookside Environmental removed 1,500 gallons of groundwater via a vac-truck. The groundwater exhibited a slight sheen on the surface but no discernable and/or quantifiable product was observed during the event. A slight odor but no PID readings were recorded. The next event is scheduled approximately two weeks from today's event." 04/16/12 Spill closure report in edocs. STV prepared the closure report. 10,000 gallon UST was removed along with associated piping. Excavation extended 2 ft below the ground water to remove petroleum contaminated material. Installed two recovery wells in the loading bay and one in the pump room of the cellar. Installed a vapor barrier system beneath the entire disturbed slab areas and foundation sidewalls. Installed two offsite monitoring wells to the south and west of the building foot print. Post remediation ground water samples result showed no VOC or SVOcs above DEC guidelines. Case closed.

Remarks: Abandoned tank on was found on the property, soil boring showed #6 fuel in the soil.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
