Re: **644 East 14th Street, Manhattan, NY**
Block 396 Lot 29

Dear Mr. Dushinsky:

Environmental Business Consultants (EBC) performed a Limited Phase II subsurface investigation at the above referenced property on March 13, 2014, confirm the presence of a possible No. 2 fuel oil underground storage tank within the small yard on the south side of the property, and determine if the historic use of the Site as an automotive service facility has negatively impacted subsurface soil and/or groundwater.

Property Description
The street address for the Site is 644 East 14th Street, Manhattan, New York 10009. The Site is identified as Block 396, Lot 29 on the Borough of Manhattan Tax Map (New York County). The Site is located on the southwest corner of the intersection of Avenue C and East 14th Street. Lot 29 is a rectangular shaped lot consisting of 114.75 feet of frontage on Avenue C and 88 feet of frontage on East 14th Street for a total of approximately 10,098 ft^2 (0.23 acres). The Site is currently developed with a vacant warehouse/commercial building formerly utilized by Strauss Discount Auto as an auto parts store. A small paved driveway on Avenue C provides access to a steel roll-up door of a former automotive service area.

Phase I Environmental Site Assessment
A Phase I Environmental Site Assessment Report was completed by Hydro Tech Environmental, Corp. in December of 2013. The Phase I noted that prior to 1948, the Site was developed with one 6-story building and two 5-story buildings with multiple storefronts. The current one-story commercial building was constructed in 1948, and has been utilized for auto parts sales and auto repair since construction. The historic Sanborn maps included within the Phase I Report notes an automotive service area was located within the building along Avenue C.

During the site inspection performed as part of the Phase I Environmental Site Assessment, Hydro Tech Environmental, Corp. observed a No. 2 fuel oil fill port within the small yard located on the south side of the building. Hydro Tech Environmental, Corp. listed the No. 2 fuel oil fill port as a recognized environmental condition within the Phase I Environmental Site Assessment Report.

However, EBC was provided a copy of a figure (dated 6/30/2009) prepared by Pillori Associates, PA, which noted the locations in which several geotechnical soil borings and monitoring wells were installed. The location of the No. 2 fuel oil fill port corresponded with the same location as monitoring well W-1, so EBC removed the fill port to confirm it was a 1" diameter PVC monitoring well, and not a No. 2 fuel oil fill port. This monitoring well (W-1) was sampled as part of the subsurface investigation and was listed as Empty Lot MW.

A copy of the Phase I Environmental Site Asessment Report, and a copy of the Pillori Associates, PA figure are attached in **Appendix A**.

Phase II Environmental Investigation

Soil Sampling

Six soil boring locations (B1 through B6) were selected as shown on **Figure 1.** Four of the soil borings (B1 through B4) were performed within the area identified on the Sanborn maps as being utilized for auto repair, on soil boring was performed within the small yard on the south side of the building (B6), and one soil boring was performed within the one-story addition accessed from the rear yard (B5) because spray painted words on the interior walls of the building indicated this area was also utilized for automotive repair or bulk petroleum storage.

All borings were advanced with Geoprobe™ direct push equipment and sampled with a 4 foot macro core sampler using disposable acetate liners. Soil was characterized by a Qualified Environmental Professional (QEP) and field screened for the presence of volatile organic compounds (VOCs) using a photo-ionization detector (PID).

At each of the soil boring locations, soil samples were collected continuously from grade to refusal which was encountered across the Site at depths ranging from 1 foot to 7 feet. Retrieved sample cores were field screened for the presence of VOCs with a photo-ionization detector (PID) and visually inspected for evidence of contamination. Soil recovered within each of the six soil borings consisted of historic fill material. Soil boring logs are attached in **Appendix B**.

Soil boring B1 was advanced to a depth of approximately 6 feet within the northern end of the former automotive service area. A 6" layer of a thick/hard tar was recovered within the 4 to 6 interval. EBC suspects the tar is associated with buried building materials, and not representative of a spill/release. No sample was retained from B1.

Soil boring B2 was performed approximately 15 feet south of B1, but refusal was encountered at a depth of approximately 2 feet. No soil was recovered within the macrocore liner, therefore no soil sample was retained for laboratory analysis.

Soil boring B3 was performed approximately 12 feet east of B1, but refusal was encountered at a depth of approximately 1 ft. Soil sample B3 @ 1' was retained for laboratory analysis. No PID values above background concentrations were detected.

Soil boring B4 was performed in the southern end of the former automotive service area and was completed to refusal which was encountered at a depth of approximately 6 feet. Soil sample B4 @ 6' was retained for laboratory analysis. No PID values above background concentrations were detected.

Soil boring B5 was performed in the one-story addition accessed from the rear yard. Spray paint was observed on the concrete block walls that indicated bulk storage of petroleum products. B5 was performed to a depth of approximately 7 feet. Soil sample B5 @ 7 ' was retained for laboratory analysis. No PID values above background concentrations were detected.

Soil boring B6 was performed in small yard on the south side of property to refusal at a depth of approximately 4 feet. Soil sample B6 @ 4' was retained for laboratory analysis. No PID values above background concentrations were detected.

Groundwater Sampling

Two groundwater samples were collected at the Site in the locations shown on **Figure 1**. Groundwater sample "Corner MW" was collected from the existing geotechnical monitoring located within the sidewalk at the northeast corner of the building. Groundwater sample "Empty Lot MW" was collected

from the existing geotechnical monitoring well located within the small yard on the south side of th property. A peristaltic pump fitted with disposable polyethylene tubing and disposable peristaltic pump tubing was used to purge approximately 3 to 4 gallons of groundwater from both monitoring wells prior to sample collection. Groundwater was encountered within both monitoring wells at a depth of approximately 6 feet below grade.

Sample Handling and Analysis
Collected samples were appropriately packaged, placed in coolers and shipped via laboratory dispatched courier for delivery to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). Each of the retained soil samples were analyzed for volatile organic compounds (VOCs) by USEPA method 8260 and semi-volatile organic Compounds (SVOCs) by USEPA method 8270. Both groundwater samples were analyzed for VOCs by USEPA Method 8260.

Results
Soil sample results were compared to the Unrestricted Use and Restricted Residential Use Soil Cleanup Objectives (SCOs) as presented in NYSDEC CP51 Soil Cleanup Guidance (10/21/10). Groundwater results were compared to the New York State 6NYCRR Part 703.5 Class GA groundwater standards. Analytical data for the soil samples are summarized in **Tables 1** through **3**, and a copy of the laboratory analytical report is included in **Appendix C**.

As presented in **Table 1**, no VOCs were detected within the four retained soil samples at a concentration above NYSDEC Part 375.6 Unrestricted Use SCOs. Tetrachlorotheylene (PCE) was detected at a concentration below Unrestricted Use SCOs within soil sample B6 @ 4' (280 ppb). PCE was not reported in any of the other soil samples, and was not detected in any of the groundwater samples, and is therefore not considered a significant concern.

As presented in **Table 2,** multiple SVOCs were detected above NYSDEC Part 375.6 Restricted Residential Use SCOs with 2 of the 4 soil samples. SVOC exceedences included benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene. The distribution and concentrations reported within the soil samples are indicative of values typically observed within historic fill material present throughout NYC and are not indicative of a spill/release.

As presented in **Table 3**, no VOCs were detected within either monitoring well above the laboratory method detection limit.

No significant evidence of a spill/release associated with the former use of the Site as an automotive service facility was found during the subsurface investigation, and the No. 2 fuel oil fill port was determined to be a 1" diameter monitoring well with a metal cover typically used for an oil tank. Please call if you have any questions or would like to discuss the project further.

Very truly yours,
Environmental Business Consultants

Kevin Brussee

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

644 East 14th Street
New York, NY

December 5, 2013

Hydro Tech Environmental, Corp. appreciates the opportunity to work for 14 Avenue C LLC at the property located at 644 East 14th Street, New York, New York.

Should you require any additional information or have any comments regarding the contents of this report, please feel free to contact our office at your convenience.

We declare that, to the best of my professional knowledge and belief, HTE personnel meet the definition of an environmental professional as defined in §312.10 of 40 C.F.R. 312, and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

Very Truly Yours,
Hydro Tech Environmental, Corp.

1.0 EXECUTIVE SUMMARY

Hydro Tech Environmental, Corp. (Hydro Tech) has performed a Phase I Environmental Site Assessment (Phase I ESA) at the Subject Property located at 644 East 14th Street, New York, NY. The Phase I ESA was performed to meet or surpass the American Standard of Testing Materials Standard for Phase I Environmental Site Assessments E 1527-05. The purpose of the assessment was to characterize the environmental quality of the Subject Property through the identification of Recognized Environmental Conditions. All work was performed under the supervision of a Hydro Tech Project Manager and under the guidance of a Hydro Tech geologist.

The results of the Phase I Environmental Site Assessment are contained in this report. The Phase I Environmental Site Assessment has revealed the following Recognized Environmental Condition(s) at the Subject Property:

- The presence of a suspect fill port in the southeastern portion of the Subject Property (§6.0)
- The presence of suspect lead-based paint inside the building (§6.0)
- The presence of suspect asbestos containing material (ACM) inside the building (§6.0)
- The presence of mold inside the building (§6.0)

No effort has been made to perform any investigation beyond what is included in this Report. The observations and conclusions included herein summarize the results of the Phase I Environmental Site Assessment up to the date of the fieldwork and the date of this Report.

The following sections provide the details and specific information pertaining to the various components of the Phase I Environmental Site Assessment.

2.0 INTRODUCTION & SCOPE OF WORK

2.1 Introduction

Hydro Tech Environmental, Corp. (Hydro Tech, the ***"Preparer"***) has been retained by 14 Avenue C LLC (the ***"User"***) to perform a Phase I Environmental Site Assessment at the property located at 644 East 14th Street in Manhattan, New York. The User is the ***"Owner"*** of the property. The Phase I was prepared for due diligence purposes towards a purchase transaction of the property. The property will hereafter be referred to as the ***"Subject Property"***.

The purpose of a Phase I Assessment is to characterize the environmental quality of the Subject Property through the determination of the presence of Recognized Environmental Conditions (RECs). As defined by the American Society of Testing and Materials (ASTM), a REC is, "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater or surface water of the property" (ASTM E 1527-05, §1.1.1).

To this end, Hydro Tech has collected information through a number of sources including, but not limited to: a property and neighborhood inspection by trained environmental personnel, a review of historical and current information collected from various federal, state, county and municipal agencies and personnel interviews with Site representatives. Recommendations are offered where prudent. Firms subcontracted by Hydro Tech and the User may have collected some information used in this report. Some or all of the Assessment has been performed or supervised by environmental professionals as required by 40 CFR Part 310. The procurement of Title and Judicial Records for Environmental Liens and/or Activity and Use Limitations ("AULs") by HTE is beyond the scope of this practice (ASTM E1527-05) and investigation.

2.2 Scope of Work

The general activities of the Phase I Assessment included the performance of the following tasks:

1. A detailed inspection of the Site and its general vicinity.
2. A review of all reasonably ascertainable regulatory agency documents.
3. A neighborhood hazardous waste survey utilizing Federal and State databases.
4. A review and evaluation of reasonably ascertainable geologic and hydrogeologic reference materials.
5. Interviews with representatives of the Site.
6. The preparation of a Phase I Environmental Site Assessment Report.

The Phase I ESA was performed in accordance with ASTM E 1527 except where noted in Section 2.3 and Hydro Tech's Proposal. As required by ASTM, the User has supplied information that has been relied upon by Hydro Tech in the rendering of findings, conclusions and opinions, except where indicated in Section 2.3 or elsewhere in the report.

2.3 Limitations and Exceptions & Data Gaps

In addition to those items outlined by ASTM E 1527, asbestos, radon, lead-based paint and lead in water were also considered in the scope of work. While this Phase I Assessment provides information with respect to both asbestos and lead-based paint, the presence of these materials can only be confirmed through the collection and analysis of bulk samples.

This report is not intended to serve as a full asbestos survey or lead-based paint survey. These surveys are commonly performed for the purpose of building demolition/renovation or the recognition/identification of any building materials that may contain asbestos or lead-based paint and it is recommended that they be performed prior to any such work.

Business Environmental Risks have not been considered and are not included in the scope of work. This Phase I Assessment is not intended to address the soil/groundwater quality at the Subject Property for

general Site characterization or waste disposal purposes. This Phase I Assessment in not intended to evaluate the fair market price of the property if it is not affected by hazardous or petroleum products.

Portions of this report have been prepared utilizing information provided by third party sources or the user. As such, Hydro Tech relies upon these sources and has recorded findings, conclusions and opinions based upon this information. Hydro Tech cannot attest to the accuracy of this information but where possible had attempted to verify the information.

This Phase I ESA Report is not intended to serve or be construed as a regulatory compliance report for the property. No legal opinions are provided with this report.

It should be noted that the USEPA has determined in their final ruling (40 C.F.R. Part 312, Standards and Practices for All Appropriate Inquires) of November 1, 2005 that "persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-05 standard to comply with today's final rule." Therefore, while all appropriate inquiry could be considered satisfied as this ESA was prepared in exceedance(s) of the ASTM E1527-05 standard, persons attempting to utilize this ESA while seeking one of CERCLA's LLPs must note that; a) they will not maintain CERCLA liability protections unless they also comply with all of the continuing obligations established under the statute that are beyond the scope of this practice (ASTM E1527-05) and investigation; and b) in order to qualify for one of the CERCLA LLPs, the person commissioning the Phase I Environmental Site Assessment must have provided site-specific information (if available) to Hydro Tech before the date of this ESA, otherwise a determination could be made that all appropriate inquiry is not complete.

As defined by ASTM, a Data Gap is defined as an inability to obtain information during the Phase I process, as required under the Standard, despite a good faith effort by the Environmental Professional to obtain this information. The Phase I ESA report must contain information pertaining to Data Gap(s) and evaluate their relative significance.

The following table provides a breakdown of the Data Gap(s) encountered and their relative significance.

Data Gap	Significance
Site History – not conducted to time of first development and/or 5 year intervals.	Low – unlikely to alter conclusions due to findings of other resource(s).
No environmental lien provided.	Low – unlikely to alter conclusions due to findings of other resource(s).
Municipal Records – FOIAs not returned as of date of report.	Unknown – Any FOIA responses that alter the conclusions of the report will be provided upon receipt.

Due to other historical information obtained over the course of this investigation, Hydro Tech does not consider these data failures/data gaps significant, as they appear unlikely to have affected potential Recognized Environmental Conditions at the Subject Property.

3.0 SUBJECT PROPERTY DESCRIPTION

3.1 Subject Property Vicinity

The Subject Property is located on the southwest corner of East 14th Street and Avenue C, in the Borough of Manhattan, New York. The Borough of Manhattan is situated in the western portion of the City of New York. The East River is located approximately ¼ mile to the east of the Site.

The vicinity of the Subject Property consists of commercial and residential properties. The ground surfaces in the vicinity of the Site consist of asphalt and concrete.

3.2 Subject Property Description

The address of the Subject Property is identified as 644 East 14th Street, New York, NY. The Subject Property is approximately 10,098 square feet in area and is currently developed with a 1-story closed Strauss Discount Auto Parts Store. A small fenced rear yard is located in the southeast portion of the property. The Subject Property is not in use. A Con Edison plant is located to the east of the Subject Property. ***Appendix A*** provides photographs of the Subject Property.

The interior of the building consists of a wide-open empty space and an out of use bathroom. The building has no basement. Gas-fired space heaters were observed in the building. The building is heated via natural gas. There was no electric in the building during the inspection.

Access to the Subject Property is via East 14th Street to the north. The Subject Property is connected to the municipal water and gas. These services enter the Subject Property from East 14th Street to the north.

The topography of the Subject Property and its vicinity is generally level. **Figure 1** provides a Site Plan.

3.3 Adjacent Land Use

The Subject Property is located in a residential and commercial area. The following properties were identified immediately adjacent to the Subject Property:

Direction	Adjacent Parcel	Surrounding Parcels
North	Multi-story residential and commercial mixed use building	Residential and Commercial
South	Multi-story residential and commercial mixed use building	
East	Avenue C and Con Edison Plant	
West	Multi-story residential and commercial mixed use building	

Hydro Tech does not believe that the present uses of the adjacent properties identified above should impact upon the environmental quality of the Subject Property.

3.4 Proximity to Environmentally Sensitive Areas

The results of the Site inspection and an evaluation of the United States Geological Survey (USGS) 7-½ Minute Topographic Map containing the properties indicate there are four (4) sensitive receptors present within a 0.125-mile radius of the Subject Property. These sensitive receptors are Vaccination Services of America, Inc., NYCHA Campos Plaza Community Center, UCPA of New York City and Gina Brown Daycare. Hydro Tech believes that the Subject Property should not impact upon the environmental quality of these sensitive receptors.

3.5 Environmental Setting

The Subject Property is located in southeastern portion of New York County, New York. The elevation of the Subject Property is approximately 7 feet above mean sea level (USGS Brooklyn, New York Quadrangle, 1995, Photo revised 2011).

The vicinity of the site is characterized by metamorphosed sequences of bedrock known as the Manhattan Prong of the Hartland Formation. The Hartland Formation was formed during the late Cambrian to early Ordovician period and consists of undivided pelitic schist with gneiss and amphibolite. The formation is frequently cross cut by transverse and parallel faults. The area is overlain by Pleistocene aged glacial till deposits.

Outcrops of bedrock are commonplace in the borough of Manhattan, as can be seen in Central Park. However, no areas of exposed bedrock were identified during the site inspection portion of the Phase I.

The depth to groundwater in the vicinity of the Site is estimated below 10 feet below grade. The water table is typically encountered within the fractures of the bedrock. The regional groundwater flow direction in the vicinity of the Subject Property is presumed to be toward the east, in the direction of the East River.

4.0 HISTORICAL USE

4.1 Sanborn Maps

Sanborn Fire Rate Insurance Maps for the Subject Property and its vicinity dated 1903, 1920, 1922, 1928, 1944, 1950, 1971, 1976, 1979, 1980, 1983, 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004, and 2005 were obtained from EDR and evaluated in order to establish the history of the Site. ***Appendix B*** provides a copy of the Sanborn Fire Rate Insurance Maps.

Date	Subject Property Shown As	Surrounding area
1903-1920	One 6-story and two 5-story buildings, multiple storefronts (use of the buildings not listed)	Residential and commercial buildings and Con Edison Facility
1922-1928	No listing for the Subject Property	
1944-1950	One 6-story and two 5-story buildings, multiple storefronts (use of the buildings not listed)	
1971-2005	Auto Service Shop and one 1-story building	

4.2 City Directory Search

In order to further assess the property's history, available City Directory files were obtained from EDR for review. The City Directories document known occupants of specific properties and sorted by individual addresses. ***Appendix C*** provides a copy of the City Directory Search.

The following provides a listing of all documented usages of the addresses 6444 East 14th Street:

Date	Use of Subject Property	Surrounding Property Use
1927-1938	Lipschitz Jon Grocer	Residential and Commercial
1942-1950	Dependable Window Shades, Leonard Goldstone, Jack Gross Window Shades, Lipschitz Jon Grocer, Marvald Saml Electrician, Ralph Miller Glass, Triboro Glass Co	
1956-2013	Strauss Stores Corp / Strauss Discount Auto	

4.3 Previous Studies

Hydro Tech Environmental performed a Phase I ESA on the Subject Property during January 2011. The January 2011 report identified three (3) RECs at the Subject Property. These include; the presence of mold inside the building, the documented presence of Asbestos-Containing Materials, and the presence of peeling paint inside the building that could be lead-based. During January 2011 inspection, there was upwards of six inches of snow covered a large portion of the sidewalk along the building and street (as well as the paved area in the southeast portion of the property). Therefore the fill port located in the southeastern portion of the Subject Property could not be identified.

4.4 Previous Owners

According to the property listing on Property Shark, the following provides a list of historical owners of the Subject Property:

Year	Name Of Previous Owner(s)
2013	14 Avenue C LCC
2008	Kimstrauss Unitary Business Trust
2005	Sbcg Strauss LLC

2000	R&S/Strauss Inc, A Del Corporation
1988	Schottenstein Storescrp
1985	644 E 14th St Corp Granett & Gold PC

4.5 Historical Use Summary

Based on a review of available information provided and/or obtained for the Subject Property as of the date of this ESA, it appears that the Subject Property was originally developed prior to 190 with storefronts. The existing building on site was constructed prior to 1950s, and has been occupied by Strauss Auto Store since then. Specific historical uses of the Subject Property include a grocery, window shade shop, glass shop, and restaurant. Since the auto service shop was utilized as a retail space for auto accessories, it should not have impacted upon the environmental quality of the Subject Property. The historical use of adjacent properties does not appear to have impacted the environmental quality of the Subject Property.

5.0 RECORDS REVIEW

5.1 Environmental Databases

Federal, State, Local and Tribal hazardous waste databases were reviewed with respect to the Subject Property and surrounding properties. ASTM E 1527 specifies the search area for each database. In addition, all orphan sites (those without adequate information for mapping purposes) listed in the database search were also reviewed, evaluated and incorporated (as needed). ***Appendix D*** provides a copy of the Database Search Results. The following databases, with the appropriate search radius, were reviewed:

ASTM Standard Environmental Record Source	**Approx. ASTM Minimum Search Distance (MSD)**	**Number of Mapped Sites within MSD**	**Number of Orphan Sites**
1. NPL (Superfund) *National Priorities List*	1.0 Mile	0	0
2. Delisted NPL Site *Delisted National Priorities List Site*	0.5 Mile	0	0
3. CERCLIS *Comprehensive Environmental Response Compensation & Liability Information System*	0.5 Mile	0	0
4. CERCLIS NFRAP *CERCLIS No Further Remedial Action Planned Site*	0.5 Mile	0	0
5. RCRA-TSD CORRACTS *Resource Conservation & Recovery Treatment/Storage/Disposal Facility Subject to Corrective Action*	1.0 Mile	0	0
6. RCRA-TSD *Resource Conservation & Recovery Treatment/Storage/Disposal Facility (Non-Corrective Action)*	0.5 Mile	0	0
7. RCRA-LG *Resource Conservation & Recovery Large Quantity Generator*	Site & Adjoining	0	0
8. RCRA-SG *Resource Conservation & Recovery Small Quantity Generator*	Site & Adjoining	0	0
9. ERNS *Emergency Response Notification System*	Property Only	0	0
10. Local / State / Tribal UST, PBS *Registered Storage Tanks*	Site & Adjoining	1	0
11. Local / State / Tribal LTANKS *Leaking Underground Storage Tanks*	0.5 Mile	45	0
12. State Spill Incidents *NYSDEC Spill Sites*	0.125 Mile	233	0
13. Local / State / Tribal SWF *Solid Waste Facility / Landfill*	0.5 Mile	0	0
14. Local / State / Tribal CERCLIS *Inactive Hazardous Waste Disposal Site*	0.5 Mile	3	0
16. Inst. / Engineering Controls *Registry of Institutional and/or Engineering Controls*	Property Only	0	0
17. Voluntary Cleanup Program Sites *Local / State / Tribal VCP Sites*	0.5 Mile	0	0
18. **Brownfield Sites** *Local / State / Tribal Brownfield Sites*	0.5 Mile	1	0
19. Non-ASTM Record Source(s)	Not Applicable	No MSD has been established by ASTM for these sources	

The review and evaluation of the above Federal and State/Tribal/Local Databases indicates that the Subject Property is identified in the RCRA Non Generator and FINDS databases. No violations are associated with the Site, and no hazardous waste is handled at the Subject Property. The listing of the Subject Property in these databases should not impact upon the environmental quality of the Subject Property.

Forty five (45) incidents are listed in the Leaking Underground Storage Tanks (LUSTs) database within a 0.5-mile radius of the Subject Property. None of the LUSTs are adjacent to the Subject Property. Thirty seven of the 45 LUSTs have been cleaned up to the satisfaction of the NYSDEC and are considered closed; the remaining 8 LUST sites are active. One of the active LUST sites is located down gradient of the Subject Property. None of the remaining 7 sites is adjacent to the Subject Property and therefore should not impact upon the environmental quality of the Subject Property.

Two hundred and thirty three (233) incidents are listed in the NY Spills database within a 0.125-mile radius of the Subject Property. One hundred ninety four of the 233 sites have been cleaned up to the satisfaction of the NYSDEC and are listed as closed while the remaining 39 sites are active. Fourteen of the active 39 spill sites are located upgradient to the Subject Property. Corrective actions were taken at all of the spill sites. The first site is 378 feet to the northwest of the Site. The second is 576 feet to the northwest of the site. Due to their proximity, none of the open spills should impact upon the Subject Property.

One (1) aboveground storage tank (AST) is located at a property located adjacent to the Subject Property. The tank is listed as "active", and is not associated with any spills or leaks. The presence of the adjacent AST should not impact upon the environmental quality of the Subject Property.

Three (3) State Hazardous Waste Sites (SHWS) are located within a mile radius of the Subject Property. None of the sites are adjacent to the Subject Property. All three sites are located cross gradient to the Subject Property, and should not impact upon its environmental quality.

One (1) Brownfield site is located within a mile radius of the Subject Property. The site is 1185 feet to the northwest of the Subject Property. The site has impacted groundwater, and remedial actions have been taken. Due to its proximity, the brownfield site should not impact upon the environmental quality of the Subject Property.

None of the remaining properties identified in the databases, including Orphan Sites, should impact upon the environmental quality of the Subject Property.

5.2 Municipal Records

Freedom of Information Act (FOIA) requests were issued to the following regulatory agencies with respect to the Subject Property. All reasonably ascertainable municipal records are provided with this report. ***Appendix E*** provides copies of the municipal documents.

- New York City Department of City Planning
- New York City Department of Building
- New York City Department of Housing Preservation and Development
- New York City Department of Health
- New York City Bureau of Fire Department
- New York State Department of Environmental Conservation
- New York City Department of Environmental Protection

New York City Department of City Planning
A FOIA request was submitted to the New York City Zoning Department. The address of the Subject Property is identified as 221-229 Avenue C and 644-652 East 14th Street. The tax map number is listed as Block 396, Lot 29. The New York City Zoning Department indicated that the Subject Property is "R7-2." The Little "E" Restriction is listed as "Not Applicable". The Department of Finance Occupancy Code is listed as "K9-Store Building" for the Subject Property.

New York City Department of Building
A FOIA request was submitted to the New York City Department of Building (NYCDOB).The NYCDOB indicates there are 3 complaints (one open), no DOB violations and one ECB violation (none open) listed for the Subject Property. The open complaint is pertaining to excessive debris. The NYCDOB further indicates there are total of 7 jobs, and 18 actions listed for the Subject Property. The actions are pertaining to alteration, building notice, curb cut, Certificate of Occupancy (CO), demolition permit, electric sign application and new building. There are 3 CO documents dated August 12, 1953, October 7, 1953, and November 2, 1964 are provided in the NYCDOB records. All three of the CO documents describe 644 East 14th Street as 1-story retail store.

New York City Department of Housing Preservation and Development
A FOIA request was submitted to the New York City Department of Housing Preservation and Development (NYCHPD). The NYCHPD indicated that there are no violations associated with the Subject Property.

New York City Department of Health
A FOIA request was submitted to the New York City Department of Health (NYCDOH). The NYCDOH was contacted via telephone to obtain the status of the FOIA request. As of the date of this report, the NYCDOH has not responded to our initial search request or subsequent follow-up calls. Any information provided by the NYCDOH will be provided as soon as it has been received and evaluated.

New York City Bureau of Fire Prevention
A FOIA request was submitted to the New York City Bureau of Fire Prevention (NYCBFP). As of the date of this report, the NYCBFP has not responded to our initial search request. Any information provided by the NYCBFP will be provided as soon as it has been received and evaluated.

New York State Department of Environmental Conservation
A FOIA request was submitted to the New York State Department of Environmental Conservation (NYSDEC). As of the date of this report, the NYSDEC has not responded to our initial search request. Any information provided by the NYSDEC will be provided as soon as it has been received and evaluated. The NYSDEC website was also searched for any records associated with the Subject Property. The Subject Property was not identified on the NYSDEC spills database website.

New York City Department of Environmental Protection
A FOIA request was submitted to the New York City Department of Environmental Protection (NYCDEP). As of the date of this report, the NYSDEP has not responded to our initial search request. Any information provided by the NYSDEP will be provided as soon as it has been received and evaluated.

6.0 SITE RECONNAISSANCE

Mrs. Ezgi Karayel of Hydro Tech performed the site reconnaissance portion of the Phase I Assessment on November 26, 2013. The weather during the inspection was sunny and approximately 50 degrees Fahrenheit.

Hydro Tech inspected all accessible portions of the Subject Property. It should be noted that the interior of the building did not have electricity and it was dark inside the building. The following pertinent information was obtained during the Subject Property Reconnaissance:

1. Industrial Processes:

   No industrial processes were observed at the Subject Property. No evidence of historical industrial processes was observed at the Subject Property.

2. Suspect Asbestos-Containing Materials:

   Visual evidence of suspect asbestos containing material (ACM) in the form of floor tiles were identified at the Subject Property. The presence of suspect ACM represents a REC.

3. Suspect Lead-Based Paint:

   Visual of peeling paint was identified at the Subject Property. The peeling paint is indicative of lead-based paint and represents a REC.

4. Drum Storage Areas:

   No current or former drum storage areas were observed at the Subject Property.

5. Storage Tanks:

   A suspect fill port was identified in the rear yard of the Subject Property. Fill port is indicative of an underground storage tank and represents a REC. No visual evidence of any other underground storage tanks (USTs) or aboveground storage tanks (ASTs) was identified at the Subject Property. As mentioned earlier, there was upwards of six inches of snow covered a large portion of the sidewalk along the building and street (as well as the paved area in the southeast portion of the property) during the January 2011 inspection. Therefore the fill port located in the southeastern portion of the Subject Property could not be identified.

6. Subsurface Drainage Structures/Drains/Sumps:

   No subsurface drainage structures, such as leaching pools, cesspools, or drywells were observed at the Subject Property. No evidence of former subsurface drainage structures was observed at the Subject Property.

   No evidence of current or former septic/waste water/storm water discharge systems is identified at the Subject Property. The Subject Property is located in a well-served area in the New York City with a publicly managed combined sewer system.

   No floor drains were observed at the Subject Property. No evidence of former floor drains was identified at the Subject Property.

   No sumps were observed inside the building at the Subject Property. No evidence of former sumps was identified inside the building at the Subject Property.

7. PCB-Containing Equipment:

   No PCB-containing equipment was identified at the Subject Property.

8. Monitoring / Potable Water Wells:

   One monitoring well was identified on the sidewalk at the corner of East 14th Street and Avenue. According to Mr. Ratnofsky, the monitoring well is associated with a historical geotechnical investigation. Based upon our January 2011 Phase I ESA, a total of six (6) geotechnical borings were advanced across the property, two (2) of which were converted to observation wells. Since the existing off-site monitoring well is a part of a geotechnical investigation, it does not represent a REC.

   No potable water wells were observed at the Subject Property.

   The Subject Property does not utilize wells for the generation of potable water.

   No monitoring wells were identified at the Subject Property.

9. Mold

   Visual evidence of mold was identified on the walls of the building. The presence of mold represents a REC.

10. Pits, Ponds, or Lagoons:

    No waste disposal pits, ponds, or lagoons were observed at the Subject Property. No evidence of former pits, ponds, pools of liquid or lagoons were observed at the Subject Property.

11. Wetlands

    No evidence of wetlands or wetlands growth is identified at the Subject Property. The location of the Subject Property and its vicinity do not appear in the USA National Wetlands Inventory.

12. Staining/Stressed Vegetation:

    No significant staining was identified at the Subject Property. No stressed vegetation was observed at the Subject Property.

13. Fill / Land Disposal / Solid Waste:

    No visual areas of fill or evidence of land disposal of solid waste material(s) were observed at the Subject Property.

14. Engineering Controls:

    No engineering controls were noted at the Subject Property.

15. Odors/Air Emissions:

    No odors indicative of a petroleum, chemical or hazardous substance spill or release were identified at the Subject Property. No evidence of air emissions or air emission equipment was identified at the Subject Property.

16. Hazardous Substance / Petroleum Containers:

No evidence of suspect hazardous substance or other petroleum containers were identified at the Subject Property.

17. Radon:

USEPA's recommended action level is 4 picoCuries/liter and the average radon gas concentrations predicted in the Manhattan area is 2 picoCuries/liter. Since Manhattan is located in a Low Radon Potential area, radon gas should not represent a potential environmental concern that would warrant the sampling for radon gas at the Subject Property.

7.0 CLIENT / USER-PROVIDED INFORMATION & INTERVIEWS

7.1 Client/User-Provided Information

During the course of the Phase I Assessment, interviews were conducted with respect to the operation and history of the Site and a Client/User Questionnaire was provided.

1. The client/user provided no records to Hydro Tech's request for information associated with Environmental Liens or Activity and Use Limitations against the property that may have been filed or listed under federal, tribal, state, or local law.

2. The client/user reported no specialized or actual knowledge or experience related to any potential Recognized Environmental Conditions at the Subject Property or nearby properties.

3. The client/user did not respond to Hydro Tech's request for information regarding the relationship of the purchase price of the property to fair market value, specifically if it has been adjusted due to the known or potential presence of on-site contamination.

4. The client/user reported no commonly known information or information within the local community regarding past use(s) of the property (including the storage and/or release of chemicals, hazardous substances, petroleum products, etc.) that could have affected the environmental integrity of the subject site.

5. The client/user could not confirm whether no environmental contamination or cleanups have occurred at the property in the past.

6. Hydro Tech Environmental provided the Questionnaire for the client/user to complete. The Client/User did not return the Questionnaire as of the date of this report.

7.2 Interviews

During the course of the Phase I Assessment, interviews were conducted with key site personnel with respect to the operation and history of the Subject Property. The following key site personnel were interviewed:

- Mr. Paul Ratnofsky, Owner Representative

The interview did not reveal the presence of any other potential Recognized Environmental Conditions in connection with the subject site, and did not provide any additional information with respect to the environmental integrity of the subject property that was not obtained from other sources over the course of this investigation.

In addition, although an interview with the former owner(s) was not possible as none were provided to HTE as of the date of this ESA, we do not believe that any such owner(s) would have additional material information regarding the potential for contamination at the property that was not obtained from other sources over the course of this investigation.

8.0 CONCLUSIONS

Hydro Tech has performed a Phase I Environmental Site Assessment at the Subject Property, and has identified the following Recognized Environmental Conditions (RECs):

- The presence of a suspect fill port in the southeastern portion of the Subject Property (§6.0)
- The presence of suspect lead-based paint inside the building (§6.0)
- The presence of suspect asbestos containing material (ACM) inside the building (§6.0)
- The presence of mold inside the building (§6.0)

9.0 CREDENTIALS & DECLARATION

9.1 Credentials

In accordance with ASTM E 1527, the credentials of those personnel directly involved with the production of this Phase I are provided with this report. ***Appendix F*** provides a copy of the personnel credentials.

9.2 Environmental Professional Declaration

We declare that to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in 40 CFR Part 312. We have the specific qualifications based on education, training and experience to access a property of the nature, history and setting of the Subject Property. Only where indicated we have developed and performed the AAIs in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

11.0 EXCLUSIONS & DISCLAIMER

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client. No warranty, expressed or implied, is made whatsoever in connection with this report.

In preparing this report, Hydro Tech Environmental, Corp. may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to Hydro Tech Environmental, Corp. at the time of the subject property assessment. Although there may have been some degree of overlap in the information provided by these various sources, Hydro Tech Environmental, Corp. did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this subject property assessment.

No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a Subject Property (ASTM E 1527-05 Section 4.5.1). The intent of an environmental site assessment is to reduce but not eliminate uncertainty regarding the presence of potential RECs within reasonable limits of both time and cost.

Observations were made of the subject property and of structures on the subject property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, Hydro Tech Environmental, Corp. renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to a non-hazardous or hazardous materials, in that portion of the subject property or structure. In addition, Hydro Tech Environmental, Corp. renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floors, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

Hydro Tech Environmental, Corp. did not perform testing or analyses to determine the presence or concentration of asbestos or lead-based paint at the Subject Property or in the environment of the subject property under the scope of the services performed.

Any water level reading made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the subject property assessment. Where an outside laboratory, Hydro Tech Environmental, has conducted such analyses Corp. has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly. If in the opinion of the Client/User or any third party claiming reliance on this report, that Hydro Tech was negligent or in breach of contract, such aforementioned parties shall have 6 months from the date of Hydro Tech's visit to make a claim.

This report was prepared solely for the use of the Client/User and is not intended for use by third parties. Unauthorized third parties shall indemnify and hold Hydro Tech harmless against any liability for any loss arising out of, or related to, reliance by any third party on any work performed hereunder, or the contents of this report.

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 644 EAST 14TH ST MANHATTAN NY
Sample ID#s: BG19213 - BG19218

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

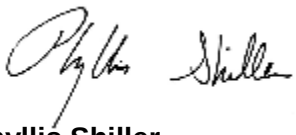
This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,



Phyllis Shiller

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quanitation) ND=Not Detected
BRL=Below Reporting Level

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quanitation) ND=Not Detected
BRL=Below Reporting Level

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comment:

Additional 8260 criteria: 10% of LCS/LCSD compounds can be outside of acceptance criteria as long as recovery is 40-160%.

l = This parameter is outside laboratory lcs/lcsd specified recovery limits.
m = This parameter is outside laboratory ms/msd specified recovery limits.
r = This parameter is outside laboratory rpd specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike
MS Dup - Matrix Spike Duplicate
NC - No Criteria
Intf - Interference
