▪ Certificate of Analysis ▪

Product: Metals in Soil
Catalog Number: 540
Lot No. D102-540
Certificate Issue Date: June 22, 2018
Expiration Date: January 31, 2022
Revision Number: Original

Product use instructions are included as part of the certification packet and are paginated separately from this Certificate of Analysis. Please reference the product use instructions for catalog #540 revision 030512.

1. The **Certified Values** are the actual "made-to" concentrations confirmed by ERA analytical verification. The certified values are monitored and purchasers will be notified of any significant changes resulting in recertification or withdrawal of this certified reference material during the period of validity of this certificate.

2. The **Uncertainty** is the total propagated uncertainty at the 95% confidence interval. The uncertainty is based on the preparation and internal analytical verification of the product by ERA, multiplied by a coverage factor. The uncertainty applies to the product as supplied and does not take into account any required or optional dilution and/or preparations the laboratory may perform while using this product.

3. The **QC Performance Acceptance Limits (QC PALs™)**are based on actual historical data collected in ERA's Proficiency Testing program. The QC PALs™ reflect any inherent biases in the methods used to establish the limits and closely approximate a 95% confidence interval of the performance that experienced laboratories should achieve using accepted environmental methods. Use the QC PALs™ to realistically evaluate your performance against your peers.

4. The **PT Performance Acceptance Limits (PT PALs™)** are calculated using the regression equations and fixed acceptance criteria specified in the NELAC proficiency testing requirements. Use the PT PALs™ when analyzing this QC standard alongside USEPA and NELAC compliant PT standards. Please note that many PT study acceptance limits are concentration dependent (some non-linearly) and, therefore, the acceptance limits of this QC standard and any PT standard may differ relative to their difference in concentrations.

5. The **PT Data/Traceability** data include the mean value, percent recovery and number of data points reported by the laboratories in our Proficiency Testing study compared to the Certified Values. In addition, where NIST Standard Reference Materials (SRMs) are available, each analyte has been analytically traced to the NIST SRM listed. This product is traceable to the lot numbers of its starting materials. All gravimetric and volumetric measurements related to its manufacture are traceable to NIST through an unbroken chain of comparisons.
Traceability Recovery (%) = [(% recovery certified standard)/(% recovery NIST SRM)]*100
The traceability data shown were compiled by analyzing the ERA standards or their associated stock solutions against the applicable NIST SRMs.

6. For additional information on this product such as intended use, instructions for use, level of homogeneity, and safety information, please refer to the provided Instruction Sheet

1. The **Certified Values** are the actual "made-to" concentrations confirmed by ERA analytical verification. The certified values are monitored and purchasers will be notified of any significant changes resulting in recertification or withdrawal of this reference material during the period of validity of this certificate.

2. The **Uncertainty** is the total propagated uncertainty at the 95% confidence interval. The uncertainty is based on the preparation and internal analytical verification of the product by ERA, multiplied by a coverage factor. The uncertainty applies to the product as supplied and does not take into account any required or optional dilution and/or preparations the laboratory may perform while using this product.

3. The **QC Performance Acceptance Limits (QC PALs™)**are based on actual historical data collected in ERA's Proficiency Testing program. The QC PALs™ reflect any inherent biases in the methods used to establish the limits and closely approximate a 95% confidence interval of the performance that experienced laboratories should achieve using accepted environmental methods. Use the QC PALs™ to realistically evaluate your performance against your peers.

4. The **PT Performance Acceptance Limits (PT PALs™)** are calculated using the regression equations and fixed acceptance criteria specified in the NELAC proficiency testing requirements. Use the PT PALs™ when analyzing this QC standard alongside USEPA and NELAC compliant PT standards. Please note that many PT study acceptance limits are concentration dependent (some non-linearly) and, therefore, the acceptance limits of this QC standard and any PT standard may differ relative to their difference in concentrations.

5. The **PT Data/Traceability** data include the mean value, percent recovery and number of data points reported by the laboratories in our Proficiency Testing study compared to the Certified Values. ▪ Certificate of Analysis ▪

1. The **Certified Values** are the actual gravimetric/volumetric "made-to" concentrations confirmed by ERA analytical verification. The certified values are monitored and purchasers will be notified of any significant changes resulting in recertification or withdrawal of this certified reference material during the period of validity of this certificate.

2. The **Uncertainty** represents an expanded uncertainty and approximates a 95% confidence interval. The uncertainty is based on the characterization, homogeneity and stability characteristics of the product, multiplied by a coverage factor (k=2). The uncertainty applies to the product as supplied and does not take into account any required or optional dilution and/or preparations the laboratory may perform while using this product. The formula used to calculate the expanded uncertainty is:
$U_{expanded} = k * SQRT((U_{char}^2) + (U_{homogen}^2) + (U_{LTS}^2) + (U_{STS}^2) + (U_{RSS}^2))$

Where:

$U_{expanded}$ = Expanded uncertainty.
k = Coverage factor.
U_{char} = Combined standard uncertainty of the manufacturing and/or analytical verification assessment.
$U_{homogen}$ = Standard uncertainty of the homogeneity assessment.
U_{LTS} = Standard uncertainty associated with long-term stability.
U_{STS} = Standard uncertainty associated with short-term (transport) stability.
U_{RSS} = Standard uncertainty associated with repeated sampling of the product (where permitted by product use instructions).

3. The **QC Performance Acceptance Limits (QC PALs™)** are based on actual historical data collected in ERA's Proficiency Testing program. The QC PALs™ reflect any inherent biases in the methods used to establish the limits and closely approximate a 95% confidence interval of the performance that experienced laboratories should achieve using accepted environmental methods. Use the QC PALs™ to realistically evaluate your performance against your peers.

4. The **PT Performance Acceptance Limits (PT PALs™)** are calculated using the regression equations and fixed acceptance criteria specified in the NELAC proficiency testing requirements. Use the PT PALs™ when analyzing this certified reference material alongside USEPA and NELAC compliant PT study materials. Please note that many PT study acceptance limits are concentration dependent (some non-linearly) and therefore, the acceptance limits of this certified reference material and any PT study material may differ relative to their difference in concentrations.

5. The **PT Performance Data** include the mean value, percent recovery and number of data points reported by laboratories in our Proficiency Testing study compared to the Certified Values. In the event this lot was not used in a proficiency testing scheme, the data displayed was generated internally by ERA.

6. Where NIST Standard Reference Materials (SRMs) are available, each analyte has been analytically traced to the NIST SRM listed. **Analytical Traceability Recovery (%)** = [(% recovery ERA certified reference material)/(% recovery NIST SRM)]*100
The traceability data shown were compiled by analyzing this ERA certified reference material and/or it's associated stock solution(s) against the applicable NIST SRMs.

7. The **Reference Values** are equal to the mean recoveries for the parameters as determined in an interlaboratory round robin study. The **Reference Values** represent the expected performance for the analytes in this standard. ERA recommends using the **Reference Values** when assessing or evaluating your results.

8. **Metrological Traceability**. This certified reference material is metrologically traceable to NIST mass reference materials through an unbroken chain of comparisons.

9. For additional information on this product such as intended use, storage information, instructions for use, minimum sample size, and safety information, please refer to the Product Use Instructions provided.

If you have any questions or need technical assistance, please call ERA technical assistance at 1-800-372-0122 or send an email to info@eraqc.com.

Calculation of Method 6020 Metals

Aqueous Samples

The instrument will calculate the concentration (µg/L). This value is divided by 1000 to convert the units to mg/L. If the sample is diluted (DF), the result is multiplied by the DF to generate the final result.

$$\text{Result, mg/L} = C_s \times (1\text{mg}/1000\mu\text{g}) \times (DF)$$

Where:

C_s = Concentration of sample (µg/L)

DF = Dilution Factor

Calculations of Nitrogen, Nitrate

Aqueous Samples:
Compute sample N in NO3 concentration by comparing sample peak areas with standard curve, as determined by the Lachat instrument software.

Calculate results by using reading on Channel 1 (NO3+NO2) and Channel 2 (NO2)

$$NO3\ mg/I = (NO3+NO2)\ mg/L - (NO2)\ mg/L$$

To compute final results for aqueous samples, multiply the direct reading by the dilution factor (also done using software)

$$(NO3)\text{-}N\ mg/L = mg/L\ direct\ reading \times dilution\ factor$$

Calculations of Nitrogen, Nitrite

Aqueous Samples:
Compute sample N in NO2 concentration by comparing sample peak areas with standard curve, as determined by the Lachat instrument software.

Calculate results by using reading on Channel 2 (NO2)

To compute final results for aqueous samples, multiply the direct reading by the dilution factor (also done using software)

$$(NO2)\text{-}N\ mg/L = mg/L\ direct\ reading \times dilution\ factor$$

Calculations of TOC

Aqueous samples:

The TOC Talk Software calculates the area of the peaks produced by the analyzer, compares them to the peak area of the calibration standard stored in its memory, and calculates a mean TOC value from two injections in mg/L.

If the sample was manually diluted prior to analysis, the calculated mean must be manually multiplied by the dilution factor. The Reported Detection Limit is also multiplied by the same dilution factor.

$$\text{Result, mg/L} = \frac{\text{area - y-intercept}}{\text{slope}} \times \text{Dilution Factor}$$

Calculations of Sulfate

Aqueous samples:

Calculate the concentration value of the sample directly from the standard curve.

$$mgSO_4/L = \frac{\text{absorbance - y-intercept}}{\text{slope}} \times \text{Dilution Factor}$$

If sample has a background absorbance, it has to be subtracted before calculation.

Summary

Samples

	Sample ID	Name	Result	State
1	Rinse,MRW	Sample size	50 mL	
		Potential R4	7.54 pH	OK
		Consumption 8.3 R1	NaN mL	Not OK
		Consumption 4.5 R2	0.935 mL	OK
		Consumption 4.2 R3	0.942 mL	OK
		Content R5	18.700 mg/L	OK
		ALK LOW R6	18.560 mg/L	OK
2	Rinse,MRW	Sample size	50 mL	
		Potential R4	5.46 pH	OK
		Consumption 8.3 R1	NaN mL	Not OK
		Consumption 4.5 R2	0.082 mL	OK
		Consumption 4.2 R3	0.088 mL	OK
		Content R5	1.640 mg/L	OK
		ALK LOW R6	1.520 mg/L	OK
3	BLANK	Sample size	50 mL	
		Potential R4	5.34 pH	OK
		Consumption 8.3 R1	NaN mL	Not OK
		Consumption 4.5 R2	0.063 mL	OK
		Consumption 4.2 R3	0.070 mL	OK
		Content R5	1.260 mg/L	OK
		ALK LOW R6	1.120 mg/L	OK
4	LCS	Sample size	50 mL	
		Potential R4	11.22 pH	OK
		Consumption 8.3 R1	4.896 mL	OK
		Consumption 4.5 R2	5.223 mL	OK
		Consumption 4.2 R3	5.231 mL	OK
		Content R5	104.460 mg/L	OK
		ALK LOW R6	104.300 mg/L	OK
5	I2446208-09 2x+30	Sample size	50 mL	
		Potential R4	5.30 pH	OK
		Consumption 8.3 R1	NaN mL	Not OK
		Consumption 4.5 R2	7.271 mL	OK
		Consumption 4.2 R3	8.155 mL	OK
		Content R5	145.420 mg/L	OK
		ALK LOW R6	127.740 mg/L	OK
6	WG1962102-3 2x+30	Sample size	50 mL	

Titration report

		Potential R4	5.37 pH	OK

WETCHEM (WATER)

Analyte	CAS #	RL	MDL	Units	LCS Criteria	LCS RPD	MS Criteria	MS RPD	Duplicate RPD	Method	Holding Time	Container/Sample Preservation
Alkalinity, Total	471-34-1	2		mg CaCO3/L	90-110	10	86-116	10	10	2320B	14 days	1 - Plastic 250ml unpreserved/No Headspace

Please Note that the RL information provided in this table is calculated using a 100% Solids factor. (Soil/Solids only)
Please Note that the information provided in this table is subject to change at anytime at the discretion of Alpha Analytical, Inc.

Calculations of Alkalinity

$$\text{Alkalinity, mg } CaCO_3/L = \frac{A \times N \times 50{,}000}{\text{mL Sample}}$$

Where:

A = mL of the standard acid titrated

N = normality of the standard acid

Results are calculated using Mettler Toledo software.

Standard sample size is 50mL, 0.02N Sulfuric acid for titration

Calculations of Chloride

Aqueous samples:

Compute sample Chloride concentration by comparing sample peak areas with standard curve, as determined by the Lachat instrument software.

Calculate results by using reading on Channel 2 (Chloride)

To compute the final results for aqueous samples, multiply the direct reading by the dilution factor. (also done using software)

Cl mg/L = mg/L direct reading x dilution factor

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

August 26, 2024: This final report includes the results of all requested analyses.

August 23, 2024: This is a preliminary report.

August 19, 2024: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

The analyses of DHC and EBAC were subcontracted. A copy of the laboratory report is included as an addendum. Please note: This data is only available in PDF format and is not available on Data Merger.

Sample Receipt

L2446922-01 through -06: The Client IDs were changed at the client's request.

L2446922-02 through -06: Headspace was noted in the sample container submitted for Total Alkalinity - SM 2320.

L2446922-04: The collection date and time on the chain of custody was 16-AUG-24 17:40; however, the collection date/time on the container label was 15-AUG-24 17:40. At the client's request, the collection date/time is reported as 15-AUG-24 17:40.

L2446922-04: The sample was received above the appropriate pH for the Total Metals analysis. The laboratory added additional HNO3; however, the pH would not adjust into the proper range.

L2446922-05: The sample was received above the appropriate pH for the Total Metals analysis. The laboratory added additional HNO3 to a pH <2.

Dissolved Organic Carbon

L2446922-04: The sample was filtered with the method required holding time exceeded.

Total Organic Carbon

L2446922-04: The DOC result is greater than the TOC result due to the filtering procedure required by the

Case Narrative (continued)

DOC method.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Cristen Walker Report Date: 08/26/24

Title: Technical Director/Representative

DATA PACKAGE GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Report Format: DU Report with 'J' Qualifiers

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

ND or U - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Volatile Organics Instruments

Volatile Organics:

Instrument: Agilent 7890 GC/5975C MSD	Columns (length x ID x df):
Trap: Supelco K Trap (VOACARB 3000)	RTX-VMS 20m x 0.18mm x 1um
Concentrator: EST Encon (or equivalent)	RTX-VMS 30m x 0.25mm x 1.4um
Autosampler: EST Centurion (or equivalent)	RTX-502.2 40m x 0.18mm x 1um
Purge time: 11 min	

Volatile Organics: VPH

Instrument: Agilent 6890 (or equivalent)	Column Type: Restek RTX 502.2
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 105 Meters
Concentrator: EST Encon (or equivalent)	df: 3.00 um
Autosampler: EST Centurion (or equivalent)	ID: 0.53mm

Volatile Organics: PIANO

Instrument: Agilent 7890 GC/5975C MSD	Column Type: DB-VRX
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 60 Meters
Concentrator: Tekmar Velocity / EST Encon	df: 1.40 um
Autosampler: Varian Archon / EST Centurion	ID: 0.25 mm
Purge time: 11 min	Desorb: 1 min

Volatile Organics: Dissolved Gas

Instrument: Agilent 7890 (or equivalent) with FID/TCD	
	Column Type: Haysep S Column
	Column Length: 2 Meters packed (100/200 mesh)
Autosampler: LEAP Headspace	Purge time: 0.6 min

Volatile Organics in Air Instruments

Volatile Organics in Air:

Instruments: Agilent 6890 GC / 5975 MSD Shimadzu QP2010-SE / QP2020

Concentrator: Entech 7100A or 7200	Column Type: Restek RTX-1
Autosampler: Entech 7016CA or 7016D	Column Length: 60 Meters
	df: 1.00 um
	ID: 0.25 mm or 0.32 mm

Trap 1: Glass Bead: manufacturer-Entech: 20 cm packing material
Trap 2: Tenax: manufacturer-Entech: 20 cm packing material

Semivolatile Organics Instruments - Westborough

Semivolatile Organics (Acid/Base/Neutral Extractables):

Instrument: Agilent 5973N MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.32 um
Column Length: 30 Meters	ID: 0.25 mm

Polynuclear Aromatic Hydrocarbons by 8270 SIM:

Instrument: Agilent 5973 MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Pesticides/PCB/Herbicides:

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Petroleum/EPH:

Instrument: Agilent 6890 w/FID / HP 5890 w/ FID	Injection Volume: 1uL
Column: Restek RTX 5	df: 0.25
Column Length: 30 Meters	
ID: 0.32 mm	

Semivolatile Organic Instruments - Mansfield

Semivolatile Organics (ALK-PAH Extractables):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 1 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8270):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 2 ul
Column Type: ZB-Semivolatiles	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (8270 SIM):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (1,4-Dioxane):

Instrument: Agilent 5973N / 5975 / 5977 MSD	Injection volume: 3 ul
Column Type: RTX-5	df: 0.25um, 0.18 um
Column Length: 30 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (209 Congener):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: RTX-5, RTX-PCB	df: 0.25um, 0.18 um
Column Length: 60 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (8081):

Instrument: Agilent 6890 / 7890	Injection volume: 1 ul
Column Type: RTX-5 / RTX-CLP II	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8082):

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Semivolatile Organics (SHC Extractables):

Instrument: Agilent 6890	Injection volume: 1 ul
Column Type: RTX-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Date Inj'd : 8/19/2024 6:33 am
Sample : WG1960966-3,31,10,10

QMethod : Elaine_240731N_8260.m
Operator : ELAINE:MJV
Instrument : Elaine
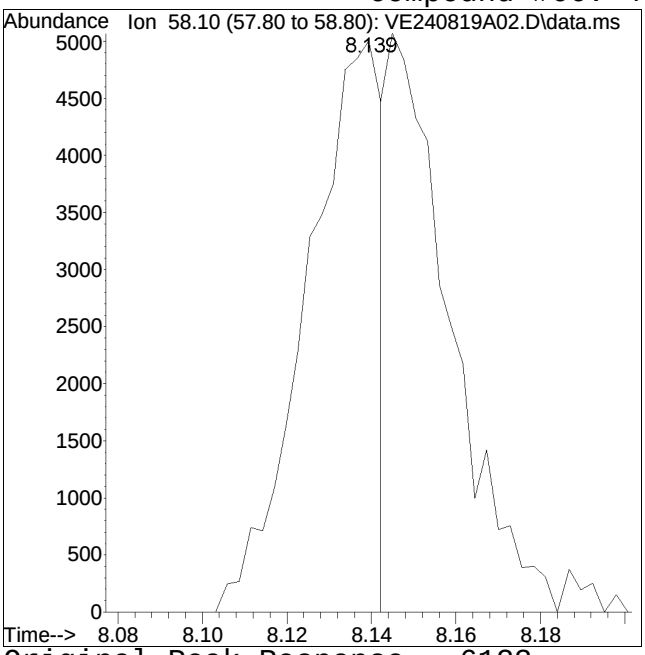
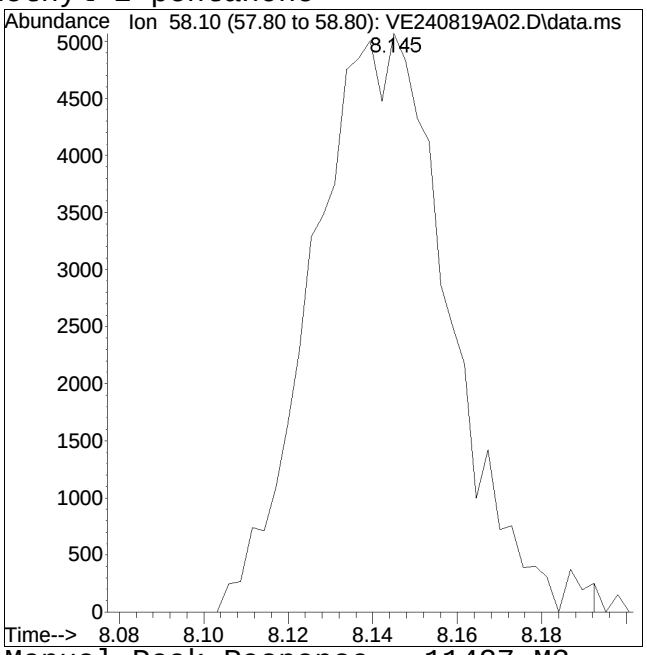
Quant Date : 8/19/2024 7:02 am

Compound #66: 4-Methyl-2-pentanone





Original Peak Response = 6123 Manual Peak Response = 11427 M3

M3 = Misidentification of the peak (i.e. 1,4-dichlorobenzene identified as 1,3-dichlorobenzene), or misidentification from 2 partially resolved peaks not being split.

Manual Integration Report

Data Path : K:\Elaine\2024\240819A\
Data File : VE240819A03.D
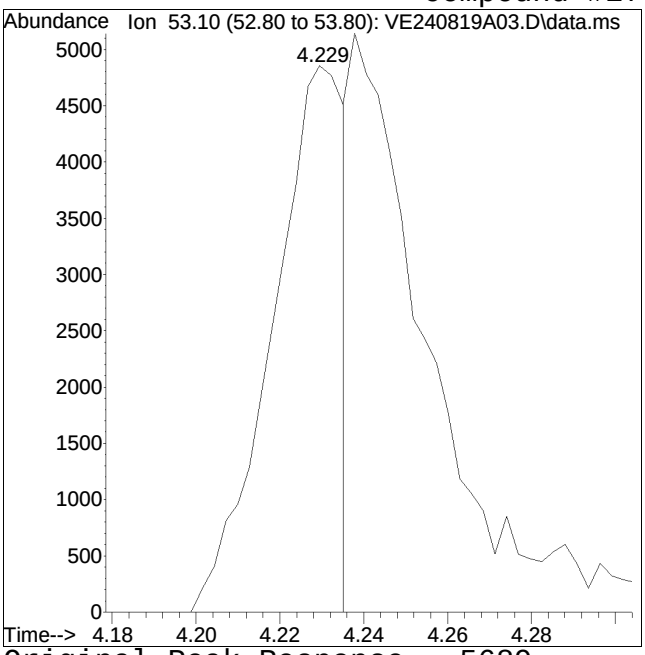
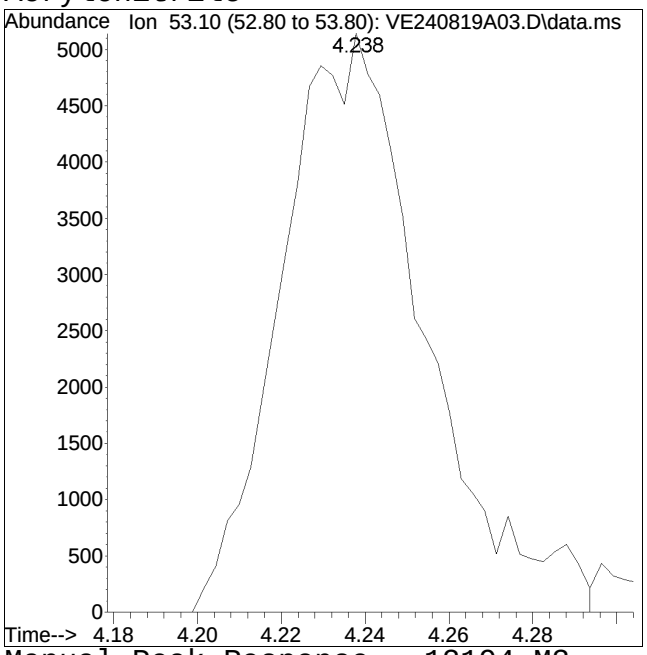
Date Inj'd : 8/19/2024 6:57 am
Sample : WG1960966-4,31,10,10

QMethod : Elaine_240731N_8260.m
Operator : ELAINE:MJV
Instrument : Elaine
Quant Date : 8/19/2024 7:27 am

Compound #27: Acrylonitrile



Original Peak Response = 5689



Manual Peak Response = 12194 M3

M3 = Misidentification of the peak (i.e. 1,4-dichlorobenzene identified as 1,3-dichlorobenzene), or misidentification from 2 partially resolved peaks not being split.

Calculation of Volatile Organic Compounds

Aqueous Concentration Formula: Amt * DF * Uf * (1/Vo)

Where:
DF = Dilution Factor
Vo = Sample Volume Purged (mL)
Uf = ng Unit Correction Factor (mL)

Soil Concentration Formula: Amt * DF * (1/Wt)

Where:
DF = Dilution Factor
Wt = Weight of Sample (g)

1. The **Certified Values** are the actual "made-to" concentrations confirmed by ERA analytical verification. The certified values are monitored and purchasers will be notified of any significant changes resulting in recertification or withdrawal of this certified reference material during the period of validity of this certificate.

2. The **Uncertainty** is the total propagated uncertainty at the 95% confidence interval. The uncertainty is based on the preparation and internal analytical verification of the product by ERA, multiplied by a coverage factor. The uncertainty applies to the product as supplied and does not take into account any required or optional dilution and/or preparations the laboratory may perform while using this product.

3. The **QC Performance Acceptance Limits (QC PALs™)**are based on actual historical data collected in ERA's Proficiency Testing program. The QC PALs™ reflect any inherent biases in the methods used to establish the limits and closely approximate a 95% confidence interval of the performance that experienced laboratories should achieve using accepted environmental methods. Use the QC PALs™ to realistically evaluate your performance against your peers.

4. The **PT Performance Acceptance Limits (PT PALs™)** are calculated using the regression equations and fixed acceptance criteria specified in the NELAC proficiency testing requirements. Use the PT PALs™ when analyzing this QC standard alongside USEPA and NELAC compliant PT standards. Please note that many PT study acceptance limits are concentration dependent (some non-linearly) and, therefore, the acceptance limits of this QC standard and any PT standard may differ relative to their difference in concentrations.

5. The **PT Data/Traceability** data include the mean value, percent recovery and number of data points reported by the laboratories in our Proficiency Testing study compared to the Certified Values. In addition, where NIST Standard Reference Materials (SRMs) are available, each analyte has been analytically traced to the NIST SRM listed. This product is traceable to the lot numbers of its starting materials. All gravimetric and volumetric measurements related to its manufacture are traceable to NIST through an unbroken chain of comparisons.
Traceability Recovery (%) = [(% recovery certified standard)/(% recovery NIST SRM)]*100
The traceability data shown were compiled by analyzing the ERA standards or their associated stock solutions against the applicable NIST SRMs.

6. For additional information on this product such as intended use, instructions for use, level of homogeneity, and safety information, please refer to the provided Instruction Sheet

If you have any questions or need technical assistance, please call ERA technical assistance at 1-800-372-0122 or send an email to info@eraqc.com.

Zinc	251	240	95.5	234	-	-

1. The **Certified Values** are the actual "made-to" concentrations confirmed by ERA analytical verification. The certified values are monitored and purchasers will be notified of any significant changes resulting in recertification or withdrawal of this reference material during the period of validity of this certificate.

2. The **Uncertainty** is the total propagated uncertainty at the 95% confidence interval. The uncertainty is based on the preparation and internal analytical verification of the product by ERA, multiplied by a coverage factor. The uncertainty applies to the product as supplied and does not take into account any required or optional dilution and/or preparations the laboratory may perform while using this product.

3. The **QC Performance Acceptance Limits (QC PALs™)**are based on actual historical data collected in ERA's Proficiency Testing program. The QC PALs™ reflect any inherent biases in the methods used to establish the limits and closely approximate a 95% confidence interval of the performance that experienced laboratories should achieve using accepted environmental methods. Use the QC PALs™ to realistically evaluate your performance against your peers.

4. The **PT Performance Acceptance Limits (PT PALs™)** are calculated using the regression equations and fixed acceptance criteria specified in the NELAC proficiency testing requirements. Use the PT PALs™ when analyzing this QC standard alongside USEPA and NELAC compliant PT standards. Please note that many PT study acceptance limits are concentration dependent (some non-linearly) and, therefore, the acceptance limits of this QC standard and any PT standard may differ relative to their difference in concentrations.

5. The **PT Data/Traceability** data include the mean value, percent recovery and number of data points reported by the laboratories in our Proficiency Testing study compared to the Certified Values. In addition, where NIST Standard Reference Materials (SRMs) are available, each analyte has been analytically traced to the NIST SRM listed. This product is traceable to the lot numbers of its starting materials. All gravimetric and volumetric measurements related to its manufacture are traceable to NIST through an unbroken chain of comparisons.
Traceability Recovery (%) = [(% recovery certified standard)/(% recovery NIST SRM)]*100
The traceability data shown were compiled by analyzing the ERA standards or their associated stock solutions against the applicable NIST SRMs.

6. For additional information on this product such as intended use, instructions for use, level of homogeneity, and safety information, please refer to the provided Instruction Sheet

If you have any questions or need technical assistance, please call ERA technical assistance at 1-800-372-0122 or send an email to info@eraqc.com.

▪ Certificate of Analysis ▪

1. The **Certified Values** are the actual gravimetric/volumetric "made-to" concentrations confirmed by ERA analytical verification. The certified values are monitored and purchasers will be notified of any significant changes resulting in recertification or withdrawal of this certified reference material during the period of validity of this certificate.

2. The **Uncertainty** represents an expanded uncertainty and approximates a 95% confidence interval. The uncertainty is based on the characterization, homogeneity and stability characteristics of the product, multiplied by a coverage factor (k=2). The uncertainty applies to the product as supplied and does not take into account any required or optional dilution and/or preparations the laboratory may perform while using this product. The formula used to calculate the expanded uncertainty is:
$U_{expanded} = k * SQRT((U_{char}^2) + (U_{homogen}^2) + (U_{LTS}^2) + (U_{STS}^2) + (U_{RSS}^2))$

Where:

$U_{expanded}$ = Expanded uncertainty.
k = Coverage factor.
U_{char} = Combined standard uncertainty of the manufacturing and/or analytical verification assessment.
$U_{homogen}$ = Standard uncertainty of the homogeneity assessment.
U_{LTS} = Standard uncertainty associated with long-term stability.
U_{STS} = Standard uncertainty associated with short-term (transport) stability.
U_{RSS} = Standard uncertainty associated with repeated sampling of the product (where permitted by product use instructions).

3. The **QC Performance Acceptance Limits (QC PALs™)** are based on actual historical data collected in ERA's Proficiency Testing program. The QC PALs™ reflect any inherent biases in the methods used to establish the limits and closely approximate a 95% confidence interval of the performance that experienced laboratories should achieve using accepted environmental methods. Use the QC PALs™ to realistically evaluate your performance against your peers.

4. The **PT Performance Acceptance Limits (PT PALs™)** are calculated using the regression equations and fixed acceptance criteria specified in the NELAC proficiency testing requirements. Use the PT PALs™ when analyzing this certified reference material alongside USEPA and NELAC compliant PT study materials. Please note that many PT study acceptance limits are concentration dependent (some non-linearly) and therefore, the acceptance limits of this certified reference material and any PT study material may differ relative to their difference in concentrations.

5. The **PT Performance Data** include the mean value, percent recovery and number of data points reported by laboratories in our Proficiency Testing study compared to the Certified Values. In the event this lot was not used in a proficiency testing scheme, the data displayed was generated internally by ERA.

6. Where NIST Standard Reference Materials (SRMs) are available, each analyte has been analytically traced to the NIST SRM listed. **Analytical Traceability Recovery (%)** = [(% recovery ERA certified reference material)/(% recovery NIST SRM)]*100
The traceability data shown were compiled by analyzing this ERA certified reference material and/or it's associated stock solution(s) against the applicable NIST SRMs.

7. The **Reference Values** are equal to the mean recoveries for the parameters as determined in an interlaboratory round robin study. The **Reference Values** represent the expected performance for the analytes in this standard. ERA recommends using the **Reference Values** when assessing or evaluating your results.

8. **Metrological Traceability**. This certified reference material is metrologically traceable to NIST mass reference materials through an unbroken chain of comparisons.

9. For additional information on this product such as intended use, storage information, instructions for use, minimum sample size, and safety information, please refer to the Product Use Instructions provided.

If you have any questions or need technical assistance, please call ERA technical assistance at 1-800-372-0122 or send an email to info@eraqc.com.

Calculation of Method 6020 Metals

Aqueous Samples

The instrument will calculate the concentration (µg/L). This value is divided by 1000 to convert the units to mg/L. If the sample is diluted (DF), the result is multiplied by the DF to generate the final result.

$$\text{Result, mg/L} = C_s \times (1\text{mg}/1000\mu\text{g}) \times (DF)$$

Where:

C_s = Concentration of sample (µg/L)

DF = Dilution Factor

Method Log:

```
FIAsoft FIAsoft v3.1.10

FIAlyzer Settings
------------
FIAlab1 Serial Number: FIA31428
FIAlab2 Serial Number: FIA31429
Pump: Connected on COM8

Spectrometer Settings
Spectrometer1
------------
Spectrometer Type: tec5
Integration Time: 11.5
Bandwidth: 2
Data Acq Rate: 2
Use Full Spectrum: False
        |---  Low: 500nm
        |--- High: 650nm
Reduce to Boxcar: True

Spectrometer2
------------
Spectrometer Type: tec5
Integration Time: 2.7
Bandwidth: 2
```

```
Data Acq Rate: 2
Use Full Spectrum: False
        |---  Low: 500nm
        |--- High: 650nm
Reduce to Boxcar: True

Start Time
------------
2024-08-17T03:51:16

Method
------------

Calculations of Nitrogen, Nitrate

Aqueous Samples:
Compute sample N in NO3 concentration by comparing sample peak areas with standard curve, as determined by the Lachat instrument software.

Calculate results by using reading on Channel 1 (NO3+NO2) and Channel 2 (NO2)

$$NO3\ mg/I = (NO3+NO2)\ mg/L - (NO2)\ mg/L$$

To compute final results for aqueous samples, multiply the direct reading by the dilution factor (also done using software)

$$(NO3)\text{-}N\ mg/L = mg/L\ direct\ reading \times dilution\ factor$$

Calculations of Nitrogen, Nitrite

Aqueous Samples:
Compute sample N in NO2 concentration by comparing sample peak areas with standard curve, as determined by the Lachat instrument software.

Calculate results by using reading on Channel 2 (NO2)

To compute final results for aqueous samples, multiply the direct reading by the dilution factor (also done using software)

$$(NO2)\text{-}N\ mg/L = mg/L\ direct\ reading \times dilution\ factor$$

WETCHEM (WATER)

Analyte	CAS #	RL	MDL	Units	LCS Criteria	LCS RPD	MS Criteria	MS RPD	Duplicate RPD	Method	Holding Time	Container/Sample Preservation
Total Organic Carbon	7440-44-0	0.5	0.114	mg/l	90-110		80-120	20	20	9060A	28 days	3 - Vial H2SO4 preserved
Total Organic Carbon	7440-44-0	0.5	0.114	mg/l	90-110		80-120	20	20	5310C	28 days	2 - Vial H2SO4 preserved

Please Note that the RL information provided in this table is calculated using a 100% Solids factor. (Soil/Solids only)
Please Note that the information provided in this table is subject to change at anytime at the discretion of Alpha Analytical, Inc.

Calculations of TOC

Aqueous samples:

The TOC Talk Software calculates the area of the peaks produced by the analyzer, compares them to the peak area of the calibration standard stored in its memory, and calculates a mean TOC value from two injections in mg/L.

If the sample was manually diluted prior to analysis, the calculated mean must be manually multiplied by the dilution factor. The Reported Detection Limit is also multiplied by the same dilution factor.

$$\text{Result, mg/L} = \frac{\text{area - y-intercept}}{\text{slope}} \times \text{Dilution Factor}$$

Calculations of Sulfate

Aqueous samples:

Calculate the concentration value of the sample directly from the standard curve.

$$mgSO_4/L = \frac{\text{absorbance - y-intercept}}{\text{slope}} \times \text{Dilution Factor}$$

If sample has a background absorbance, it has to be subtracted before calculation.

WETCHEM (WATER)

Analyte	CAS #	RL	MDL	Units	LCS Criteria	LCS RPD	MS Criteria	MS RPD	Duplicate RPD	Method	Holding Time	Container/Sample Preservation
Alkalinity, Total	471-34-1	2		mg CaCO3/L	90-110	10	86-116	10	10	2320B	14 days	1 - Plastic 250ml unpreserved/No Headspace

Please Note that the RL information provided in this table is calculated using a 100% Solids factor. (Soil/Solids only)
Please Note that the information provided in this table is subject to change at anytime at the discretion of Alpha Analytical, Inc.

Calculations of Alkalinity

$$\text{Alkalinity, mg } CaCO_3/L = \frac{A \times N \times 50{,}000}{\text{mL Sample}}$$

Where:

A = mL of the standard acid titrated

N = normality of the standard acid

Results are calculated using Mettler Toledo software.

Standard sample size is 50mL, 0.02N Sulfuric acid for titration

Calculations of Chloride

Aqueous samples:

Compute sample Chloride concentration by comparing sample peak areas with standard curve, as determined by the Lachat instrument software.

Calculate results by using reading on Channel 2 (Chloride)

To compute the final results for aqueous samples, multiply the direct reading by the dilution factor. (also done using software)

Cl mg/L = mg/L direct reading x dilution factor

Re: Data Usability Summary Report
For 1487 First Avenue Development
August 2024 Groundwater Samples
Langan Project No.: 100963701

This memorandum presents the findings of an analytical data validation from the analysis of groundwater samples collected in August 2024 by Langan Engineering and Environmental Services at 1487 First Avenue Development. The samples were analyzed by Alpha Analytical Laboratories, Inc. (NYSDOH NELAP registration # 11148) for volatile organic compounds (VOCs), total and dissolved metals, sulfate (as SO4), total organic carbon (TOC), dissolved organic carbon (DOC), total alkalinity, chloride (as Cl), and nitrate (as N) by the methods specified below.

- VOCs by SW-846 Method 8260D
- Total and Dissolved Metals by SW-846 Method 6020B
- Sulfate (as SO4) by SW-846 Method 9038
- TOC and DOC by SW-846 Method 9060A
- Total Alkalinity by Standard Method 2320B
- Chloride (as Cl) by Standard Method 4500-CL E
- Nitrate (as N) by Standard Method 4500-NO3 F

Table 1, attached, summarizes the laboratory and client sample identification numbers, sample collection dates, level of data validation, and analytical parameters subject to review.

Validation Overview

This data validation was performed in accordance with the following guidelines, where applicable:

- USEPA Region II Standard Operating Procedures (SOPs) for Data Validation
- USEPA Contract Laboratory Program "National Functional Guidelines for Organic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020)
- USEPA Contract Laboratory Program "National Functional Guidelines for Inorganic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020), and
- published analytical methodologies.

The following acronyms may be used in the discussion of data-quality issues:

%D	Percent Difference	MB	Method Blank
CCV	Continuing Calibration Verification	MDL	Method Detection Limit
FB	Field Blank	MS	Matrix Spike
FD	Field Duplicate	MSD	Matrix Spike Duplicate
ICAL	Initial Calibration	RF	Response Factor
ICV	Initial Calibration Verification	RL	Reporting Limit
ISTD	Internal Standard	RPD	Relative Percent Difference
LCL	Lower Control Limit	RSD	Relative Standard Deviation
LCS	Laboratory Control Sample	TB	Trip Blank
LCSD	Laboratory Control Sample Duplicate	UCL	Upper Control Limit

Tier 1 data validation is based on completeness and compliance checks of sample-related QC results including: sample receipt documentation; analytical holding times; sample preservation; blank results (method, field, and trip); surrogate recoveries; MS/MSD recoveries and RPDs values; field duplicate RPDs, laboratory duplicate RPDs, and LCS/LCSD recoveries and RPDs. All five SDGs underwent Tier 1 validation review.

As a result of the review process, the following qualifiers may be assigned to the data in accordance with the USEPA guidelines and our best professional judgment:

- **R –** The sample results are unusable because certain criteria were not met when generating the data. The analyte may or may not be present in the sample.
- **J –** The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
- **UJ –** The analyte was not detected at a level greater than or equal to the reporting limit; however, the reported reporting limit is approximate and may be inaccurate or imprecise.
- **U –** The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.
- **NJ –** The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

If any validation qualifiers are assigned, these qualifiers should supersede any laboratory-applied qualifiers. Data that is not qualified as a result of this data validation is considered acceptable on the basis of the items specified for review. Data that is qualified as "R" are considered invalid and are not technically usable for data interpretation. Data that is otherwise qualified because of minor data-quality anomalies are usable, as qualified in Table 2 (attached).

MAJOR DEFICIENCIES:

Major deficiencies include those that grossly impact data quality and necessitate the rejection of results. No major deficiencies were identified.

MINOR DEFICIENCIES:

Minor deficiencies include anomalies that directly impact data quality and necessitate qualification, but do not result in unusable data. The section below describes the minor deficiencies that were identified.

VOCs by SW-846 Method 8260D

L2445487

The LCS/LCSD for batch WG1959725 exhibited RPDs above the control limit for 1,2-dibromo-3-chloropropane (21%), and 1,4-dioxane (24%), methyl isobutyl ketone (23%), acrylonitrile (23%), naphthalene (25%), and trans-1,4-dichloro-2-butene (22%). The associated results in sample LMW7RS_6.75 (dilution 2) are qualified as UJ because of potential indeterminate bias.

The LCS for batch WG1959725 exhibited a percent recovery below the LCL for naphthalene (64%). The associated results in sample LMW7RS_6.75 (dilution 2) are qualified as UJ because of potential low bias.

The laboratory case narrative noted that the VOC vial used in the dilution 2 analysis of sample LMW7RS_6.75 was compromised. The associated results are qualified as J or UJ because of potential indeterminate bias.

L2446104

The LCS for batch WG1961176 exhibited a percent recovery below the LCL for chloroethane (54%). The associated results in sample LMW-6RS_18.75 (dilution 2) are qualified as UJ because of potential low bias.

The LCS/LCSD for batch WG1961176 exhibited RPDs above the control limit for 1,1-dichloroethene (26%), carbon disulfide (30%), chloroethane (24%), diethyl ether (38%), and trichlorofluoromethane (23%). The associated results in sample LMW-6RS_18.75 (dilution 2) are qualified as UJ because of potential indeterminate bias.

The case narrative noted headspace in the VOC vial used in the dilution 2 analysis of sample LMW-6RS_18.75. The associated results are qualified as J or UJ because of potential indeterminate bias.

L2446555

The LCS for batch WG1960231 exhibited a percent recovery below the LCL for naphthalene (69%). The associated results in sample LMW-6R-D_42.75 are qualified as UJ because of potential low bias.

The LCS/LCSD for batch WG1960231 exhibited a RPD above the control limit for 1,4-dioxane (23%). The associated results in sample LMW-6R-D_42.75 are qualified as UJ because of potential indeterminate bias.

Total Metals by SW-846 Method 6020B

L2446555

The laboratory case narrative noted that the total metals volume for sample LMW-7R-S_16.75 was received at a pH greater than 2, and that the proper pH range was not achieved prior to analysis (final pH 4). Using professional judgement, the associated results are qualified as J because of potential indeterminate bias.

L2446922

The laboratory case narrative noted that the total metals volume for sample LMW-10R-S_24.75 was received at a pH greater than 2, and that the proper pH range was not achieved prior to analysis (final pH 4). Using professional judgment, the associated results are qualified as J because of potential indeterminate bias.

Total Sulfate by SW-846 Method 9038

L2446555

The FB (FIELD BLANK 08152024) exhibited a detection of sulfate (as SO4) (1.8 mg/l). The associated trace detected results in samples LMW-8R-S_6.75, LMW-9R-S_13.75, LMW-6R-D_42.75, and LMW-7R-S_16.75 are qualified as U at the reporting limit because of potential blank contamination.

The MB for batch WG1962209 exhibited a detection of sulfate (as SO4) (2.1 mg/l). The associated results in sample LMW-7R-S_16.75 are qualified as U at the reporting limit because of potential blank contamination.

L2446922

The MB for batch WG1962577 exhibited a detection of sulfate (as SO4) (2.1 mg/l). The associated trace detected results in samples LMW-10R-S_24.75, LMW-8R-S_6.75, LMW-9R-S_13.75, and LMW-7R-S_6.75 are qualified as U at the reporting limit because of potential blank contamination.

TOC and DOC by SW-846 Method 9060A

L2446922

The laboratory case narrative noted that the dissolved organic carbon result exceeded the total organic carbon result in sample LMW-8R-S_6.75 and that dissolved organic carbon was filtered outside of holding time. Using professional judgment, the associated results are qualified as J because of potential indeterminate bias.

Total Alkalinity by Standard Method 2320B

L2446555

The MS performed on sample LMW-7R-S_16.75 exhibited a percent recovery below the LCL for total alkalinity (60%). The associated results in sample LMW-7R-S_16.75 are qualified as J because of potential low bias.

The laboratory case narrative noted that the total alkalinity vials for samples LMW-10R-S_24.75, LMW-8R-S_6.75, LMW-9R-S_13.75, and LMW-7R-S_6.75 were received with headspace. Using professional judgement, the associated sample results are qualified as J because of potential low bias.

OTHER DEFICIENCIES:

Other deficiencies include anomalies that do not directly impact data quality and do not necessitate qualification. The section below describes the other deficiencies that were identified.

VOCs by SW-846 Method 8260D

L2445487

The LCSD for batch WG1959725 exhibited a percent recovery above the UCL for vinyl acetate (140%). The associated results are non-detect. No qualification is necessary.

L2446104

The LCSD for batch WG1959746 exhibited a percent recovery above the UCL for bromomethane (140%). The associated results are non-detect. No qualification is necessary.

L2446555

The LCSD for batch WG1960231 exhibited a percent recovery above the UCL for vinyl acetate (140%). The associated results are non-detect. No qualification is necessary.

The LCS/LCSD for batch WG1960272 exhibited a percent recovery above the UCL for bromomethane (150%, 140%). The associated results are non-detect. No qualification is necessary.

L2446922

The LCSD for batch WG1960966 exhibited a percent recovery above the UCL for bromomethane (150%). The associated results are non-detect. No qualification is necessary.

TOC and DOC by SW-846 Method 9060A

L2446555

The FB (FIELD BLANK 08152024) exhibited detections of dissolved organic carbon (0.30 mg/l) and total organic carbon (0.28 mg/l). The associated results are >10X the contamination. No qualification is necessary.

L2446922

The MB for batch WG1963587 exhibited a detection of dissolved organic carbon (0.05 mg/l). The associated results are >10X the contamination. No qualification is necessary.

CONCLUSION:

On the basis of this evaluation, the laboratory appears to have followed the specified analytical methods with the exception of errors discussed above. If a given fraction is not mentioned above, that means that all specified criteria were met for that parameter. All of the data packages met ASP Category B requirements.

All data are considered usable, as qualified. In addition, completeness, defined as the percentage of analytical results that are judged to be valid, is 100%.

1.0 BACKGROUND

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) has prepared this Groundwater Performance Monitoring Report & Injection Design for the 1487 1st Avenue Redevelopment Site, New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Site No. C231152. The Site is an approximately 10,050-square-foot parcel identified as Block 1452, Lot 27 in the Upper East Side neighborhood of Manhattan, New York (the "Site"). A site location plan is provided as Figure 1. A Certificate of Completion for remediation through the BCP was issued on 26 December 2023 and the site is currently undergoing construction for redevelopment as a 35-story mixed-use residential and commercial building with an affordable housing component that will occupy the entirety of the Site footprint. Ongoing groundwater monitoring and remediation has been implemented under the 22 December 2023 NYSDEC-approved Site Management Plan (SMP) and groundwater monitoring will continue to be implemented under the forthcoming revised and NYSDEC-approved SMP.

March/April 2023 Injections

Chlorinated volatile organic compounds (CVOCs), including the contaminants of concern (COCs) tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), vinyl chloride (VC), and chloroform were detected at concentrations exceeding the NYSDEC Ambient Water Quality Standards and Guidance Values (SGVs) in groundwater samples collected from the eastern portion of the Site during the completion of the Remedial Investigation. The concentrations of PCE and associated breakdown compounds detected in groundwater were indicative of a release that had migrated into bedrock at the site from a former solvent storage tank. Analytical results from the initial and baseline sampling events are presented in Tables 1 and 2, respectively, and CVOC analytical results from these events are summarized on Figures 2B, 3B, and 3C.

To address these exceedances, an emulsified zero valent iron (EZVI) injection was proposed in the NYSDEC-approved January 2023 Interim Remedial Measures Work Plan (IRMWP) to achieve reduction in groundwater concentrations of the chlorinated solvents, such that natural attenuation would be supported. The EZVI remedy objectives were to:

- Both chemically reduce and anaerobically degrade the CVOCs;
- Further promote monitored natural attenuation (MNA); and,
- Mitigate potential for off-Site migration of on-Site CVOC-impacted groundwater.

The EZVI injection scope was presented in Langan's 6 March 2023 EZVI Remedial Design, the draft of which was approved by NYSDEC via email correspondence on 27 February 2023. Completion of the EZVI injections in March and April 2023 was documented in the 29 September 2023 EZVI Remedial Injection Report, which was included in the 18 December 2023 Final Engineering Report as Appendix E. A Certificate of Completion was issued for the Site on 26 December 2023.

Post construction bedrock well re-installation was completed between November 2023 and February 2024 and performance monitoring groundwater samples were collected in February 2024, approximately 10 months following the EZVI injections. Performance monitoring groundwater sample analytical results revealed the successful reduction of PCE and TCE by one order of magnitude in the wells that had previously contained the highest concentrations of these compounds during the initial and baseline sampling events, and elimination of PCE and TCE concentrations above the SGVs across the remainder of the treatment area. Concentrations of breakdown products including cis-1,2-DCE and VC were detected during performance monitoring, confirming the ongoing degradation of PCE and TCE.

May 2024 Injections

Based on the February 2024 performance monitoring analytical results, an additional focused injection was proposed in the April 2024 Groundwater Performance Monitoring Report and Injection Design to further address the highest concentrations of PCE and breakdown products remaining in groundwater. The additional injection was conducted at the four well intervals where COC concentrations greater than one order of magnitude above the SGV were detected during the February 2024 event. As shown in Figures 2A and 2B, these locations included:

- LMW-7R-S at el 8 to 3 NAVD88 and el -2 to -7 NAVD88 intervals,
- LMW-7R-D at el -9 to -14 NAVD88 interval, and
- LMW-8R-S at el 8 to 3 NAVD88 interval.

EZVI was also injected into LMW-9R-S, at injection interval el 1 to -5 NAVD88, to treat impacts in LMW-7R-S, as communication was observed between these two wells during the 2023 injection event.

In addition to EZVI injections, additional emulsified vegetable oil (EVO) was added at these five intervals (prior to and/or following the EZVI injection) and at the following well intervals where only cis-1,2-DCE and/or VC remained above the SGVs:

- LMW-6R-S at el -4 to -9 NAVD88, and
- LMW-8R-D at el -43 to -50 NAVD88.

August 2024 Groundwater Monitoring

Performance monitoring groundwater samples were collected in August 2024. The analytical results revealed the elimination of PCE and TCE concentrations above the SGVs across the treatment area. Concentrations of breakdown products including cis-1,2-DCE and VC were detected during performance monitoring, confirming the continued degradation of PCE and TCE. Based on observations of reagent in some wells during the performance monitoring event, a small volume of reagent and groundwater was purged from LMW-7R-S at el 8 to 3 NAVD88 and additional anaerobic chase water was injected into LMW-7R-S at el 8 to 3 NAVD88 and el -2 to -7 NAVD88 in September 2024 in accordance with the April 2024 Groundwater Performance Monitoring Report and Injection Design.

November 2024 Groundwater Monitoring

Sixteen performance monitoring groundwater samples were collected on 20, 21, 22 and 25 November 2024. The analytical results revealed that CVOCs were not detected at concentrations above the SGVs across the treatment area. CVOCs were either not detected or at the following seven intervals/locations, were detected below the SGVs: all three intervals at LMW-6R-D, the only interval at LMW-9R-D, the only interval at LMW-10R-S, and both at LMW-10R-D. Elevated reporting limits were reported by the laboratory for PCE and/or breakdown products at nine well intervals in six of the monitoring wells (the only interval at LMW-6R-S, the two intervals at LMW-7R-S, the only interval at LMW-7R-D, both intervals at LMW-8R-S, both intervals at LMW-8R-D, and the only interval at LMW-9R-S).

Elevated concentrations of fermentation byproducts (acetone and methyl ethyl ketone) remain above the SGVs in nine well intervals at six of the monitoring wells (LMW-6R-D, LMW-7R-S/D, LMW-8R-S/D, and LMW-9R-S) although the concentrations of one or both byproducts decreased in November 2024 from peak concentrations detected in either February or August 2024 at LMW-6R-S/D, one of the intervals at LMW-8R-D, LMW-9R-D, and LMW-10R-S/D.

Based on these results, the elimination of all sampling intervals in LMW-9R-D and LMW-10R-D and two of the intervals at LMW-6R-D from the sampling program has been approved for all future sampling events. This revision to the Groundwater Sampling Plan (GSP) will be reflected in the forthcoming, revised SMP and the modified sampling plan will be implemented starting with the fourth quarterly performance monitoring sampling event in March 2025.

The performance monitoring groundwater sample collection and analytical results and the proposed next steps are discussed in detail below.

2.0 POST-INJECTION PERFORMANCE MONITORING AND BEDROCK WELL SAMPLING METHDOLOGY

A post-injection groundwater monitoring event was conducted in November 2024, six months after the completion of the second round of EZVI injections. Sixteen groundwater samples were collected from the same monitoring intervals that were sampled during the February 2024 performance monitoring event (with the exception of the lower interval at LMW-7R-D). Quality assurance/quality control samples, including one duplicate sample and three trip blanks, were also collected during this sampling event. As discussed in the April 2024 Groundwater Performance Monitoring Report & Injection Design, during the monitoring well re-installation activities, LMW-7R-S and LMW-7R-D were evaluated for the presence of groundwater-producing fractures in the four performance monitoring sampling intervals that had been installed. A water-producing fracture was not detected in the deeper interval in LMW-7R-D and, as such, a sample was not collected from this interval during the November 2024 sampling.

Groundwater samples were collected in accordance with the NYSDEC-approved October 2023 GSP on 20 through 25 November 2024. Performance monitoring samples for VOC analysis were collected by lowering between one and four proprietary Westbay System 250 milliliter (ml) sample containers through the central access casing to the designated sampling zone. The number of sample containers lowered at one time depended on the length of the specific sampling zone. The sealed sample container(s) was then pulled to the surface and the collected sample placed in laboratory-provided bottleware, sealed, labeled, and placed in an ice-chilled cooler (to maintain a temperature of about 4° C) for delivery to Alpha Analytical of Westborough, Massachusetts, a NYSDOH ELAP-certified laboratory. All groundwater samples were analyzed for VOCs.

Water pressure measurements and groundwater quality parameters (e.g., pH, temperature, ORP, DO, turbidity, and conductivity) were collected during the groundwater monitoring event. Purging is not required with the Westbay System due to the isolated nature of each monitoring zone. Valved ports within each monitoring zone provided access to each sampling interval for discrete groundwater sample collection. Discrete groundwater samples were collected at each designated sampling zone in a container that was sealed before being brought to the surface.

Low sample recovery was encountered at three locations (LMW-7R-D, LMW-8R-S, and LMW-9R-S). The potential for these fractures to produce the necessary sample volume will continue to be evaluated during future sampling events. Due to a significant malfunction of the specialty Westbay sampler equipment that occurred following collection of all VOC samples, additional analytical parameters (metals, anions, total and dissolved organic carbon, alkalinity, hardness, and microbial genes) were unable to be collected after collection of the VOC samples.

No notable field observations of impacts were identified during sample collection. However, the presence of ZVI and EVO was observed at one interval in each LMW-6R-D, LMW-7R-D, LMW-8R-S, and LMW-9R-S, and the presence of EVO was observed at one interval at LMW-7R-S and one interval at LMW-8R-D.

3.0 PERFORMANCE MONITORING RESULTS

Groundwater analytical results were compared to the NYSDEC SGVs and are summarized in Table 2 and on Figures 3A through 3C. The laboratory data reports and data summary usability reports are provided in Appendix A and Appendix B, respectively.

Sixteen performance monitoring groundwater samples were collected on 20, 21, 22 and 25 November 2024. Analytical results revealed no CVOCs above the SGVs in any of the wells sampled. CVOCs were detected below the SGVs at seven intervals across the site (all three at LMW-6R-D, the only interval at LMW-9R-D, the only interval at LMW-10R-S, and both at LMW-10R-D) and below elevated laboratory reporting limits above the SGVs for cis-1,2-DCE, PCE, TCE, VC, trans-1,2-DCE at nine well intervals in six of the wells sampled (the only interval at LMW-6R-S, the two intervals at LMW-7R-S, the only interval at LMW-7R-D, both intervals at LMW-8R-S, both intervals at LMW-8R-D, and the only interval at LMW-9R-S).

Elevated concentrations of acetone and methyl ethyl ketone were detected above the SGVs in nine well intervals at six of the monitoring wells (LMW-6R-D, LMW-7R-S/D, LMW-8R-S/D, and LMW-9R-S). In November 2024, elevated concentrations (1,000 to 6,100 µg/l) or reporting limits (10,000 µg/l) of methyl ethyl ketone were reported at the four well locations where SRS-ZVI® was injected in May 2024: LMW-7R-S, LMW-7R-D, LMW-8R-S, and LMW-9R-S, the last of which likely has communication with LMW-7R-S. Elevated concentrations of acetone (54 to 1,200 µg/l) were also reported at these four well locations, at LMW-8R-D (where EVO was injected in May 2024), and at LMW-6R-D. Although still elevated at some intervals, concentrations of acetone and/or methyl ethyl ketone decreased in November 2024 from peak concentrations detected in either February or August 2024 at all but one interval at LMW-6R-S/D, in one of the intervals at LMW-8R-D, in the one interval at LMW-9R-D, and all intervals at LMW-10R-S/D.

Concentrations of 2-hexanone, benzene, and/or toluene were detected above the SGVs in all samples except one interval in LMW-6R-S and two of the intervals at LMW-10R-D.

Data Usability Summary Reports and Quality Assurance/Quality Control

DUSRs were prepared for data collected during the performance monitoring groundwater sampling event. The DUSRs were prepared in accordance with DER-10 and reviewed by Langan's in-house validator before issuance. The DUSRs present the results of data validation, including a

summary assessment of laboratory data packages, sample preservation and chain of custody procedures, and a summary assessment of deficiencies for each analytical method. DUSRs are provided in Appendix B. All data are considered usable, as qualified. Some data qualifiers were appended to the reported results, which have been included in the respective data summary tables (Tables 3 and 4).

Elevated reporting limits were reported by the laboratory for PCE and/or breakdown products in nine well intervals at six of the monitoring wells. Based on correspondence with the laboratory, elevated reporting limits are attributed to sample matrix interference or interferences from the elevated concentrations of methyl ethyl ketone and acetone.

4.0 PERFORMANCE MONITORING CONCLUSIONS/RECOMMENDATIONS

CVOCs were not detected at concentrations above the SGVs during the November 2024 performance monitoring groundwater sampling event, revealing a sustained reduction from the maximum concentrations of the COCs, PCE, TCE, cis-1,2-DCE, VC, and chloroform detected during the baseline concentrations and the February 2024 initial performance monitoring event.

The maximum concentrations of PCE, TCE, Cis-1,2-DCE, VC, and chloroform detected during the initial September 2022 sampling event and December 2022 baseline sampling event were 900 µg/l (LMW-8R-S), 390 µg/l (LMW-8R-S), 710 µg/l (LMW-7R-S), 6.7 µg/l (LMW-8R-D), and 56 µg/l (LMW-6R-D), respectively. Maximum concentrations of PCE and TCE decreased by an order of magnitude following the 2023 EZVI injections and were not detected above laboratory reporting limits during either the August or November 2024 performance monitoring events following the May 2024 EZVI targeted injections. Breakdown products, including cis-1,2-DCE, VC, and chloroform, were detected at concentrations above the SGVs during the February and August 2024 performance monitoring events but were not detected above laboratory reporting limits during the November 2024 performance monitoring event.

Elevated reporting limits were reported by the laboratory for CVOCs at several well locations; based on correspondence with the laboratory, elevated reporting limits are attributed to sample matrix interference and/or interferences from the elevated concentrations of methyl ethyl ketone and acetone.

Concentrations of acetone and methyl ethyl ketone were detected below the SGVs at all well locations during the initial September 2022 sampling event and December 2022 baseline sampling event. Elevated concentrations of these compounds were detected above the SGVs during the initial performance monitoring sampling event in February 2024, and as of the November 2024 sampling event, are present in nine well intervals at six of the monitoring wells (LMW-6R-D, LMW-7R-S/D, LMW-8R-S/D, and LMW-9R-S). As noted above, elevated

concentrations of these compounds were most recently detected at the five well locations where SRS-ZVI® and EVO were injected in May. These compounds are fermentation byproducts that are typically formed as a result of the introduction of electron donors, including the soybean oil and sodium lactate components of SRS-ZVI® and EVO. While a bioaugmentation culture was also introduced into the subsurface in May for the degradation of PCE and TCE, the presence of other microbial communities capable of fermenting carbon substrate and those microorganisms' specific metabolic processes may result in conversion of some of the organic matter to ketones including acetone and methyl ethyl ketone. Increases in concentrations of these byproducts are typically observed to be temporary and limited to the treatment area. Decreases from previously detected peak concentrations were detected in November 2024 at LMW-6R-S/D, one of the intervals at LMW-8R-D, LMW-9R-D, and LMW-10R-S/D. As noted, the presence of these compounds is the result of fermentation byproducts, and concentrations are expected to continue to reduce over time.

As discussed in detail below, groundwater sampling is proposed to continue for at least one additional quarterly round to monitor for continued reductions in CVOC concentration in two well intervals and to monitor for continued reductions in acetone and methyl ethyl ketone concentrations at three well intervals. Groundwater sampling is proposed to continue for at least two additional quarterly round to monitor for continued reductions in CVOC concentrations in six well intervals and to monitor for continued reductions in acetone and methyl ethyl ketone concentrations at three well intervals.

Based on these results, which were submitted to NYSDEC on 14 December 2024 and discussed during a meeting with NYSDEC on 10 January 2025, the elimination of the following five sampling intervals from the sampling program has been approved for all future sampling events:

- LMW-9R-D (el -40.5 to -48.5), due to CVOCs, methyl ethyl ketone, and acetone being detected below the SGVs for two consecutive sampling events (August and November 2024);
- LMW-10R-D (el -12 to -21 and el -26 to -31), due to CVOCs, methyl ethyl ketone, and acetone being detected below the SGVs for two consecutive sampling events (August and November 2024); and,
- LMW-6R-D (el -18 to -23 and el -28 to -33), due to CVOCs, methyl ethyl ketone, and acetone being detected below the SGVs for two consecutive sampling events (August and November 2024).

Sampling downgradient monitoring well LMW-10R-D is no longer required due to the reduction of PCE and breakdown products within the source area, the limited lateral extents of impacts at the Site, the limited impacts at this well during the baseline event, and the lack of CVOC impacts detected above the SGVs during the August and November 2024 event. Two intervals at LMW-6R-D and the only interval at LMW-9R-D are also no longer included in the monitoring plan as PCE, breakdown products, and chloroform were not detected above the SGVs in the February, August, or November 2024 performance monitoring events.

Continued monitoring is proposed for the remaining eleven intervals at the remaining monitoring wells as follows:

- LMW-6R-S (el -4 to -9), due to elevated concentrations of acetone and methyl ethyl ketone detected in August 2024 and elevated reporting limits for CVOCs in November 2024; groundwater sampling will continue for at least one additional quarterly round to monitor for continued reductions in CVOC, acetone, and methyl ethyl ketone concentrations.
- LMW-6R-D (el -38 to -45), due to elevated concentrations of acetone in November 2024; groundwater sampling will continue for at least one additional quarterly round to monitor for continued reductions in the acetone concentrations.
- LMW-7R-S (el 8 to 3), due to elevated concentrations of CVOCs in August 2024 followed by elevated reporting limits for CVOCs in November 2024 and elevated concentrations of acetone and methyl ethyl ketone detected in August and November 2024; groundwater sampling will continue for at least two additional quarterly rounds to monitor for reductions in the CVOC, acetone, and methyl ethyl ketone concentrations.
- LMW-7R-S (el -2 to -7), due to elevated concentrations of PCE and breakdown products in February 2024, elevated reporting limits for CVOCs in August and November 2024, and an elevated concentration of acetone in November 2024 following an elevated reporting limit for acetone in August 2024; groundwater sampling will continue for at least two additional quarterly rounds to monitor for reductions in CVOC and acetone concentrations.
- LMW-7R-D (el -9 to -14), LMW-8R-S (el 8 to 3), LMW-8R-D (el -43 to -50), and LMW-9R-S (el 1 to -5) due to elevated concentrations of acetone and methyl ethyl ketone detected in August and November 2024, and elevated reporting limits for CVOCs in November 2024; groundwater sampling will continue for at least two additional quarterly rounds to monitor for reductions in the CVOC, acetone, and methyl ethyl ketone concentrations.
- LMW-8R-S (el -2 to -9), due to an elevated concentration of methyl ethyl ketone in November 2024; groundwater sampling will continue for at least two additional quarterly rounds to monitor for reductions in methyl ethyl ketone concentrations.

- LMW-8R-D (el -13 to -20), due to elevated reporting limits for CVOCs in November 2024; groundwater sampling will continue for at least one additional quarterly round to monitor for continued reductions in CVOC concentrations.
- LMW-10R-S (el -9 to -15), due to elevated concentrations of acetone and methyl ethyl ketone detected in August 2024; groundwater sampling will continue for at least one additional quarterly round to monitor for continued reductions in acetone and methyl ethyl ketone concentrations.
