EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

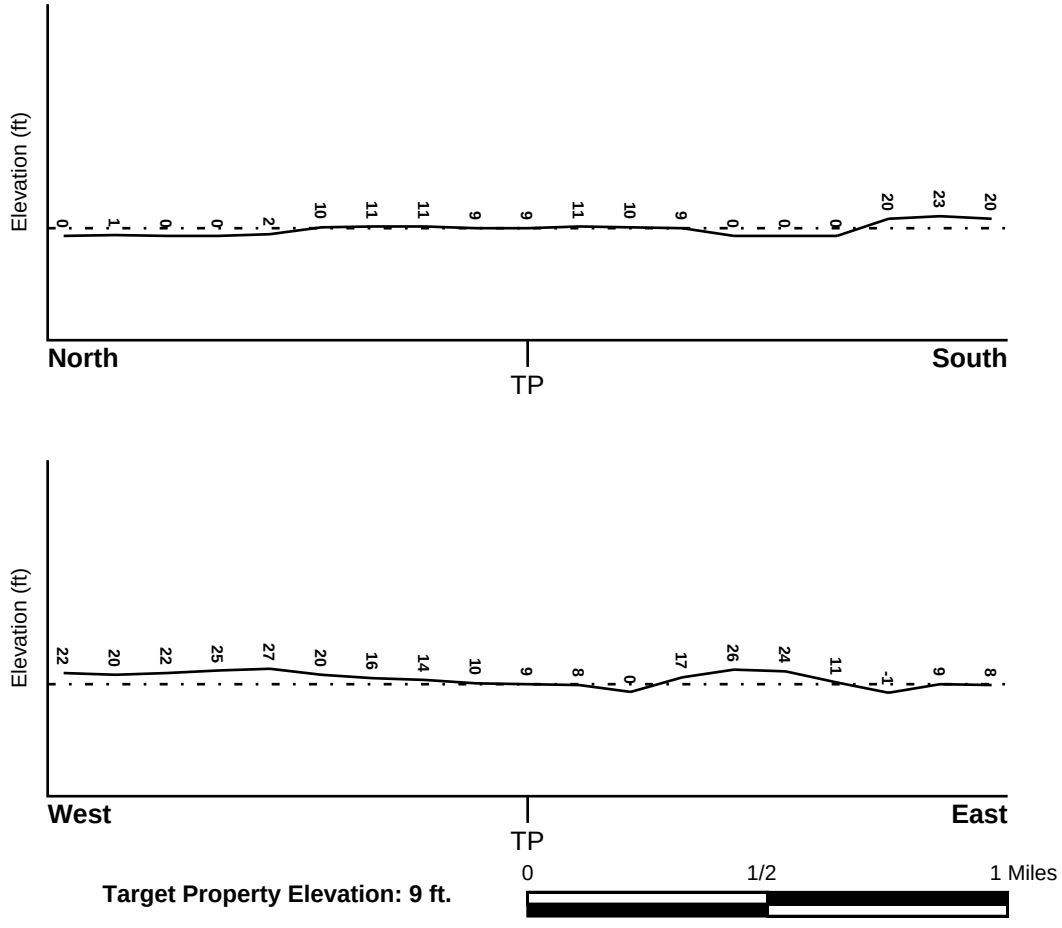
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Re: Geophysical Engineering Survey (GES) Report
413 East 120th Street,
New York, New York 10035
Langan Project# 1706745301

Dear Ms. Gioia,

Nova Geophysical Services (NOVA) is pleased to provide the findings of the geophysical engineering survey (GES) at the above referenced project site: 413 East 120th Street, New York, New York (the "Site")

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a geophysical engineering survey (GES) consisting of a Ground Penetrating Radar (GPR) and Electromagnetic (EM) survey at the site. The purpose of this survey is to locate and identify utilities, underground storage tanks (USTs) and other substructures in the vicinity of proposed boring locations on October 6th, 2022.

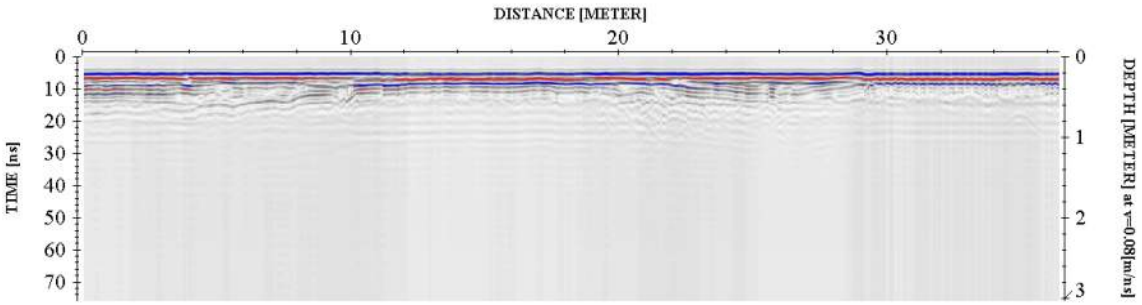
The equipment selected for this investigation was a Sensors and Software NOGGIN 250 MHz ground penetrating radar (GPR) with a shielded antenna and a RadioDetection RD7100 Electromagnetic utility locator.

A GPR system consists of a radar control unit, control cable, and transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulse into

bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

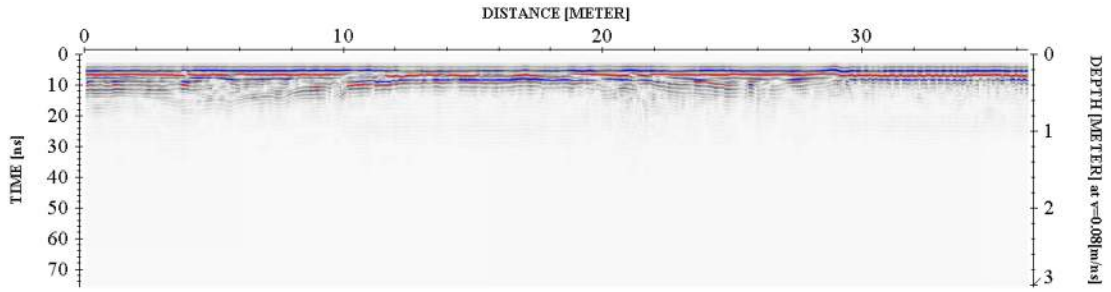
A typical electromagnetic (EM) utility locating system consists of a transmitter unit and a receiver unit. The receiver unit can be used independently of the transmitter unit in order to detect utility lines with an inherent EM signature (electric utility lines, water lines, etc.). If needed a current at a specific frequency can also be placed on a utility that is being located. This can be done via the transmitter unit by either direct connection or induction via an EM field varying at specific frequency. The receiver unit is then set to the selected frequency and the electromagnetic field created by the current running through the utility can be located allowing the utility to be marked.

GEOPHYSICAL METHODS



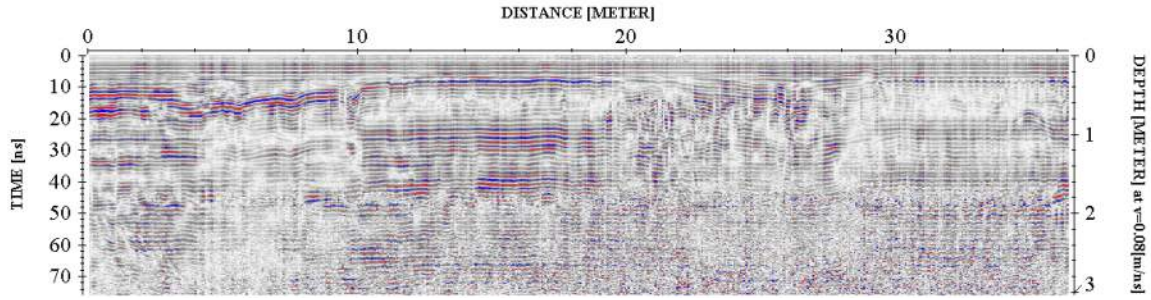
The project site was screened using GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface. An EM utility locator was used to help determine the locations of utilities within the survey area.

EM data was collected and interpreted on site and suspected utilities marked as needed. GPR data profiles were collected for the areas of the Site specified by the client and processed as specified below.

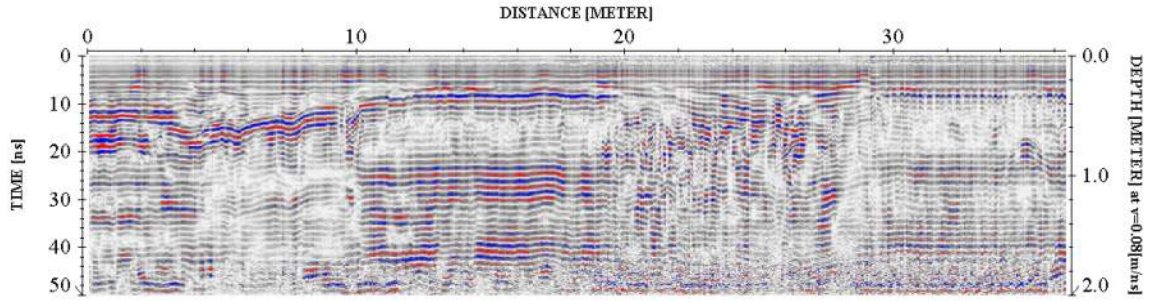


DATA PROCESSING

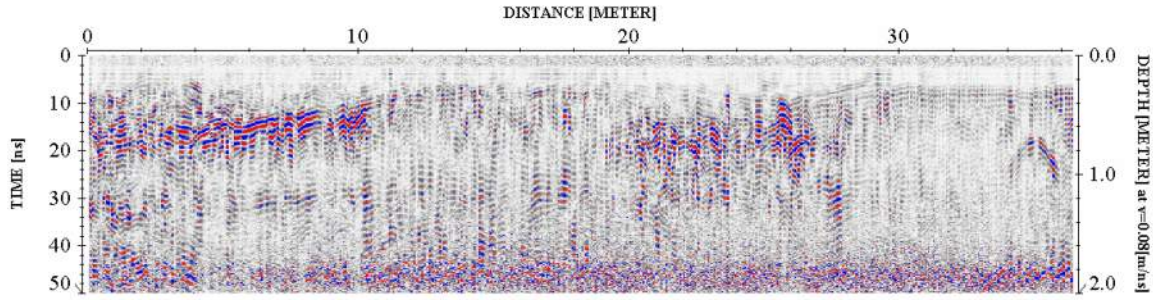
To improve the quality of the results and to better identify anomalies NOVA processed the collected data. The processing workflow is briefly described in this section.



Step 1. Import Raw RAMAC data to standard processing format



Step 2. Remove instrument noise *(dewow)*



Step 3. Correct for attenuation losses *(energy decay function)*

Step 4. Remove static from bottom of profile *(time cut)*

Step 5. Mute horizontal ringing/noise *(subtracting average)*

The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and represents the subsurface anomalies much more accurately.

PHYSICAL SETTINGS

NOVA observed the following physical conditions at the time of the survey.

Weather: Clear

Temperature: 55° F

Surface: Concrete, Carpet, Linoleum

Survey Parameters: A ground penetrating radar (GPR) grid scan was conducted within the survey areas as shown in the survey plan. The line spacing of the grid survey was approximately 5'. Additional GPR data was collected over features of interest. A utility locator was used in conjunction with GPR throughout the survey area.

Limitations: The geophysical noise level (GNL) at the site was high due to being in an urban environment, reinforced concrete, and other unknown anthropogenic noise sources. Small portions of the site were covered with immobile objects and could not be adequately surveyed.

RESULTS

The results of the geophysical engineering survey (GES) identified the following at the project site:

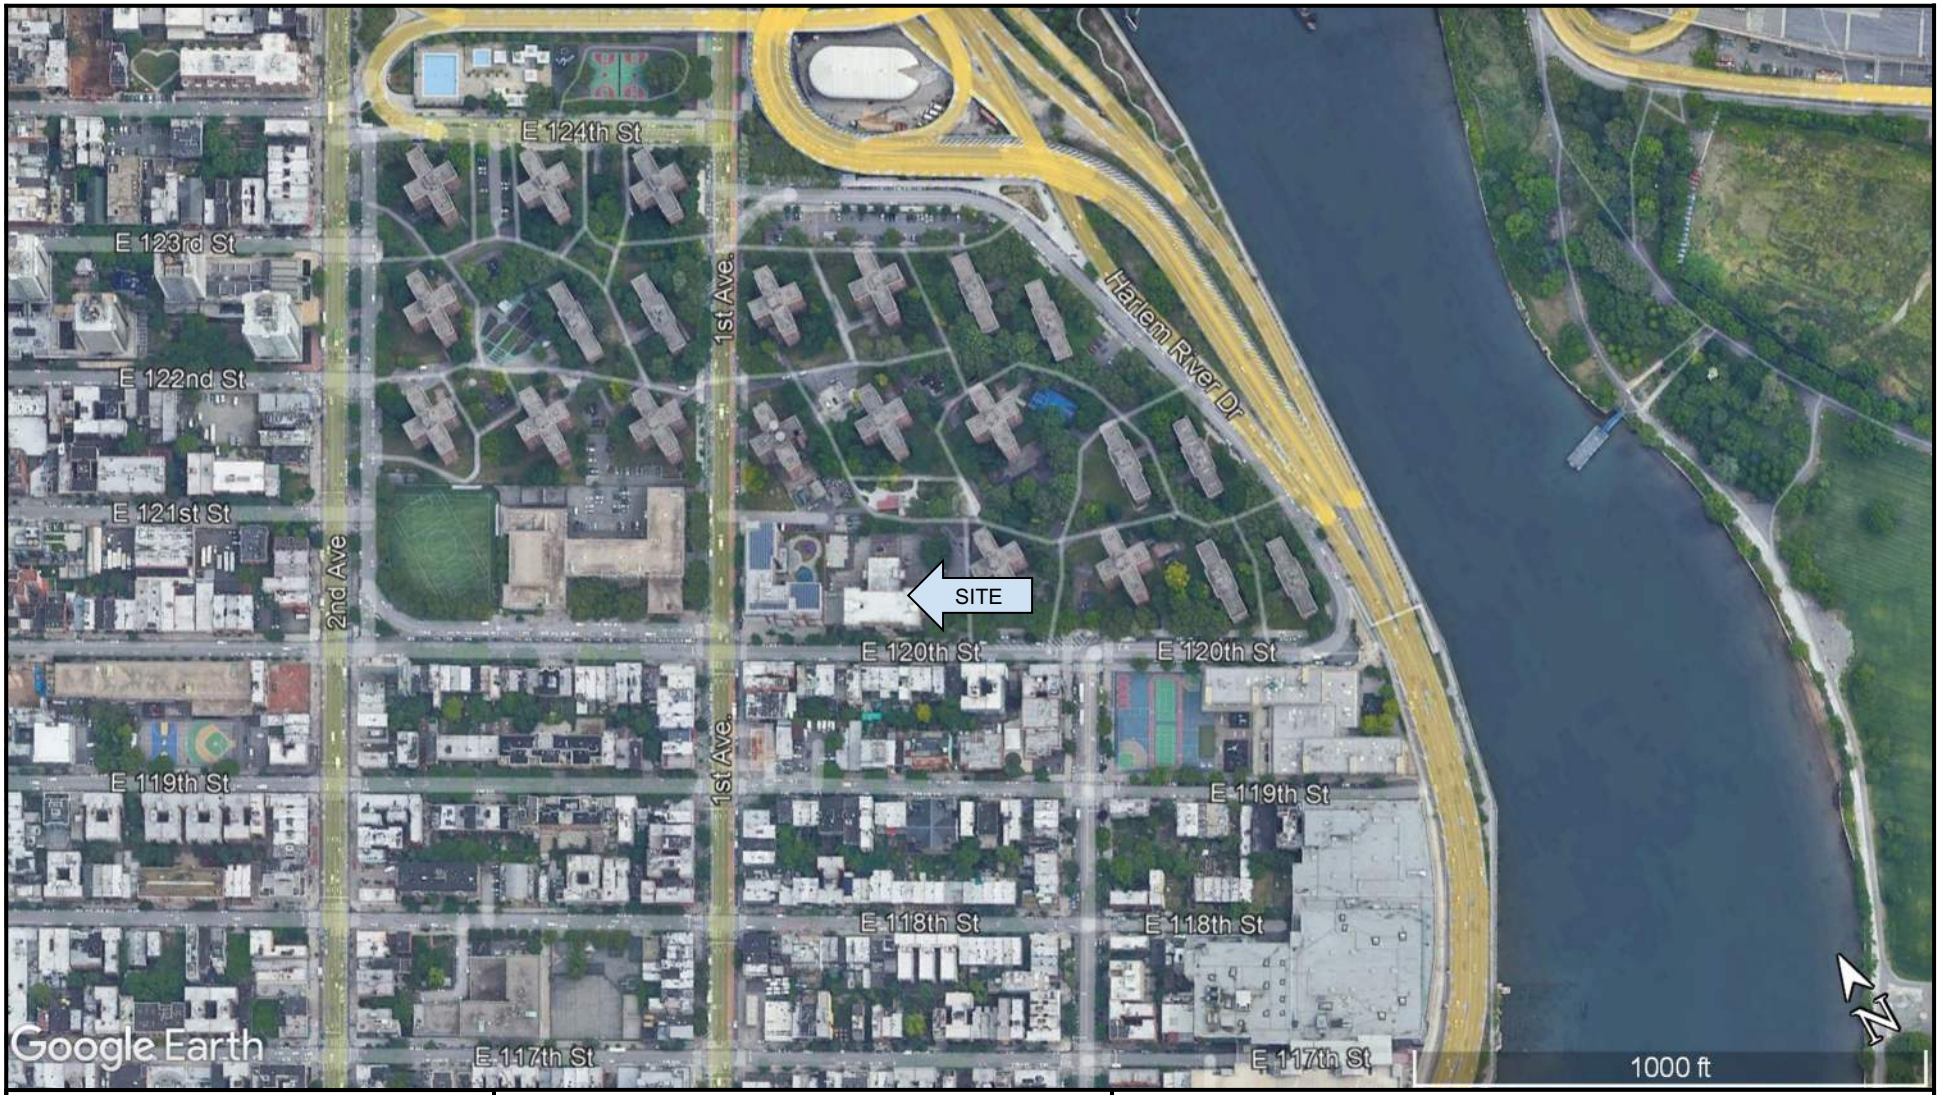
- Anomalies resembling potential subsurface utilities were identified within the surveyed areas but could not be connected to known utilities. Surface structures resembling a former utilities pit were identified during the GES. The approximate locations are shown in the survey plan.
- No large geophysical anomalies resembling an underground storage tank (UST) were identified during the GES.
- A fill port was identified during the GES and traced to a cut and capped pipe in the basement of the site. Shown in the survey plan.
- All cleared boring locations are shown in the survey plan.

If you have any questions, please do not hesitate to contact the undersigned.

Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.



Project Manager

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission
November 07, 2022: This final report includes the results of all requested analyses.
October 17, 2022: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt
The analyses performed were specified by the client.

Volatile Organics
L2255559-07: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (217%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.
L2255559-10: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (203%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

Semivolatile Organics
L2255559-07D, -08D, and -10RE\D: The sample has elevated detection limits due to the dilution required by the sample matrix.
L2255559-08D: The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.
L2255559-10: The surrogate recoveries were outside the acceptance criteria for 2-fluorophenol (16%) and 2,4,6-tribromophenol (8%); however, re-extraction achieved similar results: 2-fluorophenol (6%) and 2,4,6-

Case Narrative (continued)

tribromophenol (0%). The results of both extractions are reported; however, all associated compounds are considered to have a potential bias.
The WG1699147-2/-3 LCS recoveries, associated with L2255559-07D, -10, and -10RE\D, are below the acceptance criteria for benzoic acid (0%/0%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

Perfluorinated Alkyl Acids by Isotope Dilution
L2255559-01, -02, -04, -05, -06, and WG1701607-1/-2/-3/-4: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.
L2255559-05 and -06: The MeOH fraction of the extraction is reported for perfluorooctanesulfonamide (fosa) due to better extraction efficiency of the perfluoro[13c8]octanesulfonamide (m8fosa) Extracted Internal Standard.
The Extracted Internal Standard recoveries for the WG1701607-1 Method Blank, associated with L2255559-01, -02, and -04, are below the acceptance criteria for perfluoro[13c8]octanesulfonamide (m8fosa) and M2PFTDA (less than 10%); however, the associated samples are non-detect to the RL for all associated target analytes; therefore, no further action was taken.
The Extracted Internal Standard recovery for the WG1701607-2 LCS, associated with L2255559-01, -02, and -04, is below the acceptance criteria (less than 10%) for perfluoro[13c8]octanesulfonamide (m8fosa) (6%); however, all associated target analytes are within overall LCS criteria; therefore, no further action was taken.

Pesticides
L2255559-07: The internal standard (IS) response for 1-bromo-2-nitrobenzene (752%) was above the acceptance criteria on column A; however, the sample was not re-analyzed due to obvious interferences. Since the IS response was above method criteria, all associated compounds reported from this column are considered to have a potentially low bias. The surrogate recoveries are outside the method acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (7%) and decachlorobiphenyl (11%) due to interference with the Internal

Standard.

L2255559-08: The internal standard (IS) response for 1-bromo-2-nitrobenzene (993%) was above the acceptance criteria on column A; however, the sample was not re-analyzed due to obvious interferences. Since the IS response was above method criteria, all associated compounds reported from this column are considered to have a potentially low bias. The surrogate recovery is outside the method acceptance criteria for decachlorobiphenyl (9%) due to interference with the Internal Standard.

Total Metals

L2255559-07, -08, and -10: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

Cyanide, Total

The WG1697636-2/-3 LCS/LCSD recoveries for cyanide, total (75%/79%), associated with L2255559-07, -08, and -10, are outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Data Qualifiers

Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on October 6, 2022. The canister certification results are provided as an addendum.

L2255982-02D and -03D: The samples have elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the samples.

L2255982-02D and -03D: required a dilution greater than 4x; based on direction from the client the New York Decision Matrix Compounds have been reported by TO15-SIM for this sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

November 07, 2022: This final report includes the results of all requested analyses.

October 17, 2022: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The analyses performed were specified by the client.

Semivolatile Organics

L2256007-02: The surrogate recoveries were outside the acceptance criteria for 2-fluorophenol (8%) and 2,4,6-tribromophenol (5%); however, re-extraction achieved similar results: 2-fluorophenol (6%) and 2,4,6-tribromophenol (3%). The results of both extractions are reported; however, all associated compounds are considered to have a potential bias.

L2256007-07D: The sample has elevated detection limits due to the dilution required by the sample matrix.

The WG1699147-2/-3 LCS/LCSD recoveries, associated with L2256007-02, -02RE, -05D, and -07D, are below the acceptance criteria for benzoic acid (0%/0%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

Perfluorinated Alkyl Acids by Isotope Dilution

L2256007-09 and WG1701607-1/-2: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

L2256007-10 and -13: The MeOH fraction of the extraction is reported for perfluorooctanesulfonamide (fosa) due to better extraction efficiency of the perfluoro[13c8]octanesulfonamide (m8fosa) Extracted Internal Standard.

The Extracted Internal Standard recoveries for the WG1701607-1 Method Blank, associated with L2256007-

Case Narrative (continued)

09, -10, -12, and -13, are below the acceptance criteria for perfluoro[13c8]octanesulfonamide (m8fosa) and perfluoro[1,2-13c2]tetradecanoic acid (m2pfteda) (less than 10%); however, the associated samples are non-detect to the RL for all associated target analytes; therefore, no further action was taken.
The Extracted Internal Standard recovery for the WG1701607-2 LCS, associated with L2256007-09, -10, -12, and -13, is below the acceptance criteria (less than 10%) for perfluoro[2,3,4-13c3]buta perfluoro[13c8]octanesulfonamide (m8fosa) (6%); however, all associated target analytes are within overall LCS criteria; therefore, no further action was taken.

Total Metals
L2256007-01 through -05, -07, and -08: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.
The WG1697545-3 MS recovery for calcium (30%), performed on L2256007-14, does not apply because the sample concentration is greater than four times the spike amount added.

Dissolved Metals
L2256007-15: The Field Blank has a result for sodium present above the reporting limit. The sample was verified as being labeled correctly by the laboratory and the previous analysis showed there was no potential for carry over.

Cyanide, Total
The WG1697458-2 LCS recovery for cyanide, total (57%), associated with L2256007-01 through -05, -07, and -08, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported. The LCS/LCSD RPD is above the acceptance criteria for cyanide, total (63%).

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Re: Geophysical Engineering Survey (GES) Report
413 East 120th Street,
New York, NY 10035

Dear Ms. Wexler,

Nova Geophysical Services (NOVA) is pleased to provide the findings of the geophysical engineering survey (GES) at the above referenced project site: 413 East 120th Street, New York, NY (the "Site"). The site is about 35,000 square feet in size and is developed with a six-story building and an asphalt-paved parking lot.

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

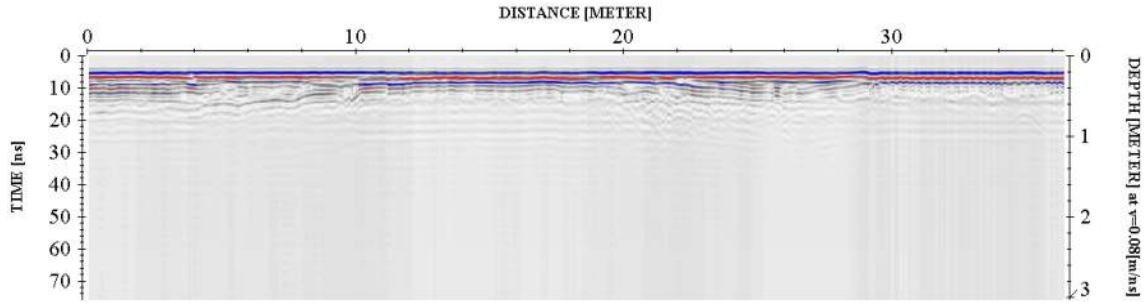
NOVA performed a geophysical engineering survey (GES) consisting of a Ground Penetrating Radar (GPR) and Electromagnetic (EM) survey at the site. The purpose of this survey is to locate and identify utilities, underground storage tanks and other substructures at the project site on February 18th, 2025.

The equipment selected for this investigation was a GSSI UtilityScan 350 MHz ground penetrating radar (GPR) with a shielded antenna Sensors and Software Noggin 250 MHz GPR with a shielded antenna and a RadioDetection RD7100 Electromagnetic utility locator. A GPR system consists of a radar control unit,

control cable, and transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250/350 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulse into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

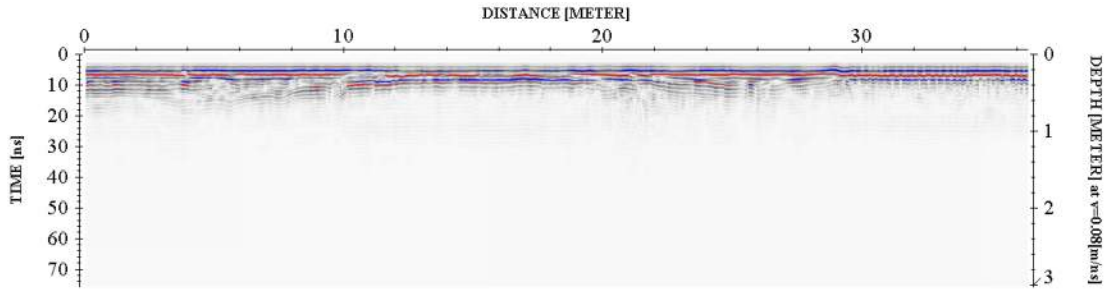
A typical electromagnetic (EM) utility locating system consists of a transmitter unit and a receiver unit. The receiver unit can be used independently of the transmitter unit in order to detect utility lines with an inherent EM signature (electric utility lines, water lines, etc.). If needed a current at a specific frequency can also be placed on a utility that is being located. This can be done via the transmitter unit by either direct connection or induction via an EM field varying at specific frequency. The receiver unit is then set to the selected frequency and the electromagnetic field created by the current running through the utility can be located allowing the utility to be marked.

GEOPHYSICAL METHODS



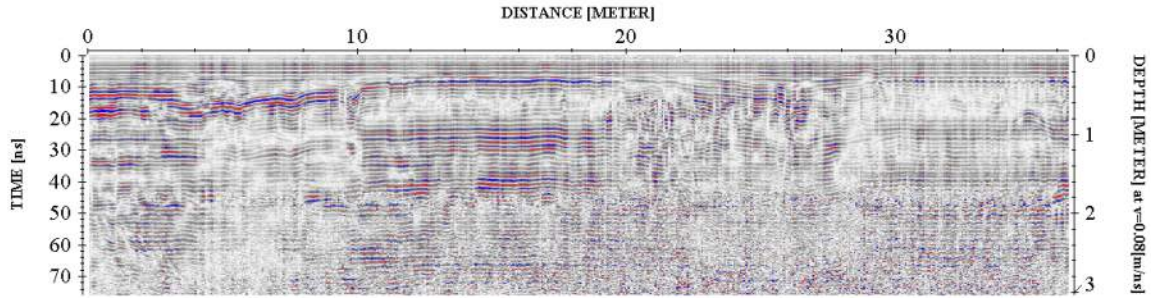
The project site was screened using GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface. An EM utility locator was used to help determine the locations of utilities within the survey area.

EM data was collected and interpreted on site and suspected utilities marked as needed. GPR data profiles were collected for the areas of the Site specified by the client and processed as specified below.

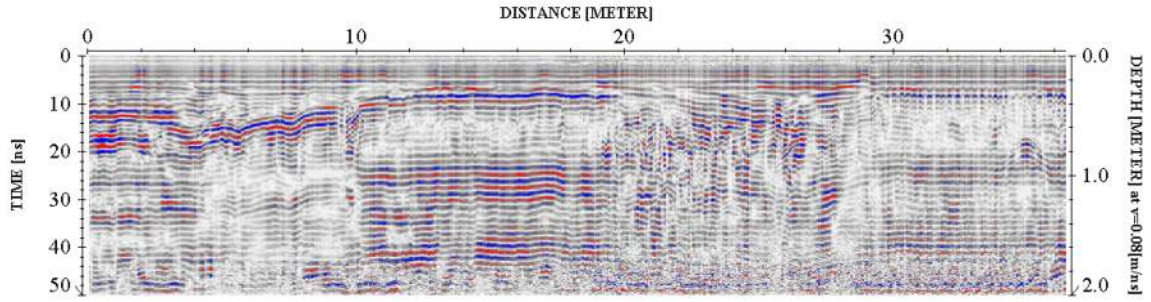


DATA PROCESSING

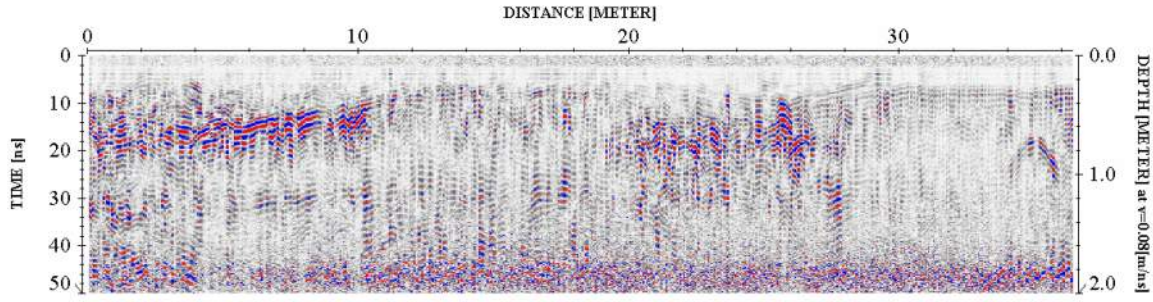
In order to improve the quality of the results and to better identify anomalies NOVA processed the collected data. The processing work flow is briefly described in this section.



Step 1. Import Raw RAMAC data to standard processing format



Step 2. Remove instrument noise *(dewow)*



Step 3. Correct for attenuation losses *(energy decay function)*

Step 4. Remove static from bottom of profile *(time cut)*

Step 5. Mute horizontal ringing/noise *(subtracting average)*

The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and represents the subsurface anomalies much more accurately.

PHYSICAL SETTINGS

NOVA observed the following physical conditions at the time of the survey.

Weather: sunny

Temperature: 26° F

Surface: Concrete/ Asphalt

Survey Parameters: A GPR grid scan was conducted within the survey areas as shown on the survey plan. The approximate line spacing of the grid survey was approximately 5'. Additional GPR data was collected over features of interest.

Limitations: The geophysical noise level (GNL) at the site was high due to being in an urban environment as well as there being multiple utilities on site.

RESULTS

The results of the geophysical engineering survey (GES) identified the following at the project site:

- Anomalies resembling potential subsurface utilities (such as sewer, drain, water, gas, and electric) were identified within the survey area. The approximate locations are shown in the survey plan.

- The GES identified all utilities entered from 120th Street.

- The GES did not identify any subsurface utilities In the cellar area of the site. NOVA observed that all utilities were located overhead.

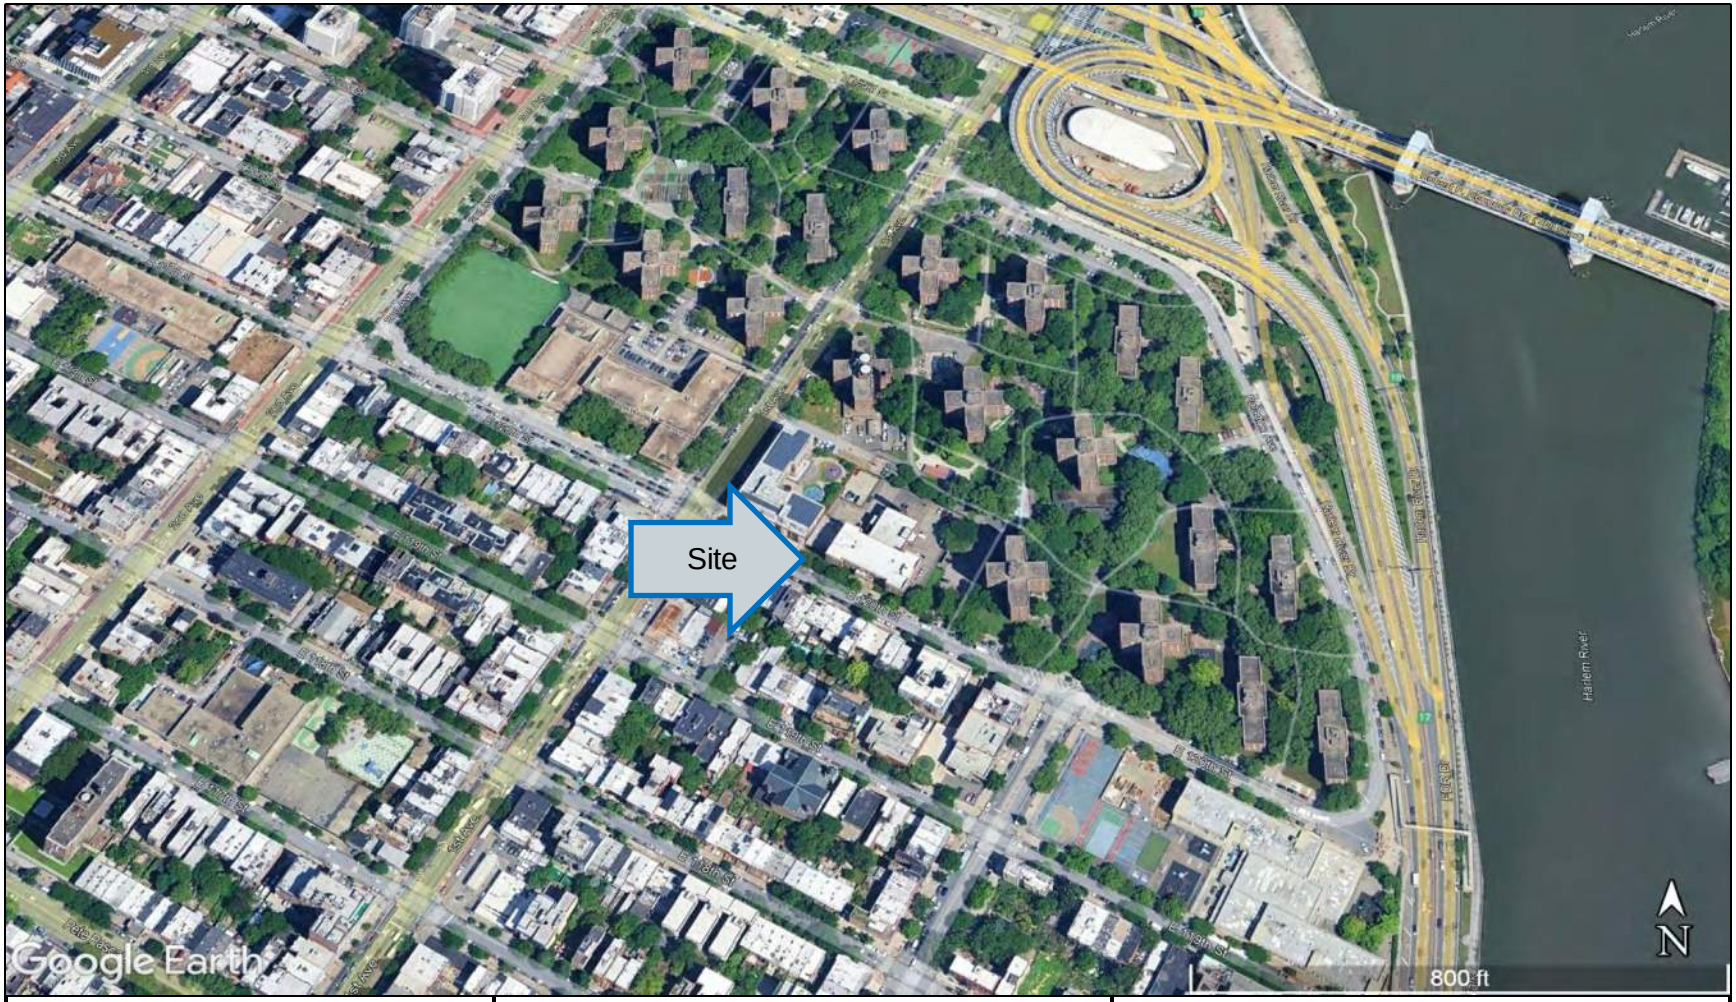
- The GES identified a scattered anomaly located in the parking lot. Based on its reflection rate, this anomaly was not consistent with a UST but may possibly represents a buried structure.

- The GES identified multiple storm drains located throughout the parking lot.

- NOVA cleared, adjusted when necessary and mark all proposed boring locations.

If you have any questions, please do not hesitate to contact the undersigned.

Sincerely,



NOVA Geophysical Services

Project Manager

General Well Construction Notes:

All wells:

1. A 6-inch bedding layer of filter pack was placed at bottom of each borehole before placing well screen.
2. Monitoring wells were completed with a 4-inch diameter protective steel casing and well j-plug.

Outdoor Wells:

1. The top of the well screen was installed about 2 to 3 feet above the observed water table to account for seasonal fluctuations of the water table elevation.
2. The well annulus above the bentonite seal was filled with soil cuttings with no detectable PID measurements and/or grossly-contaminated material, surplus filter pack, or a cement-bentonite mixture.
3. Exterior monitoring wells were finished with an 8-inch flush mounted manhole cover.

Indoor Wells:

1. Because of shallow water below the basement, indoor well screens were installed to about 0.25 to 1 foot above the observed water table (based on estimated depth to water at each location)
2. Granulated bentonite was installed above the limited sand pack, followed by cement grout to the floor surface with an 8-inch, flush mounted manhole cover.

METHOD OF INSTALLATION

A Geoprobe 8140LC Sonic drill rig was used to advance the boring to approximately 20 feet below sidewalk grade (bsg). The borehole was backfilled with No. 2 sand to about 17 feet bsg. A 2-inch polyvinyl chloride (PVC) permanent monitoring well was installed which consisted of 10' of 10 slot (0.010-inch) well screen, and a solid 2" PVC riser. Well screen was installed from approximately 7 to 17 feet bgs with riser from 7 feet bgs to 3 feet bgs. The annulus of the well was backfilled with No. 2 sand to about 5 feet bsg and hydrated bentonite was installed to about 3 feet bsg. The well was finished at surface grade with a permanent 8-inch manhole cover.

Re: Data Usability Summary Report
For The Beacon – 413 E. 120th Street
March 2025 Soil Vapor, Indoor, and Ambient Air Samples
Langan Project No.: 170745301

This memorandum presents the findings of an analytical data validation of the data generated from the analysis of air samples collected in March 2025 by Langan Engineering and Environmental Services at The Beacon site, 413 E. 120th Street. The samples were analyzed by York Analytical Laboratories, Inc. (NYSDOH NELAP registration # 12058) for volatile organic compounds (VOCs) by the methods specified below.

- VOCs by USEPA Method TO-15

Table 1, attached, summarizes the laboratory and client sample identification numbers, sample collection dates, and analytical parameters subject to review.

Validation Overview

This data validation was performed in accordance with the following guidelines, where applicable:

- USEPA Region II Standard Operating Procedure (SOP) #HW-31, "Analysis of Volatile Organic Compounds in Air Contained in Canisters by Method TO-15" (September 2016, Revision 6),
- USEPA Contract Laboratory Program "National Functional Guidelines for Organic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020), and
- published analytical methodologies.

Validation includes review of the analytical data to verify that data are easily traceable and sufficiently complete to permit logical reconstruction by a qualified individual other than the originator.

The following acronyms may be used in the discussion of data-quality issues:

%D	Percent Difference	MB	Method Blank
CCV	Continuing Calibration Verification	MDL	Method Detection Limit
FB	Field Blank	MS	Matrix Spike
FD	Field Duplicate	MSD	Matrix Spike Duplicate
ICAL	Initial Calibration	RF	Response Factor
ICV	Initial Calibration Verification	RL	Reporting Limit
ISTD	Internal Standard	RPD	Relative Percent Difference
LCL	Lower Control Limit	RSD	Relative Standard Deviation
LCS	Laboratory Control Sample	TB	Trip Blank
LCSD	Laboratory Control Sample Duplicate	UCL	Upper Control Limit

Tier 1 data validation is based on completeness and compliance checks of sample-related QC results including: sample receipt documentation; analytical holding times; sample preservation; blank results (method, field, and trip); surrogate recoveries; MS/MSD recoveries and RPDs values; field duplicate RPDs, laboratory duplicate RPDs, and LCS/LCSD recoveries and RPDs. Two (2) sample delivery groups underwent Tier 1 validation review.

As a result of the review process, the following qualifiers may be assigned to the data in accordance with the USEPA guidelines and our best professional judgment:

- **R –** The sample results are unusable. The results are rejected because of serious deficiencies in meeting quality control criteria in accordance with the applicable validation guidelines. The analyte may or may not be present in the sample.
- **J –** The analyte was positively identified but the associated numerical value is approximate.
- **UJ –** The analyte was not detected at or above the method detection limit. The method detection limit may be imprecise because of potential low or indeterminate bias.
- **U –** The analyte was not detected above the method detection limit, or the analyte detection is impacted by blank contamination and qualified as non-detect in accordance with the applicable validation guidelines.

If any validation qualifiers are assigned, these qualifiers should supersede any laboratory-applied qualifiers. Data that is not qualified because of this data validation is considered acceptable based on the items specified for review. Data that is qualified as "R" are considered invalid and are not technically usable for data interpretation. Data that is otherwise qualified because of minor data-quality anomalies are usable, as qualified in Table 2 (attached).

MAJOR DEFICIENCIES:

Major deficiencies include those that grossly impact data quality and necessitate the rejection of results. No major deficiencies were identified.

MINOR DEFICIENCIES:

Table 1, attached, summarizes the laboratory and client sample identification numbers, sample collection dates, level of data validation, and analytical parameters subject to review.

Validation Overview

This data validation was performed in accordance with the following guidelines, where applicable:

- USEPA Region II Standard Operating Procedures (SOPs) for Data Validation

- USEPA Contract Laboratory Program "National Functional Guidelines for Organic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020)
- USEPA Contract Laboratory Program "National Functional Guidelines for Inorganic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020), and
- published analytical methodologies.

USEPA Method 537 was developed and validated for the analysis of finished drinking water from surface water and groundwater sources. Laboratories have modified Method 537 to enable the analysis of groundwater and soil, and to incorporate PFAS analytes not currently addressed by the promulgated method. NYSDOH offers certification for PFOA and PFOS in the drinking water category. Non-potable water and soil certification is not available; however, the method describes acceptable modifications. USEPA recommends that modified methods be assessed relative to project goals and data quality objectives.

Tier 1 data validation is based on completeness and compliance checks of sample-related QC results including: sample receipt documentation; analytical holding times; sample preservation; blank results (method, field, and trip); surrogate recoveries; MS/MSD recoveries and RPDs values; field duplicate RPDs, laboratory duplicate RPDs, and LCS/LCSD recoveries and RPDs. All three (3) sample delivery groups underwent Tier 1 validation review.

As a result of the review process, the following qualifiers may be assigned to the data in accordance with the USEPA guidelines and our best professional judgment:

R – The sample results are unusable because certain criteria were not met when generating the data. The analyte may or may not be present in the sample.

J – The analyte was positively identified, and the associated numerical value is the approximate concentration of the analyte in the sample.

UJ – The analyte was not detected at a level greater than or equal to the reporting limit; however, the reported reporting limit is approximate and may be inaccurate or imprecise.

U – The analyte was analyzed for but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

NJ – The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

If any validation qualifiers are assigned, these qualifiers should supersede any laboratory-applied qualifiers. Data that is not qualified because of this data validation is considered acceptable based on the items specified for review. Data that is qualified as "R" are considered invalid and are not

technically usable for data interpretation. Data that is otherwise qualified because of minor data-quality anomalies are usable, as qualified in Table 2 (attached).

The following acronyms may be used in the discussion of data-quality issues:

CONCLUSION:

Based on this evaluation, the laboratory appears to have followed the specified analytical methods except for errors discussed above. If a given fraction is not mentioned above, that means that all specified criteria were met for that parameter. All the data packages met ASP Category B requirements.

All data are considered usable, as qualified. In addition, completeness, defined as the percentage of analytical results that are judged to be valid, is 100%.

Re: Data Usability Summary Report
For The Beacon – 413 E. 120th Street
October 2022 Soil Vapor, Indoor, and Ambient Air Samples
Langan Project No.: 170745301

This memorandum presents the findings of an analytical data validation from the analysis of air samples collected in October 2022 by Langan Engineering and Environmental Services at The Beacon site. The samples were analyzed by Alpha Analytical Laboratories, Inc. (NYSDOH NELAP registration # 11148) for volatile organic compounds (VOCs) by the method specified below.

- VOCs by USEPA Method TO-15

Table 1, attached, summarizes the laboratory and client sample identification numbers, sample collection dates, level of data validation, and analytical parameters subject to review.

Validation Overview

This data validation was performed in accordance with the following guidelines, where applicable:

- USEPA Region II Standard Operating Procedure (SOP) #HW-31, "Analysis of Volatile Organic Compounds in Air Contained in Canisters by Method TO-15" (September 2016, Revision 6),
- USEPA Contract Laboratory Program "National Functional Guidelines for Organic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020)
- published analytical methodologies.

Validation includes review of the analytical data to verify that data are easily traceable and sufficiently complete to permit logical reconstruction by a qualified individual other than the originator.

Tier 1 data validation is based on completeness and compliance checks of sample-related QC results including: sample receipt documentation; analytical holding times; sample preservation; blank results (method, field, and trip); surrogate recoveries; MS/MSD recoveries and RPDs values; field duplicate RPDs, laboratory duplicate RPDs, and LCS/LCSD recoveries and RPDs. The sample delivery group L2255982 underwent Tier 1 validation review.

As a result of the review process, the following qualifiers may be assigned to the data in accordance with the USEPA guidelines and our best professional judgment:

R – The sample results are unusable because certain criteria were not met when generating the data. The analyte may or may not be present in the sample.

J – The analyte was positively identified, and the associated numerical value is the approximate concentration of the analyte in the sample.

UJ – The analyte was not detected at a level greater than or equal to the reporting limit; however, the reported reporting limit is approximate and may be inaccurate or imprecise.

U – The analyte was analyzed for but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

NJ – The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

If any validation qualifiers are assigned, these qualifiers should supersede any laboratory-applied qualifiers. Data that is not qualified because of this data validation is considered acceptable based on the items specified for review. Data that is qualified as "R" are considered invalid and are not technically usable for data interpretation. Data that is otherwise qualified because of minor data-quality anomalies are usable, as qualified in Table 2 (attached).

The following acronyms may be used in the discussion of data-quality issues:

%D	Percent Difference	MB	Method Blank
CCV	Continuing Calibration Verification	MDL	Method Detection Limit
FB	Field Blank	MS	Matrix Spike
FD	Field Duplicate	MSD	Matrix Spike Duplicate
ICAL	Initial Calibration	RF	Response Factor
ICV	Initial Calibration Verification	RL	Reporting Limit
ISTD	Internal Standard	RPD	Relative Percent Difference
LCL	Lower Control Limit	RSD	Relative Standard Deviation
LCS	Laboratory Control Sample	TB	Trip Blank
LCSD	Laboratory Control Sample Duplicate	UCL	Upper Control Limit

MAJOR DEFICIENCIES:

Major deficiencies include those that grossly impact data quality and necessitate the rejection of results. No major deficiencies were identified.

MINOR DEFICIENCIES:

Minor deficiencies include anomalies that directly impact data quality and necessitate qualification, but do not result in unusable data. No minor deficiencies were identified.

OTHER DEFICIENCIES:

Other deficiencies include anomalies that do not directly impact data quality and do not necessitate qualification. No other deficiencies were identified.

CONCLUSION:

Based on this evaluation, the laboratory appears to have followed the specified analytical methods except for errors discussed above. If a given fraction is not mentioned above, that means that all specified criteria were met for that parameter. All the data packages met ASP Category B requirements.

FIELD DUPLICATES:

Three field duplicate and parent sample pairs were collected and analyzed for all parameters. For results less than 5X the RL, analytes meet the precision criteria if the absolute difference is less than ±2X or X the RL. For results greater than 5X the RL, analytes meet the precision criteria if the RPD is less than or equal to 50% or 30% for soil or groundwater, respectively. The following field duplicate and parent sample pairs were compared to the precision criteria:

- DUP01_021925 and SB15_0-2
- DUP02_021925 and SB07_0-2
- DUP03_031525 and SB10_10-12

The field duplicate and parent sample (DUP01_021925 and SB15_0-2) exhibited absolute differences above the RL for biphenyl (0.28 mg/kg) and dibenz(a,h)anthracene (0.33 mg/kg). The associated results are qualified as J because of potential indeterminate bias.

The associated results are qualified as J because of potential indeterminate bias.

The field duplicate and parent sample (DUP02_021925 and SB07_0-2) exhibited absolute differences above the RL for acenaphthylene (1.45 mg/kg), anthracene (12.2 mg/kg), benzo(a)anthracene (23.55 mg/kg), benzo(a)pyrene (17.57 mg/kg), benzo(b)fluoranthene (14.63 mg/kg), benzo(k)fluoranthene (15.27 mg/kg), biphenyl (0.78 mg/kg), and chrysene (20.94 mg/kg). The associated results are qualified as J because of potential indeterminate bias.

CONCLUSION:

Based on this evaluation, the laboratory appears to have followed the specified analytical methods except for errors discussed above. If a given fraction is not mentioned above, that means that all specified criteria were met for that parameter. All the data packages met ASP Category B requirements.

All data are considered usable, as qualified. In addition, completeness, defined as the percentage of analytical results that are judged to be valid, is 100%.

Langan (Environmental Consultant): Aron Farber, Gabriella DeGennaro
AARCO Environmental Services Corp (AARCO) (Driller): Jose Garcia, Warren James, Tim Terlaga
NOVA Geophysical Services (NOVA) (Geophysical Surveyor): Jason Staunton

OBSERVATIONS, DISCUSSION, TEST RESULTS, ETC.:

Langan Engineering, Environmental Surveying, Landscape Architecture and Geology, D.P.C. (Langan) was present to implement the New York State Department of Environmental Conservation (NYSDEC)-approved Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C231155.

Site Activities

- NOVA conducted a geophysical survey to identify underground storage tanks (UST), subsurface structures, utility lines beneath the site and adjacent sidewalks, and clearance of 14 soil boring/soil vapor point locations. The geophysical survey was completed using a collection of geophysical instruments, including ground penetrating radar (GPR) and electromagnetic (EM) detectors. NOVA detected subsurface anomalies, including a potential UST in the western part of the site, and subsurface utilities.
- AARCO used a jackhammer and hand auger to hand clear three soil borings within the site building cellar as described below:
    - SB16 was advanced to about five feet below cellar grade (bcg). Langan screened soil/fill for staining, odors, and organic vapors using a photoionization detector (PID). An organic-like odor and a maximum PID reading of 4.9 parts per million (ppm) were observed at 2 feet bcg. The cellar slab was observed to be about 1 foot thick. Groundwater was encountered at about 1 foot below the top of cellar slab.
    - SB17 was advanced to about five feet bcg. Langan screened soil/fill for staining, odors and organic vapors using a PID. An organic-like odor and a maximum PID reading of 5.3 ppm were observed at 1.5 feet bcg. The cellar slab was observed to be about 1 foot thick. Groundwater was encountered at about 1 foot below the top of cellar slab.
    - SB18 was advanced to about five feet bcg. Langan screened soil/fill for staining, odors and organic vapors using a PID. Gray to black staining and a naphthalene-like odor were observed in soil/fill from 1 foot to 5 feet bcg. A maximum PID reading of 29.3 ppm was observed at 1.5 feet bcg. The cellar slab was observed to be about 1 foot thick. Groundwater was encountered at about 1 foot below the top of cellar slab; and light non-aqueous phase liquid (LNAPL) was observed on groundwater.

Air-monitoring Activities

- Langan implemented the Community Air Monioring Plan (CAMP) with continuous air monitoring for volatile organic compounds (VOCs) and particulate matter smaller than 10 microns in diameter (PM10) using two perimeter air monitoring stations at upwind and downwind locations during ground-intrusive activities. The VOC and PM10 action levels were not exceeded during the monitoring period.

Sampling

- Soil samples were collected and submitted to York Analytical Laboratories, Inc, an Environmental Laboratory Accredited Program (ELAP)-Certified laboratory located in Stratford, Connecticut under standard chain-of-custody protocols.
- The following soil samples were submitted for analysis of Target Compound List (TCL) and New York State Department of Environmental Conservation (NYSDEC) Part 375-list volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, herbicides, target analyte list (TAL) metals (including hexavalent and trivalent chromium), total cyanide, perfluoroalkyl and polyfluoroalkyl substances (PFAS) and 1,4 dioxane:
    - SB16_0-2
    - SB17_0-2
    - SB18_0-2
    - SB18_2-4

Anticipated Activities

- AARCO will continue hand-clearing soil borings and soil vapor points within the building cellar.

OBSERVATIONS, DISCUSSION, TEST RESULTS, ETC.:

Langan Engineering, Environmental Surveying, Landscape Architecture and Geology, D.P.C. (Langan) was present to implement the New York State Department of Environmental Conservation (NYSDEC)-approved Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C231155.

Site Activities

- AARCO used a jackhammer and hand auger to hand clear three soil borings within the site building cellar and one soil boring within the exterior landscaped area as described below:
    - SB07 was advanced to about five feet below cellar grade (bcg). Langan screened soil/fill for staining, odors, and organic vapors using a photoionization detector (PID). No evidence of impacts was observed. The cellar slab was observed to be about 1 foot thick. Groundwater was encountered at about 1 foot below the top of cellar slab. After hand clearing was completed, an orange traffic cone was placed over the borehole, pending the advancement of SB07 with a drill rig.
    - SB08 was advanced to about five feet bcg. Langan screened soil/fill for staining, odors, and organic vapors using a PID. No staining, odors, or PID readings above background were observed. The cellar slab was observed to be about 6 inches thick. Groundwater was observed at about 2.75 feet below the top of cellar slab; and light non-aqueous phase liquid (LNAPL) was observed on groundwater. After hand clearing was completed, an orange traffic cone was placed over the borehole, pending the advancement of SB08 with a drill rig.
    - SB15 was advanced to about five feet bcg. Langan screened soil/fill for staining, odors and organic vapors using a PID. Gray to black tar-like staining and a naphthalene-like odor were observed in soil/fill from 1 to 3 feet bcg And a maximum PID reading of 31.2 parts per million (ppm) was observed at 3 feet bcg. The cellar slab was observed to be about 1 foot thick. Groundwater was encountered at about 1 foot below the top of cellar slab; and LNAPL was observed on groundwater. After hand clearing was completed, an orange traffic cone was placed over the borehole, pending the advancement of SB15 with a drill rig.
    - SB22 was advanced to about five feet below sidewalk grade (bsg) in the exterior landscaped area on-site. Langan screened soil/fill for staining, odors and organic vapors using a PID. No evidence of impacts was observed. Groundwater was not encountered. After hand clearing was completed, soil/fill was temporarily returned to its original location. An orange traffic cone was placed over the borehole, pending the advancement of SB22 with a drill rig.

- AARCO used a jackhammer to hand clear and install one sub-slab vapor point within the site building cellar as described below:
    - Sub-slab vapor point SS07 was installed immediately below the bottom of the cellar slab, at about 6 inches below the top of cellar slab.

Air-monitoring Activities

- Langan implemented the Community Air Monitoring Plan (CAMP) for volatile organic compounds (VOCs) and particulate matter smaller than 10 microns in diameter (PM10) using two perimeter air monitoring stations at upwind and downwind locations during ground-intrusive activities. The VOC and PM10 action levels were not exceeded during the monitoring period.

- Soil samples were collected and submitted to York Analytical Laboratories, Inc, an Environmental Laboratory Accredited Program (ELAP)-Certified laboratory located in Stratford, Connecticut under standard chain-of-custody protocols.
- The following soil samples were submitted for analysis of Target Compound List (TCL) and New York State Department of Environmental Conservation (NYSDEC) Part 375-list volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, herbicides, target analyte list (TAL) metals (including hexavalent and trivalent chromium), total cyanide, perfluoroalkyl and polyfluoroalkyl substances (PFAS) and 1,4 dioxane:

Site Activities

- AARCO used a Geoprobe 420M drill rig to advance two soil borings in the site building cellar as described below:
    - SB15 was advanced from about five to ten feet below the top of cellar slab. Langan screened soil/fill for staining, odors and organic vapors using a PID. Gray staining and a naphthalene-like odor were observed in soil/fill from five to six feet below the top of cellar slab and a maximum PID reading of 41.2 parts per million (ppm) was observed at five feet below the top of cellar slab. Groundwater was previously encountered at SB15 at about 1 foot below the top of cellar slab; and suspected waterproofing tar was observed on groundwater in the borehole. After drilling was completed, impacted soil cuttings were placed in a 55-gallon drum for future off-site disposal, and the borehole was backfilled with clean sand.
    - SB18 was advanced from about five to ten feet below the top of cellar slab. Langan screened soil/fill for staining, odors and organic vapors using a PID. Gray staining and a naphthalene-like odor were observed in soil/fill from five to seven feet below the top of cellar slab and a maximum PID reading of 9.1 ppm was observed at 5.5 feet below the top of cellar slab. Groundwater was previously encountered at SB18 at about 1 foot below the top of cellar slab; and suspected waterproofing tar was observed on groundwater. After drilling was completed, impacted soil cuttings were placed in a 55-gallon drum for future off-site disposal.
        - A 2-inch-diameter, permanent groundwater monitoring well (MW18) was installed with a 2-inch inner diameter pre-packed, 5 feet of 0.01-inch slotted screen from about 1.25 feet to 6.25 feet below the top of cellar slab. Hydrated bentonite was installed to about 1 foot below the top of cellar slab and the well was finished at cellar grade with a permanent 8-inch manhole cover.
- A 2-inch-diameter, permanent groundwater monitoring well (MW07) was installed with a pre-packed, 5 feet of 0.01-inch slotted screen from about 1.25 feet to 6.25 feet below the top of cellar slab. Hydrated bentonite was installed to about 1 foot below the top of cellar slab and the well was finished at cellar grade with a permanent 8-inch manhole cover.

- A 2-inch-diameter, permanent groundwater monitoring well (MW16) was installed with a pre-packed, 5 feet of 0.01-inch slotted screen from about 1.25 feet to 6.25 feet below the top of cellar slab. - Langan implemented the Community Air Monitoring Plan (CAMP) with continuous air monitoring for volatile organic compounds (VOCs) and particulate matter smaller than 10 microns in diameter (PM10) using two perimeter air monitoring stations at upwind and downwind locations during ground-intrusive activities. The VOC and PM10 action levels were not exceeded during the monitoring period.

Sampling

OBSERVATIONS, DISCUSSION, TEST RESULTS, ETC.:

Langan Engineering, Environmental Surveying, Landscape Architecture and Geology, D.P.C. (Langan) was present to implement the New York State Department of Environmental Conservation (NYSDEC)-approved Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C231155.

Site Activities

- Langan used a peristaltic pump to collect groundwater samples in accordance with the United States Environmental Protection Agency (USEPA) low-flow groundwater sampling procedure.
    - MW09: Groundwater was measured at about 8.13 feet below the top of the well casing (bTOC) in the exterior parking lot. Photoionization detector (PID) readings from the monitoring well headspace were 0.0 parts per million (ppm). Purged ground water was clear with no odor.
    - MW22: Groundwater was measured at about 1.5 feet bTOC in the exterior parking lot. PID readings from the monitoring well headspace were up to 109.4 beneath the well cap. Purged ground water was a brownish-green color with a petroleum-like odor and a positive sheen test.
- Purged groundwater was containerized in a 55-gallon drum, temporarily staged in the southern part of the site for future off-site disposal.

Air-monitoring Activities

- No ground intrusive activities were performed; therefore, CAMP was not implemented.

Sampling

- Groundwater samples were collected and submitted to York Analytical Laboratories, Inc, an Environmental Laboratory Accredited Program (ELAP)-Certified laboratory located in Stratford, Connecticut under standard chain-of-custody protocols.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 18, 2025 and listed below. The project was identified as your project: **170745301**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.
