Tank Info:

Tank Number:	001
Tank Id:	65959
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	1500
Tightness Test Method:	21
Date Test:	05/25/2004

Tank Info:

Tank Number:	1
Tank Id:	268443

Equipment Records:

I05 - Overfill - Vent Whistle
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
L00 - Piping Leak Detection - None
F00 - Pipe External Protection - None
J02 - Dispenser - Suction Dispenser
C03 - Pipe Location - Aboveground/Underground Combination
G00 - Tank Secondary Containment - None
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1989
Capacity Gallons:	3000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	3553
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

E01 - Piping Secondary Containment - Diking (AG only)
K00 - Spill Prevention - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
J02 - Dispenser - Suction Dispenser
I04 - Overfill - Product Level Gauge (A/G)
L09 - Piping Leak Detection - Exempt Suction Piping
G03 - Tank Secondary Containment - Vault (w/o access)
F00 - Pipe External Protection - None
H04 - Tank Leak Detection - Groundwater Well

MMJ LEGACY LLC (Continued) **A100166423**

	B00 - Tank External Protection - None
	C00 - Pipe Location - No Piping
Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DER Facility ID:	267698
DEC Memo:	"10/18/2004 Sangesland called RND Services. Problem with a valve joint on the top of the tank. Some leakage over the top of the tank onto the ground. RND will repair and submit closure paperwork. 04/12/06 - Hough - Next Step: Follow-up with RND Services on tank closure documentation. 10/11/06 - Austin - Reassigned from Central Office staff to Patel, for follow up and closure - end 11/14/06-Hiralkumar Patel. left message for Sharima Ryan at RND. received call from Ms. Ryan. she couldn't find record on subject site. she will check again and will call back. 11/20/06-Hiralkumar Patel. spoke with Ms. Ryan at RND. site had 2000 gal UST located at 447 E 115th Street address. spill case was report at office address. as per Ms. Ryan, they submitted proposal for further work and never heard back. spoke with Al Luongo, property owner/manager. as per Mr. Luongo, they have only one tank which is 1500 gal AST enclosed in concrete vault. Mr. Luongo believe this case doesn't belong to subject site. Al Luongo Ph. (212) 427-5900 FAX (212) 828-1922 11/20/06-Hiralkumar Patel. visited site. met Manny (212-534-0681), super at building. site has two tanks. one 1500 gal AST on legs and another 2000 gal UST in back of property at 447 E 115th Street. as per Manny, they never had any oil spill. he remember that after tank test, testing company recommended them to put concrete patch around stick line as that line was extended from ground and someone may get fall. as per Manny, no excavation was happened in 2004. Manny believes that tanks at site are registered. asked Manny to send tank registration number with last tank test result. 11/21/06-Hiralkumar Patel. searched PBS database. no PBS record. left message for Manny. received fax from Ms. Ryan containing copy of letter from RND about

LADY OF MOUNT CARMEL CHUR (Continued) **S106971370**

test result. as per letter from ATS, they did tank test in Feb. 2004 but this case was reported in Oct. 2004. during testing they found dry leak in tank system. sent out letter to Mr. Luongo requiring tank registration and tank testing, at following address. letter faxed to Mr. Luongo (FAX: 212-828-1922 & 212-534-0629). Al Luongo Our Lady of Mount Carmel Church 448 East 116th Street New York, NY 10029 Ph. (212) 534-0681 (church no.) (212) 427-5900 (management office no.) FAX (212) 534-0629 12/14/06-Hiralkumar Patel. spoke with Mr. Luongo. he will send documents soon. 06/04/07-Hiralkumar Patel. spoke with Mr. Luongo. he will send documents soon. received tank test result from Mr. Luongo. 2000 gal UST was tested on 01/24/07 and tank passed. based on available information, case closed. referred this site to PBS unit as tanks are not registered. Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Address: 2283 SECOND AVENUE
City,State,Zip: NEW YORK, NY 10035
Program: HW
Site Code: 579484
Classification: P
Region: 2
Acres: 0.042
HW Code: 231126
Record Add: 11/14/2018
Record Upd: 06/03/2021
Updated By: GWBURKE
Site Description: "Location: The 2283 Second Avenue p-site is located in a generally residential and commercial area in the East Harlem section of Manhattan, New York. The site is bordered by a vacant lot to the west, multiple commercial establishments to the north, including a dry cleaner, E 117th Street to the south, and 2nd Avenue to the east. The site is approximately .042 acres (1,856 square-feet) in area. Site Features: The property is improved with a single four-story, residential/commercial building. Current Zoning and Land Use: The site is currently zoned for residential and commercial use and sits within an R9A zoning district with a C2-5 commercial overlay. The commercial portion of the building is vacant according to July 2018 imagery. Past Use of the Site: The on-site building is believed to

2283 SECOND AVENUE SITE - OER (Continued) **S123159109**

	have been constructed in the early 1900 s and was used for both residential (floors 2-4) and commercial (ground floor) purposes. As recently as 2014, the commercial portion of the building operated as a retail store. Historical use includes a dry-cleaning operation which is of environmental concern. Site Geology and Hydrogeology: This information will be provided as it becomes available. "
Env Problem:	"Nature and Extent of Contamination: Potential on-site contaminants of concern include tetrachloroethene (PCE) and its degradation products warranting further investigation due to elevated concentrations detected in off-site sampling."
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

CON EDISON SERVICE BOX: 19009 (Continued) **1012185676**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"03/08/06 Feroze, PBS case of this spill is # 2-240680. TTF is sent to: Robert Algarin 2253 Third Ave New york, NY 10035 03/15/06. Spill is transferred from Feroze to Kumer Patel. 03/21/06-Hiralkumar Patel. Spoke with John Laddy at Protest. this site has three 20,000 gal USTs on location and they were transferring oil from one tank to another. during this transfer, tank overfilled and spill happened on concrete side walk and asphalt street (possible from vent pipe). Protest has cleaned the site. John doesn't know about concrete condition but nothing went down to sewer/drain. DEP has visited site already. 03/23/06-Hiralkumar Patel. Spoke with John at Protest. John will go on site to replace faulty valve on tank. he will call me with updates. 03/24/06-Hiralkumar Patel. called for Manny Dias (212-369-3755 Ext 11), but he will be in office on Monday Mar 27 2006. 03/28/06-Hiralkumar Patel. Spoke with Mr. Dias. as per him, oil came out from vent pipe and spilled on concrete side walk and then ran on asphlt street. there are no cracks in concrete on sidewalk. no soil/sewer/drain affected. the tank had faulty pressure gauge on it. tank is currently empty and out of service. they are working on replacing this faulty gauge. all cleaned up. no complaints. Spoke with Mr. Melnick at Protest and asked him to send me copy of invoice once he done changing faulty gauge. He told me that they are going to replace it soon once they find out problem with gauge. 04/21/06-Hiralkumar Patel. Spoke with Mr. Melnick. they got permission to do repair work, but they haven't got chance to do it. they will probably go in next week. he will call once he done with repair work. 05/05/06-Hiralkumar Patel. Spoke to Mr. Melnick at Protest. they will start work probably on May 15. 06/22/06-Hiralkumar Patel. visited site on 06/20/2006. spoke to William, super of building & to Maria Cruz, executive director. tank was still empty on time of visit. no work done yet. spoke with Mr. Dias and asked to call back with updates. Maria Cruz Executive Director ARCO 2253 3rd Ave, 5th Floor New York, NY 10035 PH. (212) 369-3755 Fax (212) 369-6215 Email: taino@acromgt.com mcruz@arcomgt.com spoke with John at Protest. he explained that oil spill happened due to overfill of tank. they have tested all three tanks and tank system passed test. asked John to fax me test results. John suggest Mr. Dias to repair/replace valve to prevent further spill. spoke with Mr. Dias. he explained that due to air pressure inside syphon , oil in one tank reached to top and overfilled. and piece of syphon was leaking and that why it created air pressure. Mr. Dias was planning to change that defected piece of pipe in September as winter season starts. asked him to submit work invoice once he done with such repair work.

CON EDISON SERVICE BOX: 45765 (Continued) **1000318008**

spoke with John at protest again. he explained that this site doesn't have syphon. instead these tanks are connected through valves in supply/return lines. so if they need, they can open/close valve to transfer oil from one tank to another. when John did test, he did test by isolating each tank system from another two. 06/26/06-Hiralkumar Patel. Left message for Mr. Dias. 06/29/06-Hiralkumar Patel. Spoke to John and asked to send tank test results for all three tanks. 07/05/06-Hiralkumar Patel. Spoke to John at Protest. he has misplaced tank test results, once he gets it, he will forward it to the Department. Left message for Mr. Dias. 07/10/06-Hiralkumar Patel. spoke with Mr. Dias and asked him to send tank test results for all tanks. 11/14/06-Hiralkumar Patel. left message for Mr. Dias. 12/01/06-Hiralkumar Patel. left message for Mr. Dias. 12/19/06-Hiralkumar Patel. spoke with Bob at Protest. he will check for tank test result and will fax if he finds it. spoke with Mr. Dias. they have repaired leaking valve. received tank test result from Bob from Protest. all three tanks were passed test. spoke with DEC Jacob about PBS registration. PBS registration expired on 10/23/1997. i gave tank test results to DEC Brian to update PBS record. sent email to Jacob with site address, manager's name and address. based on available tank test result and other informations, case closed. 12/22/06-Hiralkumar Patel. received work invoice copy, about repair of leaking valve, from Mr. Dias."

Remarks: "while doing product came out of another tank; clean up crew enroute"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE 11/14/94: REASSIGNED FROM SIGONA TO ZHITOMIRSKY ON 11/14/94. TRANSFERED FROM HALE TO TIBBE ON 12/27/00. SEE ALSO 88-08930, 88-09111 & 90-07322. TANKS REPLACED/REPAIRED/UPGRADED. REMEDIATION ONGOING. 06-17-08: Spill # 0502231 has been closed and consolidated under this number. 0502231 was a release of #4 heating during a delievery from a disconnected fill line. 801 gallons were delievered before the problem was discovered. NYCT DOB determined that 439 gallons of fuel oil were recovered during immediate cleanup, 68 gallons were recovered from the facility s oil/water separator system, and at least 109 gallons and as much as 275 gallons of the remaining fuel oil spilled into the UST via the open fill pipe. Based on these volumes, between 19 and 185 gallons of fuel oil could have spilled into the pea gravel surrounding the USTs. The residual contamination will be addressed during the full site remediation. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 5/19/2011 The spill was reassigned from Joe O'Connell to Linda Ross 2/27/12 - Raphael Ketani. Spill reassigned to me during February 2012. The spill was called in due to the failure of the diesel USTs. Two thirds of the southern and eastern parts of the site were affected. An associated spill numbered 9007322 was called in, referred to spill #8808896 and closed. This later spill was the result of tank test failures for the diesel USTs. Monthly progress update meetings are taking place. 4/26/12 - Raphael Ketani. Monthly groundwater monitoring is being performed by URS. 12/18/12 - Raphael Ketani. There have been monthly to bimonthly (once every two months) update meetings with the NYCT regarding this and 17 other sites. The information for the sites is in the UIS under e-docs, multiple sites, DER, Region 2, Petroleum Spills, NYCT. 4/28/14 - Raphael Ketani. As of about this date, documents are no longer archivable via the e-docs system in the UIS. The succeeding archive system is DecDocs. 6/9/14 - Raphael Ketani. Gregory Mathelier (CONSTRUCTION ADMINISTRATOR, UST & ENVIRONMENTAL REMEDIATION PROGRAM, ON-CALL PROJECTS/ CAPITAL PROGRAM MANAGEMENT, MTA NEW YORK CITY TRANSIT, 300 CADMAN PLAZA, 6TH FL., 6376, BUS: 718-613-0029/ CELL: 646-879-1970, E-MAIL:

126TH ST DEPOT -NYCT (Continued) **S106702967**

GREGORY.MATHELIER@NYCT.CO) called me today to say that the Mother Clara Hale Depot at 146th Street will be rebuilt on top of the present site. Once it is rebuilt and ready for operation during January 2015, the buses from the 126th Street Depot will be transferred to there and the 126th Street Depot will be left empty. Once empty, the 126th Street Depot will be returned to the City. Mr. Mathelier said that he was surprised by this news and never knew that the 126th Street Depot was NOT owned by the NYCT. However, that is the plan he heard from administrative staff at the NYCT. I asked Mr. Mathelier what the future use of the site will be. He said that he didn't know. With that, the conversation ended. In a later e-mail, Mr. Mathelier also informed me that he found out from his superiors that the site was sitting on top of an old slave burial ground. So excavating what little contamination is still present was out of the question. Mr. Mathelier sent me the Petition for Spill Closure Report, June 2014 and dated 6/6/14. It was written that the amount of the release was unknown. The south and east parts of the site were affected. Depth to groundwater varies from 3.5 feet to 11 feet below grade. A pump and treat system was installed. During 1993, 27,400 gals. of product was recovered. The system was permanently shut down during February 2001 due to the loss of efficiency of this collection method. This was followed by bioremediation with bacteria and nutrients during the rest of 2001. Three rounds of surfactant injections took place with BioSolve from January to March of 2004. Groundwater monitoring is continuing. The report also described the 4 spill cases that were closed by the former DEC NYCT spill case manager, Mark Tibbe. These cases were: 9007322; 0502231; 0509617; and 0513919. Spill 9007322 concerned the diesel USTs at the southeast corner of the site. There were tank test failures. So the spill was called in. The amount of the release is unknown. It was not certain from the case record whether this spill is a duplicate of 8808896. There were no case notes. Spill 0502231 was opened up due to a #4 heating oil spill. A delivery took place to an out of service 8,000 gal. UST (tank #1), instead of the neighboring in service 8,000 gal. UST (tank #2) during May 2005. This was the result of tank #2 being tagged and locked out and not tank #1. Product came out of the piping sump to tank #1. The spill was contained to the concrete vault and an non-functioning zipper drain. About 801 gals. of oil spilled. The spill took place in the southwest part of the depot. Of the total spilled, 439 gals. was recovered during the initial clean up. Another 68 gals. was recovered by the oil water separator. It was estimated that 19 to 185 gallons of product was unaccounted for. The site investigation was completed during April 2008. Borings SB-7 to SB-10 were performed 15 feet bgs. The soils encountered were sand. No product was seen in soil samples from the 4 borings. Soil analytical results revealed minor VOC exceedences of TAGM standards. Benzo series SVOC exceedences were noted (case manager's note: the results looked like historical fill). There were no groundwater VOC exceedences and only 1 sample with 2 SVOC exceedences. Spill 0509617 involved the failure of the piston at hydraulic lift #3. About 270 gals. of hydraulic fluid were released during November 2005. The lift is in the southwest part of the site. During March 2006, soil excavating took place. A trench 5 feet deep, 12 feet wide and 14 feet long was cut. However, in the process of excavating the soil, the fill line to the #2 oil USTs was cut. Number 2 oil was released and spill number 0513919 was opened. Six soil samples were taken at the ground surface in the hydraulic fluid spill area on 3/10/06 and

126TH ST DEPOT -NYCT (Continued) **S106702967**

3/13/06. The results were almost entirely non-detect. Groundwater was not affected. Spill 0513919 was estimated as 240 gals. of product. About 180 gals. was recovered from the piston sump. Sixty gallons was unaccounted for. A trench 10 feet long, 2 feet wide and 2 feet deep was dug. On 3/21/06, five PLine soil samples were collected at the very top of the ground for the #2 oil spill. The results had very high exceedences for VOCs. The investigation for the #2 oil spill was conducted during November 2006. Borings MW-10 to MW-12 were conducted. At each boring, the soil samples had elevated PID readings and strong odors with many VOC exceedences. However, only the soil sample from MW-11 had many high VOC and naphthalene exceedences. The sample from MW-12 had 3 VOC exceedences. During January 2007, a thin layer of product was seen in each well. MW-11 had 0.02 feet of product. The rest of the wells had just sheens. During March 2007, MW-13 and MW-14 were installed. Again, there were elevated PID readings and strong oil odors. The NYCT believes that the 60 gals. of product is adsorbed to the soil. During a September 29, 2011 meeting between staff from the NYCT and DEC, it was agreed that no further action may be warranted and that the site is a candidate for spill closure. This agreement was based upon the lack of substantial impacts or the absence of substantial measureable product. Groundwater monitoring is taking place monthly. MW-04 has from 0.01 to 0.13 feet of product on 11/18/13. MW-01 had 0.01 to 0.03 feet of product on 1/14/14 and 2/14/14. RW-01 had 0.01 feet of product on 4/13/14 and 5/13/14. 6/26/14 - Raphael Ketani. A case review took place today regarding the site. After consideration of the information contained in the file, it was determined that the case could be closed. This was based upon the presence of very little product in only 3 wells, the lack of collectible product since January 2011, the inability to dig up the remaining contamination due to the slave burial ground and the successful remediation of the 4 previous spills. It was determined that the residual contamination was not a threat to the public or the environment. Therefore, the spill case was closed today. 1/8/15 - Raphael Ketani. Today I reviewed the Dvirka & Bartilucci October 10, 2014 Monitoring Well Decommissioning/Abandonment Summary Letter Report. The work was performed from August 20 to 22 and from August 25 to 26, 2014. Decommissioning/abandonment was not performed for wells MW-A2 and MW-09 as they had previously been paved over and destroyed. The wells which were abandoned were: MW-1 to 14, A1, A3, A4 and RW-1 and 2. A jackhammer and concrete saw were used to remove each well manhole and the surrounding concrete. A hollow stem auger rig was used to overdrill each well to 5 feet below grade, thereby exposing 5 feet of riser. This was not done for RW-2 as the riser was made of steel. This well was simply just grouted. Each well was grouted from the bottom up using a tremmie and the upper 5 feet of the riser was cut off. Any soil with petroleum odors was drummed. A 1 foot conrete patch was installed at each former well location. The wells in the sidewalks had their entire flags replaced. A total of one quarter cubic yard of petroleum contaminated soil was shipped out via AARCO for disposal at Clean Earth in Carteret, New Jersey. All USTs will be cleaned out and closed in place as per DEC regulations. 1/15/15 - Raphael Ketani. Today I received the COMPLETE October 10, 2014 Monitoring Well Decommissioning/Abandonment Summary Letter Report. I reviewed all of the attachments that had been missing. I accepted the report without comment. 7/27/15 - Raphael Ketani. I received a call today from Tracey Bell, Assistant Vice President of the NYC Economic

126TH ST DEPOT -NYCT (Continued) **S106702967**

Development Corporation [(212) 312-3752/(347) 672-6297/TBell@nycedc.com]. She wanted to know who had responsibility for the USTs as the EDC was considering having the site developed. I told her that it was whichever entity presently owns them. She asked whether the spill case would have to be reopened if they took out the USTs and found contamination or if they dug somewhere else and found contamination. I told her that the spill would have to be called in and the case would have to be reopened. However, I added, if circumstances prevented excavation (i.e. close to utilities, would endanger a road, etc.), then the contamination could be left in place. Ms. Bell stated that since the spill would be reopened, then the site might not be developed. 2/23/16 - Raphael Ketani. Today I received an email from Cadecia Josephs (718) 613-0296, Associate Project Manager I with NYCT and assistant to Mr. Mathelier. A letter work plan was attached which described the proposed investigation of the UST tank field at the former depot. Ms. Josephs described the plan in the text of her email. She wrote the following: In preparation for the closure in place of the UST tank farm located at the former 126th street Bus Depot (former Spill No. 8808896, closed on June 26, 2014), a soil and groundwater sampling program is being proposed to investigate any potential subsurface contamination. The attached letter details the work to be performed by a subcontractor to our Consultant (Dvirka and Bartilucci Consulting Engineers). The tank farm consists of eight 4,000 gallon USTs encased in a concrete vault which extends to 20 ft below grade, this vault is backfilled with approximately eleven feet of pea gravel. A total of 12 soil borings and 4 groundwater probes are proposed to be completed in the vicinity of the USTs and associated fuel lines. Each tank vault exterior soil borings (TCSB-01 through TCSB-04) will be advanced using a direct push drill rig to approximately 22 feet below grade and 5 to 7 feet in the vicinity of the below grade fuel lines (TCSB-05 through TCSB-12). One soil boring will be advanced inside the tank vault (TCPB-01) using a guzzler to a depth of approximately 13 feet below grade surface. A total of 4 groundwater probes (TCGP-01 through TCGP-04) are proposed to be installed in the vicinity outside the tank vault and the below grade lines to a depth of 2 feet below grade. One (1) groundwater probe will be installed inside the vault (TCGP-01) to where liquid is encountered within the tank vault. All samples will be analyzed for STARS VOCs and SVOCs via USEPA Methods 8260 and 8270, respectively. Groundwater samples will be compared to the Class GA Groundwater Standards and Guidance Values and soil samples will be compared to the Soil Cleanup Objectives provided on Table 3 of NYSDEC s CP-51 Soil Cleanup Guidance document. All field activities will be performed in accordance with the Consent Order negotiated between NYCT and the NYSDEC. Upon completion of the soil and groundwater investigation and the receipt of analytical results, a Soil and Groundwater Investigation Report will be submitted to the NYSDEC for its review. If the proposed investigation plan meets the NYSDEC s approval your written confirmation would be greatly appreciated. Feel free to contact Mr. Gregory Mathelier at (718) 613-0029 with any questions you may have regarding this matter. 2/25/16 - Raphael Ketani. I reviewed the Dvirka & Bartilucci 1/29/16 Technical Scope of Work and Estimated Cost Proposal letter. The subject eight 4,000 gallon USTs and associated piping were evacuated, cleaned out and filled with concrete on December 21, 2015. In the letter plan, Dvirka & Bartilucci (D&B) proposes to conduct a soil and groundwater investigation (as described above) of the vault area and

126TH ST DEPOT -NYCT (Continued) **S106702967**

the associated piping. The pea gravel inside the vault will be screened at one location within the vault by conducting a soil boring (TCPB-01) and an assessment will be made of any petroleum contamination that is found inside. If liquid is discovered in the vault, then groundwater probe TCGP-01 will be constructed. Twelve soil borings and four groundwater probes will be completed in the vicinity of the vault and next to the piping. The vault floor slab is 7 feet thick. So no borings will be conducted through the floor. Four borings will be drilled in the vicinity of the vault to a total depth of 22 feet, 2 feet below the vault floor. Soil borings adjacent to the piping will be drilled to 5 to 7 feet below grade (8 borings). Groundwater probes TCGP-01 to TCGP-04 will be installed at selected locations (see Figure 1 in the letter). Each boring location will be hand cleared to 6 feet below the depot floor. A geophysical survey will be completed in order to locate utilities in the area. One Call utility mark outs will also be conducted. Groundwater is expected to be found at 3 to 8 feet below grade in the vicinity of the vault. Each probe will be advanced to 2 feet below the water table. A burial ground exists under the southwest part of the site. Access to drill will be coordinated with the proper authorities. If archaeological materials are encountered while drilling, then work will stop and NYCT will be notified. On pages 7 and 8 of the letter plan, D&B describes a list of tasks and assumptions regarding the proposed work which form most of the basis for estimating the cost of the investigation. These tasks comprise Task 1 - the investigation. Task 2 will be to write the tank field investigation report, have it reviewed by D&B staff and submit it to the DEC. The total cost of the project is estimated to be $96,276. I found the letter plan to be acceptable and sent a written letter to Mr. Mathelier approving the Technical Scope of Work and Estimated Cost Proposal letter. In the DEC approval letter, I indicated that a groundwater flow map must also be included in the investigation report. Also, I stated that a schedule for the various tasks must be submitted to the Department once the start date for the investigation is confirmed. 4/18/16 - Raphael Ketani. A PBS Request for Waiver letter dated 4/18/16 was submitted by NYCT to Leszek Zielinski, EE II and head of the PBS Unit. In the letter, the NYCT requested that they be allowed to forego the soil investigation around the USTs, which is required by 6NYCRR 613-2.6(c) when tank systems are being abandoned. The reason for this request is that the NYCT doesn't want to potentially risk disturbing the human remains that may be adjacent to the UST pad. "

Remarks: "DISCONNECTED & EXCAVATED TANK."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY ALTHOUGH SPILL REPORT SAYS CAUSE OF SPILL WAS TANK OVERFILL, AND THAT CONTAM. SOIL WAS FOUND DURING TANK REMOVAL, IN TRUTH, CONTAM. SOIL WAS FOUND DURING DRILLING OF BORING (AT DISPENSER) AS PART OF TANK CLOSURE-IN-PLACE INVESTIGATION. TANKS WERE NOT REMOVED; CAUSE OF SPILL WAS NOT OVERFILL. CHESNER ENGINEERING AND THEN URS CORP. PERFORMED SITE INVESTIGATIONS, FOUND SOME SOIL CONTAMINATION AND MINOR GROUNDWATER CONTAMINATION. URS INSTALLED A BIOVENTING SYSTEM TO ADDRESS SOIL AND PERFORMED GROUNDWATER MONITORING, STARTED SYSTEM IN MARCH 2003. BY OCTOBER 2003, GROUNDWATER MET STATE STANDARDS IN ALL MONITORING WELLS. DEC APPROVED NO FURTHER ACTION FOR GROUNDWATER, AND MONITORING WAS DISCONTINUED. URS PLANS TO ADVANCE SOIL BORINGS TO EVALUATE PROGRESS OF SOIL CLEANUP. Reviewed System Performance Monitoring Reports for June-Aug. '04 and Sept.-Nov. '04 on March 14, 2005; system appears to be operating adequately. Soil confirmation sampling has been performed but awaiting report with results. - J. Kolleeny 3/14/05 Spill transferred from Kolleeny to A. Zhitomirsky on 4/4/05. - JK 5-15-2005 Reviewed Perfomance Monitoring Report received on 4/1/2005 and Results of Confirmation Soil Sampling/Request for NFA received on 4/27/2005. No VOCs were detected in any of the confirmation soil samples. Minor SVOC exceedances were collected from soil borings SB-09 and SB-10. For the approximately six SVOCs that exceeded TAGM #4046 cleanup concentrations there is no apparent exposure pathway according to URS report. NFA letter was issued. AZ"
Remarks:	"during tank removal caller found contaminated soil and today got test results back "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 5/18/04 - AUSTIN - TRANSFERRED FROM TOMASELLO FOR REASSIGNMENT - END 9/10/04 - Sawyer - Talked to new manager for building. He will call back with as much information as he can find. The information should consist of the repair receipts and other supporting documentation for the clean up, if needed. 11/26/2004 Sangesland reviewed a submittal from ProTest. On Sept 30, 2004 ProTest isolated the tank and it passed. the problem was found to be a defective vent pipe. A partial replacement of this line was performed and the tank system then passed a tightness test. There were no visible signs of contamination."

Remarks: "APARTMENT BUILDING. CUSTOMER NOTIFIED OF RESULTS."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD notes: 7/12/2002: sent letter to Jacob Cohen requesting to repair or close the tank. AR 7/19/2002:He called me to clarify the letter i sent him. I told him to repair the tank or send me a letter stating what his plan of action was to repair the tank. he said he would fax it today.AR 8/28/2002: CALLED AND LEFT A MESSAGE TO JACOB TO CALL ME BACK. HE NEVER DID. AR 9/2/2002: CALLED AGAIN. JACOB FAXED THE REQUIRED INFORMATION ON 9/3/2002. ON 9/4/2002 CALLED AGAIN TO ASK IF THE EXCAVATION WAS ON CONCRETE. JACOB COHEN TOLD ME IT WAS. THEY DUG 15 FEET APPROXIMATELY. GAVE ME THE NAME OF COMPANY DOING REPAIR WORK: PETROLEUM TANK CLEANERS (7186246934). 11/18/2002: tHE FACILITY IS UNDER A CONSENT ORDER FOR NOT TESTING THE TANK. THE TANK WAS LAST TESTED IN 1987. THE ORDER IS ON FILE. THE TANK WAS LAST TESTED ON 11/15/2002. THE TANK PASSED BUT THE REPORT IS NEEDED TO CLOSE THE SPILL. 01/26/04 TRANSFERRED FROM ROMMEL TO AUSTIN 02/17/04: Reassigned from AUSTIN to KRIMGOLD. 10/21/05. J.Krimgold reviewed documentation submitted by Mr. Jacob Cohen. Based on this, the tank failed the test due to an uncapped tell-tail pipe. Pipe was ecxavated. No contamination was found. NFA letter."

Update By:	AMSERVIS
Site Description:	"Location: The site is located in the Borough of Manhattan, New York City. It is approximately 45,600-square-feet (1.04-acre) and is located in an urban area on the western half of the block bound by East 126th Street to the north, Second Avenue to the east, East 125th Street to the south, and Third Avenue to the west. Site Features: A new building is currently under construction. Current Zoning and Land Use: The entire site is located in the C6-3 mixed commercial and residential district primarily, which is consistent with the current land use. The surrounding area includes commercial, industrial, residential, institutional, and transportation/utility buildings, as well as vacant lots, construction sites, and open space. Past Use of the Site: The site was occupied by residential, commercial, and industrial facilities since the late 1800s. Historical site uses include a parking lot, a metal supply company, a dry cleaner, a laundry service, a parking garage, an automobile repair shop, and a tire repair shop. Site Geology and Hydrogeology: Historic fill, consisting of brown fine- to coarse-grained sand with varying amounts of gravel, silt, brick, concrete, ash and organic material, extends from the ground surface to depths ranging from about 2 to 17.5 feet below ground surface (bgs) across the site footprint. Native soil was observed directly below the fill layer and generally consists of brown and grey, fine- to coarse-grained sand with varying amounts of silt, clay, and gravel. The prominent rock type beneath the site is Inwood Marble containing white coarse-grained calcitic and dolomitic marble alternating with layers of silicate minerals. Bedrock is

PARCEL B WEST (Continued) **S127012989**

expected to be encountered at about 60 feet bgs. Groundwater was encountered during the RI at about 12 to 14 feet bgs and was determined to flow towards the northeast. "

Env Problem: "Nature and Extent of Contamination Post-Remediation: Remediation at the site is complete. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals, pesticides, herbicides and cyanide. Groundwater samples were also analyzed for the emerging contaminants 1,4-dioxane and per- and polyfluoroalkyl substances. Soil vapor, sub-slab vapor, and ambient air samples were analyzed for VOCs. Based on investigations conducted to date, the primary contaminants of concern include lead, mercury, tetrachloroethene (PCE) and trichloroethene (TCE). Soil - The VOCs 1,2,4-trimethylbenzene (maximum concentration of 7 parts per million, or ppm), toluene (maximum concentration of 1.2 ppm) and total xylenes (maximum concentration of 2.2 ppm) were detected at concentrations exceeding their respective unrestricted use soil cleanup objectives (UUSCOs). Several SVOCs were found at elevated concentrations above their UUSCOs, including naphthalene (120 ppm), anthracene (220 ppm), benzo(a)pyrene (330 ppm), chrysene (310 ppm) and fluoranthene (810 ppm). Metals, specifically lead (1,540 ppm) and mercury (2.3 ppm) were found in shallow soil at concentrations that exceed their respective UUSCOs. Data does not indicate any off-site impacts in soil related to this site. Groundwater - PCE exceeded the NYSDEC groundwater standards at a maximum concentration of 14 parts per billion (ppb). Naphthalene was detected in one sample at a concentration of 31 ppb, which exceeds the groundwater standard. Lead exceeded the groundwater standards at a maximum concentration of 156.2 ppb in an unfiltered groundwater sample. The filtered sample from the same location was non-detect for lead. No pesticides or PCBs were detected in groundwater. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - PCE and TCE were detected at elevated concentrations throughout the site, but were most elevated in the vicinity of the former dry cleaner. The maximum concentration for PCE was 67,700 micrograms per cubic meter (ug/m3) and for TCE it was 709 ug/m3. Data collected off-site indicated additional actions are needed to further evaluate soil vapor intrusion off-site. The maximum concentration for PCE was 56,100 micrograms per cubic meter (ug/m3) and for TCE it was 2450 ug/m3 off-site. "

Health Problem: "Remedial actions are complete and have eliminated the potential for contact with site-related contaminants. Offsite soil vapor intrusion sampling has identified elevated contaminated levels in soil vapor. Additional investigation of soil vapor is recommended as part of the offsite portion of this project #C231108A."

Gerard Mulvey 232 East 113rd Street New York, NY 10029 6/11/08 letter returned by USPS and marked Moved . bf 07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 03/30/18-Hiralkumar Patel. after discussion with DEC Vadim, case transfer to DEC Patel for review/closure. another spill (# 1711296) reported for the subject site. based on review of available spill/PBS records and discussion with environmental contractor, church owns multiple adjoining properties in the area and there are three tank systems at three different properties. all three tank

CONVENT (Continued) **S109064368**

systems are registered under one PBS record (2-209260). as per DEC Leszek, owner can register tank systems on multiple properties under one PBS record only if there are no other lots in-between these properties owned by different owner (street separating these properties will not affect PBS registration). as per PBS # 2-209260, the site has following tanks: - one (1) 5,000 gal #2 oil AST in vault, in-service, installed in Apr. 1956 - one (1) 2,000 gal #2 oil UST, in-service, installed in June 1959 - one (1) 1,500 gal #2 oil UST, in-service, installed in June 1960 PBS registration expired on 08/24/2007. the subject spill case was reported on 05/21/2008 due to tightness test failure of a 1,080 gal #2 oil tank system at convent, but there is no record of 1,080 gal tank system on PBS registration. spill # 1711296 was reported on 03/12/2018 due to oil seepage through school building's foundation wall. upon investigation, leak was found in supply/return lines of 5,000 gal tank system at school site. a site inspection has been scheduled for 2 PM on 04/03/18. as properties owned by same entity, subject spill case will be investigated/remediated (if needed) under spill # 1711296. refer to spill # 1711296 for further details and documents."

Remarks: "dry portion leak"

DEC Memo:	"need to send ttf letter to Property Manager: Mr. Joe Berko (212-687-0777) Berko & Associates 501 Fifth Ave - Suite 1408 New York, NY 10017 Nov. 7, 2005 A Tank Test Failure Letter was sent to: Joe Berko Berko & Assoc. 501 Fifth Ave- Suite 1408 New York, NY 10017 11/16/05-Vought-Spoke with Maya Betesh (212-687-0777) and she will be faxing in repair invoices. 05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 6/14/06 - Raphael Ketani. I called up Berko & Associates and asked to speak to the case manager for the property. I spoke to Joseph Berko. He said that all of the documentation showing that the tank was abandoned in place and that everything was taken care of was sent some time ago. I told him I don't have anything to look at. He said he will send it again. 6/15/06 - Raphael Ketani. Mr. Berko called me back. He stated that the tank was abandoned in place. I looked up the PBS case #2-610163 and it showed the tank abandoned in place. I told Mr. Berko that I needed the failed tank test results, why the tank failed, and a letter report from Brookside Environmental, the company that abandoned the tank, stating that there were no impacts to drains or

STORE FRONT (Continued) **S107417004**

the environment. He said he would get these documents for me. 7/20/06 - Raphael Ketani. I left a message for Mr. Berko asking what was presently taking place at the site. 8/2/06 - Raphael Ketani. I spoke to Mr. Berko. He said he was just the mortgage broker at the time. He said that he has the information and will get me the documentation that I need. 8/4/06 - Raphael Ketani. I received the dry fail tank and system test results and the cover letter from Eastside Floors stating there was no environmental impact or impact to the sewer system or drainage system. Also the cover letter stated that no oil was spilled as it was a dry leak, that the tank was abandoned in place, and that they have converted to electric heat. Based upon the above listed documentation, I am closing the spill case."

Remarks: "Systems test failure. No product released."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 12/12/2003 Management company telephone 917-709-4887 Sangesland spoke with Vega in apt B. He said he came to visit his grandmother and the apartment building was filled with a heavy oil smell. Vega called NYFD. Mike Mulqueen was at the site(Sangesland did NOT speak with Mike) Mulqueen reported the spill and estimated 30 gallons. According to Vega, NYFD and City DEP were both on site and gave the management company several written orders to clean & repair the spill. Sangesland called the management company and left a message. No response yet. Unknown who is doing the cleanup. No contact made yet with either owner or management company. 12/15/03 Tipple responded to the scene, rang all bells and was buzzed in, located boiler and tank area, found the spill, no one was to be found. It was not apparent if the spill was caused by a slow drip or asingle event. Tipple then Called Management company, Owner as per PBS registration and Tenant in apt.B , got no response. Spoke with Mulqueen, FDNY had put speedy dry and biosolve to absorb the oil and reduce the vapors. FDNY stated that a cleanup company should be in route Tipple sent letter to repair/ test/tank and clean spill. 12/15/03 Ray from Petroleum Tank Cleaners will PROBABLY do the cleanup. He will look at the site and get a signed contract. 3/5/2004 Sangesland spoke to Ray at PTC. PTC records show 4 drums & a van for 4 hours. Spill Complete Closed"
Remarks:	"caller states that the tank looks like it is leaknig. it is an above ground 1000 gallon tank in the basement that has been leaking for about a week."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 5/1/03 Tipple updating/ Office of Mental Health replacing waterline hired Office of General Services to do work. Scott Bard lead environmental person for OMH Albany Capital Operations lead person in cleanup. Contaminated soil letter sent to A. Scott Bard---------phone 518-473-5823 CDPC Unit Q 75 New Scotland Ave Albany, NY 12208 1/17/03 TJD Work plan submitted to investigate sub-surface impacts fro spill. Consultant recommednding composite sampling of trench sidewalls and bottom. The consultant has been notified that composite samples will not be accepted, the appropriate sample type required are discreet or grab samples. 6/6/07-Matthew Klaas (Albany DER) -Called Brett Mongillo at 518-377-0875 who was the project manager with Earth Tech at the time of the spill for additional information. He no longer works for Earth Tech but has refered me to call Scott Bard with the CDPC or to Caroline Benedict at the Earth Tech Albany office. -He was able to tell me that when he arrived on the scene soil samples were taken post excavation of contaminated soil, and that there was no evidence of further impacted soil. The trench was considered a work hazard and was ordered to be filled in due to its clean status. -Attempted to call Scott Bard at 518-473-5823 and got no response -Called Caroline Benedict at 518-951-2200, she was unavailable. Left a message for her to call me back or send me an email with any information she would have. 6/14/07-Matthew Klaas (Albany DER) -Wrote a letter to manhattan Psychiatric Center at 600 East 125th Street, New York, NY 10035 asking for any documentation of the subsurface investigation that Earth Tech ordered them to complete. -Wrote a letter to Scott Bard of Capital District Psychiatric Center (CDPC) at 75 New Scotland Avenue, Albany, NY 12208 requesting any information he may have on this file. 8/20/07 - received letter report EarthTech. Report needs to be reviewed to determine appropriate action 10/3/08 - Austin - Project transferred back down to Regional Office for rassignment - Assigned to Raphael Ketani to both review and respond to the SAEA State Facility Audit that was submitted by Manhattan Psych. for this project, as well as resume dialog/review of this project, to bring it towards completion. - end 10/6/08 - Raphael Ketani. I attempted to

MANHATTAN PSYCH CENTER (Continued) **S103558207**

restart the case. There are no documents in the storage files downstairs. The only E-doc I could find was a copy of the letter that was sent to Scott Bard. I tried to contact Matthew Klaas by e-mail, but he is not listed in DEC's phone directory, nor in Group Wise. I tried contact the Manhattan Psychiatric Center at (646) 672-6556 and reached the Maintenance Office. The person answering the phone said that the head of Maintenance is Bob Billings. She took a message for him. I tried calling Caroline Benedict at Earth Tech (518) 951-2200. I reached an operator who told me that Earth Tech had been bought by AECom. She said that Ms. Benedict was out on leave, but her supervisor, Mark Cory - Head of Environmental Services, could help me. I spoke to Mr. Cory. I told him who had hired Earth Tech and that a letter report was generated and submitted on 8/20/07. He said he will try to help me and he will see whether he can find the report and send it to me. Mr. Cory e-mailed me the 8/20/07 Earth Tech Spill Incident and Response Summary report. I reviewed the report. The report stated that an abandoned oil pipe with #6 oil was accidently broken while trenching for a water main. The report went on to say that the spill was cleaned up and no additional impacts were seen. On 6/17/03, Earth Tech collected soil samples from the trench. The analytical results had hits of total SVOCs of 2.5 ppm to 27.3 ppm. These hits consisted of the benzo series of analytes. The site is next to a former power plant location and the writer refers to this as a suggestion for the high hits. Further investigation was deemed impractical due to the costs and need to disrupt a bike path, a bridal path, and a levee. Also, all contractors expressed concern with ground stability between at the river bulkhead. A geophysical survey was not conducted due to the belief that rusted metal objects below ground would disrupt the accuracy of the results. At the end, closure of the spill case was requested. Mr. Billings called me back. He said that he has been at the site for only a few years. He said that I should talk to Charlie Katona, cell(646) 739-5383, Head Maintenance Supervisor - Supervisor 4. He said that Mr. Katona has been at the site for decades. I tried calling Mr. Katona, but could only leave a message. 10/7/08 - Raphael Ketani. I spoke to Mr. Katona (646) 672-6553. He said that Howard Thompson of OGS and he observed the cleanup and he stated that Earth Tech removed the contamination that occurred as a result of breaking the fuel line. He added that it was unknown whether any other places nearby had historical contamination, but that this one location was finished. I asked him what type of fuel the former power plant used to burn. He said that it was a little before his time, but he is pretty sure that it was coal. Based upon the information in the 8/20/07 Earth Tech Spill Incident and Response Summary Report, and my conversation with Mr. Katona today, I believe there are no continuing threats to the public safety or the environment from the incident and so I am closing the spill case. "

Update By:	LSZINOMA
Site Description:	"LOCATION: The site is bounded by Park Avenue, East 119th Street to the south, East 120th Street to the north and residential apartments to the west. The site occupies Tax Lot 33 of Tax Block 1746 and encompasses approximately 0.46 acres. SITE FEATURES: The site is currently occupied by an asphalt-paved parking lot secured with wrought-iron fence. Other details of the site history are discussed in the Past Use of the site section below. CURRENT ZONING AND LAND USE: The planned development is consistent with its R10, EHC and C2-5 zoning districts. R10 districts are the highest density residential district. EHC is the Special East Harlem Corridors District that was created as part of the broader East Harlem Neighborhood Initiative to facilitate the development of affordable housing, among others. C2-5 districts are commercial overlays mapped within residence districts. The area surrounding the site is urban and developed with low to high-rise multi-family residential buildings, commercial and office buildings, and mixed use residential and commercial properties. Surrounding property usage to the north of the site, beyond East 120th Street, is an athletic field (Eugene McCabe Field) belonging to a public school (PS M079- Horan School). To the south, beyond East

CON EDISON SERVICE BOX: 42084 (Continued) **1016450837**

119th Street, is a mixed-use residential and commercial development and parking lot. To the east, beyond Park Avenue and the elevated tracks of the Metro North Railroad, are a parking lot, multi-family residential buildings, and mixed-use residential and commercial buildings. To the west, and adjacent to the site, are multi-family residential buildings. PAST USE OF THE SITE: Based upon a review of Sanborn Fire Insurance Maps, a City Directory Search and Toxic s Targeting Report for the site and nearby property at 1678 Park Avenue, past uses of the site included residential ands commercial (multi-story, mixed use) from the late 1800 s until the mid-1980 s. The Site appears to have been vacant or partially vacant, between the mid 1980 s and around 2004 when remaining structures were demolished and the site was redeveloped into asphalt-paved parking lot. The City Directory search identified two potential dry cleaning facilities, Rosenstein Chas laundry and Goldstein Max laundry, on the site in as early as 1920 and 1923, respectively and operating for an unknown time. SITE GEOLOGY & HYDROGEOLOGY: Based on the U.S Geological Survey (Central Park, NY Quadrangle), the site lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). Groundwater was only present in the southern approximately one third of the site perched on bedrock andthe depth to groundwater ranged from 10 to 11 feet below grade surface (ft bgs). Refusal was encountered between 9 and 18 ft bgs. Urban fill material ranged from ground surface to seven to 11 ft bgs and was present directly above bedrock in several locations. Regional groundwater flow is anticipated to flow in an easterly direction towards the East River, located approximately 0.75 miles away. Actual groundwater flow direction may be influenced by stormwater inlets or impervious surface cover. Groundwater in Manhattan is not used as source of potable water. According to the New York City Department of Buildings (NYC DOB), the site is not located in an area that may be affected by Tidal Wetlands, Freshwater Wetlands, Coastal Erosion Hazard Area or Special Flood Hazard area."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: Facility Register

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

BEACON HARLEM SCHOOL
413 EAST 120TH STREET
NEW YORK, NY 10035

TARGET PROPERTY COORDINATES

Latitude (North):	40.798616 - 40ˆ 47’ 55.02’’
Longitude (West):	73.932644 - 73ˆ 55’ 57.52’’
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	590042.1
UTM Y (Meters):	4516738.5
Elevation:	9 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115942 CENTRAL PARK, NY
Version Date:	2019

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

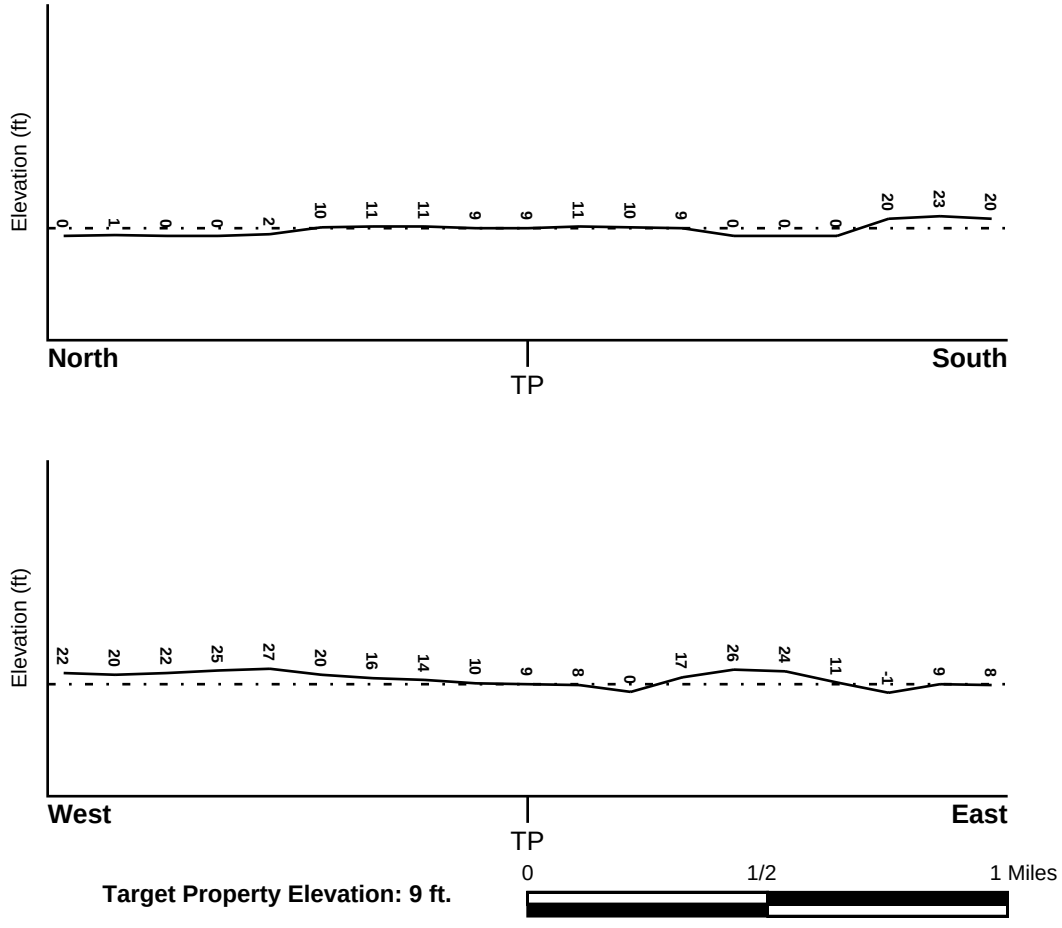
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970091F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970083F	FEMA FIRM Flood data
3604970079F	FEMA FIRM Flood data
3604970087F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovician		
Series:	Middle Ordovician (Mohawkian)		
Code:	O2 *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: A review of the RCRA-LQG list, as provided by EDR, and dated 02/28/2022 has revealed that there are 15 RCRA-LQG sites within approximately 0.25 miles of the target property.

UTM X (Meters):	590042.1
UTM Y (Meters):	4516738.5
Elevation:	9 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115942 CENTRAL PARK, NY
Version Date:	2019

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

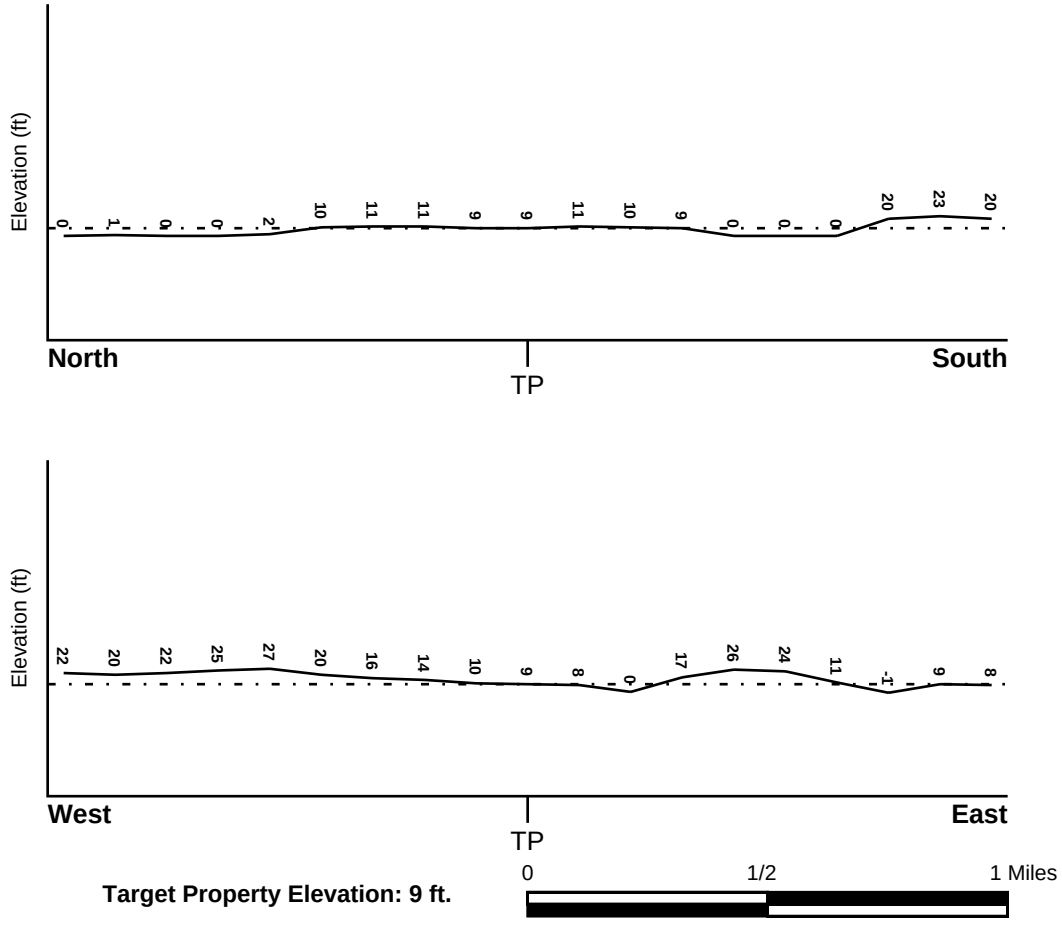
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970091F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970083F	FEMA FIRM Flood data
3604970079F	FEMA FIRM Flood data
3604970087F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovician		
Series:	Middle Ordovician (Mohawkian)		
Code:	O2 *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Qualifications

Colin Eckhardt: Assistant Project Manager, EHS

EDUCATION

University at Buffalo, Buffalo, NY- BS Environmental Geoscience

PROFESSIONAL SUMMARY

Mr. Eckhardt has over three years of extensive experience conducting environmental due diligence assessments (Phase I & II, preliminary assessments); soil and groundwater investigation and remediation. Mr. Eckhardt has a strong working knowledge of applicable federal, state, and local regulations. Mr. Eckhardt is proficient in environmental sampling methodology, data collection, compilation, evaluation and statistical analysis of data from various matrices including air, soil, soil vapor, groundwater, and surface water. Mr. Eckhardt provided consulting on regulatory compliance issues and prepared environmental compliance reports of commercial and residential facilities for the purpose of assessing compliance with local, state and federal regulatory requirements.

PROFESSIONAL EXPERIENCE

ALC Environmental:

- Perform environmental due diligence assessments (ASTM Standards) of residential, industrial and commercial properties. The range of environmental assessments includes Phase I ESA, Preliminary Site Assessments, and Thermal Explosive Survey Assessments.

KEY ACADEMIC AND PROFESSIONAL PROJECTS

- Performed environmental assessments of various properties throughout the state of New York, including manufacturing facilities, automotive service stations, office buildings, agricultural lands, multi-family residential, and daycare/educational facilities.

- Conducted sampling at remediation sites with a wide range of contaminants including petroleum hydrocarbons, chlorinated solvents, PCBs, and metals in NY.

- Performed air sampling, monitoring, and analysis at a variety of industrial, commercial, and residential facilities to determine levels of potentially hazardous substances.

CERTIFICATIONS

- OSHA 30 hour Outreach Training - Construction
- New York State Department of Labor Mold Assessor License

Sanchita Basu Mallick: Senior Project Manager, Real Estate Div.

EDUCATION

Long Island University, CW Post-NY - MS Environmental Studies

University of Calcutta, Calcutta, India- BS Zoology

PROFESSIONAL SUMMARY

Ms. Basu Mallick has over nine years of extensive experience conducting environmental due diligence assessments (Phase I & II, preliminary assessments, environmental transaction screen); soil and groundwater investigation and remediation; and environmental permitting. Ms. Basu Mallick has strong working knowledge of applicable federal, state, and local regulations. Ms. Basu Mallick is proficient in environmental sampling methodology, data collection, compilation, evaluation and statistical analysis of data from various matrices including air, soil, soil vapor, groundwater, and surface water. Ms. Basu Mallick provided consulting on regulatory compliance issues and prepared environmental compliance audits of commercial and industrial facilities for the purpose of assessing compliance with local, state and federal regulatory requirements.

PROFESSIONAL EXPERIENCE

ALC Environmental:

- Perform environmental due diligence assessments (ASTM Standards) of residential, industrial and commercial properties. The range of environmental assessments includes Phase I ESA, Preliminary Site Assessments, and Environmental Transaction Screening.

KEY ACADEMIC AND PROFESSIONAL PROJECTS

- Performed environmental assessments of various properties throughout the country including manufacturing facilities, automotive service stations, gasoline service stations, drycleaners, printing facilities, office buildings, agricultural lands, multi-family residential, bulk petroleum terminals, daycare/educational facilities, and light industrial facilities

- Managed remediation sites with a wide range of contaminants including petroleum hydrocarbons, chlorinated solvents, PCBs, and metals in NJ and NY.

CERTIFICATIONS

- OSHA 40 hour HAZWOPER
- OSHA 8 Hour HAZWOPER Supervisor
- USEPA-AHERA Certified Asbestos Inspector
- First Aid CPR AED Certified

As the owner of this facility and/or the tanks at this facility, the receipt, posting, and use of this certificate is an acknowledgement that I am responsible to the extent required by law for ensuring that this facility is in compliance with all regulations for the bulk storage of petroleum including those regarding equipment requirements, inspections, handling procedures, recordkeeping, registration requirements, providing advanced notice to the Department of major changes to a tank system, spill reporting, and all other applicable requirements. Violations may be punishable as a criminal offense and/or a civil violation in accordance with applicable state and federal law.

This registration certificate must be kept current and conspicuously posted at this facility at all times. Posting must be at the tank, at the entrance of the facility, or the main office where the storage tanks are located.

Spills must be reported to the DEC within two hours (1-800-457-7362).

Commissioner

Date 3/16/10 PBS Number(s) 2-604478

Dear Petroleum Bulk Storage Tank Owner:

Your Petroleum Bulk Storage Registration Application and/or fee are being returned to you. Your application has been determined to be incomplete and cannot be processed for the following reason(s):

_____ The fee of $_____ was not enclosed.
_____ The fee of $_____ you sent is incorrect, the correct fee is $_____.
_____ Application was not enclosed.
_____ Application was outdated and unacceptable. Please use enclosed application.
_____ Application does not have the required signature of the authorized representative.
_____ Federal Tax ID Number was not submitted or is incorrect.
_____ The application has been determined to be a Change of Ownership. Please resubmit the application as a change of ownership. A copy of the deed page showing the date of ownership transfer is needed. The date of the registration certificate will be five years from the date of ownership transfer, as determined by the deed. Please note that if the change of ownership occurred more than five years ago, additional fees will be required.
_____ Underground tank is overdue for tightness testing. See attached.
_____ Provide a copy of documentation for proof of tank capacity.
_____ Aboveground tank is 10,000 gallons or more and does not have secondary containment (column 11).
X Information is incorrect and/or missing as follows:

tank installation dates

This determination is based on the information you supplied on your application. It is your responsibility to insure that this information is correct. If applicable, please make changes and return your correctly completed application and fee within 10 days to: NYSDEC, 625 Broadway, 11th Floor, Albany, NY 12233-7020.

Thank you for your cooperation. If you have any questions, please call me at (518) 402-9549.

Sincerely,

Cynthia Freedman

As an authorized representative of the above named facility, I affirm under penalty of perjury that the information displayed on this form is correct to the best of my knowledge. Additionally, I recognize that I am responsible for assuring that this facility is in compliance with all sections of 6 NYCRR Parts 612, 613 and 614, and applicable sections of 6 NYCRR Subpart 360-14 (used oil tanks only), not just those cited below:
-- The facility must be re-registered if there is a transfer of ownership.
-- The Department must be notified within 30 days prior to adding, replacing, reconditioning, or permanently closing a stationary tank.
-- The facility must be operated in accordance with the code for storing petroleum, 6NYCRR Part 613.
-- Any new facility or substantially modified facility must comply with 6NYCRR Part 614.
-- **This certificate must be signed and posted on the premises at all times.** Posting must be at the tank, at the entrance of the facility, or the main office where the storage tanks are located.
-- Any person with knowledge of a spill, leak or discharge must report the incident to DEC within two hours **(1-800-457-7362)**.

Dear Petroleum Bulk Storage Facility Owner:

Your Petroleum Bulk Storage Registration Application and/or fee are being returned to you. Your application is incomplete and cannot be processed for the following reason(s):

- ____ The fee of $____ was not enclosed.
- ____ The fee of $____ you sent is incorrect; the correct fee is $____.
- X Application was not enclosed. Please use enclosed application.
- ____ Application is outdated. Please use enclosed application.
- ____ Application does not have the required signature of the authorized representative.
- X Federal Tax ID Number (EIN) was not submitted or is incorrect or does not match our records. Federal Tax ID must be a nine-digit number.
- X Complete property owner information (Section A). Property owner name must match info per deed.
- X Complete tank owner information (Section C).
- ____ The application has been determined to be a Change of Ownership. A copy of the deed page showing the date of ownership transfer is needed. The expiration date of the registration certificate will be five years from the date of ownership transfer, as determined by the deed. Please note that if the change of ownership occurred more than five years ago, additional fees will be required.
- ____ Underground tank is overdue for tightness testing. See attached. A copy of the passing tank tightness test report is required with your application.
- ____ Provide documentation of tank capacity.
- ____ Aboveground tank is 10,000 gallons or more; secondary containment is required (Column 11).
- ____ Tank installation date must be provided (column 5). If unknown, provide your best estimate.
- ____ Duplicate tank numbers are unacceptable. Renumber new tank whose tank number duplicates a previously registered tank.
- X Information is incorrect and/or missing as follows:

We received check #001870 with no application. Please complete application (see highlighted missing info) and resubmit application with check.

This determination is based on the information on your application. It is your responsibility to ensure the information is correct. If applicable, please make changes directly on the application form and return the completed application and fee within 10 days to: NYSDEC, 625 Broadway, 11th Floor, Albany, New York, 12233-7020. If you have any questions, please call me at (518) 402-9553.

Sincerely,
Cynthia Freedman

Attach additional sheets as needed.

PETROLEUM BULK STORAGE APLICATION - SECTION B - TANK INFORMATION - CODE KEYS

Action (1)

1. Initial Listing
2. Add Tank
3. Close/Remove Tank
4. Information Correction
5. Recondition/Repair/Reline Tank

Tank Location (3)

1. Aboveground-contact w/soil
2. Aboveground-contact w/ impervious barrier
3. Abovcground on saddles, legs, stilts, rack or cradle
4. Aboveground with 10% or more below ground
5. Underground
6. Aboveground in Subterranean Vault w/access for inspections

Status (4)

1. In-service
2. Temporarily out-of-service
3. Closed-Removed
4. Closed- In Place
5. Tank converted to Non-Regulated use

Products Stored (7)

Heating Oils: On-Site Consumption

0001. #2 Fuel Oil
0002. #4 Fuel Oil
0259. #5 Fuel Oil
0003. #6 Fuel Oil
0012. Kerosene
0591. Clarified Oil
2711. Biodiesel (Heating)
2642. Used Oil (Heating)

Heating Oils: Resale/ Redistribution

2718. #2 Fuel Oil
2719. #4 Fuel Oil
2720. #5 Fuel Oil
2721. #6 Fuel Oil
2722. Kerosene
2723. Clarified Oil
2724. Biodiesel (Heating)

Motor Fuels

0009. Gasoline
2712. Gasoline/Ethanol
0008. Diesel
2710. Biodiesel
0011. Jet Fuel
1044. Jet Fuel (Biofuel)
2641. Aviation Gasoline

Lubricating/Cutting Oils

0013. Lube Oil
0015. Motor Oil
1045. Gear/Spindle Oil
0010. Hydraulic Oil
0007. Cutting Oil
0021. Transmission Fluid
1836. Turbine Oil
0308. Petroleum Grease

Oils Used as Building Materials

2626. Asphaltic Emulsions
0748. Form Oil

Petroleum Spirits

0014. White/Mineral Spirits
1731. Naptha

Mineral/Insulating Oils

0020. Insulating Oil (e.g., Transformer, Cable Oil)
2630. Mineral Oil

Waste/Used/Other Oils

0022 Waste/Used Oil
9999. Other-Please list:*

Crude Oil

0006. Crude Oil
0701. Crude Oil Fractions

Tank Type (8)

01. Steel/Carbon Steel/Iron
02. Galvanized Steel Alloy
03. Stainless Steel Alloy
04. Fiberglass Coated Steel
05. Steel Tank in Concrete
06. Fiberglass Reinforced Plastic (FRP)
07. Plastic
08. Equivalent Technology
09. Concrete
10. Urethane Clad Steel
99. Other-Please list:*

Internal Protection (9)

00. None
01 Epoxy Liner
02. Rubber Liner
03. Fiberglass Liner (FRP)
04. Glass Lincr
99. Other-Please list:*

External Protection (10/18)

00. None
01. Painted/Asphalt Coating
02. Original Sacrificial Anode
03. Original Impressed Current
04. Fiberglass
05. Jacketed
06. Wrapped (Piping)
07 Retrofitted Sacrificial Anode
08. Retrofitted Impressed Current
09. Urethane
99. Other-Please list:*

Tank Secondary Containment (11)

00. None
01. Diking (Aboveground Only)
02. Vault (w/access)
03. Vault (w/o access)
04. Double-Walled (Underground Only)
05. Synthetic Liner
06. Remote Impounding Area
07. Excavation Liner
09. Modified Double-Walled (Aboveground Only)
10. Impervious Underlayment (Aboveground Only)**
11. Double Bottom (Aboveground Only)**
12. Double-Walled (Aboveground Only)

Tank Leak Detection (12)

00. None
01. Interstitial Electronic Monitoring
02. Interstitial Manual Monitoring
03. Vapor Well
04. Groundwater Well
05. In-Tank System (Auto Tank Gauge)
06. Impervious Barrier/Concrete Pad (Aboveground Only)
99. Other-Please list:*

Overfill Protection (13)

00. None
01. Float Vent Valve
02. High Level Alarm
03. Automatic Shut-Off
04. Product Level Gauge (Aboveground Only)
05. Vent Whistle
99. Other-Please list:*

Spill Prevention (14)

00. None
01. Catch Basin
99. Other-Please list:*

Pumping/Dispensing Method (15)

00. None
01. Presurized Dispenser
02. Suction Dispenser
03. Gravity
04. On-Site Heating System (Suction)
05. On-Site Heating System (Supply/Retum)
06. Tank-Mounted Dispenser
07. Loading Rack/Transfer Pump

Piping Location (16)

00. No Piping
01. Aboveground
02. Underground/On-ground
03. Aboveground/Underground Combination

Piping Type (17)

00. None
01. Steel/Carbon Steel/Iron
02. Galvanized Steel
03. Stainless Steel Alloy
04. Fiberglass Coated Steel
05. Steel Encased in Concrete
06. Fiberglass Reinforced Plastic (FRP)
07. Plastic
08. Equivalent Technology
09. Concrete
10. Copper
11. Flexible Piping
99. Other-Please list:*

Piping Secondary Containment (19)

00. None
01. Diking (Aboveground Only)
02. Vault (w/access)
04. Double-Walled (Underground Only)
06. Remote Impounding Area
07. Trench Liner
12. Double-Walled (Aboveground Only)

Pipe Leak Detection (20)

00. None
01. Interstitial Electronic Monitoring
02. Insterstitial Manual Monitoring
03. Vapor Well
04. Groundwater Well
07. Pressurized Piping Leak Detector
09. Exempt Suction Piping
99. Other-Please list:*

Under Dispenser Containment (UDC) (21)

Check Box if Present

As an authorized representative of the above named facility, I affirm under penalty of perjury that the information displayed on this form is correct to the best of my knowledge. Additionally, I recognize that I am responsible for assuring that this facility is in compliance with all sections of 6 NYCRR Parts 612, 613 and 614, and applicable sections of 6 NYCRR Subpart 360-14 (used oil tanks only), not just those cited below:
-- The facility must be re-registered if there is a transfer of ownership.
-- The Department must be notified within 30 days prior to adding, replacing, reconditioning, or permanently closing a stationary tank.
-- The facility must be operated in accordance with the code for storing petroleum, 6NYCRR Part 613.
-- Any new facility or substantially modified facility must comply with 6NYCRR Part 614.
-- **This certificate must be signed and posted on the premises at all times.** Posting must be at the tank, at the entrance of the facility, or the main office where the storage tanks are located.
-- Any person with knowledge of a spill, leak or discharge must report the incident to DEC within two hours **(1-800-457-7362)**.

Commissioner

Date 3/16/10 PBS Number(s) 2-604478

Dear Petroleum Bulk Storage Tank Owner:

Your Petroleum Bulk Storage Registration Application and/or fee are being returned to you. Your application has been determined to be incomplete and cannot be processed for the following reason(s):

_____ The fee of $_____ was not enclosed.
_____ The fee of $_____ you sent is incorrect, the correct fee is $_____.
_____ Application was not enclosed.
_____ Application was outdated and unacceptable. Please use enclosed application.
_____ Application does not have the required signature of the authorized representative.
_____ Federal Tax ID Number was not submitted or is incorrect.
_____ The application has been determined to be a Change of Ownership. Please resubmit the application as a change of ownership. A copy of the deed page showing the date of ownership transfer is needed. The date of the registration certificate will be five years from the date of ownership transfer, as determined by the deed. Please note that if the change of ownership occurred more than five years ago, additional fees will be required.
_____ Underground tank is overdue for tightness testing. See attached.
_____ Provide a copy of documentation for proof of tank capacity.
_____ Aboveground tank is 10,000 gallons or more and does not have secondary containment (column 11).
_X_ Information is incorrect and/or missing as follows:

tank installation dates

This determination is based on the information you supplied on your application. It is your responsibility to insure that this information is correct. If applicable, please make changes and return your correctly completed application and fee within 10 days to: NYSDEC, 625 Broadway, 11th Floor, Albany, NY 12233-7020.

Thank you for your cooperation. If you have any questions, please call me at (518) 402-9549.

Sincerely,

Cynthia Freedman

As an authorized representative of the above named facility, I affirm under penalty of perjury that the information displayed on this form is correct to the best of my knowledge. Additionally, I recognize that I am responsible for assuring that this facility is in compliance with all sections of 6 NYCRR Parts 612, 613 and 614, and applicable sections of 6 NYCRR Subpart 360-14 (used oil tanks only), not just those cited below:

-- The facility must be re-registered if there is a transfer of ownership.
-- The Department must be notified within 30 days prior to adding, replacing, reconditioning, or permanently closing a stationary tank.
-- The facility must be operated in accordance with the code for storing petroleum, 6NYCRR Part 613.
-- Any new facility or substantially modified facility must comply with 6NYCRR Part 614.
-- **This certificate must be signed and posted on the premises at all times.** Posting must be at the tank, at the entrance of the facility, or the main office where the storage tanks are located.
-- Any person with knowledge of a spill, leak or discharge must report the incident to DEC within two hours **(1-800-457-7362)**.

SITE MANAGER – PRE-SURVEY QUESTIONNAIRE

Name of person completing questionnaire:	**Nilsa Orama/Paul Delgado**
Association with property:	**EHMSC Director/EHMSC Facility Manager**
Length of association with property:	**20 + years**
Date:	**5/31/22**
Phone Number:	**(212) 410-7707**
Project Site:	**East Harlem Multi Service Center**

Directions: Please answer all questions to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response. Additional details necessary to explain any yes or unknown responses should be provided in the "Comments" column.
Note: *U/NR* indicates *"Unknown"* or *"No Response"*.

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
1A.	Is the property used for industrial purposes?		**X**		**Not presently-former School Site – history shows past industrial usage for entire lot.**
1B.	Are any adjoining properties used for industrial purposes?		**X**		**Adjoining property redeveloped into a 179 unit residential building.**
2A.	To the best of your knowledge, has the property been used for industrial purposes in the past?	**X**			**This site was originally 1 lot which was split into two lots-8 and 9 (EHMSC) for the purposes of redevelopment- what was designated as Lot 8 was redeveloped for Acacia Gardens. Prior to 1940, the entire site had been utilized for residential, commercial, stone yard, lumber yard, school and gasoline station. From 1941-1980, the site has been utilized for residential, commercial, school and gasoline station. From 1981 to present, the site has been utilized as an HRA Multi Service Center with parking for building occupants. All information quoted on this report came from the Phase II investigative report for Lot 8.**
2B.	To the best of your knowledge, has any of the adjoining properties been used for industrial purposes in the past?	**X**			**See 2A**
3A.	Is the property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	**X**			**See 2A**
3B.	Is any a**djoining property** used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	**X**			**See 2A**

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
5A.	Are there currently any automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers greater than 5 gallons in volume or 50 gallons in the aggregate, stored on or used at the Property?		**X**		**No such items at the EHMSC greater than 5 gallons in volume.**
5B.	To the best of your knowledge, have there been previously any automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers greater than 5-gallons in volume or 50-gallons in the aggregate, stored on or used at the Property?			**X**	**See answer to question 2A but based on past usage, may have been a possibility.**
6A.	Are there currently any industrial drums (typically 55 gallon) or sacks of chemicals located on the Property?		**X**		
6B.	To the best of your knowledge, have there been previously any industrial drums (typically 55 gallon) or sacks of chemicals located on the Property?			**X**	**See answer to question 2A but based on past usage, may have been a possibility.**
7A.	Has fill dirt been brought onto the Property which originated from a contaminated site?			**X**	**Based on past report, there was a potential presence of historic fill material**
7B.	Has fill dirt been brought onto the Property which is of an unknown origin?	**X**			**See 7A**
8A.	Are there currently any pits, ponds or lagoons located on the Property in connection with waste treatment or waste disposal?			**X**	**There is a coal vault on the property.**
8B.	To the best of your knowledge, have there been previously any pits, ponds or lagoons located on the Property in connection with waste treatment or waste disposal?			**X**	
9.	Is there currently, any stained soil on the Property?			**X**	
10A.	Are there currently any registered or unregistered storage tanks (above or underground) located on the Property?	**X**			
10B.	To the best of your knowledge, have there been previously any registered or unregistered storage tanks (above or underground) located on the Property?	**X**			**Based on report reviewed, five underground storage tanks were identified on the southwestern corner of the site.**
11A.	Are there currently any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the Property or adjacent to any structure located on the Property?	**X**			
11B.	To the best of your knowledge, have there been previously any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the Property or adjacent to any structure located on the Property?	**X**			**In addition, the lot had a fill port for a fuel oil tank.**
12A.	Is there currently evidence of leaks, spills or staining by substances other than water, or foul odors associated with any flooring, drains, walls, ceilings, or exposed grounds on the Property?		**X**		

U/NR: *"Unknown"* or *"No Response*

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
12B.	To the best of your knowledge, have there been previously any evidence of leaks, spills or staining by substances other than water, or foul odors associated with any flooring, drains, walls, ceilings, or exposed grounds on the Property			**X**	**Possibility based on past usage of site.**
13A.	If the Property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system?		**X**		
13B.	If the Property is served by a private well or non-public water system has the well been designated as contaminated by any government environmental/health agency?		**X**		
14A.	Have you been informed of the past existence of hazardous substances or petroleum products with respect to the Property or any facility located on the Property?	**X**			**Based on report-historical information cites gasoline station on the site.**
14B.	Have you been informed of the current existence of hazardous substances or petroleum products with respect to the Property or any facility located on the Property?		**X**		**Not currently but report from May 2015 cited information from March 2015 report and stated that the sub-surface soil was impacted by elevated metals and SVOCs. In the immediate vicinity of the former gasoline station, the subsurface soil exhibited toxicity characteristics of hazardous materials. Soil vapor investigation detected several gasoline and chlorinated solvents related compounds.**
15.	Are there any environmental liens or governmental notification relating to past or current violations of environmental laws with respect to the Property or any facility located on the Property?	**X**			
16.	Have there been any environmental site assessments of the Property that indicated the presence of hazardous substances or petroleum products on, or contamination of, the Property or recommended further assessment of the Property?	**X**			**Report was developed for the redevelopment of Lot 8 to assess conditions prior to the construction of Acacia Gardens.**
17.	Does the Property discharge waste water on or adjacent to the property, other than storm water, into a storm water sewer system?		**X**		
18.	Have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the Property?			**X**	**Based on historical information, this may be a possibility.**
19.	Is there a transformer, capacitor or any hydraulic equipment for which there are any records indicating the presence of PCBs?		**X**		

U/NR: *"Unknown"* or *"No Response*

Summarize historical Property use (when was the Property developed with the current improvements, what modifications have taken place, what was the Property used for prior to it's current use):	**This site was originally 1 lot which was split into two lots-8 and 9 for the purposes of redevelopment- what was designated as Lot 8 was redeveloped for Acacia Gardens. Prior to 1940, the entire site had been utilized for residential, commercial, stone yard, lumber yard, school and gasoline station. From 1941-1980, the site has been utilized for residential, commercial, school and gasoline station. From 1981 to present, the site has been utilized as an HRA Multi Service Center with parking for building occupants.** **The site of the former gasoline station was located on split lot 8 redeveloped for Acacia Gardens.** **The existence of a coal vault remains on Lot 9.** **All information quoted on this report came from the Phase II investigative report for Lot 8.**

1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) prepared this Phase II Environmental Site Investigation (ESI) report on behalf of The Community Builders, Inc. for The Beacon project at 413 East 120th Street in the East Harlem neighborhood of Manhattan, New York (site).

The purpose of the Phase II ESI was to investigate recognized environmental conditions (RECs) identified in a June 28, 2022 Phase I Environmental Site Assessment (ESA) prepared by ALC Environmental, and to evaluate the site's potential for enrollment in the New York State Brownfield Cleanup Program (BCP).

The Phase II ESI was completed on October 6 and 7, 2022 and included a geophysical survey, advancement of soil borings, installation of groundwater monitoring wells and soil vapor probes, and collection and laboratory analysis of soil, groundwater, and soil vapor samples.

This report is organized as follows:

- Section 2.0 Background
- Section 3.0 Field Investigation Methodology
- Section 4.0 Observations and Results
- Section 5.0 Conclusions
- Section 6.0 Limitations

2.0 BACKGROUND

2.1 Site Location and Description

The site is located at 413 East 120th Street in the East Harlem neighborhood of Manhattan, New York and is identified as Tax Block 1808, Lot 8 on the Manhattan Borough Tax Map. The approximately 35,000-square-foot (0.80-acre) site is developed with a 6-story former school building used for offices and community services, and an asphalt parking lot. The building has an area of about 18,300 square feet and has a full cellar. The site is bound to the north and east by two 16-story, multi-family residential buildings [New York City Housing Authority Wagner development (Block 1808, Lot 1)]; to the south by East 120th Street, followed by 4- and 6-story residential buildings (Block 1807, Lots 36 through 41, 136, and 138); and to the west by a 10-story, mixed commercial and residential building [Acacia Gardens (Block 1808, Lot 7501)].

According to the United States Geological Survey (USGS) Central Park Quadrangle 7.5-minute Series Topographic Map and nearby survey data, the site elevation (el) is about 9[1] and regional topography generally slopes east toward the Harlem River, about 900 feet east of the site. A site location map is included as Figure 1.

2.2 Phase I Environmental Site Assessment

ALC Environmental completed a Phase I Environmental Site Assessment (ESA) in June 2022. A copy of the Phase I ESA is provided in Appendix A. The report identified a REC related to on-site petroleum bulk storage, including two active, 10,000-gallon No. 2 fuel oil aboveground storage tanks (AST) in the cellar boiler room.

2.3 Geology

According to the USGS Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York and Parts of Bergen and Hudson Counties New Jersey (1994), the site is underlain by bedrock of the Hartland Formation, which consists of interbedded mica schist, gneiss, quartz, granite, and amphibolite. Soil and bedrock stratigraphy throughout Manhattan typically consists of a layer of historical fill that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. Bedrock was not encountered during the Phase II ESI and is estimated at about el -9 (18 feet below grade surface [bgs]) based on the Department of Borough Works' Rock Data Map of Manhattan (1940). Geological surface features (e.g., rock outcroppings) were not observed at the site.

[1] Elevations are referenced to the North American Vertical Datum of 1988 (NAVD88)

2.4 Hydrogeology

Groundwater flow is typically topographically influenced because shallow groundwater tends to originate in areas of topographic highs and flow toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetative cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, artificial fill, and variability in local geology and groundwater sources or sinks.

Groundwater was encountered at about 10 to 12 feet bgs, and is inferred to flow east toward the Harlem River. Groundwater in New York City is not used as a potable water source. Potable water is provided by the City of New York and is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

According to the current Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) dated September 5, 2007 (Map No. 3604970091F) and Preliminary Flood Insurance Rate Map (PFIRM) dated January 30, 2015 (Map No. 3604970091G), the south and western parts of the site are located in Zone AE (EL 13), which is an area of special floor hazard, and the northeastern part of the site is in Zone X, which is an area of minimal flood hazard.

3.0 FIELD INVESTIGATION METHODOLOGY

Langan completed the Phase II ESI on October 6 and 7, 2022. The Phase II ESI consisted of the following:

- Geophysical survey
- Advancement of six soil borings, and collection and laboratory analysis of 10 soil samples, including one duplicate
- Installation of two temporary groundwater monitoring wells, and collection and laboratory analysis of three groundwater samples, including one duplicate
- Installation of four soil vapor points (two sub-slab and two subsurface), and collection and laboratory analysis of four soil vapor samples, two indoor air samples, and one ambient air sample

Soil boring, monitoring well, and soil vapor sample locations are shown on Figure 2, and a sample collection summary is included as Table 1. A photograph log documenting the Phase II ESI is included as Appendix B.

3.1 Geophysical Survey

NOVA Geophysical Engineering (NOVA) of Douglaston, New York completed a geophysical survey of accessible areas of the site on October 6, 2022, prior to drilling commencement. The tank vault in the cellar was inaccessible. The survey included the use of ground penetrating radar (GPR) and electromagnetic (EM) detectors to locate potential subsurface utilities, underground storage tanks, and subsurface structures in the vicinity of proposed boring locations. A copy of the geophysical survey report is included in Appendix C.

3.2 Soil Investigation

Lakewood Environmental Services Corp. (Lakewood) advanced six soil borings (SB01 through SB06) with a Geoprobe 6620 DT (exterior locations) and an AMS 9100P limited access rig (interior locations) to about 15 to 20 feet bsg. Lakewood collected soil samples into 4-foot-long and 2-foot-long Macro-Core® sample barrels lined with dedicated acetate sleeves for exterior and interior borings, respectively.

Langan visually classified the soil samples retrieved from borings for soil type, grain size, texture, and moisture content, and screened each soil sample for visual, olfactory, and instrumental evidence of a chemical or petroleum release. Instrumental screening for the presence of organic vapors was performed using a photoionization detector (PID) equipped with a 10.6 electron volt (eV) lamp. Ten soil samples (including one duplicate sample) were collected for laboratory analysis from soil that exhibited impacts, if observed, or from within non-native material. Samples submitted for VOC analysis were collected directly from the acetate liner into laboratory-supplied Terra Core® soil samplers. The remaining sample volume was homogenized and placed in laboratory-supplied containers for additional analyses. The sample containers were labeled,

placed in a laboratory-supplied cooler, and packed on ice (to attempt to maintain a temperature of about 4°C). A courier from Alpha Analytical picked up and delivered the samples under standard chain-of-custody protocol to the laboratory in Westborough, Massachusetts. Alpha Analytical is certified by the New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) (ELAP ID 11627).

All soil samples were analyzed for the following:

- Target Compound List (TCL)/Part 375 list VOCs by U.S. Environmental Protection Agency (USEPA) method 8260C
- TCL/Part 375 list semivolatile organic compounds (SVOC) by USEPA method 8270E
- Polychlorinated biphenyls (PCB) by USEPA method 8082A
- TCL/Part 375 list pesticides and herbicides by USEPA method 8081B and 8151A, respectively
- Part 375-listed metals (including tri- and hexavalent chromium and total cyanide) by USEPA methods 6010D, 1,7196A, and 1,9010C/9012BA

One shallow sample from each boring was also analyzed for Per- and Polyfluoroalkyl Substances (PFAS) and 1,4-dioxane by USEPA method 537m and 8260C, respectively.

Following sample collection, Lakewood backfilled borings with non-impacted soil cuttings and covered each boring with concrete patch within the building and an asphalt or concrete patch in the parking lot. Two borings were converted to temporary groundwater monitoring wells. Soil boring logs are included in Appendix D.

3.3 Groundwater Investigation

Lakewood converted two soil borings (SB03 and SB04) into one-inch diameter, temporary groundwater monitoring wells (MW03 and MW04) by inserting 0.010-inch slotted schedule 40 polyvinyl chloride (PVC) well screen into the borehole and attaching PVC riser from the top of the screen to surface grade. The annulus around each well screen was then filled with clean sand. Monitoring wells MW03 and MW04 were installed to about 16 and 17 feet bsg, respectively.

Langan collected one groundwater sample from each monitoring well and a duplicate sample in accordance with the USEPA's Low Flow Purging and Sampling Procedures for the Collection of Groundwater Samples from Monitoring Wells. Langan gauged static groundwater levels to the nearest 0.01 foot with a decontaminated oil/water interface probe and monitored groundwater quality parameters including pH, conductivity, turbidity, dissolved oxygen, temperature, and oxidation-reduction potential) while gauging and purging the wells. The groundwater samples were collected using a peristaltic pump and dedicated polyethylene tubing.

A courier picked up and delivered the samples under standard chain-of-custody protocol to Alpha Analytical. Groundwater sample analysis is summarized as follows:

- TCL VOCs by USEPA method 8260C
- TCL SVOCs by USEPA method 8270E
- PCBs by USEPA method 8082A
- Pesticides and herbicides by USEPA method 8081B and 8151A, respectively
- Total and dissolved TAL metals plus tri- and hexavalent chromium by USEPA methods 6010D, 7471B, and 7196A
- PFAS and 1,4-dioxane by USEPA method 537m and 8260C, respectively

Following sample collection, Lakewood removed the temporary monitoring wells, backfilled the boreholes with non-impacted soil cuttings and/or clean sand and patched the borehole with a concrete patch within the building and an asphalt patch in the parking lot. Monitoring well construction logs and groundwater sampling logs are included in Appendix E.

3.4 Soil Vapor Investigation

The soil vapor investigation was completed in accordance with the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York. Two sub-slab soil vapor samples locations (SV01 and SV05) and two sub-surface soil vapor sampling points (SV03 and SV04) were installed. Sub-slab samples were installed using an electric drill and by placing 1/4-Inch Teflon-lined polyethylene tubing about 2 inches below the concrete floor slab. Sub-surface soil vapor points were installed at about 5 or 8 feet bsg using a Geoprobe 6620 DT and inserting an approximately 2-inch polyethylene soil vapor probe attached to 1/4-Inch Teflon-lined polyethylene tubing through the borehole. The void space beneath the ground and/or annulus around the soil vapor point and sub-slab soil vapor point tubing was filled with clean sand and sealed to surface grade with a hydrated bentonite seal.

As a QA/QC measure, Langan completed an inert tracer gas (helium) test to verify that the soil vapor sampling points were properly sealed both before and after sampling, thereby preventing subsurface infiltration of ambient air. Soil vapor point construction and sampling logs are included in Appendix F.

Soil vapor samples were submitted to Alpha via courier service under standard chain-of-custody protocol and analyzed for VOCs by the USEPA Method Toxic Organics - 15 (TO-15)

3.5 Investigation-Derived Waste Management

Lakewood containerized investigation-derived waste (IDW), consisting of excess soil and purged groundwater into two labeled United Nations (UN)/Department of Transportation (DOT)-approved 55-gallon steel drums. Lakewood disposed of the non-hazardous drums off-site at the Clean Water of New York facility in Staten Island, New York on December 8, 2022. Drum disposal documentation is provided in Appendix G.

4.0 OBSERVATIONS AND RESULTS

4.1 Geophysical Survey

The geophysical survey identified the following anomalies:

- Suspected subsurface utilities that are not connected to known utilities
- Surface structure resembling an out-of-use utilities pit in the northern central part of the site
- An about 3,000-square-foot sub-surface vault north of the building and adjoining the cellar boiler room
- A fill port traced to a cut and capped pipe in the cellar of the site (in the northwestern corner of the boiler room)
- Piping for the active ASTs along the northwestern corner of the building (adjacent to the boiler room)

The geophysical survey did not identify anomalies resembling potential USTs. A copy of the geophysical survey report is included in Appendix C.

4.2 Subsurface Observations

Non-native material was encountered from about 10 to 13 feet bgs within the building footprint and from about 3 to 8 feet bsg outside of the building footprint. The non-native material generally consists of fine-medium-grained sand, with varying amounts of silt, gravel, brick and concrete. Layers of silt and fine- to medium-grained sand with fine gravel, and coarse sand were observed beneath the non-native layer. Bedrock was not encountered during the Phase II. Soil boring logs are included in Appendix D.

Langan observed suspected waterproofing tar below the concrete cellar. This material exhibited a maximum PID response of 350.6 parts per million (ppm) in soil boring SB04 and was noted at each interior boring location (SB04 through SB06) between about 1 and 2 feet bgs. Evidence of impacts was not observed in exterior borings (SB01 through SB03).

4.3 Soil Sample Results

Soil sample analytical results were compared to the NYSDEC 6 NYCRR[1] Part 375 Unrestricted Use (UU) and Restricted Use Restricted-Residential (RURR) soil cleanup objectives (SCOs). Pesticides, herbicides, PCBs, and PFAS were not reported at concentrations above UU SCOs. Ranges of analytes detected at concentrations above the SCOs are listed below.

[1] Title 6 of the New York Codes, Rules and Regulations (NYCRR)

VOCs

The VOC naphthalene had a maximum concentration of 180 mg/kg in a sample SB04_1-3, exceeding the UU and RURR SCOs of 12 mg/kg and 100 mg/kg, respectively. Concentrations of benzene and total xylenes exceeded UU SCOs, but were below RURR SCOs.

SVOCs

Concentrations of seven SVOCs exceeded RURR SCOs in up to four of the 11 samples. Minimum and maximum values per compound are summarized in the table below.

Parameter	Minimum Detected Concentration above RURR SCO	Maximum Detected Concentration above RURR SCO	UU and RURR SCOs	Frequency of Detection above RURR SCO
Benzo(a)anthracene	2.9 mg/kg in SB01_3-5	19 mg/kg in SB05_1-3	UU: 1 mg/kg RURR: 1 mg/kg	4 of 11
Benzo(a)pyrene	2.8 mg/kg in SB01_3-5	14 mg/kg in SB05_1-3	UU: 1 mg/kg RURR: 1 mg/kg	4 of 11
Benzo(b)fluoranthene	3.3 mg/kg in SB01_3-5	17 mg/kg in SB05_1-3	UU: 1 mg/kg RURR: 1 mg/kg	4 of 11
Benzo(k)fluoranthene	6.9 mg/kg in SB05_1-3	6.9 mg/kg in SB05_1-3	UU: 0.8 mg/kg RURR: 3.9 mg/kg	1 of 11
Chrysene	6.5 mg/kg in SB02_0-2	16 mg/kg in SB05_1-3	UU: 1 mg/kg RURR: 3.9 mg/kg	2 of 11
Dibenz(a,h)anthracene	0.46 mg/kg in SB04_1-3	1.9 mg/kg in SB05_1-3	UU: 0.33 mg/kg RURR: 0.33 mg/kg	3 of 11
Indeno(1,2,3-cd)pyrene	1.3 mg/kg in SB01_3-5	9.5 mg/kg in SB05_1-3	UU: 0.5 mg/kg RURR: 0.5 mg/kg	4 of 11

3 & 4 Methylphenol (m&p Cresol), and dibenzofuran exceeded UU SCOs, but not RURR SCOs.

Metals

Concentrations of the following metals exceeded the UU and RURR SCOs.

- Lead: ranging from 93 mg/kg (in SB02_0-2) to 1,020 mg/kg (in SB03_1-2) (UU SCO of 63 mg/kg; RURR SCO of 400 mg/kg)
- Mercury: ranging from 0.187 mg/kg (in SBDUP01_100722) to 0.841 mg/kg (in SB03_1-2) (UU SCO of 0.18 mg/kg; RURR SCO of 0.81 mg/kg)

Zinc exceeded UU SCOs, but not RURR SCOs.

Soil sample analytical results are shown in Table 2 and on Figure 3, and analytical laboratory reports are included in Appendix H.

4.4 Groundwater Sample Results

Groundwater sample analytical results were compared to the NYSDEC Technical Operational Guidance Series Ambient Water Quality Standards and Guidance Values (SGV). Pesticides, herbicides, and PCBs were not reported at concentrations above the SGVs. Ranges of analytes detected at concentrations above the NYSDEC SGVs are listed below.

VOCs

Naphthalene was reported at 180 micrograms per liter (µg/l) in MW04_100622 and 110 µg/l in its duplicate sample, exceeding the SGV of 10 µg/l.

SVOCs

Concentrations of seven SVOCs exceeded the SGVs in both samples and the duplicate of MW04. Minimum and maximum values per compound are summarized in the table below.

Parameter	Minimum Detected Concentration above SGV	Maximum Detected Concentration above SGV	SGV	Frequency of Detection above SGV
Benzo(a)anthracene	0.04 µg/l in MW03_100722	0.46 µg/l in GWDUP01_100622	0.002 µg/l	3 of 3
Benzo(a)pyrene	0.7 µg/l in MW04_100622	0.9 µg/l in GWDUP01_100622	0 µg/l	2 of 3
Benzo(b)fluoranthene	0.01 µg/l in MW03_100722	0.14 µg/l in GWDUP01_100622	0.002 µg/l	3 of 3
Benzo(k)fluoranthene	0.04 µg/l in MW04_100622	0.07 µg/l in GWDUP01_100622	0.002 µg/l	2 of 3
Chrysene	0.35 µg/l in MW04_100622	0.38 µg/l in GWDUP01_100622	0.002 µg/l	2 of 3
Indeno(1,2,3-cd)pyrene	0.02 µg/l in MW04_100622	0.06 µg/l in GWDUP01_100622	0.002 µg/l	2 of 3

Total Metals

Concentrations of the following total metals exceeded the SGVs.

- Iron: 3,950 µg/l in MW04_100622 and 4,350 µg/l in GWDUP01_100622 (SGV of 300 µg/l)
- Manganese: 3,721 µg/l in MW04_100622 and 3,997 µg/l in GWDUP01_100622 (SGV of 300 µg/l)
- Sodium: 46,800 µg/l in MW04_100622 and 47,200 µg/l in GWDUP01_100622 (SGV of 20,000 µg/l)

Dissolved Metals

Concentrations of the following dissolved metals exceeded the SGVs.

- Iron: 3,190 µg/l in MW04_100622 and 3,780 µg/l in GWDUP01_100622 (SGV of 300 µg/l)

- Manganese: 4,126 µg/l in MW04_100622 and 4,057 µg/l in GWDUP01_100622 (SGV of 300 µg/l)
- Sodium: 55,900 µg/l in MW04_100622 and 54,400 µg/l in GWDUP01_100622 (SGV of 20,000 µg/l)

Per- and polyfluoroalkyls (PFAS)

The concentration of two PFAS, perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA), exceeded the NYSDEC Part 375 Remedial Programs Guidelines for Sampling and Analysis of PFAS (June 2021) adopted by New York State for public water systems (July 2020) (collectively referred to as NYSDEC guidance values).

- PFOS: 20.8 nanograms per liter (ng/l) in MW03_100722 and 27.5 ng/l in MW04_100622 (NYSDEC guidance value of 10 ng/l)
- PFOA: 16 ng/l in MW03_100722 and 19.9 ng/l (in MW04_100622) (NYSDEC guidance value of 10 ng/l)

Groundwater sample analytical results are shown in Table 3 and on Figure 4, and analytical laboratory reports are included in Appendix G.

4.5 Soil Vapor Sample Results

Soil vapor sample results were evaluated using the NYSDOH Decision Matrices contained in the October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York Decision Matrices for Sub-Slab Vapor and Indoor Air and subsequent updates (2017). The NYSDOH Decision Matrices (Matrices A, B, and C) address the compounds tetrachloroethene (PCE), trichloroethene (TCE), 1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethene, cis-1,2-dichloroethene, vinyl chloride, methylene chloride and carbon tetrachloride. The matrix evaluation requires soil vapor and indoor air data. In the absence of indoor air sampling data, soil vapor results are applied to the lowest concentration for which the matrices recommends monitoring or mitigation. Results for indoor air were also compared against the NYSDOH Air Guideline Values (AGVs).

Of the eight VOCs that are evaluated under the NYSDOH Decision Matrices, four were not detected and the remaining four were detected at levels below the concentrations for monitoring and/or mitigation. The following is a summary of concentration ranges for the detected matrix compounds in co-located samples (SV04_100722/IA04_100722 and SV05_100722/IA05_100722):

Compound	Sub-Slab Vapor Concentration Range (µg/m³)	Indoor Air Concentration Range (µg/m³)
1,1,1-Trichloroethane (111-TCA)	Not detected	Not detected
Carbon tetrachloride	Not detected	0.541 - 0.566
Tetrachloroethene (PCE)	Not detected	1.17 – 2.58
Methylene chloride	Not detected	2.32

Based on the matrix comparison, no further action is recommended. Results for indoor air samples did not exceed the AGVs, which are limited to the compounds TCE, PCE, and methylene chloride.

Sub-surface samples were also compared against the matrix values for which monitoring or mitigation may be recommended, depending on indoor air concentrations. Methylene chloride,1,1-dichloroethene, cis-1,2-dichloroethene, vinyl chloride, TCE, and carbon tetrachloride were not detected in sub-surface vapor. Concentrations of 1,1,1-TCA and PCE in sub-surface vapor result in recommendations of no further action or identify source(s) and resample or mitigate.

Soil vapor sample analytical results are shown in Table 4 and on Figure 5, and analytical laboratory reports are included in Appendix G.

5.0 CONCLUSIONS

The following is a summary of Phase II ESI findings:

Geophysical Survey

- The geophysical survey identified anomalies resembling an out-of-use utilities pit in the northern central part of the site and an about 3,000-square-foot vault north of the site building and adjoining the cellar boiler room. Two active fill lines and one cut/capped fill line were observed northwest of the boiler room. Anomalies resembling potential USTs were not identified.

Soil

- Non-native material was encountered to depths between 3 and 13 feet bsg and consists of fine-medium-grained sand, with varying amounts of silt, gravel, brick and concrete. Layers of silt and fine- to medium-grained sand with fine gravel, and coarse sand were observed beneath the non-native layer. Bedrock was not encountered during the Phase II.
- Suspected waterproofing tar was observed below the cellar. This material exhibited a maximum PID response of 350.6 ppm in soil boring SB04 and was noted at each interior boring location (SB04 through SB06) between 1 and 2 feet bgs.
- Analytical results for soil samples indicate the following:
    - The VOC naphthalene exceeded RURR SCOs in a soil sample collected from below the cellar slab and suspected waterproofing tar. Naphthalene is commonly associated with tar.
    - Several SVOCs, specifically polynuclear aromatic hydrocarbons (PAHs) were reported at concentrations above UU and RURR SCOs throughout most of the site to depths of about 5 to 13 feet bsg. Concentrations were typical of non-native material encountered throughout New York City, except for sample SB05_1-3, which contained some of the suspected waterproofing tar.
    - The metals lead, mercury, and zinc exceeded UU and/or RURR SCOs throughout the site to depths of about 5 feet bsg; however, concentrations were typical of non-native material throughout New York City.

Groundwater

- Groundwater was encountered at about 10 to 12 feet bgs, and is inferred to flow east toward the Harlem River. Petroleum-like odors or sheen were not observed on groundwater.
- Analytical results for groundwater samples indicate the following:
    - The VOC naphthalene had a maximum of 180 µg/l, exceeding the SGV, beneath the building. Naphthalene was not detected in the groundwater sample collected north of

the building. Based on soil observations and analytical results, naphthalene in groundwater beneath the building may be related to the suspect waterproofing tar.

- Several SVOCs were reported above the SGVs in both groundwater samples and may be attributable to entrained non-native material in the sample or the suspected waterproofing tar.
- Dissolved metals reported at concentrations above SGVs (iron, manganese, and sodium) are attributed to regional conditions.
- Two PFAS exceeded the NYSDEC guidance values; however, soil results and the site history do not indicate an on-site source of PFAS.

Soil Vapor

- Results for sub-slab soil vapor samples with co-located indoor air samples, and sub-surface soil vapor samples do not indicate a need for mitigation based on a comparison against NYSDOH matrices.

6.0 LIMITATIONS

This report was prepared expressly for The Community Builders, Inc. for the property at 413 East 120th Street in New York, New York, and for the objectives defined herein. Special risks occur whenever engineering or related disciplines are applied to identify subsurface conditions. Even a comprehensive sampling and testing program implemented in accordance with a professional Standard of Care may fail to detect certain conditions. The environmental, geologic, geotechnical, geochemical, and hydrogeologic conditions that Langan interprets to exist between sampling points will differ from those that actually exist. Actual conditions will vary from those encountered at the locations where borings, sampling, surveys, observations or explorations are made by Langan or its subcontractors and the data, interpretation, and recommendations of Langan are based solely on the information available to it. Furthermore, the passage of time, natural occurrences, and/or direct or indirect human intervention at or near the site may substantially alter discovered conditions. Langan shall not be responsible for interpretations by others of the information it develops or provides to The Community Builders without specific written authorization from Langan.

Langan Project No.: 170745301

Notes:

CAS - Chemical Abstract Service
NS - No standard
ug/l - microgram per liter
NA - Not analyzed
RL - Reporting limit
<RL - Not detected

Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 703.5 and the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA Water (herein collectively referenced as "NYSDEC SGVs").

Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Remedial Programs Guidelines for Sampling and Analysis of Per- and Polyfluoroalkyl Substances (PFAS) (June 2021) and the 1,4-Dioxane value reflects the drinking water maximum contaminant level (MCL) adopted by New York State for public water systems (July 2020). Pursuant to Part 375-1.7(f)(2), the NYSDEC will treat the MCL as relevant and appropriate and will consider this value in remedy selection.

Qualifiers:

J - The analyte was detected above the method detection limit (MDL), but below the RL; therefore, the result is an estimated concentration.
F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value

Exceedance Summary:

10 - Result exceeds NYSDEC SGVs
10 - Result exceeds NYSDEC Guidance Values

Table 4
Phase II Environmental Site Investigation Report
Indoor Air and Soil Vapor Sample Analytical Results

The Beacon
New York, New York
Langan Project No.: 170745301

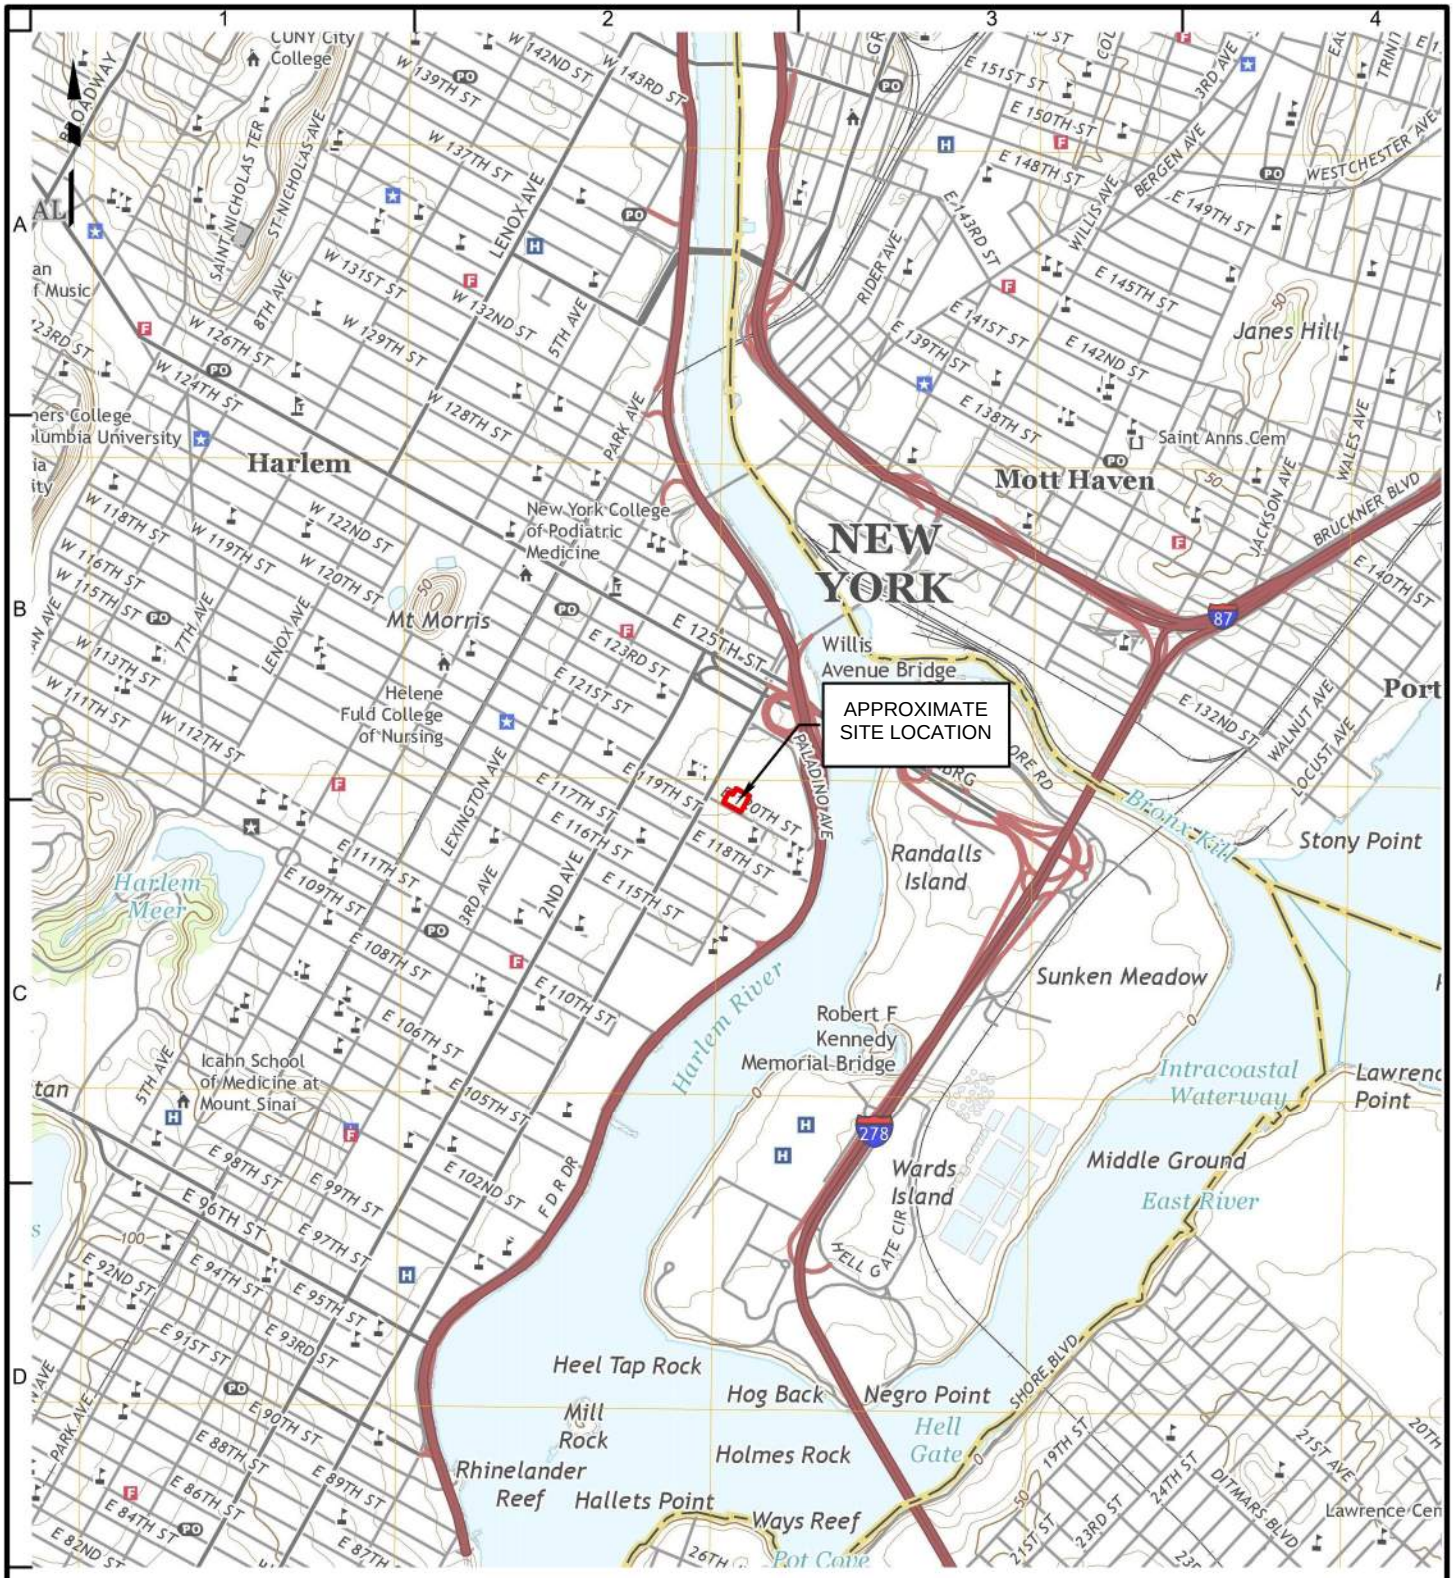
Notes:

AA - Ambient Air
IA - Indoor Air
SV - Soil Vapor
CAS - Chemical Abstract Service
NS - No standard
ug/m3 - microgram per cubic meter
NA - Not analyzed
RL - Reporting limit
<RL - Not detected

Indoor air and sample analytical results are compared to the New York State Department of Health (NYSDOH) Air Guideline Values (AGVs) as set forth in the NYSDOH October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York and subsequent updates (2013, 2015, 2017).

Soil vapor sample analytical results are compared to the minimum soil vapor concentrations at which mitigation is recommended as set forth in the New York State Department of Health (NYSDOH) October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York Decision Matrices for Sub-Slab Vapor and Indoor Air and subsequent updates (2017).

Ambient air sample analytical results are shown for reference only.



Qualifiers:

U - The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.

Exceedance Summary:

10 - Result exceeds NYSDOH AGVs
10 - Result exceeds minimum soil vapor concentrations recommending mitigation

Certification:

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 40 CFR Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Sanchita Mallick - Asst. Director, EHS

2.0 EXECUTIVE SUMMARY

2.1 Subject Property Description

ALC Environmental performed a Phase I Environmental Site Assessment (Phase I ESA) of the East Harlem Multi Service Center located at 413 East 120th Street New York, New York, NY 10035 (subject property). The purpose of the Phase I ESA is to identify recognized environmental conditions (RECs) in accordance with ASTM Standard E1527-21.
ALC Environmental (ALC) was contracted by Philip Habib & Associates, the Client, to conduct a Phase I Environmental Site Assessment (ESA) of the property located at 413 East 120th Street, New York NY 10035. The Subject Property consists of a two and six-story educational facility totaling approximately 0.8-acres in size. The Subject Property is identified by the New York City (NYC) Department of Finance as Block 1808 and Lot 8. The subject Property is located to the north of East 120th Street, between 1st Avenue to the west and Detective Robert A. Cordon Way to the east.

The objective of this assessment was to evaluate past and current environmental conditions at the Subject Property and to identify potential areas of environmental concern or recognized environmental conditions that could affect the environmental integrity of the property. This Phase I ESA was performed in general conformance with the scope and limitations of the ASTM International Practice E1527-21.
On May 18, 2022, ALC's Assessor, Colin Eckhardt conducted a site reconnaissance at the Subject Property. The information included in this report was gathered from state and municipal offices and officials, site interviews, the environmental database search, and site inspection. The Subject Property is located in the NYC Borough of the New York. The general vicinity of the property consists of multi-family apartment buildings and a mixed commercial building. The current adjoining properties do not appear to pose an environmental risk to the Subject Property.

2.2 Data Gaps

No deviations from the recommended scope of ASTM Standard E 1527-21 were performed as part of this Phase I ESA with the exception of any additions noted in Detailed Scope of Services.

2.3 Environmental Report Summary

The Consultant identified the following recognized environmental conditions (RECs) associated with the Subject Property:

- ALC observed a tank vault in the basement of the subject building. The tank vault reportedly contains two, active 10,000-gallon No. 2 fuel oil tanks. The tank vault is inaccessible allowing no visual evaluation of the tanks.

The following historical environmental condition (HREC) was identified during this Phase I ESA:

- The adjacent property to the west is listed in the NY Spills database. The incident was reported on June 29, 2015 (Spill No. 1503447). As per the database, this spill was associated with discovery of contaminated soil during geotechnical work during the redevelopment of the property. Prior to 1940, the site has been utilized for residential purposes. A gasoline service station (five, 550-gallon underground gasoline storage tanks), operated at this site from at least 1939 to 1954. On April 29, 2015, per NYC Office of Environmental Remediation (OER) requirements, soil, groundwater, and soil vapor samples were collected for chemical analysis. Soil analytics showed elevated semi volatile organic compounds (SVOCs) and metals, with almost all of the contaminated soil found within the first 2 feet of soil. Groundwater sample results displayed elevated concentrations of metals such as magnesium and manganese and SVOCs were also detected. Soil vapor samples showed elevated readings that including benzene,

tetrachloroethene, and vinyl chloride. Remedial activities were conducted in June 2015. The Remedial Action Work Plan included excavation of two feet of soil across site and eight feet of soil in the area of the former gas station in southwestern portion of property. Other remedial activities included a composite cover system placed over the site to prevent exposure, a sub-slab depressurization system (SSDS), and a vapor barrier was placed. Approximately 3,600 tons of typical historic fill and 150 tons of petroleum-impacted soil were excavated, five historic 550-gallon USTs and four additional USTs were removed. The five known historic underground storage tanks (USTs) were removed and only the concrete base of the tanks were found. However, four other USTs were found during excavation and removed. Soils in those areas were excavated down to groundwater and organic release compound (ORC) injected prior to backfilling with recycled concrete aggregate (RCA). According to the database, soil samples analyzed in 2017 were clean, while groundwater samples were contaminated. The consultants confirmed in 2018 that all subsurface activities, including installation of the vapor barrier and active SSDS, have been completed at the site. On 11/28/18, one two-inch diameter permanent groundwater monitoring well was installed in the area of the former UST to evaluate the results of ORC application. In 2019, groundwater analysis displayed concentrations below groundwater standards and well within attenuation ranges. The spill case was closed by the New York State Department of Environmental Conservation (NYSDEC) on July 29, 2019. This western adjacent property is currently improved with a 10-story mixed use commercial and residential building constructed circa 2020.

In addition, the following noteworthy conditions, which include *de minimis* conditions, were identified:

- The Subject Property is listed in the following environmental databases: NY AST, ICIS, US AIRS, FINDS, and ECHO.
- Suspect asbestos-containing materials in the form of roofing materials, sheetrock, and joint compound, vinyl floor tiles, ceiling plaster, may be were observed to be present at the subject building. The materials appeared in good to fair condition.
- Localized flaking paint was observed on the ceiling throughout the fifth floor classrooms and hallway. Corrective action is warranted.
- Evidence of water intrusion was observed in the basement of the subject building. The bottom foot along the hallway wall displayed signs of water damage from either leak or flooding events. Evidence of water intrusion was also observed on the ceiling of rooms 501, 502, 503, 504, and 510 and on the ceiling of the 5th floor hallway. Evidence of visible microbial growth was observed in the vicinity of the basement staircase impacting the walls, maintenance supplies, and storage wood pallets. Corrective action is warranted.

Vapor Encroachment Conditions (VECs) that could not be ruled out were identified for the Subject Property or surroundings sites within the distances specified by ASTM E2600-10. The EDR Vapor Encroachment Screen report is included in Appendix F.
No additional conditions were observed at the site that could potentially present a significant environmental concern or recognized environmental condition.

Based on a review of background data, regulatory agency records, aerial photographs, and observations made during the site reconnaissance, the following conclusions are presented regarding the Subject Property. The scope of this study did not include subsurface exploration, sampling or analytical laboratory testing.

- The Subject Property is not identified as being evaluated by the State of New York or federal government for remedial action under SEMS or any other environmental regulations. However, the Subject Property is listed in the following environmental databases: NY AST, ICIS, US AIRS, FINDS, and ECHO.
- There were four hundred and nineteen (419) sites listed on the regulatory database search within a 1-mile radius of the Subject Property. Based on available information, estimated flow direction of groundwater, and the nature of the database listings, it is unlikely that the Subject Property has been impacted by unauthorized releases of hazardous materials at this time, though it is impossible to entirely rule out the potential for contamination.

- Based on the lack of records pertaining to any recent tank tightness testing completed at the Subject Property, the two onsite, active, 10,000-gallon fuel oil tanks are considered RECs.
- Based on the estimated age of the subject building, asbestos containing materials and lead-based paint are anticipated to be present at the subject building.

ALC performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of the property located at 413 East 120th Street. This assessment has revealed evidence of one recognized environmental condition (REC) in connection with the Subject Property.

2.4 Recommendations

Based on a review of background data, regulatory agency records, aerial photographs, and observations made during the site reconnaissance, the following recommendations are presented regarding the Subject Property. The scope of this study did not include subsurface exploration, sampling or analytical laboratory testing.

- ALC recommends a tightness test be conducted on the tank system (tanks and the pipe system) to assess the integrity of the onsite tank.
- Suspect asbestos-containing materials in the form of roofing materials, sheetrock, joint compound, vinyl floor tiles, and ceiling plaster, were observed to be present at the subject building. The materials appeared to be in good to fair condition. Prior to any repair or renovation work that will affect the referenced materials, asbestos testing should be conducted. If determined to contain asbestos, the referenced materials should be abated by a certified asbestos abatement contractor prior to commencement of the renovation work, as per all applicable local, state, and federal regulations.
- Regarding the localized flaking paint observed ceiling throughout the fifth-floor classrooms and hallway, all areas of the subject building exhibiting damaged paint should be repaired by a Repair Renovation and Painting (RRP) certified worker.
- In regards to the evidence of water intrusion on the 5th floor ceiling and basement plaster walls, the sources of the water intrusion should be investigated and permanently repaired to prevent further water damage and the proliferation of mold growth.

ALC has no additional recommendations for further study at the Subject Property at this time, other than the recommendations provided above.

3.0 INTRODUCTION

ALC Environmental performed a Phase I Environmental Site Assessment (Phase I ESA) of the East Harlem Multi Service Center located at 413 East 120th Street in New York 10035, New York County, NY (subject property).

3.1 Purpose

The purpose of this Phase I ESA is to investigate and identify recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), and historical environmental conditions (HRECs) associated with the subject property and/or surrounding properties.

ASTM Standard Practice E1527-21 defines **REC**s as: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a REC. De minimis conditions relate to a release that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.
ASTM Standard Practice E1527-21 defines **CREC**s as: REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls.

ASTM Standard Practice E1527-21 defines **HREC**s as: a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A HREC is not a REC.

3.2 Scope of Work

The Phase I ESA conducted at the subject property was in general accordance with ASTM Standard E 1527-21 and included the following:

- A site reconnaissance and visual survey of properties proximate to the subject property,
- Review of records and interviews with regulatory officials and representatives regarding current and former operations at the subject property,
- A review of historical resources, such as: property records, topographic maps, fire insurance maps, city directories, and aerial photographs,
- Review of previous environmental site assessments, if made available,
- Review of State and Federal environmental database information, and
- Evaluation of information and preparation of the report provided herein.

Typically, a Phase I ESA does not include sampling or testing of air, soil, groundwater, surface water, or building materials. These activities would be carried out under separate cover, if necessary.

3.3 Significant Assumptions

There is a possibility that even with the proper application of these methodologies, conditions may exist that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. ALC Environmental believes that the information obtained from the record review and the

interviews concerning the subject property is reliable. However, ALC Environmental cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The methodologies of this assessment are not intended to produce all inclusive or comprehensive results, but rather to provide Philip Habib & Associates with information relating to the subject property.

This study is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with the Subject Property, within reasonable limits of time and cost. It is assumed that the user has provided ALC Environmental with any specialized knowledge or experience that is material to recognized environmental conditions in connection with the property, including the reason why the property may have a significantly lower purchase price than comparable properties, if applicable. In general, groundwater flow direction has been determined based on topography in the vicinity of the Subject Property, i.e. the assumption that shallow groundwater flow will follow topography, or on other available resources. No site-specific field measurements of groundwater flow direction (e.g. installation of groundwater monitoring wells) have been performed.
Based on this interpretation, ALC Environmental has reviewed regulatory agency information for sites that are located in a presumed up-gradient direction, which based on proximity and knowledge of potential contaminant fate and transport, may present a potential to impact the Subject Property.

3.4 Limitations and Exceptions

This assessment meets the requirements of the ASTM Standard E1527-21. The following limitations should be noted:

- Access Limitations: The site assessor was unable to observe the occupied classrooms or offices of the building on the subject property at the request of the current occupants.
- Results of this investigation are valid as of the dates on which the investigation was performed;
- A visual inspection for the identification of suspect asbestos containing materials, lead-based paint, and mold growth was performed only in readily accessible areas of the subject building. No samples were collected as part of this assessment; and
- The report has been prepared in accordance with generally accepted environmental methodologies referred to in ASTM E1527-21, and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report.

3.5 Deviations

No deviations from the recommended scope of ASTM Standard E 1527-21 were performed as part of this Phase I ESA with the exception of any additions noted in Detailed Scope of Services.

3.6 Special Terms and Conditions

There are no special terms and conditions for this assessment. ALC's standard terms and conditions are described in Appendix H.

3.7 Reliance

This Phase I ESA report ("the Report") has been prepared for the benefit of and addressed to Philip Habib & Associates and such other persons as may be designated by Philip Habib & Associates, and their respective successors and assigns, employees and affiliates, and counsel and consultants. The report speaks only as of its date in the absence of a specific written update of the Report.

4.0 USER-PROVIDED INFORMATION

The following information is based upon information provided by the client. The type of information provided can include title records, environmental liens, specialized knowledge, reasons for performing the Phase I ESA, and prior environmental reports.

4.1 Activity/Use Limitations

The client did not make ALC Environmental aware of known Activity and Use Limitations (AUL) associated with the subject property.

4.2 Specialized Knowledge

The user of this ESA report is not aware of any activity and use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the Subject Property and/or have been filed or recorded in a registry under local, tribal, state, or federal law.

4.3 Valuation Reduction for Environmental Issues

No property valuation reduction relating to environmental concerns was reported by the Client.

4.4 Owner, Subject Property Manager, and Occupant Information

During the site reconnaissance, ALC Environmental was accompanied by Mr. George Gandia, the building's Porter. Mr. Gandia reported that the basement had been impacted by occasional floods and water intrusions. Mr. Gandia was not aware of any other areas of concern.
Additionally, a standard environmental questionnaire was completed by Nilsa Orama, the East Harlem Multi-Service Center Director and and Paul Delgado the East Harlem Multi- Service Center Director Facility Manager, both of whom have associated with the property for over twenty years.

Based on a review of the environmental questionnaire, prior to 1940, the subject property and western adjacent property were originally one lot, and were split into Lot 8 (the Subject Property) and Lot 10 (currently Acacia Gardens) for the purposes of redevelopment. Prior to 1940, Lot 10 had been utilized for residential, commercial, stone yard, lumber yard, school and a gasoline station. From 1941-1980, the site has been utilized for residential, commercial, school and a gasoline station. The subject property has been utilized as an HRA Multi Service Center with parking facility since 1981. It was reported that a Phase II report from Lot 10 was published in May 2015, and stated that the sub-surface soil was impacted by elevated metals and SVOCs. Soil vapor investigation detected several gasoline and chlorinated solvent related compounds.

4.5 Reason For Performing Phase I ESA

No property valuation reduction relating to environmental concerns was reported by the Client.

5.0 SUBJECT PROPERTY DESCRIPTION

This section discusses the site location and description, site vicinity characteristics, description of structures, roads, and other improvements, physical setting, and current uses of the site and adjacent sites.

5.1 Location and Legal Description

A unit of land located in the State of New York, within New York County, and known as 413 East 120th Street, New York, NY 10035. The Subject Property is identified by the NYC Department of Finance as Block 1808 and Lot 8. The site location is shown in Appendix A.

5.2 Subject Property and Surrounding Area Description

The subject property consists of a 0.8-acre irregular-shaped parcel of land. The ground surface at the subject property slopes towards the east.
The subject property is zoned R7X, Residential District. The general vicinity of the property consists of multi-family residential buildings and mixed-use residential and commercial buildings. No heavy manufacturing or industrial land usage was observed in immediate proximity to the Subject Property.

5.3 Current Use of Subject Property

The Subject Property is improved with one, partial 2 and 6-story building and paved parking areas. The subject building is currently being used as an educational facility.

5.4 Description of Structures and Other Improvements

The Subject Property is improved with a two and six-story educational building with a basement, located on an irregular shaped parcel of land that is approximately 0.80-acres in size. The property features an asphalt-paved parking area on the northern portion of the lot. The parking lot is accessible via a driveway located on the eastern portion of the lot.
The subject building is approximately 23,400 square feet and contains a total of 5 staircases, and a basement level. The interior spaces consisted of mechanical and storage rooms in the basement, medical offices, kitchens, and general office space on the ground floor, classrooms and an auditorium on the second floor, and classroom and office space on the third, fourth, and fifth floor. Primary access/egress into the building is via an entrance fronting East 120th Street. The subject building is served by a traction elevator.
As per the Sanborn maps reviewed, the subject building was constructed in 1923. The structural improvements consist of a concrete foundation with masonry facades and a flat asphalt roof. The interior finishes of the classrooms and offices units consist of plaster and sheetrock walls and ceilings, linoleum tile flooring, and ceramic tiles in the bathrooms. The common areas consist of plaster walls and ceilings, linoleum floor tiles, and concrete stairs. The basement consists of cinder block walls, ceiling sheetrock panels, and concrete flooring.

Cooling for the classrooms and offices is provided by four (4) central heating, ventilation, and air conditioning (HVAC) systems observed in the basement of the Subject Property. Heat is generated by a natural gas-fired boiler and distributed to the interior of the building via standing cast iron radiators. Electricity is provided by Consolidated Edison. Domestic water is supplied by the municipal authority and overseen by the Department of Environmental Protection (DEP). Sanitary sewer services are tied into the municipal sewer system. No water wells or septic systems were observed on or in the immediate vicinity of the Subject Property.

5.5 Adjoining Property Information

During the onsite reconnaissance, observations were made of the adjoining properties. These observations were made to identify recognized environmental conditions with the potential for impacting the Subject Property. The following is a list of adjoining properties and a summary of the observations made:

Adjoining Property Information			
Direction From Subject Property	**Name/Description**	**Address**	**Topography**
North	Two, 16-story multi-family residential buildings, part of Wagner Houses Development	2360 and 2370 1st Avenue	The topography of the parcel to the north is cross-gradient, and at a similar elevation as the Subject Property.
East	A 16-story multi-family residential building, part of Wagner Houses Development	435 East 120th Street	The topography of the parcel to the east is down-gradient, and at a lower elevation than the Subject Property.
South	A total of twelve, 3-6 story multi-family residential buildings	410-430 East 120th Street	The topography of the parcel to the south is cross-gradient, and at a similar elevation as the Subject Property.
South	East 120th Street	Public thoroughfare	N/A
West	A 10-story mixed commercial and residential use building known as Acacia Gardens	401-411 East 120th Street	The topography of the parcel to the west is up-gradient and at a slightly higher elevation than the Subject Property.

6.0 SITE RECONNAISSANCE

The site reconnaissance was conducted on May 18, 2022 by Colin Eckhardt, Assistant Project Manager with ALC Environmental, accompanied by George Gandia, the Porter of the Subject Property's building. Weather conditions at the time of the site reconnaissance were clear. Photographs of pertinent features identified during the site reconnaissance are included in the Photograph Appendix B.

6.1 Methodology and Limiting Conditions

This Phase I ESA was performed in general conformance with the scope and limitations of American International (ASTM) Practice E1527-21. The site reconnaissance consisted of observing the boundaries of the subject property and systematically traversing the subject property to provide an overlapping field of view, wherever possible. The site reconnaissance consisted of walking the subject property perimeter, exterior areas, common areas, mechanical areas, maintenance areas, and vacant classrooms of the subject property. Building interiors were entered. Inaccessible areas of the subject property were not observed, such as beneath vehicles and occupied classrooms. The adjoining properties were visually observed from curbside, but were not entered. The inability to inspect these areas does not represent a significant data gap.

6.2 General Subject Property Setting

The subject Property is located on the U.S.G.S Central Park, NY 7.5' Quadrangle topographic map. The general site topographic gradient within a 1,000 foot radius of the Subject Property is in the eastern direction. Topographic conditions of the site vicinity are shown in the Appendix X. The Subject Property is approximately 9 feet above mean sea level. The nearest body of water is the Harlem River, located approximately 900 feet to the east of the Subject Property.

6.3.1 Hazardous Substances

ALC Environmental found evidence of oil based paint, paint thinner, wood finishing, construction enamel, bleach and other various cleaning products located in storage in the basement during the inspection of the Subject Property. The materials were stored on a metal shelf and were held in 1-5 gallon metal and plastic containers.

ASSOCIATED PHOTOGRAPHS

Paint storage in subject basement

6.3.2 Petroleum Products

No petroleum products were observed on the subject property during the site reconnaissance.

6.3.3 Underground Storage Tanks (USTs)

No obvious evidence of underground storage tanks (USTs) was identified on the subject property during the site reconnaissance.

6.3.4 Aboveground Storage Tanks (ASTs)

ALC observed a tank vault in the basement of the subject building. The tank vault reportedly contains two, active 10,000-gallon No. 2 fuel oil tanks. The tank vault is inaccessible allowing no visual evaluation of the tanks.
The Subject Property was listed in the NY AST in regards to the two, active, 10,000-gallon No. 2 fuel oil AST's in the vault identified during the site reconnaissance. The tanks were reportedly installed in January 1, 1980.

The referenced tanks were registered with the NYSDEC under PBS No. 2-604478 and expire March 31, 2025. There are no reported releases associated with this site. No fuel odors or oil staining were noted during the site visit. The associated vent pipe and fuel oil fill port were observed on the southeastern façade of the subject building, fronting East 120th Street. No evidence of spillage or oil staining was observed in the immediate vicinity of the fill port.

Per NYSDEC regulations pertaining to petroleum bulk storage (6 NYCRR Part 613), fuel oil tanks that are encased in concrete and do not contain originally installed weep holes must undergo tank tightness testing at least once every 3 years. ALC did not locate any records pertaining to any tank tightness testing conducted at the Subject Property. Based on the lack of records pertaining to any recent tank tightness testing completed at the Subject Property, the two onsite, active, 10,000-gallon fuel oil tanks are considered a REC.

ASTs			
Capacity (gals.)	**Contents**	**Construction Materials**	**Comments**
10,000	No. 2 fuel oil	Steel/Carbon Steel/Iron	Tank #1 is vaulted in the basement allowing for no visual inspection.
10,000	No. 2 fuel oil	Steel/Carbon Steel/Iron	Tank #2 is vaulted in the basement allowing for no visual inspection.

ASSOCIATED PHOTOGRAPHS

Subject basement AST vault

6.3.5 Strong, Pungent, or Noxious Odors

No strong, pungent, or noxious odors were observed on the subject property during the site reconnaissance.

6.3.6 Standing Surface Water and Pools or Sumps Containing Liquids Likely to be Hazardous Substances or Petroleum Products

No standing surface water and pools or sumps containing liquids likely to be hazardous substances or petroleum products were observed on the subject property during the site reconnaissance.

6.3.7 Drums, Totes, and Intermediate Bulk Containers

No drums, totes, or intermediate bulk containers were observed on the subject property during the site reconnaissance.

6.3.8 Hazardous Substance and Petroleum Product Containers Not in Connection With Identified Uses

No hazardous substance and petroleum product containers not in connection with identified uses were observed on the subject property during the site reconnaissance.

6.3.9 Unidentified Substance Containers

No unidentified substance container were observed on the subject property during the site reconnaissance.

6.3.10 PCB-Containing Items

No equipment likely to contain PCBs was observed in the subject building during the site reconnaissance.

6.3.11 Stains or Corrosion on Floors, Walls, or Ceilings

No interior staining or corrosion was observed in the subject building during the site reconnaissance.

6.3.12 Drains and Sumps

Discharge features, including multiple floor drains that discharge to the municipal sewer systems were observed in the basement and in the kitchens on the first floor of the subject property during the site reconnaissance. Additionally, a sump pit was observed in the basement.

ASSOCIATED PHOTOGRAPHS

Subject basement sump pit

6.3.13 Pits, Ponds, or Lagoons

No pits, ponds or lagoons were observed on the subject property during the site reconnaissance.

6.3.14 Solid Waste

Solid waste generated at the subject property is stored in the parking lot north of the subject building, and is regularly collected by the NYC Department of Sanitation. No Areas of concern were identified.
There was no evidence that the Subject Property may have been used for solid waste dumping or landfilling.

6.3.15 Stained Soil or Pavement

No stained soil or pavement was observed on the subject property during the site reconnaissance.

6.3.16 Stressed Vegetation

No stressed vegetation (from something other than insufficient water) was observed on the subject property during the site reconnaissance.

6.3.17 Wells

No wells were observed on the subject property during the site reconnaissance.

7.0 RECORDS REVIEW

The purpose of the records review is to obtain and review records that will help identify RECs in connection with the subject property.

7.1 Standard Environmental Record Resources

ALC Environmental contracted Environmental Data Resources, Inc. (EDR) to conduct a search of Federal and State databases containing known and suspected sites of environmental contamination. The number of listed sites identified within the approximate minimum search distance (AMSD) from the Federal and State environmental records database listings specified in ASTM Standard E 1527-21 are summarized in the following table. Detailed information for sites identified within the AMSDs is provided below, along with an opinion about the significance of the listing to the analysis of recognized environmental conditions in connection with the subject property. Copies of the EDR research data and a description of the databases are included in Appendix D of this report.

The subject property was listed in the following databases searched by EDR:

- FINDS
- ECHO
- ICIS
- AST
- RCRA NONGEN / NLR
- NY MANIFEST
- NJ MANIFEST
- US AIRS

Subject Property	
Site Name:	CON EDISON SERVICE BOX 19827
Databases:	FINDS, ECHO
Address:	413 E 120TH ST

Comments:	The FINDS database is typically a pointer towards additional listings and by itself do not necessarily indicate waste handling, releases, or regulatory concerns. The listing references the RCRA Info, which tracks the events and activities related to facilities that generate, transport and treat, store, or dispose of hazardous waste. There are no reported violations or releases associated with the Subject Property. No further action or investigation is warranted. According to the Detailed Finding Report from the EPA's ECHO database, there are no violations identified with this site. No further action or investigation is warranted.

Site Name:	LA CLINICA DEL BARRIO (NYCHHC)
Databases:	FINDS, ICIS
Address:	413 EAST 120 STREET
Comments:	The FINDS database is typically a pointer towards additional listings and by itself do not necessarily indicate waste handling, releases, or regulatory concerns. The listing references the RCRA Info, which tracks the events and activities related to facilities that generate, transport and treat, store, or dispose of hazardous waste. There are no reported violations or releases associated with the Subject Property. No further action or investigation is warranted. The Subject Property is listed in the ICIS database under the AIR program with Facility ID 110030901843. As per the database, the Subject Property received a Notice of Violation (NOV) under the Administrative-Informal category. The enforcement action, described as CAA (Clean Air Act), was withdrawn. Records obtained from the US EPA Envirofacts database confirms the information provided by the regulatory database. It was not reported if compliance was achieved with this site.

Site Name:	EAST HARLEM MULTI SERVICE CENTER
Databases:	AST
Address:	413 EAST 120TH STREET
Comments:	Comments: The subject property is listed in the AST database with two, active 10,000-gallon No. 2 fuel oil tanks. The tanks are permitted under the NYSDEC PBS No. 2-604478 (expiration date: March 31, 2025) and were reportedly installed on January 1, 1980. As per the environmental database, the tank bottoms rest on soil, allowing no visual inspection. There are no reported releases associated with the referenced tank. During the site visit, ALC observed a concrete tank vault in the basement of the subject building. The tank vault reportedly contains two, active 10,000-gallon No. 2 fuel oil tanks. The tank vault was inaccessible allowing no visual evaluation of the tanks. No fuel odors or evidence of staining were noted in the basement during the site visit. ALC identified the fill ports and vent pipes associated with the ASTs on the southeastern exterior of the building. No significant staining or signs of a release were identified around the fill ports and vent pipes. Per NYSDEC regulations pertaining to petroleum bulk storage (6 NYCRR Part 613), fuel oil tanks that are encased in concrete and do not contain originally installed weep holes must undergo tank tightness testing at least once every 3 years. No weep holes were observed on the bottom of the tank vault. ALC did not locate any records pertaining to any tank tightness testing conducted at the Subject Property. The tank vault was inaccessible during the site visit, hence, ALC was not able to conduct a thorough visual evaluation of the condition of the tanks and the floor beneath the tanks. Based on the lack of thorough visual evaluation of the tank condition, as well as the lack of records pertaining to any recent tank tightness testing completed at the Subject Property, the onsite 10,000-gallon fuel oil tanks are considered a REC.

Site Name:	CON EDISON SERVICE BOX 19827
Databases:	NJ MANIFEST, NY MANIFEST, RCRA NonGen / NLR
Address:	413 E 120TH ST
Comments:	The Subject Property was listed in the NJ Manifest database with an EPA ID of NYP004235198. The listing pertains to a total of 2000-pounds of lead wastes (waste code D008) transported from this location for offsite disposal in 2011. There are no reported violations. Based on the lack of reported violations, no further action or investigation is warranted in regards to this listing. The Subject Property is listed in the RCRA-NonGen (Non-Generator) database. This listing is associated with Consolidated Edison (the utility company) with the ID: NYP004235198. There are no reported violations associated with the Subject Property. Additionally, at the present time, RCRA-NonGen facilities do not generate any hazardous waste. As such, no further action or investigation is warranted in regards to this listing.

Site Name:	413 E 120TH ST BUILDING
Databases:	US AIRS (AFS)
Address:	413 E 120TH ST
Comments:	Aerometric Information Retrieval System (AIRS) is a computer-based repository of information regarding airborne pollution in the United States and various World Health Organization (WHO) member countries. AIRS contains all air quality, emissions, compliance, and enforcement information that the Office of Air Quality Planning and Standards (OAQPS) and state agencies need to carry out their respective programs for improving and maintaining air quality. The Subject Property is listed on the US AIRS database with Facility ID 110043325407. There are no reported violations associated with the Subject Property. As such, no further action or investigation is warranted in regards to this listing.

Site Name:	413 E 120TH ST BUILDING
Databases:	FINDS, ECHO
Address:	413 E 120TH ST
Comments:	The FINDS database is typically a pointer towards additional listings and by itself do not necessarily indicate waste handling, releases, or regulatory concerns. The listing references the RCRA Info, which tracks the events and activities related to facilities that generate, transport and treat, store, or dispose of hazardous waste. There are no reported violations or releases associated with the Subject Property. No further action or investigation is warranted. According to the Detailed Finding Report from the EPA's ECHO database, there are no violations identified with this site. No further action or investigation is warranted.

Adjoining and Nearby Properties

Site Name:	OER - NYC
Databases:	SPILLS
Address:	401 EAST 120TH ST
Distance (Feet):	0
Direction:	West
Elevation:	Higher
Comments:	The adjacent property to the west is listed in the NY Spills database. The incident was reported on June 29, 2015 (Spill No. 1503447). As per the database, this spill was associated with discovery of contaminated soil during geotechnical work during the redevelopment of the property. Prior to 1940, the site has been utilized for residential purposes. A gasoline service station (five, 550-gallon underground gasoline storage tanks), operated at this site from at least 1939 to 1954. On April 29, 2015, per NYC Office of Environmental Remediation (OER) requirements, soil, groundwater, and soil vapor samples were collected for chemical analysis. Soil analytics showed elevated SVOCs and metals, with almost all of the contaminated soil found within the first 2 feet of soil. Groundwater sample results displayed elevated concentrations of metals such as magnesium and manganese and SVOCs were also detected. Soil vapor samples showed elevated readings that including benzene, tetrachloroethene, and vinyl chloride. Remedial activities were conducted in June 2015. The Remedial Action Work Plan included excavation of two feet of soil across site and eight feet of soil in the area of the former gas station in southwestern portion of property. Other remedial activities include a composite cover system placed over site to prevent exposure, an SSDS, and a vapor barrier was placed. Approximately 3,600 tons of typical historic fill and 150 tons of petroleum-impacted soil were excavated, five historic 550-gallon USTs and four additional USTs were removed. The five known historic USTs were removed and only the concrete base of the tanks were found. However, four other USTs were found during excavation and removed. Soils in those areas were excavated down to groundwater and ORC injected prior to backfilling with RCA. According to the database, soil samples analyzed in 2017 were clean, while groundwater samples were contaminated. The consultants confirmed in 2018 that all subsurface activities, including installation of the vapor barrier and active SSDS, have been completed at the site. On 11/28/18, one two-inch diameter permanent groundwater monitoring well was installed in the area of the former UST to evaluate the results of ORC application. In 2019, groundwater analysis displayed concentrations below groundwater standards and well within attenuation ranges. The spill case was closed by the NYSDEC on July 29, 2019. This western adjacent property is currently improved with a 10-story mixed use

Comments:	commercial and residential building constructed circa 2020. Based on the information reviewed, regulatory closure of the spill, remedial actions taken in regards to the spill, and the fact that site has been redevelopment, the spill case listing is considered a HREC and no further investigation is warranted at this time.

Site Name:	401 EAST 120TH STREET
Databases:	NY BROWNFIELDS
Address:	401 EAST 120TH STREET
Distance (Feet):	0
Direction:	West
Elevation:	Higher
Comments:	See Spillcase: OER - NYC (Spill No. 1503447) for the address 401 East 120th Street for further details. The search did not identify any additional NY Brownfields sites adjacent to the Subject Property.

Site Name:	ACACIA GARDENS

Comments:	See Spillcase: OER - NYC (Spill No. 1503447) for the address 401 East 120th Street for further details. The search did not identify any additional US Brownfields sites adjacent to the Subject Property.

Site Name:	MANHOLE 53875
Databases:	SPILLS
Address:	1ST AVE/120TH ST
Distance (Feet):	35
Direction:	West
Elevation:	Higher
Comments:	The property to the west is listed in the NY Spills database. The incident was reported on March 8, 2000 (Spill No. 9913838). As per the database, this spill was associated with 5-gallons of unknown oil and 150-gallons of water in the subject structure. Oil and water were removed via tanker under <50.PPM , and was double washed with bio-genesis solution. The manhole was then rinsed by a flush truck. The spill case was closed by the NYSDEC on November 16, 2004. Based on the information reviewed and regulatory closure, no impacts to the Subject Property are anticipated from this site.

Site Name:	VS2027 VAULT

Comments:	The adjacent property to the north is listed in the NY Spills database. The incident was reported on November 6, 1989 (Spill No. 8907784). As per the database, this spill was associated with equipment failure, where two 33,000-gallon tanks installed in

Comments:	1951, began leaking. The two tanks were removed in 1991 and replaced. The spill was closed in 2009, however additional seepage was observed. 11 soil borings were advanced and 1 monitoring well was installed. Elevated SVOCs were detected in the soil borings. The spill case was closed by the NYSDEC on June 15, 2022 according to the New York State Department Environmental Conservation's Spill Incidents Database. Based on the information reviewed and regulatory closure, no impacts to the Subject Property are anticipated from this site.

7.2 Additional Environmental Record Resources

ALC reviewed online records maintained by the NYSDEC for information concerning the Subject Property.
NYC Department of Buildings (DOB) records were reviewed to determine whether there were any violations or other conditions that would pose an environmental risk to the Subject Property.
The following pertinent records for 413 East 120th Street were located:

- A Certificate of Occupancy issued in 2003. According to the document, the building was used as medical offices, general office space, classroom space, and a daycare.
- Two fuel oil burner applications submitted in 1988 and 1989.

7.3 Physical Setting

General site settings including topography, surface water bodies, geology and hydrology are detailed in the following sections.

7.3.1 Topography

Based on a review of the 2019 USGS topographic map for the subject property area, groundwater is inferred to flow to the east toward the Harlem River.

7.3.2 Surface Water Bodies

The nearest surface water in the vicinity of the subject property is the Harlem River located approximately 0.2-miles to the east of the subject property. No surface water is located on the subject property.

7.3.3 Geology and Hydrology

The soils under and in the vicinity of the site are classified by the U.S. Department of Agriculture (USDA) New York City Soil and Water Conservation District as Urban Land. The Soil Surface Textures consist of silt loam, loamy sand, sandy loam and fine sandy loam. The majority of the surface is covered by asphalt, concrete, buildings, or other impervious surfaces. Soils and foundation materials are highly variable. Urban structures and works cover so much of this land type that identification of the soils is not practical. Most areas have been smoothed and the original soil material has been disturbed, filled over, or otherwise destroyed prior to construction.

The Subject Property area is located within the Atlantic Coastal Plain physiographic province. Its topography is level to gently rolling, being interrupted only in localities by isolated hills, which arise abruptly from the surrounding plain. The average elevation of the Coastal Plain province is less than 900 meters and extends approximately 50 to 100 kilometers inland from the Ocean. The Coastal Plain province is characterized by many rivers, marsh and swampland and consists of sedimentary rock and unlithified sediments.

The principal aquifer system in this region consists of the North Atlantic Coastal Plain aquifer system, consisting of the Magothy and Lloyd aquifer. This aquifer primary consists of sand and gravel, with clay separating the two aquifers. The Magothy aquifer provides most of the water in the western half of Long Island. While groundwater in the vicinity of the Subject Property typically flows in an eastern direction, local variations are possible due to intervening subsurface structures that could alter groundwater flow patterns. Groundwater at the Subject Property is not used as a source of drinking water.

The Subject Property is approximately 9 feet above mean sea level. Water generally flows toward the east from the subject property due to the eastward down-gradient. No on-site water wells or springs were observed during the subject property reconnaissance. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this investigation.

7.4 Historical Use

The objective of reviewing historical resources is to develop a history of the previous uses of the subject property and surrounding area, in order to help identify the likelihood of past uses which might have led to RECs in connection with the subject property.

7.4.1 Historical Summary

Historical information identifying the past use of the subject property was obtained from a variety of sources as detailed in Appendix E of this report and included: Aerial Photographs, Sanborn Maps, and Topographic Maps.

Historical Summary			
Period	**Source**	**Subject Property Uses**	**Adjoining Property Uses**
1896	Sanborn Maps, Topographic Maps	The property was improved with multiple residential buildings ranging from single-story to 3-story.	North: Improved with multiple 2 to 3-story residential buildings and a stone yard. East: Improved with two 5-story residential buildings with storefronts. South: Improved with multiple 2 to 3-story residential buildings. West: Improved with a 2-story residential building and a commercial lot identified as a stone yard.
1897-1911	Sanborn Maps, Topographic Maps	The northern portion of the subject property is improved with three, 4-story dwellings, a coal yard, a single-story office and residential building, and a storage shed. A lumber yard, two 3-story dwellings are depicted on the southwestern portion of the subject property. The southeastern portion of the subject lot is improved with four 3-story dwellings, a single-story residential building, and a store.	North: Improved with multiple 2 to 6-story residential buildings. East: No major changes. South: No major changes. West: Improved with a 3-story residential building and a 5-story residential building.
1912-1922	Sanborn Maps, Topographic Maps	Sanborn map lacks sufficient documentation to make conclusions.	Sanborn map lacks sufficient documentation to make conclusions.

Period	Source	Subject Property Uses	Adjoining Property Uses
1923-1939	Sanborn Maps, Topographic Maps, Aerial Photographs	The property was improved with a partial 2 and 5-story school building labeled as Public School No. 80. According Sanborn Maps, the subject school building was constructed in 1923. Two 3-story dwellings are depicted on the southwestern portion of the lot.	North: Improved with multiple 2 to 6-story dwellings, an auto wrecking yard, and a single-story poultry market. East: No major changes. South: No major changes. West: No major changes.
1940-1951	Sanborn Maps, Topographic Maps, Aerial Photographs	No major changes.	North: No major changes. East: No major changes. South: No major changes. West: No major changes.
1952-1968	Sanborn Maps, Topographic Maps, Aerial Photographs	No major changes except the dwellings located on the southwestern corner of the property were razed and a 2-story structure labeled as lockers has been added to the southwestern corner of the subject building	North: The previous buildings were demolished and the lot is now improved with multiple 16-story residential buildings as observed during the site visit. East: The previous buildings were demolished and the lot is improved with a 16-story residential buildings as observed during the site visit. South: No major changes except the building at 414 East 120th Street appears to have been demolished. West: The former residential buildings appear to have been demolished. The northern portion of the lot is unimproved and the southern portion of the lot is improved with a 2-story Gym constructed in 1954.
1969-1979	Sanborn Maps, Topographic Maps, Aerial Photographs	No major changes.	North: No major changes. East: No major changes. South: No major changes except the former dwelling at 416 East 120th Street had been demolished. West: No major changes.
1980-1991	Sanborn Maps, Topographic Maps, Aerial Photographs	No major changes.	North: No major changes. East: No major changes. South: No major changes. West: No major changes.
1992-2001	Sanborn Maps, Topographic Maps, Aerial Photographs	No major changes.	North: No major changes. East: No major changes. South: No major changes except the unimproved lots at 414-416 East 120th Street are used for auto repairing operations. West: No major changes.
2002-2005	Sanborn Maps, Topographic Maps, Aerial Photographs	No major changes.	North: No major changes. East: No major changes. South: South: No major changes except lots 414-416 East 120th Street

Period	Source	Subject Property Uses	Adjoining Property Uses
			are vacant and no longer used for auto repairing operations. West: No major changes.
2006-2013	Topographic Maps, Aerial Photographs	No major changes.	North: No major changes. East: No major changes. South: No major changes except 414 and 416 East 120th Street lots are improved with 6-story residential buildings as observed during the site visit. West: No major changes.
2014-Present	Topographic Maps, Aerial Photographs	No major changes.	North: No major changes. East: No major changes. South: The vacant lot at 414 East 120th Street was improved with a 5 & 6-story residential building West: The extensions from the Subject Property appear to have been demolished. The lot was improved with a 10-story mixed residential and commercial building and a parking garage.

Subject Property: As per the historical Sanborn maps reviewed, the southern portion of the subject property was used for lumber storage from at least 1911to 1922. The northern portion of the subject lot was used as coal yard from 1911 to 1922. Historically, lumber was treated with chemicals such creosote (an insecticide, sporicide, miticide and fungicide that penetrates deeply into pressure-treated wood for a long time) and chromated copper arsenate. These chemicals have the potential to leech out and contaminate the subsurface media. The existing subject school building was constructed in 1923. As such, impacts associated with the historical lumber storage were likely addressed during the site redevelopment activities and are not a concern.

Southern Adjacent Properties: As per the historical Sanborn maps reviewed, the southern adjacent properties, known as 414 and 416 East 120th Street, were used for auto-repairing operations from 1992 to 2001. The historic Sanborn maps from dated 2003 to 2005 did not identify any auto-repairing operations at these lots. Typical environmental hazards associated with automobile maintenance activities include the generation of hazardous wastes in the form of spent oils, solvents and auto fluids. As per the municipal records reviewed, 414 and 416 East 120 Street lots were improved with current 6-story residential buildings in 2006 and 2008 respectively. There are no reported releases or known contamination associated with this site. Additionally, any potential impact to environmental media would have been addressed during the site redevelopment activities. As such, no further action or investigation is recommended regarding the former uses of these southerly adjacent sites.

Nearby Properties: As per the historical Sanborn maps reviewed, the nearby property to the west, known as 401 East 120th Street was used as a gas fueling station from 1939-1953. It was reported that five (5) UST's were buried on site. Further details regarding this site can be found in section 7.1.

7.4.2 City Directories

Date(s)	Property Comments	Surrounding Area Comments
1931 - 1988	Subject Property: 413 East 120th Street	Public educational facility
1988 - 1993	Subject Property: Renovated into Harlem Family Service Center and Educational Institution	Institution/Community Service Facility
1993 - 1999	Subject Property: Added a Healthcare Center	Institution/Community Service Facility
1999 - 2004	Subject Property: No major changes	Institution/Community Service Facility/Healthcare Facility

7.4.6 Previous Environmental Reports

No previous environmental reports were identified or made available by the client/user during the Phase I ESA.

7.4.7 Building Department Records

NYC Department of Buildings (DOB) records were reviewed to determine whether there were any violations or other conditions that would pose an environmental risk to the Subject Property. The following pertinent records were located:

- A Certificate of Occupancy issued in 2003. According to the document, the building was used as medical offices, general office space, classroom space, and a daycare.
- Two fuel oil burner applications submitted in 1988 and 1989.

See Appendix H for further detail.

7.4.8 Title Records

Records from City of New York Department of Finance were reviewed for evidence of title records. No records were found regarding the subject property.

7.4.9 Other Historical Records

ALC reviewed online records maintained by the NYSDEC for information concerning the Subject Property. Records pertaining to the onsite fuel oil tank were located, however, the records reviewed did not identify any information pertaining to the Subject Property on the state databases related to spill incidents or site remediation.

7.5 Environmental Liens and Activity/Use Limitations

The Client did not report the existence of any environmental liens or use limitations for the Subject Property.

7.6 Vapor Encroachment Evaluation

No VECs that could not be ruled out were identified for the Subject Property or surroundings sites within the above specified distances. A VEC is defined by ASTM E2600-10 as "the presence or likely presence of chemicals of concern (COC) vapors in the sub-surface of the target property caused by the release of vapors from

contaminated soil or groundwater either on, or near the target property". The EDR Vapor Encroachment Screen report is included in Appendix H. No further action or investigation is warranted.

Standard Environmental Records	Chemicals of Concern (miles)	Petroleum Hydrocarbon Chemicals of Concern (miles)
Federal NPL	0.333	0.1
Federal CERCLIS	0.333	0.1
Federal RCRA CORRACTS facilities list	0.333	0.1
Federal RCRA TSD facilities list	0.333	0.1
Federal RCRA generators list	Target property only	Target property only
Federal institutional controls / engineering controls registries	0.333	0.1
Federal ERNS list	Target property only	Target property only
State and tribal - equivalent NPL	Target property only	Target property only
State and tribal - equivalent CERCLIS	0.333	0.1
State and tribal landfill / solid waste disposal	0.333	0.1
State and tribal leaking storage tank lists	0.333	0.1
State and tribal registered storage tank lists	Target property only	Target property only
State and tribal institutional control / engineering control registries	0.333	0.1
State and tribal voluntary cleanup sites	0.333	0.1
State and tribal Brownfield sites	0.333	0.1

*Each category may include several separate databases, each having a different search distance. For each category, the table reports the maximum search distance applied.

Up-gradient	Cross-Gradient	Down-Gradient
1/3 mile for chemicals of concern sources	- 100 feet for chemicals of concern sources/petroleum hydrocarbon Light Non-Aqueous Phase Liquid (LNAPL) sources plus plume width consideration.	100 feet for chemicals of concern sources/petroleum hydrocarbon LNAPL sources.

*Each category may include several separate databases, each having a different search distance. For each category, the table reports the maximum search distance applied.

8.0 INTERVIEWS

A Freedom of Information Act (FOIL) request for information associated with the Subject Property was submitted to the NYSDEC. They can be found in Appendix H.
During the site reconnaissance, ALC Environmental was accompanied by Mr. George Gandia, the building's Porter. Mr. Gandia reported that the basement had been impacted by occasional floods and water intrusions. Mr. Gandia was not aware of any other areas of concern.

9.0 NON-SCOPE CONSIDERATIONS

The following ASTM Non-Scope considerations were evaluated during this ESA.

Asbestos-Containing Building Materials

Since the subject building was built prior to 1979, there is a possibility that the original construction materials contained asbestos. According to the EPA and included in the publication EPA560/5-85-025 "Guidance for Controlling Asbestos Containing Materials (ACM) in Buildings", asbestos containing materials are found in three forms: (1) Sprayed or troweled on ceilings and walls and structural steel; (2) in insulation around hot and cold piping, ducts, boilers, and tanks; and (3) in a non-friable state in products such as ceiling and floor tiles, wallboards and outside materials such as shingles and roofing materials. In general, ACM in a friable state (the first two categories) is of greatest concern because they are able to release asbestos fibers with only minimal disturbance.

Asbestos is the name for a group of naturally occurring silicate minerals that can be separated into fibers. The fibers are strong, durable, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos has been used in thousands of consumer, industrial, maritime, automotive, scientific and building products. During the 20th century, some 30 million tons of asbestos have been used in industrial sites, homes, schools, shipyards and commercial buildings in the United States. Common ACMs include pipe-covering, insulating cement, insulating block, refactory and boiler insulation materials, transite board, fireproofing spray, joint compound, vinyl floor tile, ceiling tile, mastics, roofing products, and duct insulation for HVAC applications. Inhalation of asbestos fibers can result in deleterious health effects.

This inspection was conducted solely to identify suspect ACM in accessible areas of the Subject Property. Additional asbestos containing materials/quantities may be present in concealed areas of the building, or areas not visually inspected during this assessment. Any suspect asbestos containing materials encountered during future construction activities should be tested or assumed to be ACM and treated as such.

- Suspect asbestos-containing materials in the form of roofing materials, sheetrock, joint compound, vinyl floor tiles, and ceiling plaster, were observed to be present at the subject building. The materials appeared to be in good to fair condition. Prior to any repair or renovation work that will affect the referenced materials, asbestos testing should be conducted. If determined to contain asbestos, the referenced materials should be abated by a certified asbestos abatement contractor prior to commencement of the renovation work, as per all applicable local, state, and federal regulations.

Lead-Based Paint

Based on the estimated age of the subject building, it is possible that lead-based paint was used during its construction or maintenance. All painted surfaces at the Subject Property are presumed to contain LBP unless the surfaces were previously tested and confirmed to be lead-free. The scope of this study did not include any LBP surveys or analytical testing. Should LBP be present at the building, lead abatement should be conducted prior to any demolition or remodeling activities. All abatement work should be conducted in accordance with applicable Federal, State and Local Regulations.

The objective of the lead-based paint visual inspection was to identify any surfaces that contain potential lead-based paint hazards such as flaking or peeling paint.

- Localized flaking paint was observed on the ceiling throughout the fifth floor classrooms and hallway. Corrective action is warranted.

Radon

Radon is a colorless, odorless gas produced by the radioactive decay of certain elements. The most common sources of radon are igneous and metamorphic rocks containing uranium (such as pitchblende), granite, shale, or phosphate, as well as soils or sediments derived from these parent materials. Radon may also be found in soils contaminated with certain industrial wastes (such as uranium or phosphate mine tailings) or in earth-derived building products which include industrial wastes that contain phosphate slag. In areas where the potential for radon accumulation is high, special ventilation systems may offset potential health hazards.
Review of the EPA Map of Radon Zones places the Subject Property in Zone 3, where average predicted radon levels are less than 2.0 pCi/L (picocuries/liter). The USEPA recommended action level is 4.0 pCi/L. Based on the low predicted radon levels, adverse environmental impacts related to radon gas migration are not anticipated at the Subject Property.

Wetlands

Review of the National Wetlands Inventory published by USGS indicated that there are no recognized wetlands on or in the immediate vicinity of the Subject Property, however the subject property falls in the FEMA Flood Zone AE (EL 13), identified as 3604970091F effective September 5, 2001. This is a Zone without base flood elevation and is considered a Special Flood Hazard Area. More information can be found on the map in Appendix A.

Microbial Conditions (Mold)

Evidence of water intrusion was observed in the basement of the subject building. The bottom foot along the hallway wall displayed signs of water damage from either leak or flooding events. Evidence of water intrusion was also observed on the ceiling of rooms 501, 502, 503, 504, and 510, on the ceiling of the 5th floor hallway, and in the roof staircase.
Evidence of visible microbial growth was observed in the vicinity of the basement staircase impacting the walls, maintenance supplies, and storage wood pallets. Corrective action is warranted.

Lead in Drinking Water

The scope of this study did not include water testing for the identification of lead. However, the Subject Property is supplied with public water which is routinely monitored by the NYCDEP.

10.0 FINDINGS AND OPINIONS

The Consultant identified the following recognized environmental conditions (RECs) associated with the Subject Property:

- ALC observed a tank vault in the basement of the subject building. The tank vault reportedly contains two, active 10,000-gallon No. 2 fuel oil tanks. The tank vault is inaccessible allowing no visual evaluation of the tanks.

The following historical environmental condition (HREC) was identified during this Phase I ESA:

- The adjacent property to the west is listed in the NY Spills database. The incident was reported on June 29, 2015 (Spill No. 1503447). As per the database, this spill was associated with discovery of contaminated soil during geotechnical work during the redevelopment of the property. Prior to 1940, the site has been utilized for residential purposes. A gasoline service station (five, 550-gallon underground gasoline storage tanks), operated at this site from at least 1939 to 1954. On April 29, 2015, per NYC Office of Environmental Remediation (OER) requirements, soil, groundwater, and soil vapor samples were collected for chemical analysis. Soil analytics showed elevated SVOCs and metals, with almost all of the contaminated soil found within the first 2 feet of soil. Groundwater sample results displayed elevated concentrations of metals such as magnesium and manganese and SVOCs were also detected. Soil vapor samples showed elevated readings that including benzene, tetrachloroethene, and vinyl chloride. Remedial activities were conducted in June 2015. The Remedial Action Work Plan included excavation of two feet of soil across site and eight feet of soil in the area of the former gas station in southwestern portion of property. Other remedial activities include a composite cover system placed over site to prevent exposure, an SSDS, and a vapor barrier was placed. Approximately 3,600 tons of typical historic fill and 150 tons of petroleum-impacted soil were excavated, five historic 550-gallon USTs and four additional USTs were removed. The five known historic USTs were removed and only the concrete base of the tanks were found. However, four other USTs were found during excavation and removed. Soils in those areas were excavated down to groundwater and ORC injected prior to backfilling with RCA. According to the database, soil samples analyzed in 2017 were clean, while groundwater samples were contaminated. The consultants confirmed in 2018 that all subsurface activities, including installation of the vapor barrier and active SSDS, have been completed at the site. On 11/28/18, one two-inch diameter permanent groundwater monitoring well was installed in the area of the former UST to evaluate the results of ORC application. In 2019, groundwater analysis displayed concentrations below groundwater standards and well within attenuation ranges. The spill case was closed by the NYSDEC on July 29, 2019. This western adjacent property is currently improved with a 10-story mixed use commercial and residential building constructed circa 2020.

In addition, the following noteworthy conditions, which include *de minimis* conditions, were identified:

- The Subject Property is listed in the following environmental databases: NY AST, ICIS, US AIRS, FINDS, and ECHO.
- Suspect asbestos-containing materials in the form of roofing materials, sheetrock, and joint compound, vinyl floor tiles, ceiling plaster, may be were observed to be present at the subject building. The materials appeared in good to fair condition.
- Localized flaking paint was observed on the ceiling throughout the fifth floor classrooms and hallway. Corrective action is warranted.
- Evidence of water intrusion was observed in the basement of the subject building. The bottom foot along the hallway wall displayed signs of water damage from either leak or flooding events. Evidence of water intrusion was also observed on the ceiling of rooms 501, 502, 503, 504, and 510 and on the ceiling of the 5th floor hallway. Evidence of visible microbial growth was observed in the vicinity of the basement staircase impacting the walls, maintenance supplies, and storage wood pallets. Corrective action is warranted.

- No Vapor Encroachment Conditions (VECs) that could not be ruled out were identified for the Subject Property or surroundings sites within the distances specified by ASTM E2600-10. The EDR Vapor Encroachment Screen report is included in Appendix F.

No additional conditions were observed at the site that could potentially present a significant environmental concern or recognized environmental condition.

11.0 CONCLUSIONS

Based on a review of background data, regulatory agency records, aerial photographs, and observations made during the site reconnaissance, the following conclusions are presented regarding the Subject Property. The scope of this study did not include subsurface exploration, sampling or analytical laboratory testing.

- The Subject Property is not identified as being evaluated by the State of New York or federal government for remedial action under SEMS or any other environmental regulations. However, the Subject Property is listed in the following environmental databases: NY AST, ICIS, US AIRS, FINDS, and ECHO.
- There were four hundred and nineteen (419) sites listed on the regulatory database search within a 1-mile radius of the Subject Property. Based on available information, estimated flow direction of groundwater, and the nature of the database listings, it is unlikely that the Subject Property has been impacted by unauthorized releases of hazardous materials at this time, though it is impossible to entirely rule out the potential for contamination.
- Based on the lack of records pertaining to any recent tank tightness testing completed at the Subject Property, the two onsite, active, 10,000-gallon fuel oil tanks are considered RECs.
- Based on the estimated age of the subject building, asbestos containing materials and lead-based paint are anticipated to be present at the subject building.

ALC performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of the property located at 413 East 120th Street. This assessment has revealed evidence of one recognized environmental condition (REC) in connection with the Subject Property.

12.0 RECOMMENDATIONS

Based on a review of background data, regulatory agency records, aerial photographs, and observations made during the site reconnaissance, the following recommendations are presented regarding the Subject Property. The scope of this study did not include subsurface exploration, sampling or analytical laboratory testing.

- ALC recommends a tightness test be conducted on the tank system (tanks and the pipe system) to assess the integrity of the onsite tank.
- Suspect asbestos-containing materials in the form of roofing materials, sheetrock, joint compound, vinyl floor tiles, and ceiling plaster, were observed to be present at the subject building. The materials appeared to be in good to fair condition. Prior to any repair or renovation work that will affect the referenced materials, asbestos testing should be conducted. If determined to contain asbestos, the referenced materials should be abated by a certified asbestos abatement contractor prior to commencement of the renovation work, as per all applicable local, state, and federal regulations.
- Regarding the localized flaking paint observed ceiling throughout the fifth-floor classrooms and hallway, all areas of the subject building exhibiting damaged paint should be repaired by a Repair Renovation and Painting (RRP) certified worker.
- In regards to the evidence of water intrusion on the 5th floor ceiling and basement plaster walls, the sources of the water intrusion should be investigated and permanently repaired to prevent further water damage and the proliferation of mold growth.

ALC has no additional recommendations for further study at the Subject Property at this time, other than the recommendations provided above.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by ALC Environmental Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

ALC Environmental Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/28/2022 has revealed that there are 15 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/28/2022 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 02/28/2022 has revealed that there are 5 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/08/2022 has revealed that there are 4 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 03/15/2022 has revealed that there are 36 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 10 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there are 6 NY VCP sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 03/15/2022 has revealed that there are 43 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/28/2022 has revealed that there are 145 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1

NY HSWDS site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
CON EDISON - EAST 11	EAST 114TH - EAST 11	S 1/4 - 1/2 (0.258 mi.)	AK390	1080
CON EDISON - EAST 11	EAST 110TH - EAST 11	SW 1/4 - 1/2 (0.483 mi.)	419	1145
CON EDISON - EAST 10	108TH ST. WEST OF FI	SSW 1/2 - 1 (0.628 mi.)	421	1151

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
UPTOWN SERVICE STATI	2326 1ST AVE	WSW 0 - 1/8 (0.033 mi.)	B37	89

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist

EXECUTIVE SUMMARY

Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Tank Info:

Tank Number:	001
Tank Id:	57946
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
K01 - Spill Prevention - Catch Basin
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
E02 - Piping Secondary Containment - Vault (with Access)
F00 - Pipe External Protection - None
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1980
Capacity Gallons:	10000
Tightness Test Method:	NN

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is

413 E 120TH ST BUILDING (Continued) **1016126991**

used to track emissions and compliance data from industrial plants.
AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
AIR MINOR

DEC Memo: "6/29/15-Zhune called James 631-616-4000. Could not get him. Left a message. Jim Cressy- 631-365-6118 Cell 631-616-4000 Ext. 101 7/3/15-Zhune spoke to Jim. He said they are working with NYCOER. the site is a previous gas station. They did a subsurface investigation. They found tanks, soil and groundwater contamination. they are planning to remove the tanks, submit the remedial work plan and remediate the site. The Phase I, Phase II and Remedial Work plan will be send to the DEC. 7/7/15-Jim sent the following email. Please find the requested subsurface investigations completed by us to date. Said investigations were conducted under the auspices of the Mayor s office of Environmental Remediation (OER). In addition, as discussed please see the OER contact cc d on this email. Please let me know if you have any questions or comments. Spill is assigned to R. Piper. 12/23/2015: Rashad Spill reassigned from Piper to Omar as per DeMeo. 12/24/2015: Rashad 401 East 120th Street has alternate addresses of 2340-2350 1 Avenue and 401-431 East 120 Street. No additional spill reports found, PBS#2-604478 was found for 413 East 120th Street, there are two 10,000 gallon #2fuel oil ASTs. 2 documents were found in D2. 12/29/2015: Rashad One of the documents is a Health and Safety Plan which outlines precautions that will be taken while working on site. Review of Phase 2 investigation report is as follows: The current site is used as school/offices/multi-uses and contains 1-story, 2-story, and one 5 story buildings. The proposed future use of site will consist of one 179-unit mixed use building which will be 12-story tall and intended mainly for residential use with mixed commercial uses on first floor. Plans do not include any basement, all parking will be on first floor. The proposed redevelopment will require demolition of the one 1-story building with a footprint of 4,482 sqft, and one 2-story building with a footprint of 2,635 sqft. No soil excavation is required for site redevelopment. Past uses of site include lumber yard, coal yard, school, gasoline station, institutional, and commercial uses. Possible areas of concerns include former gas station on southwest corner, potential presence of fuel oil USTs to the west of existing building, and potential presence of historic fill material. It was determined that in the Phase 2 report that the historic operation of gasoline filing station and the historic fill has resulted in elevated metals and SVOCs, in the immediately vicinity of the former gasoline station, the subsurface soil exhibited toxicity characteristics of hazardous material Five USTs have been identified on the southwest corner of the site. Soil vapor investigation detected several gasoline and chlorinated solvents related compounds, it is expected that SSDS and vapor barrier system will be required for the proposed site redevelopment On April 29, 2015 performed the following tasks per NYC OER requirements: 4 additional soil borings to collect 8 samples, 2 additional temporary gw monitoring wells and collected 3 samples, installation of 2 additional soil vapor probes and collect 2 sample for chemical analysis. Soil analytics show elevated SVOCs highest being 11,000ppb benzo-b-fluoranthene as well as metals, highest being 667ppm Barium and 466ppm Lead, 130ppb 4,4DDD was also found. Almost all of the contaminated soil was found within the first 2 feet of soil. Groundwater samples have elevated concentrations of metals such as magnesium-69ppb and manganese-5.11ppb. SVOCs were also detected,

OER - NYC (Continued) **S117974979**

the highest was .32ppb benzo(b)fluoranthene. Soil vapor samples also show elevated readings that include benzene-14.1ug/m3, tetrachloroethene-4.26ug/m3, and vinyl chloride-1.4ug/m3. The report recommends the following: Accordingly, it is recommended that the Remedial Action Work Plan (RAWP) be prepared to direct any future remedial actions for the Site. At a minimum, the RAWP will include the following: Removal of the USTs that were closed-in-place for off-site disposal. 28, Removal of 0-2 feet historic fill and installation of a 2-foot clean fill layer on the portion where the proposed building will be erected. Installation of a concrete slab. Installation of a sub-slab depressurization system (SSDS). Installation of a vapor barrier system. A long term groundwater monitoring program. A soil management plan for any impacted soil generated during site redevelopment. 1/6/2016: Rashad Sent email to Jim: Spill#1503447 for 401 East 120th Street, New York 10035 has been reassigned to me. I have reviewed the Phase 2 report submitted in May 2015 and I have a few questions. The report I reviewed only has analytical results for borings SB7-SB10 and groundwater samples from GW4-GW6, would you be able to send me the initial Phase 2 report containing the other sample results? Also has the RAWP been prepared yet? Jim sent email: Good morning Omar, The RAWP has been prepared and is available via the link below. It has been approved by OER and I believe the DEC s approval is pending. In addition, the link to the completed RIR is below. Further, OER s decision document is attached. Please let us know if you have any questions or comments. The link led to 2 documents and the email contained a document, these documents have been uploaded to D2. Remedial investigation report collected 16 soil samples, 5 groundwater samples, and 3 vapor probes. Depth to groundwater is 6-8 feet, groundwater flows west to east and depth to bedrock is unknown but greater than 15 feet. Soil samples have slew of contaminants such as metals, svocs, and limited number of VOCs. The VOCs above standards are found in SB-1 aceton-130ug/L found 6-8feet in soil near former gas station as well as 390ug/L xylene found at 6-8feet in soil near former gas station. There are also metal and svoc contaminants above standards in ground water, the VOCs above standards in groundwater are isopropylbenzene at 100 ppb, n-butylbenzene at 27ppb, n-propylbenzene-160ppb, and sec-butylbenezene-52ppb. The Remedial Action Work Plan outlines plan to excavate 2 feet of soil across site and 8 feet of soil in former gas station area in southwestern portion of property. Other remedial activities include a composite cover system will be placed over site to prevent exposure, an SSDS, and a vapor barrier will be placed. Removal of 5 550 USTs from southwestern portion of site as well as collection of end point samples. As per Jeff I will be sending out Report Receipt Review Letter approving RAWP with inclusion of groundwater grab sample. Letter will be uploaded to D2. As per Vought no review of vapor mitigation plans is needed as NYCDOH reportedly performs the review as part of the OER VCP program. Email sent to adgarcia@promesa.org with cc to Cider Environmental, Shaminder, and Shana from OER: After reviewing the submitted Remedial Action Work Plan, the Department has approved the Plan pending inclusion of a groundwater grab sample upon excavation of UST location. Please see attached review letter and contact me if you have any questions. 5/13/2016: Rashad Received email from Shaminder stating that OER has approved the revised RAWP and construction will begin soon. 6/10/2016: Rashad Received email from Shaminder: As you already know that this Site is in City VC program. Yesterday, we conducted a

OER - NYC (Continued) **S117974979**

Pre-construction meeting with them. Work is expected to begin soon (two to three weeks). I will keep you in loop and get you daily reports. When our field person visit this site, we will get you inspection report for your file. Approved RAWP includes: 1.Establishment of Site Specific (Track 4) Soil Cleanup Objectives (SCOs). 2.Excavation and removal of soil/fill exceeding Site Specific (Track 4) SCOs. The entire footprint of the Site will be excavated to a depth of approximately 2 feet below grade. The southwestern portion of property, where the former gasoline station was located, will be excavated to the depth of 8 feet below grade for UST removal. Approximately 3,600 tons of typical historic fill and 150 tons of petroleum-impacted soil will be disposed at an appropriately licensed or permitted facility. 3.Excavation and removal of hazardous waste. 4.Removal and registration of five known 550-gallon USTs from the southwestern portion of the Site. Removal of other unknown USTs that are encountered during soil/fill removal actions. 5.Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of Site Specific Track 4 SCOs. 6.NYSDEC will review the closure documentation for Spill No. 1503447 following tanks removal and associated contaminated soil removal per NYSDEC requirements which includes collection of a groundwater grab sample upon excavation of UST location at the southwestern portion of the Site. 7.Placement of demarcation layer in areas used for parking. 8.Installation of a vapor barrier system consisting of vapor barrier beneath the building slab to mitigate soil vapor migration into the building. 9.Installation of a active sub-slab depressurization system (SSDS). 10.Recording of a Declaration of Covenants and Restrictions. 6/14/2016: Rashad Sent email to Shaminder: Jeff said that we need a copy of the NYCDOH review letter for the active SSDS, if it is available now, or once it is produced. Thanks. 6/17/2016: Rashad Received email from Shaminder: Rashad: This Site is enrolled in City VCP. A pre-construction meeting was held on June 17th. Construction is expected to begin next week. A copy of Decision Document is attached. Remedy includes: " Track 4 Cleanup; " Excavation: The entire footprint of the Site will be excavated to a depth of approximately 2 feet below grade. The southwestern portion of property, where the former gasoline station was located, will be excavated to the depth of 8 feet below grade for UST removal. Approximately 3,600 tons of typical historic fill and 150 tons of petroleum-impacted soil will be disposed at an appropriately licensed or permitted facility. " Collection and analysis of end-point samples " ORC application per NYSDEC requirements; " NYSDEC will review the closure documentation for Spill No. 1503447 following tanks removal and associated contaminated soil removal per NYSDEC requirements; " Construction of an engineered composite cover; " Installation of an active sub-slab depressurization system (SSDS) Decision document was attached to email which outlines remedy already summarized by above email. It has been uploaded to D2. 6/23/2016: Rashad Shaminder will be supplying us with DOH approval letter. 1/13/2017 Austin This spill report is being transferred from Rashad Omar to Pratik Lakhani end. 02/16/17 - Lakhani OER Project #15CVCP130M Following email was sent to OER PM Sarah Pong: Sarah, I guess we have another site together! This spill case was reassigned to me, as Rashad is no longer with the DEC. I was reviewing the reports and conversations between Rashad and OER, and I was wondering if there are any updates on the site? I understand that an active SSDS is planned to be installed at the site, has NYCDOH reviewed and provided commentary on the SSDS? If so,

OER - NYC (Continued) **S117974979**

could you please send the review letter to me? In terms of the five (5) known USTs at the site, have they been removed along with any contaminated soils? Furthermore, have remediation plans been made to address groundwater contamination in that area? Please let me know, as I would like to close the spill case as soon as possible. Thank you. OER Pong replied. The site is currently in construction with the next remedial phase to be the installation of the SSDS some time this month (February). The five (5) known historic USTs have been previously removed and only the concrete base of the tanks were found. However, four (4) other USTs were found during excavation and removed. Soils in those areas were excavated down to groundwater and ORC injected prior to backfilling with RCA. Daily reports can be found in the following link: https://www.dropbox.com/sh/42vopwsrl8ur8za/AADPj5TyLIiANcQG1bdnQrkDa?dl=0 02/22/17 - Lakhani Sent the following email to OER Pong: I hope you re doing well. I was looking at the Tank Endpoint Groundwater Sample Lab data in the dropbox and I see that contamination in the groundwater sample, GW-EP, is above standards. Is this groundwater sample related to the four (4) new USTs that were found during excavation? Could you please clarify where these soil and groundwater samples were taken from? Also, was groundwater direction determined? I understand from the RAWP that it was assumed to be in the eastern direction. Thank you for informing me on the remediation activities. Will the groundwater be often monitored after the ORC was injected to check whether the little contamination that remains is attenuating? Please keep me updated and let me know when the active SSDS is planned to be installed. Thank you! 02/24/17 - Lakhani OER Pong sent me the following email: The groundwater grab sample was required by Rashad in the area of the UST excavation for the spill and the soil samples were collected as endpoints (one within tank area, one outside tank area). I believe temporary wells were installed during the RI so groundwater flow was not determined. The ORC was injected by the consultant of their own accord and was not a requirement of OER or Rashad so there is no requirement for monitoring the groundwater. If you require groundwater to be monitored or can provide direction for remediation of the spill, please let us know and we will relay it to the team. Following email was sent to NYSDOH Nathan Walz: I hope this email finds you in good health. I have a spill case for the property at 401 East 120th Street in Manhattan, referred to as the Site here forth. The Site has soil vapor concerns, which had driven the consultant to develop plans to install an active SSDS at the site along with a vapor barrier. Maximum PCE concentrations at the Site are 4.26 ug/m3 which falls within the no further action to & reduce exposures range on the DOH matrix. Other VOCs exceeded mean indoor concentration values as well (see attached detailed site plan). The current Site is used as a school/offices/multi-uses and contains 1-story, 2-story, and one (1) 5-story buildings. The proposed future use of the site will consist of one (1) 179-unit mixed use building which will be 12-stories tall and intended mainly for residential use with mixed commercial uses on the first floor. Plans do not include a basement and all parking will be on the first floor. Areas of concern include a former gas station on the southwest corner where nine (9) USTs were discovered. It was here where the subsurface soil exhibited toxicity characteristics of hazardous material. The soil vapor investigation on the Site detected several gasoline and chlorinated solvents related compounds as per the RAWP. From these findings, it was

OER - NYC (Continued) **S117974979**

expected that an SSDS and vapor barrier system will be required for the proposed site redevelopment. I wanted to run this site past you to determine whether the proposal to install an SSDS is acceptable and to receive any further guidance on the matter. NYCDOH has reviewed and understood their plans for the installation. I ve also attached an abridged version of the report for you to review. I appreciate the help! 02/27/17 - Lakhani Nathan responded with the following email: ...I believe that it is a proactive building approach to include an SSDS during the construction/redevelopment process. My only comment is that it would be in the property owner/participant s best interest to have the SSDS pressure differential test results provided the Department's prior to submittal of the FER in the case that modifications are necessary. OER Chawla reassured that OER usually go to a site for pressure testing and only then approves the final report. 04/20/17 - Lakhani On 03/13/17, DEC Lakhani emailed OER Pong notifying her that the groundwater should be monitored to show the effectiveness of the ORC injection. Testing can be done ever quarter. On 08/31/16, a previously abandoned and unknown 550-gallon fuel oil UST was found to the east of the previously removed gasoline USTs. Endpoint and groundwater sampling was completed in the vicinity of the USTs encased in concrete. A groundwater samples and endpoint samples from the tank west wall and tank area were extracted. Results are as follows: 1,2,4-trimethylbenzene 66 ug/L(GW-EP), 1,3,5-trimethlybenzene 38 ug/L(GW-EP), benzene 1.9 ug/L(GW-EP), xylene 37.5 ug/L(GW-EP). 06/14/17 - Lakhani OER Shaminder emailed to inform that two (2) groundwater monitoring wells will be installed after construction completion. OER requested DEC's assistance with selecting well locations. Furthermore, he also informed that the SSDS will be pressure tested when building construction is complete. DEC Lakhani responded requiring the determination of groundwater flow in order to assist with well placement. OER Pong's update is as follows: Current status of site: - most of the soil removal complete and superstructure is up 3-stories - 50 x70 NE portion of site remains to be excavated which will likely occur next week - The last part of the SSDS and vapor barrier will be installed in that area after major construction (currently equipment staging) around October/November. - Took 6 confirmation samples at bottom of development excavation depth. No detection of PCBs or VOCs. Metals and SVOCs exceeded RRSCO with barium above PGW and Track 4 Site-Specific SCOs (max 2,000ppm). Tank/spill - tanks were removed in August 2016 and area over excavated as much as possible (limited by walls to north and east and sidewalk to south and west) and down to groundwater. - ORC injected/applied directly to groundwater to speed degradation of compounds - No tank bottom endpoint sample collected since in groundwater so groundwater grab sample collected and tested. - Grab groundwater sample had metals, VOCs and SVOCs in exceedance of GQS. - Two tank sidewall endpoint taken. West sidewall sample had metal exceedance above UUSCO. No SVOCs or VOCs detected above MDL in sidewall samples. - Area was backfilled with RCA and building slab has been poured over it. - Planning on installing groundwater wells (2-3?) after major construction complete SSDS - installed portion of SSDS in March 2017 - Design incorporates sampling test points and will perform pressure test after construction complete File Review: Project Status Report (Cider Environmental, 05/26/17) - In August 2016, three (3) 1500 gallon (former gasoline) and (1) 550 gallon #2 fuel oil USTs were removed from the southwester corner of the site

OER - NYC (Continued) **S117974979**

(former gasoline station). Over-excavation was performed to remove the impacted soil and was approx. 85'x50'x8'. Due to the presence of the surrounding structures, only two (2) confirmatory soil samples and one (1) groundwater samples were collected. Soil samples were relatively clean, while the groundwater sample was contaminated. The entire footprint of the site was excavated to a depth of 2'bg, except the southwestern portion of the property, where excavation was performed to groundwater (8'bg) for UST removal. A total of six (6) endpoint samples were collected, all of which were returned with VOCs below standards. Some SVOCs, namely PAHs, were above standards. Cider supervised the installation of an active SSDS. The system consisted of a network of horizontal pipe set in the middle of a gas permeable layer immediately beneath the building slab and vapor barrier system. Due to the presence of heavy construction equipment, the eastern portion of the SSDS will be installed at a later date. The vapor barrier has also been installed except for the eastern portion for the same reasons as the SSDS. An engineered composite cover system was installed at the site. The system consisted of a 6 thick concrete building slab with a 12 clean granular sub-base beneath all building areas. 09/18/17 - Lakhani OER Sarah Pong emails to inform that according to the consultant, the wells to determine groundwater flow will be installed after the heavy machinery is no longer on-site which is sometime in November. A well will be installed downgradient of the ORC injection area to also determine effectiveness at that time. 03/28/18 - Lakhani OER Pong contacted James at Cider confirmed that the downgradient groundwater wells still have not been installed due to the onsite construction activities. The updated timeline to install the well is 1-3 months. OER Pong attached the SSDS layout. A portion of the vapor barrier and SSDS piping is still left to be installed. 06/15/18 - Lakhani As per the May 2018 monthly report, SSDS pipe was installed in the parking-garage portion of the building. 10/31/18 - Lakhani The consultant confirmed that all subsurface activities, including installation of the vapor barrier and active SSDS, have been completed at the site. Once the roof is finished, the SSDS fans will be installed and sub-slab vacuum reading collected. At this time, the consultant is proposing three (3) groundwater wells around the former UST/open spill area and collect a round of samples. 11/01/18 - Lakhani Spoke to OER Shaminder and Sarah Pong, and suggested that rather than installing three wells, MW-1 can be installed and be monitored over 1-2 quarters to determine whether if the contamination is attenuating. 11/08/18 - Lakhani OER Pong shared the updated Groundwater Monitoring Plan which includes installing one (1) permanent well in the vicinity of the former USTs and collected two (2) quarterly samples for analysis and review. THERE ARE NO OTHER FEASIBLE WELL LOCATIONS ON THE PROPERTY BESIDES THE SOUTHWEST CORNER OF THE PROPERTY. 12/20/18 - Lakhani Ground Monitoring Report (Cider, 12/12/18) - On 11/28/18, one (1) 2 diameter permanent groundwater monitoring well was installed in the area of the former UST to evaluate the results of ORC application. Sample results are as follow: no VOCs were detected. 07/25/19 - Lakhani OER Sarah Pong submitted the 2nd Quarter of Groundwater Monitoring. Concentrations are below groundwater standards and are well within attenuation ranges. The SSDS has also been pressure tested. Pressure test data has been forwarded to NYSDOH for review. 07/29/19 - Lakhani NYSDOH reviewed the RAR and the SMP for the site and has no further comments. Spill is closed."

Remarks: "geo probe confirm loss. OER is also involved with project"

Site Description:	"Location: The Site is located in an urban area in the East Harlem section in the borough of Manhattan, New York. The Site is bounded by 15-story apartment buildings to the north; East 120th Street followed by numerous commercial retail, offices, institutional, and residential buildings to the south; commercial buildings on Lot 8 followed by a 15-story apartment building to the east; and 1st Avenue followed by John S. Roberts Junior High School to the west. Site Features: Currently, the Site is used as a school, offices, and multi-uses and contains an approximately 4,480-square foot, one 1-story building. The remainder of the Site consists of an asphalt-paved parking lot. Current Zoning and Land Use: The current zoning designation is R7-2 residential use. The surrounding parcels are currently used as residential, retail, office, and institutional buildings. Past Use of the Site: Prior to 1940, the Site has been utilized for residential, commercial, stone yard (1896), lumber yard (1911), coal yard (1911), school (1923) and gasoline station (1938). From 1941 to 1980, the Site has been utilized for residential, commercial, school, and gasoline station. From 1981 to present, the Site has been utilized for institutional and commercial uses. Site Geology and Hydrogeology: Elevation of the property ranges from 8 to 10 feet and depth to groundwater ranges from 6 to 8 feet. Groundwater flow is generally from West to East. Depth to bedrock is unknown but greater than 15 feet. The stratigraphy of the Site, from the surface

401 EAST 120TH STREET (Continued) **S118628312**

	down, consists of 2-5 feet of urban fill material underlain by at least 10 feet of well drained, medium to fine brown sand with some gravel."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL CON ED E2MIS NOTES 5-04-99 Found approx. 3 gals. of unknown oil on approx. 150 gals of water. in MH#53864 oil contained to MH. No sewers or waterways affected. Cracks and sump, or sewer connection unknown. Aroclor #1254, PCB count <1.0ppm Cleanup started on 4-22-99 16,220 gals. removed via 5 tankers. Additional 18,000 removed via 7 tankera NYCDEP notified there is water leak in area, job pending water main repair. 4-28-99 DEP notifies R. O'Neil water main has been repaired. 4-29-99 3500 gals. water via tanker. Water level went down 2-ft and immediately rose when pumping stopped. DEP will be notified that problem has not been corrected. Update E-mail: Cleanup Completion information: This is the latest update I have relating to 120th and 1 Ave spill report. Attached to this e-mail is the CHEMLIMS report of the sampling done on 03/30/00. The water quality for all of the test that were run met all the DEPs requirements to discharge to a public sewer. Specifically, relating to the oil spill originally reported, the oil and grease results were non-detect. The manhole is consider clean and the spill can be closed internally. -----Original Message----- From: O'Neill, Robert Sent: Thursday, April 20, 2000 9:52 AM To: Ramon, Richard; Fenner, Wendell Cc: Torres, Carlos D.; DeStefano, Joseph; Cioffi, Steve Subject: RE: By Joseph DeStefano 00-03053 Rich This job has changed direction somewhat in the last month. In order to complete the feeder work prior to the summer load period, new conduit has been diverted around the structure. The plan is still to rectify the water problem in this hole. On of the structural engineers would like to get a look at the hole with the water down. In the past, I have been able to get the water down prior to pumping 10,000 gallons. Can we pump less than 10,000 gal without a

MANHOLE 53864 (Continued) **S103936467**

hassle. This would permit the engineers to evaluate the hole. Robert O'Neill OGS Manhattan Services 212-427-5473 -----Original Message----- From: Ramon, Richard Sent: Thursday, April 20, 2000 9:46 AM To: Fenner, Wendell; O'Neill, Robert Subject: FW: By Joseph DeStefano 00-03053 Sampling results were sent to Sophia Rabich on April 12 - I spoke to her today and she hadn't gotten to it yet. I'll call her next week to remind her if necessary. I soon as I get approval from Pravin Patel, I send to Quantity group. We'll probably have to meet with the quantity group as we have for the previous >10,000 gpd discharges. DEC Memo:	"07/15/09-Vought-Primary off-hours responder. Called and spoke to Mike Timulty (SCA (718) 752-5036). Site is a school (IS 45M) that is changing boilers and as such has installed a temporary boiler and

IS 45M- NYSCA (Continued) **S110306795**

tempoarary 275-gallon AST in center courtyard. Shoring be installed for new boiler and during installation oil was observed where shoring comes in contact with building wall. Groundwater at 8'bg. SCA performed site visit and observed oil on the soil directly under temporary boiler which was immediately adjacent to seep. Contractor for SCA will meet with SCA tomorrow to begin soil excavation and collection of endpoint samples. School is currently closed for summer and will reopen in fall so no vapor issues to date. Work will take approximately one week. Contractor to perform work will be BG National. CSL sent to: DEC requires CSL with one month due date and: 1)collection of endpoint samples 2)cc to NYSCA Timulty(Fax:646654-1861). Vought sent CSL to: Mr. Drew Pardus NYSCA 30-30 Thompson Avenue Long Island City, NY 11101-3045 Fax: (718)472-8500 07/20/09-Vought-DEC Austin requested update. Vought called Pardus and left message to return call with status update. 07/27/08-Vought-Received call from and spoke to SCA Pardus (cell 646-577-8280) and area was stabilized and LIRO Engineering working for SCA who are developing plan for investigation of soils. No sheen on groundwater but there is water present as of this morning. STV still onsite. LIRO contracted Fenley and Nicol to clean oil under boilers and collect water in pit. Possible contamination under boiler and between boiler and pit. Further excavation and or soil borings will be proposed. No samples have been collected to date. Spill underground in boiler room. Vought stressed importance of completing remedial action prior to children returning to school (late August or early Sept) in order to avoid air monitoring and possible health impacts. 08/05/09-Vought-Unscheduled office visit to DEC by Pardus to deliver workplan for further investigation prepared by (STV Timulty). Temporary tank currently in use with secondary containment. Boiler being replaced in school and new boiler had to be brought in via excavation through building foundation. During excavation of entranceway for new boiler soil contamination was discovered (oil was observed seeping into excavation adjacent to foundation wall). No oil seepage into school boiler room through foundation wall. F&N recovered impacted groundwater and free product via vacuum truck from excavation. Proposal for installation of eight soil borings with collection of highest PID and deepest dry soil samples. Vought noted that if free product encountered in borings then DEC will require well installation at same locations. If free product encountered then product recovery will only occurr after school hours (along with well installation). Boiler room sump was checked and showed no impact from spill. Boiler replacement will not be completed until October and as such excavation will remain open adjacent to school when school is in session. As such Vought required that excavation be covered during school hours to ensure no vapors migrating from excavation to school windows above. Voughht also required that member of NYCDOH Environmental Health (Bernie Orlan's group) be notified of work and Vought to CC Orlan and Pardus on approval letter for workplan. As per the workplan , It is STV's opinion that the leakage of fuel oi from the temporary boiler unit is the source of the oil discovered on the groundwater in the nearby shored pit . ...an eight foot diameter puddle of fuel oil was observed under the end of the temporary boiler. Inside the boiler control shed (located on the south side of the temporary boiler), the floor beneath the fuel oil piping was covered with oil. These spills cleaned by Fenley and Nicol. Proposal also includes collection of groundwater samples from eight boring locations and submission of a Remedial Investigation Report. Vought

IS 45M- NYSCA (Continued) **S110306795**

sent Work plan approval letter to: Lee Gutterman NYC SCA 30-30 Thompson Avenue Long Island City, NY 11101 Fax:(718)472-8500 Ph:(718)752-5026 with cc to Pardus and NYCDOE Orlan and additional requirement that excavation be covered with plastic during school hours and that well installation and recovery efforts (if any) be restricted to non-school hours. 9/30/09- File review by Intern E.M Ibeh, The file being reviewed is Subsurface Investigation Report and Remediation Plan, prepared by STV for New York City School Construction Authority (NYCSCA) at 2351 First Avenue, NY 10035. SP# 0904431. On 7/15/09, STV was alerted to fuel oil release in an excavation outside the boiler room of the site and after consultation with the NYCSA, the spill hotline was called and a spill number assigned to the case. STV inspected the site the next day (7/16) with representatives from SCA, LiRo (the provider of an on-site temporary boiler system) and Bay Boiler (LiRo subcontractor and operator of the temporary boiler system). A shored excavation pit was located adjacent to the school building that was created to allow the installation of new boiler equipment in the boiler room located in the school basement; and at the time of inspection, oil sheen was observed seeping through the sheeting on groundwater near the bottom of the pit. The temporary boiler, located 12ft south of the excavation, operates on #2 fuel oil and is connected to an adjacent 8000gallon AST. No evidence of release from AST or the lines entering into the temporary boiler. An 8ft diameter puddle of fuel oil was observed beneath the southern end of temporary boiler and inside the boiler control shed, oil was found beneath the piping. STV opined that leakage of fuel oil from temporary boiler unit is the source of the oil discovered on the groundwater in the pit. The Bay Boiler rep reported that due to sudden startups or changes in wiring, the fuel pump operated in a way that resulted in excessive pressure resulting in the blowout of a diaphragm in a pressure sensor. Oil was released to the floor and leaked through floor openings to the asphalt pavement below. He said the diaphragm and sensor switch were replaced. After discovery of the spill, measures were taken: -Groundwater from pit was temporarily pumped into pails till a vac truck arrived to remove them for disposal. -Bay Boiler performed repairs to the temporary boiler piping and controls and no further releases were observed. Boiler inspection increased to daily. -Cleanup activities were performed on 7/16 by F&N for LiRo and the pooled oil and all saturated debris were cleaned up and Speedi-Dry and sorbent pads were used to cleanup the oil. A berm was placed underneath the temporary boiler unit as a precaution against piping failure. Regional groundwater flow direction is generally to the east, towards the East River and local groundwater flow is south southeast. 11 soil borings (SB100-110) were taken onsite to vertically and horizontally delineate the oil release. Borings were advanced to depths between 10-16ft bgs and groundwater was encountered 8-9 ft bgs. All samples were screened with a PID for odors. No samples were collected from SB108 and SB109 since SB110 was advanced further west and served as the soil delineation boring. Duplicate samples were collected and samples were shipped to be analyzed for STARS VOCs and STARS SVOCs. Groundwater samples were collected from temporary well points at 6 of the 11 soil borings but they were not collected from SB105, 106,107,108 or 109 due to the presence of separate-phase petroleum. They were sent to be analyzed for STARS VOCs and STARS SVOCs. Upon discovery of free product in some of the soil borings, 4 of them were converted into recovery

IS 45M- NYSCA (Continued) **S110306795**

wells and product recovery activities initiated and the wells were installed at SB105, 106,107&109. SB109 was converted into a well because it contained FP and was located far from the spill area. As of 9/9, 5 rounds of well gauging and product recovery have been conducted on recovery wells RW105, 106,107& 109 and product was collected and contained. A significant reduction in product recovery was observed in RW105 and RW106 continues to yield the highest quantity of product per pumping event. On 8/28/09, STV oversaw the application of ~120lbs of ORC into the pit. ORC was allowed to mix with the shallow layer of groundwater in the pit to facilitate the biodegradation of any residual petroleum impacts. Soil Boring Results Sb100 (8-9'bg)- MTBE ND, Benzene ND, T 0.23J, E ND, Mixed Xylenes ND, Naphthalene ND, Benzo(a) anthracene 3200ppb, benzo(b)fluoroanthene 4200ppb, Benzo(k)fluoroanthene 1700ppb. SB105, 106, 107, 108 7 109-NS SB110- MTBE/BTEX ND, SVOCs ND 08/31/09-Vought-Received call from and spoke to Drew Pardus who wished to provide update. Eight borings installed with few additonal borings and four monitoring and recovery wells installed and product being recovered via pneumatic pump. Measurements of product and water levels prior to recovery. Two recovery events in first week and recovery amounts being used to determine recovery frequencies. For first recovery 40 gallons of free product found after allowed to settle in pump. Groundwater flow possibly to East and product is being retained by the wall of the school. Vought discussed need for groundwater flow direction. Surface spill was cleaned but temp boiler cannot be moved as they are in service. Once they are removed then soil removal will occur. As of last week boiler should be completed in October. STA's IEH group has contacted Orlan with respect to site. Investigation report with RAP will be submmitted and groundwater samples in excavation pit were below TOGS and ORC was placed into the excavation by 9/30. 11/16/09-Vought-Received message from NYSCA Pardus requesting review of Subsurface Investigation Report and RAP. Vought reviewed Subsurface Investigation and RAP received from NYSCA Lee Gutterman

IS 45M- NYSCA (Continued) **S110306795**

(Ph:718-472-8502 fax:718-472-8500) and prepared by Michael Timulty (Ph:212-777-4400 Fax:646-654-1861). Site is a four story school building with basement. On 7/15/09, fuel oil was noted in excavation located outside boiler room of site. Temporary boiler located south of excavation that is connected to temp 8000-gallon AST. An approximately eight foot diamater puddle of fuel oil was observed beneath the southern end of the temporary boiler . Oil was found in on floor beneath piping to boiler. Oil was released to the floor and leaked through floor openings to the asphalt pavement below. Fenley and Nicol cleaned spill on concrete but temp boiler cannot be removed as was servicing building. Eleven soil borings were performed and free product events are ongoing. Groundwater at 8-9'bg. Free product was discovered in four soil borings and they were converted to monitoring wells. (RW105(1.24'), RW106(1.58'). RW107(.04') and RW109(0')). Soil analyticals show 2090ppb xylene(SB107) and 5100ppb 1,3,5 trimethylbenzene(SB107). All other soil analyticals show ND for VOCs. Groundwater samples not collected from RW105, RW106. RW107 and RW109 as these wells contained free product. Groundwater samples collected from wells with no free product show non-detect concentrations for fuel oil constituents. To date approximately 140 gallons of free product have been recovered by periodically pumping the recovery wells. Five rounds of recovery were performed Report recommends continuation of VEFR on wells with product until no sheen remains or until temporary boiler is removed and subsequent excavation of impacted soil is performed. Excavation proposed to occur to 2 feet below groundwater table or until evidence of petroleum impacts are no longer observed . Soil and groundwater endpoint samples will be collected Contractor to submit a Excavation and Shoring Plan to the school as well as a Dewatering Plan. DEP permits will be obtained for treated discharge. Vought called IEH and spoke with Anne Charlap (acharlap@nycsca.org Ph:718-752-5384) and DEC's approval of plan pending inclusion of 1)installation of well in excavation and subsequent sampling and 2)PID monitoring 3)excavation during non school hours. Vought sent letter to above address with this requirement. 12/16/09-Vought-Received letter from NYSCA Gutterman dated 12/8/09. SCA respectfully requests that the installation of two monitoring wells and two quarters of groundwater sampling would only be required if soil endpoint samples.... ...or groundwater samples.... exceed TOGS and or TAGM. Vought sent reply approving of endpoint sample collection prior to well installation provided that excavation below groundwater as per RAP was performed and soil sidewall AND bottom groundwater samples are collected. Letter with cc to DOE Orlan. 4/27/10-Vought-Received call from NYSCA Lee Gutterman and he insurance company is looking to submit alternative RAP (other than soil excavation) and would like to discuss possibility of remedial alternative. Gutterman requested conference call with Vought and insurance rep from Chartis Insurance (Tanya Crawford). Vought agreed to call and Gutterman to send email to Vought with conference call time. 4/30/10-Vought-No email received from Gutterman to date. Vought received call from Gutterman and teleconference today with herself, DEC Vought and Tanya Crawford, Chartis Insurance, Claims Analyst (Ph:201-631-7158). Conference call with DEC Vought, NYSCA Gutterman, STV Timulty, Chartis (Larry Daniels and Tanya Crawford). Chartis proposed excavation of VOC contaminated soil only (as opposed to original proposal for excavation at all areas with free product on groundwater). Vought agreed to excavation to VOC contaminated soil only (to remove source) however since

IS 45M- NYSCA (Continued) **S110306795**

product has migrated on water table away from source then a down-gradient well will be installed. However if they elect to excavated entire area above free product then no down gradient delineation required as excavation will enable VEFR of water table. Tumulty indicated that 800 gallons of product-water mix recovered to date with reduction in recovery amounts (max product thickness is 6). Timulty also indicated that product was observed seeping into adjacent boiler room however the seepage was cleaned and wall repainted and no further seepage to date. 6/11/10-Vought-Spill transferred from DEC Vought to DEC Patel as per DEC Austin and Vought transfer to Section A. 07/02/10-Hiralkumar Patel. alternate addresses: 2345-2363 1st Ave, 339-355 East 120th Street 07/08/10-Hiralkumar Patel. 10:03 AM:- received message from Mr. Pardus. 08/06/10-Hiralkumar Patel. 3:27 PM:- left message for Mr. Pardus inquiring updates. 4:11 PM:- received call from Mr. Pardus. he mentioned that temporary tank and boiler were removed and excavation started early July, 2010. they found free product on water which was pumped out. soil was excavated 2 ft below water table. Mr. Pardus mentioned that based on results of previous borings, they installed sheeting in clean area. so three side of excavation is sheeting and fourth side is building foundation wall. all soils between sheetings and foundation wall were removed, so no endpoint sidewall samples collected. they collected endpoint bottom groundwater samples. will wait for results before backfilling excavation. Mr. Pardus mentioned that report will be submitted by end of Oct., 2010.
08/18/10-Hiralkumar Patel. 10:09 AM:- received email from Mr. Pardus with results of groundwater samples collected at the bottom of excavation. he mentioned that remediation area was divided in three cells (1, 2 and 3) as excavation was adjacent to building foundation wall. all soil within cells has been excavated to a depth of 2 ft below groundwater table. collected groundwater sample from each cell as endpoint bottom sample. no contamination found in groundwater sample from Cell 1 and Cell 2, but found very minor VOC contamination in Cell 3 (max. O-Xylene: 24 ppb). due to some VOC contamination, additional groundwater removal has been performed in Cell 3 and another post-remediation groundwater sample was collected today. Mr. Pardus requested approval for backfilling the excavation based on results of endpoint groundwater samples. he mentioned that ORC will be applied prior to backfilling. he also requested that no permanent well should be installed in excavation (as mentioned in DEC letter dated 12/16/09). 1:11 PM:- received call from Mr. Pardus. based on results of groundwater samples and all soils in three cells have been removed to 2 ft below water table, approved Mr. Pardus's request to backfill the excavation. also approved his request not to install a permanent well in exavation. asked him to submit a complete report.
02/03/11-Hiralkumar Patel. 12:34 PM:- spoke with Mr. Pardus regarding report. he mentioned that SCA is currently reviewing the closure report and once he gets comments, he will submit the report. 12:40 PM:- sent email to Mr. Pardus and asked to submit report by end of 02/28/11. 02/28/11-Hiralkumar Patel. received remedial action report from SCA. based on submitted information, case closed."

Remarks: "Temp boiler was set up behind the school some oil was discovered. The oil may be coming from the temp boiler on site. Clean up will start tomorrow."

Spiller Company:	INTERMIDATE SCHOOL 45
Spiller Address:	2351 FIRST AVE
Spiller Company:	001
Contact Name:	RICHARD WETHERBEE
DEC Memo:	"10/22/07 Soil contamination around fill port.I left two messeges for Richard Wetherbee.(SR) Richard Wetherbee returned my call.He works for Whitman Group.Whitman Group working as a consultant for the School Authority.The heating system for the school is planned to be upgraded.As part of decommissioning of the tanks and systems, ten soil borings were installed on the sidewalk and along the fill line outside of the tank room.Borings came back contaminated.GW was collected from the heaviest contaminated soil borings.Detailed investigation report and remediation work plan will be sent to DEC.There is no odor/smell or any open excavation at the site right now.(SR) 05/12/08 Rec'd report from STV Inc.Subsurface investigation was performed to assess the condition of the two existing 15,000-7,500 gallon ASTs and investigate the potential for a release of petroleum product to the soils in the vicinity of underground remote fill lines.STV visually inspected the ASTs.There was no evidence of significant deterioration or of a release from the ASTs, STV noted.No cracks in the floor or walls and there was no evidence of leaks,such as staining, identified in the vaults.A total of 12 soil borings were advanced with 14 soil samples and one duplicate sample collected for laboratory analysis.Soil samples were field screened with PID for vocs.Water table was encountered in all borings at approx 10' bgs.One GW sample was taken from the soil boring SB-4.VOCs in the soil samples are very close to NYSDEC RSCOs.SVOCs detected marginally above RSCOs or SCOs are attributed to the urban fill material encountered in all soil borings.Results of SB-4 indicate the petroleum most closely resembles degraded fuel oil or lube oil.SB-8 had the highest PID readings,1696 ppm in the field, but is located more than 25 feet away from the remote fill lines.GW sample revealed no concentrations of VOCs or SVOCs exceeding NYS DEC TOGS.Elevated PID readings in SB-8 may be associated with the two gasoline service stations(from Sanborn Map) that existed on site prior to the construction of the school.STV also conducted Indoor Air

INTERMIDATE SCHOOL 45 (Continued) **S108955894**

Quality and Sub-Slab Vapor Investigation in response to the detection of VOCs in soil samples.STV reported that the result of the Indoor Air Quality and Sub-Slab Vapor Investigation indicate that the sub-slab vapor intrusion is not occurring at the site. STV recommended for additional investigation that include three soil borings(two in the grassed area adjacent to the school building,one in the sidewalk)and three ground water samples to assess ground water quality.(sr) 03/20/09 Rec'd closure report.Supplemental Subsurface Investigation was performed on July 19, 2008.Three soil samples and three ground water samples were taken at depth of 12-15 ft bgs.No VOCs were detected in soil samples above TAGM.SVOCs detected in soil samples are not indicative of a release from the AST or the underground remote fill lines.STV concluded that the SVOCs are attributed to urban fill material that is present from 6 inches below grade to the water table.One ground water,closest to the street and underground utilities, ground water was found to have one SVOC and seven VOCs detected above NYSDEC TOGS.At all other locations, GW was not found above TOGS.VOCs in one ground water are slightly above TOGS, are localized and likely attributed to a past historic release.STV also conducted an Indoor Air Quality and Sub Slab Vapor Investigation from December 21 to 23, 2007, concentrations were below or equal to the observed corresponding indoor air quality and the out door ambient concentrations. NFA required.Case closed.(sr)"

Remarks: "it is an unknown amount spilled of either # 4 or # 6 fuel oil; found it in the soil along the fill line that goes to the building; the spill has not yet been cleaned up but they are still working on the soil samples than they will excavate soil at later date"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 9/19/05 - Obligado - File transferred from Vought to Obligado 12/5/05 - Obligado - Review Baseline Assessment Report, Delta, 10/2/02.At time of assessment site was an active Gaseteria Service station. PBS reports 2 4000 gallon active gasoline USTs installed in 1980, 1 4000 gallon diesel UST , and 1 4000 gallon UST converted to nonregulated use, 1 1000 temporarily out-of-service diesel UST, 1 550 gallon closed inplace used oil UST. Sensitiver receptors, one Federal Public Supply Well 0.75 mile west of site. Harlem river 1500 ft east of site. Closes school is PS80 located 250 ft north of the site. Adjacent residences with basements to north and east. 5 soil borings advanced as part of assessment, and 6 soil samples collected. Soil borings advanced to between 20 and 25 ft bgs. No soil VOC or SVOC impacts. Ground water located at 10 ft bgs. Likely flow to southeast towards harlem river. Soil is fine to coarse grained sandy silt with some gravel and rock fragments to 25 ft bgs. Notable Ground Water results in ppb (12/02): SB1 - 15.4 benzene, 546 MTBE, 18 BTEX SB2 - 364 MTBE, ND BTEX SB4 - 22.5 benzene, 15.1 toluene, 90.4 ethylbenzene, 90.2 xylenes, 208 MTBE, 218 BTEX, 1633 VOCs SB5 - 1.1 benzene, 693 MTBE, 12 BTEX, (RCRA Metals) 238 Arsenic, 12,600 barium, 1260 Chromium, 3110 Lead. 10-15-10 - Obligado - I reviewed an investigation workplan. The plan proposes to install 5 monitoring wells at the site. I sent an approval letter for the plan. A report is due within 90 days. 3/29/11 - Obligado - I reviewed an RIR submitted 2/14/11. 5 borings and 4 2 inch diameter wells were installed. Soil impacts were detected in one boring, SB5 at 8-10 ft with 36 ppm Total VOCs in soil. A well could not be installed in this location due to refusal and the location of the canopy. Low level ground water impacts were detected. Maximum contaminant concentration was 50 ug/L MTBE in MW-02. The report recommends monitoring and sampling of the site. I sent an email to Steve Muller cc to Marcello Porcelli requiring installation of well in vicinity of SB-5. I required a workplan within 15 days. 11/3/11 - Obligado - I emailed Steve Muller to inquire about the work plan. He emailed me back that he thought he had sent it to me but actually he didn't. He attached the work plan, which includes one proposed monitoring well installation adjacent to SB5 as I requested. I sent an approval letter via email for the plan. 8/16/12 - Obligado - I reviewed Remedial Investigation Report for the installation of MW5 in the sidewalk adjacent ot SB5. Soil in boring MW5 all below CP51 soil cleanup objectives. Ground water had 46 ug/L total BTEX during the initial samplin event. The report recommends no fruther action. I also reviewed the 1st Quarter 2012 report. MW 5 was sampled again and BTEX was 49ug/L, including 16 ug/L benzene, 26 ug/L ethylbenzene. Other VOC exceedences included 130 ug/L npropylbenzene, 41 isopropylbenzene, 12 MTBE, 16 sec-butylbenzene, 13 napthalene. All othe wells at or close to ground water standards. Spill case was presented to the Spill Closure Panel for discussion. Spill Closure Panel Discussion Site: 2316 1st Ave, Manhattan, Spill No. 0012876

GASETERIA (Continued) **S106001413**

Date: 8/16/12 Attendees: Hassan Hussein, Raphael Ketani, June Feng, Joseph O'Connell, Andre Obligado, Jennifer Kann DER Section C Staff met to discuss a closure request for 2316 1st Ave, Manhattan, Spill No. 0012876. After internal discussion, the request for spill closure approved based on the following: 1) Exceedences of CP51 soil clean-up guidance in only one boring, with 4 compounds slightly over the CP51 unrestricted levels. 2) Soil in vicinity of MW5 consists of clay, making in-situ remediation difficult. Excavation is not feasible due to location beneath canopy and ajacent to dispenser. 3) Low levels of ground water contamination in only one well, MW5 with the following exceedences: 16 ug/L benzene, 26 ug/L ethylbenzene, 130 ug/L npropylbenzene, 41 isopropylbenzene, 12 MTBE, 16 sec-butylbenzene, 13 napthalene. All other wells meet or just slightly above ground water standards. 4)Total VOCs reduced from baseline 1603 ug/l in 2002 to 304 ug/L in 2012. Residual soil and ground water contamination is expected to continue to attenuate naturally. "

Remarks: "Contaminated groundwater found. Data reported to DEC by Delta despite knowledge by Gaseteria since 8/5/2002."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 03/11/2002 SPILL CLEANED BY FDNY/ ROADWAY SPILL, SMALL AMT IN DRAIN"
Remarks:	"FIRE DEPARTMENT ON SCENE. THEY THINK THE SPILL IS COMING FROM THE GROUND. NO SEWERS OR STORM DRAINS INVOLVED. REQUSTING DEC RESPONSE. FIREFIGHTER MUSSORFITI FROM FDNY HAZ-MAT CALLED AT 2300. A CUSTOMER DROVE OFF WITH THE NOZZLE STILL IN THE FILL. 20 GALLONS ONTO THE GROUND. GASOLINE DID GO INTO SOME TYPE OF DRAIN. FIRE DEPARTMENT IS CLEANING IT UP. FIRE DEPARTMENT SAYS THEY DON'T NEED A RESPONSE UNLESS WE WANT TO GO. FIREFIGHTER MUSSORIFIT CALLED BACK AT 2327. THEY CLEANED UP 80 GALLONS OF GASOLINE. THEY'RE LEAVING THE SCENE NOW."

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Contact Name: JOSE MARTINEZ
DEC Memo: "04/20/18-Hiralkumar Patel. 12:00 PM:- visited site. site has four story building with a basement. the first floor is occupied by a window blind store and the upper three floors are residential units. currently, the residential units are vacant and under renovation. the eastern half section of basement (towards 1st Ave) is being used by the window blind business and multiple items are stored in that section. met Jose Martinez, store owner. he mentioned that his employee noted oil on basement floor this morning. no petroleum odors were noted inside the store. free phase petroleum product was observed in eastern section of the basement impacting stored items. could not inspect tank location due to pool of oil on floor. Jose mentioned that the site has one tank located in southeast corner of the basement. Jose has filed claim with his insurance company regarding oil impacted items in the basement. during cleanup, Jose will take inventory of damaged items. the fill port is located by the curb in front of the building entrance and the vent line is located just outside the building entrance. no signs of overfill noted from the vent line. 12:35 PM:- spoke with Annabelle Santiago, portfolio manager. she mentioned that Approved Oil delivers oil to the building and oil company will be on-site for inspection/cleanup. Eric Sutphen from Approved Oil arrived to the site. he confirmed that the site has one (1) 275 gal AST and last oil delivery was on 04/03/18. building management retained Riteway Tank Maintenance to conduct required cleanup. contaminated items from the basement will be stored in drums/plastic bags on concrete platform in backyard. 2329 First Avenue LLC. **property owner** c/o 9300 Realty Management, Inc. 740 Broadway, 2nd Floor New York, NY 10003 Attn.: Annabelle Santiago Portfolio Manager Ph. (212) 228-9300 Ext. 201 (646) 408-4785 (C) Fax (212) 529-7603 email: asantiago@9300realty.com 1:29 PM:- sent email to Ms. Santiago. based on field observations, asked Ms. Santiago to immediately: - secure remote fill port to prevent any oil deliveries to the faulty tank system until the tank system is tested tight - remove free phase product and spill impacted materials from basement - install ventilation system in the basement email copied to Eric. 3:14 PM:- received call from Eric. crew from Riteway Tank has installed ventilation system in the basement with exhaust hose through basement access door in backyard. contaminated materials have been stored on plastic in backyard. Eric mentioned that the tank was found 1/4 full. 6:50 PM:- received call from Paul from Riteway. they removed remaining oil from the tank and oil from the basement floor. they recovered total of approx. 200 gal of oil. ventilation system has been installed in the basement. the ventilation system will be turned off at the end of the day due to site safety and Jose will turn on the system tomorrow morning. basement access has been sealed to prevent odors in first floor lobby or the store.
04/24/18-Hiralkumar Patel. 10:58 AM:- spoke with Paul. he mentioned that Riteway crew responded yesterday and remove all speedie dry. today, tenant will bag his damaged items and move other stored items on shelves. Riteway crew will be on-site tomorrow to power wash floor. scheduled a site inspection at 9 AM on 04/27/18. asked Paul to bring PID meter and sampling tools/jars as soil borings may be needed based on observations during site visit. 04/26/18-Hiralkumar Patel. 11:30 AM:- visited site and met Paul and Jose. petroleum odors were noted at basement entrance hatch on First Ave sidewalk. these odors

COMMERCIAL (Continued) **S121985212**

could be result of possibly trapped oil beneath storage shelves in basement. currently ventilation fan pulls air from near the boiler room entrance in middle of basement. asked Paul to extend ventilation exhaust hose and bring ventilation fan towards eastern part of basement where most of spilled material was pooled and went under storage shelves. noted oily absorbent pads, which were placed today morning, on water on floor around the 275 gal AST. Paul also mentioned that the vent line got separated (in area right beneath the ceiling before it cross the slab to outside), due to heavy corrosion, when crew tried to disconnect the vent line from tank top. based on field observations, asked Paul to 1) move the tank for further cleanup, 2) investigate for possible contamination beneath the floor around tank location, 3) investigate areas under storage shelves via removing bottom shelf. no borings are needed in other visible part of spill inspected areas, but borings may be needed underneath shelf locations after further inspection. 11:49 AM:- left message for Ms. Santiago. 04/30/18-Hiralkumar Patel. 9;47 AM:- spoke with Paul. he mentioned that Jose will remove his items stored on bottom shelves in basement and Riteway crew will be on-site tomorrow for further inspection under shelves. 05/07/18-Hiralkumar Patel. 10:24 AM:- received call from Paul. they have removed shelves and conducted further cleanup. total of three soil probes were installed: two inside and one outside the tank storage area. soil samples were taken at 2 ft depth. samples will be screened at Riteway office as crew did not bring PID. Paul mentioned that contamination will be delineated if PID screening shows any detection of petroleum odors, otherwise samples collected today will be submitted to lab for analysis. Paul mentioned that water was noted in boreholes. 10:28 AM:- received pics from Paul. one of the pic shows a pit in room in front part of basement along the 1st Ave. 10:41 AM:- spoke with Paul and inquired him about any impact to pit in floor. he mentioned that no impact was noted in the pit. scheduled a site inspection at 9 AM tomorrow. 05/08/18-Hiralkumar Patel. 9:00 AM:- visited site and met Paul. no petroleum odors were noted in first floor or basement. Paul mentioned that the venting system in basement was removed yesterday. checked the pit (which could be a sump pit) in front part of basement, approx. 15 ft NW of the tank location. found water in the pit, but no signs of oil (sheen/product/odor) were noted on water. inspected tank location area. Riteway crew installed three boreholes along southern foundation wall. found water right beneath the cement floor in all three boreholes. free phase product was noted in all three boreholes. based on field observations, no excavation (as water right beneath the basement floor) or further cleanup is required in basement, except area where the 275 tank is located. asked Paul to install at least two (2) 4-inch diameter recovery wells in basement floor: one well should be adjacent to existing tank location where heavy impact was noted on water, and another well just outside the tank location area. asked Paul to extend wells couple of feet above basement floor to prevent flooding. 1:28 PM:- sent letter to Ms. Santiago requiring implementation of remedial measures via installation of minimum of two 4-in. wells and weekly monitoring/product recovery. asked her to submit weekly records. letter emailed to Ms. Santiago and Paul. 09/28/18-Hiralkumar Patel. 2:13 PM:- sent email to Ms. Santiago and asked her to submit required documents by the end of 10/05/18 to avoid enforcement. email copied to Paul. 04/09/19-Hiralkumar Patel. 8:42 AM:- received email from Paul including weekly well gauging record. two (2) 4-in wells were gauged weekly on 05/16/18, 05/29/18,

COMMERCIAL (Continued) **S121985212**

Remarks:	06/04/18, 06/19/18, 06/25/18 and 07/02/18. no product was noted in wells except slight staining on pads during monitoring on 06/19/18. 04/10/19-Hiralkumar Patel. 9:42 AM:- spoke with Paul and scheduled a site inspection on 04/12/19 to gauge existing wells. 04/12/19-Hiralkumar Patel. 1:45 PM:- visited site and inspected wells in basement. two monitoring wells are located in basement floor. no signs (visual/olfactory) of spill noted on water in wells. no odors noted in basement. 1:54 PM:- received call from Paul. informed him about field observations. asked him if any groundwater samples collected for dissolved contamination. he will call back with updates. 04/25/19-Hiralkumar Patel. received email from David Chan (at 12:49 PM on 04/24/19) from Riteway including result of two groundwater samples collected on 01/10/19. some VOC contamination (165 ppb total BTEX) was noted in one sample. case closed based on review of all available information. 9:13 AM:- sent spill closure letter to Ms. Santiago. letter emailed to Ms. Santiago and Paul." "the spill was over concrete floor. a company came to fill the tank and they over fill and spill.The caller call the owner to send somebody to clean that up but he did not get a response yet. He would like to speak with DEC for guidance.The caller said that the basement have 4 rooms 3 of them are with oil on the floor ."

#48962 F.O.D. OPERATOR REPORTS HE FOUND APPROX. 8 GALLONS OF AN UNKNOWN OIL MIXED WITH APPROX. 400 GALLONS OF WATER IN VS-2112 @ N/S E.120 ST 347' E/E/C PLEASANT AVE WHILE WORKING ON FDR.# 2M24..... THE SPILL IS CONTAINED AND NO IMPACT TO WATERWAYS OR SEWERS..... A SAMPLE WAS TAKEN AND TAG# 17252 WAS INSTALLED..... CLEANUP IS PENDING CREW & EQUIPMENT & I&A ADVISED..... LOGGER IS T. RUSSO# 45348 @ MCC #9 DESK..... 09/25/98 13:40 HRS R. ROACH C.I.G. NOTIFIED BY T. RUSSO..... 9/25/98 14:45 After investigation it is determined the substance is not oil. Additional sample taken for identification cleanup pending lab resultes. Supervisor on location R.Mockler #77412. 9/25/98 15:26 hrs. Roace C.I.G. Reports that the N.Y.S.D.E.C. Would like a crew to be at this location so they can make an inspection at 17:00 hrs.. 09/25/98 19:15 R.SMITH(MGR I&A SOUTH) REPORTS PETER HOFFMAN(MGR I&A NORTH) & R.SZYLIN(PLANNER I&A NORTH) MET WITH GEORGE BREEN, ENVIRONMENTAL ENG 1, SPILL MGMT PROGRAMS, NYSDEC. HIS PHONE NUMBER IS 718-482-4933 EXT 7111. MR BREEN WAS SATISFIED WITH HIS FINDINGS. WE DEMONSTRATED THAT THERE WAS NOT ANY OIL OR A SHEEN. MR. BREEN REQUESTED THAT WE FORWARD THE LAB Environmental Detailed Incident Report RESULTS FROM THE SAMPLE AND THE FINGER PRINT ANALYSIS TO HIS OFFICE. LOGGER PGM 10/02/98 On 9/25/98 at 17:30 I&A crew and P.Hofman, R.Szylin, V.Mannino met George Breen from DEC and and agreed with the assement that there was no visible oil spill at this location. On 9/26/98 lab results indicate <1 PPM and an Aroclor of 1260. On 10/01/98 I recieved lab results that state Analysis indicates the sample is similar to dielectric fluid . Based on these results the water will be tankered and structure flushed. 10/05/98 On 10/02/98, 18:00 hrs. I&A crew cleaned structure using bio-gen 760. One thousand gallons of water removed by Astoria tanker. All solid debris removed by I&A flush truck. Spill tag #17252 removed job completed. Crew F.Joseph, 05658, and H.Dean, 10682 Supervisor, J.McNeil, 43961 "

Remarks: "FOUND SPILL IN A VAULT SAMPLE WILL BE TAKEN"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
