Monthly Progress Report No. 12
June 2025
Reporting Period: May 1 – May 31, 2025

245 West 55th Street
Block 1027, Lot 7
New York, New York
Brownfield Cleanup Program Site # C231157

#### 1.0 Introduction

In accordance with the reporting requirements of the Brownfield Cleanup Agreement (BCA) for the above-referenced site, Environmental Logic (EL) prepared this progress report on behalf of 245 WEST 55TH ST LLC, to summarize the work performed at 245 West 55th Street, Manhattan, New York (the Site) through May 31, 2025. The BCA was executed on February 24, 2024. The New York State Department of Environmental Conservation (NYSDEC) approved the Remedial Investigation Work Plan (RIWP) in a letter dated October 11, 2024. NYSDEC also approved a Change of Use notification related to construction activities on March 26, 2025. This progress report includes a summary of activities conducted in accordance with these approvals.

The Site is located in a C6-4/C6-6 Commercial District in Manhattan, approximately 1,000 feet southwest of Central Park. The Site is bordered to the north, east, and west by mixed-use commercial/residential properties, and is bordered to the south by West 55<sup>th</sup> Street and additional mixed-use commercial/residential properties. A Site Location Map is included as **Figure 1**.

The Site was formerly owned and utilized by DuArt Media Services/DuArt Film Labs (DuArt) for cinematographic film cleaning and film processing from approximately 1922 through 2011. Film production including voiceover work, audio recording, and film editing continued to take place at the Site until 2021. A site plan is provided as **Figure 2**.

245 WEST 55TH ST LLC is currently redeveloping the existing 12 story, 6,000 square foot commercial building on Site. Construction activities include the demolition of the existing 12<sup>th</sup> story and bulkhead, construction of an additional six stories to the 11 stories and altering the building for future residential use.

#### 2.0 Activities Relative to the Site during the Reporting Period

### Pile Installation and CAMP Oversight

As previously reported, NYSDEC approved a Change of Use notification for drilling of steel piles related to construction activities on March 26, 2025. The structural support pile and caisson

installation activities commenced on April 1, 2025, and are currently taking place in the basement of the Site building.

To date, a total of eighteen (18) piles have been completed. This includes the following: Pile numbers 1, 2, 3, 4, 20, 21, 22, 23, 25, 26, 27, 32, 33, 35, 37, 38, 39, 45. The attached **Figure 3** shows the structural pile plan with the completed pile progress through the current May 2025 reporting period.

As requested by NYSDEC, a Community Air Monitoring Program (CAMP) is being implemented during these Change of Use activities. Procedures are being conducted in accordance with the CAMP previously approved by NYSDEC as part of the Remedial Investigation Work Plan (RIWP). There were no readings above the NYSDEC approved CAMP 15-minute average action levels for VOCs (5 ppm) or Particulate Matter (PM) (150 ug/m³) associated with the Change of Use pile installation activities during this monthly reporting period.

The following readings were observed and determined to be unrelated to the pile drilling activities:

- On May 8, 2025, there was a reading above the NYSDEC approved CAMP 15-minute average action level for Particulate Matter (PM-10) (150 ug/m³) at 11:22 AM of 266.73 ug/m³. The source of Particulate Matter contributing to the high levels seen at 11:22 AM was the demolition of part of the building structure located above the monitoring station and not the pile drilling activities at the Site. To confirm the source of the elevated PM-10 reading, demolition was paused, which caused the PM-10 to drop below the action level. Drilling continued during this time and showed no contribution to the PM-10 levels.
- On May 30, 2025, there was a reading above the NYSDEC approved CAMP 15-minute average level for Particulate Matter (PM-10) (150 ug/m³) at 1:07 PM of 168.55 ug/m³. The source of Particulate Matter contributing to the high levels seen at 1:07 PM was found to be welding operations taking place near the air monitors and not the pile drilling activities. To confirm the source of the elevated PM-10 reading, welding operations were paused, which caused the PM-10 to drop below the action level. Drilling continued during this time and showed no contribution to the PM-10 levels.

#### Water Handling

As noted in the Change of Use application, potable water is being used as the drilling fluid to remove cuttings from the boreholes during the installation of the piles. As this water may contact contaminated soils or groundwater, the drilling water is being managed and containerized for off-site disposal. A water holding tank is staged along West 55<sup>th</sup> Street, and the water accumulated is removed via vacuum tank truck for disposal at Clean Water of New York in Staten Island. During the May 2025 reporting period, a total of approximately 10,446 gallons were removed from the water holding tank as follows:

Date	Volume of Water
May 5, 2025	5,710 gallons
May 28, 2025	4,736 gallons

Manifests for the water disposal events are attached.

#### **Soil/Debris Management**

The drilling activities generate soil/bedrock drill cuttings for disposal. These drill cuttings have been placed in plastic washout bags which are stockpiled on-site for subsequent disposal. Bags are covered with plastic sheeting when no active drilling or soil disposal activities are taking place to keep soil and any associated moisture contained.

On May 7, 2025, NYSDEC visited the Site. During the Site visit, there was an on-site meeting with EL, NYSDEC, Madigan Development and the construction management company (CMA) present to discuss the ongoing Change of Use activities and the associated handling of waste materials generated by the pile drilling activities. The location of ancillary construction and demolition waste (C&D) in the basement unrelated to construction activities was also discussed. On May 9 NYSDEC sent an email requesting that all soil and C&D debris be removed and containerized appropriately for eventual off-site disposal. Subsequently, the C&D was removed from the basement and disposed of in a roll-off container on May 19, 2025. Soils and C&D that contacted potentially contaminated soil were placed in plastic washout bags for and staged in the basement for later disposal. Disposal is anticipated to take place during the June reporting period.

Daily reports have been submitted to document EL oversight of pile installation, water handling procedures, soil/debris management, and CAMP activities. Photo documentation of basement conditions was provided in the daily reports.

#### Reporting

The following reports were submitted to NYSDEC during the May 2025 reporting period.

- Daily reports to NYSDEC documenting the oversight of construction activities and implementation of the NYSDEC-approved CAMP.
- On May 16, 2025, EL submitted the revised Remedial Investigation Report (RIR) to NYSDEC. The RIR was revised to include details regarding the installation and sampling of two (2) additional monitoring wells, requested by NYSDEC.
- On May 22, 2025, EL submitted a draft Remedial Action Work Plan (RAWP) to NYSDEC.
- On May 1, 2025, EL submitted a Contained In Determination request for investigationderived waste (IDW), consisting of groundwater and soil cuttings generated during the installation and sampling of the two (2) additional monitoring wells that were drilled to complete the RI.

#### 3.0 Activities Anticipated for the Next Reporting Period

Oversight of pile installation will continue along with continued basement cleanup as needed. Daily reports will continue to be submitted documenting these activities.

#### 4.0 Approved Activity Modifications (changes of work, scope and/or schedule)

As previously reported to NYSDEC, EL submitted a second Change of Use application for the excavation and installation of four (4) pile caps and two (2) grade beams along the northern property boundary, on April 17, 2025. In an email dated May 27, 2025, NYSDEC did not approve the Change of Use activities, citing the spatial limitations of the Site leading to potential issues with IDW management as a reason for not allowing two (2) concurrent development activities to be conducted at the Site.

EL, NYSDEC, and CMA set up a call (for June 4, 2025) to discuss a path forward for activities at the Site via email correspondence dated May 30, 2025. The proposed path forward would involve pausing the pile drilling operations to allow room for and ensure proper IDW handling while the work proposed along the northern property proceeds. Pile installation activities would resume following the northern pile cap and grade beam installation.

## 5.0 Results of Sampling, Testing and Other Relevant Data

The revised Remedial Investigation Report (RIR), submitted May 16, 2025, contains all laboratory analytical results for soil and groundwater samples collected as part of the remedial investigation.

#### 6.0 Information Regarding Project Schedule and Completion

The Remedial Investigation portion of the project is complete. A revised Remedial Investigation Report was submitted in May 2025. A Remedial Action Work Plan was also submitted in May 2025 which proposed the selected remedial actions for on-site soil, groundwater, and soil vapor contaminants identified during the Remedial Investigation.

# 7.0 Unresolved Delays Encountered or Anticipated That May Affect the Future Schedule and Mitigation Efforts

None.

#### 8.0 Citizen Participation Plan (CPP) Activities During this Reporting Period

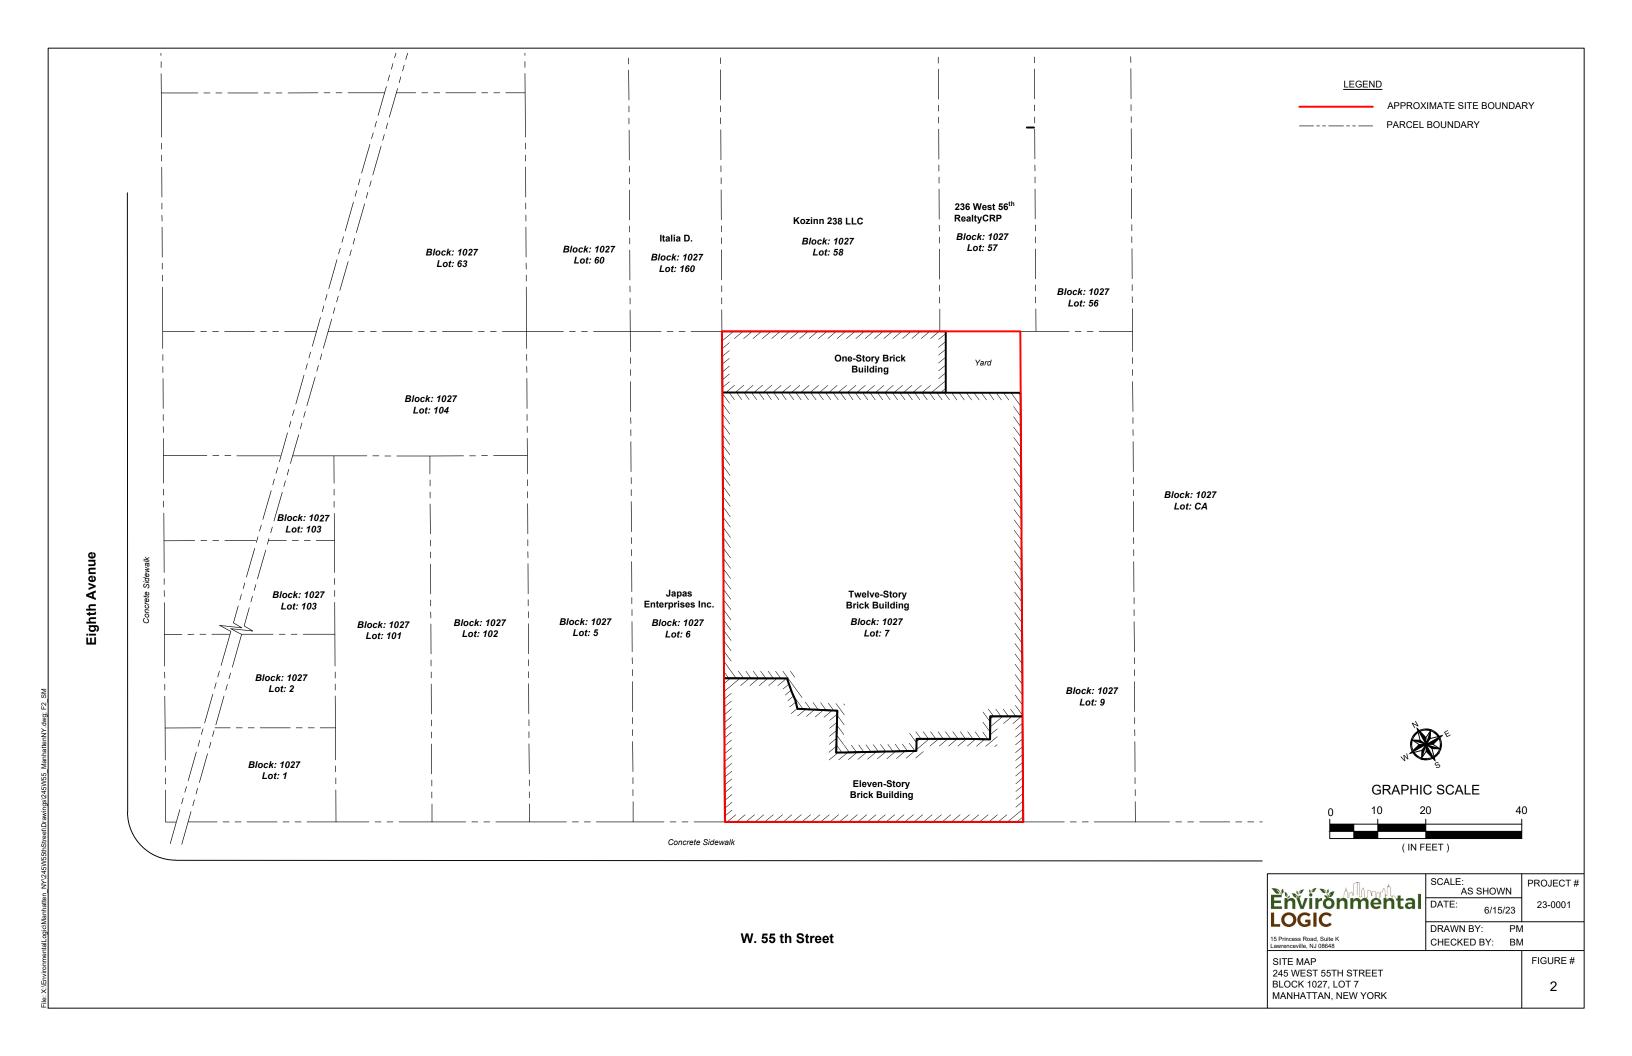

None.

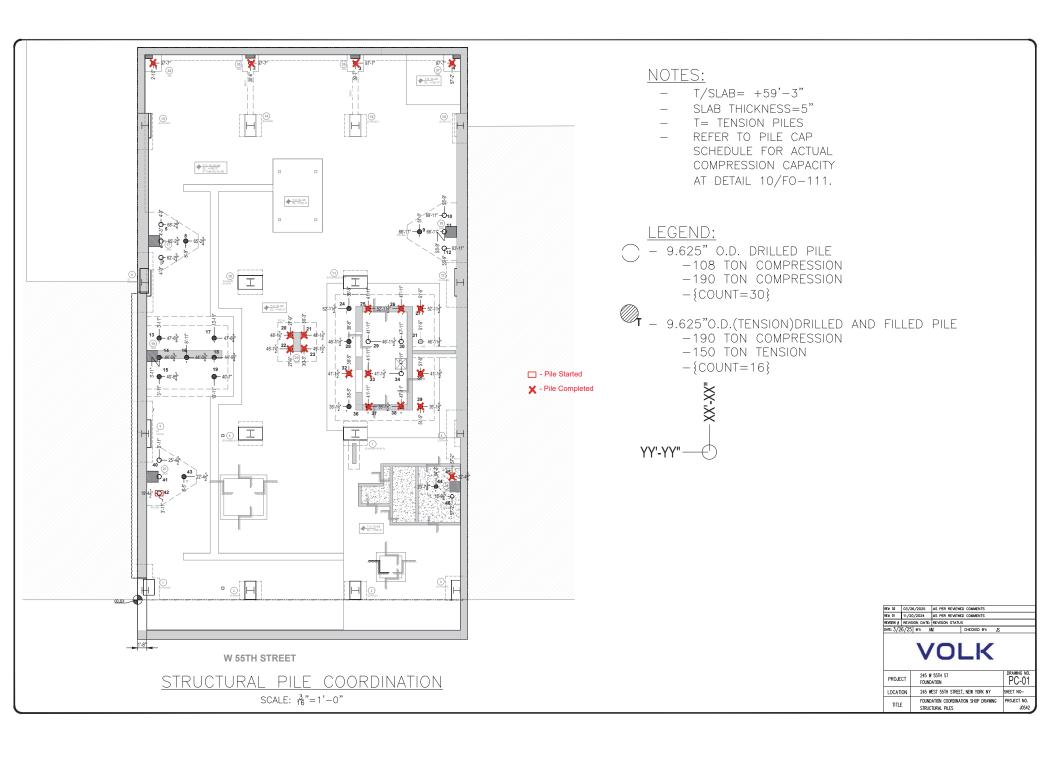

#### 9.0 Activities Anticipated in Support of the CPP for the Next Reporting Period

None.
